If this broad ground is admitted, it opens up an unlimited field for public expenditure. The same argument justifies, yes, imposes, as a national duty the expenditure of money for the improvement of roads and bridges in the most rural settlements; because, though their use is local, yet products may be and are carried over them which, passing on, soon enter into the general commerce of the country. If we must improve the small stream for the benefit of raftsmen or lumbermen, why must we not build their roads from the forest to the river-side? Surely we should benefit the commerce of the country as much by one expenditure as the other. The same argument to justify the one justifies and makes constitutional the other.

But no one seriously contends that any such power resides in Congress. The Committee on Commerce, which framed and reported this bill, declared in their report that they had "not placed in the bill appropriations for small streams of no importance to commerce."

manifest that the committee were misled.

To show the House and the country how just were the grounds of the President's veto of that bill and how unjustifiable the haste with which it was passed over his veto, I call attention to some of the items in the bill and some facts gathered from the engineers' reports to show the character of the streams and harbors into which in such large volumes the public treasure was poured. In the defense of this bill upon the floor, and by its champions before the country, it was stoutly maintained that the Government engineers had recommended not only the sums in the bill but much larger sums, and the idea was industriously circulated that these appropriations were vouched for by the engineers as needful and beneficial to the commerce of the country. I dissent from and take issue with these statements. The officers of the Engineer Corps have not recommended, but on the contrary, in many instances by their reports, have discouraged the work. True, they made estimates of the cost; true, their estimates in most cases exceeded the sum appropriated, because they figured on the total cost of improvements works as must be made to be of any benefit; but they did not recommend.

The Secretary of War in his letter of January 4, 1883, in response to the House resolution of December 9, 1882, says:

I am advised that it has been the general, if not the uniform, custom of this Department, in reporting to Congress in relation to this class of works for which appropriations were made in the above-mentioned (river and harbor) act, to refrain from any expression of opinion as to whether or to what extent works projected or in progress are in the interest of or benefit commerce and navigation.

One may search their reports in vain for a recommendation of the greater number of the items in the bill.

#### ANALYSIS OF THE VETOED BILL OF AUGUST 2, 1882.

There were in this bill three hundred and fifty-three separate items Omitting the sum for the Mississippi River, \$4,123,000, and the appropriation amounts to \$14,123,000 in round numbers. Of this number (three hundred and fifty-three) sixty-four items are classified by the engineer officers of the Army as "not yet commenced and not of well-defined and national importance." There are ninety-nine items where the works have been commenced and are of local importance only, and of slight, if any, importance to navigation, and eighty-eight items which they declare to be of local importance only. Thus from their reports two hundred and fifty-one items are outside the domain where such appropriations are legitimate or proper. These items call for \$3,790,87 True, the appropriation in most cases is small, much smaller than the estimates, but these amounts are only the nest-eggs for still greater expenditure. Before the next Congress and its successors these very appropriations will be urged as a reason for continuing appropriations to keep from utter loss the sums expended in beginning these improve-

To show as briefly as I can the nature of some of these items, I ask attention to the following cases. Note what the Secretary of War and the engineers of the Army say of them. Note how valid were the grounds of that veto, so ruthlessly overridden in this House. ports of the Secretary of War and of the engineers are my authority.

### PLYMOUTH HARBOR, MASSACHUSETTS.

Eighty-five thousand dollars have been expended here previous to the \$14,000 given by this Congress. Benefits are local. The harbor is reported "so difficult of approach as to be useless to strangers."

#### PULTNEYVILLE HARBOR, NEW YORK.

Four thousand dollars are to be expended here in aid of a commerce in which the arrivals and departures do not average over one a week during the season of navigation of vessels of not over forty tons tonnage.

#### SHEEPHEAD BAY, NEW YORK.

Three thousand dollars added to the \$7,000 heretofore voted. principal occupation is fishing, conducted by small sailing vessels, and the estimates call for \$92,000

### WILSON HARBOR, NEW YORK.

Forty thousand dollars have been appropriated here, and \$60,000 is wanted. On the average, one vessel a week of about eighty tons burden touches at this port.

Oak Orchard Harbor, on Lake Ontario, has had \$163,500 and wants \$100,000 more, of which \$3,000 was doled out by this Congress.

engineer's report says: "This harbor is of local importance only, one or two vessels a week visiting it during the season of navigation averaging not more than seventy tons each.

#### FLUSHING BAY, NEW YORK.

Five thousand dollars are given here. There is no commerce. The engineer surmises that "a development of trade by water might follow the improvement." But as \$120,000 more are needed to make the improvement of any avail, even as an encouragement to a commerce not yet called into being, it will be at this rate of annual outlay twenty-four years before the locality will realize any other result or benefit than that flowing from the expenditure of the money in the neighborhood.

Canarsie Bay, New York, comes in for \$3,000 on an estimate of \$88,000 for the benefit of an undeveloped commerce which has already absorbed \$5,000, a mere driblet of no benefit.

The act known as the "river and harbor bill" actually declares a harbor to exist at Long Branch, and provides an appropriation for its protection. There is not, never was, and never can be a harbor there, and the provision in the bill is for "shore protection," and has not even the flimsy pretext that commerce will be benefited, unless the transfer of funds from the pockets of guests to the coffers of landlords can be called commerce.

Vermillion Harbor has had \$111,946.32, and must have \$60,000 more. Nineteen vessels of small burden cleared this port in a year, yielding a magnificent revenue of \$16.45.

Michigan City, Indiana, gets \$20,000 for the inner harbor, the prime benefit of which accrues only to owners of dock property. Waukegan, Illinois, without a harbor and with little if any commerce by water, comes in for \$20,000 on top of \$15,743 already bestowed.

For the harbor of refuge at Grand Marais, Michigan, where there is no local commerce, \$40,000 is given. The engineers report that the improvement to be of value will cost half a million, and until half of this is expended the money put there is merely sunk. Monroe, Michigan, comes in for an appropriation of \$1,000. Improvements were commenced forty-six years ago and have not yet developed a commerce, but railroads have shorn it of all significance as a harbor.

Wherever you turn in this list of three hundred and fifty-three items you strike harbors without commerce, or at best only an insignificant local trade, and rivers not only without commerce but almost without water.

At New Buffalo, Michigan, an appropriation is made on an abandoned harbor in which work years ago was discontinued because there was no commerce. At Cedar River, Michigan, \$15,000 goes for what? To build a harbor at the mouth of a stream which can hardly float sawlogs and support one saw-mill.

Among the rivers which are the recipients of large sums is to be mentioned Rancocas River, which gets \$10,000 added to \$10,000 here-tofore received. This appropriation is in the interest of one single item of commerce, phosphate rock, which is carried to one factory for making fertilizers, on the river. Cohansey Creek, New Jersey, comes in for \$5,000 to clear out material permitted to wash into its channel from the streets of Bridgeton, New Jersey. Chester Creek, Pennsylvania, a drainage sewer for the town of Chester and of local importance only is given \$3,000 to add to \$3,000 already bestowed.

only, is given \$3,000 to add to \$3,000 already bestowed.

Virginia is generously dealt with in the bill. Pamunkey River is the recipient of \$2,500, continuing improvement, because the citizens think improved navigation would "stimulate better tillage and would increase trucking business." Totusky River has \$5,000, continuing improvement. This stream is navigable for small craft only five miles, and then is crossed by a permanent bridge. Staunton River gets \$7,000, continuing improvement. There is one small steamboat on it. The rest of its commerce is by "pole-boat" navigation. Archer's Hope River gets \$5,000 for a traffic carried on by "one small steamer and two schooners." Urbana Creek has no commerce, but it is thought she can get one by putting enough money into the river.

Tennessee is not forgetten in this wholesale distribution of money in small streams.

Clinch River, "used only for rafts and flat-boats at low stages," and "blocked with mill-dams and fish-traps" and a railroad bridge. She has had \$10,000, gets \$3,000 from this Congress, and needs \$13,400 more

French Broad River came in for \$5,000 on an estimate of \$136,500. Its commerce is "largely grain." It is said 65,000 bushels were floated on its bosom in one year. When this river is improved, and if it maintain its present thriving commerce, it will cost only a little over \$2 a bushel to furnish navigable water to get out this grain product. Mill-dams and fish-traps abound in this majestic national highway.

dams and fish-traps abound in this majestic national highway.

Duck River gets \$3,000, wants \$25,000 to secure two and one-half to three and one-half feet depth during four to six months of the year. The State has given the exclusive monopoly of navigation in this stream to a private corporation. Hiawassee River maintains one small steamboat. South Forked Deer River is blocked by several railroad bridges without draws, but she wants \$19,200, of which this bill doles out \$3,000, although "very little trade has been carried on of late years, for the reason that the country has had railroad facilities." Caney Fork

and Obey's River receive \$4,000 and \$5,000, respectively, continuing improvements. They each contain so little water that only three feet can be obtained at high water from February to June.

In Alabama the appropriations are equally lavish and improvident. To improve the Cahawba River \$20,000 is given. This is the starter for an appropriation of \$577,000 called for by the estimates. It is expected to get by this outlay a three-foot navigation for eighty-eight miles. There are only two insignificant villages on this river, and its use is obstructed by two railroad bridges.

The Tallapoosa River receives \$15,000 and needs \$260,000 more. The river can be navigated only with flat-boats, and the engineer says "its present commerce is not worth considering."

West Virginia comes in for her full share of this unwise appropria-

West Virginia comes in for her full share of this unwise appropriation. Elk River gets \$2,000 on an estimate of \$100,000 for one plan, and \$1,500,000 on another, for the improvement. The only navigation possible is that of logs, canoes, and flat-boats, and the logs can not float unless a five-foot rise can be furnished. Fifteen thousand dollars has heretofore been appropriated. Guyandotte River comes in for \$2,000, having already received \$10,500 to clear out old artificial obstructions, such as mill-dams and locks now blocking up the river.

North Carolina has not been forgotten. On Lillington River \$3,000 goes after the \$3,000 heretofore bestowed. Flat-boats and rafts floating cordwood constitute its commerce, which, present or prospective, does not seem to warrant expenditure above eleven miles from its mouth. New River is given \$5,000 to commence improvements, which to be effective must be costly, and, as the engineer reports, "not justified at this time."

Georgia did not sleep on her rights to a share of this divide. Oostanaula and Coosawattee Rivers, with "but little commerce on either river," get \$1,000. No steamboat has been on the Oostanaula.

Kentucky was vigilant for her due proportion. Her Big Sandy gets \$25,000, has previously had \$80,000, and wants \$46,000 more for ''bettering raft navigation.'' Treadwater River has \$3,500, but needs \$118,000 to procure available benefits.

No part of the country appears to have been neglected. Maryland has her Choptank River. This river has a trade carried on by three schooners of less than one hundred tons burden each. Five thousand dollars for continuing improvements are bestowed upon Choptank. Elk River receives \$6,500, continuing improvement, although she is blocked by a permanent bridge. A channel must be excavated to Elkton, and of course the people of the United States are profoundly interested in the increase of wharf facilities at Elkton.

Maine, New Hampshire, Massachusetts, and Connecticut have each their small rivers and these have come in for a share to aid local developments, help a local trade, increase the value of sites along the rivers, or help the business of running small excursion steamers.

Far-off Texas has her interests cared for. Trinity River had one steamboat in 1874 which was not expected to run in 1880, but \$8,000 is voted, and \$26,500 has been given before.

Neches River has been known to float a steamboat, and comes in for a permanent place in the annual bill.

At Fort Brown \$1,000 is bestowed, not to help commerce, but to keep the banks from caving into the river to the injury of the private proprietors!

Delaware gets for her Indian River \$10,000, and must have \$40,000 more. It is solely for the benefit of local trade, and the products of the region are fruit, vegetables, and oysters, which can not be shipped, as they are too perishable.

Clinton River, Michigan, attests her watchful zeal. The engineer reported \$10,000 necessary if any attempt at expenditure was made here. The act gives \$6,000. The commerce is only local, and in four years has yielded a revenue of \$297.

These are only a part of the items most manifestly misbestowed by this bill. The expression of public opinion which followed the passage of this bill, condemning it and sustaining the veto, was just although severe. But the people then knew but little of the details of the bill and could point out but few of its objectionable items. I here make this allusion to a few out of many, solely to show the erroneous theory on which the bill was framed.

Not only is the bill too lavish, putting money where it did not and could not benefit commerce or call it into being, but it has, in the attempt to give something to all localities, in many instances wasted what it has given by giving too little to do any good. The following are some of the streams to which a little was given, but not enough to be of benefit:

Swanton, Vermont, gets \$4,500 to build a breakwater 1,900 feet long, 260 feet of which have been built at a cost of \$60,000. This will make the whole cost nearly half a million. The sum appropriated will build about 20 feet, at which rate it will take eighty-two years to finish the work.

Scituate, Massachusetts, is given \$10,000. The engineers report that \$280,000 is needed and that \$100,000 is necessary to make a beginning. Canarsie Bay receives \$3,000 to make a tidal basin; cost, \$73,000. The appropriation of 1881 was \$5,000, not used, as it was not enough to start the work.

Sheepshead Bay is given \$3,000 where \$92,000 is needed.

Flushing Bay is given \$5,000 on an estimate of \$128,500, with the engineers asking \$30,000 as necessary to do any good.

Grand Marais, Michigan, gets \$40,000; estimate, \$450,000.

Cahawba River, Alabama, gets \$20,000 on an estimate of \$577,000. Oconto Harbor, in Wisconsin, is doled out \$15,000, while the engineers report that \$50,000 must be given before operations can be profitably prosecuted.

Again, the bill in several items, for some unexplained reason, exceeds

the engineers' estimates

Red River gets \$75,000 on an engineer's call for \$28,000. Yaquina Bay, in Oregon, gets \$100,000 on an estimate of \$60,000. To Providence River and Narragansett Bay \$125,000 is given on an

estimate of \$100,000.

Saint Anthony's Falls, on the Upper Mississippi, gets \$25,000 although the improvement is completed and no estimate shown, and the record is silent as to what shall be done with the money.

The act appropriates, exclusive of the Mississippi Valley amount, nearly fifteen millions. The estimates show that this expenditure involves further appropriations of not less than \$63,000,000 to save from

total waste the amounts already given. An analysis of the bill shows that forty-nine new objects are named for which appropriations are for the first time made. These items amount to \$1,798,000. Careful estimates from part of these proposed improvements warrant the conclusion that they are the beginning of a eries of appropriations which must aggregate fifteen millions

Moreover, engineers aver that the system of partial provision for continuing improvements generally results in a cost of 20 per cent. more than if the work had been prosecuted on a sum covering the estimate. If this be true, these appropriations, exclusive of the work of the Mis-

sissippi River Commission, must cost nearly ninety millions.

With a few more observations I have done. The bill of last year made an appropriation for a preliminary survey of the Hennepin Canal, in the State of Illinois. If there is power granted to Congress directly or by implication to appropriate money for such a purpose, I am unable to determine where it is vested. If building the Hennepin Canal may be done by this Government, I can not anticipate on what shore its power is limited or what public works are left for States and individuals and

private corporations to create, manage, and maintain.

In the light of history and the log-rolling tendencies apparently developed by the passage of the bill passed over the veto last summer, the Hennepin Canal is specially obnoxious to every principle of justice and sound legislation. It has been probably more widely discussed than any like project for many years. If its construction would draw to it such an immense traffic, why is it that Illinois, with all its great capital, could not find private enterprise sufficient to build it? Capital, where controlled by private individuals, rarely fails to engage itself with any valuable project, especially if it be so valuable as this is said to be. Why did not the State of Illinois build it? Certainly no people knew its advantages better than those of that State, and yet in a constitutional convention held in that State in 1870, where the whole merits of the proposed canal were discussed, an amendment was proposed and carried, by 49 ayes to 11 noes, prohibiting the State of Illinois, through its General Assembly, from ever voting to loan its credit to build this canal, and by a vote of 35 ayes to 25 noes prohibited the appropriation of a dollar for the purpose. This amendment, when submitted to the people for ratification, was carried by a vote of 142,540 aves to 27,017 no

It is opposed by those whom it would be expected most to benefit. I have listened attentively to all I could hear said by its most zealous friends and advocates, urging this Government to undertake the unsavory work of building a local canal after the great State of Illinois has forbidden by a constitutional amendment an appropriation by its State Legislature of a single dollar for such purpose

The only reason I have heard that seemed to possess any force was that if such a policy as was being carried out by the river and harbor bill was to prevail, Illinois might as well come in for her part of the general divide.

If this Hennepiu Canal were built it would unquestionably afford large additional drainage to the sewers of the city of Chicago and to the

United States Treasury

The last but not the least objection that I shall now suggest to such river and harbor bill appropriations is improving the Upper Mississippi River for the professed object of storing water in reservoirs to let out

in times of low water to improve navigation below Saint Paul, and improving Saint Anthony's Falls water-power at Minneapolis.

I understand that with all the large expenditures that have been made in constructing reservoirs no practical advantage has been or can be derived by the shipping interests on the river where relief is needed. That good storage for logs owned by private corporations and individuals has been provided and is enjoyed by such parties I suppose none will question; and that this was all that the original zealous promotors and advocates of this scheme ever anticipated seems probable. The water-power at Saint Anthony's Falls is almost as famous and well-known as the great State of Minnesota, of which it forms so conspicuous a part. This highly valuable water-power is owned, however, by private individuals or corporations, and why the United States Gov-

ernment should be called upon or consent to make large appropriations or indeed any appropriations to improve property so owned and occupied

The owners of this vast property do not, so far as I can ascertain, attempt to explain, much less to make clear, why the Government should improve, protect, and preserve their property any more than it should protect the private property of every other citizen in the country.

Furthermore, there are hundreds, if not thousands, of streams in the

country equally deserving of attention as those provided for by this legislation. Their improvement might benefit some local trade, possibly facilitate the rafting of forest or field products. They can not be denied if such claims as are granted by the act of 1882 and by the bill we are now asked to pass are worthy. Equal justice and fairness to locality and private individuals must accord to them a share in this great The disastrous result, as in the case of all departures distribution. sound and wise policy, no man can foresee.

Lee vs. Richardson.

### REMARKS

# HON. SAMUEL LEE,

OF SOUTH CAROLINA,

### IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1883,

On the contested-election case of Lee rs. Richardson.

Mr. LEE said:

Mr. Speaker and gentlemen: I have, in the short time allowed me, endeavored to prove to you that I have been elected to the Forty-seventh Congress from the first district of South Carolina and I trust I have convinced every member without regard to his political convictions that I am entitled to the seat I claim, and I earnestly look for a favorable vote from my political opponents who can rise superior to party and decide this case upon its merits. I have confined my remarks to the Darlington precinct because the chairman of the Committee on Elections states that one to be the main cause that prevents him from joining in the report made in my favor, but I refer you to the report made by Mr. Pettibone and concurred in by six other members of the Elections Committee for other startling facts in the case.

There are one or two general features of the political situation in the

South that I wish to refer to before taking my seat. The political condition of the South is at present singular and abnormal. The relation of the races there is strained and unnatural, politically, while materially and in every other aspect it is comparatively harmonious.

It is an unfortunate state of affairs, and I should despair of the future did I not believe that time would work a beneficent change in the temper and disposition of the Democrats in control there and induce them to fall in line with the progressive and liberty-loving spirit that has dominated this country for the last twenty years, and I trust will continue to control and direct its affairs through all its glorious future.

As a colored man and a representative of the race with which I am identified I have always done, and will continue to do, everything in

ny power to bring about such a state of things

If the Democrats of the South would acknowledge in a practical manner the political rights and privileges of the colored voters there would be an end of all difficulties, and the colored voters would unite in electing the best men to positions of honorand trust upon their merits only, and thus bring peace and contentment and prosperity to the South.

But as long as they see the Democrats as a party determined to de-prive them of their rights, either by brute force or clear violation of law, or under the forms of law ingeniously and elaborately devised to neutralize the practical enjoyment of their rights, they will unite to a man to resist and oppose that party, and keep it in the minority where

it so justly belongs.

I trust the Republicans of this House will to-day administer a rebuke to the practices of the Democrats in their violations of law and justice, as shown by the facts in the election in the first Congressional district of South Carolina that I have described, by unseating the contestee in

I need not say to the Republicans of this House that it is essential to the purity of elections that this be done and the safety of those princiare well aware of this, gentlemen. I am satisfied that you will not countenance by your vote the violations of law and the political practices that prevail in elections in the South, as shown in this case that is so repugnant to every sense of justice and fairness that it are is so repugnant to every sense of justice and fairness that it renders one-half of this country as unrepublican as despotic Russia, while the other half remains the most liberal and progressive of any land of ancient or

When this House, representing the great Republican constituencies of the North and West, shows its disapproval of the illegal methods resorted to by the South to obtain a representative here, these practices will cease, and not before.

I need not dwell on the intelligent appreciation shown by the colored people of the South, during the last twenty years of the eventful history of this country, of the important issues at stake.

It would be superfluous to state how deeply they sympathized with the principles that animated the Republican party from the firing of the first gun on Fort Sumter, and how steadfastly they adhered through the war and subsequently to the cause of Republicanism. They have sealed their devotion with their blood on many battlefields, and have maintained their political rights at the ballot-box, braving assassination

and intimidation that would have unnerved the stoutest hearts.

I trust the action of this House to-day will demonstrate to their anxious and waiting hearts that such sacrifices have not been in vain

I ask that you examine the report referred to.

Mr. PETTIBONE, from the Committee on Elections, submitted the following

report:
The Committee on Elections, to whom was referred the contested-election case of the first Congressional district of South Carolina, having had the same under consideration, beg leave to report:
The district is composed of the counties of Georgetown, Sunter, Williamsburgh, Horry, Darlington, Marlborough, Marion, and Chesterfield.
The returns of the State board of canvassers give to—

John S. Richardson. Majority for Richardson ....

The contest was begun by the contestant, Samuel Lee, against the sitting member, John S. Richardson, and in his notice of contest he alleges the following

grounds:
"First. That a majority of the legal votes polled at the election held on the 2d day of November, 1880, in the first Congressional district of South Carolina were

cast for me.

"Second. That owing to frauds, violence, and intimidation committed in your

"Second. That owing to frauds, violence, and intimidation committed in your interest by your partisans and supporters in each and every county in the Congressional district, the true result of the election was defeated and a pretended and fraudulent majority made to appear for you.

"Third. That the returns made to the State board of canvassers by the commissioners of elections of Sunter, Williamsburgh, Georgetown, and Horry Counties do not contain true and correct statements of the votes cast for a member of Congress in said counties.

"Fourth. That according to the returns of the election made by the managers of election of the several voting precincts in the counties of Sunter, Williamsburgh, and Georgetown I received a majority of the votes cast in each of the said counties.

"Fifth. That in Sumter County the commissioners of election illegally refused to count and canvass and include in their statement of the result of the election the vote cast, canvassed, and duly returned for a member of Congress at the fellowing voting precincts, to wit, Sumter No. 1, Carter's Crossing, and Rafting Creek.

count and canvass and include in their statement of the result of the election the vote cast, canvassed, and duly returned for a member of Congress at the fellowing voting precincts, to wit, Sumter No. 1, Carter's Crossing, and Rafting Creek.

"Sixth. That in Williamsburgh County the commissioners of election illegally refused to count and canvass and include in their statement of the result of the election the vote cast, canvassed, and duly returned for a member of Congress at the following voting precincts, to wit, Salters, Gourdins, and Midway.

"Seventh. That in Georgetown County the commissioners of election illegally refused to count and canvass and include in their statement of the result of the election the vote cast, canvassed, and duly returned for a member of Congress at the following voting precincts, to wit, Upper Waccamaw, Lower Waccamaw, Santec, Sampit, Choppee, and Fee Dec or Birdfield.

"Eighth. That in Horry County the commissioners of election illegally refused to count and canvass and include in their statement of the result of the election the vote cast, canvassed, and duly returned for a member of Congress at the vote cost, canvassed, and duly returned for a member of Congress at the vote cost, canvassed, and duly returned for a member of Congress at the vote count and canvass and include in their statement of the result of the election the vote cast, canvassed, and duly returned for a member of Congress at the voting precinct of Martin Hill.

"Sinth. That in Sumter, Williamsburgh, and Georgetown Counties, at the following voting precincts, to wit. Lynchburg, Mayeswille, Shiloh, and Privateer, in the County of Sumter, and Kingstree, Gourdins, Black Mingo, Greelyville, Salters, Cedar Swamp, Prospect Church, Pijskins, Andersons, Seranton, and Grahams, in the county of Williamsburgh, and Georgetown, Upper Waccamaw, Sampit, and Carver's Bay, in the county of Georgetown, the vote actually cast for me was larger and the vote actually cast for you was smaller than appears on the face of the vote

purpose of casting their ballots for me for Congress were deprived of the opportunity to vote for me for Congress, as they intended and desired.

"Tweitht. That at Black River or Brown's Ferry voting precinet, in Georgetown County, 278 votes were cast for me and 25 votes were cast for you; that at the County, 278 votes were cast for me and 25 votes were cast for you; that at the County, 278 votes were cast for me and 25 votes were cast for you; that at the County, 278 votes were cast for me and 25 votes were cast for you; that at the ballot-box had been stuffed as foresaid, a controversy arose between the United States supervisors and the managers as ballots was caused by your partisans and supporters fraudulently placing in the ballot-box that number of small tissue ballots bearing your name for Congress; that when it was assertained that the ballot-box had been stuffed as foresaid, a controversy arose between the United States supervisors and the managers as without making a canvase and return of the votes required by law; wherefore, the vote cast as aforesaid at said precinct should be added to the vote returned for you and for me, respectively, by the commissioners of election of Georgetown County, to wit, 22 for you and 276 for me.

County, to wit, 22 for you and 276 for me.

County, to wit, 22 for you and 276 for me.

County, to wit, 22 for you and 276 for me.

County, to wit, 22 for you and 276 for me.

The county, to wit, 22 for you and 276 for me.

"Sourcest by the managers of election of their lective was flabiled in your interest by the insertion thereon of one hundred and sixteen fletitious names, and for the names thus fraudulently placed on the poll-tist a number of bullots bearing your name for Congress were surreptitiously placed in the ballot-box and counted, canvassed, and returned for you; wherefore, from the vote returned for you as said precinct about the department of the pollicus so litegally were provided by the properties of your your partising the first Congression of the properties of

"SIR: In reply to your notice of intention to contest my seat in the Forty-seventh Congress of the United States as a member from the first district of the State of South Carolina, served on me on the 20th day of December, 1880, I have

State of South Carolina, served on me on the 20th day of December, 1880, I have to say—
"I. That I deny and except to your right to contest my seat, either in your own behalf or in the interest of the voters of the first Congressional district of the State of South Carolina, for the reason that you were not at the time of the general election of the 2d of November, 1880, either a legal voter or a citizen of the

State of South Carolina, for the reason that you were not at the time of the gaid district or State.

"I allege that two years previous to said election, with the intention of removing from South Carolina, you sold whatever property you owned in South Carolina and removed with your family beyond the borders of said State, and returned to the said State less than twelve months previous to said election.

"II. I object and except to your notice so far as you charge force and intimidation on the part of my supporters, because you do not specify, as the law and practice require, or pretend to specify, a single instance of force or intimidation committed by any of my supporters anywhere in the Congressional district on any of the voters of said district. Nowhere in your notice do you state who was forced to vote for me, or who was intimidated by my supporters and prevented from voting for you, or in what manner, place, or town such intimidation was had, or by whom it was done.

"III. Because your specifications of grounds of contest are insufficient in law, and do not set forth facts sufficient or of such a character as to enable you to contest my right to said seat. And not waiving my aforesaid exceptions, but expressly reserving and relying on the same, I do hereby expressly deny, on information and belief, all the charges and allegations in your said notice contained and set forth, and require you to prove the same, except as hereinafter admitted.

"To the first ground of your contest I deny the same, and each and exery allegations in your said notice contained.

"To the first ground of your contest I deny the same, and each and exery allegations in your said notice contained.

mitted.

"To the first ground of your contest I deny the same, and each and every allegation therein contained. On the contrary, I allege that my official majority, as found by the State board of canvassers for the State of South Carolina, was 8,468.

"To the second ground of your contest I deny the same, and each and each and every allegation therein contained.

"To the third and fourth grounds of your contest I object, and except to them indefinite and insufficient in law. If true, as alleged by you, they do not show or allege that I am not entitled to said seat, or that you are; and they do not state how or wherein the said returns are not true and correct, or what would be your majority in said counties if the said returns were corrected as claimed

by-you. In reference to your allegation in said third ground of contest, while I do not admit it, because I do not know it to be true, but, on the contrary, require you to prove it, I claim and allege, if true, as alleged by you, I would still have a large majority of the votes cast at said election, and be entitled to said seat. "In reference to the fourth ground of your contest, I answer that I believe it is true, as alleged by you therein, that a majority of the votes cast in said counties of Sumter, Wälliamsburgh, and Georgetown were cast for you, but I object and except to your specification as indefinite and insufficient in law. It does not state what returns; from what voting precincts; how or wherein the said returns are not true or correct, or what would be your majorities in said counties; and I expressely and emphatically deny that you would, if your said allegations were true, thereby or by reason of anything alleged in said third and fourth grounds of contest, have a majority of the votes cast in said district, or be entitled to said seat.

of contest, have a majority of the votes cast in said district, or be entitled to said seat.

"To the fifth ground of your contest, I answer that I do not know or admit that in Sumter County the commissioners of elections illegally refused to count and include in their statement the votes cast and returned at Sumter precinct No. I, Carter's Crossing, and Rafting Creek. I admit that the votes cast at Sumter precinct No. I, I waivethe question as to whether the same were legally or illegally refused and excluded has to the votes cast at Sumter precinct No. I, I waivethe question as to whether the same were legally or illegally refused and excluded by said commissioners, and agree that the same may be counted. And I allege and claim if they be counted I would still have a large majority of all the votes cast in said district. As to the votes cast at Carter's Crossing and Rafting Creek, I deny, on information and belief, that they were illegally refused and excluded from the said statement, and I allege and claim if they be counted I would still have a large majority of all the votes cast in said election.

election.
"To your sixth, seventh, eighth, ninth, and tenth grounds of contest, on information and belief, I deny the same and each and every allegation therein con

tained.

"As to so much of the allegation contained in your ninth ground of contest as alleges that there is such a voting precinct as Mayesville in Sumter County, I deny the same; and though I received a majority of the votes polled at said supposed precinct, I allege that there is no such voting precinct established by law, and ask that the vote returned and counted from said supposed voting precinct as a said supposed voting prec

and ask that the vote returned and counted from said supposed voting precinet be excluded.

"To your eleventh ground of contest, on information and belief, I deny that the poll at Stateburgh, in Sumter County, and at Grier's, in Georgetown County, were not opened. I deny that said polls were not held because the managers neglected or refused to act. I deny that because said polls were not held numerous voters who desired to vote for you were thereby deprived of the opportunity to vote for you.

"On the contrary, on information and belief, I allege that the poll at Grier's, in Georgetown County, was held, and I charge and allege that your partisans and supporters, with force and arms, took from the possession of the managers of said poll the box containing the ballots cast for a member to Congress and carried off the same, refusing to allow the said managers to count the ballots and ascertain the result. And I further allege that no one was prevented from voting for you who desired to do so by anything that was done at either of said voting precincts by my partisans and supporters, or by the managers at said precincts.

voting precincts by my partisans and sapprocinets.

"To your twelfth ground of contest, on information and belief, I deny the same, and each and every allegation therein contained; and I charge and allegation information and belief, that your partisans and supporters, with force and arms, took from the possession of the managers of said Black River or Brown's Ferry precinct the box containing the ballots cast at said voting precinct, and refused to allow the same to be counted by the managers, as by law required to be done.

refused to allow the same to be counted by the managers, as by law required to be done.

"To your thirteenth, fourteenth, fifteenth, sixteenth, seventeenth, eighteenth, nineteenth, and twentieth grounds of contest, on information and belief, I deny the same, and each and every allegation therein contained. As to your seventeenth ground of contest, and all other grounds where similar allegations are made by you, I charge and allege that the managers of the election were appointed, and the purging of the ballot-boxes, where the same was found to be required by law, was done in strict accordance with the laws of South Carolina governing in such cases, and that said laws were framed and passed by the political party of which you are a member, and the appointment of said managers and the purging of the boxes were done in strict accordance with the practice adopted and acted on by the party of which you are a member when said party were in power in South Carolina. I further charge and allege that the party to which I belong have not altered, amended, or repealed the said laws in one iota.

"As to so much of your allegation contained in your eighteenth and nineteenth grounds of contest as alleges that there is such a voting precinct as James Cross-Roade in Darlington County I deny the same, or that there was any vote polled at or counted from any such voting precinct.

"The undersigned alleges and charges that there is no such voting precinct established by law as Mount Clio in Sumter County, and claims that the vote counted and canvassed as polled at said supposed voting precinct should be excluded.

"The undersigned further denies that if the irregularities alleged by you to

established by law as Mount Clio in Sumter Country, and claims that the vote counted and canvassed as polled at said supposed voting precinct should be excluded.

"The undersigned further denies that if the irregularities alleged by you to have been committed did occur (of which he has no knowledge or information), they were of a character in any degree to affect or invalidate his true and lawful election. On the contrary, he alleges and claims that counting the entire vote polled at every voting precinct in the Congressional district, and accepting the returns made by the Republican supervisors wherever they made returns as to the number of such votes and the persons for whom they were cast, the contestee received a large majority of all the votes cast for a member to Congress from the first district of the State of South Carolina at the election held for such member on the 2d day of November, 1880.

"While the undersigned denies that there was any 'force or intimidation whatever used or practiced anywhere in the Congressional district by his partisans and supporters, he alleges and charges that there was great force, undue influence, violence, and intimidation practiced by you and your partisans and supporters upon and over a large number of colored voters who desired to vote for him, and who in consequence of such force, violence, undue influence, and intimidation were prevented from voting for him, and forced by fear of violence and injury to their persons or property to vote against their wishes foryou. That this was notably the case at each and every voting precinet in the counties of Sunter, Williamsburgh, and Georgetown. That to render this intimidation more consplete and effectual you and your partisans and supporters caused large numbers of the colored people to be formed into clubs and appointed captains over them, who were charged to march their aguads in a body to the polla, and there see that they voted the Republican ticket. That you and your partisans and supporters caused to be placed in the ha

"The undersigned further alleges and charges that you intimidated a large number of colored voters and prevented them from voting for contestee by procuring yourself to be appointed a United States deputy marshal, and acting as such in the interest of your own election; that you and your partisans and supporters procured the appointment of a large number of special deputy marshals, whom you and your partisans and supporters caused to be stationed at each and every poll in the Congressional district without warrant of law, there being no city or town in the district of 20,000 inhabitants; that these deputy United States marshals had displayed on their persons the badges of their authority obtained from the United States authorities, and were active partisans and supporters of yourself, overawing and forcing many colored voters to vote for you who would otherwise have voted for him.

"The undersigned further alleges and charges that in order the more effectually to intimidate and force the colored voters to vote for you, you caused your name as a candidate for member to Congress to be printed on a thick, stiff, and striped-back card, easily discerned at a considerable distance, thereby seeking to prevent, and in a great many instances did prevent, the colored voters from voting a secret ballot, as is contemplated by the law. That many of these colored voters desired to vote the Democratic ticket on which contestee's name was printed as a candidate, and would have done so could they have voted it without its being known to your partisans and supporters for whom they voted. That many colored voters actually came to the friends and supporters of the undersigned and stated that they intended and desired to vote the Democratic ticket could be pasted on the inside of your striped-back ticket, and these—when this device was resorted to, to shield and protect them against the violence and intimidation of your partisans—voted the Democratic ticket, and these—when this device was resorted to, to shield and protect them aga

#### GEORGETOWN COUNTY.

GEORGETOWN COUNTY.

It is agreed (Richardson's brief, record, page 92) by both contestant and contestee that all the vote of Georgetown County was rejected by both the county and State board of canvassers save one poll, to wit, Georgetown poll—that is, viz, and State board of canvassers save one poll, to wit, Georgetown poll—that is, viz, Santee, Sampit, Upper Waccamaw, Lower Waccamaw, Carver's Bay, Choppee, Pec Dee, and Brown's Ferry, eight precincts thrown out and Grier's not held. The "official returns" give to Lee 617 votes; to Richardson, 302 votes for the whole county; total, 919 votes. Thus giving to Mr. Lee a majority of 315 only. But Mr. Richardson admits (brief, page 10) that the total vote in 1876 in the same county was 3,536, almost four times as much as in 1880, and this is explained because of the throwing out of the eight precincts. Were these eight precincts, or any of them, improperly thrown out?

But, first, as to Georgetown poll. It appears from the record, page 788 (B. R. Williams), and is not contradicted, that at Georgetown poll 923 votes were cast, 1,092 were found in the box, 169 more than there were voters (H. T. Herriott, record, page 817), and these were Democratic tissue ballots, and all for Richardson. Instead of rejecting these 169 tissue ballots, and all for Richardson. Instead of rejecting these 169 tissue ballots, were withdrawn and destroyed them (record, 788), but not one tissue ballot is shown to have been withdrawn. Other honest ballots, which were honestly cast, were withdrawn and destroyed. All the tissue ballots were counted for Richardson; 112 honest Lee ballots and 57 honest Richardson ballots were withdrawn and destroyed.

Thus Richardson got 169 more votes than he was entitled to and 57 less; but his vote was increased 112 by the fraud 112 more than he was entitled to and 57 less; but his vote was increased 112 by the fraud 112 more than he was entitled to and 67 less; but his vote was increased 112 by the fraud 112 more than he was entitled to and 67 less; but his vo

At Santee an honest election was held; five hundred and one persons voted as shown by the poll-list, and 501 ballots were found in the box. (J. B. Lloyd, record, 804.) Two votes were only for Presidential electors; 499 votes were cast for Representatives in Congress, and of these Lee received 476 and Richardson 23, showing a clear majority for Lee of 453. But this poll was rejected, not because there was any fraud or any pretended fraud, but as J. W. Tarbox, the Democrat chairman of the county board of commissioners swears (record, page 797). We three out the Santee box because the box was sent without a written certificate authorizing the bearer to deliver it." But that the election was an honest one and that Lee received 453 majority is uncontradicted and unquestioned.

\*\*Samult.\*\*

## Sampit.

Sampit.

This precinct was rejected by the same board of commissioners for the same reason, because "the box was sent without a written certificate authorizing the bearer to deliver it."

At this precinct 437 ballots, as is shown by the poll-list, of which 432 were for Congress. (H. T. Johnson, record, page 815.) The poll-lists kept by the two supervisors agreed; 495 ballots were found in the box when it was opened. Now, somebody committed a fraud by placing 58 fraudulent ballots in that box. Two of the managers were Democratis and one a Republican. Twenty "little jokers," tissue ballots, were found inclosed in another ballot. The managers destroyed the 20 tissue ballots were found with one or more Democratic ballots folded within them. These inclosed ballots were destroyed, and then an excess of 37 ballots was still found. Then the managers drew from the box, in strict accord with the law of South Carolina, 37 ballots; 13 were Republican and 19 were Democratic. The withdrawal was as fair as could possibly be. But the fraud practiced, it is as clear as sunlight, was a Democratic fraud; yet this ballot-box was rejected, not because of the fraud, but on a purely technical ground. Mr. Lee, as both the Republican and Democratic supervisors, who were present, suw, and reported the result, swear (record, page 816), got 256 votes and Mr. Richardson 176, a clear majority for Mr. Lee of 80 votes, as shown by the managers' returns. But Richardson got 18 more votes than he was entitled to and Lee 18 less, because 18 "tissue ballots" were counted for Richardson in place of 18 honest votes for Lee withdrawn from the box, and then 36 votes should be added to Lee's vote, and his majority is honesty 116 at this precinct.

Upper Waccamau.

# Upper Waccamaw.

This precinct was rejected by the Democratic county commissioners for the same reasons—purely technical. The managers who held the election were all Democrats. (Record, page 810.) They were Mr. Richardson's political friends, and ought to have seen that no fraud was perpetrated, as against him at least. But Bently Weston and R. F. Johnson, the two supervisors, one a Democrat and one a Republican, reported (record, page 814), and Johnson gwears that there were 432 names on the poll-list; that an excess of 80 ballots were found in the box; this unvess was drawn out and destroyed by a Democratic manager; but

by a singular perversity of fate 48 of the ballots were Republican and only 2 Demogratic 1 And, as a specimen, let the following testimony of R. F. Johnson

show:

"Q. How many, if any, Democratic ballots were found together in one at the counting of the ballots at the close of the poll?

"A. Twelve in one."

"A. Twelve in one."

"A. The weight in one was an an angers gave to Mr. Lee 341 votes and to Mr. Richardson 90, which gave Mr. Lee 251 majority, and this was rejected by the Democratic county commissioners and utterly cast away.

Reversing this process of gross and palpable fraud, even the Democratic managers, whose business it was to see justice done, admitted and certified to a majority for Mr. Lee of 251; and remembering that 48 honest votes given to Mr. Lee were drawn out and 48 not honestly given to Mr. Richardson were left in the box, thus taking from Lee 48 votes which did not belong to him, Mr. Lee's vote is swelled to 341, plus 48, which makes 389, and Mr. Richardson's is 90, less 48, which gives him 42 votes; and this clearly gives Mr. Lee at this poll a majority of 347 votes instead of 251.

#### Lower Waccamaw.

The poll at this precinct was rejected for the same flimsy reason. There is no dispute between the parties as to the vote actually east. Two of the managers were Democrats and one Republican (record, page 824). An honest election was had here; the vote was 250 for Lee and 45 for Richardson. This fact is utterly unquestioned. This gave Lee 205 majority. Let us in conscience so count it.

#### Carver's Bay.

Career's Bay.

The managers here were all Democrats (record, 820). The poll-list kept by these Democratic managers and by the Republican supervisor both agree that only 25 votes were cast; 377 votes were found in the box when the same was opened. (Record, page 820, R. B. Anderson.) The box was in the hands and under the control of the Democratic managers. A fraud gross and palpable was perpetrated—94 fraudulent votes were found in the box. In one ballot 23 Democratic ballots were found inclosed, and also "tissue ballots" were found processing to be Republican ballots by having the honored names of Garfield and Arthur at the top; and then a lot of names of persons as electors who were not running; and then the name of Mr. Richardson as the Republican tissue ballots, but all having the name of Mr. Richardson as a candidate, and the one which inclosed the 23 were destroyed; thus 55 fraudulent votes out of 94 fraudulent votes were destroyed by the managers.

But 29 fraudulent votes were returned to the box; of this number was drawn out 19 Republican and 20 Democratic. The drawing out was as fair as fair could be. And the managers returned 183 for Richardson and 97 for Lee, (R. B. Anderson, record, pages 820-21.) This gave Richardson 86 majority. But the facts show the fraud was a Democratic fraud. The fraud was in favor of Mr. Richardson. Nineteen Republican votes were drawn out which were honestly east. In their place 19 fraudulent votes were farm out which were honestly east. In their place 19 fraudulent votes were farm out which were honestly east. In their place 19 fraudulent votes were felt in the box and counted for Mr. Richardson. He got 19 more votes than he was entitled to, and Lee 19 less. The difference is 38. Subtract this from Richardson's certified majority 86; lessen it by 38, and his true majority was only 48.

And this would give a difference of 38 votes in favor of Lee over that certified to by the managers.

This poll was thrown out for the same alleged reason above set forth as in the case of Sampit. (Record, page 797.) The undisputed vote cast was 238. That number of ballots were found in the box. The managers were all Democrats, but they show in this return that the honest vote cast was 197 for Lee and for Mr. Richardson 41. This gives a majority for Lee of 155. (E. J. Greggs, record, page 823.) This result is undisputed; it should be so counted.

## Pee Dec.

Here the managers were all Democrats. Their returns and the United States supervisors testify to the same result. The vote stood 469 for Lee and 33 for Richardson, giving a majority for Lee of 436. This is not questioned or disputed. It was thrown out by the county commissioners for the same technical reason as Choppee and the balance. (Record, page 797.) We can not so report; because the messenger was not authorized to carry up the returns in writing we can not reject the entire poll.

## Brown's Ferry or Black River precinct.

Brown's Ferry or Black River precinet.

At this precinct it appears to be admitted that a reasonably fair election was held. That is, every voter was permitted to vote as he choose. The poll-list of the managers showed (record, page 800) that 296 votes were cast, and the names of the voters are given. But when the box was opened 672 ballots were found in that box. All the managers were Democrats. (See record, page 790-'2.) To show these ballots were found in the box, the testimony of Joseph Dunmore, a United States surpervisor, is sufficient. We quote (record, page 790-'2.) To show these ballots were found in the box, the testimony of Joseph Dunmore, a United States surpervisor, is sufficient. We quote (record, page 791-'2.) To show these ballots were found; in what quantities, and in what condition were these tickets found?

"A. About the middle of the box, inside of a larger Democratic ticket, in quantities of ten or twelve.

"Q. How many of these packages were found together in the box?

"A. Five or six."

He also swears that "at the corner bottom of the box a large number of these tickets were found." It appears that the voters were very much excited, as we think American citizens ought to have been, "When they found that the managers attempted to throw the ballots found folded together back into the box and count them." (Record, page 790.)

The witness Dunmore being asked why he objected to counting these five or six parcels of fraudulent tickets answered, "Because they refused to destroy all but one (as the law required), but attempted to put them back in the box and count them." Isaiah James McCottru (record, page 810) swears that 201 Republican votes were cast and 96 Democratic. In this he is corroborated by Joseph Dunmore, the United States supervisor. A great excitement naturally prevailed. A monstrous fraud was about to be perpetrated before their eyes. Joseph Dunmore theory of the Republicans being largely in the majority. The Democratic United States supervisors and "No, throw them in Black River,

the Republican ticket voted (page 810) bore the name of Samuel Lee for Congress, and this would give Mr. Lee 106 majority at this poll.

The result of this analysis shows that in Georgetown County, by the record evidence, enormous frauds were perpetrated; that looking to the uncontradicted evidence as to the votes actually east by the legal voters, the vote honestly east was as follows:

Vote of Georgetown County,

Precincts.	As retur the Sta vassers.	te can-	As corrected by the committee,		
, reducin	Richard- son.		Richard- son.	Lee.	
Santee Sampit. Upper Waccamaw Lower Waccamaw Carver's Bay Choppee Pee Dee Grier's, no poll opened Brown's Ferry, or Black River Court House precinct.			42 45 164 41 33	476 274 389 250 116 197 469	
			791	3, 101	
Lee's majority				2,310	

This gives a gross majority in Georgetown County to Lee of 2,310, in place of 315 as allowed by the board of State canvassers, and deducting the admitted majority from the real majority of Mr. Lee, shows beyond cavil that Mr. Lee was defrauded out of 1,995 honest votes in Georgetown County.

#### SUMTER COUNTY.

The board of State canvassers certify that Mr. Lee received in this county 1,789 votes, and Mr. Richardson 2,560 votes (see record, page 228). We analyze the vote of this county as follows:

#### Sumter precinct No. 1.

Sumter precinct No. 1.

Mr. Richardson, the contestee, in his answer to the notice of contest, on page 4 of the record uses the following language:

"As to votes east at Sumter precinct No. 1, I waive the question as to whether the same were legally or illegally refused and excluded by the commissioners, and agree that the same may be counted."

The proof shows that 1,499 votes were cast for Samuel Lee, and 9 votes for John S. Richardson. (Record, pages 44 and 245.) Since Mr. Richardson admits this vote to be correct, we may safely count it that way. This gives Mr. Lee a clear majority at Sumter precinct No. 1 of 1,490 votes.

The honesty of the contestee with regard to this precinct is certainly worthy of commendation; but what shall be said of or what language can characterize the partisan malignity of the commissioners who utterly ignored that poll?

#### Sumter precinct No. 2.

Sumler precinct No. 2.

At this poll, which was in the same town as Sumter precinct No. 1, and about one hundred yards distant, the total vote cast for Richardson was 398; the vote cast for Lee was 91, making a total of 489 votes.

It appears clearly by the evidence that a great many voterstried to vote there who could not and did not. (See record, pages 29, 31, 88, 41, 256, 258, 259, 52, 53, and 54.) It must be apparent to the dullest capacity that if 1,508 honest votes, as Mr. Richardson admits, could be cast at Sumter No. 1 on the day of the election, the same number of votes might have been cast within the same hours at Sumter No. 2. The record shows that at Stateburgh precinct, a neighboring voting-place, no election was held. The managers at Stateburgh were all Democrats; necessarily the voters of that precinct had to go to a neighboring precinct or not vote at all. They went to Sumter, and A. Johnson Andrews swears (see page 42), "I saw about four hundred to five hundred Republicans leave town that day without voting." Other witnesses prove that Republican voters were prevented from going to that ballot-box. Men and boys stood in solid array in front of that ballot-box. Democrats had free access to the poll. One witness, B. Spears (see page 30), swears as follows: "Every time I started I was pushed right back, but that colored men who had Democratic votes in their hands were given free passage."

Thomas R. Harney (record, page 32) swears that it was impossible for a colored Republican to vote at Sunter No. 2. "Because the stairway leading to the poll was crowded with white men and boys, and when I attempted to go up I would be squeezed and mashed so that I would be injured by trying to get up there. I made three attempts to get up there, but failed each time."

C. J. Croghan swears (see page 38):

"Occasionally they let one in after sticking him with pins, abusing him, and cursing him, and telling him this was no damned Republican poll."

Alfred Davis (record, page 52) swears he attempted to vote. "I was

## Lynchburgh precinct.

Lynchburgh precinct.

The State board of canvassers report that Mr. Lee received 181 votes and Mr. Rehardson 319 votes, making a total of 500 votes. (See record, page 227.) But 107 more ballots were found in the box than were actually east by the voters. (See record, pages 25 and 27—James Levy and R. A. Wilson.) All the managers were Democrats. By the law of South Carolina 107 ballots were drawn from the box and destroyed, and then the 500 ballots remaining were counted. This would have been exactly just if the 107 fraudulent ballots had been withdrawn, but they were not. The result, as stated by the State board of canvassers, was, as we have already seen, 181 for Mr. Lee and 319 for Mr. Richardson. But since it is evident that a gross fraud was perpetrated here as in other precluits by the ballot-box being stuffed, and since all the managers whose duty it was to see that the box was empty at the outset and to see that a fair election was held were the political friends of Mr. Richardson, it is difficult, not to say impossible, to believe that the fraud was perpetrated in favor of Mr. Lee.

We turn, therefore, to the positive testimony, and on page 61 of the record a list is found of those who exhibited Republican ballots, and who voted the same. This list shows that 242 votes were cast for Mr. Lee at Lynchburgh precinct, and since the report of the board of State canvassers shows that 500 votes were cast for Richardson 258, in place of for Lee 181 and for Richardson 319.

By the official returns Richardson received 138 majority; but in truth and in

fact he received a majority of 16 votes only. (See testimony of James Levy, record, pages 25 and 61; also R. A. Wilson, page 27.)

Now, it is clear that the 107 extra ballots found in the box were fraudulent. They must have been, for there were no voters behind them. Were they for Lee? The record is silent as to who they were for.

R. A. Wilson, United States supervisor, page 28, swears the managers would not let him see the tickets they destroyed. In this he is corroborated by J. A. Rhame. (Record, 671.)

Mayesville precinct.

Rhame. (Record, 671.)

Mayesville precinct.

At this precinct the State board of canvassers give to Mr. Lee 257 votes and to Mr. Richardson 274 votes. The total vote would thus be 531.

But the poll-list showed that 559 votes were cast, and there was found in the box 760 ballots. It is thus manifest that there was a fraud perpetrated by stuffing the ballot-box with 221 fraudulent ballots. They were Democratic ballots. V. S. Johnson swears (record, page 19) that in not less than ten instances "there were quite a number of Democratic tickets folded together," and "the general appearance was that they were laid in there before the voting commenced, and had not been put through the hole in the lid;" and also swears that Mr. Wilson, one of the managers and the one who counted the tickets, stated that "the tickets were hatching in the box." Johnson also swears that he saw the tickets counted, and no Democratic tickets were pasted upon the checked-backed tickets voted by the Republicans, and all the managers were Democrats; and Mr. Cooper, one of the Democratic managers declared that the bundle of Democratic tickets "could not have been voted in the box and have to be torn up."

Mr. Johnson further swears that "there was one bundle which could not go through the hole in the lid." H. H. Wilson swears (page 21) that he kept a book, which he produced, in which the names of the voters who voted the Republican ticket at that poll on that day were written down, and that 402 Republican votes were cast, upon which appeared the name of Samuel Lee for Congress. The names of all these voters are found in the record on page 58 and following, as sworn to by the witness Wilson. Wilson swears he saw cach of these persons deposit their tickets. (See record, page 22.) True it is that E. M. Cooper, one of the Democratic managers, swears, on page 68, that in bis judgment Wilson could not know this fact, but it is evident that 221 fraudulent ballots were found in the record on the box. They would have been placed in the box before the po

Concord precinct.

Concord precinct.

At this precinct it is claimed by Mr. Richardson and conceded by Mr. Lee that every honest vote cast was east for Mr. Richardson. One hundred and fifty-two honest Democratic votes were castathis poll. The Republicans refused to vote becaused they believed the ballot-box was already stuffed before the poll was opened. All who voted there voted the Democratic ticket. This is undeniable. (See record, page 54.) But, strange to say, when the box was opened a fraudient excess of 4t ballots was found in the box. They were all Democratic tickets. As no Republicans voted, and not a single Republican ballot was found in the box, it would seem to be plain that this fraud was a Democratic fraud. The excess was properly rejected; but Concord precinct may fairly be held forth as a specimen of the frauds perpetrated in this district. The managers were all Democrats. Democrats alone voted. One of the managers, J. D. Wilder, testifies (record, page 692) that "the Republicans refused to vote, and that an excess of 4t ballots were found in the box when the same was opened." He further swears that he "did not see a single person who was recognized as a Republican voter at that poll."

at that poll."

The only explanation of the singular facts which stand out clear and apparent at Concord precinct poll is that a scheme had been formed and organized before the election came off to deliberately swindle Mr. Lee and the Republican party in the election in that district at that time. It is the only explanation a reasonable mind can offer or suggest why such a monstrous and patent fraud was perpetrated. And here we leave the consideration of the Concord precinct, with the consciousness of having exposed a fraud as novel as it is monstrous.

#### Privateer precinct.

At this precinct a comparatively fair election was held. The managers were all Democrats (record, page 45). Seventeen Republicans only voted there, and 127 Democrats; but when the box was opened there was an excess of 120 ballots. That they were fraudulent no man can deny, since there were no voters to cast them. Under the law of South Carolina these 120 votes in excess had to be withdrawn from the ballot-box. They were Democratic votes. In withdrawing 120 votes 10 of the honest 17 Republican votes that had been cast were withdrawn, and only 110 of the 120 dishonest, corrupt, and frandulent Democratic votes were withdrawn. Believing that honest votes only ought to be counted, we must diminish the vote of Mr. Richardson by 10 votes, which are counted for him in his certified majority, but which were not cast for him by voters, and increase Mr. Lee's certified vote of 7 to the 17 votes actually cast for him, and this makes a difference of 20 votes which must be deducted in truth and all fairness from Mr. Richardson'strue certified majority. This makes Mr. Richardson'strue vertified pute.

\*Carter's Proceine project.\*

Carter's Crossing precinct.

At this precinct, as in all the precincts of the county, the managers appointed by the county commissioners were all Democrats. (See record, pages 8 and 47. At this poll Mr. Lee received 407 votes; Mr. Richardson received 29 votes. This would give a clear majority to Mr. Lee of 378 votes. (See record, pages 23,

249.)
Dr. Henry Stucky, one of the Democratic managers, swears, page 18, that the election was fairly held; that the two supervisors, one a Republican and the other a Democrat, were present all the time; that the managers adjourned once for breakfast and smes for dinner, about twenty minutes (record, pages 24, 18), and left the box in the custody of these two supervisors, one a Republican and the other a Democrat.

J. Nelson Carter, one of the two United States supervisors, swears (record,

page 22) that while the managers were absent no one touched the ballot-box. The poll-list kept by the Democratic managers and the two United States supervisors exactly agreed. (See record, pages 23 and 242.) But because of the adjournment by the Democratic managers for breakfast and dinner, E. P. Ricker, one of the county commissioners, swears, on page 48 of the record, the "Carter's Crossing precinct was rejected on the ground that the managers adjourned for breakfast and dinner!" Since no witness controverts the facts as stated here, your committee is compelled to correct and count this poll and give to Mr. Lee 407 votes, and to Mr. Richardson 29 votes, thus counting for Mr. Lee a majority of 378 votes at Carter's Crossing poll.

We summarize, so far as Sumter County is concerned: The State board of tanvassers (record, page 228) certify and give to J. S. Richardson 2,560 votes, and to Samuel Lee 1,789 votes. This would give to Mr. Richardson a majority of 771 votes, and this majority goes to make up Mr. Richardson's majority in the district of 8,468 votes.

But since your committee have analyzed the vote of this county of Sumter, so far as all the disputed precincts are concerned, they find and summarize as follows:

Vote of Sumter County.

Precincts.	As retur the Sta vassers	te can-	As corrected and found by the committee to be the actual vote as cast.	
	Richard- son.	Lee.	Richard- son.	Lee.
Bishopville Lynchburgh Providence Shiloh Swimming Pens Wedgefield Mayeaville Spring Hill Corbett Store Manchester Privateer Concord Sumter No. 2	319 127 180 90 190 274 224 79 28 137	9 181 40 143 233 232 257 181 346 69 7	353 258 127 134 99 190 137 224 79 28 127 152 398	9 242 40 189 233 232 404 181 346 69 17
Add three polls not included in the returns made to State canvassers; Sunter No. 1 Rafting Creek. Carter's Crossing			2,306 9 51 29	2,054 1,499 313 407
Lee's majority		******	2, 395	4, 272 1, 877

This gives a majority in Sumter County to Lee of 1,877 votes, in place of 771 majority for Richardson, as accorded him by the State board of canvassers, and shows conclusively the extent of the frauds perpetrated.

# Shiloh precinct.

By the vote as declared by the State board of canvassers at Shiloh precinct, Mr. Lee received 143 votes, and Mr. Richardson 180 votes. This gives to Mr. Richardson a majority of 37 votes; but there was found an excess of 168 votes in the box. This was a palpable and glaring fraud. But it appears by the testimony of W. E. Boykin (page 28) that at least 189 votes were Republican, "and samuel Lee's name was on every one of them;" and that 141 Democratic votes were east, making a total of 323 votes. But this gives to Mr. Lee a majority of 55 votes instead of a majority of 37 for Richardson; and ss Mr. Richardson's assumed majority must be decreased by 92 votes. (See also record, page 26.)

### Rafting Creek precinct.

Rafting Creek precinct.

Here, as usual, all the managers appointed by the county commissioners were Democrats. One of them, however, Mr. McLeod, did not serve by reason of a broken arm. (See record, page 34.) Prince A. James, a colored man, was chosen by the other two managers, both Democrats, to fill his place. (See record, page 15.) A fair election appears to have been held by all the testimony given in evidence. The result was that for Lee were cast 313 votes and for Richardson 51 votes. This gave to Mr. Lee a majority of 262 votes. (See record, pages 33 and 249.)

The returns and ballot-box were placed by the managers in the hands of Prince A. James, to be delivered to the county commissioners. But on the pretext that James had not been appointed by them as one of the managers, these sternly righteous commissioners refused to count the vote at all, and threw out the entire poll! (See testimony of John J. Winn, pages 7 and 8, and E. P. Ricker, Pages 47 and 48.)

Your committee believe that an immense majority of all honest Americans would say at once, since no one questioned the integrity of the election at Rafting Creek poll, Mr. Lee's true majority ought to be counted for him. Your commiscioners, was 262 votes.

WILLIAMSURGH COUNTY.

#### WILLIAMSBURGH COUNTY.

The secretary of state counts, in his report, the county of Williamsburgh, as follows:

For Mr. Lee 1,565 votes, and for Mr. Richardson 2,064 votes. This would give to Mr. Richardson a majority of 455 votes. But on page 228 of the record he certifies that "no managers' returns from any precinct in Williamsburgh County are on file in his office;" that "none were sent by the county can wassers of said

are on file in his office; "that "none were sent by the county canvassers of said county."

But the positive statute law of South Carolina is that—
"After the final adjournment of the board of county canvassers, and within the time prescribed by this act, the chairman of said board shall forward, addressed to the governor and secretary of state, by a messenger, the returns, pollists, and all papers appertaining to the election. (See Statutes of South Carolina, section 4, act of 1872, volume 15, page 171.)"
It appears that three of the presincts of this county, to wit, Gourdin's, Midway, and Salter's, were thrown out, and not counted by the board of county commissioners. But it appears by the testimony of Capers King, who was the Democratic elerk of the Democratic board of county commissioners (record, page 498), that "the vote for member of Congress, as returned by the managers

election for the precincts of Gourdin's, Midway, and Salter's, and who were Democrats, was as follows:

Precincts.	Lee.	Richard- son.
Gourdin's Midway Slater's	217 155 426	300 72 49
Total	798	151
Majority for Lee	647	

But the same witness swears, on record page 499, that—
"The board of election commissioners adjudged the vetes cast at Gourdin's, Midway, and Salter's to be illegal, and in the exercise of judicial powers as election commissioners did not count the same."
Since the supreme court of South Carolina, politically opposed to Mr. Lee, have solemnly decided (Ex parte Mackey et al. vs. Carwille et al.) that the said county commissioners have no judicial powers in counting the vote for a Representative in Congress, your committee is constrained to say that the House of Representatives is not bound by their attempt to exercise judicial functions. The objections urged against the validity of these three polls, as the record shows, were not because of frauds perpetrated, but of informalities on the part of the managers holding the election, all of whom were politically opposed to Mr. Lee. (See record, pages 498 and 499.) Your committee here remark, with regard to the managers who held the election, that the presumption always is that a public officer has legally discharged his duty until the contrary appears. They hold, as did the court in Biddle and Richard vs. Wing (Cl. and H. 504), that—

that a public of oncer has legally discharged his duty unit the contrary appears. They hold, as did the court in Biddle and Richard vs. Wing (CL and H, 504), that—
"Nothing short of the impossibility of ascertaining for whom the majority of votes was given ought to vacate an election, especially if by such decision the people must, on account of their distant and dispersed situation, necessarily go unrepresented for a long period of time." (See McCrary, section 304.)
Your committee believe, and have acted upon the principle, that—
"Questionn affecting the purity of elections are, in this country, of vital importance. Upon them hangs the experiment of self-government. The problem is to secure first to the voter a free, untrammeled vote, and secondly, a correct record and return of the vote. But these rules are only means—the end is threedom and purity of the election. To hold these rules all mandatory, and essential to a valid election, is to subordinate substance to form—the end to the means." (McCrary, section 200.)
The chief objection to Gourdin's poll seems to be based on the testimony of N. W. Badget (record, page 717), who swears that he lived about fifty yards from where the votes were cast. That he went to vote at half past 50 clock p. m., and found the poll closed, and was thereby prevented from voting. He gives the names of four others who were there at the same time, and were likewise prevented from voting. He also swears that two of these persons lived within serventy-five yards of the polls, and the others two hundred yards away. But A. M. Gordon, one of the managers, who swears he was a Democrat, also swears that he polls were closed at Gourdin's precinct at 6 o'clock p. m. by his watch. So'clock was the legal hour for closing the polls. Since Mr. Lee received 217 votes and Mr. Richardson only 30 votes at this poll, and in view of the fact that all these five voters lived so near the poll, and the question at what time the poll was closed seems to be fixed by the watch of the Democratic manager, yo

## Widway

Midway.

The vote of this precinct was also rejected by the county commissioners. Levy Mouzon, one of the United States supervisors, page 492, swears that the managers were all Democrats; that he kept a poll-list, as did the managers, and both lists agreed. As an exhibit to his deposition, he furnishes (record, page 598) the report signed by himselfand. M. Kennedy, the Democratic supervisor, by which it appears that Mr. Lee received 155 and Mr. Richardson 72 votes. The only objection to this poll is that the managers, all politically opposed to Mr. Lee, closed the polls at too early an hour.

J. J. Morris, one of these managers, swears that this was done on the suggestion of Mr. Mouzon (record, page 177), while Mr. Mouzon swears (record, page 483) that it was done "at the suggestion of some of the managers." Your committee think that even if Mouzon gave bad advice the managers were not bound to take it, and since the contestee does not even pretend that any one was deprived of voting at this poll by reason of its too early closing, your committee can not agree on such a technicality that the poll should be thrown out and Mr. Lee deprived of his majority of \$8 votes. It is true that one witness, R. K. Hurst, swears (record, page 717) that Henry Williams, a colored man told him he included to vote the Democratic ticket, but after Hurst voted and left he voted the other way. As Williams was not called, and the testimony is purely hearsay, your committee can not agree that this poll should be thrown out.

Salter's precinct.

## Salter's precinet.

At Salter's precinct the managers, all Democrats, returned for Samuel Lee 428 votes and for J. S. Richardson 49 votes. This gave Mr. Lee a majority of 377 votes. (See record, page 498.)

J. E. Singletary, United States supervisor, swears that he was present and saw the polls were opened from 6 o'clock a. m. to 6 o'clock p. m.; that there was no disturbance during the voting; that he kept a poll-list, and that it agreed with a poll-list kept by the managers. (Record, page 476.)

Julius B. Grayson, one of the Democratic managers, swears that he and one B. O. Bristow were the only managers who held the election; that both served ill a quarter of an hour before closing the polls, when Bristow became sick and had to lie down (record, page 708). On cross-examination he swears that the election was tolerably quiet during the day till about 6 o'clock; that he closed the poll and refused to count the votes—

"Because I was left alone. 'I then insisted on carrying it to my rooms to remain until Bristow was able to attend to his duties, and the negroes objected to my taking away the box or leaving it till they were counted.'

It seems those negroes stuck by Mr. Grayson.

"Till I got Bristow out of bed; we then took the box into a little house and counted the votes; we then made our report, and on the following day I brought the box over to Kingstree." (Record, page 708.)

On cross-examination he swears that the box was always in his sight until he went into a room to get Bristow to come out and assist him in counting the votes; during that time he left the box in the custody of the United States supervisor, Singletary, and one Walters McCullough. They would not allow him to take the box into the house unless they could go in too, and se he left the box with them, but the box was locked and sealed "with a strip of paper and sealing wax," and he, Grayson, had the key, and when he and Bristow came

out it was in the same condition as when he left it, (Record, page 700.) Since there is no pretense that the election was not fair, since the box was not tampered with, and the result of the count was declared by the Democratic managers who held the election, your committee is constrained to count this precinct just as the managers did, that is, 426 for Lee and 49 for Richardson, giving Lee a majority of 377 votes.

# Black Mingo.

At this precinct there were returned for Lee II0 votes, and for Richardson St votes, making 191 votes; and giving Lee a majority of 39 votes. (See record, page 498.) And this is corroborated by the testimony of Isaac I. White, who swears that 191 votes were east, and 110 counted for Mr. Lee, but that this was after 12 votes in excess of the poll-list had been drawn out. These 12 votes were fraudulent votes. He further swears that he was a United States supervisor; that he kept a little book to record the names; that the Republicans voted 6 voters at a time; that they came with open votes for him to see, and folded them up and voted them; that he was present when the votes were counted.

"Q. Were any tickets found in the box compactly folded together?"

"A. There were.

Th

"A. There were.
"What kind?
"All Democratic tickets."
He also swears that there was an excess of 12 votes.
"Q. Whose name was on the tickets for member of Congress so drawn out?
"Ten for Samuel Lee and 2 for Richardson."
He further swears that the managers were Democrats; that 14 Democratic ballots were found with one or more Democratic ballots folded within them; that no Republican ballots were so found and after destroying these 14 ballots than a Republican ballots were so found and after destroying these 14 ballots than

ballots were found with one or more Democratic ballots loided within them; that no Republican ballots were so found, and after destroying these 14 ballots there were still 12 ballots in excess of the poll-list. On page 500 of record he gives a list of 120 names who voted for Lee.

Since his testimony is not traversed, the inevitable result is that Lee's vote should be increased 10, giving him 120, and Richardson decreased 10, giving him but 71, as the true result of the honest vote cast at this poll.

Cedar Swamp precinct.

By the returns of the managers at this precinct Mr. Lee received 8 votes and Mr. Richardson 107 votes.

The managers were all Democrats. The regular place of holding the election was Grayson's store. The election was held at a church three-fourths of a mile distant. J. T. Wilson, a United States supervisor, was at Grayson's as early as 2 o'clock in the morning. Before the polls were opened he found out that the place of holding the election had been removed to the church, but he swears he arrived there seventeen uninutes by the watch before 6 o'clock a. m. The polls were already opened. He remained there till after the close of the polls; saw the box opened and the ballots counted.

"Q. When the box was opened were there any ballots found with one or more ballots folded therein?"

"A. Yes, sir.

ballots folded therein?

"A. Yes, sir.

"Q. How many and what kind?

"A. Six or seven bunches, Democratic ballots, all aggregating 40."

He further swears (record, page 486) that these 40 ballots were destroyed by the managers, but that 143 votes still remained in the box in excess of those who voted, and whose names were on the poll-list (record, page 486), which showed that only 115 votes were cast at that poll. Under the law of South Carolina, 143 ballots had to be withdrawn to bring down the number left in the box to correspond with the number of votes actually cast.

The majority at this poll was honestly Democratic. The managers were all Democrats!

The majority at this poll was honestly Democratic. The managers were all Democrats!

The fraudulent votes found in the box were Democratic. It was a Democratic fraud. And in the withdrawal 121 Democratic votes were withdrawn and 22 Republican, Wilson swears that on the 22 Republican bullots withdrawn was Lee's name as a candidate for Congress. These 22 votes should be counted for him, because they were honestly cast for him.

Having been withdrawn, 22 fraudulent votes were left in the box in their place and counted for Richardson, and his vote should be diminished by the same number, since no witness contradicts the testimony of Wilson. Adding 22 votes to the 8 counted for Lee will give him 30 votes, and subtracting the 22 fraudulent votes which were not east for Richardson from the 107 counted for him will give him 85 votes.

### Greelwille precinct.

At this precinct the managers returned for Mr. Lee IIS votes and for Mr. Richardson II7, giving Lee a majority of 1.

All the managers were Democrats. (Record, page 495.)

F. J. Felix, United States supervisor, was there at the opening of the polls and staid till the ballots were counted. He swears that Sanuel Lee received 14 votes and J. S. Richardson 95. (See record, pages 45 and 503.) He also swears that there was an excess of 39 more ballots in the box than there were names on the poll-list. In this he is corroborated by W. J. Ferrell, Mr. Richardson's witness, who swears to the same fact, and who also swears that the election was peaceable. (Record, page 704.) Both witnesses agree that 30 ballots were withdrawn from the box by the Democratic managers.

Felix swears, and is not contradicted, that 25 of the ballots withdrawn were Republican, and had Lee's name on them for member of Congress, and 5 were Republican, and had Lee's name on them for member of Congress, and 5 were Richardson's tickets. He also states (record, page 496) that one Jim Lescone was detected in the act of voting two Democratic tickets.

It is evident that the fraud perpetrated at this poll was a Democratic fraud, that 25 honest votes cast for Lee were withdrawn, and 5 votes cast for Richardson's tickets. Thus Mr. Lee's vote was decrebsed 25 and Richardson's vote was itckets. Thus Mr. Lee's vote was decrebsed 25 and Richardson's vote was itckets. Thus Mr. Lee's vote was decrebsed 25 and Richardson's vote was tickets. Thus Mr. Lee's vote was decrebsed 25 and Richardson's vote was tickets. Thus Mr. Lee's vote was decrebsed 25 and Richardson's vote was tickets. Thus Mr. Lee's vote was decrebsed 25 and Richardson's vote was more asset 25 by this fraudulent votes stuffed into the box, which were all Richardson's tickets. Thus Mr. Lee's vote was decrebsed 25 and Richardson's vote was more asset 25 by this fraudulent votes to lee's the ballot-box. Your committee purged this box by deducting 25 votes from Richardson and adding 25 votes to Lee, a

## Kingstree precinct.

Kingstree precinct.

The whole number of votes counted at this poll by the managers of election for member of Congress was \$97, of which they certify that Samuel Lee received 592 and John S. Richardson 305. (Record, page 594.)

This gave Lee a majority of 287. But, as usual, there was an excess of 110 ballots found in the box. One Republican ballot was found with one or more Republican ballots within the same, while 7 Democratic ballots were found with one or more Democratic ballots within the same.

The number of ballots drawn out of the ballot-box and destroyed by the mangers by reason of excess over the poll-list was 110; 74 of these bore the names of the Republican candidates and 36 bore the names of the Democratic candidates. It is evident a gross fraud was committed. It is equally evident that Mr. Lee was cheated, but your committee is unable to say to what extent, and therefore do not undertake to purge this poll.

Prospect precinct.

## Prospect precinct.

At this precinct the managers' returns gave Samuel Lee 120 votes and John Richardson HI votes; Lee's majority, 9 votes.
All the managers were Democrats. (Record, page 468.)
As usual, there was an excess of ballots in the box over the names on the poll-list here to the number of 31. (John Roumond, record, page 466.) He also swear that the Republican tickets were on much thicker paper and could be easily told (record, page 468); that on drawing out the excess 29 Republican and 2 Demo-

cratic ballots were withdrawn and destroyed. (Record, page 466.) In this he is corroborated by A. A. Brown, one of the Democratic managers, who swears that he withdrew the excess from the box. Asked if he could tell a Republican from a Democratic ticket in so withdrawing them, he answered, "I could not say

a Democratic ticket in so withdrawing them, he answered, "I could not say positively."

"Q. Was there not enough difference so that if you had been disposed you could have distinguished between them?

"A. There was."

Asked whether the excess was drawn out fairly, or were Republican ballots fraudulently fished out, he answered, "They were fairly drawn out according to law." He also swore, "I claim to be a true Democrat." (See record, page 721.) Your committee think that little comment is necessary upon this testimony.

mony.

It is evident a fraud was perpetrated by the stuffing of the ballot-box; it is equally evident that it was a fraud by which 29 votes honestly cast for Mr. Lee were withdrawn and destroyed; that Mr. Lee's vote should be increased by 29 votes, which were honestly east for him but were not counted by the managers; that Mr. Richardson's vote should be decreased by the same number of votes which the managers counted for him but which were not cast for him by the legal voters.

Making this correction, it is evident that Mr. Lee received from the voters' Making this correction, it is evident that Mr. Lee received from the voters' hands 149 votes, and Mr. Richardson, in like manner, 82 votes. Lee's majority was thus 67 in place of 9 votes, as was reported by the managers.

In view of the above your committee correct the vote of Williamsburg County,

as follows:
By the returns of the State board of canvassers Richardson received 2,084 votes, and Lee 1,585 votes. This would give Richardson a majority of 499, which it is evident goes to make up Richardson's assumed majority of 8,468.
Your committee here summarize their correction of the vote of this county by precincts, as follows:

Vote of Williamsburgh County.

Precincts.	As return the Stat vassers.		As corrected by the committee.		
2.1004000	Richard- son.	Lee.	Richard- son.	Lee.	
Anderson Black Mingo Cedar Swamp Graham Cross-Roads Greeleyville Indiantown Kingstree Muddy Creek Pipkins Prospect School-House Scranton Sutton	112 81 107 563 117 18 309 117 74 111 83 333	59 110 8 78 118 348 592 109 120 14	112 71 85 563 95 18 305 117 74 82 83 333 75	59 120 30 78 141 348 592 109 149 14	
Add three polls not included in the return			2,013	1,778	
made to the State canvassers : Midway			72 49 30	155 426 217	
			2, 164	2,576	
Lee's majority				413	

The above table shows the vote of this county, as shown by the testimony, an in place of a majority for Richardson of 499, as given him by the State board canvassers, your committee find a majority of 412 votes for Lee, and we so accord it.

## Muddy Creek precinct.

Muddy Creek precinct.

At this poll, by the returns, Mr. Richardson received 177 votes, and Mr. Lee none. S. G. Graham, a United States supervisor, swears (record, page 490) that the election had theretofore been held at Ard's store. That this was the old voting place. The managers opened the poll at a school-house some two hundred yards distant. In this he is corroborated by W. H. Harmon, a witness for Mr. Richardson, and a Democrat. (Record, page 720.) Graham swears (record, page 489) that he showed his commission to the managers and asked permission to act as United States supervisor to the election; that—

"Henry Harmon, one of the managers, drew his revolver on me and said my authority was no account; he put his hand in his pocket, drew out his revolver, and presented it to me in a threatening manner."

He also states that Mr. Huggins, the other manager, when Harmon drew the pistol on him, went off, and Harmon said nothing, but shook his head.

Huggins and Harmon both swear that Graham's statement is false, and Huggins swears that the Republicans did not vote at all; they went off. He also swears there were about thirty-five or forty negroes in the crowd.

Your committee leave these meager facts without further comment.

#### HORRY COUNTY.

The State board of canvassers certify that Mr. Richardson received in this county 2,173 votes and Mr. Lee 599, giving Mr. Richardson a majority of 1,574. (See record, page 228.) But it appears from the record, page 236, that the board of county canvassers did not canvass or count the vote cast at Martin Hill precinct in that county; their reason for so doing they state as follows:

"In view of the facts as set forth in affidavits hereto annexed, to the effect that the polls were not opened at above precinct at the hour prescribed by law, the board of canvassers on motion decided that the vote of this precinct be not canvassed or included in the general statement."

The su parts affidavits referred to are found in the record on page 237.

Moses F. Sarvis swears that owing to the fact that Nimrod Davis, one of the managers, did not arrive till about that hour, the polls were not opened until about a quarter past 8 o'clock in the merning.

John Martin swore he was there at 7 o'clock and could not deposit his vote issues the polls had not been opened.

Frank Wilson swore that he was there at 7 o'clock and could not deposit his vote issuesses the polls had not been opened up to that hour, "and that he and others had to go to Cedar Grove to vote."

Upon this = parte testimony the poll was rejected. The three managers who

held the election certified (record, page 236) that Mr. Lee received 172 votes and Richardson 13 votes, giving Lee a majority of 159 votes, which he lost in the count by the rejection of this poll.

McCrary declares (section 114):

"That a few minutes' delay in opening the polls will make no difference, but several hours' delay may render the election void, and certainly will have that several hours' delay may render the election void, and certainly will have that selfect if the party complaining of it can show that he has been injured thereby."

But when we analyze the case it appears that only 185 votes were cast at that poll; that the polls were open continuously from 8.15 a. m. till 6 p. m., and that some and probably all of the few persons there about 7 o'clock in the morning went to Cedar Grove and voted. It does not appear for whom they voked or wished to vote. This is one of the few polls at which there is no pretence of intended fraud. There is not the slightest proof that either Lee or Richardson lost a single vote by the failure to open the polls promptly at 8 o'clock in the morning. Your committee feel that the simplest statement of the facts affords the strongest commentary. And we count this poll, as the managers did, and accord to Lee 159 majority, and, as the result of the foregoing, your committee add to Mr. Richardson's certified vote in this county 13 votes and to Mr. Lee's 172 votes, making the vote as actually east by the voters and counted by the managers for Mr. Richardson 2,186 votes and Mr. Lee '71 votes, giving Richardson a majority of 1,415 votes, instead of 1,574, as allowed him by the State board of can vassers.

#### DARLINGTON COUNTY.

DARLINGTON COUNTY.

The State board of canvassers certify that Mr. Richardson received in this county 4,671 votes and Mr. Lee 2,117 votes, giving Richardson a majority of 2,554 votes. (See record, page 228.)

But the secretary of state certifies, on page 228 of the record, that "no masagers' returns from any precinet." in Darlington County were on file in his office, nor were any returns from any voting precinct in said county sent to his office, nor were any returns from any voting precinct in said county sent to his office by the county counts yet anything in the record from the was the vote at any precinct in this county by anything in the record from the State board of canvassers. Only the gross result is given as above.

But on pages 570, 571 of the record, the contestee, Richardson, for the purpose of supplying this deficiency, introduced in evidence a schedule showing the precinct managers' returns for each and every polling place in Darlington County, by which it appears that according to the managers' returns Richardson received 4,567 votes in place of 4,671 votes, as certified to by the secretary of state; in other words, the secretary of state gives Richardson 104 votes more than did the managers who held the election.

But section 4 of the act of 1872 of South Carolina made it the duty of the chairman of the board of county canvassers to forward by a messenger to the governor and secretary of state "the returns, poll-lists, and all the papers appertaining to the election." We think it can not be questioned that the statement of the managers who held the election, verified by their returns and poll-lists, &c., is better evidence than the certificate of the secretary of state, who certified that he never saw the returns and poll-lists, for they were never sent to him as the law requires.

It is manifest that Mr. Richardson's majority grew to the number of 104 votes, by his own testimony, after the polls were closed and the result declared.

### Florence precinct.

Contestant, in his notice of contest, distinctly charged that the poll-list at Florence was "falsified by the insertion thereon of fictitious names." This is as distinctly denied by contestee. L. W. Gadsden, a United States supervisor, swears there were 18 more names on the poll-list kept by the managers than there were ballots in the box. (Record, page 371.) In this he is corroborated by W. J. Bradford, who was present and kept the tally. (Record, page 176.) He swears there were 1,048 names on the poll-list kept by the managers, and only 1,039 ballots in the box. Both these witnesses were sworn and examined on February 25, 181. On the 15th of March of the same year, William McKenzie (record, page 367), a witness for contestee, swore he was one of the managers at this poll, and that all the managers were Democrats. He was examined at length, but he does not deny that the poll-list was falsified as above set forth.

Captain E. W. Lloyd (record, page 518), also a witness for constestee, was examined on the 16th of March, 1881. He swore he was clerk of the board of managers; he was also a Democrat. He ought to know all about the poll-list by the insertion thereon of eighteen fictitious names. No witness in all the record denies the statements of Gadsden and Bradford in regard to the poll-list at Florence, though some sixteen were put upon the stand and examined by contestee touching that poll.

L. W. Gadsden, United States supervisor (record, page 365), swears that he arrived at the poll a few minutes after 5 o'clock a. m.

"The managers were then there; the door was guarded, where the poll was the place was crowded with a lot of Democrats; I could not get within ten feet of the door."

He states that a few minutes before the poll was opened he attempted to go in to witness the opening, and to examine the box; that he was obstructed from getting in by a crowd of town authorities, or policemen; that he showed his commission as United States supervisor, and told them he was going in; that one Captain Galilard told h

copy those names on the managers' poll-list that had voted. (See record, page 365.)"

He also testifies (record, page 369) on his cross-examination:

"Q. Did you stay there all day?

"A. Yes, sir; only absent for about three minutes.

"Q. How do you account for the fact that you were there all day as a life-long Republican watching the election for there being more names on that poll-list than there were ballots in the box?

"A. They must have had a false poll-list prepared beforehand that they carried in there and failed to put enough ballots in the box to tally with the poll-list. I was not allowed to examine the list. The box was closed before I was allowed to go in.

"Q. Did you witness the count?

"A. I did.

"Q. You stated that you were there all day except about three minutes. Now did you or not see the names that were written on the poll-list?

"A. I did not, for I was not allowed to examine it.

"Q. Who did you ask?

"A. I did ask, and asked further to be allowed to copy from it.

"Q. Who did you ask?

"A. The managers.

"Q. What time of day was it when you asked to be allowed to copy and examine the poll-list?

A. I first asked in the morning when the voting commenced, and again that he when the polls closed.

night when the polls closed.

Q. What did the managers say in reply to your request?

A. They said I could not be allowed to interrupt the clerk. That was in the norning. But at night when I asked to be allowed to examine the list they remained to let me examine it, but had no objections to the clerk calling the names to I could take them down, but said it was too late to remain.

Q. Who was the clerk?
A. Captain E. W. Loyd."

"A. Captain E. W. Loyd."

On his cross-examination he further states (record, page 368):

"Q. What time did you reach the polls on the morning of the election."

"A. A few minutes after 5 o'clock.

"Q. What did you see there?"

"A. I saw a lot of Democrats around the polls and the door guarded by police-Did you try to gain admission to the polls?

"A. I did.

"Q. To whom did you apply for admission?

"A. I started to the polls and was stopped by policemen and constables and told that I could not go up.

"Q. What policemen and constables denied you admission?

"A. T. D. Brunson, John Dockery, E. M. Selfe; those were the policemen, and Z. T. Kershaw was the constable.

"Q. What did they tell you?

"A. That I could not go up to the polls. I told themt I was United States supervisor, and showed them my commission, and told them I must go up.

"Q. Is that all they said to you?

"A. Yes; that I could not go up, and shoved me out of the way.

"Q. Did they or not tell you that nobody but policemen and constables could go into that house?

"A. They had a line drawn and told me nobody else had any right in there.

"A. Yes; that I could not go up, and shoved me out of the way.

"Q. Did they or not tell you that nobody but policemen and constables could go into that house?

"A. They had a line drawn and told me nobody else had any right in there.

"Q. Did they or not tell you that nobody but policemen and constables could go into that house?

"(Counsel for contestee demands an answer, yes or no.)

"A. I have answered it already.

"Q. Did you show your commission to anybody?

"A. I showed it to the very men that stopped me and Captain Gaillard.

"Q. To whom did you show it?

"A. I showed it to the very men that stopped me and Captain Gaillard.

"Q. Did they then admit you?

"A. Captain Gaillard told me to wait until he saw Captain Blackwell.

"Q. Did he say anything else beside this?

"A. Not until after he saw Captain Blackwell.

"Q. Did he or not tell yout to wait until he saw Captain Black well as to whether or not you had a right to go in?

"A. He did; but Captain Blackwell is a private citizen, and I did not think he had a right to pass upon my commission."

He also swears (record, page 366) that three hundred or four hundred Republicans were standing in line ready to vote when the polls closed, while the Demicrats were allowed to vote freely and unobstructedly during the day; that late in the evening sixty or seventy-five Democrats came in from Timmonsville; that the line of Republicans that had been standing there all day were made to stand back by the constables and town marshals and those men from Timmonsville illowed to go up and vote. He is corroborated by 208 voters who were prevented from voting, whose depositions are found between pages 139 and 312 of record. They all swear they desired to vote for Samuel Lee, but were foreibly prevented from voting, whose depositions are found between pages 139 and 312 of record. They all swear they desired to vote for Samuel Lee, but were foreibly prevented from poting thing the hallot-box. Asked why they did not, the answers were, "because the Democrats would not let me get

yoting.

John T. Rafra was United States supervisor at Timmonsville, and swears (rec-John T. Rafra was United States supervisor at Timmonsville, and swears (reord, page 85) he saw a crowd of Democrats, he counted seventy-five on the top of the flat ears, "and the coach was full of them," going in the direction of Florence. He swears they all voted before leaving Timmonsville. In this he is corroborated by John E. Keeler (record, page 374), who testifies he counted seventy-five, and that every one of them had voted before they left Timmonsville. S. W. Gadsden gives the names (record, page 365) of persons he knew who came from Timmonsville and voted at Florence, namely, Alexander Taylor, Yanty Byrd, H. M. Oliver, W. J. Stradford, and George Montgomery. Not one of these per sons were called in rebuttal. The few witnesses examined by Mr. Richardson touching Florence poll were the officers who held the election, the policeman who kept the colored Republicans from the polls, and a few active Democratic partisans.

who sape has taken (record, page 571) that the contestee puts in evidence a schedule of the vote at each precinct in Darlington County, accompanied by the certificate or J. N. Garner, the clerk of the court of common pleas, that—
"The schedule represents truly and correctly the balloting for member of the Forty-seventh Congress."

Sworn as a witness, the same Garner testifies as follows (record, page 738, bottom):

bottom):

"Q. Have you not had occasion to certify to the correctness of the precinct returns touching the last election for member of Congress?

"A. I don't think I did, because I could not certify to the correctness of the returns, as it seems to me that a commissioner ought to do that.

"Q. Did you or not?

"A. I did not."

"A. I did not."

It appears further, by his testimony, that the precinct returns, instead of being sent, as the laws requires, to the secretary of state, were with the ballot-boxes placed in the jury-room opening into the court-room, which was open for all public purposes, and only when not used was it locked up. Two terms of court were passed before he was examined.

Your committee feel constrained to say we must reject Florence poll, because there was an unlawful interference with the United States supervisor of election, whereby he was prevented from discharging the duties which were committed bis hands by the law of Congress: because it is clear that the poll-list at Florence was falsified by the insertion thereon of fictitious names by the officers of the election; because it is evident that a crowd, the exact number of which it is impossible to say, who had already voted at Timmonsville, were permitted to vote at Florence for Richardson, while more than 200 of Mr. Lee's supporters, standing in line all day, were forcibly prevented from voting at all; and because the evidence as to what the actual vote at Florence poll was is so unreliable as to be utterly without credit.

The conduct of the election officers was such as to destroy the integrity of their returns, even if we had any means of knowing what those returns were. There is no proof advised how the vote stood. The election was so utterly unfair by reason of fraudulent voting and forcible preventing of honest voting as to give us no course but to reject the poll, which we accordingly do.

Darlington precinct.

Darlington precinct.

What the exact vote at this precinct was we have no means of determining other than the certificate of J. N. Garner, the clerk of the court of common pleas for that county, which was introduced by Mr. Richardson, on page 571 of the record. But we have already seen in the case of Florence precinct that the same witness. Garner, testifies that he never did certify to the correctness of the schedule found on page 571 of the record, in which Richardson is set down as having received 1,271 votes and Lee 117 at Darlington precinct. On pages 770 and 788 of the record, the same witness, Garner, testifies as follows, on the 15th of April, 1881, when interrogated as to the returns of the precinct managers:

"A. Election papers were filed in my office by the commissioner of election, J. G. McCall.

"Q. Please state what those papers were.

"A. I can not; I did not examine them.

"Q. Have you not had occasion to examine those papers since they have been filed in your office?

"A. I have not.

"A. Thave not.

"A. I have not.

"A. I know there were election returns bearing around the last election?

"A. I know there were election returns bearing a yound the last election.

n?

A. I know there were election returns bearing upon the last election. They we been examined repeatedly by others, but not by myself.

Q. Do you know if those returns in your office are correct or not?

A. I do not know anything about them.

Q. Were those returns filed in your office delivered to you in or out of the

Were those returns nied in your office derivered to you in or out of theboxes?

They were delivered to me in an envelope outside of the ballot-boxes.
Were the ballot-boxes ever filed or deposited in your office?
They were, as they usually have been in my office.
Have you ever had occasion to examine the papers or seen in those boxes I have never examined the papers and have never seen in the boxes until

A. I have never examined the papers and have never seen in the boxes until yesterday.

In this testimony he is corroborated by J. G. McCall, who was chairman of the county board of commissioners. On page 110 of the record he testifies as follows:

"Q. Did you make any returns to the secretary of state showing the votes east at the separate precincts throughout the county?

"A. We did not.

"Q. What did your board do with the returns from the various precincts throughout the county?

"A. I think those returns were put back in the ballot-boxes and turned over to the elerk of the court.

"Q. Will you be positive that such disposition was made of them?

"A. That is my recollection of it."

On page 109 of the record, when asked if he could state what was the vote at Darlington precinct for member of Congress, he answered (page 110, top): "I can not."

It thus appears by the testimony of McCall, the chairman of the board of county commissioners, who testifies that he made no return of what the vote was at Darlington precinct, either to the secretary of state—which is corroborated by the certificate of the secretary of state, who testifies that no such returns were made to him, page 228—or to the county clerk, and by the testimony of the clerk himself, on page 738, who also swears he never examined the managers' returns from the various precincts of Darlington County, showing the results of the election held in 1830 for member of Congress.

It further appears by the testimony of George W. Brown, Mr. Richardson's own attorney, who was put upon the stand by Mr. Lee, in rebuttal, that he found the precinct returns in the ballot-boxes in one of the jury-rooms of the courthouse. (Record, page 736.)

On the cross-examination of Garner, the clerk, by the same witness, Brown, acting as the attorney for Mr. Richardson, testifies as follows. (Record, page 739.) It thus appears by the testimony of McCall, the chairman of the board of

"Q. You say that the ballot-boxes, with what they contained, upon being returned to you after the last election, were deposited in a jury-room up stairs in the court-house?"

"A. They were."

"Q. Have you not charge, and do you not keep the keys of that court-house by authority?"

Q. The court-room proper leading to that jury-room is used for all public rposes, is it not?

purposes, is it not?

"A. It is.

"Q. When not so used, is it not kept locked?

"A. It is.

"Q. Has it not been frequently used for public purposes since the last election and since those boxes were deposited in the jury-room?

"A. Yes, sir.

"Q. When the court-room is used by the public, have they not also access to the jury-room where the boxes were?

"A. They have.

"Q. Were those boxes kept locked, and is there any law requiring you to keep them locked?
"A. They were not kept locked, and there is no law requiring them to be kept

A. They were not kept locked, and there is no law requiring them to be kept locked.

"Q. Might they not, when returned, contained the papers for which contestant yesterday searched, and all other papers which the law requires them to contain, and have been lost since?

"A. They might."

We think the above evidence conclusively establishes that no confidence can be placed in any so-called returns from Darlington precinct.

Brown testifies that he prepared the statement (record, page 735), which purports to have been certified to by the clerk, Garner, but which he testifies he did not certify to. The hallot-boxes and their contents had been open to the access of any who chose to go and examine them, as the witness Brown did. Whether they had been tampered with or not, no one testifies, and no one can. How the vote stood for member of Congress at Darlington precinct the secretary of state does not know, for he certifies that no separate return of the vote of that precinct ever came to his hands.

Garner, the clerk, as we have seen, swears he does not know, and C. S. McCullough, who swears he was chairman of the board of managers, testifies (record page 527):

e 527): Q. What was the number of votes cast for member of Congress at this poll."

"A. I do not remember."

And Philip Lewenthal, who swears that he was clerk of the board of managers at Darlington poil (pages 546 and 547), testifies that he does not know. In the entire record no witness swears how the actual vote stood at Darlington poil. This is one of the precincts especially attacked by Mr. Lee.

A vast mass of testimony was taken by both parties touching this poil. From the evidence in the record it is not possible to ascertain the true result.

The rule, as laid down by McCrary (section 437), we think should be applied to this case, and is as follows:

"Where the true vote can not be ascertained, either from the returns or from evidence aliunde, the vote of the precinct is to be rejected."

But it is very evident from the testimony that intense excitement prevailed at Darlington on the day of the election. The polls were held at a different place than the usual one.

The witness McCall, a county commissioner of election (record, page 111), admits that the place was less convenient. It was up in the second story of the court-house, fifteen feet above the ground, with two stair-ways leading up to the ballet less.

mits that the place was less convenient. It was up in the second story of the ballot-box.

It appears from all the testimony that the Democrats, dressed in red shirts and caps, took possession of the polls from the outset.

J. A. Smith (record, page 106) states that from 700 to 800 Republicans were prevented from casting their votes by reason of intimidation. He says:

"I made three attempts to reach the ballot-box—myself and others; I found it impossible to do so without a collision with the Democrats and red shirts, who had the steps packed from bottom to top."

Ainwell Western, jr. (record, page 92), states that from 800 to 1,000 Republicans left the polls without voting. He also states that on the night before the election two wagons loaded with guns came on the back street and they were carried down the street next to the court-house. A portion was placed in astore of one Early, and "some were put in the court-house, where the ballot-box was."

On record, page 94, he gives the names of the men who unloaded those wagons: Moses Bishop, Sam Hinds, Rosser Hart, and Charlie Bishop. He states that Moses Bishop as Bam Hinds, Rosser Hart, and Charlie Bishop. He states that Moses Bishop as Mam Hinds, arrived a portion of those guns upstairs where the ballot-box was. It appears from his testimony that guns were brought on the train about 12 o'clock at night, which train neither blew a whisele nor rung a bell. The guns were tied up in blankets in large bales.

None of the persons who handled the guns were called as witnesses to deny the statement. A great many witnesses were called by Mr. Richardson who did not see any guns and did not see any intimidation.

Ainwell Weston, sr., swears as follows, among other things:

"Q. Did you vote there:

"Q. Why could you not vote:"

"A. There was bulldozing, pushing, pulling, and blockading the steps. Some of them had knives drawn; looked like they were drunk."

He also testifies they had red shirts on. (Record, page 116.)

Edward Williams, on same page, testifies to the same e

saw them tumble back; they were pushed back by the Democratic crowd upon the steps.

Thomas Myers (record, page 105) testified;

Q. What poll did you attend?

A. Darlington poll.

Q. Did you vote?

A. I did not.

Q. Why did you not?

A. They would not let me.

Q. Who would not let you?

A. The Democratic party.

Q. How did they prevent you?

A. I started up the steps, and they told me I should not go up.

Q. What did they do to prevent you from voting?

A. They pulled me back. I attempted to go up twice, and they pulled me back by my coat.

Noah Burch testifies (record, page 105) that he tried to vote; that the steps were full from bottom to top with white men; that they shoved him down and told him he could not vote; that he tried again, and was again shoved back by the Democratic crowd on the steps.

Simon Scott (record, page 136) testifies that a crowd of Democrats dressed in red shirts prevented him from voting. He says:

"I went up to the steps of the court-house, and they said you can not vote beer unless you vote a Democratic tickt."

Burrell McIver (record, page 355) testifies that he did not vote—

"Because the court-house steps were so crowded with Democrats that I could not reach the ballot-box to cast my ballot. They would not let me go up the steps.

"Q. Did you see any men with guns, and to what political party did they

steps.
"Q. Did you see any men with guns, and to what political party did they

"Q. Did you see any men with guns, and to what political party did they belong?

"A. The Democratic; I saw no arms but theirs.

"Q. Where were these men with their guns?

"A. In a store in front of the court-house."

Peter White (record, page 384) testifies as follows:

"Q. Did you vote?

"A. No, sir.

"Q. Why not?

"A. Recause I was prevented by the Democratic party. The ballot-box was in the court-house, and I tried to go up the steps and they would not let me go up; saw one man trying to climb up on the outside of the steps, and when he got up his handhold was broken loose and he fell to the ground and was hurt.

"Cross-examined by C. D. Evans:

"Q. What time did you reach the Darlington poll that day?

"A. About a quarter of an hour after sunrise.

"Q. When did you leave?

"A. About 2p, m., I guess.

"Q. Did you hear Jack Smith's order for all Republicans to go home, and at what time did you hear it?

"A. I heard it about II a. n.

"Q. You say it was impossible for you to vote from the time you reached Darlington until you went away?

"A. It was really impossible. I was very determined, and I saw no chance without getting hurt or being killed."

Alonzo Lewis sworn (record, page 387):

"Q. State your name, age, residence, and occupation.

"Q. Were you at the Darlington polling precinct on the day of the last election?

"A. Yes, sir.

tion?

"A. Yes, sir.

"Q. Did you vote?

"A. No, sir.

"Q. Why not?

"A. Because I couldn't get to the polls; the red-shirt Democrats prevented me from getting to the polls; they were standing on the steps leading up to the box. I attempted to go up, and they said, 'No radicals in here,' 'No radicals in here,' and all caught arms together and shoved me back.

"Q. Who did you intend voting for for Congress?

"A. Samuel Lee."

The above are given as specimens, taken almost at random from the printed testimony.

testimony.

The depositions of two hundred and forty witnesses appear in the record who swear they were present at the Darlington poll and desired to vote for Mr. Lee, but were prevented from so doing by threats or intimidation. Convinced they could not vote without danger of riot and bloodshed, hundreds withdrew from the poll. There is counter testimony in the record, but it is from the very parties complained of, and from comparatively few other witnesses.

Your committee are compelled to say, from all the evidence, that the case of Darlington poll falls within the principle laid down by McCrary, as follows:

"Sec. 416. The true rule is this: The violence or intimidation should be shown to have been sufficient either to change the result or that by reason of it the true result can not be ascertained with certainty from the returns. To vacate an election on this ground, if the election were not in fact arrested, it must clearly appear that there was such a display of force as ought to have intimidated men of ordinary firmness."

election on this greatest a display of force as ought to have intimidated men appear that there was such a display of force as ought to have intimidated men of ordinary firmness."

Here it is proper to remark that up to 1878 Darlington precinct always was largely Republican.

A few years ago the Republicans used to poll 1,200 to 1,300 votes at that poll. See testimony of John G. Gatlin (record, page 79), John Lunney (record, page 81), Jordon Lang (record, page 95).

At the election in 1890 Mr. Richardson is credited by the schedule, which purports to be certified to by the clerk, Garner, but which he testifies he did not certify, as having received 1,271 votes to 117 votes for Mr. Lee; and from the impossibility of ascertaining how the actual vote stood at Darlington poll, by the dispersand on the part of the county commissioners to forward the returns and poll-list to the secretary of state, in violation of a plain provision of law, and from the fact that intimidation and violence prevented hundreds from voting, your committee reject Darlington poll from the count.

Lydia precinct.

Lydia preciact.

All the managers at this poll were Democrats.

As we have seen, no possible reliance can be placed on the statement in the schedule purporting to be certified by the clerk, Garner (record, page 571), since he swears he did not certify it. We therefore rely upon the report, sworn to and put in evidence, of the two United States supervisors (record, page 113), by which it appears that Richardson received 572 votes and Lee 193 votes.

An excess of 163 votes was found in the box, showing the box wasstuffed. As the election seems to have been fairly conducted after the arrival of the supervisor, Robinson, which was just after the polls were opened, we conclude the box was stuffed in the beginning, and by the managers. But since the excess was drawn from the box, and seems to have been fairly withdrawn in proportion to the vote of each candidate for Congress, we think that both Lee and Richardson should each be credited by the number of votes which were counted for them, as shown by the report of the two supervisors, namely, Richardson 572 votes, Lee 193; majority for Richardson of 378.

Societu Hill precinct.

#### Society Hill precinct.

For the same reasons as above stated no reliance can be placed on the clerk's schedule, which the clerk himself rejects, as to what was the true vote at this precinct. But on page 363 of the record we have the report of Z. W. Wines and E. P. Cannon, the two supervisors, which, Wines as a witness (record, page 338) testifies, gives a true account of the poll when the box was opened and the votes counted.

By it it appears that the poll-list kept by the managers and those kept by each of the supervisors all showed that 535 votes were cast. Extra ballots were found in the box.

of the supervisors all showed that 535 votes were cast. Extra ballots were found in the box.

The box had been stuffed. John T. Prince, one of the managers, swears tree-ord, page 565) that 58 ballots in excess were found in the box. The managers and clerks were all Democrats. The excess of ballots was drawn out and destroyed, of which 12 had Richardson's name on them.

If the ballots destroyed had been the exact fraudulent ballots put in the box this would have been precisely just. But this could scarcely be.

It is not right that all the managers, in all the precincts of a county, should be the partisans of one candidate.

It is not just that ballots should be honestly voted and then withdrawn and destroyed because other fraudulent ballots had been stuffed into the box.

Happilly, we have the means to determine how many honest votes each candidate for Congress received at this poll. In the record, page 118, is found a list of 383 names kept by H. D. Kershaw and R. E. Postell, all of whom, they swear, voted for Mr. Lee. They saw them cast their votes. (Record, pages 18 and 339.) Since 12 of the 58 votes drawn out were for Richardson, the other 4 must have been for Lee; and adding these 46 votes to the 337 counted for Lee we have 383 votes, which exactly corresponds with the list of 383 names of votes who Kershaw and Postell testify voted for Lee. We therefore accord to Lee 33 votes and to Richardson 152 votes, making a total of 535 votes, the number of votes cast at this poll.

### Lisbon precinct.

Lisbon precinct.

This poll is in like strait as the preceding. We, however, find on page 238 of record the report of the United States supervisors, H. C. Harroll and J. H. Hugging. This report, Harroll as a witness, on page 194, testifies is correct. By it we see that four hundred and ninety-three names were on the poll-list, and the managers counted for Richardson 317 votes and for Lee 176 votes.

This box had been stuffed with 98 fraudulent ballots. All the managers were bemocrats. Ninety-eight ballots were withdrawn and destroyed, of which 39 were for Lee and 50 for Richardson. (Record, page 238.)

If this was a Democratic fraud, then Lee was deprived of 29 votes, and Richardson gained that many. That it was a Democratic fraud is manifest when we see that W. R. Dukes (record, page 201) testifies he was present and kept a list and saw 215 persons vote for Lee. He furnishes that list of names. (Record, page 223.)

There is no witness called to deny this. And when we add 30 Lee ballots, withdrawn from the box, to the 176 which the managers counted for him it amounts to exactly 215. But subtracting 215 Lee's votes from the whole vote of 423 and it leaves 278 as Richardson's true vote.

Timmonsville precinct.

#### Timmonsville precinct.

Timmonsville precinct.

By the report of the supervisor (record, pages 68 and 69) 608 votes were counted for Representative in Congress. The managers counted 533 votes for Richardson and 75 for Lee. It was from Timmonsville that 75 or more Democrats, having voted there, went to Florence poll and again voted. The ballot-box was stuffed at Timmonsville, and the excess drawn out and destroyed. Rafra, the superisor, swears to his report. (Record, page 84.) The managers and clerk were all Democrats. J. E. Keeler testifies (record, page 373) that he kept a list of the Republicians; that they voted Republican tickets, and for Samuel Lee for Congress. The list is found (record, page 376) showing 159 names.

The contestee has not shown that a single one of these 199 did not vote for Mr. Lee. We correct this precinct by giving to Mr. Lee 199 votes, and subtracting that number from the whole vote, 608, gives 409 as Mr. Richardson's true vote.

### Leavenworth precinct.

By the report of F. W. Prince, United States supervisor, made an exhibit to his deposition (record, page 98), it appears that the names on the poll-list kept by the managers of election were 594. That 239 fraudulent ballots in excess were found in the box. As usual the box had been stuffed; 239 ballots were withdrawn and destroyed by the Democratic managers, 110 Republican and 120 Democratic. W. H. Waddell testified (record, page 99) that he kept a list of the Republican votes. That he saw the names of the candidates on the tickets, and that they all voted for Samuel Lee.

The list foots up 308 names. As this list is undisputed by any witness we second to Mr. Lee 308 votes at this precinct, and the balance of the 594 we count for Mr. Richardson, to wit, 258 votes.

Correcting the vote at the precincts above set forth, as we have, and leaving

untouched the other precincts of Darlington County, and counting them as claimed by Mr. Richardson, and the result is as follows:

Vote of Darlington County.

Precincts.	As found by the committee.		
	Richard- son.	Lee,	
Leavenworth Cartersville Lydia Mechanicsville Timmonsville Gum Branch Effingham Lisbou Darinigton Hartsville Hartsville Florence		308 69 193 345 196 22 98 215 385	
Richardson's majority	2,395	1,88	

We find for Mr. Richardson, in Darlington County, a majority of 511 votes, in lace of 2,554 votes, as given to him by the returns of the State board of canvassers.

## MARLBOROUGH COUNTY.

Bennettsville precinct.

Bennettsville precinct.

The secretary of state certifies (record, page 226) that Lee received 464 votes and Richardson 335. An excess of 61 votes was found in the ballot-box. That number of ballots were withdrawn and destroyed, 60 being Lee's votes and only 1 a Richardson ballot. (D. D. McCall, United States supervisor, record, page 335.) How this strange result happened McCall in his testimony explains. The tickets were easily distinguished by feeling.

"When box was opened at close of polls there were 61 more votes in box than names on poll-list of clerk of managers, and in drawing out the clerk who did the drawing would carefully feel the ballots and turn loose a Democratic ballot if he found on feeling that it was such, and continue to feel until he would bring out a Republican ticket. The second ticket drawn from box was only mistake made, this one being a Democratic ticket; the other 60 so drawn out being Republican."

Weatherby, a Democratic manager, testifies as follows (record, page 652):

"Q. Could he simply by the touch distinguish the tickets?

"A. Yes, I think so; unless they were pasted together; one was heavier than the other."

the other."

He also swears the clerk seemed to be in no hurry,

Now, adding 60 votes to the 464 counted for Lee and we have a total of 524 as

Lee's true vote, if all the Republicans voted for him; but McCall swears that
511 did vote for him whose names he gives (record, page 274), and Mr. Lee

proves by five other witnesses whose names were not on McCall's list, that they
also voted for him. (See record, pages 255, 259, 260, 263, and 273.)

We therefore count for Lee 516 votes, and give the balance, 283, for Richardson.

Red Hill.

Red Hill.

The secretary of state returns for contestant 182 votes, and for contestee 353 votes, but it appears by the testimony of J. W. Jenkins (record, page 270) that the ballot-box was stuffed. Jenkins was United States supervisor. He swears to the report found on page 290 of record, that there was an excess of ballots in the box over poll-list of 25. All the managers were Democrats. In withdrawing this excess, 24 ballots bore the names of the Republican candidates and I of the Democratic candidates.

William A. Rogers, an Independent, swears, (record, page 269) that the colored voters all approached the polls by the back door—

"And as one approached the door and made it known that he wanted to vote the ticket prepared by the Republican party, I would fold the ticket and hand it to him. I did this so they should not be charged with voting double tickets." (Record, page 269.)

In to num. I did this so they should not be charged with voting double tickets."
(Record, page 269.)

And one of the Democratic managers, W. B. Alford, a witness for contestee (record, page 663), thinks there was an excess of about 24. On cross-examination, he testifies as follows:

"Q. Can you account for how 24 ballots were in excess of the names on the poll-list?"

11-1987
7. Only in this way, by finding two ballots folded together; from appearance ey were supposed to be put in together when voted.
"Q. When two or more ballots were found folded together, were not all de-

stroyed save one?
"A. I don't recollect about that, but I think they were returned to the box

"A. I don't recollect about that, but I think they were returned to the box and the success drawn out.

"Q. Then the managers did not observe the law in that particular, did they?

"A. I do not remember the particulars in that regard; I paid more attention toward the ballot-box than anything else."

Since all the officers conducting the election were Democrats, since pains were taken to prevent the Republicans being charged with double voting, and since the excess of votes must have been a Democratic fraud from the evidence, and because it clearly appears that at least 24 honest votes were withdrawn and that least 23 if not 24 were Republican tickets, we correct this poll by adding 23 votes to contestant's returned vote of 182, because 23 of his honest ballots were withdrawn from the box, and we deduct 23 votes from the 33 votes counted for Richardson, because 23 fraudulent ballots were counted for him. So correcting the vote and the result is: for Richardson 330, and for Lee 205.

Brownsville precinct.

# Brownsville precinct.

Brownwille precinct.

At this precinct, by the secretary's report, Lee received 90 votes and Richardson 290, but it appears by the report of the two United States supervisors, Moses W. Pearson and W. B. Drake, put in evidence and found on page 242 of record, that his ballot-box was stuffed by 129 ballots over the names on the poll-list. To reduce the number of ballots to correspond with the names on the poll-list 129 ballots were withdrawn by the managers, and the strange disparity occurred here as elsewhere in withdrawing the excess. The managers were all Democrate the political political political political political political and only 13 Democratic ballots. It was a repetition of what we have already seen occurred again and again. We correct this poll by adding 116 to the 90 votes counted for Samuel Lee, making a total of 206 for Lee, and deducting 116 from the 290 which the managers counted for Richardson, which leaves him 174 votes. Lee honestly received 206 votes and Richardson 174 at this poll.

## Hebron precinct.

At this precinct the secretary returns for Lee 106, for Richardson 245; total 351.

There was an excess of ballcts in the box of 43 over and above the names on the poll-list. See testimony of B. F. Hamer, United States supervisor (record, page 253), his report (record, page 282).

All the election officers were Democrats. This box had also been stuffed; 43 ballots were withdrawn and destroyed. How many Lee ballots were withdrawn the record failed to show, but Ennis Campbell (record, 263) and Crawford Tournage swear about 30 Lee ballots were withdrawn and destroyed. Tournage further swears that he saw 145 Republican votes cast. Adam Cook (record, page 259) testifies that he made a list of 145 names of those who voted the Republican ticket; he furnishes that list in record, page 283.

In this he is corroborated by Gibson Townsend (record, page 260), who testifies he was acquainted with most of those voters. As none of the witnesses called by contestee deny the above statement, we think it clear that Lee received 145 votes at this poll. We accord him that number, and the balance to Richardson, which gives for Lee 145 and for Richardson 206 votes.

Smitheille preciact.

### Smithville precinct.

Smitheille preciact.

By the secretary's table Lee received 229 votes and Richardson 233 votes. At this poll, as usual, all the managers were Democrats, and the ballot-box was stuffed.

H. S. Grant, United States supervisor, testifies (record, page 256) there were 81 more ballots in the box than there were names on the poll-list. That number was drawn out and burned. Sixty-four of them bore the name of Samuel Lee for Congress. (Record, page 256 and 282.)

H. E. Johnson, a white man, and an Independent Democrat, testifies (record, page 257) that Lee's name was on all the Republican tickets drawn out. William Pagues, a Democratic manager, drew out the ballots. Johnson swears (record, page 267):

"I told him that in the manner in which he was drawing out these ballots I pronounced him a perjured man, and told him I intended to indict him in the United States court."

The reason given was because he evidently hunted for Republican tickets.

"It was so evident that I complained of it." (Record, 267.)

On page 256 he testifies to having detected one Williams in the act of voting two Democratic tickets at once.

The vote at this poll is proved and sustained by a list kept and furnished by witness Benjamin Quick (record, page 292), whereby it appears the names of 285 voters are given who voted the Republican ticket. As this testimony is not rebutted, we count, therefore, at this precinct for Lee 255 votes and for Richardson 167 votes.

We summarize the vote of this county by precincts as follows:

We summarize the vote of this county by precincts as follows:

#### Vote of Marlborough County

Precincts.	As return the Sta- vassers	te ean-	As corrected by the commit- tee.		
	Richard- son.	Lee,	Richard- son.	Lee.	
Beunettsville Red Hill. Adamsville Brownsville Clio Red Bluff Hebron Smithville Brightsville	353 331 290 214 187 245 233	464 182 80 90 59 65 106 229 181	283 330 331 174 214 187 206 167 237	516 205 80 206 59 63 142 297 188	
	2,425	1,456	2,129	1,753	
Richardson's majority			377		

The above table shows Richardson's majority in this county to be 377, in place f 969, as allowed him by the State board of canvassers.

#### MARION COUNTY.

# Marion Court-House precinct.

Murion Court-House precinct.

At this ballot-box, as at every one in the county, all the managers were Democrats. B. A. Thompson (record, page 425) testifies that he was one of the county commissioners of election for Marion County; that he demanded of the board the appointment of a Republican manager at each precinct, but this was not complied with, and the majority of the board appointed none but Democrats. At the court-house precinct the managers reported 522 votes for Mr. Lee and 574 votes for Mr. Richardson. As seems to be the rule, this ballot-box was stuffed. R. B. Mullins, one of the managers (record, pages 632 and 633), testifies: "There was an excess of about 50 ballots in the box over the names on the poll-list."

J. H. Holloway, a Republican, testifies (record, page 41) that 56 Republican votes were thrown out at this precinct. R. J. Blackwell, another Democratic manager, testifies (record, page 637) that there was an excess over the poll-list of about 50 votes. E. J. Crawford, United States supervisor, whose report is put in evidence on page 247 of record, states that the excess was 55 votes, and of the 55 ballots withdrawn and destroyed 54 bore the names of the Republican candidates and "one doubtful whether Democratic or Republican."

There seems to be no essential controversy, and your committee count 51 votes as having been withdrawn from Mr. Lee's honest vote. They accordingly add 54 votes to the number counted for Mr. Lee, and deduct that number from the 574 votes counted, but not cust, for Mr. Richardson. This would give as the true result at this poll for Lee 576 votes and for Richardson. This would give as the true result at this poll for Lee 576 votes and for Richardson.

#### Berry's Cross-Roads precinct.

At this precinct the secretary of state reports that Richardson received 372 votes, and Lee received 168.

The managers were all Democrats.
This poll was no exception to the fact of ballot-box stuffing. All the witnesses interrogated admit this. Gregg C. Crawford (record, page 427) testifies that the poll-list called for 541 votes; that 637 ballots were found in the box, and he testifies:

poll-list called for 5H votes; that we ballots which will be seen and took out the fies:

"Joe Jarnegan put his hand into the box ninety-six times and took out the excess votes. All he took out were Republican. They put them into the free place and burnt them."

B. F. Crawford, United States supervisor, whose report is in evidence free ordinated by the states that 96 ballots were withdrawn—38 Republican and 3 Democratic. The Republican tickets were thick like unto a card and the Democratic cicket was a little thin ticket. (Record, page 427.) Since it is evident from the testimony that the ballot-box was stuffed—that 96 fraudulent ballots were found therein, and that 33 were at least Republican and only 3 Democratic—if is manifest this fraud was a Democratic one. The disparity in drawing out was enormous.

We correct this poll by adding 93 to the number which the managers count.

for Lee and deduct a like number from the vote counted for Richardson. This gives 261 to Lee and 279 to Richardson.

Campbell's Bridge precinct.

Campbell's Bridge precinct.

The secretary of state gives Richardson 284 votes and Lee III votes at this poll. The number of names on the poll-list was three hundred and ninety-five. (Record, page 432.) This ballot-box was also stuffed. The managers here were all Democrates; 31 extra ballots were found in the box. The total Republican vote found in the box was 141. (Brownhamer, record, page 481.) In this he is corroborated by the deposition of D. P. Murphy, the United States supervisor. (Record, pages 482 and 461.) How they were withdrawn is manifest from the testimony of Brownhamer. (Record, page 481.) He testifies that the manager—

"Was not blindfolded; just turned himself one sided and put his hand in the box and felt in there, and would take out a Republican ticket and hand it to John Henry, saying he was working for his country."

Witness adds:

"I could take every Republican ticket out of that box if I was as blind as a bat; one was soft and thin, the other thick and stiff."

D. P. Murphy (record, page 432) testifies:

"He turned his side to the table and drew them out very carefully, taking his time as if he was separating the Democratic tickets from the Republican tickets."

time as if he was separating the Democratic tickets from the Republican ticks."

He further states that the Republican ticket was very thick, and the Democratic tickets were very thin. In his report, to which he swears, 30 of the ballots drawn out bore the names of the Republican candidates, and 1 of the Democratic candidates. Edwin Bethea, witness for the contestee (record, page 624), states that he drew the tickets out of the box. He testifies:

"I think I can tell a Democratic ticket from a Republican ticket. The Republican ticket was about one and a half inches shorter than the Democratic, a half inch wider, and two or three times as thick."

G. J. Bethea states (record, page 628) that the excess was 31 votes; that—
"Edwin Bethea was not blindfolded in drawing out the ballots; that the Republican ticket was thicker than the Democratic ticket."

John W. Gourdin (record, page 439) testifies that about 30 white men voted the Republican ticket; he testifies that Ed. Bethea, the manager who withdrew the tickets without being blindfolded, cursed them for doing so. He said that "if white men would vote the damn nigger ticket he would throw their votes out."

out."

It is manifest from the testimony that a gross fraud was committed at this poll. Republican tickets were delibrately withdrawn and destroyed, in place of the fraudulent tickets which had been stuffed into the box. We therefore correct this poll by adding 30 votes to Lee and deducting 30 votes from Richardson, which gives Lee 141 votes and Richardson 254 votes.

Friendship precinct.

Friendship precinct.

The secretary of state gives Mr. Lee, at this precinct, 139 votes and Mr. Richardson 104 votes.

J. B. Hayne, United States supervisor, testifies (record, page 420) that there were 157 votes polled for Lee and 86 for Richardson; that he kept a poll-list and marked the Republicans "R" and the Democrats "D." That list he farnishes record, page 457, which corresponds with his sworn statement, to wit, Republican 157 and Democratic 86. He states that the Republican ballots found in the box agreed exactly with his tally, namely, 157 votes, and in this he is corroborated by John M. Mace, one of the Democratic managers (record, page 621). He "The tickets were constituted to the states of the corresponding to the states of the record of the page 621.

rated by John M. Mace, one of the Democratic managers (record, page 621). He states that—

"The tickets were emptied on the table, and we picked out the Democratic tickets and the Republican tickets, and opened them as we took them up so as to see if they were folded together. Wall, one of the Democratic managers, took the Democratic tickets and the Republican tickets, and opened them as we took them up so as to see if they were folded together. Wall, one of the Democratic managers, Mace, counted the Republican ballots in the presence of the supervisor and found they agreed with his tally—157."

He states further:

"We got through with the Republican tickets before Wall gotthrough counting the Democratic tickets. I turned to the fireplace to so what kept him. When we counted the Democratic tickets, instead of 86 there were 104. My tally of the Democratic votes was 86. All the tickets, Republican and Democratic, were then placed back in the box by the managers, and the excess of 18 drawn out by the clerk, all of which were Republican ballots."

Wall, the Democratic manager, denies that he perpetrated any fraud, but the tally-list kept by the United States supervisor and by the managers exactly agreed. It is not denied that 157 Republicans who voted at that poll. There was an excess of 18 ballots either in the box or added after the box was opened. It was a fraudulent excess. The managers deducted 18 ballots from Lee, giving him only 139 votes, and added 18 votes to Richardson's 80 votes, as found on the list furnished on page 457 of the record. It is, we think, too clear for argument that a monstrous fraud was attempted and carried out at this poll. We correct it by restoring to Lee the 18 votes, which gives him 157 votes, and deduct the same number of votes from Richardson, which gives him 86 votes; this exactly corresponds with the homes found on the tally-list.

Correcting the vote at the precincts above set forth as we have, and leaving untouched the other precincts of Marion County.

Vote of Marion County.

		1	8, 826	2,640	
Richardson's majority	**********	********	1,186		

We find a majority in this county for Richardson of 1,186, in place of 1,565, as returned for him by the State board of canvassers.

CHESTERFIELD COUNTY.

CHESTERFIELD COUNTY.

By the table of the secretary of state, Richardson received in this county 1,917 votes, and Lee 1,666 votes (record, page 228).

The county board of canvassers did not transmit the poll-lists, returns, and other papers appertaining to the election to the secretary of state, as the law requires should be done (record, page 228). But the evidence found in various parts of the record goes to show that this is a Democratic county.

The only poll attacked by Mr. Lee in his notice of contest is Cheraw precinct. Mr. Richardson shows (record, page 527) that the clerk of the court certifies that the managers' returns turned over to him correspond with the statement of the secretary of state. This certificate of the clerk is really of no force or effect. He was not by the statute required or expected to make any such certificate. The law is well settled that—

"Statute-certifying officers can only make their certificates evidence of the fact which the statute requires them to certify. And when they undertake to go beyond this and certify other facts, they are unofficial and no more evidence than the statement of any unofficial person." (See McCrary, section 104.)

But there was an election held at Cheraw, and Thomas E. Smith, who was one of the commissioners of election for that county, and was present at Cheraw, estities as follows:

"A. There were a great many more names on the poll-list than there were ballots in the box, but how many I do not recollect.

"Q. Was that defect remedied by the managers; and, if so, how?

"A. No, sir; it was not remedied. The managers called on Captain A. A. Pollock, a lawyer, for his advice, and hesaid in a case like that he did not know what to do. But if there were more tickets in the box than there were names on the poll-list, he could easily tell them what to do.

"Q. How did the managers proceed to declare the result of the election under the circumstances?"

"A. They did not take any steps about there being any more names upon the poll-list then ballets that t

the circumstances?

"A. They did not take any steps about there being any more names upon the poll-list than ballots, but just counted the ballots in the box.

"Q. Did they make any report in regard to their poll-list being in excess of the ballots in the box to your board as county canvassers?

"A. They did not, sir.

"Q. Did you see any tissue ballots in the Cheraw box while the managers were canvassing the vote?

"A. Yes, sir.

"A. Yes, sir."

Q. Did they count those tissue ballots to ascertain the result of the election?

A. Yes, sir; they did count all of them.

Q. Were you present while the voting was going on during the day?

A. I was there from 7.30 s. m. until they got through at night.

Q. Did you see any tissue ballots voted during the day?

A. No, sir; there were none voted openly.

Q. When was the first time that you may any of those tissue tickets?

A. Not until the managers opened the box and commenced canvassing that girlt."

"A. Not until the managers opened the box and commenced canvassing that night."

This testimony is not seriously controverted. A ticket printed upon thin tissue paper, and admitted in the argument to be a fac simile of some of those found in the Cheraw box, was put in evidence by contestant. It was larger in size than the other "little jokers." And some of the witnesses for contested eny that tissue ballots were voted, evidently meaning the "little jokers," about 2 inches long by 1 inch wide. But two kinds of Democratic tickets were found in the ballot-box at Cheraw, and one was printed on very thin tissue paper. We have seen that the secretary of state had before him no statement of what the vote was at Cheraw. The clerk's certificate is not evidence. How the vote actually stood we do not know, and from the evidence on file we can not know. It appears that the returns were deposited with the clerk, and the poll-list turned over to the county anditor by the board of county commissioners. (T. W. Bouchier, record, page 590.)

A manifest fraud was perpetrated at Cheraw. It is impossible to determine what the true vote was.

A manifest fraud was perpetrated at Cheraw. It is impossible to determine what the true vote was.

Your committee have no alternative save to reject this poll. We therefore deduct the reported vote of Cheraw, as shown by Mr. Richardson—to wit, for Richardson 483 votes, and for Lee 458 votes—from the vote of the county, leaving for Richardson 1,434 votes, Lee 608 votes, giving a majority to Richardson of 250 votes, in place of a majority of 851 votes, as allowed him by the State board of convassers.

Having gone over the entire district, and purged the polls, precinct by precinct, by the preponderating weight of evidence, and permitting every precinct to stand where the matter was doubtful, and not clearly made out, we tabulate the result as follows:

Counties.	Actual vo	nd by	Majorities.	
	Richard- son.	Lee.	Richard- son.	Lee.
Georgetown Sumter Williamsburgh Horry Darlington Marlorough Marlon Chesterfeld	2,395 2,164 2,186 2,395 2,129	3, 101 4, 272 2, 576 771 1, 884 1, 752 2, 640 608	1,415 511 377 1,186 826	2,310 1,877 412
	17, 820	17,604	4,315	4,599 4,313
Majority for Mr. Lee in the district		*****	************	28

From which it appears that Samuel Lee was elected by a majority of 284 votes. We therefore recommend the adoption of the following resolutions:

1. Resolved, That John S. Richardson was not elected as a Representative to the Forty-seventh Congress of the United States from the first Congressional district of South Carolina, and is not entitled to occupy a seat in this House as such.

11. Resolved, That Samuel Lee was duly elected as a Representative from the first Congressional district of South Carolina to the Forty-seventh Congress of the United States, and is entitled to his seat as such.

A. H. DETTIBONE.

Rivers and Harbors.

### SPEECH

# HON. RANDALL L. GIBSON,

OF LOUISIANA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 1, 1883,

On the bill (H. R. 7631) making appropriations for the construction, repair, and preservation of certain works on rivers and harbors, and for other purposes.

Mr. GIBSON said:

Mr. SPEAKER: It is believed by many gentlemen who have not them-selves investigated the phenomena of the Lower Mississippi, or the reports of the scientific engineers who have sought to ascertain the laws that control this inland sea, that the commission appointed by the President in conformity with the act approved June 28, 1879, have in view the reclamation or protection of the alluvial lands, while the act creating the commission declared its purpose to be "the improvement of the

river."

It is true that the Mississippi River Commission, after a thorough examination of the whole subject, came to the conclusion that it was essential us a part of their plan for the improvement of the navigation of the river to close the gaps in the levees, and that they estimated that the total cost of this work would not exceed \$4,000,000. They show that over 2,000 miles of levees have already been constructed by the people and stand firmly to-day, confining the water to the channel and securing the greatest velocity and the fullest (maximum) scouring power, and that about one hundred miles will complete a continuous line from Cairo to the mouth of the river. They do not propose to build one foot of the levees to protect or recover alluvial lands. They have not spent one dollar for that purpose. They have, it is true, made contracts for closing some of the most important gaps in the levees, and have co-operated with the State and local authorities for this purpose, but in every instance they have declared by unanimous resolution that it was for protecting and improving the channel of the river, which within the last fifty years has widened an average of about 50 per cent., and shoaled to such an extent that navigation is absolutely suspended three or four months every year, at the very time when it is necessary to move the wheat and cotton and other crops of the valley.

I might defend the action of the Mississippi River Commission by re

ferring to the names of the gentlemen who compose it; to the able and clear reports they have submitted to Congress; to the action of the Committees on Commerce and on the Mississippi River; to all the distinguished engineers of the Army, without exception, who have had service on the river; to the opinions of all the celebrated engineers in foreign countries, and to the fact that the plan of the River Commission is precisely the plan of which all the rivers of Europe, nay, of the civilized world, have been improved. But I beg now in vindication of the concurring opinions of all these high authorities to refer to two facts, one ascertained by an examination of the recent flood on the river by the present Mississippi River Commission, and the other derived from the report of Humphreys and Abbott, who were for more than ten years engaged in the examination of the phenomena of the Lower Mississippi

First. General Suter, when under examination by the recent investigating committee of this House, declared, on behalf of the Mississippi River Commission of engineers, that the crest of the flood, which was perfectly well defined and sharp and well marked, so as to be traced from gauge to gauge without difficulty when within the banks of the river, was just ten days in passing from Cairo to New Orleans; but that when the next rise took place, producing an overflow, the crest of the flood was so retarded that it was over one hundred days traveling the same distance. I beg to annex his testimony on this subject and to invite close attention to the fact. Nothing could show more plainly how much the velocity is increased and the scouring force of the current by holding the river within its channel and how much it is retarded by overflows, and how deposits or sand-bars, the great obstacles to naviga-

tion, are produced by such overflows.

Second. I go back now thirty years, to the observations made by Humphreys and Abbott, to whom I have already referred. They found on the 19th of March, 1851, that when the river was 14.9 feet above low water it discharged 1,149,398 cubic feet per second, and that its mean velocity was 6.19 cubic feet per second. On August 29, 1851, when the river was 8.1 feet only above low water, the discharge was only 572,383

the river rose only 6.8 feet at Carrollton it would have required an outlet as large as the Mississippi itself to have reduced it 6.8 feet; that is, that an increase of 6.8 feet, when confined within its banks, made it equal in its discharging capacities to two Mississippi rivers at its mean low-water stage. Hence it follows that in order to reduce the river even 6 feet by an outlet it would be necessary to make the outlet equal to the Mississippi River itself at its ordinary stage. Such an outlet or crevasse would in less than a fortnight put an average depth of

3 feet over an area greater than the State of New Jersey.

But the point I desire to establish by these two illustrations, taken from two commissions which were authorized by the Government to examine the phenomena of the river, is this: They concur, though made thirty years apart, to show how the capacity of the river to discharge the floods is increased by confining them within the channel. If these two important facts are borne in mind, it appears to me that no one can dispute the correctness of the theory of contraction; that is, of confining the river in its flood stages to a particular channel, in order that the great energy which it then possesses may be applied to the task of conveying the *détritus* and *débris* with which it is charged to the sea. How otherwise is the vast burden to be borne? By what force? If

such energy may not be utilized, it is very evident that heavy deposits must take place, and that so far from the local treatment at the reaches being successful, the shoals will be merely transferred from one point to

another, and the conditions aggravated.

If it be demonstrated that levees are essential to the improvement of the channel and navigation of the river, will gentlemen deny to the engineers the authority to complete the line because the States and people dwelling on the banks of this stream are seeking by the same instrumentalities to protect the public health, their lives and property from disastrous overflows. Is the very fact that they co-operate suffi-cient of itself to condemn the engineers? It appears to me that it would gratify every enlightened man in this House and in the country if it were shown that while we were improving by the national resources the navigation of this great highway we were at the same time securing the co-operation of the people dwelling upon its banks. For we thus accomplish a great national purpose and perform a great national duty, aided and assisted by interests that may be in one sense local, but are in reality of national importance. Should we not expend three or four millions of dollars to complete the line for the benefit of navigation when all the engineers concur in the opinion that it must be done, because it will reclaim incidentally an area of the richest lands on the continent, equal to the State of Indiana, wholly uninhabited to-day, and for the most part public lands, and protect the people who have already become farmers and planters in the valley, who are overflowed by breaks in the levees occurring not in the parishes or States in which they reside, but in the neighboring States above them at points where there are no settlements, no inhabitants, no interests of sufficient magnitude to protect themselves; for it must be remembered that when we speak of the levees having given away, we do not mean that the whole line of levees 2,000 miles long have been washed away, but that breaks may have occurred in Arkansas, and the waters from them have over-flowed a dozen or more parishes in the State of Louisiana in front of which the levees have remained perfectly secure? Now, the question is, who shall repair these breaks which occur at these points at which there is little or no population? These are the points especially that we insist should be provided for by the Federal Government, when it is demonstrated that they must be closed in order to prevent the gradual but certain destruction of the river itself for all commercial purpos converting it into a series of shallow lakes at one season and a mighty torrent at another. The March number of the North American Review contains an article on this subject to which I invite attention.

But I do not propose at this time to enter into a general discussion of the whole question. I desired merely to place two important facts, taken from the reports of the engineers of the Government, before the

I might show further how the causes that produced these floods were national, not local, but I content myself now by illustrating how they are in fact destroying the river, and how readily they might be controlled to improve the navigation of the river by levees on its banks in connection with the channel treatment, levees not of large proportions such as would be required to reclaim the delta, but of small dimensions, perfectly continuous and at an insignificant expense. If the people seeking protection should co-operate with us and enlarge these levees for their purposes nobody should complain.

I beg to call attention to the following extract from the report of the commission, dated December 1, 1882, signed by every member of the commission except its president, General Gillmore, who was ill, but who has perhaps more fully than any other member of the commission showed the disastrous results that would follow the application of the showed the disastrons results that would follow the application of the cond; that is, a difference of only 6.8 feet caused a discharge of the river at Carrollton to double. The river here at the lowest stage was 115 feet deep; hence there was an increase of only one-seventeenth part of its total depth to produce this astonishing difference in the discharge. The velocity was at the same time increased 85 per cent. These tables are velocity was at the same time increased 85 per cent. These tables are of the navigation of the river, and that they should be where the river is unduly wide and shallow, but that they should be made continuous from the head of the passes to Cairo; that the bar at the mouth of Red River and the other reaches or bars at Lake Providence and Plum Point were caused by the breaks in the river below Red River as much as by those in the vicinity of these shallow, shoal reaches themselves, and that in order to remove these vast obstacles above Red River it was absolutely necessary to close the breaks and outlets below Red River; that just in proportion as the velocity of the river was increased, even where the navigation was not now impeded, its ability would be increased and its power to remove the accumulations of sediment in the upper reaches of the river where the navigation is suspended—in other words, that the velocity of the river to be made effectual must be maintained not merely where the bars exist, but throughout its whole course."

#### APPENDIX.

REPORT OF THE MISSISSIPPI RIVER COMMISSION, DECEMBER 1, 1882—OUTLETS AND LEVERS,

APPENDIX.

APPENDIX.

APPENDIX.

APPENDIX.

APPENDIX.

The commission, in its earlier reports, agreed in recommending the confinement and concentration of discharge by restraining and contracting works, inserting and contracting works, inserting and contracting works, inserting the confinement and concentration of discharge by restraining and contracting works, inserting the control of the capacity of the principle of any correct system of improvement of the Mississippi liver. In this conclusion it was considered that flood conditions ruled in the determination of the capacity and in the formation of abnormal extremes and inequalities of width and depth, causing observed in the provement as is described in the organic act creating the commission and in the river and harbor bill of August 2, 1982. This fact, characteristic to an unsustal extent of the SissoverHowing floods or those rising above the banks at the different gauge stations is from flip to one hundred days, and in many years, at many stations from one hundred on the hundred days, and in many years, at many stations, from one hundred and with days, and even more. Thus the While it was believed that the studies and experience of engineers on sedimentary streams had collected much evidence in favor of such conclusions, it was still condidered necessary by the commission to undertake neared in deviation of the changes therein; the velocity and its distribution; the mutual relation of stage, velocity, area, and discharge; the phenomena of floods and low water; the work of the properties of the improvement. The such accurate knowledge of the river and of its lawns would enable the commission to deviate the most sure and economical methods of applying the adopted principles to its improvement. The work of the condition of the commission to deviate the most sure and economical methods of applying the adopted principles to its improvement. The work of the condition of the commission to deviate the most sure and economical methods of applying the ad

cluded from the reservoir basins. For it was considered that in the progress of levee building the extension of the work from below upward would have less tendency to produce a temporary increase of flood height, and of overflow, in the upper parts of the river below Cairo than would the extension of levees from above downward have upon the lower parts of the same river. The prudence of this method of procedure is clearly indicated in the history of levee building on the river.

on the river.

It was also thought expedient to first close new breaks, which presumably would inflict new injuries upon navigation if allowed to remain open, rather than old ones, whose effects had been to a certain degree unimated. These new breaks had principally occurred in the fronts whose restoration is first un-

new breaks had principally occurred in the fronts whose restoration is first undertaken.

It was furthermore believed that a greater effect in channel improvement would be accomplished by giving the greatest possible development in length to the levees, even at grades no higher than those previously existing, and proved insufficient for great floods, rather than by giving an entirely secure height to a less length of new work. After mature deliberation the chance of an early repetition of so great a flood as that of 1882 was deemed to involve less prospective risk to channel maintenance and improvement than the incontinuity of the line during an average flood.

Under this project it was anticipated, with such prices as had been ruling for State levee work, that the allotment made would be sufficient, in co-operation with the local and State funds, to entirely confine the river, in any ordinary flood, to its bed along the front of the Atchafalaya, Tensas, and Yazoo Basins. It proved, however, in consequence of the very late period when the appropriation became a law, and of the large amount of work to be completed in a limited time, that higher rates were demanded by contractors, thus rendering it necessary that some gaps in the line should remain unclosed under the present allotment. Others were also left open by the failure of some of the local assistance promised.

To put this project into execution the Secretary of War was requested to con-

time, that nigner rates were demanded by contractors, thus rendering in necessary that some gaps in the line should remain unclosed under the present alloment. Others were also left open by the failure of some of the local assistance promised.

To put this project into execution the Secretary of War was requested to convene in a board the executive officers of the several engineer districts of the river in which gaps were to be closed. It was the duty of this board, under the instructions of the commission, to ascertain the extent of the work and to apply the fund placed at its disposal by the commission proportionately to the amount of required work in closing the existing gaps in the fronts of the Atchafalaya the Tensas, and the Yazoo Basins, omitting such parts of the work as could be undertaken by the States in which the basins lie, and, as far as found practiculate and expedient, after the local information to be acquired, extending the work in each basin from below upward.

Their investigations led to the final subdivision of the allotment by them as follows: To the Atchafalaya Basin, \$110,000; to the Tensas, \$750,000, and to the Yazoo, \$440,000. The action of this board in distributing the allotments and in deciding what gaps should remain unclosed in consequence of its insufficiency has been approved by the commission. The reports of the board and the district engineer officers composing it are submitted as Appendices K, L, M, and R. An effort was made in September of this year by the State of Louisiana, the dississippi Valley Railroad, and private parties to raise a sufficient fund to close the Bonnet Carré crevasse. They were successful to within \$15,000 of the amount required. The commission was requested to supply the deficiency, and thus by the expenditure of a comparatively small sum secure the completion of a work costing \$80,000 or \$90,000, and closing an outlet which had been discharging for eight years at nearly all stages of the river.

Under these circumstances the commission complied with t

Coast and Geodetic Sure B. M. HARROD. ROBERT S. TAYLOR.

Note.—General Q. A. Gillmore has been prevented by severe illness from participating in the preparation of this report, and is at the date of signing unable to hear it read. S. S. L.

Major Charles R. Suter was sworn and examined.

By Mr. Robinson; Question. Will you please state your name, age, and rank in the Army? Answer. Charles R. Suter, major of engineers, United States Army; my age

Answer. Charles R. Suter, major of engineers, United States Army; my age is 41 years.

Q. Prior to your connection with the Mississippi River Commission what experience did you have in the investigation of work on the Mississippi River?

A. I have been engaged on various improvements on the Mississippi River and some of its principal tributaries since 1866.

Q. Your work as an engineer has been confined to that region?

A. As a civil engineer, entirely.

Q. Following the Mississippi River, commencing at Cairo, and going down to the outlet, to the mouth, I want to know, as a fact, which river contributes the greater amount of water, the Ohio or Missouri?

A. The Ohio; it is about double.

Q. Which one bears the greater amount of sediment?

A. The Missouri.

Q. Does the Ohio perceptibly affect the quantity of sediment in the Missis-

Does the Ohio perceptibly affect the quantity of sediment in the Missis-

Q. Does the Ohio perceptibly affect the quantity of the superior of the rivers. At Very slightly, I think, so far as the suspended sediment goes.
Q. And why is that so?
A. Mainly owing to the different character of the rivers. The Missouri is a river of very strong current and heavy slope, and it brings down an enormous quantity of sediment of all kinds. The Ohio is a much more gentle stream, and its banks are harder.
Q. The banks are not so yielding on the Ohio as on the Mississippi?
A. No.
Q. Then it is mainly attributable to the character of the soil?
A. Yes, sir.

A. Yes, sir.

Q. You have for years been dealing with the Mississippi as a stream bearing great quantities of water, and of water bearing a large quantity of sediment?

A. Yes, sir.

Q. From Cairo down you find a succession of pools and sheals, and bends to the right and left, do you not?

A. That is the general character of the river.
Q. And the result of years is that that river has wound about over different A. Yes, sir.
Q. And it is likely to do so for centuries to come?
A. Yes, sir.
Q. The banks of the river are generally yielding and soft, and sent with water, and then they break down in Yes in.

A. Yes, sir.
Q. And that forms a heavy silt in the bottom of the river?
A. Yes, sir; that forms a large portion of it; I do not know what proportion of it, but a large proportion.

Q. What are the difficulties in the navigation that steamboatmen or navigators have to contend with?

A. Of course there are obstacles such as snags, but apart from that the obstructions are shoals.

A. Of course there are obstacles such as snags, but apart from that the obstructions are shoals.

Q. Where there are pools there is no difficulty in navigation?

A. No, sir; the water is deep in pools.

Q. And then you have, as you said before, a shoal, and then a pool, and then shoal, in that order?

A. Yes, sir.

Q. So we may infer that you have to correct that class of shoals?

A. Yes, sir. That is the main difficulty.

Q. What other, leaving out the snags?

A. The shoals are, of course, the obstacles.

Q. What is the condition of the stream as to width where you have the shoals?

A. The width is excessive.

Q. And what are the conditions where you have the pools?

A. There it is comparatively narrow.

Q. At the pools you would require no contraction?

A. No, sir.

Q. You propose contraction on the shoals?

A. Yes, sir.

Q. For what purpose?

For what purpose? For the purpose of deepening the water.

Q. How?

A. By concentration, increase of current, and scouring.

Q. Will it increase by scouring, or simply by laying water upon itself?

A. It will have to do so by scouring; that would be the object of a rational improvement for a stream of this character; it would undoubtedly be the way. Of course if the bottom were unyielding the water would have to be deepened by

Q. Is it your theory that you can so control the river that you would remove the tendency to form shoals and pools?

A. No, sir; that is not the object of the improvement. That of course would be carrying the improvement to a more perfect standard, but nothing like it is contemplated by the commission.

ontemplated by the commission.

Q. That is to say, you would not deepen the shoals to correspond with the depths of the pools necessarily?

A. No, sir.

Q. You improve to what depth—the minimum depth?

A. The commission have not decided upon any special depth as yet.

Q. You contemplate something—I mean the commission?

A. The subject has not been seriously discussed, that is, so far as the limit of depth is concerned.

Q. You were a member of a former board that investigated the subject?

A. Yes, sir.

Q. You individually and your associates proposed ten feet?

A. I believe that was the limit fixed then as something attainable.

Q. How many shoal places do you find, stated approximately, between Cairo and Red River?

A. The whole list, I think, is something between fifty and sixty: I have for

A. The whole list, I think, is something between fifty and sixty; I have forgotten the exact number; that is, of shoals on which there is less than ten feet of

At the whole has, I think, is something between thy and sixty; I have forwater.

Q. It was said by General Comstock, I think, that no dredging had been done on the Mississippi to improve navigation between these points; is that correct?

A. There has been no dredging in the ordinary acceptation of the term; that is, no actual lifting out of material; but there have been attempts made of which I have had charge for the deepening of the channel by scraping. In other words, dragging the material from the crest of the bars down into the deep water. It was a much more rapid process than by the ordinary lifting dredges; and it had a further advantage—in fact it depended largely on the loosening up of the bottom and letting the current earry the material off. These results were substantially attained, but the trouble with the Mississippi is that it carries so large an amount of sediment and moves so great an amount of material along the bottom that it filled up the cuts as fast as they could be made.

Q. This was equivalent to stirring up?

A. That was the main principle.

Q. At what point was this tried?

A. It was never tried below Cairo. There has been nothing of that kind done that I know of below the Ohio, except that the same process was tried at the passes at the mouth of the river.

Q. Notwitstanding the fact of the shoals between Cairo and Red River, there is a very large amount of commerce carried on the river?

A. Yes, sir.

Q. By means of boats?

A. Yes, sir; by means of boats and barges.

Q. Steamboats of considerable size run there all the time?

A. No, sir; they do not run in low water; they adapt themselves to circumstances.

Q. And how much of the tyear are they obliged to suspend?

A. No, sir; they do not run in low water; they adapt themselves to circumstances.

Q. And how much of the year are they obliged to suspend?

A. That is a variable element and depends on the character of the season. Some years there will be no obstruction to large boats; they can run all the year. At other times they will have to shift on to other classes of vessels for four or five months in a year.

Q. What is the draught of the larger steamboats?

A. They usually leave the Saint Louis or Thio River ports when the river is up with a maximum draught of fifteen feet.

Q. Now, can they make that voyage—that trip—in low water?

A. No, sir; that is only at the extreme high stages.

Q. Well, on the average would it be more than thirty or forty days in the year that they could not make these trips?

A. Yes, sir; I think it would.

Q. What do you say as to the practicability of stirring or dredging during times of low water, so as to make a proper channel?

A. The great trouble is that the river gets shoal throughout its whole length all at once, and there is a long period which precedes the really low water. It begins usually at about half stage, or one-half gauge height, and it is then the bars present the greatest obstruction. During high water all the channels of low water are entirely obliterated. The sand moving forward fills everything level, and remains there during the entire high-water period. As the river fally seven, and remains there during the entire high-water period. As the river fally seven, and remains there during the entire high-water period. As the river falls the surface lowers—these bars and shoals begin to act as dams, and, of course, approach the surface of the water. The low-water channel has to be excavated through them; that is the general process and usually requires some

time for its execution. Sometimes it begins, as I stated, about the half stage, but the low-water channels are not fairly developed, as a rule, until the river has fallen so low that the depth on the crest of these bars is entirely insufficient for navigation. As the process continues the water finally breaks through on the line which offers the least resistance, and then the excavation goes on quite rapidly in these contracted spaces, which become the low-water channels.

Q. That excavation then goes on without any artificial means; it is the river at work on itself?

A. Yes, ir; it is a natural process.

Q. The deposits formed at the high stage of water are picked up by the current and carried on down the river?

A. Yes, in these restricted portions or sections of the river.

Q. What is the difficulty, then, about letting the river do its own work, if it conducts itself in that way?

A. It does not act rapidly enough, in the first place, and does not carry the process to a sufficient extent, in the second.

Q. And is there any difficulty. Wherever the bends in the river are well developed there is not much shifting in the location of the low-water channel. Although it goes through the same processevery year of filling upand cutting out, as a rule the beach through the shoals is sensibly the same in position from year to year. But there are a great many places in the river—and that is really where the most of the trouble comes—at which it can not be determined in advance where the low-water channel may fill up and cut out somewhere else. Frequently at low stages of water there will be through some particular bar some five or six different channels of about, the same depth. Sometimes one and sometimes another obtains a slight preponderance, which renders it the steamboat channel; but this deepening is often only temporary, and the steamboat channel may change from one channel to another from day to day.

Q. Is it a correct inference, then, that there is sufficient water in the river provided it is brought to be

So far as the low-water improvement is concerned.

And if you bring it into that limit you say there will be water enough to e sufficient crosion to give a good channel?

Q. Have you any doubt about that? None whatever.

And that is the result of your observations?

A. Yes, sir,
Q. Now, would you get that effect upon the bed of the river if the restraining rorks are put in before the river rises into a flood?
A. I do not exactly understand your question.
Q. Would you be obliged to wait until flood-time till you got that effect?
A. That would depend entirely upon the character of the works.
Q. Drop a solid dam into the river, it will throw that much more water into echannel and scour it out?
A. Yes, sir.
Q. You contemplate the works that are permeable and afterward followed by uses works?
A. The object is to build up shoals by deposits of sand, causing an obstruction y making new banks.

y making new banks.

Q. That is, it is equivalent to drawing the banks in?

A. Yes, sir; equivalent to drawing the banks in.

Q. Then your new banks are as durable as the old banks, we will assume?

A. Yes, sir. A. Q. A. Q.

A. Yes, sir.

Q. When these new banks form you have the river contracted between the river banks to 3,000 feet?

A. Yes, sir: at low water.

Q. Now, will you be compelled to wait until the river rises in flood until it shows itself on the bottom?

A. No, sir; as the river rises from low to high water it will undoubtedly scour out the channel.

Q. That is if the river flows over the height of low water?

A. Yes, sir.

Q. You are going to put them in at low water?

A. Yes, sir.

Q. You are going to put them in at low water.
A. Yes, sir.
Q. Then you are going to put them in at low water—will you have the river at work on the bottom at low water or will you have to wait until flood?
A. We contemplate that we will have to wait until flood, because the works themselves are not capable of accomplishing the results desired.
Q. Your work is for the construction of new banks?
A. They will be formed after one or more flood stages are over.
Q. Will this scheme operate in the low stages of the water?
A. I can only repeat the previous answer, if I understand the question. If the results sought to be accomplished by the works are accomplished the banks will have been built up, and as a result the bottom will undoubtedly scour out.
Q. And then with the new banks formed it will keep that scouring in process, and so keep a good channel?
A. Undoubtedly.
Q. And that process will go on even at the lower stages of the river.
A. Yes, sir.
Q. And successfully?
A. Yes, sir.
A. Yes, sir.

Now, if that is so, what do you want with the levees on the banks of the

Q. Now, if that is so, what do you want with the levees on the banks of the river?

A. That, of course, opens up another phase of the situation. According to my idea, the improvement of the river is not possible unless it is controlled at its high stages as well as at the low stages. The trouble lies in the character of the river itself. One of the essential conditions of the improvement is the obtaining a coincidence in location between the high-water channel and the low-water channel. Otherwise, and it is frequently the case now in the present condition of the river, they do not coincide, and at or during high water deposits are thrown down into the low-water channels. Then at low water, when the river has lost securing force, it is obliged to dig through these deposits left by the high water. If the low-water channel is so located and fixed as to coincide in direction with that of high water, these deposits will not be found; but in order to detail on have to control high water also, because otherwise it can go anywhere it pleases, and it may develop channels at other than the selected location. In this I am not speaking on theoretical or speculative grounds, for it has been the result of a great many improvements made in the West; that the work designed simply for the restriction of the low-water channel may have been entirely buried up at high water, so that when the river fell, instead of seeking the channel pre-

pared for it, it cut down into the works themselves, which thus were left directly in the channel and formed serious obstructions to navigation. That has occurred at Horsetail Bar, below Saint Louis, and at other places.

Q. How are you to get along unless you bring the levees up on your new

banks?

A. That is where they ought to be.
Q. Then the levee system reduces itself to the confinement of the water so as to bring it up to the edge of the new banks?

A. Yes, sir,
Q. That is what you mean by your system?

A. Yes, sir; that is my personal opinion.
Q. Then we have something new. That is your theory carried out to a logical end?

end?

A. Yes, sir.

Q. When you speak of the coincidence of high and low water channels you are necessarily brought to that conclusion?

A. Yes, sir.

Q. Then a levee, as it is understood and regarded in the present position of the levee, does not answer the needs of your theory, does it?

A. Not wholly.

Q. Nor very remotely?

A. Well, that depends on the distance from the banks; the nearer the banks

A. Well, that depends on the distance from the banks; the nearer the banks the better.

Q. You have been there and know the theory, and where they are now; can you tell me whether they answer the purpose of this plan?

A. I began by saying that they did not answer it fully. Of course they are thrown back from the river as a matter of necessity, because they would otherwise be tumbling into the river every season; but the place where they should be built is on top of the bank, when this can be held.

Q. With your channel three thousand feet wide the levees are how far apart in many places? State the average from side to side.

A. I do not think I could give you very definite figures; but, roughly speaking, a mile and a half.

Q. But some are more than that?

A. Well, you said the average. There are some that are four miles apart, probably, while the nearest, those below Red River, would be, I suppose, twenty-five hundred feet, or something like that.

Q. Well, then, to repair the levees where they now stand, some of them all the way from two to four miles apart, is going to bring danger to the work on the banks; am I correct?

A. No, sir; I do not think so, so far as my own idea goes.

Q. You say your high-water current, unless it coincides with the low water, is going to work disaster to your works. If you are going to confine the water within the levees, why are you not going to meet that difficulty? May I inquire whether you approve of the present plan of repairing the levees as they stand now as part of the channel improvement; that is, in their present location?

A. Yes, sir.

Q. Has it anything more than a remote connection?

A. That is a matter of difference of opinion.

Q. I should like yours.

A. My opinion is that it is quite an important factor in the channel improvement.

Q. Though, as you state in your report, it is not a necessary adjunct of channel

A. That is the report of the commission.
Q. You joined in it?
A. Only generally; not as an individual.
Q. Well, then, take that report as a whole, we are to average it to get the seniment of the commission?
A. It is averaged already.
Q. Where shall I put you; in the extreme view?
A. In that direction.
Q. Which end?
A. At the levee end, sir.
Q. And a pretty strong supporter of the levee end?
A. Yes, sir.
Q. But you contemplate the levees as standing on the new banks?

A. Yes, sir.
Q. But you contemplate the levees as standing on the new banks?
A. That is desirable.
Q. What is your estimate of the cost of the river improvement from Cairo to Red River, completed according to that plan; what will it cost?
A. I have never estimated the cost of the levees. My estimate for the improvement of the river without levees is about twenty-five millions.
Q. Do you still hold to that estimate?
A. Yes, sir.
Q. What will be the cost of the levees?
A. I do not know.
Q. You want them the whole length, of course, on either side and up the tributaries?

A. I do not care about the tributaries particularly.
Q. You do not care about them; why not?
A. That is not part of the Mississippi.
Q. Would not the water escape around the levees and over the surrounding

A. That is not part of the Mississippi.

Q. Would not the water escape around the levees and over the surrounding country?

A. It would have to be shut off from them to prevent overflow, but as a matter of fact they are all situated in such a way that you can not do it.

Q. When you have your complete system according to your statement, your theoretical and ideal levee system close to the edge, 3,000 feet apart, are you guing to have difficulty in maintaining them?

A. In the first place I wish to correct that idea of 3,000 feet apart, are you guing to have difficulty in maintaining them?

A. In the first place I wish to correct that idea of 3,000 feet apart. That 3,000 feet mentioned in the reports of the commission spplies only to the low-water width. The statement made by the commission was that an approximation to low-water width of 3,000 feet would do. At high water it should be more than that. The low-water width named is only an approximation, because at the bends there has got to be greater width. It would only apply strictly to the narrowest places, that is at points of inflection.

Q. Where your new banks are you would have your levees?

A. Yes, sir.

Q. In your judgment would they be easily maintainable there through the whole length?

A. That will be a question of preventing the crosion of the banks.

Q. What do you think of that?

A. I think it can be done.

Q. But at what expense, on both sides?

A. Of course that estimate I gave to you a while ago included that protection wherever it is needed.

Q. By revelment?

A. Wherever it is needed.

Q. Do you think it will be needed if you bring your river and confine it within the space indicated?

A. I think it will be needed in some places.

Q. What portion? I shold like you to be as definite as you can, because we

an extensive character, will probably be about two hundred and fifty miles. There may of course be portions of the river besides that may require more or less work. This is too early a date for us to undertake to answer definitely such a question as that. The estimate is of course only approximate, and I gave it to you merely as my individual opinion.

Q. The work that you have put in the river produces the effect speedily, does it not?

it not?

A. So far as we have had any experience, yes.

Q. But whether it will be permanent or not is a question largely for future determination?

A. Yes, sir; it depends largely upon the judiciousness of the location.

Q. Do you anticipate that when those levees are placed on your new banks, your walls raised on either side, that your flood-line is to be afterwards below the natural banks of the river?

A. No, sir; I do not.

Q. Do you not contemplate that as ever occurring in the future?

A. Only as a remote possibility.

Q. That it shall scour down—that the river shall sink below the surface of the river?

A. Only as a remote possibility.

Q. That it shall scour down—that the river shall sink below the surface of the river?

A. Very remote, sir.

Q. Has any member of your commission expressed that view?

A. I have heard that view expressed.

Q. You did not express it?

A. Only to a very limited extent. I might qualify that to make my meaning clear at once. I think it likely that in many places that effect will be produced, but I do not anticipate any general lowering from that cause. Of course theoretically there would be; doubtless absolutely there will be; at any rate the experience on other rivers, both in this country and abroad, is to that effect, but it seems to me that it will be small and hardly worth talking about. But the river as it is now with the profile which it has now (and which you will find in the report of the last year.) The profile is from Cairo to Commerce, which lies some forty miles below Memphis, that is as far as we were able to supply the low-water slope, but as that covers three of the reaches where difficulties of navigation are encountered it will answer the purpose of my explanation. You will find illustrated there that taking the lowest point and the highest, that is the extremes of the line, you will find that the straight line between these two points, and which of course is the mean slope, coincide very nearly with this profile, but you will also find that there are points which represent considerable lengths of river which stand considerably above it, which project out above this general line. For instance, the New Madrid Reach and Plumb Point Reach, my recollection of it is that the projection there above the general slope is about eight feet and the high-water slope, which is on the same profile, follows in a measure the same general form. It is, however, not quite so large, as I now remember it. I think it is about six feet. That is the local elevation of this particular reach above the main slope of the river; and you will find that the same thing holds at various points al

A. No, sir.

Q. Did you notice in the last few days the accounts of floods there?

A. Yes, sir.

Q. The Po seems to be behaving badly there?

A. We are likely to have floods on any river, but when we speak of flood-line we mean the average.

Q. There has been a depression of how much within the last four hundred

years?

A. I do not know how much; in the case of the Po there has been a depression of the bed, but not of the flood-line. Some explain this one way and some another. I think the most reasonable explanation is that the height of the flood-line is augmented by the progressive deforesting of the mountains and that the water comes down faster. Q. Then, going below the mouth of the Red River, the navigation is good, is it not?

the theory, the navigation below the mouth of the field friver, the havigation is good, is it not?

A. Yes, sir; there is good navigation below Red River.

Q. State, then, what would be the use of levees, in connection with that theory, below that point for channel improvement?

A. The effect of levees below there would be to carry off the water better and to preserve the lower trunk of the river in its present excellent condition. I cover here both branches of the subject; there is plenty of water for navigation, but if you do not get the water out of the river promptly you will have greater floods in the upper portion and corresponding deterioration of navigation.

Q. But for navigation the floods are no damage?

A. That depends.

Q. On what? There have been floods from time immemorial in the Mississippi and there has been good navigation all the way down below Red River.

A. The floods have not been allowed to go out of the river below the Red River. The levee system has been constantly kept up.

Q. But they have been badly damaged the last ten years?

A. They have been badly damaged the last ten years?

tup.
True, but serious ergynesses have occurred there making great outlets to the
4-waters?
Yes, sir; of course there have been crevasses.
What work are you doing there now?
Below Red River?

Yes, sir. We are closing crevasses.

A. We are closing crevasses.
Q. You are closing up a crevasse where water has been escaping for many ears; Bonnet Carré is the one I believe?

A. Yes, sir.
Q. In your judgment would they be easily maintainable there through the rhole length?
A. That will be a question of preventing the erosion of the banks.
Q. What do you think of that?
A. I think it car be done.
Q. But at what expense, on both sides?
A. Of course that estimate I gave to you a while ago included that protection wherever it is needed.
Q. By revetment?
A. Wherever it is needed.
Q. Do you think it will be needed if you bring your river and confine it within he space indicated?
A. I think it will be needed in some places.
Q. What portion? I shold like you to be as definite as you can, because we reserve seed ing for information.
A. My idea is that the portion of the river which will require improvement of an extensive character (I will not say expensive because that is implied), but of

a

were the breaks leading into the Atchafalaya. Of course any water that goes through these breaks tends to enlarge that outlet, which is something that the commission think it extremely desirable to prevent.

Q. Did you understand that Congress intended that you should do anything more in expending the money given you than to improve the navigation of the

A. That of course is implied by the law, but as to the work bearing upon navigation improvement, that was left for us to decide.

Q. True, and everything you did was in the direction of channel improvement?

ment?

A. Solely for purposes of channel improvement.

Q. Now, your theory of concentration as applied was to be considered in concentration with that improvement where improvement was needed, was it not? In ether words, you were given \$5,000,000 in round numbers to improve navigation between Cairo and the head of the Passes. Now, why would you spend any money where improvement of the channel was not needed?

A. It is impossible in a case of that kind to divorce the diverse interests along the river.

between Cairo and the head of the Passes. Now, why would you spend any money where improvement of the channel was not needed?

A. It is impossible in a case of that kind to divorce the diverse interests along the river.

Q. What are those interests?

A. In this particular case to which you refer, as I have before stated, the object was very largely if not entirely to prevent the admission of water into the Atchafalaya and the enlargement of that stream.

Q. Was that the reason for closing Bonnet Carré?

A. I have not come to that yet; I have referred only to the breaks on the right bank below the mouth of Red River.

Q. Well, come to Bonnet Carré at your convenience.

A. Well, in the case of Bonnet Carré, that was a question of direct benefit to be received by navigation. In other words the Bonnet Carré break was at the foot of an extremely sharp bend in the river. Boats coming down stream have to come around a sharp point to get into the bend below, and as they go around this point they are headed directly into the break. At high water there is a strong set of the current in that direction; and in case of foggy and dark nights there is danger of boats being drawn into it. The risk to steamboats is not so great; but there is a case on record where one of the large New Orleans boats went into it at night.

Q. Soon after the crevasse was opened?

A. Yes, sir; soon after the crevasse was opened; I forget the year. The crevasse was formed in 1874; I do not recollect the date, but there has been nothing to prevent them from going in since. The danger, however, was of course greater in the case of boats that had no propelling power—flat-boats and things of that kind; they have frequently been drawn in there. The case was drawn to the attention of the commission. They found that a small expenditure of money, \$15,000, would secure the closing of that break, and the remedy for that source of danger would be secured.

Q. Did it enter into your consideration at all that the value of levees was to protect lands from overfl

We singled out the different States that were concerned in the matter and then we had to locate our expenditures where the local means were the smallest. Q. What had this improvement of the channel of the river to do with the interests of the State?

A. I do not know whether it had anything to do with it or not.
Q. Why did you have to consuit?
A. Our object was to close the gaps in these levees,
Q. Your object was to close the gaps in the levees, as one of the measures.
Q. Did you proceed to decide what places ought to be closed chiefly because they would mostly improve the channel of the river?
A. No, I can not say that we did. The object that the commission had was as soon as possible, or as soon as they could get the money, to complete the line of levees throughout the whole length of the river. That was stated in the first report; that was what was meant when we referred to closing existing gaps in the levees. When they came to actual work, the consideration which ruled them, the very natural one, was to begin at the lower end of the river and work up.
Q. So your commission decided to build levees the whole length on both sides of the river, to begin with that—that is your plan if you have the money?
A. Certainly.
Q. The majority is in favor of it?
A. That must form part of the system recommended.
Q. You propose to build the new banks?
A. We proposed to close the gaps in the levees.
Q. Then afterward you proposed to build new ones on the new banks?
A. When they are completed. I do not say that is the opinion of the commission. That is my own opinion, however.
Q. But you began at the lower part and worked up?
A. Yes, sir.
Q. Did you spend any part in Mississippi?
A. I said we began at the lower end and worked up.
Q. How much did you expend in Louisiana?
A. Moo sir.
Q. Did you close all the gaps in Louisiana?
A. Hou who did you can be a part in Mississippi?
A. I said we began at the lower end and worked up.
Q. How much did you can be used in the leaves of the river is of the river of the river is further cons

Q. Well, on the left bank of the river, did you apply some mosome works?

A. In Louisiana?
Q. Yes, sir.
A. Only to Bonnet Carré.
Q. Then in Mississippi?
A. In Mississippi the expenditures were along the Yazoo front.
Q. How much?
A. I do not remember.
Q. Have you got up as far on the right bank as Arkansas?
A. We have closed some breaks in Arkansas.

Q. Have you come further in Mississippi than the left bank?
A. No, sir; there are no levees above Memphis on the left bank.
Q. Then you have helped all the States that have had any levee work to do?
A. Except Missouri.
Q. You have really gone into partnership with them; is that it?
A. If you choose to apply that name to it.
Q. For channel improvement?

Q. For channel improvement? A. Channel improvement is our purpose. Q. The difficulty I have is—the question I want to go into is, why, if you are corking for channel improvement, and commence at the lower end and come p, why you did not finish at the lower end instead of giving Arkansas some and Mississippi some? A. Well, we were disappointed in some respects. There are some gaps left pen, but it was expected when the allotments were made that these would be losed.

open, but it was expected when the allotments were made that these would be closed.

Q. In the course of years back, say twenty or twenty-five, has the navigation of the Mississippi deteriorated?

A. That is the common statement of pilots.

Q. Have you any information yourself as the result of observation?

A. There is no other authority for it.

Q. Not as the result of measurement and soundings?

A. Nothing on record; no, sir.

Q. How can you account for that fact, if it be a fact?

A. It is a hard thing to account for. There are many causes that might be assigned, but how far they are valid I should hardly like to say; but whatever may be the cause, I think that at least an accompaniment of deterioration has been the widening of the river. That has been established, I think. Where widening of that kind occurs it simply means that the caving of the banks on one side is more rapid than the growth on the opposite by deposits.

Q. Then you do not speak of such widening as the water passing beyond the line of present levees? You do not mean in overflows?

A. I speak entirely of water within the banks.

Q. Then you think that the navigation has deteriorated because of the lack of maintenance of the levee system?

A. I think in some instances there is a good deal of evidence bearing that way.

O. That is rather guardedly stated, major?

Maintenance of the levee system?

A. I think in some instances there is a good deal of evidence bearing that way.

Q. That is rather guardedly stated, major?

A. In these long reaches where navigation is difficult it is, I think, in every case associated with absence of levees or breaks in levees. For instance, take one of the list of shoal reaches—Lake Providence we will say. At the head of that reach is a large crevase which, I think, was formed during the war, in 1862. It is caffed the Ashton crevasse. It then right at the head of that reach is a large crevase which, I think, was formed during the war, in 1862. It is caffed the Ashton crevasse. It the right at the head of the shoal water. The people who live in that neighborhood assert very confidently that the deterioration of navigation has been going on only since that crevasse has been in existence. I know nothing more about it than that. The next reach in order as you go up the river is just above Arkansas City, what is known as Choctaw Bend. There you have a parallel case in the outlet from the Mississippi that is known as Cypress Creek. It is really a small drain coming down from the Arkansas; but in time of flood the Mississippi runs up this creek and passes out through a depression in the high ground which forms the southern border of the valley of the Arkansas. The vater runs through this and then flows down into the Red River. It has always been quite a large outlet, and there has been no systematic maintenance of levees across it, although levees have been constructed there.

Q. When?

A. What year I can not tell you, but they have been down for some years, so as to leave open a continuous outlet and quite a considerable one. In the other reaches, Helena, for instance, there you have large outlets into the basin on the other side, the Yazoo basin, the old Yazoo Pass, for instance. Above there at Memphis, Plum Point, and New Madrid you have no levees.

Q. This influence of the want of a perfect levee system is not to be asserted with a great deal

ou?

A. Not exactly at the present time. It has formed in my mind as my opporunities for observation have been extended.

Q. Then you do account for deterioration of navigation?

A. There are some other causes mentioned in that report which seemed to me
t the time, and I think still are, probably of more or less value.

Q. Rather more likely to be sufficient than this other?

A. Well, I should hardly give them the preponderance of value at the present
targe of the auestion.

A. Well, I should hardly give them the preponderance of value at the present stage of the question.

Q. Do you contemplate after the new banks are formed with the levees on them a revetment of the banks?

A. Wherever it is necessary. The question as to whether it will be necessary is largely a matter of conjecture; yet, I think myself that with the river regulated, reduced in width in the way we have been speaking of, I think the necessity for revetment will be very largely reduced.

Q. Will there be any danger from the revetment on the banks?

A. I do not know that I understand what you mean.

Q. Would you expect any dangerous consequences from revetments in any way?

way?

A. No, sir.

Q. Well, Major, I read from your report. After you have discussed sand bars and waves you say: "From what has been said it may be readily inferred that a wholesale revetment of the Mississippi banks would entail the gravest consequences; the bed would infallibly be raised by the accumulation of deposits and disastrous inundations would result."

A. That was written a good many years ago.

By the CHAIRMAN:
When was that?

Mr. ROBINSON. In 1875. I find that the commission referred to your report in 1875 as their opinion at the time, and you subscribe to it yourself.

A. I think the commission only referred to that as an index to shoals.

Q. Well, as an index to what is sout.d; but you have abandoned that idea.

A. Yes, sir; I gave that up some time ago.

Q. Then, there is room for information to be gained in connection with the Mississippi River?

A. There is no mistake about that.

assiph five: ... There is no mistake about that. And you would proceed with a great deal of reserve as to what would be

A. Q.

roper?

A. On a good many points.

Q. What do you say at the present time as to policy of closing chutes?

A. My own opinion has not changed.

Q. You would not close them?

A. I would. In other words, concentration must be carried to its legitimate

end.
Mr. Robinson. Still, I read—
The Witness. From that same report?
Mr. Robinson. From that same report.

The Witness. I shall have to say as I did before, my opinions have changed.

Mr. Robinsson. But I will read:

"It must first be laid down as a cardinal principle that no work should be allowed which will interfere with the present navigation. As boats during high stages of water depend upon the use of the various chutes and other similar channels as an important means of saving distance it would manifestly be improper to project any works which would prevent this use, except in cases of absolute necessity, and it is thought that such cases will be very rare."

A. I must say in explanation of that, the plan of improvement recommended in that report, which is of course a very crude affair and written many years ago, was not such a plan as is recommended now. It was practically simply a low-water improvement, which at that time I myself, and I think probably everybody else, thought was the only one possible.

Q. Well, that is all that is needed for navigation, isn't it? When the river is confined within its banks, throwing out snags and the uncertainties of piloting, what is the trouble with navigation?

A. The trouble is not in navigation exactly, but the point is to retain control over the river. At the time that report was written, from which you are reading, the only work done on the Mississippi anywhere was in the vicinity of Saint Louis, and the engineers in charge of that followed the German and French practice of building solid stone dams and attempted to control the river by these means. They were enormously costly and in the end proved a failure, but at the time that was written we did not know of anything else; but you can readily see that it was not desirable to go into experiments of high-water improvement with structures of that character.

Q. You would consider work of revetment of the banks a very expensive one, would you not?

A. That is expensive, of course.

Q. Because of the want of material?

A. Yes; and on account of the extent. It is a character of work that is very expensive. It is unquesti

on the Yazoo, in the vicinity of Vicksburgh.

Q. Well, when you recall what you said in 1875 you probably did not overstate it at that time?

A. In that report I am alluding almost entirely to dikes composed almost entirely of stone. The plan that is described there is enormously expensive.

Q. Something like \$100,000 a mile?

A. Yes, str, formed in that way.

Q. There is lighter material, that is, hurdle and piles. These are much cheaper,

A. Yes, sir.

Q. If the stone work was placed on a permanent foundation it would be permanent without reverment, would it not?

A. Well, the stone work so erected is in the nature of a revetment.

Q. Well, the stone work so erected is in the nature of a revetment.

Q. Well, your new works will require this stode revetment?

A. No, sir; the banks we propose forming are on the concave side of the river,

Q. But on the convex sides?

A. There we have to take the banks that are already there. We do not propose to furnish new banks, with the exception of a distance at Plum Point. It is very rare indeed, however, that we have to contract the river on both sides.

Q. Does it ever happen that the water passes through the revetments and the interstices and unsettles the banks?

A. Only experience can test that question. I think with properly constructed brush mattresses it is not to be feared.

Q. Do you understand the commission in their report (Executive Document No. 58, Forty-sixth Congress, second session) as recommending that work should be commenced on one of the points as a test?

A. No, sir; estimates were made for six different localities.

Q. In the report of the commission of which General Barnard was president in 1879, in which report you joined, you recommend that work be commenced upon one of the bad places?

A. Yes, sir.

O. Plum Point Reach is one of the worst reaches on the river.

A. Yes, sir.

Q. Plum Point Reach is one of the worst reaches on the river?

A. Yes, sir.

Q. Plum Point Reach is one of the worst reaches on the river?

A. Yes, sir.

Q. Economically considered, when so much is uncertain, would it not have been better to have applied the \$1,000,000 given you to some one reach rather than scatter it along in a number of reaches?

A. No, sir. That is not my opinion. When you refer to the report of the board of 1879, I will say that I thought at that time that it would be so, but that was simply for the reason that the methods proposed by that board were at that time entirely experimental; in fact, so far as this improvement is concerned, with the exception of some of Mr. Eads's work at South Pass, nothing of the kind had ever been tried in this country to my knowledge, except some work I had done myself on the Missouri River, and while I thought, and other members of the board thought, too, that it was a very promising experiment, and if it proved successful would be a very important one, yet none of us could feel the least assument of it. It was with that idea in view that we recommended that one reach should be selected and the work tried there. But almost immediately after that report was written the works below Saint Louis changed hands and the system was initiated there on a large scale. At the time that the commission made their report those works had progressed so far that anybody could see what the results would be, and we considered that it had passed beyond the experimental stage and was a fixed fact

Q. You said a moment ago, if I understood you correctly, that the whole of the work of the river could be done for \$25,000,000?

A. That is my own estimate.

Q. How much has been spent at Plum Point up to the present time?

A. I do not know, sir; General Comstock gave you the figures the other day, I think.

Q. One million two hundred and fifty thousand dollars?

Uluik.
Q. One million two hundred and fifty thousand dollars?
A. Well, of course that is not all properly chargeable to Plum Point, because he plunt, which forms a very large iten in that sun, can be used in other places.
Q. Then \$1,839,876 more will be required, according to the local engineer's

estimate?

A. I do not know anything about that.
Q. You have no reason to question that, I suppose?
A. No, sir; I should not undertake to question it, because I have not the data,
Q. Then if revetment was also required, it was stated by General Comstock
that \$670,359 more would be required; that is, a together, \$3,760,334 at that place?
A. I do not know of course exactly of what those figures are composed.
Q. And the estimate in the report which you signed was \$736,000 for certain
work, and to complete the works the same sum more, being \$1,472,000?

A. Yes.

Q. You will find it to be now \$3,760,234?

A. I say I can not speak, for that estimate, because I do not know how it was made. Of course, in giving you a lump estimate for the cost of the entire improvement of the river I should not be understood as meaning that you can divide that sum by the number of miles to be improved, thus getting the average expense per mile, and that by expending that sum on every mile of the river you

would get a complete improvement. I do not mean anything of that kind. Some points will need no improvement at all, some will need a little, others a little more, and others a great deal; but so far as is possible for any man to make estimates for his own guidance that is my opinion.

Q. But my difficulty was, if on your statement in 1880, as forming a part of the \$3,760,200,000, you allotted \$1,472,000 for Plum Point Reach, and which now amounts to \$3,760,234, whether you will proportionately increase your estimates of \$25,000,000 for the whole?

Q. But my difficulty was, if on your statement in 1880, as forming a part of the \$25,000,000, you allotted \$1,472,000 for Prinn Point Reach, and which now amounts to \$3,760,234, whether you will proportionately increase your estimates of \$25,000,000 for the whole?

A. No; for the estimate was made after the estimate to which you allude there and with that in view.

Q. How do you get at that sum of \$25,000,000?

A. I can not give any details because I never made them, and that estimate was simply from my own experience in works of that kind.

Q. Did you make any estimate as to details?

A. The detailed estimate is impossible, that is, going over it mile by mile; of other own general experience.

Q. Did you make any figures at all?

A. Yes, sir.

Q. Well, what figures did you make?

A. My idea was formed from the cost which I knew that work of a similar character had come to in other places, and that idea was formed at a very early stage in the game. I say that I have not changed it, and I have not. I still think that would be enough, but that is merely a matter of opinion.

A. Wes, sir.

Q. How can you state about that cost, then?

A. Merely as a matter of opinion.

Q. Vinta proportion of the banks from Cairo down on both sides, in your opinion, will have to be revetted?

A. It is from Cairo to Rea River the proportion of banks to be revetted will too. Q. Vinta from Cairo to Rea River the proportion of the bank from Cairo to Rea River the proportion of the bank from Cairo to Rea River the proportion of the bank for low water, as shown in the recent work that has been done at the points on the river, has averaged about \$3 a foot. The protection of the bank above water, carried to the extent which they are doing it, as, for instance, near Vicksburgh at the Deila Point, has brought the total cost up about \$14 a foot.

Q. Leaf foot, measured along the bank down the stream?

A. It is very difficult indeed to answer a question of the bank above water, carried to the extent which they are doing it, as, for instance, ne

I find that two hundred miles of revetment at \$14 a foot would cost \$14,784,000 three hundred would be \$22,170,000?
Yes, sir.
In either case you would want more to complete the other works?
What other works?
The contraction works.
They are not at all costly.
What do they cost?
At Lake Providence they have cost inside of \$4 a foot.
About \$20,000 a mile?
Yes; where you measure by miles.

About \$20,000 a mile?
Yes; where you measure by miles.
How many miles of that work do you expect there will be altogether?
That I do not know.
These reaches will all require it?
Yes; but it is not the intention to carry a line of works the full length of

How long is that longest one at Lake Providence? I could not say. That is several miles long now, is it not? I think it is.

A. I think it is.
Q. The work is going on at the rate of \$20,000 a mile?
A. That is about the figure.
By Mr. Thomas:
Q. Suppose that there are \$3,100,000 expended there; about a million of that would be for a plant, would it not?
A. You mean if the work were starting anew?
Q. Yes.
A. Yes.
Q. Including the money expended for plant and that necessarily to be expended for a plant, it would amount to a million of dollars, would it not?
A. Very nearly.
Q. When these works are completed at least half of that plant would be good for other purposes?

Q. When these works are completed at least than of this plant would be for other purposes?

A. Yes, sir.
Q. Then that would leave \$2,600,000?
A. Yes, sir.
Q. Now, that would test the work on thirty-eight miles at Plum Point reach?

- A. Yes, sir.
  Q. Two million six hundred thousand dollars divided by thirty-eight miles gives about \$70,000 per mile?
  A. Yes, sir.
  Q. I believe the largest estimate of river to be improved is two hundred and sixty miles, is it not?
  A. I think about that.
  Q. That makes only \$18,200,000 for the complete improvement?
  A. I think so.

By Mr. ROBINSON :

A. Captain Knight is one of your officers in charge there, is he not?

A. Yes, sir.

Q. Is he a competent officer?

A. I presume he is.

Q. Have you had any occasion to oversee his work?

A. Only as a member of the commission; he has only been on the work a short

time.
Q. You have had no opportunity to examine his work?
A. Only with the commission at the various inspections.
Q. Has he been so situated as to know what the work would east at that reach?
A. So far as his experience goes. Pretty much all the work done there has been done under his direction.
Q. So that of the work done under his direction he would be a competent judge and a good witness as to the cost?
A. Certainly.

Q. So that of the work done under his directors judge and a good witness as to the cost?

A. Certainly.
Q. And that would be better than mere speculation or estimates?
A. Yes.
Q. Have you known of your own knowledge what it has cost?
A. Only two little pieces of revetment had been put in there the last time I was there, one at the head of Bullerton Towhead and the other near Ashport. Neither of them is completed, but from figures given us at the time we estimated that the cost completed would be about \$12 a foot.
Q. Do you know whether it is a fact that it has not cost double that sum?
A. It certainly can not have cost double, because they had only expended up to that time \$3 a foot.
Q. But of what it has cost Captain Knight would be a good witness?
A. That was the cost at that time. They had only finished a portion of the work under water, and that cost \$3 a foot.
Q. How much mattress work had they sunk there?
A. It think they had about \$3,000 feet at Ashport and perhaps an equal amount at Bullerton Towhead.
Q. How often do you visit the work personally?
A. Whenever the committee on construction does.
Q. Personally how often do you visit it?
A. We have been down there pretty near once a month a portion of the time.
Q. Yourself?
A. It have never gone alone.

Q.A.Q. Yourself?
I have never gone alone.
Have you always gone when somebody else has gone?
Yes, sir.

A. Yes, sir. Q. And when you have gone has it been in company with a majority of the

A. Yes, sir. Q. So that the commission has been present every time?
A. Not every time; there was at least one trip—two trips, I think—when they Not every time; there was at least one trip—two trips, I think—when they re not.

How often in each year does the whole commission visit the works?

There is no fixed rule about that.

How often have you within the last twelve months?

The full commission have made three trips since last May.

By what method of transportation do you go when you inspect the works?

On our own boat.

When was that boat obtained?

During the course of last winter.

And used the last season for the first time?

Yes, in May.

Was it built expressly for the commission?

It was built by the commission.

Where?

At Saint Louis.

At what cost?

The total cost I believe was \$60,000; I would not be positive about that.

That is a boat for the accommodation of the commission?

What is the name of it?

The Mississippi.

It is need in the construction of part of the work?

Yes, sir.

Yes, sir.

It is not then entirely for transportation of passengers?

That is merely an incident.

In your very last report, which is now in process of printing, is there any

A. Q.

A. That is merely an incident.
Q. In your very last report, which is now in process of printing, is there any revision of your estimate of that whole cost?

revision of your estimate of that whole cost?

A. No, sir.

Q. Have you had that under consideration since last year?

A. No; I felt, and I think the whole commission did, that there was not enough data from the work that has been done to make an estimate, and, moreover, the maps of the river are not completed yet.

Q. With the \$5,123,000 already appropriated there is not enough data and experience so that you can say what will be the limit of cost in the future?

A. No, sir; you see there is very little work done of the kind that is going to be costly.

be costly.

Q. For how long a time must your work at Plum Point have to stand before

Q. For now long a time must your work at Plum Point have to stand before you can tell about its success?

A. Do you mean the revetment?

Q. All that is necessary; and if that includes revetment, how long will it stand before you are certain it will be permanent?

A. So far as the revetment is concerned, I should say that a test of one flood would be pretty good evidence of that, at least for the portion below water.

Q. I gather from your testimony that you approve of the plan that is now being pursued?

wed?
Yes, sir.
And have confidence in its successful result?
Yes, sir.
What do you think of the outlet system?
I do not approve of it, sir.
For much the same reasons that have been given quite at length by other lemen here. gentlemen here?

A. Yes, sir.
Q. Have you examined the works at South Pass known as the jettics?
A. I have been there once. I was down there in 1879.
Q. Not later than that?
A. No, sir.
Q. Have you ever made any soundings of the South Pass into the Gulf, and save you knowledge as an engineer about the deposition of sediment there?
A. No, sir.

By Mr. Thomas:

Q. You say that you do not approve of the outlet system for the same reasons that have been given at length. Will you state them briefly?

A. The principal one is that the system as a whole is opposed to the system of contraction and concentration, which is the main principle upon which the plans of the commission are based.

Q. That is the whole thing in a nutshell, is it not?

A. Yes.

Q. Do you know whether this estimate that has been worked out here by Mr. Robinson is a fair estimate of the amount of money that will be necessary to be expended at Plum Point?

A. I do not. I have not seen the details of it.

Q. It is an estimate that I understand was procured by General Comstock from the officer in charge of the work there. Do you know whether that estimate included the revetment and the work completed?

A. I do not, but I presume that it did.

Q. Would you think that the amount over and above \$18,200,000 up to \$25,000,000, which you estimate, would be enough to repair the levees, close the gaps, and restore a continuous line of levees?

A. No, sir; I should hardly think it would. In the estimate that I said I had made I had no reference to levees.

Q. You left them entirely out. What length of river do you contemplate improving—how many miles?

A. Well, the total distance is about eight hundred miles.

Q. I mean upon how many miles do you estimate that work would have to be done?

A. About two hundred and fifty miles.

A. About two hundred and fifty miles.
Q. The balance of the river would require little or no expense?
A. Little or no expense.

Little or no expense. By Mr. Robinson:

By Mr. ROBINSON:
Q. How many of your corps are detailed to the service of the commission?
A. There are three from the Engineer Corps of the Army and one member of the Coast Survey.
Q. Please name them.
A. Of the engineers, General Gillmore, General Comstock, and myself; and of the Coast Survey, Professor Mitchell.
Q. You four have no choice as to whether you are on the board or not, have you?

you?

A. No, sir.

By Mr. Burrows:
Q. Your plan contemplates the protection of caving banks, does it not?
A. Yes, sir.
Q. Those must be protected?
A. Yes, sir.

Description of caving banks. A. Q. A. Q. A. A. Yes, sir.
Q. Do you know the number of caving banks?
A. No; I attempted to do it once, but I have lost the figures and do not remember what they were,

The caving does not conce, but I have lost the figures and do not remember what they were.

Q. How high up did you get in the figures?

A. I do not remember, really. It was not a fair count, as I remember, which some of my assistants were making; it took in every bank that ever had caved; but the point I am trying to make out is that in any one bend where caving of the bank of the river is going on it is not all caving at once. The caving goes on piecemeal.

Q. When you say two hundred and fifty miles are to be protected, do you mean two hundred and fifty miles of caving bank?

A. I should think they would aggregate that.

Q. Would you say there are not three hundred?

A. I would not like to swear that there are not.

Q. Would you say there were not five hundred, taking first one side and then the other?

Q. Would you say there were not five hundred, taking first one side and then the other?

A. I should not think it would run over the figures I gave.
Q. Would you say there were not five hundred miles?
A. I should say not; I am very sure of it.
Q. The current of the river strikes one bank, does it not, and caves there, and then strikes over on the other side, and caves it there?
A. Yes, sir.
Q. Does it not consume about half the length of the river in caving, counting both sides?
A. No, sir; I think not. Oh, certainly; I think I misunderstood you; of course it would approximate to one-half the entire length of the river.
Q. Would it not approximate to the entire length of the river?
A. I think not.
Q. How much short of it would it fall?
A. That would be something I should dislike to make a close guess at; I could not make a close guess at it. The point is that even in the banks that, from their position, are liable to cave, it is a very rare thing to find that the whole length does cave.

does cave.
Q. But you have been down the river and noticed the caving; wherever the river strikes the bank as a rule the banks cave?
A. A portion of it does, but not the whole, as a rule, of any one of those caving banks; the caving is at least initiated at one point.
Q. Did you not find at different places where the current strikes the banks for a mile that there is caving and that trees were falling into the stream?
A. Oh, yes; for longer places than that; some of those bends are twelve or fifteen miles around.
O. And the current oreding the banks all the way?

A. on, yes; for longer places than that; some of those bends are twelve or fifeen miles around.
Q. And the current eroding the bank all the way?
A. No, sir; that is the point I stated.
Q. Well, I want to know, now, if you are prepared to say that there are not alwe hundred miles to be protected?
A. Yes, I think I could assert that pretty confidently.
Q. Have you ever made any measurement to ascertain the fact?
A. No, I have never gone into it in much detail.
Q. Then it is guess-work?
A. It is guess-work.
Q. Well, if five hundred miles of bank is to be protected the cost would be increased, would it not?
A. It would cost whatever the cost would be. But even supposing the revetment had to be extended over a longer distance than that I am speaking of the cost of it would not come up to that \$70,000 a mile, because that is only a very exceptional case.
Q. Does not the current change frequently?

exceptional case.
Q. Does not the current change frequently?
A. At certain localities it does.
Q. Suppose you have a concave bank protected from the course of the current and the current should change and strike above your bank protection?
A. It would very soon disappear.
Q. What would disappear?
A. The bank protection.
Q. How would you save it?
A. It would have to be extended up-stream you would have to increase your bank protection?

your bank protection? Yes, sir.

xes, sir.

Then you can not estimate the cost even by your present banks, can you?

Yes; the caving of the banks, wherever that does occur, is due as a rule to caving above, because usually bends follow each other. As the water crossess.

out from the foot of one bend, it strikes over obliquely and downward into the next; it can not shift up in the second bend unless it is given such a direction by the bend it leaves; and that change occurs, as a rule, from the caving of the

by the bend it leaves; and that change occurs, as a rule, from the caving of the benk.

Q. Then your idea is—
A. That one bend will protect the next.

Q. Then the your idea is—
A. That one bend will protect the next.

Q. Then involves the doing of this work all at ence, does it not?
A. Well, of course it would be much better to do it so, but that is impossible,
Q. If you are going to keep the protection at one bend you must put these
protections all down at the same time?
A. It is desirable but it is not absolutely necessary to push it to that length,
Q. Suppose the current should leave the bank that you have just protected
and strike the other shore immediately opposite, what would ise the effect?
A. You mean if that bank were protected, or unprotected.
Q. It leaves the protected and strikes the unprotected bank directly opposite?
A. It would be very apt to start it to caving.
Q. And cause the sediment to fall in front of your work?
A. Yes, sir.
Q. And leave it inland a mile or two perhaps?
A. That would be rather excessive.
Q. Well, quite a distance?
A. Yes, there would be a deposit there.
Q. What are we to understand by "revetment"?
A. It is a mattress protection for the bank.
Q. Under water?
A. Under and above also.
Q. And of what material?

Q. Under water?
A. Under and above also.
Q. And of what material?
A. Brush.
Q. And on top of that?
A. Above water some portions of it would be covered with stone.

By Mr. ROBINSON:

By Mr. Robinson:

Q. You find hard clay at certain depths in the bottom of the river, do you not?

A. I could hardly say that we do. I have not found any.

Q. There are instances within your observation in which portions of the bank of the river behind the front portion will go down, break down behind the front portion and disappear, trees and all?

A. Yes, sir.

Q. How do you account for that?

A. Wherever we have made borings we find areas of greater or less extent, where there is a pretty well defined stratification of clay and sand, sometimes quite a considerable area; layers of clay are a considerable feature, but with the layers interpolated with beds of sand; and the only explanation that I can give for a phenomenon of that kind is that from the action of the water the sand is washed out and then the whole mass sinks in the way you state.

Q. What would become of your works if located in such a place as that?

A. They would be washed out.

Q. That is not a very unusual occurrence on the river, is it?

A. Yes, it is rather unusual.

Q. One sees it in innumerable places in going down the river, does he not?

A. No, sir. If I understood correctly the phenomenon you referred to, where the bank some distance back from the river sinks, I have only seen two or three mislances of it. Perhaps you refer to what are called slides, in which a portion of the bank, in greater or less extent, will begin to go down, with the trees and all standing, and gradually go down deeper and deeper, and finally go out into the river.

Q. No, sir. I am aware of that occurrence, but also I refer to that which you

No, sir. I am aware of that occurrence, but also I refer to that which you

Q. No, sir. I am aware of that occurrence, but also I refer to that which you first alluded to.

A. That is a very rare occurrence. Of course if it should occur it would take out anything in front of it.

Q. Do you recollect any point on the left bank pretty well down the river—I should think perhaps two hundred miles above New Orleans—where it has happened in behind the bank at least a hundred feet, forming quite a lake there?

A. No, sir.

A. No, sir. Q. Such localities as that would, as you said before, disturb any works that

you might put in front of them?

A. Of course it would be necessary to find out what was the true cause of such action as that. The explanation I give may be a good one, and it may not; but of course it would be very difficult to prevent anything of that kind. For the ordinary slides that I spoke of, the best protection against them is in grading the bunk.

Q. From your observation is the breaking down of the bank perpendicular or

A. Both, but the perpendicular is the most common.

Q. You speak of it as perpendicular; do you mean down to the water-line?

A. To tile water-line; below that it is only a slope. It is caused by the undermining action of the current at the toe of the bank. It cuts in a few inches at a and then a slice falls.

Q. It is because the soil is so soft and yielding that there is nothing to sustain

A. It is sandy generally.
Q. Does the bank go down under the line of the water perpendicularly?
A. No, sir.
Q. In no case?
A. It must be a very rare occurrence; I never saw it.
Q. What is that angle?
A. I think in the steepest places it is about two to one, but it will run, even on soneave banks, as high as three to one.
Q. What will you state is the height of the banks of the river above low-water nark?

ark?
A. I think the average height will probably be somewhere in the neighborhood of fifty feet—forty-five or fifty feet high.
Q. What is the range given in the height of water from low-water mark to high flood, on the vertical line?
A. The average approximates the same height.
Q. And what was that?
A. Forty-five or fifty feet.
Q. How wide over the valley does the flood extend at its height?
A. A flood like this last one would extend over the whole area of the valley.
Q. And what is its depth over beyond the crest of the banks?
A. That I do not know, but of course it is not a level line; the surface of the water as well as the surface of the ground slopes very rapidly from the banks of the river.

The river.

Q. But stating it roughly, about what?

A. My recollection of that is that it conforms pretty nearly to the slope of the ground, and that slopes back at the rate of about twelve feet to the mile.

Q. Then you find over the soil of that valley when the rivers are in flood a depth of water of twelve to twenty feet?

A. I have no doubt you would in places.

Q. And extended twenty miles wide?

A. Yes, sir.

Q. And your plan contemplates bringing that all together within a space of 3,000 feet, and keeping it there?

A. Not 3,000 feet.

Q. How many feet?

A. That is not a settled point yet.
Q. Twice 3,000 feet?
A. I could not answer that,
Q. It contemplates bringing it somewhere within defined lines and keeping it there, does it not?
A. Yes, sir.
Q. And you believe in the efficacy of that plan, do you?
A. Yes, sir.

Yes, sir.

And you believe it is economical to carry it out as a work for the people of

this country to engage in? A. Yes, sir

By Mr. Thomas:
Q. This report of 1875 that you wrote was based mainly on the report of Hunphreys and Abbott, was it not; that is, in reference to blue clay substratum underlying the bed of the river?

lying the bed of the river?

A. Certainly.
Q. And from Humphreys and Abbott's report up to the time that an examination was made by your commission that statement of theirs that there was a blue clay substratum was accepted as a fact?

A. I think it was.
Q. Investigations made by you have shown that they were altogether at sea on that point?
A. Yes, sir.
Q. How deep is the average alluvial deposit from Cairo down?
A. About one hundred and thirty feet.
Q. Is not the bottom of the river as easily croded if the scouring force is brought to bear upon it as the banks?
A. So far methe crossion is concerned I presume it is; but in the case of the banks you have the weight of the overhanging banks to assist the caving.
Q. You have the atmospheric influences also; what I meant is they are made of the same material?

Q. You have the same material?
A. Yes, sir, of the same material?

A. Yes, sir.

Q. As to the length of caving banks; suppose the bend is twelve miles around on the line of concavity, the point where the caving occurs is where the current finally culminates, at the point of the bend, is it not?

A. The point most generally attacked is the upper portion where the water begins to draw into it.

Q. That is where the greatest force of current strikes it?

A. Yes, sir.

Q. Now, in case of modification of the current above, it works down instead of working up, as suggested by Mr. Eurrows?

A. It can not work up unless there is some obstruction.

Q. The working is almost always down?

A. Yes, sir.

The working is almost always down?
 Yes, sir.
 The tendency of the river being to cut deeper into the bend?
 Yes, sir.
 Then it has happened that having cut through at one point they will drop he point of impact on the bend below?
 Xes, sir.

WASHINGTON, D. C., Monday, January 15, 1882.

The committee met at 9.30 a.m. in the room of the Committee on the Terriories, House of Representatives.

Present, the chairman. Mr. Burrows of Michigan, Mr. Robinson of Massahusetts, Mr. Hiscock, Mr. Ellis, Mr. Holman, and Mr. Thomas.

The examination of Major C. R. Suter was continued, as follows:

By Mr. ELLIS:
Question. Have you devoted much time to studying the effect of floods and verflows upon the progress of the current of the river?
Answer. Yes, sir.
Q. Please state in detail what effect an overflow has upon the progress of the

overflows upon the progress of the current of the river?

Answer Yes, sir.

Q. Please state in detail what effect an overflow has upon the progress of the current.

A. The general effect is one of retardation. My attention was first attracted to the subject in the spring of 1881. We had a very remarkable flood on the Missouri River, of which I have charge, and I noticed it then for the first time. I do not know that any one had ever called attention to it before. I never found it mentioned. I thought it was so remarkable that I called the attention of the commission to it, and a special report was made, which was published in our annual report of last year. The general effect was this: As soon as the banks were overflowed, that is, when a general overflow of the valley began, the progress of the flood down the valley, as indicated by the progress of its crest, as determined by the hydrographs or records of gauges at the stations keept along the river, showed that up to the time at which the overflow began, that is, up to the top of the banks, the conditions were reversed.

Instead of being accelerated, the velocity was retarded so, that the progress of the whole flood down the valley was much slower than would have been antiefpated from the known rate of progress before the overflow began. We had a continuous supply coming in from above, while the progress of the main body of water was retarded. This caused a piling up of the water, as the supply from above was greater than could be carried off below. In that particular case there was no question whatever but that an abnormal height was reached by that flood. It varied at different points from five to eight feet. The actual height attained by the flood was greater by the amount flowing in the river. I reported that to the commission, and it was a subject of special report in the last annual report. After that I looked into the matter in connection with the gauge records of the Mississipi River to see whether the same thing was noticeable there, and I found at o

and well marked, so as to be traced from gauge to gauge without difficulty. That food passed from Cairo to New Orleans in just ten days. The next rise was much higher and produced overflow. I do not now remember the precise figures, but it was slower in its rate of transmission to New Orleans, and so on with each succeeding rise until finally the crest of the highest rise of all was over one hundred days in transling that distance.

Q. The crest that was within the banks went from Cairo to New Orleans in ten days, and the crest of the flood-wave that was over the bank was one hundred days.

Q. The crest that was within the banks went from Cairo to New Orleans in ten days, and the crest of the flood-wave that was over the bank was one hundred days?

A. Yes, sir; and that of course indicates an obstruction, an engorgement of some kind. There is an obstruction caused in the overflow by the falling silt.

Q. Then according to that, it retards the current 1,000 per cent, at that rate?

A. Yes, sir; but I would not venture to say that the deposit of silt by slackening the current caused retardation to that extent; the figures given only show the rate at which the mass of water is transmitted down the valley. The sequence of that is just here. If you have water in any channel like that of a river, flowing off at the lower end as fast as it is supplied at the upper end, you will have no rise of the surface at all. If the channel is obstructed, you will have more or less rise depending upon the extent of the obstructing. The explanation of this is that when the river is within its banks, even in those portions where its condition is the worst, you have a channel which is certainly better for purposes of discharge than when it extends more or less across the whole valley, and a large part of the section is obstructed by trees, busbes, and the thousand and one things which influence the flow of the water under these conditions. That being the case you must have retardation. It is impossible to expect anything else. The conditions are precisely the same, though varying in degree, as they are between a wide and shallow section where the relative proportion of resistance or frictional surface to area is greatest and what it is in the case of a narrow and deep section where the relation of race to frictional resistance is a minimum. When you have an overflow of the valley this frictional resistance is a minimum. When you have an overflow of the valley this frictional resistance is a minimum. When you have an only be done when we have the records of last year's observations. But from analogy and from the records

A. Yes, sir.
Q. Are you able to fix the percentage of increase?
A. No, sir; because that varies at different places. We have already the records of a large number of observation stations, not only upon the Mississippi River, but upon its tributaries. These observations have been in progress four years or more, but they have only been published in part; they have not yet been put in proper shape for thorough study. I have been studying them myself with the object of ascertaining the law, if there is one, which governs the whole subject—that is, the discharge of the river. I shall speak now only of such facts as have been sufficiently well established to admit of statement with any degree of necence.

subject—that is, the discharge of the river. I shall speak now only of such lates as have been sufficiently well established to admit of statement with any degree of accuracy.

We find that, taking the results of all our observations at any one station, and platting them so as to establish the relation between these velocities, areas, or discharges, whichever they may be, and the height of the gauge at the date of the observation, we find that they group themselves according to haw, and that this law shows a progressive increase from the low stages to the high stages, which is quite regular. In this way can be ascertained the law of increase of velocity and area, and also the increase of discharge.

(Major Suter here referred to Appendix D, Plate 4, figure 1, under the title of "Relations between gauge heights and mean velocity water, and datum areas, and discharges" and explained: These were taken in 1879 and 1880 at Fulton, the lower end of Plum Point reach. It is in the Report of the Mississippi River Commission for the year 1881, found in Executive Document No. 10, Forty-seventh Congress, first session.)

The WITNESS (continuing). From this you will see, taking the discharge at the higher portions of the gauge, that is, when the river is near the top of the banks, that a very small increase of gauge-height makes a very large increase in the discharging capacity, and it seems a legitimate course of reasoning to say that if this law of increase of discharge holds within the limits of the actual measurements, which in the present case do not exceed the height of the existing banks, then if the banks were higher, so as to prevent any overflow and to keep the whole amount of water within their limits, the same law would hold as you went up. When we know the amount of water that passed down during the last flood, when we collate that information from the record of the various stations, we will know of course from the measurements what the actual amount of water was that passed down, and from the computed curves w

A. We have there a very period of the solution of banks would be necessary to secure a greater increase of discharge?

Q. What elevation of banks would be necessary to secure a greater increase of discharge?

A. I am not prepared to say. My understanding of the matter—I am not entirely familiar with matters so far down the river—but I understand that the extense rise of floods passing through that section is about five feet.

Q. By increasing the banks five feet what would be the effect?

A. The effect would be that it would earry off all that water.

Q. In your judgment, how much would the discharge be increased by increasing the height of the banks five feet?

A. I could not answer that. That depends on local circumstances. That question could only be answered by knowing what the area and velocity are, and by knowing what is the law of their increase.

Q. Have you any information about it?

A. No, sir; I have not. I should be perfectly ready to say, however, that from the information which I have increase of bank height would increase the current. You have a low-water discharge there of about 100,000 cubic feet, and you have a high-water discharge at New Orleans of very nearly I,000,000, and that we know will pass off with an elevation of the water surface not exceeding five feet.

Q. It would discharge the entire river?

A. All that we know is that it will pass off ten times the amount of the low-water discharge with an increased elevation of water surface of only five feet.

Q. Then the elevation of the banks five feet would increase the discharge ten times?

A. Probably much more than that, if you propose to increase it five feet more.

mes?

A. Probably much more than that, if you propose to increase it five feet more.

Q. Do you believe it possible to confine the river within its banks?

A. Following out the line of argument I have been indicating to you this mornage, I think unquestionably that it is possible.

Q. Is there any question between the members of the commission?

A. I do not think there is.

Q. The commission are unanimous on that point?

A. I think they are.

Q. What effect has this retardation of current upon the bed of the river?

A. Any retardation of velocity in a river like the Mississippi must necessarily produce a deposition of sediment. That is the law of the river. Whenever a river is charged with sediment, as long as the current is kept up and it maintains a uniform velocity the sediment will be carried along. The moment it slackens up that sediment falls.

Q. From what you say, it is hardly any use to ask you what would be the effect of outlets greatester any anything like that, taking water from the river, will produce a deposit of sediment the moment the velocity is retarded.

Q. You do not think there is any doubt of that?

A. No, sir; I do not think there is any doubt of that.

Q. Then, as I understand you, your whole theory of the improvement of the Mississippi River is that of holding the banks?

A. That is really the key to the whole matter.

Q. Do you believe that it can be done?

A. Yes, sir; I am positive of it?

A. I have seen a number of successful examples, and I have based my faith upon them.

Q. State any experience with which you are familiar in connection with holding the banks of the river; that is, experience upon the Mississippi River, or streams of kindred character, and by what plans or how long since this has been

one.

A. My own personal experience lies on the Missouri River.

Q. Is there any material difference in the two rivers?

A. Nothing, except in degree. The Missouri River is more difficult to do anyoing with on account of the current.

Q. Then the Mississippi River is larger, but really presents no difficulties as a cast as those on the Missouri?

A. That is true.

A. That is true.
Q. And that is on account of the greater rapidity of the current of the Missouri

iver?
A. Yes, sir; mainly on account of the greater rapidity of the current.
Q. State your experience in connection with work on the Missouri River.
A. I began that work in the summer of 1877. I began at that time putting in less brush mattresses—revetments. Some of the work done that year is still

By the CHAIRMAN:

standing.

By the CHAIRMAN:

Q. Do you say that that was in 1877?

A. Yes, sir; at Saint Joseph, in the year 1877; and every year since I have had more or less work of that kind going on. I would not like to say that all the work has stood, because it has not; but it has stood long enough for me to feel pretty sure of the reasons why some of it has been lost, and the reasons have not been adverse to the employment of that method of protection. The way in which the work has been carried on on the Missouri has had much to do with the results. The appropriations were made for specific points. The money was appropriated in small amounts, and that was done contrary to the recommendations that I made and contrary to my opinion. We were obliged to spend small amounts of money year after year, and were often obliged to go over the same ground year after year. As a result we were not generally able to put in enough work to protect the work that was already done, as we had no chance or funds to do it. In the Missouri River, if you have a piece of caving bank and you go and put down one hundred or two hundred feet of revetment and leave it for a year, when you go back again you will not be likely to find it there. The banks may be a quarter of a nikle behind where it stood. Consequently there has been a great loss of actual work put in, owing altogether to its incompleteness. But there never has been a case of loss in which I have not been able to trace it up to its true cause, and know why it was lost.

Q. Why was it lost?

A. Owing to incompleteness. But I can say that wherever a work, has been carried to completion there has never been any loss. The work, or some of the work, put in in 1877 is there to-day; that is on the Missosiri, and in the vicinity of Saint Louis, on the Mississippi, work has been put in of a similar character, but more recently. That seems to stand all right. On the Lower Mississippi, in 1878, work was begun at Memphis. The protection used there was of mattersses made in detached sections and sunk

works?

A. I have no doubt of it whatever.

Q. What would be the result of leaving these works on account of failure to appropriate money?

A. I think it would be a very unwise thing to do, because the works would almost certainly be sacrificed. But not only that, for if the work was begun again at these points it would have to be begun on an entirely different plan, because conditions might, probably would, have changed completely. Moreover, there is another point of considerable importance, and that is, that any changes of channel which might result while the works were in an incomplete state would result in throwing these works into the channel and cause them to become dangerous obstructions to navigation.

Q. The idea of the commission in desiring the closing of the outlets and crevasses below Red River I suppose is to facilitate discharge?

A. Unquestionably.

Q. Do you regard the construction of artificial banks as absolutely necessary to your plan?

to your pian?

A. I think it is. In view of the continuity of discharge I think there is no possibility of avoiding the necessity of it.

By Mr. ELLIS:

Q. There is a single question which I would like to ask you: Have you any separate estimate of the number of miles of banks that are to be held in order to perfect this plan of yours?

A. It is merely a guess.

Q. What have you guessed?
A. I gave you that the other day.
Q. Well, I was not present. I will not trouble you to repeat it.

By the CHAIRMAN:

Q. I understood you to say that the key to your improvement is the holding the caving banks?

of the caving banks?

A. Yes, sir.
Q. If that fails your work fails?
A. Unquestionably.
Q. There is no question about that?
A. No, sir; no question whatever about that.
Q. Why?
A. Well, sir, we are agreed as to the means to be employed to get deep water for low-water navigation; we have got to have concentration and contraction.

We can not possibly have contraction unless we have something to contract against. It means that we must cut off a certain portion of the present river bed, and that necessarily throws the whole river either against one side or the other, and the bank on that side must be held.
Q. And if you can not hold the banks the whole thing will be a failure?
A. Yes, sir.
Q. That depends upon the strength, the efficacy, and the durability of your works?

A. Yes, sir. Q. You say that work of a similar character was tried in 1877? A. Yes, sir; the instance I mentioned was on the Missouri River at Saint

A. Yes, sir; the instance I mentioned was on the Missouri River at Saint Joseph.

Q. Was that on a caving bank?
A. Yes, sir; that was on a caving bank; a very rapidly caving bank.
Q. And a bank that was overflowed?
A. Not as a general rule. There has only been one instance of its overflow within my knowledge. The banks of the Missouri River are as a general rule above overflow.
Q. The caving banks at Plum Point reach and at Lake Providence reach we are protecting. Are they subject to overflow?
A. Yes, sir.
Q. Then in that river they are different?
A. They are different in that respect.
Q. Were the works that you put in at Saint Joseph the same as the works that you put in at Plum Point?
A. The same general character of work, although the details are different. It was not nearly as perfect work as we do at the present day.
Q. You put down mattresses?
A. Yes, sir. The mattresses used at Saint Joseph were made of fascines; that is, bundles of willows, willow saplings tied up in bundles and fastened together.
Q. How thick?
A. About ten inches.
Q. How much of that work was put in at Saint Joseph?
A. I do not remember. I think that particular year we put in about half a mile, perhaps. We only had a little money to spend and could not go very far, and I do not think there was more than half a mile put in at that time.
Q. What was the character of the bank as compared with the character of the bank at Plum Point?
A. Do you mean with regard to stability?
Q. Yes, sir.
A. Very much softer.
Q. Has that work, since 1877, been overflowed?
A. Yes, sir.
Q. To what extent?
A. I would not undertake to say that. It extends over several years and every year we lose pieces here and there.
Q. Did you lose any there in 187?
A. No, sir.
Q. In 1878?
A. No, sir.
Q. How much bank-work did you lose that year?
A. Several miles. The pieces of work done along the river rarely exceed a

year we lose pieces here and there.
Q. Did you lose any there in 1877?
A. No, sir;
Q. In 1878?
A. No, sir; in 1879 was the first loss.
Q. How much bank-work did you lose that year?
A. Several miles. The pieces of work done along the river rarely exceed a mile in length.
Q. Now, if you will tell me the number of miles of bank-work lost in 1879, and the reasons for the same, I will be obliged to you?
A. The total amount did not exceed two miles. That is, there was about one mile lost opposite Omaha, and a similar amount at Nebraska City.
Q. There was a mile lost opposite Omaha?
A. Yes, sir.
Q. What kind of a bank was that?
A. It was nearly pure sand.
Q. It was a caving bank?
A. Yes, sir.
Q. Does it overflow?
A. It does in great floods. In fact, at Omaha it overflows every year to a certain extent, a foot or two feet, perhaps.
Q. Was this a protection by a mattress?
A. Yes, sir.
Q. How wide was the mattress?
A. The mattress was about forty feet in width.
Q. How wide was the mak above the water?
A. The bank was about fifteen feet high above low water.
Q. When was that work begun?
A. If was put in in the previous fall, in 1878.
Q. Was it completed?
A. No; it was not completed. When I speak of completion I mean the whole bank that was caving was not protected, because we had not money enough to do it. The work as far as it went was completed.
Q. When did it go out?
A. In the spring following.
Q. Did the entire work go out?
A. Wes sir; it went down the stream?
A. Yes, sir; it went down the stream. Some of the mattresses were caught I believe at Memphis. That work was built upon the theory of the pilots on the Mississippi River that at high-water the whole bed of the river comes bodily up, and at low water it goes bodily down. That is a fixed belief among them, and prior to our beginning the works on any of these rivers, we had always accepted it as an article of faith, and on the stream?
A. The cost of it was about \$2.25 a foot. I wish to explain the remark which I made a moment and on the terest of the work on the Mi

the channel, that the pools the banks of which needed protection were excavated to the greatest amount that they ever would be, and that at high water I would get seven or eight feet fill, so that there would be no necessity of providing for greater depth. After I had built several miles I found that I was mischangen and the several miles I found that I was mischangen and the several miles I found that I was mischangen and the several miles I found that I was mischangen and the several miles I found that I was mischangen and the several miles I found that I was mischangen and the several miles I found that I was mischangen and the water being about fifteen feet deep. I put in revetments forty feet wide from low water down, and I thought I had annel margin the bottom secured out forty feet below the mattresses, and naturally the whole revetment slid into the hole. Before I got through I had mattresses one hundred and forty feet wide at the same place.

Q. Then, in other words, you went to work and made this expenditure without making an examination of the real situation of affairs?

A. I had no chance. I made what investigation I could.

Q. Then, without making a personal examination?

A. There was no personal examination of any kind that I could make that would have thrown any light upon the subject without losing at least a year.

Q. Without determining the question scientifically whether the high water would lower the bed or elevate it, you took the common statement of pilots and worked upon that principle?

A. Yes, sir.

Q. The theory of the commission is right with reference to that subject now, I suppose?

A. Yes, sir.

A. Q.

ppose?
Yes, sir.
The high water lowers the bed and low water lifts it up?
Yes, sir; that is the general rule.
The higher the water the lower would be the bed?
Yes, sir.
Did that work go out at once in a single day or night?
No, sir; it was of course progressive, but it went pretty rapidly.
Were you present at the time?

A. No, sir; it was of course progressive, but it went pretty rapidly.

Q. Were you present at the time?

A. No, sir.

Q. What information have you about it?

A. I have the information of my assistant, who was on the ground at the time.

Q. Did he explain to you how it went out?

A. Yes, sir.

Q. The river cut in from above, as I understand you?

A. Which are you referring to now?

Q. I am talking of the one opposite to Omaha.

A. In that case the damage was principally from above, from the upper part of the bank. The water cut in on top of the revetment.

Q. The water then overflowed this work?

A. No, sir; it did not overflow.

Q. How could it cut in then?

A. The flood which came in brought down the ice from the upper portion of the river, great masses of ice, and very heavy ice at that, and when they struck the upper bank, which had been but lightly protected, it cut right through the light protection which was all that had been thought necessary above low water. We had merely put a thatching of brush on the bank, and the fields of ice ut through this. Then the water, flowing along the upper edge of the matresses, as the river was still rising, cut in behind them and they were finally all carried away.

Q. In other words the mattress was cut in behind by the flood?

A. That was the ultimate result; yes, sir.

Q. Now you have completed the explanation of the manner in which that went out?

A. Yes, sir.

A. Yes, sir.

Q. Then their going out was not by reason of the mistake of the ancient mar-

iners' ners?
A. The case which I gave you as an illustration was at another place.
Q. Well, I am talking of this place.
A. Well, I do not think it was. I think it took place before that cause had

A. Well, I do not think it was. I think it took place before that cause had time to act.
Q. Has that work been put in again?
A. Yes, sir.
Q. And any more?
A. A good deal more.
Q. How much?
A. Well, nearly three miles in nearly the same locality, extending up the stream from the old works.
Q. Then the old work has been renewed?
A. Yes, sir.
Q. When was that work completed?

A. Yes, sir.
Q. When was that work completed?
A. It was completed about two years ago; the last work was put in about two

A. It was completed about two years ago; the last work was put in about two years ago.
Q. Is that built of the same kind of mattress used at Plum Point?
A. Not exactly; the same general character.
Q. How does it differ?
A. That particular mattress is composed of wires that run the whole length of the revetment. It is built on continuous wires, which run out over reels on the mattress bout, and brush is laid on them and sewed down to them with wire. It is a continuous mattress.
Q. How thick were those mattresses?
A. About eight inches.
Q. How wide?
A. About ninety feet.
Q. And this extended down for a distance of three miles?
A. Yes, sir.
Q. Suppose the current should cut in at the head of that?
A. It would undoubtedly go out the same way that the other did.
Q. How is the mattress protected above the bank?
A. On the upper portion of the bank a woven mattress is made, lapping over the lower one and extending up to the crest of the bank. It is made something like basket-work.

the lower one and extending up to the crest of the bank. It is made something like basket-work.

Q. And that extended to the crest of the bank?

A. Yes, sir.

Q. In the last flood did the water overflow that bank?

A. In the great flood of 1881 it did,
Q. It extended over the crest of that bank?

A. Yes, sir.

Q. How much?

A. I think about four feet deep.
Q. Do you extend the works at Plum Point to the crest of the bank?

A. Well, that is a matter that has not yet been fully settled upon. I do not think that it will be necessary.

Q. Well, you have not done so?

A. No, sir.

Q. What was the value of the work that went out?

A. It cost about \$2.50 a foot.
Q. That would make it about \$15,000?

A. In that neighborhood somewhere.
Q. That was independent of any plant?

A. Yes, sir; that is just the net cost of the work itself.
Q. Have you lost any at other places on the river?

A. There has been some lost at other places.

Q. Where?

A. There was a piece of work lost at Nebraska City during the great flood of 1881. be all right? Now, is it not true in the case of any of these works that if the water gets in behind it will take it out?

A. There is no doubt of that.
Q. Did you lose mattresses at any other places?
A. Another place was at Leavenworth.
Q. When was that built?
A. That was built in 1878.
Q. How much?
A. Two miles.
Q. When did it come out?
A. Eighteen hundred and eighty-one.
Q. The wylole of it? 981.
Q. Of the same kind?
A. No; that had been lost, as I told you before, in 1879.
Q. It was renewed then?
A. Yes, sir.
Q. You say there had been work lost at Nebraska City in 1879?
A. There was about a mile lost in 1879.
Q. Was that of the same kind and character of work?
A. Yes, sir.
D. M. There. Yes, Sir.

By Mr. Thomas:
The same kind of what?
It was of the same general character.
The same general character of the work that had gone out in the flood besit? Yes, sir; in the flood of 1879. A. Yes, sir; in the flood of 1879.

By the CHAIRMAN:

Q. What caused that to go out?

A. That was caused by underscour.

Q. That lifted the mattress out—took it out?

A. No, sir; it went down into a hole. The water washed the ground away underneath and the mattress went right down.

Q. Well, that was done upon the theory of the mariners, too, was it not?

A. Yes, sir.

Q. Did it all go out together?

A. Yes, sir.

Q. What did the work cost?

A. That was cheaper; that only cost \$1 a foot, there was a loss of some five or six thousand dollars there.

Q. Do you know where that went to?

A. No, sir; that was heavy wood that would not float, and I think it staid there. You built another work there?
We were working at it while the other was going out.
When was it completed?
The same season—in 1879.
Where is that?
That is gone too. That went out in 1881.
How much?
The same amount—about a mile.
You are still working on the theory of the "ancient mariners?"
No. sir. A. No, sir.
Q. You did not put in the second work upon the theory of the "ancient mariners?"
A. Yes, sir; the reason in this case was that the river cut in far above it, and the whole thing was finaked out.
Q. It does that, then, sometimes?
A. Yes, sir.
Q. Then the second work, completed in 1879—that went out in the flood of 1881?

How much?
Two miles.
When did it come out?
Eighteen hundred and eighty-one.
The whole of it?
No, not all of it; I think about one mile and a half.
What made that go out?
That was built also on the pilots' theory.
That was built on the pilots' theory instead of on the theory of the comsion? mission?
A. Yes, sir.
Q. That was before the commission had any theory?
A. Yes, sir.
Q. Did that go out?
A. That was sooured underneath. I had some more work in the same place.
I said two miles; I had three miles in place, and about half of it was lost. The balance was built on sounder principles, and that staid.
Q. That was built at the same time?
A. No, sir; the next year.

Dr. Mr. ROBINSON: Q. That was built at the same time?
A. No, sir; the next year.

By Mr. Robinson:
Q. That was built after the fall of 1877?
A. Yes, sir; all these works were done after that.
By the Chairman:
Q. How much did that work cost?
A. About \$2.30 or \$2.50 a foot.
Q. And a mile and a half of that went down?
A. Yes, sir.
Q. Have you rebuilt that?
A. No, sir; I have not had any money.
Q. What became of the balance; did that stay there?
A. Yes, sir; that is there yet.
Q. Is that on the upper portion.
Q. And have you lost mattresses in any other places?
A. No, sir; not of any consequence. There have been slight damages done here and there, but that has generally been done by ice.
Q. How is it done? Have you lost mattresses at other places?
A. No; it was done in the manner I have been describing. There have been damages from various causes; for instance, the lower end of the work would be attacked and a pocket formed and cut in.
Q. What would be the result of that?
A. It would result in cutting it out.
Q. How many instances are there of that sort?
A. That occurs occasionally. A pocket is formed at the lower end of the work and cuts in behind; when it does that it takes the worksout as far as it extends; it does not generally extend very far.
Q. You spoke of some works being lost at Memphis; what was the extent of the works lost there?
A. I would not be able to state positively. I said there had been some damage.
Q. How was that done? A. Yes, sir.
Q. Then the second work, completed in 1879—that went out in the flood of 1881?
A. Yes, sir.
Q. The whole thing?
A. The whole thing?
A. The whole thing?
A. Well, sir, during that flood the whole country was overflowed. The work was eight feet under water. The work lay at the foot of a long bend twelve or fifteen miles around. The river began cutting a mile and a half or more above where the works terminated. This cut went on widening as it came down stream. When it reached our works it was a quarter of a mile or more wide, and as that slice came down it took the work out.
Q. Did it take it out and carry it down the stream?
A. Well, I do not know about that. When it disappeared I lost all interest init.
Q. You do not know what became of it?
A. I presume it is buried somewhere in the bottom of the river.
Q. Could you stop the flood from doing that?
A. Well, we might of course have stopped it if we had had the money; but that is a contingency that we have to encounter in this work.
Q. Well, what should you have done provided you had plenty of money—you had the Treasury at your back; what would you have done if you saw it was citting in a mile and a half above your works?
A. We would have begun revetting the banks at the point where it was caving. That is what we did in 1879.
Q. And commenced sinking mattresses at the bend?
A. Yes, sir; in that way we should have attempted to arrest it.
Q. Suppose you had work on hand at a dozen different bends, and the river should attempt to cut in behind, could you take care of it all.
A. If we had money enough we could take care of it.
Q. That is if you had money and men and plant and time?
A. Yes, sir;
that was about \$5,000.
Q. And have you put in any other?
A. Yes, sir; that was about \$5,000.
Q. And have you put in any other?
A. Yes, sir; that was about \$5,000.
Q. And have you put in any other?
A. We encluded to quit with that?
A. We concluded to wait until we had money enough to extend the works a little further.
Q. Did you think, when you had the work done a sec A. I would not be able to state positively. I said there had been some damage done.

Q. How was that done?

A. The steamboats land against the work, and as they came in at low water they would punch their bows through the mattresses.

Q. Then it would not do for steamboats to land where this work is built?

A. That could have been prevented by covering the work with stone.

Q. Well, has there any damage been done at Vicksburgh?

A. Yes, sir; in the way I have described. The work was isolated.

Q. Who built that?

A. Major Benyaurd had it in charge.

Q. Do you know how much was lost there?

A. I do not.

Q. And you do not know personally how it was lost?

A. I have always understood that the work was isolated, and that it was attacked from above and below and lost in high water.

Q. You do not know the extent?

A. No, sir.

Q. You speak of danger to these banks, these revetments, by reason of steamboats landing at their sides; they generally land, do they not, whenever there is a barrel to be taken on or put off?

A. That does not constitute any very great danger.

Q. At these places where they land, would it be necessary to make the protection strong?

A. Well, if you should put on a little stone at that place it would be all right; it would overcome that difficulty.

Q. It is your judgment, you say, in reply to a question that has been asked, that if you leave these works, say at Providence reach, at the close of this fiscal year, they will be in danger of being destroyed?

A. I should consider so; yes, sir.

Q. Could you not put it in a condition that it would be protected if nothing further was done?

A. I should consider it very doubtful; that is, with the money we now have available.

Q. Well, could you by any process of engineering, without extending the work A. It was done as far as our money would allow us to go.
Q. Well, when you laid the mattresses down you thought it was liable to go out? available.

Q. Well, could you by any process of engineering, without extending the work of bank protection, tie it up as it is in its present shape and preserve it?

A. I do not think we could.

Q. Well, then, another point: Having put in a piece of work, you must complete it, or it will be in danger of being destroyed?

A. That is my idea.

Q. What will it cost to complete the work after you have used the present appropriation? out?

A. If there was any change in the direction of the current higher upstream.
Q. Were you compelled to spend this money?
A. Yes, sir.
Q. You were compelled to spend this money, then, even if you knew that it was liable to go out?
A. I do not mean to say that I knew so. It would only be liable to go out in certain contingencies.
Q. You had already had experience, and yet you built it in accordance with your first theory?
A. In the first case it was lost by such very obvious means, and we thought that by extending it and making it wide and allowing for scouring it would be successful. propriation?

A. I can hardly answer that question. I do not remember exactly the amount of work that has to be done. Without knowing that, I could not at this moment answer the question; but it certainly is necessary to protect those two bends lying above the Lake Providence reach; I mean the Louisiana bend and Carolina bend.

Q. In order to protect these would it be necessary to go through the Lake Providence reach and construct the works commenced?

A. The works at the upper end are still in an unprotected condition, and there is danger arising from the causes I have suggested above.

Q. Can you tell the amount that it will cost to complete the works at the two bends which you have mentioned?

A. No, sir.

Q. You do not know what the damage would be if it should not go on?

A. The damage would occur at points below. If these bends are not protected the river will cut in behind the piling, you have seen, and destroy the work already done. Q. When you made the first work you had reasonable belief that it would stand?
A. Yes, sir.
Q. And you have continued work at that point?
A. At that point? Not exactly at that locality. We have been working this senson in the same bend, but we began at the other end. I did not propose to let it get in behind me. I began at the upper end and I worked down.
Q. Well, then, you suppose that if you could begin at the source of the river—that is, if you could find the spring—and follow the river down to the Gulf, and build these works all the way, as long as the water would not get behind it would

Q. Have you any data as to the probable cost of completing the works at these we bends  $\tilde{\tau}$ 

A. No, sir.

Q. How about the work at Plum Point; what will it cost to complete that after the work for the present fiscal year is completed; how much will it take to complete that work?

A. At Plum Point there is a considerable amount of bank revetment that will have to be done in order to complete the work that is in, and also to protect some extensions that will have to be made. I shall have to give the same answer that I gave in reference to Lake Providence; I do not think I could answer it from my present information. In the first place, I do not know how far the work is likely to be carried this season; but there are several miles of work yet to be done.

Q. Some one, I think, has testified that three-quarters of a million of dollars would complete the works at Plum Point?

A. I did not testify that; I have never heard such a statement. I do not know the estimate on which it is based.

Q. It would not be necessary to commence work at other reaches or districts

Q. It would not be necessary to commence work at other reaches or districts in order to complete the work at Plum Point?

A. No, sir If you do not commence the new work you will not have to buy new plant? will save in that way?

You will save in that way?

A. Yes, sir.

A. I should consider a matter of wisdom?

A. I should consider it entirely unnecessary.

A. I should consider it entirely unnecessary.

A. I should consider sire sirely unnecessary.

A. I should consider sirely unnecessary.

A. I should that it is perfectly safe to do so.

A. I think that it is perfectly safe to do so.

A. I think that it is perfectly safe to do so.

A. So far as you are concerned you want no further trial of the efficacy of the lan?

A. No, sir; but I, of course, expect that experiments and further experience will reduce the cost.

You say that an outlet decreases the current and forms bars below? Q.

Q. You say that an outlet decreases the current and forms bars below?
A. Yes, sk.
Q. Is this statement true that General Humphreys made before the House Commerce Committee in 1882, speaking of Bonnet Carré outlet and the shoaling, wherein he says: "That matter was very carefully examined into by myself when I took charge of the surveys of the Mississippi River. There is not a single fact that goes to show that any shoaling whatever has been made below any of these crevasses?"
A. I know that was the opinion held by General Humphreys,
Q. Is the correct?
A. I would not undertake to say so, but I think he is mistaken.
Q. Is this statement correct: "The Bonnet Carré crevasse was a great one, and it was stated that the river had shoaled below the crevasse; but there is no doubt that it had not?"
A. That has been denied by perfectly trustworthy and well-informed people.
Q. Then he was in error about that?
A. I think that probably he was.
Q. Is this statement correct: "The whole discussion as to the shoaling of the river between an opening grew out of certain theoretical views propounded by Malian philosophers?"
A. I do not know that that can be said. The views have been advanced on both theoretical and practical grounds, and I think there is a great deal of practical evidence tending in the same direction in which the theory tends.

By Mr. ELLIS:

tical evidence tending in the same direction in which the theory tends.

By Mr. ELLIS;
Q. You started at one point of your cross-examination to give some reason for the loss of the mattresses in the Missouri River; will you recur in this connection to that point and give the other reasons for the loss of these mattresses?

A. I gave it substantially; it was caused by being attacked from above, and by the fields of ice that were coming down the river.

Q. If the work had been completed above the point of impingement would that loss have occurred?

A. If it had been more substantial it would not.
Q. Are the banks of the Lower Mississippi as liable to destruction as on the Missouri?

A. No, sir.
Q. And there is less danger?
A. Yes, sir; there is less danger.
Q. You spoke of a bend where you lost mattresses by the caving of the bank above?

A. Yes, sir.

Q. If the work had been commenced above the point of impingement would it he

A. No, sir.
Q. If it had been completed it would have resisted the action of the current,

would it not?
A. Yes, sir.
Q. Have you ever lost any work at points where the current took the works themselves?
A. No, sir; not where it was properly finished.
Q. Then all the loss you have had has been upon uncompleted works that were built upon false theory?
A. That is about it.
Q. I suppose that men navigating the Mississippi River would be supposed to know something about this marvelous uplifting?
A. I supposed at first that they had means of knowing.
Q. The consequence of leaving these works, then, in an uncompleted condition would be the same as that which attended the uncompleted works on the Missouri River?

would be the same as that which attended the uncompleted works on the Missouri River?

A. There would be great liability to that.

Q. And the prime cause of the loss was the folly of the Government in giving you an insufficient amount of money to do miles and miles of work?

A. Yes, sir; that was the cause.

Q. And is not that rather singular conduct on the part of the Government that has given \$423,000,000 to aid in building railroads in different sections of the country?

country?

A. It is not my place to criticise the action of the Government, sir.

Q. Have you ever estimated the carrying capacity of that river; and have you ever estimated how much it would be greater than that of ten or fifteen tracks of double line of railway?

A. No, sir; I have not.

Q. That is all I have to ask.

WASHINGTON, D. C., January 27, 1883.

Mr. James B. Eads sworn and examined.

By Mr. ROBINSON: Question. You are a member of the Mississippi River Commission? -Answer. Yes, sir. Q. Have you been such since the organization?

You constructed the works at the South Pass known as jetties?

Yes, sir. When w

n was that work completed and the channel secured? In July, 1879.
Since that time your work has been for the maintenance of the channel?

Yes, sir.
Under the provision of the contract requiring maintenance for twenty

A. Yes, sir.
Q. Since July, 1879, have the jetties been extended in length out into the Gulf?
A. No, sir.
Q. They have been raised in height?
A. Some parts of them.
Q. For what reason?
A. To prevent the deposits of the shoals on the outer side of the jetties from eing brought over by wave action into the channel.
Q. Has the water of the Gulf setting around behind the jetties and forcing up gainst them in the rear thrown a shoal on each side of the jetties, on the cast ide particularly?

against them in the rear thrown a shoal on each side of the jetties, on the east side particularly?

A. There is an extensive shoal on the east side. During heavy storms waves roll over that shoal and stir up the deposit of which it is composed, and in that way a very considerable quantity of material was brought into the jetty channel which the current of the river was required to discharge again; and to prevent that, a line of concrete work on top of each jetty was built in conformity with the original design of the works. It was raised on the east jetty from two of five feet above high tide. On the west side the storms are not so severe, and owing to the prevalence of the easterly wind the currents of the Gulf sweep the deposit to the west. Storms rarely come from that direction. Consequently the work is not so high above the surface of the water as it is on the east, and it is not necessary to make it so, as the servitude to which it is exposed is much less on that side.

Q. The shoal you speak of on the east side of the jetty is how far distant from the outer end of that jetty line?

A. The outer end of that jetty line forms what might be called the apex of a triangle. It is very narrow there and very close to the jetty, but does not extend out to the end of it. In fact there is deep water around on the outside of the east jetty for some considerable distance—at least a few hundred feet. The shoal grows wider and wider as it approaches the land, and the west side of it is close to the jetty.

O. Was that shoal there in position before the jetties were built?

out to the end of it. In fact there is deep water around on the outside of the cast jetty for some considerable distance—at least a few hundred feet. The shoal grows wider and wider as it approach set the land, and the west side of it is close to the jetty.

Q. Was that shoal there in position before the jetties were built.

A. Yes, sir. It has altered the shape somewhat since the jetties were built.

Q. Heen enlarged?

A. That is owing to the action of the waves of the Guil?

A. That is owing to the action of the waves of the Guil?

A. Yes, sir. It hink the alteration is caused by the modified effect of the waves under the influence of the jetty line. If the waves come at all diagonally against the line of the jetty they have a tendency to be depleted along the line of the jetty (shoreward I mean), and that creates h wash and tendency to lift the sediment and deepen the shoal and carry the material further back landward. This shoal has come above water. It was not in sight at the time that where the land in sight terminated, and it extends out about two miles. Show then this wave action, together with the escape of water through the willow work of the jettics, which occurred during the construction of the work, has increased the area of the shoal and the land, which is now above water and which is covered with vegetation, extends above one and a quarter miles further down the line of the jettics, which occurred during the construction of the work, has increased the area of the shoal and the land, which is now above water and which is covered with vegetation, extends above one and a quarter miles further down the line of the jettics, which occurred during the construction of the work has been dead to the feet of the work and transfer it to where it was more needed, further down it has the only thing in sight in the sea. This shoal tends of course to consolidate and so the court of the proper to take the stone of that part of the work and transfer it to where it was more needed, further down it has an object of

agon this area.
Q. You are aware that Captain Heuer states that during three years there has een a deposit of four feet?
A. I don't remember his stating so much as that; but I think that involves a

larger area than what I allude to. Recently the soundings have been extended

larger area than what I allude to. Recently the soundings have been extended out four or five miles.

Q. There must be, according to the nature of things, a deposit there of greater or less depth?

A. Most assuredly. Ultimately the Alleghany and Rocky Mountains will probably be washed down and carried into the Gulf.

Q. So that in the future, more or less distant, it will require an extension of the jetties or clearing out at the mouth?

A. I think that is likely. Although where jetties have been used in the Baltic and in front of sill-bearing rivers, such extension as that has not appeared necessary, especially in the mouth of the Dvina, in Russia. I was told in the department of public works at St. Petersburg that those jetties were so old that they had no record in the department of the time they were built—certainly one hundred years ago, but they maintained the channel without any extension. The bar outside of them had six feet on it before they were built, and the depth when I was there was eighteen feet.

Q. Those are matters of record in scientific reports, and although they may be used as illustrations, still there are varying conditions in every stream, and we may expect different results in the Mississippi, where to the casual observer the conditions were the same perhaps?

A. At the mouth of the Coatzacoalcos River, on the Isthmus of Tehuantepec, which I have had occasion to examine, it is a well-established fact that the bar has not advanced materially since the white man knew it, since the earliest surveys have been made. Some of the Spanish surveys date back many hundreds of years—

Q. (Interrupting.) If you will, please keep to the Mississippi River—

A. If you will pardon me a moment, I will say that that triver discharges quite

of years

Q. (Interrupting.) If you will, please keep to the Mississippi River

A. If you will pardon me a moment, I will say that that river discharges quite
as much sediment in proportion to its volume as the Mississippi does. There
are conditions there in the Gulf that prevent the delta of the Coatzacoalcos from
extending; there is a sea current in front of it.

Q. It is a fact that the bar, previous to the building of the jetties, was advancing in the Gulf?

A. Yes, sir.

Q. The land was advancing in front?

A. Yes, sir.

Q. And it appears that the

A. Yes, sir. Q. And it appears that there is a land-building process going on?
A. I am not willing to admit that there is any yet ascertainable in front of the

A. I am not willing to admit that there is any yet ascertainable in rolls of setties.

Q. If the engineers certify so upon their measurements and you have not measured it, do you believe them?

A. I have not the least doubt about their measurements being taken in good faith and as accurately as possible; but I claim that a large portion of the area examined ought not to be included. There is a very large portion of the discharge from Pass à l'Outre that is swept by the sea current westward in front of the small pass at which I was compelled to place the jetties. During one year there was a difference of eleven feet of deposit discovered off to the seaward and eastward corner of the area under examination, and the discharge from the South Pass certainly could not produce any such deposit there. That deposit can only be accounted for as coming from Pass à l'Outre, as it is entirely out of the line of the discharge of the little pass. My opinion is that the effect of the jetties its ostop the advance of the bar at the mouth of the river, or to greatly retard its advance.

advance.
Q. Still the shoals on the east side of the jetties have been growing and advancing northward all this time, as I understand you?
A. That shoal is made up more largely from the deposits from the Pass A Poutre than from the South Pass.
Q. It is from the deposits that accumulate in the Gulf from the various passes?
A. I think it is from the South Pass and Pass A Poutre.
Q. Your theory that it comes from Pass A Poutre may mainly be a sound one, and may operate if the current sets that way. With regard to the rate of advance of deposit in front of the jetties, and a probability that the extension of the jetties will be required, what is your judgment as to the time in the future that any such work will be necessary?
A. I do not think that the extension of the jetties will be required in one hundred years.

dred years.

Q. What has been done since 1879, if anything, toward the protection of the

A. I do not think that the extension of the jetties will be required in one hundred years.

Q. What has been done since 1879, if anything, toward the protection of the jetty works against damage by storms or wave action?

A. A very large amount of work has been done in that direction. During the last twelve months I have expended \$110,000 in that way, in the neighborhood of \$20,000 more than I was paid by the Government. In other words, I have been charged with certain little deficiencies of the channel for which my annual pay for maintenance has been reduced. Supposing that this payment which is now withheld and submitted to the Attorney-General as to my obligations to maintain the channel in the pass itself—

Q. (Interrupting.) We will come to that. I asked you about the work that had been done on the jetty walls, if any, since 1879 for their protection against the effect of storms or wave action.

A. You do not want anything about the cost of it, but the extent of the work?

Q. Yes, sir.

A. Since 1879 a large amount of concrete work has been done. I am unable to state from memory the exact extent of it. On the east jetty it extends one mile in length. On the west jetty it extends half a mile.

Q. When was that done?

A. My recollection is that part of it was done in 1878 and it was finished in 1879. You ask what extent of work has been done since. I have put out some fifty groins seaward from the east jetty. They may be called short spur-dikes capped with very heavy blocks of concrete weighing perhaps eighty or one hundred tons each.

Q. On the inside or the eutside?

A. On the outside, the sea side. I did that because in 1879 or 1880 (I forget which) a severe hurricane attacked that side of the work and injured some part of the concrete capping of the jetty and broke some portions of the parapet and then placed these groins out to break up the force of the waves and to stop the racing of the waves along the outside line of the jetties shoreward which occurs in severe storms. After that work had stood for a

Q. That was put inside one hundred and twenty feet distant from the east jetty?
A. Yes, sir. The original jettics are about 1,000 feet apart.
Q. If I recollect the act, they must be seven hundred feet apart?
A. But the jetties are 1,000 feet.
Q. But if you keep them seven hundred feet apart you are within the terms of the original act, as I understand it?
A. I do not think the original act now has any bearing on the maintenance of the channel. The channel which I am to maintain is of specified width and depth, and if it should be found that the volume flowing into that pass is not capable of maintaining thirty feet deep and of specified width without being reduced to six hundred feet, I don't think there is any question of my right to do it.
Q. You think, then, that you are not confined by the terms of the original act of 1875 to keep the jetty walls seven hundred feet apart?
A. The original act provided for the construction of the jetties and required them to be built at least seven hundred feet apart.
Q. And provided for the maintenance also?
A. They were built a thousand feet apart. The work to a great extent was experimental. It was impossible for me or any other engineer to have told exactly how wide a channel could be maintained of thirty feet deep. The question of putting more water into the pass was one that was very seriously discussed by committees in Congress, and they took a great deal of expert testimony on the subject, all of which went to show that it would be injudicious and dangerous to increase the flow into that pass. It discharges one-tenth of the water of the river and it would be dangerous to make it discharge more. It is absolutely necessary to make it discharge more if you have to maintain a channel of more than thirty feet of water.

Q. We will come to that later. But you have built an inner wall, and, without going into the reasons for your opinions, it is your view that, not withstanding the terms of the act of 1875, you could bring in the walls of the jetties even to a distance of fi

used in the jetties?

A. Yes, sir. All information of that kind will be found in the engineers' reports.

Q. These reports state the facts in regard to the jetties. You find it necessary to use a dredge-boat more or less in the jetties in order to maintain the channel?

A. I have found it necessary up to within the last four months to do so occasionally. The work which I have been putting in the channel on each side of the jetty channel between the original jetties has been placed with a view to the maintenance of the channel without the aid of the dredge-boat at all.

Q. Whether that will obviate the necessity of using the dredge-boat hereafter will be determined by experience?

A. Yes, sir. If I did not believe it would save me the expense of using the dredge-boat, I should not put them in.

Q. What has the dredge-boat been made to operate upon?

A. The bottom.

Q. And is that the deposit formed by the stream?

A. We find by observations made by the Mississippi River Commission in the main river a phenomenon not previously noticed, or in fact known, viz, that sand waves move along the bottom of the 'ver. That phenomenon I have noticed in the jetties. When the river is largely charged with sediment, sand will accumulate in the form of a wave two or three feet high at places on the bottom and move along down the river much slower than the current. It may be compared to the movement of the sand dunes or hills in Egypt or Holland, or places where the sand is exposed to the winds. Hills of sand form, and the wind prevailing in one direction carries the sand over the top of the hill and deposits it on the leeward side, and in that way the entire hill many feet high moves along slowly. The sand is moved by the current in contact with the bottom, and it is transported up on the upper side of the sand-wave and dropped below; and by that process it moves on down. It will take probably a week or two for one of those waves to pass through the length of the jetties. Such deficiencies of the channel as have occurred have b

nel and securing a greater force of water that will remove those waves more appidly?

A. It is with a view of further contraction of the width of channel, and a better alignment of it, that is, of the sides of the channel, to make it more regular. This line of work which I put in one hundred and twenty feet from the east jetty gives a straight alignment instead of the irregular one which was caused by wing-dnuss five hundred or six hundred feet apart.

Q. In the case of wing-dams in the space of 1,000 feet, it would not without the action of the water give a channel parallel with the sides of the jetties, would it?

A. No, six; for the reason that I would like to explain. Your supposition would be that it was owing to the want of volume passing through the jetties a thousand feet wide; but it is because of the tendency of silt-bearing streams to form their banks and to reduce their width in proportion to suit the volume. But unfortunately near the sea we have the effect of strong winds and waves inside of the jettles, and when these battures or deposits are formed on each side of the channel in calm weather and thus narrow the channel, they are awept up by the waves in storms and the material is taken up and carried into the main channel. This gives the force of the river as much more work to do. Now it is to protect these natural deposits on each side of the jettly channel, and to allow the jettly channel to take that shape which it would naturally take in the upper part of a river of that size and protect it against the action of the waves of the sea, that these dams and interior works are being built.

Q. What is the width and depth of the channel required in the jettles under your contract?

A. A channel two bundred feet wide on the bottom in which there shall be not

your contract?

A. A channel two hundred feet wide on the bottom in which there shall be no depth less than twenty-six feet, and through the A. A channel two indirectives was on the outer in which there shall be indepth less than twenty-six feet, and through the center of that channel there shall be thirty feet of water.

Q. That channel will be more or less a winding channel through the jettles, even after the wing-dams are put in?

A. No, sir; it will not be a winding channel, it will be a very direct channel with a very slight curve due to the original alignment of the jetties to bring the discharge of the river at right angles with the shore current of the Gulf.

Q. If you were constructing the work over again, would you build the jetties much nearer together?

A. I should not put them more than eight hundred feet apart, because it would be cheaper toget the specified channel with eight hundred feet than to get it with a thousand. But, having placed them a thousand feet apart, the work will be much more substantial and permanent in character by being afterward reduced within the original line of the jetties to the width required for the volume of water discharged by the pass.

Q. On that I would like to know your judgment better. If the jetties had originally been placed five hundred feet apart with the same degree of strength of construction, would they have been as permanent?

A. No, sir; they would not be, for the reason that that would create too deep a channel and be in danger of being undermined. I would place them a thousand feet apart again for the greater safety.

Q. Putting works inside of the present line of jetties would secure the same results?

results?

A. Yes, sir. I had the jetties a thousand feet apart originally to prevent any possibility of undermining them by too deep a channel. The material upon which they are built is, of course, the most recent deposit of the river, and is unstable in character. If you piled too much weight upon it, and got too great an angle of slope upon the sides, the banks would be in danger of sinking.

Q. Since your works were finished in 1879 the question of whether you could within the terms of your contract use the dredge-boat as an instrument of maintenance of the channel has been submitted to the War Department and the Attorney-General?

A. Yes, sir.

A. Yes, sir.
Q. And it has been decided that that may be considered as one of the auxiliary works for the maintenance of the channel?

ks for the maintenance of the channel? Yes, sir. And so in the line of that construction you are continuing to use the dredge

Whenever it is necessary.

Payments are deferred over the number of days in which you fail to mainthe channel of the jetties of the required width and depth?

Yes, sir.

there been such failures in each year during the terms of mainten

nce so far?

A. Yes, sir.

Q. That deferring of payment by the construction of law is to require you to you true to the time of failures?

A. Yes, sir.

A. Yes, sir.

A. Yes, sir.

Q. That deferring of payment by the construction of law is to require you to give twenty full years of maintenance, without regard to the time of failures?

A. Yes, sir.

Q. So that you do not get your pay at regular recurring periods except that during the time you have maintained the channel, as, for instance, in any six months if you fail for fifteen days to maintain the channel you would not receive your pay until you had maintained it for fifteen days longer?

A. That is so, sir; I have maintained the channel from July, 1879, three years and six months, and supposing that this payment was made to me, which is now in dispute, I should have been paid for four months less time than I have made a substantial maintenance of the channel. I have been discounted in this pay for the most trivial deficiencies. There were no injuries in the world to commerce, and I consider it a hardship that no other person occupying a similar position toward the Government has ever suffered from. For instance, if you made a contract to deliver a lot of square piles to the Government with clean square edges there is some one in the employ of the Government who hassome discretion in the matter, so that if there is a little deficiency in some one or more of them which does not unfit them for the purpose intended they are not rejected. Ship timber is purchased by the Navy Department with the distinct declaration that it shall be clear of all sap, yet there is some one who has the authority to say, "There is a little sap on this piece or that, but it will be cut off in the construction of the vessel," and it is accepted unless grossly defective. But if there is an inch of deficiency in my channel in a single sounding through the whole length of it my pay is deducted.

On one occasion, over a mud lump which I had twice dredged down to the required depth about half an hour with the Government launch was required to get one single sounding cight inches too little. That was the only sounding that could be found where it lacked

Q. Now, the Government, through its officers, requires you to live up to your contract?

A. They require me to live up to the exact letter of the contract, and wherever the spirit can be construed against me it is done. Wherever the letter of the contract can be quoted against me it have no benefit of the spirit of the law. The letter and spirit are both construed against me. You alluded to the million dollars that was reserved as a security. The law distinctly says, in one article distinct from the others, that the Government will pay me 5 per cent. semi-annually upon that million dollars so long as it or any part of it remains in the hands of the Government. It declares that I shall have \$100,000 per annum for the maintenance and be only allowed for the exact time I maintain it. The law is so construed that the interest on this million dollars is stopped also, which I think is a gross injustice. I have no appeal except to go to Congress for it, and any gentleman who is familiar with Congress knows the difficulties that beset one in doing that. I came to Congress in 1865 to get a balance of \$60,000 on two gunboats, which is still unpaid, though fully certified to.

Q. I object to that. I wish you to confine yourself to answering my question, of for the purpose of preventing you from saying anything you wish to say, but I have a course marked out in my own mind, and I will give you an opportunity afterward. I want to bring your attentions amply to the elements of width and depth in the channel in the jetties. The Government officers, as to those two points alone, require you to maintain, according to the terms of the contract, a channel of the prescribed width and depth before they pay you; is not that it?

A. It is more than that. The law says I shall be paid if this width and depth of channel through the jetties is maintained. They declare that through the jet-

ties means through the pass, and my pay is stopped if the depth fails to exist in

ties means through the pass, and my pay is stopped if the depth fails to exist in it also.

Q. We will go to the pass. What work have you done since 1879 from the head of the passes to the upper end of the jetties?

A. I have put in some wing dams at two places in the pass itself. Up to the time of your visit I think I had put in some of those only at once place. If I remember correctly, I have since ordered some in another part of the pass. The pass is unusually wide at these two places. Those were put in for the purpose of reducing the width of the pass. You will understand that they were not put in from any obligation on my part to maintain any specified depth in the pass.

Q. That is your construction of the law?

A. That is my construction of the law.

Q. But the Attorney-General's Department construes it differently.

A. These works were not put in because I recognized any obligation to maintain the depth in the pass, but to facilitate the flow of the water through the pass. When you come to discuss the question of the improvement of the Mississispipi River, I desire to explain the influence which the friction of the bed of the stream has in retarding the flow of the water through it, and if it is brought to a uniform width the friction is decreased, and in that way I will increase the flow and get a more rapid current in the pass, and so will be able to maintain the channel required by law through the jetties without using the drede-boat.

Q. That is, you regard whatever you have done in the South Pass, under your construction of the law, has been done for the improvement of the jetty channel, precisely as you did at the head of the South Pass and Pass à l'Outre when you put sills there?

A. Yes, sir.

construction of the law, has been done for the improvement of the jetty channel, precisely as you did at the head of the South Pass and Pass à l'Outre when you put sills there?

A. Yes, sir.

Q. What channel do you understand that the Government officers insist that you should maintain in the South Pass itself?

A. They require me to maintain twenty-six feet of water.

Q. A navigable channel of twenty-six feet?

A. Yes, sir.

Q. Without specifying any width?

A. Yes, sir.

Q. With some interruptions?

A. The present payment is withheld on account of a question of that kind, Q. Were there any interruptions up to this present time?

A. No, sir; there was claimed to be an interruption because the plane to which the soundings were measured was an incorrect one, and the level was made higher, or proved to be higher than the one referred to.

Q. Has the dredge been used any since in 1879, in the South Pass?

A. Yes, sir.

Q. In each year?

A. I am not able to say that; I do not think it has been during the past year.

Q. Was it last year, 1882?

A. I do not remember, but I think not.

Q. When?

A. I do not recollect exactly, but soon after the decision was made that I must keep the channel through the pass.

I have been sick so long I have forgotten the exact time. It was before I went abroad.

Q. During the last year?

A. Yes, sir.

Q. Up to that time you had used the dredge-boat and conformed to the requirements of the War Department in keeping a navigable channel of twenty-six feet in the South Pass?

A. No, sir; I am not willing to admit that.

Q. Without making any admission, what is the fact?

Q. Up to that time you had used the dredge-boat and conformed to the requirements of the War Department in keeping a navigable channel of twenty-six feet in the South Pass?

A. No, sir; I am not willing to admit that.

Q. Without making any admission, what is the fact?

A. The fact is just as I stated it.

Q. That you had used the dredge-boat?

A. Yes, sir; but very seldom.

Q. For what purpose?

A. For a very small period of time.

Q. For what purpose in the South Pass?

A. As a matter of course, to deepen the pass at the point where it was used.

Q. And to secure the navigable channel of a certain depth?

A. It was used as a part of the method of facilitating the flow in the pass, and because there was a move on foot to get the Great Eastern to come to New Orleans, and I was anxious to have ample depth in the pass for her.

Q. This controversy about your payment upon the condition of the maintenance of the South Pass is not a new one this year, is it?

A. No, sir; it arose last February, I think, sir.

Q. The engineer, in reporting upon the maintenance of this work, has reported also upon the condition of the channel in the South Pass as well as through the jetties, has he not, each time?

A. Yes, sir. My counsel, Mr. Cochran, calls my attention to the fact that the earlier reports only report the depth of water through the jetty channel and through the shoal at the head of the pass. It is only more recently, I think, that instructions were given to report the depth through the pass itself.

Q. This question in controversy was submitted to the Department of Justice as far back as 1881, was it not, by him?

A. Yes, sir; not by him, but by the Secretary of War.

Q. It went through the Attorney-General's Department, and there was an opinion rendered recently, and your counsel, Mr. Cochran, has filed a protest' A. Yes, sir; in other was an opinion rendered recently, and your counsel, Mr. Cochran, has filed a protest' A. Yes, sir; the filed at that time a protest against the decision of the Attorney-General's Depa

A. Yes, sir. There has been no deficiency in the passe since then until the resent time?

Present time.

Q. Because you have used the dredge-boat to the present time?

A. No, sir.

Q. The pass has been satisfactory to the officers, has it?

A. Yes, sir; they reported that there has been twenty-six feet of water in it. Recently they reported six-tenths of a foot short for eight days and one-tenth of a foot for twenty-three days, and that is what my pay is stopped for now.

Q. Do you take issue as to their right to retain the payment because of any failure, as they assert, in the South Pass?

A. I take issue with the Government that they refuse to pay me because I have not maintained twenty-six feet for certain days.

Q. But you assert that you have maintained a channel of at least twenty-six feet?

A. Most assuredly, and because the South. The

feet?

A. Most assuredly, and because the South Pass was twice reported upon by two different commissions as entirely adequate for the purposes of commerce, it is evident that it was not contemplated by Congress or myself that I was to maintain any specific depth of water in it.

Q. What was the determination by the acts of Congress, and the contract made in pursuance of it?

A. The acts of Congress constitute the only contract. The evidence that is used against me upon all occasions when it can be to my disadvantage certainly should be used in my favor when applicable. General Barnard, president of the commission of 1876, declared that there was nothing in the act that related to the obtaining of a channel at the head of the pass, except in the forfeiture proviso of

the act, that if I did not have a channel twenty-six feet deep through the pass, which they construed to mean through this shoal at the head of the pass, Congress might forfeit the act, and Attorney-General Taft declared that there was nothing in the act which required me to secure a channel through the pass, except that proviso for forfeiture; that if I did not have it within thirty months after the signing of the act, Congress might forfeit the grant.

Q. Don't you understand that under the act of 1875 alone, if that had not been changed, you would have been required to maintain that depth?

A. No, sir; never. It was never contemplated by either committee charged with the bill.

Q. Don't you rely upon the accordance of the committee charged.

Don't you rely upon the amendment that you say was adopted in the year

A. No, sir; never. It was never contemplated by either committee charged with the bill.

Q. Don't you rely upon the amendment that you say was adopted in the year 1879?

A. Yes, sir; because this question of maintenance through the head of the pass or shoal at the head of the pass had been raised, and, to make that perfectly clear, that language was used in framing the bill of 1879, namely, that my payments should depend upon the depth and the width through the jetties. It was clearly shown to the committee that the pass had been declared to be entirely adequate for the purposes of commerce, and there was nothing in the report of the commission that indicated any improvements would be required in it. The commission of 1874 and 1875 spoke of a shoal at the head of the pass, and estimated some \$28,000 for the reduction of that shoal; and it was understood that I took this work at the estimate of that commission. Five millions and a quarter was what I was to be paid for the work, and their estimate was almost identically the same, being \$5,340,000. Their estimate contained no estimate or amount whatever for work in the pass itself, that having been declared by this commission to be entirely adequate, and it was explained to the committees in Congress that it was adensessary to do in order to get greater depth in the jetties; and for that reason the act was changed regarding the size of the jetty channel. Instead of requiring me to maintain an enormous channel thirty feet deep and three hundred and fifty feet wide through the jetties it was reduced for the safety of the jetties. I stated to the committees that framed the bill of 1870 that I had the sills hid sures both of the great passes, and, if they insisted, very little expense would enable me to throw more water into his pass, which it would be dangerous to do. Generals Barnard and Wright and other engineers were called to testify, and the commission of 1874 was referred to in proof that it was not advisable to put more water in the pass. Unless I put more wa

of the channel?

A. No, sir; the thirty feet was to be three hundred and fifty feet wide originally.

ally.

Q. Now it is to be only two hundred feet wide?

A. No; it is to be thirty feet, without respect to width; it is a 30-foot channel.

Q. But it is only twenty-six feet all through that channel, except in certain large year.

Q. Now it is to be only two hundred feet wide?

A. No; it is to be thirty feet, without respect to width; it is a 30-foot channel.
Q. But it is only twenty-six feet all through that channel, except in certain places, now?

A. Probably I can make that plainer with a diagram.
Q. You just state in your own words what the former act required in depth and width, and then what the amended act requires.

A. It required a maximum channel of three hundred and fifty feet wide which should not be less than thirty feet in any part of its width. It was shown to the committee that that could not be, without greater flow in the pass.
Q. And the act of 1870 amended it so ast to give the channel the width and depth indicated by you formerly in your testimony?

A. Yes, sir. It did not reduce the depth; it simply reduced the width of the channel, but it did not reduce the central depth of it. In other words, a 30-foot channel was required through the jetties; the other required a 30-foot channel hree hundred and fifty feet wide, and now it requires also that 25-foot channel hree hundred and fifty feet wide, and now it requires also that 25-foot channel have lead from the law of 1875: "That after said channel of thirty feet in depth and of not less than three hundred and fifty feet in width shall have been secured, \$100,000 per annum shall be paid in equal quarterly payments through each and every year that said channel of thirty feet in depth and three hundred and fifty feet in width shall have been maintained by said Eads or his associates by the effect of said jetties and suxiliary works aforesaid in said pass for a period of twenty years, dating from the date on which said channel of thirty feet in depth and three hundred and fifty feet in width shall be first secured; provided, however, that no part of suchannel of said pass shall be less than thirty feet in depth and three hundred and fifty feet in width shall be first secured; provided of time during which the channel of said pass shall be less than thirty feet in depth and

the shoal. I am entitled to my pay for maintaining the channel through the jetties. The maintenance of channel relates wholly to the channel through the jetties. The forfeiture clause relates wholly to the construction of the work, as you will see by the plans and estimates of the commission of 1874 and 1875.

Q. Coming to the act of March 3, 1879, which modified the conditions of the former acts, I will read the section: "The \$100,000 per anum, provided by said recited act to be paid to said Eads and his associates during the period of twenty years, shall be paid at the times and in the manner therein provided, upon the maintenance by said Eads and his associates of a channel through the jetties of not less than two hundred feet in width and having through it a central depth of thirty feet without regard to width." Then follows a section which provides that in all other respects than as amended by this act, the original act of 1875 shall be held to be in force. You maintain now that that language of 1876 act makes it very plain?

A. It was in part intended to correct and make plain the question of the maintenance of the channel through the pass and to relieve me wholly from it. The clause you first read from the act of 1875, relating to the maintenance of the channel for twenty years, made the meaning obscure because it used the words "through said pass" instead of "through said channel." I was relieved from it because: First. If I had to maintain the channel through it I must necessarily maintain one thirty feet deep and three hundred and fifty feet wide through it, which was absurd. Second. Because it was explained to the committees in 1879that there would not be any less channel through the pass than then existed, because I must have that much water flowing in it to maintain the requisite channel through the jetties. Third. Because the pass itself had been declared entirely adequate for the present and prospective wants of commerce by the commission furnished an plan and estimates to show the extent of the

he pass?
A. Yes, sir; entirely so.
Q. In connection with the claim for the payment which is now withheld, has he opinion of the present Attorney-General, as you understand it, been required?
A. Yes, sir.
Q. And you understand that he has also decided that you are requested to an intain the navigable channel of twenty-six feet through the pass?

maintain the navigable channel of twenty-six feet through the pass?

A. Yes, sir.
Q. What is the number of days that it is asserted there was a failure during the last quarter to maintain the channel through the pass?

A. Twenty-three days when the deficiency of depth was one and one-eighth inches (one-tenth of a foot) over a space of two hundred and fifty feet, I think, and eight days a deficiency of six-tenths of a foot over the distance of five hundred feet, throughout the entire channel, and about twelve and a half miles long, from the river to the Gulf.
Q. In all, thirty-one days?

A. Yes, sir; amounting to nearly \$13,000.
Q. That is to say, if a ratable deduction were to be made?

A. Yes, sir.

Q. That is to say, if a ratable deduction were to be made?

A. Yes, sir.
Q. But under this construction by the terms of the contract it is simply postponed for thirty-one days?

A. It is an absolute loss of nearly \$13,000 to me.
Q. Yes, it works that way—a loss to you of \$13,000. But the Government does not make a payment to you pursuing the policy of making a ratable deduction, but allows the quarter to go on until so many more days have elapsed?

A. Yes, sir; and right there I would be glad to say that it is not simply the ruling of the Department that works me a great hardship, but for these ninety days, if it continued, I would get nothing at all with which to pay the expense of maintaining the works during that time; but if the deficiency alone were deducted and I was paid at the end of every quarter, I would be certain of receiving more or less during each quarter.
Q. That course was adopted upon the opinion of Attorney-General Devens, was it not?

Q. That course was adopted upon the opinion of Attorney-General was it not?

A. I think it was. That \$13,000 that I allude to is not only the maintenance that is deducted, but the interest on the \$1,000,000 also, both amounting to about \$411 a day. Q. During thirty-one days?

Q. During thirty-one days?
A. Yes, sir.
Q. In the language of the original act of 1875 with regard to interest, I think there has been no modification of that provision?
A. No, sir; I was to be allowed "interest at 5 per cent. per annum on the same, being payable to said Eads, his associates and legal representatives, semi-anually, from the date when a channel of thirty feet depth and three hundred and fifty feet in width shall have been first secured, so long as said money or any part thereof is held by the United States."
Q. And your theory is that under that provision you should be paid the interest, notwithstanding that there is a failure to maintain the channel?
A. Yes, sir; so long as this money is in the hands of the United Stats it should pay that interest.
Q. Suppose you decline to go any further in the maintenance of that channel,

Suppose you decline to go any further in the maintenance of that channel, ld you consider that you had a permanent lien against the Government for

A. If I should decline to maintain the channel it would be a fraud, and I suppose the Government would have a right to confiscate that million dollars. The act in effect declares that it is so much money loaned by me, and it belongs to me; and so long as the Government has use of it it should pay interest on it as it promised. It has reserved the right to pay it off whenever it pleases, and your idea of my having "a permanent lien against the Government for interest," if I ceased to maintain the channel, is, I think untenable.

Q. And would it not also have a right to stop the interest?

A. It would have a right to apply that million dollars to the maintenance of

the channel if I forfeited my agreement by gross neglect, probably, but I hold that I would be entitled to interest upon the money, just as though it held a million dollars in bonds drawing 5 per cent. interest as a security instead of furnishing bondsmen. I would be entitled to the interest so long as the Government held it. I did not agree to put up a million dollars and the interest on it also as security. On the contrary, the act expressly stipulates that the interest shall be paid to me on the million every six months, and I have been mulcted out of at least \$16,000 of this interest by this decision already. The Government agrees to pay me \$100,000 per annum or \$274 per day, for maintaining the channel. For every day I have failed to maintain the channel I have been made to lose \$411. This is the kind of justice that is meted out to me, who saved the Government from going into the costly blunder of the Fort Saint Philip Canal, and whose jetties are saving at least \$100,000,000 annually to the country.

Q. Passing from the consideration of the jetties to the general work of the improvement of the Mississippl River from Cairo to the head of the passes, does the committee understand that you approve of the plans and works of the Mississippl River from Cairo to the head of the passes, does the committee understand that you approve of the plans and works of the Mississippl River Commission?

A. I approve of the general plan adopted by it.

Q. Without going into details at length, your views are stated clearly and fully in the minority report which you made last year?

A. Yes, sir; and at the meetings of the commission.

Mr. Ellis. Your minority report, dated April 12, 18\$2, signed Washington, D. C., appears as Executive Document No. 10 of the Senate, part 2, Forty-seventic Congress, first accession?

A. Yes, sir; I understand the last question to relate to the general plan of improvement adopted by the Mississippi River Commission?

A. Yes, sir; and you also testified at length in the last session of Congress,

A. Yes.

Mr. Ellis. I only want to ask you if you reiterate that report?

Captain Ears, Most assuredly I do. There are some matters I would like to have an opportunity to speak to the committee about. But I now ask to be excused to-day, and I will appear before the committee some other day when it is convenient for the committee.

Adjourned to Monday, 9.30 a. m., January 29, 1883.

WASHINGTON, D. C., January 29, 1883.

The committee met in the room of the Committee on the Territories, House of Representatives.

Present, the chairman, Mr. Burrows of Michigan, Mr. Robinson of Massa chusetts, Mr. Thomas, and Mr. Hiscock.

The examination of Mr. James B. Eads was continued, as follows:

chusetts, Mr. Thomas, and Mr. Hiscock.

The examination of Mr. James B. Eads was continued, as follows:

By Mr. Robisson:

Question. In your majority report you stated your views, and those views you now reaffirm in regard to the importance of levees in connection with the improvement of the low-water channel of the Mississippi River, do you not?

Answer. Yes, sir.

Q. And you state them at length in that report, because you differ from the other members of the commission in regard to the degree of their importance?

A. I think you are stating the case rather strongly as regards some of the other members of the commission. I don't understand that my position is different from General Gillmore's, Professor Mitchell's, Major Suter's, Major Harrod's, or Mr. Taylor's on the importance of the levees. I have seen nothing to indicate such different views recently. When my minority report was written nearly a year ago, there was some difference of opinion as to the importance of closing the gaps in them, but I believe all that I have named were convinced that the retention of the flood waters within the levees would accelerate the progress of channel development. I think my views and those of General Gillmore (the president) and Major Suter have, on the levee question, been in full accord from the first day the commission met. I have, however, never advocated raising them, but simply closing the gaps in them.

Q. Your views are quite different from those of General Comstock?

A. As you will see by my minority report, it was written partly because a paragraph in the report of the commission was to the effect that further study was necessary in determining the real value of the levees as a factor in this improvement. I will state that I returned from Mexico two or three days after the report of the commission had been sent on to Washington, and too late to discuss the matter with the commission. As I thought it was very important that the gaps in the levees should be closed, I at once wrote my report on the subject. Anot

the Red River altogether from the base of the commission?

Q. Has that been determined upon by the commission?

A. I do not think it has. My health broke down after having to testify here at considerable length before the Committee on Levees and the Improvement of the Mississippi River, and the Committee on Commerce. I was urged most strenuously by my physician to give up all work and go abroad. I left here in the latter part of April, and since then I have been unable to attend any meetings of the commission.

Q. Below the mouth of Red River there is at present no practical difficulty in the navigation of the Mississippi River, is there, until you reach the head of the passes?

Q. Below the mouth of Red River there is at present no practical difficulty in the navigation of the Mississippi River, is there, until you reach the head of the passes?

A. Yes, there is. I was told by the commander of one of the largest cotton-basts some three years ago that he could not take full loads of cotton down from Vicksburgh and Natchez during the lowest stage of water because of some of the bars below the mouth of Red River.

Q. The universal testimony of the steamboat captains on the river is that at all stages of water there are ten feet of water, or more, and that they find no difficulty in navigation. Are you so informed?

A. No, sir; my information is that at extreme low water there are bars on which there are not more than ten feet of water, and this is not sufficient for the largest steamers when fully loaded. I don't know of this depth of my own knowledge, but I have been assured of it by what I consider very reliable authority.

Q. Do you advise building levees below the mouth of Red River in order to remove these bars that you have now alluded to below Red River?

A. I have never advised building levees. I have urged the great importance of closing the gaps in the levees now built, above and below Red River, for the purpose of improving navigation.

Q. Below Red River?

A. Yes, sir.

Q. The levees that are below Red River extend far down below the position of any bar that has been alluded to?

A. I think the proper correction of the river involves the controlling of the flood-waters of the river within its banks, or within the levees, until the banks are high enough, or rather until the service of the river is low enough, to dispense with the use of levees.

Q. Are the levees below Red River solely for the improvement of the portion of the Mississippi River below Red River, or will they have a beneficial effect at all above Red River? What is your theory about that?

A. That involves the question of the advisability of closing Bayou Atchafalaya. I will state that the measurements of the co

annual report of November, a year ago, show that there was one-sixth of the volume of the Mississippi River passing out through Bayou Atchafalaya when in flood. Now, I presume that there is not a gentleman on this committee whose examination of the jetties has not satisfied him that the depth and width of the channel there is due to the volume of water that goes out through South Pass; and that if that volume is diminished the channel which is formed by the discharge of South Pass through the jetties will be diminished also. The discharge of South Pass through the jetties will be diminished also. The discharge of South Pass but one-tenth of the volume of the Mississippi River passing New Orleans, and if that volume be diminished one-sixth it must follow, I think, without any argument to show it, that one-sixth of the volume that would otherwise go through the South Pass has been lost. I see by a chart here, prepared recently by the Mississippi River Commission (it is the first time that I have had an opportunity to see it), that the less of flood water at Red River Landing is placed at 550,000 cubic feet per second. That is over 40 per cent. of the total flood discharge of the Mississippi River. I state very emphatically in my minority report that it is a matter of vital importance, in my judgment, to close the Atchafalaya for the benefit of navigation. I believe now if it is left alone that the whole Mississippi River will go out through it. Such radical changes in the principal mouths of rivers are by no means uncommon. The visual is a notable instance of it; the Adour is another, and many other instances could be cited if my memory served me at this moment. There are some matters connected with the principles which control this question that are necessary for the committee to understand clearly in order to have a proper comprehension of the cited if my memory served me at this moment. There are some matters connected with the principles which control this question that are necessary for the committee to unde

A. No. sir. A. No. sir. I mean that when it is nearly full it will discharge more than when it is entirely full. I submit this diagram for the purpose of proving the fact that the friction increases in proportion as the surface in contact with the water increases. The flow of water through a partially full pipe and through a full one demonstrates this [pointing to the diagram]. This curve will show the increased flow which occurs when a portion only of the whole frictional surface is in contact with the water; when the water is about twenty-two and a half inches deep in a pipe twenty-four inches in diameter it will discharge more water than it will when it is entirely full.

O. Do you ever have a condition of the channel of the Wississiphi Riverse.

tact with the water; when the water is about twenty-two and a half inches deep in a pipe twenty-four inches in diameter it will discharge more water than it will when it is entirely full.

Q. Do you ever have a condition of the channel of the Mississippi River so that you can say that a pipe is a fair illustration of it?

A. If you will excuse me until I have finished the answer to your question. You asked me what my theory is as to the use of levees below Red River. I wish to submit another diagram to show that the ratio of friction increases as we diminish the size of a river's channel. [Pointing to the second diagram.] These two circles represent the diameter of two pipes, one one foot in diameter and the other four feet in diameter. The frictional surface in contact with water flowing through the two pipes would be as their circumferences, that is, as one to four; but the quantity of water held by each pipe is as the square of its diameter, or as one to sixteen. It follows, then, that there will be really one-fourth as much friction in proportion to the volume in the large pipe as in the smaller one, because it has sixteen times the capacity and but fourfold friction. If we give to these two pipes the same inclination and let each be kept half full owater they will fairly represent the beds of two rivers, and it will at once be found that the current in the smaller one will be more sluggish than that in the larger one, because the ratio of friction is greater in the small pipe. To make the current in each the same you must make the slope of the small one steeper. This steepening of the slope is precisely what all silt-beating streams have the power to do, because certain velocities of current are required by them to carry the silt on to the sea, and if the stream fails from any cause to have that velocity is attained, and then the steepening process stops. The small pipe in this illustration will fairly represent the South Pass and the larger one the Southwest Pass. South Pass fails three inches per mile an

The navigation suffers by the reduced channel and the height of the floods is increased.

This process is now going on below the mouth of Red River to the injury of the river navigation, endangering at the same time the jetty channel and involving additional heights for the levees. I am safe in saying that those levees will require to be at least six or eight feet higher than they are at this present day. Diminishing the volume of the main river will increase the amount of shoaling and lessen the depth of water over the bars how existing below the mouth of the river. But this is not all. The slope of the river can not be steepened below Red River except by raising the Red River end of the slope, as the other end is fixed by the Gulf of Mexico. If it be raised at Red River it will react to the injury of the river all through the alluvial basin above Red River. If you mise the flood line (or slope) say five feet at Red River, you will have just that much less slope in the river above. I think there is no problem before the Mississippi River Commission, or before the country, or before Congress, connected with the Mississippi River, that is more important than the closure of Bayou Atohafalaya, for its discharge is rapidly increasing and will continue to increase, and, if the not promptly checked, the whole Mississippi River will go out through it. I speak with all the earnestness I can command on this matter. I will now be glad to answer any other questions.

By Mr. THOMAS:

By Mr. Thomas:

Q. If the Atchafulaya be closed, and all the volume of the Red River turned into the Mississippi River below that point, what effect would it have on the Mississippi River above the mouth of the Red River?

A. It will have the effect to ultimately lower the slope of the river or flood line from Red River up through the alluvial basin of the river wherever its channel is not controlled by a rock bottom, for the reason that the restoration of the volume of the Red River into the Mississippi River will reduce the ratio of friction (as just explained), which will induce a more rapid discharge of the river. A stronger current will be maintained, and this will carry more sediment. The excess of slit due to the increased velocity will be taken up from the bottom of the river, and thus it will deepen its bed and lower its slope until this abnormal velocity is reduced to a velocity only sufficient to carry the sediment without loss or gain. When this velocity occurs the lowering of the bed will cease. The result of this will be, in my judgment, a lowering of the flood line at Red River

fully five feet, and this reduced elevation will extend on up through the alluvial basin of the river and make the necessity of levees to control the flow of the river for the benefit of navigation so much less necessary. I will state that a few years ago the Atchafalaya was practically closed by a floating raft which extended many miles down through it. In this condition it furnished an illustration of the flow of water through a full pipe, and through one partially full. The water had the friction on the top as well as in the bed, in passing under this raft, to diminish its discharge, and then it discharged very little in comparison to what its discharging now. This raft was removed by the Government a few years ago, and since then that much frictional resistance to the flow of the water through it has been removed, the current has been greatly increased in it, and it is now rapidly enlarging.

through it has been removed, the current has been greatly increased in it, and it is now rapidly enlarging.

Q. Is it not true that the Mississippi River reaches the Gulf by the shortest route known, to deep water?

A. No, sir; it would reach it through the Atchafalaya; the water coming down from the Atchafalaya would be a shorter route.

Q. To deep water in the Gulf?

A. Yes, sir; I think to deep water. Although there is a delta at the mouth of the Atchafalaya, it is like the delta in front of the Mississippi; it extends out only a few miles to deep water. I think the route through the Mississippi from Red River to the jetties is probably twice as long as through the Atchafalaya to equally deep water.

Re Mr. Robinson:

By Mr. ROBINSON :

By Mr. Romison:

Q. What you stated in regard to pipes and the flow of water through them is quite elementary knowledge, is it not?

A. I would like to know what you mean by "elementary?".

Q. If you do not know, I will not ask any further questions upon that.

A. If you mean that it is didactic in me to give such an explanation, I am willing to admit it, because I am before such an intelligent committee, and of course it is familiar with these principles. But I presume this testimony will be for the use of Congress and a large portion of the public who, I take it, are not all so familiar with the science of hydraulic engineering as you are. As familiar as I am myself with these principles, I had quite forgotten the fact that a full pipe does not discharge as much water as it does when it is only partly full, until my attention was called to it by a very able hydraulic engineer, Colonel Flad, a few days ago.

attention was called to it by a very able hydraulic engineer, Colonel Flad, a few days ago.

Q. Is it or is it not elementary knowledge in the science of hydraulics?

A. The question of friction?

Q. The flow of water through pipes, such an illustration as you have given here this morning?

A. I do not think it can be called elementary, as I understand the term. The force of gravity is elementary, and friction is elementary. The knowledge that the first causes the current and that the last retards it is certainly "elementary knowledge." But the knowledge which is acquired by, or deduced from, an observance of the various phenomena resulting from the varying relations of these two elements or forces, as exhibited in the flow of water in pipes and in river channels, and which knowledge can only be understood, even after explanation, by those who have an elementary knowledge of hydraulics, should, I think, is estimated as at least a few degrees beyond mere "elementary knowledge."

Q. The Mississippi River channel is bounded by sides and bottom, is it not?

A. Yes, sir.

Yes, sir.

It has no top over it?

No, sir; it has a surface not in contact with anything to resist its flow but

Q. It has no top over it?

A. No, sir; it has a surface not in contact with anything to resist its flow but the air.

Q. It has no top over it, has it, as it has bottom under it?

A. No, sir; none. The Atchafalaya had, however, when the raft existed.

Q. Taking the whole Mississippi River, then, your illustration of the pipe will answer only so long as you keep up to what you may consider the horizontal diameter of the pipe, will it?

A. Oh, no, sir.

Q. Do you ever in the Mississippi River find a condition of things in the channel which will answer to a pipe?

A. Not to a pipe full of water?

A. No, sir.

Q. To a pipe more than half full of water?

A. No, sir.

Q. To a pipe more than half full of water?

A. No, sir.

Q. Then of what use is your illustration as to the whole upper portion of your pipe, the portion above the horizontal diameter, with reference to this problem?

A. Simply to furnish a proof that the increase of frictional surface in contact with the water increases the resistance to its flow.

Q. There could be no doubt about that in anybody's mind—that an increase of surface would give an increase of friction, and that an increase of friction would retard the current?

A. I think that such a doubt might very reasonably come into the mind of any one. I think it would be a natural conclusion in the mind of any one that the greater would be the friction.

Q. How in speaking of the sides and bottom of the channel?

A. There is no better illustration of friction acting in proportion to the surface in contact with the water than is shown in this diagram [pointing to diagram]. In my own study of the river problem I could not a first believe otherwise than that the weight of water modified the amount of friction. If this were so, then doubling the width of the bed, or wetted perimeter, would not double the friction of the water, and it was only after a study of the flow of water through pipes and the results of experiments made with them that the conviction of this fact was forced upon me. This is a grap

River?

A. Most assuredly. I am not contemplating anything that would be deemed impracticable by others. But I want to make the statement to the committee that if we double the width of the surface of the bed of the stream we will double the riction; and I want to present this diagram to prove it, so that the statement will not simply rest on my word, but that it can be demonstrated scientifically, and therefore that there is no getting over it.

Q. Doubling the width of the stream doubles the amount of friction, you say?

A. Doubling the vidth of the stream doubles the amount of priction, you say?

A. Doubling the surface in contact with the water—doubling the wetted perimeter.

eter.

Q. But that perimeter, that circumference, will never be so much that it will become a complete circle, in connection with your theory?

A. No, sir.

Q. Then what I want to know is, how is your illustration pertinent at all when you speak of a pipe two feet in diameter, in one condition full, having twenty-four inches diameter of water, and the other condition twenty-two and a half inches of water; why is it pertinent in this discussion to present that illustration when you never pass in this problem a horizontal diameter?

A. Because it shows that a very small additional quantity of water may bring in a very large frictional surface in contact with it, and that the flow will be retarded in consequence. When the water is twenty-two and a half inches deep there is a large frictional surface above the water not yet touched, but it requires only a little more water to bring this surface into the illustration. When this is done the ratio of friction to volume is increased and the current is at once reduced in velocity.

Q. But that condition only occurs when you come to complete the circle above?

A. Excuse me, that is not my answer at all. It proves that if the frictional surface in contact with a given volume of water be increased, whether it be widened out or whether it be made into a circle, the velocity will be diminished, and vice versa. If the 2-foot pipe were opened out to represent the lower half of a 4-foot pipe it would hold twice the volume of water without any increase of frictional surface, and with no greater inclination it would have a much more rapid current, because the ratio of friction to volume would be diminished one-half. But if it were still more widened out, it would hold less and less water, with the same frictional surface; therefore the ratio of friction to volume would be less and less. I think the pipe is, therefore the ratio of friction to volume would be less and less. I think the pipe is, therefore, a good illustration of the matter we are discussing.

The committee adjourned to meet this evenion at 7.30 o'clock.

we are discussing.

The committee adjourned to meet this evening at 7,30 o'clock.

#### EVENING SESSION.

Washington, D. C., January 29, 1883.

The committee met pursuant to adjournment. A quorum was present, The examination of Mr. James B. Eads was continued, as follows:

The committee met pursuant to adjournment. A quorum was present, The examination of Mr. James B. Eads was continued, as follows:

By Mr. Romison:
Question. I repeat the question that I asked you in the morning session: Are the levees below Red River solely for the improvement of the Mississippi River below Red River, or will they have a beneficial effect at all above Red River?
Answer. The maintenance of the levees below will ultimately have a beneficial effect above Red River.
Q. In what way?
A. By retaining the entire flood volume within the river below Red River a deepening of the bed all the way down to the Gulf will occur, and this will lower the slope.
Q. Lower the slope of the bed of the river?
A. No, sir; when I allude to slope I invariably allude to the flood surface of the river unless otherwise stated; and it is generally so understood by engineers, unless expressed differently.
Q. The reason I made the suggestion at this point was that you just spoke of its lowering the bed.
A. The slope will only be lowered as a result of the deepening of the bed.
Q. You mean that the effect will be by lowering the bed of the river to deepen it, consequently the surface of the slope will be lowered too;
A. Yes, sir. The slope of the bottom, except through long distances, has, apparently, very little to do with the surface slope of silt-bearing streams. The slope of the bottom of the river below New Orleans is actually an uphill grade to the head of the pusses; at this place it is only thirty feet deep from the surface of the water to the bottom, while at New Orleans, one hundred miles above, it is in the neighborhood of one hundred and fifty feet deep. The flood slope from New Orleans falls in this distance less than fourteen feet, while the slope of the bottom actually rises about one hundred feet. This proves that the slope of the sortine strace of water is the true indication of the force of gravity which is acting to produce the current. The irregularity and paradoxical profile of the slope of the bed in some p

to the irregularity in the width of the river. The profile always rises where the vide places occur.

Q. If that be the condition of things, what gain will there be in securing the leepening of the bed of the river from Red River down, say to New Orleans, if he water when it leaves New Orleans must run up that hill which you describe s marked by the bottom?

A. It seems actually to run up hill. The bottom of the river certainly inclines p toward the passes from New Orleans. I simply refer to that to show that he slope of the bottom of the river has very little to do with the velocity of the iver. The velocity results wholly from the flow of the water from a higher to lower level, the surface flow.

Q. Let me state it as I understand it and see if we agree about it: The confinement of the water within the levees over the natural channel of the river will ause a greater volume of water?

A. Yes, sir.

Q. And an increase of velocity?

Yes, sir.

And an increase of velocity?

Yes, sir.

Q. And an increase of velocity?
A. Yes, sir.
Q. And that increased velocity will act upon the bed of the river to deepen it and lower it. Is that right so far as I have gone?
A. I think you are entirely correct, sir.
Q. Now, what will be the effect of that lowering of the bed of the river?
A. The high places in the profile of the river's bottom will be cut down lower, and as these are the shallowest places, an improvement in the navigation will result. The first effect of the increased volume which will result from keeping the levees in repair will be to increase the current. A still greater volume will result by closing the Atchafalaya. The water when its current is thus increased will not be charged with the whole amount of sediment due to its velocity. It will take up the additional quota due to this increase of velocity, from the bottom, and so long as this process continues the bed will be deepened. As the bottom deepens, the surface slope is lowered and the normal velocity of the stream results. What I mean by the normal velocity is that velocity which is sufficient to carry the sediment without loss or gain. That may be more rapid at one time than it is at another, owing to the stage of the river and the quantity of sediment discharged by the tributaries into the main river. Do I make my-self clear?

O I wedgestend was respective.

of sediment discharged by the tributaries into the main river. Do I make myself clear?

Q. I understand you perfectly.

A. Now, as that surface slope lowers it affects the river above Red River. You can understand at once that if the surface slope above Red River was near the top of the levees, and by any operation of art you reduced the lower end of that slope to a lower level at Red River, you would have a steeper slope immediately above Red River. A more rapid current would occur throughout the extent of this steepened slope, and the lower level existing at Red River would be gradually extended above Red River by the deepening of the bed that would result from this steeper slope and increased current. This deepening process would in this way extend on up the river until it would finally lower the slope throughout the whole alluvial basin as much as it was lowered at Red River.

Q. Then there is, in the first place, an acceleration of the velocity and an increase of scouring?

A. Yes, sir, an increase of sediment-carrying capacity.

Q. And so an increase of scouring?

Q. And so an increase of scouring?

Q. And that goes on until, as the result of the scouring, the flood surface falls and so restores what you call the normal velocity, slackens the current, and you say it carries that slackening until it reaches the point where it neither deposits nor scours. How do you know that the Mississippi River is going to behave in that way—that it will go just to the critical point of scouring just enough to get the current accelerated and then retard just enough to prevent the scouring, and

not prevent deposition from the great tributaries flowing from it over the country, and which generally have an effect upon the stream?

A. When the discharge from the tributaries is large it creates a greater current in the main trunk of the river. It gives it a greater sediment-carrying capacity, My own opinion is that as the river begins to fall half a foot, there is a general deposition as far as the reduced current extends of the excess of sediment which is in the water, and which the slackened current is unable to carry. This deposition as occur within a few days throughout the entire length of the river; but it amounts to very little, and is no doubt nearly all taken up again in floods when the current is accelerated. Now, I know that the river will act in this way from my own experience at the South Pass and elsewhere on the river. I am putting in to-day in two places, where the pass is unusually wide, works to reduce the width of the pass at these two places. The reduction of the width will reduce the frictional resistance of the water because it will make a smaller wetted perimeter or cross-section of channel.

The acceleration of the current will cause a removal of the shoals which exist at these two places. They are the only two places in the pass where the water gets so shoal as to have only twenty-six feet of depth. I think probably out of the whole ten miles there are certainly seven mice through which there are from thirty-two to thirty-five feet of water in the pass. I am very certain that the left, if I reduce the width of the pass at these two points I will increase the depth to thirty-five feet of water will any additional assurance. I am very certain that when I reduce that width to the width of the pass, where thirty or thirty-five feet of water will any additional assurance. I am very certain that when I reduce that width to the width of the pass, where thirty or thirty-five feet of water exists, I will have comally deep water. How can it be possible to get this increased scouring power.

A. The greatest deposit is of course in flood times in places where the current is sluggish.

Q. Does that continue along down after the flood lines receded, we will say to a depth of perhaps ten feet below the crest of the natural bank?

A. Well, you would have to locate the place where you would apply the question, because the rise and fall of the river is so great that ten feet at New Orleans would be two-thirds, almost, of the total flood of the river, while ten feet at Natchez would be only one-fifth.

Q. That is the object of my question—that it shows a condition of things varying at different points of the river, does is not?

A. The rise and fall of the river is less as you go down toward the lower end of the alluvial basin. Not to any great degree, however, from Cairoto Natchez, seven hundred and fifty miles. My recollection is that the rise of the river is equal to fifty-two feet at Cairo, and I think & is about fifty at Natchez.

Q. What is the full from New Orleans to the Gulf?

A. From New Orleans to the Gulf it is only about sixteen feet.

Q. Do you expect to have a fall from New Orleans to the Gulf greater than seventeen feet?

A. I have no question that it will be greater than seventeen feet, if the volume

seventeen feet?

A. I have no question that it will be greater than seventeen feet, if the volume of Red River is allowed to be obstructed from the Mississippi River.

Q. That is, it will increase the flow if you turn the Red River away from the Mississippi River.

Q. That is, it will increase the flow if you turn the Red River away from the Mississippi River?

A. No, sir; it will increase the slope of the river, and the same height of leve will not retain the floods.

A. No, sir; it will increase the slope of the river, and the same height of levees will not retain the floods.

Q. If you take the water out of the Mississippi River the slope will be raised?

A. Yes, sir; ultimately. If you take the water-escapes by an outlet, the first effect is to lower the surface of the river in the neighborhood of the outlet. The permanent effect is, however, just the opposite, as it was in building the jettles. The first effect of the contraction of the outlet there was to raise the surface of the water above the jettles in the pass. If we had depleted the pass by an outlet in its side, the first effect would have been to lower it, of course. Here it is the opposite. We narrowed the outlet, cramped it in width, and the first effect was to raise the surface above it. That gave a greater force and a greater current through this contracted part, and what it lost in width it recovers by deepening; and when it is deepened down it lets down the head of water which was above, that is gone; but an abnormal current still remained, because in contracting the mouth of the pass by the jettles we reduced the frictional resistance, and the old slope was then sufficient to maintain a more rapid current than before the jettles were built. I am satisfied that the South Pass to-day with the same quantity of water passing through it, does not attain as great a height, by several inches, at the head as it did before I commenced the work, because of the reduction of frictional resistance to the flow over the bar.

Q. The effect of the work in the South Pass, the jetties, has been to take hold of the bunks and build them up closer together and pile the water on itself and make it deeper?

A. Not in the pass.

of the banks and build them up closer together and pile the water on itself and make it deeper?

A. Not in the pass.

The jetties have contracted the channel to 1,000 feet in width?

A. You speak of the pass, or of the bar in front of the pass?

Q. I allude to the jetty works.

A. The contraction was not made in the pass, you understand.

Q. It might be said to be equivalent to it, because it is made on the end of the pass. You may draw together, as it were, the banks of the river as making a narrow channel for the water?

A. There were no banks where the jetties are located.

Q. Might they not be the same if you really had built the jetties in the lower part of the pass itself and contracted the water way there?

A. The pass if contracted would have recovered in depth what it lost in width, or so much as would be sufficient to re-establish the normal velocity.

Q. By contraction of the river you pile the water on itself?

A. Yes, sir; it is backed up to a certain extent, according to the contraction.

Q. And make it deeper?

A. Yes, sir.

Q. And that acts with a scouring force upon the bottom?

A. Yes, sir.

Q. Below the city of New Orleans do you contemplate portions in the bowle.

A. Yes, sir.

Q. Below the city of New Orleans do you contemplate putting in the banks of a river any works of that kind for contracting the natural banks?

A. No, sir.

Q. Then we will assume all the time the present width of the stream?

A. Yes, sir, below Red River.

Q. With the current of the surface of the water below the natural banks of the

river, how could you get an acceleration of the current if you have no narrowing of the water way? I am asking the question with reference to flood-time. A. I explained that an increase of volume decreased the ratio of friction, and we can increase the current in two ways. We can increase it by increasing the slope of the surface, the fall from a higher to a lower level, which we do by increasing the volume. This increase of volume can be obtained in two ways also; first, by closing the gaps in the levees; and, second, by closing Atchafialaya and making the Red River discharge into the Mississippi. The second way of increasing the current is by decreasing the friction. When we narrow the river (as before explained) this is done.

Q. You are not to contract at New Orleans, so we will leave that element out, if you please?

Q. You are not to contract at New Orleans, so we will leave that element out, if you please?

A. I am not prepared to say that there are no places in the three hundred miles below Red River where it may not be necessary to make contraction to secure twenty feet at low water, but I think not.

Q. I say from New Orleans down?

A. I do not know of any place where it will require any contraction below

w Orleans.

Then, there being no contraction from New Orleans down, how will year acceleration of the current, when the river is not above the creet of the current.

New Orleans.

Q. Then, there being no contraction from New Orleans down, how will you get acceleration of the current, when the river is not above the crest of the banks?

A. Suppose that one-sixth or one-third of the river escapes at Red River, in one case we get an acceleration of current, if we prevent that loss of volume by the levees now existing if they are intact.

Q. Now, the water being in this condition at all times, while below the natural banks, and accelerated, you say, by the inflow of the current from Red River by one-sixth of one-tenth, you will then have an increase of scouring at the bed of the river, resulting from the acceleration, and then a retardation of that velocity, and a tendency to deposit, but not a deposit; is that your theory?

A. A retardation would occur as the channel was enlarged to suit the increased volume; but the retardation would not go to the extent of a deposit. That is what I mean, because there would be nothing to carry it beyond that point. But it is proper in this connection to explain that the magnitude of the channel is determined by the maximum floods of the river and not by ordinary stages of water. When I speak of the water being within the river banks, it is not in that condition always to increase the magnitude of the channel. The great scouring the maximum floods, and then it produces its maximum channels.

Q. I thought you said a deposit was going on at the time of the flood?

A. Excuse me, I did not make such a statement. I said that during floods the largest amount of sediment was transported, as the river was then most highly charged with sediment; but the deposit was not made then except at places where the current was slackened; the current in flood, if che-ked by any means whatever and in the slightest degree, will throw down some portion of its burden of sediment. I stated six or eight years ago that the friction of a fish-ned stretched across the channel would cause a deposit. This was verified a few years later on the Missouri, where wire screens w

A. It runs faster in flood, of course, than it does at the lower stages of the water.

Q. Does it when it floods so that it is over the bank; if the force is being lost over the bank?

A. I am not prepared to say that it will run faster than it runs when bank full; but if the flood be retained within the levees it will undoubtedly run faster. I show in my minority report facts that prove undoubtedly that the river with a difference of only 6.8 feet in its height, when it was above the banks within the levees, doubled its discharge, the river being at the time about 115 feet deep. This is a stubborn fact and is on record as one of the results of careful measurements made by Humphreys and Abbott over twenty years ago.

Q. A river filling its channel pursues a meandering course so long as it keeps within its natural banks, does it not?

A. Yes, sir; generally speaking.

Q. The general course of the river is very winding, is it not?

A. Yes, sir.

Yes, sir.
With a river bank full, the current is confined to the channel, and so winds

A. Yes, sir.

Q. With a river bank full, the current is confined to the channel, and so winds about, going, you might say, at a rough estimate, two miles for one over the whole valley. If you put on five feet of water above that level of the natural banks will the water then run faster on the surface than it did run when the water was confined within the natural banks?

A. Yes; not only on the surface, but all through to the bottom in the channel, Q. Is it not a fact that when the river rises over the tops of the natural banks it begins to slacken the current at once?

A. Are you speaking of its being confined within levees?

A. Are you speaking of its being confined within levees?

Q. It may be confined within levees and yet not be within the natural banks. A. That is true. And whenever the levees are unusually wide there will be a more sluggish current in the shallow water over the natural banks. If the levees followed the curvature of the river and were near the banks, the current in the channel would be more rapid.

Q. Is the water more sluggish than when it passes the limits of the natural banks, and there is water enough not only to fill the natural banks but to overtop and run down the whole length?

A. No, sir; it would not be more sluggish, because it would have a greater depth within the channel as the result of confinement of the river by the levees, and that is just the force that I want to retain. That is why I advocate the maintenance of the levees during the process of this river improvement. The result to which I look forward, and which I am confident will follow the complete improvement of the river, will be the lowering of the flood within the banks above the Red River so that the levees will be absolutely unnecessary, and below Red River down they will be only necessary to a limited extent.

Q. Let me suppose two conditions to illustrate it. Take the distance between New Orleans and Vicksburgh. A steamer shall start, carrying one hundred and fifty pounds of steam, if you please, to make the t

second, not quite one-half what it discharged at the higher surface, the velocity was only 3.38 feet per second, which was a loss of over 40 per cent. of that velocity. A diagram and complete statement of this is shown in my minority report of the River Commission above referred to.

Q. I included in my question the condition of the levees in their present location, with the breaks closed; would there be an acceleration of velocity, leaving out that element in your consideration, when the water was eight feet above the crest of the natural banks?

A. With the levees conforming to the curvature of the river.

With the levees conforming to the curvature of the river.

With the levees conforming to the curvature of the river.

Wherever an escape of flood volume is made through any of the breaks in the levees there would be a loss of current.

Just as at that place?

But that won't affect them sensibly the whole length of the river at, for instance, between New Orleans and Vicksburgh?

Ourse one crevasse would not immediately affect that, but a permanent on the kept open at Vicksburgh would undoubtedly affect the velocity of the current all the way down, until deposits in the bed of the stream raised it and gave that part of the river a steeper slope, and thus restored the velocity.

Suppose there were no levees at all now; we wipe them all off, and take the channel and fill it up with water, and it has a certain velocity, and then we have a flood eight feet above the crest of the natural banks. Now, which surface will move faster, the one which is even with the natural banks, or that which is eight feet above the crest of the natural banks. Now, which surface will move faster, the one which is even with the natural banks, or that which is eight feet above the crest of the natural banks. Now, which surface will move faster, the one which is even with the natural banks, or that which is eight feet above the crest of the natural banks.

Q. It was eight feet over the Mississippi Valley last year, was it not?

A. It mi

s within the natural banks.

A. A stream of greater depth?

Q. Yes, sir.

A. I am not prepared to admit that. A greater depth is possible in the alluvial basin outside of the channel.

Q. We have a map here which shows the overflowed region during the last flood—the ground covered. Now, from the point a little below Memphis it is apparent that the flooded portion covered a space, by the scale of the map, varying from twenty to seventy miles in width. You have information, probably, to the effect that it was to the depth of a good many feet over a large portion of that flooded space?

ably, to the effect that it was to the depth of a good many feet over a large portion of that flooded space?

A. Yes, sir; there were places where it was very deep, no doubt, in the depressions in this area; but you speak of forming a river outside of the fiver—outside of the Mississippi itself.

Q. You misunderstood me. Take it as represented by the colored portion of the map and the width shown there, covering not only the space the natural channel occupies but also miles on either side of it. I would like to know when the water is at that stage of flood whether it is moving down the valley as fast or faster than the water is moving within the natural channel?

A. The overflow water moves much more sluggishly than the water in the channel.

hannel.

Q. How does the water just above the channel move at times of flood?

A. It has the velocity of the water in the channel.

Q. Then that runs as fast at least as the water in the channel?

A. The water immediately above the channel?

Q. Yes, sir.

Yes, sir.
That is part of the channel water, I should call it.
No matter if it is above the actual banks, it partakes of and shares the motion?

A. Water will flow through banks of water as easily as it will through banks of earth.

A. Water and the content of the cont

proof of it.

Q. But you have no doubt that that statement is sound which you have just made?

Q. But you have no doubt that that statement is sound which you have just made?

A. I believe it to be so.
Q. That water will flow through banks of water as easily and rapidly as through banks of earth?

A. I have no doubt of that fact myself, but I do not know that it has been demonstrated as a scientific truth; I merely give my opinion. Water from the Mississippi River, that passes out through the jetties in flood-time, has its current well defined in the Gulf of Mexico for many miles out; but the waters of the river being lighter than the water of the Gulf, they have a tendency to rise and spread over the Gulf water, and as it spreads the frictional resistance to its flow increases and it gradually loses its velocity.
Q. Taking the height indicated by this map, and the space from New Orleans to Vicksburgh to be made by that steamer I have spoken of, and there are no levees we assume, will she have to contend against a stronger current at that time of flood than if the water was just even with the banks?

A. I think she would.
Q. No levees at all?
A. No levees at all. In other words, the larger and deeper the channel is the more rapid that current will be, whether it is flowing through banks of earth or banks of water on each side. If it have banks of water to flow through, there is a tendency to drag that water along with it and give it motion, and if it is shallow water laying over the banks of the river, it will have so much friction it can not move with the velocity of the other; therefore, this water will drop its sediment on the natural banks which it covers, and in that way the river builds up the banks within the levees.

Q. Then there is no doubt that the water above the natural channel at the time of flood, without regard to levees, moves with a greater velocity than when the water is just even with the banks?

A. I think it would move with greater velocity, of course.

Q. And so would have a scouring force greater on the bottom of the river, would it not?

A. It would have a greater scouring force.

Q. And wouldn't that be sufficient without building uplevees for the improvement of navigation?

A. It would be impossible in that condition of things to have permanence in the channel. So long as the wide places exist it would be eternally caving its banks and creating new shoals, at new places. My views upon the levee question are easily stated, and I think they can be readily understood.

I do not pretend to say that the improvement of the river for navigation alone and independently of any protection of the banks against overflow can not be accomplished ultimately without the maintenance of the levees. I will say even more, namely, shat if there were no levees to day in existence below Cairo I would not recommend the building of them as a part of the system of improvement, adopted, because to rebuild the 2,000 miles of them as they now exist otheir present height would cost from sixty to seventy million dollars. But as they are already built, and three or four millions will close the gaps in them and thus give us a much greater scouring force to deepen the channel through our works and will maintain and deepen other parts of the river that would become troublesome to navigation if the crevasses are left open and which are not yet under treatment, I feel fully warranted in urging with the greatest carnestness the closure of the gaps in them and their maintenance in good condition during the progress of the improvement of the channel. I urge this as a measure of economy, and a very important one. I feel perfectly sure that the cost of the channel improvement will be three or four fold greater than the cost of this levee work, if the levees are allowed to remain in bad repair or such condition as they were in a year ago. In this condition the effect of the crevasses is to increase the shoals in the channel and make many miles of channel works necessary that would not otherwise be needed, and this in portions of the river now needing no such treatment. As the places n

Q. Do these banks cave during floods?

A. To some extent.

Q. Much?

A. No, sir; not much during the flood, but during the subsidence of the flood. During the flood the bottom at certain localities is deepened so as to make the bank steeper, and when the water falls the bank loses the supporting pressure of the water, and, being too steep, caves in.

Q. Then there is no danger from caving banks during floods?

A. Not much. It is not when the river is high but when it is low that difficulties occur in navigation.

Q. But if the current is accelerated when it gets above the banks without levees, and gets greater scouring force, why do you not build levees to restrain the water for the purposes of navigation?

A. In the first place you could not get the water a foot or two higher on an average than the banks are without levees. You would have 1,000 miles on each side of the river for the water to go over, and it would be simply impossible to get an average of over a few inches, and this would be but a small increase of scouring force.

Q. It is not square miles, I suppose you mean?

A. No, sir; a thousand lineal miles measured along the stream on each side of it over which the flood water would be escaping, and you could not maintain it six inches deeper than bank full on an average, without levees, consequently it would make very little difference in the acceleration of current in the main stream. It is when the stream is in flood that it exerts its greatest channel-making power. A big stream makes a big channel, and a little stream makes a little one. If its flood waters are not permitted to escape the bed will be deepened. If you rob it of its quota of water, its channel at once begins to diminish. Its cross-section becomes smaller, and like a smaller pipe, it will require a steeper slope to produce the same velocity.

Q. The river would do good scouring work; that is, good on the bed of the river; if the old water, it will do good, will it not, digging out the bottom?

A. Yes, if its floods were not permitted

A. I admit all that.

Q. Haven't you got an effect on the bottom, a scouring force of the water on the bottom?

A. That would be sufficient if the width of the river is confined to 3,000 feet.

Q. But suppose that that overplus of water is not confined?

A. Then there is a loss of that much channel-making force. The overplus would not be at work in the interest of navigation. It would simply be devastating the lands adjacent to the river and leave the channel works to more slowly effect their object.

Q. Why is not that condition of channel sufficient to do the work when the channel is full of water?

A. Because it is not sufficient in flood time. There is no law that is more clearly established in silt-bearing streams than the fact that the slope diminishes with the increase of volume, and the reverse is equally true that the slope steepens with the reduction of volume.

Q. We understand that. If I get your idea, it is that with this increase of velocity and so great a scouring force there is a deepening of channel, then with a retardation of velocity there is a stopping of scouring and possibly a deposit, and so the bed is formed, a seesaw down and up, or up and down, as the water fluctuates; am I right?

A. You may be right, but I don't clearly understand you. The bed of the river deepens in certain places where the channel is confined, that is, where it is narrow, as is the case at the piers of the Saint Louis bridge. In flood the bottom of the river between them is considerably lower, many feet lower than when it is low water. The bed fills up then. The bottom comes up as the surface of the water goes down. It is not a seesaw; the bottom and the top of the river come together during low water, and they are wider apart by the lowering of the bottom of the river in flood time as well as by the rise of the surface of the river.

Q. Then there are two seesaws instead of one; the bottom goes down and up, and the flood comes up and then down, so my illustration is a good one?

A. The trouble is in the wide place

locations and in good order in time of flood. If the levees are of sufficient height you will have the water confined within these artificial banks, and so you ex-pect to have a greater current and a great scouring force?

locations and in goot order in time or heavier.

Journally have the water confined within these artificial banks, and so you expect to have a greater current and a great scouring force?

A. Yes, sir.

Q. That great scouring force will be exerted all over the space between the levees, will it not, however far apart they might be?

A. No, sir.

Q. Why not?

A. Because the water over the natural banks has less depth, and is therefore more retarded by frictional resistance.

Q. It is a question of degree?

A. Yes, sir. You never find the water flowing over the banks with anything like the velocity that you do where the stream is deep; and as the stream rises up and spreads over such wide places as may exist within the levees it has no scouring power. On the contrary, there is a deposit occasioned, because the water is overcharged with sediment as it overflows, and it loses its velocity and deposits on the banks within the levees, and thus the overflow has a tendency to build up these banks between the levees higher.

Q. In all of that space?

A. Certainly. In all the space between the levee and the river.

Q. Supposing the levee to be set back some distance from the river may not be more than a quarter of a mile wide?

A. I expect there are instances where that distance between them exists; but none where the river is only one quarter of a mile wide. The normal high-water width of the river from Cairo to New Orleans is about 3,500 feet.

Q. So you expect that intervening space to be filled up in course of time between the natural banks and he levees?

A. (The witness here illustrated by the first diagram in his minority report, and in explanation said): My view of the levees is that the maintenance of the levees intact (not the raising of them) is all that is necessary to cheapen and expedite the work of channel improvement so far as the levee question is concerned; and every year, as this work progresses, it will be less and less necessary to maintain them. By keeping them intact you will facilitate the improvemen

sary to maintain them. By keeping them intact you will facilitate the improvement of the river by bringing greater scouring power within the line of the works of improvement. You will hasten the improvement and very much lessen the cost of it.

Q. You look forward to the time when in the greatest floods of the Mississippi River the water will all be below the natural banks?

A. Yes, sir; I have no doubt that if the greatest flood that ever occurred be repeated the surface water will be entirely within the banks from Red River up, when the proposed improvement is completed.

Q. And now levees will be required?

A. Yes, to lasten the improvement.

Q. In saying that you now contemplate a flood as great as that which extended over seventy miles in width, and you expect to get all that water within the space of the width of the natural channel and to keep it there?

A. It is evident, from the height of the river above Memphis, that that flood was no greater than other floods, and not even as great.

Q. Leaving that out of the question, take that flood as being one of the greatest, yet you look forward to the time when you can take all that water and keep it there within the natural banks so that the bouse of the cottager may be as safe immediately on the banks as houses that are built on the Chickasaw bluffs?

A. I have no doubt of it.

Q. How much will it cost to bring about that condition of things?

A. That will depend upon the skill that is exercised in the location of the works and in their construction. I think it ought not to cost over \$30,000,000.

Q. And that will give you how much water to Cairo?

A. Id on not think there will be less than twenty feet.

Q. And that will give you a ship-cannal all the way to Cairo?

A. Not necessarily. Ido not think that it would be necessary, or that it would pay to have a ship goup to Cairo. They are so vastly more costly than the river craft.

Q. It would be safe for them to come?

A. Yes, occan steemers could co un to Cairo then; it will, however, make a

A. Not necessarily. Ido not think that it would be necessary, or that it would pay to have a ship go up to Cairo. They are so vastly more costly than the river craft.

Q. It would be safe for them to come?

A. Yes, ocean steamers could go up to Cairo then; it will, however, make a cheaper channel for river craft, and be one of the safest for barge transportation that can be found in the world.

With respect to lowering of the surface of the floods within the banks, I call your attention to the fact that from New Orleans to Red River the slope is only one and eight-tenths of a foot per mile. That is three hundred miles and over. I speak from memory. I think it is three hundred and thirty miles from the jettles or from the head of the passes.

Q. To the mouth of Red River?

A. Yes, sir. In the sixty-nine miles immediately above Red River the slope is almost double in steepness. It is three and two-tenths inches per mile.

Q. Now, you speak of the slope of the surface at flood line?

A. At the high stage; yes, sir. That is from Red River to Natchez. Now, there is a reason for this, undoubtedly, and the reason is found in the numberless obstructions to the flow of the water above Red River. I would like to call your attention to the maps of the river recently published by the commission. The first maps, which show the river below the mouth of Red River, exhibit a very remarkable uniformity of width of river. But above Red River the character of the river changes; from there up the greatest irregularity in its width is to be seen, and the multitude of islands, chutes, and bayous constitute the bed of the river. From Natchez up the slope is still greater. Now it only requires a lowering of one-quarter of an inch per mile in the slope, owing to the frictional resistance the flood has to overome. It deposits its sediment and builds up its bottom and gets a steeper slope a every island and wide place in the river; and each place you correct will produce just the effect that I shall accomplish by narrowing the two wide p

down hill?

A. Yes, sir.
Q. If it were not a winding stream, but were a perfectly straight line of a certain slope, you would have a certain velocity of that stream?

A. You would have a greater increased velocity, yet the result would be that it would dig itself a deeper channel and destroy navigation above, and the excessive velocity would tone down to the normal.
Q. If the lower end of that channel should be fixed, as I suppose it is, by the level of the Gulf of Mexico, then all the digging out process would result in lowering the upper portion?
A. Yes, sir.
Q. That would retard the current, would it not?
A. There is no man living who can retard the current of the Mississippi River

permanently. Engineers can increase or decrease it temporarily. Nature has given it the power to regulate its own current. It does it by this scouring and depositing action. It does it because it carries this sediment in proportion to its velocity, and if its velocity is too great it will take greater loads, deepen its bottom, lower its slope, and thus reduce its current.

Q. Then the Mississippi River having by nature been provided with that power to regulate its own current, don't you anticipate that it will deal somewhat with the works that you have put in the stream, and that it will thus give an exhibition of its power?

bottom, lower its slope, and thus reduce its current.

Q. Then the Mississippi River having by nature been provided with that power to regulate its own current, don't you anticipate that it will deal somewhat with the works that you have put in the stream, and that it will thus give an exhibition of its power?

A. Yes, sir. There is no doubt it will act precisely in this way. The works are designed to make the river do what we want.

Q. And in a small degree you count on this tremendous power of water in time of flood?

A. Yes, sir; we limit the degree of the force in the plan of the works. When we get the river to a comparative uniformity of width we will get a comparative uniformity of depth, and that will give us a comparative uniformity of that comparative velocity of current will give us a comparatively uniform charge of sediment; and being charged with that it can not carry more, and it can not therefore attack the bottom or banks, and therefore they will cease to cave in and thus form new shoals.

Q. Now, you propose to create a uniform width of 3,000 feet?

A. Three thousand or three thousand five hundred feet at low water.

Q. You say if you make a comparatively straight and direct channel of 3,000 feet wide, all the way from Cairo to the Gulf, the water will not after that maintain that same channel and preserve it?

A. It will lower it so much that you will have enormously high banks on each side and destroy their utility.

Q. More than that, with the soil peculiar to the valley of the Mississippi, it will throw itself into the wandering course it has now and assert its power laterally?

A. It is a doubtful question to what extent it will do that. To straighten the river as you are proposing is an impossibility.

Q. I am supposing what engineers suppose. They are in the habit of assuming something which pleases their fancy and making their plans to suit them.

A. You are building a man of straw then and asking me to knock it down.

Q. I am building you banks of earth that shall be separate and unifor

ourse?

A. I think to a great extent that would be so, because of the different characters of the soil through which the river runs.

Q. It not being entirely homogeneous?

. Yes, sir.

When you have your banks only 3,000 feet apart will not the river assert its ver to meander?

Q. When you have your banks only 3,000 feet apart will not the river assertits power to meander?

A. We can only judge by the facts which exist. There is, as you will see, a very great bend [referring to Coast Survey chart No. 94, Mississippi River] at Fort Jackson. There is a place where you would naturally expect the Mississippi River to cut away its bank, because the whole volume of the river is there directed against that very short bend. Since the white man has known it, however, there has been no change in it. Why? Because the river is comparatively uniform in width above, and it is so charged with sediment that when it comes down here it can not pick up any more from the bottom or undermine the banks. It is simply because it is of uniform width of body for many miles above. If you had just above it a wide place, some of the lake-like places which are common on the Upper Mississippi, it would be cutting away that bend immediately. It is one of she most recent deposits of the river, and of the most unstable character; yet with a uniform width of river above it, this bend is almost as stable character.

k.

2. There is comparatively little erosion of the banks below New Orleans?

3. Very little; very little below Red River, because of the great uniformity of depth and width of the river.

4. And there is a little less current there, is there not?

4. Very little less current.

5. Very little less current.

6. The difference in the velocity is very little. I do not think it is one quarter.

7. Very great.

A. Very great.
 Q. Doesn't that make a difference in velocity?
 A. It would, were it not for counteracting forces. The slope of the South Pa is three inches per mile, and the slope of the Big Pass two inches. The Sma Pass being smaller, has a greater ratio of friction to overcome, and needs steeper slope.

steeper slope.

Q. From the mouth of the Red River down to the head of the passes, the slope is not so great as from Cairo to Red River?

A. No, sir; it is not.

Q. Doesn't that slope down from Red River give greater velocity than it does above? With a much greater slope between Cairo and Red River than between Red River and the head of the passes, isn't there much greater velocity of the stream above?

Act River and the head of the passes, isn't there much greater velocity of the stream above?

A. Not much greater. The mean velocity down here would probably be six or six and a half feet per second; and up in the upper part, where the slope inearly two and a half times greater, it is only about eight feet per second.

Q. I thought the whole theory of this improvement was, that by increasing the slope you were thereby going to have a greater velocity, and now we find that we have a greater slope and not so much velocity?

A. There are some things that look like paradoxes in nature, but which admit of easy solution.

A. There are some things that look like paradoxes in nature, but which admit of easy solution.

Q. Well, we will have the solution.

A. The question you have raised is one often discussed by hydraulic engineers; that is, that the slope of a river is always less near the sea than further from it, and a satisfactory solution of it I do not think has ever been published. The question was raised in the commission one day, and I proposed a theory to explain it. I attributed it to the acceleration of velocity in falling bodies. All water falling from one level to another acquires this acceleration, other things being equal. In one second of time it falls a certain distance, the second second through a greater one, and the third through a still greater. This is an acceleration of velocity, and is easily noted in waterfalls. If we consider that the water up the river above Cairo once fell over a precipice three hundred and fifty feet high, there must have been an enormous acceleration of velocity in the lower part of the fall. If you slant out from the precipice a vast deposit of earth, we would bring in the element of friction to retard the velocity, but the accelerating force would remain. There would be still a greater velocity, the lower end of the incline, if it were straight, than at the upper end, and this would be due to this acceleration of velocity as exhibited in bodies falling through the air.

O. Is that a good illustration—the fall of a body through the air.

the air.

Q. Is that a good illustration—the fall of a body through the air?

A. Yes, sir; it is. Then comes in the silt-bearing character of the stream, by which it regulates its own current and produces that current necessary to preserve its channel from being filled up or too deeply excavated. As this neceleration of velocity is felt on down toward the lower end of the river, a lower slope will produce that normal velocity which is necessary for the stream to have in its higher reaches. When I speak of normal velocity, I mean the velocity necessary to carry sediment without loss or gain.

Let us suppose the incline from the top of our ancient precipice to be a perfect plane to the sea; that is, a regular slope from a height of three hundred and fifly feet to the Gulf. The accelerating force alluded to would create a more rapid current as it traveled on toward the sea. This would give too great a silt-carrying power to the water, and the result would be a deepening of the bed at the lower end of the river and a lowering of its slope. The slope would not remain uniform from the precipice to the sea, but if the width of the stream was uniform the slope would doubtless be a parabolic curve, with its flattest end at the Gulf, and the bed at that end would have greater capacity with less current.

Q. What is the average velocity of the current from Red River to the head of the passes?

Q. What is the average velocity of the current from Red River to the head of the passes?

A. I think in flood-time it would be about six and a half feet.
Q. What is the average velocity of the river at the same stage of water from Cairo to Red River.

A. The average would not be over seven and a half feet; but from Cairo down to Memphis it would probably be eight feet per second. It is not materially greater. When you get up into the Missouri you have a fall there of ten or twelve times as great as it is here per mile, but the mean current is but rarely, I believe, more than eight or nine feet per second.
Q. All this velocity gives greater increase in scouring power.
A. That depends upon where it is located.
Q. Well, we are talking about this Mississippi River now. I will stay right in that river.
A. You lose sight of the power of the river to produce its own velocity.
Q. I do not think so. I adapted your statement to the conduct of the river itself.
A. I an at a loss to see how you come to such a such states.

itself.

A. I am at a loss to see how you come to such a conclusion, because you say although the slope from Cairo to Red River ismuch greater than from Red River to the head of the passes, yet the velocity from Cairo to Red River is substantially no greater than from Red River to the head of the passes.

Q. Your theory is that you increase the slope, and by that you get acceleration of velocity whereby there is no increase, and there is no acceleration of velocity. If you increase the slope you said you would get an acceleration of velocity.

To are theory is that you increase the slope, and by that you get acceleration of velocity. If you increase the slope you said you would get an acceleration of velocity. If you increase the slope you said you would get an acceleration of velocity. A. That is one way to increase the current, but we get our acceleration by decreasing the friction; that is, by contracting the narrow places. We want to lower the slope, not to raise it. One reason of the greater slope above Memphis and above the mouth of Red River is because of obstructions to the flow of the water—those islands and wide places. There is no possible explanation in the world of such an increase of slope as exists from Res flow to Natchez and on up to Cairo, except these obstructions will be water by reducing the wide places. This will give us a more rapid current, and it will deepen the stream through these wide places, where the obstructions to navigation also exist. I will state in this connection that at Karishad, last summer, I had the pleasure of meeting the chief hydraulic engineer of the Prussian Government, Mr. L. Hagen, to whom I submitted my minority report and also the lirst report of the commission. I have a letter from him, in which he says that the principles on which the plan of improvement adopted by the commission is based are recognized by the engineers in Germany as correct, and their works for the rectification of the Elbe, the Rhine, Weser, and other rivers, are based upon the same theories.

Q. There is considerable controversy between foreign engineers with reference to river works, is there not?

A. I think so.

Q. That last collection of works translated by Lieutenant Merrill of the distinguished Russian engineers, Janicki, Jacquet, and Pasqueau—do they not question a good deal the system of rectification of water ways in France?

A. I have not had the advantage of reading them yet.

Q. That is a work that you will find, and for free distribution, at the War Department; and I have no doubt that you will find it very interesti

me.

Q. (Interposing.) I want you to keep to the Rhine.

A. With respect to the Rhine, the improvement I alluded to was below Cologne. It extended some forty miles, I think. I remember loaning one of my essays to Colonel Flad, explaining my plan for improving the Mississippi River, seven or eight years ago; and, when he returned it to me, he said that it was similar to the plan by which the Rhine was improved below Cologne. When he came out of school, that was the first work he was employed on. He proposed to get me the official account of it and its results. He said it produced remarkable results; and the report showed that the surface of the river in floods had been lowered six feet, and the depth of the channel had been increased about two meters, or six and a half feet.

Q. These observations were taken at the time when there were no floods?

A. They must have been taken at the time of floods. There is one there almost every year.

A. They must have been taken at the time or noods. There is one distributions of the people along the banks, inundating towns, and rendering the people homeless, so that all America has been called upon for contributions to aid the sufferers. And this effect, it seems to me, shows apparently that that work is not at all sufficient for any such results as you anticipate here.

A. The work Colonel Flad referred to was below Cologne. These recent floods are, I understand, far above there. It does not follow that they have carried the works to completion there. On the contrary, the chief engineer of the Prussian Government, to whom I referred, gave me two official reports on these rivers (which I have had translated for the Mississippi River Commission), describing the improvements on the Rhine, the Vistula, the Elbe, and some French

rivers; and I recollect distinctly that he said that the works on the Rhine would yet require some eight or ten years to complete, and an expense of I forget how many million of marks.

Q. How does the Rhine compare in volume with the Mississippi River?

A. It is very much smaller, of course.

Q. Not one of these rivers which you have mentioned is as large as the Mississippi River?

I think not. The Danube drains about one-third of the area drained by

a Mississippi.

Then what would answer for a stream like the Elbe or Theiss might be sufficient for the Mississippi? Q.

Q. Then what would answer for a stream like the Elbe or Theiss might be insufficient for the Mississippi?

A. Very true.

Q. The tests upon a small stream of water are not very satisfactory for a current like that of the Mississippi River?

A. The currents of the Rhine and Danube are as rapid as that of the Mississippi. The only means of judging of the probable effects are by noting those which are produced upon smaller streams, and by a thorough knowledge of the laws which control all rivers.

Q. Would it not be a better thing to put down works at one place—say, for instance, at Plum Point reach—and perfect the works there according to the plans of the commission, and then wait through a season of flood and test the efficacy of this work?

A. If there were any doubt as to the absolute result of such works there might be some wisdom in doing that; but they are so thoroughly verified by observations and by scientific deductions from well-established laws that they are just as certain of producing their results as it is certain that if you stand a pole out in the park and the sum shines upon it it will cast a shadow.

Q. You do not anticipate any failure in the matter?

A. Not at all. I think it would be very numise to suspend work at any of these points where it has been commenced. It would result in great loss. It would cause a decay of plant, a disorganizing of the force employed at each, and many other expensive things.

Q. If the work on a given reach should turn out to be a failure, the plant would probably drift into decay, and there would be no need for preserving it for another day?

A. There is no probability of its turning out a failure to justify such a suspen-

other day?

A. There is no probability of its turning out a failure to justify such a suspen-

sion.

Q. Your commission are not unanimous in regard to their opinion as to the absolute perfection of their theory?

A. They are, with the exception of General Comstock, and I don't know that he goes so far as to condemn the work. In the first report he dissented because he thought there were certain principles laid down in the report which he did not think had been sufficiently demonstrated to be recognized as established facts; but I think that General Comstock has not had that experience in the construction of works of this sort that some other members of the commission have had.

He does not agree with some of you in regard to the efficacy and importance he levees in connection with the low-water navigation?

No, sir; he does not think they are an essential factor in the improvement he navigation.

A. No, sir; he does not think they are an essential factor in the improvement of the navigation.

Q. During the last year, did you participate in the consultations of the commission in regard to the works?

A. No, sir; I was sick and absent.

Q. You did not take any part, then, in their deliberations?

A. No, sir; I was such and absent.

Q. So you only know by hearsay why allotments were made in one place or another; you only know from what other members of the commission have told you?

A. I know by what I have read in their proceedings. These I have received and read. But you have had all that information from those members themselves in their testimony here.

Q. So you would not be able to give any additional information of your own knowledge?

A. No, sir; nothing so reliable as that. The reasons for the allotments, I think, are given in their report.

By the CHAIRMAN:

Q. Take a place where the river is 5,000 feet wide and bank-full, and suppose you could bring the banks to within 3,000 feet instantly, what would be the first effect?

A. The raising of the water above and lowering it below, cutting off a portion.

effect?

A. The raising of the water above and lowering it below; cutting off a portion of the supply of the lower part of the river would lower the surface there, and the damming effect would tend to raise the water above. It would therefore greatly increase the slope between the part below this narrowing and the part

the damning effect would tend to raise the water above. It would therefore greatly increase the slope between the part below this narrowing and the part above it.

Q. That increase of slope would produce a very rapid and abnormal current. Wouldn't that secour out the channel and bring in into the banks?

A. I presume it would, as you say the river would be only bank-full.
Q. Now, when that is accomplished, will there be any addition in the velocity between a stream 5,000 feet wide and one 3,000 feet wide?

A. The velocity which would be produced would be the normal velocity; that is, that velocity which is sufficient to carry off the sediment.

Q. Wouldn't the velocity be the same?

A. Practically it would be the same, I was going on to say, if the river is bank-full, the raising of a head of water above would cause a loss of all that force due to the raising of a head of water above the contraction, because it would overflow the banks, and it would take longer to deepen the channel through the contraction on that account.

By Mr. Rounsos:

Q. I intended to ask you a question or two in regard to the other passes at the mouth of the Mississippi River. When you commenced the construction of the retties, or after you proceeded with your work, did you stop in any way, partially or wholly, either of the other passes, or both?

A. The Southwest Pass is now perhaps a little smaller at the head in cross-section, where I laid a sill across it, than it was when I commenced the work at the jetties, and Pass à l'Outre is a little larger. Observations made by the engineers at the jetties last year. I understood from my manager there, revealed the fact that there was about the same quantity of water passing down the South Pass now that there was previously—that is, before the jetties were built; so that if less should go through the Southwest Pass there must be more through the other.

Q. Is there a sill now in position at the South Pass?

A. Yes, sir; there is a sill across the head of each one of these passes.

Q. What is

And the purpose is to cause a greater amount of water to go down the South

Pass?

A. No, sir; the purpose was to hold these two passes in the shape I found them in when I commenced the work.

Q. Was there any purpose to furnish more water for the South Pass?

A. No, sir. It was never my intention to put more water through it than naturally flowed into it when I commenced the work. And these sills were placed there purposely to prevent any enlargement of these two passes, so that I should have no less in it. The works that I built at the head of the pass for the purpose of deepening the shoul that obstructed the entrance into the South Pass were of such a character as to form an obstruction to the flow of the water. Water follows by "the line of least resistance," and that was down these two

passes after the works were built. They stood on each side of these works with their channels wide open to receive the slightest accession, and I found that the Southwest Pass and Pass à l'Outre had both deepened under the influence of it. An enlargement always occurs at the upper end and works down; and this enlargement had commenced there, and to prevent any further enlargement put these sills in, and it practically resulted in causing the same sized cross-section as when the work was commenced, because they had only deepened about two feet, which was the thickness of the sills.

Q. No damage could result to the Southwest Pass by being deepened?

A. No, sir.

Q. And therefore it was to hold it in proper shape?

A. Yes, sir; the South Pass under the influence of this loss of water had lost a part of its cross-section at the upper end, and it was officially reported by engineers hostile to the work down there—Major Howell, who had charge of the dredging operations at the Southwest Pass and who originated the Saint Philip's Canal—that the South Pass had been seriously reduced in its capacity as the result of the jettics checking the flow of water into it, and that the whole thing would be a failure from that cause. It did lose 6 per cent. (I am not sure but it was 10 per cent.) of its cross-sectional area under the influence of the works at the head of the South Pass, which prevented the water from coming in freely. I received letters from General Barnard and from General Alexander, in California, Colonel Merrill, and other of my engineering friends, urging me to remove the works at the head of the pass and let the water in, as otherwise they feared I would have serious trouble.

Q. But instead of removing the works at the head of the pass—

A. (Interposing). I left them intact.

Q. The object in putting the works there was to deepen the shoal that was there?

A. Yes, sir.

A. (interposing). I left them intact.

Q. The object in putting the works there was to despen the shoal that was there?

A. Yes, sir.

Q. And that was done about the time you made the jetties?

A. It was commenced very soon after I commenced the jetties.

Q. As a part of your jetty contract work?

A. I recognized it as a part of my duty to deepen that shoal, because an estimate for it of \$380,000 was contained in the estimate of the commission's report, which Congress adopted as the basis of their contract with me.

Q. If you regarded that work as necessary at the head of the pass; if you regarded that as a part of your contract, and also regarded the work at the outer end of the South Pass, where you put the jetties, why is not the entire South Pass as much a part of your work as the two ends of the pass?

A. If it is a good reason to assume that I was bound to do that because it was included in the estimate, it is an equally good reason, I think, to suppose that Congress did not intend me to maintain the pass channel also, because it was not in the estimate. The commission made an estimate for the cost of the works, and they furnished a plan, and the plans and estimate for the cost of the works, and they furnished a plan, and the plans and estimate showed just exactly what work was contemplated to be done, and the maximum depth to be maintained, by the advice of the commission, was twenty-five feet, and they estimated that it would cost \$380,000 to reduce this shoal; and they estimated that it would cost \$380,000 to reduce this shoal; and they estimated that it would cost \$380,000 to reduce this shoal; and they estimated that it would cost \$380,000 to reduce this shoal; and they estimated that it would cost \$380,000 to reduce this shoal; and they estimated that it would cost \$380,000 to reduce this shoal; and they estimated that it would cost \$380,000 to reduce this shoal; and they estimated that it would cost \$380,000 to reduce this shoal; and the work.

There would be a supported to the pass of the maintain

Professor Henry Mitchell was sworn and examined.

By Mr. Thomas: Question. I will get you to state your name, age, and business. Answer. My name is Henry Mitchell; my age is 52 years; my business that of

surveyor.
Q. Are you a member of the Mississippi River Commission?
A. Yes, sir.
Q. How long have you been a member of that body?
A. Since its organization.
Q. What was your business prior to your appointment as a member of that

Q. What was your business prior to your appointments as a member of the Mississippi River prior to your appointment as a member of the Mississippi River Commission?

A. Yes, sir; I had been a member of the Jetty commission.

Q. Since you have been a member of the Mississippi River Commission how often have you been up and down the river examining its condition?

A. Well, we usually have had meetings out there about ten times in the year.

Q. What do you mean by "out there?"

A. I mean at Saint Louis, on the river, and at New York. We receive reports of the officers in charge of the surveys and works of the river, and go over their balances.

Q. Are you a member of the executive committee or the committee on work?
A. No, sir.
Q. Were you a member of the sub-committee to formulate a plan for the improvement of the Mississippi River, or was that determined by the whole com-

mission?

A. I think by the whole commission; but I am not sure.

Q. Since the adoption of the present plan by the commission have you had reason to doubt its efficacy, or are you yourself satisfied that the plan of the work for the improvement of that river is the correct one?

A. I think my confidence in the plan lass steadily augmented with our experiments. The theory that we had for the care of that river is no new theory. It has been used from time immemorial, as far as I am aware.

Q. You speak of time immemorial. Will you be more specific and give us instances—where it was employed first, and come along down the pathway of time since that immemorial period you speak of?

A. I think I could carry it back to Alexander's mole across the chute at Tyre.

Q. Well, that is beyond the Constitution, and I will not ask you to go as far back as that,

Re Mr. Ferre.

By Mr. ELLIS:
Q. Was a similar plan to this tried at that early day?
A. I do not know the details of that time. I only know of works at that time,
The Dutch have always used these methods on the Lower Rhine.

By Mr. THOMAS: Successfully?

Q. Successing:
A. Yes, sir; and the English have used it on the Thames.
Q. How about the Austrians on the Danube?
A. I have never been on the Danube.
Q. Have you observed these works personally in Europe?
A. Yes, sir; not intimately; I have not examined them professionally in many laces.

places.
Q. Have you examined the Mississippi River below Cairo with a view to determining the extent of the river that will need treatment by your plan?
A. I made a little study of that kind two or three months ago and reported to the commission that about one-third of the whole distance from Cairo to Red River would require full-bank work.
Q. That is, on one side or both sides?
A. Two hundred and sixty miles of river; that is, making five hundred and twenty miles of bank work.
Q. What is your estimate as to amount per mile which it will cost to put in foot mattresses, revet the bank, and narrow the river according to your plan at the wide places?
A. I have made a very liberal estimate in this way: I have taken Mr. Mar-

the wide places?

A. I have made a very liberal estimate in this way: I have taken Mr. Marshall's estimate for all the varieties of work in his district, which is \$15, I think, a running foot, and then I have doubled that and multiplied it by the five hundred and twenty miles, making \$41,000,000, and that sum I consider excessive.

Q. Why did you double the estimate of Mr. Marshall, who I believe is one of the officers in charge of one of the reaches on this river?

A. Because he was not working at full bank-work on both sides of the river.

Q. But his estimate included full bank-work. Was it made on that basis?

A. Yes, sir; this \$15 per foot covers full bank-work.

By Mr. Ellis: Q. What do you mean by "full bank?"
A. I mean all the work that is executed, and all the essentials of the entire

By Mr. Thomas: That involves the improvement work and revetment up to high-water

ck?

I believe it does.

And you double his estimate for that work in making the estimate which do?

You do not understand me. I take my 260 miles and multiply it by 5,280 the feet, and I then multiplied by \$15, which gave me \$20,522,000, and then I blied that. A. Q.

doubled that.

Q. Do you think Captain Marshall's estimate would be a reasonable one?

A. Well, I find that the engineers are inclined to base their future estimates upon their past experience, and not assume anything for future improvement of skill, so that I presume that that is a full estimate.

Q. Then why do you double this?

A. Because I want to include both banks.

Q. Does not his include both banks?

A. No, sir; he has work on both banks, but the works are not opposite to each other.

other.
Q. As I understand you, you say that his estimate for completed work on the bank is \$15 per lineal foot?
A. Yes, sir.
Q. Then you say that includes all the work according to the plans, that is, the estimate for the work according to your plan; then you say that you multiply that by the number of feet. You first reduce the live hundred and twenty miles to feet, and you multiply then the cost per lineal foot by the number of miles?
A. I do not multiply by two twice. If I multiply 520, I have already doubled my banks.

The first multiply by two twice. If I multiply 22, I have already doubled my banks.

Q. Upon what do you base your estimate of one-third the distance requiring work?

work?

A. I base it upon such surveys as we have already made, and such reports as we have from steamboatmen who have had considerable experience with the bars, but mostly upon the studies and the maps of that portion of the river which we have carefully surveyed.

Q. Do these maps show accurately the extent of the caving banks?

A. No, sir; but they show the extent of the curves in the course of the river, the length of the pools, the length of the bars; and from that one may easily judge, who has experience of the river, about what amount of caving is going on.

on.

Q. What is your experience of the river, about what amount of caving is going on.

Q. What is your experience as to the extent of caving in bends, the average extent between the mouth of Red River and Cairo? Is it1, 2, 3, 4,5, or 10 miles?

A. I can not answer that question. There are bends where there is no caving at all. There are some where there is no caving at all. There are some where there is no caving at all. There are some where there is no caving at all. There are some where there is no caving, and there are others where the caving has been going on for a great length of time.

Q. Take the length of the bars and the present and past cavings, as shown, do you think that \$20 miles is a reasonable estimate of distance that would have to be improved by your plan?

A. Yes, sir.

Q. Do you think that \$15 per foot will be the average cost of that improvement, or is the work of Captain Marsfall the most expensive?

A. I have considered this full-bank work.

Q. Is it true that full-bank work will have to be done on this full stretch of five hundred and twenty miles?

A. I do not think it is.

Q. What proportion of it do you think will require full-bank work?

A. I have estimated upon all requiring it; but I have no doubt that we shall discover that a portion does not require it, and that other portions will require only partial work.

O. Set that you think that would be a fair average?

A. I have estimated upon all requiring it; but I have no doubt that we shall discover that a portion does not require it, and that other portions will require only partial work.

Q. So that you think that would be a fair average?

A. That is a fair statement, I think, of the case.

Q. What is your minimum? If I get you aright, your minimum and your maximum are the same.

A. I have neither, because I have based it upon an average.

Q. What is your estimate as to amount of bank that will require the first or primary work? How much do you estimate will require the foot-mats, and how much will require reverments, and how much will require reverments?

A. I do not know, sir.

Q. You have never made an estimate on that basis?

A. No, sir; not on that basis.

Q. Do I understand you that you think this estimate you have made will cover the full cost of the completed works on the river, excluding levees, from Cairo to the mouth of Red River, or throughout the entire extent of the river?

A. From Cairo to Red River,

Q. Why do you state that this is an excessive estimate?

A. Because I have made no allowances for incomplete work at those points where completeness will be necessary.

Q. Then I want to know what would be a reasonable estimate?

A. I think this a safe estimate, but I have never seen any occasion to doubt that our original estimate of \$33,000,000 would be a reasonable one of the cost of

- Q. As I understand it, you have no reason to change your opinion as to the easonableness of that estimate?
- A. No, elr.
  Q. Has your experience in the work, as far as progressed, taught you how to you money—that is, how to improve the character of the works at a saving of

- I think that would be the experience of the executive committee.

  Are you not a member of that executive committee?

  No, sir.

  If that is the experience of the executive committee it is the experience of
- Yes, sir.
  I understand they are simply the agents of the whole commission?
- A. Yes, sir.
  Q. I understand they are simply the agents of the whole commission?
  A. Yes, sir.
  Q. What effect do you think outlets have on the navigable channels of the Mississippi River above the mouth of Red River or from Cairo down to Vicksburgh? and by outlets I mean the overflow of the river into the Saint Francis basin and the other basins of the alternate sides of the river.
  A. I have no doubt they are a source of injury.
  Q. Give us an instance.
  A. Those in the locality of which I have been speaking, on which I have based my figures between Cairo and Memphis—Q. (interrupting.) Was it upon that stretch of the river that you based your estimate between Cairo and Memphis?
  A. Yes, sir; largely.
  Q. I thought Marshall was in charge of the section between Vicksburgh and Plum Point?
  A. Yes, sir,
  Q. Did he make the estimates for the section between Cairo and Memphis?
  A. No, sir; his estimates were the largest ones that I had.
  Q. And that applied to work in points known as the Vicksburgh reach?
  A. In the Lake Providence reach.
  Q. In the Lake Providence reach.
  Now go on.

- Q. In the Lake Providence reach.

  Q. In the Lake Providence reach.

  Q. In the Lake Providence reach. I mean. Now go on. I did not understand the connection of the estimates made in one section with those made in another. Now go on.

  A. I was going on to say that the great trench which the Mississippi River is plowing through its own débris, and those great banks which separated it on either hand from the adjacent swamps, are the works of its floods. That is patent. Now the maintenance of these great banks is essential to the retention of this flood river in its present location. This flood river predetermines, in a very general way, the position of the low-water river. Where this flood river is very yide its floor is flat, and the low-water stream meanders over it in a thin sheet. Where it is constrained it has a hollow bottom more or less acute, and the low-water river, while still having the same amount of water, furnishes greater depth. You have observed in your recent visit that when the stream goes around a bend it plows into the bank, and into the bottom, and in that operation it loses its power, it loses the continuity of its motion and its acquired velocity; it loses what is technically called its energy, and immediately beyond such a bend the river throws down its load of material which it has dug out of the pool above. Thus the bar is a legitimate product of the turn in the river's course and these bars are found all the way to the Gulf of Mexico, although in the lower portion of the river they are submerged, it may be, sixty feet.

  Whatever changes the straight direction of the stream consumes its energy, breaks up the continuity of its motion, reduces its velocity, and is a source of bar building. Now this change of direction may be induced by a crevasse—a break in this great natural levee—which influences the stream to the very bottom of its channel. Theoretically, this influence extends to the bottom of its channel, be it ever so deep. The movement of water at all depths is dependent upon the dire
- sion at that time, namely: that the great river had been turned against its bank by this crevasse.

  Now, this crevasse, Cubitt's Gap, was an artificial one. It was simply a boat passage to an oyster-bed; so that we can not assume that there was any previous tendency of the river in that direction. This crevasse was surveyed in 1866 and again in 1876, and during that period it was in full operation. The great river was turned by this outflow so that at forty-five feet deep the thread of the river chantel unned toward the bank. Now, by reason of this turning of the river toward the artificial outlet, there was brought about an impact upon the bank of the stream, something more than ordinary scour. It was an impact which caused the stream immediately to exhaust its energy in excavation one hundred and twenty feet below the surface of the natural bank.

  Its waters then poured through into the sea over a sill three to five feet deep at high water.
- By Mr. THOMAS:

- By Mr. Thomas:

  Q. What do you mean by the "sill?"

  A. The sill was where the pre-existing earth had never worn away. Now, the turning of this stream and the loss of this water caused the great river below to ahrink upabout three and eight-tenths feet in the average for over two miles.

  Q. Then that is a clear loss of sectional area?

  A. Yes, sir; for over two miles; so that the river gained nothing, for there was no more outlet now than there was before. But the great point in the illustration is this: that this river did turn in its bed with this water flowing over a sill only five feet deep. If it is necessary to complete the banks of the river it must be done in such a way as to provide against any sudden bursting open of crewasses. We happened to have the history of Cubitt's Gap, but for another crevasses, Bonnet Carré, we have not. Bonnet Carré happened long ago, but Riverton is opened during the last flood, and we may be able to trace its effect in our present surveys. One observes at Bonnet Carré, in the form of the bottom, precisely what exists at Cubit's Gap; the same shoal makes out from the opposite shore, and the same deposit appears below. This turning of the river is really an important point, because it does not admit of any doubt theoretically, and is only doubtful in its magnitude. This report that I have here is from Mr. Marindin, of the Coast Survey, to the superintendent of that service, and is to be found in Appendix No. 10, "Report of the United States Coast and Geodetic Survey for 1880." I read from it: "The notable feature in front of the gap riceferring to Cubit's Gap), and one which in a great measure must be traced to it as its cause, is the formation of the shoal on the west bank, as shown by the deep contours, the 24-foot curve more especially."

  He observes this very thing there, but perhaps he had seen my previous report, written several years before, in which I had expressed much the same idea. At the Jump we know nothing of the history of the crevasses; but it will

- he observed, on looking at the chart, that the river runs close in against the bank below and more sharply there than at any other point. The committee adjourned to 9 s. m. Friday morning, January 12, 1883.
- Washington, D. C., January 12, 1883. The committee met on Friday morning, a quorum being present. The examination of Professor Henry Mitchell was continued, as follows:

- "The stage of the river to which these figures correspond was flood, the surface elevation at the head of the passes being about one-tenth of a foot below the bench at the center of the flat circular foundation of the old light-house (the astronomical station occupied by the Coast Survey in 1857).

  "The section found for Cubit's Gap, 119,000 square feet, is 70 per cent, of that of the main river a short distance above this crevasse. This, however, by no means represents its true capacity as an outlet, for within 150 feet, as we go seaward, the loss of area amounts to 30 per cent., and within a mile from the center of the gap the sum of the sectional areas of all the passes amounts to but 58,748 square feet, or only 34 per cent. of the main river section.

  "Our conclusion from these results is that the gap has been created mainly by impact of the main river current upon the slender bank, causing this bank to give way as it became undermined. The section of the gap, if it had been due to the scour of the outflow, would have had less area than the sum of the sections of the passes beyond instead of having three times as much. One may easily conceive that a cut having been made through the natural bank, it may easily conceive that a cut having been made through the natural bank, it may easily conceive that a cut having been made through the natural bank, it may easily conceive that a cut having been made through the natural bank, it may easily conceive that a cut having been made through the natural bank, it may easily conceive that a cut having been made through the natural bank, it may easily conceive that a cut having been made through the natural bank, it may easily conceive that a cut having been made through the natural bank, it may easily conceive that a cut having been made through the natural bank, it may easily conceive that a cut having been made through the natural bank, it may easily conceive that a cut having been made through the natural bank, it may be a conceive that a cut having been area than the
- - "Very respectfully, yours,
- "HENRY MITCHELL,
- "Carlile P. Patterson, Esq.,
  "Superintendent U. S. Coast Survey.

- "Carlie P. Patterson, Esq...
  "Superintendent U. S. Coast Survey.

  "The above is cited to illustrate the manner in which a crevasse turns the river toward the hank—it being held that this turn involves a loss of energy in the stream and the slackening up of the river's flow, followed by a deposit below the crevasse.—H. M."

  Q. Is there anything further that you would like to say?

  A. I do not think that I have anything further to say about Cubitt's Gap.
  Q. Suppose an outlet could be maintained near New Orleans, what effect would it probably have on the river above?

  A. You will remember that the river presents a series of pools and bars. Now, I have conceived this series of pools and bars to be, in effect, a staircase of locks, the pools representing lock-chambers, the bars representing their gates, and the great flood filling the chambers and overflowing the gates. Now, there are several hundred of these locks, and the opening of the lowest gate in the scheme could not affect the upper locks any more than in ordinary canals. Conceive of the flood overflowing the Caledonian Canal at the "Neptune Staircase." You would not affect the upper locks any more than in ordinary canals. Conceive of the flood overflowing the Caledonian Canal at the "Neptune Staircase." You would not expect to relieve that canal by opening the lowest gate, but by opening in succession all the gates. It is possible that the gates or bars are so low in the Mississispin River below Red River that an outlet near New Orleans might extend its influence to Red River. Theoretically it seems to me that it would, but I can not conceive of its amounting to over an inch, perhaps, at that distance; and I have no figures to back that statement.

  Q. Have you made an examination of the river from the mouth up to the mouth of Red River, from the head of the passes, with a view to ascertaining whether there have been outlets or mouths higher at one time?

  A. No, sir; I never made any such inquiry.

  Q. Have you ever made any such inquiry.

  Q. Have you over ma

- A. Yes, sir.
  Q. With what success have you met in that work?
  A. I do not know what the last reports indicate. It was undertaken under

- Q. With what success have you met in that work?

  A. I do not know what the last reports indicate. It was undertaken under this appropriation.

  Q. Recurring to the subject we had up a little while ago, as a member of the Coast Survey what has been the opportunity afforded by your labor and study?

  A. My department is called physical hydrography, and it concerns the study of the movement of waters relative to the bottoms of rivers and harbors, and of the movement of the sands along the coast.

  Q. To what extent has your study been given to the form of rivers, and what rivers have been embraced in your investigation?

  A. I have made studies and reports upon the Hudson, Delaware, Savannak, Alabama, and upon numerous smaller streams.

  Q. And the lower part of the Mississippi River?

  A. Yes, sir; and the lower part of the Mississippi.

  Q. How does the Mississippi River compare with the other rivers as to the possibility of improvement?

  A. I don't like to belittle at all this problem of the Mississippi River improvement, and that estimate which I gave yesterday was based rather upon my fears than my hopes. But there is one respect in which the Mississippi River is superior in the prospect of improvement to any other sediment-bearing stream with which I am familiar, and I have seen a great many in this and other countries. It is in respect to its great average depth of water. I have here a table of the average depth for short reaches from Cairo to Council Bend, a distance of two hundred and sixty-seven miles, which is cludes the notorious New Madrid, Plum Point, and Memphis reaches, the average depth is thirty-three feet at low water, or if we

take the worst half of the Plum Point reach (twenty-three miles) the average depth is twenty-seven feet. The very worst place is near New Madrid, where between Shotwell and Point Pleasant (twenty-eight miles) the average depth is twenty and one-fourth feet. These are pretty close figures, and I offer this table

Thalweg depths by mean of short reaches.

[From regime data compiled by L. C. Jones, assistant engineer. Notes derived from thalweg profile, compiled by R. E. McMarth, assistant engineer.]

NOTES

Proportion of length in which thalweg depth is less than mean, 10% Longest continuous stretch in which depth is less than mean, 11 miles. Longest continuous stretch in which thalweg depth is less than 20 feet, four miles. Average thalweg depth in New Madrid reach, 20 feet. (Sections 104-163.) Aggregate distance for which thalweg depth is less than 20 feet, 30 miles in 150. The aggregate distance for which the depth is less than wenty feet is thirty miles in the first one hundred and fifty, or one-fifth part. That is what I am able to obtain from the surveys and the data that I have with me. Now, in the Rhine and the Rhone there were some failures to get the expected depth of water. There was no great difficulty about the engineering. The banks were made to stand; but there was lack of water. When they made contractions so as to let down the bars they let down also the surface of the pools and developed new bars. Now this you perceive is impossible in the case of the Mississippi River. There would be very few cases where new bars would be discissed by the letting down of the surface of the river. I have made an estimate of how much the flood-line will be lowered, or rather how much the low-water line will be lowered (they will be nearly parallel) at the bars. In Plum Point reach and in New Madrid reach there are perhaps six feet of water on the bars in ordinary low water. If we produce ten feet of soour on these bars the effect will be only in the direction of an equalization of slopes. (We let down the gates of the canal lock ten feet, and we have so far an equalization of slopes.) This will amount in the New Madrid reach to one foot in ten on the worst bar. That is to say, instead of realizing sixteen feet you will realize but fifteen on that bar. I would like to show the committee a tracing of the bottom profile of the river from Cairo down as far as New Madrid.

(The witness here laid before the committee a tracing which be explained in detail.)

(The witness here ind before the committee a tracing which he explained in detail.)

Q. The plan of this improvement, as I understand it, is to direct the securing force of the current against these locks, or bars, so as to regulate and equalize the bottom of the river and its depth?

A. Yes, sir.

Q. Do you think that the plan of the commission will accomplish that result?

A. I see no reason why it should not.

Q. But that is a negative way of answering the proposition. I want to know what you think about it?

A. But I think so. I would like to make an explanation just at this point as to that word "equalization." It conveys a little too much. An equalization of the water in the portion of the river I have just described would give thirty-three feet of depth. That is impracticable; not impossible, but impracticable because the turns are necessarily followed by bars, and it is hardly likely that we should succeed in so narrowing the river at the bars as to exactly compensate for the loss in the turn. But I have made a calculation which I think is suggestive without being entirely conclusive. In the lower section of the river where the navigation is perfect as regards depth of water—between Point Houmas and the forts (one hundred and fifty miles), the average channel depth is ninety-eight feet, and the depth in the shoalest bur fifty-four feet at low water (for I find the same series of bars here as in the upper river), while the characteristic depth on the crest of the bar is equal to the average depth of the river from shore to shore throughout the whole section. Carrying this principle into the portion of the river which hasto be regulated if we succeed in initiating nature closely, we should get on the bars by our work at least the average depth from shore to shore, that is, say fifteen feet. Now, in this process of equalization we do not widen the river where less than the mean width, but we narrow it at the broad places, so that our result mustadd to the stated depth. We must have more than fifteen feet as a legitimate result. I conclude then that we have more than fifteen feet as neal insinate result. I conclude then that we have more than fifteen feet as a legitimate result. I conclude the river where less than the mean width, but we narrow it at the broad places, so that our result mustadd to the stated depth. We must have more than fifteen feet as a legitimate result. I conclude then that we have more than fifteen feet as negitimate result. I conclude then that we have more than fifteen feet as the minimate d

of the cost of that work?

A. Yes, sir.

Q. What were the circumstances under which these estimates were made in reference to data on which they were based?

A. Much the same as those for the enterprise we have now on hand. The work was not new in theory, but the scale of the work was greater than anything that had ever been undertaken before, and we varied very much in our estimates—we varied millions in our estimates, and finally compromised our differences.

rences.

Q. You mean the board?

A. Yes, sir; we compromised finally on \$5,000,000, and the result of Mr. Eads's rork is to indicate that it was in excess of the cost; very much in excess of the cual cost in labor and material.

Q. About how much?

A. Mr. Eads is coming before this committee, and he can be called upon for hat statement.

A. Mr. Eads is coming before this committee, and he can be called upon for that statement.

Q. That will probably be a great deal better. Now, yesterday, in discussing the plan of your improvement and the extent of the work, you stated, as I now recall your testimony, that the work in all its parts, excluding levees, would cost probably \$15 a linear foot for the worst parts of the river. Is it not true that a large portion of the five hundred and twenty miles will only require half the amount of work that is required at Delta Point?

A. I have not so regarded it. I have taken the five hundred and twenty miles as requiring full-bank work in that estimate.

Q. You think that there will be that many miles which require that full-bank work?

as requiring full-bank work in that estimate,
Q. You think that there will be that many miles which require that full-bank
work?
A. Well, I can hardly say that I think there will be as much work as that,
but I put that as an outside estimate.
Q. Then I want the inside estimate.
A. That I can not give you.
Q. You can not give me your opinion?
A. I said yesterday that I thought the estimate in the report of the commission
of \$33,000,000 was reasonable.
Q. For the whole work?
A. Yes, sir; for the whole work.
Q. But I mean as to minimum distance?
A. I should not like to reduce that minimum distance. I have had that distance lower than it is, but I have brought it up, after further study, to the two
hundred and sixty miles.
Q. Five hundred and twenty miles of shore line?
A. Yes, sir. As I am not a member of the committee on construction (and
never made any such constructions), my testimony offered to that committee
was simply with the understanding that I had gathered this data in extreme
fear, and to express this to them.
Q. You are referring now to the cost of the work?
A. I fear it is going to cost \$41,000,000 to complete the work.
Q. That will secure, as I understand you, at least fifteen feet of water to Cairo?
A. It ought to, and I think it will.
Q. How long do you think it will require to complete this work?
A. I can form no idea.
Q. It will depend upon so many contingencies that it is a mere matter of speculation?
A. Yes, sir, we have in fact just begun work. We are called upon for estimates before we have had sufficient experience to make them, and just after a terrible flood which has upset a good many of our calculations.
Q. Are you satisfied with the plans of the commission? Have you faith in
their efficacy in improving the Mississippi River? Do you approve the work as
proposed?
A. Yes, sir. At one of the meetings ? introduced a resolution providing that

their efficacy in improving the Mississippi River? Do you approve the work as proposed?

A. Yes, sir. At one of the meetings I introduced a resolution providing that any member, not on the committee of construction, should spread upon the record at his own option any criticism or protest against the work of that committee, or against any of its plans or operations. I myself introduced that resolution, and I have had no occasion to make use of the privilege thus accorded.

Q. That resolution was adopted by the commission?

A. Yes; it was adopted, and I have had no occasion whatever to make use of it. There was a majority of the commission then sitting on this committee of construction, and I wanted to restrain any tyrannical disposition they might evince.

By Mr. ELLIS:

Q. Has any one protested under that resolution? Has anybody taken advantage of that privilege to protest?

A. No, sir; no one.

By Mr. THOMAS:

By Mr. TROMAS:

Q. The maximum and minimum depth of the river which it is expected will be obtained by this work has the depth at low water?

A. Yes; at low water.
Q. Does your completed plan involve the revetment of the shore from the bottom of the river covered by the foot-mat back to the levees, supposing them to be situated five hundred feet from the top of the bank?

A. No, sir; I think there is nothing in our plan that includes any revetment on the surface where it is already revetted by mature.
Q. You were present, were you not, when Major Harrod testified the other examing when that subject was under discussion?

A. Yes, sir.

Q. The revetment referred to by him as sloping back was the sloping back of the natural bank. By that I mean the part below the low-water mark and the level of the earth. This being the bottom of the river [indicating] and that the low-water mark and this the top of the bank, the sloping bank and revetment

ntemplated in that plan is simply the revetment from that point and that point

[indicating]?
A. Yes, sir.
Q. It is not contemplated to revet the surface of the earth?
A. Yes, sir. It is not contemplated to revet the surface of the earth which is already reveted by forests and grass and other vegetable growths and held by the roots of trees. So far as my observation goes (and that is not very intimate, because in our journeys up or down the river we only travel on steamboats) there is no abrasion of the surface of the earth between the levee and the river. I have never seen a case of abrasion along the surface of the earth between the levee and the river. There are traces of old barrow-pits to be seen, filled up with the river deposits. And Mr. Ockerson, one of our assistants, contends that the presence of the levees a quarter of a mile back makes no difference in the rapidity of the bank's growth.

Mr. Thomas. I believe that is all I wish to ask, Mr. Mitchell.

By Mr. Robinson:

By Mr. ROBINSON :

By Mr. ROBINSON:

Q. In your last statement do you indorse that yourself—that the presence of the levees makes no difference in the rapidity of the bank's growth?

A. I have no knowledge to contradict it.

Q. As a scientific observer and engineer, do you believe it to be so?

A. I have no other evidence but his; I have no memory or observation of my own to contradict it.

Q. I mean upon theory; do you subscribe to that idea?

A. Well, I will say I was surprised at the result. There is no question about its being true, because it is actual observation, and he is employed to make just such observations.

Q. I mean upon theory; do you subscribe to that idea?

A. Well, I will say I was surprised at the result. There is no question about its being true, because it is actual observation, and he is employed to make just such observations.

Q. Does the presence of levees assist in the land building?

A. It does not lessen the rapidity of the bank's growth.

Q. Then the bank's growth goes on just the same with the levees constructed as without them?

A. In the department of labor in which he is engaged.

Q. We may infer that it will be so throughout the whole extent, if it be true where he is engaged, may we not?

A. I don't know anything about that.

Q. What part of the river was he engaged in?

A. Between Saint Louis Landing and Red River.

Q. If the presence and maintenance of levees makes no difference in the rapidity of the bank's growth, how, then, do you sustain the theory of the scouring power with the maintenance of the levee?

A. You observed, I think, if you were down the river, that at high water the water does not abrade the levee at any point. The levee is simply the shore-line of the river at which all motion ceases. As your observations extend across the river, as you cast your eye over the scene, you find the velocity is strengthened where there is the greatest depth, and that it diminishes again as we approach the opposite shore. If I draw these levees together I make shore-lines, say half the distance apart; I increase the velocity (double, say) over the deep water, and I increase the seour by the square of the velocity, say four time along the channel which lies between. Now, there is a movement of the water—of course along the levee and going toward the river you will find this movement increasing—but there is so little that the amount of deposit is small, and the bank rises as rapidly perhaps as if there was no levee there.

Q. The effect of your levees in connection with this plan is to narrow the river within these banks?

A. Yes, sir.

Q. And that really causes a deepening of the whole river b

A. Yes, sir. Q. And that really causes a deepening of the whole river between the levees

Q. And that really causes a deepening of the whole river between the levees, does it not?

A. No, sir.
Q. Is not the water deeper because you confine it within these levees?
A. You mean on account of the increase of height, or do you mean on account of the increase of scour?
Q. You have the water arrested, and a greater depth of water may be the result of confining them within the levees?
A. Yes, sir; as an immediate result.
Q. Then, to illustrate, it would be reasonable to expect that at places where these was no water you would, as an effect of the levees, have water from twelve to twenty feet deep?
A. In the bed of the river.
Q. Inside the levee?
A. Between the natural banks?
Q. Yes, sir; if you choose.
A. Yes, sir.
Q. Then that would be so. Does water twelve to twenty feet deep move with any great velocity?

Q. Then that would be so. Does water twelve to twenty feet deep move with any great velocity?

A. No, sir.
Q. At what velocity?
A. That I can not tell you.
Q. This fact, you, say, is determined by the square of its depth?
A. No, sir; the square of its velocity.
Q. You can not tell what the velocity is?
A. No, sir; I can only say that it is greater in the channel—
Q. (Interrupting.) But there is considerable velocity between the natural banks of the river and the levees?

A. No, sir.

of the river and the levees?

A. No, sir.

Q. When the water is ten or twelve feet deep there?

A. I have never seen water ten or twelve feet deep between the natural banks and the levees,

Q. In flood?

A. Myself, no, sir.

Q. What depth have you seen?

A. The average height of the levees is six or seven feet.

Q. In these long reaches, where the river is quite wide and you are putting your restraining walls so as to have a channel only 3,000 feet wide, there will be between your natural banks and the new walls quite a space, say of several hundred feet, which will be lower than the general surface of the country. That is so, is it not?

hundred feet, which will be lower than the general surface of the country. That is so, is it not?

A. I do not think I understand your picture of the river.
Q. You will find in these long reaches places a mile and half or two miles wide which seem to be out of the natural banks—real wide reaches, long shoaling places; all parts of these places are considerably below the general surface of the soil in the valley at that point. Now, when your new walls only 3,000 feet apart are built, all this space is occupied by your new channel?

A. But we have no walls 3,000 feet apart. Three thousand feet is the limit which we have agreed upon for low water, and then the sides are sloped away, as well as we can make them, toward the high-water lines, which lie perhaps 4,000 feet apart.

4,000 feet apart.

Q. But you have places where you are preparing your works; you drive your lines of piles and maintain your new works so as to confine the waters within a

Q. But you have places where you are propagated to confine the waters within a channel of 3,000 feet?

A. But I do not understand your word "walls."
Q. I mean these new works which you call restraining works.
A. Yes, sir; or new slope of repose. Of course that is really what it is.
Q. It has not been called a slope before. But you have the low flat stream flowing along from a wide path, and that produces great difficulty in navigation."
A. Yes, sir.

Q. Where you have wide reaches you have shallow water; where you have arrow places you have very deep water. Now you propose, do you not, to arrow up these wide reaches and bring the water within a narrow space?

A. Yes, sir.

Q. And you propose to bring that water in by contracting a line of works which shall be 3,000 feet apart, and to keep the water within these two lines. Now, between that new line that you have for restraining the water and the old natural bank from which you separate the water there is a space of several hundred feet? natural using from which you separate the water there is a space of several num-dred feet?

A. Yes, sir.

Q. And the surface of intervening space is lower than the surface of the soil of

the valley?

A. Yes, sir.
Q. Well, when a flood comes up and the water is restrained within the levees, the water spread over that intervening space is deeper than it is over the natural surface of the valley?

A. Yes, sir. You mean over the swamps or lands—the natural surface of the

ral surface of the valley?

A. Yes, sir. You mean over the swamps or lands—the natural surface of the valley?

Q. Yes, sir; the surface of the land at the top or crest of the natural bank.

A. You mean that we shall have ten fect of water over a space that, perhaps, shall have been raised up?

Q. Yes, sir.

A. I should presume it would,

Q. Is it a fact?

A. It might happen.

Q. If that happens with water possibly ten fect or more, will not there be scour without that increased depth?

A. We expect those hurdles which have produced this valley, that has raised the water up, will hold that land until it is covered with forest trees.

Q. You mean to build up that intervening space to the height of the natural bank?

I mean that we shall naturally do it.

My question is not intended to imply that you were to do that as part of
work, but that is a result. Then is it your idea that in time of flood there
be any scour over that intervening space so as to disturb that land-building

rocess?

A. We provide against all effects of flood by our plan. If our works can live arough one or two floods in the extreme condition which you have supposed, bey will hold forever.

Q. The view which I take is not an extreme one, is it?

A. You take the case of a river so wide.

Q. But you have taken the Mississippi River?

A. You six.

A. You take the case of a river so wide.

Q. But you have taken the Mississippi River?

A. Yes, sir.

Q. You take Plum Point reach, where you have been working?

A. Yes, sir; but you have taken an extreme case.

Q. But Congress has appropriated money and has appointed this commission for the purpose of enabling them to deal with that problem?

A. Yes, sir.

"Q. Then following your lead (and it is probably a very safe one), I am not wrong in taking that extreme case of Plum Point reach?

A. Well, I think on the whole you are right.

Q. Then your idea is that in that worst case to which I have called your attention your plan is sufficient to overcome all difficulties?

A. I think so, sir.

Q. But the real test of it will be in seasons of high flood?

A. Yes, sir.

Q. Do you contemplate making the high-water channel coincident with the low-water channel?

A. There has been some evidence here relative to an ideal river which the committee seems to think is really to be attempted, but my impression is that we should never let better be the enemy of well enough. Whenever we get these bars out of any section of the river, we shall stop right there—tie up the ends and stop right off.

Q. Do you intend that the limits of the high-water channel shall correspond with the limits of the low-water channel?

A. Ob you intend that levees shall be placed on or near the new bank that is formed?

A. Of course not.
Q. Do you intend that levees shall be placed on or near the new bank that is I have no idea that the levees will ever be within an average of five hun-

dred

red feet from each bank.

Q. But you believe it is possible that in time quite a large space between the ew banks and the levees will be formed, and it may be a thousand or more

new banks and the levees will be formed, and it may be a thousand or more feet?

A. It may be five hundred feet.

Q. The nearer you can bring the levees to the line of bank the better the effect on the improvement of the river?

A. Yes, sir; I think so.

Q. You do not think it is of enough consequence to bring them up to the line?

A. We should be afraid to bring them up to the line.

Q. Why?

A. Because if the revetment should give way at any point or caving set in at a point where we hadn't revetted, we should not be able to meet the difficulty in time to provide for the protection of the bank. We should keep a levee at a safe distance to give us time to arrest eaving. I am not speaking now of the opinion of the commission, but simply of my own conception of the thing, with little knowledge of levees and their present uses.

Q. If the water has been in flood, you say that during that time there has been a deposit on the bottom of the river in consequence of that flood?

A. I think that the flood drives before it great waves of sand, just as the wind on the desert earries with it the sand dunes.

Q. With the river in flood you have that sediment carried along?

A. Yes, sir.

Q. At what stage of the water does it begin to fall and rest on the bottom?

A. There is a great contradiction of testimony upon that point. Usually when the current for any reason slackens these accumulations take place.

Q. At what stage of elevation of the surface of the water does that slackening occur?

A. I say there is a great contradiction of testimony on that point, and I should

ceur?
A. I say there is a great contradiction of testimony on that point, and I should of like to say what the result of the testimony is.
Q. Do you get the slackening before the water falls below the natural banks of the river.

A. I say there is a great contrained of the testimony is.

Q. Do you get the slackening before the water falls below the natural banks of the river?

A. I am satisfied that you do in many cases, but whether in the majority, or even in the average, I do not know.

Q. At some point thereafter the river begins to scour out these deposits, does it?

A. As I conceive of the operation of the flood at these shallow reaches, for instance along the Saint Francis bottom, where there are many erevasses twenty feet below the natural banks, when it meets with any such deflection, it throws down ahead of it a barrier of sand, as if forming a new bank, and then it accumulates against that bank and augments the rise and overflow.

Q. When does that bar begin to pass away?

A. Such bars are very apt to wear away as soon as the water is ponded back by the bars so that it has power to produce an effect upon these bars. Then they begin to pass away, but if the river had never left its banks, and never turned into these broken places, these particular bars would never have been formed.

Q. The bar having formed there at that time, then you say the river, after it

comes within the natural banks, acts upon the newly formed bar and carries it

A. Yes, sir; of course it must tend to carry it away.
Q. When the water comes below the natural banks the river then proceeds to carry out that deposit?
A. Yes, sir.
Q. And restore the bed of the river to its former condition?
A. It does not usually succeed in making that restoration after a great flood. I believe, as the general testimony and the result of inquiries that I have made, that after a great flood the bars at low water are worse than at any other time, but the restoring power of the water does not ensue until the river subsides somewhat; at least, until it comes down to the level of the natural banks. It is greatest at high water, and if by reason of any deflection or coming into a particularly wide space it has been slackened and its sediments thrown down, this bank of sand must remain until there is accumulation enough behind it to make a guzzle through it.

a guzzle through it.
Q. Have not the members of the commission testified that within the low-water bed of the river the deposit is formed, and that it always begins to work at that time?

A. I have seen evidences of that; but I have recently studied up the point and I find that the testimony is not steady upon it; different observers give different

A. We all agree that at the low stage of the water the water is making this guzzle there.

A. We all agree that at the low stage of the uzzle there.

Q. But you say that one of the difficulties you meet with is the exact time durage low water at which the water begins to cut through the bars. There is no ifficulty in determining that the water, when there is sufficient depth of it, cuts way the bars, but simply the time in the low-water stage at which they begin o cut away. Is that the point?

A. Yes, sir.

Q. It is at some period of low water that this cutting begins?

A. At some period of falling water.

Q. After it leaves the surface of the natural banks, and before it reaches the own water?

A. At some period of name water.

Q. After it leaves the surface of the natural banks, and before it reaches the low water?

A. I have only reference to the surface of the bank in this connection; under the action of a crevasse my bar is formed of which I am speaking.

Q. But I wish you to also now apply your statement to bars that may be formed independent of any crevasse, by which I understand a break in the levee.

A. A break in the levee and natural banks.

Q. Independent of that, how does the current act upon this deposition; how does it remove the bars within the channel of the river?

A. As I say, our testimony is not concurrent. The river does not always behave itself in the same manner. We can furnish you with data, but we can not make the deductions.

Q. You make no statement giving data?

A. There are plenty of physical data, but we have not been able to reconcile them; we haven't the key to the inductions yet.

Q. Therefore it is not safe to make any positive declaration on that point?

A. No, sir.

Q. And then it is hardly safe to say, is it, that for the purposes of the removal of the bar you need no greater depth of water than what will be contained in the natural banks of the river?

A. Ou very theory of work depends upon the securing of the water and the discharge. If you take the Lower Mississippi River and compare it with other rivers, you will find it a better river than others. It is on the whole one of the finest rivers on the globe as a navigable stream.

Q. Yes. But no such works have ever been produced on a river of the magnitude and the character of the Mississippi River?

A. No, sir; but the general principle has been applied in many similar cases.

Q. But what may be necessary in a smaller case may not answer in a larger case?

A. Certainly not.

Certainly not.

In the estimate of the cost of your works did you include the levee work? No, sir. So that you will add to that amount whatever is necessary to repair or re-

A. No, sir.
Q. So that you will add to that annual build the levee system?
A. To repair the levees; yes, sir.
Q. You would expect, therefore, that if the levee system was a necessary part of it to keep them in repair and rebuild them in case they were washed away?

I suppose so.

of it to keep them in repair and rebuild them in case they were washed away?

A. I suppose so.

Q. If they are a necessary part of the improvement, you would expect to retain them at all the works in the bed of the river?

A. It has never been presented to my mind in that way.

Q. They are either of importance or they are not of importance. If they are an important adjunct for the improvement of the navigation of the river, you will take care of them?

A. Yes, sir, I do consider them important, and I do say that no alluvial river on the face of the globe which has been improved is without them as far as I know.

Q. It will be a matter of no consequence whether States or individuals furnish the expense or not?

Row.

Q. It will be a matter of no consequence whether States or individuals furnish the expense or not?

A. I think the people who are benefited ought to pay the larger amount.

Q. But suppose they decline, will you go on all the same?

A. That is a matter for Congress to determine. That will depend upon the policy of Congress. We shall execute the will of Congress at any time.

Q. But Congress has given you \$5,122,000 without indicating to you how you shall spend it, and you have spent a million and more for levees. Suppose in time of flood these levees should be washed away for many miles, would you not consider it your business to rebuild them in case the States in which they were located declined to contribute toward that end?

A. I do not know what our authority would be under the law, but under good sense it would be the proper thing to do.

Q. But under the law you have found no restraint upon that exercise of good sense as far as you have gone?

A. The law as expressed is quite complicated. I confess that I have been unable fully to comprehend it.

Q. It has not operated to prevent the commission from spending the amount of money which they have expended upon the levees?

A. I think that the riparian property-owners ought to pay their proportion of the improvement. It is as incidental to the improvement of their property as the improvement of a street in a city is incidental to the improvement of the property along the line of that street.

Q. Then the improvement of the rivers is merely beneficial to the riparian property-holders? You are talking of good sense.

A. And I think that betterment is good sense.

A. And I think that betterment is good sense.

A. I think that yought to be applied. I trust the Government may require these individuals to pay these betterments.

Q. You understand that there are other difficulties that may be included in that suggestion? The matter of State and Federal authority is not so well defined as perhaps it might be.

A. I understand that, sir.
By the CHAIRMAN:
Q. I understand you to say that your confidence in the policy and plan of the Mississippl River Commission has steadily increased?
A. Yes, sir.

ussippi River Commission has steadily increased?
Yes, sir.
You had doubts once in respect to these plans?
I have doubts always in particular projects.
My question was, have you had doubts once about these?
Yes, sir.

Q. My question was, have you had doubts once about these?
A. Yes, sir.
Q. And has all doubt been removed?
A. No, sir. I have never engaged in any project in which my doubts were removed until the work contemplated by that project had been completed.
Q. And then you have some doubt about the policy of building a stone wall on a solid foundation?
A. I might have some degree of doubt; for instance, an earthquake might throw it down.
Q. Well, do you anticipate an earthquake in the Mississippi River?
A. Well, do you anticipate an earthquake center.
Q. That has not entered into this question. But you still have doubts, of course?

course?

A. I am not entirely confident that our plans are going to be successful.

Q. We will take a stretch like Plum Point, for instance. Now, suppose you are to complete the work there, making it as perfect as labor and money could make it, and then it resists an assault of two or three severe floods, would it increase your confidence in the stability of the work; would it be an evidence to your mind of its efficacy?

A. Yes, sir.

Q. Your confidence would then be increased?

A. Yes, sir; but my confidence would not be entire. We should not have demonstrated that our plan contained all the elements of success by one example. We should prefer to have another illustration, I should say, below Arkansas River.

But even with that test you would not be confident, would you? No. sir. . No, sir.
In your estimate of cost of bank revetment do you include the dike work, closing up of chutes, and so on?
Yes, sir.
All that kind of work?
Yes, sir.

the closing up of chutes, and so on?

A. Yes, sir.
Q. All that kind of work?
A. Yes, sir.
Q. Now, suppose this stream at some place at low water extended over a space 10,000 feet; is there any such width as that?
A. Yes, sir; I think there is such a width—at low water; I am not sure.
Q. At low water what is the greatest width?
A. Something over a mile; something over 5,000 feet; and if you take certain stations you might measure eight thousand or nine thousand feet, for instance at Plum Point.
Q. It is there where you have shoal water?
A. Yes, sir.
Q. Suppose at a low stage of water by contraction works you bring the water within a space of 3,000 feet, you anticipate that that will deepen the channel, do you not?
A. Yes, sir.
Q. Then scouring would take place at low water in a narrow channel?
A. Yes, sir.
Q. You are just on the threshold of this work, are you not?
A. We have just really entered upon it seriously.
Q. And there has been appropriated something over \$5,000,000?
A. Yes, sir.
Q. Will you go much beyond the threshold of the work when you use the next appropriation of \$7,500,000, if it should be made?
A. I trust we shall.
Q. You will get inside the door, will you?
A. Yes, sir.
Q. The jetty plan is similar in principle to the plan of confining the waters of the Mississippi River to a narrow channel?
A. Yes, sir; the principle is the same.
Q. Has there not been developed since the construction of the jetties a tendency to shoal above and below the works?
A. On the other side of the bar—
Q. (Interrupting.) But I ask you, has there not been a constant tendency to shoal above and below the works?
A. On the other side of the year to remove sand from the jetties?
A. There was one used; but when I was there it was not in use. In our original plan we recommended a dredge. There occur at the South Pass mulumps, which are like little volcanoes—
Q. (Interrupting.) You do not understand my question. Has there not been a dredge-boat used at least three months of the year to remove sand from the jetties?
A. Yes, sir;

A. Yes, sir; but I know there is a channel five fathoms deep from the Mississippi River (South Pass) to the ocean, and that is something which very few rivers enjoy.

A. Yes, sir; but I know there is a channel live fathoms deep from the bussestipp River (South Pass) to the ocean, and that is something which very few rivers enjoy.

Q. Is there more than twenty-six feet of water in the South Pass?

A. I understand at the upper end of the pass there is twenty-six feet of water.

Q. Has there ever been more?

A. I believe that is all that was required by law.

Q. But I asked you if there had been more than twenty-six feet?

A. At the upper end of the pass, I think not.

Q. How is it at the jetties?

A. Thirty feet; thirty-one feet often.

Q. Do you know how wide?

A. No, sir; I do not remember the width.

Q. I understood you to say, as a matter of fact, that there had been a constant tendency to shoul above and below the works of the jetties?

A. I will explain that entirely: When I was on that jetty board I called the attention of the board to the bad character of the South Pass, although I may say I was in favor of putting the jetties there. The South Pass was subject to changes of depth, and I referred to the fact that there had been an eighteen-foot bar across the middle of the South Pass within ten years before that time, and that it was subject to a variation of depth.

By Mr. Tromas:

Q. You mentioned a while ago that the plan had not demonstrated with mathematical certainty; in other words, that the results were not of a sufficient character to shake your confidence in them, but that they lacked physical demonstration to make them an absolute certainty. Do I get your idea?

A. Yes, sir; that is true. It was the same in the case of the South Pass. We never knew what the works would do until they were proved.

Q. But then this did not shake your faith in the plan?

A. No, sir. If you take Major Suter's estimate, based on more knowledge than that of any person, and compare it with my estimate, you will discover

that I am an alarmed party, for the reason that I think the problem is a greater one than he does, and he has a much greater knowledge of this river than I

have.
Q. State what results have been obtained on other rivers by levee in the direction of improvement of the channel?
A. Besides the case of the Po (which was mentioned by General Comstock in his evidence, and which was new to me, for I had never been there), I would mention the Rhine, and also the river Thames. The river Thames is a more striking instance, because the improvement of the navigation was not the object of the levees, but the improvement of navigation followed the erection of

A. Besides the case of the Pv (which was mentioned by General Constock in serviciones, and which was new to me, for I had never been there), I would mention the Rhine, and also the river Thames. The river Thames is a more striking instance, because the improvement of the navigation was not the object of the levees.

Q. What was that improvement?

A. These were begun before the beginning of this century. They were built for agricultural purposes only.

A. The only advantage is in the distinctive character of the two reaches. There is no remarkable difference between the two, except that one is below great tributaries.

By Mr. ELLIS:

A. I do not know the reasons. I have only an apprehension that we can not determine all the evidence for our problem until we get below the Saint Francis basin and below the Arkansas River.

Q. Do you think that the added volume of these tributaries will create such a condition of things as to render its necessary in order to demonstrate the absolute certainty of your plan?

A. I do not know the reasons these tributaries will be considerable.

Q. So if you went on at Plum Point and finished your work in that isolated place, and time demonstrated it as true and stable, you would still be lacking an absolute test because you had not improved the river below these tributaries?

A. I should feel very nearly certain of a grand success for the whole river. Moreover, we should have two locations which are all the colorest points in the difference between the two places might indicate the solution of the problem by the success of one place by a certain class of works not tried in the colore. Moreover, we should have two locations which are the lowest workmen engaged in this work interested in its success. This competition is an important matter.

Q. Is not the key to the whole plan your ability to hold the banks?

A. That has been indicated; I do not know that anything has been demonstrated their value by a test of severa floods? T

below.

Q. This dredge-boat was placed there for the purpose of removing these lumps?

A. It was an auxiliary boat to the whole operation of the jetty plan.

By Mr. Robinson:

Vou allude to levee works on the Thames for agricultural purposes, and you say that that resulted in the improvement of navigation. I think that you said that it produced this result.

A. Yes. sir.

said that it produced this result.

A. Yes, sir.
Q. Does that include the details of all works done on levees?
A. This information in regard to the Thames I got from a great French authority, M. Bourniceau. These works occurred between 1780 and 1820.
Q. And does he give the details of all the work that was done?
A. No, sir.
Q. Are you informed, then, that ever since 1820 there has been no work on that river to maintain the channel?
A. Since 1820 there has been an immense amount of work on the river of all sorts. Bridges have been built and rebuilt, and the river has been dug out.
Q. So that the present condition of the channel may be due to many other causes?

A. I did not mean to imply that the magnificent channel up to London was wholly due to levees built for agricultural purposes.

Q. And this fact is only described in light terms in the book which you have quoted from?

A. Not in light terms, but in rather heavy terms. I will read it, if you wish

[reads]:

"Finally the river Thames, considered in 1767 and 1802, gives a more complete field of instruction for the observer.

"We have said that the shores of this river were lined by reclaimed lands and that their reclamation had reduced the space heretofore covered by the tides. These conquests must have increased each year from 1767 to 1802, and the Thames must have been more and more reduced in width.

"Thus, comparing the observations obtained in 1767 with those of 1802, we find that the channel-way has sensibly increased in depth during this interval of time, and that reaches which had a depth of twelve feet in 1767 had eighteen feet in 1802. And further, the difference of level between London and Sheer-

ness, which in 1767 was somewhat more than three feet, was found in excess of four feet in 1802.

"This comparison of two different conditions of a stream being made in the same river, no one could argue a difference of weight of sediments. We can therefore safely conclude that the successive reduction in width due to the reclamation of land along the shores is the cause of the increased channel depth of the Thames, but also the difference of level at London.

"Now, if such important improvements in navigation have followed the reductions in widths and other regulations accidentally, for the benefit of agriculture, what could not be expected from systematic works under the guidance of learned English engineers? The sand-bar at Woolwich and others of same kind would certainly vanish without the use of dredges."

By Mr. THOMAS:
Q. Was he a French engineer of distinction?
A. Yes, sir; he was a scientific writer, an engineer of the Ponts et Chaussée.

By Mr. Robinson:
Q. That was published in 1845. But since that time engineers in this country, seems, have continued to adopt that theory?
A. Yes, sir; I believe they have.
Q. And they do at present?
A. I have no doubt there is a difference of opinion.
Q. The Rhone is now in one of the greatest floods that it has ever experienced, and great disasters are occurring, as you probably have learned from he newspaners.

he newspapers.
A. Yes, sir; and I believe that is true.
The committee adjourned to 7 o'clock p. m.

Washington, D. C., January 19, 1883.

The committee met in the room of the Committee on the Territories, House of

Representatives.
Present, the chairman, Mr. Burrows of Michigan, Mr. Ellis, Mr. Robinson of Massachusetts, and Mr. Holman.
Professor Clemens Herschell was examined, as follows:

Professor Clemens Herschell was examined, as blocked by Mr. ELLIS:
Question. Will you please state your full name, place of residence, your prossion, &c.?
Answer. Clemens Herschell; I live in Holyoke, Massachusetts; I am a civil nd hydraulic engineer.
Q. And have been for how long?
A. For twenty-five years.

Dr. Mr. Rophyson.

By Mr. Robinson:
Q. What afficial position do you hold in the State of Massachusetts.
A. I am one of the railroad commissioners.

A. I am one of the railroad commissioners.

By Mr. ELLIS:
Q. By appointment or by elections
A. By appointment.
Q. By the governor?
A. Yes, sir. I studied my profession in Cambridge, Massachusetts, then in termany and France.
Q. Have you had much practical experience in hydraulic engineering?
A. Most of the work I have done for the past twenty-five years has been of hat nature. I have been a hard-working man.
Q. Have you had any experience on the Mississippi River?
A. I have done no work there. I have traveled on the Mississippi River. I vent there for the purpose of looking at the works going on.
Q. When?

went there for the purpose of looking at the works going on.

Q. When?

A. I was there in 1877. I had a boyhood acquaintance with the Mississippi River from Saint Louis upward; but of late years the only personal view I have had of it was in 1877, which was from a short distance above New Orleans down to the Gulf. My other knowledge of the river is derived from study and from the reports and writings of others.

Q. As you know, we are trying to find out the best plan to improve the navigation of the Mississippi River and cure the many ills from which it suffers, and I believe everybody is united in the wish that plans may be discovered by which the floods can be prevented from devastating the alluvial regions. I do not think there is a member of Congress or a man North or South, whatever may be found for the improvement of the navigation of the river that will result in protecting these rich lands. Directing your attention to that, I would ask you what, in your judgment, is the cause of those features of the river that interfere with navigation; I refer especially to the caving banks, the bars, the shoals, the shifting of the current, &c. To what do you attribute the cause of those results?

A. I should say the feature of alternate pools and shoals is a common one in

shifting of the current, &c. To what do you attribute the cause of those results?

A. I should say the feature of alternate pools and shoals is a common one in the rivers in their natural untrained state. It is one of the burdens of civilization that rivers in that state no longer suffice. The experience of all countries is that large expenditures must be incurred in training rivers so as to fit them for the amount of navigation that becomes necessary as population and civilization increase along the banks. And by training of rivers I mean keeping them within defined limits both at high-water and at low water. It is a common method in training rivers to have high-water channels marked out by lowers or banks and a low-water channel likewise marked out by other artificial works, which in times of high water are entirely submerged.

Q. Is that an old system—of having well-defined, permanent, well-located, low-water channel, and a permanently-located, well-defined, high-water channel?

A. I should say it was forty or fifty years old. I do not know whether it is older or not.

Q. Have you had experience or observation in Europe?

Q. Have you had experience or observation in Europe?
A. Yes. sir.
Q. Do you know whether that system has been pursued in European rivers?
A. I know that it has.
Q. What river?
A. The Rhine is a good example of it, the upper reaches of it. It is a well regulated and trained river from Switzerland to the mouth, to the German Ocean.
Q. How has it been regulated and trained?
A. Generally by the very system I have described. In time of flood its waters are limited and defined. In time of low water they are likewise marked out within the high-water limits.
Q. A channel within a channel?
A. A channel within a channel; that is it precisely.
Q. Is it regarded in streams that are subject to flood periods as necessary to ave the high-water channel well defined?
A. I think that is the general opinion among engineers. It certainly is mine.
Q. What is that; is tha protection to the inner channel, the low-water chanlet?

nel?

A. I should say the principal reason was to keep the river from abandoning entirely its former channel and striking out in a new course for itself, as it would be likely to do, unless guided, during times of flood. Another reason is that the very material that the river crodes or takes up is one of the chief causes of its forming shoals. That is where the most of the material that makes shoals comes from. It comes from being picked up in one place and deposited in another. In order to have a river of proper navigable depth—a reliable navigable

depth—at all stages it is necessary that it shall pick up material as little as pos-sible.

sible. Q. I should suppose, however, that those high-water banks can not provide against every exigency; occasionally a flood will come that will go over them?

A. In case of river works, they are liable to floods such as occur, we will say, once in a century or thereabouts. They will be higher than has been provided for. It does not pay commercially to provide against exigencies of this sort, that are not liable to occur more than once in a hundred or two hundred years. At this very moment the greater part of Central Europe is recovering from the effects of a flood from both the Danube and the Rhine, the like of which I am informed has not been seen for two hundred years. To make the river works on those rivers sufficient to guard against grossly exceptional floods of that character probably would not pay. It is practically impossible. A contingency of that sort must be endured.

Q. Certainly. Like the flood of which we read—they could not help it. But generally, in your opinion, it is necessary to control the river in high-water periods?

sentially, in your judgment, for the purpose of navigation and

Q. And this essentially, in your judgment, for the purpose of navigation commerce?

A. I think it is.

Q. Have you had occasion to examine the different theories advanced for the improvement of this river? The air has been full of theories; we have had a reservoir theory, we have had an outlet theory and the theories of the commission, and I don't know how many others, but I think those are the principal ones—the three I have mentioned—the reservoir, the outlet, and the system as finally determined upon by the Mississippi River Commission. Have you had occasion to examine those?

A. I have posted myself pretty fully about the last two mentioned, the outlet theory and the works of the commission. The reservoir plan as regards the Mississippi River I have not looked into.

Q. What is your judgment of the proposed outlet plan?

A. I think to indulge in it would be a great mistake. I should regard it as a calamity to yield to the arguments of those who believe in it.

Q. Why? Give us the reasons upon which you base that opinion.

A. I think that it is going in the wrong direction; and when any work is done in the wrong way, I think it is impossible to predict the full extent of the evil that may rise. The tendency of diffusion; Neither the old channel nor the new channel formed are likely to be of proper service, and the water above the point of diffusion is liable to rise higher than it ever did before. I think, in brief, those are the objections to what is called the outlet system.

Q. Why do you think that the flood is liable to rise higher than the river on account of this diffusion?

A. On account of the obstruction to its flow below the point of diffusion.

Q. How is that obstruction caused?

A. On account of the obstruction to of hydraulies, as well as of many of the A. By shoaling. It is one of the low of hydraulies, as well as of many of the

brief, those are the objections to what is called the outlet system.

Q. Why do you think that the flood is liable to rise higher than the river on account of this diffusion?

A. On account of the obstruction to its flow below the point of diffusion.

Q. How is that obstruction caused?

A. By shoaling. It is one of the laws of hydraulies, as well as of many of the other sciences—pixical and moral forces take the paths of least resistance. If any obstruction is put in the way of a flowing river the tendency is to go off in some other direction. If that kind of work is indulged in the evil is constantly increasing, and if carried to its extreme limit it would break up the Mississippi River into 10,000 small channels, no one of which would be good for any purpose.

Q. The outlet theory, then, presents, in your judgment, a result of constantly increasing evil?

A. I think so.

Q. Is it your opinion that the more outlets that are made the more will be demanded?

A. I should say the more outlets made the more tendency toward further outlets. Perhaps that means the same thing.

Q. The result of an outlet, then, in your judgment, is toward shoaling?

A. I think so.

Q. The river below shoals and readjusts its regimen?

A. Yes, sir.

Q. And makes it commensurate with the decreased room that is required, and the flood rises as high as ever?

A. Yes, sir.

Q. By continuing that theory when the flood rises again, make another outlet; when the river readjusts, make another. Wouldn't that be the consequence, and wouldn't it result in filtering the water of the Mississippi River all over the country and absolutely destroying it as a great highway of commerce if it were persevered in?

A. The tendency would be in that way; and if prosecuted to its full extent and if the river were allowed to open up all the channels it pleases it would estroy it as an avenue of commerce. That is the extreme limit following in the line that such a theory would mark out.

Q. Hon the river were allowed to open up all the channels it pleases it wo

ar above?

A. I should anticipate that it would have a detrimental effect; that is, it would nise the flood-line.

Q. Immediately or eventually?

A. Very soon after; within half a year.

Q. Within a year?

A. Within a year?

A. Within a year.

Q. Its temporary effect would be to lower it, would it not—its first effect?

A. I am not sure asto that. You have given the size of the outlet; but I would to be prepared to say at present. It might have that temporary effect to begin with.

not be prepared to say a present
with.

Q. Then what would be the result?

A. The next result would be a huge shoal immediately below the outlet in the
channel of the river, and the outlet itself would tend to shoal up and the river
water would flow off less freely than it did before the outlet was formed, thus
causing a damming up of the water above the point of outlet.

Q. The result then would be shoaling below, a current decreased in velocity,
and consequently in the end a raised flood-line?

A. I think so.

Q. Is that the law of outlets in sedimentary streams?

A. I thoroughly believe it is.

Q. Have you had occasion to investigate the plans of improvement proposed
by the present Mississippi River Commission?

A. Yes, sir.

Q. Is that the law of outlets in sedimentary access.
A. I thoroughly believe it is.
Q. Have you had occasion to investigate the plans of improvement proposed by the present Mississippi River Commission?
A. Yes, sir.
Q. Have you seen any of its works?
A. No, sir.
Q. Is their plan a new one, or is it an old plan?
A. I should say the general features of the plan were old; but the means and methods used by them in carrying out their works present a great many novel features, and to my mind valuable ones. I think they have gone ahead of what has been hitherto accomplished in that line, and are making progress in that branch of engineering work.
Q. What do you understand to be their theory?
A. Practically, what I stated a shorttime ago. For that part of the river which

is troubled by shoals, to improve the navigation by having a defined high-water as well as low-water channel, one within the other, confine the waters of the stream, train it, and thereby cause it to excavate its own channel, having a channel of proper and reliable depth at all seasons of the year. These training works are built out from the shore, and they include in certain cases widening some parts of the river, other parts contracting; but the object sought to be attained is to obtain a regular systematic channel which the river is to be kept in, and which it will maintain of its own accord.

Q. Do you believe it is feasible to confine the ordinary floods of the Mississippi River within channels within the banks, artificial banks?

A. I believe it is, for that part of it the navigation of which is now obstructed by shoals. I do not know enough about the lower reaches of the river to be able to give an opinion as to whether that part could be kept within levees during its floods or no.

Q. I speak particularly of that portion of the river between Cairo and Natchez, Mississippi, or the mouth of Red River.

A. That part I think could be trained?

A. Yes; although in working on a river of such magnitude it is necessarily a matter to some degree of experiment. I believe in the motto of the Engineering Corps of the United States, which is, "Let us try." In a case of this sort there are reasonable grounds for believing that success is attainable, and all that can be done is to go ahead and endeavor to achieve that success.

Q. Do you know the means adopted by the commission to hold the caving banks of the river?

A. I do not in detail.

Q. Do you know the means that are being used by them in making contraction works in the shoal places at the head of towheads and along bars, for the purpose of creating a filling, making an artificial low-water bank by the means of wing-dams, the jetties, foot-mats, watling, &c.?

A. I understand in a general way what has been done in that direction.

Q. Do you think that is feasib

As I think that work and seem very went one. I had that work in himland work elsewhere, and I regard it as a marked progress in that branch of engineering work.

Q. It looks like a mammoth undertaking, does it not, to gather up the flood waters that extend, for instance, fifty or sixty miles wide and three or four feet deep? For instance, take this point where, according to the section lines, the flood was seventy miles wide. It looks like a huge undertaking to propose to control all that water and keep it within the channel of the river and compel the river to discharge it.

A. Well, sir, it does not look so very formidable to the hydraulic mind.

Q. To the unprofessional mind I confess it looks like a big job.

A. If the river discharged it it would not spread out.

Q. That is true.

A. There would be nothing to gather up, as it were.

Q. Under what law of hydraulic engineering or dynamics would the river ever control and discharge that immense flood?

A. It is one of the most notable laws of hydraulics that the channel, with an increase of depth and only a slight increase of slope, discharges so much more water. Five feet increase in depth when the depth is already eighty feet, say, may double the discharge.

Q. Five feet increase in depth may double the discharge?

A. Those are mere random figures to illustrate that a small increase in depth will very greatly increase the discharge.

Q. Is not that the law?

A. It is a well-ascertained, incontrovertible law?

A. It is a well-ascertained law that one handling water becomes very familiar with, and is not surprised at when he sees it in practice.

Q. I want you to elaborate that thought as applied to the Mississippi River?

A. It is that has been so well done by Captain Eads that, did I wish to state this fact in the tersest and strongest way, I think I should quote his very words on that subject.

Q. To what utterance of Captain Eads do you refer?

A. I refer to a pamphlet of his in which he gives some diagrams showing the Mississippi River at various depths,

creased by comparatively small increase in depth of river.

Q. Had you studied that question before you saw Captain Eads's utterance about it?

A. Yes, sir,

Q. Was your opinion influenced by his, or did you hold that opinion before you saw his statement?

A. I held that opinion before I saw his statement. But I admired the terse and strong way in which he put it and brought it, as I thought, within the comprehension of everybody.

Q. Then your opinion was not at all influenced by his?

A. Not at all.

Q. (Handing document to witness.) Will you look at that and see if that is the document to which you refer?

A. (After examination.) That is the document, as I remember by the drawings on page 5.

(The witness referred to the minority views signed by Captain Eads in the report of the Mississippi River Commission of 1881, known as Senate Executive Document No. 10, part 2, Forty-seventh Congress, first session.)

Q. You believe, then, that if the Mississippi River is confined in a high-water channel by artificial banks, with a low-water channel well defined in a permanent place, that it will discharge its ordinary flood of water without overflowing the country?

A. I think it will.

Q. Under the law which you mention?

A. Yes, sir.

Q. And for a full elucidation of your opinion you refer to this document of Captain Eads?

A. I do for a strong way of putting it.

Q. Have you had any other observation or experience with European rivers than the Po and the Rhine?

A. Yes; there are other rivers with which I am familiar with the works on them, from study of books, hydraulic works, describing the training works on those rivers. The Danube isanother river that not so much work has been done on as on the Rhine. The Mosell is a trained river, and various smaller r.vers I know of in Europe.

Q. Have these rivers of which you speak a defined high-water channel within the low-water channel?

A. Yes, sir, in smaller rivers especially; there is no question that the way to rain them is in the manner stated, and that it can be do

A. That is a subject I have not studied. I should not want to give an opinion

upon that.

Q. Is the law exactly the reverse of that to which you have just alluded? As I am informed, you believe that by confining the waters to a well-defined highwater channel by artificial banks it will discharge according to the increase of depth given by those banks; it will discharge with twofold or threefold rapidity, according as depth is increased. The reverse of that is the destruction of these artificial banks, and allowing the river to wander all over the country, is it not?

these artificial balls, and anowing the river to wander an over the country, is it not?

A. I am afraid that I do not catch the drift of the question.

Q. You have just stated that if the waters of the river were confined within well-defined high-water banks permanently located the discharge would be two-fold or threefold in rapidity as a consequence of the increase of depth occasioned by those high-water banks; then I say the reverse of that would be the destruction of those banks and allowing the water to run all over the country. That would be the reverse action, would it not?

A. Yes, sir.

Q. Then, does it not follow that crevasses and outlets and a general overflow retard the progress of a flood?

A. Yes; that is as I stated before. Outlets destroy channels instead of making them.

retard the progress of a flood?

A. Yes; that is as I stated before. Outlets destroy channels instead of making them.

Q. What is the general angle of slopes in sedimentary rivers?

A. It is very varying; there is no rule about it.

Q. Do you know of any such thing as a perfectly perpendicular bank below the water-line?

A. I thought you meant slope of the water's surface.

Q. No, sir; I meant of the bank below the water-line.

A. Some kinds of earth will stand up for a certain length of time almost or entirely perpendicularly.

Q. What kind of bank would that be?

A. I could hardly say; soils act very curiously about that. A perpendicular bank without sufficient slope is only a temporary thing; it is a question of time whether it will cave in. But for a short time earths will stand up occasionally quite perpendicularly in running water.

Q. Would the soil of the character of that which composes the banks of the Mississippi River stand up perpendicularly below the water-line for any length of time?

A. It would not for any length of time; it might temporarily.

Mississippi River stand up perpendicularly below the water-line for any length of time?

A. It would not for any length of time; it might temporarily.

Q. The general law, however, requires a sloping bank?

A. A sloping bank is necessary for any degree of permanency.

Q. And that necessity is greater in sedimentary streams where the bank is soft, is it not?

A. A soft bank would need a slope to be at all permanent.

Q. I will ask you one more question, and that is if the plan, the theory, and the works of the Mississippi River Commission, as far as you understand them, meet your approval as a professional man—as an engineer?

A. They do most decidedly.

Q. If it were a private investment of your own would you hesitate to go on with the work? If the results to be achieved were as great proportionately to you as an individual as they will be to the Government would you hesitate to go on and prosecute them?

A. I should go on with them.

Q. I understand you to say that you had given them a good deal of consideration?

A. Linye given them considerable thought and study.

ion?

A. I have given them considerable thought and study.
Q. Had you studied the problem presented by the Mississippi River Commision before the organization of the commission?
A. Somewhat, though not very much.
By Mr. Robinson:
Q. You visited the Lower Mississippi in 1877?

You visited the Lower Mississippi in 18
Yes, sir.
How long a time were you there then?
Something like a week or ten days.
Have you visited it since?
No, sir.

A.Q.A.Q.A.Q.A.Q. No, sir.
And prior to 1877 you went there to make an examination of the river?
Not since I was a boy.
At that time you had no scientific knowledge or attainments that would st you very much in the investigation?
No. sir.

A. No, sir. Q. Have you had any experience in the regularization of rivers, as an engi-

?
I have done no work in handling large river channels.
What rivers in this country have you trained?
None at all.
You are at present the engineer for the Holyoke Water Power Company, tassachusetts, are you?
Vos. sir.

Q. You are at present the engineer for the Holyoke Water Power Company, in Massachusetts, are you?

A. Yes, sir.

Q. And that is a work of different character from that in this scheme?

A. Yes, sir.

Q. And you have not seen, as I understand you, any of the works that have been done by the commission since the commission was formed?

A. I have not seen the actual works.

Q. You have read their reports, and you pass your opinion on their reports as applied to what you have known of the river before?

A. Yes, sir. My knowledge on river works is, I may say, mainly gained from the study of the works of others.

Q. What is the object that you understand the commission to be aiming at?

A. I understand that the commission is trying to make a channel of a proper and reliable (I mean by that, permanent) depth in all that part of the river which is now subject to shifting shoals; that is to say, from Cairo down to the mouth of Red River, roughly speaking. Whether or not they are to train the river below that point and confine its flood-waters is a thing, as I understand, that is a matter of discussion.

Q. They are aiming at training the river in the shoal places; but for what purposes?

A. Ever the purposes of navigation.

oses?
For the purposes of navigation.
Solely?
Solely.
You do not contemplate any works for the protection of lands from over-

A. I do not, unless they at the same time act as improving the navigation of Q. Do you understand that the condition of the water at all stages below Red iver is sufficient for navigation?

River is sufficient for navigation?

A. Yes, sir.
Q. Can you conceive, then, of any need of an application of the plan of the commission below Red River?
A. Not for purposes of navigation, unless it is down at the passes possibly.
Q. If they are limited in their jurisdiction to the head of the passes, you would not then consider it necessary?
A. No, sir; not in that case.
Q. The navigation is good, on the statement of all river men, from Red River to the head of the passes; you see no necessity or propriety in continuing any works below?

A. Not for purposes of navigation.
Q. Then you do not regard the maintenance of levees below Red River as of ny consequence at all for navigation?
A. Not for that part of the river, as I understand.
Q. You make that statement upon the assumption that the navigation below ted River is good at all stages of water?

A. Not for that part of the river, as I understand.
Q. You make that statement upon the assumption that the navigation below Red River is good at all stages of water?
A. Yes, sir.
Q. In regard to the river from Cairo to Red River, you apply the plan for the sake of improving the bad places in navigation?
A. Improving and maintaining.
Q. You conflue it to the shoal places of the river?
A. Maintaining the improvement, will you please say?
Q. Do you confine the works to the shoal places of the river?
A. No, sir; that can't be done. To improve shoal places it is necessary to do work on either side of the shoal places.
Q. Above and below?
A. No sir; that can't be done. To improve shoal places it is necessary to do work on either side of the shoal places.
Q. Above and below?
A. Above and below.
Q. By narrowing the channel in shoal places do you expect a deepening of the channel at those points?
A. I do if properly supported by the other works above and below.
Q. What will become of the effect of a secur?
A. Pass on down the stream.
Q. It will have to stay somewhere.
A. No necessarily; it should reach the Gulf of Mexico.
Q. And you anticipate that it will always go to the Gulf of Mexico without making a call anywhere?
A. It will get there in course of time. That is the object of training works, to prevent the sediment which is rolled along the bottom from accumulating at any point in the shape of shoals. They are detrimental to navigation; and the object of these works also is to take this material from time to time, from flood to flood, and pass it along down the stream with some degree of regularity and system until it is finally ejected at the mouth of the river.
Q. Are you looking to the maint-mance of a channel that shall have a well-defined and uniform depth throughout?
A. No, sir; but to have a channel whose least depth at any point shall be no less than the amount aimed at or desired. What that depth exactly in feet and inches shall be is something that I do not pretend to know. It has undoubtedly been settled

lways pursued that course, has it not? A. Yes, sir. Q. Is it a fact that there are similar undulations in a vertical line on the bed of

the river?

A. The line of deepest water would go up and down, for, as I have expressed it, that would be a succession of pools and shoals.

Q. You contemplate that the banks for the high-water channel and the low-water channel shall coincide?

A. I think they would not necessarily; they might in certain cases.

Q. Is the object of the contraction works to secure a scouring force on the

A. I think they would not necessarily; they might in certain cases.
Q. Is the object of the contraction works to secure a scouring force on the bottom?
A. Yes, sir; principally.
Q. Is the object of the confinement of the water at high stages to secure a greater secouring force?
A. Not so much as in the case of the low-water training works.
Q. I understand you to say that an increase of five feet would very much increase the scouring force of the stream?
A. It would. But what I said was that a slight increase in depth very largely increased the carrying capacity of the river to carry water.
Q. Because it increases the velocity?
A. Because it increases the velocity.
Q. An increase of scouring force would accompany it?
A. It would accompany it.
Q. And then the piling of the water upon itself by maintaining the banks for a high-water channel, preventing dispersion over the valley, would give greater depth, greater velocity, and greater scouring force?
A. It would in high water. This very material that has been spoken of would be picked up and carried further toward the Guif.
Q. The crest of the banks is in general above low-water mark at what height along the Mississippi River?
A. I do not quite understand.
Q. How high is the surface of the soil on the crest of the natural bank above the stage of low water in the river?
A. I could not say.
Q. Assume it to be forty feet; then would your observation lead you to believe it to be that?
A. It is in some places.
Q. When the river is bank-full, then, you have increase of depth of your stream forty feet to below low water?
A. I do not understand that the Mississippi River at any place has a range of forty feet between high or low water.
Q. If it is at low water when it runs over the banks and fills the banks, it is as much higher as the banks of the stream?
A. I do not understand that the range is forty feet.
Q. What range do you put it?
A. Well, not at the upper end.
Q. Was assumed the fifterence of high flood, and you are going to bring the water that the upper end.

five feet?

A. Yes, sir.

Q. Now take the difference of high flood, and you are going to bring the water that flowed over the valley, to the extent described in that map there before you, somewhere from forty to seventy miles wide; and you anticipate bringing all that flood in within those new banks?

A. I anticipate discharging it into the Gulf of Mexico before it can spread over

the land.
Q. How high necessarily would they be to hold that flood?
A. There is such a variation I could not say; I am not sufficiently posted in the details of the question.
Q. You anticipate that it would require pretty high banks, do you not?
A. I do not remember any banks that have ever been proposed of what an engineer would call an urreasonable height.
Q. But could the flood of 1882, extending down in the valley, ranging from twenty to seventy miles in width, and in depth over the land from five to ten

feet, be confined in that space? Do you look forward to it as a practical scheme that by any walls of earth in the bed of the river, or on the banks, you could confine that flood and carry it out to the Gulf without disturbance?

A. Certainly. The width of a flooded district and the moderate depth over which it has flowed are alarming-looking figures. But if that water, instead of standing still and flooding the land, had been enabled to pass on, it would not have assumed this alarming proportion. It is like the genii in the Arabian Nights Entertainment. So long as it was kept within the bottle it was all right, our when it got out it looked very formidable and impossible to get it basek again.

Q. You think you could keep this spirit of the Mississippi Valley within a bottle?

A. I see nothing alarming in the proposition. Q. Did you see the flood of 1882?

No, sir. Did you ever visit there when the river was at high flood since your boy-

Q. Did you ever visit there when the hood?

A. No, sir; I have seen no very high floods. I have seen crevasses and ordinary floods.

Q. If the river had this great increase of depth and augmentation of velocity, and so of scouring force, will you tell why it will not proceed to scour down behind the contraction works that are within the bed of the river.

A. May I ask does that refer to the low-water training works or the high water?

A. May I ask does that refer to the low-water training works or the high water?

Q. It refers to the effect of the greatly deepened river in time of flood when confined within the high-water banks, the effect upon the low-water works.

A. Yes, sir. All I can say is that experience on that subject does not lead one to anticipate any such trouble. The works that are built to guide the low-water channel are of such a nature that they can stand a great deal of seour; they necessarily must in the execution of the work that is put upon them. The bed of the river is not deepened to any great amount except at the crest of the bars. The line of the channel, as I have said, assumes the form of a succession of shoals and pools; and I do not anticipate that the bottoms of the pools will be secured at all. It is simply taking off the top edge of the water. I might call it the saw-teeth, as that is what this profile would look like on a distorted scale, and these teeth would be chopped off by the training works.

Q. But you have now confined your explanation entirely to the effect in the low-water channel. I want to lead your mind to the space between the contracting works on the one side of the low-water channel and the levee on the top of the bank of the same side of the stream. I want to know if there will be any scouring between those two lines when the water is deepened twenty-five or forty feet?

of the bank.

Scouring between those two lines when the water is despendent forty feet?

A. That space between the low-water marks and the high-water levees must be protected and guarded in some way. It would not do, for example, to plow it up and cultivate it. It ought to be allowed to grow up there in underbrush, or certainly nothing less than grass. It will have to be taken care of; it is one of the burdens of a civilized channel of the river.

Q. How with regard to its width?

A. Its width will be a determined measure.

Q. But it will vary in places?

A. I presume so.

A. I presume so.

A. I presume so.

I presume so, You do not understand that it is proposed to continue these works in par-

Q. You do not understand that it is proposed to continue these works in parallel lines?

A. Roughly speaking, I think they would be parallel; but speaking strictly mathematically they would not be.

Q. It is a fact that the levees are in no sense parallel, are they?

A. I think that is one of the defects of the present haphazard system.

Q. What would you recommend in place of them?

A. I would recommend a system of levees to guide the high waters of the river that are in some remote degree of uniform width.

Q. Then you understand that it would be necessary to build new levees in order to have a proper high-water channel?

A. I do in such places where they do not already exist, and are not already on a proper line.

Q. What do you mean by "not on a proper line?" Be more definite.

A. I can not very easily, except to say that the works which guide the river in the high water must be, roughly speaking, parallel to those that drain it at low water.

low water.

Q. And the variation of the width of the space between them of a mile would not be sufficiently near the parallelism to answer the purpose?

A. That must be studied and answered for each particular locality.

Q. Your information would not enable you to answer now?

A. I could not lay out here a line of levees for guiding the high waters of the Mississippi, and describe them merely in language.

The committee adjourned to 7.30 this evening.

FRIDAY, January 19, 1883, 7.30 p. m.

Mr. Robinson in the chair. Testimony of Clemens Herschel continued.

Testimony of Clemens Herschel continued.

By Mr. Robinson (in the chair):

Question. You understand that the effect of these works that are put into the bed of the river is to assist the river in forming new banks, do you not?

Answer. Yes, sir; generally it is.

Q. And you expect, then, to have a deposit and so the process of bank building going on after those works are completed?

A. Yes, sir.

Q. Now, my question is, why will you not have, as a certain result when the river is raised in flood to the top of the high-water banks, a scouring over that newly formed bank?

A. Well, sir, another reason besides those that I mentioned is this: That on this fore shore, which is the technical name of that part of the shore between the high-water and the low-water bank or shore, the depth of water in time of flood will be comparatively small, and the depth being small the velocity will be small also, and that prevents erosion in that part of the high-water channel. Where the depth is greatest the velocity is greatest and then there will be the greatest amount of erosion.

Q. Then it is measured by the same law as to the depth?

A. Yes, sir.

Q. So that you will have with the same depth the same effect of increased velocity and increased power of current?

Q. So that you will have with the same depth the same effect of increased velocity and increased power of current?

A. If the depth is uniform; if its depth is nothing but a hole dammed up down the stream it will make it a still pool.

Q. If it is in the ordinary course of the stream and going along the extended line of the river you expect results of the same character?

A. I would. I will call attention, though, to the object of these very works, which is to arrest the current and build up the shore, and which is diametrically opposed to any digging out or erosion.

Q. But these works are not greatly permanent, are they, in themselves; they are made there from materials which will perish?

A. Yes, sir; the idea being that they will have achieved their object before they perish.

hey perish.
Q. That is, they will have built up the bank?
A. Yes, sir.

Q. Then when they decay they leave nothing but the bank?

Q. And then you have the bank to be attacked; is that so?
A. Not exactly.
Q. Why not?
A. For the reason that I have given. The bank will be but to a comparatively small extent under water, and such ahoal-water may not assume any great vertically.

small extent under water, and such shoal-water may not assume any great velocity.

Q. But it has no protection in the perished dike work?

A. It has no artificial protection.

Q. Then it comes down substantially to the soil which forms the new bank?

A. I can say on that point that there is little or no fear of any crosion of those banks after they are formed; all experience proves that. I am not confined to reasoning on that point; it is a matter of experience.

Q. Do you regard it as within reasonable expectation that the banks must be revetted?

Q. Do you regard it as within reasonable expectation that the banks must be revetted?

A. In certain portions they probably will have to be revetted, especially during the first stages of formation of the new channel. The formation of the new channel is the work of several years; it can not be achieved all at once. River works always extend through a series of years before they are completed, and they must be watched after that and kept in repair.

Q. There is a danger all the time, is there not, that the river may set in behind and fiank these works?

A. Yes; works of this sort must be protected and taken care of constantly.

Q. So that while they might be successfully constructed there would afterward be a necessity for maintenance constantly?

A. Yes, sir.

Q. And in a valley and in a bed like that we have in the Mississippi River problem, that would not. Handling a river is like handling a living organism. You build up a bridge; it is handling dead material, comparatively speaking; once put there it will stay there, and it is very much more so in works of this sort.

Q. As a living organism, to carry out your simile, the river oftentimes seems to manifest a will of its own and do very straage things?

A. Apparently so, although when its laws are well understood there is little or none of this sort of action.

Q. In other words, many things which are counted great wonders cease to be such when we understand them?

A. Yes, sir.

Q. The river is performing remarkable feats as observed with our present.

A. Yes, sir. Q. The river is performing remarkable feats as observed with our present

Q. The river is performing remarkable feats as observed with our present inowledge?

A. Yes, a river of this magnitude.

Q. You are aware that the river has run about over that valley to the extent f many miles in some parts of it?

A. That is a feature of untrained rivers.

Q. And particularly with the soil of the character of this—so easily moved as hat of the Mississippi Valley.

A. Yes, sir.

Q. The more yielding the soil the more susceptible it is to the action of the vater?

water?

A. Yes, sir.

Q. Then will not—in these great bends that are plainly seen to every passer, which extend sometimes five or ten miles, after you have prepared your works in them, if the river suddenly concludes to cut off these bends—your works be left to one side? What would you do about that?

A. In its trained state the river would not have these extremely sharp bends that it forms now.

Q. You propose to cut across and shorten the river?

A. It would have to be done in certain cases, I presume; I am not acquainted with the whole length of the river.

Q. In your theory of the river would it remain shortened after you had cut across these bends?

A. The artificial channel, such as is built by training works, would have to be maintained.

A. The artificial channel, such as is built by training works, would have to be maintained.
Q. Is it not a well-observed fact in such a river, through such a bed, that whenever a shortening is made the river begins to compensate for that shortening by lengthening either above or below?
A. It does attempt to do so.
Q. So that you practically would in the end have the same distance from Cairo to Red River that you have now?
A. Practically the same distance would have to be maintained unless an increase in depth and an improvement in the discharging capacity of the river would change that length.
Q. Do you contemplate any particular increase of depth so that you can state it in feet?
A. No, sir; I could not state it in feet.
Q. Have you an impression that you would get a depth of twenty feet at low stage of water from Cairo down?
A. No, sir; I should say not so much.
Q. As much as ten feet?
A. Possibly that.
Q. That would be the outside, would it?
A. I don't think my judgment on that point is very good; I have not fixed my ideas of channel-way in feet.
Q. If you were to drop the bed so that you would have ten feet of water from Cairo down, do you expect that that increased depth would give sufficient channel to carry all its waters below the natural banks of the river, even in time of flood?
A. Yes, sir.

flood?

A. Yes, sir.

Q. Then your idea is that, with a ten-foot channel secured, you would have no water to overflow the valley?

A. The depth of channel is one element and the height of levees is another. Those two together must be so constructed that they will carry off all but the most extraordinary floods.

Q. What is it that makes the water run into the Gulf of Mexico?

A. The slope of the water surface.

Q. Now, if you lower that slope will your water run faster or slower?

A. I hardly know what is meant by "slower."

Q. If you drop the upper portion of the slope it is like an inclined plane with a broken surface. Now, drop the upper end of that inclined plane; will the water run faster or slower?

water run faster or slower?

A. That would decrease the slope and the water would run slower.

Q. Now, an increase of depth of that upper portion does really drop the upper end?

Q. Now, an increase of the surface of the river.

Q. What does it do?

A. It increases the slope of the surface of the river.

Q. Then you do not mean the slope of the bed?

A. No, sir; that is of little consequence as regards flow of water; it is the slope of the surface of the water that makes the water flow.

Q. The lower end of the slope is fixed?

A. Fixed.

Q. That can not be raised much?

A. No, sir.

Q. What object is it to lower the bed of the stream if the lowering does not accelerate the current?

A. Lowering the bed of the stream improves the navigability of the stream.

Q. Yes; but how does it affect the current if you say it does not accelerate it?
A. I have said that it needed to be lowered in the channel, or on the crests of the shoals, and that this will not necessarily lower the surface of the water, although it will improve the navigation.
Q. Well, illustrate it with a book held on an inclined plane [illustrating] of which the upper portion will represent Cairo and the lower the Gulf of Mexico.
A. Yes; roughly.
Q. Down that slope the water runs with a certain velocity. Suppose that I cut the plane from the upper portion down greatly [suiting the action to the word] so that I have lowered the slope; in other words, sunk the bed; will I get more rapid discharge of water down that new slope, or less rapid?
A. If these things are done as you have described them the water will run slower.

A. If these things are done as you have described them the water will run slower.

Q. In the upper portion of the river, from Cairo to Red River, in what way does it scour out from what I have supposed in this instance?

A. I do not understand that it is the intention to lower the slope, or to make the slope flatter, rather.

Q. To lower the slope of the bed?

A. Lower the slope of the water surface. I do not understand that this is to be done. The only thing I understand to be done is to make a regular channel, and one of such a depth at its shoalest parts as to improve the navigation, and that that depth shall be found there at all seasons of the year.

Q. With a given quantity of water in the channel of the river, enough just to fill the natural banks, if you lower the bed of that stream it is admitted that the water will full below the natural crest of the bank?

A. It would if the whole bed is lowered and the quantity of water has fallen to a corresponding depth, why do you not get a slower current?

A. You would in that case,

Q. And why is not that just where you are coming to as the result of these works?

Q. And why is not that just where you are coming to as the result of these works?

A. Because these works are not intended to and need not appreciably lower the whole bed of the stream or lower the water surface, at Cairo we will say, for the same stage of water.

Q. Is it not, after all, a relief from that perplexity that may exist, in my mind if not in yours, to keep separate the consideration of the channel for the purposes of navigation and the lowering of the flood-line for the protection of the valley?

A. It would be well enough to keep these objects separate, but, practically, it can not be done. I think improvement of the river for the purposes of navigation usually brings with it a lowering of the flood-line.

Q. Well, for any purpose of navigation it would be all-sufficient, would it not, if you could put a dredge up and down that river with sufficient frequency to keep these tops of the shoals all scraped off and the burden carried into the pools so that boats could pass up and down without striking those shoals; that would be all that would be necessary, so far as navigation alone was concerned, would it not?

be all that would be necessary, so far as navigation alone was concerned, would it not?

A. That would not be practicable.

Q. If that were practicable, like the farmers breaking out a path through the snow, if you could break down the tops and put the contents of them into the pools you would have a channel for navigation purposes, which would be all that you want?

A. Certainly.

Q. If you use the power of water to accomplish the same thing, that is all you want to seek for, so far as channel improvement is concerned?

A. Yes, sir.

Q. Then all other considerations and desiderata may be omitted in the consideration of that problem?

A. Is that a question?

Q. Yes.

A. What considerations are referred to?

Q. The other question was the one to which you gave assent—that the force of water as a scouring power, instead of a dredge, if it carried off those obstructions would be all that would be necessary so far as channel improvement was concerned. Now, I said, working to that end, you may safely omit the other considerations and desiderata?

A. Yes.

A. Yes.

Q. You advanced the belief that the result, in an outlet of any considerable volume from the Missiscippi River, would be a shoaling below, and hence an obstruction to navigation.

struction to navigation.

A. Yes.

Q. What should you say if you were told by experienced navigators of the river that below the Bonnet Carré crevasse, the crevasse having occurred in 1874, no perceptible shoul of the river had occurred—none that had affected the navigation of the river?

A. I should want to distinguish between "perceptible shouling" and "shouling that had not affected the navigation of the river." I can conceive of a river so deep that it could shoul very much without affecting navigation; but it undoubtedly has shouled, or I am very much mistaken in facts and theories.

Q. You would be mistaken as to the theory if it had not shouled?

A. If it had not shouled I should be very much surprised; at least I should want to seek a cause for such an exceptional state of affairs.

Q. That crevasse having been open for eight years, and it having been found that during that time there had been no shouling sufficient to operate as any obstruction to navigation, from the great depth of water or otherwise, should you say it was necessary to close the Bonnet Carré crevasse for purposes of navigation?

obstruction to navigation, from the great depth of water or otherwise, should you say it was necessary to close the Bonnet Carré crevasse for purposes of navigation?

A. Well, the question seems to be like this: If the crevasse has been opened eight years, and has produced in that time no shoaling to such an extent that it is detrimental to navigation, need it be closed in the interest of navigation at that point? and I should say of course not. If there is no detriment to navigation there is nothing to be cured at that particular spot; at the same time there undoubtedly was shoaling there, and the river discharges less freely below that crevasse now than it formerly did, and that amounts to the river being on the road to ruin, although it has not got there yet.

Q. The ruin don't quite stare us in the face, but I think it is in an evil way—going in the wrong direction.

Q. Well, it is a fact in the behavior of the river that it makes shoals one day or one month and removes them the next, and makes new ones in other places?

A. In certain parts it undoubtedly does that.

Q. So that you might find a shoal there now, and perhaps in three months you would not find it there?

A. I don't agree with that exactly; as long as there is a crevasse there would be a shoal not far below.

Q. That is the tendency undoubtedly, but when the water is fifty feet deep do you expect such a shoaling as to interfere with the navigation for boats that draw eight or ten feet?

A. I don't mean to be understood that shoaling, as applied to those places, is a shoal that interferes with navigation; where there has been one hundred feet and only fifty feet is there now, I call that a shoaling, although there are still fifty feet of water left.

Q. In order to make these works of improvement in the channel of the river a success, all the caving banks must be created and maintained?

A. I don't mean to be ankes must be created and maintained?

A. Yes.
Q. And you expect a very large amount of revetment to be required to accomplish these results?
A. Yes, sir; especially during the first year of the work.
Q. Practically, in your judgment, it would amount to about the length of the river from Cairo to Red River, would it not, continuously, taking one side alone; that is, putting two sides together you get as an effect about one length?
A. I should think that might be a fair estimate.
Q. You have said, as I understand you, that you have confidence in this plan of the commission?
A. I ado think that inasmuch as it has been begun it should now be continued and finished.
Q. Is it a fact that scientific gentlemen like yourself like to see these problems solved and settled for the benefit of science?
A. Well, I should hardly go in my devotion to science to that extent. I believe this, that the training of the Mississippi River and other mavigable rivers has got to be undertaken at some time in the history of this country. The Congress of the United States in its wisdom has seen fit to commence that work in the year 1832 rather than in the year 1900 or in the year 1932, and now that the work has been begun I certainly believe that it should be finished.
Q. Whatever the cost?
A. No, sir; but if not too largely in excess of such estimates as were made previously to the beginning of the work.
Q. If you knew that the members of the Mississippi River Commission estimate the entire expense in amounts differing with the individuals, ranging from \$25,000,000 for \$66,000,000 for the whole work, omitting all consideration of the construction, repair, and maintenance of levees, and you consider that the plan included works upon several distinct reaches of the river, would you not consider it the part of prudence as an engineer or as a practical man in any other branch of employment to confine your work to one of those reaches until the work there had stood the test of the flood season and demonstrated its success? You may consider in that connies your works are now in pro

ar reach of river.

Q. Taking, then, your assumption of it as part of the necessary working out of the theory, you would be of the opinion that that would be the more economical and safer course to pursue than to apply the work to the whole of the river at once, taking the chances of failure if the whole of it should result disastronely?

at once, taking the chances of failure if the whole of it should result disactrously?

A. It may be judiclous to confine the works in that way.

Q. Because, I understand you to say, after all, in such an undertaking as this there must be a very large element of experiment?

A. Yes. There are very few Mississippi Rivers in the world.

Q. As you spoke of foreign rivers, have you any one of them that is up to the Mississippi problem?

A. No, sir, certainly not.

Q. The Rhine does not approach it?

A. No, sir.

Q. And you alluded to the overflows of the Rhine at present; there you have a regularly trained stream with levees upon the banks, maintained for many years, and yet you have an overflow that is disastrous?

A. Yes, sir.

Q. Therefore the training of the river and the maintenance of the banks has not so deepened the channel there as to carry away the flood waters without their doing damage?

their doing damage?

A. I stated that floods have occurred there though the banks have been graded

A. I stated that floods have occurred there though the banks have been graded and known for two hundred years; but those very works have been of an immense amount of benefit for the last forty years, and the moment these floods subside they will again take up their beneficent work.

Q. That is, when the water is within the natural banks the levees do a good

Q. That is, when the water is within the natural banks the levees do a good work?

A. Oh, there are floods on the Rhine every year, but there are extraordinary floods and floods that might be termed extraordinarily extraordinary, and it does not pay to grapple with freaks of nature that only come once in a century.

Q. Well, the river Po is a very much smaller stream than that we are now contemplating; that has levees and works within the banks, and yet it is subject to overflows, is it not?

A. There has a great deal been said about the river Po, yet very little that I have seen that may be termed reliable. I have never seen, myself, or read anything about it that I could say were facts and figures.

Q. It is thought that those works have been maintained somewhere about four hundred years, is it not?

A. It has been under some sort of training for as long a period of time as that.

Q. You are aware that the bed of the river is claimed to be only one foot lower than it was four hundred years ago.

A. I think the Po ought to be left out of the discussion until we get some data. I have heard almost everything about the Po.

Q. So you will omit it because it is an uncomfortable factor in the discussion?

A. No, sir; it is quoted in support of almost every theory that has been brought forward. The reason I say it ought to be left out of the discussion is that we know so little about it that is reliable.

Q. Well, how is it about the river Rhone?

A. I am not posted on that.

Q. Have you had time to examine the translation by Lieutenant Merrill, of the United States Engineer Corps, of the work on improvement of non-tidal rivers?

A. Xes, although I have not read it very carefully yet.

vers?
A. Yes, although I have not read it very carefully yet.
Q. Those engineers who are prominent and distinguished abroad discredit ery largely this theory for the regularization of rivers?
A. I find a Russian engineer is quoted there.

Q. Those engineers over largely this theory for the regularization of the find a Russian engineer is quoted there.
Q. Janecki does abandon it and believes in canals, which are, however, entirely impracticable for a river of the size of the Mississippi.
Q. Oh, yes; but he proceeds to show that as to the Rhone this training and regularization has not been a success, does he not?
A. Yes.
Q. And that is the most recent work that we have by authority upon the works in French and German rivers?
A. Well, I think not; take the river Loire, for instance, which is a very successful case of river training—and the Garonne.

- Q. How do they compare in size with the Mississippi?
  A. Well, those rivers are smaller than the Mississippi.
  Q. How do they compare in size with the Connecticut River?
  A. I think they are larger than the Connecticut.
  Q. Not very much, are they?
  A. I could not say. The Rhone is, certainly.
  Q. Do you contemplate as a necessary result of the completion of the works on the Mississippi River that there should be any such protection of the bottom of the river as has been applied in the regularization of the German rivers?
  A. No, sir.
  Q. Why not?
- of the river as has been appears.

  A. No, sir.

  Q. Why not?

  A. Those German rivers are cases of small rivers, with much steeper slopes.

  Q. You mean slope of bed now, do you?

  A. Both slope of bed and slope of water surface.

  Q. You would not anticipate, even with the yielding soil of the Mississippi, that you would have in that increased current so great a force as to perceptibly affect the bed of the stream?

  A. I should think not.

  Q. Would it not be sufficient, possibly, to undermine the very works that have been put against the banks as a retaining wall?

  A. I should not anticipate anything of that sort in the stretch of river from Cairo down.

- A. I should not anticipate anything of that sort in the stretch of river from Cairo down.

  By Mr. Ellis:

  Q. Mr. Herschel, Mr. Robinson asked you that question there again that I was directing your attention to. I want to again carry you down to the Bonnet Carré works referred to in your examination this morning. You stated that for purposes of navigation alone you see no use of any work below the mouth of Red River. There are three or four large crevasses below the mouth of Red River, as you probably know. Is it not consistent with the entire plan of the commission for obtaining the greatest discharging capacity and for stopping whatever shoaling may be going on down there to close those crevasses?

  A. I think it is consistent with the work of river improvement and river training to close accidental outlets of this sort.

  Q. Do you not regard it as necessary to the plan of the river commission to close those crevasses?

  A. I think that I could hardly say it is necessary. I should say it was desirable.

- able.
  Q. The surveys made by Professor Bailey after the Bonnet Carré crevasse of 1874, and also the surveys made by Professor Forshey after the Bonnet Carré crevasse of 1850, showed the contraction of the sectional area below the pointed outlet to be about 75,000 feet; now will it not very greatly facilitate the river's discharge if that contraction can be undone and the bar which was formed washed out?

- out?

  A. Yes, sir.

  Q. The theory of the river commission is to obtain the greatest discharging capacity. Now, in order to do that, is it not necessary to close those crevasses?

  A. It is necessary in order to obtain a river of greatest discharging capacity.

  Q. And while it might not affect the navigation at that point forever, that creases might remain open forever and never affect the navigation below, and yet as long as it remains open it must protanto impair the discharging capacity of the river?

  A. That is correct.

  Q. Suppose it were shown to you by the testimony of the engineers who had

- Q. And while it might not affect the navigation at that point forever, that evases might remain open forever and never affect the navigation below, and yet as long as it remains open it must protanto impair the discharging capacity of the river?

  A. That is correct.

  Q. Suppose it were shown to you by the testimony of the engineers who had done the works, and by the official reports, that works similar in character to this being done by the river commission had been done at other points in the river where the river features were bad, and similar to those at Plum Point and Providence reaches, though the rivers were smaller—done under the theory and by the same means now being used by the Mississippi River Commission; and that these works had stood the test of several floods and were unimpaired and had accomplished the purpose for which they were created; would you not consider this test as sufficient to warrant the Government in going ahead war and the proceeding with the work.

  A. I should regard these as experiments of sufficient weight and value to warrant proceeding with the work.

  Q. People aregenerally prone to talk about the Mississippi River as a mystery, as presenting features never presented by any other river, as having crooks and whimsand moods that are unknown in any other stream in the world, and that it is a vast complex problem. Is it not exactly like any other sedimentary river, only on a larger scale?

  A. I think the novelties the Mississippi presents are those of size.

  Q. It is exactly as any other sedimentary river?

  A. I think the novelties the Mississippi presents are those of size.

  Q. Now, Mr. Herschel, suppose you knew that works of the character contemplated by the Mississippi River Commission had been put-into a stream that carries very much less volume of water, had been put-into a stream that carries very much less volume of water, had been put-into a stream that carries very much less volume of water, had been put-into a stream that carries very much less volume of water and the ma

- whether they fail on account of the defect in the general system or plan or the defect in that particular system of work.

  Q. And hypothetical cases that are put to you merely in the form of questions in one way or the other do not form much of a basis for you to express any
- way or the other do not form much of a basis for you to express any nupon? They do not form a basis for opinion on the actual work in full. I will just at it is not well to judge of work until it is finished.

## Deficiency Appropriation Bill.

I would rather be a FREEMAN than to be a KING and rule the WORLD.

### SPEECH

# HON. JAMES H. MCLEAN.

OF MISSOURI,

## IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 1, 1883,

On the bill (H. R. 7637) making appropriations to supply deficiencies for the fiscal year ended June 30, 1883, &c.

Mr. McLEAN, of Missouri, said:

Mr. CHAIRMAN: I rise in my place to offer this amendment in the interest of 30,000 negro people, the former slaves of the Choctaw and Chickasaw Indians, who are virtually as badly, if not worse, conditioned than prior to the war for the Union and human freedom. treaty stipulation the Government agreed with these tribes in the year 1866 that for a consideration certain lands should be ceded to the Uni-ted States. They also agreed in the same treaty to secure to those negroes their emancipation and induction into Indian franchise and citizenship before the expiration of two years subsequent to the ratification of the treaty referred to. The Indians failing to keep their compact in the treaty within the time above specified, the Government agreed within ninety days thereafter to come forward and use moneys otherwise. wise held in trust for said Indians, for the removal of those negroes

from the midst of the Indian tribes.

Now, sir, neither the Government nor the Indians have kept faith in this matter of solemn treaty stipulation. The result is that 30,000 negroes dwell in that section in a condition nondescript, a state virtually that of human slavery to semi-savage Indians. These negroes are without schools; they are without any recognized rights in the Indian courts. They cultivate in commonalty the lands of that Territory but to have their improvements confiscated at the unfair and absurd complaint of any individual Indian. These people have no rights as jurors; they are incompetent as witnesses in those courts. Indeed, they are without protection of law for civil, religious, or personal rights, and this amendment is intended to relieve them. I hope for the honor and good faith of the nation that the House will accept it.

That these negro people did not make application to Government to be removed at the expiration of the two years mentioned and prior to the time when the ninety days stipulated had elapsed would not seem to bar these freedmen from their rights as stipulated for on any reasonable ground of negligence or lack of due diligence. It will be seen that at the time of the formulation of that treaty those negro people were slaves, and therefore property. \* Hence, they could not be and were not in any sense a high contracting party to the treaty. They were property so far as any preparatory agreement to the stipulations of that

Therefore it would be as consistent in the light of the terms of the treaty to require that the lands whose cession back to the Government was provided for at the same sitting and in the same treaty should come forward and claim that the Government should keep a stipulation as to require that those slaves, treated for as property, should have demanded before the expiration of the ninety days that the Government should execute those conditions which the Indian tribes had evaded and neglected to execute in the fulfillment of the promise to emancipate and enfranchise those negroes. Had the negroes been emancipated and standing nondescript before the law, then it would have been possible for them to have slept upon their rights, and those rights would have expired by "limitation" with the close of the ninety days. But have expired by "limitation" with the close of the ninety days. But the fact is that these people were property and therefore incapable of becoming a party to the treaty. Their very emancipation was attempted to be provided for in the treaty itself; hence the responsibility of neglect rests with the Government and the Indians. The Indians having forfeited all right to the consideration named and the Government having neglected their duty, the trust fund in all equity forfeits or exchange at the reals, to the negrees referred to

escheats, so to speak, to the negroes referred to.

I therefore urge upon this Congress the wisdom of securing to these

negro people their just rights without further delay.
my reasons for asking the adoption of this amendment. And these are

DEPARTMENT OF THE INTERIOR, Washington, February 28, 1883. DEPARTMENT OF THE INTERIOR, Washington, February 28, 1855.

SIR: I have the honor to invite attention to the inclosed copy of letter of the 27th instant from the Commissioner of Indian Affairs, presenting an item for insertion in the deficiency bill now before your committee, appropriating the sum of \$25,000, to become immediately available, to enable the Secretary of the Interior to settle persons of African descent noted in the treaties of 1866 with the Seminole, Creek, Choctaw, and Chickasaw Nations of Indians upon lands edded for such and other purposes to the United States by the Seminole and the Creek Nations of Indians in their two several treaties of March 27, 1866, and June 14, 1866, respectively. (See third article treaty of 1866 with Seminoles, 14 Statutes, 786; third article treaty of 1866 with Creeks, 14 Statutes, 786.)

I approve of the object of this appropriation, and respectfully urge the early and favorable attention and action of the committee and of the Congress to the subject.

subject. Very respectfully,

H. M. TELLER, Secretary,

Hon. Frank Hiscock, Chairman House Committee on Appropriations.

DEPARTMENT OF THE INTERIOR, OFFICE OF INDIAN AFFAIRS,

Washington. February 27, 1883.

DEPARTMENT OF THE INTERIOR, OFFICE OF INDIAN AFFAIRS,

Washington, February 27, 1883.

Sir: By article 3 of the treaty of 1866 (14 Stat., 756), in compliance with the desire of the United States to locate other Indians and freedmen thereon, the Seminole Indians ceded to the Government their entire domain, &c.

By the third article of the treaty of 1866 with the Creeks (id., 786) said Indians, in compliance with the desire of the United States to locate other Indians and freedmen thereon, ceded and conveyed to the Government the west half of their entire domain, &c.

The eastern portion of these two cessions is what is understood to be the Oklahoma district.

There is now in this city a delegation of colored persons representing the various classes of freedmen mentioned in the several treaties of 1866 with the five civilized tribes, which freedmen, the delegation represent, are now anxious to avail themselves of their right to settle in the country ceded by the Seminole and Creek Indians in the treaties aforesaid.

I think there can be no doubt as to the right of the United States to settle them in the country referred to, and believe that the best interests of the freemen will be subserved by settling them there.

I have therefore had prepared and submit herewith a draught of an item intended to be inserted in the deficiency bill now before the House Committee on Appropriations appropriating £25,000, to be immediately available, to enable the Secretary of the Interior to settle in the country named such persons of African descent, and their descendants, as are mentioned in the treaties with the Seminole, Choctaw and Chickasaw, Creek, and Cherokee Indians of March 21, April 28, June 14, and July 19, 1866, respectively, with authority to the Secretary of the Interior, upon application made and proof submitted to his satisfaction that the applicant is entitled thereto, to assign one hundred and sixty acres to each herefore pressed, I have the honor to recommend be transmitted to the chairman of the House Committee

Hon. SECRETARY OF THE INTERIOR.

## THE AMENDMENT.

For this amount, or so much thereof as may be necessary, to enable the Secretary of the Interior to settle such persons of African descent, and their descendants, as are mentioned in the treaties with the Seminole, Choctaw and Chickasaw, Creek, and Cherokee Indians dated, respectively, March 21, April M. June 14, and July 19, 1866, upon the lands ceded to the United States by the Seminole and Creek Indians in their treaties dated, respectively, March 21 and June 14, 1866, for the location of other Indians and freedmen thereon: Provided, That of the lands referred to in said treaties with the Seminole and Creek Indians, upon application made and proof submitted, to the satisfaction of the Secretary of the Interior, that the applicant is entitled thereto, there shall be assigned to each head of a family of the class of persons herein named one hundred and sixty acres, to each person over 21 years eighty acres, and to each orphan child under 21 years eighty acres, the sum of \$25,000 to be immediately available, out of which sum there shall be paid the necessary expense incident to carrying out these provisions.

The Tariff.

SPEECH

# HON. CLEMENT DOWD.

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1883,

On the bill (H. R. 5539) to impose duties upon foreign imports, and for other purposes.

Mr. DOWD said:

Mr. SPEAKER: At the last session I voted for the bill reducing internal evenue, the substance of which is included in the bill now before the In fact that bill is the nucleus or comet to which this gigantic tail has been attached by the Senate and the conference committee. I voted for that bill upon the principle that half a loaf is better than no bread, and that if we can not get all we want in the way of reduction we had better take all we can get. Being pledged to the extermination of the whole internal-revenue system, I felt that if we could not get it all destroyed at once we should take off a branch, a limb and root wherever we could.

A few weeks ago when the same bill was up for consideration in this

House I again voted in its favor, this time having the satisfaction of the concurrence of every one of my colleagues. But the Senate took this internal-revenue bill and ingrafted upon it

a tariff bill, and after discussing it for months sent it to this House for con-currence. Here, without consideration, and without even being read, it was referred just two days before the end of the session to a conference committee, with the avowed purpose of having it doctored, or rather having a new bill fixed up in the interest of certain monopolists. I shall not pause to repeat the rumors that are floating through the Capi'ol, nor to do more than refer to the army of lobbyists that are thronging the hotels and corridors and restaurant of the House, where it is said the popping and flying of corks from champagne bottles represent a protracted battle of musketry.

But the bill, dectored and fixed up so as to please certain manufacturing interests, was presented to this House this day at about 12 o'clock. uring interests, was presented to this House this day at about 12 o'clock. It consists of about one hundred and twenty pages of printed matter, and embraces all the various schedules and articles of merchandise that are imported into the United States, there being in fact more than 4,000 of these items or classes of articles. Neither the Senate nor the House had considered the rates of duty proposed in this bill, and we are obliged to vote upon it without the opportunity of even reading it or hearing it read. We know by the concessions of its friends that it raises the duty on steel rails and other articles upon the iran schedule. raises the duty on steel rails and other articles upon the iron schedule. That it raises the rates on cheap woolen goods, while there is quite a variety of opinion as to its effect upon sugar, cotton goods, band-iron,

Upon articles of luxury we are told the rates are reduced, while articles of necessity are left to groan under existing burdens.

I should be glad to vote for a reduction of taxation, and I should be especially pleased to vote again for the bill for which I have already voted twice. But I am unwilling to vote for a bill that I do not and can not understand because I have neither read it nor heard it read. I do not believe that we should refuse to reduce taxation because we can not get all the reduction we want, or can not get it in the way we want it. But no prudent man, no wise and safe legislator can afford in any case to vote for a measure that he has not had an opportunity to consider carefully and intelligently.

Jefferson said that no bill should be passed until it had been engrossed and allowed to remain on the table for at least twelve months,

unless passed by a two-thirds vote.

Such hasty legislation as that which gallops this bill, which is of more importance to the people than any that has been passed for years, into a law, without consideration in either House of Congress, should receive the emphatic condemnation of every man who holds the sacred trust of the people's right. And this is my sufficient excuse for voting against it against it.

Fitz-John Porter.

SPEECH

# HON. EDWARD S. BRAGG.

OF WISCONSIN.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 15, 1883,

On the bill (S. 1844) for the relief of Fitz-John Porter.

Mr. BRAGG said:

Mr. Speaker: By permission of the House I submit my views on Senate bill 1844, for the relief of Fitz-John Porter. Did I not know him to have been a soldier unfaltering in duty, energetic and faithful in the execution of every trust, lion-hearted in battle, and true to his flag as the needle to the pole, and did I not feel and believe that he was sacrificed when excitement was great and the passions were hot by a cunning blending of truth with falsehood that in calmer times would not have the weight of a feather against the unsullied honor of a soldier, I should not be found raising my voice in his defense. But, sir, I speak the sentiment of men learned in the law, of military savants in Europe as well as America, of that body of brave men composing the Fifth Army Corps, and of impartial history, when I say Fitz-John Porter was unjustly condemned for the blunders and incapacity of others, and that an American Congress, with the record before it, is an unworthy representation of a chivalrous, generous people when it hesitates to give him full and ample reparation.

It is my purpose to discuss the case in detail from its inception, and

though my argument may be dry and uninteresting to many it may give new light to a few.

My first proposition, sir, is:

The proceedings of the court-martial are void.

Before taking this extreme ground I have consulted civil and military

authority, and find my convictions sustained by jurists of great ability

and by military men of high rank and distinction.

It is provided in section 1, chapter 179, of the Laws of the United States, approved May 29, 1830, as follows:

Whenever a general officer commanding an army \* \* \* shall be the accuser or prosecutor of any officer in the Army of the United States under his command, the general court-martial for the trial of such officer shall be appointed by the President of the United States.

The sixty-fourth article of war provides:

General courts-martial may consist of any number of commissioned officers om five to thirteen inclusively; but they shall not consist of less than thirteen then that number can be convened without manifest injury to the service.

The seventy-fifth article of war provides:

No officer shall be tried but by a general court-martial, nor by officers of an inferior rank if it can be avoided.

Under these provisions of law the court-martial which tried and convicted General Porter was convened and organized, and it is upon them that I make the point against the legality of the court-martial in its origin, organization, and composition; and most surely, if I can maintain my position, the whole proceeding, judgment, and sentence were absolutely void and of no effect, and Major-General Porter in law never lost his standing in the Army.

The proposition is a bold one, perhaps a startling one to minds edu-

cated to the idea that a Secretary of War and a court-martial are above the law and can do no wrong, but I maintain it to be true upon the facts of the case under consideration and the law applicable thereto.

It may seem by my presentation of this point that I desire to rest my case upon a technicality. Not so. Such an intention is furthest from my purpose. But it is claimed that the judgment of this court is a finality and beyond the reach of proper Congressional action. Hence I make this point, which, if well taken, dispenses with the need of arguing this claim, to see whether or not it be well founded, because it demonstrates there was no court and could be no judgment in law, and what was done has none of the qualities of a proceeding that can ever be a finality. This follows from well-known principles alike applicable to military as to civil tribunals: before there can be a judgment there must be a legally constituted court and that court must have jurisdiction of the subject-matter as well as of the person, or its proceedings will be "coram non judice" in all places and under all circum-

I will proceed to the discussion of the proposition enunciated under three subdivisions:

First. The authority convening the court.

Second. The number of officers constituting the court.
Third. The rank of the officers composing the court.
It should be always in mind during this discussion that courts-mar-

tial are creatures of statute defining how and by whom they may be called into existence and what powers are vested in them when they are so created. And the statute quoted heretofore, in most explicit languare, declares that-

If a general officer commanding an army shall be the accuser or prosecutor of any officer of the Army of the United States under his command, the general court-martial for the trial of such officer shall be appointed by the President of the United States.

Now, it is submitted, and probably will not be denied, that in any given case within the limitation of this statute, if an officer so accused or prossecuted were convicted by a court appointed by any other authority than the President of the United States, such conviction would be a sheer nullity in law.

General Porter commanded an army corps assigned to the Army of Virginia under command of General Pope; he was accused of grave military offenses in the execution of his office as corps commander while attached to the Army of Virginia under such command, and was tried for such offenses before a court-martial appointed November 25, 1862, by Major-General Halleck, was found guilty, "and sentenced to be cashiered and forever disqualified from holding any office of trust or profit under the Government of the United States."

And in view of the premises, it logically follows, if General Pope was the accuser of General Porter and brought him to trial for the offenses committed while under his command, and such trial resulted in the conviction and sentence stated, such conviction and sentence never had any legal force whatever.

Let us then critically examine and ascertain who was the accuser of General Porter within the meaning of the statute; and when we are prepared to answer that question we are prepared to say whether Major-General Halleck had any authority to appoint the court-martial.

The violations of duty specified under the charges upon which General Porter was tried and convicted were in substance as follows:

Disobedience of an order given by General Pope to him on the 27th day of August, 1862, to move his troops from Warrenton Junction to Bristoe Station, starting at 1 o'clock on the morning of the 28th.

Disobedience of an order of General Pope, dated August 29, 1862, directing Generals McDowell and Porter to move their joint commands

toward Gainesville.

Disobedience of an order dated August 29, 1862, 4.30 p. m., direct-

ing Porter to push forward into action at once upon the enemy's flank.

Disobedience of an order dated August 29, 1862, 8.50 p. m., directing General Porter to march st once to the field and report in person

for orders, in allowing Generals Griffin and Piatt to march their commands to Centreville, instead of bringing them to the field.

Disobedience of the 4.30 order of August 29, by falling back without fighting or trying to assist Federal troops contending against great

Neglect of duty on the 30th August, 1862, by feebly attacking the enemy, and drawing back unnecessarily his troops without making effort to rally his men

Having stated the gist of the accusations upon which General Porter was tried I will now endeavor to show their paternity.

It will be seen by reference to the exhibits attached to General Pope's official report (Executive Document, third session Thirty-seventh Congress, volume 8, page 256) that after his disaster at Bull Run he reached Ball's Cross Roads and established his headquarters there on the 2d day of September, 1862. Ball's Cross Roads are not to exceed four and oneof September, 1862. Ball's Cross Roads are not to exceed four and one-half miles from Washington.

Turn now to the Report on the Conduct of the War (first session Thirty-

ninth Congress, supplement, volume 2, 1865-'66) and read from General Pope's report:

Pope's report:

I made my personal camp at Ball's Cross Roads, and on the morning of the day of September \* \* \* reported in person to the General-in-Chief, the Secretary of War, and the President. \* \* Great indignation was expressed at the treacherous and unfaithful conduct of officers of high rank who were diffectly of indirectly connected with these operations, and so decided was the feeling and so determined the purpose to execute justice upon them that I wanged to furnish for use to the Government immediately a brief official report of the campaign. So anxious were the authorities that this report should be in their possession at once that General Halleck urged me to remain in Washing on that day to make it out. I told him that my papers, dispatches, &c., were a my camp near Ball's Cross Roads, and that I could not well make a report with out having them by me. He still urged me to remain, with great persistence but I finally returned to my camp and proceeded to make out my report. The next day it was I delivered it to General Halleck.

The onestion way well be selved. What pressive day did this intensive.

The question may well be asked, What precise day did this interview take place? I answer September 3, the day after General Pope reached take place? I answer September 3, the day after General Pope Feathed his camp, four and one-half miles from Washington, he most undoubtedly reported in person to explain the victory he had reported by telegram on the night of the 29th of August, and to make excuses to the Secretary of War and the General-in-Chief for disaster, when he had led them to believe a glorious victory crowned his arms. Who made the report of the treacherous and unfaithful conduct of officers of high rank which led to the great indignation expressed, and the determination to execute institute of the property tion to execute justice upon them? I answer, unhesitatingly, General

And here comes a piece of unwritten history, which may have some significance to those, and they are not a few, who believe that Mr. Stanton did not hesitate, under his power as War Minister, to select agencies to crush at his bidding those whom he disliked or who stood in the

way of his desires; and that he was not overscrupulous in his selection of the means, if the end he desired was thereby assured.

On the 3d day of September, 1862, the very day on which I think this conference referred to took place, and the very day the brief report bears date, Major John F. Lee was removed from the position of judge-advocate, and a bitter partisan and follower of the Secretary was removed from civil like Colored and Judge Advocate General Joseph Holt named from civil life, Colonel and Judge-Advocate General Joseph Holt, of Kentucky. I do not deny his ability, but must say if the aim of the Secretary was to reach ends regardless of judicial impartiality he was fortunate in his selection. If the selection was made in view of subsequent events culminating in the prosecution and conviction of Porter.

quent events culminating in the prosecution and conviction of Porter, the result showed the unerring sagacity of the Secretary in his choice. On the next day General Pope, in compliance with the request of General Halleck, submitted his brief official report, to the end I suppose that "justice might be executed" speedily. That report bears date September 3, 1862, and contains the gist of all the charges against Porter. It will be found, by such as desire to peruse it, on pages 1038, 1039, 1040, and 1041 of the new record.

In a more extended form, with accompanying documents in General Pope's official report, the same charges are made. His report will be

Pope's official report, the same charges are made. His report will be found in volume 8 of executive document of third session Thirty-sevfound in volume 8 of executive document of third session Thirty-seventh Congress, on page —, on which appears: The charge against General Porter of disobeying the order to march from Warrenton Junction. Angust 27, 1862; the charge of disobeying the joint order of August 29, 1862, and the charge of disobeying the 4.30 order of the same day; the charge of permitting Generals Piatt's and Griffin's brigades to go to Centreville in disobedience of orders; and the crowning charge "of failing to attack with vigor" on the 30th August, 1862, all are there And they are the accusations of General John Pope, commanding the Army of Virginia, against General Fitz-John Porter, a subordinate commander in that army.

The first action taken upon these charges was the change in the office

The first action taken upon these charges was the change in the office The first action taken upon these charges was the change in the office of Judge Advocate of the Army, already commented upon. The next step was an order by the President of the United States, dated September 5, 1862, directing "An inquiry as to Major-General Fitz-John Porter." "Whether he was with his command in the battle of Friday. August 29, 1862, and if not, where was he, and why was he not in such battle?" This order, like others issued by the President of the United States, was buried in a pigeon hole of the Secretary of War, and only saw the light at the sessions of the West Point board, in 1878. Why was it not obeyed? Porter had asked for an inquiry, and there was no objection to it, except if carried into execution the Secretary would have been thwarted in his purpose of immolating Porter as a sacrifice to atone for the blunders of others.

On the same day this order bears date Mr. Lincoln confided the care of the defenses of Washington to the so-called traitor, Major-General

Porter continued with his command through the Maryland campaign and until November 12, 1862, when he was relieved at Warrenton. As the enemy were driven from the presence of the capital, so came to the front the enemies of the chief of the Army of the Potomac. Absence of extreme danger revived internal plotting. The snake had been scotched, not killed. The victories in Maryland, received in grim silence by General Halleck and the War Secretary, had created a popular sentiment that they dare not face. McClellan was safe from prosecution, but their

power could reach a subordinate—his known friend.
On the 17th day of November, 1862, a military commission was created by the command of Major-General Halleck for the trial of General

Porter, on charges made by General John Pope.

The Judge-Advocate General states (court-martial record, page 11)

that in point of fact no charges were ever preferred by General Pope.

Think of this declaration. Porter was relieved of his command on the 12th, and on the 17th a commission was detailed of five officers to try General Porter upon charges preferred by General Pope. Colonel Holt was named as Judge-Advocate—Porter was in arrest—and on the 25th of November, 1862, the prisoner and the world are coolly informed that the official orders and records of the War Office are false; and to make the pantomime complete General Pope swears (court-martial rec-

ord, page 21), "I have not preferred charges against him; I have merely set forth the facts in my official reports."

What necromancy was at work to produce such a sudden change in the line of operations? I think it can be easily answered, and the answer supported by the strongest kind of circumstantial proof.

A military commission was one of those arbitrary tribunals that the

Secretary of War delighted to indulge in; the limitations and restric-tions of the written law were thrown off and the law of might was too often their rule of action. The article of war which required the often their rule of action. The article of war which required the President to convene a court-martial was avoided by selecting a military commission as the tribunal, "to execute justice" I believe is General Pope's term, upon the alleged offender, and hence there was no hesitation in boldly stating upon the record "that it was for the trial of Porter on charges made by Major-General Pope." But General Porter was an officer of the Army. The offenses of which he was charged were defined by the articles of war, and the method and trial of them was prescribed by the military code. Presumably this was overlooked in the haste of the newly-made Judge-Advocate to win his spurs, by "executing justice," and when reflection showed that Porter must be tried for violation of the articles of war it was necessary to abandon the for violation of the articles of war it was necessary to abandon the avowal that he was to be tried upon charges preferred by General Pope, for that would oust the cabal from the power of making the detail for the court. Hence we find the distinction made between charges in the official report and the charges and specifications and accusations drawn thereon, and the avowal both of the Judge-Advocate and of General Pope that General Pope had not in fact preferred any charges; and it was upon this flimsy technical distinction that the Judge-Advocate proceeded and declared to the court-martial (court-martial record, page 11):

There is no reference in the order appointing this court to General Pope at all. I wish to state distinctly that Major-General Pope is not the prosecutor in this case; nor has he preferred these charges; nor do I present them as being preferred by him.

And upon this statement the court, acting presumably under the advice of the law officer of the Government, overruled the objection of General Porter: that the court was not appointed by the President, as

required by law.

It will be seen the language of the judge-advocate is guarded. He does not say that General Pope is not the accuser, but says "he is not the prosecutor."

The law which I have cited uses both terms, "accuser or prosecutor."

Whenever a general officer commanding an army \* \* \* shall be the accuser or prosecutor \* \* \* the general court-martial \* \* \* shall be appointed by the President of the United States.

It is true the charges and specifications were signed by "B. S. Roberts, Brigadier-General of Volunteers and Inspector-General Pope's Army," but they were the same charges and accusations made by General Pope against his subordinate, the same charges and accusations upon which the commission was assembled by General Halleck to try General Porter as upon charges preferred against him by Major-General Porter but on the 35th days of Newsyn 1862, this course erel Pope; but on the 25th day of November, 1862, this commission was dissolved and a court-martial was detailed to try Porter instead of military commission, and then the charges became the charges of Pope's Inspector-General, to defeat the right of the accused secured to him by law of a trial before a court appointed by the President of the United States.

Was not General Pope the real accuser? Can an officer be cheated of his rights guaranteed him by law by such jugglery, for I know no better term to describe it? And can the signing of General Pope's accusation by General Pope's staff officer so far change the nature of the accusation as to deprive the accused of his reliance upon the President, far removed above any cabal, when he shall be accused of offenses not only affecting his character and office, but his life?

If this thing may be done, we nullify the law in the very cases where it was intended as a protection. With such a precedent any general commanding an army, or colonel commanding a department, who may wish to strike a man down has but to signify to his staff officer his ac cusation and procure his signature to the charges. And he may appoint his own court to carry into execution his own desire.

But we are not left to the argument from inference that General Pope was the accuser. General Pope himself, by his own declaration, made subsequent to the trial, confesses that he was both the "accuser and prosecutor." He says to the committee on the conduct of the war, in bold and distinct language (Supplement, volume 2, Report on Conduct of the War, first session Thirty-ninth Congress, page 190):

I considered it a duty I owed to the country to bring Fitz-John Porter to justice, lest at another time and with greater opportunities he might do that which would be still more disastrous.

With his conviction and punishment ended all official connection I have had with anything that relates to the operations I conducted in Virginia.

There can be no mistake in this avowal; "he brought Porter to justice and he did it officially;" but, more than this, he claimed the price of blood, for he says in the same connection:

When the trial of Fitz-John Porter had closed and when his guilt had been established I intimated to the President that it seemed a proper time then for some public acknowledgment of my service in Virginia from him.

Modest man! he had finished the work; the "Mordecai" of the Gen-

eral-in-Chief and of the Secretary had been stricken down and he claimed the reward! The President did not seem to appreciate his genius and services, for he banished him from the field and located him at Milwaukee for the remainder of the war.

But we have another significant declaration. On the 16th day of September, 1867, General Pope, having learned that General Porter had appealed to General Grant for a review of the proceedings of the courtmartial, addressed a letter to General Grant and commenced it with the use of the following words: "General, as I am one of the principal parties concerned in the case of Fitz-John Porter," declaring himself a party in the case. When and how did he become so if he were not the accuser or prosecutor?

In the light of this new evidence, added to the facts patent upon the

Major-General John Pope, commanding the Army of Virginia, says he was. If he is a credible witness when he speaks against his own interest, this House must believe and the country will believe that the declarations of Judge-Advocate Holt were the declarations of an attorney to serve his client, and that the declarations of the client are

It then follows logically that the law required in this case a court convened by the President, and as there was no such court the proceedings had were coram non judice. And it would seem to follow that an intrigue among persons high in position was in operation to produce a conviction of Fitz-John Porter.

I will now proceed to discuss the second subdivision of my proposi-

The number of officers constituting the court.

The court consisted of nine members instead of thirteen, as the sixtyfourth article of war requires; but the detail concluded with the formal declaration:

No other officers than these named can be assembled without manifest injury to the service.

It is claimed, and such has been its usual construction, that article 64 in its mandate is directory merely, and that the words "without manifest injury," &c., leaves the number above five and less than thirteen purely a matter of discretion resting in the officer convening the

I do not believe such should be the construction given to the article. I believe that to constitute a legal court the number must be thirteen, unless in fact that number can not be assembled; and that whenever the fact appears that the certificate appended to a detail is one of form, because it might be inconvenient to assemble the full number, that such fact goes to the organization of the court and affects the validity of its proceedings.

This, of course, is contrary to the tenets of military teaching; but I am not addressing military men, but the law-making power of the country and the legal profession, who form public opinion on matters of legal construction.

If the mere certificate of an officer calling a court may limit its number from thirteen to five upon his own volition, and that volition is conclusive, then it is in the power of such officer to deprive the accused of a trial by a full court and opens the door for malice or jealousy under cover of discretion to work a most foul and grievous wrong for which there is no remedy.

Attorney-General Wirt declares (1 Attorney-General's Opinions, pages 299, 300), in speaking of this article of war, "The phrase is not where that number (13) can be conveniently called, but where they can be convened at all, not only without probable injury but without manifest injury to the service; ° ° and if a smaller number act without such manifest emergency, I repeat 'that they are not a lawful court and an execution under their sentence would be murder!"

Major-General Gaines declares his views to the same effect, with clear and cogent reasons therefor (first session Twenty-second Congress, report of committee No. 269, page 11). The opinion of the Attorney-General cited was given when partisan bias formed no constituent element in forming the opinion of the great law officer of the Government; when the Government was young and the despotic discretion of arbitrary power was looked upon with distrust and fear. I commend it and the views of General Gaines to your careful consideration.

In Martin vs. Mott, the language of the court would seem to imply that the formal certificate was a final adjudication by the officer calling the court, which could not be questioned. But when the facts are critically examined in reference to which the language is used it will critically examined in reference to which the language is used it will be found that the case goes no further than to hold upon demurrer that the declaration of the officer that the emergency authorizing a lesser court than thirteen could not be examined dehors the record, and the opinion in that case means that and no more—applying the rule to public officers omnia rite esse acta præsumuntur; and within the same limits, upon careful construction, is the opinion in Dynes vs. Hoover, 20 Howard, and to the same effect are the opinions of the Attorney-General, volume 10, page 67, and cases cited. But where the record itself disproves the existence of the emergency, the sentence is not conclusive if the want of jurisdiction appears on the face of the record, but is an absolute nullity. In the record under consideration we find the seed of its own destruction, and so is within not only the views of Attorney-General Wirt cited, but of all the cases and opinions.

destruction, and so is within not only the views of Attorney-General Wirt cited, but of all the cases and opinions.

The order recites, "No other officers than those named can be assembled without manifest injury to the service." But the record itself impeaches the certificate, a certificate of form and not of fact, in a case where honor and life were in jeopardy.

By reference to the proceedings of the court-martial (court-martial record, page 5) it will be seen that on the 26th day of November, 1862, Brevet Brigadier-General Morris was relieved from the court and Brigadier-General J. P. Slongh was detailed as a member of the court in adier-General J. P. Slough was detailed as a member of the court in his stead. And upon December 2 the judge-advocate stated to the court, and he was the representative of the General-in-chief who called the court, and made the statement by the authority of the General-in-

the court, and made the statement by the authority of the General-in-chief, and it is part of the record (court-martial record, page 6)— He had consulted the General-in-chief, by whom this court-martial was ordered, and his reply was that he did not consider any further order necessary to en-able this court to proceed to business, but that General King was expected by every arrival, and if he did not reach here very soon his place would be sup-plied.

This declaration impeaches the certificate out of the mouth of the man who made it. He certifies, "No other officers can be assembled," but upon the same record, and before the court is organized and proceeds to business, he announces his ability to fill vacancies. It may be said this is a mere declaration. I answer, his certificate was a mere declaration. One declaration says he can not and the other says he can, and the record should be construed most favorably to the accused,

every presumption being in favorem vitæ.

But we are not confined to declarations to impeach this certificate. The order substituting General Slough shows by official acts that the certificate was untrue. If no other officers but those named in the detail could be assembled how comes it that General Slough could be

tail could be assembled how comes it that General Slough could be spared without injury to the service and that there were other officers from whom General King's place could be supplied?

The record shows one additional officer assigned and a declaration that others were at hand to fill vacancies. Had this court condemned Porter to have been shot, as it ought to and would have done had he been guilty, I say, in the emphatic language of Wirt, "The execution of such a sentence would have been murder."

Hence I say the court was defective in its organization as to the number of officers composing it, and its proceedings were null and void.

The third subdivision of the proposition rests upon

The rank of the officers composing the court.

It is an old truism that every man is entitled to be tried by his peers, and nowhere should the doctrine be more strictly held than in the military code; and it was to prevent any infringement of it that it was made the subject of statutory enactment in prescribing the rules and regulations for the organization of courts-martial. The seventy-fifth article of war declares:

No officer shall be tried but by a court-martial, nor by officers of an inferior rank if it can be avoided.

Mark the language and see the difference between it and the language of the sixty-fourth article, which defines the number of officers of which a court shall be constituted. The number is fixed at thirteen, "when that number can be convened without manifest injury to the service." The rank is fixed in the seventy-fifth article by more restrictive and imperative language: "nor by officers of inferior rank, if it can be avoided."

The change of language is significant, and while "manifest injury" to the service gives a discretion to call a court of a less number than thirteen, "manifest injury" is not sufficient to deprive the accused of the benefit of a trial by his peers; the law enacts he shall not be tried by officers of an inferior rank "if it can be avoided," that is to say the trial of a superior before a tribunal composed of inferior officers, if it is possible, "must be avoided."

General Gaines, in the paper heretofore cited, insists that whenever there are officers of equal or higher grade than the accused sufficient to

form a court or at least a majority of a court in such case, the trial of a superior by a tribunal composed of inferior grades can always be avoided.

The reason of the difference in phraseology is this: Congress recognized the weakness of human nature, and the dangers arising from the trial of a man for his commission by a court the members of which may be advanced in grade by the conviction of the accused and the making a vacancy to be filled from the lower grade.

The court which tried General Porter was composed of nine members seven of whom were officers of a lower grade than he. Could not this be avoided? The General-in-chief does not even certify it could not be avoided, but he uses a certificate under the sixty-fourth and not the seventy-fifth article which fixes the rank of the court. There is a dictum cited from 20 Law Journal, treating the words of the two articles of war as synonymous; but the facts upon which the dictum rests are not of war as synonymous; but the facts upon which the dictum rests are not stated; and I protest that nowhere in the legal profession will it be received as good law that the important change of the language of the sections does not require a construction giving a different effect to the words "cannot be avoided" from the words "manifest injury." And I repeat that for the violation of the provisions of the seventy-fifth article of war the judgment of this court-martial lacks every quality which is an attendant upon a judgment entitled to be spoken of as a finality Before leaving the discussion of this branch of the case I can not re-

frain from further comment upon certain circumstantial evidence that should go to the country with the history of this case. The records of the War Department show that when the detail for this court was made there were forty-five major-generals in commission in the United States Army. Surely seven of these could have been spared from their posiwithout "manifest injury to the service" even. Notably three major generals—Dix, Wool, and Cadwallader—exercised no field commands. They were men of brains and character. Had these three even been made members of the court in lieu of its three junior members, Major-General Porter would have been tried by a court in which his peers were a ma-

But such was not the will of the War Secretary. Whether there were occult reasons governing him, and what they were, the judgment of history will determine. The Secretary possessed great brain power combined with energetic force, but coupled with them was a cold, cruel, despotic, and crafty nature, crowned with a greed for power that conquest could not glut nor enjoyment cloy.

General Grant is accredited at a later period with having said of him

His greed of power prevented the Commander-in-Chief of the Army from ontrolling the minutest details without interference.

The popular mind was wrought almost to frenzy by the repeated disasters which had befallen our Army under his administration. What am hour for the execution of a grand coup de main, by turning the wrath of the people from himself in holding up another and having him judicially declared to be the cause of all our wees! How propitious the time to hold out the glittering stars "as a reward for faithful performance of duty in striking down treachery and treason and upholding loyalty!" And how easy the task at such time by subtle and insidious influence to control and direct the mind, unconsciously to its possessor, to an honest belief in a conclusion that after-generations look at with wonder and astonishment. History is full of such instances, and it is not to be expected that during the exciting hours of the great rebellion our history should fail to swell the number.

It was in the sacred name of liberty that the horrors of the French Revolution were committed. Can we be so blind as not to see and so dull as not to know that "in the name and for the preservation of the Union" men were stricken down, and rights of person and property were ruthlessly trampled under foot? The popular mind was wrought almost to frenzy by the repeated dis-

ere ruthlessly trampled under foot?

The past is gone; its record is made up for history. The present is ours, and if we are worthy to represent a free, magnanimous people. we can not shirk our duty by talking of our reverence for the memory of the living or dead. The American people are too practical to be gulled by any such nonsense. If a citizen was illegally deprived of his rights, if a soldier was unjustly degraded and dishonored, they want to know what all the facts and circumstances were, not only the facts which were put forth as a justification, but all the facts, without regard to men or memories; and believing this, I have described some of the attributes, as I believe, of the War Secretary, Mr. Stanton, and have referred to the felicitousness of the occasion for the exercise of those attributes. And I now supplement this with a statement of what the records of the War Office show, and leave to the judgment of the wresent and the fature to determine whether the destrict of the wars. present and the future to determine whether the doctrine of reward and punishment had anything to do with the judgment of the court-mar-

and punishment had anything to do with the judgment of the court-martial in the Fitz-John Porter case:

Brigadier-General N. B. Buford, appointed major-general January
16, 1863, with rank from November 29, 1862; Brigadier-General Silas
Casey, appointed major-general January 22, 1863, with rank from November 29, 1862; Brigadier-General B. M. Prentiss, appointed major-general January 22, 1863, with rank from November 29, 1862. These were three members of the court-martial which convened November 27, 1862, and convicted Porter January 10, 1863. The president of the court, Major-General Hunter, had been relieved from command at Hilton Head. South Carolina, for an alleged fiasco before his detail on this ton Head, South Carolina, for an alleged fiasco before his detail on this court. He was restored to his command after the court was dissolved. Brigadier-General Rufus King had been relieved from the command of his division after the battle of Bull Run; and was restored to command

after the court-martial.

Colonel Thomas C. H. Smith, a witness whom the judge-advocate deemed important by reason of his psychological powers, was after the finding made a brigadier-general to date from the 29th day of November, 1862, having seen little if any service except for the few days of Pope's campaign in Virginia, upon whose staff he was and as a witness before the court-martial.

These rewards may have been for merit, but none of the beneficiaries either before or after, except General Prentiss, can be said to have done anything which would justify the promotion so given.

There is still another circumstance worthy of note in reviewing the history of the personnel of this court.

Brigadier-Generals King and Ricketts, who were members of the court, eem, from the official reports of McDowell and Pope, to have removed their commands from between Longstreet and Jackson on the night of

their commands from between Longstreet and Jackson on the night of the 29th of August, 1862, in violation of positive orders.

And I will add yet one more fact, which can not fail to shock the honest sentiment of every lover of law and justice. For forty-five days the judge-advocate was engaged in hot conflict with Hon. Reverdy Johnson in the trial of this case, and when the case was concluded he (the counsel) wrote what he called an impartial review of the proceedings to direct the President's mind to a fair and impartial judgment; and it was upon his statement and argument that Mr. Lincoln approved the finding; upon his statement and showing that Mr. Lincoln believed the accused guilty. How unsupported by fact that statement was the world knows, and it will stand a marvel of specious sophistry, mingling fact ing; upon his statement and snowing that Mr. Lincoln believed the accused guilty. How unsupported by fact that statement was the world knows, and it will stand a marvel of specious sophistry, mingling fact and fancy, "adder's fork and blind-worm's sting," a perversion of truth for the subversion of justice. God forbid that ever again in this land of freemen shall we see a prosecutor pronouncing judgment upon his victim, and grant that day is at hand when this judicial outrage shall in the still the state of the subversion of the

fail to receive a single voice of approval in the legislative halls of America.

I have not made this review of the court-martial with a purpose to stand upon this strong position alone and give the enemies of Porter an opportunity to cavil at what they may not answer. As I have before opportunity to cavil at what they may not answer. As I have before stated, this is far from my purpose; but I desire the country to know the true history of the case, and having shown the disregard of right and law in the inception of the proceeding, I now cast aside the legal shield and without other armor than truth will defend the justice of

my cause against all comers.

Mr. Speaker, before entering into an analysis of the evidence in the record before us it may not be amiss to call to mind the rules, or some of them, which experience has established for weighing evidence; the interest of the person testifying; the facilities for information upon the subject with regard to which he testifies; the consistency of the statements made with known facts; the manner of the witness, his tendency to quibble, his anxiety to volunteer irrelevant matter to distract attention, his substitution of opinions and inferences for facts, his contradiction of himself upon material facts, the difference of his statements at different times; the general character of the witness for truth; the liability of witnesses to err in the repetition of a conversation; the motive of the witness, if any, to lead him to exaggerate or suppress; the loss of memoranda in writing, whether properly accounted for; the suppression and fabrication of evidence, and the like, for we shall have occasion to apply them all in sifting out the truth in this complicated mass of testi-

It is also proper to recall certain well-known maxims of the law alike

applicable to all courts.

All presumptions are in favor of innocence.

To establish guilt the facts must be inconsistent with the hypothesis of innocence, and when the facts proven are consistent with the hypothesis of innocence, as well as with the hypothesis of guilt, no conviction can be had.—Green leaf on Evidence, volume 3.

Major-General Porter was tried, convicted, cashiered, and debarred the rights of citizenship for alleged disobedience of orders issued on the 27th and 29th days of August, 1862, by Major-General Pope. I will consider the charges, with the proofs touching the same, in their order: First. Disobedience of orders under the ninth article of war.

[Order No. 1.]

HEADQUARTERS ARMY OF VIRGINIA,

Bristoe Station, August 27, 1862—6.30 p. m.

General: The major-general commanding directs that you start at 10 clocks and come forward with your whole corps, or such part as is with you, so as to he bere by daylight to-morrow morning. Hooker has had a severe action with the enemy, with a loss of about three hundred killed and wounded. The enemy has been driven back, but is retiring along the railroad. We must drive him from Manassas and clear the country between that place and Gainesville, where McDowell is. If Morell has not joined you send word to him to push forward immediately; also send word to Banks to hurry forward with all speed to take your place at Warrenton Junction. It is necessary on all accounts that you should be here by daylight. I send an officer with this dispatch who will conduct you to this place. Be sure and send word to Banks, who is on the road to Fayette ville—probably in the direction of Bealton. Say to Banks also that he had best run back the railroad trains to Cedar Run. If he is not with you write him to that effect.

P. 8.—If Banks is not at Warrenton Junction leave a regiment of infantry and two pieces of artillery as a guard till he comes up, with instructions to follow you immediately. If Banks is not at the junction instruct Colonel Cleary to run the trains back to this side of Cedar Run and post a regiment and section of artillery with it.

The spirit and meaning of this order was to get Porter's troops at Bristoe as soon as practicable, or I may say possible, conditioned to

take part in the pursuit of Jackson and in the battle necessary to drive him from Manassas. It was not General Pope's desire to secure a straggling detachment of Porter's command at Bristoe, jaded and weary, insufficient in number and unfit in condition to pursue and give battle to Jackson, but it was to secure the presence of Porter's corps of all arms, with legs to march and spirits to fight at Bristoe so soon as it could be done and fulfill these conditions, and no sooner. How that result could be accomplished was best known to the corps commander, who knew the condition of his troops, their capacity, their situation, and the difficulties to be surmounted to accomplish the end in view, all of which were unknown to the officer issuing the order nine miles away and a total stranger to the command. And herein from necessity springs the discretion which is recognized and must from the very nature of things exist in a corps commander at a distance from his chief. Else why the difference in grade and rank of subordinate officers? Why is skill and experience sought for when corps commanders are selected if they are to be mere automatons? But I forbear to enter upon the discussion of the questions of "blind obedience" and "wise discre-

tion" at this branch of the case. I will return to it later.

Having stated what the face of the order shows its spirit and purpose to be, I shall endeavor to show from the evidence and examples occurring in cotemporaneous history, demonstrating the correctness of my

I. That a literal obedience to this order was not only impracticable,

but was a physical impossibility.

II. That General Porter promptly advised General Pope of the situation and of his proposed action, and that General Pope acquiesced in his decision.

III. That General Pope recognized not only in General Porter, but in many other officers, the existence of the discretion used by General Porter in this instance.

IV. That the evidence given to the court, to give an air of importance to this order and its violation, was sheer afterthought and to make weight to the other charges.

Before proceeding further let us look at the State of Porter's command and his conduct in the movement of it to join General Pope.

Porter's command had marched continuously every day from the 14th of August, with the exception of one day, and one day and night on of August, with the exception of one day, and one day and night on transports; the 25th of August it rested, but marched all night and all day of the 26th, and on the 27th of August Morell's division marched one brigade nineteen or twenty miles, and the other two sixteen to seventeen miles. (Court-martial record, page 145.)

They were very much exhausted when they arrived at Warrenton Junction on the evening of August 27. (Court-martial record, pages

139 and 144.)

While we were marching Porter was constantly urging us forward and was ways attentive to see that our supplies were kept up as well as they could pos-bly be.

This is the testimony of General Morell, who commanded one of Porter's divisions, and against whose integrity and loyalty no caviler has vet ventured to breathe a suspicion.

General Sykes, who commanded the other division under Porter, had marched twelve to fourteen miles that day. (Court-martial record,

General Burnside says of Porter (court-martial record, page 176): He moved his troops off rapidly and marched them at night, and everything ithin my limits appeared to me that he was determined to get his troops up acre as soon as possible.

This brief statement of the evidence shows that Porter was no laggard; that he faltered not in his duty to his country, though he distrusted Pope's capacity. It shows also the condition of the troops that trusted Pope's capacity. It shows also the General Pope continually refers to as fresh.

But there is another piece of evidence in this same direction (courtmartial record, page 232):

Headquarters Army of Virginia,
Warrenton Junction, August 27, 1862,

Major General Fitz-John Porter will remain at Warrenton Junction until he is relieved by Major-General Banks, when he will immediately push forward with his corps in the direction of Greenwich and Gainesville to assist the opera-tions on the right wing.

The precise date of receiving this order is not stated, but it was received before the Drake de Kay order of 6.30, for Porter acted under it as soon as received.

Captain Monteith testifies (page 123):

On the evening of the 27th of August General Porter sent Captain McQuade and myself to look out the road to Greenwich.

Here we have an order from General Pope to General Porter late on the afternoon of the 27th of August, and find Porter promptly sending out his aid upon a reconnaisance to learn the roads that he might ing out his aid upon a recommandance to learn the roads that he might move not only promptly but expeditionsly to the support of the chief that we are gravely told three hours after he resolved to betray, because it is said the reasons which in his judgment and in the judgment of his chiefs of brigade and divisions were sufficient to delay the hour of march, in the judgment of a non-combatant in 1883 are insufficient!

Desirous of attempting literal obedience (General Butterfield, court-

martial record, page 179)

Porter upon the receipt of the order handed it to General Morell or to General Sykes and said there was a chance for a short nap, or something of that sort.

\* \* General Sykes or General Morell, I do not remember which, spoke

with regard to the fatigue our troops had endured, and the fact that in their judgment the troops would be of more service to start at a later hour than they would be at the hour named. In reply General Porter spoke rather decidedly; that there was the order; it must be obeyed; that those who gave the order knew whether the necessities of the case would warrant the exertions that had to be made to comply with it. That is the substance of what he said. Captain De Kay, who brought the order, was asked some questions about the road. He stated "that it was very dark, and that the road was full of teams." General Porter called two aids and sent them off to investigate the condition of the road, and to ask General Pope to have the road cleared so that we could come up. When we got outside the darkness was so apparent (to use such expression) and it seemed to be such a matter of impossibility to move that General Porter and it, "In consideration of all the circumstances, I will fix the hour at 3 instead of 1; you will be ready to move promptly;" and I subsequently wrote an order in General Porter's tent for my command to be in line at 3 o'clock.

After stating circumstances of General Porter's sending for him on

After stating circumstances of General Porter's sending for him on receipt of the De Kay order, General Sykes says (court-martial record, page 170):

ord, page 170):

I met General Morell, General Butterfield, and Captain Drake De Kay.

We talked it over among ourselves, and thought nothing was to be gained by moving at midnight, or 1 a. m., rather than dawn. I was very positive in my opinion, and gave General Porter my reasons. They were: First, that a night march was always exceedingly fatiguing and injurious to troops; that my command had already marched from twelve to fourteen miles that day; that I thought the darkness would cause confusion; that a constant stream of wagons had passed ahead of us, from the time my command reached Warrenton Junction until dark; and, above all, that as but two or three hours at most would elapse between 1 o'clock and daylight, we could make the march in better order and much more rapidly by starting at dawn than by starting at the hour prescribed.

After stating the presence of other general officers, General Morell says (court-martial record, page 140):

General Porter said to us that he had received this order to march at I o'clock that night. We immediately spoke of the condition of our troops, they being very much fatigued, and the darkness of the night, and said we did not believe we could make any better progress by attempting to start at that hour than if we waited until daylight. After some little conversation General Porter said, "Well, we will start at 3 o'clock; get ready!"

At the hearing before the West Point board, General Warren said (West Point record, page 91):

He was present at the consultation on receiving this order, and repeats the statement made by Generals Sykes and Morelland concludes: "Finally Genera Porter said, after considerable discussion and with a good deal of reluctance, that he would defer the starting for two hours."

It is submitted that this evidence proves that Porter acted upon the advice of his officers, men of experience and of known attachment to the Union cause, and for the best of reasons that the troops would reach the objective point stated in the order just as quick and in much better plight for action. Certainly the most zealous opponent of Porter can not say that in following that advice he so grievously sinned that the cry should rise at the mention of his name, "Crucify him!"

These general officers gave their reasons. Were those reasons well founded? Was the night dark? The three general officers who consulted together touching the question of moving, and weighed the circumstances and supreguadings say it was a very dark night, and assign

cumstances and surroundings, say it was a very dark night, and assign that as one of a combination of reasons against a night march.

General John F. Reynolds, than whom no truer soldier ever sat in saddle, and who gave his life to his country at Gettysburgh, says (courtmartial record, page 164):

He was on the Warrenton pike at Buckland Mills on the night of the 27th August; it was a very dark night.

Question. Did you consider it too dark a night in which to move troops in masses over an unfamiliar country?

Answer. I do not think it possible to have marched troops on such a night without having a good guide or marching on a road, if the road were obstructed in several places. I should not have considered it practicable to march that night; I should have considered it a very precarious undertaking.

General Charles Griffin bears witness the night of the 27th and the morning of the 28th August, 1862, was very dark. (Court-martial record, page 155.)

Colonel Cleary had charge of the railway transportation. up all night and says the night was dark and cloudy. (Court-martial record, page 118.)

Captain Fifield was attached to General Pope's headquarters in charge of the transportation and railway for the Department of the Army of Virginia, and up most of the night and on the road from Warrenton to Bristoe on horseback. He says (court-martial record, page 352):

The night was very dark, and it was like a man groping his way in darkness without being able to see his hand before him much of the way through the

Captain Monteith, who was sent out just before sundown to find the road to Greenwich and was not able to return to camp without difficulty on account of night-fall, says it was very dark. (Court-martial record, page 123.) Colonel Locke declares (court-martial record, page 133) that one great difficulty about movement of troops was the darkness of the night. I received a very severe injury groping about in the darkness. This officer has an especial reason for remembering the night. Lieutenant-Colonel Joseph P. Brinton testifies (court-martial record,

pages 197-200) to the darkness of the night, and that it was so dark he lost his way on horseback, going from Catlett to Warrenton Junction. "I do not think I could distinguished a wagon five yards off. I left Porter's headquarters about midnight. I should think it would have been very difficult to move a body, either of infantry or cavalry, over that road at night—almost impossible. Artillery could not have been moved without moving the wagons.

General Pope testifies (court-martial record, page 14):

It was a clearnight; there was no difficulty in marching so far as the night was concerned. \* \* \* There was some obstruction in a wagon train stretched along the road \* \* \* marching in the rear of Hooker's division, not sufficient in my judgment to have delayed for a considerable length of time the passage of artillery; but even had the road been entirely blocked up the railroad track was clear, and along that track had passed the larger portion of Hooker's infantry. There was no obstruction to the advance of infantry.

The utter worthlessness of this testimony deserves immediate critism. The witness neglected to state that his knowledge was derived from a ride over the road the afternoon before in broad daylight. He omits to state that he was not with Hooker's column and therefore did not know on what road they marched. He forgets that his order to Porter directed the trains to be run on the railway, and thereby occupied it. He forgets that Hooker's column moved in advance of the trains and gave battle, and he ignores the fact that he, in company with his escort, were from 12 o'clock m. on the 27th till 6 o'clock in the evening in getting over the road from Warrenton Junction to Bristoe Station, and when his attention is called to it attempts to explain and account for the loss of time in stopping to see the wounded and in looking up strag-

Who believes that a general-in-chief, riding to his column that had just been engaged and was in pursuit of the enemy, dawdled by the way two, three, or four hours hunting up stragglers and sympathizing with the wounded? It is too diaphanous. He was six hours going over a road on horseback by daylight that he says Porter ought to have passed over in the night, and could have done, with a corps of troops, accompanied by its artillery, in three hours. Let his acts stand as answer to his words. But he says infantry could have moved; he knows that. His order does not call for infantry, but in plain terms calls for all arms. Captain Drake De Kay is the next witness for the Government. He

declares (court-martial record, page 48) the night was not dark and that there were no serious obstructions; but still he bore an order bearing date 6.30 p. m., and he started soon after its date, but did not reach Porter until 9 p. m., and accounts for his delay only that he was obstructed by wagon trains, and states that he passed the last train east of Catlett, in which he was clearly mistaken, because Colonel Brinton, as I shall show, ran into a train west of Catlett as late as 10 o'clock the same night

General Heintzelman testifies (court-martial record, page 80) that the night was very dark.

Colonel Fred. Myers, chief quartermaster of the Army of Virginia, testifies (court-martial record, page 106) he was up nearly all night on the 27th, and it was quite dark—no moon; it was quite dark.

Major Barstow, adjutant-general to General McDowell (court-martial record, page 109) thought the night of the 27th was not different from other nights. He experienced no difficulty in marching troops. It will be noted that this gentleman was an adjutant-general of a corps, riding at the head of column, on the Warrenton Pike, without obstruction. Let me call the attention of the House to the statement of old General Patrick, of the regular Army, who commanded a brigade in that column, on the subject of that march (West Point board, page 223):

It was one of the darkest nights, that night of the 27th. When I came in with McDowell I got lost on account of darkness; it was a very dark night to march, so much so that we stretched men across the road quite a distance each side lest they should pass by the bivouae. It was so dark that the openings on the side of the road where the men were could not be seen. I recollect they were calling out to the men as they came up through the night to their respective commands, not being able to see.

I let this evidence answer the testimony of the man who rode at Lieutenant Edward P. Brooks says (courtthe head of the column. martial record, pages 112, 113):

The night of the 27th was not very dark. It presented no unusual difficulties or marching troops. It was not so dark but that I could find my way through ne wood. It was starlight.

Here is one witness who recollects, as General Pope recollects, but he was mistaken. And if he had been examined by one who knew the facts, I have no doubt it would have been shown that he incurred dangers to life and limb by riding against trees in the darkness. He was acting adjutant of the Sixth Wisconsin Volunteers, and I think I know where I speak. He was acting as courier for General Pope, and he rode fast, for a commission in the regular Army was the prize he desired to win. But scale down his evidence, and see what it in fact aggregates. He rode from Bristoe to Greenwich, in a direct line across the country, leaving Bristoe at 9 o'clock and not reaching Greenwich until 12.10, three hours and ten minutes, in a starlight night, making six miles!

Verily, his was not a steed that rode on the wings of the wind!

Captain W. B. C. Duryee, an assistant adjutant-general in Rickett's division, says (court-martial record, page 113):

On the night of the 27th August we halted I should think some three or four miles this side of Warrenton, about midnight. Did not experience any unusual difficulty growing out of the character of the night.

But it was a very tedious march, and I should think they halted every ten or fifteen minutes.

In the new record it appears from the evidence of General Pope's chief of staff, concerning the night of August 27, as follows (new record, page 307):

I know it was very dark, so dark that I lost my way going a few hundred feet om the bivouse.

Colonel Buchanan, commanding the First Brigade of regular infantry, testifies that the delay in marching on the night of the 27th of August, 1862 (new record, page 250)—

Without further presenting in detail the evidence on this point, I submit that any candid mind must concede that not only does it establish a condition of things making an attempt at a march at 1 o'clock under the 6.30 order impracticable by a great preponderance of testi-

mony, but by an overwhelming preponderance.

Next let us consider the nature of the road and the obstructions to be overcome in this dark night, impracticable for military movements. Colonel Brinton says (court-martial record, pages 197, 198):

Colonel Brinton says (court-martial record, pages 197, 198):
I left Callett at about 10 o'clook on the night of the 27th and went to General Porter's, where I arrived about 12 o'clook. The road from Callett for a half-mile westward was blocked up with wagons. We ran into them constantly. The road is there a narrow one, leading through a wood, and it was difficult for us to get along on that account. We ran into a tree upon the one hand or a wagon on the other, without being able to distinguish until we were upon it. The railroad bridge over Cedar Creek is one which I think it would be difficult to pass a party of infantry over at night; almost impossible, certainly with danger. I passed over it, I think, two days before and led my horse across it, but that was in the day-time. Even then it was a difficult matter. Infantry could pass over it well in the day-time, but the planks were thrown loosely on and they would be likely to fall through at night. As I was leading my horse across I aw one fall through that was being led over.

General Ruggles, chief of staff to General Pope, testifies (new record.

General Ruggles, chief of staff to General Pope, testifies (new record, page 307) in answer to his question:

page 307) in answer to his question:

Does your experience enable you to form a judgment as to the practicability of an army corps, with a road obstructed as you understand this to have been, starting from Warrenton Junction at 1 a. m., to reach Bristoe by daylight?

Answer. I don't think it could have been done. I recollect that road as I came through; it ran part of the way through groves or woods, and I recollect that there were stumps of trees and saplings in the road; that the road was filled with these little stumps; that the road itself was tortuous. I think the men would have been impeded on the road by the trains, by these stumps, and by the crookedness of the road. According to my recollection there were several runs that cross the railway between those two points, and over these runs were open bridges. I think the men could not have marched upon the railway, because in the darkness they would have fallen through these open bridges.

Calonel Channeev McKeever. chief of staff of the Third Army Corps,

Colonel Chauncey McKeever, chief of staff of the Third Army Corps, Heintzelman's division, rode over this rode from Warrenton Junction with Generals Pope and Heintzelman on the afternoon of the 27th of August, 1862. He says (new record, page 191):

The road was obstructed; a great many wagons on it and stragglers. The enemy had torn up the railroad track for some distance between Warrenton Junction and Bristoe Station, and the ties and rails piled up in some instances on the road. It was a narrow country road.

General Heintzelman, called by the Government, passed over the road from Warrenton to Bristoe on the afternoon of the 27th of August. In speaking of the road at that time he says (court-martial record, page 79):

It was a narrow road, in tolerably good condition. A part of it ran through some woods. \* \* \* Troops could only march in one line. There were a few little ditches that were bad crossings, and I think the road crossed the railroad once or twice. These crossings were bad. I do not recollect distinctly about the road. It was not a very good road, however. There was a large train of wagons behind us—a considerable obstruction. The wagons were in front of the accessed.

Captain De Kay, of General Pope's staff, testified (court-martial record,

The road runs through the woods part of the way, through an undulating country of small hills and valleys, so that I could not tell whether troops were closed up or not. \* \* \* General Porter then asked me how the road was. I told him the road was good, though I had difficulty in getting down on horse-back owing to the number of wagons on the road; but I told him I had passed the last wagon a little beyond Catlett from this direction, and as they were moving slowly he would probably get up with them by daylight.

That this witness was mistaken as to the last wagon the testimony of Colonel Brinton clearly shows, for he passed from Catlett to Warrenton Junction much later that night and found more wagons!

General B. S. Roberts, on General Pope's staff, testified (court-martial

record, page 49):

The condition of the road was good generally: the first three or four miles of the road passed through open country, some wood intersecting it. Some bridges had been burned, and the passing the streams were the only difficulties I now remember, and they were not material, a large number of wagons having passed them without any difficulty.

If this officer had ever moved troops in a dark night, in an unknown country, he would have found "some woods" a great annoyance, and the fording "streams" a check that would delay a column of 10,000 infantry several hours, which could be readily pass. 1 indaylight, and had he campaigned any considerable time in Virginia in that section he would have known that the greater the number of wagons that had sed through the stream the deeper and more inextricable would the

mire become for the batteries moving with the column.

Colonel T. C. H. Smith, on General Pope's staff, the psychologist, who read treason in General Porter's eye, says of this road (court-martial record, pages 69, 70):

For the first mile and a half until you go to Cedar Run the road was bordered on either side by open fields or open woods—

Query: How much by fields and how much by woods?

over which troops could march easily in great part without going on the road. Indeed, I doubt if there is any regular road a good part of the way up. The troops marched through the fields to Bristoe Station; a road has been worn by the troops. I suppose. At Cedar Run, on the west, just above the railroad, there is a bridge and a ford with it, and men coming from this side of Cedar Run soon struck a

small piece of woods, which is, perhaps, less than a quarter of s mile. I give these things as I remember; I may be mistaken on this point. \* \* \* At Kettle Run there was another bad piace. There was, however, a very practicable ford there; a narrow ravine, the road running down with high banks to it on either side. I should say that there was half or three-quarters of a mile of the road in which if there was a wagon train the march of troops would be badly impeded. The railroad track was good, all that I saw of it; men could march upon it. upon it.

Mr. Speaker and gentlemen of the House, I now desire to call your especial attention to certain testimony which, I find in the CONGRESSIONAL RECORD of January 6, 1883, is cited as proof not only of the condition of that road, but also as proof absolute that there were no conductor of that road, but also as proof assolute that there were no obstructions by wagon-trains, because they were all parked. Perhaps you may find some difference in the testimony as I shall read it from the statement in that RECORD purporting to state it. I think you will; and that the newly discovered part of it will lead to the opposite conclusion from that deduced in the RECORD to which I refer. In addition to the evidence cited in that RECORD to prove that the trains were parked I wish to add Colonel Myers's evidence touching that point, contained in another part of his evidence, which is as follows (court-martial record, page 107):

I think all my train went into park; the wagons were coming in all night, and I could hear the wagons rolling all night. No trains passed me that night.

\* \* There were no wagons whatever in front of me. I was with the head of the train. There might have been a good many in rear of me. That I could not tell about.

If the train was "parked" and the road was unoccupied, where did the wagons come from "that were rolling all night?" That presents a question that I do not believe the Atlanta campaign can furnish a solution for! There can be but one explanation as it occurs to me. The general commanding having adopted the military theory of the Bedouins, headquarters in the saddle, the commentator, on the evidence of his chief quartermaster, may have thought the quartermaster had fallen back upon the tactics of the ostrich. The head of the train was parked. Ergo, &c.

How much of a train was that? Hear what the witness says (courtmartial record, page 108):

Question. You have been understood to say that the wagons were rolling all

night?
Answer. Yes, sir. Coming into park as they got along all night. The rear wagons take a long time to come up in a long train of 2,000 or 3,000 wagons.

If you will turn to General Heintzelman's evidence you will see that he was at the head of the column, and he says (court-martial record, page 80):

Our wagons

Referring to headquarter wagons-

did not come up for an hour or two, perhaps more, after night.

Where probably was the rear of the train at 8.30 p. m.? If Captain De Kay is correct he passed the rear wagon near Catlett Station at that hour. Catlett Station is about six miles from Bristoe. If what is said in the record referred to about the distance such a train would occupy well closed up is correct (and I think it is), if the wagons were three abreast, the rear would have been beyond Catlett Station at the hour named by Captain De Kay.

This proves to my mind beyond question that the witnesses who seek to have an unobstructed road in order to prejudice Porter made the facts yield to their wishes, and the more they struggle against the facts the more they show themselves unreliable as witnesses.

Perhaps if we had before us a witness who was there, who knew that General Pope commenced a retrogade movement from White Sulphur that afternoon, and that each corps, division, and brigade commander was directed to and very generally did order his trains to Warrenton Junction and Bristoe, to get them safety to the year, we should understand that each train struck for the road leading to Warrenton Junction, and stood not much upon the order of their going; and if some one could explain to us how quick a mule would become panic-stricken when Jackson or Mosby was reported in his rear, we could form some proper estimate of the value of the evidence which intimates that a train of 3,000 wagons, drawn by such animals, guided by panic-stricken drivers, in a dark night, upon a narrow road, or any road, might have a tendency to impede but would not obstruct the road for marching!

As I said, if we understood the order about sending back the trains we could readily appreciate the testimony of Captain Monteith when he relates his experience on the evening of the 27th of August, which

he reported to General Porter (court-martial record, page 123):
We found wagon-trains on the road from Warrenton Junction going by Catlett's Station. We also found wagon-trains coming in on the Warrenton road,
intersecting the road that runs by the railroad just below Catlett's Station.

I will now refer to the evidence of Colonel Robert E. Clary to show that the railway was in use running trains to the rear until after 2 o'clock a. m. of the 28th; to show the nonsense of talk about moving troops on the grade, and the condition the witness found the road riding to Bristoe after that hour (court-martial record, page 118):

At 10 'clock on the night of the 27th I received a note from General Porter to move the trains eas' on the railway (this was by General Pope's order) beyond and east of Cedar Run toward Bristoe Station. I gave the orders to the proper persons connected with the trains and they commenced immediately to move.

\* \* The removal of the trains occupied me from about 10 o'clock till about 2 o'cic ek in the morning, at which time or perhaps a little later I myself left for Bristoe. \* \* The road for some three miles, I think, was occupied by wagons and was obstructed so as to render it very difficult for me and my party to ness alone.

And to the same effect Captain Fifield, who had charge of railway transportation, testifies (court-martial record, pages 120–122):

transportation, testifies (court-martial record, pages 120–122):

I left (Warrenton Junction) myself about 20'clock, in advance of one train that was left behind, while an engine had to run down with a train and return. \* \* \* Loaving the last train I myself left on horseback about 2 0'clock. \* \* \* It must have been near 4 0'clock in the morning when this train reached its destination. \* \* I should think it was three or four miles from the place where I first struck the wagons to where I passed the main body. \* \* \* The culverts on that line of road are all open culverts. I can not state the number between Warrenton and Bristoe, but there were several of them. \* \* \* The wagons were very much jammed and remaining stationary. I found a great deal of difficulty even in getting through on horseback. \* \* The jam was just after leaving Callett's Station, between that and Kettle Creek. \* \* \* At the time I saw the wagons the railroad was on one side of them, and for some portion of the way where this jam occurred was timber country. \* \* \* In some places it would have been very difficult to move these wagons without great trouble.

I believe I have now stated all the evidence, in substance, given to the court-martial in relation to the darkness, the nature of the road, and the obstructions in it up to the time Porter's troops attempted to

It will not be necessary for me to explain to a soldier that every ditch, It will not be necessary for me to explain to a soldier that every ditch, every bad place on the road, every bridge, every ford, operates as a serious impediment to a march at night. Soldiers stretch out into single-file and pick their way carefully at the slightest obstruction. If there was a little stream to wade, and a log lay across it above or below the ford, they will take to the log in single-file until the officers, finding the column broken, ride to the rear for the cause and force them across the stream, even at the risk of muddying their boots. The same result follows the miring of a battery.

But for the benefit of such as have had no experience I beg leave to

But for the benefit of such as have had no experience I beg leave to read an account of what took place upon a broad turnpike in daylight the following day to a column of General McDowell's troops, that all may understand what the effect of such a train as it must be conceded was on Porter's road would have produced had he started from Warrenton Junction at 1 o'clock in literal obedience to General Pope's order. I read from General McDowell's statement before a court of inquiry sitting at the same time Porter was being tried:

inquiry sitting at the same time Porter was being tried:

The orders I gave General Sigel to march on the turnpike from that place directed him as follows: "No wagons but for ammunition will accompany your trains on this road; your bagage trains will immediately proceed to Catlett's."

\* \* General Sigel had, notwithstanding this order, nearly two hundred wagons, which kept blocking up the road and retarding the movement, and notwithstanding I had seen him on the morning of the 28th and I had urged on him personally to march immediately and rapidly, \* \* \* yet his advance was so slow that the note written by me at 10.15 a. m. \* \* \* reached him \* \* \* about three miles from his bivouac of the night before. His division had been on their feet since 2 a. m., over nine bours, and in that time had not gone twice the length of his division front. \* \* \* For an account of the efforts to get troops over this fine road see testimony, &c. \* \* \* I knew well the difficulties in moving so large a body of men and artillery over the same road under the most favorable circumstances, and wished therefore it might be unobstructed. The first battle of Bull Run was seriously affected by a small baggage train getting into the column. \* \* We had great delay and confusion on account of baggage wagons at Culpeper and on the march to Warrenton.

A layman who reads this statement of history, and learns that this

A layman who reads this statement of history, and learns that this nine-hours' delay was of a column pursuing Jackson under Generals Pope and McDowell, will wonder why Porter was cashiered, because he said, under the advices of his general officers, that he could not expedite a march by mixing his column with the wagon train of the Army of Virginia in a night so dark that you could scarcely see your

hand before your face.

It seems clear that I have sustained my position, that it was not practicable to march at 1 o'clock, and that Generals Reynolds, Sykes, Morell, Butterfield, Griffin, Heintzelman, and Colonel Buchman were

correct in their evidence.

I will next show the result of an actual attempt to march in the dark, and establish, I think, conclusively that no matter what somebody else thinks he did under just such circumstances (but which are sure to be different when investigated) this army could not make the march until daylight, and that General Porter's error was, he did not

let his men sleep until 3 o'clock before he sounded reveille!

The troops attempted a start before daylight, and I will permit the officers to detail their experience.

Captain A. M. Randol says (new record, page 142):

I was first lieutenant First Artillery, commanding Battery E of that regiment, seigned to Sykes's division. \* \* \* On August 27 I received two orders to narch—one to hitch up at tattoo and be ready to move at midnight. That order has countermanded to move with batteries at 3 o'clock.

Note this evidence, as it corroborates Porter's statement, showing an original determination to move at 1, but which he changed to 3 on advice of his officers.

Witness continues his statement (page 143, 144):

Witness continues his statement (page 143, 144):

It is my recollection we remained hitched all night. At 3 o'clock we moved out in accordance with orders. \* \* \* Wagons were constantly passing or attempting to pass. They had blocked the ford so that they were jammed at the place where our batteries were parked, filling the space between us and the creek. \* \* \* Riding to the front I found that the ford across Owl Run, a branch of Cedar Run, was blocked by wagon-trains, as I understood at that time, of Sigel's Corps. Captain Weed, myself, and other officers endeavored to make an opening by forcing teams across, but we found it impossible. I remembered that I had seen a ford higher up the creek. \* \* I turned the head of my battery up the creek toward the railroad crossing. Arriving at the ford I found it was blocked also. There was a part of a battery and some wagons in it. I then moved higher up and put my horse in the stream, until I found a place I thought we could cross. We cut down brush and filled it in the stream and cut out a roadway, and then cut a roadway on the other side. \* \* After this was accomplished, we crossed our batteries, my battery leading. \* \* After

It must have taken two hours or more to cross this stream. Our own teams stalled in crossing the ford. \* \* \* 1t was not five hundred yards from our

And here let me pause and inquire: Would not Porter's artillery have And here let me pause and inquire: Would not to the sartillery have been found, had they started at 1 o'clock, within five hundred yards of their own camp at daylight, instead of being at Bristoe, as General Pope ordered? And would not the same have been the result had they started at 10 o'clock the night previous? There may have been officers in other sections of the army that would have carried these batteries over their shoulders, but such predictions were few, and they were all on on their shoulders, but such prodigies were few, and they were all absorbed elsewhere.

sorbed elsewhere.

After we got started our next difficulty was at Cedar Run, not over a mile and a half or two miles from camp. \* \* \* Here the approaches to the creek were abrupt, and the bank on the other side was very abrupt. Here we found the creek blocked again on both sides. The wagons going up were stalled in the creek four or five deep, and the drivers watering their teams, and it was almost impossible for us to get through. \* \* \* At last we managed to mount the hill, and when we got near the station (Catlett) we found difficulty again in passing through the teams which had halted to feed, and wagons and stragglers.

This, it will be remembered, is the particular part of the road that the last team had passed off from at 8.30 the night before, if you credit Captain De Kay's evidence. Does it not show how utterly he failed to appreciate the condition of things on that road and how little credit should be given his opinions:

At each of the crossings, of which there were some dozen little branches—rens, as we call them in Virginia—at each of these nearly every one of the teams was stalled. We would have to make new crossings. The soil was a kind of quicksand. I know on one occasion we crossed in almost battery front, so that each piece would have a crossing of its own, so that the ground would not be cut up. Under this water the bed was clay, then built over with sand. The wheels would go up to the hub. We had difficulty constantly until we arrived at Kettle Run.

This is the actual experience of an officer of the regular Army. opinion or guesswork. He was from 3 o'clock a. m. until noon in making the march to Bristoe. About what probability is there that it could have been made in the darkness between 1 and 4.30 in the morning? Not a shadow. But Porter was found guilty of a grave offense, because he had sense enough to know it could not be done! But it is said he should have marched his infantry and let his batteries care for themselves! What, leave all the artillery of the Fifth Army Corps and the reserve artillery sent forward by Burnside, and ordered by General Pope to report to him, without infantry in a neighborhood overrun with Jackson's troops and Stuart's cavalry? Had Porter done such an act he would have not only disobeyed General Pope's written order, but he would have violated every military principle and convicted himself of being a dolt without sense enough to be trusted with a squad!

Having read to you the experience of an officer in the regular Army, now listen to the commander of Morell's artillery, a volunteer officer,

Colonel Martin (court-martial record, page 136):

We had reveille about 1 o'clock, \* \* ordered to move at 3, and moved between 3 and 4 across the run, less than a mile from camp, and haited there and remained until after daybreak. \* \* \* only knew there was some artillery and teams we had to pass by going through the field as we passed over that road. \* \* \* We encountered a difficulty in getting out of camp in the darkness, and getting many of our carriages stuck in the run near the edge of camp. Some of them were not got out until after daylight, especially one battery wagon.

These were the batteries probably that Captain Randall found stalled when he went up the creek and found the new ford, as related by him.

Having heard from the artillery of the two divisions of Porter, we will now see how the infantry column progressed.

General Sykes, speaking of the march from Warrenton Junction, says (court-martial record, pages 170, 171):

In the citations of evidence I have confined myself to witnesses of known character and standing, and have principally made the selections from the records of the original court-martial. But I can not in justice leave this branch of the discussion without showing the wholly unreliable character of the evidence on the part of the Government by its new evidence given before the West Point board. I find in the CONGRESSIONAL RECORD of January 6 copious extracts of what is termed evidence attempting to disprove the condition of things as stated in the evidence which I have quoted. I shall only refer to one or two as types of all that class of evidence the maligners of Porter give to the country as proof of the correctness of their assertions. On page 16 of the CONGRESSIONAL RECORD of January 6 I find published the evidence of Major J. H. Duvall, of the First West Virginia Regiment, belonging to Ricketts's division, who swears:

On the evening of August 27, 1862, I was with my brigade; we were four miles northwest of Warrenton at that time—north or northwest—and I was directed by my colonel to carry a letter that he handed me from General Ricketts to General Pope. \* \* \* I found General Pope near Manassas Junction. \* \* \* There were a great many wagons along the line, but I went along without any particular obstruction.

This is the evidence; that because one man on horseback swears he rode through without obstruction all the other witnesses who were

Now, it is matter of history (vide General Ricketts's official report, executive document, third session Thirty-seventh Congress) that General Ricketts was not at or near the point designated on the night of the 27th, but he was in the rear of King, near New Baltimore, on the Warrenton pike.

It is true that he moved to the point designated on the afternoon of the 28th of August to defend Thoroughfare Gap, and that on the even-

ing of the 28th he sent two different messengers to General Pope.
On his cross-examination (new record, page 821) this man Duvall fixes the date of the receipt of the letter from the fact that General Ricketts was ordered to Thoroughfare Gap. Ricketts was not ordered to Thoroughfare Gap until the afternoon of the 28th, as will be seen from General McDowell's official report (executive document, third session Thirty-seventh Congress).

Witness further says (new record, page 822):

He delivered the message to General Pope between Centreville and Manas-a Junction, near to Manassas Junction.

Who in this land at all familiar with the events of those days does not now know that General Jackson's troops occupied Manassas Junction the night of the 27th of August and extended their lines toward Centreville, and that General Pope claimed they went to Centreville? General Pope was at Bristoe Station. But the witness, in the face of these facts, insists that it was the 27th. Why? He was brought to swear that what he did was on the night of the 27th, and he swore to it. The use of such evidence and imposing it upon the country for truth ought to bring the blush of shame to the cheek that would give it currency. One more witness, Colonel McCoy, of Pennsylvania—his evidence appears on page 14 of the CONGRESSIONAL RECORD referred to—he testified (new record, page 632) that he belonged to Ricketts's division, marched till 1 o'clock that night of 27th August, and had no difficulty in marching. His cross-examination shows that he marched on the broad turnpike running from Warrenton to Centreville; that his command passed through Warrenton between 4 and 5 o'clock in the afternoon and halted

at New Baltimore at 1 o'clock the next morning.

The distance is between five and six miles, and the time taken to march it was eight and one-half hours! And this, too, when I am told the troops were kept under whip and spur in pursuit of Jackson. What cause kept those troops that length of time on an open turnpike? It was the darkness and difficulties attending this night march on an open road. The words of the witness are for the Government, but the facts which he gives are for the accused and corroborates General Patrick, who marched on the same road a little in advance of him.

these facts answer the testimony of every witness in Ricketts's division.

Next come Haddon, Tiffany, and Beach (page 16 of the Record).

What did they do? They went from Bristoe on the road by Catlett, eight miles and back, on the 28th, making sixteen miles; they started very early in the morning and got back at night. "We must had three ambulances." They were empty when they went out and had stores when they returned. They moved by daylight and avoided troops by going out into the fields. And this we are told is proof that Porter could have moved his corps on the night before.

O Praiding where thy reason; where O Rigotry, this had?

O Prejudice, where thy reason; where, O Bigotry, thy h sh?

This summary contains substantially all the evidence touching that night march; and I will go to the country upon it as establishing the fact that no guilt of either intent or act attaches to General Porter by reason of what he did or what he did not do.

Porter had no cavalry, and that nine miles of road filled with insub-

ordinate mules of both species, running away from danger with their trains, could not be cleared by infantry moving from their rear except by forcing them from the road and filling up the vacated space by a column of troops. These trains were not Porter's; they were not under his control, but they belonged to General Pope and his army, and were subject to his orders.

At 12 o'clock at night Porter learned that Lieutenant-Colonel Brinton had a detachment of cavalry at Catlett Station. He applied to him at once for a force to clear the road. Colonel Brinton says (courtmartial record, page 198):

He requested me to try and have the road cleared, stating his intention to pass along with his corps. On my return I told the adjutant to send out some men to get these men out of the way.

He sent out his own aid, and like a faithful, vigilant officer as he was, he reported the situation with the line of action he thought wisest to pursue to General Pope for approval or disapproval, and asked assistance to be applied at the Bristoe end of the line in clearing the road that he might quicken his arrival at the point he was ordered to reach. I make this statement arguendo from the data we have furnished us by General Pope, for it is a curious circumstance, and one that lawyers always draw

inferences from, not wholly consistent with the integrity of parties and witnesses, that in this case every paper, every dispatch, every written communication sent by General Porter to General Pope or General Mc-Dowell which would tend to explain Porter's action and show his true purpose—were lost, and only such as would make color against him un-explained by others were preserved and presented to the court. Porter's lips were sealed, his correspondence lost, and he stood voiceless at the mercy of his enemies.

General Pope says (court-martial record, page 14):

He wrote me a note, which I received on the morning of the 28th—very early in the morning, perhaps a little before daylight; I am not quite sure about the time. The note I have mislaid. I can give the substance of it—I remember the reasons given by General Porter.

Before I conclude I expect to satisfy this House that the memory of this witness is so treacherous that it is not safe to rely upon his memory at all.

Again, in the testimony of this witness (court-martial record, page 28),

I find in answer to this question:

Did you receive from the accused, after you sent him the order just referred to (the 6,30 order of the 27th), a note or message requesting you to have your end of the road cleared, so as to enable the accused to get to you as rapidly or as fast as he could with his corps?

Answer, I received at least one such request, probably more than that. I am inclined to think two—one I am sure of, to that effect. \* \* \* On the contrary, from a note that I received from him I did not understand that he would march until daylight.

In the record, "I can not" is the answer to the question to produce the dispatches. The evidence proves my statement, and to a mind in search of truth is evidence of zeal and desire to conform to the requirements of his chief; but so bitter are Porter's enemies, so malignant in their assaults, and so persistent in the effort to deceive the country, that within a few days past it has been publicly announced and has been sent broadcast over the country in the Congressional Record-

That from the days of Cyrus and Alexander down to the present time this is the only instance in which a subordinate officer ever sent to a superior officer to clear the road for him so that he could march; and there was never a commanding officer yet, unless it was Pope, who would not have retired such an officer from his command that moment. \* \* \* That very fact, that very act in itself shows that man did not intend to obey the order.

If the case against Porter requires such a distortion of evidence and such illogical conclusions to sustain it it must be weak indeed. We have seen from General Pope's evidence that he was promptly advised by General Porter of the situation and his conclusion thereon, and are left to present now the remaining branch of the proposition: Did General Pope acquiesce in the correctness of the decision? Consider the following acts and conduct of General Pope, and you have an affirma-

General Pope swears (court-martial record, page 19):

I saw Porter at Bristoe Station about 8 o'clock on the morning of the 28th.

\* \* \* I do not remember having any conversation with him in reference to obeying or disobeying the order, although I had much conversation with him.

\* \* \* I am very sure I did not complain. I am not sure that he gave me any explanation. I have a general recollection that he spoke to me of his march and the difficulties, &c.

General Pope describes himself (page 23) as a frank, open man When this frank-spoken gentleman learned of General McDowell's dis-obedience of orders and being absent from his command, he freely ex-pressed himself to a subordinate of General McDowell (new record 282) in pretty harsh language. General Pope was prejudiced against Porter long before Porter joined him. He said to his chief of staff (new record 308), "Porter will fail me," or "Don't you think Porter will fail me?" What are the corollaries from these premises?

What are the corollaries from these premises?
It is submitted, they are:
Had Pope not acquiesced in Porter's action upon being advised of what
he contemplates and the reasons for it, he would have signified his dissent by a response, "More irrespective of the difficulties you state!"

Had not Pope acquiesced in the correctness of Porter's action; this frank man," who did not hesitate to use harsh language to a subordinate, touching the action of one of his corps commanders, would have reprimanded him at once, instead of receiving Porter without a syllable of dissatisfaction.

I now desire to show, in support of this acquiesence of General Pope, that he recognized and acquiesced in the right of his corps commander to the use of discretion when detached from him all through this campaign, and I give several of the more prominent instances. General Pope, on the night of 27th August, 1862, the same night he sent to Porter, gave McDowell this order (Report on Conduct of the War; first session Thirty-ninth Congress, volume 2, page 145):

MAJOR-GENERAL McDowell.: At daylight to-morrow morning march rapidl on Manassas Junction with your whole force. \* \* Jackson, Ewell, and J. Hill are between Gainesville and Manassas Junction. \* \* If you wi march promptly and rapidly at the earliest dawn of day upon Manassas Juntion we shall bug the whole crowd. I have directed Reno to march from Gaine ville at the same hour, \* \* \* and Kearney, who is in his rear, to march o Bristoe at daybreak. Be expeditious and the day is ours.

General McDowell disobeyed this order. General Pope says in his official report (Report of the Committee on Conduct of the War, first session Thirty-ninth Congress, volume 2, page 147) that-

General Sigel, who commanded McDowell's advance, instead of moving for-rard from Gainesville at daylight, as he was ordered, was absolutely with his dvance in that town as late as 7½ o'clock in the morning.

And of McDowell's personal action he says:

He had, without my knowledge, detached Ricketts's division in the direction f Thoroughfare Gap.

We hear nothing of a court-martial for this double disobedience of orders, but on the contrary General Pope testifies before the court of inquiry, sitting in Washington at the same time Porter was being tried and found guilty, because he had no discretion but literally to obey the order to march from Warrenton Junction. (Proceedings of the McDowell's court of inquiry, page 307.)

I sent nothing to General McDowell concerning Thoroughfare Gap, and regretted afterward that any portion of his forces had been detached in that direction. General McDowell had the discretion, however, necessarily incident to his position and to his distance from me, to make such a disposition to cover his rear from the direction of Thoroughfare Gap.

Again, upon the night of the 28th of August, 1862, after King's division struck Jackson near Groveton and occupied the road between Longstreet and Jackson, General Pope, in his official report heretofore cited in the report of the Committee on the Conduct of the War, says (volume 2, page 147):

I felt sure then, and so stated, that there was no escape for Jacksou. I accordingly sent orders to General McDowell, as also to General King, several times during the night, and once by his own staff officer, to hold his ground at all hazards and prevent the retreat of Jackson to the west, and that at daylight in the morning our whole force from Centreville and Manassas Junction would be up with the enemy, who must be crushed between us.

Surely these were orders given upon the field of battle, the execution of which was vital to the success of our arms and the disebedience of which lost many hundred lives and brought disaster to the Union McDowell was absent from his command and could not be found until the next day. King abandoned his position without a shot (I mean after receipt of these orders), "thus leaving open the road to Thoroughiare Gap." (See same report, page 148.)

And now I can not pass without glancing at the sequel. Bull Run was lost, and the court of inquiry summoned at the request of General McDowell (see report of McDowell court of inquiry) find that he was unjustifiably absent from his command, and that

unjustifiably absent from his command, and that-

this ustifiably absent from his command, and that—
The misconduct of his own corps thwarted a plan the execution of which afforded an opportunity for easy victory. \* \* His subsequent efforts on the 29th to repair the consequences of that unfortunate movement of his corps and to press them forward into action were carnest and energetic, and show fully that the separation of which the court has just stated its disapproval was inconsiderate and unauthorized, but was not induced by any unworthy motive. \* \* His commanding officer, General Pope, not only omitted to hold him culpable for this separation but emphatically commends his whole conduct while under his command, without exception or qualification.

McDowell was exonerated and excused because of his conduct on the next day, when he, in fact, did nothing but interfere with Porter and prevent his movement on Gainesville, and because General Pope did not blame him. General King was recognized and placed upon the court-martial that tried Porter. Porter offered to prove his conduct on the following day, when his troops bore the brunt of the battle, and he was personally present on the field under fire to disprove "any unworthy motive" attributed to him for his non-action on the 29th. But no, one rule of military law would do for McDowell, but another one must answer for General Porter. He was denied the privilege under Colonel Holt's declaration of the law and General Hunter's administration of it.

Here is another case. General Pope on the 29th of August, 1862, at

9 p. m., gave the following order:

HEADQUARTERS BRISTOE.

MAJOR-GENERAL KEARNEY: At the very earliest blush of dawn push forward with your command with all speed to this place. You can not be more than three or four miles distant. \* \* I want you here at day-dawn, if possible, and we shall bag the whole crowd.

General Pope says (Pope's report, Committee on the Conduct of the War, first session Thirty-ninth Congress, page 146):

This latter order was sent to Kearney to render my right on Bristoe perfectly secure against the probable movement of Jackson in that direction. Kearney arrived at Bristoe at 8 o'clock in the morning.

Kearney was three or four miles from Bristoe; had a clear road, but kearney was three or four miles from bristoe; had a clear road, but delayed the movement until 6 on account of fatigue of his troops, and arrived at 8 a.m. (New record, page 807.) Porter, nine miles away, with an obstructed road, as we have seen, arrived at 8 a.m., the head of his column halting at the run to close up. Kearney received nothing but encomiums. Porter was charged with disobedience of orders, of failure to support his chief. Comment is unnecessary.

Here is another order:

NEAR BULL RUN, August 28, 1862-9,50 p. m. NEAR BULL RUN, August 28, 1862—9.50 p. m.

GENERAL: General McDowell has intercepted the retreat of the enemy and is now in his front. \* \* \* I desire you to move forward at I o'clock to-night, even if you can carry with you no more than 2,000 men. \* \* \* The enemy is not more than three and a half miles from you. Seize any of the people of the town to guide you. Advance cautiously and drive in the enemy's pickets to-night and at early dawn attack him vigorously. Be sure to march not later than I with all the men you can take.

JOHN POPE,

To Major-General KEARNEY.

Here is an order for battle, positive in its terms, and showing on its face the emergency requiring immediate action. Does anybody question Kearney's fidelity?

Kearney, notwithstanding the pressing necessity and imperative character of the order, did not move till after daylight.

General Heintzelman testifies (new record, page 605): Kearney did not get off until after daylight. We were all detained by him

Here we have instances, repeated in the same campaign, of the exercise of discretion on the part of the several commanders under General Pope, men who know and practiced the rules of the military code, and in every instance their right to exercise such discretion was recognized and acquiesced in.

The West Point board, who will be recognized by the country as be-

ing authority on this point, say:

Abundant experience in situations similar to that above described leave no room for doubt what General Porter's duty was. He exercised only the very ordinary discretion of a corps commander, which it was his plain duty to exercise, in delaying the march until 3 o'clock, and in his attempt to move at that time instead of at 4 o'clock he only showed too auxious a desire to comply with the letter of of his orders.

I will recur to and discuss the questions of discretion, literal and intelligent obedience, more fully in another branch of the case

And now I come to the last proposition: That the evidence given to the court to give an air of importance to this order was sheer after-

This Order No. 1 describes the enemy fleeing before Hooker. That is the military situation at Bristoe as it is described by General Pope in his order. Now, to give this order an air of importance there is inin his order. Now, to give this order an air of importance there is in-jected into the case upon the trial a mental condition of General Pope's mind not disclosed to any one, to wit, that he thought that perhaps Ewell or Jackson was not running away quite so much as he had given Porter to understand; and Hooker being out of ammunition, General Pope says (court-martial record, page 13):

That made him so anxious that General Porter's corps should be present by daylight, the earliest moment at which the attack (Jackson's attack) would be

It was certainly a strange way to apprise General Porter that he feared an attack and was out of ammunition, to tell him "The enemy has been driven back and is retiring along the railroad. We must drive him from Manassas" (not from Bristoe)!

General Pope's chief of staff (Colonel Ruggles), who wrote the order, says (new record, page 301):

I knew record, page 501):

I knew record, page 501:

I knew record, page 501:

I knew record, and that time. I heard nothing of an anticipated attack in the morning.

\* \* I understood the enemy had been driven back and was retiring.

Question. That order states we must drive the enemy from Manassas.

\* \* Did you understand that was the purpose?

Answer. Yes, I understood that from the instructions given me by General Pope to write the order that way.

Now, before we go any further let us understand. Hooker was in Now, before we go any further let us understand. Hooker was in command of the troops that fought at Bristoe. He commanded the second division of the Third Corps—General Heintzelman's corps. His division was alone engaged, and the battle was principally between the Excelsior brigade in his division and Early's brigade. The loss was some three hundred killed and wounded, principally of the Excelsior brigade. (See General Heintzelman's official report, executive document third corporate the second brigade. (See General Heintzelman's official report, executive document, third session Thirty-seventh Congress.)

This left the first division of the Third Corps in front of Early, who that Hocker may have been short of ammuni-

had a single brigade, so that Hooker may have been short of ammunition, but the first division was ample to meet Early's brigade, which was only in position to cover Ewell's retreat and after dark was with

drawn to Manassas, which proves for a wonder that General Pope stated the military situation in his order to Porter correctly.

Now, supplement this with the testimony of the chief of staff of Heintzelman's corps, Colonel McKeever (new record, page 193):

Hooker's division was not at Bristoe that night when we arrived. They had gone off to the northward in pursuit of a force of confederates that he had been having a fight with. There was no large body of troops at Bristoe when we reached there.

Now, bear in mind, General Pope arrived at Bristoe with General Heintzelman and Colonel McKeever, and it was there and then that he had the order written for Porter to come up.

Colonel McKeever also states (page 200):

I did not hear anything of an anticipated attack. I saw nothing that gave me the impression that any attack was expected. There was no disposition of troops made to meet any attack of the enemy. I understood they were in retreat.

Here, then, we learn that no attack was expected and no disposition

of troops made to meet any!

General Pope's acts at the time are better evidence of what he thought and expected than his declarations made long afterward! His action shows his subsequent declarations were a makeshift! But I will not stop here in exposing this pretense. When did General Pope first learn that Hooker was out of ammunition? General Pope says (court-martial record every 12). record, page 13):

Just at dark Hooker sent me word, and General Heintzelman also reported to

General Heintzelman says:

A portion of Hooker's division was nearly out of ammunition. It was made known to General Pope late in the afternoon.

General B. S. Roberts testifies (court-martial record, page 14): That the order to Porter was written about sundown

Now, it will be seen the order was written before dark, and the information as to the scantiness of ammunition was "just at dark." But there is another piece of evidence which came to light after the court-martial trial which shows almost conclusively what General Pope would have embodied in his order had he been possessed of the information when he sent the order to Porter. Here is a dispatch found in one of

General Pope's dispatch-books, which was not sent, presumably because he had received information from Porter of his approach:

BRISTOE STATION, August 28, 1862-

GENERAL: Major-General Pope directs me to say that General Hooker reports this ammunition exhausted. General Pope desires, therefore, that you come forward with your command at once, with all possible speed, and that you send back to hurry up your ammunition train.

If anything had been needed in addition to the other evidence to disprove the idea that the order of the evening before had been written in view of Hooker being out of ammunition, this is certainly conclusive.

From the evidence sustaining my several propositions, referring to Porter's action under the order to move from Warrenton Junction at 1 o'clock a. m., August 28, 1862, I deduce the following corollaries:

I. That there was not, in a military sense, any violation of this order.

II. That if the failure to obey the letter of the order was an offense, it was damnum absque injuria, for which a reprimand would have been the gravest punishment under the military code.

III. That a corps commander, situated as Porter was, had a discre-

tion, and though he may have erred in judgment, such an error might

disclose weakness or incapacity, but not a crime.

It may be said that I have consumed too much time on an immaterial matter. Perhaps so; but my purpose is to commence at the root and show how utterly groundless all the charges of misconductare, that the country may the better know the great wrong done one of its most faithful soldiers. We have now reached Bristoe, and have

POPE AND PORTER IN CONFERENCE.

It was a pleasant conference, without any bitterness or accusation; and we may naturally suppose that the commanding officer of a veteran command like the Fifth Army Corps upon joining a new army with which he was to co-operate or of which he was to become a part on the eve of an impending battle would inquire something as to the plan of campaign, that he might understand the military situation and be ready to co-operate in bringing to a successful termination whatever plans his new chief had determined to execute. It will be manifest that Porter sought this information that he might actunderstandingly when his new chief was engaged with other detachments of his army and not present with Porter upon the field. But General Pope gave him no information concerning nor insight into proposed future operations, but rode away leaving Porter with 10,000 men at Bristoe utterly in the dark as to General Pope's plan of action, if he had one. Of course Porter knew that Pope had an army scattered about somewhere and knew the confederate army, or a part of it, was roaming around loose, striking from time to time Pope's disconnected divisions. He forecast the result in a communication to Burnside, and his gravest sin is that he forecast it

I have had occasion to allude to the bad memory of General Pope and am here obliged to recur to it again. Upon the trial before the court-martial he was asked this question in relation to what took place at that

Question. Will you state to the court whether or not you had made known to General Porter the position of the enemy's forces and your plans and intentions so far and so fully that he knew the critical condition of your army and the importance of rapid movements and prompt and energetic action to secure your supplies and guarantee your success?

This was not a difficult question to answer, and "a frank, open man, as General Pope describes himself to be, ought to have had no difficulty in promptly responding yes, as it seems to me he would have done if "yes" had been the truth. But "yes" was not the truth, and so we find him evading a direct answer, and by a multitude of words covering up a fact and conveying an impression contrary to the fact. Read

It has been my habit to talk very freely with all officers having large commands in the army which I commanded. How far I informed General Porter I am not now able to say.

Now, hear him.

But I should presume from my habitual practice and from conversations I had with him that he understood pretty fully the condition of the army and the position of the various corps of the army. What I regarded as a necessity, it is altogether possible he might have had a different opinion about. Therefore I can not say that he understood the necessity that I understood.

This I call an adroit evasion, swearing to no fact but containing a fling at Porter. And this style of answer will be found all the way through the proceedings.

Now I propose to show, to discredit this witness, that the facts do

not support him and his statement rests in his imagination.

The Army of Virginia consisted of McDowell's command, Sigel's command, Banks's command, Porter's command, Reno's command, and Heintzelman's command; Banks's was not engaged at Bull Run.

McDowell swears, referring to the morning of the 29th of August,

1862 (new record, page 715):

I had no knowledge of General Pope's future policy.

Question. What knowledge did you then have, if any, of General Pope's plans
and the changes likely to occur through any possible concentration of the

enemy?
Answer. I could not know them and I did not know them.

General Heintzelman says (court-martial record, page 80), in answer to this question:

Were you made acquainted by General Pope with ordid you know what were his plans?

Answer. I did not know what his plans were.

Here we have General Pope's alter ego in the Bull Run and courtmartial campaign denying all knowledge of Pope's plans; and the other corps commander, General Heintzelman, also in ignorance, leaving only Sigel, who was not questioned on the point, and Reno, who fell on the field before the court was held. Was not General Pope a little unfort-unate in presuming that Porter knew his plans because his habit was to talk so freely with officers of high command? Now, let us see what Now, let us see what General Pope's chief of staff knew of the plan of this campaign. Speaking of the conference between Generals Pope and Porter on the mornof the 27th at Warrenton Junction, Colonel Ruggles says (new record, pages 306, 308):

ord, pages 306, 308):

General Porter came in and reported to General Pope, and asked him the situation of affairs and what was proposed to be done and the future of the campaign. General Pope was rather reserved in his manner; he was reticent and uncommunicative, as it seemed to me. \* \* I thought possibly my presence might be an embarrassment, so I left the room. General Porter remained alone with General Pope some five or ten minutes after I left. \* \* When General Porter came out he asked me what was the plan of the campaign. I told him that if there was a plan of campaign it had not been communicated to me; that so far as I understood, the enemy was threatening and occasionally turning our flank; that we had been getting out of tight places as fast as we got into them, and that we had been doing it with eminent success, and that as fur as I understood we were to keep communication with Alexandria. I think I told him we were getting along as best we could until the Army of the Potomac all came up. That was my impression. Perhaps I may have derived that from general conversation, but I had no plan of campaign to communicate.

This was all the knowledge General Porter received and he cave

This was all the knowledge General Porter received, and he gave Burnside, for the President, the benefit of the information, as he had been requested to do. And it was this sort of information, conveyed in pungent style, that made Porter, in the eyes of the judge-advocate and the court-martial, to be held up to the country "monstrum horrendum, ingens nefas.

This information, coupled with the knowledge that Sumner, Franklin, and Couch, with their veteran troops, were on the march from Alexandria to Centreville, is especially important when you come to consider the joint order to McDowell and Porter and the construction to be put upon it by an officer having this light to guide him in under-

standing its purpose.

But before going to the events of the 29th of August, 1862, there are two unfortunate statements of General Pope in his official report that deserve attention in chronological order. In speaking of General Porter's arrival at Bristoe, he says (see Report on Conduct of War, Supplement, volume 2, first session Thirty-ninth Congress, pages 146 and

The moment he (Porter) found that Jackson had evacuated Manassas Juncion he requested permission to halt at Bristoe and rest his men \* \* \* I ent orders to General Porter, whom I supposed to be at Manassas Junction, where he should have been in compliance with my orders of the day previous.

The facts, when considered in connection with these statements, show them not only grossly incorrect, but tend strongly to show a design to cast a cloud and suspicion upon Porter on the part of General Pope, cast a croud and suspicion upon Forer on the part of General Pope, irrespective of the truth. The purpose being, it seems, to show Porter adopting pretexts to avoid coming to the front and supporting General Pope, and so making evidence to sustain the charge of improper inaction on the 29th of August, when the truth is that Porter was anxious to move forward and solicited orders to move; and when he heard the firing in the battle of Gibbon's brigade with Ewell on the afternoon of the 28th sent a written request to General Pope for orders, but received in reply notice to remain where he was (Bristoe) until he was sent for, and he was not notified to leave Bristoe until the morning of the 29th; all of which General Pope ought not to have forgotten.

And now I will give you the undisputed evidence to support what I

have said. General Sykes, who commanded Porter's advance division,

savs:

My command was thrown in position a little in advance of Bristoe; remained there all day. We camped there that night and we did not leave until an early hour on the 29th. General Pope being there in person, the only inference was that he sanctioned our camping at that place. My men, when we reached there, were fresh and could have gone wherever it was desired.

Lieutenant Monteith, of the Fourth Michigan Infantry, aid to General Porter, says (new record, page 333):

General Porter sent me, between 1 and 2 o'clock that day, August 28, to Manassas Junction with a message to General Pope. \* \* \* General Porter sent me to say his troops were resting at Bristoe and to inquire if he had any orders. I found General Pope and gave him my message. He replied that he had no orders for General Porter and for him to remain where he was.

Lieutenant Weld, of Massachusetts, who was also an aid to General Porter, testifies (new record, page 291) that on the afternoon of the 25th

It was sent by General Porter to General Pope from Bristoe Station. General Porter told me he thought I would find him in the direction of Bull Run. \* \* \* met General Pope I should think a mile to the west of Bull Run. I gave him Feneral Porter's message, which was "to ask if he had any orders." \* \* \* They were using field-glasses, looking at a fire going on at Groveton.

That was Gibbon's battle, when McDowell got lost looking for Pope

at Manassas, and did not get back until next day.

He told me to tell Porter to remain where he was; that he would be sent for when wanted. \* \* \* My opinion is that this was between 5 and 6 o'clock. I went back and gave that message to General Porter.

Now, I fancy I can see a sneer upon the face of some unbeliever, accompanied with an ejaculation, "This evidence has been trumped up after sixteen years' preparation, and an official report written at the time is much the most reliable." Well, I am prepared for just your case, and ask you to turn to page 339 of the new record and find some more "trumped-up" evidence; but this time the evidence is written, and is found among General Pope's miscellany

Headquarters Fifth Army Corps, Bristoe, Virginia, August 28, 1862—5 p. m. Colonbl [Ruggles]: I send Lieutenant Weld, of my staff, for orders, if any

there be.
I am, your obedient servant,

F. J. PORTER Major-Ge

What lingering shadow of doubt can there be that the official report - mistake

Who now can believe Porter hung back that day, and who can believe General Pope thought he was at Manassas? Why, Mr. Speaker, General Pope's order to move from Bristoe was not dated until August 29, 1862, at 3 a. m. (see page 151, Report of Committee on the Conduct of War, Supplement, volume 2). And to conclude upon this day's operation and show how all these charges against Porter for misconduct and unwillingness to act on the 27th and 28th were fiction, I cite General Pope's order detaching King's division, which contained, as Generals Pope and McDowell each bear witness, "some of the finest men in the Army," from McDowell, an especial favorite, and placing them, unsolicited, under Porter's command on the morning of the 29th of August,

I must believe, then, and the country will believe, that Porter on the 29th of August, when he received the order to move on Gainesville at 9 o'clock, was a soldier with record as unsullied as when he turned back the tide of battle at Malvern and received the plaudits of his countrymen everywhere, except in and around the War Office of the Government whose battles he was fighting.

ext in order is the movement on Gainesville. McDowell an order on the morning of the 29th day of August, 1862. This order was delivered to McDowell at about 9 o'clock in the morn-This order was delivered to McDowell at about 9 o'clock in the morning. It was carried by an aid of General Pope. This aid met Porter at the head of his column near Bull Run Creek, moving to Centreville, having marched from Bristoe under General Pope's order of August 29, 3 a. m., which reached Porter about 6 a. m. The aid in passing General Porter stated to him the purport of the order, which was: "An order to McDowell, directing Porter to take General King and move toward Gainesville." (See Captain Piatt's statement, new record, page

General Gibbon says:

General Pope, on the morning of the 29th, gave me a written order, which I delivered to General Porter. This is the order:

"Headquarters Army of Virginia,
"Centreville, August 29, 1862.

"Push forward with your corps and King's division, which you will take with you, upon Gainesville. I am following the enemy down the Warrenton turnpike. Be expeditious or we lose much.

"JOHN POPE"

"JOHN POPE " Major-Gen

General Pope in his official report thus speaks of this order:

General Pope in his official report thus speaks of this order:

I also sent orders to Major-General Fitz-John Porter at Manassas Junction to
move forward with the utmost rapidity, with his own corps and King's division
of McDowell's corps, which was supposed to be at that point, upon Gainesville
by the direct road from Manassas Junction to that place. I urged him to make
all speed that he might come up with the enemy and be able to turn his flank
near where the Warrenton turnpike is intersected by the road from Manassas
Junction to Gainesville. Shortly after sending this order I received a note from
General McDowell (whom I had not been able to find on the night of the 28th
dated at Manassus Junction, requesting that King's division might not be taken
from his command. I immediately sent a joint order to Generals McDowell and
Porter.

General Gibbon says (new record, page 277):

I delivered the order to General Porter, and almost immediately General Me-Dowell made his appearance. General Porter placed the order in his hands; he read it and expressed dissatisfaction that a portion of his command was assigned to Porter, and he requested General Porter to place King's division on his right when he formed line of battle.

This order brings Porter into contact with General McDowell, or, to use a very common expression, made Porter cross his track, for it stripped him of his favorite division, and the scheming to regain that command on the part of McDowell began at once. McDowell has been held up as a very model of official propriety; a Chevalier Bayard in honor—faithful, watchful, and energetic. This order deprived him of King. Ricketts was at Bristoe, six miles away. Reynolds was over near the Warrenton pike; and Major-General McDowell was at Manass renton pike; and Major-General McDowell was at Manassas without a command. Porter marched away toward Gainesville, and King's division closed his column. What did McDowell do? Go and search for his command? No. He staid at Manassus Junction and sent a note to Pope, and waited for a reply; and when he succeeded in getting it, rode to the front, found Porter deploying for battle under the order brought by Gibbon; but McDowell assumed authority under the joint order; directed Porter to discontinue offensive operations, rode back to King's division detached it from Porter, and rode away; sending his compliments to Porter, and saying he was going by another road and would take King with him.

From this time on we shall find McDowell a central figure in this

From this time on we shall find McDowell a central figure in this prosecution. But learned and polished as he is, if we criticise his conduct and testimony we shall find his tongue as subtle as the poison of a Borgia, and be led to wonder-

That deceit can steal such goodly form, And under a virtuous visor hide deep vices.

We have now reached in chronological order the second order set out in the charges and specifications, known as the joint order, which is in

the words and figures following:

Headquarters Army of Vieginia,
Controville, August 29, 1862.

You will please move forward with your joint commands toward Gainesville. I sent written orders to that effect an hour and a balf ago. Heintzelman, Sigel, and Reno are moving on the Warrenton Turnpike and must now be not far from Gainesville. I desire that as soon as communication is established between this force and your own the whole command shall halt. It may be necessary to fall back behind Bull Run at Centreville to-night. I presume it will be so on account of our supplies. I have sent no orders of any description to Ricketts, and none to interfere in any way with the movements of McDowell's troops, except what I sent by his aid-de-camp last night, which were to hold his position on the Warrenton Pike until the troops from here should fall on the enemy's flank and rear. I do not even know Ricketts's position, as I have not been able to find out where General McDowell was until a late hour this morning. General McDowell will take immediate steps to communicate with General Ricketts and instruct him to join the other divisions of his corps as soon as practicable. If any considerable advantages are to be gained by departing from this order it will not be strictly carried out. One thing must be held in view, that the troops must occupy a position from which they can reach Bull Run to-night or by morning. The indications are that the whole force of the enemy is moving in this direction at a page that will bring them here by to-morrow night or the next day. My own headquarters will be for the present with Heintzelman's corps or at this place.

JOHN POPE.

JOHN POPE, Major-General, Command

enerals McDowell and PORTER

General Pope between the issuing the Gibbon order and this one General Pope between the issuing the Gibbon order and this one seemed to have undergone one of those sudden mental transitions so peculiar to him in this campaign, and which made it so difficult for subordinate commanders, receiving an order at one moment and a different one immediately following, to have any distinct idea either of the position of the enemy which they were to attack or of the troops they were to act in concert with. One would think, reading the mass of orders, that the general commanding had no defined plan of operation nor certain information as to the location or position of the enemy, but, acting on immulse instead of information, fired off a new order. my, but, acting on impulse instead of information, fired off a new order on the report of each straggler or contraband that might find his way past headquarters.

General Pope seems infatuated with the idea that Jackson was in all retreat. King's division had found him near Groveton, and left full retreat. him there on the morning of the 29th, but still this order informs the officers to whom it is addressed that Heintzelman and Reno are moving on the Warrenton pike and must be now near Gainesville, when in fact Jackson's whole force lay between them and Gainesville, at least three miles east of Gainesville, with his right resting near Groveton and commanding the Warrenton pike! A junction of two Federal columns, one moving from Manassas Junction on the Gainesville road and one moving on the Warrenton pike from Centreville, reads well in an order where Jackson's part in the piece was left out; but with Jackson lying across the route of the Centreville column it was easier to write the order than to execute it, as General Pope soon found to the

This order has no indication of battle in it, and is one of the few orders issued about that time that leaves out the "bag" that Jackson and his troops were to be stored in and carried off the field. This order upon its face would seem to indicate that at last the general commanding had begun to perceive that the enemy could not be van-quished with orders, and to realize that there should be a junction of his forces preparatory to action, and that behind Bull Run would of his forces preparatory to action, and that behind Bull Run would give him a better line and at the same time give the troops marching from Alexandria time to come up and take part in the general engagement then impending. And for that reason it will be noticed, while he gave discretion to deviate from the terms of the order "if any considerable advantages are to be gained," the order is explicit upon one point, from which there must be no departure, "that the troops must occupy a position from which they can reach Bull Run to-night or by morning."

This is the way I read the order; this corroborates the idea of the campaign given by Pope's chief of staff at Bristoe, and this, I believe, is what General Porter understood and had a right to understand the order to mean. Take a view of the situation and see if this construc-

order to mean. Take a view of the situation and see if this construction is not borne out by the lack of readiness for battle of the Union forces. Banks at Bristoe, and not under marching orders, with 10,000. Ricketts was near Bristoe, with a division of worn-out men, 8,000. King's division was jaded and weary, 7,000. Sumner, Franklin, and Couch were on the march from Alexandria. The dictates of sense and ordinary prudence at once answer that it would be foolhardy to imperi the Union cause by delivering battle under such conditions against the combined army under General Lee. But some one may say, why did General Pope deliver battle if he had no design to do it when he issued this order? I answer, he lost his head, and this court-martial that is

now under consideration was to punish somebody else for it.

I remember full well how the country was electrified by the follow-

WASHINGTON, Monday, July 14, 1862. officers and soldiers of the Army of Virginia:

By the special assignment of the President of the United States I have assumed command of this Army. I have spent two weeks in learning your whereabouts, your condition, and your wants, and preparing you for active operations, and in placing you in positions from which you can act promptly and to the purpose I have come to you from the West, where we have always seen the backs of our enemies, from an army whose business it has been to seek the adversary and

to best him when found, whose policy has been attack and not defensive. In but one instance has the enemy been able to place our Western armies in a defensive attitude. I presume that I have been called here to pursue the same system and to lead you against the enemy. It is my purpose to do so and that speedily. I am sure you long for an opportunity to win the distinction you are capable of achieving; that opportunity I shall endeavor to give you. In the mean time I desire you to dismiss from your minds certain phrases which I am sorry to find in vogue among you. I hear constantly of taking strong positions and holding them, of lines of retreat and of bases of supply. The strongest position a soldier should desire to occupy is one from which he can most easily advance against the enemy. Let us study the probable lines of the retreat of our opponents and leave our own to take care of themselves. Let us look before us and not behind. Success and glory are in the advance. Disaster and shame lurk in the Feat. Let us act on this understanding, and it is safe to predict that your banners shall be inscribed with many a glorious deed and that your names will be dear to your countrymen forever.

JOHN POPE Major-Gener

But before this proclamation was made I find that General Pope, under oath before a committee, described his method of accomplishing

under oath before a committee, described his method of accomplishing these grand results foretold in this order (supplement report Committee on Conduct of War, volume 2, page 107):

By laying off on their flanks if they should have only 40,000 or 50,000 men I could whip them; if they should have 70,000 or 80,000 men I would attack their flanks and force them, in order to get rid of me, to follow me out into the

Bull Run was evidently lost while General Pope was studying the Bull Run was evidently lost while General Pope was studying the line of the enemy's retreat, and Porter was derelict because he did not strike Jackson's flanks! Our lines of retreat took care of themselves, and on August 30 were occupied by the greater part of our soldiery, in compliance with the precept "Sauve qui peut."

Really we are so remote from the war that we may indulge in a little amusement over the "fustian" of such orders and such evidence. And perhaps when the promises are compared with results it will not be treason to say, in the words of Jomini:

I have seen many generals, marshals even, attain a certain degree of reputa-tion by talking largely of principles which they conceived incorrectly in theory and could not apply at all. I have seen those men intrusted with the supreme command of armies and make most extravagant plans, because they were totally deficient in good judgment and were filled with inordinate self-conceit, (Jomini, Art of War, page 345.)

I commend this declaration to the consideration of such as are looking for the cause of disaster in the Bull Run campaign of 1862

Until the rennaissance of fustian on the discussion of the Porter case I had supposed that "The Life of Napoleon and his Marshals," by Headly, had been laid aside to fire the ambition of some bucolic youth who might seek glory in the next war. But, sir, I find myself mistaken, for I read in the CONGRESSIONAL RECORD of January 6, 1883:

One of the great leading maxims in Napoleon's military experience—you will find it in all his campaigns, and it was a standing order to all his corps commanders—was that when the general of the army was not present to give orders, each corps commander shall march to the sound of the enemy's guns. That was a general order in all his campaigns.

This is nearly as good as General Pope's address to the Army of irginia, and is fully up to it in style. There is but one thing omitted Virginia, and is fully up to it in style. to complete its dramatic effect—a battle-scene, with a drummer-boy leading a charge.

Blind obedience is a favorite maxim of military writers, and I concede that an indiscriminate questioning of orders would be wholly subversive of discipline in peace, and in war fatal to the success of many a campaign. But, sir, in war, in the handling of large bodies of men, that doctrine implicitly followed would lead oftentimes to death and disaster. No general commanding understandingly issues an order that would defeat the purpose he seeks to obtain by the destruction of his would defeat the purpose he seeks to obtain by the destruction of his troops. If he be present and direct a movement he must be blindly obeyed, irrespective of consequences. Not so if he be absent, in a distant part of the field. The reason is manifest. With a line of battle of 100,000 men, extending across a country miles in length, with country broken and view obscured and hidden, the general commanding sends an officer from the right to the left of his line with an order of movement; an hour, two hours may intervene before its delivery. In the mean time the whole condition of the left is changed. The enemy, weak at the giving of the order, at the time of its reception may have messed his force on his right, and the attack which an hour conjugate which massed his force on his right, and the attack which an hour earlier might have been practicable has become utterly hopeless; and a failure in it, followed by an "offensive return" of the enemy, be the loss of the field that might otherwise have been won. What would be expected of an officer in command of the left under such circumstances? Archduke Charles answers this question for me:

Charles answers this question for me:

Jourdan's army having forced the passage of the Lahn (July 7, 1796) the first intention of Wartensleben, who commanded the Austrian corps left before it by the Archduke Charles, had been to fall back behind the Widda. \* " " But the 9th of July having received a dispatch, in which the Archduke wrote to him to withdraw from the environs of Friedburg only after having fried the fortune of arms, he changed his design and resolved to attack Jourdan the same day. However, Wartensleben should not have attempted an attack. He could in fact direct it only against the center of the French army. \* " " In spite of these dangers he had the temerity to attack, and in what a situation. With forces inferior in number, in a position in which his wings deprived of support and threatened with being constantly outflanked, had no reserve. In vain will it be said that the order which the Archduke Charles had sent him was the ground of his resolution. Wartensleben had the right not to execute it. The Archduke Charles, then near Pforzeim, did not know his situation when he gave him the order. A general-in-chief who indicates to subordinates detached afar their lines of operation and the strategic points of their defensive positions, has performed his duties. One can not expect from him precise and

detailed orders when their execution depends not only on the circumstances of the moment, but also on the actual position of the troop. L'ARCHDUC CHARLES.

A reprimand of one of his own officers for obedience to one of his

The Duke of Wellington issued a general order from the camp at Jansen, 1803, containing the following enunciation of military law

sen, 1803, containing the following enunciation of military law:

Major-General Wellesley thinks proper to explain to the troops that it is necessary to well distinguish the cases in which it is allowable or not for an officer to act at his own will. It may frequently happen that an officer receives an order which, through circumstances unknown at the moment of giving it by him who gave it, is impossible to execute, or the execution of which would be so difficult or so dangerous that there would be a moral impossibility to conform to it. In a case of this nature Major-General Wellesley would be very far from wishing to prevent detached officers from acting freely. But Capt. \* \* \* was not in that situation: he had, and has had, no private information which the officer who had given him his orders did not also have, and then it was his duty to obey.

ARTHUR WELLESLEY.

In a little work translated from the French by Colonel D'Aguilar, entitled Napoleon's Military Maxims, I find under maxim No. 52-

A blind obedience is due only to a military command given by a superior present on the spot at the moment of action. Being in possession of the real state of things, the superior has it then in his power to afford the necessary explanations to the person who executes his orders.

In a translation from the French of "Dupareq," by General Cullum, entitled Elements of Military Art and History, I read from the chapter on battles, page 310:

The order of the day, often completed by verbal instructions, also exhibits each person's part in the attack, develops and explains the principal maneuver \* \* \* in order that each general may intelligently perform his part toward the success of the maneuver, even should circumstances oblige him to depart from his orders and to make use of the large discretionary power necessarily intrusted to him.

General Grant has given his recognition to the same principle. Generals Schofield, Terry, and Getty in the case under consider pressly recognize and approve it and declare-

It is a well-established military maxim that a corps commander is not justifiable in making an apparently hopeless attack in obedience to an order from a superior who is not on the spot and who is evidently in error in respect to the essential conditions upon which the order is based.

But, sir, we are told that the great Lord Mansfield and Chancellor Loughborough, in the case of Sutton vs. Johnstone (1 Term, 548), declared that the doctrine of "blind obedience" was military law, "and that nothing but physical impossibility can excuse non-performance." I answer yes, so they said; but that does not make it military law. The question before them was, how far an officer was protected from civil action for damages sustained by an act done under color of office in arresting and sending before a court-martial a subordinate for alleged dis-The court-martial found the disobedience justifiaobedience of orders. ble; which established by the only military authority in that case that it is justifiable under certain circumstances not to blindly obey. But the court held, in the civil action for malicious prosecution, the gist of which every lawyer knows is "probable cause," that the finding of the court that the disobedience was justifiable showed there was probable cause, and hence the action would not lie, overruling the unanimous judgment of the exchequer delivered by Baron Eyre (1 Term, 493)

The language used not relating to the points involved is mere obiler, and no more establishes a rule of military code than it would have settled a theological dogma, if the learned court had discussed it and given their views upon it. Napoleon, Wellington, Archduke Charles, and General Grant, may not equal Lord Mansfield in knowledge of commercial law; but their opinions upon the duties of a subordinate to his chief on the battle-field are infinitely preferable to his. I would not break down the discipline of a command depending largely upon the rule of "blind obedience," but I say there are periods in the field when from necessity the subordinate must use his judgment; and the subdivision of troops into corps, divisions, and brigades, permits the invest-ment of discretion to men of experience, courage, and fidelity, when-ever the corps is absent from the general-in-chief, whenever the division is absent from the corps and the brigade from the division, which will in no sense impair the discipline of the service, but will, on the contrary, advance its best interests.

Having reviewed to some extent the recognized rule of the military code, defining the powers and duties of a corps commander, I ask you to join the Fifth Corps on its march from Manassas Junction. General Morell leads the column, followed by Sykes, Sturges, and King's division; an effective force of 15,000 men ready and willing to fight under a corps commander, whose name was a prestige of victory. We meet a mounted man just fron Gainesville; he tells us the enemy's skirmishers were there to the number of about four hundred, and their main body was not far behind them. (General Morell's evidence, page 141, court-martial record.) If we are to reach Gainesville it is apparent the sooner we get to work and clear the road the more likely we will be to reach the point of our destination, for we know that every moment increases the force in our front. Without hesitation Griffin's moment increases the force in our front. Without hesitation Griffin's brigade halts, throws four companies of the Sixty-second Pennsylvania to the front with instructions to move on in advance about half a mile. throwing out flankers to the side and skirmishers to the front. move on until we reach a cleared place, about five miles from Manassas Junction. Our skirmishers have found the enemy's pickets and

firing commences; the other eight companies of the Sixty-second Pennsylvania are ordered out to the front to support their comrades—there are twelve companies in this regiment. (General Griffin's evidence, page 156, court-martial record.) Our skirmishers capture and send in to us 156, court-martial record.) Our skirmishers capture and send in to us three mounted prisoners. (Griffin's evidence, court-martial record, page 159.) We are now on the crest above Dawkins Branch, and it is at least 11 o'clock, and General Porter immediately formed line of battle on the crest. (Morell, new record, page 431.) General Porter examines the prisoners and learns they are Lonstreet's men. (Lieutenant Weld, new record, page 292.) Griffin puts a battery in position. (Griffin, court-martial record, page 156.) And General Porter receives the joint order. Let us see where Butterfield is. He has an order from Porter to move his brigade across the branch and take position in the vicinity of the Car-He puts his brigade in motion and then rides forward to make a personal reconnoissance of the ground. McDowell comes up in his absence, the order he gave his brigade is countermanded without his knowledge, and he soon rides back in a rage to find out who gave orders to his troops without sending it through him; and found his brigade had gone to the right in the woods. He complains of the method used in changing the direction of his troops. He inquires for General Porter and finds that he had gone into the woods on the right with General McDowell, and learns that the change in the direction of his troops was a sudden movement in consequence of something that had occurred between McDowell and Porter. (General Butterfield's evidence, new record, pages 467-468.)

#### M'DOWELL HAS COME AND TROUBLE BEGINS.

Porter is made a subordinate. His orders to advance are countermanded, and we withdraw from the head of the column and let the witnesses who remained tell what took place. Colonel Locke, adjutant-general of General Porter, testifies (court-martial record, page 131):

general of General Forter, testifies (court-martial record, page 131):

First as w General McDowell at Dawkins Branch. Porter was forming his corps in line of battle. He had made considerable progress in the disposition of his troops; a battery was in position and the troops were being deployed. General McDowell said: "Porter, you are too far out already; this is no place to fight a battle." McDowell remained some little time in private conversation with Porter. They then mounted their horses and rode off across the railroad to a woods upon our right of the road. I was sent by General Forter with a message to General King. General McDowell answered, "Give my compliments to General Porter and say to him that I am going to the right and will take General King with me. I think he had better remain where he is, but if it is necessary for him to fall back he can do so on my left."

Captain A. P. Martin, who commanded the artillery of Morell's di-sion, saw the meeting between McDowell and Porter on the morning of the 29th at Dawkins Branch. These two officers met at the head of Porter's column about 11 o'clock. After the formal salutation, General McDowell said (court-martial record, page 136): "Porter, this is no place to fight a battle; you are too far out." This evidence was undisputed before the original court-martial, but was ignored by the judge-advocate in stating the case to the President. It is undisputed still.

Before the West Point board the following compulative evidence was

Before the West Point board the following cumulative evidence was

given on this point:
Captain Earle, Morell's acting adjutant-general, formerly adjutant of the Fourth Michigan Infantry, testifies (new record, page 421):

Between II and 12 saw McDowell come on to the field. The remark which General McDowell made when he came up attracted my attention from the abrupt manner in which he spoke. His remark to General Porter was, "Porter, you are too far out." I saw him make a motion with his hand back and heard the word "back."

Walter Scott Davis, First Lieutenant Twenty-second Massachusetts, acting staff officer of Martindale's brigade, testifies (new record, pages 405-406):

We marched directly down here (pointing on the map), near Dawkins Branch, on the right of the Manassas and Gainesville road; it was 11 o'clock at least. After forming line of battle there we were moving slowly forward.

\* \* \*\*
General Porter was there in person. General McDowell rode down there rapidly and rode up to General Porter \* \* and said "Porter, you are too far out; move your troops back into these woods." Then in an undertone he said, "This is no place to fight a battle."

Question. You have used a gesture. Will you describe that gesture? Answer. With his thumb pointing back ward over his right shoulder. General Porter spoke to me and asked to have the brigade moved back. Witness then recites dreumstances impressing the facts on his memory.

McDowell said to him as he turned back his brigade, "I am going to take you away from Porter," \* \* \* "Porter has gone as far as he can go," or "Porter has gone as far as he can go," or "Porter shield," Non me ricardo."

If we believe it, we have Porter at noon of the 29th day of August If we believe it, we have Porter at noon of the 29th day of August pushing forward to engage the enemy under the Gibbon order, that he might strike connection with General Pope's troops moving up the Warrenton pike. This proves him no laggard. This disproves the insinuation he had no stomach for battle. This proves his willingness to fight under Pope or any one else who carried the Union flag. Who, then, was responsible for halting the troops and allowing the enemy to mass his forces across the way? It was Major-General Irvin McDowell, who said "Porter, you are too far out; this is no place to fight a battle." This man's testimony convicted Major-General Fitz-John Porter of neglect of duty; it was the keystone of the arch that held all else of the prosecution in position. It was upon him Pope relied; it was upon his statements the court-martial relied. It was to his declarations

the judge-advocate pointed as absolute verities, and directed the mind

the judge-advocate pointed as absolute verities, and directed the mind of Mr. Lincoln to an approval of conviction.

And now, sir, I will consider his evidence—I will compare his statements to the court-martial with his statements to the West Point board, and with printed circulars distributed by him. I will read dispatches produced after sixteen years' concealment. I will separate his facts from his insinuation. I will point to his evasions, misstatements, and equivocations—to his manner in testifying and to his conduct in the dissemination of untruthful statements, tending to mislead and deceive the public to the injury of a former companion in arms, and when I have done, if I shall repeat my former declaration, "That his tongue is as subtle as the poison of the Borgias," I thoroughly believe the country will respond, Amen!

General McDowell commenced his evidence, by putting forth the

General McDowell commenced his evidence, by putting forth the absurd pretense that General Porter's corps and King's division were under his command by virtue of the sixty-second article of war. Prior to the receipt of the joint order, he made this absurd claim, to account for his absence from his troops while he was scheming to get back King from Porter. He says (court-martial record, page 81):

On arriving at Manassas Junction I met Major-General Porter's corps coming up, and saw Major-General Porter. Soon after he showed me an order from Major-General Pope to himself, directing him to make a certain movement and to take with him King's division. \* \* \* Some conversation took place between General Porter and myself concerning this order, I feeling some embarrassment at one of my divisions going off, as it seemed to me, under his command. He mentioned, as I was the senior officer I naturally and necessarily commanded the whole, his force as well as my own, and with that understanding the division followed after his corps on the road he was ordered to take toward Gainesville, I think.

In this statement he would seem to imply that General Porter conceded the command to him, which General Porter has always denied, and "that with this understanding King's division followed after Porter's corps;" impliedly insinuating that if it had not been for this understanding King's division would not have followed Porter; and this in the face of a direct order from General Pope to General Porter to take King's division with him. The order in effect detached King's division from McDowell and placed it under the command of Porter, but General Pope to Gen eral McDowell seems hardly satisfied himself with his first statement, and on page 82 (court-martial record) he says:

In starting out on this road, as I mentioned before, General Porter had started out ahead of me under the order he had himself received to move with his corps and one of my divisions. \* \* At that time I conceived General Porter to be under me.

On his cross-examination he still insists upon his theory, and says pages 88 and 89, court-martial record):

(pages 85 and 59, court-martial record):

I came down to take King's division and bring it up along with my other division, that is, with Reynolds's division then engaged at Groveton. I found it with an order to go with General Porter in another direction; that was what produced the embarrassment. \* \* I do not know that embarrassment is the proper word; what I meant was that I found things different from what I expected. When I spoke of one of my divisions going under him he suggested that I was senior officer and that I could take command of the whole force. \* and we went forward at first in that way before the joint order reached us. \* \* The order was sent by General Pope upon the receipt of a note from me in reference to this matter of my division.

Again he says (court-martial record, page 90):

General Porter and myself started out from Manassas with the understanding that, under the article of war applicable to such cases, I had the command of the whole force, his own and my own.

Now, what are the undisputed facts? Porter and McDowell did not start from Manassas together; McDowell did not assume nor seek to exercise any control over the Fifth Corps and King's division or either of them, after the Gibbon order and before the joint order. He did not even accompany the troops on the march, but he staid behind and wrote a note complaining of his loss of command and sent it to General Pope at Centreville, and waited until he received in reply to it the joint order. Then he rode forward and overtook the Fifth Army Corps deploying into line of battle, and under the joint order assumed command. There is not a single particle of evidence in the case that sustains his statement; but, on the contrary, all the evidence proves the facts as I state them. I will go further than this, and assert that General Mc Dowell knew better when he made the statement. General Gibbon swears (new record, page 177) that when he delivered the order to General Porter "General McDowell requested General Porter when he formed his line of battle" "that he would place King's division on his right, so that he (McDowell) could have his command together, it being known at the time that Reynolds's division, a portion of McDowell's command, was out in that direction somewhere, presumably on the right of what would be Porter's line."

On page 328, Senate Executive Document No. 37, first session Forty-sixth Congress, will be found a portion of a dispatch from McDowell to Pope, with this postscript:

I have just seen your last order to take King. Of course this is but temporary, and I have asked Porter to place King on his right that I may have him when I McDOWELL

Verily out of thine own mouth art thou condemned!

But look at it from another view, and you will see the hollowness of the claim. If McDowell retained not only command of King's division, despite General Pope's order, but became commander of the Fifth Corps

well, by virtue of his seniority as he puts forth claim, why did he write to General Pope complaining because King's division was taken

from him and given to Porter?

The case briefly stated is this: The general commanding upon the field issued an order transferring a division of troops from one command to another. The commanding officer from whom the troops are detached another. still claims them to be under his command and insists that, by following them in person, he acquires command of the corps to which they were transferred, if he happens to be senior in rank, thus defeating the very purpose, presumably, which led to the transfer. It seems to me to be an absurdity that a pleb at the academy would not commit!

But it may be asked, what motive could have led General McDowell

to make a fictitious claim? I answer, a very strong motive. And here we find it. On the night of the 28th, by his absence from his troops, he permitted King and Ricketts to abandon the lines between Longstreet and Jackson, for which we have seen the court of inquiry severely cen-sure him. Reynolds was then engaged with the enemy at Groveton, so McDowell says. McDowell saw the order transferring King at 9 o'clock a. m. What excuse could be make for absenting himself from the field when he says his division under Reynolds was struggling with the enemy over at Groveton? None, unless one was manufactured to order. And his imagination seems felicitous in that direction. Gibbon fought Jackson on the night of the 28th; McDowell was absent looking for General Pope, because he wanted to tell him something. He heard the sounds of the battle, but got lost moving to the sound of the guns. Reynolds engaged Jackson in the morning, but McDowell left him and turned up at Manassas looking for King—he was performing the duty of an aid-de-He finds King sent to Porter as early as 9 o'clock a. m. he can only account for his continued absence from Reynolds and the field from that hour till 12 o'clock by alleging that he was in command of the Fifth Army Corps. It is apparent, then, that his motive was strong to shield himself from the charge of being absent from his command when engaged, a second time, within the limits of twenty-four

But as I have said, the real object of his maneuvering was to get King back under his command and take his division back and connect it with Reynolds, resting near the Warrenkon pike. He used the joint order for that purpose, and never thought of doing anything under it but that. Let us see. Before the court-martial he says:

I came down to take King's division and bring it up along with my other division—that is, with Reynolds's division, then engaged at Groveton. (Court-martial record, page 88.)

There he avows his original purpose. Before the West Point board, upon being examined with reference to the movements going on in Porter's command, relative to an offensive movement against the enemy at Dawkins Branch, when he rode to the head of the column with the joint order, General McDowell was asked this question (page 758, new

Question. Did you make any observation at that time as to what his troops

cere doing?

Answer. No, sir! \* \* \* \* Q. Did not you understand that one of his brigades was deployed?

A. I don't know whether it was a brigade, division, or regiment. I was not there for that purpose

But if General McDowell's testimony is to be believed these troops had been under his command since 9 or 10 o'clock, and they, under the joint order, were at this time unquestionably subject to his command and were preparing for battle. He did not even pretend to know or inquire as to the preliminary dispositions. "He was there for another purpose." What did he do indicative of that purpose? He did not move to the front. No, but he rode down on to the woods on the right, in the direction of where he supposed Reynolds was, to see if he could get through. Failing in that he decided to take King and Ricketts over the Sudley Springs road. What for? "With a view of putting them on the left of Reynolds." (New record, page 759.)

I was excessively anxious to join Reynolds. (New record, page 759.) I thought I could get my troops into action quicker that way than I could by bringing them in the rear of General Porter, because the road was blocked up with his

General Reynolds says (court-martial record, page 167):

I knew that troops were over at Manasses, and was expecting to have them rought upon my left. I was informed such would be the case.

Who but McDowell, his corps commander, gave him the informa-

Here we find another of these blunders that a man makes when he abandons himself to his imagination. He feels it incumbent upon him, when he finds his acts criticised, to constantly iterate and reiterate expressions of zeal to get engaged with the enemy. This has served before to mislead and cajole, but we can not let it pass now unchallenged.

Let us weigh it for what it is worth. The enemy were then in his front, the skirmish firing was going on, and the batteries were exchanging salutations—these troops were not Porter's, they were McDowell's. Under the joint order he had control of his own corps and Porter's expressions. corps. He was general commanding the left wing of Pope's army. He stopped that preparation for battle and decided to take King and Ricketts over onto the Sudley Springs Road, "because," to use his lan-

guage, "because I thought I could get my troops into action quicker that way." Now, notice the following questions and answers:

Question. Did you then have any idea how long that movement would take

Answer. No; I don't know that the question came into my mind; but whether it took long or short, it was a movement I wanted to make. (New record, 758.) Q. Did you know how far you would have to take your troops to get around where you believed Reynolds to be?

A. I had only a general knowledge. I had not ridden over the road the day before.

Here, then, we have presented the curious spectacle of a brave man and zealous officer who was excused for negligence, criminal in its character, on the night of the 28th, on account of his heroic conduct this day, leaving a field within range of artillery and musketry and moving where he did not know, to some point the distance to which he did not know, with a body of 15,000 troops, in search of an enemy to engage. He was so impatient that he could not wait for the deployment of a corps under his command in front, but was so zealous and auxious to fight that he gave up the command of the left wing of Pope's army and went off over an unknown route with two divisions in quest of some enemy that his force might be applied against. The reasons General McDowell assigns for his action place him in this ridiculous attitude, when a frank and ingenuous statement would not have made him subject to criticism, and would have furnished General Porter a full and complete justification. He went after King to put him in on the left of Reynolds. He obtained the joint order putting Porter under his command. He found Porter confronted by Longstreet. He knew it was not the purpose to bring on a general engagement from the terms of the joint order if from no other source. Hence, finding Porter's roadway cut off he directed him to rest his line there and took his division and moved to the rear and right to go round the road and come in on Reynolds's left, fulfilling the condition of the joint order making a continuous line from the east to the west

Porter, McDowell, Sigel, Reno, Heintzelman, and if there needed anything more to settle this construction as the true one, General Pope gives it to us, before he had started out on the prosecution of Porter:

HEADQUARTERS ARMY OF VIRGINIA, August 29, 1862.

To Generals Heintzelman, Reno, and Sigel:

If you find yourselves heavily pressed by superior numbers of the enemy, you will not push matters further; Fitz John Porter and King's division are moving on Gainesville from Manassas Junction and will come in on your left. They have about 20,000 men. The command must return to this place to-night or by morning on account of subsistence and forage.

[IGHN POPE]

Major-Ger

The "this place" mentioned was Centreville, from which point it was The existence of this order was not known until after the courtmartial closed its session. (Senate Executive Document 37, first session Forty-sixth Congress, page 329.)

This order to the right wing corresponds with the construction Porter

has always given to the joint order to the left wing.

But we have not yet done with General McDowell's zeal to attack the enemy which led him away from Porter. He did not get over on to the Warrenton pike till nearly if not quite 6 o'clock with the head of his column, and he moved it toward Reynolds's left, but General Pope countermanded the order. One brigade was sent in one direction and one in another; and the balance of King's division went into the fight at dark under General Pope's order. Ricketts's division did not get farther than the Henry house, and only three brigades of King at most were engaged. This is a summary of that hero's record of the 29th, which has been spoken of and which led the court of inquiry un-der Pope's evidence to excuse McDowell's delinquency. But there are other meshes in the net woven about General Porter by this witness to be unraveled.

General McDowell was permitted by the court-martial to testify as to the meaning of the joint order, which was a question arising on the face of the order to be determined by the court having the facts before them; and here again he proves himself a swift witness. He says (court-martial record, page 82):

That order contemplated a line being formed, which was to be joined onto a ne that was to come up from the east to the west.

That is just what we claim the order contemplated as is patent on its face. But that did not suffice this witness. He injected into the order the following additional meaning (court-martial record, page 82): And have the troops on the Gainsville road attack the flank and rear of the enemy, as I understood it.

Is there a word in that order about attacking the flank and rear of I submit there is not. Nor do I believe General McDow ell so understood it. Let his actions speak. If he understood that the troops on the Gainesville road were by that order to attack the flank and rear of the enemy, why did he stop Porter from making the attack, and why did he take two-thirds of the force off the Gainesville road, where it was to attack on flank and rear, and move it to the rear and west five miles away from the Gainesville road, leaving 10,000 troops to do the work assigned by General Pope to 25,000? Actions speak louder than words!

In looking over the evidence I discover where General McDowell

received his idea that the joint order contemplated an attack in flank and rear of the enemy.

General Pope says (court-martial record, page 31) in reply to this question:

Will you state as accurately as you can recollect from the information that you have received up to the present time from any quarter, in what particular or particulars the accused failed to carry out that joint order?

Answer. I have stated that the accused had failed to carry out that order; first, because I believed if he had attacked the enemy on the flank as he was directed, &c.

Here is where General McDowell obtained his light, which he blindly followed as his polar star through the whole case. He understood General Pope to testify to that construction and he echoed it! But General Pope did not intend to so testify. It was one of his hasty, illconsidered statements. He was chock-full of desire to show Porter disobedient, and he fired off answers irrespective of questions. General Pope's answer related to his 4.30 order and not to the joint order, and this is apparent from the context, for immediately following the declaration stated and in the same answer he says (court-martial record, pages 31, 32):

In relation to the joint order of the 29th, I have General Porter's note to Generals McDowell and King, in which he himself states that he has not fully obeyed the joint order of the 29th of August.

Now is it not apparent that although the question related to the joint order the witness answered as to the 4.30 order as well as to the joint order? His testimony reads:

If he had attacked the enemy on the flank, as he was directed, I should have nown it, being myself on the field of battle and near to the front.

He states why he knows he did not attack the flank, because he was there to see; but when he speaks of the joint order he says:

In relation to the joint order of the 29th, I have General Porter's note, in which he states he has not fully obeyed.

One order he swears disobedience to from personal knowledge; the other, the joint order of the 29th (he specifies it by date), he knows he did not obey, because he has written evidence from the accused him-

Now where is the motive that could lead General McDowell to fol-low General Pope's lead blindly? It was his self-interest, his selfpreservation. It was freely charged that his neglect of duty permitted the junction of Lee with Jackson that brought disaster upon our arms. He occupied the position of a suspected witness who must convict another to save himself, and his safety in any event rested on the preservation of his relations with General Pope, who had the power to save or destroy him. And here in this motive we shall find the key to his whole evidence, and to his conduct afterward in attempting to injure Porter when he was struggling for a rehearing.

Having injected "the flank and rear" into an order that had no allu-

sion to either of them, but directed the formation of a line of battle simply, and having himself clearly violated the order by the removal of the troops that were to strike "that flank and rear" from the Gainesville road, he commences to throw up a line of defenses to shelter him-

He says (court-martial record, page 84):

General Porter made a remark that showed me he had no question but that the enemy was in his immediate front. I said to him, "You put your force in here and I will take mine up the Sudley Spring road," on the left of the troops at that time engaged with the enemy.

It is shown by the evidence of General Patrick, Colonel Locke, Captain Martin, Captain Earle, and Lieutenant Davis that he said just the contrary; that instead of an order to go in, he gave the order to come out. We have shown by his action a denial of his words, in corroboration of these witnesses. Why did he make this statement except to cover his own failure to fight by charging it upon some one else? He fell back like the captain in the story who said he was lame. But he says he ordered somebody else to fight. But this witness is not content to stop here. He seems to desire to fan public prejudice, and by gentle insinuations brand Porter as a coward, for he knew that whatever else the American people might condone, cowardice placed an officer beyond the pale of sympathy. Hear him:

Question. You have said that the accused made an observation which showed he was satisfied that the enemy was in his immediate front; will you state what that observation was?

Behold the hesitating, doubtful rôle assumed, as he says but little and implies so much:

and implies so much:

Answer. I do not know that I can repeat it exactly. I don't know that the accused meant exactly what the remark might seem to imply. The observation was to this effect, putting his hands in the direction of the dust rising above the tops of the trees, "We can not go in there anywhere without getting into a fight."

Q. What reply did you make?

A. I think to this effect, "That's what we same here for."

He don't know exactly what Porter said, and he thinks what his reply was. More of this occurs on page 92 of the court-martial record: Q. When the accused said to you there he could not go anywhere without getting into a fight, did he or not appear to be averse to engaging the enemy?

This question came from the court, who seem from the form of the question to desire a categorical answer. The witness dare not say yes; he knew Porter too well. He dare not say no, for he knew what was expected of him. See how nicely he goes between the rain-drops:

A. I can not say that it made that impression on me.

But he can not stop after answering this question, and must put an addendum to it:

Though in giving my answer I took the view he did so imply and made the

He can not stop here with safety, but in an additional addendum I mean by that, that that was not seriously a question with me, for when I left him I thought that he was going to engage and would engage the enemy.

Translated it reads: "I can't say that it did, but still I gave you to understand that it did. I did not think he was, meaning by that, I did not think of it at the time."

But we have some more light on this question of what Porter said. On page 88 of the court-martial record General Porter asked General McDowell in reference to his conversation with General Porter at the interview between them at Dawkins Branch, on the 29th of August, 1862-the identical conversation of which McDowell has been speak. ing-the following question:

During that conversation, that interview, did the accused say anything or do anything from which you inferred disloyalty upon his part, or unwillingness to perform his duty under the command of General Pope?

Answer. No, sir. What he said was the reverse. He professed to have but one feeling, and that was the success of his country. This was said, I think, in reference to the subarrassment, &c.

And yet, sir, this same man insinuates that Porter was afraid to fight, that he neglected willfully his duty, that he was treasonable to his flag and aided purposely in bringing defeat upon our arms, and the judge-advocate caught up the refrain, and made the executive office resound with its notes

Had the judge-advocate scanned the evidence to arrive at the truth rather than to convict he would not have made this testimony pivotal, but would have answered it with his favorite maxim, "Falsus

falsus in omnibus.

Justice compels me to follow the tortuous trail of this witness to the end. He has testified, as we have seen on page 82, that the joint order contemplated an attack upon the "flank and rear" of the enemy. We have shown that such a construction was not a legitimate one, and have said he knew or ought to have known it was not. He confirms what we have said. Look at page 86 of the court-martial record:

Question. When did you first see the order of which you have spoken in your testimony in chief, that of 4.39 p. m., August 29th, which directed the accused to turn the right flank and attack the rear of the enemy? You, have been understood as saying that was the effect of the joint order. That is not your meaning, is it?

The witness is quick to perceive the blunder made by him in his zeal. and he answers:

It was the effect of the joint order as modified by me, when I left General Porter—so far as I had the power to modify that order, and so far as the understanding with which I left him at the time.

Q. Are you to be understood as saying that before you saw the joint order of 4.30 of the 29th of August you, under the discretion you supposed was reposed in you by the joint order to yourself and General Porter, had directed him to attack the enemy's right flank and rear?

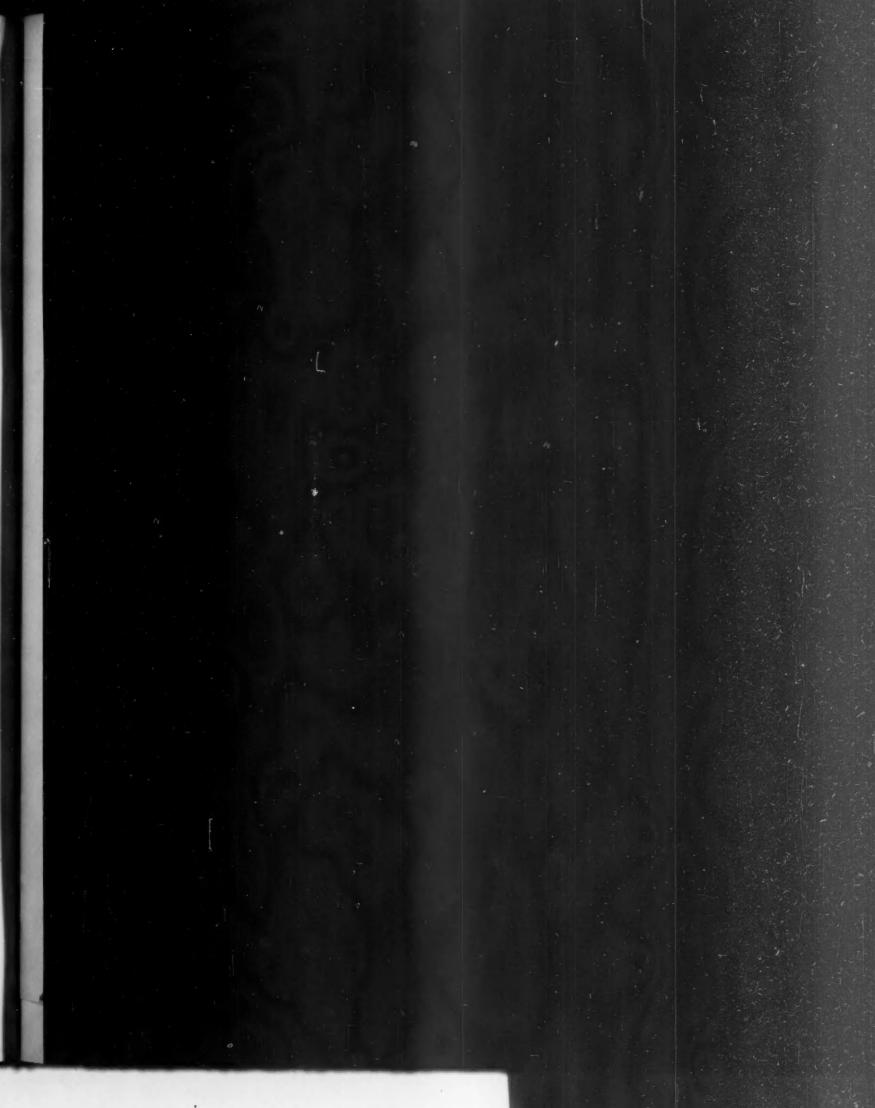

This seems to be a simple question calling for a direct answer; but it will be borne in my mind one of the rules for the detection of spurious evidence is the unwillingness of the witness to permit his answer to stand without voluntary explanations, and reciting other matters not per-tinent to the question to distract the attention. This system of tactics marks all of General McDowell's evidence, and I give his answer to this one as an illustration:

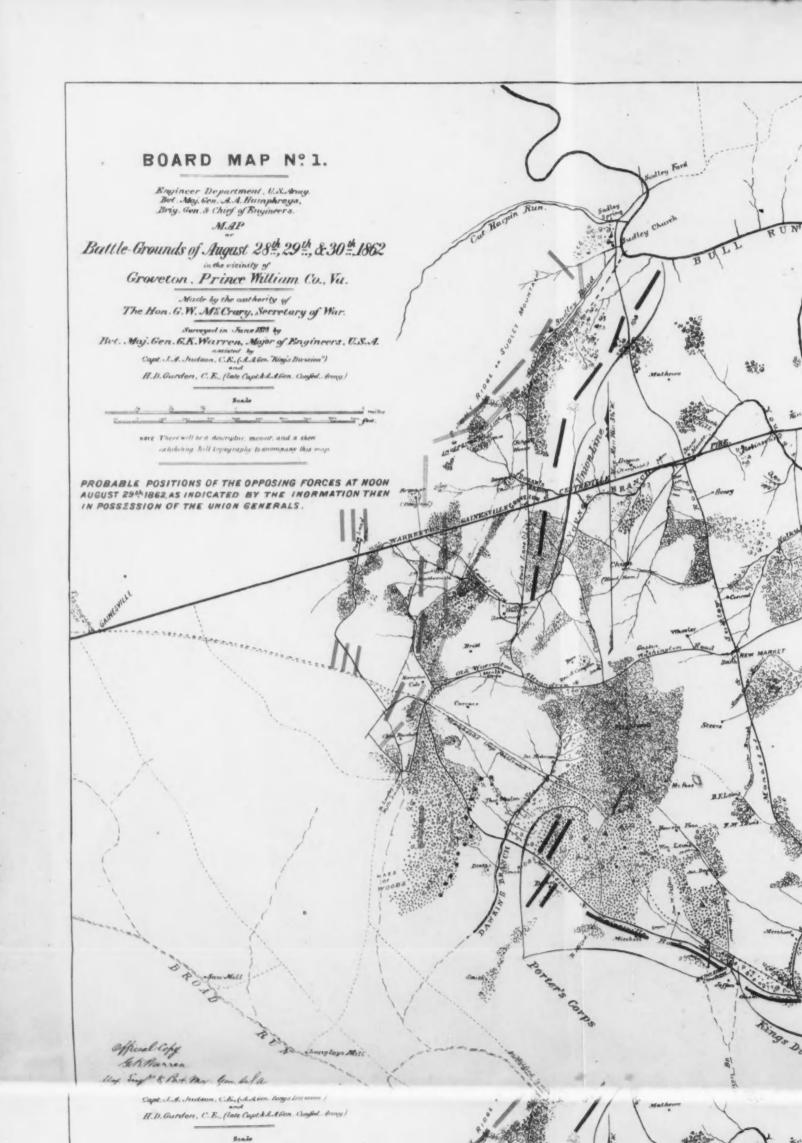

To that effect, yes, sir. I knew I had the discretion, and I did not suppose. This is the clause under which I suppose, if you prefer that term, I had that discretion: "If any considerable advantages are to be gained by departing from this order, it will not be strictly carried out." That joint order contemplated General Porter's corps and my own to be "employed differently from the way I had arranged when I left General Porter, which arrangement was to separate them, leaving him alone on the Gainesville road while I went up the Sudley Springs road."

The rule for detection of fraud in evidence which I have stated never had a happier illustration. He states in an ad captandum sort of way to the first question: It was the effect of the joint order as modified by me, so far as I had the power to modify it.

That was intended to convey the impression that he had "ordered Porter to attack flank and rear" without saying so, for he left his power of modification open, but when pressed with the second question, to make it certain that he intended to say that, he answers, "To that effect, yes." He follows in the same breath and as part of his answer, assuming to resent a reflection that he finds in the question and makes an issue on the word supposed, and then cites his authority, running off in an independent collateral matter, but before he gets done, under cover of the smoke he has a raised he says, referring to what he had aroff in an independent collateral matter, but before he gets done, under cover of the smoke he has raised, he says, referring to what he had arranged when he left Porter (now recollect that was the time he has been giving you by his former answer to understand he directed the flank and rear attack), "which arrangement was to separate them, leaving him alone on the Gainesville road," &c., commencing by stating implicitly one thing and concluding by stating the fact showing he did no such thing, for if his arrangement for Porter had been to attack he would have so stated instead of saying his arrangement was to leave him alone on the road. Prevarication is a mild way of designating this sort of testifying. But there are some other things showing he gave no such order, in addition to the evidence of General Patrick and the others whom I have quoted.

.

On page 85, court-martial record, the witness, speaking of whether he told Porter he was too far to the front, says:

Something may have been said about not going further toward Gainesville with reference to falling behind Bull Run that night. \* \* It was hardly a question of going further on; it was more a question of turning to the right and going against the enemy passing down the Warrenton pike.

He admits something was said about not going further toward Gaines ville, but why was it hardly a question of going further on? General Pope had designated the road. It reached Warrenton pike, and the Pope had designated the road. It reached warrenton pike, and the point of intersection was several miles in rear of Jackson's line; but General McDowell has said that off from that road troops could move on the flank and rear of the enemy. There was no road to the right except the Sudley Springs road that General McDowell selected for his line of operation, leaving the Gainesville road to Porter. Now, I repeat, what made it "hardly a question of going further on?" I answer it was the enemy in front, which made it as early as 12 m. of the 29th of August impracticable for the troops of Porter and McDowell combined to attempt the passage of the road. And, hence McDowell left Porter to hold the enemy on that road, while he went around to come in on Reynolds's left and make a line that he could not otherwise

come in on Reynolds's left and make a line that he could not otherwise make because of the lion in his path.

Again, McDowell says "turning to the right" was the true movement and the only one to be made. Turning to the right carried the troops away from the right of the enemy, who prevented McDowell's command (Porter, King, and Ricketts) from moving as General Pope directed. So that when he says "attack flank and rear," and defines the movement to be to the right, his orders are the reverse of his movement. But to cap the climax of this pretended order to attack "the flank and rear," the witness states, at page 213 of the court-martial record. "It do not know where the right wing of the main hody of the meat. But to cap the cilmax of this pretended order to attack. The flank and rear," the witness states, at page 213 of the court-martial record, "I do not know where the right wing of the main body of the enemy was at the time." And yet this was the flank he says he or-dered the attack to be made upon. It is entirely consistent with the facts and the situation that McDowell moved to the right; but it is equally certain that a movement by Porter in the same direction must have resulted in leaving his rear and the left wing of the army uncovered, to be enveloped by the enemy's right, or he must have undertaken a flank march in the immediate battle-front of the enemy in position, moving through tangled thickets, wood, and ravine, to get to the War-renton pike, either of which movements on the 29th would have spared the country the battle of the 30th, for we would have been sans men, sans guns, sans everything to fight a battle!

There is still another evidence that General McDowell gave no such

order. It is not hinted at even in his official report! And there is no specification charging General Porter with violating any such order.

The crime charged against Porter which struck more keenly the American heart than any other was that he held his corps idle all day within the sound of the guns of his comrades in arms and refused to give them his support.

It was a most heinous charge, and I have no language to express my condemnation of it if it were true. That he was under orders not to move until he received the 4.30 order I think is settled beyond question, unless you believe McDowell. I will now show you that General McDowell was one of the principal agencies in creating that impression and procuring Porter's conviction for it, and that he did so by the use of the same tactics that have been discussed, and that he did so pur-

On page 84, speaking in reference to the time when the supposed order was given by him to Porter to attack, he says:

question. Were there any obstacles in the was of the advance of General Porer's command upon the flank of the enemy?

Answer. That depends upon what you call obstacles; a wood is an obstacle.

Q. I mean insuperable obstacles in a military sense.

A. I do not think we so regarded it at the time. I did not.

Q. Was or was not the battle "raging" at the time?

J. The battle was raging on our right \* \* \* at Groveton.

I ask you to scan the board map No. 1, which I here attach and make part of my remarks. General McDowell says there was a "battle raging at Groveton at the time." "Reynolds's division was engaged," one of his own divisions. And in order to reach it and give succor to his comrades in arms he neglects to go across the country over which he says it was practicable to move troops, but goes off down the Sudley Springs road to the Henry house, and does not reach that part of the field where the troops are said to be engaged until after 5 o'clock, and then with only a part of King's division. What became of the combatants in that "raging battle" during that five hours? As I have said, scan this official map and tell me where the road lies for Porter to move upon that McDowell could not and would not have taken if he was pushing his troops rapidly to the field of battle to assist troops then engaged. General McDowell convinced the court that there were woods Porter could have made his way through. Just where they were it is not clear, for in his testimony at West Point, on page 775, he admits he had no reference to these woods extending across to Five Forks, as shown upon this map. "He don't know anything about them." "They were not before the court." On page 91, court-martial record, General McDowell sizes. McDowell gives some very peculiar reasons why he knew the face of the country and was competent to give an opinion. I can not avoid referring to them, as it shows what passed for evidence in the hours of sion and excitement. He enumerates:

First. Because he had been over the railroad to Gainesville, when he

was so busy he did not notice the country through which the track passed.

Second. By marching from Buckland Mills to Gainesville and from Gainesville east a mile or so (this was four miles from the country in question), the turning off to the right and south and going across the country to Bethlehem Church and thence to Manassas. (This turning off carried him right away from the country under consideration and would seem to indicate that the détour was made because of the impractica-

bility of marching through this broken wooded section.)
Third. Because Reynolds had gone nearer Groveton than the witness had and had then made a détour to the right. (Recollect these troops were coming from Gainesville and each détour to the right carried them south from these woods.)

Fourth. Because King had turned south from beyond Groveton and found his way to Manassas. Hence he thinks himself competent to speak of a section that neither he nor King had passed over.

The judge-advocate seized upon this evidence and, re-enforcing it with the evidence of Lieutenant-Colonel T. C. H. Smith, who had never been there at all, pronounces his judgment that it furnishes a conclusive reply to Porter's declaration that this country was impracticable for military operations. What does Colonel Smith say (court-martial record, page 294), as quoted by the judge-advocate?

I infer the corps of the accused could have moved up its right wing, joining with the forces engaged. \* \* \* It is not all inference from the general character of the country. It is based also upon the fact, as I understand it, \* \* \* that that portion of the country over which the corps of the accused would have moved upon the evening was sufficiently practicable to enable the enemy, as they did, to make a similar movement on our left the next day.

It does seem more than passing strange that the judge-advocate should have pressed these statements as "conclusive proof," and omit to allude to the evidence of the only men who spoke from knowledge.

Lieutenant James Stevenson made a trip from the left of General Pope's army between 1 and 2 o'clock across Longstreet's front in a direct line, and he says (court-martial record, page 194):

It was a rough country, partly wooded, with some ravines. It was not a country over which troops could be marched in large numbers. I saw the enemy's ine; should judge from 12,000 to 15,000!

General John F. Reynolds, whom McDowell cites in giving his reasons, held the extreme left flank of our line during the 29th of August, and he says:

Question. Between New Market and Groveton what was the character of the

Question. Detween Set and wooded. I will state I know that from survey?

Answer. Very broken by ravines and wooded. I will state I know that from wing passed over it on horseback that night from somewhere in the neighborhood of New Market over to the Warrenton pike near Groveton.

It may be well to explain when McDowell received his order on the afternoon of the 28th to push his troops on Centreville, Reynolds, who was in the advance, making the movement on Manassas, changed the head of his column for Centreville. He found he could not cross this country under consideration, so he made a slight détour and came in on the Gainesville and Manassas road, thence down to Bethlehem Church. and followed Sudley Springs road down to the neighborhood of New Market. King, who was in the rear of McDowell's column, turned into the Warrenton pike and in a few minutes Gibbon was engaged with a portion of Jackson's force near Groveton. Reynolds heard the firing, and, soldier as he was, rode across the country to King to let him McDowell heard the firing but got lost know his position.

General Reynolds, on cross-examination, continues, in reply to the judge-advocate (court-martial record, page 165):

It was impossible to maneuver troops over that country

This answer ought to suffice for McDowell's statement, based on what Reynolds did

And now General Reynolds answers Colonel Smith's inferences, on which the judge-advocate relies as conclusive (court-martial record,

Question. Did not the enemy in attacking the left and rear of General Pope on Saturday, the 30th of August, pass with artillery and infantry over much of the country that General Porter would have had to pass over on the 29th to attack the right of the confederates?

Answer, I think not, I think he had gotten in, as it were, between that broken country and our position on that day, occupying a ridge which crossed the turnpike there, and having the broken country behind him, because I maneuvered the 29th all up to that broken country and got partially on that ridge.

Choose ye between that life-long soldier who knew and the soldier of a few months who guessed!

a few months who guessed:

At West Point General Longstreet corroborates General Reynolds, and testifies his troops on the 30th did not pass over the wood east of Dawkins Branch, but his right moved by way of the old Warrenton, Alexandria, and Washington road (new record, page 121).

Porter, then, could not move to the right; he could not move to the front without bringing on an engagement not contemplated by General Pope's joint order and forbidden by General McDowell, his superior.

A suggestion may be properly made here not entirely in accord with the popular idea. It is as much a violation of military law and sol-dierly duty for a subordinate to bring on a general engagement prematurely as to stand aloof or give faint support, for it leads to as great—sometimes greater—disaster. I complain of this statement that there was a "raging battle" at the time spoken of by General McDowell, because it was not true, in the sense the court and the country were given to understand by the statement.

What the judge-advocate understood by that evidence is apparent from the picture drawn by him in his review presented to the President, where he says:

The accused had for between five and six hours been listening to the sound of the battle raging to his right. \* \* \* That a vigorous attack at any time between 12 o'clock, when the battle began, and dark, when it closed, would have secured a triumph to our arms, and not only the overthrow of the rebel forces but probably the destruction or capture of Jackson's army, the record fully justifies us in maintaining.

This presentation of the case contains the germ of the theory upon which the court acted; a battle commencing at 12 and raging till dark; Porter lying idle upon his arms, when had he attacked, the rebel forces would have been overthrown and Jackson's army captured. It conforms to General Pope's and McDowell's theory, that it was Jackson, and Jackson alone, that was upon the field, and that the attack Porter

should have made necessarily was an attack upon Jackson.

What McDowell meant to give the court to understand was exactly that thing. Not artillery here and there breaking the silence with irregular firing, but a raging battle of the troops of all arms, such as occurs at every general engagement. And that he, present with Porter, heard the sound and rushed to the field; while Porter inertly and listlessly loitered away the day and let defeat attend our arms and death

McDowell, in his official report, speaks of Gibbons's fight, wherein he had his four regiments, supported by two regiments of Doubleday's, and engaged Ewell's and Taliaferro's divisions of Jackson's army as "an affair'' (see Executive Document, third session Thirty-seventh Congress, volume 8, page 44, for McDowell's report; and for Jackson's report see volume 6, Confederate Reports, page 225), which is the language used to distinguish it from battle, in the sense which he understands the word "battle" when applied to the operations of an army. Now, I maintain and prove by the official records that there were not more and I think not so many troops, including both sides, engaged at any one time on the 29th of August until after half past 5 o'clock p. m.; and that from 12 o'clock m. until late in the afternoon there was nothing that could be called more than a skirmish here and there; and that the sounds of that skirmishing were inaudible to Porter or his troops. I also think, I may say without fear of being contradicted by any one who is conversant with the evidence, that the sounds of what are called battle on the right by portions of the commands of Hooker and Kearney were at no time audible to Porter or his troops.

But we have General McDowell's evidence on this "raging battle," that he conducted before the court-martial with greater success than

ever attended his operations in the field.

Called before the West Point board (on page 781), in answer to the question, "Did you hear any infantry firing at that time?" he says: "I do not think I did; I can not recollect at this day whether I did

Now, he can not plead excuse that time has dimmed his recollection. because he has been for years engaged in discussing this campaign and his part in it, as I shall hereafter show. He has manifested the deepest interest, his reputation as a soldier and as a man of honor depended on his sustaining himself; and the natural sequence from these conditions is that, with memory dimmed, interest makes imagination supply facts favorable to one's self. Hence I say if he dare not trust himself to say "yes" to the question put, his negative answer should be given full strength, unimpaired by his excuse of lapse of time or dimnes memory

Now, I submit if the firing of artillery means battle, in the sense of an army's engagement, the Army of Virginia was in a "raging battle" from Rappahanock Station to Falls Church, and by the same token General B. S. Roberts speaks truthfully when he says (page 10) in a pamphlet entitled Pope's Campaign in Virginia; its Policy and Results:"

In all these operations of Pope's on the Rappahannock, running through eight ays, a confederate general of high rank has said "that Pope had not once een diverted into the smallest blunder and had been guilty of no mistake."

Who was he?

His indomitable energy, endurance, and vigilance defeated every purpose of a bold, determined, and crafty enemy, who had calculated with certainty to destroy or capture his entire army—

And describes Hooker's engagement at Kettle Run on the 27th, where the loss was three hundred killed and wounded, in his following strictly truthful, barren style:

Forming his columns for this purpose, he pushed at a double quick through an extension of open fields swept by the fire of more than 10,000 muskets and carried the position of every battery with the bayonet. Having driven every piece of artillery from the field, he changed his direction by his right finak and forming his line under a heavy musketry fire fell with fury on triple lines of the enemy's infantry, filling a railroad cut of a thousand yards, seattering their force in every direction and putting to rout Ewell's entire army. (Page 13.)

And also in the following description of Pope's battle on the 29th of August, 1862:

His attack was successful, and he carried at great cost the wood where the enemy had massed their forces and at dark was in the possession of the field with the enemy's dead and wounded. (Page 19.)

But this historian does not confine himself to dry statements of facts, such as I have quoted; but in describing the characteristics of his hero he is seized with poetic fervor and breaks forth (page 31):

General Pope and General Lee are not the type of opposing generals who throw large armies into combat without great lesses. None will deny to Pope

the imperium of a general (? sic.) He was supreme in command and the controlling magnetism of every battle and combat. \* \* \* All his movements have been calculated with mathematical certainty and executed with a precision and exactness that has few examples in any war—none in this country. Within twenty-three days he fought seven important battles without mistake or disaster, and ended his campaign without a surprise or blunder.

I have digressed to give this piece of history, because its author, Gen-I have digressed to give this piece of history, because its author, General Roberts, is the officer who signs the charges against General Porter, and is a witness in the case whose opinion as an expert upon the operations at Bull Run are cited as strong and reliable evidence against Porter by the judge-advocate in his paper laid before the President.

But to return. General McDowell testifies before the West Point board (new record, page 780) that—

Porter was too far off to know whether there was a contest of musketry going in on the right.

How does this leave McDowell? His "raging battle" dies down to some artillery fire without musketry, so far as he knows, with the ad-mission that Porter's position was such that he could not hear musketry! General Pope, touching this "raging battle," says, in his official report (supplement report of the Committee on the Conduct of the War, volume 2, pages 153, 154):

I arrived on the field from Centreville about noon, and found the two armies confronting each other. \* \* 1 informed General Sigel \* \* that I would not again push his troops into action. \* \* I rode to the front of our line and inspected it from right to left, giving the same information to Generals Heintzelman and Reno, who were accordingly suffered to rest in their positions. From 12 o'clock until 4 o'clock, very severe skirmishes occurred constantly at various points in our line—

Note what made them-

and were brought on at every indication the enemy made of a disposition to retreat.

Now, then, we have "this raging battle," as it was described officially by General Pope, who rarely omitted to describe his battles in as high coloring as the pen and ink at his command would permit. Think of it, when you are told by the judge advocate that Porter sat unmoved as his comrades were stricken down in this raging battle!
General Pope says, on page 154 last cited, that "about 5.30 p. m."
"I directed Heintzelman and Reno to attack the enemy."

General Heintzelman in his official report says Kearney did not engage until near 6 p. m. that Hooker had previously engaged Grover's brigade of 2,000 men doing the fighting (the engagement lasting not more than twenty minutes), but they were repulsed before Kearney moved (see Executive Document, third session Thirty-seventh Congress, page 55); and being called as a witness before the West Point

board, testified (new record, page 606):
There was no continuous battle on the 20th—just sports. There was no general attack; the attacks were generally by brigades and regiments, not made by divisions—two divisions.

This officer commanded the right center.

Colonel McKeever, his adjutant-general, says (new record, page 197): I don't think there were more than 3,000 to 4,000 men engaged at any one time \* \* I could see the right of the line and center.

I need not remind those who have seen battles that this officer's position made it his especial duty to know and see what was being done, and hence his testimony is entitled to great weight, because we all know from experience the general tendency of officers engaged to magnify the part taken by their commands, and that great battles on paper sometimes dwindle down to insignificant nothings in fact.

This battle was fought and lost, as many others have been and will

by pounding the life out of regiments and brigades before the be, by pounding the fire out of regiments and brigades before the decisive battle begins. Every officer and man of the Fifth Army Corps who has ever spoken on the subject bears united testimony that no sound of infantry battle reached their ears until the last assault at dark, made on the left of the Warrenton pike. With such corroboration I concede the correctness of General McDowell's evidence "that Porter was too far off to hear musketry on the right."

The next thread is the location of Porter's troops at a point in rear and to the right of Jackson's flowless of the restriction of the real point in rear

and to the right of Jackson's flank and within striking distance, and

this is most stealthily spun and deftly woven. General McDowell says (court-martial record, pages 83, 84):

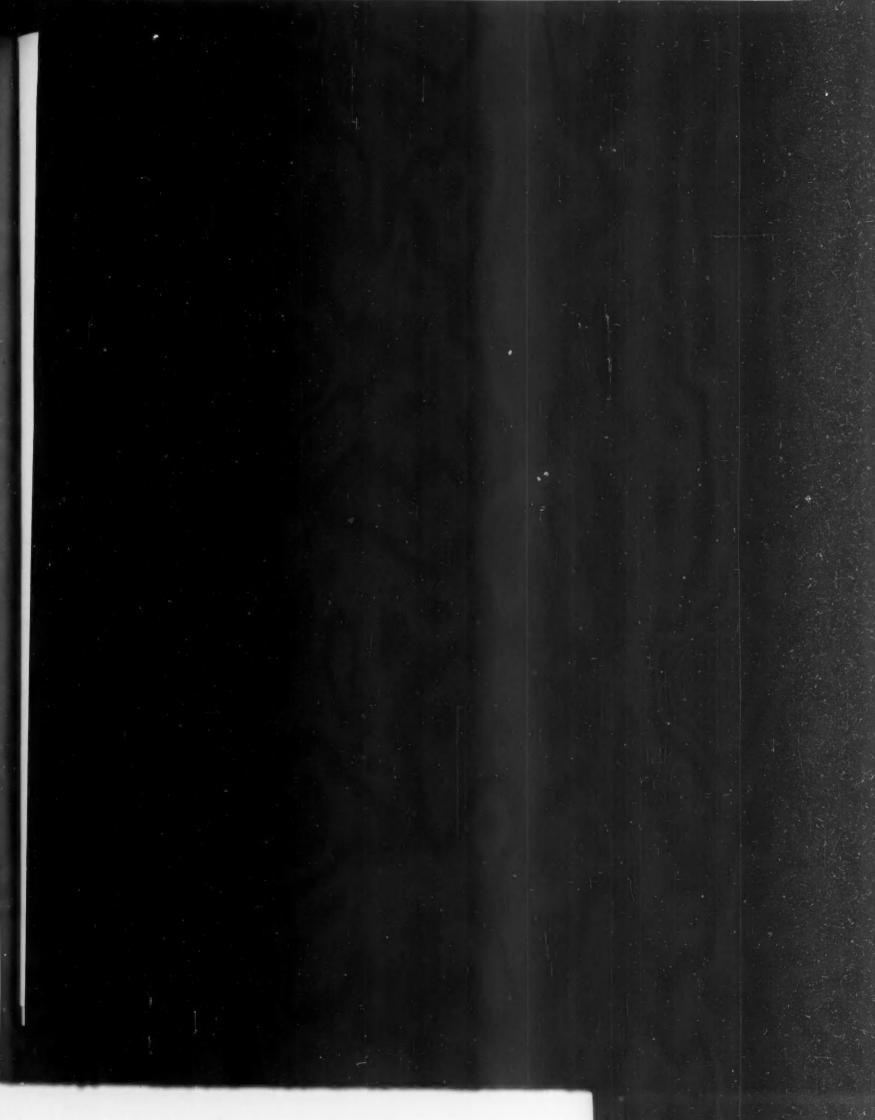

The country in front of the position where General Porter was when I joined him was open for several hundred yards, and near, as I supposed, by seeing the dust coming up above the trees, the Warrenton pike. I had an impression at the time that these skirmishers were engaged with some of the enemy near that road \* \* \* the dust ascending above the trees seeming to indicate that force to be not a great distance from the head of Porter's column. I am speaking now of that force of the enemy referred to by General Buford as passing down the Warrenton turnpike toward Groveton.

This statement ingeniously puts Porter's skirmishers over near the Warrenton pike and the head of Porter's column across Dawkins Branch and near the enemy moving down the pike, but it is all done qualifiedly under a supposition or impression. But General McDowell before the West Point board, testified on page 758 of the new record, "that he made no observation as to what Porter's troops were doing, except there were some few persons out in the bushes and he heard a shot or two.

On page 93, court-martial record, he says:

The rear of Porter's column reached a distance from Bethlehem Church sufficient for the larger part if not the whole of one of my brigades to occupy that road. I should suppose this column occupied perhaps three miles of the road.

But I considered him in the presence of the enemy.

on at thr Porter hem ( Warrer neight ishers on the make McDo Cole's which him warrer wilco: left, warrer neight ishers on the man to a support of the maines support oning make to been fawould That the unplanate mitted found it

Let the of memoral The exter's troot on pike plete; but were no

On page 210 he fixes the distance from Bethlehem Church to the pike at three and a half or four miles. Here there is a basis for calculation. Porter's corps extended three miles and a brigade front beyond Bethle-hem Church. It is three and a half to four miles from the church to the Warrenton pike. Hence the head of Porter's column would be in the neighborhood of a half mile from the Warrenton pike, and his skirmishers preceding his column would naturally be firing upon the enemy Now, please turn to the Government map No. 1, and on the pixe. Add, pixes to the overline that 30.1, and make the measurement by the scale and you find this calculation on McDowell's premises brings the head of the column near Hampton Cole's, beyond the old Warrenton, Alexandria & Washington road, which you see places Porter in the desired position necessary to charge him with the loss of the battle. The court found the head of his colmum there and judged him accordingly. By reference to Longstreet's map of his line of battle hereto attached, made part of my remarks, you will see it crosses the place where Porter's head of column was located by the court and by Generel McDowell. (It will be noticed that Wilcox with three brigades, located on this map in rear of Longstreet's left, were transferred to the support of Jones on the right, and there remained till between 4 and 5 o'clock p. m., when they were sent back to

support Hood, but took no part in this fight.)

This was a foul blow dealt Porter, and was all the evidence which placed him in striking distance of Jackson's line, and taking no reckoning whatever of Longstreet's troops, but leaving him a clear field to make the assault, which they all swear in their opinion would have been fatal to the enemy, and the judge advocate tells the President, would have captured Jackson.

That there may be no mistake in this view that I have given you of the understanding of the court of Porter's position, I here insert as explanatory of and make part of my remarks General Pope's map, submitted to the Committee on the Conduct of the War, where it will be found in supplement volume 2 of the report of that committee.

No. 4, between pages 190, 191 and the map of the West Point board No. 2, which is official. A comparative view of these maps shows at a glance more convincing proof of the error of the court-martial than pages of statements of witnesses could.

But I must not lose sight of the sinuosities, so to speak, of the witness under consideration. He may have erred innocently in the evidence I have recited; but in a case of life and death it is strange, to say the least, that he was not better advised before he ventured on his guess It is a part of the history of this case, that the persons immediately connected with the conviction of Porter are extremely sensitive, and act as if a blow were struck at them when a bare mention of an application for rehearing has been made. This is not only strange, but it would seem as if an inner consciousness made cowards of them. would naturally suppose that every officer of the United States Army would rejoice to know that the stigma east upon a brother officer and upon the profession could be shown to have been the result of error in information; but not so these men. Years have not tempered their The name of Porter throws them into spasms, and they bitterness.

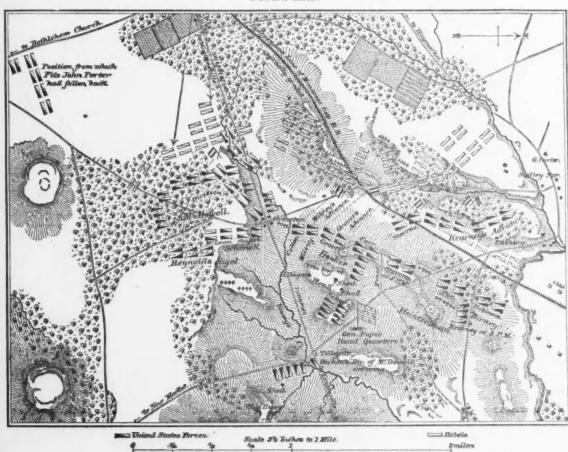

General McDowell printed and largely circulated in February, 1870, a document that it will do to compare with some of his evidence. The statement will be found on pages 720, 721, new record. Let me read:

General McClellan seems to have been ignorant of the fact that up to the time of McDowell's separation of his command from Porter the opposing forces had not come within range of each other. The separation took place before conflict was possible.

Compare this statement coolly made by a major-general of the Army and thrown broadcast to the country with the statement of the same officer in 1862, made to convict a brother officer, where he says:

I had an impression that these skirmishers (Porter's) were engaged with some of the enemy near that road (Warrenton pike). \* \* \* That force seemed to be not a great distance from the head of Porter's column. \* \* \* I considered him in the presence of the enemy.

#### POPE'S MAP

Let these inconsistent statements stand a monument to the uncertainty | pusillanimity on Porter's part that held him back.

of memory when controlled by interest or malicious intent.

The court-martial having by McDowell's estimates established Porter's troops at Hampton Coles's and his skirmishers over on the Warrenter's troops at Hampton Coles's and his skirmishers over on the Warrenton pike, the work of entangling Porter would seem to have been complete; but the zeal of the prosecution pushes them on to show there
were no troops in Porter's front, or at most so few that it was sheer

deficient and troops at Sanda Schuller's location 12,000 to 12,500 men. The official
return shows the strength of the Fifth Army Corps at 9,583; of Piatt's
brigade, 823—10,406; and that covers all present for duty

The tactics resorted

General McDowell says he estimates Porter's force from 12,000 to

We are now face to face with two questions of importance to be con-dered in reference to Porter. What enemy was in his front, and did sidered in reference to Porter. he know it at the time?

LONGSTREET WAS IN HIS FRONT IN FACT, AND PORTER THEN KNEW IT.

As I am not yet done with General McDowell, I shall first show that he knew it and prevaricated to accommodate himself to Pope's infatu-

Before McDowell came up Porter had captured three scouts, who said they were Longstreet's men. The countrymen who met General Morell apprised him that the enemy had reached Gainesville, with skirmishers to the front of about four hundred men, and the main body close behind. Jackson was known to be near Groveton, with his right resting near Warrenton pike. McDowell was handed, on his way to the head of Porter's column, this dispatch (court-martial record, page 82) from General Buford, who had been left to watch the approach of the enemy from Thoroughfare Gap:

HEADQUARTERS CAVALRY BRIGADE-9,30 a. m.

Seventeen regiments, one battery, five hundred cavalry, passed through Gaines-ville three-quarters of an hour ago on the Centreville road. I think this division should join our forces now engaged.

General Buford in his evidence says (court-martial record, pages 182,

I saw them myself. I thought the regiments would average eight hundred men each. " " At that time I made a particular estimate. I thought they were the largest regiments I had ever seen in motion.

This is not pretended to be evidence proving all the troops there were moving up, but it fixes the number that had passed Gainesville at the time mentioned, 9 o'clock. Here is one little circumstance in the proportion of arms of the service in the column seen that shows it was but part of a column—not the whole column. One battery is hardly a complement of artillery for a division of infantry of 13,600 muskets.

General McDowell, before the court-martial, declared:

I did not know anything about Longstreet's corps or Jackson's corps. I have mentioned the note I received from Buford. Seventeen regiments, one battery, and five hundred cavalry were marching from Gainesville to Groveton. To whom they belonged or to whom they were going was not a matter of which I was informed.

Just what mental reservation enables the witness to make this statement I do not quite see, if he desired to preserve his reputation for truth in any degree. He was himself engaged in burnishing his military prestige before a court of inquiry sitting in Washington contemporary with the court-martial, and in that court he produces the follow-

11.30 p. m., Headquarters Third Army Corps, Buckland Mills, August 27, 1862.

It being understood that a large division of the enemy under Longstreet left Salem at 4 o'clock p. m. for the enemy's position near Manassas, through Thoroughfare Gap, and is now on the march, the preliminary movements, &c.

By command of Major-General McDowell.

In this order General McDowell detaches Sigel's corps and one of his own divisions to hold and guard Thoroughfare Gap against Longstreet. This order was changed the next day, the 28th, and upon receipt of a dispatch from his aid, W. Leski, captain, &c., dated the 28th, 10.15 a. m., in these words:

The enemy is advancing through the pass. \* \* \* Colonel Wyndham will hold them as long as he can, and asks to be re-enforced. McDowell sent Ricketts with four brigades of infantry, of about 8,000 men, two brigades of cavalry and six batteries, to check the progress of the enemy. \* \* And in defense of his action he refers to results and says: "General Ricketts went to Thoroughfare Gap; did hold Longstreet in check during the day."

Again he says, "It will be seen the provisions I made for Long-street" was owing to Sigel's delays, &c. (See McDowell's statement before his court of inquiry.) What did the term Longstreet mean, and what ought every commanding officer to have known when he was informed Longstreet was approaching?

General Pope, in his report to the Committee on the Conduct of the War, on page 139 (supplement, volume 2), annexes a dispatch from Waterloo Bridge, August 26, 1862, 2.45 p. m., which informs him:

A deserter has just come in. Says Longstreet's corps, embracing Jones's, Kemper's, Anderson's, Whiting's, and Evans's divisions are located in the woods back of Waterloo Bridge.

Here is information of the body of troops composing Longstreet's corps. Certainly it is a body not to be overwhelmed with 10,000 men. General Pope testified before the McDowell court, July 14, 1863:

I believed then and believe now we were sufficiently in advance of Longstreet, who was supposed to lead the main body of the enemy, that by using our whole force vigorously we should be able to crush Jackson completely before Longstreet by any possibility could have reached the seene of action.

I will read General Ricketts's official report of his operations at Thoroughfare Gap (executive document, third session Thirty-seventh Congress, volume 8, page 170):

The men moved forward gallantly, but owing to the nature of the ground \* \* \* when I ascertained the enemy in superior force were turning my right and left in the endeavor to surround us \* \* \* I dispatched two messengers to you (General McDowell) with this report. \* \* \* While considering the posi-

tion critical \* \* \* ordered that retreat, which defeated their anticipations of capturing the entire division by their overpowering numbers outflanking us

And now, sir, in the face of this evidence, who can be expected to believe General McDowell, who had made these provisions against Longstreet, and had learned that his division of 8,000 infantry, six batteries, and two brigades of cavalry were in danger of being captured by overpowering numbers, when he says he does not know what troops they were; that he does not know anything about Longstreet's corps? Tell it to the marines!

General Porter in one of his letters to Burnside had predicted exactly this thing when he says, under date of August 28:

I expect the next thing will be a raid on our rear by way of Warrenton pike

Porter had struggled with Longstreet on the Peninsula. He knew Porter had struggled with Longstreet on the Peninsula. He knew, as every private soldier knew, that Longstreet was pushing to support Jackson. The pickets and skirmishers at Sulphur Springs knew Longstreet was following Jackson's trail. Longstreet meant Lee and the combined confederate army. The Union divisions were marching and countermarching to bag Jackson, while the combined confederate force was stretched out in connected line for battle. Longstreet's corps lay idle all the day until nightfall, when Hood met a part of King's divisions and it realized to be seen. ion and sent it reeling to the rear.

Porter sent messenger after messenger to find the location of our troops on his right, but failed to find them. So he stood on the extreme left flank of our army unable to make connection or learn the plans or designs of the commanding general other than as explained by the joint order. This was his position; responsible that the flank of the Union army should not be turned; responsible that the lives of his men

should not be ruthlessly sacrificed.

The West Point board, composed of officers of distinction, have found that he did his full duty under this joint order. It is a work of assumption on the part of a civilian to attempt to add to the force of their finding. We submit questions of the civil and common law to the opinions of men learned in the law, and their judgment is accepted as conclusive. Questions of military law, the force and effect of military movements, the discussions of campaigns, and the causes of success or failure, from the military standpoint, can only be properly deter-

mined by men learned in military science.

The character of evidence offered to sustain conclusions is within the province of my profession, and I have not hesitated to examine it in this case. The testimony of the Government in the case against Porter I have always believed entirely failed to support a conviction. The principal witnesses I have always believed were unworthy of credit in their statements affecting the action of Porter. It is for this reason I have so carefully held up to view their inconsistencies and the probabilities of the truth of their statements. I may have done it too unkindly, but I have done it from a conviction that the wrongs of an in-

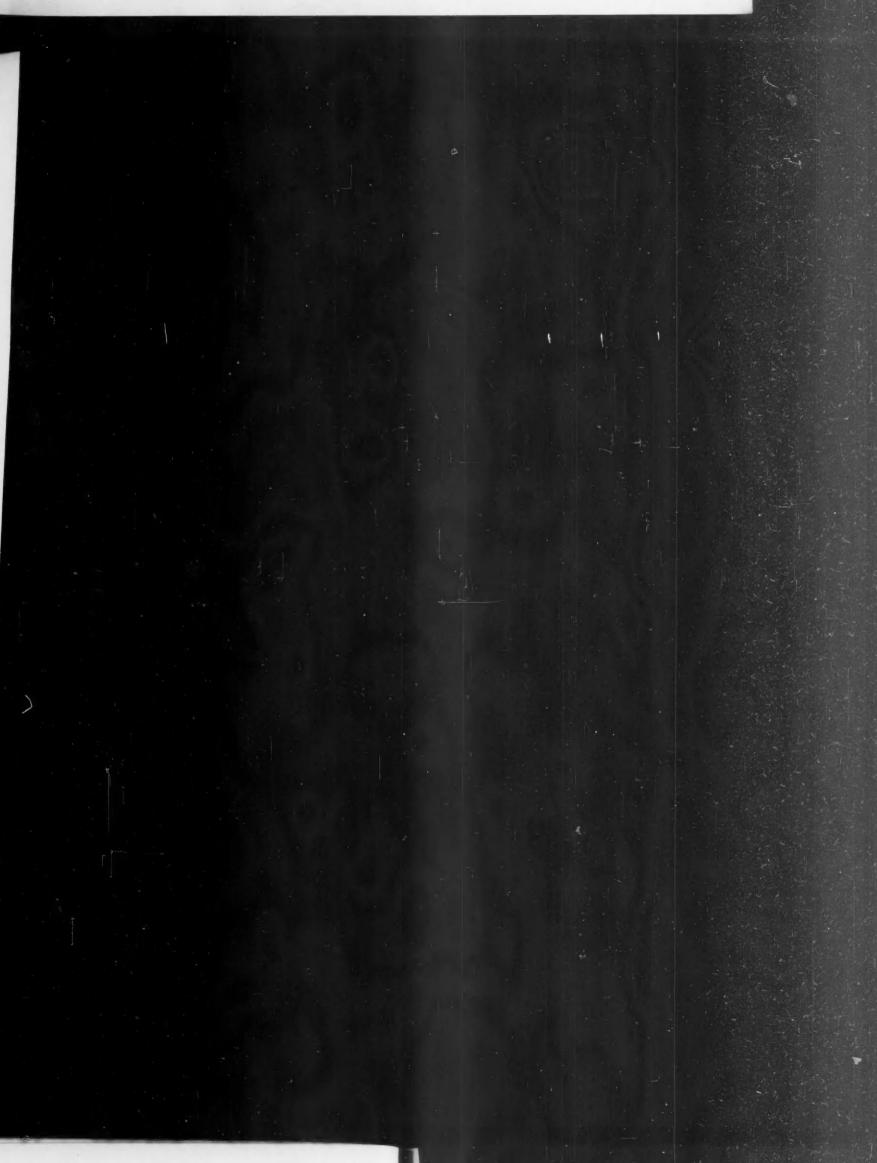

But I have done to find a conviction that the wrongs of an injured man and the truth of history demanded it.

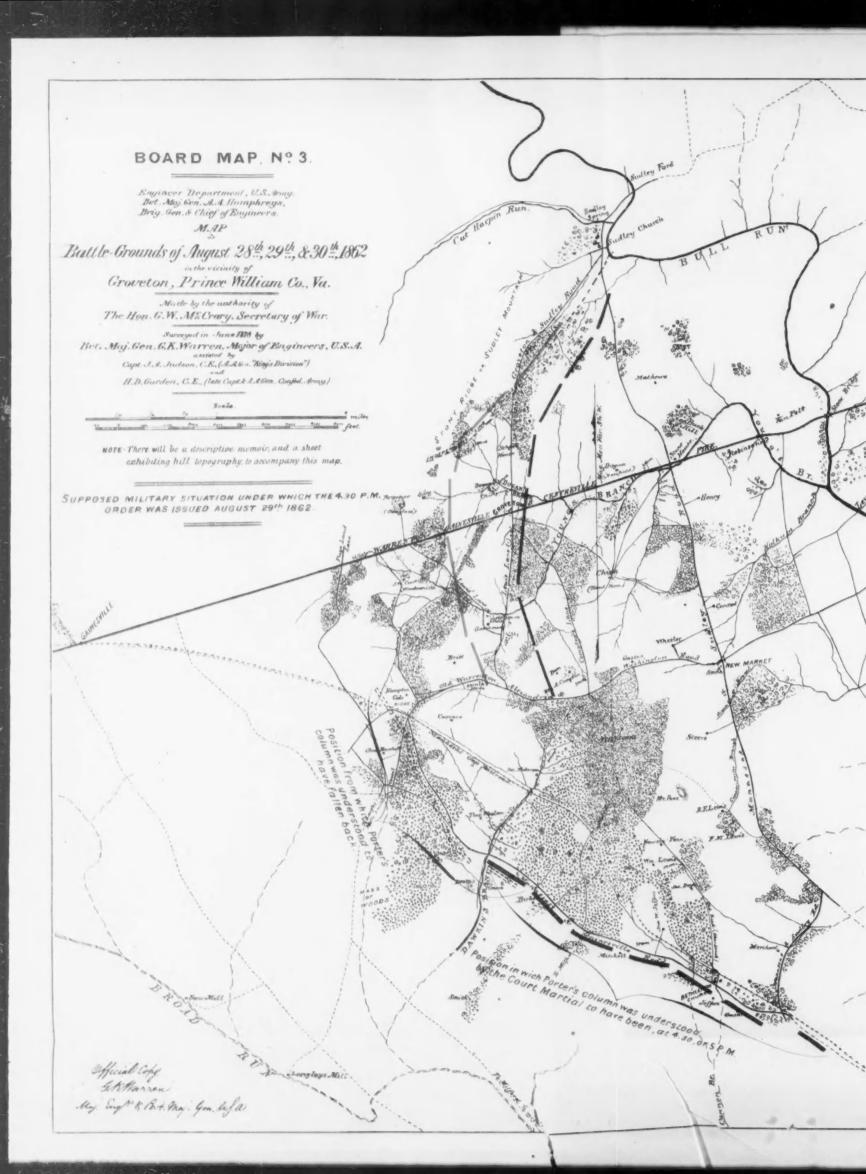

But I have digressed too far from my review of General McDowell's evidence and conduct in this case. If it were consistent with my sense of duty, I would gladly leave him here. But having entered upon the review of his evidence and conduct, I must not shrink from any part of the task. In 1870, to prejudice the public mind, when Porter asking to have his case reopened and examined, General McDowell assisted in widely circulating an extract from General Jackson's report to support his statement of "raging battle" on the 29th of August, 1862, and, as proof that Porter must have known it and coldly turned away and refused assistance, this history:

In a few moments our entire line was engaged in a fierce and sanguinary struggle with the enemy. As one line was repulsed another took its place, and pressed forward as if determined by force of numbers and fury of assault to drive us from our position. So impetuous and well maintained were these onsets as to induce me to send to the commanding general for re-enforcements, but the timely and gallant advance of General Longstreet, on the right, relieved my troops from the pressure of overwhelming numbers. As Longstreet pressed upon my right the Federal advance was checked and soon a general advance of my whole line was ordered.

To make the blow more deadly there was appended the certificate of the Adjutant-General of the United States Army to the correctness of the extracts. When that was done Major-General McDowell put on a heading "Operations of the 29th of August, 1862," although the report from which the extract was copied showed this statement to relate to the action of the 30th of August, 1862, and the battle therein described to be action of the 30th of August, 1862, and the battle therein described to be the attack of the Fifth Army Corps, Porter commanding in person. Colonel Smith called attention to the error, but no correction was made, and this major-general at West Point gave as his reason for not correcting the error, "that he did not think it in his province." Yes, sir, a major-general put forth a report sanctioned by the certificate of Adjutant-General, United States Army; altered its entire scope and meaning by a heading, circulated it among brother officers indorsed by himself as true, and when the error was detected "did not think it within his province," to undo the evil he had done.

Av. his sin was greater than that. He circulated a history from confederate sources of the deeds of bravery of the Fifth Army Corps on the 30th of August and changed its date so as to make it evidence of supineness and lethargy on the part of General Porter who led his men against Jackson in the conflict described

Arrived on the field in the afternoon of Major-General L. McLaw's division (four brigades) on the march to join. Arrived on the field in the afternoon of the 30th.

Note by counsel for the Government.—While the enemy's forces are given a position in line of battle west of Pageland Lane, at 2 p. m., it is considered very down and extend below the pike, as early as this time. When Jackson's right was threatened and attacked by Reynolds's division of Pennsylvania Reserves attached Jackson's right, to move up to near Pageland Lane from the "defensive" position taken at Gainesville (part of Hood's division in advance). That "defensive" of the Potomac, would come up from the Rappahannock, via Warrenton, on the Warrenton, Gainesville, and Groveton pike, instead of landing at Alexandria, and overwhelm it before the third of his army, then absent, could arrive. Jackson's cavalry, under Stuart, were down in the indicated direction in order to watch to General Banks's corps could have advanced and interposed at Gainesville between the portion of Lee's army under Major-General Longstreet and his re-enforced.

But he did even more than that. On this rehearing he produced three dispatches from Porter to him, telling his situation and asking for information, the last being a summary of all, in these words:

GENERAL McDowell: Failed in getting Morell over to you. After wandering about the woods for a time I withdrew him, and while doing so artillery opened on us. My scouts could not get through; each one found the enemy between us, and I believe some have been captured; infantry also are in front. I am trying to get a battery, but have not succeeded as yet. From the masses of dust and from the reports of scouts, think the enemy are moving largely in that way. Please communicate the way this messenger came. I have no cavalry or messengers now. Please let me know your designs; whether you retire or not. I can not get water, and am out of provisions. Have lost a few men from infantry firing.

F. J. PORTER, Major-General, Volunteers.

AUGUST 29-6 p. m.

Which had lain for sixteen years in his archives.

Porter was convicted of disobedience of an order which he denied the receipt of until dark. He was convicted of retreating before the enemy. He was convicted of inaction and lethargy amounting to crime. His claim that he received no orders from McDowell was found against him. His assertion that McDowell left him to come in on the other side of the wood and make connection was denied and found against him. He held out his hands to his brother officer and besought him to speak. He begged for the production of his communications. He received no response; and now, sir, comes this mute witness to prove all that he

"Failed in getting Morell over to you." What does it mean? It means that he thought McDowell had done as he said, and he had been struggling to join hands with him. It shows that there was no forward movement in contemplation, but a lateral one to make a union of lines, and that when he failed he notified McDowell and asked for informa-It shows he did not retreat, because it asks McDowell for his designs; and lastly, it shows Douglas Pope and his orderly testified falsely when they fixed the time of delivery of the 4.30 order earlier than 6 o'clock, for it bears date at 6 p. m., and its contents are conclusive to prove the 4.30 order had not yet been delivered.

What excuse for this? I did not know I had it, and for that reason did not search for it, is the substance of the answer of the witness. Didn't know he had it! He did not forget to remember the dispatch that was thought damaging to Porter by showing a retreat. Oh, no. I wish every man in this broad land would read Mr. Choate's examination of this witness before the West Point board, and see him writhe and wriggle as if he were roasting upon a spit, until he cried out in anguish, "This campaign has been a nightmare to me!"

Conscience hath administered but gentle punishment if that be all the pangs it hath imposed. Let the opponents of this measure affect to believe McDowell if they will. To my mind his evidence is broken, discredited, and worthless, and his conduct "unbecoming an officer and a gentleman."

THE FOUR-THIRTY P. M. ORDER.

HEADQUARTERS IN THE FIELD, August 29, 1862—4.30 p. m.

Major-General Porter: Your line of march brings you in on the enemy's right flank. I desire you to push forward into action at once on the enemy's flank, and if possible on his rear, keeping your right in communication with General Reynolds. The enemy is massed in the woods in front of us, but can be shelled out as soon as you engage their flank. Keep heavy reserves and use your batteries, keeping well closed to your right all the time. In case you are compelled to fall back, do so to your right and rear, so as to keep you in close communication with the right wing.

JOHN POPE, Major-General Commanding.

The language and direction of this order show fully General Pope's view of the military situation. He places Porter on the enemy's flank, meaning Jackson, not Longstreet. He directs an attack upon Jackson, not Longstreet, and in making it he directs Porter to preserve his right in communication with Reynolds. He directs heavy reserves, to use batteries, and if compelled to fall back to keep in close communication with the right wing. There is not one single movement therein described which Porter could execute, and it shows a complete ignorance of the situation of the Fifth Corps.

I have said that order relates exclusively to an attack upon Jackson, and not upon Longstreet; and to refute the idea that because it calls for an attack upon the flank of the enemy it was an execution of it in the sense which it was issued to attack any enemy that might be in reach and trust in Providence for the result, I will show the military situation as General Pope understood it, and construe the order by the light of his understanding, and show if his facts were correct the order would have had the effect that was claimed for it had it been obeyed. The court-martial found that the military situation was as General Pope assumed it to be, and convicted Porter. How did General Pope understand the military situation at 4.30 p. m., August 29, when he dictated that order; and what did he mean Porter to do? Let him answer for himself (court with a situation at 25). himself (court-martial record, page 35):

The accused was expected to attack, if possible, and as I understood to be practicable, the right flank of Jackson's forces, and if possible, the rear of his forces, to prevent, if it were practicable, the junction of Longstreet's forces with Jackson, and to crush Jackson's flank before Longstree-would effect a junction with him. I did not then believe, nordo I now believe, that at that time any considerable portion of Longstreet's command had reached the vicinity of the field.

It is altogether likely that some of Jackson's troops were in presence

of General Porter's advance, though of my own knowledge I do not know that.

General Pope, in his report to the Committee on the Conduct of the War (first session Thirty-ninth Congress, supplement, volume 2, page 154), says:

I do not hesitate to say that if he (Porter) had discharged his duty as became a soldier under the circumstances, and had made a vigorous attack on the enemy, as he was expected and directed to do, at any time up to 8 o'clock that night, we should have utterly crushed or captured the larger portion of Jackson's forces before he could have been by any possibility sufficiently re-enforced to have made effective resistance.

Page after page from General Pope can be found to the same effect. This suffices to establish my position. He swears in language too plain to admit of a doubt "the order contemplated an attack upon General Jackson's right flank." The order contemplated no intervening considerable force, and was intended for execution before "Longstreet

That you may thoroughly understand examine board map No. 3, official, which I attach as part of my remarks, and bear in mind that Reynolds was opposite Jackson's right, with his divisions lying obliqued from the Warrenton pike on Sigel's left. The order, you will see by its terms, meant communication with Reynolds and an envelopment of the right of Jackson by Porter, having heavy reserves and using his bat-teries. With that construction upon the order, coupled with an ability to execute, which you will see by Porter's supposed location [marked] he could execute had he been situated as the court-martial supposed he was, we can anticipate success. And that is just the hypothetical case put to each of the Government witnesses for an opinion, and that opinion is conclusive in the mind of Judge-Advocate Holt, and he presses it with vigor upon the President, and charges the salvation of the confederates to the failure of Porter to execute the movement described in the hypothetical case. It is readily conceded that the name of the officer commanding the confederate troops had no further effect than to designate the location and body of troops to be attacked, and if that body of troops indicated had been in the position indicated it was Porter's duty, had he received the order in time, to have attacked if Longstreet had been transferred to the command and Jackson personally had gone away. But when it appears that Porter had no communication with Reynolds, that between him and Jackson's right flank an army corps not known to be upon the field by the general who had issued the order had intervened, the movement which we have just seen would result in victory becomes changed to a movement not intended, and an attempt at its execution would result in great disaster without any probability benefit, expected or hoped for.

This latter condition is now known to have existed by every reader of military history. Porter declared then that it so existed from the data before him. The court-martial disbelieved him, but history has proved the truth of his assertion.

But, sir, the bitterness of Porter's enemies and their readiness to maintain themselves by "fair means or foul" is nowhere more manifest than in the change of front on the question of Longstreet's presence on the field August 29. They lack the manhood to acknowledge their error and rejoice over a brother officer relieved from unjust stigma. But with their ship sunk and every boat stove in, and themselves "rari nantes in gurgite rasto," they seize upon pieces of the wreck to build a raft upon which they may still pursue the object of their unrelenting hate.

Longstreet is now admitted to be upon the field. Who ever denied it? say they. And there is prepared for Judge-Advocate Gardiner a map, which was published in the Congressional Record of the Forty-sixth Congress, March 26, 1880, and in a milder form appears in the Con-GRESSIONAL RECORD of January 6, 1853, which is given to the country as official and truthful. But instead of that it is not an official map, but a map of positions and lines of troops made to fit the argument nec essary to be made by the judge-advocate to avoid the crushing weight of the facts. I here produce the map, and the descriptive sheet beionging to it (illustrative map No. 1), and ask you to look at it as I explain it, and then conclude how much reliance is to be placed upon it.

Longstreet's troops are thrown behind Pageland lane. Immediately in feart of the context of his line at a line at the context of the context of his line at a line at

ately in front of the center of his line, at a distance, as you will see if you apply a rule upon the scale, of eighty rods, lies a division of Federal troops, with the Warrenton pike leading past their immediate front. Longstreet's line of battle is at right angles with the Union line. At the rear of the left flank of the Union line you have a battery marked A. It is south of the troops a distance of eighty rods, and is thrown a litthe forward of a line dropped from the left flank of the troops, and it has no support. In the rear of this battery you see a line of cavalry pickets of the enemy, marked by red dots, extending along Meadow-ville Lane. You will particularly note that the Union flank has not even a picket or skirmish line to cover it.

The first brigade lying in that position is under the command of General George Meade, the successful commander of the Army of the Potomac, and the division was commanded by General John F. Reynolds; and that battery was Simpson's Fifteenth Pennsylvania Light Artillery. This purports to give their positions for 2 o'clock p. m. One would suppose that at this day a major in the United States Army, even if belonging to a non-combatant corps, would pay sufficient respect to the memory

of two soldiers such as Meade and Reynolds were not to deliberately place them in a position where the enemy could roll them up like a string upon a spool, and leave them thus exposed without even an outpost. That might do for a battle of McDowell's, but will not answer for Meade and Reynolds. Their reputation as soldiers is too well known and appreciated.

But suppose these troops were permitted to lie thus exposed, within rifle shot, what has Longstreet ever done to deserve such a fling? Here he was, Lee with him. The judge-advocate has placed Reynolds's dihe was, Lee with him. The judge-advocate has placed Reynolds's division where he (Longstreet) can roll it up and turn the whole line, and given him a broad turnpike to operate from, and he lies still and fires not a shot. He was never so considerate of the welfare of "Yankee

troops" before nor since!

will not do to say that Longstreet overlooked them, for he says he made a reconnaissance in person, with the view to making an attack, and found the position too strong to attack in front. (New record,

page 120.)

But this is not the only ridiculous thing apparent at a glance upon this map. Reynolds's position flanks Jackson, and Porter could hardly pass Reynolds's flank, between him and Longstreet, a space of eighty rods, and come down on Jackson's flank. This is not accidental, but is the result of a well-planned scheme to keep off popular censure. The genius that planned this map (I do not attribute it to Major Gardiner) conceived the idea of throwing back Longstreet's line nearly two miles, so that the Manassas Gap Railroad may furnish a resting place for the right of the line, to conform to the evidence in that particular, throwing the whole line back so that Longstreet's right flank would be three miles from Porter, but in a direct line, and then Reynolds is brought forward from behind Lewis lane, where he belongs. Now we have the troops manipulated upon paper—with Longstreet's flank all arranged for Porter to attack, and that places Reynolds on the right of the Fifth Army Corps, and by holding well to the right the condi-tions of General Pope's order are complied with and Longstreet's flank tions of General Pope's order are compiled with and Longstreet's hank is the one to be attacked. The judge-advocate at West Point endeavored to support this theory by an examination of General Longstreet, who promptly replied to his question: "No, sir! My line was drawn back away beyond the railroad. They would have had to make a considerable détour to strike my flank." (New record, page 124.) Now, if you will cast your eye upon Longstreet's map, you will see the détour carries Porter away from Reynolds, and leaves nearly four miles of uncovered front between them.

But while on this subject let us locate Longstreet's troops on his line

of battle. On his extreme right is D. R. Jones, 6,300 men, extending beyoud the railroad; Kemper, with three brigades, 6,100 men, was thrown out in that direction so as to be in easy supporting distance in case of need by Jones, all arranged in double line, two brigades in front, one in rear. Hood was deployed across the turnpike, with Evans in rear, This was the Wilcox, with three brigades, 6,300 men, covering his left.

first formation. (New record, page 117.)
Wilcox with his three brigades went to the support of the right under Jones as soon as Porter's approach was reported by General Stuart.

(New record, page 120.) Charles Marshall on General Lee's staff testifies that General Lee personally examined Longstreet's right and ordered Wilcox to its support (New record, page 211) about 20 clock. This gives us in Porter's front alone 18,700 infantry, with General Robertson on the extreme right flank with 2,500 cavalry (new record, page 215) in advance of Jones and some distance to his right, south by west of "Vessels." (New record, page 217.) Longstreet's whole available force on the 29th was 25,000, and all on the field.

That there may be no loophole left in connection with this force, to show that Porter was advised of the true condition, in addition to what has been said on that subject, I beg to trespass on your patience by referring to the evidence of Colonel E. G. Marshall, a graduate of the Military Academy, who had charge of Porter's skirmish line and personally inspected the front, who testifies, on pages 129 to 137, inclusive, in new record, that he crawled out on to the skirmish line and saw large bodies of troops in line of battle, and that a force extended be-yond his left and his line was under cross-fire; that he reported his condition and the constant arrival of new troops on his front to Generals Morell and Porter, and was carefully examined by Porter personally to learn the situation on his front; that he (Colonel Marshall) protested against attack and characterized it as an act of insanity to put troops in that position. And the witness corrects an impression derived from his testimony before the court-martial as to the time he heard infantry firing, and fixes the time at sundown.

Lieutenant James Stevenson testified (court-martial record, 194) that Pope's army to his regiment, Colonel Marshall's regiment. "I could see the enemy." "I judged him to be between 12,000 and 15,000 strong, of all arms." "I should judge the length of his lines was about a mile." on the 29th of August, 1862, he went from the left flank of General Pope's army to his regiment, Colonel Marshall's regiment. "I could

Colonel Holt in his review of the evidence disposed of Stevenson's evidence by saying, "He was a young man of limited experience, and when he stated the enemy's line of battle was but a mile long (which

he did not state), it is evident that a large abatement must be made from his estimate.

Colonel Marshall, on page 134 of new record tells us who "this young man of limited experience" was. He says:

Private Stevenson had been on duty before the war. I had known of his being with General Warren. \* \* \* I placed great confidence in him. \* \* \* His general duties were to bring me any information he could. He was a quiet man; more like a man who has served against Indians in the far West. He would never overstate; he would rather understate anything he had to say, and you would have to draw him out.

Major Hylands's testimony was rejected, as well as Colonel Marshall's, because they judged from indications, without actually seeing large bodies; and then Colonel Holt states the evidence on the other side:

We learn from General Buford that the enemy's forces passing through Gaines-ille that day from Thoroughfare Gap, as counted by himself, did not exceed 14,000 men.

I have read General Buford's dispatch and evidence to you, and he made no such statement. General Buford states that number to have passed before 9 o'clock a. m., and at 9.30, the date of his dispatch, he moved toward Bristoe. The judge-advocate divides 14 by 2, and concludes that there were not to exceed 7,000 confederates in front of Porter, and so tells Mr. Lincoln the proof establishes, with a strong probability it was not so great a number. Is it to be questioned that Mr. Lincoln was not deceived as to the evidence by the judge-advocate? The evidence after the fact shows that Porter's information was true.

Now, I submit in all candor to laymen whether the facts are not sufficiently plain for you to see that if Porter had received the 4.30 order in time to have made an attack, that an attack upon Longstreet, a new factor intervening without General Pope's knowledge, would have been a sacrifice of life not expected nordesired by General Pope. And that it would have been no military offense to have neglected to make the attack, I refer you to the military savans, Wellington, Napoleon, Archduke Charles, General Grant, and the West Point board.

PORTER DID NOT RECEIVE THE 4.30 ORDER

until too late to attack; and here, sir, I must digress to notice a state ment of the evidence on this point which has just been given to the country in the CONGRESSIONAL RECORD of January 6, 1883, and has been put in book form for circulation. The evidence upon this point is thus summarized (CONGRESSIONAL RECORD, January 6, page 26):

The order was sent by Captain Douglas Pope, the brother of General Pope. He passed down this open country from Pope's headquarters, rode rapidly, and he swears that he brought that order to General Pope and delivered it to him by 5 o'clock p. m. General Sykes was there with him and quite a number of his officers. He delivered the order to Porter. Porter read the order and put it in his pocket. Two other witnessess, Charles Duffie and Archelaus Dyer, support Pope in this statement and state that Porter was sitting under a tree.

This statement of the evidence of these witnesses, so far as it goes, is probably true. But the mass of evidence that proves the statements of probably true. But the mass of evidence that proves the statements of those witnesses as absolutely false is omitted. General Sykes swears "this order was received as near sunset as I can remember." Colonel Locke swears "this order was delivered between sundown and dark." Captain Monteith swears "the order was delivered about sundown." Lieutenant Weld swears "the order was delivered after sundown." Lieutenant Ingham swears "the order was delivered after sunset."

Captain Moale, of the regular Army, testified in substance that in 1867 upon the frontier he had heard Captain Douglas Pope speak of his ride with this order. Of this conversation he said (page 560, new rec-

It is only a matter of recollection. I am very sure I heard him say "it took him one or two hours to go through; that he had got lost on the road, and when he reached General Porter it was very near dark."

Lieutenant Jones, of the regular Army, in speaking of what Captain Douglas Pope said of this order, says:

Douglas Pope said of this order, says:

My recollection is that he said he was directed to carry an order from General Pope to General Porter, and that in going from one headquarters to the other he got on to a road and traveled it for some distance until some women and children told him if he wanted to go in a certain direction he was on the wrong road; and also to the best of my recollection he said, in my presence, in carrying that order he came out through the woods on a hill or eminence and saw rebei troops—saw a large body of rebel troops—and therefore turned back in that direction and went in some other direction.

It is omitted to be stated that Duffie and Dyer showed on their cross examination that they had been coached as to the roads to enable them to swear, and that Duffie stated he had always thought he had gone a different route until he was coached; and that Dyer identified the road by a house, which it was proved was not built until a year after the time, and recognized the place where he found Porter by a church with as steeple, when at that time there was no steeple upon the church at all; and this man Dyer found Porter in a tent, but Duffie and Pope found him in bivouac, showing clearly, and the board so find, that they had been tampered with, and rejected their evidence. But, sir, there is an omission of two pieces of written evidence produced by the Government which are conclusive against Captain Pope, Duffie, and Dyer, if their evidence was not otherwise fully broken down. There was produced before the board this dispatch (new record 329):

GENERAL MORELL: Send down some energetic men to General Pope at Centreville; get hold of Colonel Beckwith and get some rations; bring beef up to kill, we have nothing else, and get enough to last two or three days.

F. J. PORTER, Major-General.

Ricketts has gone up-also King.

This dispatch was before the original court-martial, but no notice of

it was taken in the record.

General Zealous B. Tower, who commanded the rear brigade of Ricketts, passed Porter at about dusk on the 29th. (New record, page 452.) This dispatch, not prepared for this case, but written in the ordinary course of business, shows that Ricketts's command had passed at the date of writing. They passed at about dusk, says the officer in command; hence the dispatch is proof that at about dusk the 4.30 order had not been delivered, because he sends to General Pope at Centreville, showing clearly that he had not been advised of his change of headquarters, which would have been the case had he been in receipt of the 4.30 order; and the other dispatch, newly produced by General McDowell, which I have already read, commencing:

GENERAL McDowell: Failed in getting Morell over to you. \* \* \* AUGUST 29, 6 p. m.

F. J. PORTER, Major-General, Volunteers.

which will be found in the new record, page 776. And this, sir, shows how wholly unreliable are the statements assumed to be the facts of the Porter case, which are prepared and distributed for political effect.

The evidence, when massed upon this point, is incontrovertible, and proves beyond a shadow of doubt that

### PORTER DID NOT RECEIVE THIS ORDER TILL DUSK.

With this fact so clearly established, the allegations occurring in the specifications under the second charge, that General Porter, after receiving this order, did shamefully retreat and fall back from the advance of the enemy, of necessity falls, for there is not one syllable of evidence nor shadow of pretense, even in argument, that Porter fell back after 6 o'clock p. m., August 29. But justice to Porter compels me to go further and show by the evidence that he not only did not fall back after the receipt of the 4.30 order, but he did not fall back or retreat at all after General McDowell left him; and here again we have a glaring illustration of the effect of the prejudice and passion of the time, in biasing judgment and forcing illogical conclusions from given facts. The following dispatch is the principal evidence:

GENERALS McDowell and King: I found it impossible to communicate by crossing the woods to Groveton. The enemy are in great force on this road, and as they appear to have driven our forces back, the fire of the enemy having advanced and ours retired, I have determined to withdraw to Manassas. I have attempted to communicate with McDowell and Sigel, but my messages have run into the enemy. They have gathered artillery and eavalry and infantry, and the advancing masses of dust show the enemy coming in force. I am now going to the head of the column to see what is passing, and how affairs are going, and I will communicate with you. Had you not better send your train back?

F. J. PORTER, Major-General.

What does this often-paraded dispatch mean? To give its proper and legitimate meaning, we must remember the joint order contemplated a connected line from east to west to be made by Porter and McDowell with Heintzelman and the forces moving up the Warrenton pike; that the forces under Heintzelman and Reno and Sigel were operating under an order of General Pope, which I here read:

If you find yourselves heavily pressed by superior numbers of the enemy you will not push matters further. Fitz-John Porter and King's division of McDowell's corps are moving on Gainesville \* \* \* and will come in on your left. \* \* The command must return to this place to-night, or by morning, on account of subsistence and forage.

This order was before McDowell and Porter's command were consolidated under the joint order to execute the same purpose. We have seen McDowell leave and move a portion of the troops to go around and come in on the left of Reynolds. Now we are prepared to understand this dispatch, "Porter says he has failed to reach over and find McDowell's left," so as to make the contemplated junction. The artillery booming now and then on the right of the proposed line indicates a "retiring of the right" of the line he was endeavoring to connect with. "I have therefore determined to withdraw to Manassas," which was a corresponding movement of the left with what he supposed was being done on the right, drawing the lines back to Bull Run, as directed in the joint order. But mark ye, this is no evidence that he has retired or did retire; it is the expression of an unexecuted determination formed from what he supposed the military situation required to fulfill General Pope's order.

One thing must be held in view, that the troops must occupy a position from which they can reach Bull Run to-night or by morning.

The dispatch to McDowell and King reached General McDowell at 5.45 p. m., as appears from General Heintzelman's diary. (New record, 605.) General Porter did not even know there had been engagement enough to have brought the general commanding on the field, for we have seen by the order to send to Centreville for beef and rations sent later than this hour, General Porter thought General Pope at Centreville. The face of the dispatch to McDowell and King distinctly repudiates the idea of any construction contrary to the one 1 am giving it, for it contains this significant sentence: "I am now going to the head of the column." What for? Not to retreat, "but to see what is passing and how affairs are going." What then? Beat a retreat? No. "And I will communicate with you." "Had you not better send your train back?

That dispatch was held as proof conclusive of a retreat in fact; and it was furnished Mr. Lincoln with a statement that Porter in fact fell back while the storm of battle was raging before his eyes and the shrieks of his dying and wounded comrades were ringing in his ears, and it was this piece of evidence Mr. Robert Lincoln speaks of as being referred to by his father when he expressed his condemnation of Porter. Now, sir, to complete this chain-proof and show Porter's actions all in harmony and in accord with a soldier's duty I must read a dispatch from Porter to the general commanding his advance:

GENERAL MORELL: I have all within reach of you. I wish you to give the enemy a good shelling without wasting ammunition, and push at the same time a party over to see what is going on. We can not retire while McDowell holds his own.

F. J. P.

### WE CAN NOT RETIRE WHILE M'DOWELL HOLDS HIS OWN,

Faithful and fearless, isolated as his command was upon the extreme flank, with the right seemingly retiring and leaving him exposed to be entirely enveloped by the combined force of Lee, he says in this dispatch "We must stay while McDowell holds his own."

"How did he know that McDowell held his own?" I heard asked the other day in sonorous tone and with flashing eye. I will answer that question, although from this Hall my voice may not reach the one asking it. Porter received a message from General Hatch, who commanded King's division, that they were driving the enemy down the pike. This message came an hour and a half before King's division were engaged in the night attack at dark. McDowell thought the enemy were running away while his troops were marching down the Sudley Springs road. I have been told by what I believe to be best of authority that on passing the Sixth Regiment of Wisconsin Volunteers that afternoon, marching down that road to the Henry house with Hatch's division, General McDowell said to the men on the march, "The enemy is falling back," "He is sick at the stomach," "He has got his belly full," "Move on steady," and more nonsense of that sort. In further proof that this was McDowell's idea, see the testimony of Captain Judson, page 156 of the new record. This officer was General Hatch's adjutant-general.

A short time before dusk an aid-de-camp rode up to General Hatch and said in effect that General McDowell directed him to say to General Hatch that the enemy were in retreat on the Centreville pike, and that he was to pursue him and give him battle. General Hatch immediately moved his division out on to the road and began a rapid march along the Manassas and Sudley road until we reached the junction of that road with the Warrenton pike, when we turned on to the pike and moved down in the neighborhood of where we saw McDowell. When we reached him he said in tones that everybody could hear, "that the enemy were in retreat down the pike and Hatch was to pursue him with his division and attack him."

At about the time this first order reached Hatch, Weld, of Porter's staff, was there looking for McDowell, and he sent an orderly to Porter, informing him "we have driven the enemy into the woods." (Court martial record, page 126.) This shows how and when Porter received information of McDowell's forces and explains this dispatch to Morell:

GENERAL MORELL: I wish you to push up two regiments, supported by two others, preceded by skirmishers, the regiments at intervals of two hundred yards, and attack the party with the section of artiflery opposed to you. The battle looks well on our right, and the enemy are said to be retiring up the pike. Give the enemy a good shelling when our troops advance.

F. J. POETER.

Which answers the question and disposes of the idea that Porter had then received the 4.30 order and that this direction to Morell was in consequence of the attack by McDowell, said to be as late as 6.20 p. m., which is so much dilated upon in the Congressional Record, referred to on pages 28 and 29. It not only meets the theory there advanced but absolutely refutes it.

In connection with this order from Porter to Morell to make a movement on the enemy, "said to be retiring up the pike," Colonel Marshall, who had command of the skirmish line, says, "General Morell gave him the order to advance and attack, commencing with four regiments" (new record, 133), and he remonstrated; and he says (courtmartial record, 184), "General Morell said that the news was that the enemy was retreating, but we know to the reverse, they are not."

And to show further McDowell's idea that the enemy were in retreat, as Porter was informed when he issued the order to Morell which he countermanded, Judson testifies "that General Hatch became satisfied the enemy were strongly posted and not in retreat, as he had advised Porter, and he sent back that information to McDowell, to which McDowell's only response was, 'What! Does General Hatch besitate? Tell him the enemy are in full retreat and to pursue him.' (New record, page 158.)

This brought on the engagement with Hood at dark; a blunder resulting from men in the rear assuming to know more the condition of the front than the men in command of the front. The disaster which befell Hatch's and King's divisions would have befallen Porter if he had not been guided by the knowledge received from his trusty officers on the front line, who took note of and informed him of the situation

So much for the written evidence that is made to play such an important part in the case against Parter.

portant part in the case against Porter.

But I may be told, as the President was told by the judge-advocate,

that General Griffin and a Colonel B. F. Smith testified before the courtmartial that a retreat in fact took place. Let us see upon how slight a foundation this claim rests.

General Griffin in his examination before the court-martial did say (court-martial record, page 158):

We had started back toward Manassas Junction when the order (referring to the order to Morell to attack) came down the road. The order was carried by an orderly, and was stopped by Colonel Warren, who read it. We faced our command about and immediately started back. We were probably a mile and a half or two miles from the position occupied by the battery. I rode ahead to General Morell and asked him if he was going to attack, and he said: "No; it is too late, and this order has been given under a wrong impression." The substance of the order was: "The enemy are retiring or retreating; attack and pursue him vigorously." General Morell said to me: "Colonel Marshall, who commands the pickets in front, states the enemy are receiving re-emforcements."

Question by the court (court-martial record, 162):

Did you understand your corps to be retreating at all that night?

Answer. No. I do not know that I did. I supposed we were going to change position somehow; that we had failed to get through on the right during the day, and that we were going to shift to some other position, where I did not know. We did not connect with anything on our right or on our left.

General Griffin had no idea of a retreat, he says, but the court and the judge-advocate knew better about it than he. They say Porter "shamefully retreated," and cite Griffin to prove it.

It is strange, to one knowing the facts, that General Griffin should have fallen into such an error as to the distance of his retrograde movement; and shows how immaterial this statement was deemed to be at the time that its error was not fully corrected. Let us see: A mile and a half or two miles would have carried the brigade past Sykes's division and by Porter's headquarters, leaving General Morell in command of a division at Dawkins Branch, and the brigade composing the head of his column moving to the rear away from the division, and leaving another division between this brigade and its own division occupying the front. This suggestion of itself ought to be sufficient to show how badly he was mistaken. But, in addition to this, Generals Morell, Sykes, Butterfield, and every brigade commander testify there was no retreat, or any movement partaking in any manner of the nature of a retreat. General Morell swears (new record, page 435):

I had no orders for him (Griffin) to retreat or retire, and I gave him none

There now appears written evidence from General Warren, whom Griffin says was with him, which closes the door to all doubt. General Warren commanded the head of Sykes's column, and that column was lying between Bethlehem Church and Dawkins Branch, Morell's division filling the distance between it and the branch. General Warren, it seems, had been ordered to support Morell, which gives us information that Porter in his proposed attack intended to use Morell's division supported by Warren, holding two brigades of Sykes's in reserve with Piatt's two regiments. I need hardly suggest to any one who knew the Fifth Army Corps that this disposition meant "music by the full band," if I may be pardoned the expression, in reply to the statement in the record on page 29, which charges the order to Morell to attack as a shallow pretense. Morell says (new record, page 436):

I immediately gave orders to my whole division to the front to support the

AUGUST 29, 1862-5.45 p. m.

GENERAL SYKES: I received an order from Mr. Cutting to advance and support Morell. I faced about and did so. I soon met Griffin's brigade withdrawing, by order of General Morell, who was not pushed out but returning. I faced about and marched back two hundred yards or so. I met then an orderly from General Porter to General Morell, saying he must push on and press the enemy. Griffin then faced about, and I am following him to support Morell, as ordered. None of the batteries are closed upon me.

There is the retreat, with its history written at the time in an official dispatch. It proves Griffin's error as to distance and corroborates him that there was no retreat. But Porter was convicted of "shamefully

I mean to be frank and attempt to conceal nothing, and I therefore give you another piece of evidence which covers every scintilla of proof given to the court-martial tending in the most remote degree to sustain the allegation.

Captain B. F. Smith testified that he belonged to Chapman's brigade of Sykes's division, and in describing the operations of the brigade to which he belonged on the 29th day of August, 1862, at Dawkins

Branch, says (court-martial record, page 110):

While we were halted a battery of the rebels opened upon us. \* \* \* Our brigade then marched into a field and the regiments were placed in order of battle. \* \* \* Morell's division was in our advance on lower ground. \* \* \* Probably half an hour afterward we received orders to retrace our steps and march back in the direction we had come. We then marched back to near Manassas Junction and camped in the woods alongside this branch railroad, and that night I was placed on duty as the field-officer of the pickets of Sykes's division.

Here is another case of mistaken distance patent on the face of the evidence. On his cross-examination this witness discloses his mistake

His camp was near the junction of the Gainesville and the Sudley Springs road.

He thought it was a mile or two from the Junction (Manassas) (page 111, court-martial record).

This evidence, condensed, then proves that his camp was near the Sudley Springs road, a mile or two from Manassas Junction. If you will look at your map you will see that was Porter's headquarters, and there General Sykes had his headquarters and the field officer of divisions, pickets covering the rear and flank of Sykes's division, marched back far enough to reach the exact position that his duty as field officer of pickets required of him; but the court thought that was evidence of a retreat. But I should call your attention to the rank by which this witness is styled—colonel—as it may perhaps be said he marched his regiment back. His colonelcy was volunteer rank, to which he was appointed after Bull Run and before he was sworn as a witness. On the 29th of August, 1862, he was a captain in the Sixth Infantry, and says "he had permission from the officer commanding his regiment to Says the man permission from the other communing his regularity of go forward." (page 110, court-martial record).

This witness unquestionably intended to speak truthfully, but had

only a confused impression of distances. But he puts the question of retreat at rest, for he says (page 111):

I did not receive any impression that we were retreating from the enemy

But the judge-advocate told Mr. Lincoln this officer testified that Porter retreated. As I have before said, it seems to have been the idea of the prosecutor before the West Point board that he could justify the finding of the court-martial without evidence if he could now produce evidence to show that the court-martial could have found Porter guilty upon proper evidence if they had known where to find it.

General Sturgis is called before the West Point board for said purse and testifies that he halted his troops (Piatt's brigade) in rear of Porter's column and rode on to the front and reconnoitered the situa

Watching the skirmishers, and among other things I took a glass and looked in the direction of the woods, about a mile beyond, which seemed to be the object of attention. There I saw a glint of light on a gun and I remarked to Porter that I thought they were putting a battery in position at that place, for I thought I had seen a gun. He thought I was mistaken, but I was not, for it opened in a few moments and fired four shots, as I recollect. \* \* Then when they had fired, as near as I can recollect, about four shots from this piece General Porter beckoned to me. I rode up to him and he directed me to take my command to Manassas Junction and take up a defensive position, insamuch as the fire seemed receding on our right. By firing I mean the cannonading that had been going on for some time on our right, probably in the direction of Groveton (new record, page 689). My impression is that this was about I o'clock. I have no way of fixing the time of day. The order was obeyed. He afterward or dered my brigade to be brought forward and I brought it to Bethlehem Church, and arrived about dusk.

It is not for me to question the correctness of this statement, for I be lieve it a probable one. General McDowell had checked Porter's advance and directed him to remain until he went around and came in on Reynolds's left. Manassas Junction was the key to his position. If the enemy extended his right and struck Manassas Junction while our right was receding on the pike, he could have swooped down upon Porter's rear as well as front. This position, to be held to avoid this contingency, was not more than two and one-half miles from where Sturgis's command, eight hundred and twenty-three strong, as General Piatt's official report shows, was lying. Porter threw back this force to hold the junction to guard against disaster; but when he received information that the enemy were retreating it relieved him of the necessity of covering his rear, and he immediately ordered the command back

It is well perhaps here to remark that the cannonading, now moving forward and then receding, indicated not battle, but a feeling the way, shelling woods, and endeavoring to draw fire, to find the location and strength of lines preparatory to taking position. As General Morell says, he could see shells in the air off to his right, but it was slow firing, and I supposed at the time, what men called firing at long range. It was

not at all like the artillery fire of a battle. (New record, page 438.)

But, sir, I can not leave this question of retreat without quoting a statement from the denunciation of Porter in the RECORD of the 6th of January, 1883, page 26, which shows either gross ignorance of the facts

or a willful perversion of them. I read:

When General Griffin was directed to move forward at one time he received an order sent to him by an orderly from General Porter to move to the rear, and that officer moved clear back to Centreville and staid there, not only all night of the 29th, but during the whole day of the 30th while the battle was going on.

General Griffin did not leave the field on the 29th. General Griffin remained at Dawkins Branch as rear guard for Porter, when Porter moved in compliance with this order of 8.50, which was delivered to Porter early on the 30th and immediately obeyed. Griffin's brigade supported Hazlett's battery at Dawkins Branch on the 29th (court-marrecord, page 142). This statement, therefore, is not only untrue, but it is as abourd as General Pope's allegation in his brief statement, put in circulation and vouched for by McDowell (new record, page 728;)

But Lee, according to the testimony of the chief engineer on his staff, took breakfast that morning (the 29th) on the opposite side of Thoroughfare Gap, ful thirty miles distant.

It is true, however, that Griffin, moving on the morning of the 30th, was so far in rear, covering the column, that he missed the road taken by the troops and went direct to Centreville, and the court-martial mequitted Porter of the charge.

But sir, we are asked why should General Pope have sent such a peremptory order as the following one:

HEADQUARTEES ARMY OF VIRGINIA,
IN THE FIELD NEAR BULL RUN,
August 29, 1862, 8.50 p. m.
GENERAL: Immediately upon receiving this order, the precise hour of receiving which you will acknowledge, you will march your command to the field of battle of to-day and report to me in person for orders. You are to understand that you are expected to comply with this order and to be present on the field within three hours after its reception or after daybreak to-morrow morning.

JOHN POPE. norrow mornin JOHN POPE

Major-General Co

F. J. PORTER, Major-General. Received 3.30 a. m., August 30.

This is an order on its face imperious in language and distrustful in nport. It came from Pope's headquarters on the field or near where the 4.30 order was issued; but the latter it was claimed was delivered in an hour or less, and one of the strongest arguments in support of its delivery at that time, made by the judge-advocate, was on the short distance it had to be carried, and the opinions of Pope, Roberts, and others, that one hour was ample time in which to carry it, while this order. carried from the same place to the same place, and more imperative than the former order, was by the official receipt shown not to have been delivered until six hours and forty minutes had elapsed. Captain Pope, the bearer of this 4.30 order, did not know Porter's position, while the latter 8.50 order was sent after the place of Porter's cumstance to show that the 4.30 order was not delivered so early as it was claimed?

If General Pope would produce the receipt for the 4.30 which Porter gave, all would be settled; but General Pope says of this and of all other communications received from Porter, which would tend to show the truth of Porter's statement, that he does not know as he ever had them, or they are lost. The only communication which could be tortured into evidence against Porter is preserved. Comment is unnecessary.

The suppression speaks for itself!

But to return, why should General Pope send an order of such tenor as the last one to Porter? I have said and the record shows General Pope to be an impulsive man. He was misinformed as to Porter's position during the day. He was surrounded by his satellites, who catered to his weaknesses and advanced themselves by feeding his prejudices.

They had all expressed the opinion that "Porter would fail him." His suspicions and jealousy were inflamed. Smith had seen treason in Porsuspicious and resorted it to General Pope, and McDowell, as insidious as Iago, was at his elbow to make insinuations; and this order was the result of the passion inflamed.

Porter came to the field. General Jackson describes his assault in his official report as follows (Report of Confederate Military Operations,

volume 6, page 231):

In a few moments our entire line was engaged in a flerce and sanguinary struggle with the enemy. As one line was repulsed another took its place and pressed forward as if determined by force of numbers and fury of assault to drive us from our position. So impetuous and well maintained were these onsets as to induce me to send to the commanding general for re-enforcements; but the timely and gallant advance of General Longstreet on the right relieved my troops from the pressure and gave to those men the chances of a more equal conflict.

The alleged traitor of August 29 was the Achilles of August 30!

On that field the Fifth Army Corps, having neither Piatt nor Griffin with it, entered the fight 6,000 strong, under Porter, and sustained a loss of 2,171, of which 112 were officers! And still, sir, so bitter was the feeling of General Pope, and so unwilling to do justice was he, that in the charges against Porter he is accused of proceeding with "unnecessary slowness, and by delays, giving the enemy opportunity to watch and breaches against Porter he is accused of proceeding with "unnecessary slowness, and by delays, giving the enemy opportunity to watch and know his movements and prepare to meet his attack; did finally so feebly fall upon the enemy's lines as to make little or no impression on the same, and did fall back and draw away his forces unnecessarily;" and in his official report puts this base libel upon record:

The attack of Porter was neither vigorous nor persistent and his troops soon retired in considerable confusion. No slander more foul upon brave men living and dead ever polluted

a lip; no libel more base and malignant ever suilied the face of paper! Breasting a storm of artillery and musketry in front, torn with an enfilade fire of artillery, the soldiers of the Maltese cross, but 6,000 strong, unmindful of danger and death, threw themselves again and again like a thunderbolt upon the enemy. The heroes of Hanover Court-House, Gaines's Farm, and Malvern Hill were there; and their trusted leader, Fitz-John Porter, cool and collected, guided that thunderbolt in the storm of battle, breaking and staggering the "Stonewall" line, until its leader cried out, "Save me, Lee, or I perish!" When Longstock board the gray and agreet the field

When Longstreet heard the cry and swept his legions across the field from Jackson's right, then, but not till then, was the Fifth Corps forced back, leaving more than one-third its number dead, dying, and bleeding upon the field in testimony of the bravery and devotion of its men and commander to the cause for which they fell.

Now, sir, the inquiry becomes pertinent, why was it that Longstreet, with his line of battle formed and complete, as the map now used by the enemies of Porter concede (see map of Major Gardner, marked illus-

trative map No. 1), at 2 p. m., August 29, 1862, did not sweep down upon Pope while Porter's corps was detached and at Dawkins Branch, and McDowell was wasting the afternoon in a march down the Sudley Springs road? It would certainly have been a much easier task to have turned Pope's flank and driven him from the field on the 29th, in the absence of Porter and McDowell, than on the 30th, when McDowell and

Porter were present on the field.

I answer, without fear of contradiction from any man who ever saw a battle and who understands the position of the troops on the 29th, that had Longstreet attempted to have enveloped Pope's left on the 29th as he did on the 30th he would have exposed himself to an attack on flank and rear from Porter, which he was too much of a soldier to risk, but waited until Pope relieved him from Porter threatening his right, and left him unembarrassed to advance his troops on the 30th over the country crossed by the old Warrenton, Alexandria, and Washington road from his right, and throw them upon Pope's flank, resulting in the rout of Pope's army. And here, sir, I am called again to correct statements lately given to the country as facts touching this case. I may not say who made them without trenching upon the rules of the House, but I may say they will be found on page 20, CONGRESSIONAL RECORD, January 6, 1883, in these words:

nary 6, 1883, in these words:

In General Longstreet's testimony is where he makes a mistake. He says he does not remember distinctly, but makes a statement that Wilcox was thrown over by Jones's command at 4 o'clock in the afternoon to support him against Porter, when the fact is that late in the afternoon General Wilcox, with several brigades besides his own, were thrown over in the direction of Groveton and went into the battle at Groveton, and staid there until 11 o'clock at night and moved back at 11 o'clock to his position upon the Warrenton turnpike, not in front of Porter, but he came in to the rear of Hood near the Warrenton pike.

And to prove how utterly reckless of fact the author of the statenent quoted is, I read from the sworn testimony of General Cadmas Wilcox himself, touching the subject-matter of the statement. In speaking of the operation of his three brigades on the afternoon of the 29th of August, 1862, he says (new record, pages 264, 265):

23th of August, 1852, he says (new record, pages 264, 265):

In the afternoon about half past 4 or 5 I was moved over to the right of the pike. One brigade stopped not over three hundred yards from the pike. \* \* \*
There was probably a half a mile between that brigade and the other two. Those other two extended to the Manassus Gap Railroad, \* \* \* I was in rear of the other troops. I did not see the troops. I knew they were in front. I saw General Jones at a dislance. I suppose they were eight hundred or nine hundred yards in front of us on the field. \* \* \* I was ordered over there to meet an emergency and to support those in front in anticipation of trouble—a fight.

This witness has thus described his transfer to the support of D. R. Jones, whose division, supported by Kemper, as we have seen by Long-street's evidence, was in the afternoon re-enforced by Wilcox so as to check Porter in his advance from Dawkins Branch.

Witness says (new record, page 266):

I came from the second position almost in a right line until we got across the pike. Then I think my line would have been probably in about that direction (south) down the railroad (rear of Hampton Coles's). I formed it in line of battle, the right resting on the Manassas Gap Railroad. \* \* \* I remained there, I think, until near sundown. Meantime there had been some musketry heard on the p.ke in the direction of Groveton and some little artillery. I went down to that. I got there about dark. The flash of musketry looked red. My three brigades did not fire ashot. I heard no infantry firing until that fight late in the evening with Generals Hood and Evans.

The battle at dark that so much is said about was an accidental colision between the Texas brigade and Law's brigade of Hood's division with Patrick's, Sullivan's, and Doubleday's brigades of King's division. Longstreet ordered an advance of his line at dusk, not to give battle, but to obtain position for battle. Hatch, with his three brigades, was ordered to pursue and overtake a fleeing enemy. The forces collided in the dark, and after a few minutes' conflict of the intermingled masses Hatch withdrew and Hood had the best of the mélée; for it was nothing but a melée, and not a battle in any military sense.

Of a verity, the Record of January 6, 1883, should be bound with

General Pope's official report and General Roberts's pamphlet cited supra, and be entitled, "Fictions by Great Commanders."

A single illustration (court-martial record, page 17) more of General Pope's habit of reckless statement and I have done with him as a witness. It relates to the 4.30 order:

Question. Did or did not General Porter obey the second order to which you refer, issued at 4.30? \* \* \* Answer. He did not, so far as my knowledge of the fact goes.

Q. You have stated that General McDowell obeyed that order so far as to appear upon the battlefield with his command?

A. Yes, sir; he arrived on the battlefield I think about 5 o'clock.

This is a deliberate assertion that McDowell came from the left to the right on the 29th in obedience to the 4.30 order, when there is not the least prefense but that McDowell left Porter and went down the Sudley Springs road at 12 o'clock m., four hours and a half before the order was written. What motive had General Pope for making such a willful misstatement of fact? I will show you his purpose by his answers to succeeding questions (court-martial record, page 17):

Question. To reach the battlefield had or had not General McDowell as great a distance to march as General Porter?

Answer. Yes, sir, fully as great.

Q. In point of fact, did or did not General McDowell in obeying that order ass General Porter and his command on the way?

A. I so understood; General McDowell can tell that better than I can myself.

The purpose is patent. The witness tells the court that McDowell eccived the 4.30 order and obeyed it, and in doing so he marched by Porter's troops. It is so gross a falsehood upon a most material question that I may best answer it by saying, "If the place held by the father of all lies shall ever be filled by selection on the score of ability there can be no doubt to whom the place will be awarded."

I will now pass to General B. S. Roberts, whom I have often referred o, and whose reputation for veracity may be determined by reference to the statements from his book which I have repeated, my purpose now being to show how utterly ignorant he was of the field, and hence how incompetent to testify as to the effect of any movement. On pages 52 and 53 of his testimony (court-martial record) he fixes the arrival of the troops reported by Buford "at about dark, 6 or 7 o'clock," and puts their number "between 4,000 and 5,000 men." On the same page he gives the grounds of his opinion that Porter could have struck Jackson's flank. They are these: That Porter received the 4.30 order at 5 o'clock p. m., and that at that time Porter was within an hour's march of Jackson's flank, which would have brought him on to Jackson at 6 p. m., which was not too late to attack.

This witness was recalled by the Government to strengthen his evidence, and he then gives an additional reason for knowing there were no troops in front of Porter. He says (court-martial record, page 206):

I sent cavalry there (to the right) twice and found only a force of mounted men, with some light artillery, who were watching all our movements on our right flank, and I inferred that it was a similar force to that which was upon our left watching our movements there, which were in front of General Porter.

How logical this deduction may have been I leave you to consider. There was no heavy force guarding Jackson's left flank; hence there was none on Longstreet's right! I have but one witness who appeared before the court-martial whom I have not specifically considered, Colonel T. C. H. Smith, who saw a sneer on Porter's lip and a gleam of treason All of his sayings and thoughts are of too little consequence

to be dignified by a review It appears from an examination of the proceedings before the West Point board that he was the Atlas, in his own esteem, on whose brawny shoulder General Pope's defense rests. He commenced his statement by an argument from the witness-box to show that he should be permitted to vindicate General Pope in reference to the address to the Army of Virginia, by explaining that anonymous articles were written and published in the newspapers, to show that nothing offensive was intended by it. Poor soul, he seems to have honest instincts, but lacks mental force to save himself from being a dupe. He testifies in his honesty to one fact that should be carried to the home of every man who formed his judgment upon the Porter case upon the evidence published and circulated at the time. Read it and ponder upon it, for the tactics then adopted to deceive the public have been continued on the same line from thence till now. What is it? The pamphlet is entitled "Proceedings of General Court-Martial at the Trial of General Fitz-John Porter, United States Army." It was prepared and printed at General Pope's headquarters, and omitted all the evidence of the accused. It was sent to every Senator and Representative and sent broadcast over the land to form public opinion, and the reading men in civil life who think they have read the record now should know that they have been deceived into forming an opinion upon the evidence of the prosecution instead of the evidence in the case. This man's honesty was shocked at the fraud and he tried to correct it, but was overruled

(See pages 366-67, new record.)
Pope's conduct at and immediately after the battle disproves the charges. Porter continuously disobeyed General Pope's orders through the 27th, 28th, and 29th of August, 1862, which was the result of cowardly instincts or the base and treacherous purpose of bringing defeat to our arms. Such is the charge upon which Porter was convicted.

I say that Pope's conduct at and immediately after the battle dis-

proves his belief in the charges which he supported by his evidence.

According to all rules established by the experience, not of one man but of all men, we feel safe in saying that if General Pope had believed General Porter betrayed him and lost the battle of the 29th from evil purpose and cowardly holding back, he would not in the attempt to retrieve the disaster on the following day have retained Porter in command of the corps that was specially charged to break the enemy's center. Such a course is not consistent with our knowledge of the springs of action which control the human mind, but is consistent with the idea of confidence and trust in Porter. Pope's act, then, contradicts his subsequent declarations.

But this is not all. After the battle was over and the troops had fallen back to Centreville and Pope was suffering all the bitterness following disappointed ambition, Porter was taken to his counsels and given the post of honor-to cover the retreat of the shattered army, pressed on every side with the enemy exultant in victory. (See the testimony of Colonel O. D. Greene, assistant adjutant-general of the Sixth Corps, on pages

1022 to 1026, inclusive, new record.)

Again, at Fairfax Court-House on the 2d of September, 1862, Colonel Ruggles, Pope's chief of staff, says (pages 149–150, court-martial record):

I was present at Fairfax Court-House, in a room in a private house there.

I was engaged at the time writing orders for the position of the troops. \* \* \* While I was writing these orders General Porter and General Pope had a conversation lasting about twenty minutes. \* \* While studiously avoiding overhearing the conversation, I heard scraps enough of it to know that they were talking about the incidents of the few days previous. At the conclusion of the interview General Pope and General Porter got up, and I heard General Pope say to General Portar that his explanations were satisfactory, with the exception of the one brigade. I think he said entirely satisfactory, though as to the word "entirely "I can not swear positively. I knew the matter of the one brigade meant Griffin's brigade. I think Porter replied, "That can be easily explained."

The one brigade, you will understand if you have followed the case. was Griffin's, who by mistake went to Centreville in violation of Porter's orders on the 30th. The court-martial acquitted Porter from blame on that charge. Here, then, we have both action and declaration of General Pope showing confidence and trust in Porter and satisfaction

with the manner of his execution of the trusts reposed in him.

Colonel Ruggles states further that when solicited by General Pope to become the principal witness in the case, on the 5th or 6th of September, 1862, he reminded General Pope of this conversation. Frankness compels me to state that General Pope substantially denies this evidence in an equivocal sort of way, on page 20, court-martial record, and alleges "that there were no explanations," "no time for explanation," "that five minutes at the outside would cover all the time he saw Porter, and persons were coming and going all the time, and all was in confusion;" and he does not remember of Ruggles speaking to him about it.

But immediately in this same connection, in reference to a conversation concerning the McClellan dispatch, General Pope says (page 21, court-martial record):

I told General Porter that I had not reported him to the Department in Washington, and that as matters stood I thought I should not take any action in reference to his case, though I felt bound to do so in the case of Griffin.

Now, it would seem to follow, when he avowed his satisfaction with Porter on the 2d and his determination to prosecute Griffin, that some strong cause must have intervened between the 2d and the 3d day of September, when he drops Griffin and turns his wrath upon Porter and charges him with Griffin's sin.

That metamorphosis was wrought in the interview with General Halleck and the Secretary of War referred to in General Pope's official report, when it was determined "to execute justice."

The agencies used manifestly were disappointed ambition and perrne agencies used manifestly were disappointed ambition and personal vanity. It was for that purpose Porter's dispatch was brought into requisition. General Pope was shown a pen photograph of his campaign, taken while it was in progress, and its results faithfully sketched days before its end. His vanity was wounded, his passion was aroused, and he became a tool to work out the purposes of others. And in this connection, sir, I will speak briefly of those telegrams and letter.

They were truthful and foreshadowed results that were the inevitable consequence of a campaign conducted as that one was being conducted. They betray no indication of a purpose to shirk duty. They are no evidence of duty neglected. They are the free criticisms They are no evidence of duty neglected. They are the free criticisms of an officer upon the methods of the campaign. Had these telegrams and letters been circulated among the troops of the Army of Virginia they would have been censurable as tending to destroy the morale of the army. But, sir, in Porter's connection with his subordinates not one word of criticism ever fell from his lips. His military mind saw disaster, but his military duty scaled his lips. These letters and dispatches were to an old and trusted friend, under whose command Porter had been read with did not be the large to the trust of the part of the large had been, and who did not belong to the Army of Virginia; and they were furnished by him to the President of the United States, who sought information and could obtain none from General Pope.

They are in no sense a breach of discipline or duty. found only in their truth. I am no believer in the doctrine that incapacity in high places can be hedged about by rules that make it a crime for one to see it and bring the attention of the supreme power to it, to the end that a remedy may be applied to prevent great evil resulting to

the public therefrom.

That the Government did not believe in Porter's cowardice or unfaithfulness is apparent from the act of placing him in command of the defenses of Washington on September 5, 1862, with a full knowledge of his alleged sins of omission and commission. Would any but a most trusted soldier have been assigned to this command in the dark days succeeding Bull Run? No; the act of Porter's assignment to that high trust is proof conclusive that, no matter what they may say, they did not believe nor think Porter a coward or unfaithful.

General Pope's conduct from the date of Porter's trial to his ex-oneration by the West Point board is a confession of Porter's inno-

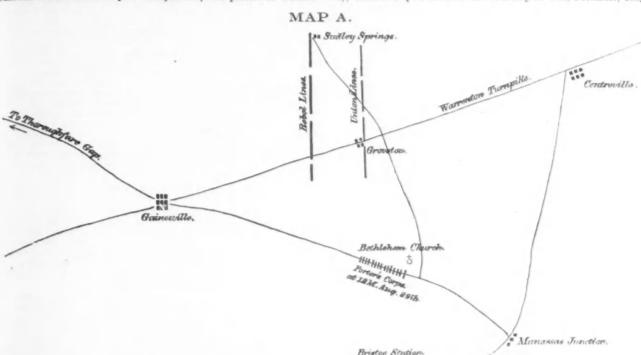

There is implanted in the breast of man a monitor called conscience Its prickings may be deadened and its voice stifled for the time, but its presence and power will ever and anon proclaim itself.

The secret which the nurderer possessessoon comes to possess him, and like the evil spirit of which we read it overcomes him and leads him whithersoever it will. He feels it beating at his heart, rising to his throat, demanding disclosure. He thinks the whole world sees it in his face, reads it in his eyes, and almost hears its workings in the very silence of his thoughts. It has become his master. It betrays his discretion, it breaks down his courage, it conquers his prudence. When suspicions from without begin to embarrass him and the net

of circumstances to entangle him the fatal secret struggles with greater vio-lence to burst forth. It must be confessed, it will be confessed; there is no refuge from confession but suicide, and suicide is confession.

Thus spoke the immortal Webster while painting the powers of conscience! Trace its workings in this case: The publication of a fictitious record of the court-martial soon after the close of the trial and its cir-

Pope to General Grant, September 16, 1867, against allowing General Porter a rehearing (new record, page 1126); the brief statement of the case of Fitz-John Porter prepared and published in 1868 by General Pope, with a map, hereto attached, marked Map A, still insisting there was no junction with Longstreet, and filled with the grossest misstatements and falsely quoting from confederate reports (new record, page culation from General Pope's headquarters; the protest of General 728); General Pope's letter to the Secretary of War, December, 1869

(new record, page 1129); General Pope's letters to M. le Comte de Paris, May 29 and December 21, 1876 (new record, page 1143 to 1149), reviewing the history of the "Civil war in America" and attempting to bully this author into support of Pope's statements in reference to Porter at Bull Run; the document filed in the War Office in June, 1878, marked "memoranda concerning second Bull Run battle" (new record, page 1132) which contains the product that Parter bad Parter bad. 1133), which contains the modest statements that Porter had for two hours nearly 26,000 men to have attacked Longstreet, and that at that time, 12 m., the battle was the hottest, and if McDowell had not been behind Porter there is no doubt but McDowell would have attacked; forgetting for the purposes of that statement that McDowell was not behind, but was in command, under his (Pope's) orders, of the whole

All these manifestations show conscience at work. Every plunge to free himself but adds to his entanglement. The knowledge of his crime committed "betrays his discretion, conquers his prudence," and he bravely challenges (new record, page 734):

The very fullest examination of the case is earnestly desired and invited, as it seyond doubt. The more the question is looked into the worse it will prove

The opportunity is given by President Hayes for him to make good his old defiance. A board of distinguished officers is appointed, and when bold defiance. A board of distinguished officers is appointed, and when they meet at West Point the representative of the Government refuses to summon General Pope. The petitioner, conscious of the justness of his case, asks that his accuser be demanded to testify. The president of the board, on the 17th of October, 1878, notifies General Pope that General Porter desires his presence as a witness; no response. On the 18th of October the following dispatch was sent:

WEST POINT, N. Y., October 18, 1878.

General John Pope, Fort Leavenworth, Kansas:

On the same day General Pope replies, "Your dispatches of 17th and 18th received;" but gives no other answer. Conscience was at work and his courage was oozing out. But, like Bob Acres, this consciencestricken coward wants time and a pretext. Three days' reflection and he sends the following:

FORT LEAVENWORTH, KANS., October 21, 1878.

General J. M. Schofield, United States Army

I transmit a telegram in answer to yours of the 17th. I presume it will occa-

sion no delay, as I could not leave here for two or three days on account of important public business relating to Indian affairs, so that I could not reach New York before Saturday night in any case.

Brevet Major-General, United States Army

And this is the telegram:

FORT LEAVENWORTH, KANS., October 21, 1878.

To General J. M. Schofield, West Point, New York

West Point, New York:

I have received your dispatch of the 17th, in which you state that "in view of the fact that the counsel for the petitioner have stated that they believe that justice to their client requires your presence here the board request that you appear as a witness before them at Governor's Island next Thursday, 2th in stant." In reply I have to state, if the petitioner considers my presence necessary he should apply to have me subpensed as a witness for him. Only as witness for him or for the Government can I be expected with any semblance of legality to appear as a witness in the case. To do so on a mere request of the board would be to place myself in a position not only false, but in every other respect extraordinary and unknown to the laws of or to the practice of the civil and military tribunals of the country.

While I stand ready to appear before your board in any position known to law or practice, I can not appear as a volunteer witness in the case on mere request and without knowledge whether I am called for the Government or petitioner. As you state that I am requested to appear as a witness because of the statements or suggestion of the petitioner, it is to be inferred I am called as a witness for him. But this fact is not definitely stated nor does your telegram convey a subpeana; only a request. To a subpona regularly issued for either side I will cheerfully and promptly respond. I am entirely willing to appear as a witness in the case, and desire simply to be placed in the same relation to the board and the parties in controversy as that occupied by all the other witnesses.

\*\*Rejentling\*\* Research\*\*

JNO. POPE, Brigadier-General, United States Armu

On the same day the board, in reply to this dispatch, sent the following subpœna by telegram:

WEST POINT, N. Y., October 21, 1878.

General John Pope, United States Army, Fort Leavenworth, Kansas:

Vou are hereby required, on behalf of the United States, to appear before the board of officers appointed by the President to examine the evidence in the case of Fitz-John Porter, late major-general of volunteers, at Governor's Island, New York Harbor, on Thursday the 24th of October instant, or as soon thereafter as practicable, to give evidence in said case.

Major-General, United States Army, President of the Board.

After waiting two days without reply, General Schofield sent another dispatch asking when the witness would come. On the 24th General Pope replied that he had received instructions to remain at Leavenworth until further orders. On the 27th October, 1878, General Pope procured from the War Department the following:

After full consideration the President declines to order you either to appear or not to appear as a witness before the advisory board in the case of Fitz-John Porter, and says you will determine for yourself what action to take, and advise General Schoffeld promptly by telegraph of your decision.

GEO. W. McCRARY, Secretary of War

On the 29th General Pope announces his determination:

On the 29th General Pope announces his determination:

I am informed by Secretary of War in telegram of this date that the President declines to order me to appear or not to appear before your board as a witness, but leaves the matter to my discretion. In view of this fact and of the telegraphic instructions of the Secretary of War for the guidance of the board, copy of which Secretary has sent, I must adhere to my position taken in my telegram of 21st instant to General Schofield. Nevertheless, although the counsel for the Government has refused to subpena me as a witness for the Government and the petitioner declines to subpena me as a witness for him, and therefore I am subpamaed by neither party, if the board require any information in my power to give on any point brought out in this investigation I will cheerfully give it by sworm replies to written interrogatories, or, if the board deem it necessary, by appearing before it for this purpose, on due notification to that effect.

JNO. POPE,

Brevet Major-General, United S

He dare not come. He would not come. He sought the protection of the President against the subpœna, and the President refused to shield him by an order not to go. Left to his own discretion this man forgot that he claimed to be heard before General Grant in 1867 "because he was one of the principal parties in interest in the case." He forgot that he courted the fullest investigation in 1869. He forgot that he filed a brief in the case in 1878. He forgot how bravely he brandished his sword when no combatant was present. Entangled in his embarrassments, conscience made a coward of him. He dare not be examined in his own case! He fled examination, and flight is confession!

But, sir, I am reminded by the opponents of this measure that General McClellan sent the following dispatch:

WAR DEPARTMENT, September 1, 1862-5.30 p. m.

Major-General PORTER:

I ask you for my sake, that of the country, and of the old Army of the Potomae that you and all friends will lend the fullest and most cordial co-operation to General Pope in all the operations now going on. The distresses of our country, the honor of our arms, are at stake, and all depends upon the cheerful co-operation of all in the field. This week is the crisis of our fate. Say the same thing to all my friends in the Army of the Potomae, and that the last request I have to make of them is that for their country's sake they will extend to General Pope the same support they ever have to me.

GEO. B. McCLELLAN

Ah, say they, even McClellan thought Porter was derelict. General McClellan replies, "He never distrusted Porter, nor any of his old officers," but Pope's reflections and insinuations had alarmed Mr. Lincoln, who urged him to send the dispatch, and he sent it to allay arising fear in Mr. Lincoln's mind. Listen to Porter's patriotic reply, which not one in ten of you who have talked about McClellan's dispatch ever saw:

General George B. McClellan :

You may rest assured that all your friends, as well as every lover of his country, will ever give as they have given to General Pope their cordial co-operation and constant support in the execution of all orders and plans. Our killed, wounded, and enfeebled troops attest our devoted duty.

Major-Gener

Has this dispatch any ring of treason, cowardice, or lack of fidelity in it? You may jeer at the expressions of the dispatch from Porter to Burnside, "hoping Mc. is at work;" but here you have "Mc." to Porter and Porter to "Mc." Judge them both by their utterances.

I have not referred to much rubbish put in this case at West Point which to me is only indicative of weakness. The dragging of brush as a ruse has wholly lost its effect when the Government puts in a map to support the argument of its counsel, showing Longstreet's full corps in line of battle at 2 p. m. And if it were not so rendered the positive evidence of General Longstreet, General Lee, and all the officers of their commands that they were in position not later than 12 o'clock, and were in supporting distance as early as 10 o'clock, would render it immaterial. But the evidence of General Rosser puts the locus in quo of this

exploit on Meadowville lane, which was to the right and east of Porter's front and more nearly in front of Reynolds and Sigel.

Bowers, the spy, was so effectually broken down that I pass him, and the doctor, Faxon, I believe, as I would have passed the chaplain, who wrote his letter in one of the Massachusetts papers stating that "Porter and Lee had a conference on the night of the 28th." Such evidence results from a disordered intellect or from a total want of moral sensibility. In either case the antidote comes with the poison, and the evidence soils the hand that attempts its use.

But, sir, there were two witnesses sworn at West Point for the first

I do it, not to treat their sayings as evidence of any facts, further than to show to what extent the fears, the passions, and the excitement of the times seized hold of all minds and colored all mental visions. A statement of the facts are sufficient. Porter was on trial for his life, charged

with being unfaithful to Pope. In the midst of the trial, he, protesting the charge was untrue, came, it is said, to his room and in an excited manner broke out, in the presence of these men and without addressing them, "I was not loyal to Pope. I was loyal to McClellan." That these men—one of whom was a reporter for a newspaper and unknown to Porter-should have imagined for a moment that a man situated as Porter—should have imagined for a moment that a man situated as Porter was, on trial for his life, should confess his crime to them, is strange enough, but that a grave Senator of the United States (Senator Chandler) should have caught it up as proof strong as "Holy Writ" is beyond the measure of my comprehension. It does not seem to occur to any of them that a high-minded soldier, cut to the quick by the imputation of disloyalty to one commander and loyalty to the other, uld in his indignation, brooding over the insult to his honor, repeat to himself as he paced the floor, with the sting still rankling in his heart, the words of the charge! Ah, no! No inference, no construction, was admissible that did not tend to prove the guilt of the accused Each vied with the other to have their garments sprinkled with his blood. It is a pleasant reflection that such distortion of meaning and misconstruction of action only survive to mark the extent of prejudice

and passion in the dark hours of 1862.

And now, Mr. Speaker, I have done with the evidence in this case and can not summarize that part of it touching Porter's actions on August 29, 1862, better than by adopting the conclusions of the West Point

Not one among all the gallant soldiers on that bloody field was less deserving of condemnation than he.

It is the unanimous verdict of a board of officers of acknowledged learning in military law, of distinguished service, and of high character, one of whom at least entered upon his duties protesting that his convictions of Porter's guilt were so strongly settled that he questioned the propriety of his going upon the board by reason of such bias, and only accepted the position upon the express request of the accused, having full knowledge of his bias. By permission I read a letter from him, after the finding of the board was promulgated:

SAINT PAUL, MINN., August 26, 1879.

Dear General: Soon after the publication of the report of the Schofield board you wrote to me thanking me as one of the board for our action in your case. \* \* I write now to say it is not thanks but pardon I should ask from you. For years I did you wrong in thought and sometimes in speech. It is true that this was through ignorance, but I had not the right to be so ignorant; I might have learned something at least of the truth had I diligently sought it. If you find anything in my action as a member of the board which you can accept as an atonement for the wrong which I did you I shall be more than gratified.

led.
With great respect and admiration, I am, yours, most sincerely,
ALFRED H. TERRY.

Major-General Fitz-John Porter, New York.

There speaks the hero of Fort Fisher. General Grant, the great captain of the rebellion, frankly acknowledges his error of judgment, and like a true soldier vindicates his brother in arms. Lawyers, statesmen, publicists, all who have studied the case by other than partisan light. pronounce Porter innocent. The finding of the West Point board relieves Porter from all moral stigma, and is accepted as conclusive in Europe and America by all save the few who resist to shield themselves from dishonor. and the politicians who hope to fatten upon war prejudices revived.

The honor and good name of the Republic are at stake. By its power an honored name was degraded, by its power a soldier with a brilliant career was stricken from one of the topmost rounds of the ladder of fame and for sixteen years lived a living death. But unfaltering in his belief of ultimate justice, he has been unceasing in his prayer for an opportunity to be heard. His step has not been heard in legislative halls, his prayers have not been poured into the legislative ear, but, soldier as he is, he sought his relief through military channels, to be soldier as he is, he sought his reflect through intrinary can be and, a day in court was given him, and he vindicated his innocence. The President of the United States submitted that vindication to Congress for its action thereon. And the honor of the nation requires that we speedily make amends for the wrong done in its name.

The laws of the land require of the citizen compensation for injury done. Shall a more lax rule prevail where the nation itself hath done a wrong to a citizen greater in degree, more ignominious in its character, than was ever inflicted by any Christian government, affecting not life it is true, but blasting name and fame, destroying citizenship, and, greatest of all, branding a soldier who periled his life for its flag and covered its arms with honor, with the burning words of infamyardice, treachery, and dishonor?"

Let us not be unmindful of our duty as representatives of a magnaninous, justice-loving people. Let us make haste to make public repara-tion for the wrong now so clearly shown to have been done. The wealth of the Indies can not compensate for the sufferings undergone, but we may do partial justice by restoration of rank and position and by compensation for losses sustained and for moneys expended in Porter's years of struggle for justice.

In the name of justice and honor I ask it. For the good name of the Republic I urge it upon you. In the name of the living and the dead whom he led in battle I demand it! Fiat justitia, ruat calum. Fitz-John Porter.

## SPEECH

OF

# HON. JOSEPH WHEELER,

OF ALABAMA,

### IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 15, 1883,

On the bill (S. 1844) for the relief of Fitz-John Porter.

Mr. WHEELER said :

Mr. SPEAKER: As regards the conduct of man to man, the highest command given is that he do unto others even as he would that others should do unto him; and when wrong is done to any man it

should be restored to him twofold.

If this mandate should be observed by men, how imperatively should it be the law to govern sovereignties of men! And if reparation must be made to all men, by what rules of measurement should a nation make restitution for the wrongs inflicted upon a public servant whose patriotic, faithful, and heroic service has given luster to her military renown ?

General Porter does not ask that the Scriptural precept be meted to him—that to him should be restored twofold for the wrong that has been done him. The demand for justice does not come from him; it comes from the people. Let me express myself clearly. I do not rise, Mr. Speaker, to make an appeal for Fitz-John Porter. That he has been the victim of wrong, great wrong, has been incontrovertibly proven to the American people. He has suffered, and his family has shared his cup of bitterness. Yes, Mr. Speaker, for the fifth of a century the pangs of a living death have been their portion, but his grandeur of character, sustained by Christian virtue, has proved equal to the emergency.

What he now endures, what he has borne for twenty years, he can still support for the short term God may will that he remain with us; and then the grass, perchance rose-bedecked, may grow over a grave marked by a broken shaft on which will be engraved only the words

#### FITZ-JOHN PORTER.

Passion, prejudice, and falsehood may poison the first impressions of the most earnest seeker for truth, but the sober second thought of the American people will always crystallize around right and justice. the American people will always crystallize around right and justice. The fabric of injustice which the enemies of this great soldier have reared by suppression of facts and distortion of truth will prove fatile to withstand the evidence which, accumulating day by day, will, like the steady current of the Mississippi or the thundering torrents of Niagara, sweep every vestige of their work, and themselves with it, into the ocean of oblivion. My appeal, Mr. Speaker, is for the honor of our country; that so far as lies in our power we avera the stigma which must inevitably rest upon her escutcheon should we refuse or hesitate in the rectification of this great wrong.

## THE PEOPLE HAVE VINDICATED GENERAL PORTER

The honor of Fitz-John Porter is no longer in your hands. In their

own high court the American people have reversed the decision of 1863. We now call upon you to register the popular decree.

Individual considerations are lost in the presence of the more stupendous question of principle which we feel should guide this great nation in its dealing with its servants.

### PORTER DELIBERATELY SELECTED FOR IMMOLATION

The subject we are called to discuss leads us to make this inquiry:

Is the life, or, what is dearer than life, is the honor of an officer
safe in times of great public excitement when his destruction will
aid the purposes of partisans?

In a country where there is so much virtue and intelligence and love of justice we would readily conclude that generally Americans, whether officers or citizens, might depend upon being awarded justice in our courts, either civil or military, but the evidence presented by this case to the House and the investigation of other similar cases are startling reminders that we cannot always depend upon the truth or

startling reminders that we cannot always depend upon the truth or certainty of this proposition.

Fitz-John Porter—the brave soldier—the beau ideal of chivalry—the only member of his class who won on the plains of Mexico the brevet of a field officer—the man selected to instill honor and chivalry into the minds of the military students of our country—the Chevalier Bayard of the Army of the Potomac—the man who, already covered with glory on twenty fields of battle, was selected to command McClellau's rear-guard from June 26, 1862, the darkest hours seen by the 100,000 men that the gallant and skillful McClellau had pressed to the very inner gates of the confederate capital lan had pressed to the very inner gates of the confederate capital— Fitz-John Porter, the man who in those desponding hours rallied and aligned the dispirited troops, and owing to whose skill and cour-age the sun went down the night of July 1 upon the triumph of Malvern Hill, a victory so brilliant and so signally due to that officer as to call for the thanks of the nation, this is the man deliberately se-lected for immolation! The disaster to Pope's army, which occurred

within sixty days from this victory at Malvern Hill, required a scapegoat and a sacrifice

goat and a sacrifice.

Fitz-John Porter had refused or had failed to assist in fomenting unjust accusations against General Patterson, and had thereby incurred the ill-will of that officer's enemies. He had spoken highly of McClellan and Buell, and it was charged that he had used expressions which could be interpreted as indicating that the officer who escorted President Lincoln while en route to Washington, and who was then commanding fifty thousand men in the defense of the national capital, was not endowed with all the attributes of a great commander. commander

These offenses, together with assertions (devoid of foundation) that in private conversation he had used utterances which indicated that he did not approve certain views that the Administration regarded favorably, added force to the incentive to charge General Fitz-John Porter with cowardice before the enemy; and a specification of tar-diness was sufficient in that time of great excitement to cause the court, without a scintilla of credible evidence, to brand that awful word upon the name of a distinguished American general whose intrepidity and courage were winning from his soldiers the soubriquet of the Marshal Ney of the American continent.

When a man in the high places of military power needs a victim, one can be found. Pope needed a victim, and he found one. I do believe that if such a towering military genius as Alexander, or Hannibal, or Cæsar, or Marlborough, or Napoleon, or if any one who combined the high qualities of all these in one, had been the exciting cause of overshadowing the self-supposed glory and eminence of John Pope, that, as the situation then existed, he could have found his victim even in such an illustrious personage. Not only would be have found his victim, but he could have found a court subservient to his purposes, and witnesses quick and apt with the testimony necessary to convict him.

### SOUTHRONS HAVE A RIGHT TO FEEL AND SPEAK ON THIS SUBJECT.

The taunts so often hurled at men from a certain section of the United States, who, in compliance with official obligations, presume to express the results of their investigations and reflections on this subject, will not drive us from our duty.

subject, will not drive us from our duty.

In r-ply to their question as to what we have to do with it, let me say that in legislation of a judicial nature we strive to act without passion or bias; and I desire to say that the honor of an American soldier is as dear to us as it is to the people of any portion of our land, whether he belong to one section of the Union or the other. I shall endeavor to confine myself to a discussion of the subject in a military and historical view, as my friend from Wisconsin, the able jurist, General Bragg, informs me he will give especial consideration to the legal aspects of the case.

## SUCCESS THE END OF MILITARY OPERATIONS

There is but one purpose in conducting military operations; and that is, to attain succes

Decided victory at one point of battle will often determine the result, and where the armies are about equal in strength, morale, and position, this is so generally true that it is received as a recognized axiom of war.

Victory at a point of battle is attained by accumulating a predomi-

nance of force at a given place nance of force at a given place.

This involves many elements; but supposing other things to be equal the problem resolves itself into the concentration of men at the point indicated, all of which is modified by the various elements which enter into warfare, such as strength of position, morale of com-

batants, resolution, ability, and vigor of attack; determination, skill, and stubbornness of defense. Now, in order to fight with the necessary elements of advantage,

we must know substantially and practically the strength and position of the army we propose to assail.

The commanding general cannot be everywhere, and cannot know the continually changing condition of the opposing army.

To act with intelligence his army is divided into corps, each of which is under the orders of a man who is and ought to be equal in many respects to the army commander.

He is a man whose reputation and renown is national. While he is primarily responsible to his commander, he is also responsible to the country and to the government he has sworn to serve.

Such chief of corps has not performed his duty unless he has kept himself fully advised regarding the enemy, which information he should transmit frequently and rapidly to the general of the army.

All orders he receives should be obeyed with promptness and intel-

ligence, and an

INTELLIGENT OBEDIENCE OF ORDERS comprehends an obedience which will carry out the purposes of the

commanding general.

A literal compliance with an order which it is evident would defeat the designs of the general, and which it is evident was written with erroneous impression regarding the situation, would be base and crim-

inal disobedience. To win battles you do not want subordinates who with the acumen of a lawyer will justify blunders and unskillful manœuvers by strained, critical construction of words or phrases.

Victories are attained by simpler principles than these.

Every corps commander knows the position of the enemy's troops. He knows the general plan of battle; he knows the point of attack proposed for the other corps; he knows the general principles which govern operations on the field, and the officer who keeps these views appermost in his mind will generally construe orders as his commander intended he should.

If a chief of corps receives a written order which he knows to be based upon a status which has changed, and he knows that complibased upon a status which has changed, and he knows that compli-ance with it will cause useless slaughter to his men and insure dis-aster, can any one justify the officer who blindly and like an au-tomaton mechanically obeys the literal direction? I say emphatically, no! and military history for two thousand years sustains me in my assertion. So, too, if any order has been

DELAYED IN TRANSMISSION.

so that when received the time has passed for subserving the intended purpose, the same discretion should be used, and failure to use it would be base and criminal.

I not only admit but I must insist that any non-compliance with orders in battle is at the peril of the officer who assumes so grave a responsibility.

If by neglect of his duty he has failed to inform himself suffi-ciently of the situation, that subsequent events show his action was not in all respects *proper*, he is and ought to be held to the highest responsibilit

So, too, if his mental comprehension is so weak or obtuse that he can not instantly discern his duty, he is not the man designed by nature for a valuable tactician at the supreme moment of battle.

It may be said by some that this test is too severe, but the friends of Fitz-John Porter ask no relaxation of its stringency. As the reward of the successful chieftain is imperishable renown, they admit that the country has a right to correspondingly exacting requirements. But still that

MODERN GOD OF WAR. NAPOLEON.

made no such rules for his marshals and generals.

If literal compliance with the words of his orders had been invariably followed, history would now record disastrous defeats in place of many of the brilliant victories which have entwined imper-

ishable renown with the name of that greatest of commanders.
Such a rule would have made the exercise of two of his most valued maxims of war impracticable, nugatory, and impossible.

FIRST.

There is a moment in battles when the smallest maneuver or the smallest numer of troops decides and gives the superiority.

SECOND.

In war, as in politics, the lost moment never returns. Fortune is a woman, and it is necessary to profit holdly by every opportunity.

I read these two maxims of Napoleon from the very excellent work of Edward Yates, B. A., of King's College, London, page 38. The work is specially commended and indorsed by Professor Narrien, of the Royal Military College, and also by Lieutenant-General Sir Wm. Napier, K. C. B.

I will now read from Baron de Jomini, page 70, on this subject of

THE FUNDAMENTAL PRINCIPLES OF WAR:

It is proposed to show that there is one great principle underlying all the operations of war, a principle which must be followed in all good combinations. It is embraced in the following maxims:

To throw by strategic movements the mass of an army, successively, upon the decisive points of a theater of war, and also upon the communications of the enemy, as much as possible, without compromising one's own.

II. To manœuver to engage fractions of the hostile army with the bulk of one's III.

On the battlefield, to throw the mass of the forces upon the decisive point, or upon that portion of the hostile line which it is of the first importance to over-threw. IV.

To so arrange that these masses shall not only be thrown upon the decisive point, but that they shall engage at the proper times and with energy.

From Military Maxims of Napoleon, as translated by Colonel D'Aguilar, adjutant-general to the troops serving in Ireland, the seventy-second maxim is:

seventy-second maxim is:

A general-in-chief has no right to shelter his mistakes in war under cover of his sovereign or of a minister when these are both distant from the scene of operation, and must consequently be either ill-informed or wholly ignorant of the actual state of things.

Hence it follows that every general is culpable who undertakes the execution of a plan which he considers faulty. It is his duty to represent his reasons, to insist upon a change of plan, in short, to give in his resignation rather than allow himself to be made the instrument of his army's ruin. Every general-in-chief who fights a battle in consequence of superior orders with the certainty of lonny it is equally blanuable.

In this last-mentioned case the general ought to refuse obedience, because a blind obedience is due only to a military command given by a superior present on this spot at the moment of action. Being in possession of the real state of things, the superior has it then in his power to afford the necessary explanations to the person who executes his orders. But supposing a general-in-chief to receive a positive order from his sovereign, directing him to fight a battle, with the further injunction to yield to his adversary and allow himself to be defeated, ought he to

obey it! No. If the general should be able to comprehend the meaning or utility of such an order, he should execute it, otherwise he should refuse to obey it.\*

In 1793 General Hoche, having received orders to move upon Treves with an army harassed by constant marches in a mountainous and difficult country, refused to obey. He observed, with reason, that, in order to obtain possession of an unimportant fortress, they were exposing his army to inevitable ruin. He caused therefore, his troops to return into winter-quarters, and preferred the preservation of his army, upon which the success of the future campaign depended, to his own safety.

Another quotation from an American edition of this work reads

A military order exacts passive obedience only when it is given by a superior who is present on the spot at the moment when he gives it. Having then knowledge of the state of things, he can listen to the objections and give the necessary explanations to him who should execute the order.

The maxim which enjoins us to

ATTACK THE WEAKEST POINT

of the enemy's position is much older than Napoleon. It is as old as of the enemy's position is much older than Napoleon. It is as old as the military artitself. At least, we can say it was known and practiced at the siege of Troy, as is proven by the following passages from the grand old Homer, to whom we are indebted for nearly all the military maxims of this and past ages. We perceive herein that not only did the Greeks attack the weak point, but also that the Trojans had an eye to its defense. The verses below are a part of the earnest and eloquent appeal made by Andromache to Hector, urging among others this reason why he should remain within the city:

Here is full work for thy majestic soul.

For hitherward the waves of battle roll;

Here, by the fig trees, feeblest is the wall;
Here plant thy standard, here thy heroes call.

Thrice here, the towering Greeks their strength have tried;
Here Ajax stormed with Diomede allied,
Assisted by the matchless king of Crete,
And Atrens' sons, in war-gear clad complete;
Hither directed, by their skill to ses
Our salient points, or led by prophecy,
Perhaps some God points out the dangerous way;
Then here, dear Hector, dearer husband, stay;
So that th' Atridæ and their Grecian braves
In their next onset, here embrace their graves.

This maxim was known to Alexander, to Scipio, Hannibal, Caesar, and Pompey

It was known to Marlborough, Wellington, Washington, and Napoleon.

It was known to Andrew Jackson, and was known to Lee and Grant and Sherman and to Fitz-John Porter.

THE CHARGES UPON WHICH PORTER WAS TRIED EXAMINED.

The specifications to the charges upon which General Porter was tried, after divesting them of verbiage, were, in substance, these:

First. Disobedience to the order of August 27th, requiring him to march from Warrenton Junction at one o'clock on the morning of the 28th, and be at Bristoe Station by daylight.

Second. Disobedience on August 29th, while in front of the enemy, to the joint order to McDowell and Porter, directing them to march toward Gainesville and establish communication with the other corps.

Third. Disobedience on August 29th, while in front of the enemy, to what is known as the "4.30 p.m. order," requiring Porter to attack the enemy's flank and rear.

His prosecutors of the last few years have made the additional charge that he violated a maxim of war, and, as some term it, one of the great leading maxims in Napoleon's military experience. I will endeavor to discuss these matters in their order, and we will first examine

THE ORDER DIRECTING PORTER TO START AT 1 A. M.

on August 28, for Bristoe Station.

Porter's corps had marched all day. A portion of the troops were just going into camp when the order which is referred to and which constitutes the gravamen of the first specification reached him. This was at 9.50 p. m. on the 27th. I will read the entire specifica-

SPECIFICATION 1st.—In this: that the said Major-General Fitz-John Porter, of the volunteers of the United States, having received a lawful order, on or about the 27th August, 1862, while at or near Warrenton Junction, in Virginia, from Major-General John Pope, his superior and commanding officer, in the following figures and letters, to wit:

HEADQUARTERS ARMY OF VIRGINIA.

August 27, 1862—6.30 p. m., Bristoe Station.

GENERAL: The major general commanding directs that you start at one o'clock to night and come forward with your whole corps, or such part of it as is with you so as to be here by daylight to morrow morning. Hooker has had a very severe action with the enemy, with a loss of about three hundred killed and wounded. The enemy has been driven back, but is retiring along the railroad. We must drive him from Manassas and clear the country between that place and Gainesville, where McDowell is. If Morell has not joined you send word to him to push forward immediately: also send word to Banks to hurry forward with all speed to take your place at Warrenton Junction. It is necessary, on all accounts, that you should be here by daylight. I send an officer with this dispatch, who will conduct you to this place. Be sure to send word to Banks, who is on the road from Fayetteville probably in the direction of Bealeton. Say to Banks, also, that he had best run

<sup>\*</sup>In the campaign of 1697 Prince Eugene caused the courier to be intercepted who was bringing him orders from the Emperor forbidding him to hazard a battle, for which everything had been prepared and which he forcease would prove decisive. He considered, therefore, that he did his duty in evading the orders of his savereign; and the victory of Zanta, in which the Turks lost about thirty thou and men and four thousand prisoners, rewarded his audacity.

back the railroad train to this side of Cedar Run. If he is not with you, write him to that effect.

By command of Major-General Pope:

GEO. D. RUGGLES Colonel and Chief of St

Major-General F. J. PORTER, Warrenton Junction.

If Banks is not at the junction instruct Colonel Clary to run the trains back to this side of Cedar Run, and post a regiment and section of artillery

By command of Major-General Pope:

GEO. D. RUGGLES, Colonel and Chief of Staff.

Did then and there disobey the said order, being at the time in the face of the enemy. This at or near Warrenton, in the State of Virginia, on or about the 28th of August, 1862.

The distance was nine or ten miles, the night was dark, and the narrow road, badly cut up with ditches and gullies, was filled with the general supply train of the Army.

[I will have published in the RECORD a series of maps, illustrating the geography of the country and the several positions of the two

armies.]
Most of Porter's corps had marched 18 miles a hot summer day,

and all of them as much as 12 miles.

Porter had a right to suppose that if Pope knew these facts he would not have fixed 1 o'clock for his command to move. He, however, directed the order to be complied with, and his subordinate generals joined in an appeal that the tired men should be allowed a little much-needed sleep.

Porter immediately sent a dispatch to General Pope stating these facts, together with the information that the road was so blockaded with wagons that progress would be difficult, suggesting a delay until 3 a. m., also respectfully requesting that he would send an officer of his staff to a d him in moving the wagons out of the road so that he could march.

could march.

The fact that General Pope sent officers to aid in clearing the way shows that the commanding general recognized the difficulty of Porter's immediate and literal compliance with the order, by reason of the impediments suggested in Porter's request. The commanding general makes haste to aid in thus clearing the way. Porter's request for aid to clear the way was but a part of his request to Pope, the other part being for two hours' delay (from 1 to 3 o'clock). Now, the fact that Pope sent officers to aid in clearing the way, thus acknowledging its necessity, was quite sufficient to assure Porter that the general had recognized the difficulty of an immediate movement. This was sufficient to lead Porter to suppose that Pope in complying with the chief part of the request signified his assent to the other. This was sufficient to lead Porter to suppose that Pope in complying with the chief part of the request signified his assent to the other. And this suggestion becomes irresistibly forcible when coupled with the fact that upon the arrival of Porter the next day the commanding general expressed no displeasure, and that, in fact, if he felt any displeasure it was concealed from Porter for nearly three months, he hearing nothing of it until the charges were preferred against him.

I do not mean to assert that Porter's letter to General Pope contained a request in so many words for authority to delay the more

tained a request, in so many words, for authority to delay the march until three o'clock. Porter explained the situation to General Pope, and stated that therefore (meaning, of course, that unless the commanding general otherwise directed) he would start at three o'clock.

A CORDIAL AND SOLDIERLY MEETING. Not only was there no suggestion of displeasure on the part of Geueral Pope at this meeting, but there was a remark made by him to Porter which conclusively shows that there was no feeling of dis-

pleasure. He said to Porter that there had been no necessity for an earlier appearance of his corps.

Now this meeting of Pope and Porter is extremely significant. Here we see the chief and the subordinate face to face on the morning of the 28th. The meeting is cheerful, soldierly, and cordial; just such a meeting and greeting as should be between brave men in the harness of war, fighting for their country. It must be remembered, too, that both these generals had in their minds at that moment the correspondence these generals had in their minds at that moment the correspondence of the previous night; that is, the order to move by Pope, and the request of Porter for aid and delay. And with all these transactions fresh in the mind of each they met on the square; and there is not the slightest hint of disapprobation, but, on the contrary, the high courtesies of gentlemen with social and official cordiality. Three months afterwards Pope was a witness against Porter on the contramartial. In reply to a question from Porter he testifies (see p. 19, marginal p. 18, Ex. Doc. No. 71, Thirty-seventh Congress, third session, record of Fitz-John Porter's court-martial):

I saw him (Porter) at Bristoe Station. I think it was about 8 o'clock on the morning of the 28th.

And in further reply to most searching interrogatories, General Pope says (see p. 19):

I am therefore very sure that I did not complain to Porter.

I am not sure that he gave me any explanation. I have a general recollection that he spoke to me of his march and the difficulties that he had in getting wagons out of the road,

and the difficulty he had in getting through the wagon-

On page 13 General Pope, in testifying about this order, in reply to a question from the judge-advocate, said:

Q. Did he at that time, or at any time before his arrival, explain to you the reason why he did not obey the orders !

A. He wrote me a note, which I received, I think, on the morning of the 28th very early in the morning, perhaps a little before daylight. I am not quite sure about the time. The note I have mislaid. I can give the substance of it. I remember the reasons given by General Porter.

WAS PORTER'S REQUEST FOR AID TO REMOVE THE IMPEDIMENTS IMPERTINENT!

I respectfully submit that there was nothing improper or unusual in this request for assistance from the commanding general in their

On the contrary, it was precisely what any well-informed and judicious officer should have done.

Porter was without any cavalry, and his couriers were exhausted. The wagons encumbering the road belonged to the general supply

No portion of the trains which filled the road belonged to Porter's

For him to give orders to wagon-masters over whom he had no control, while proper in case of an exigency when it could not be avoided, was certainly more

CONSISTENT WITH MILITARY BULES

and discipline for him to prevent difficulty and conflict by asking Pope to send an officer who understood his wishes to superintend this

It is very probable that Porter considered it possible there we

It is very probable that Porter considered it possible there were some trains, for instance the ammunition trains, which Pope desired especially to have hastened on and not turned out of the road.

If we establish a principle that it is right and proper for subordinate commanders to order the supply and ammunition trains of an army out of the road, and thus stop them while they are moving pursuant to orders from the commanding general, a most dangerous and unmilitary system would be inaugurated, and frequently such action on the part of subordinate officers would thwart the best-laid plans of an army commander; sometimes trains which the general was having moved to a place of safety would by orders of a subordinate officer be stopped and left liable to capture, and in other cases supply and ammunition trains which were imperatively needed at a certain point would by such unauthorized orders be delayed so as to materially embarrass the plans of the general commanding.

(EXECAL PORTER WAS 100 GOOD A SOLDER

#### GENERAL PORTER WAS TOO GOOD A SOLDIER

not to appreciate such considerations, and therefore he asked General Pope to have an officer of his staff who understood his plans present, so that by no possibility could be interfere with any wishes or purposes of the general regarding the movements of the army trains; and yet there are men, formerly brave generals, now assailing General Porter, who sound such deep depths in search of matters of accu-

eral Porter, who sound such deep depths in search of matters of accusation that they lose their bearings, and in discussing this action of Porter regarding the wagons go so far as to say that Pope would have been justified in relieving him of his command at that moment. This effort to show that in a military sense this request was a piece of impertinence amounting to insubordination is a huge absurdity. The fact that General Pope complied with it by sending officers to aid in clearing the way is conclusive to show that General Pope did not consider this request as at all impertinent. A commanding general will hardly make haste to comply with an insulting or impertinent request.

nent request. Every experienced officer knows how fatiguing is a march over a gullied road stopped up with wagons, and that to awaken wearied troops in time to start on the march at 1 o'clock will unfit them for the next day's work. General Porter knew that upon his arrival at Bristoe Station he was

# EXPECTED TO PURSUE A FLYING ENEMY,

and that his commander's purposes could be better carried out by allowing his fired soldiers a two hours' rest, while, with his staff aided by orders from his commander, he prepared the road so that his troops could march with facility.

The suggestion that the troops could march on the railroad does not help the matter, for ten thousand men after stumbling over cross-ties and trestles on a dark night for nine miles would be of little value the next day.

Now, bear in mind that on the opening of Porter's trial, General Pope swore as follows (page 13, Ex. Doc. No. 71, Thirty-seventh Congress, third session, record of Fitz-John Porter court-martial):

By the JUDGE-ADVOCATE :

Question. What was the character of the night; was it starlight f Answer. Yes, sir; as I remember, it was a clear night. \* \* \* There was no ficulty in marching, so far as the night was concerned.

Major-General Heintzelman, a witness for the prosecution on Por ter's trial, testified (see proceedings of court cited, Schofield board,

It was very difficult to march on the railroad in the night. Some of the rails ere torn up, ties piled on the track, culverts destroyed, and bridges burned. It as very dark. In the coarse of the night we had a drizzling rain.

General Reynolds (page 169 court-martial record) testified:

It was a very dark night.

I should not have considered it practicable to march that night. I should have ensidered it a very precarious undertaking.

These distinguished officers, Major-General Heintzelman and General Reynolds, are sustained in their testimony that the night was very dark by the following array of witnesses (I will cite the House

to the pages where their evidence can be found in the court-martial records; the pages referred to are the marginal pages in the Schofield board record): Col. Robert E. Cleary, page 121; Capt. B. F. Fifield, page 123; Capt. George Montieth, page 126; Col. Frederick T. Locke, page 134; General Charles Griffin, pages 160 and 161; Col. J. P. Brinton, page 205; General Robert C. Buchanan, page 214; General George D. Ruggles, page 279. All these witnesses testify that the night was very dark, and some of them swear that it was raining. And the substance of all their testimony shows that to have made the march either on the railroad or the dirt road or across the fields would have been almost impossible, and would have destroyed

made the march either on the railroad or the dirt road or across the fields would have been almost impossible, and would have destroyed the efficiency of the army corps for any service the following day. This evidence also flatly contradicts the evidence of General Pope. Now, as General Pope is flatly contradicted by this array of witnesses upon an important point, and as we have seen that he contradicted himself on another important point, and as this is but a sample of the want of accuracy in very many points in his evidence, can the American people allow the honor of Fitz-John Porter to be affected by any statement of such a man?

When Porter reached Bristoe Station the next morning, about 8 o'clock, he received no order to proceed farther.

NO ATTACK WAS EXPECTED,

I will read General Pope's orders to his other commanders:

HEADQUARTERS ARMY OF VIRGINIA.

Bristoe Station, August 27, 1862—9 o'clock p. m.

Major-General McDowell:

Major-General McDowell:

At daylight to-morrow morning march rapidly on Manassas Junction with your whole force, resting your right on the Manassas Gap Railroad, throwing your lett well to the east. Jackson, Ewell, and A. P. Hill are between Gainesville and Manassas Junction. We had a secere tight with them to-day, driving them back several miles along the railroad. If you will march promptly and rapidly at the earliest dawn of day upon Manassas Junction, we shall bag the whole crowd. I have directed Reno to march from Gainesvilleat the same hour upon Manassas Junction, and Kearney, who is in his rear, to march on Bustoe at daybreak. Be expeditions and the day is our own.

JNO. POPE Major-General Command

HEADQUARTERS, BRISTOR, August 27, 1862-9 o'clock p. m.

Major-General KEARNEY:

Major-General Kearney:

At the very earliest blush of dawn push forward with your command with all speed to this place. You cannot be more than three or four miles distant. Jackson, A. P. Hill, and Ewell are in front of us. Hooker has had a severe fight with them to-day. McDowell marches upon Manassas Junction from Gainesville tomorrow at daybreak; Rene upon the same place at the same hour. I reant you kere at day-dawn, if possible, and we shall bag the whole crowd. Be prompt and expeditions, and never mind wagon trains or roads till this affair is over. Lieutenant Brooks will deliver you this communication. He has one for General Reno and one for General McDowell. Please have these dispatches sent forward instantly by a trusty staff officer, who will be sure to deliver them without fail; and make him bring back a receipt to you before daylight. Lieutenant Brooks will remain with you and bring you to this camp. Use the cavalry I send you to except your staff officer to McDowell and Reno.

JNO. POPE.

Major-General Commanding.

BRISTOE STATION, August 27, 1862-9 p. m.

To Major General Reno: March at earliest dawn of day, with your whole command, on Manassas Junction. Jackson, Evell, and A. P. Hill are between Gainesville and that place, and if you are prompt and expeditions we shall be given whole crowd. Movelle advances upon Manassas Junction from Gainesville at the same hour; Kearney on Bristoe. As you value success, be off at the earliest blush of day. Acknowledge the receipt of this, and do not stop to look for roads, and, if necessary, leave guards with your trains. Push across the country wherever artillery can be hauled. I rely on your speed.

Major-General Comm

It will be observed that the other troops of Pope's army were ordered to march at daylight, and all were notified that the movement proposed was an aggressive one.

would here call attention to what I regard as an

IMPORTANT FACT.

The order to Kearney said:

At the very earliest blush of dawn push forward with your command with all speed to this place. You cannot be more than three or four miles distant.

It also contained these words: I want you here at day-dawn, if possible, and we shall bag the whole crowd.

want you here at day-dawn, it possible, and we shall bug the whole crowd. Although Kearney had but three or four miles to travel, while Porter had to travel nine or ten miles, Porter reached Bristoe Station at 8 a. m., at the same time that Kearney arrived. Kearney, up to the day of his death, was so commended as to cause him to be considered a proper officer to be put in command of the army.

The next day Pope, over his own signature, informed Kearney that—

McDowell had intercepted the retreat of the en And in the same communication he said:

I desire you to move forward at 1 o'clock to-night, even if you can carry with you no more than 2,000 men. \* \* \* The enemy is not more than three and a half miles from you. Seize any of the people of the town to guide you. Advance cantiously and drive in the enemy's pickets to-night and at early dawn attack him vigorously. Be sure to march not later than 1 with all the men you can take.

The evidence of Major-General Heintzelman, witness for the prosecution (marginal page 610, Schofield board report) is:

Direct-examination: estion. Will you read to the board those events which you noted at the time, Question. Will August 29, 1862

Answer. Centreville, Friday, August 29, 1862: Kearney did not get off until after day-light. \* \* \* In the night an order came for Kearney to advance at 1 a. m. and attack the enemy. Hooker, at 3 a. m., was to support him. The report was that Generel Mc Dowell had intercepted the enemy, and the next morning I started at daylight as I was directed. When I got to where Kearney was his division had not

Now, bear in mind that while General Kearney was delaying six or seven hours, in complying with a most positive and peremptory order to move at 1 o'clock and attack the enemy at daylight, Porter, order to move at 1 o'clock and attack the enemy at daylight, Porter, as we shall soon see, was obeying Pope's order to march at 3 a.m., with most implicit accuracy and promptness. As not even an explanation was required of Kearney, it must be presumed that Pope recognized that he made the delay for good reasons.

I am not permitted, under the rules of Congress, to allude to the able speeches of Senators, but I am authorized to refer to their published letters, one of which, under date of November 23, 1882, I find in the Chicago Tribune.

in the Chicago Tribune.

General LOGAN, in this letter, under the heading

POPE'S ORDER TO PORTER.

Anticipating an attack from the confederate forces on the morning of the 28th.

General Logan commits an error here, because Pope's order to Porter directed him (Porter) to start so as to be at Bristoe Station the morning of the 28th; not for the purpose of resisting an attack, but quite contrary, for the purpose of inaugurating an aggressive move-

The enemy has been driven back, but is retiring along the railroad. We must brive him from Manassas and clear the country between that place and Gainesville, where McDowell is.

In this connection, I will state that all the proof shows that at the hour Porter left Warrenton Junction there was not a confederate at Manassas, nor between that place and Gainesville. General Logan, in his letter, also uses these words:

Hooker's command being about out of ammunition.

If it was true that Hooker was about out of ammunition, General Pope did not know it when he made the 6.30 order of the 27th, and therefore it could not have entered into his reasons for sending the

The proof shows that the report regarding the scarcity of ammunition did not reach Pope until after dark, and it appears that Hooker did not get through with his fight until dark, which was some time after Pope wrote the order, and so far from its being proven that he was out of ammunition, distinguished officers of Hooker's corps say that there was no scarcity; and if Hooker had needed ammunition is it not probable that General Pope would have ordered supplies from General Kearney, who was but four miles distant, and whom Pope ordered to start at daylight to Bristoe Station? In addition, it must be remembered that General Pope's general supply train was then in the road which led to that place

The first allusion I find to this matter is in General Pope's official

report.

General Logan also gives another reason why General Pope made the 6.30 order of the 27th. General Logan's words are:

Inasmuch as he desired to send a portion of his forces in the direction of Gaines ville and on to Thoroughfare Gap, so as to impede the advance of Longstreet, who was then marching rapidly to join Jackson.

This could not have been General Pope's purpose, because his correspondence shows that he had no idea at that time that Longstreet was anywhere near Thoroughfare Gap, marching to join Jackson. It was two days after, that is, on the 29th, that General Pope says he learned of Longstreet's advance.

The words General Pope used on the 29th were:

The indications are that the force of the enemy is moving in this direction at a pace that will bring them here by to-morrow night or next day.

But, in passing, let me make this comment. If General LOGAN is But, in passing, let me make this comment. If General Logan is correct in his assumption that the purpose of Pope's order of the 27th was for Porter to impede the advance of Longstreet, and if it was true that Longstreet was then marching rapidly to join Jackson, how can General Logan or General Pope, or any one else, deny that on the 29th Longstreet was in front of Porter?

But as a conclusive answer to the prosecutors and persecutors of General Porter, who still say that he should have literally complied with the order, and started to march at 1 o'clock in the night, I will read the oninion expressed by General Grant upon this subject, and

read the opinion expressed by General Grant upon this subject, and will not weaken his forcible way of treating the matter by any further remarks of my own:

remarks of my own:

His troops had been marching all day, were very much fatigued, some of them only having just arrived in camp and had their supper, when the order to march at 1 o'clock was received. The night, as shown in the testimony before the court which tried Porter, and as confirmed by the evidence given in what was known as the Schofield board, was extremely dark; the road very narrow, with numerous cuts and streams passing through it; bounded by woods on both sides in many places, with no place where the open country could be taken for the march of troops; and blocked up with about 2,000 army wagons, many of them nired in the narrow road, so that the officer who conveyed this order to General Porter was expected, with fatigued troops, worn with long marches, on scanty actions to make a march on a very dark night, through a blockaded road, more rapidly than a single aid-de-camp, unincumbered, had been able to get through. A horse-back.

When he received the order he showed it to his leading generals, and, apparently with one accord, they decided that the movement at that hour was impossible; further, that no time could possibly be gained by so early a start, and that if they should start at that hour and get through to Bristoe Station at the time designated, tho troops would not be fit for either fighting or marching on their arrival at that point. Porter replied, however, "Here is the order, and it must be obeved;" but, after further consultation, he decided, as did bis generals, that a postponement of two hours in starting the march would enable them to get through as quick as if the men were kept on foot and under arms while the road was being cleared, and that the men would be in much better condition for service on their arrival at their destination. He was centrely justified in exercising his own judgment in this matter, because the order shows that he was not to take part in any battle when he arrived there, but was wanted to pursue a flecing enemy. He did not leave the commanding general in ignorance of his proposed delay, nor of the reasons for it, but at once sent a request that the general commanding should send back cavalry (he had none himself) and clear the road near him of incumbrances, so that the march might be unobstructed.

It is shown that a literal obedience of the order of the 27th of August was a physical impossibility. It is further shown that General Porter was desirous of obeying it herally, so far as was practicable, but was prevailed upon by his leading generals—against whom a suspicion of disloyalty to their commander or to the cause has never been entertained—to do what his own judgment approved as the best thing to do, to make a later start with a view of arriving at his destination as early as it was possible for him to arrive there, and to give to his jaded and won troops two hours more of needed read. If the night had been clear and the road an open one there would not have been as much justification for the e

We now come, Mr. Speaker, to the second specification, which refers to what is called the joint order. General Porter received it about noon, 12 o'clock, on August 29. The entire specification reads:

SPECIFICATION 2D.—In this: That the said Major-General Fitz-John Porter, being in front of the enemy, at Manassas, Virginia, on or about the morning of August 29, 1862, did receive from Major-General John Pope, his superior commanding officer, a lawful order, in the following letters and figures, to wit:

HEADQUARTERS ARMY OF VIRGINIA, Centreville, August 29, 1862.

Generals McDowell and PORTER:

Generals McDowell and Porter:

You will please move forward with your joint commands towards Gainesville. I sent General Porter written orders to that effect an hour and a half ago. Heintelman, Sigel, and Keno are moving on the Warrenton turnples, and must now be not far from Gainesville. I desire that as soon as communication is established between this force and your own the whole command shall halt. It may be necessary to fall back behind Bull Run at Centreville to night. I presume it will be so on account of our supplies. I have sent no orders of any description to Ricketts, and none to interfere in any way with the movements of McDowell's troops, except what I sent by aid-de-camp has night, which were to hold his position on the Warrenton pike until the troops from here should fall on the enemy's flank and rear. I do not even know Ricketts' position, as I have not been able to find our where General McDowell was until a late hour this morning. General McDowell was until a late hour this morning. General McDowell was until a late hour this morning. General McDowell was until a late hour this morning. General McDowell was until a late hour this morning. General McDowell was not been able to find out where General McDowell was until a late hour this morning. General McDowell was considerable will take immediate steps to communicate with General Ricketts and instruct him to join the other divisions of his corps as soon as practicable. If any considerable advantages are to be gained by departing from this order it will not be strictly carried out. One thing must be held in view: That the troops must occupy a position from which they can reach Bull Run to night or by morring. The indications are that the whole force of the enemy is moving in this direction at a pace that will bring them here by to-morrow night or the next day. My own headquarters will, for the present, be with Heintzelman's corps or at this place.

Which order the said Major-General Porter did then and there disobey. This state of Virginia an or

Which order the said Major-General Porter did then and there disobey. This at or near Manassas, in the State of Virginia, on or about the 29th of August, 1862.

The charge that Porter delayed in obeying this order directing that McDowell and himself march towards Gainesville is certainly

without foundation.

He did not receive the order until 12 o'clock, and all the proof

shows he had anticipated the order and had tuly executed it. He had "moved forward with his command toward Gainesville" as far as he could go, and he had fully complied with the part of the order which said-

I desire that as soon as communication is established between this force (that on his right), and your force, the whole command shall halt.

He had established communication with the force on his right, and he had formed line to engage Lougstreet, whose forces drawn up in his immediate front.

Even General McDowell testifies that Porter had complied with the directions of the order before it reached him, and all the facts show that General Porter gave an intelligent and prompt compliance with this and the two preceding orders which he received that day; and the proof also shows that General McDowell, who was senior to Porter, was present when Porter received the order; that he assumed command and became responsible for the movements of General

Porter's corps. To use the

LANGUAGE OF THE SCHOFIELD BOARD :

McDowell arrived on the field, \* \* assumed the command, and arrested Por-

General McDowell's exact language while testifying upon this point against Porter was (see record, page 83):

At that time I conceived General Porter to be under me. When the joint order

reached us we were doing what that joint order directed us to do. That joint order found the troops in the position in which it directed them to be.

cannot do better than to read an extract from the report of the

order found the troops in the position in which tidrected them to be.

I cannot do better than to read an extract from the report of the Schofield board, which explains these views very fully:

These charges and specifications certained bear no discertible resemblance to the facts of the case as now established. Yet it has been our duty to carefully compare with these facts the views entertained by the court-funrial, as shown in the fludings and in the review of the case which was prepared for the information of the President by the judge-advocate-general, who had confusted the prosecution, and thus to clearly perceive every error into which the court-martial was led. We trust it is not necessary for us to submit in detail the results of this comparison, and that it will be sufficient for us to goind out the fundamental errors, using the contrast to those supposed facts eyon which General Porter was adjudged guilty.

The fundamental errors upon which the conviction of General Porter deepended may be summed up in few words. It was maintained Porter was adjudged guilty.

The fundamental errors upon which the conviction of General Porter was adjudged guilty.

The fundamental errors upon which the conviction of General Porter was expected to make to insure the elecat and destruction of adjust of the confiderate army was on the field of Manassas on the 29th of August, while General Lee, army, exclusive of Porter's corps, was engaged in a seven of the Confiderate army was on the field of Manassas on the 29th of August, while General Lee, army, exclusive of Porter's ecops, was engaged in a seven of the confiderate army was on the field of Manassas and Lee and the seven of the confiderate army was on the field of an only needed the aid of a flant attack which Porter was expected to make to insure the elecat and destruction or capture of the confederate force in their front under General Jackson; that McDowell and Porter, with their joint forces, Porter's leading, had advanced towards Gaineaville until the bead of their

and Forter.

General Pope appears from his orders and from his testimony to have been at that time wholly ignorant of the true situation. He had disapproved of the sending of Ricketts to Thoroughfare Gap to meet Longstreet on the 28th, believing that the main body of Lee's army could not reach the field of Manussas before the night of the 30th. Hence he sent the order to Porter dated 4.30 p. m. to attack Jackson's right flank or rear. Fortunately that order did not reach Porter until about sunset, too late for any attack to be made. Any attack which Porter could have made at any time that afternoon must necessarily have been fruitless of any good result.

Jackson's right flank or rear. Fortunately that order did not reach Porter until about sanset, too late for any attack to be made. Any attack which Porter could have made at any time that afternoon must necessarily have been fruitless of any good result.

Porter's faithful, subordinate, and intelligent conduct that afternoon saved the Union army from the defeat which would otherwise have resulted that day from the enemy's more speedy concentration. The only seriously critical period of that campaign manely between 11 a.m. and sunset of August 29, was thus safely passed. Porter had understood and appreciated the military situation, and, so far as he had acted upon his own judgment, his action had been wise and judicious. For the disaster of the succeeding day he was in no degree responsible. Whoseever else may have been responsible, it did not flow from any action or inaction of his.

The judgment of the court-martial upon General Porter's conduct was evidently based upon greatly erroneous impressions, not only respecting what that conduct really was and the orders under which he was acting, but also respecting all the circumstances under which he acted. Especially was this true in respect to the claracter of the battle of the 29th of August. That battle consisted of a number of sharp and gallant combats between small portions of the opposing forces. Those combats were of short duration, and were separated by long intervals of simple skirmishing and artillery duels. Until after 6 o clock only a small part of the troops on either side were engaged at any time during the alternoon. Then about sunset, one additional division on each side was engaged near Groveton. The musketry of that last centest and the yells of the confederate troops about dark were distinctly heard by the officers of Porter's corps; but at no other time during all that afternoon was the volume of musketry such that it could be heard by them during all those hours when Porter was underestood by the court-martial to have been listening to the sou

right. And those sounds of artillery were by no means such as to indicate a general battle.

The reports of the 29th and those of the 30th of August have somehow been strangely confounded with each other. Even the confederate reports have since the formination of the war been similarly misconstrued. Those of the 30th have been misquoted as referring to the 29th, thus to prove that a furious battle was going on while Porter was comparatively inactive on the 29th. The ferce and gallant struggle of his own troops on the 30th has thus been used to sustain the original error under which he was condemned. General Porter was in effect condemned for not having taken any part in his own battle. Such was the error upon which General Porter was pronounced guilty of the most shameful crime known among soldiers. We believe not one among all the gallant soldiers on that bloody field was less deserving of such condemnation than he.

This board, whose material was of the very best, composed of men of character, learning, and integrity, not only acquits Porter, but passes upon him and his gallant conduct the highest eulogy. They show a generous eagerness to publish these exculpatory facts, recognizing that it is their great privilege to help to lift away the obloquy which has so long rested upon the name and character of a great and noble man. Their deliberations were attended with fairness, cantion, energy, and openness, such as to exclude the idea of prejudice on one side or partiality on the other. And the conclusion reached by this board has been indorsed by the American people.

This beard, in addition to what is set out in the foregoing extract,

as the conclusion of its labors, after the most patient and solemn deliberation, under the guidance of the truths of history and the testimony before them, elaborately examined and compared with the testimony upon which the convicting court-martial had acted, proceed to recommend in these words:

Having thus given the reasons for our conclusions, we have the honor to report in accordance with the President's order, that, in our opinion, justice requires a his hands such action as may be necessary to annul and set aside the findings and sentence of the court-martial in the case of Major-General Fitz-John Porter, and to reatore him to the positions of which that sentence deprived him—such restoration to take effect from the date of his dismissal from service.

MOHE OF GENERAL LOGAN'S MISTAKES

General LOGAN, in the newspaper article, in discussing the operations of August 29, says:

Pope issued an order at 3 o'clock a. m. for Porter to move at daylight to Centreville. This order being a verbal order, Porter did not obey it.

General Logan is again mistaken. This order was not verbal; it was written, and appears in records of the court of the Schofield board, and in all the proceedings. I read from the proceedings of the Schofield board, page 18, and I also find it in the Congressional Record of January, 1883:

Headquarters Army of Virginia,

Near Bull Run, August 29, 1862—3 m.

General: McDowell has intercepted the retrest of Jackson. Sigel is immediately on the right of McDowell. Kearney and Hooker march to attack the enemy's rear at early dawn. Major-General Pope directs you to move upon Centreville at the first dawn of day with your whole command, leaving your trains to follow. It is very important that you should be here at a very early hour in the morning. A severe engagement is likely to take place, and your presence is necessary.

essary.

I am, general, very respectfully, your obedient servant
GEORGE J

GEORGE D. RUGGLES, Colonel and Chief of Staff.

Major-General PORTER.

General Porter obeyed the order promptly, and marched at least x miles to a point beyond Manassas Junction. It is not surprising that an experienced soldier like General LOGAN

should get an impression that the order was not obeyed. No doubt his study of the campaign convinced him that Porter might have doubted its authenticity and hesitated a moment to inquire into its integrity before rousing his tired troops for a march, pursuant to an order which showed inconsistency upon its face.

This order informed Porter that a severe engagement was likely to take place near Centreville, and therefore he is told that "his pres-

ence is necessary."

Now, General Logan's study of the case no doubt convinced him that so eminent a soldier as General Porter could see in a moment that the order was devoid of purpose; that it carried him away from the field of action, and not towards a point where "a severe engagement was likely to take place."

General Logan's study of the case showed him that Porter knew Lecken's corns was not at or near Centreville, but that the bulk of

Jackson's corps was not at or near Centreville, but that the bulk of his troops were between Groveton and Sudley's Springs.

General Logan's study of the case also showed him that Porter knew of the contradictory orders which General Pope sent to General McDowell the day previous, viz:

First, To march with his whole force to Manassas.

First. To march with his whole force to Manassas.
Second. To march upon Centreville.
Third. To march upon Gum Spring.
It is possible General Logan felt that if he had been in Porter's place he would have asked explanations before obeying the order.
But, as I have asserted, General Porter obeyed the order without hesitation, and continued to march as directed, until General Pope, convinced that the order was wrong, hastoned to countermand it, and to direct Porter to march upon Gainesville.

General Logan, continuing the narrative, says:

eneral Pope in the mean time, finding that Longstreet was moving to the sup-t of Jackson and that Porter was still not moving, changed his order and put

it in writing to Porter to avoid any excuse on Porter's part. The order was in the following language:

HEADQUARTERS ARMY OF VIRGINIA, Centreville, August 29, 1862.

To Major-General FITZ-TOHY PORTER .

Push forward with your corps and King's division, which you will take with you, upon Gainesville. I am following the enemy down the Warrenton turnpike Be expeditious or we will lose muck.

JOHN POPE Major-General, Commo

The order was handed to General Porter about 9 o'clock. His troops were then eady to move.

This last expression would indicate that Porter had not yet left his camp, near Bristoe Station, when in point of fact he was six miles away, two miles beyond Manassas Junction.

General Logan then says that Porter did not move in compliance with that order until 10 o'clock, and that—

He moved slowly and leisurely and arrived at Dawkins Branch at 12 o'clock, a distance of five miles.

I admit that this was not rapid marching, but without any orders to hasten, it was fair speed for a hot August day, and it must be re-membered that these troops were up before day and had already marched six miles before commencing the five-mile march referred to. General Logan further says:

At Dawkins Branch General McDowell came up to the head of Porter's column, having what is known as the joint order, or an order to McDowell and Porter both to proceed to Gainesville.

At this point McDowell showed Porter the joint order to proceed to Gaineaville, at the same time giving him the information sent to Pope by Euford of the passage of the fifteen regiments of infantry and five hundred eavalry through Gaineaville that morning. This was the only information that Porter had on the subject of Longstreet's forces, as he stated himself.

General Logan is certainly mistaken in this last statement, for the proof shows that Porter obtained his information from various other ources, among which was the fact that he had taken prisoners belonging to Longstreet's corps.

General LOGAN also says

McDowell finding that it was impossible to pass Porter's forces in the road with his command went back and took his command on a road off to the right, reaching out to the rear of Pope's forces that were then engaged in battle. He marched and arrived in time to put his forces in action and fought them until 9 o'clock that

The proof shows that he is mistaken on this point. General Mc-Dowell says that the fight commenced about sundown and lasted nearly an hour. What was called General Pope's fight of the 29th was on Pope's right, fully three miles off. The fight on the Warrenton pike was part of King's division, under Hatch, engaged with Hood's two brigades.

THIRD SPECIFICATION.

We now come, Mr. Speaker, to the third and last specification, which embodies what has been termed the 4.30 order, and charged that General Porter received and failed to comply with the directions it contained. I will read:

SPECIFICATION 3D.—In this: That the said Major-General Fitz-John Porter, having been in front of the enemy during the battle of Manassas, on Friday, the 20th of August, 1862, did on that day receive from Major-General John Pope, his superior and commanding officer, a lawful order, in the following letters and fig-

HEADQUARTERS IN THE FIELD, August 29, 1862-4.30 p. m.

Major-General PORTER:

Major-General FORTER:

Your line of march brings you in on the enemy's right flank. I desire you to push forward into action at once on the enemy's flank, and, if possible, on his rear, keeping your right in communication with General Reynolds. The enemy is massed in the woods in front of us, but can be shelled out as soon as you engage their flank. Keep heavy reserves, and use your batteries, keeping well closed to your right all the time. In case you are obliged to fail back, do so in your right and rear, so as to keep you in close communication with the right wing.

Major-General, Commanding.

Which wild order the said Major-General Dorter did then and there displays, and

Which said order the said Major-General Porter did then and there disobey, and did fail to push forward his forces into action either on the enemy's flank or rear, and in all other respects did fail to obey said order. This at or near Manassas, in the State of Virginia, on or about the 29th of August, 1862. General Logan insists that Longstreet was not in Porter's front,

General Logan insists that Longstreet was not in Porter's front, and that he could easily have complied with the order and attacked the enemy's flank and rear. He says:

General Grant says: "And now it is known by others, as it was known by Porter at the time, that Longstreet, with some 25,000 men, was in position confronting Porter by 12 o'clock on the 29th of August, four and a half hours before the 4.30 order was written."

Upon what this statement of General Grant is based it is impossible for me to understand. In the first place Porter did not know that Longstreet was there with 25,000 men, nor did he know, unless he made a false statement, anything about the force, except what General McDowell told him was his information received from General Buford. Nor was Longstreet confronting Porter. He was two and a half miles away from Porter; was not on the same road that Porter was, but was forming west of the old Manassas Italiroad, on Pageland Lane, to the right rear of Jackson's forces, fronting the forces under Pope, on Pope's left flank, that were then attacking Jackson. His front was entirely in a different direction from Porter.

The evidence is so clear that General Logan is mistaken vectoring

The evidence is so clear that General Logan is mistaken regarding this matter that I might be excused if I did not sustain the assertion

by reading evidence upon the subject. General Robert E. Lee says:

Longstreet's command arrived within supporting distance of Jackson the 29th of August, 1802, between 0 and 10 a. m., and his lines were formed by noon.

General Longstreet says:

My command arrived 9 a. m., the 29th August, near Groveton. \* \* \* My command was deployed in double lines for attack between 10 a. m. and 12 m. on the 29th, extending from Jackson's right across the turnpike and Manassas Gap Railroad. \* \* \* My command was ready to receive any attack after 11 a. m., and we were particularly anxious to bring on the battle after 12 m., General Lee more so than the rest.

What I have just read is from letters written by these officers since the war closed.

To show that their memory was correct, I will now read extracts from official reports which were indited while these events were

transpiring.
I will first read extracts from a letter written by General Lee to

President Davis:

Headquarters Army of Northwestern Virginia,

Chantilly, Va., September 3, 1862.

Chantilly, Va., September 3, 1862.

The President: My letter of the 30th ultimo will have informed your excellency of the progress of this army to that date. General Longstreet's division, having arrived the day previous, was formed in order of battle on the right of General Jackson, who had been engaged with the enemy since morning, resisting an attack commenced on the 28th. The enemy on the latter day was vigorously repulsed, leaving his numerous dead and wounded on the field. His attack on the morning of the 29th was feeble, but became warmer in the afternoon, when he was again repulsed by both wings of the army, his foss on this day, as stated in his published report, herewith inclosed, amounting to 8,000 killed and wounded.

I have the honor to be, very respectfully, your obedient servant,
R. E. LEE, General.

To His Excellency JEFFERSON DAVIS,

President Confederate States of America.

I will now read an extract from the

REPORT OF LIEUTENANT HAZLETT

who commanded the battery in Pope's army:

MINOR'S HILL, VA., September 3, 1862.

Captain MARTIN, Chief of Division Artillery:

We took up a position on an eminence opposite to where the enemy were ascertained to be, and in a short time they opened on a column of our infantry with one gun, a 6-pounder. We replied, but with what effect could not be ascertained, as the enemy were concealed in the woods. The enemy kept up their firing for a very short time, none of their shots reaching us, and then ceased, but shortly after opened upon us again with two rifled guns, one of them being a 10-pounder Parrott. None of their shots took effect in the battery, though some of the infantry some distance in the rear were injured by ricochet shots. At this same time clouds of dust were some rising in woods near the enemy's batteries. I directed part of the guns of the battery on this dust and part on the enemy's batteries. If directed part of the guns of the satery on this dust and part on the enemy's batteries. If directed part of the guns of these shots could be seen for the woods, but shortly after a large column of infantry tappeared in an opening in the woods, on which the guns, which could see into this place, were immediately turned with very good effect, as the shells could be seen bursting directly in the column, which broke and ran into the woods for shelter, but soon again formed, only to be again dispersed.

Very respectfully, your obedient servant,

CHAS. E. HAZLETT, First Lieutenant, Fifth Artillery. The report of General M. D. Corse, in whose brigade these shot

fell, corroborates the statement of Lieutenant Hazlett.

Lieutenant Hazlett also made a report to Captain Perkins, assistant adjutant-general, an extract from which I will read:

The effect of our firing on their artillery could not be ascertained, but several times their infantry made their appearance, when the effect of our fire on them was plainly visible, causing them to break and seek shelter out of sight.

From an array of evidence which cannot be refuted, the advisory board found and asserted (see page 1710):

The fact is that Longstreet with four divisions of full 25,000 men was there on the field before Porter arrived with his two divisions of 9,000 men; that the confederate general-in-chief was there in person at least two or three hours before the commander of the Army of Virginia himself arrived on the field, and that Porter with his two divisions saved the Army of Virginia that day from the disaster naturally due to the enemy's early preparation for battle.

This and much other conclusive evidence to the same effect is now available to every one, and it shows beyond question that Porter could not, at 6 o'clock, when he received the order, have attacked Jackson's flank or rear. It shows he could not have done so at 4.30

when the order was written, nor for five hours prior to 4.30.

Therefore, yielding every other point for the present, Porter was excused from any effort at executing the 4.30 order, because it was absolutely impossible for him to have done so. He was two miles and a half from Jackson's flank; the country was rugged and ditches and other obstacles intervened, and in addition the presence of Longstreet with 25,000 men was a conclusive obstacle.

The distinguished writer of the Tribune article, apparently finding that he could not maintain the position that Porter could have attacked Jackson's flank, changes his line of argument and attempts to show that even under such a state of facts Porter was wrong.

Thus General Grant puts Porter squarely in front of Longstreet with his 25,000 men. and says that he could not have obeyed the order without first whipping Longstreet's 25,000 with 10,000 men.

General Logan, then, arguing from General Grant's standpoint,

He was only required to attack the right flank of the enemy, and the right flank of the enemy was the right flank of Longstreet's command. He was part of the enemy, his flank being in the direction of Porter.

General Grant says: "He was three miles away from Jackson's flank."

If so, then why not attack Lengstreet, whose flank was sticking out in air where Porter could have attacked it, as it was the only flank that presented itself where he could attack! How, then, was he to construe the order! Was he to order his men to attack Jackson when the order did not say so? Was he to say, "Longstreet's flank is sticking out there; I can see it; but I am not to attack that; he is not the enemy; the order says to attack the enemy!" Will he say that does not mean to attack Longstreet!

This is the logic of General Grant's position.

General Grant also assumes that to have attacked under that order would have taken Porter until 9 o'clock, inasmuch as he would have to make disposition of some of his troops, issue orders. &c.

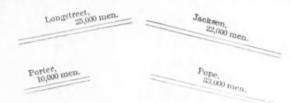

Now, admitting, for the sake of argument, that it was received as claimed, I will explain why General Porter could not have complied with the 4.30 order by an attack on General Longstreet's flank and rear as urged by General LogAn.

The very order we are considering directed something besides an attack on the enemy's flank and rear. It directed Porter to keep his "right in communication with General Reynolds;" also to keep "well closed to the right all the time."

And, again, the same order closed with an admonition that, if com-

And, again, the same order closed with an admonition that, if compelled to fall back, to keep "in close communication with the right

Now I submit this diagram which proves that an effort to attack Longstreet's right would have cut Porter loose from Pope, and he could not have complied with the three last imperative injunctions of the 4.30 order.

These points having been disposed of,

THE ASSAILANTS OF GENERAL PORTER MAKE A NEW ATTACK.

One justification for Porter not attacking pursuant to the 4.30

That General Pope issued the order under a wrong impression of the status, that is to say, Pope ordered Porter to attack Jacksou's right flank, under the impression that Longstreet did not intervene. Porter's assailants say we have no right to any such assumption. They say, admitting it to be established that Longstreet was in front

of Porter at 11 a. m., we must assume that Pope knew it, and therefore we must assume that when he issued the order for Porter to attack the enemy's flank, he intended him (Porter) to attack the flank of General Longstreet.

To show the error of this position it is only necessary to again allude to what I have just shown. If General Pope had intended Porter to attack Longstreet he would not have added the requirement for him to keep "well closed to the right all the time."

But there is other incontrovertible evidence that General Pope did not know that Longstreet was on Jackson's right and in Porter's front.

The evidence of the prosecuting witness who testified on the trial of General Porter in 1862 was such that the majority of the court saw fit to find that at 4.30 o'clock on the 29th the position of the two armies was substantially as shown by this diagram:

and it also appears that they saw fit to find that Longstreet was at least twenty-four hours' march distant.

That General Pope regarded the status at 4.30 as is shown by the

diagram is further proven by his joint order to McDowell and Porter, received by Porter about noon on the 29th.

In this order General Pope said:

The indications are that the whole force of the enemy is moving in this direction ta pace that will bring them here by to-morrow night or next day.

We thus see that on the 29th Pope thought Longstreet was marching at a pace which would bring him on the field on the night of the 30th or on the following day (the 31st).

General Pope also said in the order

The enemy is massed in the woods in front of us. Bear in mind that he says "the enemy."

"Dawkins Branch.

As there was no pretense that Longstreet was massed in front of Pope, and as he alludes to no other force of the enemy being near, he must have supposed such to have been the fact. In addition to all this General Pope testified, December 4, 1862:

Had General Porter fallen upon the flank of the enemy, as it was hoped, at any time up to 8 o'clock that night, it is my firm conviction that we should have destroyed the army of Jackson.

Again he testified, December 6, 1863:

Again he testified, December 6, 1863:
General Porter was expected to attack if possible—and as I understood it to be practicable—the right flank of Jackson's forces, and if possible the rear of his forces, to prevent, if it were practicable, the junction of Longstreet's forces with Jackson's, and to crush Jackson's flank before Longstreet could effect a junction with him. I did not then believe, nor do I now believe, that at that time (4.30 p. m.) any considerable portion of Longstreet's corps had reached the vicinity of the field. I do not know that General Porter, between 5.30 p. m. and 7 o'clock, had the enemy immediately in his front, though I would think it altogether likely that Jackson would have pushed out some force to observe the road between Gaines wille and Mannassa Junction. It is altogether likely, therefore, that some of Jackson's troops were in presence of General Porter's advance, though of my own knowledge I do not know that.

It is hard to conceive how the most prejudiced mind could want anything further on this subject, but I will add one word from no less a distinguished soldier than General and Ex-President Grant,

But, even if the position of Lee's army had been thirty-six to forty-eight hours distant, as asserted in the joint order to McDowell and Porter, it would have been impossible for Porter to have obeyed the 4.30 order, because it did not contemplate a night attack, and was not received by Porter until about dark. To have obeyed it would have required some little preparation, movement of troops, and distribution of orders, so that it would have been some time after dark before he could have moved from the position he was then occupying, and at least as latems 9 o'clock at night before he could have reached Jackson's flank to engage it. His efforts to execute the order, notwithstanding its apparent inappropriateness, demonstrate this assertion.

I feel, with all this proof, that no one will any longer contend that General Porter was in any way censurable for anything connected with the 4,30 order, of which so much has been said.

Yet in the face of all this General LOGAN says:

At 50'clock (one hour later) General Porter received the "4.30 order" to attack the enemy's right and rear at once. At this very moment when he was ordered to attack, the larger portion of Longstreet's forces were engaged against Pope's forces in front of Jackson, leaving but a small force back under Longstreet for the protection of the flank of the army.

It is clear that there is error in the statement that Porter received this order at five o'clock. It was written at 4.30, and copies taken of it, and it was carried five and a half miles.

It was positively proven before the Schofield board that this order was not received by Porter until after 6 p. m.

In fact, General McDowell there produced a dispatch from Porter, dated 6 p.m., which shows that Porter had not received the order at that hour. Porter claimed and proved in his defense to the same effect on the trial in 1862, but the court disregarded this testimony.

effect on the trial in 1862, but the court disregarded this testimony. I here call attention to the difficulty experienced by Porter's assailants in fixing the locality of Longstreet's corps at this hour. One witness puts him thirty-six hours' march from Jackson's right flank, another puts him near Gainesville, another to the right and rear of Jackson, another directly on Jackson's right, and here we have the remarkable assertion that at this hour "Longstreet's forces were engaged against Pope's forces in front of Jackson."

Does he mean to say that Longstreet was in front of and between Jackson's and Pope's forces?

Jackson's and Pope's forces?
All accounts say both Jackson's and Pope's troops were firing.
If it was true that Longstreet was between the two, receiving fire from both front and rear, some report of the many officers engaged would have alluded to it, and our first information upon this subject would not have been found in a letter to a Chicago paper twenty years after these events transpired.

GENERAL LOGAN'S REMARKS ON NAPOLEON'S LEADING MAXIM EXAMINED.

Having in the beginning of these remarks read some uncontroverted maxims, I will, now, Mr. Speaker, allude to that maxim of war enunciated by the author of the article in the Chicago Tribune, and I beg to state that I make no criticism upon the very creditable military career of this distinguished soldier.

The history of General Logan evidences that he never failed to conform to the military maxims I have cited, and I am justified in giving this as one of the reasons for his remarkable and successful career; and while facts show that General Logan at the head of an army in battle was right in the theories he put in practice, I must at the same time insist that the same eminent American, while in the heat of debate, allows his enthusiasm to carry him away, and thus cause him to announce principles that are clearly wrong.

In the published argument, he does not allude to the maxims I have quoted, but gives this as

NAPOLEON'S LEADING MAXIM:

One of the great leading maxims in Napoleon's military experience—you will ad it in all his campaigns and it was a standing order to all his corps command—was that when the general of the army was not present to give orders, each orps commander should march to the sound of the enemy's guns. That was a

In reply, I beg to state that I have searched in vain to find any such principle laid down as a maxim of Napoleon.

Maxim, as defined by Webster:

MAXIM is a guiding principle, ever to be received and admitted in the practice of life.

Also, continues Mr. Webster:

The greatest sentiment, sentence, proposition, or axiom, i. e., of the greatest weight or authority. An established principle or proposition; a condensed proposition of important practical truth; an axiom of practical wisdom.

Axiom, as defined by Webster, is:

An established principle in some art or science

As defined by Worcester:

A self-evident truth or proposition; an established principle not requiring proof.

This idea of marching to the sound of guns very probably arose in this way: When a boy, I, in company with our many patriotic citizens, on every Fourth of July morning, hastened to the point where we heard the sound of guns, and after the exhaustion of all available ammunition, as well as the strength of the cannoneers, we listened to what is called

FOURTH OF JULY ELOQUENCE

in which, of course, much was said of Washington, Napoleon, and other distinguished gentlemen. No doubt General Logan's experience was very like mine in this No doubt General Logan's experience was very like mine in this respect, which may account for the apparent confusion of war speeches with war principles. I admit that when I read what is alleged to be a Napoleonic maxim, it sounded so familiar and patriotic that I was obliged to reflect for a moment before I could see the objections to adopting it as a military maxim.

The very definition of the word maxim shows that for a proposition to become such it must be one that will hold good under all circumstances, and not a proposition which could, with propriety, only sometimes be adoped. In illustration, I recall this incident: A young physician determined to practice from personal experience. His first patient recovered rapidly from pneumonia, and learning that

first patient recovered rapidly from pneumonia, and learning that he had eaten freely of pork and beans, he writes in his note-book:

"For pneumonia—pork and beans," and adopting this as a medical maxim, he prescribed the same diet for his next pneumonia patient. maxim, he prescribed the same diet for his next phenimonia patient. The very prompt death of the sufferer embarrassed the young doctor, and below the former entry he wrote: "For pneumonia: Pork and beans sometimes." We all admit that to "march to the sound of the enemy's guns" would sometimes be a very good movement. It was the proper thing for Gronchy at 11 a. m., June 18, 1815, but it would not do to make this an invariable rule.

make this an invariable rule.

We are all familiar with the fact that the sound of guns is loudest where there is the most artillery, and that strong redoubts are frequently built where batteries are congregated.

We are also familiar with the fact that prudent commanders keep heavy reserves to defend concentrated artillery; therefore to "march to the sound of the enemy's guns" would sometimes involve an attack upon the very strongest and possibly impregnable positions, and it must be remembered that

NAPOLEON MODESTLY SEGGESTED

the propriety of seeking to pierce lines at the weakest, not the

strongest point.

Again, if we admit this to be a maxim, let us see to what it might

If you, Mr. Speaker, were commanding an army and knew your adversary would follow this alleged maxim, would you not be induced to cause the sound of guns at a point where an attack would

duced to cause the sound of guns at a point where an attack would be least detrimental to your army?

Now, if in future, our military gentlemen in following the "marchto-the-sound-of-the-enemy's-guns" maxim, should strike an impregnable position, much as mankind is dazzled by the display of heroic courage, would not we all, even General Logan, while witnessing the terrible shock and inevitable recoil of broken, shattered, and decimated columns, involuntarily exclaim: It is magnificent, but it is not war? Or if a cunning for by the sound of guns should lure us from the point we should attack, would we not finally be compelled to modify this proposition so that it would read "march to the sound of the enemy's guns" sometimes, and having done this, the proposition

modify this proposition so that it would read "march to the sound of the enemy's guns" sometimes, and having done this, the proposition would no longer be a maxim, and much less a Napoleonic maxim? I beg here to be permitted to suggest that "to always, in the absence of orders, march to the sound of the enemy's guna" is not a maxim, for the reason that it conflicts with several undisputed maxims which were enunciated and adhered to by Napoleon.

It would conflict with the maxim which directs corps command-

To profit boldly by every opportunity.

And which admonishes them that-The last moment never returns

3.

4.

And which commands them to seize-A moment in battle when the smallest manœuver decides superiority.

And which commands them-

euver to engage fractions of the hostile armics.

And which commands them -

To throw the mass of their forces upon the decisive point.

These purposes and many others essential to success might or might not be attained by "marching to the sound of the enemy's guns.

There is another, the sixteenth, maxim of Napoleon:

It is an approved maxim of war never to do what the enemy wishes you to do, or this reason alone: that he desires it.

To march to the sound of his guns might be just what the enemy wished. I will also read Napoleon's tenth maxim:

When an army is inferior in numbers, inferior in cavalry, and in artillery, it is essential to avoid an action.

For commanders of divisions and corps of such an army to "march to the sound of the enemy's guas" might seriously conflict with this maxim.

I might continue this investigation through very many of the remaining seventy-eight maxims of Napoleon, but I will conclude by remarking that as this supposed maxim, "march to the sound of the enemy's guns" was made the basis and foundation and starting point of all the voluminous arguments against General Porter, and as we have clearly demonstrated that it is not, never was, and never can have clearly demonstrated that it is not, never was, and never can be either a maxim or an axiom of war, much less a Napoleonic maxim, and still much less (as claimed by the prosecution) Napoleon's leading maxim, let me ask, Mr. Speaker, is there any foundation upon which the fabric of the opposing argument can stand?

It is evident, as before stated, that the commanding general cannot be at the head of every corps "to profit boldly by every opportunity." If he cannot do it, and corps commanders are simply to literally observed and the second of the commanders are simply to literally observed or the second of t

ally obey orders, how then are they to take advantage of those "mo-ments in battles which never return to be profited by ?"

I think, Mr. Speaker, that what I have said explains that "to profit boldly by every opportunity" corps and division commanders must often strike when, in their discretion and judgment, circumstances make it advisable. This must be done with orders or without orders. If a corps commander is right in attacking without orders, so he must in his discretion

DISSENT FROM ATTACKING.

oven though ordered by his commander to do so.

If the army commander is fully possessed of all the facts—if he is fully apprised of the military status, and with that knowledge issues an order, it would be hard to justify a subordinate officer who hesitates to obey. A case of that character comes to my mind.

General Reille commanded Napoleon's largest corps. He was with the Emperor early on the morning of June 16, from whom he received orders to march with Ney to Quatre Bras. Reille was fully apprised of Blucher's position, and thought it strange that the attack upon the Prussians was delayed. He knew fully the plans of battle for both Ligny and Quatre Bras. His duty was to fight under Ney and attack the force Wellington had thrown forward from Brussels. Written orders show that early on the 16th Soult ordered Reille to report to Ney. report to Ney.

At 9 a. m. Ney is ordered to combine the corps of D'Erlon, Reille, and Kellermann and move on the enemy in front of Quatre Bras.

At the same time Napoleon wrote amplifying the instructions, both of which letters Ney received at 11 a. m., and immediately sent orders directing the rapid march of these troops. At 10 a. m. Napoleon's orders were repeated and received by Ney at 11.30, but he had previously received dispatches from Reille, dated Gosselies, 10.15 a. m., stating that in consequence of Prussian forces at Fleurus, he would not move until further orders from Ney. This helped to delay Ney's attack until after 2 o'clock.

Had he made the attack two hours earlier, he would have easily driven every opposing force beyond the heights of Mount St. Jean.

driven every opposing force beyond the heights of Mount St. Jean, and the battle of the 18th would have been fought nearer Brussels

and the battle of the 18th would have been fought nearer Brussels and on less favorable ground for the allies.

General Reille has never been blamed for this very brief delay.

I say he did wrong, because he knew Napoleon was to attack Blucher near Fleurus. He was marching to Genappe under orders received from Napoleon and reiterated by Ney, and information received from General Gèrard, of facts which Reille knew, and which Napoleon certainly knew when he gave Reile his orders, was no justification for a moment's delay. If General Reille was not censured for delay in that case, then how entirely justifiable was Fitz-John Porter.

The proof shows that during all this campaign there was but one order that Porter hesitated a moment in obeying. It also shows that immediate compliance with the order was impossible, and that he did immediately comply, by taking measures to prepare the road so that he could march on it.

that he could march on it.

I therefore say that he gave immediate intelligent compliance with the order, and that this so-called delay was based on the best of judgment, and resulted favorably, while Reille's delay was unwarranted by the facts, and, if I am correct, in its effect on Ney it was the beginning of the events which changed Waterloo from victory to defeat; and since I have touched upon this matter, I will give the most noted instance I can recall of literal, instead of intelligent, whether the the correct of a companying report. obedience to the orders of a commanding general.

NAPOLEON AND GROUCHY.

I select this because the superior genius of Napoleon so over-shadows all others that if any such case could arise this certainly

would be the one where a blind literal obedience of orders could be justified. At the risk of being tedious, I will recite sufficient of the events which preceded June 18, 1815, to illustrate what I believe all will admit was the duty of Marshal Grouchy upon that eventful

day. Napoleon landed in France March 1, 1815. He marched in triumph to Paris and assumed the government on March 13; he proceeded to establish his power at home; to create armies and war material; to restore the broken finances; to re-establish so far as possible the diplomatic relations.

FORCES AT WATERLOO.

On June 1, the allied armies menacing France were:	
Anglo-allied army, under Wellington Prussian army, under Blucher	116, 897
German corps d'armée, under Kleist. Army of the Upper Rhine, under Schwartzenberg Russian army, under Barelay de Tolly.	254, 499
Army of Italy, under Frimont.	60, 000

April 1, Napoleon's circular letter to the sovereigns of Europe ap-

April 1, Napoleon's circular letter to the sovereigns of Europe appealing for peace, commencing "Sire, my brother!" had been received, only to be ignored.

There was no way to defend but by attack, and the Emperor determined to fall upon the nearest advance of the menacing armies, which were upon the Belgian frontier.

He caused the election of deputies to the Chamber of Representa-ves. This body convened, and it was soon evident that there was not only a lukewarm support, but that there was an evident determination to throw obstacles in the way of the Emperor's ambition.

mination to throw obstacles in the way of the Emperor's ambition.

On June 11, Napoleon issued a moderate but earnest farewell address to the deputies, appointed his brother Joseph president of a provisional government, before daylight on the 12th left Paris, and on the 14th reached the theater of war in Belgium, making his first halt at Beaumont, about fifty-three miles from Brussels, the headquarters of Wellington, and about forty-two miles from Namur, where Blucher was located. Zieten's large corps was at Charleroi, but eighteen miles from Beaumont.

When Namoleon arrived he found about 60 000 of his man, in facet

but eighteen miles from Beaumont.

When Napoleon arrived he found about 60,000 of his men in front of Beaumont about 14,000 to the right or southeast, and about 40,000 on the Sambre to the left of Beaumont.

Though physically indisposed, Napoleon directed in person the preparation for the movement of the several corps. By daylight on the 15th, Prince Jerome struck the enemy's outpost at Thurin, and General Pajol, commanding the first corps of cavalry, fought for two miles, from Marchiennes to Charleroi.

This point was thirty-five miles from Brussels, and twenty-four miles from Namur. Namur is thirty-five miles from Liege, where miles from Namur. Namur is thirty-five miles from Liege, where Bulow was located, and twenty miles from Ciney, the headquarters of Thielmann.

I will here give in detail the organization and strength of the two pposing armies:

ALLIED ARMY UNDER THE DUKE OF WELLINGTON.

SUMMARY. 10 901

Napoleon also had a corps of engineers with wagon-trains numbering about 5,000 men, which I do not include, nor have I included the engineers or wagon-trains of the allied army.

I give the figures of Napoleon's force as stated by those who argue against him and in favor of Marshal Grouchy, and who, as part of their argument, put Napoleon's forces as high as possible.

I have given the names of his corps and division commanders to show that but a small number of the greatest of his generals were with him. Very faw of those leaders who had during his sighteen years.

him. Very few of those leaders who had during his eighteen years of triumphs shared his world-wide renown, as participants in the victories he had won, were with him, and what was worse, nearly all his generals a year previous had left him with his fallen fortunes, and given unqualified adhesion to the Bourbon dynasty, and but three

months gone had turned from their Bourbon masters to bow again at the shrine of the Imperial eagle, and undannted genius of Napoleon.

The organization of the several brigades and divisions was changed, the old regiments were reformed, old numbers replaced, and eagles, which recalled past glories, were restored. While these changes tended to enthuse the troops, their advantage was in a measure neutralized by their placing troops under new commanders, and to a considerable extent separating soldiers who had learned by experience to rely upon each other.

to rely upon each other.

These facts show that Wellington and Blueher had ample informa-These facts show that Wellington and Blucher had ample information regarding Napoleon's efforts. Surrounded by the embarrassments to which I have alluded, this great leader, on the 16th at the head of 69,000 men, consisting of the Guards and five corps, hurled himself against the corps of Zieten, Pirch, and Thielmann, in all, 85,560 men, under Field Marshal Prince Blucher, and after a terrific engagement, which lasted from noon until dark, the Emperor gained a complete victory, driving him from the field of Ligny, and inflicting upon him a loss which Blucher reported at 3,507 killed and 8,571 wounded, besides a great number of prisoners. At 2 o'clock the same day Marshal Ney, with 17,615 men, increased at 5 p. m. to 20,000, attacked the allied troops at Quatre Bras, on the road from Chatleroi to Brassels, and by dark had won a victory, inflicting a loss on the enemy of 5,200 killed, wounded, and missing, and himself suffering a loss of 4,140 killed and wounded.

Now, suppose Napoleon's loss in killed and wounded to have been

a loss of 4,140 killed and wounded.

Now, suppose Napoleon's loss in killed and wounded to have been equal to that of Blucher, then his army after the engagement would be 100,583, while Wellington and Blucher had 203,829. But every one who has had experience in war knows that such conflict will reduce an army at least 10 per cent, in addition to casualties, caused by those who leave the field from fatigue, to care for the wounded, and from other less creditable reasons.

Therefore, the next day, the force may be said to have been, Wellington's 183,447, Napoleon's 90,425. No one knew better than Grouchy the critical position of the French army, and the necessity for most prompt and intelligent obedience to orders.

Grouchy the critical position of the French army, and the necessity for most prompt and intelligent obedience to orders.

Even without orders he should have never ceased to press upon the retreating Prussians, at least he should have kept his advance within cannon range of their rear; but he attempts to justify this neglect by certain verbal orders which he says were given him by the Emperor, and which he contends were capable of being literally construed so as to justify his movements and marches with 34,000 men (more than one-third of Napoleon's force), and for half a century he has found those who sustain him. has found those who sustain him.

GROUCHY LOSES FOR NAPOLEON AN EMPIRE BY LITERALLY OBEYING ORDERS.

Now admit for Grouchy all he desires and the verbal order he receives from Napoleon was:

Pursue the Prussians; complete their defeat by attacking them as soon as you come up with them, and never let them out of your sight. I am going to unite the remainder of this portion of the army with Marshal Ney's corps, to march against the English and to fight them if they should hold their ground between this and the forest of Soignies. You will communicate with me by the paved road which leads to Quatre Bras.

Also Grouchy's friends allege that Napoleon said to him:

The Prussians are put to rout, and are flying on the road to Namur and Liege.

Also that Grouchy appealed to the Emperor to allow him to march to Quatre Bras, and that Napoleon replied:

Marshal Grouchy: Proceed towards Namur, for according to all probability it is on the Meuse that the Prussians are retiring. It is then in this direction you will find them and that you ought to march.

Grouchy himself says:

The orders of Napoleon were, "Put yourself in pursuit of the Prussians, complete their defeat in attacking them as soon as you shall join them, and never loss sight of them. I am going to reunite to the corps of Marshal Ney the troops carry with me, to march upon the English and to tight them if they will stand this side of the forest of Soignies. You will correspond with me by the paved rose which leads to Quarte Bras." I attest upon my honor that these were his own expressions, that I received no other instructions.

Far from modifying his first orders, the Emperor corroborated them.

Marshal, make your way to Namur, for it is on the Meuse that, according to all probability, the Prussians are retiring; it is therefore in this direction that you will find them and in which you ought to march.

Now Grouchy also justifies himself because on June 17, Napoleon then en route to Quatre Bras, sent back a written order to Grouchy,

March to Gembloux: you will explore in the direction of Namur and Maestricht, and you will pursue the enemy—

And find out if the enemy are "separating from the English, or are bent on uniting with them to save Brussels and try the fate of another battle."

The order, it is claimed, was sent from Marbais, a little town halfway between Ligny and Quatre Bras, and Grouchy's friends also insist that when Napoleon sent the order he had information that the Prussians had passed Tilly, in the direct road to Wavre.

These orders Marshal Grouchy claims are his justification for moving his army to Gembloux, and a portion of it through and on to Sart-les-Walhain and Perwez, these movements extending into the

<sup>\*</sup>Mortier stated he was ill on the 14th at Beaumont and retired from command.

night of the 17th, so that the rear did not reach Gembloux until as late as 10 p. m.

The march was fortunately only about eight miles for the most

of the infantry and about fifteen for the advanced cavalry, which camped on the night of the 17th at Perwez.

After revolving these matters for four years, Marshal Grouchy published a work entitled "Observations sur la Relation de la Campagne de 1815, publice par le Général Gourgaud; et Réfutation de Quelques-unes des Assertions d'Autres écrits relatifs à la Bataille de Waterloo. Par le Comte de Grouchy. A Paris. 1819," in which he says [page 127:

It is the first the first the first that the first that the first the evening before at 10 o'clock, and so forth. These observations were not well received. He repeated to me the order which he had given me, adding that it was for me is discover the route taken by Marshal Blucher; that he was going to fight the English; that longht to complete the defeat of the Frussians in attacking them as acos as I should have joined them; and that I should correspond with him by the paved road, which leads from a point near where we were to Quatre Bras. Some moments of conversation which I had with the chief of staff [Soult] regarded only the detaching of certain of my troops which were to be sent to Quatre Bras. Such are, word for word, the only dispositions which were communicated to me, the only orders which I received.

Now take every assumption, just as Marshal Grouchy's ex parte statement would have us believe, and what is the attitude? Six days before Napoleon was in Paris manipulating the wires of

foreign and domestic diplomacy, creating and organizing armies, and in those six days he had traveled 150 miles, had conceived and Blucher, and then relying upon his generals to manage minor details, he had fallen exhausted, and was taking a little rest.

Grouchy was the commander of four army corps of cavalry, each

one of which had a lieutenant-general.

No duty ever devolved on a general more imperative than now devolved upon Grouchy, and that duty was to press vigorously the rear-guard of each of Blucher's columns and dispatch Napoleon every hour of their location.

hour of their location.

Grouchy should have known every movement of the enemy, and, in the very nature of military precedents, orders given to such a commander of cavalry would in all probability have been based upon information given by him to the Emperor.

If Napoleon gave any such orders as Grouchy alleges, it was Grouchy's fault and neglect that they were so given.

The orders, if given at all, were given upon incorrect information as to the enemy's movements; and Marshal Grouchy defends his march toward Namur and Liége solely upon the ground that he complied literally with orders. complied literally with orders.

We might have the miserable excuse for him that he did not know We might have the miserable excuse for him that he did not know himself where the enemy was; but he deprives us of that by admitting that he knew at 2 o'clock on the 17th that the Prussian troops had gone through Tilly to Wavre, and he admits, too, that this was discovered by the Emperor and communicated to him. But, says the marshal of France, I obeyed orders literally, and, although it cost an empire, I must be exoncrated.

Even upon Grouchy's own statement of the wording of the orders he received, it is very clear that he did not comply with them in the spirit intended by Napoleon.

This is conclusively shown by the correspondence between Mar-

This is conclusively shown by the correspondence between Mar-shal Grouchy and the Emperor, most of which was not published

antil years after the events transpired.

Before I read these letters, I want to call attention to the fact that Grouchy was in command of Napoleon's cavalry. It was his special duty to keep Napoleon informed regarding the position and movements of the enemy, and any orders given by Napoleon must have been based upon Grouchy's statements regarding Blucher's movements.

I will first read an order written before Napoleon left Ligny for

March to Gembloux with Pajol's cavalry.

\*You will explore in the direction of Namur and Maestricht, and you will pursue the enemy; explore his march and instruct me as to his movements, so that I can find out what he is intending to do. I am carrying my headquarters to Quatre Bras, where the Eanglish still were this morning. Our communication will then be direct, by the paved road of Namur. If the enemy has evacuated Namur, write to the general commanding the second military division at Charlemont to cause Namur to be occupied by some battations of the National Guard and some batteries of cannon which he will organize at Charlemont. He will give the command to some general officer. It is important to find out what Blucher and Wellington are intending to do, and if they gurpose to reunite their armice to over Brussels and Liege in trying the fate of bettle. In all cases, keep constantly your two corps of infantry united in a league of ground, having several avenues of retreat, and post detachments of cavalry intermediate between us, in order to communicate with headquarters.

Dictated by the Emperor in the absence of the chief of staff.

The Grand Marshal, BERTRAND. LIGNY, June 17, 1815.

Marshal Grouchy replied to this order at 10 o'clock; I will give

exact language.

To do him no injustice, I will first give his letter in French, and then give what I think is a correct translation.

Gembloux, le 17 Juin, à dix heures du soir. Sire: J'ail'homeur de vous rendre apte que j'occupe Gembloux et que ma cavalerie est à Sauvenières. L'ennemi, t d'environ trente mille hommes, continue son mouvement de retraite; on lui hisi ici un paro de 450 bêtes à cornes, des magasins et des bagages. I paraît d'après tous les rapports, qu'arrivés à Sauvenières, les Prussiens se

sont divisés en deux colonnes; l'une a da prendre la route de Wavre en passant par Sart-à-Wallain, l'autre colonne parroît s'être dirigée sur Perwes.

On peut peutêtre en inférer qu'une portion va joindre Wellington, et que le centre, qui est l'armée de Blucher, se retire sur Liége; une autre colonne avec de l'artillerie ayant fait son mouvement de retraite par Namur, le Général Excelmans a ordre de pousser ce soir six escadrons sur Sart-à-Wallain et trois escadrons sur Parvea.

Perwes.
D'après leur rapport, si la masse des Prussiens se retire sur Wavre, je la suirai dans cette direction afin qu'ils ne puissent pas gagner Bruxelles, et de les
éparer de Wellington.
Si, an contraire, mes renseignemens prouvent que la principale force Prussiens.
Les Généraux Thielman et Borstell faisaient partie de l'armée que Votre
fajesté a battue hier; ils étaient encore ce matin à 10 heures et, et out annoncé
que vingt mille hommes des leurs avaient été mis hors de combat.
Ils ont demandé en partant les distances de Wavre, Perwes, et Hannut,
Blucher a été blessé légèrement au bras, ce qui ne l'a pas empêché de continuer
commander après s'être fait panser.
Il n' a point passé par Gembloux.
Je suis avec respect, de Votre Majesté, sire, le fidèle sujet,

Le Maréchal Comte DE GROUCHY.

GEMBLOUX, June 17, 10 p. m.

GEMBLOUX, June 17, 10 p. m.

Sire: I have the honor to report to you that I occupy Gembloux and that my cavalry is at Sauvenières. The enemy, about thirty thousand strong, continues its retreat. We have seized 400 head of cattle, some magazines, and baggage. It appears from all the reports that, arriving at Sauvenières, the Prussians divided into two columns, one taking the route to Wavre, and passing by Sart-lea-Walhain, the other seems directed upon Perwes.

It may perhaps be inferred that one part is going to join Wellington, and that the center, which is Blucher's army, is retiring on Liège; another column, with artillery having retreated by Namur, General Excelmans is ordered to push to night six squadrons of cavalry on Sart-lea-Walhain and three squadrons of prevez. According to their report, if the mass of the Prussans retire on Wavre, I will follow in that direction to prevent their reaching Brussels, and separate them from Wellington. If, on the contrary, information shows that the principal Prussian force has marched on Perwez, I shall pursue the enemy towards that town.

The corps of Generals Thielman and Borstell formed part of the army which your Majesty vanquished yesterday. They were still here this morning at 10 c'clock, and announced that twenty thousand of their men were disabled. They inquired, on leaving, the distances of Wavre, Perwez, and Hannut. Blucher was slightly wounded in the arm, which did not prevent his reauming command, after having his wound dressed. He did not pass through Gembloux.

I am, respectfully, sire, your Majesty's faithful subject,
Marshal Count DE GROUCHY.

I now read two letters from Napoleon which show clearly that the

I now read two letters from Napoleon which show clearly that the verbal instructions, with which Grouchy seeks to screen his error, were accompanied by other words, explanatory of them, and showing that the order was strictly in accordance with the military principles which should have been followed by Grouchy:

EN AVANT DE LA FERME DE CAILLOU, le 18 Juin, 1815, à dix heures du matin.

MONSIEUR LE MARÉCHAL: The emperor has received your last report, dated from

MONSIEUR LE MARECHAL: The emperor has received your last report, dated from Gembloux.

You speak to His Majesty of only two Prussian columns which have passed at Sauvenières and Sart-à-Walhain. Neverthèless, reports say that a third column, which was a pretty strong one, has passed by Gerry and Gentennes, directed on Wavre.

Wavre.

The emperor instructs me to tell you that at this moment His Majesty is going to attack the English army, which has taken position at Waterloo, near the forest of Soignies. Thus His Majesty desires that you will direct your movements on Wavre, in order to approach us, to put yourself in the sphere [en rapport] of our operations, and keep up your communications with us; pushing before you those troops of the Prussian army which have taken this direction, and which may have topped at Wavre, where you ought to arrive as soon as possible. You will follow the enemy's columns, which are on your right, by some light troops, in order to observe their movements and pick up their stragglers. Instruct me immediately of your dispositions and of yourmarch, as also of the sews which you have of the enemy, and do not neglect to keep up your communications with us. The Emperor desires to have news from you very often.

The Marshal DUKE OF DALMATIA.

Monsieur Le Maréchal: You have written to the Emperor at three o'clock this morning that you would march on Sart-à-Walhain; your intention, then, is to go to Corbaix and Wavre. This movement is conformable to His Majesty's arrangements which have been communicated to you. Nevertheless, the Emperor orders me to tell you that you ought always to manœurer in our direction, and to seek to come near to our army, in order that you may join us before any corps can put itself between us. I do not indicate to you the direction you should take; it is for you to see the place where we are, to govern yourself accordingly, and to connect our communication so as to be always prepared to full upon any of the enemy's troops which may endeavor to annoy our right, and to destroy them.

At this moment the battle is in progress on the line of Waterloo, in front of the forest of Soignies. The enemy's center is at Mont. St. Jean; maneuver, therefore, to join our right. 18 Juni, une heure après midi,

The Marshal DUKE OF DALMATIA. P.S.—A letter which has just been intercepted says that General Bülow is about to attack our right flank; we believe that we see this corps on the height of 8t. Lambert. So lose not an instant in drawing near us and joining us, in order to crush Bülow, whom you will take in the very act.

The Marshal DUKE OF DALMATIA.

It will be observed that Grouchy admits that at 1 p. m., June 17, Napoleon ordered him to

Fursue the Prussians, complete their defeat by attacking them as soon as you ome up with them, and never let them out of your sight.

Grouchy also admits that Napoleon said:

It was for me [Grouchy] to discover the route taken by Marshal Blucher; that he was going to light the English; that I ought to complete the defeat of the Prussians in attacking them as soon as I should have joined them.

He also admits that the order dated Ligny, June 17, dictated by the Emperor and signed by Bertrand, said:

You will pursue the enemy; explore his march, and instruct me as to his movements, so that I can find out what he is intending to do.

It is important to find out what Blucher and Wellington are intending to do.

Now observe that Grouchey's letter to the Emperor, written at 10 clock that night, said:

The Prussians divided in two columns, one taking the route to Wavre.

If the mass of the Prussians retire on Wavre, I will follow in that direction.

Also bear in mind that at 10 o'clock on the morning of the 18th

Rapoleon acknowledged the receipt of this information, at the same time saying:

A third column, which is a pretty strong one, has passed, directed on Wavre

This order also says:

The Emperor instructs me to tell you, that at this moment His Majesty is going to attack the English army, which has taken position at Waterloo, near the forest of Soignies. Thus His Majesty desires that you will direct your movements an Wavre, in order to approach us, to put yourself in the sphere of our operations.

To show that Napoleon expected Grouchy to be close upon the Prussians, remember that the Emperor's letter of 1 p. m., of the 18th said :

You ought always to maneuver in our direction, and to seek to come near to ear army in order that you may join us before any corps can put itself between

This letter also informed Grouchy that Billow was about to attack Napoleon's right, and it closed with these words:

We believe we see his corps on the heights of Saint Lambert. So lose not an instant in drawing near us, and joining us, in order to crush Bülow, whom you will take in the very act.

It does not matter whether we take what Grouchy claims to be his verbal orders, or the authenticated official letters of instruction. In either case it is clear that he did not give an intelligent obedience to Napoleon's directions, although he did comply with the literal language of certain phrases that the order contained.

It might be interesting to proceed with an account of the sublime heroism which Napoleon instilled into his soldiers and which they evinced on June 13 in their attack upon Wellington, and in resisting the assaults of Blucher upon their right flank and rear. But I have no heart to discuss an engagement which, with all its brilliancy of conception and courage and intrepudity of execution, was lost by the misjudged action of a man who owed his rank and honors to the imconception and courage and intrepidity of execution, was lost by the misjudged action of a man who owed his rank and honors to the imperial leader whose fame and power ceased to exist when the charge of the imperial guard of France was checked, and they were compelled to recoil from a carnage too bloody for humanity to endure. It is painful to go further. The battle of Waterloo was lost when Grouchy failed to intelligently comply with the Emperor's orders; and no heroism could have compensated for the great disparity of numbers which existed between the contending armies.

Begging the House to excuse my long digression for the purpose of illustration. I now return to the subjects, leaving the events of June

illustration, I now return to the subjects, leaving the events of June 18, 1815, to consider those of

AUGUST 29, 1862.

General LOGAN now admits that Longstreet was on Jackson's right,

General Logan now admits that Longstreet was on Jackson's right, but he insists that Porter ought to have complied with the literal language of one phrase of the 4.30 order, although by doing so he would have been drawn away from Pope, which would have caused him to disobey three other phrases that the order contained.

This is precisely the way that Grouchy justities himself in disobeying the order to approach Napoleon, and to put himself in the sphere of Napoleon's operations, and to draw near to Napoleon "before any corps of the enemy can put himself between us"—that is, between Napoleon and Grouchy.

Napoleon and Grouchy.

Does not this illustrate that corps commanders must use discretion, and that they must obey orders so as to successfully carry out the purposes of the commanding general?

I will place in the record a map illustrating the relative location

of the places I have mentioned.

PUNISHMENTS FOR INSUBORDINATION.

The course pursued towards subordinates by nations and commanding generals who have sustained reverses has varied greatly. Passion and not reason has often guided their action, and when sovereigns and generals of armies have found themselves involved in difficulties by reason of their own derelictions and false movements, they often attempt to shift censures and fasten responsibilities upon subordinates, and in these efforts they have too frequently allowed a mean and despicable selfishness to control their actions, regardless of the better dictates of the heart.

Many cases have arisen where rulers have sought to inflict punish-

the better dictates of the heart.

Many cases have arisen where rulers have sought to inflict punishment for example's sake, and where packed courts have been used for the purpose of branding stigmas upon rising men, whose talent and courage were making them so prominent and popular as to create jealousies which developed into envy, hatred, and malice. This spirit is not confined to rulers and to persons in high places alone. It develops itself in all circles of society, and in all the seasons of life. Some children, with more of pleasure than pain, cause the infliction of punishments upon their fellows, their schoolmates, and even upon their brothers and sisters, by withholding truth, and sometimes by wicked falsehoods. This inclination grows with the growth, and, as "the child is father to the man," it hardens and matures itself into cold and deliberate cruelty, so that commanders are found to create courts for some particular and selfish end, to construct them of truculent officers to be swayed too often by perjury. I desire to say,

before proceeding, that I do not apply these terms to the Porter court. The primary evidence as to the location of the confederate army was not placed before it, the most competent witness to testify on these points being cut off by the line of battle that divided the contending armies of what were then two separate nationalities. SOME CULIOUS FACTS AS TO THE CONSTRUCTION AND CONDUCT OF THE COURT.

In connection, however, with this observation of mine, as to the Porter court-martial, I feel it my duty to call attention to this extra-ordinary statement of facts, as they exist, not only as to the organization of the court, but as to a part of its conduct in the course of the investigation:

the investigation:

It is now known that the movements of two divisions of General McDowell's corps gave up the key to the situation by their movements on August 28. I refer to the divisions of King and Ricketts—the former by his withdrawal from Gaines ville and the latter by falling back from Thorougnfare Gap. It is to these two movements more than to anything that Porter did, or failed to do that caused Pope's defeat on the 30th, and yet the officers who commanded those divisions were members of the court that tried Porter, in which either may have had the casting vote. Furthermore, General King was called by the Government as a witness to help make out the case for the prosecution, while he was a member of the court engaged in trying Porter. Can anything be more monstrous than such a proceeding in a court pretending to administer justice! When the record first disclosed this fact to me I thought there must be some mistake as to the identity as to officers mentioned. I know that the enemies of Porter were powerful and unscrupulous, but I was not prepared to find that they had gone to the length of trying him before their own prosecuting witnesses.—Colonel Moulton's letter to General Gibbons.

The facts here stated have become historical, and it may be de-

The facts here stated have become historical, and it may be de-The facts here stated have become historical, and it may be de-clared to the world, that in this great case of the trial of Fitz-John Porter for his life, as a coward, some of his accusers were his judges, nay, more—some of his judges were officers whose military movements had brought about the very mischief for which he was by them con-demned!! And one of these was produced as a witness against him at the trial, and having testified as such witness, gravely resumed his place on the board as a judge!

THE IMPATIENT JUDGES.

Another thing is disclosed in the conduct of this Porter court-artial. They were in haste to get out of the judicial harness. They were needed in other quarters, and for other purpose

It is a matter of record in the proceedings (see pages 218 and 219) that when the case was closed and the accused read his defense, that the judge-advocate declined to reply, stating: To prepare a written reply, in keeping with the gravity of the proceedings to the argument of the accused, would require several days, thus involving a delay which it is most important to word. From the consideration and from the urgent demand which exists for the services of members of this court in other and more active fields of duty, it is felt that the public interests will be best subserved by asking, as I now do, that you will proceed at once to deliberate upon and determine the issues which are before you.

Now, Mr. Speaker, a judge who has in his hands the life of a human

IS NOT PERMITTED TO BE IN A HURRY.

He may grow weary under long and laborious toil in listening to evidence and in examining facts, but when he reaches the solemn moment of judgment he must deliberate unembarrassed by the hurly-burly of the outside world, and not allow himself to be led away by any extraneous matters. But in this case, involving the life and honor of this distinguished American general, the judge-advocate gravely says to the court:

To prepare a written reply in keeping with the gravity of the proceedings to the gument of the accused would require several days, thus involving a delay hich it is most important to avoid.

And again this same judge-advocate, after thus acknowledging the gravity of the proceedings, perhaps shaking his finger at the court, makes this further impressive observation:

From the urgent demand which exists for the services of members of this court in other and more active fields of duty, it is felt that the public interests will be better subscreed, by asking, as I now do, that you will proceed at once to deliberate upon and determine the issues which are now before you.

Mr. Speaker, I have a faint recollection of a sarcastic line of English poetry, something like this:

But men must hang, that jurymen may dine.

A stroke of satire leveled at the proverbial impatience of English

I do believe the day will come when some American Juvenal will arise who will find in the history of the trial of Fitz-John Porter abundant materials for a scorching song, and I carnestly hope that he may take advantage of the occasion to lash all

IMPATIENT JUDGES

whether found on the bench, on the wool-sack, or on the drum-

JUDICIAL HASTE AN ELEMENT OF TYRANNY.

That voracious judicial vulture, Lord Jeffreys, was always in a hurry. When he convened his grand jury at Bristol, in his bloody ridings in Eugland, so memorable in the judicial history of that

ridings in England, so memorable in the judicial history of that country, he glared and stormed at the jury, and exclaimed: "I am here to do the King's business." Everybody knew what that meant. He had come to repeat his sanguinary role—to hang fifty men a day! It is fair evidence of haste in a judge to hang fifty men in a day. It would seem that at that time men were merely cattle in England. But they are not so considered in America. Here, the life of an individual, however humble, can be taken by a court only after the most solemn consideration. Here, too, we pretend that

HONOR IS DEARER THAN LIFE.

Certainly, to a soldier whose dream is of glory, honor is dearer than

Certainly, to a commanding general of an army corps, whose plume is already glittering with the rays of glory, won on the fields of battle in the service of his country, honor is dearer than life.

Certainly, to Fitz-John Porter, as he stood that day before that court-martial—having uttered a defense which put that staggered judge-advocate to the heavy task of several days' labor to answer—certainly to him, honor was dearer than life.

#### NEVERTHELESS.

as it appears from the facts above referred to, that very courtmartial had not time to give to that defense the consideration that its gravity demanded, for the court was advised, and, as it appeared, acted upon the advice, "to come at once to a determination of the matter, before it?" matters before it.

The writer of the Tribune article does not, however, appear to entertain my idea of the official integrity of officers of the Army, as is shown by his thrust at Generals Terry and Getty, in his statement that Terry was Pope's competitor for the anticipated vacancy among the major-generals, and that Getty was an applicant for promotion I regret that he made the allusion, as I feel he did both thes

officers great injustice; but it is not surprising that, in the study of a case which shows the use of so much selfishness, treachery, and perfidy to destroy Porter, he would be led to believe that integrity and honor had become in a measure supplanted by the baser instincts of

This yielding to popular passion is no new phase in the history of

The cry of

Crucify him! crucify him!

by the raging multitude could not be resisted by Pontius Pilate. The trial and acquittal of our Saviour had taken place. diet was :

I have examined him before you and find no cause in this man touching those things wherein you accuse him. No, nor Herod neither.

Subservience to those who dispense office was at that time not un like it is to-day, and all hesitancy ceased when he heard the threat: If thou release this man thou art not Casar's friend,

and this judge and ruler, giving him over to death, satisfied himself with the pusillanimous expression:

I am innocent of the blood of this just man

Magistrates and judges of all times, including those of to-day, are so disposed to yield to the clamor of popular fury that in all States and all nations it has been found necessary to incorporate in written statutes provisions for removing trials from the scene of excitement and prejudice.

If such a law had existed in 1865, the records of our country would not show that

IN A PERIOD OF EXCITEMENT MES. SURRATT WAS TRIED,

sentenced, and executed on the charge of harboring her son, who was charged with a crime of which, upon his subsequent trial, he was acquitted. It requires no argument to demonstrate that the mother could not have possibly been guilty of crime in harboring her son, when the facts finally showed that the son himself was not guilty.

## MILITARY DISCIPLINE AMONGST THE BOMANS.

No nation ever exercised military subordination more rigidly than the Romans. Their armies were models of discipline in the most enlarged sense of that phrase. But military punishments were enforced with the greatest caution, and, excepting a few rare instances, with humanity. The Romans are known, in one instance at least, to with humanity. The Romans are known, in one instance at least, to have rewarded with honors and congratulations the greatest military blunder ever perhaps committed by any of their generals. When Varro fought and lost that most disastrous battle of Canæ, in which he displayed the greatest want of capacity and evinced the utmost ignorance of military affairs, the magnanimous people of Rome went ignorance of military affairs, the magnanimous people of Rome went out to meet him, upon his return to the city after the disaster, and warmly congratulated him "that he had not despaired of the Republic," Why was this? Simply because they knew that Varro was honest and patriotic, and that what he had done was done through ignorance, untainted by a corrupt intention.

On this subject a very learned and distinguished writer on the history of the wars and customs of the Romans gives us this enlightened chapter on that phase of Roman heroism:

chapter on that phase of Roman heroism:

The Romans were not only less ungrateful than other republies, but were also more lenicut and considerate in the punishment of the generals of their armies. For if their misconduct was intentional, they punished them humanely; and if it was caused by ignerance, they not only did not punish them, but rewarded and henored them nevertheless. This mode of proceeding had been well considered by them; for they judged that it was of the greatest importance for those who commanded their armies to have their minds entirely free and unembarra-sed by any anxiety other than how best to perform their duty, and, therefore, they did not wish to add fresh difficulties and dangers to a task, in itself so difficult and perions, being convinced that, if this were done, it would prevent any general from sperating vigorously. Suppose, for instance, that they had sent an army into Greece against Philip of Macsdon, er into Italy against such tribes as had at first gained some victories over them. Now, the commander of such an expedition would naturally feel the weight of all the cares attendant on such enterprises,

and which are very great. But if in addition to these anxieties the mind of the general had been disturbed by the examples of other generals, who had been crucified or otherwise put to death for having lost battles, it would have been impossible for him, under the influence of such apprehensions, to have proceeded vigorously. Judging, therefore, that the ignominy of defeat would be sufficient punishment for such a commander, they did not wish to terrify him with other penalties. The following is an instance of how they punished intentional faults:

"Sergius and Virginius were encamped before Veil, each commanding a separate division of the army, Sergius being placed on the side where the Tuscans could make an attack, and Virginius on the opposite side. It happened that Sergius being attacked by the Faliscans and other tribes, he preferred being beaten by them and put to dight rather than apply to Virginius for assistance; and on the other hand, Virginius, waiting for his colleague to humble himself, was willing rather to see his country dishonored and the army of Sergius routed than march unsolicited to his succor. Certainly a very bad case and worthy of note, and well calculated to cause unfavorable conjectures as to the Roman Republic, if both these generals had not been punished. It is true that whilst any other republic would have inflicted capital punishment upon them, they were subjected by Rome only to a pecuniary fine. Not but what their misconduct merited severer punishment, but because the Romans, for the reasons above explained, would not vary from their established castom."—Machiacelli.

But the Roman generals-in-chief, and the Roman consuls and disconting the content of the reasons above explained, would not vary from their established castom."—Machiacelli.

But the Roman generals-in-chief, and the Roman consuls and dictators were not always so generous or so lenient as the Roman people. The rigid sternness of some of these military-civic superiors led to he commission of acts the most savage and revolting, one of which tshall here notice:

#### HOW TORQUATUS MANLIUS EXECUTES HIS SON.

In the war between the Romans and the Latins the consuls issued orders that "no person should fight with any of the enemy, except in his

orders that. "no person should hight with any of the enemy, except in his post."

It happened that among the other commanders of the troops of horsemen which were dispatched to every quarter to procure intelligence. Titus Manlius, the consul's son, came with his troop to the back of the enemy's camp, so near as to be scarcely distant a dart's throw from the next post, where some horsemen of Tusculum were stationed under the command of Geminius Metrius, a man highly distinguished among his countrymen, both by his birth and conduct. On observing the Roman horsemen, and the consul's son, remarkable above the rest, marching at their head (for they were all known to each other, particularly men of any note), he called out, "Romans, do ye intend," with one troop, to wage war against the Latins "and their allies! What employment will the two consuls and their armies have in the mean time?" Manlius answered: "They will come in due season, and with them will come one whose power and strength is superior to either—Jupiter himself, the witness of those treaties which ye have violated. If as the lake of Regillus we gave you fighting until ye were weary, I will answer for it that we shall in this place also give you such entertainment that for the future it will not be extremely agreeable to you to face us in the field." To this Geminius, advancing little from his men, replied: "Do you choose, then, until that day arrives when with such great labor ye move your armies, to enter the lists yourself with me, that from the event of a combat between us two it may immediately be seen how much a Latin horseman surpasses a Roman?" Either anger or shame of declining the contest or the irresistible power of destiny urged on the daring spirit of the youth, so that, disregarding his father's commands and the edict of teconsula, he rushed precipitately to a contest in which, whether he was victorious or vanquished, was of no great consequence to himself. The other horsemen removed to some distance as if to behold a show.

### THE DUEL ENSUED AND YOUNG MANLIUS TRIUMPHS

Then, collecting the spoils, he rode back to his men, and together with his troop, who exulted with joy, proceeded to the camp, and so on to his father, without ever reflecting on the nature or the consequences of his conduct, or whether he had merited praise or punishment. "Father," said he, "that all men may justly attribute to me the honor of being descended of your blood, having been challenged to combat, I bring these equestrian spoils, taken from my antagonist, whom I slew;" which, when the consul heard, turning away instantly from the youth, in an angry manner, he ordered an assembly to be called, by sound of trumpet, and when the troops had come together in full numbers, he spoke in this manner:

youth, in an angry manner, he ordered an assembly to be called, by sound of frumpet, and when the troops had come together in full numbers, he spoke in this manner:

"Titus Manlius, forasmuch as you, in contempt of the consular anthority, and of the respect due to a father, have, contrary to our edict, fought with the enemy, out of your post; and, as far as in you lay, subverted the military discipline by which the power of Rome has to this day been supported, and have brought me under the hard necessity either of overlooking the interests of the public or my own and those of my nearest connections, it is fitter that we undergo the penalty of our own transgressions than that the commonwealth should expiate our offense, so injurious to it. We shall afford a molancholy example, but a profitable one, to the youth of all future ages. For my part, I own, both the natural affection of a parent and the instance which you have shown of bravery, misguided by a false notion of honor, affect me deeply. But since the authority of a consul's orders must either be established by your death or, by your escaping with impunity, be annulled forever, I expect that even you yourself, if you have any of our blood in you, will not refuse to restore by your punishment that military discipline which has been subverted by your fault. GO, LICTOR, DIND HIM TO THE STAKE!"

Shocked to the last degree at such a cruel order, each looking on the ax as if drawn against himself, all were quiet, through fear father than discipline. They stood, therefore, for some time motionless and slient; but when the blood spouted from his severed nock, then, their minds emerging, as it were, from the stupefaction in which they had been plunged, they all at once united their voices in free expressions of compassion, refraining not either from lamentations or execrations; and covering the body of the youth with the speils, they burned it on a pile, creeted without the rampart, with every honor which the warm zed of the soldiers could bestow on a funeral. From

It should be here observed that upon the successful closing of this war, when Torquatus Maulius returned to Rome, that only the aged people went out to meet him, the young refusing to join in doing him people went out to meet him, the young refusing to join in doing him honor, and ever after continued to execrate and curso him. Philosophers and historians, in succeeding ages, have been found to commend this conduct of Torquatus Manlius. For myself, I have no hesitation in expressing my intense aversion to the act. It was atrocious, because it was unnecessary; it was cruel, because it was unnatural; it was tyrannical, because it exercised paternal authority in conjunction with military power; and it was hypocritical and mean, because it was a strained effort to distort the heart and to substitute Romanism (as called) for humanity, and thus to contribute to the personal re-(so called) for humanity, and thus to contribute to the personal renown of the imperious parricide. I would rather a thousand times be

the young Manlius dead than the old Manlius living. the young Manlius dead than the old Manlius living. From this, tragic picture of horrid war I turn for relief to the contemplation of another, wherein I behold the grandest of all the monarchs of this earth, the illustrious David, the God-appointed King of Israel, lamenting over the dead body of his erring son Absalom. Absalom had rebelled and waged war against his father, and was slain, as a consequence of that war. Nevertheless, the heart-stricken, good old monarch, precipitated by natural emotions, falls into the most violent lamentations, seeing nothing before him but the breathless beauty of a darling son whee grievous sins were all forcetten in the arguy of a darling son, whose grievous sins were all forgotten in the agony of a father's grief.

In the one picture I see humanity deformed by the god of war into a demon; in the other, I see humanity in its godliest aspect, asserting Christianity a thousand years before its advent into this world. This stupendous parricide of Torquatus was

PROMPTED BY MILITARY AMBITION

The love of personal renown had crushed out all the other loves in that man's heart. The long contemplation of war and blood had made of him a brute. Personal glory had become his god, and the god of personal glory is a demon.

The same awful mischief which military ambition perpetrated in this particular case, envy and jealousy have perpetrated in a thousand others. Between the chief and subordinate commanders of the Roman armies, in all the ages of the kingdom, the republic, and the empire, there

EVER EXISTED A PERVADING PERSONAL JEALOUSY

The chief would not allow his lieutenants to fight in his absence because a victory might have redounded to the glory of the lieutenousy, however applicable to the earlier chieftains in the Roman wars, became especially conspicuous in the days of Marius, Sylla, Cassar, and Pompey. Perhaps the solitary exception to this remark is found in the person of Cincinnatus, for the simple reason that he did not allow glory and ambition to play their vicious roles in his improvable except. immortal career.

ANOTHER CASE OF ROMAN FEROCITY.

In connection with the foregoing reflections I give a brief account of another leading case of the furious determination of a Roman dic-tator to punish a lieutenant who had fought against orders.

THE CASE OF QUINTIUS FABIUS.

The Case of Quintius fabius.

In the war with the Samnites, Cursor, the dictator, having occasion to go to Rome, left strict orders with the master of the horse to remain in his post, and not to engage in battle during his absence. After the departure of the dictator, Fabius, having discovered by his secouts that the enemy were in as ungarded a state as if there was not a single Roman in their neighborhood, the high-spirited youth (either conceiving indignation at the sole authority in every point appearing to be lodged in the hands of the dictator, or induced by the opportunity of striking an important blow), having made the necessary preparations and dispositions, marched to a place called Imbrinium, and there fought a battle with the Samnites. His success in the fight was such that there was no one circumstance which could have been improved to more advantage if the dictator had been present.

The fight resulted in a splendid victory for Fabius, and the slaughter of 20,000 of the enemy, and had been fought upon the discovery of a certain feeble situation and condition of the enemy which had been

certain feeble situation and condition of the enemy which had been developed after the dictator had left, and which authorized and called for a fight; a general of our day, refusing to take advantage of such a situation, would be covered with merited disgrace.

Now, when the dictator heard of this victory he flew into the greatest rage, for he considered that he had lost just so much renovem as Fabius had achieved for himself. He hastened back to the army and placed Fabius in the hands of the lictor, and was about to inflict upen him the penalty of death, when the offending officer fled from the camp to Rome, and appealed for protection to the senate and to the people. But the raging dictator followed him to the senate and

to the people. But the raging dictator followed him to the senate and to the people. But the raging dictator followed him to the senate and was inexorable, though the senate and people with great unanimity interceded for Fabius.

In this famous controversy the dictator planted himself upon the precedent which Torquatus had made in the slaughter of his son, and insisted that the splendor of the victory was no offset to the breach of Powen discipling. His arguments and invincible resolubreach of Roman discipline. His arguments and invincible resolu-tion prevailed, and Fabins was forced to submit on his knees to the inexorable will of the dictator. But seeing that all the people and the senate of Rome were undisguisedly on the side of the young here, the dictator so far relented as to grant Fabins his life, asserting to the last that the public submission of Fabius had re-established the Manlian edict, and that his pardon was dictatorial mercy, persuaded by the prayers of the people.

POLITICAL JEALOUSIES AND ASPIRATIONS.

Another peculiarity cropped out in the Roman wars—political ambition built upon military success. Marius, by all odds the greatest man of his day, was early penetrated with a desire to achieve military renown as a foundation of civil power at Rome. He succeeded. Sylla, his lieutenant, followed in his footsteps. Having supplanted Marius to a certain extent in war (for it was Sylla's strategy that closed the Numidian war by the perfidious capture of Jugurtha), Sylla resolved to supplant Marius at Rome in civil authority. Hence the stupendous civil wars between Marius and Sylla, which were the beginning of the end of the grand old Roman nation.

In these wars, growing out of political jealousies, every man fell but it was months before he received as correct.

Most of the new evidence was documentary and written on the ground during the events inquired into.

The War Department exercised an espionage over all of Porter's correspondence, and he complained to the court that letters to him from the Army were withheld and pilfered.

Complaint was made and made again to the Post-Office Department; but it was months before he received even a portion of the abstracted

who was in the way of the rising of either of these bloody aspirants. To suspect a subaltern was to execute him, if

THE EXIGENCIES AUTHORIZED THE SACRIFICE.

Now, it is quite evident that this political ambition which so engrossed the old Romans is a prominent feature at this day in American olitics.

War made George Washington President of the United States, so it made Andrew Jackson, so it made Harrison, and Taylor, and Grant. This war element had its influence in making Pierce President; so also it extended into the election of Hayes and Garfield; each had been military men with more or less renown. This element extended also into the nomination of General Hancock; and it is well known that it was the mythical idea that Richard M. Johnson, of Kentucky

that it was the mythical idea that Richard M. Johnson, of Kentucky had killed Tecumseh that made Johnson Vice-President.

This spirit is especially recognizable as a part of American politics from the persistence with which General Scott's friends pressed him for President, without a record excepting his military renown. Now, Mr. Speaker, I really doubt, and I express it here freely in my place, whether there were many successful generals in our late terrific war who did not feel in their captivated ears at some exquisite moment of sweeping triumph the unutterably harmonious humming of that inevitable bird, better known as the "Presidential bee."

The use of these observations in this place is simply to give me the liberty of suggesting that in the sacrifice of Fitz-John Porter by

liberty of suggesting that in the sacrifice of Fitz-John Porter by that cruel court-martial the evil spirit of military and political jealousy and ambition entered fearfully and most effectually

THE TRUE ENDS OF PARTY ORGANIZATIONS

Is this House now willing to make a political matter of this ques-

tion?
The legitimate ends of political parties are the urging and establishing of great principles; the means of preserving the free institutions of one's country; of promoting the prosperity of the people, and working for the amelioration of mankind; to find the best means to protect personal liberty and private property; to bring about the greatest good to the greatest number, and to throw around the citizen an ægis broad enough to shield him, not only in the enjoyment of property and liberty, but to guard and defend his honor; these are the ends of party, and in this view of it! I too am a party man liberty than carry my partisan feelings into a contest which in-But rather than carry my partisan feelings into a contest which involves the honor of a gallant soldier, who had fought bravely for his country in the face of danger and death, I would see my right arm severed from my body.

If you are disposed to make this a party question, remember two

. It was under Republican rule that this great wrong was committed

A Republican Congress has the power to undo this mischief, and refuses the last opportunity to relieve its party from the obloquy of having done a great wrong.

GENERAL GRANT'S MAGNANIMITY.

On this very subject, in this very case, you have before you a splendid example in your own gallant and honored leader, General Grant. With a magnanimity that does honor not only to him but to the whole human race, his mind being disabused of error and prejudice by the revelations of the truth of history, he rises superior to party, and asserts the grandeur of a real heroic nature in pro-claiming to the world not only his own grave error, but he publicly expresses genuine and honorable and manly grief for the mischief he has done this injured man by having refused to undo the greater mischief which had been done to him by this cruel court-martial; lamenting that when he had the power to undo the mischief, his mind labored under the belief of this man's gnilt upon a false theory and a fatal delusion.

As much honor as General Grant has won in the service of his country, his glittering plume is yet brightened in its gleamings by this other ray of glory, coming, not from a victory on the field of battle, but from that greater victory over self, over party, and over

Every point now and heretofore claimed by Fitz-John Porter to prove his innocence of all wrong, intentional or otherwise, under the charges on which he was tried, is

FULLY ESTABLISHED IN THE ORIGINAL RECORD

of the court-martial, printed and shown in his defense at the time.

The subsequently presented newly discovered evidence confirms the

original testimony given in his behalf, and disproves that of his accusers and prosecutors.

Owing to circumstances best known to the court, the evidence in his defense was not credited, while that of the prosecution, now fully dis-

proved, was received as correct.

Most of the new evidence was documentary and written on the ground

and withheld documents, which when presented with other evidence confirmed the old testimony and

ESTABLISHED HIS INNOCENCE

on all points. Other documentary evidence was withheld or mislaid by on all points. Other documentary evidence was withheld or mislaid by his accusers; some of this has not come to light, though its tenor is known. Other papers proving essential facts asserted by him but denied by his prosecutors were brought forward in 1878, by one of his accusers, from the secret recesses in which they had been held since 1862—brought out to prove a "point" in favor of the accusing witness, and they proved Porter's entire innocence of one of the gravest charges, and would have done so in 1862, when they were asked for. I refer to Porter's letter, which showed that he received the 4.30 order after 6 o'clock, and which had been in General McDowell's possession for sixteen years.

The minority report of the Senate, submitted by Senator LOGAN on May 31, 1882, as if feeling the necessity of asserting a full and fair trial, says that for forty-five days the court-martial was in session and that after a "patient investigation," during which many witnesses were examined, Porter was found guily. Nothing, however, is said of the fact that only thirteen days (four being Sundays or holidays not used) of the forty-five were given to the defense, and that those were extra bort by the one idea of cut short by the one idea of

EXPEDITING THE TRIAL,

that the service might not be inconvenienced, no matter how the ends of justice might be perverted, which seems to have actuated the Secretary of War, who issued a peremptory order to the court to sit without reference to hours. When Porter was required to enter on his defense notone of his important witnesses had been summoned or notified that he was to be a witness, although at the beginning of the trial Porter had been required by the judge-advocate to furnish a list of his witne an unusual demand, the plea for making it being that the trial would be expedited and the service put to less inconvenience; and further, one witness, General Pope's chief of staff, held for the prosecution, was ordered away from Washington so soon as it was found that he was to be a witness for the defense. Eminent statesmen, honored jurists, and lawyers as able and distinguished as are in our country have declared after a careful and tire to take the records of that count warried that careful and "patient study" of the records of that court-martial that

FITZ-JOHN PORTER SHOULD HAVE BEEN ACQUITTED,

Conscious of his innocence, and as preparation for an appeal, almost simultaneously with the publication of the sentence, Porter asked for the publication of the record by the Senate. His appeal was met by Senators presenting a volume, which had been surreptitiously published and hastily issued, which contained only the evidence for the prosecution, not one word for the defense. And so

SUCCESSFUL WAS THE DECEPTION

in creating the impression that the whole evidence had been published. that the Senate denied the motion to print.

Senator Fessenden said, holding the volume up to view:

He was rather in favor of having the record printed and go to the country. But the record had been printed; he had received a copy and read it. He believed that the result arrived at was amply justified by the facts, and no other results could have been reached in any court. But the record was very voluminous; it would create a vast expense under the present circumstances, and as it was already printed he did not think it best to adopt the resolution.

That volume, bound with other anonymously written and surreptitiously printed pamphlets of the prosecution, furnished to Senators, is new in existence.

THE PRESS ALMOST UNANIMOUSLY FAVORABLE TO PORTER.

The press of the country, that had carefully watched the proceedings of this court-martial, and which had all the evidence, almost unani-

on this court-martial, and which had all the evidence, almost unanimously announced their opinion, a fair sample of which is an article in the New York Times January 12, 1862, from which I quote:

It is very certain that the trials (General McDowell's and Porter's), although the impeachments of each officer were so grave, have not resulted in establishing any startling and terrible crimes to shock the country and disgrace the service.

In the minority report of the committee of the Forty-sixth Congress, page 29, "the opinion of a careful military historian, the author of perhaps the best history of our civil war that has been written" and written without "prejudice or passion," is given, but if the members of the committee had turned to the appendix, pages 761-763 of the history by the Comte de Paris, from which the extract was taken, they would have found the amended opinion, and on page 292 of the later American edition they would have found all trace of it gone and commendation substituted; and they no doubt would all have been as much astonished was one of the minority when this appendix and the new addition were shown to him, unfortunately not until after the report had been made. If the minority still retain their exalted appreciation of this author, then certainly when they find passages derogatory to Porter changed under new light to commendations, in justice they should give him the benefit of this high opinion.

I give the exact words of the Comte de Paris (Appendix, page 761):

We shall pass over in silence the charges of incapacity, cowardice, and treason. These are belied by Porter's whole career, who, both as a soldier and a chieftain, had been tried on more than one battlefield, and whose devotion to the cause he served can not be called into question.

General Pope censured his lieutenant for not having prevented the junction of Jackson and Longstreet by placing himself between them on the Gainesville and Groveton road. He asserted that this maneuver was practicable and that it would have assured the defeat of the confederates. It was in consequence of this accusation that Porter was tried and condemned. At a later period when the facts became more fully known and the official reports of the confederate generals were given to the public it was shown that the junction of the two confederate corps was effected long before Porter could have reached the point which had been indicated to him.

which had been indicated to him.

\*\*General Pope has weakened the effect of this charge by his immoderate course and by presenting the facts in a light which does not bear investigation. On the one hand he asserts that he ordered Porter to attack the enemy's right, and assumes that he willfully disobeyed him in not fulfilling his instructions. Now, this order, as we have already stated, was only dispatched at half past 4 o'clock, and Porter declared that he did not receive it until the moment when night rendered its execution impossible. The movements of the several corps had been so frequently countermanded that the officers of the general staff were unable to ascertain the exact position of each, so that the delay in the transmission of that order is not to be wondered at. On the other hand Pope, in his anxiety to prove that Porter's inaction had permitted the enemy to concentrate all his forces upon that portion of his line which was defended by Jack'son, quotes the official report of the latter. But he made a mistake in the dates, as we have ascertained by examining a collection of confederate reports on the campaigns of Virginia, published in Richmond in 1884 (volume 2, page 39); the quotation he produces has reference to the 30th of August, and not the 29th. This explanation will suffice to show how important it is to be circumspect in examining the various documents that have been published on both sides if one wishes to arrive at the exact truth.

In the stress laid on the fact that Mr. Lincoln, then President on

In the stress laid on the fact that Mr. Lincoln, then President, approved the sentence of the court, it should be remembered that the proved the sentence of the court, it should be remembered that the proceedings of the court were never examined by him, and that he approved the sentence mainly on the argument of the judge advocate, which misrepresented the evidence. Never was a great-hearted or great-minded executive more grossly betrayed by the servants in whom he trusted. Mr. Robert Lincoln's testimony plainly shows that his father was misled by the Judge-Advocate-General's interpretation of Porter's dispatch to Generals McDowell and King; nor should Governor Newell's letter and testimony, showing that President Lincoln acknowledged to him that he believed himself misled and would be glad of an opportunity to reopen the case, be forgotten.

It has been said that Porter should be judged on the 29th of August, 1862, by what he knew of Longstreet to guide his acts; also, that Long-

1862, by what he knew of Longstreet to guide his acts; also, that Longstreet was not in his front, and if so, that he did not know it. In this connection, I refer to Porter's letter of January 9, 1871, to the honorable Secretary of War, and to a dispatch of August 29, 1863, from General McDowell to General Pope, both accompanying this letter. It will there be seen that for the purpose of assuming a great success after a severe battle on the 29th that General Pope claimed in his dispatch from the battlefield that he had been fighting the combined forces of Longstreet and Jackson; but in order to convict Porter, who acted on a positive knowledge of Longstreet's presence in his immediate front, General Pope testified in 1862 that Longstreet had not arrived up to a late hour in the evening and subsequently reported him coming on the field all that night and next day.

Again, General McDowell testified in 1862 that he knew nothing of Longstreet or of the cause of the falling back to Manassas of Ricketts and King, and that he did not meet them until after parting from Porter. Yet in part of that dispatch, written before seeing Porter, he says he had met King, had heard of Ricketts, and that they had fallen back, "being overmatched" by Longstreet. The record of McDowell's court of inquiry, sitting in the same building with Porter's court, shows that he was proving that he knew all about Longstreet, and had arranged to prevent him coming through Thoroughfare Gap, only nine miles from Porter, on the morning of the 28th August. In 1878 he testified

that he had imparted his information to Porter.

The charge that Porter exhibited ill-feeling toward General Pope is not sustained by the proof. But we see scattered through the testimony very strong evidence that General Pope entertained both jealousy and animosity against Porter.

In his first report of the battle of August 30, he said:

The attack of Porter was neither vigorous nor persistent, and his troops soon retired in considerable confusion.

Porter lost about 2,100 out of less than 8,500 men for the fighting

Porter lost about 2,100 out of less than 8,500 men for the fighting that General Pope styles "neither vigorous nor persistent."

Other corps of General Pope's army lost from August 16 to September 2, inclusive—Sigel 2,087 out of 9,000, Heintzelman 2,238 out of 9,000, Reno 1,523 out of 7,000, McDowell 5,469 out of 18,000; and of these 5,469, more than 2,000 of McDowell's losses were reported as "missing," while Porter's "missing" was only 458.

It will therefore be seen that in the fight that General Pope says was "neither vigorous nor persistent" Porter's loss in killed and wounded on that afternoon was in proportion to the strength of the

wounded on that afternoon was, in proportion to the strength of the various corps,

NEARLY DOUBLE THAT OF ANY OTHER CORPS

during all the battles of the campaign, which lasted eighteen days. In describing the attack of General Porter, which General Pope says was neither vigorous nor persistent, Stonewall Jackson uses these words:

In a few moments our entire line was engaged in a fierce and sanguinary strug-le with the enemy. As one line was repulsed another took its place and pressed orward as if determined, by force of numbers and fury of assault, to drive us

from our positions. So impetuous and well sustained were these onsets as to induce me to send to the commanding general for re-enforcements, but the timely and gallant advance of General Longstreet on the right relieved my troops from the pressure of overwhelming numbers, and gave to those brave men the chances of a more equal conflict. As Longstreet pressed upon the right, the Federal advance of my whole line was ordered.

The Schofield board, after describing Porter's conduct on this occa-

sion, comment upon it in these words:

Thus did this gallant corps nobly and amply vindicate the character of their trusted chief and demonstrate to all the world that "disobedience of orders" and "misbehavior in the presence of the enemy" are crimes which could not possibly find place in the head or heart of him who thus commanded that corps.

Porter's faithful, subordinate, and intelligent conduct that afternoon saved the Union army from the defeat which would otherwise have resulted that day from the enemy's more speedy concentration.

Whoever else may have been responsible, it did not flow from any action or maction of his.

We believe not one among all the gallant soldiers on that bloody field was less eserving of such condemnation than he.

Now, when we recall General Pope's testimony against Porter on his trial, contradicted as it was in many material points by an array of witnesses, many of them called by the prosecution, does it not appear that General Pope was possessed by some personal and malignant animus

On January 15, the gentleman from Ohio [Mr. DAWES], by interposing objections, prevented the consideration of the bill for the relief of Fitz-John Porter. He afterward obtained leave to address the House, and, by unanimous consent, I was granted the same privilege. His delay until this time made it necessary for me to proceed without a knowledge of the positions he would assume or the line of argument he would pursue, and it was not until to-day that his views were presented to

the House, so as to give me an opportunity to reply.

It would seem, Mr. Speaker, that what I have already said has anticipated every material point in the speech of the learned and distinguished gentleman. There were, however, a few assertions and insin-uations in his speech to which I will briefly allude. He states:

General Porter had, therefore, a trial according to the custom of war in like cases—a fair trial and by a court of the highest possible standing as to intelligence, character, and integrity.

It had not been my intention to discuss the legal features connected with the court, as I did not feel such a course was at all necessary to

PORTER'S VINDICATION. It had been my impression that all persons who had examined the matter admitted the illegality of the proceedings under which he was tried; the matter of contention being that his conduct was so exemplary that no honorable court could hesitate a moment, after hearing the evidence as now presented, to entirely exonerate him from any and

all blame or censure.

But as General DAWES has stated that Porter had a fair trial according to the customs of war in like cases, I will reply by asserting that the court, as constituted, was in violation of the sixty-fourth article of war and the sixty-fifth article as modified by act of Congress May 29, 1830. It was also in violation of the seventy-fifth article of war, and if the attempts of these who still asset General Boston and an extension of the seventy-fifth article of war, and if the statements of those who still assail General Porter are correct some of its members have disregarded the requirements of the sixty-

some of its members have disregarded the requirements of the sixtyninth article of war, which, if true, would involve those gentlemen
in the turpitude of disregarding the oath that is recited in said article.
I will first call attention to the sixty-fifth article of war, as modified.
I read from the Army Regulations of August 10, 1861, page 495. The
act referred to is an amendment to the sixty-fifth article of war:
Whenever a general officer commanding an army, or a colonel commanding
a separate department, shall be the accuser or prosecutor of any officer in the
Army of the United States under his command, the general court-martial for
the trial of such officer shall be appointed by the President of the United States.
The proceedings and sentence of the said court shall be sent directly to the
Secretary of War, to be by him laid before the President, for his confirmation
or approval, or orders in the case.
So much of the sixty-fifth article of the first section of "An act for establishing
rules and articles for the government of the armies of the United States," passed
on the 10th of April, 1896, as is repugnant hereto, shall be, and the same is hereby,
repealed. (Act 29th May, 1880, sections 1, 2, 3.)
Pope was a general officer, commanding an army, and Porter was an

Pope was a general officer, commanding an army, and Porter was an officer in the Army of the United States, under his command.

It will therefore be observed that the act of Congress modifying the

sixty-fifth article of war directly applies to a case like this.

General Pope and General Halleck could not be ignorant of these provisions, but is it not probable that they feared the inquiry which would have come from President Lincoln had they asked him to order the court? Did they not apprehend he would have hesitated before ordering a court to try the hero of Gaimes's Mill, Cold Harbor, Chickahominy, Malvern Hill, and the brilliant victory of August 30 at second Manassas? Is it not possible that Lincoln was asked and either hesitated or refused to

order the court?

Certainly these men would have made some effort to procure a legal tribunal before resorting to violation of law in their efforts to crush a

man whose reputation they sought to destroy.

It is true that they give the face of the paper an appearance of legality, Pope's name not being signed to the charges. The signature reads:

B. S. ROBERTS,
Brigadicr-General Volunteers and Inspector-General Pope's Army

When this point of illegality was suggested, Judge Holt said:

There is no reference in the order appointing this court to General Pope at alt. I wish to state distinctly that Major-General Pope is not the prosecutor in this case, nor has he preferred these charges, nor do I present them as being preferred by him.

It is true that General Pope swore before the court-martial that he at is true that General Pope swore before the court-martial that he was not the prosecutor, but his report of the battle of August 30 clearly showed that he was the animating cause of the prosecution; and when it became no longer necessary for him to fire from under cover, he acknowledged or rather boasted that he was Porter's accuser and prosecu-

In supplement to Senate Report No. 142, Thirty-eighth Congress, second session, volume 2, I find on page 190 extracts from a letter written by General Pope, which I will read. It is addressed:

Hon. B. F. Wade, Chairman of the Joint Committee on the Conduct of the War.

It says:

I have the honor to acknowledge the receipt of your letter of the 18th May, 1865.

Within two months it was actually found necessary to depose General McClellan from his command, and bring Fitz-John Porter to trial.

In the last days of January, 1863, when the trial of Fitz-John Porter had closed and when his guilt had been established 1 intimated to the President that it seemed a proper time then for some public acknowledgment of my services in Virginia from him.

I considered it a duty I owed to the country to bring Fitz-John Porter to justice, lest at another time and with greater opportunities he might do that which would be still more disastrous.

With his conviction and punishment ended all official connection I have since had with anything that related to the operations I conducted in Virginia.

Although this is conclusive, it is only a part of the abundant evidence that General Pope was both the accuser and prosecutor of Porter, and as the court was appointed by General Halleck and not by the President, it was an illegal tribunal from the inception of its proceeding, and its findings were void, even if all else had been legal.

In discussing this feature of this article I quote O'Brien on Courtsmartial, page 227:

WHO MAY ORDER GENERAL COURTS-MARTIAL

By the sixty-fifth article of war, any general commanding an army, or colonel commanding, a separate department, may appoint general courts-martial whenever necessary.

But, by the act of 29th May, 1830, section 1, whenever said general or colonel shall be the accuser or prosecutor of any officer in the Army of the United States, under his command, the general coart-martial for the trial of such officer shall be appointed by the President of the United States.

It is intended to prevent the packing of a court and still more, perhaps, to prevent the suspicion of such packing.

The effect of this article is, first, when an army is assembled in a body, to prevent any other than its commander from ordering general courts-martial and to limit this privilege, even in such cases, to commanding officers having at least the rank of general. The second effect of the article is, when a territory is divided into different departments, to confine the right of ordering general courts-martial to the commanding officer of a department, and to grant this privilege to him only when he has, at least, the rank of colonel.

With regard to the value this distinguished gentleman placed on him-

With regard to the value this distinguished gentleman placed on himself, in his conversation with Mr. Lincoln in January, 1863, I will simply suggest that if he had only put himself on the New York Stock Exchange and bought himself for what Mr. Lincoln seemed to estimate his worth to the country and then sold himself for what he thought he was worth it would have required but few deals for his wealth to have exceeded the colossal fortunes of Stewart, Vanderbilt, or Astor. I will now read the sixty-fourth article of war, from page 495, Army Regula-

tions, of August 10, 1861:

ART, 64. General courts-martial may consist of any number of commissioned officers from five to thirteen, inclusively; but they shall not consist of less than thirteen when the number can be convened without manifest injury to the

This article applies to all courts-martial and is intended when possible to give an officer a full court even when tried for a most trivial offense. That being true, why should the law be disregarded in the trial of such a man as Porter upon charges involving life and honor? Washington city was at the time filled with high titled military men, and with all this array could not Halleck and Pope find more than nine officers whom they could trust with their commission?

I do not mean to say that a court would be illegal composed of less than thirteen members, nor shall I discuss the question of what should be regarded as

MANIFEST INJURY TO THE SERVICE.

But I insist that the spirit and letter of the sixty-fourth article of war were grossly violated by ordering Major-General Porter to be tried in the city of Washington by a court consisting of nine members, with the thousands of officers of all grades in and about Washington; and it is impossible to ascribe other than improper motives in providing for less than thirteen members of the court.

In 1 Attorney-General's Opinions, page 299, Mr. Attorney-General Wirt, in referring to this provision of the sixty-fourth article of war, after stating that it does not refer to convenience, nor is the injury alluded a probable one, but it must be a manifest injury to the service, uses these words:

And if a smaller number act without such manifest emergency, I repeat "that they are not a lawful court and an execution under their sentence would be mur-

I will now read the seventy-fifth article from page 497:

ART. 75. No officer shall be tried but by a general court-martial; nor by officers of an inferior rank if it can be avoided. Nor shall any proceedings of trials be carried on excepting between the hours of 8 in the morning and 3 in the afternoon, excepting in cases which, in the opinion of the officer appointing the court-martial, require immediate example.

Of the nine officers appointed by the court only two held commissions of the same grade as Porter, all the balance being brigadier-generals. There were at this time more than thirty officers in the Army who were superior in rank to General Porter. Is it possible for any one to contend that the officers ordering the court could not have avoided naming eight officers of a grade lower than that held by the accused? Comment

I will now allude to another action on the part of the prosecution, and remark that they may select that horn of the dilemma which best suits the purpose of their effort at justification. The seventy-fifth article of war provides that trials shall be carried on between the hours

of 8 a. m. and 3 p. m., except in cases which

REQUIRE IMMEDIATE EXAMPLE

General Porter's friends have insisted for twenty years that one purpose of his immolation was, because the disasters of others required the

punishment of some officer for an example.

The proceedings of the court show that orders were given for its see sions to be held regardless of hours, so that either it was considered necessary to make an immediate example or this law was grossly violated by the action of the official who issued the order.

It is certainly not creditable to the Government that documentary

avidence was

WITHHELD

or mislaid by General Porter's accusers. Some of this has not yet come to light, but other papers which prove essential facts, which were insisted upon by Porter at his trial, but denied by Pope and the prosecusisted upon by Forcer at his trian, but defined by Force and the prosecution, were brought forward in 1878 by General McDowell, he having secretly withheld such papers since 1862. These papers were brought forward by McDowell to prove a point to sustain his assertions as an accusing witness; but the effect of said papers was to sustain and confirm other proof which General Porter had insisted upon and which disproved one of the strongest points insisted upon by the prosecution in

In the elaborate and well-arranged speech of the distinguished gentleman from Ohio [Mr. Dawes], he has apparently selected every particle of alleged proof and every point which could be brought against this unfortunate soldier.

Unlike, however, General Pope, he is not universal in his condemnation. He says:

I respect General Porter for his valor on other fields, but for his failure on this field I condemn him.

His allusions to Porter's accusers do not show that his opinion of those

gentlemen is very exalted. I will read:

I have spoken not for General Pope. History must attend to his case; it is not here for trial. I have no concern as to the plots or machinations of General Irvin McDowell. I know nothing of his personal schemes, plans, or purposes in that

General DAWES also sustains General Porter and contradicts General The night of August 27, it will be Pope in many points of evidence. recollected, Pope testifies was starlight. General DAWES'S recollection is very different. He says:

I have no doubt that that night was dark; nights are apt to be when there is no moon. There is unimpeachable evidence that the night was dark. I find evidence that it was "very dark," given by my gallant leader who fell at Gettysburgh, General John F. Reynolds. He testifies:
. "It was a very dark night, as was the succeeding night. I recollect both of them distinctly from having been about a good deal until after 12 o'clock on each night."

night."
Ah, on the succeeding night I was about myself, and so was my honorable friend from Wisconsin. We can swear it was dark—very dark.

General DAWES's recollection that this was a very dark night is also sustained by a number of other witnesses whose testimony I have cited to this House. He, however, commits a grave error when he makes this statement, which I will read:

The sentence was approved by Abraham Lincoln, President of the United States. The Hon. Robert T. Lincoln, in his testimony upon the subject, says:
"My father was exceedingly severe in his condemnation."
Had he looked into the record of the Schofield board he would have

found on pages 320 and 321 the evidence of Governor Newell, who testifies that he had seen General Porter only twice, and that his personal and political relations with President Lincoln were intimate and friendly and that he had a conversation with President Lincoln regarding Porter's case. In answer to a direct question from the court regarding Mr. Lincoln's statement on this occasion, Governor Newell said:

ing Mr. Lincoln's statement on this occasion, Governor Newell said:
Mr. Lincoln stated that he had not been able to give that personal attention to
the cause which its merits required; that he had accepted the opinion of the
Judge-Advocate-General and of the War Department as the basis of his action;
that if any evidence exculpatory of General Porter could be introduced he would
be very glad to give him an opportunity to have it presented; that he had a high
regard for General Porter personally and as a soldier, and that he hoped that
he would be able to vindicate himself in that way. I had at least two conversations with the President on that subject, the import of which I have given you.
I do not recollect the precise language, but it made a special impression upon
my mind as the time, and my recollection has been fortified by a letter which I
wrote to Governor Randolph, and which reminds me of this particularly.

General DAWES and others of Porter's assailants make assertions regarding General Garfield which I hope are equally erroneous. In their earnest efforts to argue what they seem to choose to regard as their side of the question they do not apparently reflect upon the great injury they were inflicting on the great and

DISTINGUISHED DEAD.

If it was true, as stated by some of General Porter's assailants, that information had been received by them regarding the opinion of any of the members of the court or any intimation as to how any member voted upon any of the charges or specifications, then it is also true that the member of the court who, they say, gave them information in the matter was guilty of violating the oath which he took not to divulge said facts. The letter alleged to have been written by General Garfield I hope and trust was imposed upon the gentlemen by some enemy of our martyred President. I hope General Garfield's friends will come to his rescue and prove, what I believe they will be able to prove, that this,

like the Morey letter, was a forgery.

I can not conceive that after reading Mr. Lincoln's views, to which I have alluded, General Garfield would have used an express injure Porter and at the same time pervert the position of Mr. Lincoln. If he had in a thoughtless moment written such a letter or uttered careless expressions of the same character to confidential friends, he certainly had too much confidence in them to believe that his reputa-

tion would be assailed by their publication to the world.

My very high opinion of General Dawes convinces me that he was gnorant of this testimony regarding President Lincoln when he put on the first page of his speech the eight words taken from an expression of Hon. Robert T. Lincoln. These unexplained words standing alone do injustice to both the living and the dead. They misrepresent Mr. Lincoln and make his distinguished son appear to attribute to him views very different from those expressed by him when first informed of the wrong done to Porter.

It seemed that Mr. Lincoln evinced a great pleasure in learning of Porter's ability to vindicate himself, also remarking that "he had a very

high regard for General Porter personally and as a soldier."

Of course the distinguished Secretary of War, in the phrase of eight words attributed to him by Mr. DAWES, referred to the ideas which his father derived from the review placed before him by Judge Holt.

I feel confident, when my gallant friend, General DAWES, learns that

his expressions did injustice to the magnanimity and love of justice of both President Garfield and President Lincoln, that he will hasten to correct the error into which he has been led.

General DAWES seems to be a gentleman whose mind was made up on this matter twenty years ago. His language on this floor is:

As a soldier of the army of General Pope, and afterward in the Army of the Potomac, I then accepted this action of the court-martial as conclusive upon the

Is it not probable that this fact, together with his acknowledged ability, was the reason why he was selected to combat this cause against General Porter on this floor? General DAWES also says:

That other generals under Pope in that campaign may have failed is quite probable. It was a general failure all around, so far as results are concerned. To assail other generals does not defend Porter.

The intensity of Dawes's feelings he does not attempt to conceal. Because of the disastrous results of the campaign, he seems to think speech I can not see that he gives any reason why Porter should be the one selected for sacrifice. His own wishes on the subject are very tersely and forcibly expressed. I will read his exact words:

From an old letter of my own, written from our camp near Belle Plain, April 8, 1863, I take these words:

"Shot to death by musketry for Fitz-John Porter would have been poor pance for the thousands slaughtered at Bull Run, and we, their surviving crades and friends, would for their takes rejoice at it."

I respectfully submit to this House that in the trial of this cause a member who admits such prejudice should be struck from the panel of jurors. We will not object to the use of his great ability as counsel against the accused; but I feel confident from my knowledge of his better feelings he will of his own motion decline to stay with us in the double capacity of judge and juror. But whatever may be his disposition in this regard, the friends of justice will certainly appreciate his

incapacity to give this case an impartial consideration.

General DAWES's effort to prejudice the case by alluding to the time

that has elapsed since the court-martial met in 1862 is a point hardly worth considering. The entire country knows that General Porter has been during all the time assiduous in his demands for a proper hear ing of his case. The effort to sustain a wrong by such a plea would meet with no favor from the people. Another effort is made to detract from the dignity of the Schofield board, by assailing them with the statement that they "were without power to compel the attendance of witnesses." This is an equally unfortunate allusion. The record shows that the only witnesses wanted by the Government or by Porter's accusers were easily procured, and it also shows that this want of power to compel the attendance of the witness was only made apparent by the court's strenuous efforts to bring General Pope before it to testify. Popels appeals to the Government to tify. Pope's appeals to the Government to

SAVE HIM FROM

the severe examination and confusing inquiries to which he would have

been subjected is now a matter of history.

Again, General DAWES, wincing under the overwhelming proofs developed by the Schofield board, as a last resort attempts to weaken its findings by speaking of its constitution as of questionable legality.

This attack upon President Hayes would have come with better grace from some one else than the distinguished member from Ohio. The board was, in fact, in the nature of a court of inquiry, which is especially provided for by the articles of war. Even if it should be said that a court of inquiry has no jurisdiction to report upon a citizen, it must be remembered that its report and inquiries were with regard to many gentlemen who still bore commissions in the Army. I have already considered what the evidence shows regarding the animus of the parties, but as General DAWES states that "the animus of Porter will be the controlling consideration in the debate before the American people,"let me ask what animus was in Porter's heart when he hurried people," let me ask what animus was in Porter's neart when he number from the Peninsula to the support of Pope, not even waiting for orders but anticipating them? What was his animus on August 30, when by gallantry he saved Pope from disastrous defeat? What animus was shown in his reply to a letter from General McClellan which that officer wrote to him at the earnest solicitation of President Lincoln? The animus The animus of Porter during all this time is the same as that which he exhibited from June 26 to the night of July 1, when by his great gallantry and skill he won those

VICTORIES

to which earlier in these remarks I have alluded.

Mr. Speaker, we accept this question of animus, and we inform General Pope and his friends that they shall not retreat from the position which they have taken. Let us consider Pope's animus and that of the which they have taken. Let us consider Pope's animus and that of the Government officials in their treatment of Porter. What was the animus inducing Pope to testify that he had nothing to do with the charges against Porter? He knew that statement to be untrue, and has subseagainst Force: The knew that satements to be dirtie, and his subsequently made statements that proved that it was not true. He also knew that if he admitted before the court that he was Porter's accuser he would have destroyed the legality of the proceedings. What animus was exhibited toward Porter by the Judge-Advocate of the Army? He had prosecuted Porter before the court as judge-advocate. He then reviewed the proceedings of the court in the capacity of Judge-Advocate-General of the Army.

When Porter completed his defense Judge Holt was invited by the

court to reply, but he declined to do so; yet under an order of the President he revised the proceedings in the capacity of Judge-Advocate-General of the Army, preparing a most elaborate argument against Porter, in which he canvassed and reviewed the evidence; and this was the paper which was placed before President Lincoln.

My friend, Mr. Dawes, knows that this argument of the judge-advocate of the court should have been made before that body so that General Porter could have had opportunity of replying thereto. One more point on animus. If Mr. Dawes will read the proceedings of the Porter case, page 489, he will find that during the trial Major-General William B. Franklin informed Porter that, if requested, General John F. Reynolds, General George H. Thomas, and himself would go before the court and swear that they would not believe either Pope or Roberts

Such evidence would have instantly crushed the prosecution, and Porter knew it, but he declined to have these distinguished gentlemen testify, giving as a reason that it would give rise to bad feeling. Could there, Mr. Speaker, be a more glaring case of animus than was exhibited by McDowell when he circulated what he represented to be a copy of Stonewall Jackson's report of the battle of the 29th, when in truth and in fact the report referred to the battle of the next day, in which Porter was so distinguished? What kind of animus was it, Mr. Speaker, which induced the ordering of an

ILLEGAL COURT?

Illegal because it was not ordered by the President as required by law; illegal because it was in violation of the articles of war. It contained but nine when it should have contained thirteen members. tained but nine when it should have contained thirteen members. Illegal again, Mr. Speaker, because two of its members were not disinterested in the result of the trial. Illegal also, Mr. Speaker, because one of these interested judges was placed upon the stand as a witness and resumed his place upon the bench as a juror and judge.

But I am wrong, Mr. Speaker, in detaining the House any longer in regard to the argument of the gentleman from Ohio. I hope upon further reflection that he will be led to do this wronged man justice.

In closing, Mr. Speaker, let me say that I have never seen General Pope in my life, and my knowledge of General Porter is limited to the short time that he was my instructor in artillery at West Point. In common with all men who were thrown under his influence, I recognized in him those elements of which honorable and brave soldiers are constituted. During the last quarter of a century I have not met him but once, and that for a single moment, and in the presence of those who demanded his attention, so that he did not recognize me as one of his pupils at the Academy. I have no prejudice for Porter, nor do I desire to criticise his assailant. Every word that I have said I feel is justified by evidence. I have not sought to vindicate Porter. My ob-

ject in saying these words to the lovers of right throughout our land is to add my feeble mite toward the establishment of truth, the vindication of honor, and the upholding of the sublime principles of justice.

In order to illustrate some of the foregoing remarks and positions, I

take the liberty of adding a number of curious and instructive cases, all historical, involving and elucidating the subject of military punishments for insubordination and dereliction of official duty. These cases show the danger of hasty trials in times of great tumult and of those high and turbulent excitements which usually exist in times of war; when nations are contending in arms on the field of battle, amid scenes of slaughter and the thunders of artillery; when the nerves of men are strained to the utmost, and their minds are thrown out of that quiet equilibrium so necessary to weigh with deliberation the testimony which

sways the judgment involving the life or honor of eminent men.

The history of wars is full of gloomy records which show the hasty conviction of the most honorable and innocent men; and some of these, to which I here call attention, show that time has exculpated many a victim of injustice, where history in discovering innocence had to weep over the dead who had passed away from earth under clouds of infamy, too far removed to hear the voice of vindication as it sweeps over the grasses and turfs of the defamed grave—a vindication powerless to do aught but to revive the melancholy memory of a blasted

All the persons were very distinguished officers, all were convicted upon evidence which time showed was either false or insufficient, and all have been vindicated by history, notwithstanding great efforts on the part of their prosecutors to repress and hide the development of

### APPENDIX.

ADMIRAL BYNG.

[Encyclopædia Britannica.]

The celebrated British Admiral Byng entered the navy at an early age, became captain in 1727, and in 1745 was made rear-admiral of the In the year 1755 the British Government received intimation that the French were fitting out a naval expedition in Toulon, and it behooved them to attend to the defenses of Gibraltar and Minorca. Nothing, howthem to attend to the defenses of Gibraltar and Minorca. Nothing, however, was done until the intentions of the French were too apparent, and Byng was then intrusted with ten miserably equipped ships of war, and set sail from Spithead on the 7th of April, 1756. He put in at Gibraltar to receive stores, and there learned that the French had made good their descent upon Minorca. On the 19th of May he came in sight of St. Philip's, still held by the British, but failed to establish communications with the governor.

On the following day he engaged with the French fleet, which was inferior in number of vessels but vestly superior in armament and conin-

inferior in number of vessels but vastly superior in armament and equipment. There seems no doubt that the division under Byng's charge did not second with sufficient eagerness the bold attack made by Addid not second with sufficient eagerness the bold attack made by Admiral West. The action was indecisive, and next morning Byng called a military council, and it was resolved that, under the circumstances, it was hopeless to attempt anything further, and that Minorca must be left to its fate. The fleet returned to Gibraltar. The indignation of the English at the transaction was intense, and the government took advantage of it to avert from themselves the charge of incapacity. Byng was at once superseded and brought home under arrest. A count-martial on his conduct sat during December, 1756, and January, 1757, and found that the admiral had not done his utmost to relieve St. and found that the admiral had not done his utmost to relieve St.

ROBERT CLIVE.

Robert Clive, Baron of Plassy, in the peerage of Ireland, was the founder of the empire of British India before he was 40 years of age. At 18 he was sent to Madras in the civil service of the East India Com-He was just of age when in 1746 Madras was forced to capitulate to Labourdonais during the war of the Austrian Succession. The power of the Great Mogul was at that time in the hands of three prorincial viceroys, the nawabs of the Deccan of Bengal and of Oudh. Clive successively established British ascendency against the French in these three great provinces. The English supported the claims of Moagainst Sahib in the province of the Carnatic; and Clive hammed Ali against Sahib in the province of the Carnatic; and Clive with a small force and only three field-pieces gained possession of its capital, Arcot, and there sustained a siege of fifty days against the forces of Sahib, supported by the French. He was finally relieved by English troops from Mahratta.

In all history there is scarcely a parallel to this exploit of 1751, until the siege of Lucknow in 1857. When war again broke out in 1756 Clive's efforts helped to drive the French from their settlements, and the treaty of Paris in 1763 confirmed Mohammed Ali in the position Clive had won for him. Two years after the British possessions in Southern

had won for him. Two years after the British possessions in Southern India were formally recognized by the Emperor of Delhi. The siege

of Arcot gave Clive a European reputation. Pitt pronounced him a "Heaven-born general." He returned home early in 1753. He was sent out in 1756 as governor of Fort St. David, and on his way out he took Bombay and captured Gheriah, a piratical stronghold. He took his seat as governor on the very day on which the nawab of Bengal captured Calcutta.

On the 5th of August Suraf-ab-Dowlah took the old fort of Calcutta and plundered it; the English fled, many jumping from the ships into the river. Of one hundred and forty-six who were forced into the "Black Hole" in the stifling heat of that sultry season only twentythree came out alive. Disembarking below the city, Clive marched through the jungles, invested Fort William and by the assistance of the fleet reduced it, January 2, 1757. A month later he defeated the nawab and forced him to conclude a treaty favorable to the English. Clive then sent a fleet up the river against a French settlement, when the treacherous nawab refused to be bound by the treaty, and Clive

was compelled to treat him as an enemy.
On the 21st of June Clive arrived on the bank opposite Plassy with 1,100 European and 2,100 native troops and ten field-pieces. The nawab had drawn up 18,000 horse, 50,000 foot, and fifty-three pieces of heavy ordnance served by French artillerymen. When, after a heavy rain, the sun rose brightly on the 22d, the 3,200 men and the six guns crossed the river and took possession of the grove and its tanks of water, while Clive established his headquarters in a hunting lodge. On the 23d the engagement took place and lasted the whole day. Except the forty Frenchmen and the guns they worked, the enemy did little to reply to the British cannonade, which, with the Thirty-ninth Regiment, scattered the host, inflicting on it a loss of five hundred men.

In 1760, at 35 years of age, Clive returned to England with a fortune

of at least £300,000, and the quit-rent of £27,000 a year, after caring for the comforts of his parents and sisters, and his old commander, Lawrence. The money had been honorably and publicly acquired with the approval of the company. The amount might have been four times what it was had Clive been either greedy after wealth or ungenerous to the colleagues and troops whom he led to victory. the young man had crowded together a succession of exploits which led Lord Macaulay to compare him to Napoleon Bonaparte. Then it was that he set himself to reform the home system of the East India Company, and commenced a bitter warfare with Mr. Sullivan, chairman of the court of directors, whom finally he defeated. In this he was aided by the news of reverses in Bengal. On the 3d of May, 1765, he landed at Calcutta.

Kassim Ali had induced not only the viceroy of Oudh, but the Emperor of Delhi himself, to invade Behar. After the suppression of the first mutiny in the Bengal army Major Momo, "the Napier of those times," scattered the united armies on the hard-fought field of Bexar. The Emperor Shah Aalum detached himself from the league, while the Oudh vicercy threw himself on the mercy of the English. He returned to the Oudh viceroy all his territory save the provinces of Allathe date of the Oddn viceroy art his territory save the provinces of Anahabad and Corah, which he made over to the weak emperor. But from that emperor he secured a most important document in the "firman from the King Shah Aalum, granting the dewany of Bengal, Behar, and Orissa to the company 1765."

The date was the 12th August, the place Benares, the throne an English dining-table covered with embroidered cloth and surmounted by a behali in Chical cost. Clinick final patterns to England was the size of t

chair in Clive's tent. Clive's final return to England was the signal for an attack of his personal enemies. Every civilian whose illicit gains he had cut off, every officer whose conspiracy he had foiled, every proprietor or director whose selfish schemes he had thwarted, now sought their opportunity. Burgoyne, of Saratoga memory, did his best to induce the House of Commons, in which Lord Clive was now member for Shrewsbury, to impeach the man who gave his country an empire, and the people of that empire peace and justice. The result after the brilliant and honorable defense of his career, which will be found in Alman's

debates for 1773, was a compromise.

On a division, the house, by a vote 155 to 95, carried the motion that "Lord Clive did obtain and possess himself of £234,000 during his first administration of Bengal," but refusing to express an opinion on the fact, it passed unanimously the second motion at 5 in the morning that "Robert, Lord Clive, did at the same time render great and meritori-

ous service to his country."

The first motion satisfied the animosity of those whose ambition Clive had thwarted, and the second satisfied the consciences of those who knew the first motion was a base slander upon a great and brave man. He died 1774, in his fiftieth year.

Count Lally, son of Sir Gerald Lally, an Irish loyalist who accompanied James II in his exile in France, when scarcely 12 years of age performed his first military service at the siege of Barcelona.

In 1745 he distinguished himself at the battle of Fontenoy, where he led the Irish brigade whose gallantry secured victory to the French. Louis XV made him a brigadier-general on the field. Several years later he received the appointment of governor-general of the French establishments in the East, but the means placed at his disposal were wholly inadequate. He landed at Pondicherry April 28, 1758, and found that the agents of the French East India Company were secretly

Nevertheless the Coromandel coast was conquered in a He laid siege to Madras in December, carried the Black against him. w weeks. Town, and had some prospect of success; but being unsupported by D'Aché, the commander of the French fleet, and having no money to pay his mutinous soldiers, he was obliged to retire on the arrival of an

English fleet.

Besieged in Pondicherry, he held out for ten months; but he was finally compelled to surrender his garrison of seven hundred men, January 14, 1761, to General Coote, who had 22,000 troops and was supported by fourteen ships. He was carried as a prisoner to London; but having heard that he was charged by his personal enemies with various crimes, he obtained his release on parole, went to Paris, entered the Bastile in order to hasten his trial, and remained there for nineteen months. Accused by the very men who had caused his ruin as a traitor and defaulter, a mock trial took place; witnesses of the worst character were allowed to testify against him; he was refused counsel, and was not even allowed to present his defense. At last, after a long secret deliberation, he was sentenced to death and executed. Several years afterward the whole of these proceed ags were revised, and the sentence was finally reversed in 1778.

THOMAS COCHRANE, EARL OF DUNDONALD

As commander of the sloop Speedy, to which Lord Cochrane was appointed in 1800 (he was then 25 years of age), he performed a series of exploits in capturing vessels of immensely larger size than his own, which are almost without parallel in the annals of naval warfare.

The Speedy's cruise of thirteen months, during which she took up-

ward of fifty vessels, with one hundred and twenty-two guns and five ward of fifty vessels, with one hundred and twenty-two guns and five hundred and thirty-four prisoners, ended in her own capture by three French line-of-battle ships, after making so gallant a resistance that the French captain to whom Cochrane delivered up his sword at once re-turned it. After a brief imprisonment Lord Cochrane was exchanged. The promotion to post rank to which he was fully entitled came somewhat tardily in August, 1801, and the persistence with which his claims had to be urged laid the foundation of the bad understanding with the au-

to be urged laid the foundation of the bad undefstanding with the authorities at the admiralty that caused him to be lost to the British service a few years later, while he was still in his prime.

In August, 1806, Lord Cochrane was transferred to the command of the Imperieuse (44), in which during the succeeding two years he did immense damage to the enemy's fleet in the Bay of Biscay and the Mediterranean. One of his most gallant exploits during this period was his defense of Fort Trinidad, near Rosas, which he held for twelve days (November, 1808) against overwhelming odds. When he found further resistance impossible he helw up the magazines and returned further resistance impossible he blew up the magazines and returned

to his ship.

Meanwhile, though his services were so distinguished, his relations Meanwhile, though his services were so distinguished, his relations with the admiralty had not become more friendly. At the general election in May, 1807, he had been returned triumphantly for Westminster in the Radical interest, along with Sir Francis Burdett; and during the brief interval spent at home, while he was in command of the Imperieuse, he had rendered himself still further obnoxious as a critic in Parliament of naval abuses. In 1809, however, the authorities had occasion for a daring service which he alone was found competent and willing to undertake. It had been suggested to them that the French fleet blockaded in Basque Roads might be destroyed by means of fireships, and the hazardous duty was intrusted to Cochrane. On the ships, and the hazardous duty was intrusted to Cochrane. On the night of the 11th of April he personally piloted the vessels loaded with explosives to the entrance of the harbor, where they spread such terror that seven French frigates slipped their cables and ran on shore, five of them being afterward destroyed.

Unfortunately this first success was not followed up as it ought to have been. Lord Gambier, the commander of the blockading fleet, ignoring the repeated and urgent request of Cochrane, refused to order a general attack, and thus the opportunity of destroying the whole of the enemy's ships was lost.\* Lord Cochrane was bitterly disappointed, and made no attempt to conceal his opinion of the incompetency of his superior, who found himself compelled to demand a court-martial. The trial was worse than a mockery; the court was packed, witnesses were manipulated, and charts fabricated, with the scandalous result that Gambier was acquitted and Cochrane by implication disgraced. There was of course no further professional employment for one who had been stigmatized as a false accuser. For four critical years Lord Cochrane held no command, and his country lost the services of one of the few naval heroes she has had worthy to be named along with Nelson. In his place in Parliament he did what he could to secure a reform

of the many abuses connected with the administration of the navy, and his unsparing criticisms greatly embittered his already unfriendly relations with the admiralty and the government. In 1814 an unfortunate concurrence of circumstances, suspicious in themselves, though capable of a satisfactory explanation, led to his being accused, along with several others, of a conspiracy to defraud the Stock Exchange by circulating a false report of the success of the allies and the death of Napoleon. He had only a week or two before so far overcome the discount of the success of the suc favor with which he was regarded by the admiralty as to secure his appointment to the command of the Tonnant, the flag-ship of his uncle, Sir Alexander Cochrane, but he had to resign the position in order to meet the prosecution which the government was not slow to institute.

The trial was conducted before Lord Ellenborough, a noted partisan, who, if he did not, as Cochrane's friends have insinuated, exceed the limits of his office in order to secure a conviction, certainly showed no favor to the accused, who were all found guilty. Lord Cochrane was sentenced to a fine of £1,000, twelve months' imprisonment, and an hour in the pillory. His ruin and disgrace were completed by his being expelled from the House of Commons and deprived with the usual humiliating ceremonies of the Knighthood of Bath, which had been bestowed iating ceremonies of the Knighthood of Bath, which had been bestowed on him after his heroic service at Basque Roads. Popular sympathy, however, was strongly with him. An influential minority of forty-four voted against his expulsion from the House of Commons, and when a new writ was issued for Westminster he was unanimously returned, no one having ventured to stand against him. A public subscription was raised by his constituents for the payment of his fine.

His colleague, Sir Francis Burdett, pledged himself to stand along with him in the pillory if that part of the sentence was carried out, and the government judged it prudent to remit it. Lord Cochrane's

and the government judged it prudent to remit it. Lord Cochrane's conduct was throughout that of an innocent if somewhat imprudent

At his trial he volunteered a full explanation of the suspicious circumstances that were urged against him, and after his conviction he took every opportunity of protesting against the injustice that had been done him and was urgent in his demand for a new inquiry.

At the close of his imprisonment Lord Cochrane, finding little hope

of active service in his native country, took command of the fleet of Chili, offered him in 1818, and he subsequently served the Brazilian Government most brilliantly and successfully.

Finding inaction impossible, Lord Cochrane gave his services to the cause of Greek independence, being appointed admiral of the Greek fleet, in which for the first time his heroism and exalted military genius were of no avail. On his return to England Lord Cochrane found himself the object of a popularity that had grown rather than abated during his absence. His great achievements had been spoken of in the warmest terms in the House of Commons by Sir James Mackintosh, who urged the government to restore him to his place in the service of

who arged the government to restore min to his place in the service of his native land.

With the accession of King William and the formation of a liberal ministry there came at last a tardy and imperfect reparation to Lord Cochrane for the injustice he had suffered. He was restored to his rank in the navy, but with this he had to remain content. It was with bitter and indignant feelings that he found himself compelled to accept a pardon under the great seal instead of the new trial he had long and vehemently demanded. And the restoration to his rank was robbed of wenemently demanded. And the restoration to his rank was robbed of much of its grace by the fact that the honor of the knighthood of the Bath, of which he had also been deprived, was not restored at the same time, and that the arrears of his pay were withheld. In 1831 he succeeded his father in the earldom of Dundonald.

On the 23d November, 1841, be became vice-admiral of the blue. Another installment of the

that was due to him was paid in 1847, when the honor of knighthood of the Bath was restored, though, by that strange fatality which seemed to have decreed that no reparation made to him should be complete, his banner was not replaced in the chapel of the order until the day before his burial. No one will now deny that this "heroic soul branded with felon's doom" suffered more cruel and undeserved wrongs than ever fell to the lot of any warrior of his genius and achievements.

Lord Dundonald died at Kensington on the 30th October, 1860, and

was buried in Westminster Abbey.

### COMMODORE JAMES BARRON.

On June 22, 1807, the frigate Chesapeake, thirty-eight guns, Captain Gordon, bearing the broad pennant of Commodore Barron, was boarded by a boat from the British ship Leopard, offifty guns, Captain Humphreys, to search her for certain deserters from the British navy. Commodore Barron refused to submit to this extraordinary demand, and in a very few moments afterward the Leopard fired a broadside into the Chesapeake. The American ship was in no condition to return it; besides her inferior force, she was in utter confusion on first coming out of port, and although the guns had been loaded, rammers, wads, matches, gun-locks, and powder-horns were all wanting. The Leopard continued to fire until Barron, finding that no resistance could be made, ordered the colors struck.

A single gun was fired by the Chesapeake just as her colors were hauled down. There being no matches at hand, it was discharged by means of a coal brought from the galley. The ship received twenty-one shot in her hull, and three were killed and eighteen wounded; among the latter were Commodore Barron and his aid, Mr. Broom. Four men claimed as English were taken out of her, and she returned to Hampton Roads the same evening. Intense excitement was created throughout the country by this outrage.

Barron was court-martialed and sentenced to be suspended for five years without pay or emoluments. Barron remained abroad till 1818, when an attempt was made to restore him to duty. This was resisted by many officers, including Decatur, who had been a member of the court-martial, and after a long and bitter correspondence Barron sent

Decatur a challenge. The duel was fought at Bladensburgh, March 22, 1820. Both fell at the first fire. Decatur died the same night, and Barron recovered after months of great suffering.

Facts developed soon after Barron's trial quite conclusively showed that he was in no wise responsible for the condition of the vessel upon which he was ordered to sail, but the deep sympathy and indignation of the people at the cruel injustice meted to him was the only reparation that was made to him.

This case of Commodore Barron is still fresh upon the minds of all readers of history, while the late action of the Government in restoring to the Army Surgeon-General Hammond and Colonel Granville O'Haller shows that their previous dismissal was without warrant of law or ins-But the recent centennial anniversaries of the capture of Stony Point and the surrender of Lord Cornwallis at Yorktown have called our attention to one of the bravest actors in those battles, whose fate makes a record of the most atrocious outrage which ever disgraced the annals of military jurisprudence.

#### GENERAL HULL'S CASE

General William Hull, a gentleman of the highest culture and attainments, was among the first of the Revolutionary patriots who rushed to the defense of our country. He served with great distinction as an officer of the line

#### UNDER WASHINGTON

at the siege of Boston, and in the battles of Trenton, Princeton, and Monmouth.

General Washington, in his published letter to Major-General Heath, dated December 13, 1779, says

Colonel Hull is an officer of great merit, and whose services have been honorable to himself and honorable to his country.

In the summer of 1780 General Washington solicited him to accept a position upon his staff as aid-de-camp, which appointment he declined at the earnest request of Major-General Baron Steuben, inspector of the Army, under whom Hull was then serving as inspector-general of the Army, under whom Hull was then serving as inspector-general of the division of Major-General Howe. Baron Steuben visited General Washington especially on this subject, and stated to both General Washington and Colonel Hull that he, "Hull, would be more useful in the office of inspector than in any other situation, and hoped such considerations would influence their decision for him to remain."

Colonel Hull also fought under General Lee at White Plains, under General St. Clair at Ticonderoga, and under General Gates in the bat-tles of the 19th of September and the 1st and 3d of October, and in the

capture of Burgoyne's army at Saratoga.

Hull also commanded and led his regiment, four hundred strong, in the assault and capture of Stony Point, and for his great gallantry in that battle he received the

### PARTICULAR THANKS

of General Wayne and General Washington and Congress.

By General Washington's special permission, given in his published letter of January 7, 1881, Colonel Hull attacked and defeated the nemy at Morrisania.

Major-General Heath, in a letter dated December 30, says

Major-teneral fleath, in a letter dated December 30, says

The success of this Morrisania enterprise was doubtful in the opinion of Genral Washington, but Colonel Hull, with the troops under his command, was
uccessful. With great address and gallantry they forced a narrow passage to
he enemy, and with the loss of one subaltern, one drummer, and ten privates
tilled, one captain, one sergeant, and eleven rank and file wounded, completely
lefeated the enemy, and, besides the killed and wounded, took upward of fifty
trisoners, cut away the ponton bridges, took a considerable quantity of forage,
a number of cattle, &c., for which they were thanked in public orders.

General Heath also states twice in this letter that-

Colonel Hull sustained a conspicuous character of a brave and good officer and possessed the particular esteem and confidence of General Washington,

Colonel Hull continued in active service during the entire war of he Revolution.

For gallantry at Dorchester Heights, White Plains, and Trenton General Washington promoted him to the rank of major. His heroic conduct at Princeton, Ticonderoga, Bemis Heights, Stillwater, Saratoga, Monmouth, and Stony Point won him promotion to lieutenant-colonel, and he was acting under the orders of Washington with the rank of colonel when Cornwallis surrendered in 1781.

When the Army was disbanded at the close of the war Hull was tendered by Washington the appointment as

# LIEUTENANT-COLONEL OF THE ONLY REGIMENT

which was retained in the service, and when the Army was organized in 1799 for the anticipated war with France he was selected by Washington as one of the major-generals.

General Hull was appointed commissioner to make treaties with the

Indians 1798; appointed judge of the court of common pleas 1798; was State senator 1798 to 1805, and governor of Michigan 1805 to 1812.

Appointed brigadier-general regular Army 1812, and declined (see evidence of Secretary of War Eustis, page 3, Appendix Hull's Trial).

Again appointed brigadier-general regular Army to command troops at Detroit, which appointment was conferred and accepted for the distinct purpose of enabling him to better protect settlers in Michigan from Indian depredations. This appointment was coupled with the assur-Indian depredations. ance on the part of the Government that in the event of a war with England a naval force would be placed upon Lake Erie, as General Hull had previously suggested in a paper laid before the Secretary of War, showing that in that contingency Detroit could not be held unless the

lake was thus kept under our control.

Before reaching Detroit, and before he had any intimation of the dec laration of war with England, the entire baggage of his troops with the hospital stores and implements, was captured on Lake Erie by the British, and Fort Mackinaw, a post north of Detroit, had also fallen into their hands.

General John Armstrong, who afterward became Secretary of War and an opponent of Hull, in his notice of the war of 1812 (page 47), thus censures Secretary of War Eustis for this disaster:

We have seen that General Hull lost his own baggage and that of the army, the whole of his hospital store and intrenching tools, and sixty men in consequence of the ill-judged and tardy manner employed in transmitting to him the declaration of war. A fact so extraordinary in itself and so productive of injury to the public calls for more development than has yet been given to it. Still more extraordinary was the fact that the news of the declaration of war reached the Canadian authorities some days before it reached General Hull, and this under the frank of a Washington official, this error or treason being the direct cause of the disaster.

With Lake Erie under the undisputed control of the British and the entire line of march to Detroit being filled with hostile Indians, all military men of experience considered the few hundred men under Hull, detached as they were two hundred and fifty miles from re-enforcements or supplies, as

VIRTUALLY SACRIFICED

by the declaration of war with England.

General William Henry Harrison, afterward President, writes to the

Secretary of War, August 6, 1812:

The information received a day or two ago from Detroit is of the most unpleasant nature. The loss of Mackinaw will probably be followed by the capture of Fort Dearborn. It is my opinion that it will be the object of the British to draw as many of the Indians as possible toward Malden to cut off the supplies from and ultimately to capture General Hull's army.—Clarke's History of Campaign of 1812, page 326.

\* The Government appreciated this, and suggested that Colonel Wells should re-enforce Detroit with a large detachment and convey rations

and supplies to Hull.

General Harrison deemed this hardly practicable, thinking it would only add to the force sacrificed. Harrison, in replying to this suggestion in his letter of August 10, 1812 (Dawson's Life of Harrison, page

I greatly fear the capture of Mackinaw will give such éclat to the British and Indians that the northern tribes will pour down in swarms upon Detroit, oblige General Hull to act on the defensive, and meet and perhaps overpower the convoys and re-enforcements which may be sent him. It appears to me, indeed, highly probable that the large detachment which is now destined for his relief under Colonel Wells will have to fight its way. I rely greatly on the valor of these troops, but it is possible that the event may be adverse to us, and if it is Detroit must fall.

(See Clarke's Campaign of 1812, page 397.)
The Government appreciated these views and was deeply impressed with the jeopardy in which Hull's force was placed, and directions were given to create a diversion at the east end of Lake Erie to induce a with-drawal of a portion of the enemy which was in front of Hull, and thus release the pressure upon the beleagured forces at Detroit. General Hull had frequently in his letters shown the necessity of such a diversion. (Appendix to Hull's Trial, 38.)

During July the often-repeated orders of the Secretary of War to General Dearborn, who commanded the entire northern army, was similar to the following paragraph in the orders to General Dearborn dated August 1, cited in Appendix No. 10 to Armstrong's Notices of the War of 1812; also Appendix to Hull's Trial, page 38:

You will make a diversion in favor of him (General Hull) at Niagara and Kingston as soon as it may be practicable.

Major-General Dearborn neglected to make the slightest movement to comply with these instructions, but in direct violation of these orders made an armistice with the enemy,

### EXCLUDING HULL'S FORCE

from its benefits, which enabled the British Major-General Brock and Sir George Prevost (who had full control of Lake Erie) to throw their entire army and thousands of Indians upon Hull and compel the surrender of his little undisciplined and unprovisioned force of seven hundred

In the life of Sir George Prevost this armistice is thus spoken of:

A ruse de guerre as creditable to the shrewdness and sagacity of Sir George revest as it was disreputable for the obtuseness or treachery of General Dear-

No. 11 of Armstrong's Notices of the War of 1812, in the appendix, is the following extract of a letter from Sir George Prevost to General Brock:

I consider it most fortunate that I have been able to prosecute this object of the government [the armistice] without interfering with your operations on the Detroit.

(See Clarke's History, page 355.)
General Armstrong, afterward Secretary of War (volume 1, page 97 in his Notices of the War of 1812), says:

We have already stated that to lessen the pressure on General Hull, Major-General Dearborn was directed in make such movements against the British

posts in his front as would have the effect of preventing them from re-enforcing the garrison at Malden, or otherwise altering the relation as to strength which had hitherto existed between Hull and Proctor.

But for this service the major-general had made no preparation and appeared to have little relish, as on the very day on which he was thus instructed by the Government (though sufficiently apprised that detachments had been to Malden and that the situation of Hull was becoming more critical every moment) he did not besitate to enter into an armistice by which he completely disabled himself from giving any aid to that officer either by vigorously assailing the British posts in his front (now rendered comparatively weak by the absence of Brock and the troops carried with him) or by extending to him and his army the benefits of the temporary suspension of hostilities into which he had entered.

(See Clarke's Campaign of 1812, page 354.) On August 12, 1812, General Hull's situation was as follows: His last letter from the War Department (July 9) informed him that he must NOT RELY UPON RE-ENFORCEMENTS

On the north, Michilimackinac had fallen, and 3,200 Indian warriors were marching upon Detroit from that quarter. The lake which lay to the south of Detroit and east was under the undisputed control of the British. On the south or southwest a dense forest for over two hundred the south or southwest and the southwest dred miles, filled with hostile Indians, separated him from the nearest settlements. The detachments under Major Van Horn, Colonel Miller, and Colonels Cass and McArthur, which had attempted to penetrate this forest and succor a much needed and hoped-for convoy with provisions, had been checked or driven back by the hordes of Indians who, aided and directed by British officers, had established strong fortifications within fourteen miles of Detroit. To the west was an unexplored wildernes

Letters just received from Generals Hall and Porter, who commanded small posts to the east on Lake Erie, informed him that-

A large number of boats filled with British troops had passed over to Fort Malden, and that the British forces with the Canadian militia and savages on the opposite side of Niagara River were moving by water to the same point; and at the same time General Hull was informed that nothing could be done to check their movements, and that no assistance or co-operation could be afforded to him.

General Hull's troops, estimated by his brigade-major, Jessup, and Colonel Cass at from 750 to 1,060 officers and men, which included teamsters, laborers, and other non-combatants, were ignorant, undisciplined, and many of them imbued with a spirit of insubordination and mutiny, fostered and encouraged, and in some cases even initiated, by militia officers of all grades, including colonels of regiments. They without efficient arms, with but little ammunition, and were deficient in supplies of all kinds. (See Colonel Miller's evidence, Hull's Trial, pages 116 and 117; also, Appendix No. 2, Hull's Trial, page 14; also, Memoirs of Campaign of 1812, page 61.)
In his front was Major-General Brock with a thoroughly equipped

and disciplined army, with no limit to the vast hordes of Indians which were anxious to obey his orders, and the armistice which Sir George Prevost had effected with

MAJOR-GENERAL DEARBORN

placed at General Brock's disposal as many thousand British troops as he could possibly desire.

In addition to the above, General Brock had subject to his command the entire Canadian militia, which numbered more than 18,000 men. (See Memoirs of 1812, pages 19 and 20.)

This was the condition of affairs when Major-General Brock wrote as

General WILLIAM HULL:

The force at my disposal authorizes me to require of you the immediate surrender of Fort Detroit. It is far from my intention to join in a war of extermination; but you must be aware that the numerous bodies of Indians who have attached themselves to my troops will be beyond my control the moment the

contest commences.

You will find me disposed to enter into such conditions as will satisfy the most scrupulous sense of honor. Lieutenant-Colonel McDowell and Major Gleggard fully authorized to conclude any arrangement that may lead to prevent the unnecessary effusion of blood.

ISAAC BROCK, Major-General,

General Hull was

GOVERNOR OF A DEFENSELESS PEOPLE

as well as commander of the troops at Detroit. His pride as a soldier induced him to reply that he was prepared to meet any force at his disposal and any consequence which might result from it. (Hull's Trial, Appendix 2, page 23.)
General Brock opened a severe fire from his batteries and advanced

his troops to the attack.

Hull left the inclosed fort in person, rode to his advanced battery under a heavy fire and superintended the dispositions for defense.

The evidence of Major Munson and Captains Dyson and Maxwell says: "General Hull's bearing was cool and collected." (See Hull's Trial, pages 128-131, 133.)

Notwithstanding the hopelessness of the situation General Hull continued to make

ALL POSSIBLE PREPARATION FOR DEFENSE

but during the night one hundred of his men deserted with their arms to the British standard, confirming the previous statements of the militia colonels that these men could not be relied upon. The Michigan militia had been for years separated by vast forests from American settlements. Social and business relations and frequent marriage connections with the Canadians had caused a growth of identity of feeling and interest. (Me-

moirs of 1812, page 60.)

Most of the remainder of Hull's forces were Ohio militia; the same troops who had refused to march at Urbana; the same troops which Colonel Miller referred to in his evidence when he stated that Colonel Brush said on the morning of the capitulation, "his men would run away to a man." (Hull's Trial, page 125.)

The same troops whose mutiny Colonel Miller's regiment suppressed while en route to Detroit. (Hull's Trial, page 125; and Memoirs of Compaging 1812, page 25.)

Campaign 1812, page 35.)

The same troops WHO REFUSED TO OBEY ORDERS

to cross the river into Canada. The same troops which Colonel Cass said would desert to a man if ordered to take post at the Miami. (Hull's

Trial, page 33; Memoirs, page 65.)

The same troops which Lieutenant Bacon testified were without subordination or discipline, and who were frequently disorderly, and who rode

their officers upon a rail.

The same troops, Lieutenant Bacon saw refuse to obey orders, the same troops referred to when he heard Colonel Miller informed that there was another mutiny among the Ohio militia, and the same troops to whom he alluded when as a staff officer he gave to Colonel Miller an order to suppress the mutiny.

The same troops which were referred to when the commander said to Colonel Miller: "Your regiment is a powerful argument; without it I could not march these volunteers to Detroit." (See Hull's Trial,

pages 124 and 125.)

The senior officer of these troops was

COLONEL CASS.

who admitted that he encouraged his troops to refuse to obey orders which they did not approve, notwithstanding the fact that they had never heard a hostile gun, and notwithstanding the further fact that their commander was a veteran of thirty battles and enjoyed the implicit con-

defined the same of General Washington, and for twenty years had been his tried and trusted friend. (See Cass's letter, Memoirs, page 65.)

Cass also openly admitted (see Hull's Trial, Appendix No. 2, page 26) that two days previous to the attack these officers were engaged in a mutinous conspiracy which he says Hull prevented by sending two col-

onels off on detachments.

In Memoirs of Campaign of 1812, page 60, we find the following:

In addition to all this combination of force which was proceeding against me symptoms appeared in the interior of my camp not less alarming; the spirit of mutiny which before had manifested itself in whispers increased and became more open. It was evident it was now fostered and encouraged by the principal officers of the militia and was fast rising into an avowed conspiracy.

This was the condition of the garrison of Detroit when its commander found himself confronted by the forces of Sir George Prevost and Major-

General Brock with

ALL THE MILITARY RESOURCES OF ENGLAND

then in Canada at their disposal. General Dearborn, the commanderin-chief of the American army, having stipulated and agreed that the American army would remain quiet during an indefinite period, during which the entire resources of England then in Canada were left free to overpower and capture the troops under General Hull, at daylight on

GENERAL HULL WAS WITH HIS TROOPS

outside the fort engaging the enemy.

He had learned that Dearborn's armistice had thrown upon him all the British troops, Canadian militia, and Indians on the northern

He also learned that in addition to this combination and increase of the enemy's force, contrary to all expectation, the Wyandots, Chippewas, Ottawas, Pottawatomies, Munsees, and Delawares, all tribes of Indians who had been counted upon as friendly with Americans, had gone over and joined the British standard. (Hull's Trial, Appendix No. 2, page

A report dated after the loss of Detroit, published in a French Canadian paper, gives the following as the British force in Canada;

the perior, gives the forth ming as the printed force in Camada.	
Royal Artillery	500
First Royal Scots Infantry, first battalion	1,200

Canadian Fencibles	800
Nineteenth Dragoons	500
Glengary Fencibles	800
Voltigeur Corps	800
Embodied militia, about	6 000
Emoodled militia, about	
Two troops volunteer cavalry	150
Three companies chasseurs	150
Eighty-ninth Regiment	500
German Legion, called De Walteville's	1,600
m. 4.3	20.000

One of the detachments General Hull had sent with orders for Colonels Cass and McArthur to join him now came in, having been driven

back by the enemy, and reported their inability to continue upon their mission. (Hull's Trial, Appendix No. 2, page 15.)

The fort, or rather inclosure, which was a fort only in name, had become filled with women, children, and old and decrepit people of the town and country. The enemy's fire had already killed some of those helpless people, and they could not retire back of the town without being killed by the Indians.

The whole effective force under General Hull were new troops accustomed to camp life. A laborious march, a number of combats and skirmishes, in which a portion of these troops had engaged, a large amount of sickness, and a want of medicines and comforts had still further reduced his strength of effective troops. (Hull's Trial, Ap-

pendix No. 2, page 15-16.)

while in this defenseless condition Major Anderson brought the intelligence that two companies, the advanced post under Captains Knagg and Shover, had gone over to the enemy, while at the same time Colonel Brush exclaimed to his general, "By God, every man of his regiment had or would desert to the British" (Hull's Trial, page 123; also Appendix, pages 91–93), events adverse to General Hull and over which he had no control had transpired in rapid succession—

First. The fall of Mackinaw and Chicago, and the destruction of the

garrison of the latter place.

Second. The absolute impossibility of procuring ammunition and pro-

Third. The failures of convoys with supplies to make their way to him from the settlements.

Fourth. The general uprising of the Canadian militia and the fact that all the savages, including many tribes heretofore friendly, had joined the British standard.

Fifth. The ignorance, disaffection, conspiracy, and mutiny which pervaded his troops, culminating in desertion to the enemy.

Sixth. The action of General Dearborn in failing to comply with orders from the Secretary of War to make a diversion in General Hull's

Seventh. The astounding conduct of Dearborn in agreeing to an armistice which turned all the British forces upon General Hull's small detachment. This was the situation when, on the 16th day of August, General Hull found his most advanced post had deserted and joined the British troops.

The information regarding the extent and character of General Dearborn's armistice was confirmed by official papers in the possession of General Brock, which were sufficient to justify Hull in the belief that General Dearborn entered into the armistice with the view that the SACRIFICE OF THE FORCE AT DETROIT

which would inevitably result would be compensated for by advantages

which he expected to gain in other localities.

The hundred or more of his men who had deserted during the night were now with Major-General Brock, and that officer was oughly informed regarding the deplorable condition of Hull's force, their limited supplies and ammunition, and the disaffection and mutinous spirit which prevailed. It was clear a further effort at battle would accomplish nothing, and it was equally clear that

BUTCHERY OF WOMEN AND CHILDRE!

would follow should further progress of the conflict be permitted.

No alternative was left but to capitulate to General Brock while it was still in the power of that officer to protect the non-combatants from the knife of the savages. It was impossible under the circumstances to avert defeat, and it was clear that even a temporary success over General Brock would avail nothing, as the rapidly approaching force both of British and Indians would in a few hours number twenty armed men to every fighting soldier under his command.

The terms exacted by General Hull secured an immediate parole and return to their homes of most of the garrison, making, however, no

stipulations favorable to himself.

NOT A WORD OF CENSURE WAS HEARD EITHER BY THE ARMY OR PEOPLE. General Armstrong, in his notices of the war of 1812, No. 10, says:

The inaction by General Dearborn, which enabled Brock to leave his posts on the Niagara undisturbed and unmenaced, and even to carry with him a part of his force to Detroit and there to capture Hull, his army, and territory, was not noticed by any kind of disapprobation on the part of the Government. The inference is fair that it (the Government) was willing to take the responsibility on

The edition September fifth of The War, a newspaper said to have been published, at least in a measure, under the auspices of the Government, contains the account of the loss of Detroit, in which it uses these words:

General Hull's army is represented as having been in the greatest distr They were almost destitute of provisions, and many of them were sick. I said that eight hundred only were able to do duty.

The same article also said:

To whom to attribute this great national disaster we do not know, but conjecture that the blame will fall upon the Secretary of War.

The Administration did not attempt to deny that all the blame attending the loss of these troops rested entirely upon them or upon General Dearborn, whose situation was such as to really make him a part

This is supported by the following letter taken from Records of the War Office, volume 6, page 253:

WAR DEPARTMENT, December 18, 1812.

WAR DEFARTMENT, December 18, 1812.

Sir: Your letter of the 11th is received. Fortunately for you, the want of success which has attended the campaign will be attributed to the Secretary of War. So long as you enjoy the confidence of the Government the clamor of the discontented should not be regarded.

You are requested to make an exchange of General Hull as soon as possible.

WILLIAM EUSTIS, Secretary of War.

Major-General Dearborn.

Colonel Cass had left Detroit on the 14th of August with most of the able bodied and best equipped soldiers of the command.

On the 15th, when Detroit was attacked by General Brock, Hull sent

orders for Colonel Cass to return, which order he made no preparation

At the capitulation on the 16th Colonel Cass was left to choose whether he would take the risk of cutting his way through to the settlement or returning under General Brock's pledge of British protection from the

Though two days' march from Detroit, he returned, and Colonels Cass and McArthur and the men under their command were paroled and returned to their homes

The most pronounced division in political opinion at this time was between the war party and those who believed it was unnecessary and

ought to have been averted.

The Administration and war party were severely censured for their management, which resulted in the disaster at Detroit.

The Presidential election was now about to take place, and the effort

of any one tending

TO TURN THE TIDE OF DISAPPROBATION

from the door of the administration was most earnestly desired.

Colonel Cass arrived in Washington in this crisis. He was politician enough to see a road to promotion and preferment, and with a British parole in his pocket he commenced a series of letters, which abounded in misrepresentation, and sought to shield the Secretary of War and General Dearborn and cast the blame resulting from their errors upon General Hull, who was a prisoner at Montreal.

The leading papers were supporters of the Administration and largely elaborated the opinions and

MISSTATEMENTS OF COLONEL CASS

all of which had a very appreciable effect upon the public mind.

The force surrendered by Hull was falsely stated to have been 2,500, when in fact after the descritions on the night of the 15th he had less than 600.

Cass, a militia colonel, without even having been in battle, was appointed to the rank of brigadier-general in the regular Army, and others who were at Detroit and who aided the statement of and sustained Cass were also liberally promoted.

Cass and his coadjutors insisted that if Huil had held out, supplies

and re-enforcements would have been brought to succor him.

Subsequent experience showed that

HULL WAS RIGHT

in not relying upon such a contingency. After the loss of this meager force General Harrison was placed in command of the Northwest with over 10,000 men and ordered to penetrate to Detroit. By October 22, 1812, he had made no progress, and writes to the Government as follows:

To get supplies forward through a swampy wilderness of near two hundred miles in wagons or on pack-horses which are to carry them provisions is absolutely impossible. (See Armstrong's Notes of the War, volume 1, page 59; also Clarke's Northern Campaign, page 373.)

And it was not until after Perry's victory, in September, 1813, had opened Lake Erie that Harrison was able to act against Detroit, which he then captured without resistance.

Again, General Cass stated in his letter of September 10, 1812, which

he reiterated as his opinion in his evidence upon General Hull's trial,

that provisions could have been procured in the country around Detroit.

This was not true, and it was afterward proven that little more than a month previous to September 10, when General Cass had no purpose to subserve, he was writing letters asserting precisely a contrary opinion of the condition of the country. (Clarke's Campaign of 1812, page 369; Memoirs of 1812, page 60.)

HOW CRIMINALLY UNJUST

to censure Hull for not holding Detroit under such circumstances, and how equally unjust to censure him for not cutting his way through to the American settlement. His effective force, as before stated, was hardly six hundred strong. His road required a détour for sixty miles to the southwest along the bank of the lake, making it necessary for him to cross all rivers and streams at their mouth, all of which, together with the lake, were under the undisputed control of the British, with their army and Indian allies and a naval force consisting of five vessels of war and a number of gunboats, some of the British vessels carrying twenty cannon, (see Memoirs of 1812, page 27), while at the same time DEARBORN'S ARMISTICE

turned the entire force of the English and Indians to attack him by force in Canada upon him.

both land and water, and impede his march at every step. Two months later Major-General Harrison, with 10,000 men, found and reported it impossible to penetrate the forest from the settlement to Detroit, and this, too, after the armistice had terminated and only a small portion of the British and Indians were opposing him, and when no portion of the British navy was in position to menace his line of march. (See Memoirs of 1812, page 73.)

Again, Colonel Cass by his conduct also showed Hull was right.

When Hull was attacked Colonel Cass was two days' march en route for the States, with three hundred picked men, all of the healthy and effectives of his own and McArthur's regiments. He was well ammunitioned and unincumbered with luggage.

Major-General Brock and Sir George Prevost were engaged against Hull; yet Colonel Cass, with all these advantages, dared not attempt to reach the settlement, and gladly

MARCHED TO DETROIT AND SURRENDERED

himself and command to the British forces.

With what propriety could Hu!l have attempted the same march, with the women and the sick and feeble and attacked at every step by the armies of Sir George Prevost and Major-General Brock, aided by the vast hordes of Indians which these officers controlled. That General Hull did right is now the verdict of every honest and intelligent man in America, and every informed and honest historian of the present day instifice him in every preticular. So clearly were General Hull instific justifies him in every particular. So clearly was General Huil justified by the Administration that any thought of censuring him was not in any

On the contrary, the Secretary of War, after four months' deliberation, writes, under date of December 18, 1812:

The want of success which has attended this campaign will be attributed to the ecretary of War.—Clarke's Campaign of 1812, page 421.

It was clear that General Dearborn and the Administration had brought about the disaster, and it was difficult to see how any one could so perwert facts as to relieve them from the responsibility. At first no attempt was made, but the Administration soon found, or rather had forced upon them, a man ready and willing to do anything which would give him preferment with those in power. That man was Colonel Cass, who, as before stated, soon appeared in Washington, and, with a British parole in his pocket, commenced by

BASE FALSEHOOD

hase falsehoods to decry his old commander, then in a British prison, at the same time lauding himself, General Dearborn, and the Administration. Colonel Cass was a man of talent and plausibility, but he showed in this that in a matter of personal interest scruples had to be subordinated to ambition. He sought by his letters to protect the Administration and General Dearborn and to place the entire blame upon General Hull. He east Dearoom and to place the entire blame upon General Hall. Has asserted that Hull wanted neither men nor supplies of any kind, that the Army was in all respects in good condition, and that the British might easily have been defeated.

These letters soon had the effect which Cass and his supporters sought to produce upon the public, who did not know that this same Colonel Cass had written to Governor Meigs and to his own brother-in-law a few days before the surrender—

few days before the surrender-

That the Army was in want of everything and must perish unless soon as-

Also using expressions in his letters to them of which the following is a sample:

Our situation is become critical. Bad as you may think our situation, it is still worse than you can believe.

Cass also knew, but kept it a secret, that his friends, whom he relied upon to join in accusation against Hull, and who did join in those accusations, were deserting so rapidly that regiments were becoming depleted, and that a hundred of them did desert to the enemy on the

night after the action of August 15.

Cass also knew, but did not make it public, that Colonel Brush, one of Hull's accusers, on the morning of the capitulation, upon hearing that the most advanced post had deserted to the British, rushed up to General Hull, exclaiming "By God!" or "he believed, by God, that his men would desert to a man." (See pages 91 and 93, Appendix to Hull's Trial.

Cass also knew that Lieutenant-Colonel Miller had positively refused to be commanded by either Colonels Cass or McArthur or Findley, and

to be commanded by either Colonels Cass or McArthur or Findley, and that the entire force was in a state of insubordination. Cass also knew, but withheld the fact, that be nonther occasion Colonel Brush publicly announced and told General Hull "he believed that his men would run away to a man." (See Hull's Trial, page 125.)

There was no one to rectify these falsehoods by publishing General Harrison's letter of August 6, 1812, which states that, even under conditions much more favorable than those which surrounded Hull on August 16, "Detroit must fall." Nor did any one show that, while Cass and the Administration and General Harrison regarded Hull's position as critical, he was cruelly sacrificed by the failure of General Dearborn to obey orders and make a diversion in favor of General Hull, but who on the contrary made an armistice and threw the whole British but who on the contrary made an armistice and threw the whole British

Hull was a dignified gentleman, who, to refute all accusations, asked for an immediate trial.

A court was ordered, consisting of the following officers: Brigadier-Generals Wade Hampton, James Bloomfield, and H. Burbeck; Colonels E. Izard and A. McComb, artillery; J. Burn, cavalry; J. Simonds, J. Kingsbury, J. Parker, H. Brady, W. H. Winder, and P. P. Schuyler, infantry. Supernumeraries: Lieutenant-Colonels W. Scott, artillery; infantry. Supernumeraries: Lieutenant-Colonels W. Scott, artillery; J. Chrystie and R. Dennis, infantry; and A. J. Dallas, judge-advocate. General Hull hastened before this tribunal confident of prompt vindication.

General Dearborn felt certain that this court, consisting as it did of honorable and with a fair average of experienced soldiers, would neces-EXONERATE GENERAL HULL

and at least incidentally place censure upon himself, and an order was issued dissolving the court and preventing the investigation so much desired by General Hull.

Immediately a most discreditable plot was planned which is without an equal in the annals of judicial proceeding.

A portion of the press under the patronage of the Administration, Dearborn, as commander-in-chief, being as it were, a part of it, kept up a series of articles to influence the public mind favorable to the Adminiistration and General Dearborn and unfavorable to General Hull, and at the end of the year

ANOTHER COURT

was directed to convene. Of the fourteen officers appointed upon this court, thirteen of whom were to try General Hull, and determine matters which ought by right to be submitted only to officers of the highest honor and military experience and learning, twelve were men from civil life, whose occupa-tions and calling had been

CIVIL AND POLITICAL rather than military.

Eight of them were not in the military service at all during the campaign of 1812, and the average length of time they all had held commissions was less than a year.

These men owed their positions as generals, colonels, and lieutenant-

These men owed their positions as generals, colonels, and neutenant-colonels, not because of any service whatever, but because they were violent political partisans and supporters of the Administration (see Clarke's Campaign, 1812, page 423).

They did not enter the Army as a profession, and it would seem had no idea of remaining in the Army, and in point of fact they returned to civil and most of them to political life upon the close of the war. Not one of them ever received a brevet or any kind of promotion for the contraction and as for a contraction of the contraction of t service, and as far as can be learned not one of the twelve was ever in

Colonel Gardner's excellent work, which gives the record and a sketch of all Army officers and carefully mentions all service in battles, recites the records of all these twelve officers, giving a sketch of their service in and out of the Army, and these records do not show that any one of the eight was ever in or near any battle or skirmish or action of any kind whatever, and investigations indicate that this is equally true regarding eleven of these officers. If all else had been fair and just the appointment of

SUCH A BODY OF MEN

to try a veteran of twenty battles and a trusted friend of Washington was sufficient to put the stamp of dishonor upon the entire proceeding.

But to make matters worse, one of these members, Colonel Conner, was at the time upon the staff and a member of the military family of General Dearborn, and owed to his influence a promotion to lieutenantcolonel just before the court convened as well as all previous appointments and promotions. Two other members of this court had been recently promoted, and three others were or had been members of General Dearborn's military family, and were generally regarded as thoroughly under his influence.

Certainly such a court could be relied upon to protect General Dearborn and the Administration, no matter what evidence was produced; they were mere parasites, without character to lose, unknown to fame,

MEN WHO REMAINED UNKNOWN

to the end of their days; a pack of subservient tools to echo the wishes and mandate of General Dearborn, the commander of the American

That mandate was, so far as in them lay, to strike at the honor of a brave and trusted officer of General Washington.

The law gives a majority of a military court the power to make a

These young unknown tools of the Administration could certainly outvote Colonels Fenwick and House, who were regular officers and who might be supposed to be men of integrity. Certainly with that majority in his favor General Dearborn ought to have felt certain of being protected, and all these men knew that

But with all this Dearborn was not satisfied. His vindication appeared to be his uppermost thought. Fenwick and House might influence

these young members to regard their oaths and do justice to General

DEARBORN WAS COMMANDER-IN-CHIEF

of the American Army. A war was being waged and then at its height which jeopardized the existence of our country as a separate nationality. Certainly his duty demanded that he should remain in the field where his soldiers were standing in line of battle. This was eminently true, but it was also true that General Dearborn's

PERSONAL INTEREST CALLED HIM ELSEWHERE.

Hull's acquittal was his condemnation.

This must be averted at the expense of country, and, if need be, of

If he were on the court his vote at all hazards was sure to be for Dearborn and against Hull, and his influence with the young men, most of whom owed their positions to him, and all of whom, it might be pre-sumed, looked to him for future preferment, would no doubt, the

schemers hoped, attain the wicked end they desired.

To the astonishment of every one, Major-General Dearborn, the commander-in-chief of the American armies, was ordered to act as president of this court, and to the greater astonishment of those who did not know him, he

LEFT HIS ARMY IN TIME OF WAR

and went to Albany to sit in trial and render a verdict in a case which was essentially, paramountly, and virtually his own.

To do this took him from the field from early in December, 1813, to some time in April, 1814, which shows what was sacrificed in order that this man might determine his own cause.

So much for the constitution of this inquisition.

It would be interesting if we could get a correct view of the proceedings of this remarkable tribunal, but that we are denied. We see that General Hull in his defense often alludes to the failure of the recording officer to write down rulings and even evidence which would benefit the accused, and he therefore appeals to the members of the

benefit the accused, and he therefore appeals to the members of the court to recall the omitted paragraphs.

There were some things, however, which they allowed to be spread upon the record to which we shall make some allusion.

The court met January 3, 1814.

Four principal witnesses of the Government were present, but the court declined to proceed, says the record, "for want of witnesses."

They adjourned from time to time until January 19, and thus for sixteen days the commander of the American Army, in the height of war kept himself and thirteen other war, kept himself and thirteen other

OFFICERS IDLE AT ALBANY,

when they were so much needed to confront the enemies of our country.

The purpose to be subserved by this delay was soon developed.

On the 19th the array of Government witnesses were assembled, with many indications that they had been drilled to do the work needed by

The whole concourse were brought into court and General Cass, the most talented, led off with his evidence, to which the others

LISTENED WITH SUCH CARE

as it was thought at the time would prevent the possibility of embar-rassing contradictions.

General Hull had made so many objections to the various unlawful proceedings of the court, which had in every case been overruled, that he finally determined not to go through the useless form of further protestations

One honorable officer of the court, however, upon his own motion, insisted that this TUITION OF WITNESSES

should not be allowed; but he was promptly rebuked by General Dearborn, who stated it was not necessary, in his judgment, to examine these witnesses separately. (Hull's Trial, Appendix, page 17.)

General Hull had from the first been

DENIED THE PRIVILEGE OF COUNSEL

toaddress the court, although the Government employed Hon. A. J. Dallas and Hon. Martin Van Buren, then regarded as the ablest advocates in America, to conduct the prosecution.

If Hull was guilty of anything it was improperly surrendering the garrison at Detroit, which charge could have been expressed in a dozen lines, but these astute lawyers drew up a series of intricate charges covering over one hundred pages of ordinary paper.

In this mass of verbiage were concealed expressions admitting of various meanings, the real use to which they were to be applied never being developed until during the closing argument of the Government.

MOST FLAGRANT VIOLATIONS OF LAW

were permitted by this remarkable tribunal. Officers were permitted to testify to their recollection of written documents when the witnesses themselves admitted these documents were under the control of the prosecution and easily attainable, and this, too, even when the defense denied that the documents alluded to were such as described by the verbal testimony. (Hull's Trial.)

The prosecuting witnesses are here worth a passing notice. Their military experience, with few exceptions, had been confined to the two

months' service under General Hull just preceding their capture by General Brock. During these two months their conduct had been insubordinate, mutinous, and almost treasonable. So ignorant were these men of military usage and propriety that they did not conceal the fact of their disobeying General Hull's orders, issued by him in June, for the army to march from Urbana to Detroit (see Memoirs, page 35), nor his orders to cross into Canada; nor did they deny their refusing to march to the Miami, stating they would desert rather than obey; nor did they deny that two days before the capture of the troops they were in open mutiny against their commander. On the contrary, they boasted of these acts, vindicating themselves with the statement that they had lest confidence in the military cancelty of their commander. lost confidence in the military capacity of their commander.

The majority of the court seemed to concur with their witnesses in these views, and apparently commended such disgraceful and unmilitary conduct, all of them failing to observe that the first mutiny and disobedience of these officers was at Urbana, when General Hull first assumed command, with a reputation indorsed by Washington as one of the bravest and most skillful officers of the Revolution.

So little did the officers who conducted this prosecution know of military duty and propriety, that they even embodied in the charges (see Trial, Appendix, pages 7 and 14):

That the officers and soldiers were induced to lose and did lose confidence in the courage and military capacity of their said commander.

Now, mark that this opinion of these men was reached before they saw General Hull in the presence of an enemy, and mark also that it was precisely the reverse of the opinion reached by Washington and Generals Wayne, Steuben, Saint Clair, Gates, Heath, Commodore Charles Stewart, Majors Bannister and McCracken, and Governor Brooks and Captain Tufts. These illustrious men, as shown by history, witnessed and testified to General Hull's intrepidity, courage, skill at Dorchester Heights, White Plains, Trenton, Morrisania, Princeton, Ticonderoga, Bemis Heights, Stillwater, Saratoga, Monmouth, and Stony Point. Some witnessed what they termed Hull's heroic conduct at some battles and others witnessed and admired the courage he displayed upon other fields in which they participated

Also, continue Hull's accusers of 1812 who had never seen him in

The officers and soldiers naturally became dissatisfied and disgusted.

These men, without military knowledge or experience, were selected by General Dearborn and the Government to give their opinions regard-ing General Hull's conduct and to testify against him. Some of them had been promoted from the rank of lieutenant-colo-

nel of militia to the rank of general in the regular Army and others of lesser rank had received promotion on a similar scale.

Of the fourteen witnesses relied upon by the Government, all came

with commissions as officers of the regular Army.

Twelve of the fourteen had been recently appointed from civil life or the militia service, and all had very recent commissions, some dated three months before the sitting of the court, some dated eight months previously, and some received promotion and commissions while waiting as witnesses at the trial.

All of these promotions must have been given to

PAY FOR THEIR EVIDENCE

as neither Gardner's Dictionary of the Army nor any other work re cords that they ever did any creditable service, and so far as most of them are concerned they did no service at all before the promotion, and it can hardly be supposed that it was intended for these ervice afterward, as the same records show they did nothing after they left the court.

Even without this bribery of rank they had

STRONG INDUCEMI

to swear to suit the prosecution, because if Hull should be vindicated how could they justify their disobedience of orders and their mutiny and conspiracy, or, as these mutineers expressed it, "to incur the responsibility of divesting the general of his command."

They were the men who were to go into court and give evidence as to their opinions regarding the propriety of orders which two years before they had refused to obey. They were also to give in evidence their opinion as to the capacity of the commander they had "conspired to opinion as to the capacity of the commander they had "conspired to divest of his command," a conspiracy which they were only prevented from carrying out by Colonels Cass and McArthur being detached with their regiments. Could any doubt arise in the mind of General Dearborn what would be the evidence of such witnesses?

It was true that a cross-examination developed a great deal to break the force of their opinions and to materially embarrass the witnesses, that the developed he had a constituted and that was unlowfaller.

but this had probably been anticipated, and Hull was unlawfully

REFUSED THE RIGHT TO HAVE COUNSEL

to assist him in the cross-examination of witnesses, and the bad effect arising therefrom was also in some degree prevented by vigorous applause from the Administration organs, which were lavishly distributed and, together with pamphlets containing most scandalous falsehoods, hawked for sale at every door of the Capitol while the trial was progress-

g. (Memoirs of 1812, page 13.)
One point in evidence is also worthy of notice.
Militia officers who had never been in battle, and who only saw Gen-

eral Hull while he was inside the fort or inclosure, gave their opinion that he was influenced by fear, because they saw him in a safe place

and marks of tobacco-juice were about his mouth.

Now, it must be observed that seven militia officers who gave that character of evidence all testify that they saw General Hull inside the fort and out of danger, while regular officers like Colonels Miller and Kingsbury and Captain Maxwell, who had been in over twenty battles, testify that they saw

GENERAL HULL EXPOSED TO THE ENEMY'S FIRE

on the advanced line while balls were passing and repassing, and that he, General Hull, appeared firm, cool, and collected. (Hull's Trial, pages 128 and 129; Appendix, page 103, and Appendix No. 2, page 7.)

It must be observed that General Hull was with his advanced line

under fire during the 15th; was on the line during the night of the 15th and on the morning of the 16th.

Lieutenant Bacon swore that he saw General Hull once on the 15th on

the parapet, and once on the 16th. He saw him also in different parts of the fort during the cannonade, and that General Hull appeared engaged as usual. (Hull's Trial, page 124.)

Colonel Richard Platt also swore that General Hull's character stood

in cardinal points, intelligent, brave, active and enterprising. (Hull's Trial, page 145.)

Is it not remarkable that brave veterans should see General Hull

firm, collected, and

COOL WHILE UNDER FIRE,

and that men who had never seen a battle and who testify they were in a place of safety when their observations were made, should when they saw General Hull in a place of safety be of opinion he was deficient in courage? (Hull's Trial, page 128; Appendix, 103.)

Major-General Heath, Major Bannister, Captain Francis Tufts, Governor Brooks, Major McCracken, and Admiral Charles Stewart, all war-

worn veterans, testified to General Hull's distinguished gallantry.

How disgraceful in the face of all this credible evidence for the court to give weight to the evidence of militia officers who had never been in battle, and whose interest induced them to swear falsely against their commander to as far as possible justify their "disobedience of orders," "insubordination," "threatened desertion," "mutiny," and "conspiracy "during the two months they were under the command of General Hull. (Hull's Trial, page 66, Appendix.) Such were the men who, as experts in military experience, science, and

art, were called before the tribunal to give opinions regarding the military character and the propriety of military measures adopted by Gen-

The Administration sent them there with high-sounding titles of military rank—generals and colonels who had never seen a battle or had any military experience. (Hull's Trial, Appendix, page 64.)

A number of official documents which

EXONERATED GENERAL HULL

and placed blame upon General Dearborn and the Administration were known to be upon file in the War Department.

They were applied for by General Hull to use as evidence, but under the false plea that the documents could not be found the officials in Washington allowed the court to adjourn without giving the accused the court of the false of their benefit. That these papers were at this time available to the Government and to Dearborn, the president of the court, is evident from the fact that twelve years afterward, when John C. Calhoun became Secretary of War, he found them regularly filed in the Department, and promptly furnished them upon General Hull's application.

Bad as was all this a crowning in face were found to be necessary and

Bad as was all this, a crowning infamy was found to be necessary and

was therefore enacted.

So exemplary had General Hull's conduct been that with all the efforts of Dearborn and the Administration no evidence had been produced which would justify an honorable man in doing otherwise than declaring that General Hull deserved commendation rather than the slightest censure, and some of the members of the court

REVOLTED AT THE TERRIBLE INDIGNITY

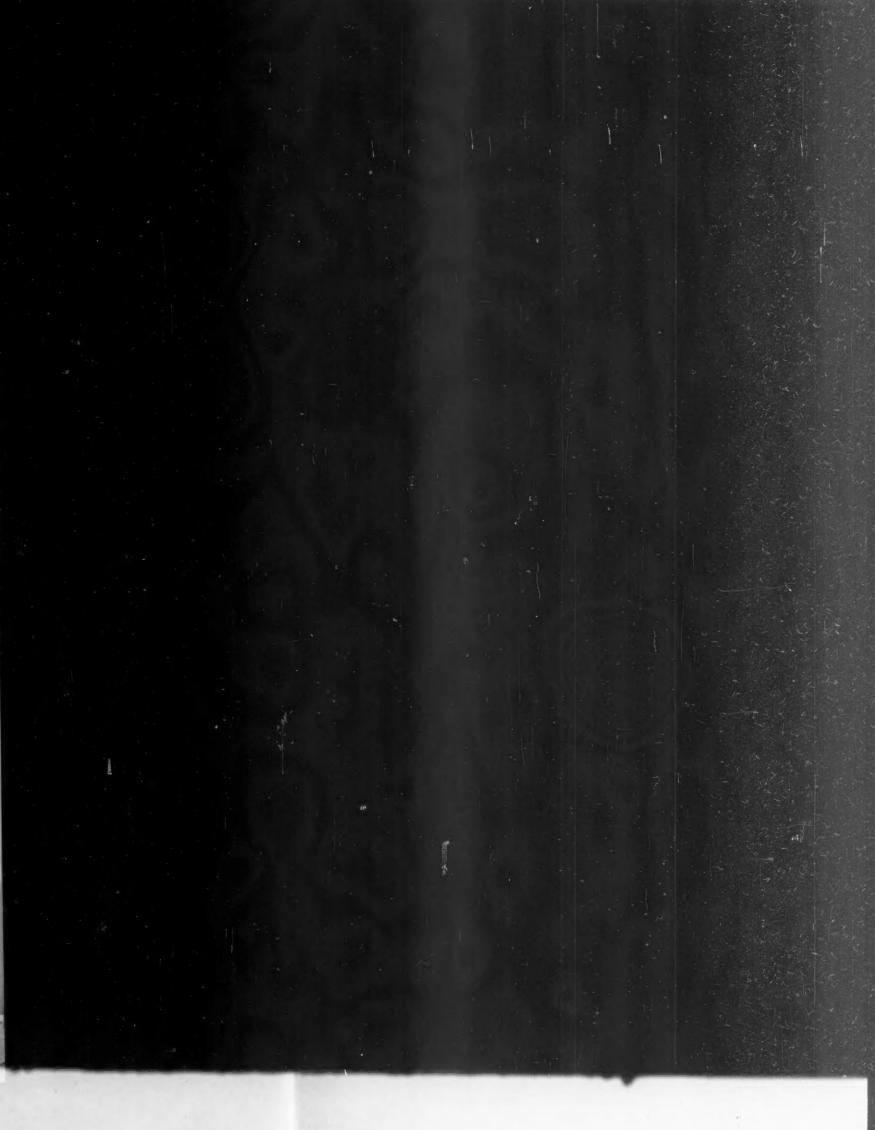

which was sought to be enacted.

On a military court the members are all jurors as well as judges. sustain the charges against Hull the vote of two-thirds of the court was necessary. Some of the members had been absent from time to time during the three months occupied in taking testimony. It is evident that General Dearborn became apprehensive the vote of these absent members would be necessary to sustain him and the Administration by General Hull's conviction. It is a rule of both military and civil law, General Hull's conviction. It is a rule of both military and civil la as old as law itself, that each juror must see the witnesses for the procution give in their evidence, so that he can judge of its credibility. This rule is unvarying in all civilized countries, and is regarded as one of the most important safeguards of liberty. The honorable members of the most important safeguards of liberty. The honorable members of the court felt that their oaths compelled them to exclude these mem-

bers and not permit them to vote upon the findings of the court.

On March 7 the Government completed its evidence and had proven nothing to Hull's detriment. Therefore we see (Hull's Trial, page 155) that "General Hull stated he had no evidence to adduce but what was by way of depositions."

Many days were then occupied in speeches by Hon. Martin Van Bu-

Major-General D. H. Hill's division (five brigades with artillery) on the march to join. Arrived on the field in the afternoon of the 30th.

Major-General L. McLaw's division (four brigades) on the march to join. Arrived on the field in the afternoon of the 30th.

Note by counsel for the Government.—While the enemy's forces are given a position in line of battle west of Pageland Lane, at 2 p. m., it is considered very doubtful if they had a need from a point just east of Ga dextend below the pike, as early as this time. When Jackson's right was threatened and attacked by Reynolds's division of Pennsylvania Reserves attached to McDowell's corp., and Schenck's division of Sigel's ackson's right, to move up to near Pageland Lane from the "defensive" position taken at Gainesville (part of Hood's division in advance). That "defensive" position, it is believed, was taken because the enemy did for the Potomac, would come up from the Rappahannock, via Warrenton, on the Warrenton, Gainesville, and Groveton pike, instead of landing at Alexandria, and thus strike in the rear of so much of Lee's army under Stuart, were down in the indicated direction in order to watch the Manasses and Gainesville road, and were subsequently eneral Banks's corps could have advanced and interposed at Gainesville between the portion of Lee's army under Major-General Longstreet and his re-enforcements then on the march via Thoroughfare Gap. ren and Hon. A. J. Dallas, the counsel employed to prosecute for the Government.

Colonel Forbes, the reporter, says (page 2, Hull's Trial):

I have to regret, moreover, that I did not take down espatism the summing up by Hon. Martin Van Buren, the special judge-advocate; the ability and perspicuity displayed by him extemporaneously on an occasion so novel to him excited, I can venture to say, the admiration of one of the most numerous and respectable audiences that ever attended a court-martial in the United States,

General Hull was refused by the court the privilege of introducing counsel to reply to these able jurists, but above and beyond that General Dearborn found

ANOTHER ATROCITY NECESSARY.

More than four months had elapsed since the court was ordered and nearly three since it commenced its sittings. Members, as before stated, had been absent much of the time, and it is convincing that now General Dearborn found that the votes of these absent members were nec sary to his purposes, and an order is produced which contained the following directions:

A member of the court who has been absent may take his seat after such absence, and in case an absent member returns and resumes his seat the proceedings which have been had in his absence must be read to him.

Pursuant to this nefarious and unlawful ruling absent members were brought back and voted upon the finding of the court, and this, too, against the protest of honorable members of this tribunal, and thus ended the most atrocious outrage which was ever perpetrated under the form and guise of justice.

I will read a paragraph from page 92 of Captain De Hart's excellent work on court-martial:

work on court-martial:

If a member of a court-martial should for any cause be absent from his seat during the course of the trial, he can not resume it. It would have been considered vacated, and thus he is excluded from any further participation in the trial. All the members of a court-martial must be present during the proceedings on the reception of testimony, and resumption of his place by a member who has been absent for any period while proceedings were going on would vitiate the judgment of the court. It is essentially necessary that witnesses be examined in the presence of all the members of the court, for no act performed by a part of the court can be legal. The mere reading the recorded testimon in the presence of the deponent is not sufficient.

A case of this description is quoted by Captain Simmons, page 176, in which the reviewing authority said, "This proceeding is so directly at variance with the practice of courts-martial and the principles of justice that it may be held to affect the legality of the judgment of the court," and concluded his remarks by stating that "the irregularity before observed has rendered nugatory the sentence of the court-martial."

In addition to the many other illegalities and wrongs committed in this prosecution, six distinct provisions of the Constitution of the United States were trampled under foot. I read these words of the Constitution:

In all criminal prosecutions, the accused shall enjoy the right to a speedy and public trial by an impartial jury, \*\* \* to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favor, and to have the assistance of counsel for his defense.

All these guarantees were denied General Hull:

First. He was refused a speedy trial. Second. He was brought before an interested instead of an impartial jury

Third. He was not informed of the nature and cause of the accusation.

Fourth. He did not have process for obtaining witnesses in his favor, and was refused evidence of a documentary character.

Fifth. He was positively refused the right to introduce counsel to assist him in his defense.

Sixth. He was not confronted by the witnesses against him. The object of this provision is to have the witnesses confront the court, who are to thus determine their credibility, and hence the gross illegality of the order which it is charged was procured by General Dearborn, and which placed officers on the court to vote on the findings who had not been present, and who had therefore not been confronted by the witnesses who had testified against Hull. This was a flagrant violation of the spirit and meaning of the Constitution. The Constitution does not limit these provisions to civil trials, and even if it did so, the principles are so just and necessary to all tribunals which seek to dispense justice that to disregard them would vitiate and make void any legal procedure.

As additional proof that no sentence of the court was intended to be carried out and that the whole matter was prearranged, I will call attention to the fact that when the proceedings, amounting to thousands of pages, reached Washington and before time had elapsed to give the record of a five months' court any proper examination, the President terminated the half-year's operation of the commander-in-chief of the armies by issuing the following order:

APRIL 25, 1814.

The sentence of the court is approved and the execution of it remitted.

JAMES MADISON.

General Hull returned to his home at Newton, Massachusetts, and at that place and Boston and other cities he was received with the most distinguished attention. Dinners were tendered to him by the most eminent citizens, and unqualified indignation was expressed at the dishonorable course pursued by those who were responsible for the atrocious proceedings of which he was the sufferer.

Some historians, actuated by prejudice, some actuated by a desire to defend General Dearborn, and some through a want of correct informa-tion, have made very untruthful statements which did General Hull great injustice, but many have sought to give a correct narration of these operations

Since I began these comments my attention has been called to Los-sing's Pictorial Field Book of the War of 1812. Mr. Lossing says:

I have given in this and the preceding chapter as faithful a general history of Hull's campaign as a careful and dispassionate study of documentary and other contemporameous narratives, written and verbal, have enabled me to do. I have recorded what I believe to be undoubted facts. As they stand in the narrative, unattended by analysis, comparison, or argument, they present General Hull in his conduct of the campaign in some instances in an unfavorable light.

narrative, unattended by analysis, comparison, or argument, they present General Hull in his conduct of the campaign in some instances in an unfavorable light.

But after weighing and estimating the value of these facts in connection with current circumstances to which they bore a positive relationship—after observing the composition of the court-martial, the peculiar relations of the court and the witnesses to the accused, and the testimony in detail, the writer is constrained to believe that General Hull was actuated throughout the campaign by the purest impulses of patriotism and humanity. \* \* \*

When he could perceive no alternative but surrender or destruction, he bravely determined to choose the most courageous and humane course, so he faced the taunts of his soldiers and the expected scorn of his countrymen, rather than fill the beautiful land of the Ohio and the settlements of Michigan with mourning. Hull had warned the Government of the folly of attempting the conquest of Canada without better preparation; but the young hot-bloods of the Administration—Clay and others—could not wait; and the President and his Cabinet, lacking all the essential knowledge of planning a campaign, had sent him on an errand of vast importance and difficulty without seeming to comprehend its vastness or estimating the means necessary for its accomplishment.

The conception of the campaign was a huge blunder, and Hull saw it, and the failure to put in vigorous motion for his support auxiliary and co-operative forces was criminal neglect.

When the result was found to be a failure and humiliation the Administration perceived it and sought a refuge. Public indignation must be appeased; the lightning of the public wrath must be averted.

General Hull was made the chosen victim for the peace-offering, the sin-bearing scape-goat; and on his head the fiery thunderbolts were hurled. The grass has grown greenly upon his grave for more than forty years. Let his faults (for like all men he was not immaculate) also be covered with the v

If I had time I would also read from J. H. Patton, in his History of the United States, and Colonel T. W. Higginson in his Youth's History of America.

From Harper's Cyclopædia, which has just been handed me, I read the close of a sketch of General Hull:

His name and fame now appear in history untarnished

From the same work these words close the account of the trial:

To-day the character of General William Hull, purified of unwarranted stains, appears in history without a blemish in the eye of just appreciation.

After many delays General Hull succeeded in procuring from the War Department a number of public documents which were denied him during the trial ten years previous. These, together with other documents, were published in the American Statesman, a Boston paper, and they were copied in other papers and exercised a great influence on the public mind.

Mr. Jared Sparks, in a notice of these documents in the North American Review, said "that from the public documents collected and published the conclusion must unequivocally be drawn that General Hull was required by the Government to do what was morally and physically impossible that he should do." Many other periodicals throughout the Union expressed the same opinion.

Just before General Hull's death the Marquis de Lafayette, a younger man than himself, came to this country and made him a special visit. His declining years were made happy by the reception of very many letters from various distinguished persons, particularly from old companions of the Revolution, expressing their pleasure that he had so completely vindicated his conduct and character. Surrounded by his family he passed quietly and sweetly from this life, declaring on his death-bed in the most solemn manner his conviction that he had done right in surrendering Detroit, and expressing his happiness that he had saved the lives of the peaceful citizens of Michigan, who for seven years he had protected as their governor, from being needlessly sacri-

CONCLUSION

In all the cases that I have appended it will be observed there is a marked similarity. This is natural, because the evil inclinations and passions of men are the same in all ages. Particularly do we see a resemblance between the Hull case and that of Fitz-John Porter. Both were men whose services and gallant conduct had been the admiration of the nation. Both were arraigned pursuant to an afterthought-Porter after a lapse of three, Hull after the lapse of sixteen months. applied for an investigation the moment they heard whispers of com-plaint. Both were refused official documents necessary to their de-The conviction in both cases was necessary to atone for bluufense. ders of their commanders.

Both were assailed by vindictive and ambitious subordinates; particularly is this a prominent feature in the case of General Hull. Both were tried by a court some of the members of which were directly interested in their conviction, and the records of both courts show that shameful illegalities were necessary to carry out the purposes of their accusers, and much of the evidence of the witnesses for the prosecution in both cases was an ex parte defense of themselves; and finally the printed records of both cases is their emphatic and complete vindi-

Both are similar in this: The first printed record in the Porter case was an imposition and a falsehood, because it omitted all the points of Porter's defense, and the record in Hull's case shows for itself that it was manipulated and contorted to make the best case possible for the Government. Evidence favorable to Hull is shown to be omitted, and

illegal rulings detrimental to him were not recorded.

I have this moment received a copy of a letter from the most prominent citizens of Minnesota, addressed to General Grant, and commending his noble effort to do justice to General Porter. I will ask to have

it printed:

General: The undersigned citizens of Minnesota, without distinction of party, take this method of expressing to you our high appreciation of your efforts in securing for General Fitz-John Porter that simple measure of justice which a misapprehension of the facts bearing on his case has been so long and largely instrumental in withholding from him. Whatever may have been public sentiment touching the merits of General Porter's case, as presented to the country from time to time by the several tribunals that have been changed with its determination, there is, in the opinion of the undersigned, no denying the fact that at the present time the American people demand his restoration to the position in the Army of which he has been, in the light of more recent disclosures, for twenty years unjustly deprived. Not unmindful of the fact that the representatives in both Houses of Congress from New Jersey, the home of General Porter, have ignored party considerations and united in vain in an appeal to Congress do do a simple act of justice to this wronged soldier and citizen of the Republic, the undersigned ex-soldiers and citizens, generally of Minnesota, having full faith in the patriotism and integrity of General Porter, while thanking you for your efforts in his behalf, express the hope that the example and co-operation in this case of one so illustrious as yourself may lead to the prempt and full vindication of General Porter at the hands of the present Congress.

#### Internal Revenue and Tariff.

# SPEECH

# HON. WILLIAM R. MORRISON, OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES.

Saturday, March 3, 1883.

The House having under consideration the report of the committee of conference on the bill (H. R. 5538) to reduce internal-revenue taxation, and for other purposes—

Mr. MORRISON said:

Mr. SPEAKER: It is too late to debate this conference bill or to designate the discreditable methods and agencies which brought it here. When passed, as it will be, duties on imports or tariff taxes may be lowered at most one-eighth, or 12½ per cent. of the present rates; but they will still be 40 per cent. higher than they were before the war rates were added. To-day they are higher by 60 per cent. than they were before the addition of war rates. Some have been increased more, others less, but I state the average increase at less than it is when I fix it at 60 per cent.

And yet before these duties were so increased the tariff-the Morrill tariff of March 2, 1861-was fully up to that protective standard of equal-

ization between us and our foreign competitors beyond which the Tariff Commission tells us protection may not go without positive injury to the interests it is intended to benefit. Its author, Mr. Morbill, advocated it here as a measure which would place our people and their varied industries upon a level of fair competition with the rest of the world. As such a measure it had in the Senate the support of Mr. Simmons, of Rhode Island, the elder Cameron, and other advocates of the protective

I am not disappointed in finding no medification of that policy in this conference measure, based as it is on the Tariff Commission report. Neither did the commission in its proposed rates of duty make any substantial or equitable reduction in the burdens of taxation, although it was professedly appointed to revise the tariff upon a scale of justice to all interests. It credits itself in its report with a substantial reduction of more than 20 per cent., not one-fourth of which it made, unless diminished revenue from increased and prohibitory rates of duty be accepted as a reduction of taxes. A more shameless piece of trickery than that attempted in its revision and assumed reductions never received the respectful attention of the National Legislature. The pending bill will not reduce taxes to the extent it will reduce revenue-it has no such purpose. As a bill to reduce tariff taxation it is aptly described by a German, saying, "Wash me the fur, but don't wet it." The same is true of the commission scheme and the bills fashioned after and from it at both ends of the Capitol.

I put aside from the beginning, as impracticable in this Congress, all question of rightful authority to impose or the justice of imposing taxes on all the people to enable part to acquire property or get money in business, profitable or unprofitable. But might we not reasonably ex-pect and rightfully demand even of this Congress the removal of so much of the 60 per cent. increase or war-tariff taxes as is now no longer neces-

sary for revenue?

The commission, packed to perpetuate the present system, admits and reports that except for the establishment of new industries no duties can be justified which more than equalize the conditions of labor and capital with those of foreign competitors; that duties above such standard of equalization are excessive and positively injurious to the interests they are supposed to benefit; that a substantial reduction of the tariff is demanded by the best conservative opinion of the country, is a due recognition of public sentiment, a measure of justice to consumers, and that it will add to the general industrial prosperity. From 20 to 25 per cent, is stated by the commission as the substantial reduction demanded. Does the majority of the House who would professedly quiet the apprehension resulting from the agitation of this question expect to accomplish it with less? Does the majority here expect the next House of Representatives to accept less than the commission concedes to be demanded by the best conservative sentiment of the country? Gentlemen may continue to protest here their anxiety to quiet the unrest on this subject, but their refusal to double the proposed reductions will be correctly interpreted to contradict all such protests.

Early in this discussion I said, in reply to the honorable chairman [Mr.

KELLEY], that it was the duty of this Congress not only to revise the tariff, but to so revise it as to make a real and equitable reduction of tariff taxes. and not to so revise it as to reduce the revenue by increasing rates of duty and taxation, which is the effect of this bill. I said then, and repeat now, its purpose is to forestall action in and by the next Congress. and thus prevent any fair and reasonable reduction. I said then, and now again repeat, that when this bill is passed all those who would maintain war duties or increase them will insist that this is a revision of the tariff, and therefore a settlement of the question which must not again be disturbed or agitated lest a demand for further revision or reduction will unsettle the industrial interests of the country. Sir, the advocates of protective and selfish greed here and everywhere but deceive themselves if they expect from this measure so much as a temporary settlement of the questions for which they seek oblivion.

ADDITIONAL TARIFF REDUCTION OF \$30,000,000 CONSISTENT WITH PROTECTIVE POLICY.

With good harvests, without which we can not have commercial and industrial prosperity, we may expect under this bill an income of \$10,000,000 from the sale of public lands and other miscellaneous sources; \$120,000,000 from internal taxes on spirits, malt liquors, and tobacco, and unless the bill contains artfully concealed prohibitory clauses not yet discovered, \$200,000,000 from imports, making an estimated annual revenue of \$330,000,000.

For expenses of administration we may estimate \$135,000,000—the

cost of administration may soon grow to \$150,000,000, but it is not cost of administration may soon grow to \$150,000,000, but it is not likely to outgrow the revenue. The annual average cost of the pension-list for several years can hardly be less than \$75,000,000. To pay off the public debt when it is payable in the year 1907 will require for interest and principal an average annual payment of \$90,000,000 (\$88,832,547; see Appendix). Together these give us a total estimated annual expenditure of \$300,000,000, leaving a surplus of \$30,000,000. It will thus appear that a reduction of 25 per cent., or twice the tariff reductions proposed by the bill, can besafely made, still leaving a small annual surplus in the Treasury and the tariff 20 per cent. above the protective standard because of the still remaining war rates. Such increased reduction, equitably made and fairly distributed, will lessen by \$25,000,000 the temptation fund of the Treasury, and leave to the people in largely increased proportion the means of comfortable living. WE TAX OURSELVES OUT OF THE WORLD'S MARKETS.

The necessity for a revision and substantial modification of our commercial and industrial policy rests not alone upon the demand for relief from needless taxation. Legislators and manufacturers contriving by law to keep the markets of our own country exclude us from the markets of all other countries.

The gentleman from Pennsylvania [Mr. Kelley] tells us that laboring people out of employment can not pay taxes, and that they have always found themselves out of employment, idle, and impoverished when we have had great reductions of tariff duties. This latter statement I have no doubt the gentleman will believe requires some modification. But whatever the fact may be as to the effect of great reducfication. But whatever the fact may be as to the effect of great reductions of tariff taxes, no one has so frequently borne testimony to the lack of employment and the idle and impoverished condition of working people as has the gentleman himself in the last ten years under his favorite system. And now, while we are but continuing that system in aggravated form by this bill, the public journals each recurring day tell of mills unemployed and of workmen with no work to do; no work to do, because men will not pay other men to make goods for which there is no market. Already our manufacturers can make more than our people can use, but this does not deter capital from manufacturing investment under our system of bounteous protection. Our facturing investment under our system of bounteous protection. Our annual growing immigration adds largely to our surplus-producing power and to our necessity for other markets. Of this necessity some weeks ago I said:

weeks ago I said:

To get foreign markets we must be able to sell in them without protection and on equal terms. We must therefore lessen the cost of production of manufactured goods so that we may find a market elsewhere than among our own people. This, Mr. Chairman, can be done in but one of two ways—reduce the rates of wages or reduce the cost of producing manufactures by reducing the cost of materials out of which they are made. Here, Mr. Chairman, is the place to begin by leaving untaxed the ore for making iron. Even on the protection theory this raw material needs no protection. The workers in it have natural protection double the amount of wages paid them. But it is not the workers in iron mines in whose behalf this tax is invoked; they are not the beneficiaries; the mines in which is an increase on the present rate and explains the character of this bits.

If we would avoid industrial disease, resulting in reduction of wages.

If we would avoid industrial disaster, resulting in reduction of wages and lack of employment with their attendant evils, we can not too speedily remove taxes on the means of production. We must have other markets for our ever-increasing products, to which, if we are not led by prudent statesmanship, we are likely to be driven in adversity for want of it. for want of it.

#### REVISION AND REDUCTIONS MADE.

The taxes to be repealed or reduced by the pending bill are chiefly internal taxes. This will relieve bankers, tobacco-chewers, perfumers, snuff-takers, and is "not to be sneezed at" because of the odor of special relief to capital. It is not so much intended to benefit the banking and tobacco interest as the manufacturing capital by furnishing a pretext for maintaining protective war duties. Since that part of the bill repealing internal taxes passed the House the terms of the clause repealing bank taxes have been amended, and if they have not been so altered as to include and cover up such advantage to banks and bankers as in the ordinary transactions of life would be called a cheat, I mistake the

After three months of consideration it has not been ascertained, except perhaps by those skilled in the concealed purposes of the bill, what tax is laid by it on very many articles, or whether the tax on many articles is to be more or less than under existing law. From the day the first tax was laid by the Government under which we live cloves, cassia, and other spices have been taxed and made to contribute a considerable revenue to the Government. Now they are to be made free, and the million dollars heretofore collected on these articles will come and the million dollars heretolore collected on these articles will come from salt, coal, plank, and boards, that somebody may share with the Government the benefits of the increased cost of lumber and salt. The increased cost on spices not produced here would go as heretofore to the Treasury. If, however, we may believe in the protective doctrine of the gentleman from Iowa [Mr. Kasson], and in which he is probably the only believer, that the importer pays and loses half the duty, then this bill remits to the importers of spices a continuing bounty of a half million dollars annually. million dollars annually.

Silks go down to 50 per cent.; earthen-ware up to 60, because to the beneficiaries of this bill it may be silks are necessaries and common carthen-ware a luxury not used.

The schedule of duties on iron and steel contains perhaps more hidden and misleading provisions than any other. Such changes of classification have been made in rods, wires, sheets, weights, sizes, and values as are not explainable to the honest mind. Bar-iron, ingot (or bar) steel, and other iron and steel which lie at the foundation of the iron and steel industries are left 40 per cent. above the protective Morrill tariff. Some reductions have been made in most of these less finished forms of iron and steel which are used in the manufacture of still other forms, but the reductions are so artfully made that the resulting benefits do not reach the ultimate consumer and tax-payer. Lower priced qualities of steel, much used by blacksmiths and for use in making agricultural implements and machinery, are to be increased to 45 per cent.—half as much more

than the existing rate. Blacksmiths' hammers, sledges, and tools of trade than the existing rate. Blacksmiths naminers, stedges, and tools of trade must still pay 81 per cent., pocket cutlery 50 per cent., and, while some reduction is proposed in the tax on iron and steel from which these and various other articles, tools, and machinery are made, the tax on the articles themselves remains the same—the maker gets the benefit of the reduction.

In the list of cottons, compared with present rates apparent sub-stantial reductions have been made on all low-priced cotton cloths; but the reduction is more apparent than real—the rate is still prohibitory on the cheaper goods.

The classification of cotton yarns has been so changed that some are made to pay more under an apparently reduced rate, and are taxed higher than goods to be made of the yarns. No doubt in this as in many other cases the sharers of Congressional bounty have overreached each other.

we collect about \$13,000,000 on cottons, equal to about 4 per cent. on all the cottons consumed by our people. The duties from which we collect three of the thirteen millions are reduced, while those from which we collect ten millions are unchanged or are increased, and cotton is to be taxed substantially as now at the average rate of nearly 40 per cent. Taking no account of any increase which may be hidden away in a contraction of the contractio

new classifications, in double or compound duties still maintained, or in raising one duty while lowering the other on the same article, woolen goods are to be reduced from 68 to 62 per cent., or 9 per cent. of the present rate. The pretext for retaining this enormous and compound rate is the duty on raw wool; but care has been taken to reduce wool 18 per cent, while reducing woolen goods 9.

In theory the two duties on woolen goods are laid, one specific, by the pound or yard, to compensate for the duty on the raw wool, the other on the value for protection. Some of the specific rates have been reduced 15 cents and 5 per cent, added to the duty on value which would seem to be a reduction. On inquiry it will be found that in such ses more is laid on than taken off.

When the existing tariff on woolens was made the manufacturers asked and were given 10 per cent. increase to compensate them for 6 per cent. internal taxes paid on all manufactures. The 6 per cent. internal tax was repealed more than ten years ago, but the beneficiaries of the 10 per cent. compensation cling to it with a tenacity which could scarcely be excelled by honest men making an honest demand.

Besides the three and a half millions to be taken off of the annual

income from the tax on imported silks, the only considerable reduction

Besides the three and a half millions to be taken off of the annual income from the tax on imported silks, the only considerable reduction proposed is that on sugar, estimated at ten millions, for which the opponents of this bill voted. Why the majority here was willing to concede greater reductions on this than upon other necessaries I can not better explain than by repeating from my remarks when the question of the tax on sugar was considered here. I then said:

Gentlemen have been pleased to say that they were in favor of this reduction on sugar so much below the reduction on other necessaries because it was an article of "prime necessity common to all classes of people." Let it be so—it is so, Mr. Chairman. It is also conceded we must have revenue—quite three hundred millions of dollars. Our friends over the way, some of them, and sometom may, I fear—on this side, insist on repealing the internal-revenue tax, or most of it, so we are not to have much help to the Treasury from that source in the future should the policy of internal-revenue repeal prevail.

The gentleman from Indiana [Governor Browne] says we are paying about \$6\$ to protect \$10 worth of sugar—I forget the exact quantity and the exact sum. But, having stated this, substantially in principle at least, he wanted to know if that was right. It is right for me in laying taxes for revenue to impose them in that mode which will do the people the least harm and be least burdensome to them. If in paying \$6 on \$10 worth of sugar I get \$5—all but one dollar of the six—into the Treasury, and I can not do so well on any other article, it is entirely consistent with my notions of public duty to pay \$6 to protect \$10 worth of sugar. Hence it is that while I favor a large reduction on sugar—much larger than is proposed on any other article.—I will not vote for the lowest rate proposed until gentlemen are willing to give us fairer reductions on other highly protected articles alike essential to the comfort of our people. If the honorable gentleman from Indiana

Looking only to this conference revision as it appears and overlook ing the craftily placed protective advantages it contains, who can doubt that its purpose is not to substantially modify and reduce the existing tariff, but to hide its enormities that it may be perpetuated?

#### THE AGENCIES OF PROTECTION

When the bill providing for the Tarif' Commission was under consideration I called attention to the fact that before the scheme made its appearance in Congress it was urged by the American Iron and Steel Association as a means of perpetuating the present tariff. Its adoption was urged by some and supported by others here upon the assurance that the commission would be so fairly made up as to represent and do justice to all interests.

Some amiable old gentlemen were placed on the commission to give it the semblance of decency. But it is known to us all that the commission was packed and made up of men to be judges in their own cases; that upon their determinations depended how much money several of them might pocket from profits on iron or wool or sugar, industries in the second of the second control o which they were engaged; that their conclusions were the result of dicker and a system of give and take—mostly take—among themselves; and that they made a falsely favorable report to Congress.

While making a statement before the Committee on Ways and Means the president of the commission, Mr. Hayes, was asked why a duty had been changed from a single to a double duty and a little increased. His answer was that it had been done on the recommendation and testimony of a gentleman in whom he had confidence. He was then asked if the gentleman upon whose recommendation he had acted was so interested that his profits depended on the rate of duty. Mr. Hayes answered, yes; that the gentleman was a manufacturer of the article on answered, yes; that the gentleman was a manufacturer of the article on which the duty was so changed, and that no one else than the manufacturers understood the subject or knew what the duties ought to be. It is not unreasonable, therefore, to assume that what the Tariff Commission did not know when made up it afterward learned from those whose gains depended on the information revealed.

The Ways and Means Committee was regularly organized.

thirteen members the minority was given three and charged with five. And so organized, it readily granted to cotton manufacturers the rates of duty fixed by themselves, since for some reason their demands were not made known to the commission. Of the five members of this extraordinary conference the minority was given one and charged with two. The majority has added to this conference bill new puzzles and tangles containing increased duties and additional burdens, and has in disregard alike of the instructions and declared will of the House assumed disagreements which did not exist as a pretext for raising duties higher

than those fixed by the House or Senate.

The Senate had fixed the duty on steel rails at \$15.68 per ton, and The Senate had fixed the duty on steel rails at \$15.68 per ton, and the House had fixed it at \$15 on my own motion. The conference reconciled this disagreement with the Senate by going above both House and Senate and placing the duty at \$17 per ton, thereby adding a million dollars yearly to the profits of the rail-makers. In view of such facts, was I not justified in declaring, as I did when speaking upon another question but two days ago, that next to conference committees Congressional commissions as a rule are more prolific of personal and private jobbery and public plunder than any other legislative methods or instrumentalities yet discovered.

#### REDUCED PRICES NOT THE RESULT OF PROTECTION.

One of the many fallacies practiced in support of the present tariff is the assumption that it has reduced the price of goods to the consumer since its adoption. Prices of manufactured goods have lessened in all European countries in greater proportion than with us, and especially in England, where manufactures are unprotected. If this were not true the advocates of this bill would not be here demanding and defending prohibitory duties that we may take and keep our own market by law. To-day you reject 50 per cent. as insufficient and retain 60, 70, and 80 per cent. to protect iron, earthen, and glass ware and woolen goods in our own market. When this tariff was adopted you asked but 35 per cent, as all-sufficient. Under our system of bounties for manufacturing we have bribed capital to leave the sea, abandoned the foreign trade, and given it over to our chief commercial rival. Carrying across the sea is unprotected and free to all nations, and England, competing with herself, bears the surplus of our harvests to foreign markets at less than half the former cost. Railroads, unprotected except as they protect themselves, have made greater reductions in prices than any protected industry in the country

There are members of this House not older than myself with scars in their hands made by shelling corn a third of a century ago. Then it required a whole day's work to shell five bushels of corn, and if wages were but 59 cents per day then it cost 10 cents per bushel, while now, with the use of machinery of little value, corn is shelled for 2 cents per bushel. What is true of the diminished cost of shelling corn is true of the cost of making cotton and woolen goods, manufactures of iron and steel, and all other fabrics in the production of which improved machinery is extensively used. A better knowledge of science and the arts and of mechanical appliances help us to do our work. The work being more efficient, the cost and the price is less, not because of

protection, but in spite of it.

PRICES IN OTHER COUNTRIES REDUCED AND WAGES INCREASED

Neither is it true, as is sometimes asserted, that prices have been reduced abroad by reducing wages and thereby lowering the cost of production. In  $M\ell$ . Webster's time he advocated a duty on iron to compensate for the difference between wages here and in Sweden. He said that wages in Sweden were but 7 cents per day, and in this country five or six times as much, or about 40 cents per day. To-day there is no manufacturing country in Europe where wages are five or six times less than in the United States. Wages are higher in England than elsewhere in Europe, and poorly paid as laborers still are they receive there double the wages of forty years ago and more than ever received before. Have we more than doubled wages in the last forty years? I think not. I am not well advised of what has been the growth of wages for the past half century in France, Germany, and other nations of Europe, but we all do know that, like England as they are in all their conditions except that they have the protective system, laborers receive much lower wages there than are paid by their English neighbors. And since England has kept her own markets and maintained her commercial supremacy at home and abroad as against her German and French neighbors who have both protection and cheaper labor, it is fair

to infer that whatever may be claimed for protection here it neither increases the wages of labor nor decreases the cost and price of manufactures on the other side of the Atlantic.

PROFESSIONS AND PRACTICES OF PROTECTION."

Not quite a century ago in the First Congress Mr. Hartley, of Pennylvania, said:

sylvania, said:

We have been forced by necessity and various causes to increase our domestic manufactures to such a degree as to be able to furnish some in sufficient quantity to answer the consumption of the whole Union, while others are daily growing into importance. Our stock of materials is in many instances equal to the greatest demand and our artisans sufficient to work them up even for exportation. In these cases I take it to be the policy of every enlightened nation to give their manufactures that degree of encouragement necessary to perfect them without oppressing other parts of the country.

The degree of encouragement then deemed necessary to "perfect" manufactures was fixed by the First Congress on clothing and iron and other like articles at 7; per cent.; and this conference committee proposes nearly a century later to go on perfecting manufactures with a

duty six or seven times higher.

Mr. Clymer, of Pennsylvania, said that the manufacture of steel was "rather in its infancy," but "was already established and attended with considerable success," "and with a little further encouragement would supply enough for the consumption of the Union."

The Congress in 1789 laid a duty of half cent a pound on, and gave a little further encouragement to, steel "rather in its infancy," now in 1883 Pennsylvania asks and is given five or six times as much

as a little further encouragement to steel.

And Mr. Goodhue said that Pennsylvania and Massachusetts made more nails than they could use, and in a little time with, of course, a little encouragement enough might be made by them to supply the whole Union. Mr. Fitzsimmons said the people of Pennsylvania no longer imported beer, ale, and porter, and in two or three years, with the fostering aid of Government, would be able to furnish enough for the whole consumption of the United States. The First Congress gave the little encouragement and fostering aid asked for, and the Fortyseventh Congress continues the little encouragement and fostering care with several hundred per cent. increase.

Nearly fifty years later, now fifty years ago, Mr. Clay, the foremost advocate of his time, if not the first mover of the protective policy as then interpreted, urged his compromise tariff fixing rates of duty after nine years at 20 per cent., considered by him sufficient encouragement and fostering aid to maintain the system of which he was at the time the

reputed father.

It thus appears that the advocates of this system in the earlier history of the country defended it on the alleged necessity for encouragement to new industries. They believed and conceded that as our establish-ments grew older and stronger the necessity for their encouragement would become less as to some and entirely cease as to others

I think I do them no injustice in saying that the protectionists of today, as represented here, insist that the encouragement and fostering aid which the Government owes to manufacturers is the absolute control of the home market to be given by law. It is true that we have in theory advocates of protection, of incidental protection, of a tariff for revenue with discrimination that will give our own people the advantage, and of a tariff high enough to cover the "gap" or difference in rates of wages between us and our foreign competitors. But no one has undertaken to give us the incidental amount, the measure of the advantage or the length of the gap, and in practice these have proven to be unmeaning or avoiding phrases. Protectionists of whatever degree (if protection has degrees) have supported the commission scheme from the first, and did not scruple to do so after the flagrant manner of making up the commission. They have voted and will continue voting for du-ties of 60, 70, and 80 per cent. on goods for women and children's clothing, window-glass, articles of iron, and other articles of common use among our people. This can not be justified by an assumed apprehension that harm may come to any industry as the result of the reduction or removal of war taxes.

In the past half century, with a tariff sometimes for revenue, at others for protection, our people have made the great mass of the wares they used. They will continue to do so in the future with the advan-tages afforded by an equitable revenue system or with the disadvantages this bill will for a time continue. Sooner than gentlemen expect, justice will be done even here; when it is, we shall have a system of more equal taxation, and agitation of this question will then cease.

# APPENDIX.

Memorandum.—Required the constant annual sum by payment of which the interest on the public debt of the United States will be met as it accrues and the principal extinguished during the period of twenty-four and one-half years, beginning January 1, 1883, and ending July 1, 1907; it being understood that the 3½ per cent, securities shall be first called in and paid; then so much of the debt bearing interest at 3 per cent, as can be called in and paid prior to September 1, 1891, when the 4½ per cent, securities bearing interest at 4½ per cent,), and then the portion of the 3 per cent, securities still outstanding; after which the 4 per cent, securities, which it is assumed can then be obtained at par, shall be purchased and canceled.

The interest-bearing indebtedness of the United States, not including the so-called Navy pension fund—a nominal debt of \$14,000,000 bearing interest at the rate of 3 per cent, per annum—was on the 1st day of January, 1883, \$1,378,245,450. The interest payable annually on this amount is \$52,987,547.50, showing an aver-

age annual rate of interest of 3.84 per cent. Of the aggregate indebtedness just stated \$99,324,200 bear interest at the rate of 3½ per cent, per annum, the annual payment for interest on this part of the debt being \$3,476,417; \$299,563,950 bear interest at the rate of 3½ per cent, per annum, the annual payment for interest on this part of the debt being \$8,680,918.50; \$250,000,000 bear interest at the rate of 4½ per cent, per annum, the annual payment for interest on this part of the debt being \$11,250,000; \$739,355,300 bear interest at the rate of 4½ per cent, per annum, the annual payment for interest on this part of the debt being \$29,574,215 total interest-bearing debt, as stated above, \$1,378,245,450, and the total annual interest \$52,987,547.50. The constant annual sum required by the conditions of the problem for the payment, in the twenty-four and one-half years from January 1, 1883, to July 1, 1907, of the principal and interest, as above given, of the interest-bearing debt of the United States is found to be \$88,822,947,50.

The \$99,320,300 of debt bearing interest at 3½ per cent, will be extinguished in two and two-thirds years (more accurately 2.691 years) from January 1, 1883, of the debt bearing interest at 3½ per cent, \$233,233,669 will be extinguished in a further period of about six years (more exactly 5.976 years), which added to the previous period of two and two-thirds years makes eight and two-thirds years (8.667) ending with the 1st day of 8eptember, 1891, when the securities bearing interest at 4½ per cent, become by law redeemable. The securities last mentioned, namely, those bearing interest at 4½ per cent, amounting to \$250,000,000, will be extinguished in four and seven-eighths years (more exactly 4.883 years) from the date last named. The remainder of the debt bearing interest at 3 per cent, amounting to \$36,330,270, will be extinguished in a further period of two-thirds years (more exactly 0.628 year), leaving ten and one-third years (more exactly 10.822 years) for the \$250,350,350

Education.

I trust more to the schoolmaster armed with his primer than I do to the solier in full military array for upholding and extending the liberties of his buntry.—Lord Brougham.

# SPEECH

# HON. JOSEPH WHEELER,

OF ALABAMA,

### IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 24, 1883.

The House having under consideration the bill (H. R. 6158) to aid in the support of common schools—

The SPEAKER. The gentleman from Alabama [Mr. Wheeler] is recognized.

Mr. PAGE. Will not the gentleman yield for a motion to adjourn?
Mr. WHEELER. I will yield for that motion provided I have the
floor when this bill is taken up next Monday.
Mr. PAGE. I move that the House adjourn.

Mr. WHEELER. Mr. Speaker—
The SPEAKER. The Chair understood the gentleman to yield for a

motion that the House adjourn.

Mr. WHEELER. I did not yield for that purpose.

The SPEAKER. The Chair understood the gentleman to say dis-

The SPEAKER. The Chair understood the gentleman to say distinctly that he yielded for a motion to adjourn.

Mr. WHEELER. I was willing to yield to the gentleman from California for that motion, provided I could have unanimous consent to occupy the floor on Monday when this bill is again taken up.

The SPEAKER. The Chair can only say that under the practice the gentleman would be entitled to the floor when the bill comes up again.

Mr. WILLIS. I hope the gentleman will go on now.

Mr. WHEELER. I decline to yield unless it is understood that I shall have the floor on Monday. [Cries of ''Regular order!'']

The SPEAKER. The regular order is the bill to aid in the support of common schools, on which the gentleman from Alabama [Mr. Wheeler] is entitled to the floor.

Mr. WHEELER. Mr. Speaker, I feel that it requires no argument to impress upon this intelligent body the duty of ingrafting the human mind with knowledge. In the first chapter of Genesis, in the third and fourth verses, in the Bible, I read these words:

And God said, Let there be light: and there was light. And God saw the light, that it was good.

Is it not possible that in these sublime words, the first recorded utterance of the Great First Cause, there is contained an indication to the beings for whose use He called a world from chaos, to enlighten the minds which He should implant in the human frame?

The Almighty is here represented as feeling a certain degree of pleasure as He contemplates the charming results of His high command, for "He saw the light" He had called out of darkness "that it was good." Though it is not in the power of any human tribunal by the mere force of words to spread the light of learning throughout the human family was Coal so family, yet God has graciously given us the capacity to enjoy the highest degree of gratification at the consummation of any good or beautiest degree of gratification at the consummation of any good or beautiful work which we may perform. And though we have not the power to command the instantaneous spread of education, nevertheless we have the legislative power to put this good work in motion; and it may be our pleasing privilege in aftertimes, when we contemplate the results of this day's labors, as we see the light of learning spreading abroad in the human mind, to know and rejoice "that it is good."

That inimitable French writer, Mgr. Dupanloup, beautifully says:

The work of the educator bears a likeness to the work of the Creator. If he does not create from nothingness, he draws from slumber and lethargy the benumbed faculties; he gives life and movement and action to an existence yet imported.

perfect.

In this light an intellectual, moral, and religious education is the highest possible human work. It is the continuation of the highest and noblest work of divinity: the creation of souls.

It is impossible for us to escape the responsibility which rests upon

with the present existing facilities placing education within the reach of every one, is it not a reflection upon us as a nation to see the appalling amount of ignorance with which we are surrounded?

Does not our conscience every day, yes, every hour, reproach us? Is

there not something that asks:

Can ye, whose souls are lighted, the lamp of life deny?

A few moments ago my eye fell upon the date of the invention of printing, and a thought of the condition of the world prior to that time forced itself upon me. There were in those days few books, comparatively, and those mostly in the classic languages, known only to the small number of the educated; for to read necessitated an acquaintance with those languages, so that the

MASS OF THE PEOPLE

were debarred from this medium of learning.

were debarred from this medium of learning.

In those days men with minds equal to or greater than Napoleon's, Cuvier's, Morse's, or Webster's, may have lived, contemplating great ideas, evolving wonderful inventions penetrating into the arcana of hidden science, and have died unknown, the grandeur of their conceptions buried in the grave with them. How frequently in the fragmentary manuscripts of the men who lived in those days do we find the first dawning of the ideas, the inchoate thoughts, the inception of inventions of which we now boast as the result of modern investigation, the development of progressive civilization. development of progressive civilization.

Surrounding us to-day there may be just such minds of natural grand-eur which cultured would equal any of the brilliant intellects that his-tory has ever known, but which like the priceless gem hidden beneath the surface of the earth, while there remaining, performs no function more important than does the common pebble by its side.

I consider-

Said Addison-

a human soul without education like marble in the quarry, which shows none of its inherent beauties until the skill of the polisher fetches out the colors, makes the surface shine, and discovers every ornamental cloud, spot, and vein that runs through the body of it. \* \* \* What sculpture is to a block of marble education is to a human soul. The philosopher, the saint, the hero, the wise, the good, or the great man very often lie hid and concealed in a plebeian, which a proper education might have disinterred and brought to light.

Leibnitz says:

The way to reform the human race is to reform the education of the young. The good education of youth is the first foundation of human happiness.

CHILDREN OF THE PRESENT DAY

who will be the legislators, the judges, the manufacturers, the agriculturists, and the busy working population of the country ere two decades of years have passed away. As we educate them, so will they be the counselors and patriots to save and defend the country and the Constitution, or a raging rabble ready and willing to overthrow the tempor of liberty and to destroy forever the fair fabric of freedom. "Educate the people," were the warning words of Washington; "Educate the people," echoed Jefferson; and let us join in the refrain, "Educate the people," until the means of education are in the reach of every child in the Republic. the Republic.

It will be observed that there is no provision in the bill of a sectarian

character.

Schools will all be opened as is now the custom by religious exercises, which important feature would thus in a measure be incorporated

into the system of instruction.

In this age of enlightenment we are daily more and more convinced that no education is worth having which does not crystallize around the principles of Christian virtue, and that the

#### HEART MUST NOT LIE FALLOW

while the mind is subjected to cultivation. And this was recognized by the men composing the Congress of the Confederation in these words:

Religion, morality, and knowledge being necessary to good government and the happiness of mankind, schools and the means of education shall forever be encouraged.

We must not forget that learning did not avert the fall of the old nations for it was when Rome had attained her highest point of intellectual grandeur that her scholars were among the most depraved and corrupt of men; so, too, if we believe the writings of Plato, the fall of the Persian nation was precipitated by the princes, who, though instructed highly in the arts and sciences, their hearts uninfluenced by any religious training, were monsters of vice, obeying only the brutal instincts of nature. When the colonists landed on the shores of the American continent,

seeking new homes wherein to rear their children far from the oppressions of the old governments, their first care was for the education of their children. In all the colonies

#### SCHOOLS WEEE ESTABLISHED,

and the culture of mind kept pace with the cultivation of the soil and the opening of the country. With the development of the principles of popular government grew the idea of the necessity for popular edu-If the people are to rule the people must not remain in ignorance. Knowledge is power; knowledge is freedom.

Ye shall know the truth, and the truth shall make you free.—John, viii, 32.

It is not surprising that our colonial fathers gave early attention to the education of their children. They were acquainted with some of the laws and customs of England, and were not unmindful of the great value of a little learning, for in the old country not many ages ago a man's life sometimes depended on his ability to read. Let us refresh ourselves a little by referring to these curious laws:

ourselves a little by referring to these curious laws:

In Dyer's time, a man being convicted of a simple felony, as stealing any chattel of the value of twelve pence, if, when asked why he should not be sentenced, he prayed the benefit of clergy, the book containing the "neck verse" was put into his hand, and if he could read he was discharged, but if he could not he was hanged.

A question arose "whether if a man who may have his clergy granted in case of felony prays his book and, in fact, can not read, and it is recorded non legit at clericus, and being respited for a time he learns to read before he is executed, he shall have his clergy, notwithstanding the record?" The matter was referred to all the justices of assize assembled at Sergeants' Ina, and it was resolved, is faceoren witz, that he should have his clergy; "for," said Dyer, "he should have had it allowed under the gallows by the Year-Book, 31 H., 6, 49 a, b, pl. 16, if the judge passed by there, and much more here. And although he had been taught and schooled in the jail to know letters and read, that shall help him for his life, but the jailer shall be punished for it."—Campbell's Lives of Chief-Justices, volume 1, page 191.

Proceenigings this processity, it is not surveying that the explicated.

Recognizing this necessity, it is not surprising that the earliest admonition of the patriots of those days was: "Educate the people." Early in the history of Massachusetts laws were made that each town of fifty families should maintain a primary school, and a grammar school should be opened in each town of a hundred families.

Penn's constant efforts in his colony of Pennsylvania tended toward the establishment of schools. And so, following out this idea of the necessity for popular education, and recognizing that one of the ends of government is to provide for a perpetuation of the principles of that government, the wise founders of the Republic, assembled in the Congress of the Confederation May 20, 1785, when considering the question of governmental aid for education, out of the means at their disposal made provision for that purpose.

There was then no revenue. There was an enormous public debt.

#### THERE WAS NO MONEY

to devote to school purposes; but there was land, billions of acres, and of this, their only abundance, they made a provision in the western territory (which included all west of the original thirteen States), of

#### SECTION NUMBER 16

"in every township for the maintenance of public schools within said township." Neither the manner of establishing these schools nor where the jurisdiction over them should reside was considered.

In the Continental Congress, July 23, 1787, it was enacted:

That the lot (section) 16 in each township or fractional part of a township be given perpetually for the purpose contained in such ordinance (the ordinance of May 20, 1785).

Also,

That not more than two complete townships be given perpetually for the pur-pose of an university, to be laid off by the purchaser or purchasers as near the center as may be, so that the same shall be of good land, to be applied to the in-tended object by the Legislature of the State.

April 30, 1802, Congress, in authorizing the formation of the State government of Ohio, ordered:

That the section number 16 in every township (and where such section has been sold, grasted, or disposed of, other lands equivalent thereto and most contiguous to the same) shall be granted to the inhabitants of such townships for the use of schools.

In addition to this, March 3, 1803, Congress provided:

That the following several tracts of land in the State of Ohio be, and the same are hereby, appropriated for the use of schools in that State, and shall, together with all the tracts of land heretofore appropriated for that purpose, be vested in the Legislature of that State in trust for the use aforesaid, and for no other use, intent, or purpose whatever.

Until this date there had been discussion whether the United States should control the schools benefited by these donations, or whether they should be under State management, and there was much legislation upon the matter, the ablest and most learned men of those times always contending that the control and management of public educa tion should be confined to the States.

This grant of the sixteenth section was made to all the States admitted into the Union, previous to the passage of the act for the organization of the Territory of Oregon, August 14, 1848, when, in addition to the sixteenth, the

THIRTY-SIXTH SECTION

in each township was also reserved and confirmed by grant in the act of

admission of each State or Territory into the Union since that date.

It will be perceived that the States of Alabama, Arkansas, Florida, Illinois, Indiana, Iowa, Louisiana, Michigan, Mississippi, Missouri, Ohio, and Wisconsin have each received one section less in each township than their younger sisters in the Union.

Subsequent legislation in reference to the lands donated for public schools was confined chiefly to enactments regarding the location of such lands, until July 2, 1862, when a donation was made to each State, for the support of colleges for the cultivation of

# AGRICULTURAL AND MECHANICAL SCIENCE AND ART,

of 30,000 acres for each Representative and Senator in Congress to which the State was entitled, of land "in place," where the State contained a sufficient quantity of public land, and of scrip when the State did not

contain such land.

The land "in place" amounted to 1,770,000 acres; land scrip, 7,830,-000; total, 9,600,000; the land grant to universities, under the law of 1787, amounted to 1,165,520; the sixteen sections and also the thirty-six sections amounted to 67,893,919; total lands granted for educational purposes, 78,659,439. In addition to these, large amounts of swamp lands have been appropriated, which would swell the amount to 130,-000,000.

In order to comprehend the extent of this domain we must remember In order to comprehend the extent of this domain we must remember that all of New England, together with the States of New Jersey, Maryland, and Delaware, have an area of 56,665,600 acres of land, which is less than half the area already given to States for the purposes of education. All the distinguished founders of our Government were earnest advocates of a system of public education. Franklin urged the importance of such measures, and after the Constitution was formed, Washington and Maryline and Lafferson Medicane and Clinical Research. ton and Hamilton, Adams and Jefferson, Madison and Clinton were particularly noted as supporters of the theory that government should see to it that education is placed within the reach of all its people. We have seen that one of the first acts of the Congress of the Confeder-

ation was to provide liberal donations of land for educational purposes; and yet the articles of confederation do not give any direct authority for such an appropriation.

Two years afterward, with this law fresh upon their minds, the fathers met to frame the present Constitution, in the preamble of which we find these words:

We ordain and establish the Constitution to promote the general welfare and ecure the blessings of liberty to ourselves and posterity.

I do not wish to be understood as asserting that the above words from the preamble is

#### AUTHORITY FOR GOVERNMENT APPROPRIATIONS

for education, but I will assert that the Constitution gives more authority to provide means for education than it gives for the support of an army in time of peace. I will read the provisions for that purpose:

Sec. 5. That Congress shall have power \* \* \* to declaye war; \* \* \* To raise and supportarmies, but no appropriation of money for that use shall be for a longer term than two years; \* \* \* \* To provide for organizing, arming, and disciplining the militia.

A strong argument might be made that this provision only contemplated supporting armies in time of war. Yet no one now contends that the maintenance of a regular army in time of peace is in violation of the Constitution.

The proceedings of our last session, page 417, January 16, 1882, contains the record which I will read:

#### COMMON SCHOOLS

Mr. Wheeler also introduced a bill (H. R. 2817) to aid in the establishment and temporary support of common schools; which was read a first and second time, referred to the Committee on Education and Labor, and ordered to be printed.

I prepared the bill referred to with much care, incorporating what I regarded as an essential provision, and which would enable the States and Territories having school organizations to control the fund and not be subjected to the embarrassments of

TWO SEPARATE BUREAUS.

State and Federal, which, besides incurring the danger of conflict, had other more objectionable features.

My bill was the first measure introduced by a Democrat for such appropriation and certainly the first advocacy of this character from a Southern Democrat.

It was also the first bill prepared, placing the management of the system under State control.

The committee to whom the bill was referred, concurring with me in these views, reported a bill which contains most of the features which were incorporated in the bill that I had prepared.

In order that the House may better understand the character of this measure, I ask that the bill be read.

The bill was read, as follows:

Whereas it appears from the Tenth Census that one-eighth of the people of the United States are totally illiterate, and it seems that those States in which illiteracy exists to the greatest extent are not at presentable to provide by local and State taxation for the adequate support of common schools to meet the emer-

gency; and
Whereas the general welfare and perpetuity of our whole country depend
upon the intelligence of all its citizens, and it is deemed to be the duty of the
General Government to aid temporarily in the support of common schools:

upon the intelligence of all its citizens, and it is deemed to be the duty of the General Government to aid temporarily in the support of common schools: Therefore,

Be it enacted, &c., That for five years next after the passage of this act there shall be annually, appropriated, out of any money in the Treasury not otherwise appropriated, the sum of \$10,000,000 to aid in the support of free common schools, which amount shall be known as the common-school fund.

SEC. 2. That the Secretary of the Treasury shall annually apportion to the several States and Territories the said sum of \$10,000,000, according to the number of their respective populations of ten years old and upward who can not read and write, as shown by the Tenth Census of the United States, which report shall be submitted to the Commissioner of Education.

SEC. 3. That before any State or Territory shall be entitled to receive its share of said fund it shall have provided by law for the free common-school education of all its children of school age, without distinction of color, for at least three months in each year, from the funds provided for schools under the laws of said State or Territory; and in no case shall any State or Territory be allowed out of said fund a greater sum than such State or Territory shall have expended during the previous year for the common-school education of the children of such State or Territory, exclusive of the sums paid for grounds, school buildings, or repairs on the same:

Provided, That separate schools for white and colored children shall not be considered a distinction of color.

SEC. 4. That an amount not exceeding 5 per cent, of the sum apportioned to each State and Territory, may be used by them for the education of teachers in normal schools, teachers' institutes, or otherwise.

SEC. 5. That it is hereby further provided that before any State or Territory shall be entitled to receive its share of said fund it shall have compiled with the following conditions:

First. That it shall have applied all moneys b

normal schools, teachers' institutes, or otherwise.

Sec. 5. That it is hereby further provided that before any State or Territory shall be entitled to receive its share of said fund it shall have complied with the following conditions:

First. That it shall have applied all moneys by it previously received under the provisions of this act in accordance therewith.

Second. That, it shall have caused to be made such reports to the Commissioner of Education concerning the condition of the schools in the same, on or before the 1st day of August of each year, as said Commissioner of Education, under the direction of the Secretary of Ute Interior, shall deem desirable; and shall especially report for each county as follows: The number of public schools of every grade; the whole number of daysactually taught in each during the year preceding; the total amount received from State taxes and from local taxes and the total amount expended for educational purposes in the preceding year; the total amount expended for white and colored schools separately; the number of public-school buildings owned and hired, and the character, condition, and value of the same; the number of children, white and colored, male and female, in attendance on the public schools, and the length of attendance; the number of the same; the number of cholored, employed at the same time and at different times in the same year, with particulars as to qualifications of same; the number of school libraries and the number of olumes therein; the branches taught and the text-books used; the total wages paid teachers, male and female, white and colored.

Sec. 6. That the Commissioner of Education shall prepare forms of such blanks as shall facilitate the making of the reports herein provided for, and transmit the same to the State and Territorial authorities.

Sec. 7. That in such States and Territories as shall maintain separate schools for white and colored children the money so apportioned shall be divided according to the respective number of such white a

with.

SEC. 11. That the amount apportioned to any State or Territory, and certified as herein provided, shall be paid on or before October 1 of each year, upon the warrant of the Commissioner of Education, countersigned by the Secretary of the Interior, out of the Treasury of the United States, to such officer as shall be, by the laws of such State or Territory, entitled to receive the same.

SEC. 12. That the Commissioner of Education shall annually report to Congress the information received by him from the reports of the school officers of the several States and Territories provided for herein, together with such rec-

ommendations as will in the judgment of the Commissioner subserve the pur-

ommendations as will in the judgment of the Commissioner subserve the purposes of this act.

Szc. 13. That there is hereby appropriated the sum of \$10,000,000 for the year commencing September 1, 1882, which shall be apportioned as directed herein; and those States and Territories which have provided by law for the free common-school education of their children of school age, without distinction of color, shall be entitled to their apportionment of said sum, all other requirements precedent to the right to receive such apportionment being hereby waived for the year 1882.

Szc. 14. That any State signifying its desire that the amount allotted to it under the provisions of this act shall be appropriated in any other way for the promotion of common-school education, in its own borders or elsewhere, its allotment shall be paid to such State to be thus appropriated. Provided, That its Legislature shall have first considered the question of its appropriation to the general fund for use under the provisions of this act in States and Territories where the proportion of illiterate persons is more than 5 per cent, of the whole population.

Mr. WHEELER. It is true that at first there were persons who se-

Mr. WHEELER. It is true that at first there were persons who severely criticised and condemned the measure, but in a few weeks I was overwhelmed with petitions urging me to press the bill to a passage, Most of the petitions came from my own State, and some of them from the district I have the honor to represent.

This question was to some degree considered in our State canvass pre-ceding the election for State legislators in August, 1882; and on the 11th day of December, 1882, this measure was unanimously indersed by the Legislature of Alabama, which was an almost solid Democratic

The joint memorial of that body, transmitted to our Senators and Representatives, I will read:

Joint memorial. Joint memorial.

That the Senators and Representatives in Congress from this State be requested to secure the passage of a bill granting aid to education in the several States on the basis of illiteracy, the amounts so appropriated to be applied by the several States through their superintendents of education.

WILBUR F. FOSTER,

Speaker of the House of Representatives.

GEO. P. HARRISON, JR.,

President of the Senate,

Approved December 11, 1882.

E. A. O'NEAL, Governor,

IPon. Joseph Wheeler, House of Representatives.

I now wish, Mr. Speaker, to call attention to the action of this session regarding apppropriations, to which I will add the sums appropriated during the last three years for the ordinary expenses of the Government, which of course does not include interest or any other expenditure pertaining to the public debt:

Note,—Since the delivery of this speech I have added the exact figures appro-priated in the sundry civil and the deficiency bills as they finally passed, and have also added the figures of the river and harbor bill as it passed the House.

Does it not seem that a Government which is spending money at the rate above indicated could give something to the important cause of education? Suppose we deduct 4 per cent. of the appropriations and apply the sum to education. This would give all we ask; and would any department of the Government feel the 4 per cent. deducted?

I will now read a table showing the amount expended in 1880 for

school purposes as reported by the Commissioner of Education; also the portion each State would receive of the proposed consideration:

States and Territories,			Share of each in \$10,000,000.

This report does not give the full amounts appropriated for school purposes in 1880 in some of the Southern States. They are continually increasing their donations of money for this purpose. This year, I am informed, Florida has at least two hundred thousand made available for educational purposes. And Alabama, besides largely increasing the general appropriation, has taken measures more effectually to collect the poll-tax, all of which the law provides shall be used for public education. If the present effort succeeds in collecting the poll-tax of education. If the present effort succeeds in collecting the poll-tax of one dollar and a half per head, from only two-thirds of those who should pay it, the fund this year for school purposes will exceed the \$694,000, the pro rata of Alabama under the bill now being considered.

To illustrate what has been done by the States themselves, and also

to give an idea of their relative ability to cope with this question, I have prepared a table showing the expenditure for educational purposes in each State and Territory as reported by the Commissioner of Educa-tion; also the assessed value of property as shown by the census of 1880:

Expenditure for educational purposes.

States and Territories,	Expenditure in 1880,	Assessed valuation,

Total	* **************	16, 902, 755, 893

We therefore see by this table that Florida, Mississippi, and Missouri spend largely more than four-tenths of 1 per cent, on the valua-tion of property for school purposes; that Alabama, Delaware, Louisiana, Maryland, and Virginia, spend more than three-tenths of 1 per cent. of the valuation of their property, for the same purpose; that Arkansas, Georgia, Kentucky, North Carolina, South Carolina, Tennessee, Texas,

Georgia, Kentucky, North Carolina, South Carolina, Tennessee, Texas, and West Virginia spend nearly three-tenths of 1 per cent.

To show how favorably this compares with the States of the North, I call attention to the fact that Massachusetts and New Jersey and New Hampshire only spend about three-tenths of 1 per cent. on the value of their property, Rhode Island but about two-tenths of 1 per cent., and New York less than four-tenths of 1 per cent.

This statement of figures refutes the charge made against the Southern States of being neglectful of the educational interests of their people, and shows that in proportion to the assessed value of their property their expenditures equal those of the most cultured of the Northern States; while it further reveals that in proportion to wealth the genera-States; while it further reveals that in proportion to wealth the generosity of expenditure of Florida, Mississippi, and Missouri exceeds that of the State of Massachusetts, famed as is that State for the learning

of her people.

I insist, Mr. Speaker, that there is no investment of money that can be made by any sovereignty that brings so large a percentage of profit as money invested in education.

I have used the word investment not in the sense alone of money at interest, yielding a per centum in cash, to be added year by year to the original amount, in the production of dividends, and so to inspire speculations in stocks and ventures, as the capital swells in dollars and cents into fortunes. On the contrary, I mean here by investment, the food furnished by an enlightened government to nourish and develop the mind of an earnest and thriving generation of mortals who, outside of the use of money, are making themselves ready to produce it, and use money in the most practical way.

In what way can we better develop the wealth of our country than by educating our people? Alabama to-day has an area of coal and mineral lands nearly equal in extent to those of England. With the opening up of this wealth is there any possible estimate we can put upon our prosperity? In reply to those who insist that this bill is an innovation of the principles of our Government, let me say that the system proposed, with proper restrictions and limitations, is no departure from the policy of the Government. Every State in the Union has its college and academies built out of the public domain munificently donated for that purpose. Unfortunately, however, though the acres of donation were originally equal, the States admitted into the Union at later dates have the advantage of the earlier States, both as to acreage of grant and the greater value of the lands resulting from the more rapidly filling up of the population.

This bill to a certain extent is intended to equalize the donation. I had time I could illustrate this proposition satisfactorily, but I here merely throw it out as a thought for members. That country that has the best school facilities will attract to it the greatest number of the best class of emigrants. People who are willing to go to a country where they can not educate their children are not of the class who will make good citizen

Can we invite the best of European labor to come and dwell among us unless we offer to them educational facilities superior to those they enjoyed in their European homes?

Last year France spent \$22,717,880 for the purposes of education England last year spent £2,749,863; Scotland, £468,512; poor Ireland, £729,868; Belgium, with a population of 5,000,000, spent last year over\$5,000,000 on education; Prussia, with 27,251,067 population, expended \$11,458,856.

I will now ask leave to read a table, showing the number of persons who have the right to vote, who are reported by the Census Bureau as not being able to write. Those residing in the Northern States who-

have had advantages denied to the Southern people I will classify in the first table:

States.	fotal number of males of 21 years of age and upward,	Number of males 21 years of age and upward who can not write.			
	Total of mu year	White.	Colored.	Total.

If here hat r of

ong hey i. Irelast ion,

ons a as who I will now ask leave to read a similar table regarding the sixteen States of the South, in which I particularly call attention to the great amount of illiteracy among the colored people. It is true that lack of education exists altogether too much among the whites, and I hope that this House will be impressed with the fact that a government, deriving all its power from the sovereign will of the people, has no right to leave so large a proportion of its voting population without advantages of education:

	number voters.		of voters ed as not	
	Total of v	White.	Colored.	Total,
Alabama	259, 884	24, 450	96, 408	120, 858
Arkansas	182,977	21, 349	34, 300	55, 649
Delaware	38, 298	2,955	3,787	6,742
Florida	61,699	4,706	19, 110	23, 816
Georgia	321, 438	28, 571	116,516	145,087
Kentucky	376, 221	54, 956	43, 177	98, 133
Louisiana	216, 787	16,377	86,555	102,932
Maryland	232, 106	15, 152	30,873	46,025
Mississippi	238, 532	12, 473	99,068	111,541
Missouri	541, 207	40,655	19,028	59,683
North Carolina	294,740	44, 420	80, 282	124,702
South Carolina	205, 789	13,924	93,010	106, 934
Tennessee	330, 305	46,948	58, 601	105, 549
Texas	330, 476	33,085	59,669	92, 754
Virginia	334,505	31,474	100,210	131,684
West Virginia	139, 161	19,055	3,830	22, 885
Total.	4, 154, 125	410,550	944, 424	1, 354, 974

It is true that these tables present a very unsatisfactory exhibit, but in order to show what a large proportion of the money which would fall to the share of the Southern States would be used for the education of the colored people, I beg leave to present a table which shows the relative proportion of whites and blacks in sixteen Southern States and in the District of Columbia.

Relative proportion of whites and blacks.

States.	White pop- ulation.	Colored popula- tion.
Alabama. Arkansas Delaware. Florida Georgia. Kentucky. Louisiana. Maryland. Mississippi. Missouri North Carolina. South Carolina. South Carolina. Tennessee Texas. Virginia. West Virginia. District of Columbia.	391, 105 1, 138, 831 1, 197, 237 880, 858	600, 103 210, 666 26, 442 126, 690 725, 133 271, 451 483, 655 210, 230 650, 291 145, 350 531, 277 604, 332 403, 151 393, 384 631, 616 25, 859, 596
Total	12,578,253	6, 099, 258

And now, Mr. Speaker, I desire to say that the Southern States, particularly those under Democratic rule, and more especially those which have been longest under Democratic rule, have done full justice to the colored people. They have given them advantages equal to those which have been accorded to their white population. In my State every dollar collected from colored people as poll-tax is donated to schools for the colored race, and in addition they are accorded a full share of the general appropriation for school purposes. We have given them normal schools for the purpose of educating colored teachers, to maintain which involves very large expenditures. Notwithstanding what has been done, the table which I will now read, which refers to schools exclusively for colored children, shows that the enrollment is not by any means what it would be if Congress should pass this bill:

Class of institutions.		Enroll- ment,	
Public schools Normal schools Institutions for secondary instruction Universities and colleges Schools of theology Schools of law Schools of medicine Schools for the deaf, dumb, and blind	15 22 3 2	784, 709 7, 408 5, 237 1, 717 800 35 87	
Total	16,793	800, 100	

I will now, Mr. Speaker, present a valuable table prepared by Hon. Mr. Waite, agent statistics of education. The table is taken from the report of the census of 1880.

Population and percentage of illiteracy.

		who	pop-	who	pop-
States and Territories.	Total population.	Total population can not read, 10 of age and over.	Percentage of total ulation who can read.		Percentage of total ulation who can write,

I will now, Mr. Speaker, add a tabular statement, which I take from the report of the Commissioner of Education, which shows the grants of land by Congress for school and university purposes from 1792 to the present time. The table also gives the date of each act and the num-ber of acres donated by said act.

Statement of grants to States and reservations to Territories for school purposes.

States and Territories.	Total area.	Dates of grants.
SECTION 16. Ohio	1, 067, 107 886, 460 908, 503 905, 144	March 3, 1803, April 19, 1816. April 18, 1818. March 6, 1820. March 2, 1819. March 3, 1803; May 19, 1852; March 3, 1857. April 21, 1806; February 15, 1843. June 23, 1855. Do. March 3, 1845. Do. August 6, 1846.
SECTIONS 16 AND 36.  California	2, 8889, 990 3, 329, 708 2, 801, 306 3, 985, 428 2, 702, 044 3, 715, 555 2, 488, 675 4, 309, 368 3, 003, 613 5, 894, 451 5, 112, 035 4, 050, 347 3, 068, 231	March 3, 1853. February 25, 1857. February 14, 1856. January 29, 1861. March 21, 1864. April 19, 1864. March 3, 1875. March 2, 1853. September 9, 1850; July 22, 1854. September 9, 1850. March 2, 1861. February 28, 1861. May 26, 1864. March 3, 1863. July 25, 1868.
Total	67, 893, 919	

No grants to Indian and Alaska Territories. Lands in sixteenth and thirty- I also append the following table showing school income and school

sixth sections in Territories not granted, but reserved. Lands in place and indemnity for deficiencies in sections and townships, under acts of May 20, 1826, and February 26, 1859, included in above statemer.t.

#### UNIVERSITY GLANTS.

I will now read a table which states the number of acres granted to the States and reserved in the Territories of Washington, New Mexico, and Utah for university purposes by acts of Congress, the dates of which are given in proper column:

States and Territories.	Total area.	Under what acts.		
	Acres.			
Ohio	69, 120	April 21, 1792; March 3, 1803.		
Indiana	46,080	April 19, 1816; March 26, 1804.		
Illinois	46,080	March 26, 1804; April 18, 1818.		
Missouri	46,080	February 17, 1818; March 6, 1820.		
Alabama	46,080	April 20, 1818; March 2, 1819.		
Mississippi	46,080	March 3, 1803; February 20, 1819,		
Louisiana	46,080	April 21, 1806; March 3, 1811; March 3, 1827.		
Michigan	46,080	June 23, 1836.		
Arkansas	46,080	Do.		
Florida	92, 160	March 3, 1845.		
Iowa	46,080	Do.		
Wisconsin		August 6, 1846; December 15, 1854.		
California	46,080	March 3, 1853.		
Minnesota	82, 640	March 2, 1861; February 26, 1857; July 8, 1870.		
Oregon	46,090	February 14, 1859; March 2, 1861,		
Kansas		January 29, 1861.		
Nevada	46,080	July 4, 1866,		
Nebraska	46,080	April 19, 1864.		
Colorado		March 3, 1875,		
Washington Territory	46,080	July 17, 1854; March 14, 1864.		
New Mexico Territory		July 22, 1854.		
Utah Territory		February 21, 1855.		
Clan Activory	20,000	February 21, 1800.		
Total	1, 165, 520			

Lands in the Territories not granted, but reserved.

I will now present a table of statistics which explains itself. The data is taken from the census reports and from Mr. Spofford's almanac. Where the figures differ from statements in other tables it is accounted for by the fact that the tables refer to different years:

	School population, 1880.	stimated population, between 6 and 16 years of age, 1879.	-qnd- 880.	normal 1880.	in agri- colleges.	ap-

In addition to all that has been said upon this subject there are other reasons, Mr. Speaker, which impel me to advocate this measure with all the earnestness in my power. Circumstances have thrown me in very intimate relations with the people from many parts of the South, and particularly close for several years has been my intimacy with the people of that section known as North Alabama.

There is something in the character of these people which, in spite of one's self, will draw forth feelings of love and admiration. They were brave soldiers in war, are exemplary citizens in peace, and faithful and true to all the social relations of life. In the language of Edmund Burke, "They were a people proud and jealous of their freedom." Freedom to them is not only an enjoyment, but a kind of rank and privilege. They resemble the people of our ancient commonwealths. Such were our Gothic ancestors; such in our days were the Poles, and such will be all men and all nationalities who in their youth have imbibed the sub-lime principles of justice, virtue, and liberty. In such a people the consciousness of domination combines with the spirit of freedom, fortifies it, and renders it invincible.

A vast number of these people were never slaveholders; they were people of moderate means and shunned the rich, alluvial lands of the valleys. They or their fathers selected more humble abodes on the lofty plateaus, sometimes called the mountains of North Alabama

It is the jealousy with which these people cherished the spirit of liberty and local independence which causes them to so tenaciously claim the rights accorded them by the Constitution of their country. The native energy of the minds of these people is shown from the fact that from them arose most of the great leaders among the Southern people.

From this class of men came such leaders as Andrew Jackson, of Tennessee, and Stonewall Jackson, of Virginia. They furnished the greater part of the rank and file of the armies of the confederacy, and concluded with glorious honor a contest which they entered into with unanimity, prosecuted with unparalleled devotion, exhibiting in all times an endurance and gallantry which commanded for them universal admiration. The ancestors of these men fought in the war of 1812, the war with Mexico, and the war of the Revolution. From this class of the people came such men as Patrick Henry, Calhoun, Clay, Andrew Johnson, Jefferson Davis, Alexander H. Stephens, and

we might add most of the prominent political leaders of the last half century. Their attachment to home influences disinclined them to emigration, and as a consequence the best energy and talent of that section of country has not been drained, as is the case in New England, which has furnished so many distinguished men to every State of the Union.

has furnished so many distinguished men to every State of the Union. It is this class of people for whom I appeal when I ask that they may have the same opportunities which have been accorded to the other sections of our land. You can not travel in the mountains of North Alabama without being impressed with the honest principle and intensity of religious feeling which prevails. You will receive in the humble homes the most cordial hospitality. You are invited to partake of the best their means afford; you are welcomed to the family circle, and before you retire the family is assembled in religious devotions. These people yearn for the advantages of education. They appreciate its blessings, and they lavish honors upon persons of culture and education from whatever section they come.

The most distinguished men of Georgia, Mississippi, Louisiana, and Texas are from the far North. I recall at this moment Goldthwaite and Manning of our supreme court bench. Quitman, the gallant soldier, the distinguished governor, and a chancellor of the supreme court, the received all his honors from the people of Mississippi, came from the Knickerbocker country of New York. Prentiss, who was idolized by the entire Southern people, came from Maine. He commenced his career in the South as an humble school teacher. Robert J. Walker, John D. Freeman, Montgomery, Boyd, and many others came from the cold regions of the North and settled among us of the South, and won by their talents and culture the respect and esteem of all our people.

There is much more, Mr. Speaker, that I would like to say. There is much more that I feel I ought to say upon a subject which in importance is not surpassed by any question which has claimed the consideration of this American Congress, but having already trespassed upon the indulgence of this House, I will close my remarks with these eloquent words of Daniel Webster:

If we work upon marble it will perish; if we work upon brass time will efface it; if we rear temples they will crumble into dust; but if we work upon immortal minds, if we imbue them with principles, with the just fear of God and love of our fellow-men, we engrave on those tablets something that will brighten to all eternity.

Rivers and Harbors.

SPEECH

## HON. ADDISON S. MCCLURE,

OF OHIO.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 1, 1883,

On the bill (H. R. 7631) making appropriations for the construction, repair, and preservation of certain works on rivers and harbors, and for other purposes.

Mr. McCLURE said:

Mr. Speaker: To vote for a river and harbor appropriation bill, however just its provisions, however impartial its allotments, however obvious its benefits, after the storm of misrepresentation that recently swept over the country, will require the serene courage of honest con victions of public duty. The reproach heaped on the river and harbor measure of last session in some of the seaboard cities of the Atlantic, especially in New York, was so coarse, so wanting in every element of just and sober criticism, as to almost warrant the conclusion that there were unfair motives behind it. That measure was stigmatized, not simply as a lavish expenditure, not simply as wasteful profusion, but as a naked steal, as a bold robbery of the national Treasury, more flagrant and odious than the salary-grab of 1873. Nor did the denunciation and uproar stop here.

The motives of the members who voted for it were openly challenged, their official probity impugned, and their names covered with undeserved obloquy. And now when the storm signals are down, when the public passions have subsided, what fair-minded man in the United States will affirm that any member who voted for that measure was instigated by corrupt designs on the public moneys, or was enriched by a single dollar

of illicit emolument?

This scheme of indecent villification had its origin on Manhattan Island. It was bottomed on commercial jealousies and fomented by the extortion of railway monopolies. It was organized to throttle, in its beginning, the beneficent national policy of improving the Mississippi River, with its navigable tributaries, as the great national avenue of commerce. It was contrived to protect the transportation interests of the mammoth trunk lines of railways that stretch from the North Atlantic, across the Mississippi Valley, almost to the Pacific Ocean. It was cultivated with hot energy by the railway organs in the name of public economy and good government. By artful misrepresentation they succeeded in provoking the popular displeasure against the men who supported the

measure of last session, but their success will prove to be ephemeral.

That a commanding interest, an interest treated by the National Government with princely liberality, an interest endowed with millions of acres of the public domain, subsidized with \$64,000,000 of Government bonds and \$40,000,000 of unreimbursed interest, equipped with franchises of incalculable value, should, through its open and secret organs, make war on two-thirds of the members of Congress, because, in the interest of cheap transportation in all sections of the Union, they had aimed to establish, enlarge, and develop competing water routes, is somewhat singular. In citing these facts I do not propose to impeach the original policy of land grants and subsidies to railway corporations, but to emphasize the old story, that avarice, ingratitude, and injustice will, in the end, always overreach themselves.

Another circumstance attending the roar of abuse that pursued the men who voted for the river and harbor bill of the last session of this House deserves to be noticed. At the same time the New York press scourged with virulence the members who voted four millions of dollars to improve the navigation of the Mississippi, from Cairo to New Orleans, it espoused with vehemence the dedication of the Eric Canal to free commerce. To construct, enlarge, and repair this canal cost the people of New York State sixty millions of dollars, and its aggregate tolls, since its inauguration in 1825, aggrandized the revenues of the State to the extent of eighty millions of dollars. By a majority of over 200,000 votes the people of the State yielded it up to free commerce. That splendid gift to the transportation facilities of the country justly vertice and chearly be said doubtless is highly approximated.

That splendid gift to the transportation facilities of the country justly evokes applause and should be, as it doubtless is, highly appreciated by the beneficiaries, especially the people of the West.

But why should this burden be put on the shoulders of the people of New York? There is unquestionably a motive behind it other than pure benevolence. That motive is founded on commercial rivalry and has for its chief purpose the retention of dominion over the commerce of the great West. It is an oily scheme to seduce the commerce of the Northwest from its nuptial contract with the Mississippi River and to cause it to clope to the scalpoord through the Eric Canal.

Northwest from its nuptial contract with the Mississippi River and to cause it to elope to the seaboard through the Eric Canal.

Sandy Hook against the South Pass, New York against Saint Louis and New Orleans is the true solution of this transaction.

Since the success of the jetties, since the evident purpose of Congess to take care of the Mississippi as an "arm of the sea," as the great central tonnage artery of the continent, commercial jealousy has been excited in some of the seaboard cities of the North Atlantic, likely to be

affected by these measures of internal improvement. Hence any member who votes for the improvement of the Mississippi River, or its navigable tributaries, incurs the disadvantage, if not the odium, of being proscribed as the sworn enemy of the commercial metropolis of the

country.

country.

This is a capital mistake. What member on the floor of this House who hails from the Mississippi Basin, where the unselfish spirit of exalted nationality has attained its most vigorous growth, would hesitate for a moment to vote every dollar needful to make the harbor of New York easy of access to the deepest keel that ploughs the ocean? What man who hails from the Mississippi Valley could see the shadow of a single cloud fall on the prosperity of New York city without feeling that it affected the whole country? I profess, for myself, to cherish a patriotic pride in that hive of human industry that fills Manhattan Island and overflows into the adjacent municipalities. I hope it may grow from year to year in arts, commerce, civilization; in law, local modesty, and orthodox theology: that its merchant princes may glow. modesty, and orthodox theology; that its merchant princes may glory in affluence of fortune, may pile up the wealth of quarried marble in palatial residences, and be renowned throughout the world for commer-

palatial residences, and be renowned throughout the world for commercial probity.

I would rejoice to see Broadway, from the Battery to Spuyten Duyvel Creek, paved with solid silver and Fifth avenue blaze with the diamonds and rich attire of fair women. I would like to see the city overspread Long Island; fill up the gap between Amboy and Dobbs Ferry; rival London in populousness; Paris in splendor; combine the culture of Athens with the dominion of Rome; be crowned queen of commerce, embellished with the transplanted monuments of antiquity and enriched with the pacific spoils of all profitable latitudes.

riched with the pacific spoils of all profitable latitudes.

The transportation problem in the country is a weighty problem. The restoration of our mercantile marine, the stable readjustment of the tariff, the reduction of the burdens of internal taxation, are justly regarded as matters of vital national concern, but not more so than

that of cheap transportation.

Our agricultural products for 1880 reached the enormous aggregate of 57,000,000; our exports and imports, \$1,600,000,000; and the products of our manufacturing industries, \$5,369,000,000. We paid for railway transportation in 1881 over \$700,000,000. Add to this sum the amount paid for transportation in the coastwise and ocean trade, on lakes, rivers, canals, and for inland transportation other than by railway, and it is safe to affirm that the American people in the year named paid for transportation alone a sum equal to the public debt at the present time. Much of our raw material and manufactured products are transported over vast distances, and to cheapen transportation by

rail, steam, or sail is a matter of incalculable importance to the public.

The giant growth of the railway interest of this country is one of the marvels of modern times. It leaped from 2,818 miles in 1840 to 104,000 in 1881, almost equaling the total mileage in all other countries in the world. These roads cost in their construction and equipment \$5,557,996,991; their gross earnings were \$725,325,000; their employés numbered 1,200,000; and the value of the tonnage moved, \$12,000,000,000. Mathematics is too cold to compute this prodigious growth or to

measure these gigantic operations.

One of the most significant features in the history of this country perhaps since the close of the civil war is the rapid accumulation of great masses of property in the hands of a few men who control the principal trunk lines of our railway system. The current tendency to consolidation is almost portentous.

Road after road has been absorbed by the principal lines until powerful corporations dominate the continent from ocean to ocean, and aspire, not only to control public opinion, but to dictate the legislation of the country. They have strangled in many instances beneficial competition, and in many other instances rendered all competition imprac-These great trunk lines in their interstate traffic are wholly uncontrolled by law. By their pooling of issues, by their wars, by their discriminations against localities, by their rebates and drawbacks, a pernicious system which enables them to take the strong shipper by the hand and the weak by the throat, they have perplexed business, robbed communities, inflicted incalculable injury on localities, and utterly destroyed every element of stability in freight tariffs.

terly destroyed every element of stability in freight tariffs. In the matter of winter tariffs alone their action descends to the turpitude of rapacity. They coin into gold the first breath of winter that seals navigation, husband the vicissitudes of climate, harvest opulence from the rigors of the Northern latitudes, by pooling issues with the thermometer. That they take an unfair advantage of the interruption of the water transportation in the North and Northwest by the dominion of winter will hardly be denied. Now, I do not propose to engage in a mere agrarian clamor against the railway enterprises of the country or to advocate dangerous aggressions on corporate franchises or try or to advocate dangerous aggressions on corporate franchises or vested rights. The interests of railways are bound up with the public vested rights. The interests of railways are bound up with the public prosperity, and they should be brought into more harmonious relations with the public. They are auxiliaries of civilization, and have marched step by step and hand in hand with the growing tide of immigration that has poured into the West creeting mighty States in the wilderness. But that there are wrongs connected with their management to be righted, grievances to be redressed, glaring evils to be eradicated is indisputable. Congress, by a judicious system of internal improvements, by fostering competing water routes, holds in its hand the power to mitigate in a large degree the evil complained of. There is an exuberance of material. Nature has been lavish in her gifts of water transportation to the United States of America. The Atlantic seacoast, from the Bay of Fundy to the Florida reefs, rejoices in the affluence of its rivers, bays, and harbors, which constitute a paradise of commercial energy, thrift, and adventure. On the south, the Gulf of Mexico speads out its ample and adventure. On the south, the Guin of steems speads out its ample bosom to the navigator. The Pacific, on the west, is full of soft attractions to commerce. On the north, the great mediterranean lakes extend over seventeen degrees of longitude, spacious avenues of commerce, tilled with a floating forest of masts; the home of marine freedom, the nurseries of sailors as handy as ever contended with storm and wave, forever dedicated to the unfettered democracy of free navigation. No sceptered monopoly fixes its yoke on their boundless waves, nor does any aggregation of capital bridle their wild liberty. They obey no syndicate except that of the Almighty. Any member on this floor who has traversed those inland seas, from Buffalo to Duluth, a city commemorated by the forensic gayety of the distinguished gentleman from Kentucky, will readily understand the signal advantages that have accrued to their commerce and navigation by reason of the wise superintendence

and liberal policy of the National Government.

Take the basin of the Mississippi, the noblest valley in the world, nobler far than the Amazon, the Nile, the Ganges, the Danube, or the Rhine. It stretches in unmatched amplitude from mountain to mountain, from the lakes to the Gulf. It contains 20,000 miles of navigable ann, from the takes to the Gulf. It contains 20,000 miles of navigable waters, unrivaled resources of cheap transportation. The fertility of tisself coaxes man to industry, and the exhibitantion of its climate fills his veins with constitutional vigor. An omnipotent power fashioned it to be the home of a great people, and it is destined to become before many generations the center of civilization as well as the proudest monument of the hessings of free government.

of the blessings of free government.

an

When the nation was young and poor and weak we acquired Lou-isiana, and with it the immense expanse of territory extending from the mouth of the Mississippi to Vancouver's Island, and even beyond, for, in the Oregon boundary question the muniments of title acquired by the purchase of Louisiana were the foundation of our claim to all the region up to "fifty-four forty." We acquired it when the constitutional power of the National Government to acquire territory by purchase was hotly disputed. We acquired it when its acquisition meant, perhaps, the expenditure of the national blood as well as the national treasure. We acquired it not simply to enlarge our territorial area, but to hold forever the Mississippi River and its outlets as an unblockaded highway of commerce to the sea.

Eighty years of experience ratifies and applauds that acquisition as

one of the noblest efforts of American statesmanship.

When the English veterans, trained in the Peninsula under the greatest of English soldiers, unfurled a foreign flag on the banks of the Mississippi, they met a valor as resolute, if not as disciplined, as that of the soldiers of Marengo and Austerlitz. When in the civil war a flag representing the principles of rebellious violence to the Union was displayed senting the principles of rebellious violence to the Union was displayed from New Orleans to Cairo, the nation marshaled 500,000 soldiers, as brave as ever pulled a trigger, to tear it down. In that valley was first unfolded the solid genius of the greatest captain now living on earth, Ulysses S. Grant. There the inimitable strategy of Sherman found an ample theater of operation. There the brilliant qualities of Phil Sheridan flashed in the smoke of the struggle. There the heroic Thomas stood like the throned hills against the red, surging fury of a desperate enemy. There Rosecrans put forth patriotic efforts in behalf of the national cause. There, too, the young and ambitious Garfield moved There, too, the young and ambitious Garfield moved untouched amidst the volleyed missiles of war, to fall in the end under the more cruel missile of the assassin.

When, after Fort Donaldson, and Shiloh, and Stone River, Chickamauga, Lookout Mountain, Vicksburgh, and Port Hudson, the Mississippi River was recovered to the nation, the doom of the confederacy was sealed. He who lays the hand of intestine violence on the Mississippi River combats the ordinance of nature and incenses Omnipotence by rebelling against His wise provision. Every drop in its mighty volume of water from its source to its mouth is chivalric in loyalty to the Its floods are terrible engines of war and its uncut levees perpetual pledges of domestic peace. Diked, circumscribed, harnessed, deepened, improved, it becomes an indissoluble bond of union more valuable than standing armies or steel-clad navies.

I believe that it is entirely practicable to so wed Wisconsin and Minnesota to Louisiana and Mississippi, to so yoke Saint Paul to New Orleans by national civility to the Mississippi Riverthat no human power, nothing but the convulsions of nature, can tear them asunder. Congress has the constitutional power to solemnize this marriage of the centuries by appropriate legislation. I would like to have a hand in it. I would like to be the officiating clergyman. But there are gentlemen here, as well as elsewhere, who believe that the mastery of the Mississippi River offers a problem incapable of solution; that our engineering skill, splendid as are the monuments of its achievments, will be futile to control it and that we will be obliged, out of sheer powerlessness, to commit the river to the uncontrollable caprice of nature. That is an old story, old as the first human endeavors to surmount the obstacles

of nature and to appropriate its forces to the economy of human happiness. Substantially the same predictions were ventured as to the

The First Napoleon, measuring the magnitude, grasping the utility of such a commercial highway, caused a route to be surveyed. The engineers by a gross miscalculation elevated the level of the Red Sea thirty feet above the level of the Mediterranean. For fifty years that de-lusion imposed on the world. When it was finally dissipated other obstacles were conjured up by the wise men. They said that the sirocos of the deserts, hot hurricanes of whirling sands, the blizzards of the Sahara, would fill up the channel as fast as it was excavated; that the Nile, pouring down its oozy sediment along the Mediterranean shore, would choke up the canal at its mouth, and that the sandy bed of the desert would let the water through like a sieve. All these forecasts of complex difficulties were signally disappointed. The canal was built, one hundred miles long, three hundred feet wide, twenty-six feet deep,

one numbered miles long, three numbered rete wide, twenty-six rect deep, a monument of civilization that degrades the Pyramids.

The Mediterranean kissed the Red Sea, the oceans embraced after centuries of alienation, everybody applauded except the apostles of the Cape of Good Hope, who still hug their old delusions in spite of the fact that the stock of the canal is worth five times its par value. So when the jetties of the Mississippi were projected, the wise men affirmed with sad emphasis that they would prove a failure and a blunder; that the 3,000,000,000 tons of sedimentary matter transported in a state of the 3,000,000,000 tons of sedimentary matter transported in a state of suspension each year to the Gulf by the enormous energies of the river would mock at and baffle the efforts of the engineers by depositing a new bar at the mouth of the jetties. This forecast of insuperable difficulties proved to be groundless. Gibbon, in commenting upon the devastating floods of the Tiber, was led to observe that the "servitude of rivers is the noblest and most important victory which man has obtained over the light increases of nexture?" obtained over the licentiousness of nature."

The South Pass is a happy illustration of the wisdom of this observa-

tion. Engineering skill achieved a marvelous triumph there by literally enslaving the energies of the river and compelling them to do its Where commerce was obstructed by eight or nine feet of water, it is now facilitated by twenty-six feet of water. The South Pass rivals the Narrows. The jetties have augmented the ocean commerce of the Mississippi River a hundred-fold. Captain Eads fulfilled his contract Mississippi River a hundred-fold. Captain Eads fulfilled his contract literally as it was nominated in the bond or the engineer officers of the Government, the whole city of New Orleans, the entire population dwelling on the Lower Mississippi are engaged in a conspiracy to perpetrate

of the Dower Mississippi are engaged in a conspiracy to perpetute a fraud on the American people.

When the bill to provide for the appointment of the Mississippi River Commission was under consideration in the House General Garfield, in referring to the work in the South Pass, said in substance "that if the jetty system proved a permanent success, all our calculations and indeed all our theories concerning the improvement and management of other portions of the river need to be reconsidered in view of the new light the jetty system will throw upon the question." In speaking of the Mississippi itself, he said:

This great river which our fathers made such sacrifices to acquire, and which the present generation made such costlier sacrifices to redeem from disunton and to hold in the grasp of the nation, we have held, not in obedience to sentiment alone, not with a view of keeping it as a vast and worthless waste of waters, but to utilize it by making it the servant of all the people of the country. How shall we utilize it, unless at some time and in some wise way we bridle it by the skill of man and make it subservient to the interests of commerce?

The Mississippi River Commission was appointed in 1879. The engineering genius, skill, and experience of the country is grouped in its composition. It has bestowed elaborate investigation on the river problems. Why discard its plans? The outlet system would only force the river to retrograde in geology. Do you want to go back to the gla-cial period? The engineer who would invite the river out of its bed would only confirm its intemperate habits. For uncounted years the Mississippi has been damming up outlets, fighting to perfect its bed, to curb its own lawlessness, to establish a system of civil-service reform, to do precisely what the jetties propose to help it to do—finish itself. It will do this itself in time. But it will take ten centuries of floods, of shifting bars, of interrupted navigation, of the wasted fruits of hu-

man industry, aggravated by human woe.

There is no study, Mr. Speaker, so full of interest and grandeur as the study of the efforts of man to overcome the obstacles and to utilize

the forces of nature.

If I were called on to name a special glory of Roman civilization, I would not name the baths of Caracalla, or the stupendous aqueducts that supplied them. I would not name the amphitheater of Titus, colossal as it is in its ruins. I would not name the Forum, with its wealth of historic associations, but I would name those solid and massive public highways, which, issuing from Rome, traversed the empire in all directions; works so solid in construction that "their firmness has not entirely wielded to the efforts of fifteen centuries." Little Holland entirely yielded to the efforts of fifteen centuries." Little Holland choked back the ocean, expelled him, expatriated him, dismembered and occupied his bed. For a hundred miles along the North Sea she barricaded the dispossessed waters, and for centuries has collected the landlord rent from a part, at least, of the ocean's ancient homestead,

reclaimed by the herculean toil of her laborious people.

The Danube has been conducted into a new channel at Vienna, and

its flood-fangs drawn at a cost of \$12,000,000. The bar at its Silurian mouth has been reduced from eight to fifteen feet by two enormous wingdams, and its commerce thereby vastly enhanced. The project is on The project is on dams, and its commerce thereby vastly enhanced. The project is on foot to extirpate the Zuyder-Zee, and to reclaim its immense area, at a cost of \$45,000,000, an hydraulic enterprise bold and audacious beyond example, for it means the lifting of a sea from its foundation. Germany is now expending 30,000,000 marks in the improvement of the Weiser River from Bremerhaven to Bremen. Most costly works have

Weiser River from Bremerhaven to Bremen. Most costly works have recently been commenced on the harbor of Genoa.

We live in an epoch of engineering skill and glory. The enormous structure that spans the East River, a thing of massive beauty in the sky, is infinitely more creditable to the people of New York than Central Park, though populous with Egyptian obelisks.

In the beginning of this century Alexander von Humboldt visited South America to study the secrets of nature in her wildest solitudes. From his investigation of both commercial and scientific subjects he was empled to point out five practicable routes for an interpresence when From his investigation of both commercial and scientific subjects he was enabled to point out five practicable routes for an interoceanic shipcanal across the American Isthmus, at points where the hand of nature dissociated the Cordilleras range, estranged the hoary mountains, to incite man to energy by half doing the job. He discoursed in noble and vigorous language on the advantages that would flow to the commerce of the United States and of the world by the construction of an interoceanic highway on some one of the routes he described. For ages the Gulf of Mexico and Carribean Sea have courted the Pacific Ocean through the gaps in the Cordilleras range, burning to lean into its arms. through the gaps in the Cordilleras range, burning to leap into its arms, but needing the active co-operation of man to smooth away some minor

obstacles to the gigantic junction of the seas.

If it could be demonstrated to a mathematical certainty that an interoceanic ship-canal could be constructed by private capital on the Nicaragua route at a cost of \$70,000,000, that it would pay for itself in ten years; that it would produce a revolution in commerce; that it would contribute largely to resuscitate our commercial marine; that it would have New York and Hone Kene is instanciation. would bring New York and Hong Kong in juxtaposition, or at least abridge the distance between them 8,000 miles; that it would give us a decisive advantage in the struggle for the trade of China, Japan, and the East India Islands; that it would obviate the necessity of circumnavigating the South American continent, I say that if all these could havigating the South American continent, I say that if all these could be demonstrated to a mathematical certainty, how many votes could be secured in this House, in the present condition of public opinion, to lend the countenance of the National Government to such an enterprise, if it involved a pecuniary liability however slight? England would fight at the rustle of a leaf to maintain her empire over the Suez Canal, but if the American Isthmus is to be pierced by an interoceanic highway it will be done by Greior, seines with discountered and the second s it will be done by foreign engineers, with foreign capital, under foreign

auspices.

If the acquisition of Louisiana as now bounded, embracing within her jurisdiction, as she does, the outlets of the Mississippi, was an original question and we were called upon to appropriate \$150,000,000, as purchase-money, which would be relatively about what we paid for it in 1804, I doubt very much whether a measure of that kind would go through, because it would interfere with the profits of the pools of the

through, because it would interiere with the profits of the pools of the railway kings.

I believe in the practicability of solving the problem of cheap transportation in this country by a wise and liberal policy of internal improvement. I know it is claimed that, since 1872, the railways have enormously reduced the cost of transportation on through freights, in some instances to the extent of 300 per cent. If this be true, it furnishes a most unanswerable vindication of the policy I advocate, for since 1872, the appropriations for river and harbor improvements nearly equal in the aggregate all other appropriations for that purpose since equal in the aggregate all other appropriations for that purpose since the foundation of the Government in 1789.

If it be true, and the statistics seem to warrant the allegation, that

the tariff on through freights from the Mississippi Valley to the Atlantic seaboard have been reduced over 300 per cent. in eleven years through the operation of competition in water routes, then what man need cower before the journalistic thunderbolts for having voted for the river and harbor bill of 1882?

One of the principal arguments adduced by the milway corporations against the passage of an interstate commerce bill is the fact that they are now brought into competition with the "great and growing tonnage upon the long mileage of the combined Western rivers as, notably, the great growth of the grain movement from Saint Louis and the Northwest via the Mississippi River and New Orleans."

ria the Mississippi River and New Orleans."

The Republican party when it commenced its proud career in 1856, a career of which I, as a Republican, am justly proud, a career of which every Republican has just cause to be proud, announced its belief in the constitutional duty of the National Government to make appropriations for river and harbor improvements as one of its cardinal creeds. We should stand by thatoriginal creed. It is true the hurricane swept over the party last fall, but the fury of the storm is spent. Courageous devotion to a great and beneficent system of public policy will win in the end. When gentlemen on the other side of this Chamber taunt us with being the representatives of a dving party, they misinterpret the with being the representatives of a dying party, they misinterpret the signs of the times. The Republican party will live in the good-will of the American people, and command their intelligent support as long as patriotism, public honesty, obedience to law, and the protection of home industry are national virtues.

#### Justice to Mexican-War Heroes.

Tarde beneficere nolle est; vel tarde velle nolentis est. - Seneca

## SPEECH

## HON. JOSEPH WHEELER.

OF ALABAMA,

## IN THE HOUSE OF REPRESENTATIVES,

Monday, January 15, 1883.

The House having under consideration the resolution to make a special order of the bill (H. R. 7135) granting pensions to the survivors of the Mexican and Indian wars—

Mr. WHEELER said:

Mr. Wheeler said:
Mr. Speaker: Although I was a very little boy at the time, I remember, as though it were but yesterday, hearing the first dispatches read which announced that Taylor had crossed the Rio Grande and fought the battles of Palo Alto and Resaca de la Palma. You, Mr. Speaker, and all but the very young members in this Hall recollect the enthusiastic pride felt by our country at these victories.

We all recall how from week to week and month to month we read of Taylor's steady advance into the heart of Mexico—of the battle and capture of Monterey and General Taylor's final battle and victory over Santa Anna at Buena Vista. Is there any one here who has forgotten the landing of General Scott at Vera Cruz and his triumphant and

VICTORIOUS MARCH TO THE CITY OF MEXICO,

the siege and capture of Vera Cruz, the victories of Cerro Gordo, Churubusco, and other less severe engagements, the terrible onslaught at Molina del Rey, the storming of Chapultepec, and the final capture and entrance into the city of the Montezumas? Would any one at this time, Mr. Speaker, have believed that after the lapse of thirty-six years the American Congress would stand here hesitating, yes, even refusing, to give the

MOST MEAGER RECOGNITION

of the services of the few remaining of that band of heroes? It is true that the people by their suffrages have honored and re-warded the generals and leaders of these armies.

The campaign in Northern Mexico has made

TWO AMERICAN PRESIDENTS, a father and son, one of whom died in the first blush of richly earned honor, and the other, by the fifth section of this bill, is proscribed from

The campaign in the valley elevated another of these leaders to the high dignity of Chief Magistrate, and the commander of all the forces, General Scott, only failed in becoming our President because he was opposed in the election by a general who claimed equally with himself that he too fought under our banner in the victorious march which gave

such luster and renown to the American people.

The men whom we now ask you to place upon the pension-roll are

THE ONLY AMERICAN SOLDIERS

who under the Stars and Stripes fought a successful campaign on a foreign soil; they are the only soldiers who bore the flag which floats over this Dome in the conquest of a foreign enemy, living upon its territory and dictating terms of peace in the capital of its country.

These men, Mr. Speaker, are the victors whose intrepidity and courage won for us a territory larger in extent than the original thirteen States. Yes, Mr. Speaker, more than equal to the area of all the land east of the Mississippi River, and including the untold wealth of the silver mountains of Colorado and Nevada and the golden sands washed by the placid waters of the Pacific Ocean. And equally cherished and valued by us is that glory and honor given by them to American arms which has made this people which has made this people

RESPECTED AND FEARED BY ALL NATIONS

The few whom God spared from the carnage of battle, the few left after encountering, unacclimated and unprepared, the poisoned valleys and swamps of an unknown land, the few who, after waiting thirty-six years, old, grey, and decrepit, ask in the name of their dead comrades the same consideration which you have promptly awarded to all

OTHER SOLDIERS OF OTHER CONFLICTS

It is true many of the soldiers in that war were from the southern half of our country, but in all other wars that section of our land has been most prompt and liberal in her quota of men to battle for their country.

One hundred and thirty years ago, when the settlers beyond the Alle-ghanies were attacked by Indians,

FOUR HUNDRED BRAVE MEN PROM VIRGINIA,

led by a very brave young man named George Washington, were the first to fly to the rescue.

When the sound of battle was heard at Lexington and Concord,

Captain Morgan with a hardy Southern band was the first to march for the defense of the people of Massachusetts. When the second war with England came upon us, the entire South rushed to the flag of our country and fought and won an honorable, lasting peace. The last battle of that war was fought by a Southern general, by Southern soldiers, upon Southern soil. In the Indian wars

#### THE SOUTH FURNISHED HER ABUNDANT SHARE:

and naturally when the call to arms was heard in 1846 she sent her

best blood to fight under the folds of the Stars and Stripes.

Even in the war of 1861-'65 the South furnished to the Union 358,729 white and 186,017 colored troops, a total of 544,746, more than double the number which in 1863 were enrolled under the banner of the confederacy. That

#### YOU MAY EXPECT MUCH

from her in case of need her record is abundant proof.

#### THE COST.

The estimate made by the gentleman from Indiana as to the amount this bill would take from the Treasury is, I think, clearly erroneous. Of the soldiers who served in the campaigns in Mexico fully 15,000

fell victims to the climate and other casualties of war, and very many contracted diseases which materially shortened their lives. These conrobable increase of the pension-roll.

I fear, Mr. Speaker, the list will be much shorter than we should hope. I fear

TOO FEW OF THESE HEROES

remain to enjoy this testimonial from their country. It is true the battles in Mexico were not as bloody as some with which we are fa-It is true the miliar, but for years they were the pride and glory of all our people.

These battles were almost instantaneous flashes of victory, and to point to the disparity in casualties between their battles and the struggle from 1861 to 1865 for many reasons is an unfair comparison. We must bear in mind that in these battles it was Americans contending with each other.

The battles of Mexico in extent and severity may well be compared with all those in America which preceded them.

#### DURING THE REVOLUTION

the largest enrollment was during a short period of 1776, reaching 89,-761, and the entire loss during the seven years' war was about 2,200 killed and about 6,500 wounded. After 1776 the average enrolled force of Continental troops was 38,263, while the returns of the British war office show the number of regulars with whom we had to contend were, as I will read:

August, 1776	24,000
November, 1776.	26,600
December, 1776.	27,700
March, 1777	27,000
June, 1777	30,000
March 26, 1778	33,556
December 1, 1779	
May 1, 1778	38,002
August 1, 1780	
December 1, 1780	
September 1, 1781	42,075

This did not include their American adherents by them called Tories, but by us designated as traitors.

Troops of this character, I see in one report, numbered 8,954.

#### IN THE WAR OF 1812

the largest force was 38,186, while the available militia was reported at 471,622.

The entire loss in all the battles from July, 1812, to January, 1815, was 1,877 killed and died of wounds, and 3,737 who were wounded and recovered.

In the war with Mexico 1,049 were killed or died from wounds, and

3,928 were wounded and recovered. It will not do to make any comparisons with the war of 1861–'65, where the reported killed of the Federal armies were 61,362, and the wounded estimated at nearly 300,000; but to show how favorably the battles of the Mexican war compared with those which preceded, I will read the list of engagements from Lexington, in 1775, to the triumphant entry in the city of the Montezumas by the soldiers whose service this law recognizes and honors.

\* Forces opposing the American armies.

There were sentiments expressed on this floor which I regretted to hear, and which I still hope and trust may

GIVE WAY TO THE BETTER FEELINGS of the gentlemen from whom they came.

When this bill was called up this morning, the gentleman from Vermont, Mr. JOYCE, held the Revised Statutes of the United States high in air, and asked if the bill repeals section 4716 of the Revised Statutes. He then, in loud and emphatic tone, read to the House these words:

Sec. 4716. No money on account of pension shall be paid to any person, or to the widow, children, or heirs of any deceased person, who in any manner vol-untarily engaged in, or aided or abetted, the late rebellion against the authority of the United States.

The gentleman was promptly informed that section 4 did repeal that section, so far as it related to pensions under this act.
Mr. JOYCE then said with great emphasis:

Then I can not vote for it.

I think Mr. JOYCE knew before he asked the question that this limited repeal of section 4716 was a prominent feature of the bill we are considering

I think his object was to recall to the minds of the Representatives of this House that many of the beneficiaries of this act will be

FROM THE SOUTHERN STATES.

His object, I think, was, Mr. Speaker, to remind the House that this bill would give \$8 a month to a few men who, after fighting bravely a score of battles on the plains of Mexico, drew their swords to fight for their own homes and firesides. Rather than give these men \$8 a month the gentleman from Vermont appears to be willing to deprive of their just rights the brave men from Massachusetts, Indiana, Iowa, Illinois, Michigan, Pennsylvania, Wisconsin, New Jersey, Ohio, New York, and California; not only those but also

## BRAVE SOLDIERS OF EVERY NORTHERN STATE

who fought in the various regiments of regulars under Generals Scott and Taylor.

It would also give \$8 a month to a score or more who resigned from the Army in 1861 in obedience to the calls from the States of their nativity.

As the speech of the gentleman showed that the

## ONLY OPPOSITION TO THE BILL

arose from the fact that Southern people would be recipients of its bounty, and as the remarks heretofore made in this House, as well as elsewhere, reveal that this is the sole ground of opposition to the measure, I will beg permission to ask a calm consideration of this view by all the people without regard to prejudice of locality, prejudice of parky, or prejudice of sentiment, and in doing this, Mr. Speaker, my purpose will be, in the most respectful and kind manner, to remind the gentlemen who make this the basis of their opposition, of facts which for the moment may have escaped their memories.

Does the gentleman from Vermont remember

### ALL THE CIRCUMSTANCES

which influenced men in their actions at that time—the period from the election of Mr. Lincoln to the establishment of the confederate

government? Does he recall all the causes which brought about the sad condition of our country at that period?

I am not, Mr. Speaker, a beneficiary under this bill. I am glad that I am not, because it gives me an opportunity to speak in the interest of brave men to whom the Government owes a debt of gratitude they can

never pay.

And let me say to the gentleman from Vermont and to others who entertain the sentiments he has expressed that he must not forget the

circumstances which surrounded and the sentiments which actuated the men who marched to battle in 1861.

It was a period in the history of our country which to be understood must be

VIEWED PROM THE PINNACLE OF THAT TIME.

If we look back from the standpoint of to-day we see nothing of the picture which was presented to the American people twenty-two years ago.

The sentiments which actuated myself and others with whom I was associated were probably similar to the sentiments of all the beneficiaries

of this bill whom you seek to proscribe.

I ask the gentlemen to look back and

EXAMINE THE INPLUENCES

that determined the action of the brave veterans of the war with Mexico, when they were called upon after the election of Mr. Lincoln to take their stand either for or against the country to which they owed their birth.

I ask them to recall the advice these heroes of the country's battles received from

TRUSTED LEADERS OF YOUR PARTY;

and I ask you to study the character and sentiments of these men who will receive pensions under this bill. It was their love for country which carried them to hardships and privation and dangers of the conflict which thirty-five years ago made so glorious a chapter in the history of their country. Yes, Mr. Speaker, they

LOVED THEIR COUNTRY AS MUCH AS ANY

of the thirty millions who enjoyed and took pride in American progress and liberty, Christianity and civilization. When the clouds began to lower, and gathering storms seemed threat ening, they did not look alone for counsel to the utterances of our great Southern statesmen, for it was possible that they, stung by the wrongs Southern statesmen, for it was possible that they, stung by the wrongs our section had suffered, might in the moment of passion give vent to hastily formed and ill-considered expressions, but they looked to New England, the land of our Puritan fathers, to learn their path of duty, and for wisdom to guide their footsteps, for they thought "certainly there they would find good reasons to justify them in adhering to the Union they so much loved." They looked not alone to the press of the Southern States, for with all its ability and conservative grandeur they feared it might be swayed by the mighty interests involved, but they sought counsel from the most extreme anti-slavery, anti-Southern, and sectional of sectional of

THE NORTHERN PAPER

and in every issue they saw emblazoned on their columns,

Erring sisters, go in peace!

The New York Herald, Harper's Weekly, and other

REPUBLICAN PAPERS WERE FILLED WITH ARTICLES

which expressed and reiterated substantially the words, "Let the South

go.''
They read such leaders and articles as these from the great Republican papers and revolved them in their minds while pursuing their various avocations

In Mr. Greeley's New York Tribune of November 9, 1860, he said:

GOING TO GO.

If the cotton States shall become satisfied that they can do better out of the Union than in it, we insist on letting them go in peace. The right to secede may be a revolutionary one, but it exists nevertheless.

And again in the same issue of his widely circulated and influential paper, Mr. Greeley said:

We must ever resist the asserted right of any State to remain in the Union and nullify or defy the laws thereof. To withdraw from the Union is quite another matter; and whenever a considerable section of our Union shall deliberately resolve to go out, we shall resist all coercive measures designed to keep it in. We hope never to live in a Republic whereof one section is pinned to the residue by bayonets. Let them have both sides of the question fully presented; let them reflect, deliberate, then vote; and let the action of secession be the echo of an unmistakable popular flat. A judgment thus rendered, a demand for separation so backed would either be acquiesced in without the effusion of blood, or those who rushed upon carnage to defy and defeat it would place themselves clearly in the wrong.

The New York Tribune of November 16, 1860, again announced their views to the Southern people in an article headed

SECESSION IN PRACTICE

in which the paper used the following words:

In which the paper used the following words:

Still we say in all earnestness and good faith, whenever a whole section of this Republic, whether a half, a third, or only a fourth, shall truly desire and demand a separation from the residue, we shall earnestly favor such separation if the fifteen slave States, or even the eight cotion States alone, shall quietly, decisively say to the rest, "We prefer to i.e henceforth separated from you," we shall insist that they be permitted to go in peace. War is a hideous necessity at best, and a civil conflict, a war of estranged and embittered fellow-countrymen, is the most hideous of all wars. Whenever the people of the cotton States shall have definitively-and decisively made up their minds to separate from the rest of us we shall urge that the proper steps be taken to give full effect to their decision.

Three days afterward, on the 19th, the same paper uses these words:

Now, we believe and maintain that the Union is to be preserved only so long as it is beneficial and satisfactory to all parties concerned.
We do not believe that any man, any neighborhood, town, county, or even state may break up the Union in any transient gust of passion; we fully com-

prehend that secession is an extreme, an ultimate resort—not a constitutional but a revolutionary remedy. But we insist that this Union shall not be held together by force whenever it shall have ceased to cohere by the mutual attraction of its parts; and whenever the slave States or the cotton States only shall unitedly and coolly say to the rest, "We want to get out of the Union," we shall urge that their request be acceded to.

The New York Herald of Friday, November 23, 1860, said:

THE DISUNION QUESTION-A CONSERVATIVE REACTION IN THE SOUTH,

THE DISUNION QUESTION—A CONSERVATIVE REACTION IN THE SOUTH.

We publish this morning a significant letter from Governor Letcher, of Virginia, on the subject of the present disunion excitement in the South, Southern constitutional rights, Northern State acts of nullification, and the position of Virginia in this crisis. \* \* \* To this end would it not be well for the conservative Union men of the city of New York to make a demonstration—a Northern movement of conciliation, concession, and harmony?

Coercion in any event is out of the question. A union held together by the bayonet would be nothing better than a military despotism. Conciliation and harmony, through mutual concessions, in a reconstruction of the fundamental law, between the North and South, will restore and perpetuate the Union contemplated by the fathers. So now that the conservative men of the South are moving let the Union men of the North second their endeavors, and let New York, as in the matter of the compromises of 1850, lead the way.

And on the following day, November 24, the Tribune says:

PEDERAL COERCION

FEDERAL COERCION.

Some of the Washington correspondents telegraph that Mr. Buchanan is attempting to map out a middle course in which to steer his bark during the tempest which now how is about him. He is to condemn the asserted right of secession, but to assert in the same breath that he is opposed to keeping a State in the Union by what he calls Federal coercion. Now, we have no desire to prevent secession by coercion, but we hold this position to be utterly unsupported by law or reason.

They very probably read the article from the New York Daily Trib-une, Friday, November 30, 1860:

ARE WE GOING TO FIGHT?

But if the cotton States generally unite with her in seceding, we insist that they can not be prevented and that the attempt must not be made. Five millions of people, more than half of them of the dominant race of whom at lenst half a million are able and willing to shoulder muskets, can never be subdued while fighting around and over their own hearthstones. If they could be, they would no longer be equal members of the Union, but conquered dependencies. \* \* \* We propose to wrest this potent engine from the disunionists by saying frankly to the slave States:

"If you choose to leave the Union, leave it, but let us have no quarrel about it. If you think it a curse to you and an unfair advantage to us, repudiate it and see if you are not mistaken. If you are better by yourselves, go and God speed you. For our part we have done very well with you and are quite willing to keep along with you, but if the association is irksome to you, we have too much self-respect to insist on its continuance. We have lived by our industry thus far and hope to do so still, even though you leave us."

We repeat, that only the sheen of Northern bayonets can bind the South wholly to the evils of secession, but that may do it. Let us be patient, neither speaking daggers nor using them, standing to our principles but not to our arms, and all will yet be well.

I will read an extract from an editorial in the New York Times of

I will read an extract from an editorial in the New York Times of

By common consent, moreover, the most prominent and tangible point of offense seems to be the legislation growing out of the fugitive-slave law. Several of the Northern States have passed personal-liberty bills, with the alleged intent to prevent the return of fugitive slaves to their masters.

From Union men in every quarter of the South come up the most earnest appeals to the Northern States to repeal these laws. Such an act, we are assured, would have a powerful effect in disarming the disunion clamor in nearly all the Southern States and in promoting the prospects of a peaceful adjustment of all pending differences.

The next day, December 4, the New York Times publishes another

The next day, December 4, the New fork times publishes allother article, in which it says:

Mr. Weed has stated his opinion of the crisis thus:

1. There is imminent danger of a dissolution of the Union.

(2.) The danger originated in the ambition and cupidity of men who desire a Southern despotism, and in the fanatic zeal of the Northern Abolitionists who seek the emancipation of slaves regardless of consequences.

(3.) The danger can only be averted by such moderation and forbearance as will draw out, strengthen, and combine the Union sentiment of the whole country.

y. Each of these statements will command general assent. The only question likely to arise relates to the practical measures by which ie "moderation and forbearance" can be displayed.

And while the South Carolina convention was in session, as if fearing it might not carry that State from the Union, and as it appeared to the Southern people to encourage a prompt passage of the ordinance of secession, Mr. Greeley again says:

If it [the Declaration of Independence] justifies the secession from the British Empire of three millions of colonists in 1776, we do not see why it would not justify the secession of five millions of Southrons from the Federal Union in 1861. If we are mistaken on this point, why does not some one attempt to show wherein and why? For our own part, while we deny the right of slaveholders to hold slaves against the will of the latter, we can not see how twenty millions of people can rightfully hold ten, or even five, in a detested Union with them by military force.

In the same issue of Mr. Greeley's paper we read the following:

If seven or eight contiguous States shall present themselves authentically at Washington, saying: "We hate the Federal Union; we have withdrawn from it; we give you the choice between acquiescing in our secession and arranging amicably all incidental questions on the one hand and attempting to subdue us on the other," we could not stand up for coercion, for subjugation, for we do not think it would be just. We hold the right of self-government even when invoked in behalf of those who deny it to others. So much for the question of principle,

This pledge, given by Mr. Greeley with such emphasis, was reiterated for months with the characteristic persistence of that able leader. Among other articles occurs the following:

Any attempt to compel them by force to remain would be contrary to the principles enunciated in the immortal Declaration of Independence, contrary to the fundamental ideas on which human liberty is based.

After the people of the South had adopted a constitution and organafter the people of the South had adopted a constitution and organized their new confederate government; after they had raised and equipped an army, appointed embassadors to foreign courts and convened a congress; after they had taken possession of three-fourths of the arsenals and forts within her territory, and enrolled her as one of the providence of the control of the contro the nations of the earth, Mr. Greeley's paper indorsed the action of the Southern people as fully as it was possible for language to enable it to do so. Mr. Greeley said:

We have repeatedly said, and we once more insist, that the great principle embodied by Jefferson in the Declaration of American Independence, that governments derive their just powers from consent of the governed is sound and just; and that if the slave States, the cotton States, or the Gulf States only, choose to form an independent nation they have a clear, moral right to do so. Whenever it shall be clear that the great body of Southern people have become conclusively alienated from the Union and anxious to escape from it, we will do our best to forward their views.

Mr. Greeley was earnestly and ably supported in his views by the most prominent men and able editors of Republican papers all over the North.

I cite the following from The Commercial, which was certainly the leading Republican paper of Ohio. After Mr. Lincoln was inaugurated The Commercial said:

We are not in favor of blockading the Southern coast. We are not in favor of retaking by force the property of the United States now in possession of the seceders. We would recognize the existence of a government formed of all the slaveholding States and attempt to cultivate amicable relations with it.

Having, with the aid of his own and other papers, proven that SECESSION WAS A LEGAL AND PROPER REMEDY.

Mr. Greeley now proceeded to show the South that no concession would Mr. Greeley now proceeded to show the South that no concession would be made by the dominant party which was about to assume control of the Government, and also that the rights of the South in the Union would not be regarded and that secession was the only remedy. To do this effectively Mr. Lincoln is called to his aid. In the issue of his paper of January 30, 1861, he says:

We do not hesitate to say that these statements are false and calumnious. We have the best authority for saying that Mr. Lincoln is opposed to all concessions of the sort. We know that his views are fully expressed in his own language, as follows: "I will suffer death before I will consent or advise my friends to consent to any concession or compromise which looks like buying the privilege of taking possession of the Government to which we have a constitutional right."

Mr. Lincoln does not say that the

CONCESSIONS ASKED FOR WERE NOT RIGHT.

He does not say that they were concessions which as a matter of right ought not to be granted. He speaks of the matters then pending before Congress, all of which were efforts to uphold the Constitution, as a concession or compromise. His language virtually admits that the demand for the concessions referred to were right, but he puts his refusal them are retirally different ground. In civing his records for to grant them on entirely different grounds. In giving his reasons for not being willing to entertain the asked-for concessions, he uses these words:

Because whatever I might think of the merit of the various propositions be one Congress, I should regard any concession in the face of menace as the de truction of the Government itself and a consent on all hands that our syster hall be brought down to a level with the existing disorganized state of affair

On the 6th of February, 1861, Judge Chase made a speech before the peace congress, in which he, with great emphasis, said that the Northern States would not and ought not to comply with the obligation of the Constitution. Mr. Chase said:

The result of the national canvass which recently terminated in the election of Mr. Lincoln has been spoken of by some as the effect of a sudden impulse or of some irregular excitement of the popular mind; and it has been somewhat confidently asserted that, upon reflection and consideration, the hastily-formed opinions which brought about that election will be changed.

I can not take this view of the result of the Presidential election. I believ and the belief amounts to absolute conviction, that the election must be regarde as a triumph of principles cherished in the hearts of the people of the free State

We have elected him (Mr. Lincoln). After many years of earnest advocacy and of severe trial we have achieved the triumph of that principle. By a fair and unquestioned majority we have secured that triumph. Do you think we who represent this majority, will throw it away? Do you think the people will sustain us if we undertake to throw it away? I must speak to you plainly gentlemen of the South. It is not in my heart to deceive you. I therefore tell you explicitly that if we of the North and West would consent to throw away all that hea been gained in the recent triumph of our principles the people would not sustain us, and so the consent would avail you nothing.

Mr. Chase in that speech, with great force, gave the South to understand that the Northern States would not and ought not to comply with the obligations of the Federal Constitution. The people of the South did not look alone to the utterances of our great

MILITARY CHIEFTAINS OF THE SOUTH.

who, it is possible, feared they might allow their great love for our land of sun and flowers, and their admiration for so grand and brave a people to bias their views upon this question; but they listened to the voice of that chief who led them to victory on the plains of Mexico, and who for forty-seven years had been a distinguished general in our Army, and for twenty of those years had been its commander, and for whom 1,386,578 American citizens cast their votes for the highest office of honor and power within the gift of the people, a greater vote than had ever before

been given to any of our greatest and most admired leaders and statesmen; and the only sound that came from his trusted lips was—

Wayward sisters, depart in peace

While these statements were so general as to fill the air, they learned that the recognized leader of all, Mr. Chase, said:

The South is not worth fighting for; let them alone.

In Mr. Seward's speech of December 22, 1860, he substantially said that "succession was a mere political threat, unworthy of notice." Mr. Chase in a letter to the peace congress said the party ought "to use the power while they had it and prevent a settlement." He also said "don't yield an inch." And when the

SOUTH AND THOSE WHO LOVED THE UNION

in that great congress plead on bended knee for the preservation of the Constitution, there fell from the lips of this man an utterance which, though not so intended, was the first installment of those expressions which finally denounced the Constitution of Washington, Franklin, and Hamilton a

A league with hell and a covenant with the devil.

The people of the South read over and over the great speech of Mr. Webster at Buffalo, delivered on May 22, 1851, when he said:

The people of the South read over and over the great speech of Mr. Webster at Buffalo, delivered on May 22, 1851, when he said:

Then there was the other matter, and that was the fugitive slave law. Let me say a word about that. Under the provisions of the Constitution, during Washington's administration, in the year 1793, there was passed by general consent as law for the restoration of fugitive slaves. Hardly any one opposed it at that period; it was thought to be necessary in order to carry the Constitution into effect, the great men of New England and New York all concurred in it. It passed and answered all the purposes expected from it till about the year 1841 or 1842, when the State interfered to make enactments in opposition to it. \* " Now I undertake as a lawyer and on my professional character to say to you and to all, that the law of 1890 is decidedly more favorable to the fugitive than General Washington's law of 1793. \* " Such is the present law, and much opposed and maligned as it is, it is more favorable to the fugitive slave than the law enacted during Washington's administration in 1793, which was sanctioned by the North as well as by the South. The present violent opposition has sprung up in modern times. From whom dues this clamor come? Why, look at the proceedings of the anti-slavery conventions; look at their resolutions. Do you find among those persons who oppose this fugitive-slave law any admission whatever that any law ought to be passed to carry into effect the solemn stipulations of the Constitution? Tell me any such case; tell me if any resolution was adopted by the convention at Syracuse favorable to carrying out of the Constitution. Not one. The fact is, gentlemen, they oppose the constitutional provision; they oppose the whole. Not a man of them admits that there ought to be any law on the subject. They deny altogether that the provisions of the Constitution ought to be carried into effect. Look at the proceedings of the anti-slavery conventions in Ohio, Massachusetts, and at Syrac

Mr. Webster, in his speech at Capon Springs, also said:

The leading sentiment in the toast from the chair is the Union of the States. The Union of the States. What mind an comprehend the consequences of that union, past, present, and to come? The Union of these States is the all-absorbing topic of the day; on it all men write, speak, think, and dilate from the rising of the sun to the going down thereof. And yet, gentlemen, I fear its importance has been but insufficiently appreciated.

Again Mr. Webster says:

Again Mr. Webster says:

How absurd it is to suppose that when different parties enter into a compact for certain purposes either can disregard any one provision, and expect, nevertheless, the other to observe the rest! I intend for one to regard and maintain and carry out to the fullest extent the Constitution of the United States, which I have sworn to support in all its parts and all its provisions. It is written in the Constitution—

"No person held to service or labor in one State under the laws thereof, escaping into another, shall, in consequence of any law or regulation therein, be discharged from such service or labor, but shall be delivered up on claim of the party to whom such service or labor, but shall be delivered up on claim of the party to whom such service or labor may be due."

That is as much a part of the Constitution as any other, and as equally binding and obligatory as any other on all men, public or private. And who denies this? None but the abolitionists of the North. And pray what is it they will not deny? They have but the one idea; and it would seem that these fanatics at the North and the secessionists at the South are putting their heads together to devise means to defeat the good designs of honest, patriotic men. They act to the same end and the same object, and the Constitution has to take the form both sides.

I have not hesitated to say, and I repeat, that if the Northern States refuse willfully and deliberately to carry into effect that part of the Constitution which respects the restoration of fugitive slaves, and Congress provide no remedy, the South would no longer be bound to observe the compact. A bargain can not lie broken on one side and still bind the other side. I say to you gentlemen in Virginia as I said on the shores of Lake Erie and in the city of Boston, as I may say again in that city or elsewhere in the North, that you of the South have as much right to receive your fugitive slaves as the North has to any of its rights and privileges of navigation and commerce.

Mr. Webster also said:

I am as ready to fight and to fall for the constitutional rights of Virginia as I am for those of Massachusetts.

Mr. Webster was a constitutional lawyer, and he had read the prosar. We osser was a constitutional lawyer, and he had read the proceedings of the convention which had adopted this Constitution. He knew that the provision of the Constitution which he was discussing was unanimously adopted by the New England States. And the fundamental law which they created in 1787 Mr. Webster felt they

HAD NO RIGHT TO TRAMPLE UNDER FOOT

in 1861. I will read the proceedings of August 29, page 306, of the constitutional convention of the United States:

It was moved and seconded to agree to the following proposition, to be inerted after the fifteenth article:
"If any person bound to service or labor in any of the United States shall es-

cape into another State, he or she shall not be discharged from such service or labor in consequence of any regulations subsisting in the State to which they escape, but shall be delivered up to the person justly claiming their service or labor." escape, but shall labor."
labor."
Which passed unanimously in the affirmative,

I will read from page 222 of the journal of the convention which formed the Constitution. The fourth section of the seventh article, as reported by the committee of five on August 6, 1787, is in these words:

SEC. 4. No tax or duty shall be laid by the Legislature on articles exported from any State, nor on the migration or importation of such persons as the several States shall think proper to admit; nor shall such migration or importation be prohibited.

On page 276 I find that on August 21, 1787, a motion was made to amend this section, which I will read:

It was moved and seconded to insert the word "free" before the word "persons" in the fourth section of the seventh article.

The journal also states that-

Before the question was taken on the last motion the House adjourned.

I read from the journal, page 276, these words:

August 22.

The motion made yesterday, to insert the word "free" before the word "persons" in the fourth section of the seventh article, being withdrawn, it is moved and seconded to commit the two remaining clauses of the fourth section and the fifth section of the seventh article;

Which passed in the affirmative,
Yeas—Connecticut, New Jersey, Maryland, Virginia, North Carolina, South Carolina, Georgia—7.

Nave. New Hemship. Proceedings 1.

Yeas—Connecticut, New Jersey, Maryland, Virginia Carolina, Georgia—7. Nays—New Hampshire, Pennsylvania, Delaware—3.

I read this to call the attention to the fact that New Hampshire and Pennsylvania were so anxious to have slaves imported free of tax that they voted against recommitting the section.

From page 285 of the journal of the convention I read these words:

August 24.

The honorable Mr. Livingston, from the committee of eleven, to whom were referred the two remaining clauses of the fourth section, and the fifth and sixth sections of the seventh article, informed the house that the committee were prepared to report.

The report was then delivered in at the secretary's table, was once read, and is as follows:

Strike out so much of the fourth section of the seventh article as was referred to the committee, and insert "the migration or importation of such persons as the several States now existing shall think proper to admit, shall not be prohibited by the Legislature prior to the year 1800; but a tax or duty may be imposed on such migration or importation at a rate not exceeding the average of the duties laid on imposts."

When the motion was made to recommit the two last clauses of section 4 the purpose was to change this section so as to restrict the importation of slaves. The vote on this question may be regarded as a test vote, and I call attention to the fact that while New Hampshire and Pennsylvania voted against recommitting, Georgia, South Carolina, North Carolina, Virginia, Maryland, and New Jersey voted in favor of recommitting the clauses, so as to restrict by constitutional recognition of human beings for slavery. It will be seen provision the importation of human beings for slavery. It will be seen that as the committee reported the clause, slave traffic was prohibited after the year 1800. I have looked carefully through the Journal and I can find no record of these clauses being changed so as to contain the words "finally adopted." The Constitution, as it now stands, varies but little from the clauses as reported by Mr. Livingston. Some influence, possibly from New England, induced the change so as to continue the slave trade until 1808, and decreased the duty from what would have been about 15 per cent. ad valorem to a specific duty of \$10 per head.

I want specially to call attention to the fact that the vote of the slave States you will find on this subject was to restrict the importation of slaves, so as to prohibit it altogether after the year 1800, and also that the Southern States by their votes expressed a further desire to limit the importation of slaves during this period by their advocacy of an import duty equal to 15 per cent. ad valorem upon such importations. Mr. Webster was familiar with all these facts, and no doubt they were on

his mind when he made his Capon Springs and Buffalo speeches.

In passing, may I not ask if there are not gentlemen still in New England who by way of diversity might cease for a while to pick motes from the eyes of their Southern brethren and devote a little time in extracting some of the huge beams which for more than twenty years have

incumbered their orbits and so seriously affected their political vision?

It would seem that the facts I have recited were enough to teach the people of the South what they ought to do; but to strengthen their convictions of duty they recalled

THE GREAT SPEECH OF JOHN QUINCY ADAMS,

delivered, I believe, April 30, 1839, half a century after Washington was inaugurated, the occasion being the celebration of the fiftieth anof the commencement of our Government under the Constitution. Mr. Adams said:

But the indissoluble union between the several States of this confederated nation is, after all, not in the right but in the heart. If the day should ever come (may Heaven avert it!) when the affections of the people of these States shall be alienated from each other; when the fraternal spirit shall give way to cold indifference, or collision of interest shall fester into hatred, the bands of political asseveration will not long hold together parties no longer attracted by the magnetism of conciliated interests and kindly sympathies; and far better will it

be for the people of the disunited States to part in friendship from each other than to be held together by constraint. Then will be the time for reverting to the precedents which occurred at the formation and adoption of the Constitution to form again a more perfect Union by dissolving that which could no longer bind, and to leave the separated parts to be reunited by the law of political gravitients the confere tation to the center.

And they remembered also that the distinguished son of this illustrious gentleman nine years later received 291,267 votes as candidate for VICE-PRESIDENT OF THE FREE SOIL PARTY

They remembered the Hartford convention in Connecticut, the Dorr rebellion in Rhode Island, the whisky rebellion in Pennsylvania; and they also remembered that only so far back as 1844 Massachusetts pro-claimed the right of secession not only by unanimously enacting secession resolutions, but in addition thereto by distributing copies of these resolutions throughout the land.

I will read from page 319, "Acts and resolutions passed by the Leg-islature of Massachusetts in the year 1844:"

islature of Massachusetts in the year 1844:"

1. Resolved, That the power to unite an independent foreign state with the United States is not among the powers delegated to the General Government by the Constitution of the United States.

2. Resolved, \*\* \* That the project of the annexation of Texas, ruless arrested on the threshold, may drive these States into a dissolution of the Union.

3. Resolved, That his excellency the governor be requested to transmit a copy of the foregoing resolves to each of the Senators and members of the House of Representatives of this Commonwealth in the Congress of the United States.

4. Resolved, That his excellency the governor be requested to transmit a copy of the same resolves to the Executive of the United States and of the several States.

Approved by the governor March 15, 1844.

Our people also recalled that the Legislature of Massachusetts, as if apparently to

EMPHASIZE THEIR VIEWS.

selected the one hundred and thirteenth anniversary of the birth of the father of our country to pass another secession resolution which I read from pages 598 and 599 of the same volume. I call especial attention to the second resolution:

the second resolution:

Resolved, That Massachusetts has never delegated the power to admit into the Union States or Territories without or beyond the original territory of the States and Territories belonging to the Union at the adoption of the Constitution of the United States,

Resolved, \* \* \* and as the powers of legislation granted in the Constitution of the United States to Congress do not embrace the case of the admission of a foreign state or foreign territory by legislation into the Union, such an act of admission would have no binding force whatever on the people of Massachusetts.

setts.

Resolved. That his excellency the governor be requested to transmit copies of the preceding report and resolves to the President of the United States, the several Senators and Representatives in Congress from this Commonwealth, and the governors of the several States.

Approved by the governor February 22, 1845.

And while I can not point to the record I have often heard it asserted and have never heard the assertion questioned that eighty years ago the same Legislature passed a resolution containing the following words:

That the annexation of Louisiana to the Union transcends the constitutional power of the Government of the United States. It formed a new confederacy to which the States united by the former compact are not bound to adhere.

I admit, Mr. Speaker, that, judging from what I have read, it did seem that the prominent Republican leaders desired very much to drive

us from the Union.

I have read extracts from the most influential and extreme Republican papers, commencing from the moment Mr. Lincoln's election was announced up to the period when the southern confederacy was an established nation of the earth; I have read speeches from your greatest statesmen and sentiments from the trusted commander of your Army, and utterances from the man whom you had chosen as your Chief Magistrate.

I admit there was but little encouragement extended to the great mass of the Union people of the South, but, notwithstanding this, had it not been that I was afar off among the mountains and cañons of New Mexico, engaged against the hostile Indians, I should have urged my people to proceed with deliberation and caution; had I been where I could have expressed my views I should have combated the arguments and advice given by these men; I should have opposed the secession theory of Mr. Greeley and of the Legislature of Massachusetts; I would have spoken with all my power against not only the expediency but the propriety of secession; I should have reminded the people that the

FATHERS OF THE NEW ENGLAND MEN WHO SENT THE SECESSION RESOLUTIONS to us were the same who, two-thirds of a century before, contended with equal force in favor of maintaining the African slave trade, and that they voted in the constitutional convention for the clause of the Constitution which secured the slave trade to New England slave-traders

for a period of twenty years.

I would also have informed them that New England unanimously voted for the clause of the Constitution known as the fugitive-glave law clause, which Mr. Webster quoted in his speech from which I have read. It was to their interest to vote for that clause, for they knew it would increase the value of the slaves brought in their ships from Africa

and sold to the planters of the South.

I should have told the people of Georgia, Alabama, and Mississippi how, when that entire to ry was governed by Oglethorpe, for twenty years there

EXISTED A LAW AGAINST SLAVERY,

and that the law would no doubt have continued in force had it not

been for New England slave-traders, who sought its repeal for the purpose of creating a new market for the slaves they imported. have warned the Southern people against the secession teachings of Mr. Greeley, Mr. Chase, and Mr. Seward. I would have told our people that, though the Republican party had trampled the law of Congress and the Constitution of our country under foot, as the House will observe was admitted by the New York Times in the article which I have read, and although Mr. Chase stated that the Republican party not only would not obey but would sustain the Northern States in nullifying the Constitution, yet with all that I would have said, let us seek our remedy.

and through the decrees of our courts.

Mr. Speaker, are not the facts I have placed before you sufficient to have convinced the Southern people of 1861 that if they would give up all the Federal offices and Federal official positions which their Northern brethren had so long coveted, and if in addition they surrendered all claim to the rights and privileges which were guaranteed by the Federal compact, and thus obeyed the orders of Scott and Chase and Greeley to "Depart in peace," that they would not only meet with no opposito "Depart in peace," that they would not only meet with no opposi-tion in the execution of this purpose, but that it would have the co-operation and sympathy of these aggrandizers? After they had given up everything, was it not reasonable they should indulge the hope that they would not be further molested, and that after a little reflection the North would see its error, and that finally an

ASSURANCE OF JUSTICE

would be given such as would bring us back together on good and amicable terms?

And after reading Mr. Webster's speeches, were not the Southern people justified in their determination that, if the worst came to the worst, their duty was plain-that at every cost the constitutional rights

worst, their duty was plain—that at every cost the constitutional rights of the States should be maintained?

If Mr. Webster, a native of Massachusetts, who owed to the people of that State every honor he had received, was right in battling for the preservation of the constitutional rights of Virginia, and in so doing performed what he regarded as a solemn duty, was it not equally just and right that the gallant men who fought in Mexico should draw their swords for the preservation of the constitutional rights of their own dear native States—Alabama, Georgia, Mississippi, and other soverging States of the Union? eign States of the Union?

I ask the gentleman from Vermont if, with all this, he will adhere to his determination to deny these brave soldiers this meager pension be-

his determination to deny these brave soldiers this meager pension because they acted pursuant to views so earnestly urged upon them by the ablest leaders of your party?

I have suggested these facts in reply to the emphatic declaration of the gentleman from Vermont [Mr. Joyce] in the hope that he will withdraw his hastily uttered expression.

Remove this objection, and the bill will certainly become a law; and let meak your gentleman of the convention if this objection is norther.

let me ask you, gentlemen of the opposition, if this objection is worthy of you or your party?

I know, gentlemen, it is hard to overcome prejudice, but to subdue that subtle enemy is the

NOBLEST CONQUEST

of the human heart; prejudice, that invisible foe, invades and poisons the reason as the malaria from the deadly swamp invades and destroys the physical system. You struggle against it, but still it abides with you every hour of your lives. This prejudice for and against locality, clings to and controls your actions, like an irresistible temptation with which it requires all the strength of your manhood to contend.

You can master this spirit; great men can master every inclination, and every rooted error however deeply seated, though it sometimes requires a supreme effort to effect the victory.

Ulysses, the warrior of old, conquered prejudice for the sake of self; Ulysses, the warrior of to-day, achieves the same conquest for the sake

Let me recall to your minds the story of how Ulysses of old escaped the sirens' toils, and how the gentle Orpheus evaded the snares of the

When Ulysses sailed past the isle of the sirens, who had the power of charming by their songs all who listened to them, he heard the soreerous music on the shore, and to prevent himself and his crew from landing he filled their ears with wax and bound himself to the mast with knotted thongs. Thus, according to the subtle Grecian story, he passed safely the fatal strand. But when Orpheus, in search of the golden fleece, went by this island, he—being, as you remember, a great musician—set up better music than that of the sirens, enchanted his crew with a melody superior to the alluring song of the sea-nymphs, and so, without needing to fill the Argonauts' ears with wax, or to bind himself to the mast with knotted thongs, he passed the soreerous shore not only safely but with disdain.

Now, Mr. Speaker, were our people of the North and South to use the same effort in promoting harmony as is often used in kindling strife, would not the sweet influences thus aroused, like the music of Orpheus near the sirens' coast, close our ears to the clamors of sectional strife, and direct us safely in our search for the golden fleece, a prize to be realized only in a newly regenerated Union, happier and grander than before, more prosperous and more united, more Christian and more enlightened?

Tariff on Sugar.

SPEECH

## HON. OSSIAN RAY.

OF NEW HAMPSHIRE,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 15, 1883.

The House in Committee of the Whole on the state of the Union having under onsideration the bill (H. R. 7313) to impose duties upon foreign imports, and for other purpos

Mr. RAY said:

Mr. CHAIRMAN: I rise to make a parliamentary inquiry.
The CHAIRMAN. The gentleman will state it.
Mr. RAY. I would like to inquire whether an amendment striking Mr. RAY. I would like to inquire whether an amendment striking out lines 1042 to 1052, inclusive, of the original bill, and proposing a substitute for the amendment offered by the gentleman from Louisiana [Mr. GIBSON], is in order at this time? At the proper time I want to offer a substitute both for the pending paragraph and the amendment, in substance making all unrefined sugars free and at the same time affording proper protection to our friends from Louisiana and elsewhere who are interested in this industry, by providing for the payment of a bounty of 2 cents per pound on all raw or unrefined sugars produced in the United States

The CHAIRMAN. The pending proposition is the motion of the gentleman from Louisiana [Mr. GIBSON] to strike out from line 1042 to 1052, both inclusive, as follows:

SCHEDULE E.-Sugar.

All sugars not above No. 43 Dutch standard in color shall pay duty on their polariscopic test as follows, namely:
All sugars not above No. 13 Dutch standard in color, all tank-bottoms, sirups of cane-juice or of beet-juice, melada, concentrated melada, concrete, and concentrated molasses, testing by the polariscope not above 75°, shall pay a duty of 1.25 cents perpound, and for every additional degree or fraction of a degree shown by the polariscope test they shall pay four-hundredths of a cent per pound additional.

And insert the following:

And insert the loflowing:

All sugars not above 13 Dutch standard in color shall pay duty on their polariscope test as follows, namely:

All sugars not above No. 13 Dutch standard in color, all tank-bottoms, sirups of cane-juice or of beet-juice, melada, concentrated melada, concrete, and concentrated molasses, testing by the polariscope not above 75°, shall pay a duty of 1.50 cents per pound; and for every additional degree or fraction of a degree shown by the polariscope test they shall pay five-hundredths of a cent per pound additional.

Mr. RAY. If it is in order for me to do so now, I desire to offer my amendment as a substitute for the proposition of the gentleman from Louisiana, as well as for the pending clause.

The CHAIRMAN. A substitute for what the gentleman from Lou-

isiana proposes to insert? Mr. RAY. Yes.

The CHAIRMAN. The Clerk will read it.

The Clerk read as follows:

The Clerk read as follows:

Strike out the pending clause of the bill and insert the following:

Any person who shall produce and make within the United States any raw
or unrefined sugar to the amount of two hundred pounds or upward, and who
shall sell the same in good faith for actual use or consumption within the United
States, shall be entitled to and may receive from the Treasury a bounty of 2
cents per pound for all such sugar so produced, made, and sold as aforesaid;
and the Secretary of the Treasury is authorized and required to make such suiable regulations in regard to proof of production and sale, and payment of
bounty aforesaid, as will best accomplish the purpose hereof and prevent fraud.

Mr. KELLEY. I make the point of order on that proposition that it is not germane to the question before the committee-not a tariff proposition.

Mr. RAY. I want to be heard on the point of order.
The CHAIRMAN. The Chair will hear the gentleman on the point of order.

Mr. RAY. Mr. Chairman, I submit that the amendment offered by me is not out of order, and that when carefully considered it will be found to be quite germane to the pending bill. This is a tariff act. None will dispute the parliamentary propriety of transferring sugar from the dutiable to the free list. Hence the only inquiry which remains is, does the proposition to pay a bounty from the Treasury of 2 cents per pound on domestic sugars contained in my amendment make the amendment foreign to the scope and purpose of the bill? In several sections, having no relation to the schedules and duties

levied, changes are made in existing laws, notably in sections 5 to 16, inclusive. In sections 11 and 12 money is appropriated out of the Treasury for purposes not so germane to the design of this act, it seems to me, as the bounty proposed in my amendment. The sections referred to authorize importers in case of controversy with the Government touching goods imported under the provisions of this act to go to the Court of Claims by appeal, and that court is given jurisdiction to hear and determine all questions arising therefrom.

This act, respectively.

This act appropriates money to pay stenographers, assessors, for court-

rooms, &c., and at the option of the importer changes the entire course rooms, &c., and at the option of the importer changes the entire course of legal procedure in cases growing out of the importation of goods. Therefore I maintain this amendment ought not to be rejected on the point made by the chairman of the Committee on Ways and Means [Mr. KELLEY] that it is not germane to the bill because money is appropriated to pay the bounty, for I fail to see wherein the difference between an appropriation of money under this act for a purpose or object not recognized by existing law, such as is proposed in the sections referred to, and the appropriation of money provided for by my amendment.

Mr. Chairman, the majority of this House, and the majority of the Ways and Means Committee, in the establishment of a system of import duties religiously believe in the doctrine of protecting American industries in all cases when required to prevent ruinous foreign competition.

The bounty of 2 cents per pound offered by my amendment is proposed for the express purpose of protecting the sugar industry of Louisiana and other sections of the United States where sugar is produced. Our friends upon the other side of the Chamber agree that we may legitimately in our tariff laws incidentally protect our own laborers, proand manufacturers.

The Republican doctrine is that we are authorized under the Constitution and the settled policy of the country for a hundred years to impose duties for protection alone or for revenue alone, or for both objects. In other words, that both the doctrine of protection and the purpose to obtain revenue from import duties are within the proper constitutional powers of Congress. Now, when sugar is put upon the free-list and powers of Congress. Now, when sugar is put upon the free-list and our people engaged in its production are thrown into competition with the cheap labor of the West India Islands and other sugar-producing countries, the payment of a bounty to encourage them, to stimulate the production of an article of food at home, required by every family in the land, is the most direct and legitimate form of protection we can adopt. Therefore, taking a broad and general view of the subject, I believe the gentleman's point of order is not well founded, and that the amendment is strictly germane to the bill.

Now, sir, I desire to say a few words generally upon this subject. It is an axiom in political economy that no nation ought to levy a tax on the necessaries of life, on an article of food universally consumed by its people, unless required to do so by the public good, or without an important of the public good, or without an important of the public good people, timess required to do so by the public good, or without an imperative and controlling necessity exists to raise revenue thereby. Sugar is everywhere a necessity of life among our people. I hope none within our borders are so poor and destitute that they can not obtain sugar, as well as other articles of food, sufficient comfortably to maintain life, health, and strength. According to the last report of the Commissioner of Internal Revenue about 2,200,000,000 pounds of sugar are now annually consumed in the United States, of which only about onetenth, or 200,000,000 pounds, are produced by ourselves. Upon the 2,000,000,000 pounds imported yearly the Government collects from the people duties amounting to more than \$49,000,000.

Everybody admits there is no necessity for levying this enormous burden upon our inhabitants at the present time, and that the problem for us to solve by prudent legislation happily is, not how we shall provide for more revenue but how we may most wisely and largely reduce the amount now being collected. It is agreed on all hands that a re-duction of seventy-five or a hundred million dollars can and ought to be made at once in our tariff and internal-revenue taxation. Should my amendment become a law it would insure an immediate reduction of forty millions of dollars and upward, and the best refined sugars, which are now sold at retail throughout the country at about 10 cents a pound could and would be sold as cheap as in England, at 6 or 7 cents a pound. This reduction would be sensibly felt by the head of every family in the country. The total reduction would be nearly one dollar for each man, woman, and child of our population.

The benefits resulting from the abolition of the sugar duty would be shared by everybody, and be more helpful to our people generally than any other reduction that could be made in our tariff laws. I have but little patience, Mr. Chairman, with gentlemen who clamor here and elsewhere for the abolition of the whisky and tobacco taxes, but are silent when we touch the duties on sugar. Many more people use sugar than use either whisky or tobacco, and I believe the tax on sugar should for the abolitical or bornilland. first be abolished or heavily reduced. Sugar is no longer a luxury but is a necessity in every home.

On every dollar's worth of imported sugar in the year ending June 30, 1882, the purchaser was compelled to pay an average duty to the Government of more than 50 per cent. ad valorem (52.05), while the average rate on all dutiable goods for the same year was only about 30 per cent. ad valorem (30.11). Why longer maintain the burden of this unjust and discriminating duty upon sugar? It is a conceded fact that in a family numbering four or five persons or upwards living no more generously than our farmers, mechanics, and other plain people com-monly do, the cost of their sugar per annum considerably exceeds the cost of their flour or bread.

If we had any well-grounded hope or assurance that the average quantity of sugar annually produced in the United States would soon be subtantially increased, by reason of the continuance of the present high rate of duty on that article, we might have some reason for continuance. uing the duty for the sake of protection and encouragement to that industry; but, sir, the statistics furnished by gentlemen in this debate un-

erringly show a gradual diminution of the domestic sugar product since the war. Indeed, the largest sugar crop ever produced was just before the rebellion begun in 1861-'62, when that of Louisiana amounted to 528,321,500 pounds, and when the rate of duty was only 24 per cent. ad

The truth is we have within the United States only a small area of land suitable for the production of sugar. Sugar-cane is a tropical plant, and its growth is mainly confined to portions of Louisiana, Florida, and Texas, and in those sections the crop is subject to the hazards of frosts and floods, so that a full crop cannot be relied upon more than

half the time.

In this connection I desire to quote from the last annual report of General Raum, the able Commissioner of Internal Revenue, who says

General Raum, the able Commissioner of Internal Revenue, who says: I apprehend if sugar were not produced in this country Congress would not hesitate to remove the duty from imported sugar as the best means of reducing taxation. The present law gives to the sugar planters of this country, indirectly, about \$4,000,000 or \$5,000,000 per annum. My proposition would be to give them this amount directly and let the whole people have the benefit of the reduction of taxation of, say, \$49,000,000, which would in this way be effected.

The principle of paying a bounty for the encouragement and development of American industry is not new; it was adopted in the case of our fisheries as early as 1813, and was continued for more than fifty years. Millions of dollars have been paid out during this period to American fishernen for fish caught and exported, and we are still giving to this industry the bonus of allowing them to withdraw salt free of duty and of requiring from them no tonnage dues. As a matter of principle, a bounty to our sugar interests would, in my opinion, be no more objectionable than similar encouragement to our fisheries.

I am utterly opposed to the project which seems to be favored by some of our Pennsylvania, New Jersey, and Ohio friends, and the majority of the Democratic party South and West, to abolish our whole internal venue system of taxation, the effect of which would probably be to compel the Government to maintain a high rate of duty on imported sugar for a long time to come. It is my opinion sir, that any party, or combination of parties in this country which succeeds in effecting the abolition of the taxes on liquors and tobacco, and at the same time upholds the principle of levying a high duty upon sugar when we produce so little and consume so much, will go to the wall. Such a political party or combination of political party is my sindement will need with and or combination of political parties in my judgment will meet with and deserve a crushing defeat at the polls.

I think this new tariff is in many respects an improvement on the old one, but the trouble with it is, it makes no such substantial reduction of our revenues as ought to be made, and which the settled judgment of the country demands. The place to make the chief reduction in this bill is clearly the sugar schedule. The gentlemen of the Committee on Ways and Means seem to think its adoption will effect a reduction on sugar of a little more than eleven millions of dollars (\$11,249,625.62), according to the estimates prepared for the committee by the Bureau of Statistics. This is not half enough. In any event thirty millions in round numbers ought to come off the tariff on sugar. If the present bill should become a law the average rate of duty on sugars will be more than 40 per cent. (40.15). The sugar schedule now in force was adopted in 1864, and in July and December, 1870 (Revised Statutes, page 472), and then an additional 25 per cent. was imposed by

the act of March 3, 1875. This bill hardly takes off the last increase.

I trust I shall be pardoned for suggesting that the report of the
Tariff Commission, so far as their sugar schedule is concerned, is not entitled to the utmost confidence of Congress or the country. The commission rates are even higher than those in the bill before the House. mission rates are even higher than those in the bill before the House I am advised that Mr. Duncan F. Kenner, the Louisiana member of the Commission, was and is a sugar planter—an officer of the Louisiana Sugar Planters' Association. The following letter written by him to Mr. D. A. Given, president of the same association, indicates quite clearly what a forlorn hope the advocates of free sugar had before him, or before the commission whereof he was a leading and influential mem-This letter has been widely circulated in the newspapers without denial, so far as I can learn, and must be regarded as genuine and au-

LONG BRANCH, N. J., August 10, 1882.

Long Branch, N. J., August 10, 1882.

Dear Sir: Our friend has arrived and is busily engaged, under my direction, in seeing certain parties in New York and preparing for certain combinations in case of necessity. He will be of the greatest possible service to us in all these matters. I regret very much that you have succeeded so slightly in providing the sinews of war. I beg you will see all the parties and say to them that if his stay here terminates before the object is accomplished it will be a cause of regret to us all. There are certain things which I can't look after. Circumstances forbid me ostensibly appearing in the matter at all. Consequently, without some such assistance, I lose half my efficiency and chance of success. I beg you will see all of them again and urgently insist on the amount appropriated so far being increased. Use this letter with discretion, but do not hesitate to show it to any one who is equally interested in our success.

Yours, truly,

DUNCAN F. KENNER.

The "friend" above referred to is understood to be Mr. John Dymond, vice-president of the Louisiana Sugar Planters' Association

mond, vice-president of the Louisiana Sugar Planters' Association. But, Mr. Chairman, some people object to paying money out of the Treasury as a bounty for any purpose whatever, and different grounds are urged in support of the objection. Some say it is contrary to sound public policy, others suggest that it is unconstitutional to appropriate the public money for bounties, gratuities, or premiums under any circumstances. I do not care to enter upon the discussion of either class of these objections. That the United States and the several States, in the absence of constitutional inhibition, have the power to provide for the payment of bounties whenever the public exigencies require it can the payment of bounties whenever the public exigencies require it can

not now, in my opinion, be successfully controverted. The Government has heretofore paid, as suggested by the Commissioner of Internal Revenue, large sums of money for the encouragement of our fisheries. Almost every State in the Union from time immemorial has main-

tained laws providing for the payment of money bounties for the destruction of certain kinds of wild animals and birds, and nobody, to my belief or knowledge, has ever yet suggested that the States might not lawfully pay such bounties. If this may be done to get rid of noxious animals and birds on the ground that it is for the public benefit why not pay a bounty to promote the growth of a very ne

of food?

Our 1000?

During this session a provision for bounty, miscalled a "drawback" in the bill, to encourage American shipping, received strong support in this body and came near passing the House when the final vote was taken. The Government has granted millions of dollars, and millions of acres, in bounties to reward its brave defenders in time of war. tracts of the public domain have been granted as subsidies to individuals and corporations for the purpose of aiding the construction of railways in our Western States and Territories. Indeed, duties levied upon imported merchandise, when similar articles are produced at home, may and often do, to the full extent of the duties paid, indirectly operate as a bounty or protection to the home producer or manufacturer. course, such is not the effect in all cases.

In regard to sugar, however, I think it is demonstrable that the mar-In regard to sugar, however, I think it is demonstrable that the market price, both of domestic and foreign sugars, in the United States is increased by the tariff to nearly or quite the amount of duty imposed on that article. So that the effect of our tariff legislation on sugar is, to enable the sugar planters to obtain 2, 3, or 4 cents a pound more for their sugar from consumers than they otherwise would, and so much more than their sugar is really worth. Hence I claim that the operation of our tariff laws on this article amounts practically to the same thing as giving the sugar planters of the South a bounty from the Treesury to pearly the amount of the duty. Now they exact the extra Treasury to nearly the amount of the duty. Now they exact the extra price for sugar, which the tariff adds, from purchasers and consumers. By adopting my substitute the sugar planters would still get 2 cents per pound over and above the market price throughout the country from the Treasury. In both cases the money will come from the people's

Why, sir, the value of the whole sugar crop of Louisiana last year—which was larger than any other since the rebellion—was only \$20,000,000, giving it a liberal appraisal. Now, when the people of the United States are compelled to pay about \$50,000,000 in duties on this article for a single year, or about two and a half times the worth of the whole quantity produced in the country, is it not the time for a change in our tariff legislation? The country had better buy out every sugar planter as a matter of business economy rather than continue to pay this enormous tax on such an article of universal consumption. The abolition of the sugar duty would be the most popular act this Congress can adopt. I trust we shall not disappoint the public expectation.

The CHAIRMAN. Does the gentleman from New Hampshire [Mr.

RAY] insist upon his amendment? Mr. RAY. I do.

The CHAIRMAN. As against the point of order?

Mr. RAY. I do; and I would like a vote on my proposition.
The CHAIRMAN. Does the gentleman from Pennsylvania [Mr. Kelley] insist upon his point of order?
Mr. Kelley. I do.
The CHAIRMAN. The Chair thinks the amendment proposed by

the gentleman from New Hampshire [Mr. RAY] is subject to the point of order. It does not propose a duty on any imported article, but it is a proposition that the Government of the United States shall pay a bounty on an article of domestic production, and therefore the Chair rules it out of order.

### Rivers and Harbors.

## SPEECH

## HON. HENRY S. HARRIS. OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 28, 1883.

The House having under consideration the bill (H. R. 7631) making appropriations for the construction, repair, and preservation of certain works on rivers and harbors, and for other purposes—

Mr. HARRIS, of New Jersey, said: Mr. Chairman: I move to strike out the last word for the purpose of adding something to what has just been so well said by the chairman of the Committee on Commerce in reference to the commerce of Cheese-quake's Creek. I wish the House to know that three-fourths of the paper-clay used by the manufacturers of wall-paper in this country are mined from the beds on that creek, and go down the creek, and not

only to the large cities of this country, but to Montreal and Quebec; so that its commerce is not only national but international in its character

I wish to say further that prior to the formation of the bar across the mouth of the creek, which it is designed by this appropriation to remove, this creek was navigable to Jacksonville, and steamboats ran regularly to and from New York. The chairman of the Committee on Commerce has told you that five hundred and fifty vessels passed through the draw in one year. That is true, and they carried a variety of products, not only the unique fine white clay before mentioned, but other products of this region. There are situated on the creek three brick-yards, five clay-pits, ten docks, and one railway.

The gentleman has also moved to strike out the appropriation for Mattawan Creek, but I did not hear him state any reason for that motion. I desire to call his attention to the fact that while the Secretary of War in a letter to the House stated that he had caused a re-examination of the items of appropriation in the river and harbor bill, he makes no objection whatever to the appropriations for Elizabeth River and Mattawan Creek. The volume of exports from Keyport is \$4,070,000 annually, and of imports \$1,851,000, and the tonnage is 785,000 tons.

I can not understand why a representative from the State of New

Jersey should ask to have the appropriations for these creeks stricken from this bill when the work of improvement is already more than half completed. I remember that the last river and harbor appropriation carried an appropriation of \$50,000 for the Passaic River, in the gentleman's district, and the present bill carries for the same an appropriation of \$15,000. I remember that he then wanted to navigate through solid ground between Jersey City and Newark, to have a ship-canal built at the cost of a million. [Laughter.] Evidently a change has come o'er the spirit of his dream.

Elizabeth River has a commerce of national importance. a number of works of importance along it; and the engineer in his

report, page 698, says:

This improvement is of special interest to the city of Elizabeth, through which the stream flows. The shipping is carried principally by canal-boats and the smaller class of sailing vessels, engaged in carrying coal to the city gas-works and building material to the several lumber-yards situated on the banks of the stream. A pottery and an oil-cloth works are also located on the stream, and are dependent on the navigation of the river for the transportation of their heavy and bulky freights.

heavy and bulky freignus.

Half of that work has been done. All that is needed to complete it is \$16,160. Mr. Chairman, we do not want to spend money where commercial facilities are perfect and abundant; we want to spend it where they are imperfect, where improvement is required. This is one of those cases, and so is Cheesequake's Creek, which is a navigable tide-water stream and not a "creek" in the upland meaning of the word, any more than Hampton Roads is a turnpike.

Mr. BUTTERWORTH. I would like to ask the gentleman a question

Mr. BUTTERWORTH. I would like to ask the gentleman a question before he sits down. It has been stated in the presence of the House and before the country that Elizabeth Creek or Elizabeth River, if you please to call it so, has no commerce; that a boat can not get more than fifteen rods up that stream; that it is worse than a farce, a fraud, to appropriate any money there. I want the gentleman from New Jersey to state what he knows about this matter in order that the House to state what he knows about this matter, in order that the House may not be misled.

may not be misled.

Mr. HARRIS, of New Jersey. The tonnage of Elizabeth River between July 1, 1881, and July 1, 1882, was 20,967 tons. It consisted of lumber, lime, coal, fire-brick, hides and leather, sand, brick, hemp, general merchandise, barytes, and potter's clay. The statement from which I read these figures will be found on page 698 of the engineer's report.

Mr. BUTTERWORTH. But I understand that this tonnage is all within fifteen rods of the mouth of the river. How is the fact?

within fifteen rods of the mouth of the river. How is the fact?

Mr. HARRIS, of New Jersey. My information is that that is not so; that it is all the way up the river.

Mr. VAN VOORHIS. Do you know it personally?

Mr. HARRIS, of New Jersey. I do not, but I am so informed by my colleague [Mr. Ross], in whose district the river in question is situated, and by other reputable gentlemen, as well as by the report which contains the names of the firms and the amount of business of each of them in tons, furnished, as I understand, by themselves.

Mr. Chairman, at the present session the House adopted a resolution requesting the Secretary of War to inform it whether any money appropriated by the act of August 2, 1882, "making appropriations for the construction, repair, and preservation of certain works on rivers and harbors, and for other purposes," was appropriated for works or objects that were not in the interest or for the benefit of commerce and navigation, and if so to name such works and objects and the respective amounts so appropriated, and whether any moneys appropriated by ive amounts so appropriated, and whether any moneys appropriated by said act have been or are being used upon works or objects not in the interest or for the benefit of commerce or navigation, and if so to name interest or for the benefit of commerce or navigation, and if so to name such works or objects and the respective amounts so used or expended. In his reply to said resolution the Secretary says that he has made a "new and extended examination" of the subjects covered by the act, and he submits a list of works erected in accordance with that act, which he states are seemingly of this character, with such details of information concerning them as seem to him substantially to furnish the information called for by the resolution. In his list so submitted are three improvements in the State of New Jersey, namely, South River, Woodbridge Creek, and Cheesequake's Creek. To his objections to these improvements and to the facts in answer to his objections I desire, as a Representative from that State, to ask the attention of the House. Having already discussed the proposed appropriation of \$7,000 for the completion of the Cheesequake's improvement, I pass it, quoting merely that portion of the report of the Committee on Commerce which relates thereto:

lates thereto:

IMPROVING CHEESEQUAKE'S CREEK, NEW JERSEY—OBJECTION OF THE SECRETARY OF WAR.

"Continuing improvement, \$15,000.

"The purpose of this appropriation is to improve about three miles of creek by such dredging operations as will secure a navigable channel four feet deep and one hundred feet wide as far back as Whitehead.

"The report of the Chief of Engineers shows that the original condition of the channel from the bar or jetty at the mouth gives a depth of one foot at mean low water for about three-fourths of the length to be improved, and for the remaining portion a depth of from four feet to one and one-half feet at low water. The course of the creek is very crooked and requires to be straightened.

"The project is a change of the outlet into a direction at right angles to the beach, to sustain this direction by jetties of stone, and to straighten the course of the creek and increase its depth in the upper portions.

"The official reports furnish no definite information as to the amount of commerce to be benefited.

Balance in Treasury July 1, 1882.

\$24,000
Appropriated act August 2, 1882.

15,000

THE FACTS.

THE FACTS.

The statement that "the official reports furnish no definite information as to the amount of commerce to be benefited" is not true. The local engineer, in reports for 1881, gives the following data:

Statistics of commerce for year ending June 30, 1881.

Class.	Number.	Tonnage.	Draught.
SloopsSchooners	146	50 to 80 each 80 to 200 each 100 to 300 each Not known	4 to 7 feet. 5 to 7 feet.

"These vessels carry manure, gas-house lime, poudrette, &c., up the creek, and bring down fire and potter's clay, molding sand, cordwood, brick, and iron ore."

And in the reports of 1882 the local engineer, after giving an estimate of another as to the amount of commerce of Cheesequake's Creek and certain other commercial data, states that the "amount of commerce to be benefited by this improvement is about \$110,000." He elso intimates that when the navigation is improved the trade by water will be much increased. An additional appropriation of \$7,000 has therefore been made in the present bill, and is justified by the commercial data given below:

1880	\$20,000 5,000 15,000

\$129.82,
"The condition of the creek and outlet at that date was unaltered.
"The amount expended during the fiscal year ending June 30, 1882, was \$568.07, and no alteration was made in the original condition of the outlet and creek.
"The available funds can be profitably expended during the fiscal year ending June 30, 1883, in the prosecution of the work.
"The estimated amount required for the entire and permanent completion of the work of improvement, in accordance with the approved and adopted project, is \$35.279."

Amount that can be provided by

Amount that can be profitably expended in fiscal year ending June 30, 1884, \$20,000.

"[From accompanying report of local engineer.]

"IMPROVEMENT OF CHEESEQUAKE'S CREEK, NEW JERSEY

"The survey of this work was directed by the act approved March 3, 1879, and the results of the survey, with a project of improvement, and estimate of cost, were reported December 23, 1879.

"On July, 13, 1881, proposals were received for the dredging of the new outlet, the closing of the present outlet, and the partial construction of the jetties, but the bids were too high, the price of the dredging alone being almost as much as the available amount for the work. A subsequent offer at lower and reasonable rates was afterward made, which I was authorized to accept, but unfortunately too close upon the approach of cold weather to safely undertake a series of operations, all of which should have been simultaneously finished to produce effect, or even preserve the work completed.

"It was decided then to await further appropriations, until a sum sufficient to commence work was available.

"The original condition of the channel over the bar or shoal at the mouth gives a depth of one foot at mean low water; the channel in the creek has a depth of four feet at mean low water for about three-fourths of the length to be improved, and for the remaining portion a depth from four feet to one and one-half feet at low water; the course of the creek is very crooked, and requires to be straight.

"The belance \$24.302.11 is prechebly, too little to undertake works as each and "The plance \$24.302.11 is prechebly, too little to undertake works as each and the mouth gives a certain."

ow water; the course of the creek is very crooked, and requires to be straightened.

"The balance, \$24,302.11, is probably too little to undertake works a certain amount of which should be completed for their own preservation.

"A larger amount, \$40,000, could be profitably expended during the fiscal year ending June 30, 1883.

"The amount of commerce of Cheesequake's Creek is estimated by one of the parties interested at \$110,000 per annum. Among the exports are clay and molding sand, of the former 15,000 or 20,000 tons annually; and it is supposed by residents that the trade by water will be much increased after the navigation has been improved.

"This work is in the collection district of Amboy, New Jersey; nearest port of entry, Perth Amboy, New Jersey; nearest light-house, Princess Bay, "Amount of revenue collected during the past fiscal year, \$183,973.84; amcunt of commerce to be benefited by this improvement is about \$110,000.

As to South River and Woodbridge Creek an examination of the official statement of the Engineer Corps, the evidence of the local engineers, and the testimony of the inhabitants and business men engaged in using these water ways for commercial purposes will answer the objections of

the Secretary conclusively.

The local engineer states the commerce of South River to be 193,177 tons, valued at \$3,415,300. Situated upon this river and its tributaries are two ship-yards, eight brick-works, eleven flour-mills, one licorice-mill, four snuff and tobacco manufactories, two shirt factories, and six saw-mills. Engaged in the commerce of the river are two steamers, sixty sailing vessels, and forty barges, in addition to forty-eight sailing vessels owned there. I quote from the report of the Chief of Engineers, United States Army to the Segretary of Wer. Executive Decryate No. 1. United States Army, to the Secretary of War, Executive Document No. 1, Forty-seventh Congress, second session, and the accompanying report of the local engineers, and ask leave to insert their statements as a part of my remarks:

[From report of Chief of Engineers, United States Army, through the Secretary of War, second session Forty-seventh Congress.]

17. South River, New Jersey .- The original condition of the navigable chan-

17. South kneer, new sersey. The original relief is nel is:

1. A false direction of the canal mouth, a depth there at mean low water of 3½ feet; thence up to Little Washington, depths varying from 3.1 to 11.6 feet at mean low water; thence to Bissett's brick-yard, depths varying from 2.8 to 10.1 feet at mean low water; and thence to Old Bridge, depths varying from 2.1 to 12.5 feet at mean low water. There are also several sharp bends above Little Washington where it will be expedient to strengthen the course occasionally by cuts.

Washington where it will be expedient to strengthen the course occasionally by cuts.

2. The originally adopted project, which has not been modified, was: To change the outlet of the canal; to close the natural course of the river below Tetit's; to dike and to dredge in order to obtain eight feet at mean low water up to Little Washington; thence to straighten the course, dike and dredge up to Bissett's brick-yard in order to obtain six feet at mean low water; and, finally, to straighten the course, dike and dredge to Old Bridge in order to obtain four feet at mean low water.

3. The amount expended to the close of the fiscal year ending June 30, 1881, was \$382.20.

No change in the work at that time. The amount expended during the fiscal year ending June 30, 1882, was \$356.43, without change in the condition of the river.

river.

The available funds, \$55,261.37, can be profitably expended during the fiver ending June 30, 1883, upon diking and dredging in the canal and at year ending June 30, 1883, upon diking and dredging in the canal and at its mouth.

The estimated amount for the entire and permanent completion of the work of improvement, in accordance with the approved and accepted project, is \$138,-

Amount that can be profitably expended in fiscal year ending June 30, 1884,

[From accompanying report of local engineer.]

The survey of this river was directed by the act approved March 3, 1879, and the results, with a project of improvement and estimate of cost, were reported January 23, 1880.

South River is a tributary of the Raritan, which it enters by two courses, the one natural, the other artificial, one and one-fourth miles below the former.

After considerable delay the necessary papers for acquiring the title to the land needed to change the direction of the mouth of the canal were completed, and on June 29, 1882, proposals were advertised to be opened on July 20 for constructing dikes and dredging at the entrance of the canal into the Raritan River.

The amount of commerce to be benefited annually is represented to be 193,175 tons, of the value of \$3,415,300, the principal articles of export being bricks, molding sand, and wood, fruit, and vegetables.
On South River and tributaries there are represented to be: Eight brick-works.
Eleven flour-mills,

Of Woodbridge Creek, the local engineer says:

Of Woodbridge Creek, the local engineer says:

This stream, although classified as a creek, has really a more important and extended bearing on commerce and industry than many smaller streams called rivers. Traversing as it does the richest fire-clay region of the State of New Jersey, it affords a direct outlet for the product of the numerous and valuable elaypits of the adjacent country. The clay on being mined is drawn to the docks on the stream, and is shipped thence to all parts of the country. Numerous fire-brick and drain-pipe works, some of which are the oldest and most extensive works of this kind, are also located on the banks of the stream, and ship their constantly increasing products directly from their docks to various ports.

Woodbridge Creek is in the collection district of Perth Amboy, New Jersey. Nearest light-house, Prince's Bay, and nearest fort, fort at Sandy Hood.

Statement of the shipments of fire-brick, clay, &c., and receipts of coal, merchandise, &c., from July 1, 1881, to July 1, 1882, through Woodbridge Creek, New Jersey.

Total received and shipped, 116,154 gross tons.

These figures speak for themselves.

An attack has recently been made upon the appropriation for the improvement of the channel between Staten Island and New Jersey by a certain New York newspaper, whose editor evidently assuming to know more about everything than any one else knows about anything, has outstripped all others in the inconsiderate venom of his assaults upon New Jersey improvements.

How much truth and force there is in his abuse in this instance may be estimated by an examination of the report of Major Gillespie, the engineer officer in charge. He says of this improvement:

engineer officer in charge. He says of this improvement:

The channel forms an important link between the great highway of the West and the upper part of New York Harbor, connecting further the channel of the Kill von Kull with that of Arthur Kill, and extending thence by the Raritan Bay and River through the Delaware and Raritan Canal, forming an unbroken water communication with the Delaware River. The channel also has an important bearing on the trade and commerce of Elizabethport, which is one of the most important shipping points for coal and iron brought by rail from the rich fields of Pennsylwania to the extensive docks located adjacent to the channel, whence shipments are made direct to foreign as well as to home ports.

The appropriation for this improvement should be on the most liberal scale.

Compare this with the following statement taken from the paper referred to, the New York Sun of the 21st instant:

ferred to, the New York Sun of the 21st instant:

A correspondent is puzzled by the appropriation of \$25,000 for the so-called Staten Island channel in the present river and harbor bill:

"What is this channel? It seems suspiciously near New Jersey. Is it one of Hon. Mr. Rose's 'tributaries?' It is something new, anyhow."

Oh, no; it is nothing new. By referring to The Sun of Friday last, our correspondent will find it duly credited to Hon. Milles Rose. By referring to a map of New Jersey he will find that Staten Island is separated from Hon. Milles Rose's district by a narrow sound. The improvements in question are at Elizanest Hon, which lies within the limits of Hon. Milles Rose's district the summer \$40,000 were appropriated for this work; at the end of the year the Secretary of War reported an unexpended balance of \$30,000. According to that eminent authority on riversand harbors, Colonel George Bliss, the work at Elizabethport was elassed as " of local importance mainly" by certain engineers of the Army

of high standing and entire familiarity with the subject, when they were equited by the Administration just before the veto.

Consider, also, the statement of Hon. Henry S. Little, receiver and president of the Central Railroad of New Jersey, in his letter to Lieutenant-Colonel Gillespie on the commerce of Elizabethport, all of which goes through this so-called channel:

goes through this so-called channel:

OFFICE OF THE RECEIVER,
CENTRAL RAILROAD COMPANY OF NEW JERSEY,
New York, July 5, 1882.

BEAR SIE: I send you the following memoranda showing the commercial business transacted at Elizabethport during the past year by the Central Railroad of New Jersey, and also the amount of business done by the commercial and manufacturing establishments of that place.

The Central Railroad of New Jersey shipped during the year 2,500,000 tons of coal, and the Philadelphia and Reading Railroad 725,000 tons. The miscellaneous freight amounted to 45,000 tons; native ores, 40,000 tons.

The amount of pig-iron received was 40,000 tons, and cast-iron pipes 16,000 tons.

Railroad and scrap iron amounted to 18,500 tons, and the shipments of slate to 3,000 tons.

The following are the principal manufacturing and commercial establishments and the number of operatives employed by each:

Opera	tives.
Singer Manufacturing Company	2,500
Five founderies	650
One ropewalk	500
One car-wheel foundery	20
One rolling-mill	20 50
Ten other factories	700
Repair shops Central Railroad of New Jersey	550
77-4-1	4.000
Total	4. 970

Elizabethport is, next to Jersey City, the chief commercial port in the eastern part of New Jersey; access, however, to its wharves and docks is only possible for vessels of light draught; with the impediments in the way of navigation removed, a very great degree of commercial prosperity will result to Elizabeth port and its vicinity.

Yours, truly,

H. S. LITTLE,

Receiver and President Central Railroad of New Jersey.

Brovet Lieutenant-Colonel G. L. GILLESPIE.

United States Engineer.

In addition to this the vect over

In addition to this the vast commerce of the Delaware and Raritan Canal goes through this "narrow sound." The freight moved on it in 1881 was 1,710,888 tons. (See Poor's Manual for 1882, page 208.) Still further swelling this total, one-half of the commerce of the city

of Newark seeking water routes goes also through this very channel. If this is a specimen of the information received by the President relative to so important a water route as this is demonstrated to be by the foregoing figures, within tweaty miles of the city of New York, what can we say as to the reliability of such "entire familiarity" as to works in progress all over the country. The consideration of the nature of this attack in this newspaper ought to be sufficient to show the people of the whole country how much reliance is to be placed in the malicious statements which for six months have been dinned into their ears by this very journal and how just and how fair it has been in its personal attacks upon representatives in Congress who were seeking only to legislate for the best interests of the

country.

The impression produced to a very great extent in New Jersey by this publication and by other cheap imitators who followed barking in its train was that the Representatives in Congress who supported the last river and harbor bill had been personally corrupted and had received pecuniary rewards for their votes for it, an impression which every gentleman on this floor knows to be erroneous and cruelly unjust. It also sought to produce the impression among the Democrats of New Jersey that the policy of internal improvement was undemocratic, and that those Democrats who supported the last river and harbor bill had been false to their party and its principles, ignoring the fact that the representatives of ten Democratic States voted solidly in favor of that bill, and that but four Democratic States voted solidly in favor of that bill, sentatives of ten Democratic States voted solidly in layor of that bill, and that but four Democratic Senators were found voting to sustain the veto of the President in the Senate. I desire also to place upon record the fact that the Representatives from New Jersey who supported that measure did so in obedience to the request of the Legislature of that State. The following resolutions were unanimously adopted by the senate and house of assembly of New Jersey and approved by its governor:

Whereas there are necessary improvements required in the Delaware River between the city of Trenton and the sea, to improve the navigation of said river, and the citizens of New Jersey and Pennsylvania are petitioning Congress to make an appropriation for the same: Therefore,

1. Be it resolved by the senate and general assembly of the State of New Jersey. That the Senators and Representatives in Congress from this State be requested to use all honorable means to secure such appropriation as shall be necessary for the above purpose.

2. And be it resolved. That after this joint resolution shall have been approved by the governor, copies of the same shall be sent to our Senators and Representatives in Congress.

Approved March 3, 1892.

Approved March 3, 1882.

The only way, as every member of the House knows, in which we could obey that request was by voting for the river and harbor bill. It was impossible to obtain an appropriation for the Delaware River between the city of Trenton and the sea except by supporting the river and harbor bill. Now, in obedience to that resolution, \$474,000 was carried in the bill of last session for the Delaware between Trenton and the sea. In addition to that amount, which was for the joint benefit of New Jersey, Pennsylvania, and Delaware, New Jersey received for works distinct from the Delaware in round figures \$361,000, making in all for her benefit, singly and jointly, \$787,000. Yet notwithstanding all this, and notwithstanding those resolutions of instruction, we

have been held up to scorn by a portion of the press of New York as criminals and dishonorable men.

The distinguished gentleman from Maryland [Mr. McLane] early this session had occasion to say that a most provincial opinion prevailed in that city.

Great as she is in wealth, commerce, and culture, some of her citi-zens seem to forget that the Union is not her appurtenance and that she is great because of the country whose metropolis she is, and that the

country is not great merely because she makes it so.

A significant sentence was that contained in the notable letter of Governor Seymour in favor of free canals which appeared last autumn. Commenting on the opposition thereto he said it came chiefly from the counties of Cattaraugus, Franklin, and Saint Lawrence, the representatives from which in Congress voted for the last river and harbor bill, "the most important expenditure of which is designed to turn commerce from our State, to harm the prosperity of the city of New York, and to check the increase of its share of the State assessments, thus tending to increase the charges upon the counties I have named."

Instead of the lofty position of national opposition to local improvement which a portion of the press of New York assumes, this expression of New York sentiment from so distinguished a source indicates

the existence of local opposition to national improvement.

If New York thought it unfair to her as a railroad center to improve the Mississippi, her opposition should have been put boldly on that ground, and not have assumed the form of vituperation and outcry against individual members as "jobbers" and participants in a "steal."

However, while we who supported the last bill suffered the injustice of heritage areas a provided that the provided the provided the second content of the second content of

of having very many honest people misled not only as to our acts but as to our motives, nevertheless that bill, in my view, served a useful

as to our motives, nevertheless that bill, in my view, served a useful social purpose. It was a safety-valve whereby the cranks of the country let off their surplus of energy; and it also permitted many persons of damaged reputations to masquerade as reformers—to rehabilitate themselves in seeming pure political virtue.

In my own district there was scarce a political broker who had sold himself and everybody else over and over again to all sides of everything but was horror-struck at such a "steal." There was scarce a man who had paid the penalty of imprisonment in the State's prison for theft of public funds but stood around the colors in the front rank of reform as an opponent of that "steal." And as hypocrisy is always most zealous, those most deficient in character and most unsavory in their histories were the loudest in denunciation. their histories were the loudest in denunciation.

But, Mr. Chairman, I shall withhold my vote from this bill because there is much honest difference of opinion among the people of my district as to its wisdom, and I purpose to respect the sentiment of those who sent me here whenever I can ascertain it. Notwithstanding, however, that I shall adopt that course I have taken this opportunity to defend some of the appropriations for my State because they were I thought unjustly assailed, and have also availed myself of my privilege of placing on record my protest against the unjust, ignorant, and in many cases malicious abuse lately heaped upon those who could not reach with reply the firesides and homes into which these cowardly reach with reply the firesides and homes into which these cowardly attacks, hissing with personalities, penetrated. My conscience is clear, and I trust and believe that those who now honestly attach to me and to others blame for voting for the river and harbor bill passed at the first session of the Forty-seventh Congress will not continue to do so when the fires of prejudice, kindled and fanned for the most part by persons with sinister motives, shall have consumed themselves, and information and reflection shall have led to the formation of a just opinion.

### The Judiciary-Federal Courts.

"Law is the fruit of no human invention, is the decree of no judge, no nation, no country, but is that eternal something to whose unerring dictates of command or prohibition the whole world should bend."

"Virtue is the doing good to mankind in obedience to the will of God, and for the sake of everlasting happiness."

## SPEECH

## HON. JOSEPH WHEELER, OF ALABAMA.

### IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 16, 1883,

On the bill (H. R. 3123) to amend sections 1, 2, 3, and 10 of an act to determine the jurisdiction of the circuit courts of the United States, and to regulate the removal of causes from State courts, and for other purposes, approved March 3, 1875.

Mr. WHEELER said:

Mr. SPEAKEE: The features of this bill that commend it to my approval are those which tend to facilitate the removal of cases from the State to the Federal courts by regulations that will establish the practice and so define the jurisdiction as to leave no room for caviling.

do not propose to examine the bill minutely, but have some few observations to submit on the formation, construction, the use of courts of the United States, and the abuse of courts and judges, and their tendency to usurpation. Another reason why I desire to avail myself of this opportunity to express these views is the pendency of a bill to

INCREASE THE FEDERAL JUDICIARY,

the consideration of which, in its present condition, I shall feel it my duty to oppose.

The attention of mankind can not be too frequently called to the abuses of courts and to the crimes, corruptions, and cruelties of judges.

The history of past ages shows that courts grow up to overshadow and subordinate all other authorities, and that this tendency is observable in the judicial tribunals even of this, our free country

Whoever is afraid of centralization should be jealous of the Supreme Court of the United States; for in that institution above all others in this country is lodged

#### THE POWER TO CENTRALIZE THE GOVERNMENT.

Mr. Jefferson gave this subject the profound consideration of his great mind, as is clear in the extracts from letters of his which I here pro-

duce, and is clearly illustrated in his writings.

Mr. Jefferson, like all greatmen, became more and more imbued with the conviction that there was no lamp by which a people could be so surely guided as the

#### LAMP OF EXPERIENCE AND THE TEACHINGS OF HISTORY :

recounting the experiences of those who have gone before us, blazing out the ways traveled by men, warning against the pitfalls to which they were led by error, and prominently portraying the paths of truth by which peoples and nationalities alone attain the zenith of glory, prosperity, and happines

The judiciary hold in their hands the lives, the liberties, and the property of all the people of all nations. With just, learned, and wise judges any people will be free and happy, but it matters not how free and liberal the laws and institutions of a country may be if these laws are to be construed and executed by a judiciary who are devoid of any

of these three requisites.

A country with bad judges will feel the iron heel of tyranny more surely than it is felt by the people of the

#### FORST IMPERIAL DESPOTES

and more incisively will these wrongs be felt because they are too apt

to strike where they are least deserved and least expected.

A judge, no matter how learned, if corrupt; no matter how wise, if unjust; is a disgrace to the ermine which he wears, an insult to the bench on which he sits, and an oppression to the people of the country which he serves.

To save posterity from such evils seemed to be the study of the latter part of Mr. Jefferson's life.

I will detain the House a few moments while I read some emanations upon this subject from his pen. I will first read an extract from his letter dated December 25, 1820, to Mr. Thomas Ritchie, in which Mr.

Jefferson says:

The judiciary of the United States is the subtle corps of sappers and miners constantly working under ground to undermine the foundations of our confederated fabric. They are construing our Constitution from a co-ordination of a general and special government to a general and supreme one alone. This will lay all things at their feet, and they are too well versed in English law to forget the maxim Boni judicis est ampliture jurisdictionem.

A judiciary independent of a king or executive alone is a good thing; but independence of the will of the natio, is a solecism, at least in a republican government.

The expressions in this letter from Mr. Jefferson are prophecies which could only come from a man of his great penetration. In less than fifty years all that he here says

## IS FULLY REALIZED,

and had he lived until to-day he would have seen American people subjected by corrupt judges to wrongs and indignities greater than had ever entered into his contemplations. I will now read what a month later was said by Mr. Jefferson in his letter of January 19, 1821, to Hon. Archibald Thweat:

I am sensible of the inroads daily making by the Federal into the jurisdiction of its co-ordinate associates, the State governments. The legislative and executive branches may sometimes err, but elections and dependence will bring them to rights.

The judiciary branch is the instrument which, working like gravity, without intermission, is to press us at last into one consolidated mass.

Against this I know no one who, equally with Judge Roane himself, possesses the power and the courage to make resistance; and to him I look, and have long looked, as our strongest bulwark. If Congress fails to shield the States from dangers so palpable and so imminent the States must shield themselves and meet the invader foot to foot.

I call special attention to the warning here contained against consolidated government, and his intimation of the evils arising from a life tenure of officials whose positions enable them to wield unrestrained power. I will now call attention to what is said by Mr. Jefferson in his letter dated August 18, 1821, to Mr. C. Hammond, in which he

It has long, however, been my opinion, and I have never shrunk from its expression (although I do not choose to put it into a newspaper, nor like a Priam in armor offer myself its champion), that the germ of dissolution of our Federal Government is in the constitution of the Federal judiciary; an irresponsible body

(for impeachment is scarcely a scarcerow), working like gravity by night and by (for impeachment is scareely a scareerow), working like gravity by night and by day, gaining a little to-day and a little to-morrow, and advancing its noiseless step like a thief over the field of jurisdiction, until all shall be usurped from the States, and the government of all be consolidated into one. To this I am opposed, because when all government, domestic and foreign, in little as in great things, shall be drawn to Washington as the center of all power, it will render powerless the checks provided of one government on another, and will become as venal and oppressive as the government from which we separated. It will be as in Europe, where every man must be either pike or gudgeon, hammer or anvil.

anvil.

If the States look with apathy on this silent descent of their government into the gulf which is to swallow all, we have only to weep over the human character formed uncontrollable but by a rod of iron and the blasphemers of man as incapable of self-government become his true historians.

This letter to Mr. Hammond reiterates the sentiments before pressed, and in addition thereto he uses utterances which it would be well for us to consider. I will now read what is said by Mr. Jefferson in his letter dated July 2, 1822, to Hon. William T. Barry:

in his letter dated July 2, 1822, to Hon. William T. Barry:

We already see the power installed for life, responsible to no authority (for impeachment is not even a scarcerow), advancing with a noiseless and steady pace to the great object of consolidation. The foundations are already deeply laid by their decisions for the annihilation of constitutional State rights, and the removal of every check, every counterpoise to the ingulfing power of which themselves are to make a sovereign part.

If ever this vast country is brought under a single government it will be one of the most extensive corruption, indifferent and incapable of a wholesome care over so wide a spread of surface. This will not be borne, and you will have to choose between reformation and revolution.

If I know the spirit of this country, the one or the other is inevitable. Before the canker is become inveterate, before its venom has reached so much of the body politic as to get beyond control, remedy should be applied.

Let the future appointments of judges be of four or six years and renewable by the President and Senate. This will bring their conduct at regular periods under revision and probation and may keep them in equipoise between the general and special governments. We have erred in this point by copying England, where certainly it is a good thing to have the judges independent of the king. But we have omitted to copy their caution also, which makes a judge removable on the address of both legislative houses. That there should be public functionaries independent of the nation, whatever may be their demerit, is a solecism in a republic of the first order of absurdity and inconsistency.

I will now give a single extract from the pen of Mr. Jefferson, in his

I will now give a single extract from the pen of Mr. Jefferson, in his letter dated March 4, 1823, to Judge Johnson:

I can not lay down my pen without recurring to one of the subjects of former letter, for in truth there is no danger I apprehend so much as the condation of our Government by the noiseless, and therefore unalarming, in mentality of the Supreme Court. This is the form in which Federalism arrays itself, and consolidation is the present principle of distinction betw Republicans and the pseudo-Republicans, but real Federalists.

We see that, so far from receding from the positions previously taken, this great man is more strongly impressed with the propriety of his apprehensions; and three months after this date, namely, June 12, 1823, we again find him writing to Judge Johnson, in which letter he says:

we again find him writing to Judge Johnson, in which letter he says:

I have stated above that the original objects of the Federalists were, first, warp our Government more to the form and principles of monarchy, and, second, to weaken the barriers of the State governments as co-ordinate powers. In the first they have been so completely foiled by the universal spirit of the nation that they have abandoned the enterprise, shrunk from the odium of their old appellation, taken to themselves a participation of ours, and under the pseudo-Republican mask are now aiming at their second object, and strengthened by unsuspecting or apostate recruits from our ranks are advancing fast toward an ascendency. I have been blamed for saying that a prevalence of the doctrines of consolidation would one day call for reformation or revolution. I answer by asking if a single State of the Union would have agreed to the Constitution had it given all powers to the General Government; if the whole oposition to it did not proceed from the jealousy and fear of every State of being subjected to the other States in matters merely its own; and if there is any reason to believe the States more disposed now than then to acquices in this general surrender of all their rights and powers to a consolidated government, one and undivided?

It seems almost an assumption for me to descant upon these words

It seems almost an assumption for me to descant upon these of wisdom so tersely and ably expressed. I will therefore, without comment, proceed to read what was said by Mr. Jefferson in his letter dated October 31, 1823, to Hon. M. Coray:

dated October 31, 1823, to Hon. M. Coray;

At the establishment of our Constitution the judiciary bodies were supposed to be the most helpless and harmless members of the Government.

Experience, however, soon showed in which way they were to become the most dangerous; that the insufficiency of the means provided for their removal gave them a freehold and irresponsibility in office; that their decisions, seeming to concern individual suitors only, pass silent and unheeded by the publicat large; that these decisions, nevertheless, become law by precedent, sapping, by little and little, the foundations of the Constitution and working its change by construction before any one has perceived that that invisible and helpless worm has been busily employed in consuming its substance.

In truth, man is not made to be trusted for life, if secured against all liability to account.

It must be observed that during all the period occupied by these let-ters the prevailing thought in Jefferson's mind seemed to be

APPREHENSION OF THE LIFE-TIME TENURE

of the judiciary, and the feeling seemed to grow more intense as he gave it additional consideration. I will now read an extract from one of the last letters written by him. May we not call it the utterance of the greatest of statesmen, standing on the brink of the grave?

It was dated March 25, 1825, and was addressed to Edward Living-

ston, esq. It says:

One single object, if your provision attains it, will entitle you to the endless gratitude of society; that of restraining judges from usurping legislation. And with no body of men is this restraint more wanting than with the judges of what is commonly called our General Government, but what I call our foreign department. They are practicing on the Constitution by inferences, analogies, and sophisms, as they would on an ordinary law.

They imagine they can lead us into a consolidated government, while their oad leads directly to its dissolution. This member of the Government was at

first considered as the most harmless and helpless of all its organs. But it has proved that the power of declaring what the law is, ad libitum, by sapping and mining styly and without alarm the foundations of the Constitution, can do what open force would not dare to attempt. I have not observed whether, in your code, you have provided against caucusing judicial decisions, and for requiring judges to give their opinions scriatim, every man for himself, with his reasons and authorities at large, to be entered of record in his own words.

The acuteness of Jefferson's mind appears in all his writings. His patriotic devotion to the

FUNDAMENTAL PRINCIPLES OF FREEDOM

is universally acknowledged. His intellect was grasping; his reading extensive, and his learning was vast, especially in the history of the progress, and fall of empires.

rise, progress, and fall of empires.

His jealousy of the powers of the judiciary, as emphatically and repeatedly expressed by him, was built upon his knowledge of the usurping inclinations of the human mind, for he had observed how incessantly power accumulated power to itself, and how prone was authority to add to its own potency. And he had before his great mind developed as if by an open and widespread panorama the

ABSOLUTELY AUTOCRATIC POWER

of the English judiciary, which from its foundation by William the Conqueror grew up side by side with the kings, and how it finally became more potent in the affairs of state than the king himself. The royal authority of the King of England was so hedged and restricted by the rulings of the judges that the majesty of imperialism dwindled almost into governmental imbecility, and the royal head of the government was an autocrat only in name. When King John heard of the death of his chief-justice, Fittzpeter, he laughed aloud and ex-claimed with a profane oath: "Now, I am again king, and am a lord in England."

Henry IV on one occasion had to submit to the judicial authority of one of his judges, who, for contempt of court, absolutely imprisoned the Prince of Wales, that rollicking youth popularly known in litera-ture as "Prince Hal." On that memorable occasion the judge was greater than the king, and this liberty-loving world of ours has never ceased and will never cease to applaud that iron-hearted old judge for this act as indicating an independence of character in his high office that made him the most illustrious of the judges that in any age adorned the English bench.\*

This grand display of judicial authority was perfectly legitimate; it taught mankind a lesson which was to them then unknown—simply that a king and his children must be subject to the same laws and rules which are made for the people. Nevertheless, the act was one of audacity, an audacity which grew bold in the gradual gathering of power to power and of authority to authority; and it presents a prime case by which I seek to illustrate the inevitable

TENDENCY OF THE JUDICIARY TOWARD ABSOLUTE AUTOCRACY.

And here I may safely assert that in England to-day the modern judicial ermine is more regarded and sanctified than the purple robes of royalty. And now, further to justify Jefferson in his jealousy of the judicial power, let us take a brief view of the rise of the judicial power of England to its present eminence.

THE BRIGAND JUDGES

The first and most notable feature of the English judiciary is its early rigandism. Do not be startled by the phrase. William the Norman brigandism. Do not be startled by the phrase.

\*Sir William Gascoigne is the judge referred to. The story is stated in an old English book, and preserved by Lord Campbell:

'The most renowned prince King Henry the Fith, late King of England, during the life of his father was noted to be of fierce and wanton courage. It happened that one of his servants, whom he favored well, was, for felony by him committed, arraigned at the King's Bench; whereof the prince being advertised and incensed by light persons about him, in furious rage came hastily to the bar where his servant strode as a prisoner and commanded him to be ungyved and set at liberty; whereat all men were abashed, reserved the chief-justice, who humbly exorted the prince to be contented, that his servant might be ordered according to the ancient laws of this realm, or if he would have him saved from the rigor of the laws, that he should obtain, if he might, of the king, his father, his gracious pardon whereby no law ar justice should be derogated. With which answer the prince, nothing appeased, but rather more inflamed, endeavored him self to take away his servant. The judge, considering the perilous example and inconvenience that might thereby ensue, with a valiant spirit and courage commanded the prince, upon his sillegiance, to leave the prisoner and depart his way. With which commandment the prince being set all in a fury, all chafed, and in a terrible manner came up to the place of judgment, men thinking that he would have slain the judge, or have done to him some damage; but the judge, sitting still without moving, declaring the majesty of the king's place of judgment, and with an assured and bold countenance, had to the prince these words following:

"Sir, remember yourself. I keep here the place of the king, the prince these words following; remember yourself. I keep here the place of the king, remember yourself. I keep here the place of the king, remember yourself. I keep here the place of the king, remember yourself. I keep here the place of the king, remember yourself. I keep here the pla ment, and following:

ment, and with an assured and bold countenance, had to the prince these words following:

"'Sir, remember yourself. I keep here the place of the king, your sovereign lord and father, to whom ye owe double obedience, wherefore eftsoon in his name I charge you desist of your wilfulness and unlawful enterprise, and from henceforth give good example to those which hereafter shall be your proper subjects. And now, for your contempt and disobedience, go you to the prison of the King's Bench, whereunto I commit you, and remain ye there prisoner until the pleasure of the king, your father, be further known."

"With which words being abashed, and also wondering at the marvelous gravity of that worshipful justice, the noble prince laying his weapon apart, doing reverence, departed and went to the King's Bench as he was commanded. Whereat his servants, disdaining, came and showed to the king all the whole afair. Whereat he awhile studying, after as a man all ravished with gladness, holding his eyes and hands up towards heaven, abraided, saying, with a loud voice: 'O, meriful God, how much am I, above all other men, bound to your infinite goodness, specially for that you have given me a judge who feareth not to minister justice, and also a son, who can suffer semblably, and obey justice!"

appointed his judges from the army. Some of his commanders were at were called

The greatest fighter, the most successful knight, was made the chief justiciar, and the judge even at that early day was next in power to

The same beastly brutality that distinguished some of the English monarchs as well distinguished some of the earlier English judges. Henry VIII found his counterpart in some of his judges; not only his counterpart, but his willing and subservient parasites—these latter the everlasting disgrace of the bench. It is natural to suppose that a man stepping from the gory field of Hastings into the inner chamber of the judicial temple carried with him his military idea of obedience. In war he had one most effectual way of enforcing it—to command was to be implicitly obeyed.

It was a hard thing for thoseold knights of war to lay aside the cumbersome load of mail and brazen armor and put on the lighter and more graceful habiliments of a judge. But in disencumbering the body of its savage accounterments he took care to hold on to all the harder qualities of his head; and the lightening of the body only left the heart more free to follow its savage instincts; so that we see through many ages the chief justiciars of England composed of men of most brutal instincts.

THE JUDICIARY AS AN AID TO GOVERNMENT.

It was one of the ideas of Mr. Jefferson that at times the judiciary would become subservient to the Government, and so aid the Government in crushing out the public liberty. There never was a more sagacious apprehension.

Although the rulings, as I have before said, so hedged and restricted the authority of the king as to make him in many respects a mere automaton, nevertheless when the king could draw his judges to his side of any question, whether of mercy or tyranny, he could always carry his point. For when the regal prerogative was propped and supported by the presence of the judicial sanction it was all-powerful; and many prominent examples appear in English history where the king needed and found a suppliant and unscrupulous judge to support him on some imminent occasion; and we see in many cases that, when a new appointment of a judge became necessary, the question of succession was, not who is most learned in the law and most upright in integrity, but—

WHO IS THE MOST LIKELY TO SUPPORT THE GOVERNMENT,

in some great pending or prospective question such as this—a certain nobleman must be tried for treason—now, where shall we find a judge who in this anticipated prosecution will stand most stolidly by the king? Such was the question on which often hung the selection of a judge to fill a vacancy; nay, it has often happened that an upright judge of unflinching integrity has been removed upon some plausible pretext, in order to make way for some truculent parasite. Some satirist has said in his advice to monarchs as to their choice in the selection of judges:

Judges:
Take Jeffreys—if you want a pliant tool;
Take Murray, if you want the law to rule;
Take Bacon, if you want the "itching palm;"
Take Coke, if you prefer the healing balm.
Take Holt, if you would teach how erring youth
May come back to the beauteous ways of truth,
After the manner of Prince Hal. of Wales—
(When Harry robs, tis frolic that prevails)
Holt greatly err'd: how nobly he retrieves!
He steals one purse, but hangs a thousand thieves! THE BRIGAND JUDGES OF ENGLAND.

These sketches are historical and are taken mainly from Campbell's When the Duke of Normandy claimed the crown of England and prepared to wrest it from the perjured Harold, Odo preached the crusade in the pulpit and zealously exerted himself in levying and training the troops.

ODO, THE FIGHTING PRELATE.

He was one of the first to jump ashore at Pevensey; and he continued to ply his double trade of a priest and a soldier. At daybreak of the ever-memorable 15th of October, 1066, he celebrated mass in the Norman camp, wearing a coat of mail under his rochet. He then mounted a gallant white charger, carried a marshal's baton in his haad, and drew up the cavalry with the command of which he was intrusted.

In the fight he performed prodigies of valor and he mainly contributed to the victory. ODO, THE PIGHTING PRELATE.

In the fight he performed products of the distributions of England. He was a general insurrection all over England; and William was obliged to return and to reconquer the kingdom.

Only one cause is reported as tried before him, which resulted in a verdict for the Crown.

When intrusted with a military command he thought it unnecessary to discriminate between guilt and innocence; he executed without investigation all natives who fell into his hands, and he ravaged the whole country.

Instead of attending to the duties of his station he made riches and power the principal objects of his pursuit.

Such is the character of the first justiciar of England. man of unbounded ambition, both as to preferment in church and state. He sought to be king, and even had an aspiration (founded upon a superstitious dream) to be Pope of the Roman Church. To the natural qualities that made up in the rough the genuine old English baron of later day, she had as much culture as the educational facilities of the times afforded. He had considerable learning in civil, feudal, and

canon law, with undaunted courage; and in gentler times and under

different auspices might have been an ornament to the bench.

William De Warrenne and Richard De Benefacta were jointly appointed to the office of chief justiciar.

These two grand justiciars, during their joint administration, invented a new puni-shment to be inflicted on disturbers of the public peace. Having encountered and defeated a powerful band of insurgents at a place called Fagadun, they cut off the right foot of all they took alive including the ringleaders, the Earls of Norfolk and Hereford. It seems then to have been considered that in times of rebellion the judges were to exercise martial law, or to disregard all law, according to their own arbitrary will.

Ralph Flambard, the "devouring torch," held the great seal. He was distinguished alike for his revolting atrocities and his edifying peni-tence. His name is significant of his character.

RALPH BASSET,

during the king's absence in Normandy, convicted capitally and executed no fewer than fourscore and four thieves, and deprived six others of their eyes and their virility.

King Richard the First put up

THE OFFICE OF CHIEF-JUSTICIAR TO SALE,

and the highest bidder was Hugh Pusar, Bishop of Durham. His morals were depraved even beyond the common licentious standard prevailing there. He was guilty of rapine and extortion exceeding anything practiced by any of his predecessors.

DE WEYLAND

was esteemed a great lawyer, was zealous in detecting and punishing criminals. But unfortunately his salary—

Being only sixty marks a year, he seems without scruple to have resorted to very irregular courses for the purpose of increasing his riches. He was punished for bribery. Having walked barefoot and bareheaded with a cruciffx in his hand to the seaside at Dover, he was put on board a ship and departed to foreign parts. He is said to have died in exile, and he left a name often quoted as a reproach to the bench till he was celipsed by Jeffreys and Scroggs.

SIR WILLIAM THORPE

chief-justice of the King's Bench in Edward the Third's time, having of five persons received five several bribes which in all amounted to £100, was for this alone adjudged to be hanged and his lands and goods forfeited. POPHAM.

Lord Campbell says:

Lord Campbell says:

The career of our next hero is capable of being made amusing as well as instructive. Although at one time in the habit of taking purses on the highway, instead of expiating his offenses at Tyburn he lived to pass sentence of death upon highwaymen and to be a terror to evil-doers.

While yet a child he was stolen by a band of gypsies, and remained some months in their society. We have no account of his schooling before he was sent to Baliol College, Oxford. Here he was very studious and well behaved, and he laid in a good stock of classical learning and of dogmatic divinity. But when he removed to the Middle Temple, that he might qualify himself for the profession of law, he got into bad company and utterly neglected his judicial studies. He preferred theaters, gaming-houses, and other haunts of dissipation to "readings" and "moots."

It seems to stand on undoubted testimony that at this region of his life.

sion of law, he got into bad company and utterly neglected his judicial studies. He preferred theaters, gaming-houses, and other haunts of dissipation to "readings" and "moots."

It seems to stand on undoubted testimony that at this period of his life, besides being given to drinking and gaming, either to supply his profligate expenditure or to show his spirit, he frequently sallied forth at night from a hotel in Southwark with a band of desperate characters and that planting themselves in ambush on Shooter's Hill, or taking other positions favorable for attack or escape, they stopped travelers and took from them not only their money, but any valuable commodities which they carried with them, boasting that they were always civil and generous, and that to avoid serious consequences they went in such numbers as to render resistance impossible.

We must remember that this calling was not then by any means so discreditable as it became afterward. The traditions were still fresh of robberies having been committed on Gad's Hill under the sanction of a Prince of Wales. The extraordinary and almost incredible circumstance is that Popham is supposed to have continued in these courses after he had been called to the bar.

When Sir Thomas Bromley, who had been long solicitor-general, was promoted to be lord chancellor, Popham succeeded him as solicitor-general. He succeeded Sir Gibert Gerrard as attorney-general.

Popham conducted the trials of all those charged as being implicated in Babbington's conspiracy, which were meant to prepare the public mind for the unhappy Mary herself. I will give a little specimen of these proceedings from Tinley's case. The charge against him was that he had planned the murder of Queen Elizabeth in her coach. The chief evidence consisted of a confession of Abbington, an avowed accomplice, in which he said that "Tinley would have had the Hajesty set upon in his own trial said the day before: "Tinley would have had Her Majesty set upon in her coach," and I said no more. But that proves not I

"POPHAM, A. G. You have said enough, if we had no other evidence against you.
"TINLEY. How so?"
"POPHAM, A. G. Because you have confessed high treason; your words prove that you were devising on the menner of her death.
"TINLEY. I tell you there is no such matter intended in my words. If a servant which is faithful, knowing where his master's money is, do say, 'If I would be a thief I could rob my master, for in such a place as his money is,' this proves not that he would rob his master, albeit he used such words. And so, though I said 'she might be set upon in her coach, it proveth not that I assented to the same;' for I protest before God I never intended any treason in my life."

Upon the death of Sir Christopher Wray there was some hesitation about the nomination of his successor. Popham was an able man and had done good service as attorney-general; but there was an awkwardness, after the stories that were circulated about his early exploits, in placing him at the head of the administration of criminal justice; nevertheless the choice fell upon Popham who, on the 8th day of June, 1592, received his writ as chief-justice of England and was knighted by the queen at Greenwich.

He held the office fifteen years. The reproach urged against him was extreme severity to prisoners. He was notorious as a "hanging judge." Not only was he keen to convict in cases prosecuted by the government, but in ordinary larcenies, and above all in highway robberies there was little chance of acquittal before him.

Among the many important trials over which he presided, probably the one most prominently connected with the history of England and this country was that of Sir Walter Raleigh.

Guy Fawkes and his associates, implicated in the Gunpowder Plot,

were tried before Popham.

GARNET'S CASE

Popham's last appearance in a case of public interest was upon the trial of Garnet, the Superior of the Jesuits. Against him the evidence was very slender, and the chief-justice was obliged to eke it out by unwary answers to dexterously framed interrogatories. He succeeded so far as to make the prisoner confess that he was aware of the plot from communications made to him in the onfessional; so that in point of law he was guilty of misprision of treason by not giving information of what he had so learned; but Garnetstill firmly denied ever having taken any part in the devising of the plot or having in any manner encouraged it. At last he said very passionately:

"My lord, I would to God I had never known of the powder treason; but, as He is my judge, I would have stopped it if I could."

"POPHAM, C. J. Garnet, you are Superior of the Jesuits; and if you forbid, must not the rest obey? Was not Greenwell with you half an hour at Sir Everard Digby's house when you heard of the discovery of your treason? And did you not there confer and debate the matter together? Did you not stir him up to go to the rebels and encourage them? Yet you seek to color all this; but that is a mere shift in you. Catesby was never far from you, and, by many apparent proofs and evident presumptions, you were in every particular of this action, and directed and commanded the actors; nay, I think, verily, you were the chief that moved it.

"Garnet add "Garnet" the first the superior of the proofs and evident presumptions, you were the chief that moved it.

"Garnet Add "Garnet" the first that the course and the proofs and evident presumptions, you were in every particular of this action, and directed and commanded the actors; nay, I think, verily, you were the

and directed and commanded the second and directed and commanded the second chief that moved it.

"Garrier No, my lord; I did not."

The report adds: "Then it was exceedingly well urged by my lord chief-justice, how he writ his letters for Winter, Fawkes, and Catesby, principal actors in this matchiess treason, and how he kept the two bulls to prejudice the king, and to do other mischief in the realm; and how he afterwards burnt then when he saw the king peaceably come in, there being no hope to do any good at that time."

at that time."

His summing up to the jury is not reported, and we are only told that the verdict of guilty being found, "then the lord chief-justice, making a pithy preamble of all the apparent proofs and presumptions of his guiltiness, gave judgment that he should be drawn, hanged, and quartered."

With all his heavy sins upon him he lived to a good old age. 1st of June, 1607, he expired in his seventy-second year. His virtues are not enumerated, but he was much commended in his own time for the number of thieves and robbers he convicted and executed. In his long

career he had a keen eye to the goods of this life, for we are told that-He left behind him the greatest estate that ever had been amassed by any

LORD HOLT

In connection with this story of Popham we should place that of Lord folt. There are some characteristics so peculiar to each that they may be profitably considered together. They had both in their youth been public robbers, highwaymen; they both became great and famous law-yers; they both occupied the exalted position of chief-justice of the King's Bench, and they were both especially notorious in their judicial careers for the unrelenting severity with which they punished thieves and robbers, as if they were thus attempting to convince the world that they had never been guilty of the same crime, or, more charitably perhaps, as if they thus intended to atone for their own offenses. I shall not pause to give an extended account of Lord Holt's career. He comes down to us as one of the greatest, most learned, profound, and renowned of the English judges and one of the most upright in his memorable judicial

Lord Campbell, in his Lives, admits the historic truth of Holt's highway robberies:

His biographers represent him as copying Henry V, when the associate of Falstaff, as not only indulging in all sorts of licentious gratifications, but actually being in the habit of taking purses on the highway. They even relate that many years after he recognized a man, convicted capitally before him, as one of his own accomplices in a robbery, and that, having visited him in jail and inquired after the rest of the gang, he received this answer: "Ah, my lord, they are all hanged but myself and your lordship."—Campbell's Lices.

## CRIEF-JUSTICE HEATH.

The grand scheme of ship-money which had been long in preparation was ready to be brought forward, when, to the astonishment of the world, Heath was removed from his office. It has been said that the government was afraid of his opinion of ship-money and wished to prefer Frenca, the most profligate of men, on whom they could entirely rely.

Afterward Heath was made chief-justice of England in order that he might attaint the slaughtered rebels. Thus it appears that it was his fate to be removed for one purpose and elevated for another.

### CHIEF-JUSTICE FOSTER-RELIGIOUS PERSECUTION.

The arbitrary disposition of this chief-justice was strongly manifested soon after, when John Crook and several other very loyal Quakers were brought before him at the Old Bailey for refusing to take the oath of allegiance:

FISTER, C. J. John Crook, when did you take the oath of allegiance?
CROOK. Answering this question in the negative is to accuse myself, which you eught not to put me upon, nemo debet seipsum prodire. I am an Englishman, and I ought not to be taken, nor imprisoned, nor called in question, nor put to answer but necording to the law of the land.
FOSTER, C. J. You are here required to take the oath of allegiance, and when you have done that you shall be heard.
CROOK. You that are judges on the bench ought to be my counsel, not my accuser.

Cusers.
FOSTER, C. J. We are here to do justice, and are upon our oaths, and we are to tell you what is law, not you us. Therefore, sirrah, you are too bold.

CROOK. Sirrah is not a word becoming a judge. If I speak loud it is my zeal of the truth, and for the name of the Lord. Mine innocency makes me bold. FOSTER, C. J. It is an evil zeal.

CROOK. No; I am bold in the name of the Lord God Almighty, the everlasting Jebovah, to assert the truth and stand as a witness for it. Let my accuser be brought forth.

FOSTER, C. J. Sirrah, you are to take the oath, and here we tender it to you. CROOK. Let me be cleared of my imprisonment, and then I will answer to what is charged against me. I keep a conscience void of offense both toward God and toward man.

FOSTER, C. J. Sirrah, leave your canting.
CROOK. Is this canting to speak the words of the Scripture?

FOSTER, C. J. It is canting in your mouth, though they are Saint Paul's words. Your first denial to take the oath shall be recorded; and on a second denial you incur the penalties of a præmusire, which is the forfeiture of all your estates, if you have any, and imprisonment for life.

CROOK. I owe dutiful allegiance to the King of kings. We dare not break Christ's commandments, who hath said, "Swear not at all;" and the apostle James says, "Above all things, my brethren, swear not."

A printer named John Troyn having printed a book entitled Phosnix; or, The Solemn League and Covenant, containing passages which were said to reflect upon the king, was arraigned before him at the Old Bailey on an indictment for high treason. The prisoner being asked how he would be tried, said: I desire to be tried in the presence of that God who is the searcher of all hearts and the disposer of all things.

God who is the searcher of all hearts and the disposer of all things.

"Hyde, L. C. J. God Almighty is present here, but you must be tried by Him and your peers; that is, your country, or twelve honest men.

"Prisonee. I desire to be tried by God alone.

"Hyde, L. C. J. God Almighty looks down and beholds what we do here, and we shall answer severely if we do you any wrong. We are careful of our souls as you can be of yours. You must answer in the words of the law.

"Prisonee. By God and my country."

It was proved clearly enough that he had printed the book, and some passages of it might have been considered libelous; but there was no other evidence against him, and he averred that he had unconsciously printed the book in the way of his trade.

"Hyde, L. C. J. There is here as much villainy and slander as it is possible for devils or man to invent. To rob the king of the love of his subjects is to destroy him in his person. You are here in the presence of Almighty God, as you desired; and the best you can now do towards amends for your wickedness is by discovering the author of this villainous book. If not, you must not expect, and, indeed, God forbid there should be, any mercy shown you.

"Prisonee. I never knew the author of it.

"Hyde, L. C. J. Then we must not trouble ourselves. You of the jury, there can be no doubt that publishing such a book as this is as high treason ms can he committed, and my brothers will declare the same if you doubt."

The jury having found a verdict of guilty, the usual sentence was pronounced by Lord Chief-Justice Hyde, and the printer was drawn, hanged, and quartered accordingly.

HYDE'S REMARKABLE DEATH.

On the 1st day of May, 1631, as he was placing himself on the bench to try a dissenter who had published a book recommending the com-promise that had been promised by the king's declaration from Breda, while apparently in the enjoyment of perfect health, he dropped down

CHIEF-JUSTICE KELYNGE,

He made up by loyal zeal and subserviency for his want of learning and sound sense.

and sound sense.

The new chief-justice even exceeded public expectations by the violent, fantastical, and ludicrous manner in which he comported himself. His vicious and foolish propensities broke out without any restraint, and at a time when there was little disposition to question any who were clothed with authority, he drew upon himself the contempt of the public and the censure of Parliament. He was unspeakably proud of the collar he wore as chief-justice; this alone distinguished him externally from the puisnies, a class on whom he now looked down very haughtily. In his own report of the resolutions of the judges prior to the trial of Lord Morley for murder before the House of Lords, he considers the following as most important:

"We did all use coc resolve that we were to attend at the trial in our scarler robes and the chief judges in their collars of S. S., which I did accordingly."

When Chief-Justice Kelynge was upon the circuit, being without any check or restraint, he threw aside all regard to moderation and to decency. He compelled the grand jury of Somersetshire to find a true bill contrary to their consciences, reproaching Sir Hugh Windham, the foreman, as the head of a faction, and telling them that they were all his servants, and that he would make the best in England stoop.

Some persons were indicted before him for attending a conventicle, and although it was proved that they had assembled on the Lord's Day with Bibles in their hands, without prayer-books, they were acquitted. He thereupon fined the jury one hundred marks apiece and imprisoned them until the fines were paid. Again, on the trial of a man for murder, who was suspected of being a Dissenter and whom he had a great desire to hang, he fined and imprisoned all the jury because, contrary to his direction, they brought a verdict of man-

CHIEF-JUSTICE SCROGG

was the son of a butcher, and it is said that he was cruel as a judge because he had been himself accustomed to kill calves and lambs when he was a boy.

He contrived to be called to the bar, and some of his pot-companions being al-orneys, they occasionally employed him in causes likely to be won by a loud-oice and an unserupulous appeal to the prejudices of the jury. He was, says Robert North, a great voluptuary, his debaucheries egregious, and his life loose.

and his life loose.

He kept company with King Guy and the high-court rakes, and his clients could not depend upon him.

He was knighted and swarn in a justice of the court of common pleas. In addressing grand juries on the circuit he was loud and eloquent against the proceedings of the country party.

WHY EAYNSPORD WAS REMOVED.

The immediate cause of Raynsford's removal was the desire of the government to have a chief-justice of the King's Bench on whose vigor and subserviency reliance could be placed to counteract the apprehended machinations of Shaftesbury.

machinations of Shaftesbury.

The first of popish plot judicial murders, which are more disgraceful to England than the massacer of Saint Bartholomew is to France, was that of Stayly, the Roman Catholic banker. Being tried at the bar of the court of King's Bench, Scroggs, according to the old fashion, which had gone out during the common wealth, repeatedly put questions to the prisoner, attempting to intimidate him, or to involve him in contradictions or to elicit from him some indiscreet admission of facts. A witness having stated that "he had often heard the prisoner say he would lose his blood for the king, and speak as loyally as man could speak," Scroggs exclaimed, "That is, when he spoke to a Protestant." In summing up, having run himself out of breath by the violence with which he declaimed against the Pope and the Jesuits, he thus apologized to the jury:
"Excuse me, gentlemen, if Is ma little warm when perils are so many, murders so secret that we can not discover the murderer of the gentleman whom we all know so well. When things are transacted so closely and our king is in grated danger and religion is at stake I may be excused for being a little warm. You may think it, gentlemen, to be warmer here than in Smithfield. Discharge your consciences as you ought to do. If guilty, let the prisoner take the reward of his crime, for perchance it may be a terror to the rest. I hope that I shall never go to that Heaven where men are made saints for killing kings."

#### HOW SCROGGS TRIED A PRIEST,

Andrew Bromwich, being tried before him capitally for having administered the Lord's Supper according to the rites of the Church of Rome, thus the dialogue between them proceeded:

Home, thus the dialogue between them proceeded:

Prisoner, I desire your lordship will take notice of one thing, that I have taken the oath of allegiance and supremacy and have not refused anything which might testify my loyalty.

Scroggs, C. J. That will not serve your term; you priests have many tricks. What is that to giving a woman a sacrament several times?

Prisoner, My lord, it was not a sacrament unless I be a priest, of which there is no proof.

Scroggs. What, you expect we should prove you a priest by winceses who saw you ordained? We know too much of your religion; no one gives the sacrament in a wafer except he be a popish priest; you gave that woman the sacrament in a wafer; ergo, you are a popish priest.

Thus he conversed way.

#### Thus he summed up:

Gentlemen of the jury, I leave it upon your conscience whether you will let priests escape, who are the very pests of church and state; you had better be rid of one priest than three felons; so, gentlemen, I leave it to you.

#### SCROGGS IS IMPEACHED.

A committee was appointed which presented a report recommending

that he should be impeached.

The report was adopted by a large majority, and articles of impeachment were voted against him. These were eight in number. The last was in these words:

Was in these words:

Whereas the said Sir William Scroggs, being advanced to be chief-justice of the Court of King's Bench, ought by a sober, grave, virtuous conversation to have given a good example to the king's liege people, and to demean himself answerable to the dignity of so eminent a station; yet on the contrary thereof, he doeth by his frequent and notorious excesses and debaucheries, and his profane and atheistical discourses, daily affront Almighty God, dishonor his majesty, give countenance and encouragement to all manner of vice and wickedness, and bring the highest scandal on the public justice of the kingdom.

He was then called in and ordered to find his bail in £10,000 to answer the articles of impeachment, and to prepare for his trial. for him, at three days the parliament was abruptly dissolved.

Scroggs may be considered as having been of some use to his country, by making the character of a wicked judge so frightfully repulsive that he may have deterred many from giving away to his propensities.

### SIR ROBERT WRIGHT,

if exceeded by some of his predecessors in bold crimes, yields to none in ignorance of his profession, and beats them all in the fraudulent and sordid vices.

### HOW JEFFREYS MADE A JUDGE OUT OF A CRIMINAL.

Wright had been introduced into the circle of parasites and barrioons who surrounded Jeffreys, at this time chief-justice of the King's Bench, and used to make sport of him and his companions in their drunken orgies by taking off other judges, as well as the most eminent counsel.

One day, being asked why he seemed to be melancholy, he took the opportunity of laying open his destitute condition to his patron, who said to him, "As you seem to be unfit for the bar or any other honest calling I see nothing for it but that you should become a judge yourself." Wright naturally supposed that this was a piece of wicked pleasantry, and when Jeffreys had declared that he was never more serious in his life, asked how it could be brought about, for he not only felt himself incompetent for such an office, but he had no interest, and still more, it so happened, unfortunately, that the Lord Keeper Guilford, who made the judges, was fully aware of the unaccountable lapse of memory into which he had fallen when he swore the affidavit for Sir Walter Plummer that his estate was free from incumbrances, the lord keeper himself being the first mortgages.

which he had failed when he swore the amoaytt for sir watter rummer that is estate was free from incumbrances, the lord keeper himself being the first mortgagee.

Jeffreys, C. J.: Never despair, my boy; leave all that to me.

Jeffreys, who was then much cherished at court and was impatient to supersede Guilford entirely, had urgently pressed the king that Wright might be elevated to the bench as a devoted friend of the prerogative and that, as the lord keeper had a prejudice against him, his majesty ought to take the appointment into his own hands.

The next time that the lord keeper was in the royal presence, the king, opening the subject on his own accord, observed, "Good, my lord, why may not Wright be a judge? He is strongly recommended to me, but I would have a due respect paid to you and I would not make him without your concurrence. Is it impossible, my lord?"

LORD KEEPEE. Sir, the making of a judge is your majesty's choice, and not my pleasure. I am bound to put the seal as I am commanded, whatever the person may be. It is for your majesty to determine and me, your servant, to obey. But I must do my duty by informing your majesty of the truth respecting this man whom I personally know to be a dunce, and no lawyer; who is not worth a groat, having spent his estate by debauched living; who is without honesty, having been guilty of willful perjury to gain the borrowing of a sum of money. And now, sir, I have done my duty to your majesty and am ready to obey your majesty's commands in case if it be your pleasure that this man be a judge.

The king thanked the lord keeper without aving more, but next day came.

Judge, The king thanked the lord keeper without saying more, but next day came

a warrant under the sign manual for creating the king's "trusty and well-beloved Robert Wright" a baron of his exchequer, and orders were given for making out the patent in due form.

And the detected swindler, knighted and clothed in ermine, took his place among the twelve judges of England.

#### HIS DISGRACE AND DEATH.

When William of Orange landed at Torbay Wright still filled the office of chief-justice of the King's Bench. He continued to sit daily in court till the flight of King James, when an interregnum ensued, during which all judicial business was suspended, although the public tranquillity was preserved and the settlement of the nation was contranquillity was preserved and the settlement of the nation was conducted by a provisional government. After Jeffreys had tried to escape disguised as a sailor, and was nearly torn to pieces by the mob, Wright concealed himself in the house of a friend, and being less formidable and less obnoxious (for he was called the jackall to the lion) he remained some time unmolested, but upon information, probably ill-founded, that he was conspiring with Papists who wished to bring back the king, a warrant was granted against him by the Privy Council on the vague charge of "endeavoring to subvert the government." Under this he was apprehended and carried to the Tower of London; but this he was apprehended and carried to the Tower of London; but after he had been examined there by the committee of the House of Commons it was thought this custody was too honorable for him. He was transferred to Newgate.

When he died his body was thrown into a pit with common malefactors; his sufferings when related excited no compassion; and his name was execuated as long as it was recollected.

## Mr. Speaker, this is a

#### FRIGHTFUL ARRAY OF JUDICIAL MONSTERS

but the facts are historical and the numbers might be duplicated.

These odious names have been well-nigh forgotten, having been lost in a great eclipse which obscured their bloody disks when Jeffreys rose supreme. Up to that day, when one desired a name to personify the most depraved of judges, he would say "Scroggs." The very sound of the word was significant of some impending horror. Yet, when we consider the improved civilization of the present day and consequently the less excuse for such atrocities, we are pained to admit that, compared with the changed condition caused by the advancement of knowledge some of the rulings decisions and orders of edge, some of the rulings, decisions, and orders of

### FEDERAL JUDGES DURING THE LAST TWENTY YEARS

have been more unwarranted, tyrannical, cruel, and unjust than those to which I have made allusion

A brief review of the leading traits of these infamous English judges will show

1. They were appointed with a full knowledge on the part of the government of their publicly known records; and the more vicious the man the more trusted the judge.

2. They were selected with a view to carry out some scheme of government to meet the exigencies of some anticipated or projected prose-

3. They were appointed on account of the entire absence of personal integrity, simply because they could and would be subservient to the appointing powers

4. That learning in the law was of minor consideration, and when coupled with personal integrity was a bar to promotion.

5. That the intrigues of such a man as Jeffreys, forecasting his own fortunes, could circumvent the keeper of the great seal and hoodwink the king.

6. That a government itself corrupt is driven to the use of corrupt

7. That a government judge is a tyrant to the people.

8. That a judge selected by a dominant party being a partisan will carry out the views of the party to which he owes his place.

That the party will protect him until the people, disgusted, clamor for his removal.

10. That the end of official corruption is riches in goods, and curses

in the hearts of a betrayed people.

Another thing appears, gratifying to the reflection, that the gowned tryant of to-day may die in dungeons or ditches to-morrow; and that the wines that bribe the easy conscience serve as well to swell and bloat the despicable body of the oppressor. But there is

### ANOTHER SIDE TO THIS GLOOMY PICTURE.

In those dark records the great British nation finds its shame. In those dark records humanity finds abundant cause to lament over her frailties too glaringly displayed. But intermingled with these beastly portraits of the lowering brows of a long line of judicial monsters there appear from time to time and from age to age on the walls of the Britpantheon the features of men of the human face divine which reveal

all that is grand and noble in our nature.

In Glanville, in Bracton, in Dyer, in Bradshaw, in Coke, in Mansfield, and in a host of other distinguished English judges, Great Britain finds ample consolation and abounding glory growing out of her judicial his-

tory.

To these great minds she is indebted for the fundamental principles of her constitutional freedom; and from these great men have sprung

the prevailing tendencies of the human mind to keep up steadily its onward march toward the consummation of the

#### GRAND IDEA OF HUMAN LIBERTY

in its perfection; and to the honor of the English people be it said that she has employed her best energies for the last two centuries in wiping from the walls of her historic temples the hideous portraits of the monsters to which I have referred, and in their places substituting nobler pictures that disclose the diviner lineaments of justice and Christian civilization.

The bill now under discussion does not propose to make any change in the law governing the appointment of judges. But my observations are intended to bring the appointing power up to the consideration of the caution, the deliberation, with which every judge should be se-

#### IT IS A LIFE OFFICE.

and virtue, integrity, honesty of purpose, and learning should all enter into the qualifications of a judge. If he be deficient in any of these, he is not fit for the place. No learning can supply the absence of integrity, and no integrity can fill up the gaps of learning.

# If wrong prevail, say, what's the odds to me Whether a knave or fool despoil my fee?

If I lose my estate, it is of no consequence to me or my children whether it was lost by the lack of learning or a misapplication of the rules of law or the knavery of a corrupt judgment, and the fraud-made prince may revel in the halls of the prince-made beggar.

Let an honest and enlightened President, when he comes to appoint a judge, recall the scene which I have depicted, in which the profligate Jeffreys is represented as circumventing an honest chancellor and in deceiving a confiding king, and so to secure the appointment of a recognized scoundrel. Let him refresh his mind now and then by a recurrence to the history of the

#### BRIGAND JUDGES OF ENGLAND,

and so see the dangers and villanies that surround the most conscientious princes. Let him thus keep his mind familiar with the practices of knaves and court retainers, who plot to control the king, and so rule the state by deep-laid schemes of corruption. Let him see to it that no man goes upon the bench or into any place of power who does not

#### ALL THE REQUISITE QUALITIES

for his place. The ruler that will do this in any country under any form of government will enjoy the confidence of his people

I will now, Mr. Speaker, say a word regarding the tyrannies and oppressions suffered by the people of Alabama from the Federal courts, confirmed by facts which have come under my observation. I will not dwell upon the administration of

#### JUDGE RICHARD BUSTEED.

His boasting of having discharged a jury and entered a verdict of guilty to which they did not give their assent is one of the least of his

I will briefly, however, allude to a few of his proceedings. It will be remembered that President Johnson required all citizens of the Southern States whose property exceeded \$20,000 to apply for pardon. Busteed and his district attorney, Smith (formerly a contestant for a seat in this House), caused indictments for treason to be presented against hundreds of the best citizens of Alabama, all of whom had been par-doned, and in each and every case the parties were informed that a nolle pros or a verdict for the defendant would be entered upon payment of the cost bill, which varied in the several cases from one to three hundred dollars. In this way hundreds of thousands of dollars went into the pockets of the court officials, as none of the gentlemen could afford the greater expense and the inevitable vexation which a trial would be certain to cause them to incur. But as Busteed's conduct has been the subject of investigation by Congress, which resulted in our being relieved from his tyranny, I will refer the House to the published evidence which shows a few of the offenses he committed, and I will pass on to tell you something of his successor,

## HON, JOHN BRUCE,

at present the judge of the district court, in which my duty has required me to appear in defense of the citizens of my section of the country.

I do not wish to say and will not say one word reflecting upon the character of Judge Bruce outside of his judicial conduct. He is a genial, pleasant gentleman, and, apart from his judicial actions, is a good and exemplary citizen; but notwithstanding this I shall be able to show that in judicial effrontery the worst and most ignorant of English judges never exceeded Judge Bruce.

My information is that he came to this country from Great Britain, studied law in Iowa, served in the Army, and then settled in Wilcox County, Alabama, where, until his appointment as a Federal judge in

# DEVOTED HIMSELF TO POLITICS AND COTTON PLANTING. Having taken his seat on the bench without even having been a practicing lawyer, we were all disposed to excuse his want of information regarding the subjects treated of by Littleton, Coke, Blackstone, and Judge

This deficiency, time and application we hoped would in some

measure correct; but the gentleman seemed so imbued with the idea that the purpose of

#### HIS APPOINTMENT WAS TO MANIPULATE REPUBLICAN

and Greenback politics that he had but little time to devote to the ungenial task of reading books.

His decisions and rulings by which he cast into prison three judges who presided over our State courts, because they failed to violate their oaths as judges and make decrees which were not authorized by law, are now matters which are of record in the Supreme Court of the United

The prompt rebuke given him by the unanimous bench was com-

mented upon by the benck and bar.

The Chicago American Law Journal likewise rebukes Judge Bruce in the following conclusion of its comments on the case:

in the following conclusion of its comments on the case:

In ordering the arrest and punishment of the commissioners for not doing what the law did not require them to do, the United States circuit court exceeded its jurisdiction, and its order was void. It is difficult to conceive how the court below could have erred so egregiously as it is seen to have done from the most cursory inspection of the proceedings above set forth; the excess of jurisdiction seems plain and palpable, and it resulted not only in great hardship to the petitioners (Rowland, Shultze, and Germany), but also in detriment to the public, the courts of probate and county commissioners (which were necessarily suspended during the incarceration of the petitioners) being the two most important courts under the system of laws in force in Alabama.

From the opinion of the Sunreme Court and the opinion of the Law

From the opinion of the Supreme Court and the opinion of the Law Journal, the public can form a judgment of Judge Bruce's legal capacity and soundness of judgment.

This decision leaves him and his apologists to choose one of the two horns of the dilemma. Either he was ignorant of his duty, or else he hoped the people of Alabama would subscribe and pay the amount of his illegal decree, rather than see the health and life of their State judges jeopardized by incarceration in damp jails, while awaiting the action of the Supreme Court of our country.

In support of this view I will state that this course was strongly

urged by many of the best and wisest people of our State, and no doubt would have been adopted but for the fear that it would only have invited a repetition of a similar atrocity. Not having time to go into the matter in extense, I will now inform the House of the modes adopted by

#### JUDGE BRUCE

to protect his own official and political friends in the worst violation of the State laws of Alabama, and in treating of this matter my statements will be based upon my personal knowledge and supported by copies of the records of the cases to which I refer, certified to be correct by A. W. McCullough, esq., the clerk of the Federal court, who is also the chairman of the Republican executive committee of the district. The record shows that Deputy-Marshal James H. Bone and Leroy M. Peevey shot and killed a citizen by the name of James Treece, and that both were regularly and legally indicted by our State courts for murder in the first degree. The record also when the trivial representations are stated to the first degree.

der in the first degree. The record also shows that Judge Bruce issued a decree ordering them to be brought before him, which he had executed by his marshal, both of the indicted men being thus taken from the State authorities, and when they entered the Federal court, the case having been previously entered on its docket, the Federal judge, namely.

#### HON, JOHN BRUCE, entered a verdict of

### NOT GUILTY

The order by which the defendants were taken from the State courts was in these words:

was in these words:

The President of the United States of America to the marshal of the northern district of Alabama, greeting:

You are hereby commanded to take the bodies of James H. Bone, Theodore A. Thurston, George M. Ware, Jonathan Latham, and Leroy M. Peevey into your custody, alleged to be detained by Robert E. Murphy, sheriff and jailer of Madison County, in the State of Alabama, by whatsoever name they may be charged with, the cause of their detention, and a certified record of the proceedings which caused such detention before the honorable judge of the United States circuit court at the city of Huntsville, in the northern district of Alabama, forthwith to be dealt with in said circuit court according to law and the order of said circuit court.

Witness the Hon. Morrison R. Waite, Chief-Justice of the Supreme Court of the United States, this the first Monday of April, A. D. 1876.

A. W. McCullough,

Clerk U. S. Cir. Court, Nor. Dist., Ala.

The indersement of the United States marshal, showing how he exe-

The indorsement of the United States marshal, showing how he executed the order, is in these words:

Executed by reading the within writ and delivering a copy to Robert E. Murphy, sheriff of Madison County. Alabama, and by taking the bodies of James H. Bone, Theodore A. Thurston, George M. Warcand Leroy M. Peevey, and Jonathan Latham into my custody. R. P. BAKER, U. S. M.

Executed May 26, 1876, by serving a copy of notice and petition on the clerk of Saint Clair County at Ashville. R. P. BAKER, U. S. M.

R. P. BAKER, U. S. M.

The verdict entered on the records of the court is in these words:
Be it remembered that on the 1st day of November, 1s76, it being a day of the regular term of the circuit court of the United States for the northern district of Alabama, the following proceedings were had and entered of record on the minutes of the said circuit court, to wit:

The State of Alabama vs. Leroy M. Peevy, Jonathan Latham, James H. Bone, Theodore A. Thurston, George M. Ware.—Murder.

This cause being called for trial same the defendants, Leroy M. Peevy, Jonathan Latham, James H. Bone, George M. Ware, and Theodore A. Thurston, and

defendants Thomas Moody and McClain come not, and it appearing to the court that the said Thomas Moody and McClain have not been arrested and do not appear, it is therefore ordered by the court that defendants Thomas Moody and McClain be severed from the said Leroy M. Peevy, Jonathan Latham, James H. Bone, Theodore A. Thurston, and George M. Ware, and that the trial of said cause as to said Leroy M. Peevy, Jonathan Latham, and James H. Bone, George M. Ware, and Theodore A. Thurston do now proceed: and thereupon comes a urry of good and lawful men, to wit, Joel T. Parish and eleven others, who were duly elected, empaneled, and sworn according to the statute, and truly to try said cause and true deliverance to make between the State of Alabama and Leroy M. Peevy, Jonathan Latham, James H. Bone, Theodore A. Thurston, and George M. Ware, the defendants at the bar, and a true verdict to render according to the evidence; and thereupon the said Leroy M. Peevy, Jonathan Latham, James H. Bone, Theodore A. Thurston, and George M. Ware, being duly charged and arraigned on the indictment in this case, each in his own proper person plead "not guilty;" and thereupon the trial of said cause proceeding, and the jury being duly charged by the court to find their, verdict as follows, to wit: We, the jury, find the defendants Leroy M. Peevy, Jonathan Latham, James H. Bone, Theodore A. Thurston, and George M. Ware not guilty; Joel T. Parish, foreman. And thereupon it is ordered by the court that Leroy M. Peevy, Jonathan Latham, James H. Bone, Theodore A. Thurston, and George M. Ware not guilty; Joel T. Parish, foreman. And thereupon it is ordered by the court that Leroy M. Peevy, Jonathan Latham, James H. Bone, Theodore A. Thurston, and George M. Ware not guilty; Joel T. Parish, foreman. And thereupon it is ordered by the court that Leroy M. Peevy, Jonathan Latham, James H. Bone, Theodore M. Thurston, and George M. Ware not guilty; Joel T. Parish, foreman.

Now, Mr. Speaker, I was present and witnessed the proceedings in a part of these cases, and I assert that the record I have read is not a true statement of what occurred.

The trial did not proceed.

There was no trial. There was no jury.

There was no charge or indictment read.

There was no arraignment.

There were very few persons in the court-room when the farce was

I also, Mr. Speaker, will publish in the RECORD the proceedings in the case of a colored woman named

LUCY GILGHRIST.

I am familiar with the facts of the case. The defendant went to a bed in which another colored woman was lying, and possibly sleeping, and with an ax chopped her so as to cause her death. I will print a certified record of her case, which shows that she was indicted for murder in the first degree by the circuit court of Lawrence County, Alabama. She applied to have her case removed to that haven of securest rest for Reapplied to have her case removed to that haven of securest rest for kepublicans, the portals of the court of Judge Bruce. There being no warrant of law for such proceedings, of course the State judge refused to grant the application. But where law was lacking, with the example of Jeffreys and other English judicial tyrants before him, Federal force and power was ready at hand to take its place. A decree is prepared, a marshal sent to Lawrence County, who immediately returned with the defendant.

The order of the court and indorsement on the same is in these

words:

In the circuit court of the United States for the northern district of Alabama The President of the United States of America to the marshal of said northern district of Alabama, greeting:

of Alabama, greeting:

You are hereby commanded that you take the body of Lucy Gilchrist into your custody, alleged to be detained by William T. Canch, sheriff and jailer of Lawrence County, in the State of Alabama, whatsoever name she may be charged, with the cause of her detention before the honorable B. Woods, judge of the United States circuit court, at the city of Huntsville, in the northern district of Alabama, forthwith to be dealt with in said circuit court according to law and the order of said circuit court.

Witness the Hon. Morrison R. Waite, Chief-Justice of the Supreme Court of the United States, this second Monday of October, A. D. 1876.

A. W. McCULLOUGH, Clerk U. S. Circuit Court, Northern District of Alaba

Issued April 14, 1877. Received April 14, 1877.

R. P. BAKER, U. S. Marshal.

Executed April 16, 1877, by taking the body of Lucy Gilchrist into my possession as herein commanded and now have her in my custody. my custody. R. P. BAKER, U. S. M., By D. N. COOPER, Deputy.

I was at my State court in Lawrence County and saw the United States official come after the woman. I was called to the Federal court at Huntsville the next day, and was present when Lucy Gilchrist came into the court. I saw the farce enacted. The court seemed to be about to adjourn. There were but few persons present, and a

FALSE VERDICT OF ACQUITTAL WAS ENTERED.

It is in these words:

The United States of America, northern district of Alabama.

The United States of America, northern district of Alabama.

Be it remembered, that heretofore, to wit, on the 21st day of April, A. D. 1877, it being a day of a regular term of the circuit court of the United States for the northern district of Alabama, begun and held at the United States court-rooms in the city of Huntsville, in the said district, on the first Monday of April, A. D. 1877, and of the independence of the United States of America the one hundred and second year, present the Hon. John Bruce, judge of district court presiding, the following proceedings were had and entered of record on the minutes of said circuit court, to wit:

The State of Alabama vs. Lucy Gilchrist. 1097.

The State of Alabama vs. Lucy Gilchrist. 1097.

Comes the defendant in her own proper person and by counsel, and no prosecutor appearing for the State of Alabama, and it appearing that due notice had been given, come a jury of good and lawful men, to wit, C. C. Swoop, and eleven others who are duly elected, empanneled, and sworn, who return their verdict: "We, the jury, find the defendant not guilty."

It is therefore considered by the court that said defendant, Lucy Gilchrist, go hence without day.

These recitals may be tedious but I have only one more to which I will allude, and then I will recur to a new feature in the action of this

WILLIAM RICHARDSON

was a colored brakeman on the Memphis and Charleston Railroad. Shooting from the train with a pistol he inflicted a severe wound in Shooting from the train, with a pistot he inflicted a severe would in the head of a citizen named Schuyler Parshall, for which he was indicted in the State court. To be brief, William availed himself of his color, and therefore supposed politics, and had his case removed to the Federal court; and, as a matter of course, Judge Bruce immediately proves his innocence, and he was promptly set at liberty upon the face of the papers. The course pursued in this case was consistent with his former actions.

The defendant was a colored man and the presumption followed that he was an unquestioned Republican. The man he attempted to mur-der, it might be assumed, was a Southern man and a Democrat. In some people's eyes there might be great propriety in the shooting of a Southern white Democrat by a colored Republican. I do not mean to say that Judge Bruce entertained such views, but I do say he entered a verdict of

NOT GUILTY

for William Richardson. And now, Mr. Speaker, you will observe that when judges go too fast they sometimes make mistakes, and unfortunately for Judge Bruce he appears to have traveled a little too fast in this case

I append a certified copy of the record of his court, which explains the a append a certified copy of the record of his court, which explains the error that he admits was in this case committed. It will be seen that Mr. Parshall, hearing of the acquittal of his assailant and, as he felt, would-be murderer, ventured to remonstrate. He hastened before the judge and made an affidavit, which I will print with the balance of the record in this case. The defendant, William Richardson, had been acquitted and discharged and had gone; but what did that matter with a judge who in the place of law and right had learned to substitute expedients and Federal force? Although William was in another State Judge Bruce entered a decree which I will read:

And afterward, to wit, on the 29th day of April, 1876, the following proceeding was had and entered on the minutes of said circuit court, to wit:

The State of Alabama and the said entry of the State of Alabama or for the defendant; and it further appearing that the attorney for the State of Alabama or for the defendant; and without the introduction of and while pending in the State of Alabama, who had represented this life cause, and will appear in the the attorney for the state of a said court, and it appearing to the satisfaction of the court that notice of said motion was served on the day said motion was filed on one of the attorneys who represented said defendant on this cause, and the said motion being read to the court, and on argument of counsel, it is therefore considered by the court that said entry of jury and verdict made in this cause having been made in the absence of any attorney having authority to represent the State of Alabama, and the same was made without the arraignment of said william Richardson, without the arraignment of said william Richardson, without the arraignment of said rease, and without the introduction of any evidence either for the State of Alabama, who had represented the State in the commencement of said prosecution and while pending in the circuit court of Lawrence County, departed this life on the 14th day of March, 1876, and the court being satisfied that the said entry of jury and verdict was unadvised and without a knowledge of the facts of the case, as shown by said motion and the affidavit accompanying and verifying the same, it is therefore entered, adjudged, and decreed that the said act of jury and verdict heretofore entered in this cause be, and the same is hereby, nanulled, set aside, revoked, and held for naught; and that the said cause be, and the same is hereby, reinstated on the trial docket of this court as though the said entry of jury and verdict heretofore entered in this cause be, and the same is hereby, reinstated on the trial docket of this court as though the said entry of jury and verdict had never been made.

Now, one thing is certain. If Jeffreys, or the elder Chase, or Bus-The State of Alabama vs. William Richardson

Now, one thing is certain. If Jeffreys, or the elder Chase, or Busteed, had ever made a decree like the one I have read, they would have had legal knowledge enough to deter them from having it spread on the records; but I challenge the entire judicial system of Europe or America to produce a more remarkable record.

But our judge does not stop here. Mr. Parshall wanted William where he could give the law to him good and heavy, and he therefore, having appointed himself guardian ad litem for the State of Alabama, applied for and procured an order remanding the case back to the State

I will read the order of the Federal court by which the case was remanded to the circuit court of Lawrence County:

Remanded.
On the 19th day of October, 1880, the following order was made and entered on the minutes, to wit:
The State of Alabama vs. William Richardson.

Came the parties by their attorneys, and on motion of plaintiff's counsel, and or good cause shown, it is ordered by the court that this cause be remanded to for good eause s the State court.

I was attending the State court engaged in some railroad litigation, when the defendant, who had been rearrested, arrived in company with the remarkable record, and as William was a railroader, it made us for the time brother professionals, and actuated by the feelings which pervade fellow-tradesmen, I, in compliance with his request, assisted in his defense. Of course we entered a plea of autrefois acquit, and the judge, seeing no other exit from the tangled web of error which the record disclosed, sustained the plea, and William was again set at lib-

In reply to inquiries as to what influenced Judge Bruce in setting aside the solemn verdict of acquittal, rendered, as the record said, by a

jury, and his further action in remanding William to the tender mercies of a State court, I can only reply that I have never heard Judge Bruce explain the matter, and therefore I do not know. But there is no impropriety in my stating that some people have been so unkind as to intimate that he was in a measure influenced by certain facts which were finally developed. It appeared that

WILLIAM'S ADHERENCE TO THE REPUBLICAN PARTY

was by no means established, and it was broadly charged that the culture of railroad travel had caused him to become largely imbued with the principles of government which were so ably advocated by Thomas Jefferson and Andrew Jackson, while at the same time it was proved that Parshall, so far from ever having been a Southern rebel, was raised in the bosom of free-soil politics in Central New York, had adhered to, and served the cause of the Union during its trials from 1861 to 1865, and since that time had come to Alabama, where for a long time he was a supporter of the same party of which the judge is so prominent a member.

I wish to be disfinctly understood that I do not indorse the views of others on this subject, but simply state the rumors to show how some people will draw extensive inferences from a very small investment of

The judge says in his decree that the verdict of acquittal was ren-

dered without a knowledge of the facts, &c.

Of what facts was he ignorant? The papers showed that William had shot Parshall. The judge with his own eyes saw William's ebony

face; it is true the papers did not disclose the politics and antecedents of the parties. What other facts existed which influenced him?

I have now, Mr. Speaker, shown the tender care taken by Judge Bruce of the lambs of his flock, and how with judicial discrimination he expelled William from his fold when he discovered that Billy was not a Republican lamb, but rather a Democratic goat.

I will now proceed to show how he endeavored to neutralize his errors by exercising his judicial force upon men who belonged to the party

whose representatives sit upon your right in the Hall of Congress.

At the election held in the fourth district in 1878 some colored brethren flew the track and committed the crime of casting their votes for General Charles M. Shelley, and the Republican candidate was defeated. VENGRANCE WAS DEMANDED,

and Judge Bruce's court was selected as the avenging instrument. Upward of a hundred Democratic inspectors were indicted and dragged before his court at Montgomery.

The inspectors of election at a box in Lawrence County were also arrested and indicted, all of which was caused by some colored men exercising the right given them to vote under the mistaken idea which in some way had been impressed on them, that the right to vote also carried with it the right to exercise their wishes and judgment in the I was counsel in many of the cases, and to be brief regarding this subject, I will state that none of these inspectors were convicted, and that demurrers were sustained to many of the indictments on the ground that a board of inspectors under the laws of Alabama consists

of three members, and THE INDICTMENTS ONLY INCLUDED THE TWO WHO WERE DEMOCRATS. describing them as the board of inspectors. Judge Bruce, in these cases, seemed to be controlled by the decision of Mr. Justice Miller, of the Supreme Court, in Peay vs. Schenck and Bliss (1st Woolw. Cin.

Ct. Rep., pp. 176, 187).
In 1880 the election for the Forty-seventh Congress was held, in which the most determined efforts were made by the Republicans aided by the Greenback party to elect Colonel William M. Lowe. The main concentration of all the force of the opposition in Alabama centered in this district, and when the result was announced showing the defeat of Colonel Lowe, plans of vengeance were immediately inaugurated and this willing and powerful engine of oppression was called into requisi-tion. The election was held on November 2, 1880, and the court did not meet until April, 1881.

In the mean time a contest for the seat had been begun and means were adopted to AID THE CONTESTANT

with all the force, power, and terror of the Federal court.

During the five months which intervened between the election and the meeting of the court all the evidence in the contested election case had been taken. Most of that for the contestant was taken and written out in the office of the clerk and deputy clerk of the United States circuit and district courts. The clerk, Mr. A. W. McCullough, was the chairman of the Republican district committee. The assistant dis-trict attorney was chairman of the Greenback district executive committee. The United States marshal was an active supporter of the contestant. Most of his evidence was

WRITTEN BY THE DEPUTY CLERK OF THE FEDERAL COURT,

and the assistant district attorney was one of the contestant's lawyers and assisted in the work of taking the evidence, and the clerk and marshal and some of his deputies were often present, while the witnesses were giving their testimony. Another lawyer of the contestant who was afterward employed by the Government to prosecute the in-

dictments to which I am about to refer, was also active in taking evidence. Still another lawyer in the case was president of the Huntsville Advocate Company, which published a paper mostly owned and con-trolled by the Federal officials connected with the court. Much of the evidence was published in this paper, and the evidence was kept open for many weeks in the office of the clerk of the court, and all these offi-cials seemed to have unrestricted access to it. This shows that the Federal court officials knew what it contained.

I will now endeavor to show that the court did not make any effort to do justice, but confined the exercise of its powers to the

PERSECUTION OF INNOCENT PARTIES

for the purpose of obtaining political advantage. I will here call attention to the evidence on pages 1 to 12 of my brief in the election case, which shows that the Democratic party acted with perfect fairness in the election. The conclusion arrived at by said evidence is collated in these words:

The proof shows that the election was conducted with perfect fairness so far as the contertee (Wheeler) and his party friends were concerned.

We insist that there never has been in the history of contested elections so determined, energetic, and powerful an effort to prove fraud as the effort in this case, on the part of Colonel Lowe and his party friends.

If the slightest fraud or unfairness of any kind had been done by Wheeler or his friends, it would have been unearthed.

Colonel Lowe had the service of eighteen lawyers (many of them eminent), including three persons who acted as lawyers.

His notices to Wheeler that he would take evidence of witnesses were showered upon him, all of them containing lists of names of witnesses numbering about a thousand.

with all these herculean and unprecedented efforts on the part of Colonel Lowe and his friends, we insist that he failed to prove one single fraudulent or unfair act on the part of any of contestee's friends; nor did he prove a single act of violence; nor did he prove a single illegal act by which a single legal vow was lost to William M. Lowe, and he was unable to prove that any una of the 12,800 votes which were counted for Wheeler lacked the slightest element of perfect legality.

The unanimous report of all the Democrats of the Committee on Elections, which report is now a record of the Forty-seventh Congress, refers to this question in these words:

The evidence shows that the election was conducted with perfect fairness in the part of Wheeler and his supporters. Indeed, there is no pretense that there was unfairness anywhere except at Meridianville and Lanier's precinct, and the most extraordinary efforts on the part of Mr. Lowe and his attorneys utterly fail to prove any fraud or unfairness at these boxes.

As the questions involved in the prosecution, or rather persecution to which I am about to refer, all entered into the contest and have been carefully considered by Congress, I can not explain the matter better than by reading from the report on said case signed by all the Democrats belonging to the committee and indorsed by all the Democrats in Con-

The contestee insists that ballots of the form described were illegal and ought 1. The contestee insists that ballots of the form described were illegal and ought to have been excluded by the inspectors, because they contained the designations of eight offices unknown to the laws of Alabama, and for the further reason that they were so printed that their contents were distinctly visible on the outside to the inspectors and bystanders when the ballots were folded.
1. In support of his position that the ballots in controversy were illegal and ought to have been rejected, the contestee urges the following considerations:
The ballots were in this form:

FOR ELECTORS FOR PRESIDENT AND VICE-PRESIDENT:

STATE AT LARGE, JAMES M. PICKENS. OLIVER S. BEERS.

DISTRICT ELECTORS lst District—C. C. McCALL.
2d District—J. R. TOWNSEND,
3d District—AL. B. GRIFFIN.
4th District—HILLIARD M. JUDGE,
5th District—THEODORE NUNN,
6th District—J. B. SHIELDS,
7th District—H. R. McCOY,
8th District—JAMES H. COWAN,

FOR CONGRESS-EIGHTH DISTRICT. WILLIAM M. LOWE.

The following ballot is in the form prescribed by the laws of Alabama. It is similar in form to 12,808 ballots east for the contestee:

For Electors for President and Vice President of the United States. the United States.
GEORGE TURNER.
WILLARD WARNER.
LUTHER R. SMITH.
CHARLES W. BUCKLEY.
JOHN J. MARTIN.
BENJAMIN S. TURNER.
DANIEL, P. BOOTH.
WINFIELD S. BIRD.
NICHOLAS S. MCAFEE.
JAMES S. CLARK.
Five Representation in. For Representative in Congress from the Eighth Congressional District: WILLIAM M. LOWE.

Two of the offices designated on the illegal ballots are offices of Presidential electors for the State at large, and two of the candidates named are candidates for those offices. Eight of the offices designated are offices of district electors of President and Vice-President, for eight different districts in the State; and eight of the candidates named are candidates for those offices.

The Alabama statute declares that—
"The ballot must be a plain piece of white paper, without any figures, marks, rulings, characters, or embellishments thereon, not less than two nor mure than

1 2 30

two and one-half inches wide, and not less than five nor more than seven inches long, on which must be written or printed, or partly written and partly printed, only the names of the persons for whom the elector intends to vote, and must designate the office for which each person so named is intended by him to be chosen, and any ballot otherwise than described is illegal and must be rejected."

This law prescribes four distinct requirements for the ballot:

1. It must be a plain piece of white paper, without any figures, marks, rulings, characters, or embellishments thereon.

2. It must be not less than two nor more than two and a half inches wide, and not less than five nor more than seven inches long.

3. It must contain only the names of the persons voted for and the designations of the offices for which they are "intended to be chosen."

4. The names of the candidates and the designations of the offices are to be written or printed, or partly written and partly printed.

If the Legislature had merely prescribed the form of the ballot, without declaring those cast in any other form to be illegal, or commanding their rejection, then, of course, it would be a question whether the requirement of the statute, that the ballot must contain only the names of the candidates and the designations of the offices, is directory or mandatory. And to the decision of that question such authorities as McKenzie ex. Braxton, Smith, 19, would be applicable. But when the law makes a ballot not cast in a prescribed form illegal and requires its rejection, there is no place for the question whether the statute is mandatory or directory. The ballot which is not in the prescribed form is illegal, and must be rejected, because the law in terms declares it to be illegal and commands its rejection.

The Legislature of Alabama, exercising a power expressly conferred by the Federal Constitution, had prescribed the mode of choosing Presidential electors as follows:

"On the day prescribed by this code there are to be elected, by general t

The Legislature of Alabama, exercising a power expressly conferred by the Federal Constitution, had prescribed the mode of choosing Presidential electors as follows:

"On the day prescribed by this code there are to be elected, by general ticket, a number of electors for President and Vice-President of the United States equal to the number of Senators and Representatives in Congress to which this State is entitled at the time of such election."

Under this statutory provision there could be no choice of "district elector" for the "first district," or "second district," or for either of the other eight districts designated. The ballots in question each contained the designations of eight different offices unknown to the law; that is to say, the offices of district electors for the eight districts of the State. They were deposited in the ballot-boxes in violation of the requirement of the statute that the ballot shall contain only the names of the candidates and the designations of the offices.

It is submitted, as an incontrovertible proposition, that this statutory provision for the choice of Presidential electors makes the office of each and every Presidential elector an office for the State at large, and that the office of district elector is unknown to the law of Alabama. It is submitted, as a second incontrovertible proposition, that the ballots in question were ballots for two electors from the state at large, and for eight district electors, one for each of eight district. If these two propositions are correct, so also must be the conclusion that eight of the offices designated on these ballots are unknown to the laws of the State, and that the designation of these eight offices was a violation of that requirement which excludes from the face of the ballot everything except the names of the candidates and the designation of the offices voted for, and that, therefore, under the law, it was the duty of the inspectors to reject these ballots.

This would be all different in the State of Massachusetts. For th

each ballot shall contain the name of at least one inhabitant of each Congressional district into which the Commonwealth shall be then divided, and shall designate the Congressional district to which he belongs." (Pub. Stat. Mass., 1882, page 90.)

The effect of this statutory enactment is that two of the Massachusetts electors are chosen from the State at large, and the others, although chosen by the people of the whole State, are district electors, chosen not from the State at large, but from the several districts. In Massachusetts the ballots now under consideration would be in exact conformity with the requirements of the law; and a Massachusetts statute, commanding the rejection of ballots containing designations of offices unknown to the law, would not affect ballots like those alleged to have been rejected in this case.

For precisely the same reasons, ballots like these would be legal in the States of Iowa, Tennessee, Missouri, Virginia, and North Carolina.

If, then, the statutes of Massachusetts, Iowa, Tennessee, Missouri, Virginia, and North Carolina commanded the rejection of all ballots not fashioned in conformity with the requirements of law, they would not affect ballots like those alleged to have been rejected in the late election in Alabama, because such ballots would conform to the statutory requirements of those States.

The laws of Illinois, New York, South Carolina, Michigan, and Wisconsin, like that of Alabama, provide that the Presidential electors shall be chosen by "general ticket." The statutes of Mississippi and Nebraska provide that they shall be chosen from the "State at large." If the laws of these seven States provided, as do the laws of Alabama, that all ballots containing anything beyond the names of the candidates and the designations of the offices should be rejected, then ballots like those alleged to have been rejected, in the case now under consideration, would necessarily be rejected in those States. But no law, in either of those seven States, requires the rejection of ba

provides that the ballot shall contain only the names of the candidates and the designations of the offices.
But to ascertain whether these ballots did have distinguishing marks, let us refer to the evidence of the witnesses whom the contestant introduced, and by whom he claims to have proven the rejection of these ballots.

Mr. Hopkins, a witness for the contestant, testifies (see bottom of page 131 and top of page 132) that the ballots which he says were rejected could be identified from the outside when folded four times.

His evidence is as follows:

"Question. When folded in four thicknesses, could you see at a distance of three feet that that ticket had something on it besides the names of the persons voted for and the offices for which they were to be chosen?

"Answer. Yes, sir; I could.

"Q. Please examine the ticket and see if it is the ticket that you made an exhibit to your deposition.

"A. Yes, sir; it is.

"Q. Please examine those three tickets folded, and say if they are not the kind of tickets that were rejected, and say if you can not identify them from the outside when folded four times?

"A. These tickets are similar to the tickets that were rejected for being numbered, and I can designate them when the printing is folded inside and the ticket folded in four thicknesses."

These ballots are in evidence, and it will be observed that they are of the least objectionable class of Greenback ballots found in the record.

Ira G. Wood, a witness and supporter of Mr. Lowe, and an officer of the election, testifies as follows regarding the ballots which he says were rejected (see record, page 304, near bottom):

"Question. Your eyesight is a little defective and infirm without your glasses?

"Answer. Yes, sir; I can read large print; I do not do it, however, without my spectacles, but I can.

"Q. Can you see the words first district on that ticket [handing witness a

Q. Can you see the words first district on that ticket [handing witness a

"A. Yes, sir.
"Q. Can you see the words first district on it?
"A. Yes, sir.
"Q. Can you see the words first district on the back when folded with the printg inside?

tuside?"

A. Well, I wouldn't know that unless my attention was called to it.

Q. Could you read it if your attention was called to it?

A. I suppose I could if my attention was called to it.

Q. Can you, when the ticket is open, read the words first district without your

"A. Yes, sir.

"Q. When the ticket is closed now, with the printing inside, can you see by reading backwards, when your attention is called to it, the words first district; wouldn't you be willing to swear there was a D?

"A. Yes, sir."

"A. Yes, sir,"
If feeble old men could identify the ballots, when folded, which Mr. Lowe laims were rejected in the railroad towns, it is evident that it would have been mpossible for such ballots as Mr. Lowe's witnesses put in evidence, and swear were used in Franklin County, to have escaped the scrutiny of the party man-

agers.

It is claimed that these ballots ought to be counted for Representative in Congress, if for no other candidate. This would be true, if the statutory provision had been merely that such names of candidates and designations of offices as should be placed on the ballots in violation of the law should be rejected in the canvass. But such is not the provision of the statute. The statutory provision is that if the ballots are not in the form prescribed, the ballots themselves shall be rejected.

should be placed on the ballots in violation of the statute. The statutory provision is that if the ballots are not in the form prescribed, the ballots themselves shall be rejected.

It seems to us clear that these 1,294 ballots, which not only contained the designations of eight offices unknown to the law of Alabama, but were also marked ballots, and, for that reason, peremptorily excluded by a mandatory law of that State, were illegally counted for Mr. Lowe, and are to be deducted from his vote. The question here presented is a new question. It was not considered by the Committee on Elections in the Mississippi case of Lynch vs. Chalmers. The differences between the statutory provisions of Mississippi and Alabama, and between the ballots in the two cases, are such that a decision in one of the cases will not, necessarily, turnish a precedent for the other. The Mississippi statute is in the following words:

"All ballots shall be written or printed in black ink, with a space not less than one-fifth of an inch between each name, on plain, white printing news paper, not more than two and one-half nor less than two and one-fourth inches wide, without any device or mark by which one ticket may be known or designated from another, except the words at the head of the ticket; but this shall not prohibit the erasure, correction, or insertion of any name by pencil-mark or ink upon the face of the ballot; and a ticket different from that herein prescribed shall not be received or counted."

As we have seen, the Alabama provision is that—

"The ballot must be a plain pleee of white paper, without any figures, marks, rulings, characters, or embellishments thereon, not less than two nor more than two and one-half inches wide, and not less than five nor more than seven inches long, on which must be written or printed, or partly written and partly printed, only the names of the persons for whom the elector intends to vote, and must designate the office for which each person so named is intended by him to be chosen; and any b

there is other evidence in this case which makes their rejection still more imperative.

The evidence shows that Mr. Lowe's supporters used the marked ballots, together with violence and terrorism, to destroy secret voting.

The evidence shows clearly that the using of these ballots in the precincts where it is claimed they were rejected was for the unlawful purpose of preventing m secret ballot.

It is evident that with these ballots secreey was impossible and that such ballots could be identified in the hands of the voters.

It is certain that when voters are abused, terrorized, and ostracized for not voting as their leaders dictate, the weaker classes will hesitate before going to the polls with ballots different from those ordered by their leaders.

It was distinctly charged in the answer, and proved by over fifty witnesses, that the supporters of Mr. Lowe had unlawfully maintained a state of terrorism and alarm among the colored persons by threats of harm to their persons and property. (See record, pages 506, 893, 894, 895, 898, 900, 902, 904, 989, 966, 061, 92, 938, 964, 965, 967, 969, 900, 1000, 1001, 1002, 1002, 1021, 1022, 1023, 1024, 1025, 1068, 1068, 1070, 1072, 1075, 1076, 1079, 1081, 1082, 1085, 1089, 1091, 1093, 1085, 1089, 1102, 1109, 1111.

This uncontradicted testimony of more than fifty witnesses, including men of all parties and of both colors, shows that by threats of bodily harm, by ostracism, and by fear and intimidation, Greenback leaders have absolutely destroyed freedom of election among the weaker class of colored persons in the eighth district of Alabama.

A colored man, page 1079, swears that if colored men had been left to their

cism, and by test of the freedom of election among the weaker class of colored personal freedom of election among the weaker class of colored men had been left to their own choice nearly all would have voted the Wheeler ticket. They would have so voted had it not been for the threats of the Greenback leaders, and this same character of evidence is found on pages 1067, 1068, 1071, 1073, 1075, 1081, 1083, 1085, 1089, 1092, 1096, 1088, 1102, 1110, 1112.

It is also in proof (see bottom of page 1095) that two colored men, Peter Walker

and John Bell, attempted to become candidates for the Legislature upon the Republican ticket, and these Greenback leaders drove them from the town and threatened to kill them.

Also, on this subject, see pages 1066, 1070, 1073, 1075, 1079, 1085, 1087, 1089, 1091, 1092, 1096, 1098, 1102, 1109.

We might stop with the above, but in passing we will call the attention to the evidence of two of Mr. Lowe's witnesses, Wade Blankenship and William Wallace.

evidence of two of Mr. Lowe's witnesses, Wade Blankenship and William Wallace.

These men were party managers for Mr. Lowe. They testified that they required every man to carry his ballot at least a foot and a half from his body. (See bottom page 224.)

Wallace says, page 234. "I told it to every man. Now, I said, you hold your ticket so I can see it."

Wallace also testified, page 223, as follows:

"Question. You thought it important to examine their wrists and see that there was nothing up their sleeves?

"Answer. Yes, sir; I did."

"Q. And you examined each one in this way?

"A. Yes, sir. I examined every one that voted the ticket.

"Q. You examined each one of the one hundred and fifty-six colored men?

"A. Yes, sir; I did.

"Q. You examined their hands and sleeves to see that there could be no foul play?

"Q. You examined their hands and sleeves to see that there could be no four play?

"A. Well, I did not feel of their arms and sleeves, but I examined their wrists close before I gave them their ticket."

We think the evidence shows beyond question that the policy of the Greenback party was to prevent a secret ballot. Mr. Lowe's witnesses, supporters, and managers swear they examined the wrists of voters, and made them hold the ballot at least a foot and a half from the body to prevent the possibility of their escaping the surveillance of party managers.

This was the plan adopted with colored men, but in localities where possibly objections might be urged to so close inspection of underclothing, Mr. Lowe's managers adopted the plan of having the ballots marked so that they could without question identify the ballot in the hands of the voter.

We have examined the ballots, and can not resist the conclusion that these ballots were issued to enable party managers to destroy the freedom and purity of the election, and to prevent secrecy of the ballot, and to place the voter under improper restraint or influence in casting his ballot.

More than a year prior to November 2, 1890, this law had been construed by an eminent judge of the State of Alabama. His decision was as follows:

Transcript.

Transcript.

The State of Alabama, Callman County:

Before Hon. Louis Wyeth, judge of the fifth judicial circuit.

Charles Plato w. Julius Damus.—Contest of election.

In this case Charles Plato contests the election of Julius Damus to the office of manyor of the town of Cullman, in the county of Cullman, claiming to have been elected to that office himself by a majority of the votes cast at the election held on the first Monday in April, 1879.

The respondent claims to hold the office under the certificate of election issued by the proper officers under the provisions of the "act of assembly to establish a new charter for the town of Cullman." (Pamphlet Laws of 1879, page 304, section 9.)

by the proper omcers under the provisions of the "act of assembly to establish a new charter for the town of Cullman." (Pamphlet Laws of 1879, page 304, section 9.)

On examining and counting the votes it appears that fifty-four of them were cast for the contestant, and twenty-seven for the respondent; of these fifty-four votes given for the contestant, fifty-two had printed on them at the top of the ballot the words "Corporation Ticket," and of the twenty-seven votes cast for respondent three had in like manner printed thereon the same words, and the question for me to decide is whether or not those words rendered the ticket on which they were printed illegal ballots, and such as must be rejected.

The act approved February 12, 1879, Pamphlet Laws, pages 72, 73, requires that the ballot must be a plain piece of white paper, without any figures, marks, rulings, characters, or embellishments thereon, " " on which must be written or printed " " only the names of the persons for whom the elector intends to vote, and must designate the office for which each person so named is intended by him to be chosen, and any ballot otherwise than described is illegal and must be rejected.

The law under which the election now being considered was held, in section 4, Pamphlet Laws, 1879, page 305, declares "that the election provided for in this charter shall be regulated by the general State election law,"

The judicial officer of the State has nothing to do with the propriety of a statue. If not void by reason of a constitutional inhibition, the judicial duty is limited to their construction and enforcement.

These ballots had more than only the names of the persons for whom the elector intends to vote, or the designation of the office, and must be rejected because illegal. Such is the mandate of law and so I must declare it.

It is considered, adjudged, and ordered that the election of Julius Damus as mayor of the town of Cullman, in the county of Cullman, be confirmed, and that the contestant pay the costs of this court.

LOUIS WYETH, Judge, &c.

JUNE 9, 1879.

The numerous authorities which the contestee cites in pages 14 to 85 of his brief conclusively show that Congress and the courts and all law-writers have uniformly held that, under such a law as that of Alabama, ballots like those now under consideration are filegal.

First. The law of Mississippi provides that all ballots shall be "without any device or mark by which one ticket may be known or distinguished from another."

First. The law of Mississippi provides that all ballots shall be "without any device or mark by which one ticket may be known or distinguished from another."

This leaves room for debate as to whether the marks on the ballots were marks by which one ticket may be known or distinguished from another.

The Alabama law provides that the ballot shall have "only the names of the persons for whom the elector intends to vote and the designations of the office;" therefore this law does not give latitude for debate on this question.

The Alabama law and Pennsylvania law (see page 21 of contestee's brief) stand alone in this, that they alone prohibit anything being on the ballots but the names of candidates and designations of the offices.

In the report of the case of Lynch es, Chalmers the committee say, on page 11:

"It need, however, hardly be added that a line of carefully considered cases in the States, in which such courts have undoubted jurisdiction, so far as they would apply in principle, would go a long way toward settling a disputed point of construction in any State election law. In fact it may be said that it would probably be the duty of Congress to follow the settled doctrine thus established."

On page 10:

"Where decisions have been made for a sufficient length of time by State trunals, construing election laws, so that it may be presumed that the people of the State knew what such interpretations were, would furnish another good reason why Congress should adopt them in Congressional election cases."

And on page 12:

"Had the opinion been rendered before the election of 1880, or become one of settled law of Mississippi, we do not say but that it would have such weight with us that, though we might disagree with it in logic, we might feel compelled to follow it."

Now, certainly, the facts in this case bring it within the principles here expressed.

Now, certainly, the facts in this case bring it within the principles here ex-

The decision of Judge Wyeth was rendered June 9, 1879, seventeen months before the election of November 2, 1890.

First. It was carefully considered.

Second. The court had undoubted jurisdiction.

Third. It had been made for a sufficient length of time; and above and beyond this, to use the language of Mr. Justice Curtis, 16 How., 279-87, quoted page 11 of Lynch report, it was "needful to the ascertainment of the right or title in question between the parties."

The committee in Lynch vs. Chalmers say:

"What we have here remarked does not, of course, apply to the marks or devices ordinarily used on tickets, such as spread eagles, portraits, and the like; those would be considered marks and devices of themselves, and not necessary in the ordinary mechanical art of printing. The use of the latter would be considered a violation of the statute in any aspect of the case, while the use of the former seems to us, in any view of the law, ought to be restricted to an intentional or manifest misuse."

We submit that this reasoning makes the Greenback ballots clearly obnoxious to the statute of Alabama.

The act amending section 274 is a remedial act. Sedgwick, page 309, says:

"The words of a remedial statute are to be construed largely and beneficially, so as to suppress the mischief and advance the remedy. It is by no means unsual in construing a remedial statute, it has been said, to extend the enacting words beyond their natural import and effect, in order to include cases within the same mischiefs.

"Remedial statutes are liberally expounded in advancement of the object of the Legislature."—Blakency vs. Blakency, 6 Port., 109.

"A remedial statute must be construed largely and beneficially, so as to suppress the mischief and advance the remedy."—Sprowt vs. Lawrence, 33 Ala., 674.

Let us now see what was sought to be remedied by the amendment to section 274 of the code, approved February 12, 1879.

It is shown by the evidence, page 1237 of the record, that at elections prior to November 2, 1880, the Democrate use

STATE AT LARGE. District electors.

1st District-2d District-3d District-4th District-5th District-6th District-7th District-8th District-8th District-

And one of which, page 1234, is almost precisely like the ballots which we decide should be rejected.

The evidence shows that at previous elections ballots were used substantially like the Weaver and Lowe and Hancock and Lowe ballots, and that the remedy sought was to prevent the use of the very ballots which the Greenback party insisted upon using.

The report of the majority even admits the correctness of our position on this subject.

subject.
We are to bear in mind these facts:
First. The election preceding and nearest to November 2, 1880, when such ballots were used, or could by any possibility have been used, was the election of November, 1876.
Second. The first Legislature of Alabama which was elected after the November Presidential election of 1876 proceeded to and did amend section 274 of the code, and did prohibit by the law they enacted the use of the very ballots which the contestant swears were used in November, 1876, and preceding elections. This shows what was to be remedied.
We are also to remember—
Third. That Judge Wyeth construed the law on June 9, 1879, just as we construe it.

We are also to remember—
Third. That Judge Wyeth construed the law on June 9, 1879, just as we construe it.
Fourth. That the contestant swears that the August, 1880, can vass was made mainly by attacking this law.
Fifth. That with all this before them, he and his party managers defied the law they had denounced, and printed ballots and placed in voters' hands ballots which were prohibited by the law of the State.

Sixth. That nearly one hundred witnesses in this case testify that the Greenback party compelled men to vote their ticket by threats and terrorism, and that forty witnesses (including men of both colors and all parties) swear that but for this system of terrorism exercised by the Greenback leaders at least half of the people who voted for contestant would have voted with the party which supported the contestee.
Considering all these things together, we see how necessary it was for contestant to have a ballot which could be distinguished by his party leaders, in order to keep the weaker classes in line and prevent them from secretly voting as they desired.

as they desired

It must be observed that the unanimous report of the Democratic members of the Elections Committee in considering the illegality of the ballots says:

The numerous authorities which the contestee cites in pages 14 to 85 of his brief conclusively show that Congress and the courts and all law writers have uniformly held that, under such a law as that of Alabama, ballots like those now under consideration are illegal.

First, The law of Mississippi provides that all ballots shall be "without any device or mark by which one ticket may be known or distinguished from another."

device or mark by which one ticket may be known or distinguished from another."

This leaves room for debate as to whether the marks on the ballots were marks by which one ticket may be known or distinguished from another.

The Alabama law provides that the ballot shall have "only the names of the persons for whom the elector intends to vote and the designations of the office;" therefore this law does not give latitude for debate on this question. The Alabama law and Pennsylvania law (see page 21 of contestee's brief) stand alone in this—that they alone prohibit anything being on the ballots but the names of candidates and designations of the offices.

It is not improper for me to here remark that the records of this election case from the eighth district of Alabama, now a part of the records of the Forty-seventh Congress, show that the question upon which Judge Bruce laid such stress did not in any way affect the result of the election of November, 1880, because uncontradicted proof, all of such proof being primary, and unquestioned evidence, clearly demonstrated that even according to the contestant's most extreme demands on this subject, and counting every illegal ballot which he and his friends claimed were cast for him, and refusing to count any of the rejected ballots which it is admitted were cast for the contestee, still the contestee's majority of votes cast by legal voters would be 1,547. I will now proceed to state some of the

ILLEGAL RULINGS.

The board of inspectors at Huntsville box were:

First. Mr. Davis, who for years prior to 1880 had been an earnest and persistent opponent of the Democratic party and in the election of 1882 he was a most active worker and canvasser against said party.

Second. Mr. Clark, who was a Federal soldier who fought gallantly and received wounds from which he is still suffering, was an earnest Republican for a long time, but had voted the Democratic ticket for several elections

Third. Mr. McGehee, who was a Democrat.

When the polls closed they found in the box ballots for both Wheeler and Lowe of the character referred to in the Congressional report which I have read, said ballots being in direct violation of the law of Alabama. The board of election officers after mature investigation, unanimously decided that they were illegal, and they reported them to the county board precisely as directed by the laws of Alabama. The report signed by the inspectors specifically stated the number of ballots rejected for each party, and inclosed them with the report of the election which was sent to the county officials. It was for this that Mr.

Clark and Mr. McGehee were indicted.

Mr. Davis, as is shown by his action in the elections which have taken place since November, 1880, no doubt satisfied these people of his adhesion to the party in opposition to the Democracy, and he was not indicted, although his position and action was the same as that of Clark or Mr. McGehee.

These two gentlemen were, however, brought to trial and the

UNCONTRADICTED EVIDENCE

showed that they acted conscientiously and judicially; that they counted all the legal ballots fairly and made a correct report, and also reported the number of illegal ballots which were cast for each party.

Mr. Goodwin, a deputy marshal and a Republican, was present as a Federal supervisor, and he corroborated these facts in his printed evidence, but with all this and notwithstanding the fact that authorities were read to the court showing that inspectors of elections are judicial officers and, that under such a state of facts, no crime could attach to them even if they had erred (which was not the case), even with all that this, Judge John Bruce, either from ignorance or corrupt intention, charged the jury, in effect, to find a verdict of

GUILTY.

A prominent lawyer who was present informed me that his charge was substantially as I will read:

Was substantially as I will read:

That although the defendants McGehee and Clark had no criminal intent in rejecting ballots cast for William M. Lowe and notwithstanding the fact that the laws of Alabama directed that they should reject said ballots, yet; if they did reject any said ballots they were guitty under the United States law, and the jury must bring in a verdict against them, and he further charged that although the proof showed McGehee and Clark never heard of a United States statute this did not alter the case, and that if the jury believed the evidence they must find a verdict of guilty against the defendants.

The jury consisted of six Democrats and six of opposing politics, mostly Republicans. The

CHARGE SO SHOCKED THE JURY

that they could not but feel that the judge was either insane or corrupt, and after mature deliberation they returned a verdict of acquittal.

JUDGE BRUCE RECEIVED IT WITH ANGER

and indignation and while he was compelled to discharge the defendants he attempted to insult the jury by immediately ordering them to be discharged from further service.

To show that I am right in my information regarding these statements, I will read some editorials from the press of Huntsville giving an account of these atrocities. I read first from the issue dated April 26, 1882, of or these attocaties. Tread instribution issue dated April 26, 1882, of a newspaper published by Hon. J. Withers Clay, a brother of Senator C. C. Clay, for many years an honored Senator in this Capitol:

The Government's counsel and the judge both urged that defendants violated the law of Congress in rejecting the Lowe ballots, and made no complaint of the rejection of Wheeler ballots, and the judge charged the jury, if they believed the evidence, to wit, the rejection of the Lowe ballots, they must return a verdict of cultiv.

evidence, to wit, the rejection of the Lowe ballots, they must return a verdict of guilty.

Defendants' counsel maintained that the rejection of ballots was required by the Alabama statute and not violative of the law of Congress. The indictment charged defendants with violating the law knowingly, willfully, and fraudulently. Government's counsel and the judge ignored the allegations of the indictment, acquitted defendants of knowing, willful, and fraudulent violation of the law, but asserted that the law was, nevertheless, violated, and subjected defendants to its penalties. Defendants' counsel contended that the allegata and the probata must agree, and, if the allegations were not proved, the jury could not lawfully convict. The jurors agreed with defendants' counsel, believed the evidence, but did not believe the charges proved, and, therefore, returned a verdict of "not guilty." The judge, however, instructed them, if they believed the evidence, they must find defendants guilty. For the violation of this palpably wrong instruction the judge discharged the jury for the rest of the term.

The jury, from the time it was empaneded to the rendition of the verdict, was classified here as six Democrats and six opposition, Republicans or Greenbackers, and the jury was in charge of a United States bailiff.

The fact was (we learn from other jurors) that the negro (a Republican) was one of the first to say "not guilty," remarking, in substance, that Government's counsel seemed to want to punish defendants for the acts of the Legislature.

I now read from the Huntsville Independent, edited by a son of Judge

I now read from the Huntsville Independent, edited by a son of Judge

Coleman, formerly of the supreme court of Alabama. Its date is April

In the trial of Captain J. T. McGehee and Mr. Dan C. Clarke (two gentlemen of most excellent character), charged with violation of election laws, there was not a particle of proof that they were guilty of any official misconduct whatever. Nicholas Davis, esq., who, together with the above-named, was an inspector of the election, was the only witness examined. He testified that there was no concealment in anything that was done and that the election was fair in all respects. The sole charge against the other inspectors was that they had rejected a certain number of ballots, a number for Lowe and a number for Wheeler, which ballots had been rejected because they had on them numerals and something else than the designation of the office and the name of the person voted for. The sole question was whether these gentlemen were criminally responsible for their act in rejecting these ballots. Judge Bruce held that under section 5515 of the Revised Statutes of the United States they were in criminal violation of the law. This decision was contrary to all authority, precedent, reason, and principle. There is an unbroken line of legal authorities, both English and American, holding that inspectors of election are judicial officers. Admitting that in this instance they might have been wrong in their judgment (there is no legal decision to such effect), no criminality attaches to the error of judgment.

To enforce the other, most absurd view, would make it impossible to get men to accept the office of inspector. (It is likely that the hope of the prosecutors is to so intimidate Democrats as to prevent them from serving as inspectors. This, however, will utterly fail of its object.)

The Mobile Register, which for a long time, and I think still is, principally owned by a gallant Federal general, said

Principally owned by a gallant Federal general, said:

The singular performances of District Judge Bruce, of the Alabama district, have induced many of his friends to believe that his mind is seriously affected. A dispatch of the 12th instant from Huntsville, reads:

"Judge Bruce, of the Federal court, to-day discharged the twelve jurors regularly summoned for the term because they rendered a verdict of not guilty in the Clark and McGebee case, which the minutes of the court state was in disobedience of the mandate of the court. General L. P. Walker and other members of the bar protested against this action of the court, and one of the jurors arose and said that he asked the court on yesterday if they must decide the case according to the law and evidence presented before them, and the court said they must; that they had been guided in rendering their verdict by their responsibility under their oaths, and not by the mere ipse divit of the court. The new jury was ordered to be drawn, and the court suspended until jurors can be summoned."

The action of Judge Bruce is in keeping with his invariant of the court.

Inty was offered to be drawn, and the courtsuspended until juriors can be summoned."

The action of Judge Bruce is in keeping with his imprisonment of the county officers of Chambers County, a short time ago. It will be remembered that these gentlemen were incarcerated, without a shadow of justification, until the Supreme Court of the United States granted a writ of habeas corpus and virtually released them.

These eccentricities of Judge Bruce and his disregard of law have been of late so very pronounced that it would be proper for our Representatives in Congress to propose articles of impeachment.

No judge in his senses could act as Judge Bruce does, and no judge who is learned in the law could so often and so flagrantly disregard the law. There is no explanation of his vagaries except that his mind is seriously affected. Those who have watched him closely during the past few years are alarmed at his aberrations of intellect. It is the duty of Congress to give us relief at once.

There is no limit to the judicial decisions which show the error of adge Bruce in his charge. I have one before me from the supreme court Judge Bruce in his charge. I have one before me from the supreme court of Pennsylvania. During the war a great number of foreigners, who had settled in Pennsylvania, in order to avoid conscription, did not naturalize. Therefore, in 1868, a large number naturalized for the first time. A great many such citizens presented themselves on election day to Republican inspectors, who decided that citizenship had been granted wrongly by the nisi prius court in which they had taken out their nat-uralization papers. The practical result of this wholesale rejection of votes went materially toward affecting the result. As many as 24,000 votes are said to have been thus rejected. Many of the inspectors of election were indicted, and in the first case, styled Lee et al. vs. the Commonwealth, the supreme court decided that he, among other inspectors, had done wrong in rejecting these votes, as the voters offering their ballots had been naturalized by the proper court and in the proper way. But the supreme court, at the same time, decided that the inspectors had merely committed an error of judgment and no crime. There are no conflicting decisions. The British parliament actually has a statute to this effect.

The Lee case will be found in 1 Brewster, 273. It is cited approvingly by Judge McCrary, section 466, and this writer also with great emphasis lays down the same rule in chapter 10 of his work on Elec-tions and cites numerous authorities to the same effect. I call attention to the cases referred to in his second edition, paragraphs 459 to

Atrocious as these matters may appear, there were other equally discreditable features in the rulings of Judge Bruce in this case. As before stated, the indictment included but two of the inspectors, namely, Clark and McGehee. Judge Bruce had sustained demurrers to indict-ments in other cases which were precisely similar. In order to carry out his cruel and illegal purposes it was necessary

In order to carry out his cruei and fliegal purposes it was necessary for Judge Bruce to overrule his former decisions, but this did not seem to cost him one pang of regret. The principle of law which Judge Bruce trampled under foot so that he might confine his persecutions to Democrats is as old as law itself. We find it in old decisions and in the works of text-writers. It was recently reasserted by Justice Miller, of the Supreme Court, in Peay vs. Schenek and Bliss, 1 Woolw. Circuit Court Reports, pages 176, 187, who used these words:

We understand it to be well settled that when authority of this kind is conferred upon three or more persons, in order to make its exercise valid, all must be present, and participate or have an opportunity to participate in the proceedings, although some may dissent from the action determined on.

The action of two out of three commissioners to all of whom was confided a power to be exercised can not be upheld when the third took no part in the

Bear in mind that the indictment charged that McGehee and Clark held the election.

If that were true the election was illegal and void, and for that reason the indictment was bad.

In that connection I will read from Howard vs. Cooper, 1 Bartlett, page 282:

Fourth. Your committee have rejected the vote of the township of Van Buren. The law requires that the board of inspectors shall be constituted of three persons in number. The proof is clear that there were but two. And as there was no board of inspectors known to the law, your committee see no way by which any legal effect can be given to the returned vote; they have therefore deducted it, although it can in no way affect the decision of this case, whether it be deducted or retained.

Before leaving this case let me explain the sophistry by which Judge Bruce and the prosecuting attorneys arrived at their conclusions; and in passing I must not forget to mention that the Department of Justice (should not I say the Department from Justice?) had three lawyers employed, all in the pay of the Government, to prosecute this case, namely, Ex-Governor Smith, district attorney; L. W. Day, assistant district attorney and chairman Greenback executive committee, and P. L. Jones (specially employed), who at that time and now heads the list of members of the national committee of the Greenback party. From what could be gathered Judge Bruce and these prosecutors based their proceedings upon section 27 and section 5515 of the Revised Statutes. Section 27 is a part of the act of February 28, 1871, which provides

All votes for Representatives in Congress must be by written or printed ballot.

This meant nothing more than to prohibit voting viva voce and to insure secrecy to the voter.

Section 5515 is a part of the act of February 28, 1875, which provides that an election officer, at an election where a Representative for Congress is voted for, who fraudulently does certain things or violates any duty "required of him by any law of the United States, or any State," "shall be punished," &c.

Now, unless these inspectors had violated a law of the United States

or of Alabama it was criminal for Judge Bruce to tell a jury to render

a verdict against them. Let us examine this matter.

Article 1, section 4, of the Constitution of the United States says:

The times, places, and manner of holding elections for Senators or Representatives shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by law make or alter such regulations, except as to the places of choosing Senators.

Judge McCrary, in his work on Elections, says (paragraph 6):

While the Legislature can not add to, abridge, or alter the constitutional qualifications of voters, it may and should prescribe proper and necessary rules for the orderly exercise of the right resulting from these qualifications. The Legislature must prescribe the necessary regulations as to place, mode, manner, &c.

Again, Mr. McCrary says:

All devices by which the secrecy of the ballot is destroyed by means of colored paper used for ballots, or by other similar means, are exceedingly reprehensible, and, whether expressly prohibited by statute or not, should be discountenanced by all good citizens.—American Law of Elections, page 195; People 22. Cicott, 16 Michigan, 283.

Judge Cooley, in his work upon Constitutional Limitations, says, page 599, under the head of "The right to participate in elections:"

Each State establishes its own regulations on this subject; subject only to the afteenth amendment to the National Constitution, which forbids that the right of citizens to vote shall be denied or abridged on account of race, color, or previous condition of servitude. Participation in the election franchise is a privilege rather than a right, and it is granted or denied on grounds of general policy.

After speaking of the various restrictions, Judge Cooley says (page

All such reasonable regulations of the constitutional right which seem to the Legislature important to the preservation of order in elections, to guard against fraud under influence and oppression, and to preserve the purity of the ballot-box, are not only within the constitutional power of the Legislature, but are commendable, and at least some of them absolutely essential.

Judge Cooley continues (page 604):

The mode of voting in this country at all general elections is almost universally by ballot. The distinguishing feature of this mode of voting is that every voter is thus enabled to secure and preserve the most complete and inviolable secrecy in regard to the persons for whom he votes, and thus escape the influences which, under the system of oral suffrage, may be brought to bear upon him, with a view to overbear and intimidate, and thus prevent the real expression of public sentiment. In order to secure as perfectly as possible the benefits anticipated from this system, statutes have been passed in some of the States which prohibit ballots being received or counted unless the same are written or printed upon white paper, without any mark or figures thereon intended to distinguish one ballot from another.

After giving this statement of the system, Judge Cooley proceeds to use this emphatic language:

These statutes are simply de laratory of a constitutional principle that inheres in the system of voting by ballet, and which ought to be inviolable, whether declared or not. In the absence of such a statute all devices by which party mangers are enabled to distington ballots in the hands of the voter and thus determine whether he is voting for or against them are opposed to the spirit of the Crastitution, inasmuch as they tend to defeat the design for which voting by ballot is established.

These paragraphs show the views of able writers upon constitutional law regarding the clause of the Constitution which I have read, and pursuant to which the Legislature of Alabama enacted the law which Judge Bruce nullified or tried to nullify, at the same time overruling and nullifying the Constitution, and also overturning the principles of

law so ably expounded by Judges Cooley and McCrary. This clause of the Constitution is the only one which directly delegates legislative powers to States.

We see that the decision of Judge Bruce in this case is in harmony with his decree by which he imprisoned three Alabama judges, solely for the reason that they refused to violate law and perform acts not permitted by their jurisdiction.

In the McGehee and Clark case he exercised all his power in the en-deaver to incarcerate two excellent citizens because they would not violate their oaths and trample under foot the laws of Alabama and the Constitution of the United States.

He could not have vengeance on the defendants; he therefore satisfied it as far as possible on the jury by not permitting them to serve for the period for which they were empanneled.

And this judge is allowed to preside over a court and decide cases from which there is practically no appeal.

He could imprison the best citizens of Alabama, and only in very exceptional cases could an appeal be had to the Supreme Court.

The most charitable explanation suggested is, that the judge, having

been born and reared in Scotland, can not conceive but that the relation of a sovereign State in America to the Federal Government, is the same as that of a borough of Scotland or Ireland to the Crown of England; and he seemed to regard Legislatures of States as social gath-England; and he seemed to regard Legislatures of States as social gatherings of ambitious gentlemen, and the laws they enact as of about the same force and dignity, as resolutions of a town-meeting or the rules adopted by the vestry of a country church. His contempt for the mandates of the Constitution can be understood when we recall that probably his first knowledge of that instrument was its denunciation as a "league with hell and a covenant with the devil," by Garrison, Seward, Charles and other probably his divides of constitutions. Chase, and other people from whom he imbibed his idea of constitutional construction

The decisions which have been quoted by able lawyers in their efforts to extricate Judge Bruce from his embarrassing position have no application to laws enacted by States in obedience to the mandates of the Constitution and pursuant to power delegated to States by that instrument.

The following list of cases, which I believe have been cited, all refer

The following list of cases, which I believe have been cited, all refer to regulations regarding commerce:

Wilson vs. Blackbird Creek Marsh Co., 2 Peters, 225, opinion by Marshall, J.; Cooley vs. Board of Wardens, 12 Howard, 318, opinion by Curtis, J.; Linnott vs. Commissioners of Pilotage, 22 Howard, 241; Gilman vs. Philadelphia, 3 Wallace, 727-729, opinion by Swayne, J.; Shirlock vs. Allen, 3 Otto, 104, opinion by Field, J.; Hall vs. De Cuir, 5 Otto, 488, opinion by Waite, C. J.; Mobile vs. Kimball, 12 Otto, 700, opinion by Field, J.; Webber vs. Virginia, 13 Otto, 351, opinion by Field, J.

Phrases from these decisions have no applicability to this case, for many reasons, and particularly because the Constitution does not direct States to enact laws regarding commerce, and for the same reason the decisions of Ex parte Eames, 2 Story, 322, and Sturgess es. Crowninshield, 5 Wheaton, 122, are inapplicable to State laws on the subject of elections

Article 1, section 1 of the Constitution reads:

All legislative power herein granted shall be vested in a Congress of the United tates, which shall consist of a Senate and House of Representatives.

Among the powers which are enumerated are:

To regulate commerce

And-

To establish uniform laws on the subject of bankruptcies.

Observe that the Constitution does not direct States to legislate on

Observe that the Constitution does not direct States to legislate on these subjects, but, quite the contrary, provides that they shall be regulated or established by Congress.

The part of section 27, Revised Statutes, which particles that "all votes for Representatives in Congress must be by written or printed ballot" was first enacted February 28, 1871 (16 Stat., page 440, sec. 19). It is the last section of what is known as the "enforcement act," amendatory of the act of May 31, 1870. This law was construed in the circuit court of the United States, in the case of Exparte Mo-I read from Brightley's Leading Cases on Elections, page 65. Illwee. The court says:

The act of Congress of 31st of May, 1870 (16 Stat., 440), does not interfere with the laws of the several States.

The decision also says:

It was not the intention of Congress to abolish the laws of the several States which prescribe the qualifications of voters, or even after them, except so far as they are founded upon the distinction of race, color, or previous condition of servitude.

I will now give an account of a still

GREATER ENORMITY.

The next case set for trial was an indictment against two gentlemen

of high standing, together with a colored man.

They were the inspectors at Lanier's precinct.

The evidence shows that the election at Lanier's was conducted with perfect fairness so far as the rights of Colonel Lowe were concerned.

The proof shows that it was conducted under the supervision of Mr.

Hertzler, a Federal supervisor, who was a friend and advocate of Colonel Lowe, and John F. Lanier, a deputy United States marshal had, at the August election just preceding, been an active supporter of the Republican candidate for probate judge. (Record, page 180.)

Mr. Lanier was appointed marshal by United States Marshal Sloss to take charge of the election at this box.

Marshal Sloss is shown by the evidence to be a violent supporter of William M. Lowe.

Even Mr. Hertzler (page 183) says, under oath:

Everything was fairly done in counting the ballots as possibly could be.

The report of the Democratic members of the Committee on Elections, in referring to the evidence regarding this box, uses these words:

At Lanier's box the evidence regarding this box, uses these words:
At Lanier's box the evidence shows that it was impossible for any fraud to have
been practiced by any one in the interest of Mr. Wheeler.
Mr. Lowe's friend swears they could not have counted the ballots in the shop
where the election was held, and he swears that he "took charge of the box,"
and carried it to the store of Deputy United States Marshal Lanier, who was appointed to take charge of the election by Mr. Lowe's friend, Marshal Sloss.
The box remained locked up in the side room of Mr. Lanier's store for about
an hour, and Mr. Lanier, who was a Republican, swears that no one could possibly have had access to it while it was there.

All these facts were known to Judge Bruce and the prosecuting counsel, and they apparently foresaw that some extraordinary effort would be necessary to carry out the nefarious purposes which they contemplated.

THE USES AND ABUSES OF JURIES.

The word jury, as used in the Constitution, is qualified; it means jury as then constructed and governed by the rules then ascertained to be applicable to it. Any tribunal, though called a "jury," is no longer a constitutional jury when it ceases to embrace any material old element, or if it be burdened with any material additions to its original inside that the course of time may be different to the course of time may be determined to the course of the course of time may be determined to the course of the cour A word in the course of time may be frittered away or signification. whittled out of its original meaning and be brought into new and baser

The fact that the framers of our Constitution used the word impartial as a qualification to the word jury is significant that even at that day the word jury had been to a certain extent corrupted. It had been hammered on the judicial anvil for several centuries, and had thereby been beaten somewhat out of shape, and had lost some of its original meaning, so that our fathers evidently concluded that it was not safe to let the word stand alone. They cast the word anew and gave it to us as a coin with an unmistakable face upon it. The crucible through which they passed it cleansed it of all alloy, and it now stands in our

IMPARTIAL JURY.

It is thus placed beyond the reach of all conventionalities, stripped of its dross, and glittering with all its original purity.

A packed jury is

NOT A CONSTITUTIONAL JURY,

would have used the word. The words are "a speedy public trial before an impartial jury," not a packed jury. There are more ways than one of packing a jury; the usual modus operandi is secret, vicious, sinister, and is consummated generally in the dark, either by bribery, persuasion, partiality, rewards, or the hope of rewards. Selfishness sometimes enters into its machinations when men guilty of similar offenses it exists on the invertee and smooth the way for an area. sit quietly on the jury to prepare and smooth the way for an easy acquittal of themselves upon an emergency. The modes of packing juries are as various as the suggestions of iniquity are numerous. But this packing of juries has ever been abhorrent in the eyes of the judiciary. It is a new phase in the mode of packing a jury to see the judge him-

self AIDING AND CONTRIBUTING TO IT BY HIS RULINGS AND HIS ADVICE.

I respectfully submit that in this case, the jury was packed by the instrumentality of the judge. Now, let us see. Here are these newly invented interrogatories to the juror upon his voire dire:

invented interrogatories to the juror upon his voire dire:

Each juror, before the case was opened, qualified by accepting the test embodied in the appended questions, propounded by the Government, as a challenge for cause. The defense resisted the right of the prosecution to try the jury in this manner, but the court refused to sustain the objection.

2. Do you hold any opinion upon the subject of the Federal election laws, so called, or upon the subject of prosecutions thereunder, which would induce you to refuse to convict a person indicted under said laws, if the facts set forth in the indictment are proven against him, or if the court directs that upon the facts proven it is your duty to convict?

4. Do you hold any opinion upon the constitutional power of Congress to punish State election officers for acts of omission or commission at elections for members of Congress, which would induce you to refuse to convict such officers when indicted under the laws of the United States for such acts of omission or commission, if the facts set forth in. he indictment are proven against them, of the court directs you that upon the facts proven it is your duty to convict?

5. Are you sensible of any bias or prejudice of any character which will prevent you from rendering a verdict of guilty against the electhants, if the court should charge you that upon the facts proven it is your duty to render such verdict?

As doubts might arise that a judge could be guilty of such an enormity I state that I take these interrogatories from the issue of April 19, 1882, of the Huntsville Advocate, which paper as I have before stated was mostly owned and controlled by the Federal court officials and the Congressman whom they supported. It was in fact the organ of the Federal court officials, and it might with propriety be termed the court

journal of these autocrats. This paper in the same edition says edito-

CHALLENGE FOR CAUSE

The organization, Monday, of the present jury for the trial of the election cases led to protracted argument as to the right to challenge for cause. His honor Judge Bruce permitted the jury to be examined as to bias, opinion, and prejudice.

I do not believe that the judicial history of this or any other country shows any case which would authorize such questions. They do not belong to the category of questions heretofore recognized as proper to be propounded to a juror, in testing his qualifications to sit on the trial in a criminal case. The old, well-recognized questions have, I admit, been enlarged and expanded from time to time, as certain exigencies and the remodeling of old and the adoption of new laws, have dictated the change, but these expansions upon examination will appear to the judicial mind to be on the line of sound logic and legal legitimacy, and they well illustrate the enlightened judgment of the present age. know of no one of these questions authorized or sanctioned in the books, that wears upon its face either unreasonableness or absurdity, certainly not one of them could be considered as a monstrosity.

But we have here

BRAND-NEW INTERROGATORIES,

invented and sanctioned not by a Coke, a Mansfield, or a Denman, a Kent or a Story—judges grown gray in the precincts of the temples of learning, and who might be permitted to have a right to plant amid the rules of law some sound and matured maxim, the suggestion of tedious toil and learned sagacity—but questions invented, sanctioned, and sustained by a Wilcox farmer, who had been made a judge from political considerations alone, to

SUBSERVE THE EXDS OF A DOMINANT PARTY

without ever perhaps having filed a declaration in an important case or have written an indictment for petit larceny.

And what are these questions? The practicing lawyers and the pre-

siding judges of this day will be amazed when these questions are re-

Do you hold any opinion upon the subject of the Federal election laws, so called, or upon the subject of prosecutions thereunder, which would induce you to reuse to convict a person indicted under said laws if the facts set forth in the ndictment are proven against him, or if the court directs that upon the facts proven it is your duty to convict?

This question being gravely propounded, the juror says, This question being gravery propounded, the juror says, "Yes." This is declared by the judge cause for challenge, and the juror is promptly set aside. Why? Because his opinion, thus dragged out by the judicial nippers, is not the opinion of the prosecuting attorney nor of the court, who is snuthing for the odors of conviction.

If he answers "No," he is competent, and sworn and seated. He is thus packed in because his opinion is thus asserted

NOT TO BE AGAINST THE GOVERNMENT,

and be it remembered that in packing a jury the opinion of the juror is a paramount consideration. But the further absurdity of this proceeding appears in this: it will be observed that this conglomerate interrogatory which calls for one categorical answer, "yes" or "no," contains three distinct questions, each requiring ratiocination, and each to a certain extent intricate. The part first of the interrogatory calls attention to the Federal election laws and prosecutions under them, and for the jurer's opinion as to a conviction; part second calls attention to the indictment, using this idiotic phrase, "if the facts set forth in the indictment are proved against him." Now, these very remarkable words place

THE JUROR IN A STATE OF ANXIETY

as to what these facts may be, and he is called on to say "yes" or "no," without being informed what the facts are or even time being given him to inquire, but he is

ABSOLUTILY FORCED TO PRESUME

that the facts are both indictable and are sufficiently and legally set out in the indictment to authorize a conviction! The part third of this interrogatory is a distinct question, "or if the court directs that upon the facts proven it is your duty to convict."

This conglomerate interrogatory, as I have called it, was framed, it would seem, on the strict rules of rhetoric, which looks as well to phraseological adornments as to logical climaxes—and this third part presents what we may call the logical climax-and the whole should pass into the text-books of belles-letters as an example, and be placed side by side with the efforts of the great writers as illustrative of the beauty of the construction of sentences, so as to be both sonorous in tone, grand in the conception, and conclusive in the argumentative arrangement.

Now, if we cut off this climax and put part third on a line to itself, what does it amount to? Simply, will you refuse to convict if the court directs that upon the facts proven it is your duty to convict?

It must not be forgotten that this question was put to the juror upon his voire dire, and that the answer was to disclose his competency to sit upon that jury. That is to say, the United States would not allow him to sit without a pledge in advance that he would convict "if the court directed that upon the facts proven it was his duty to convict." Scroggs, Wright, and Jeffreys, those great jury-bullies of England of whom I have spoken, amid all their enormities never

REQUIRED A JUROR, IN ADVANCE.

to thus basely pledge himself to follow the directions of the court in a criminal case. It remained for Judge Bruce, a Federal judge in the State of Alabama, to be the first judge in Christendom who ever required a juror in advance to pledge himself to

CONVICT IF THE COURT DIRECT IT.

Scroggs, Wright, and Jeffreys did their bullying on the bench, after the jury was sworn and impaneled. But Bruce

PACKS THE JURY IN ADVANCE,

by requiring the pledge of base subserviency to the "direction of the

The fourth interrogatory allowed by Judge Bruce in this case reads thus:

Do you hold any opinion upon the constitutional power of Congress to punish State election officers for acts of omission or commission at elections for members of Congress which would induce you to refuse to convict such officers when indicted under the laws of the United States for such acts of omission or commission, if the facts set forth in the indictment are proven against them, or if the court directs you that upon the facts proven it is your duty to convict?

In this conglomerate interrogatory will be seen also this same anomy: Three distinct questions calling for one categorical answer.

The first phase is signally remarkable in this: it inquires of the juror's opinion upon the

CONSTITUTIONAL POWER OF CONGRESS TO PUNISH STATE ELECTION OFFICERS for acts of commission or omission at elections for members of Congress; a question involving an enlightened capacity on the part of a juror on a subject sufficiently intricate to demand the laborious investigation of a good legal mind, a question upon which the best judges of the Supreme Court of the United States might entertain positively opposite views! It presumes the existence of an amount of intelligence on the part of the juror utterly inconsistent with the well-known fact that the mass of jurors summoned for the Federal courts in the Southern States are illiterate persons, very many of them freedmen, without a particle of education or legal acumen! A man that is not acquainted with a letter in the alphabet is staggered with a question of the greatest magnitude, a question that a Coke might decide one way and a Mansfield another.

It is hardly possible for the imagination to take in the grotesque situation, the ludicrous absurdity of asking a negro his "opinion of the constitutional powers of Congress to punish State election officers for acts of omission or commission at the election of members of Congress."

I know nothing equal to this in history or fable, excepting the story of Cambyses, the Persian monarch, who, taunting the calf-god of the Egyptians, gravely inquired of that deity concerning some of the mysteri's of Egyptian worship. The calf-god of course had no orinion on that occult subject. The calf-god had not fathomed the profound deeps of Egyptian theology; and in answer only glared with upraised and dilated eyes at the imperial interrogator; thus mutely signifying that he had no opinion.

The haughty monarch, receiving such an answer, in his fury stabbed and slew the unoffending deity for its mute ignorance. Not so with Bruce. He was not quite that savage, but on the contrary, upon being sured by the juror that he had no opinion on the subject, he rewards

him by giving him a high place in the governmental inquisition.

As further proof that Judge Bruce, after allowing his court to exercise its power to aid in the election of the Greenback candidate for Congress, now sought to devote its powers to aiding him in the contest to cure the position for which the people had defeated him, I will call attention to a few facts.

At boxes where I got majorities, indictments were presented against the Democratic iuspectors, although the proof showed the utmost fairness and good faith on their part. For instance, at Laniers Colonel Lowe's friend, the supervisor, swears he took charge of the box and went to find a place where they could count the ballots, and the ballots were all counted in a very short time, but on account of the unavoidable de-

lay of an hour the Democratic inspector was indicted.

The same officials had before them the evidence of Colonel Lowe's witnesses regarding Courtland box No. 2. I will read from the report of the Elections Committee, signed by all the Democrats of that committee:

the Elections Committee, signed by all the Democrats of that committee:
At Courtland precinct (the same place where the proof shows that there was no legal registration, and that one hundred and eighty unregistered persons cast illegal votes for William M. Lowe) the preponderance of evidence decidedly shows that none of the inspectors were supporters of the party which sustained Mr. Wheeler, and Mr. Lowe's witnesses are compelled reluctantly to admit that they violated the law which required them to count the ballots immediately on the closing of the polls, and that they pretended to be occupied for nine hours in counting about 500 ballots, and then put the counted and uncounted ballots together in a rough box, and that one of their number took the box off and kept it until the next day, when a box was returned which contained some ballots which they counted in an illegal manner, and made a report that Mr. Lowe had received 419 votes and that Mr. Wheeler had received 111 votes.

The proof also shows that this report was false, as the witnesses admit that Mr. Wheeler was polling a large vote—quite as large as that polled by Mr., Lowe—and some of the witnesses testified that he (Wheeler) polled two or three times as many votes as were counted for him.

Mr. Wheeler has proven, by uncontradicted and uncontroverted evidence of

Republicans as well as Democrats, that over two hundred persons voted for him at that box.

We respectfully submit that we have never seen a case where the integrity of a ballot-box was more emphatically and essentially impeached, and where justice called louder for action.

The proof that all the inspectors were opposed to the Democratic party has been since overwhelmingly confirmed. The inspector who was claimed to have had a spark of Democracy in him was one of the most active opponents of the party at three elections held since November, 1880. No thought of indicting these inspectors was entertained by these court officials.

At the other Courtland box two of the inspectors were Republicans or Greenbackers. The first ballots taken from the box which were illegal in form were Wheeler ballots.

These inspectors read the law and decided them to be illegal and they rejected them. This was all right with Judge Bruce's court, and

no complaint was ever made about it.

No doubt one object of Judge Bruce was to prevent Democrats having anything to do with elections, so that the Greenback party could carry on their election frauds without danger of detection.

In reply to a very proper inquiry as to how it was possible for such indictments as I have described to be presented by a grand jury, I will thank the gentleman for the inquiry and will say this is another illustration of the judicial tyranny practiced by Judge Bruce.

Another instance where Judge Bruce subordinated justice and law to political chicanery is when he dragged the ermine of a judge into the sluck of reditient.

slush of political DEBAUCHERY.

On June 30, 1879, the President approved a law enacted by Congress, a portion of which I read from pages 43 and 44, acts of first session Forty-sixth Congress:

Sec. 2. That the per diem pay of each juror, grand and petit, in any court of the United States, shall be \$2; and that the last clause of section 800 of the Revised Statutes of the United States, which refers to the State of Pennsylvania, and sections 801, \$20, and \$21 of the Revised Statutes of the United States are hereby repealed; and that all such jurors, grand and petit, including those summoned during the session of the court, shall be publicly drawn from a box containing at the time of each drawing the names of not less than three hundred persons possessing the qualifications prescribed in section 800 of the Revised Statutes, which names shall have been placed therein by the clerk of such court and a commissioner, to be appointed by the judge thereof, which commissioner shall be a citizen of good standing, residing in the district in which such court is held, and a well-known member of the principal political party in the district in which the court is held opposing that to which the clerk may belong, the clerk and said commissioner each to place one name in said box alternately, without reference to party affiliations, until the whole number required shall be placed therein. But nothing herein contained shall be construed to prevent any judge from ordering the names of jurors to be drawn from the boxes used by the State authorities in selecting jurors in the highest courts of the State; and no person shall serve as a petit juror more than one term in any one year, and all juries to serve in courts after the passage of this act shall be drawn in conformity herewith.

There was but one purpose to be attained by this law and that nur-

There was but one purpose to be attained by this law and that purpose was to prevent packing juries in the interest of political parties. To such an extent had this been done in the South that trials by jury in the Federal courts had become mockeries in conception, farces in execution, and tragedies in their termination.

This was made possible by the existence of a law which was enacted during the times when party feeling was supreme. The law provided that any person could be excluded from serving as either grand or petit jurors in the Federal courts who declined to take the following oath, namely-I call attention to sections 801, 820, 821, and 822 of the Revised Statutes, and I will read the oath for jurors which formed a part of section 821:

That you have not adhered to any insurrection or rebellion, giving it aid and comfort; that you have not directly or indirectly given any assistance in money or other thing to any person or persons whom you knew or had good ground to believe to have joined, or to be about to join, said insurrection or rebellion, or to have resisted, or to be about to resist, with force of arms the execution of the laws of the United States, and that you have not counseled or advised any person to join any insurrection or rebellion against or to resist with force of arms the laws of the United States.

An examination of section 822 shows that another law went so far as to provide that on trials under the civil-rights bill the judge could, on his own motion, exclude from the jury any person whom he thought was in complicity with any combination or conspiracy in said law set

forth. Here was a case where humanity demanded immediate action.

Honorable Republicans from the North were shocked when informed of the injustice and base wrongs suffered by Southern people resulting from such laws. I had myself seen our best citizens dragged from their homes and lodged in jail because some trivial regulation of which they had not been complied with had never heard had not been complied with.

An honest farmer had perhaps made a tub for his neighbor, had hauled him a load of wood, or sold him a peck of peaches, and because an investigation showed that his neighbor afterward made a quart of peach brandy all parties were arrested, dragged one and even two hundred miles from home, thrown into jail, and then brought out and tried by a jury who could take the oath we have above recited.

I have seen in Huntsville and Montgomery hundreds of honest and hard-working men sleeping upon the cold ground, without means to buy bread or procure shelter. There they would wait, their families

miles away, suffering the agonies of anxiety and deprivation. I have seen honest, free men dragged before a jury of twelve men, seven of whom were deserters from the confederate and afterward soldiers in the Federal army, men filled with hate, prejudice, and partisanship; men who in the supreme hour of battle, had deserted their colors, their comrades their country, their honor, and their God.

To do some justice to our people, Congress proposed to change the law so that a portion of the jurors who were to try our citizens should come from the honorable class of society, and who could be relied upon to do justice between the citizens and Government.

The law was all that Democrats asked, and we all felt that it would secure fair trials in the Federal courts—a constitutional right which Matt Carpenter, a Republican Senator, said the South had not had since Certainly it would have been thought that not one could be found to oppose this just measure, but remarkable as it may appear, it was opposed, notwithstanding that it was absolutely essential to the

The object of the law enacted was to repeal the laws by which juries had been packed, yes, shamefully packed, for the purpose of tyranny and for the purpose of using Federal courts in the South as engines of

There was a man in Congress who it appears was a beneficiary of this jury-packing. The more terrible the Federal court to honest citizens the more license and force to those who profited by its exercise of power. That man raised his voice against the law which sought to give fair juries to the South, and the affidavit of a Republican, Mr. Hewlett, which I will print, shows that two distinguished citizens of Alabama, whom he wished indicated assemed his respective. Alabama, whom he wished indicted, escaped his vengeance. few of his words in Congress:

Now for the first time in the history of this country partisan politics is introduced by law into the jury-box. Juries, no doubt, have been sometimes packed, but contrary to law, never before by statute. This section does it. I am opposed to the whole thing in principle and practice.

It is a recognized principle adhered to by just and virtuous rulers that laws should be executed in the spirit of their enactment,  $i.\ e.$ , that the intention of the law-making power should govern; and with that view it is regarded proper and judicious to consult the originators and advocates of measures in the selection of persons to carry these measures into execution, because it is presumed that their judgment will be correct as to what manner of person will execute the law in accordance

with the mandate of those who made it.

The records of Judge Bruce's court, however, show that he adopted precisely the opposite rule, and that the appointment of the commissioner to select juries was dictated by the only man who raised his voice against the law when it was enacted. This proves that Judge Bruce sought to violate his duty by not executing the law of Congress, but, just the contrary, to prevent its execution. That he succeeded in this

effort is not surprising.

The record shows that in direct violation of the law not only did he not appoint as commissioner a "well-known member of the principal political party in the district in which the court was held, opposing that to which the clerk may belong," but directly the reverse; he appointed one James M. Hutchens, who was a well-known member of the party which affiliated with the party to which the clerk of said court belonged; and worse than that, the testimony recorded in the court shows that said Hutchens himself said at the time he received his commission as commissioner to select jurors that it was through Colonel Lowe that he got the appointment; and as it might be presumed the records of the court show that he performed his duty, so as to make the law

I will present as an appendix to these remarks, certain records of Judge Bruce's court, which show that Mr. Hutchens and the clerk of his court violated the law and selected as jurors men who were almost entirely members of the parties which coalesced against the Dem-

ocratic party.

In making these remarks I beg leave to say that not one word is intended as in the slightest degree reflecting upon the gentleman whose Congressional candidacy and contest was so especially made the business of these Federal officials, but it is necessary to my argument to allude to the matter to show that a person who opposed the jury law and who is shown by the record and by the affidavits hereto appended to have, by himself and the aid of friends, taken charge of the grand jury and the court, was not the man whom Judge Bruce should have permitted to dictate the appointment of an officer who was to carry the law into operation. I will read a few lines:

Your petitioners further state that the juries and grand juries drawn at the spring term, 1881, of this court were almost entirely composed of men who belonged to the political organization which opposed the Democratic party as aforesaid, and at the fall term, 1881, the grand jury which was drawn was of the same political complexion. Your petitioners further state that the political status of the thirty-men drawn for the petit juries at the present term, as reported by their neighbors, is as follows: Twenty-seven are men who have been and are now members of the Greenback or Republican party, which have as aforesaid coalesced against the Democratic party. One of said jurors belonged to and acted with the Greenback party until recently, and the remaining two are members of the Democratic party.

It will also be seen by the sworm power of record in this case that

It will also be seen by the sworn paper of record in this case that

the defendants and the counsel were denied any knowledge of the number or character of the names in the box, by the action of the clerk and commissioner in not filing a list of said names in the court as required by the printed rules of said court. Now, remember that the prosecuting attorney had the right to four peremptory challenges, and we see how thoroughly packed were the juries for obeying the mandate of a cruel judge. It was such grand juvors who presented the indictments which have claimed our attention.

Not satisfied with such packing, it seems from the affidavit of a Republican, which affidavit was taken before another Republican, that in violation of law the United States marshal had notified men of the same class to be on hand so that when persons on the grand or petit jury were excused he could still continue the packing. He tells McCul-

lough, the Republican clerk, that-

I notified men to be here so I could summon them none of them are here and it is a going to play Hell with these election cases. McCullough replied well I cant help it I have done my duty and it is not my fault.

I will print the entire affidavit in the RECORD. I will explain how the jury commissioner was finally changed. The circuit judge, Hon. Don A. Pardee, attended on court at the October term, 1881, and the

records which refer to this matter were placed before him.

As soon as he discovered that the clerk of the court was a Republican and chairman of the Republican executive committee and that the district attorney was chairman of the Greenback executive committee, and that these two parties were combined against the Democratic party, he immediately admitted that the object of the law was defeated in the appointment of a Greenbacker to the office of commissioner, and as the oof also developed that the appointment was by recommendation of william M. Lowe, in whose interest the chairman of the committee of his party was prosecuting gentlemen charged with election frauds in the election of November, 1878, when Colonel Lowe was a candidate, he immediately announced that unless the attorney (Mr. Jones), who appeared for Hutchens, could contradict these facts he would be compelled to appoint another commissioner. Judge Pardee afterward appoints of the Pierr and he was then called to Atlanta. After he left pointed Mr. Rison and he was then called to Atlanta. After he left what was our surprise to learn that Judge Bruce declined to allow the newly appointed commissioner, together with the clerk, in compliance with the law and rules of the court, to place not less than three hundred names in a box and file the list in the office of the clerk; Judge Bruce intimating that he would let the marshal draw the names of the grand and petit jurors from the box which Hutchens and McCullough had previously arranged.

Shocked at this action we filed with the court a paper asking that the commissioner be permitted to perform the duties for which he had been appointed. In submitting the paper, counsel suggested many

reasons why it would

BE ILLEGAL TO DRAW JURORS FROM THE OLD BOX:

and among them the attention of the judge was called to the fact that as the rules of the court had been violated and no list of the names filed, it was impossible to know how many names there were in the box. There might be less than the three hundred required by the statute, and there might be many more. For as far as the record showed there might have been 3,000 of these illegal names in the box, and to exhaust that number would occupy ten or fourteen years. Judge Bruce replied, with great asperity, that he did not care if it took forty-four years. In other words, he did not care if Democrats were tried for the next forty-four years by juries illegally impaneled and consisting almost entirely of their opponents.

Fortunately the clerk's better feeling prevailed, and he finally consented that the newly appointed commissioner and himself should add

names selected by Mr. Rison.

I understand that the Federal court gentlemen claim that their record shows that many convictions have taken place in their courts, and this fact they insist upon as an evidence that Federal statutes have been violated.

In reply I will state that it is quite true. Judge Bruce's record shows convictions.

I will now explain the

DISGRACEFUL BARGAINS

by which many of these records of convictions were obtained. Many expedients had been exhausted to secure conviction. plaints had come from Washington of the great expense of the courts,

and the meager results attained had also been brought to the attention of these officials. A new plan was now devised.

Hundreds, nay, probably thousands of honest and good citizens who had been arrested, charged with violating some tribal rule or regulation, were awaiting the slow process of judicial procedure.

Perjury of witnesses had been so thoroughly exposed by the defendant of the process of the control of the control of the process of the control of the great expenses of the

ants' attorneys that the prospects of satisfactory results in attaining convictions were not encouraging to the prosecution. A bargain was arranged by which defendants in a large class of cases were allowed to plead guilty upon the assurance that they would be released; that sentence should not be pronounced, and that they should be allowed to return to their homes, of course, with the condition precedent (so I am informed) that court costs should be paid or satisfaction secured.

Under this plan the question resolved itself into one of endurance.

The judge with \$3,500 a year and the other court officials with boun-

teous incomes, and all with sumptuous living, on the one side, and the poor defendant with nothing a year and often with nothing to eat on

I am credibly informed that in this way many convictions were made

to appear on the record.

I was present when one defendant came forward to enter his plea of guilty under this bargain.

When asked if guilty or not guilty, he replied:

I am not guilty; I am entirely innocent of the charge, but I have concluded it is better to plead guilty than to be kept longer from my family.

A colloquy then took place between the judge, the defendant, and his attorney as to whether a plea of guilty could be legally entered at the request of the defendant while he still asserted his innocence. The final determination was reached that the defendant had a right to enter such plea as he desired, and the records of Judge Bruce's court in the case

show a confession of guilt.

I will mention an incident which, I am informed, a former district attorney repeated as a good joke: After the acquittal of a defendant, against whom conclusive evidence had been adduced, the district attorney privately inquired of a colored juryman how it was that such a verdict was reached? His reply was, "That man is a good Republican. We (meaning the jury) agreed we would acquit him, but we will bring in all the rest of the verdicts for you."

Such oppressions of our people are justified by the charge that we are

The people called Bourbons in the South are those who build the churches, maintain the schools and the industrial enterprises which once again, thank God, are feeling the mental and physical energies of the sons of those who made the South a great, chivalrous, and prosperous country

Who, Mr. Speaker, are those who oppose the Bourbons? They comprise almost all the deluded colored men, to whom are added a very few conscientious and respectable Republicans, a very few conscientious and excellent men whose delusions cause them to follow the greenback phantom, all of whom are controlled by a few score of leaders who, crazed with a desire for office, worship at any shrine whose altar affords a glimpse of hope of an answer to their prayer for official power. men were formerly confined to people who came from afar to seek office and fortune at our homes, but now the worst of these leaders are men who were raised in our midst. They seem to think that the god at whose feet they kneel is best pleased with sacrifice, and they seem to scruple at no wrong or oppression that they are able to inflict upon their former fellows and former friends.

What will history say of such greedy cormorants? What malediction will time heap upon them? When passion has been appeased, when the clouds have vanished, when the storm shall have ceased and reason once more has its legimate sway; when posterity looks back reason once more has its legimate sway; when posterity looks back and sees the blows these men struck at our prostrate land; when they read the utterances from malignant tongues, when told of their base invasion of quiet homes, and the trampling under foot of the rights and liberties of these chivalrous people, who, I am proud to say, are of my country, my State, and my neighboring states, will they not say, "Withered be the arm that struck, cursed be the tongue that maligned, and despised be those who wounded the honor of our good people and the corn of the father the brother and the corn leaving wives mothers. dragged off the father, the brother, and the son, leaving wives, mothers, sisters in the agony of apprehension and alarm; and when the wrongs were inflicted by a son of the land of the South, one to the manor born—cursed, thrice cursed, be his name, and withered, thrice withered, should be his arm, despised and hated be his memory to-day, to-mor-row, and forever?"

In closing, let me to all these political judges say, that law is the fruit of no human invention, is the decree of no judge, no nation, and no country; but it is the eternal something to whose unerring dictates of command or prohibition, the whole world should bend, and to him and all his retainers let me pronounce the admonition that justice is the most sublime element of virtue, and that virtue is the doing good to mankind in obedience to the will of God and for the sake of everlasting happiness.

## APPENDIX.

STATE OF ALABAMA, Madison County:

STATE OF ALABAMA, Madison County:

Before me, James H. Bone, a commissioner of the U. S. circuit court for the northern district of Alabama, personally appeared Thomas G. Hewiett, who, being duly sworn, says: That during the October term, 1881, of the United States court at Huntsville, Alabama, and while the court was in session, affiant saw Joseph H. Sloss, the marshal, come out of the court-room and walk to the door of the back room of the clock room of the clock room of the clock room of the clock and heard him call the clerk of the court, A. W. McCollough, out of his back office, which is in the building in which said court, into the hall leading from said back office into the front office. Affiant further states that said McCollough went out of his office into said hall in response to said call, and while there with said Sloss affiant heard a conversation between them, of which the following is the substance:

Sloss said they have excused several of the jurors and I have notified men to

be here so that I could summon them; none of them are here and it is going to-play hell with these election eases.

McCollough replied, well I can't help it; I have done my duty and it is not

y naut.
Sloss then left McCollough and went out and called some one else.
When Sloss made the above remark to McCollough I remarked to Capt. F. M. bouse, with whom I was sitting, "listen, the boas is stocking the jury on the

boys."
When Sloss called McCollough out of his office, and when said conversation occurred between them, Shouse and I were sitting on the steps leading from said hall to the court-yard at the rear of the court building. We were in a position in which we could not be seen by McCollough and Sloss, and were engaged in reading some affidavits made by Capt. Jas. H. Savage, Wm. Stevenson, Mark L. Hatfield, and others.

THOS. G. HEWLETT.

JAMES H. BONE,

PLEA TO THE VALIDITY OF INDICTMENT.

Circuit court U. S. for northern district of Alabama

Circuit court U. S. for northern district of Alabama.

United States vs. Jos. S. McGehee et al.

The defendant for answer to said indictment says that the indictment was presented to this court by a body of men who were not a legal grand jury for the following reasons:

The records of this court show that the said grand jury which presented this indictment was not a legal grand jury in this: That said persons who composed said grand jury, or thirteen members thereof, were summoned to attend said court when no order had ever been made by any of the judges of this court for an indictive the notite of the property of the judges of this court has found that a grand jury was needed one of the judges of this court when in his own discretion or upon a notification by the district attorney the judge of this court as found that a grand jury was needed one of the judges of this court and practice in this court, and the records of this court sairmatively show that grand jurys which were summoned anterior to the summoning of the grand jury which presented this indictment were summoned pursuant to a recorded order on the minutes of this court, and the same is true for all grand juries which have been summoned since the summoning of the grand jury which have been summoned since the summoning of the grand jury which presented this indictment, and the records of this court affirmatively show that it has likewise been the standing rule and practice of this court that such orders for the summoning of grand jurors should be entered on the record of this court, and the records of this court affirmatively show that all of these rules were violated in the creation and organizatively show that all grand jury and the records of this court affirmatively show that the said persons who presented the indictment were ever soon or charged or organized or empaneled as a grand jury, and the records of this court affirmatively show that it is a standing rule of practice in this court for its records to show that the said grand jury which prese

drawn were not noted in the list kept by the clerk of the names deposited in the box.

The records of the court show that no one of the eighteen persons who appeared and acted as a member of said grand jury were challenged, and the record one not show that any challenge was allowed by the court to any one of said eighteen persons who appeared and answered to their names and were ready to act as grand jurors, but the record shows that for good and sufficient reasons to the court shown: It is ordered that John Winstead, F. M. Reece, Gilbert Shelton, James Canal, and Wm. Driscoil be excused from service as grand jurors at this term of the court.

The rules of this court require that "a list of the names deposited in the box shall be made and kept on file in his office by the clerk." And the clerk of this court violated the rules of this court in this, that when he and the jury commissioner placed the names in the box, from which the grand jury which presented the indictment in this cause was drawn, be, the said clerk, did not make and keep on file in his office a list of the names deposited in the box.

Before me, A. W. McCullough, clerk of the United States circuit court, personally appeared Jos. T. McGehee, who, being sworn, says that the above statement is true to the best of his knowledge, information, and belief, and as he verily believes.

J. T. McGEHEE.

JAS. A. TAIT, Notary Public.

PETITION FOR LEGAL JURY COMMISSIONER.

To the honorable Don A. Pardee, circuit judge, and the honorable John Bruce, district judge:

To the honorable Don A. Pardee, circuit judge, and the honorable John Eruce, district judge:

Your petitioners, humbly complaining, state unto your honors that on the 30th day of June, 1879, a law was enacted by the Congress of the United States which provided for the manner of drawing all jurors, grand and petit, for the circuit and district courts of the United States. Said law provided that said jurors should be selected by the clerk of the court and by a commissioner to be appointed by the judge of said court, "which commissioner shall be a citizen of good standing, residing in the district in which said court is held, and a well-known member of the principal political party in the district in which the court is held, opposing that to which the clerk may belong."

Your petitioners further state that before the term of the circuit court of Alabama and the district court of the northern district of Alabams, which was held soon after the passage said act, to wit, on or about the 1st day of August, 1879, a petition was filed asking that H. L. Scruggs be appointed said commissioner; and your petitioners aver that said H. L. Scruggs is "a citizen of good standing residing (at said time and at this time) in the district in which said court is held, opposing that to which the clerk of the court belongs." Petitioners allege that parties, who do not belong to the principal political party, opposed to the party to which the clerk belongs, made such representations to his honor Judge B. Woods as to secure the appointment as said commissioner of James H. Hutchens, who is not a member of the principal political party, in the district in which the court is held, opposing that to which the other to appoin the political party. Your petitioners further state that A. W. McCullough, esq., the clerk belongs, and certainly is not a well-known member of said principal political party, in the district in which the court is held, opposing that to which the clerk belongs, and certainly is not a well-known member of the Perincipal po

State of Alabama; that Mr. J. H. Hutchens, who holds the office of commissioner to select juries, is a member of the party called the Greenback or Independent party.

Your petitioners further state that the political affiliation and political status of the legal voters who reside in that portion of Alabama which comprises the northern judicial district of Alabama, as shown by the election returns for the four elections which took place next preceding the date of the appointment of the present commissioner, was as follows:

In Aug., 1876, 60v. Houston, the Democratic candidate for governor, received 30,648 votes, and Mr. Woodruff, his opponent, sometime called the Republican candidate, received 40,337 votes, and Mr. Hayes, the Republican, the Democratic candidate, received 30,337 votes, and Mr. Hayes, the Republican, candidate, received 40,408, and Mr. Cooper, the Greenback candidate, did not receive any votes, and no candidate for Congress received any votes as a Greenback candidate; receiving but 8,910 votes. In August, 1878, Mr. Cobb, the Democratic candidate for governor, received 31,443 votes, and no votes were east for any candidate for governor any other State office who ran on the Greenback ticket or the Republican ticket.

In Nov., 1878, the Democratic candidates, who were designated in the American Almanac (compiled by the Librarian of Congress received 12,935 votes, and the opponents to said Democratic candidates, who were designated in the American Almanac (compiled by the Librarian of Congress) as Independent Democratics, the American Almanac (compiled by the Librarian of Congress) as Independent Democratics, the American Almanac (compiled by the Librarian of Congress) as Independent Democratics, the American Almanac (compiled by the Librarian of Congress) as Independent Democratics, the American Almanac (compiled by the Librarian of Congress) as Independent Democratics, the American Almanac (compiled by the Librarian of Congress) as Independent Democratics, the American Almanac (compiled by the Lib

Your petitioners further state that there have been three elections in this judicial district since the appointment of Mr. J. H. Hutchens as commissioner.

At the election for governor in August, 1880, Mr. Cobb, the Democratic candidate, received 38,726 votes, and Mr. Pickens, the Greenback candidate, received

18,014 votes. At the election for President in November, 1880, General Hancock, the Demo-cratic candidate, received 26,753 votes, and General Garfield, the Republican can-didate, received 13,660 votes, and General Weaver, the Greenback candidate, re-ceived 3,266 votes.

ceived 3,266 votes.

The combined vote of Gen. Garfield & Genl. Weaver being only 16,926, or less than two-thirds the vote received by Genl. Hancock. At the Congressional election in November, 1880, the Democratic candidates received 26,456 votes, and the entire vote polled by the opposing candidates was 15,153 (all of which is fully shown by the tables filed herewith, marked Exhibit A & B, and prayed to be taken as a part of this petition; said figures are copied from pages 350 & 351 of the American Almanac of 1879, and pages 197 & 198 of the American Almanac of 1881, both compiled by Ainsworth R. Spofford, the Librarian of Congress, which are also filed herewith and prayed to be taken as part of this petition).

Your petitioners therefore assert that the Democratic party is the principal political party which is opposed to the party to which the clerk of this court belongs and they pray that your honor will appoint a commissioner who belongs to said principal political party.

Your petitioners further state that the Greenback party, to which Mr. J. H. Hutchens, the present commissioner, belongs, is not opposed and has not been op-

Your petitioners further state that the Greenback party, to which Mr. J. H. Hutchens, the present commissioner, belongs, is not opposed and has not been opposed to the party to which the clerk of this court belongs, but in the election for member of Congress in Nov., 1878, and in the election for all State and county officers in August, 1880, and in the election for member of Congress in the 8th district, which comprises eight counties of this district, the said Greenback or Independent party and the party to which the clerk of this court belongs worked together as one party and voted for the same candidates; and your petitioners further state that the clerk of this court was the chairman of the Republican district executive committee, and the assistant district attorney of the court was the chairman of the Greenback district executive committee, and that they both worked together to elect the same candidate.

Your petitioners further state that the juries and grand juries drawn at the spring term, 1881, of this court were almost entirely composed of men who belonged to the political organization which opposed the Democratic party as aforesaid, and at the full term, 1881, the grand jury which was drawn is of the same political complexion.

Your petitioners further state that the political status of the 30 men drawn for the petit juries at the present term as reported by their neighbors is as follows: Twenty-seven are men who have been and are now members of the Greenback or Republican party, which have as aforesaid coalesced against the Democratic party. One of said jurors belonged to and acted with the Greenback party until recently, and the remaining two are members of the Democratic party.

AFFIDAVIT.

Petition for the appointment of a legal commissioner to select jurors.— in the circuit court of the United States for northern district of Alab

in the circuit court of the United States for northern district of Alabama.

Before me, A. W. McCullough, esq., clerk of the court aforesaid and the district of the northern district of Alabama, personally appeared Daniel C. Clark, who, being sworn, deposes and says that he is a neighbor and has been a neighbor of James H. Hutchens for ten years. That said James H. Hutchens for ten years. That said James H. Hutchens has a warm supporter of Hon. Wn. M. Lowe in his con'est against the Democratic nominee, Hon. W. W. Garth, in November, 1878, and affiant further states that said James H. Hutchens told affiant that he would vote for James M. Pickens, who was the Greenback candidate for governor in August, 1880. He also told affiant that he would vote for James M. Pickens, who was the Greenback candidate for governor in August, 1880. He also told affiant that he would vote for Hon. Perry L. Harrison, for probate judge, said Harrison's principal opponent being Hon. Wn. Richardson, the Democratic candidate. He also told affiant that he would vote for Gen. Weaver, for President, in November, 1880, and for Hon. Wm. M. Lowe, for Congress, in November, 1880.

Affiant met said Hutchens at the time he received his commission to select jurors and affiant asked him how he got the appointment and said Hutchens told affiant that it was through Col. Lowe that he got the appointment.

Affiant further says that in all conversations with said James H. Hutchens for the last three years on the subject of politics the said Hutchens has been outspoken in opposition to the Democratic party.

DANIEL C. CLARK.

DANIEL C. CLARK. Sworn to and subscribed before me this 24th day of October, 1881.

A. W. McCULLOUGH, Clerk.

MOTION OF JOHN L. RISON.

Circuit Court United States for northern district of Alabama

Circuit Court United States for northern district of Alabama.

And now comes John L. Rison, in his own person, and states that he has been appointed the commissioner to select jurors, and that he has accepted said appointment, and his acceptance is on file in this court, and he moves the court to allow him to perform his duties as said commissioner.

Your movent states that the former commissioner did not comply with the law in selecting the names of jurors to put in the box containing the names of jurors, in this, that said jurors were not selected without regard to party affliation, that the clerk did not comply with the law, and the clerk did not comply with the rules of the court in this, that the clerk failed to keep on file in this court a list of the names placed in the box in which the names of jurors are kept.

Your movent requests permission, in conjunction with the clerk of this court, to prepare a list of jurors, who are householders, and who, under the laws of Congress and the State of Alabama, are competent and qualified to serve as grand and petit jurors of this court, and place the names of said jurors in the jury box, according to the rules of this court, from which said names, so deposited in said box, the grand and petit jurors may be drawn in pursuance of law and the rules of this court.

CASE OF BONE, PEEVEY, ET AL.

To the honorable judge of the United States circuit court for the northern district of Alabama;

To the honorable judge of the United States circuit court for the northern district of Alabama:

Your petitioners, James H. Bone, Leroy M. Peevey, Jonathan Latham, G. M. Ware, and T. A. Thurston, respectfully represent unto your honor that at the spring term of 1876 of the circuit court of St. Clair County, which is in the northern district of Alabama aforesaid, they were indicted by the grand jury of said circuit court, and now stand charged with the murder of one James Treese in said county of St. Clair, before the finding of said indictment and of which offense they are not guilty.

Petitioners further allege that at the time of the alleged killing of the said James Treese your petitioner, the said James H. Bone, was a deputy United States marshal of the northern district of Alabama aforesaid, and your petitioners, Jonathan Latham, G. M. Ware, and T. A. Thurston, were special deputies acting underhim, and your petitioners further aver that at the time of the alleged killing aforesaid, your petitioner, the said Le Roy M. Peevey, was a deputy collector of internal revenue for the third collection district of Alabama.

Your petitioners further aver that at the time of the alleged killing aforesaid James H. Bone, as such deputy U. S. marshal for the northern district aforesaid, had in his possession a capias against the said James Treese, issued from an indictment theretofore found against the said James Treese, issued from an indictment theretofore found against the said James Treese, issued from an indictment theretofore found against the said James Treese, which is court of the United States aforesaid, and that said James H. Bone, united States for the northern district of Alabama aforesaid; and also a warrant of arrest against the said James Treese issued by A. W. McCullough, clerk of the circuit court of the United States aforesaid, with his special and also a warrant of arrest against the said processes.

And your petitioners further aver that at the time of the alleged killing aforesaid the said Le Roy M.

Before me, A. W. McCullough, clerk of the circuit court of the United States for the northern district of Alabama, this day personally came James H. Bone and Le Roy M. Peevey, two of the petitioners aforesaid, who, being duly sworn, deposes and say the statements contained in the foregoing petition are true.

JAMES H. BONE.

THEO. A. THURSTON.

GEO. M. WARE.

LE ROY M. PEEVEY.

Sworn to and subscribed before me, this 20th of May, 1876.

A. W. McCULLOUGH,

Clerk U. S. Cir. C't.

HUNTSVILLE, ALA., May 20, 1876.

We hereby certify that as counsel for the petitioners, James II. Bone, Le Roy M. Peevey, Jonathan Latham, G. W. Ware, and T. A. Thurston, we have examined the proceedings against them and carefully inquired into all the matter set forth in their petition, and that we believe them to be true.

WALKER & SHELBY, Att'ys for Petitioners.

The President of the United States of America to the clerk of the circuit court of the county of St. Clair, in the State of Alabama, greeting:

of the county of St. Clair, in the State of Alabama, greeting:

You are hereby commanded to transmit to this court forthwith a certified transcript of the proceedings had in the circuit court of said county of St. Clair, in which the State of Alabama is plaintiff and James H. Bone, Le Rory M. Peevey, J. F. Latham, George Ware, Theodore A. Thurston, Andrew McLane are defendants.

And in this you shall in no wise fail.

Witness the Hon. Morrison R. Waite, Chief-Justice of the Supreme Court of the United States of America, at Huntsville, this the 20th day of October, in the year of our Lord one thousand eight hundred and seventy-six, and of the Independence of the United States the one hundred and first year.

A. W. McCULLOUGH, Clerk Circuit Court,

A. W. MCULLIOUGH, Clerk Circuit Court.

A. W. MCULLIOUGH, Clerk Circuit Court.

A. W. MCULLIOUGH, Clerk Circuit Court.

The President of the United States of Alabama, greeting:

You are hereby commanded to take the bodies of James H. Bone, Theodore

A. Thurston, George M. Ware, Jonathan Latham, and Le Roy M. Peevey into
your custody, alleged to be detained by Robert E. Murphy, sheriff and jailor of
Madison County, in the State of Alabama, by whatsoever name they may be
charged, with the cause of their detention, and a certified record of the proceedings which caused such detention before the Hon. Judge of the United State
circuit court, at the city of Huntsville, in the northern district of Alabama, forthwith to be dealt with in said circuit court according to law and the order of said
circuit court.

circuit court.

Witness the Hon. Morrison R. Waite, Chief-Justice of the Supreme Court of the United States, this the 1st Monday of April, A. D. 1876.

A. W. McCULLOUGH,

Clerk U. S. Cir. Court Nor. Dist. Ala.

Issued this the 20th day of May, A. D. 1876.

Executed by reading the within writ and delivering a copy to Robt. E. Mur-phy, sheriff of Madison County, Alabama, and by taking the bodies of James H. Bouc, Theodore A. Thurston, George M. Ware, and Le Roy M. Peevey, and Jonathan Latham into my custody. R. P. BAKER, U.S. M.

Executed May 26, 1876, by serving a copy of notice and petition on the clerk of St. Clair County, at Ashville.

R. P. BAKER, U.S. M.

Circuit court Saint Clair County, Alabama, spring term, 1876.

Be it remembered that at a regular term of the honorable circuit court of the county of Saint Clair and State of Alabama, began and held at the town of Ashville, in the county of Saint Clair and State of Alabams, on Monday, the 24th day of April, in the year of our Lord one thousand and eight hundred and seventy-six, and of the Independence of the United States of America the one hundredth, to hear and determine all causes, as well as divers felonies, trespasses, and misdemeanors in the said county committed. On Monday, the 24th day of April, of the year aforesaid, at 10 o'clock of the forenoon, the same being the time appointed by law for holding said circuit court, the honorable William L. Whitlock, judge of the tenth judicial circuit of the State of Alabama, appeared and presided, and the said court was opened in due form of law.

Hereupon the following proceedings were had and done, to wit:

Abner Crow, sheriff of St. Clair County, returns into court a venire facias, heretofore issued, to wit, on the 6th day of January, in the year of our Lord one thousand eight hundred and seventy-six, in words and figures as follows, that is to say: Circuit court Saint Clair County, Alabama, spring term, 1876.

THE STATE OF ALABAMA, St. Clair County :

The State of Alabama, St. Clair County:

To the sheriff of St. Clair County greeting:
You are hereby commanded to summon the following-named persons to appear and serve as grand jurors at the term of the circuit court for St. Clair County, to be on Monday, the 24th of April next, they laving been regularly drawn as grand jurors for said term said circuit court, to wit:

No. 1. John C. Williams, farmer, prect. No. 1.

2. John A. Harden,
3. 3. John M. Sims, farmer, prect. No. 1.

4. William Vowel, 9.

5. John J. Abbott, 11.

6. Moses Pierce, 4.

7. Samuel C. Vaughan, 8.

8. John M. Gulley, 9.

9. J. H. Vandergriff, 9.

10. James H. Ranking, 9.

11. D. J. Clark, 9.

12. Robert M. Cook, 9.

13. James H. Autrey, 9.

14. J. F. Fletcher, 9.

15. John A. Zell, 9.

16. A. P. Stain, 9.

17. C. J. Teague, 9.

18. J. S. Maddox, A. D. 1876.

11. And have you then and there this writ with your endorsement thereon. Witness my hand this the 6th day of January, A. D. 1876.

Clerk of the Circuit Court of St. Clair County, Alaba

Which said venire facias was returned into open court by said sheriff with endorsements of the tenure following, that is to say:

Received into office this 6th day of January, A. D. 1876.

Received by me February the 24th, 1876, and executed on all the within-named jurors by personal service.

April 24th, 1876.

ABNER CROW, Sheriff.

April 24th, 1876.

Upon the call of it, as in venire facias for said grand jurors by the sheriff of St. Clair County, all the persons therein named appeared in court, and answered to their names. The court for good an' sufficient reasons excused said John M. Gulley from serving. And the court being satisfied that the seventeen other persons therein named are qualified under the laws to serve as grand jurors for the present term of this court, appoints James H. Vandegrift as foreman of the grand jury. And the said James H. Vandegrift so appointed as said foreman, together

with the said John C. Williams, John A. Harden, John M. Sims, William Vowel, John J. Abbott, Moses Pierce, Samuel C. Vaughan, James H. Ranking, D. J. Clark, Robert M. Cook, James H. Autry, John F. Fletcher, John A. Zellner, A. P. Stain, C. J. Teague, and John S. Maddox, were duly empanneled, sworn and charged according to law, as the grand jury for the present term of this court, who retired in charge of James A. Walker as their duly sworn bailiff to consider of their presentments.

Circuit court, spring term, 1876.

THE STATE OF ALABAMA, Saint Clair County:

THE STATE OF ALABAMA, Saint Clair County:

The grand jury of said county charge that before the finding of this indictment that James H. Bone, Jonathan Latham, Thos, J. Moody, LeRoy M. Peevey, A. T. McLane, whose Christian name is to the grand jury unknown, G. M. Ware, whose true Christian name is to the grand jury unknown, unlawfully and with malice aforethought killed James Treese by shooting him with a gun; and the grand jury of said county further charge that before the finding of this indictment James H. Bone, Jonathan Latham, Thomas J. Moody, LeRoy M. Peevey, A. T. McLane, whose true Christian name is to the grand jury unknown, and T. A. Thurston, whose true Christian name is to the grand jury unknown, and T. A. Thurston, whose true Christian name is to the grand jury unknown, unlawfully and with malice aforethought killed James Treese by shooting him with a loaded fire arm, to wit, with a loaded fire arm known, assigned, and called a carbine, contrary to law and against the peace and dignity of the State of Alabama.

WELLINGTON VANDIVER,
Solicitor for St. Clair County.

ROBERT E. MURPHY, Sheriff.

To the honorable judge of the United States circuit court for the northern district of Alabama:

To the honorable judge of the United States circuit court for the northern district of Alabama:

Your petitioners, James H. Bone, Le Roy M. Peevey, Jonathan Latham, G. M. Ware, and T. A. Thurston, respectfully represent unto your honor that at the spring term of 1876 of the circuit court of St. Clair County, which is in the northern district of Alabama, as aforesaid, they were indicted by the grand jury of said circuit court, and now stand charged with the murder of one James Treese, in said county of St. Clair, before the finding of said indictment and of which offense they are not guilty.

Petitioners further allege that at the time of the alleged killing of the said James Treese, your petitioner, the said James H. Bone, was a deputy United States marshal of the northern district of Alabama, as aforesaid, and your petitioners, Jonathan Latham, G. M. Ware, and T. A. Thurston, was special deputy collector of internal revenue for the third collecting district of Alabama.

Your petitioners further aver that at the time of the alleged killing aforesaid the said James H. Bone, as such deputy United States marshal for the northern district aforesaid, had in his possession a capias against the said James Treese in the circuit court of the United States for the northern district of Alabama aforesaid. And also a warrant of arrest against the said James Treese in the circuit court of the United States for the northern district of Alabama aforesaid. And also a warrant of arrest against the said James Treese is used from an indictment theretofore found against the said James Treese in the circuit court of the United States for the northern district of Alabama aforesaid, and that said James H. Bone, United States deputy marshal as aforesaid, with his special deputies, the said Jonathan Latham, G. M. Ware, and T. A. Thurston, were then endeavoring lawfully to execute said process.

And your petitioners further aver that at the time of the alleged killing aforesaid, the said LeRoy M. Peevey, as such deputy collector of inter

WALKER & SHELBY,

Before me, A. W. McCollough, clerk of the circuit court of the United States for the northern district of Alabama, this day personally came James H. Bone and LeRoy M. THE STATE OF ALABAMA, St. Clair County:

The State of Alabama, St. Clair County:

I, Samuel A. Wyatt, clerk of the circuit court in and for said St. Clair County and State, hereby certify that the within pages, numbering from one to twenty-three, contains a full, true, and complete transcript of all the record and proceeding in the above-stated cause as appears of records in my office, in witness whereof I hereunto set my hand and affix the official seal of my office, at office in the town of Ashville, on this 24 day of October, A. D. 1876.

S. A. WYATT, Cir. Clerk St. Clair County.

Be it remembered, that on the 1st day of November, 1876, it being a day of the regular term of the circuit court of the United States for the northern district of Alabama, the following proceedings were had and entered of record on the minutes of the said circuit court, to wit:

The State of Alabama ex. Leroy M. Peevey, Jonathan Latham, James H. Bone, Theodore A. Thurston, George M. Ware,—Murder.

This cause being called for trial, came the defendants. Leroy M. Peevey, Jonathan Latham, James H. Bone, George M. Ware, and Theodore A. Thurston, and defendants Thomas Moody and McClain have not been arrested and do not appear, it is therefore ordered by the court that defendants Thomas Moody and McClain have not been arrested and do not appear, it is therefore ordered by the court that defendants Thomas Moody and McClain be severed from the said Leroy M. Peevey, Jonathan Latham, James H. Bone, Theodore A. Thurston, and George M. Ware, and that the trial of said cause as to said Leroy M. Peevey, Jonathan Latham, and James H. Bone, George M. Ware, and Theodore A. Thurston do now proceed, and thereupon comes a jury of good and lawful men, to wit: Joel T. Parish and eleven others, who were duly elected, empanelled, and sworn according to the statutes and truly to try said cause and true deliverance to make between the State of Alabama and Leroy M. Peevey, Jonathan Latham, James H. Bone, Theodore A. Thurston, and George M. Ware, the defendants at the bar, and a true verdict to render according to the evidence, and thereupon the said Leroy M. Peevey, Jonathan Latham, James H. Bone, Theodore A. Thurston, and George M. Ware, the defendants Leroy M. Peevey, Jonathan Latham, James H. Bone, Theodore A. Thurston, and George M. Ware being duly charged and arraigned on the indictanent in this case, each in his own proper person plead "not guilty," and thereupon the trial of said cause proceeding, and the jury being duly charged by the court do find their verdict as follows, to wit: We, the jury, find the defendants Leroy M. Peeve

ohn E. Stenson	Mt. Hope Landersville	-

Herein fail not and have you this writ of venira facias at the office of the clerk of said court three days previous to the next term of said court, with your return thereon.
Witness my hand this 3d day of July, 1874.

R. Y. GOODLETT, Clerk

Venire facias returned September 10th, 1874. Endorsed: Executed September 10, 1874.

W. T. SIMMONS, Sheriff.

W. T. SIMMONS, Sheriff.

Upon a call of the venire facias of the grand jury the following-named persons appeared: W. H. Bowling, Robert Byan, A. J. Shilton, J. H. Livingstone, W. S. Eyster, J. E. Steenson, J. W. Sandlin, R. Young, J. P. Craig, J. D. Pickens, S. H. Radford, D. B. Barret, J. D. Nidam, G. W. McNutt, and W. D. McDaniel, making lifteen in number, there the court appointed W. H. Bowling, foreman, who being duly sworn diligently to inquire and true presentment make of all indictable offenses committed or triable in this county, &c., the rest of said purors being duly sworn well and truly the oath of their said foreman to observe and keep and receive the charge of the court, and retired with the bailiff, W. J. Gibson, who was duly sworn to consider of their findings.

The State of Alabama, Lawrence County circuit court, September term 1874. The grand jury of said county charges that before the finding of this indictment, Lucy Gilchrist, alias Lucy Depriest, alias Lucy Arnold, unlawfully, and without malice aforethought, killed Phillis Gilchrist, alias Phillis Depriest, by striking her with an ax, cutting off her leg, whereby she was killed, against the peace and dignity of the State of Alabama.

JOS. C. BAKER,

JOS. C. BAKER. Solicitor of Law

Witnesses: Tom Caldwell, Jefferson McCullough, Anderson McCullough, Laura Nelson, Martha Harris, Edmond Blair. A true bill. No prosecutor.

W. H. BOWLING,

Filed in office 15th September, 1874.

R. Y. GOODLETT, Clerk.

At fall term, 1874, defendant, Lucy Gilchrist, arraigned in open court and plead "Not guilty."
Ordered by the court that said court be continued by defendant and admitted to bail in bond of one thousand dollars.
At the spring term 1875 the following order was made:

The State of Alabama vs. Lucy Gilchrist.

Continued by defendant. At fall term 1875 the following order was made:

The State of Alabama vs. Lucy Gilchrist.

Defendant in open court ordered that the sheriff summon fifty jurors, including the regular jurors, for next week of this term, and a list of jurors, with copy of indictment, be delivered to defendant at least one entire day before day of trial, and that Wednesday of next week be set for her trial.

WEDNESDAY, October 20, 1875.

This day set for trial, the following order was had:

"Continued by State and attachment for witness for their appearance at next term of this court, and that they enter into bond of one hundred dollars each, with good securities, for their appearance to give evidence as aforesaid."

Circuit court.-Fall term, 1876.

THE STATE OF ALABAMA, Lawrence County:

To any sheriff of the State of Alabama, greeting:
Whereas it appears to the satisfaction of the court that Thomas Caldwell, Jefferson McCullough, Laura Nelson, Martha Harris, Edmond Blair, Robert Fester, Charles Looney, and Robert Parker have been duly summoned to appear at this term of this court and testify or give evidence in case of The State ma Lucy Gilchrist, and they having been solemnly called came not, but made default. It is therefore ordered by the court that an attachment be issued for the said

witnesses.
You are, therefore, hereby commanded to forthwith arrest the said Tom Caldwell, Jefferson McCullough, Anderson McCullough, Laura Nelson, Martha Harris, Edmon Blair, Robert Foster, Charles Looney, and Robert Parker, and them safely keep until the next term of this court, to be held in April, 1876, next, at Moulton, Alabama, when and where you must produce said witnesses until they give good bond, with good security, in the sum of one hundred dollars each for their appearance at said court to testify or give evidence in the case of the State es. Lucy Gilchrist.

Witness my hand, this 28th day of March, 1876.
B. Y. GOODLETT, Clerk.

At the April term, 1876, the following order:

The State of Alabama w. Lucy Gilchrist.

Came H. C. Jones, solicitor for the State, and defendant in own proper person is brought into open court. It is ordered thereupon by the court that sheriff summon fifty persons, including the jurors summoned for the sweek of the trial of defendant, and that a list of jurors and a copy of the indictment be delivered to the defendant at least one entire day before the trial, and that Wednesday of this week be set for her trial.

To the Hon. Wm. B. Woods, judge of the fourth judicial circuit of the State of

Your petitioner, Lucy Gilchrist, would respectfully show unto your honor that a prosecution has been comme need her and is now pending in the circuit court of Lawrence County, of said State of Alabama, in which she is charged with the murder of one Phillis Gilchrist; that she is a woman, and on account of her color and race is denied and cannot inforce in the judicial tribunals of that part of the State of Alabama in which such prosecution is pending, and particularly in the courts of said fourth judicial circuit of said county of Lawrence, the equal civil rights of citizens of the United States; that according to the rules and practice prevailing in the said circuit court of said sid united, and particularly of said county of Lawrence, and according to the usages and customs established by the officer thereof, to wit, the circ of said circuit court, the sheriff, and judge of probate, who, according to the laws of said State of Alabama, select, draw, and summons jurors for the trial of the offenses that pertain to the jurisdiction of said circuit court of said State of Alabama, and particularly of the offense with which petitioner is denied and cannot inforce in the judicial tribunals of said State of Alabama the rights of being tried by a jury consisting in whole or a part of her own race and color, as secured to her by the Constitution and laws of the United States.

Whereupon petitioner pray that the said cause be removed for trial into the next circuit court of the United States, to be held in the district wherein said cause pending, to wit: The circuit court of the U. S. for the northern district of the State of Alabama, at Huntsville, in said State.

LUCY GILCHRIST.

Sworn and subscribed before me this 20th day of April, 1876. R. Y. GOODLETT, Clerk,

The State vs. Lucy Gilchrist.

This being the day set for trial, came H. C. Jones, solicitor for the State, and defendant in her attorney and in her own proper person, and on petition of defendant, under act of Congress providing for the removal of causes from the State courts to the United States court, it is ordered that proceedings in this court be stayed, and that the clerk of this court certify the same to the U. S. court, with a transcript of the indictment and all the orders and proceedings had in the case.

THE STATE OF ALABAMA, Lawrence County:

I, R. Y. Goodlett, clerk of the circuit court in and for said county and State aforesaid, hereby certify that the foregoing is a correct transcript of the proceedings had in case of The State w. Lucy Gilchrist, iscluding organization of grand jury and bond for appearances of witnesses, and all orders of court.

Witness my hand this 26th day of May, 1876.

P. Y. GOODLETT Cont.

R. Y. GOODLETT. Clerk.

In the circuit court of the United States for the northern district of Alabama.

The President of the United States of America to the marshal of said northern district of Alabama, greeting:

Alabama, greeting:
You are hereby commanded that you take the body of Lucy Gilchrist into your custody, alleged to be detained by William T. Couch, sheriff and jailer of Lawrence County, in the State of Alabama, by whatsoever name she may be charged, with the cause of her detention, before the honorable William B. Woods, judge of the United States circuit court, at the city of Huntsville, in the northern district of Alabama, forthwith to be dealt with in said circuit court according to law and the order of said circuit court.

Witness the Hon. Morrison R. Waite, Chief-Justice of the Supreme Court of the United States, this the 2nd Monday of October, A. D. 1876.

Teste:

A. W. McCULLOUGH, Clerk U. S. Circuit Court Northern District of

Issued April 14th, 1877. Received April 14th, 1877.

R. P. BAKER, U. S. Marshal.

Executed April 16th, 1877, by taking the body of Lucy Gilchrist into my posession as herein commanded, and now have her in my custody.

R. P. BAKER, U. S. M.,
By D. N. COOPER, Deputy.

THE UNITED STATES OF AMERICA,
Northern District of Alabama:

Be it remembered, that heretofore, to wit, on the 21st day of April, A. D. 1877, it being a day of a regular term of the circuit court of the United States for the northern district of Alabama, begun and held at the United States court-rooms in the city of Huntsville, in said district, on the first Monday of April, A. D. 1877, and of the Independence of the United States of America the one hundred and second year, present, the Hon. John Bruce, judge of district court, presiding, the following proceedings was had and entered of record on the minutes of said circuit court, to wit:

The State of Alabama vs. Lucy Gilchrist.-1097.

Comes the defendant in her own proper person and by counsel, and no prosecutor appearing for the State of Alabama, and it appearing that due notice had been given, come a jury of good and lawful men, to wit, C. C. Swoop and eleven others, who are duly elected, empaneled, and sworn, who return their verdict: "We the jury find the defendant not guilty."

It is therefore considered by the court that said defendant, Lucy Gilchrist, go hence without day.

hence without day.

United States of America, northern district of Alabama

I, A. W. McCullough, clerk of the circuit court of the United States of America, in and for said district, do hereby certify that the above and foregoing is a true, full, and complete copy of the proceedings had in the case of The State of Alabama vs. Lucy Gilchrist, as fully as the same doesappear of record in my office. In testimony whereof I have hereunto subscribed my name and affixed the seal of said court at office in the city of Huntsville, in said district, this 19th day of February, A. D. 1883.

[SEAL.]

A. W. McCullough.

CASE OF WILLIAM RICHARDSON.

THE STATE OF ALABAMA, Lawrence County:

W. T. SIMMONS, Sheriff.

Circuit court

Circuit court.

The State of Alabama, Lawrence County:

The hon, W. B. Woods, Judge, &c.:

The petition of William Richardson, a colored, man, showeth to your honor that he is, as he understands the facts, to be indicted in this county & charged with having assaulted with intent to kill one Schuyler Parshall, who is a white man & a man of prominence & influence, residing in the said county, &c. the keeper of a hotel or tavern in Courtland, & has much close connection thereby with the white comunity. Petitioner is advised and so charges the facts to be that said Parshall has made many times a statement of his own version of the alleged facts of the case and greatly to the prejudice of the petitioner in the premises and to such an extent as causes to show that petitioner shot at said Parshall without any authority, excuse of palliation for the same; & petitioner insist that such was an statement & version of the facts of the case, and that thereby the cause of the petitioner has been greatly prejudiced & damaged in the eyes of the community to such an extent that petitioner, as he thinks, is advised, &c., severily believes and is satisfied in his opinion and judgement that he can not certainly have a fair, impartial trial in said county. He is not guilty in manner or form as charged as he understands, believes, and is advised the law and facts to be.

Your petitioner asks an order & judgement of this court granting and changing the venire for the trial of the said case to the next nearest county from these objections, and that the trial of the said case may be removed to some other county than Lawrence, when petitioner may, if possible, have a fair trial. He is satisfied that let his trial come off where it may under the present organization of the administration organs of justice in the State a fair trial is hereby possible. He asks an order of this court to change the venire of the trial of his said cause to some other county.

 $\begin{array}{c} \text{his} \\ \text{WILLIAM} + \text{RICHARDSON} \\ \text{mark}, \end{array}$ 

R. Y. GOODLETT, C. C. C.

THE STATE OF ALABAMA, Lawrence County:
Came William Richardson, colored, into open court this eight day of April, 1875, and made affidavit that the petition as above set out positiveley is true, and the other matter he believes to be true. Sworn to in open court.

At April term, 1875, was ordered by the court that this cause be continued. At October term, 1875, the following proceedings were had, to wit:

Circuit court, Lawrence County, October term, 1875, and 18th day of Oct., 1875. The State of Alabama, Lawrence County:

The State of Alabama, plaintiff, against William Richardson (a colored man), charged by indictment in said State court with having assaulted Schuyler Parshall with intent to kill and murder one Schuyler Parshall, in said county and State of Alabama.

shall with intent to kill and murder one Schuyler Parshall, in said county and State of Alabama.

In the above case which is not yet come, but is pending in the circuit court of Lawrence County, and State of Alabama, your petitioner, William Richardson da colored man, petitioning, charges and states that by reason of his being a colored man, and that the great prejudices existing against him as such colored man, and existing in said county and State, he can not, as he verily believes, is advised, and so charge the truth to be, have a fair and impartial trial, and is additionable to him in his defense secured to him in his defense in the trial of said prosecution and intended by law to be secured to him by the laws of the State providing for the equal civil rights of all citizens of the United States, and to the ends of a fair and impartial trial of said cause and prosecution and defense, at it be secured to him his civil rights in such trial, he asked that said cause and the trial thereof be removed to the circuit court of the United States, to be holden at the city of Huntsville, in said State, at the next regular term thereof. Said county of Lawrence is within the circuit of said United States court, and petitioner asks that a transcript of the proceedings being had in the said circuit court of the county of Lawrence and State of Alabama shall be promptly made out by the clerk of said State court with all the proceedings in said cause, and furnish to petitioner that the same may be filled in the circuit court of the United States, according to the act of Congress in such cases made and provided.

his WILLIAM + RICHARDSON mark.

Attest:

R. Y. GOODLETT

APRIL 14TH, 1876.

THE STATE OF ALABAMA, Lawrence County:
This day came William Richardson (colored), the above petitioner, who makes
this oath that the above petitioner is true as set forth.
Sworn to and subscribed by afflant in open court, this 18th day of October,

R. Y. GOODLETT, Clerk.

Whereupon the following order was had, to wit:

The State of Alabama vs. William Richardson.

Transferred to the circuit court of the United States at Huntsville on petition of defendant underact of Congress.

The State of Alabama, Lawrence County:

I, R. Y. Goodett, clerk of the circuit court in and for said county and State aforesaid, hereby certify that the foregoing is a correct transcript of The State vs. William Richardson, as appears from the record on file here in office.

Witness my hand this 20th day of November, 1875.

R. Y. GOODLETT, Clerk Circuit Court, Lan

Circuit court United States.

The State of Alabama es. William Richardson.

The State of Alabama vs. William Richardson.

In this cause the State of Alabama by counsel moves the court that the entry of jury & verdict in the cause for the defendant to set aside, and that the said cause be reinstated on the docket of this court for trial for the following reasons, viz: (1) Because in fact no jury was impanelled, the defendant was not arraigned, nor trial, no issue of law nor fact was made up nor submitted to the court nor jury; no nolle prosequi was asked of the court nor submitted to by any one who represented the said cause, nor who had nor claimed to have authority to represent the State of Alabama, nor the said cause, nor any one who was prosecuting, nor who ever had been prosecuting the said cause. (2) No counsel represented the said cause was or had been in court to take charge of the said cause, and the same was wholly unrepresented. And the reasons for the same are the following: Joseph C. Baker, eac, an attorney of this court, and who was at the time of the transfer of said cause to this court, departed this life about the 14th day of March, 1876. That said Baker resided in Lawrence County, Alabama, from the circuit court for which county this cause was transferred to this court, was the solicitor for said county of Lawrence, and the law officer of the State of Alabama for said county and was to attend this court to resease a the circuit court. In the cause of the cause after its transfer to this court, and also prevented said laker from being present at this term of this court, and also prevented said laker from being present at this term of this court, and also prevented said laker from being present at this term of this court, and also prevented said laker from being present at this term of this court, and also prevented said laker from being present at this term of this court, and also prevented said laker from being present at this term of this court, and also prevented said laker from being present at this term of this court and representing the State of Alabama in the pro

attorney of this court, has also been employed in this cause to assist in representing the State of Alabama in said cause, and that he has been closely engaged in this circuit court of Lawrence County, wherein he resides, in attendance to his professional engagement as a practicing attorney in said court. That said accusation of The State of Alabama vs. William Richardson is a grave offense and should be investigated in and by this court, and that the same would of had been properly represented in this cause and in a state of readiness for trial but for the death of the solicitor of the State of Alabama for the county of Lawrence.

Att'y for State of Alal

In open court, personally, S. Parshall, who, being sworn in due form of law, deposes and says that the facts stated in the above motion are true and that the death of Joseph C. Baker, his being solicitor for the State of Alabama, his representation of said cause, his intention to attend this court for the prosecution of said cause, the employment of Thos. M. Peters, esq., the cause of his absence as stated in the above motion are true to his knowledge of this affiant.

Sworn to and subscribed before me this 14th day of April, 1876.

S. PARSHALL.

Subscribed & sworn to before me this 14th day of April, 1876.

A. W. McCULLOUGH,

The State of Alabama vs. William Richardson.

Comes the defendant and moves this the court set aside the continuance granting the plaintiff on the 12th day of October, 1876, and for grounds of this motion states the following: Said continuance was granted in the absense of defendants, when defendant was not present in court, and without his knowledge and consent or permission.

The prosecution is without foundation in law and facts, and is malicious, being instigated and carried on by one Schuyler Parshall to gratify malicious and malignant feelings he has towards the defendant. Defendant is a poor man, with a wife & children depending upon him for their daily bread.

Defendant is, by the continuance this case in court, kept from his work, and in this way defendant's family are made to suffer.

Defendant now has in attendance upon this court a witness, James J. Blackmore, who resides in Memphis, Tennessee, by whom defendant can prove his entire innocence of the charge in this cause preferred against him. Wherefore defendant moves the court to set aside said order of continuance that he may have a fair and speedy trial, as is guaranteed by the Constitution and laws of the United States.

\*WILLIAM + RICHARDSON.

Be it remembered that heretofore, to wit, on the 11th day of April, 1876, a day of the regular term of the circuit court of the United States for the northern district of Alabama, the Hon. John Bruce presiding as judge of said circuit court, the following proceedings were had and entered on the minutes of said court, to wit:

The State of Alabama vs. William Richardson.

Comes the defendant by counsel, and no prosecutor appearing, come a jury of cool and lawful men, who return a verdict in favor of said defendant. It is herefore considered by the court that the said defendant go hence without delay. And afterward, to wit, on the 14th day of April, 1876, a motion was filed in said ause in words and figures as follows, to wit:

Circuit court of the United States,

APRIL 4TH, 1876.

The State of Alabama rs. William Richardson.

In this cause the State of Alabama, by counsel, moves the court that the entry of jury and verdict in this cause for the defendant be set aside, and v. It he said cause be reinstated on the docket of this court for trial for the follow v greasons,

cause be reinstated on the docket of this court for trial for the follow—greasons, viz:

1st. Because in fact no jury was empanelled, defendant was not arraigned nor tried; no issue of law or fact was made up nor submitted to the court or jury; no nol prosequi was asked of the court nor assented to by any one who represented the said cause or who had or claimed to have authority to represent the State of Alabama or the said cause; nor any one who was prosecuting nor who ever had been prosecuting the said cause was or had been in court to take charge of said cause, and the same was wholly unrepresented, and the reasons fore the same are the following, viz: Joseph C. Baker, esgr., an attorney of this court, and who was at the time of the transfer of said cause to this court, departed this life about the 14th day of March, 1876. That the said Baker resided in Lawrence County, Alabama, from this circuit court from which county this cause was transferred to this court, was the solicitor for said county of Lawrence and the law officer of the State of Alabama for said county, and was to attend this court to prosecute said cause in this court as he had been prosecuting the same in the circuit court of Lawrence County, Alabama, and his death prevented the necessary preparations of the cause after its transfer to this court, and also prevented said Baker from being present at this term of this court and representing the State of Alabama in said cause, and that Thomas M. Peters, esgr., an attorney of this court, thad also been employed in this cause to assist in this representing the State of Alabama in said cause, and that he has been closely engaged in the circuit court of Lawrence County where he resided attending to his professional engagements as a practicing attorney in said court. That the said accusation of The State of Alabama in said cause, and the the head heen properly represented in this cause and in a state of readiness for trial but for the death of the solicitor of the State of Alabama for the county of La

Parish and the county of haw
DAVID P. LEWIS,

For the State of Alabama.

LEWIS E. PARSONS,

For motion.

In open court personally appears S. Parshall, who, upon being duly sworn in due form of law, deposes and says that the facts stated in the above motion are true, and that the death of Joseph C. Baker, esqr., his being solicitor for the State of Alabama, his representation of said cause, his intention to attend this court for the prosecution of said cause, the employment of Thomas M. Peters, esqr., and the cause of his absence as stated in the above motion are true to the knowledge of this affiant.

Sworn to and subscribed before me this 14th day of April, 1876.

A. W. McCULLOUGH, Clerk,

Filed the 14th day of April, 1876.

A. W. McCULLOUGH, Clerk Cir. Court.

And afterwards, to wit, on the 29th day of April, 1876, the following proceeding was had and entered on the minutes of said circuit court, to wit:

The State of Alabama rs. William Richardson.

In this cause a motion having been entered on the motion docket of this court on the 14th day of April, 1876, to set aside the action of the court in this cause on the 11th day of April, 1876, as shown by the entry thereof, and reingtate said

cause on the trial docket of said court, and it appearing to the satisfaction of the court that notice of said motion was served on the day said motion was filed on one of the attorneys who represent said defendant in this cause, and the said motion being read to the court, and on argument of counsel, it is therefore considered by the court that said entry of jury and verdict made in this cause having been made in the absence of any attorney having authority to represent the State of Alabama, and the same was made without the empannelling of any jury for the trial of said William Richardson, and without the raraignment of said William Richardson, and without the raraignment of said William Richardson, and without the reading of the indictment or any paper in said cause and without the introduction of any evidence either for the State of Alabama or for the defendant; and it further appearing that the attorney for the State of Alabama who had represented the State in the commencement of said prosecution and while pending in the circuit court of Lawrence County, departed this life on the 14th day of March, 1876, and the court being satisfied that the said entry of jury and verdict was unadvised and without a knowledge of the facts of the case as shown by said motion, and the affidavit accompanying and verifying the same, it is therefore ordered, adjudged, and dereed that the said as of jury and verdict herefore ordered, adjudged, and the same is hereby annulled, set aside, revoked, and held for naught, and that the said cause be and the same is hereby reinstated on the trial docket of this court as though the said entry of jury and verdict had never been made.

And afterwards, to wit, on the 12th day of October, 1876, an order was made as follows, to wit:

The State of Alabama vs. William Richardson.

Comes the parties, by their attorneys, and on motion of counsel for the defendant this cause is continued until the next term of this court: and thereupon.

The State of Alabama vs. William Richardson.

Comes the parties, by their attorneys, and on motion of counsel for the defendant this cause is continued until the next term of this court; and thereupon, on motion of the counsel for the defendant, leave is granted for the petition in this cause to be amended.

And on the 14th day of April, 1877, the following order was made and entered on the minutes, to wit:

The State of Alabama vs. William Richardson.

Come the parties, by their attorneys, and on motion of the defendant and for good cause shown, it is ordered by the court that the cause be continued.

And on the 18th day of October, 1877, the following order was made and entered on the minutes, to wit:

The State of Alabama vs. William Richardson

Comes the parties by their attorneys; comes also the defendant in his own proper person, and on motion of defendant counsel leave is granted to take the deposition of a witness residing in the State of Texas, subject to all legal objections, and this cause is continued on application of defendant's counsel until the next term of this court.

On the 26th day of April, 1878, the following order was made and entered on the minutes, to wit:

The State of Alabama vs. William Richardson,

Comes the defendant in his own proper person and by his counsel, and on his motion it is ordered by the court that this cause be continued.

On the 11th day of October, 1880, the following was made and entered on the

Comes the State of Alabama vs. William Richardson.

Comes the State of Alabama, by District Attorney William H. Smith, esqr., and on his motion it is ordered by the court that an alias capias be awarded for the defendant.

[Conditional judge set aside.]
On the 12th day of October, 1880, the following order was made and entered on the minutes, to wit:

The State of Alabama vs. William Richardson

Come the parties by their attorneys, and on motion of defendants' counsel, and upon a showing deemed satisfactory to the court, that the conditional judgment taken at the former day of this term of this court be, and the same is hereby set aside.

Remanded.

On the 19th day of October, 1880, the following order was made and entered on the minutes, to wit:

The State of Alabama vs. William Richardson

Come the parties by their attorneys, and on motion of plaintiffs' counsel and for good cause shown, it is ordered by the court that this cause be remanded to the State court.

UNITED STATES OF AMERICA, Northern District of Alabama:

I, A. W. McCullough, clerk of the circuit court of the United States of America, in and for said district, do hereby certify that the above and foregoing is a true, full and complete copy of the proceedings had in the case of the State of Alabama vs. William Richardson as fully as the same does appear of record in

my office.

In testimony whereof, I have hereufto subscribed my name and affixed the seal of said court, at office in the city of Huntsville, in said district, this 20th day of February, A. D. 1883.

A. W. McCULLOUGH,

A. W. McCULLOUGH, Clerk of U. S. Court,

Contested Election-Sessinghaus vs. Frost.

SPEECH

HON. JOSEPH WHEELER, OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 2, 1883.

The House having under consideration the contested-election case of Sessing-haus w. Frost—

Mr. WHEELER said:

Mr. SPEAKER: On the 17th of March, 1882, I had the honor to address the House upon a subject that was partially judicial in its character. I then expressed my views, the force of which has strengthened day by day, and what I now say will at least in part involve an endeavor to reiterate the principles I advocated nearly twelve months ago. I will repeat the words I then used:

Fixed rules based upon legal principles should be established and adhered to so that decisions of Congress would become adjudications as binding and dignified as the opinions and decrees of the highest courts of our land.

We are called upon to determine the

HIGHEST RIGHT KNOWN TO OUR SYSTEM OF GOVERNMENT,

We are to determine a question of representation. It is a greater question than the elective franchise. It is to ascertain and to decree under our oaths as judges and jurors which of two contending parties was elected a member from the third district of Missouri.

Article 1, section 4 of the Constitution of the United States says:

The times, places, and manner of holding elections for Senators or Represent-atives shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by law make or alter such regulations, except as to the places of choosing Senators.

Under this provision of the Constitution, and under laws enacted pursuant thereto.

THE SITTING MEMBER WAS DECLARED ELECTED,

and the sovereign power which he represents has certified such to be the case, and for two years, with credit to himself and his constituency, he has occupied a seat as the Representative from the third district of Missouri.

If Mr. Frost did not receive the greatest number of legal votes cast he would be the last man in this House to wish for a moment to retain

a seat to whic another had been elected.

The statutes of the United States provide the means of ascertaining with unquestioned accuracy the number of votes cast for each party at each poll, and this evidence will be adopted by Congress in the place of the sworn returns of the election officers, and if said proof shows that another than Mr. Frost received the greatest number of votes, then I pledge myself to vote to seat that person in this Hall, without regard to his political views or party affiliations.

THE LAWS OF THE UNITED STATES PROVIDE

that this proof shall be taken by written deposition, and that evidence

thus presented to Congress by written deposition, and that evidence which party has a right to the seat now being considered.

Section 105 of the Revised Statutes provides that the contestant shall give the contestee notice in writing and "shall specify particularly the grounds upon which he relies in the contest."

Section 106 provides that the contestee shall-

answer such notice, admitting or denying the facts alleged therein, and stating specifically any other grounds upon which he rests the validity of his election.

Sections 108 to 120 then provide that each party shall take testimony to sustain his allegations and to assail the allegations of his competitor, and section 121 provides that-

The testimony to be taken by either party to the contest shall be confined to the proof or disproof of the facts alleged or denied in the notice and answer.

I will now read sections 122 and 127:

Sec. 122. The officer shall cause the testimony of the witnesses, together with the questions proposed by the parties or their agents, to be reduced to writing in his presence and in the presence of the parties or their agents, if attending, and to be duly attested by the witnesses respectively.

Sec. 127. All officers taking testimony to be used in a contested-election case, whether by deposition or otherwise, shall when the taking of the same is completed and without unnecessary delay certify and carefully seal and immediately forward the same by mail addressed to the Clerk of the House of Representatives of the United States, Washington, District of Columbia.

Evidence by deposition is in derogation of common law. It is only by virtue of statute that such evidence can be used in any judicial tri-

The supreme court of Pennsylvania, using the language which we find in every elementary work on evidence, said:

The taking of testimony by deposition is at best but a very imperfect way of rriving at the truth; every precaution should, therefore, be taken to guard gainst abuses.

I approve of this expression and think that evidence taken with disregard of the statutory requirements should not be received.

The provisions of the judiciary act of 1789, which correspond with

the provisions of sections 122 and 127 of the Revised Statutes, are in these

And every person deposing as aforesaid shall be carefully examined and cautioned and sworn or affirmed to testify the whole truth, and shall subscribe the testimony by him or her given after the same shall be reduced to writing, which shall be done only by the magistrate taking the deposition, or by the deponent in his presence. And the depositions so taken shall be retained by such magistrate until he deliver the same with his own hand into the court for which they are taken, or shall, together with a certificate of the reasons as aforesaid of their being taken, and of the notice, if any, given to the adverse party, be by him, the said magistrate, scaled up and directed to such court.

The provision that the deposition must be reduced to writing in the presence of the officer, and the provision regarding the scaling and transmission of depositions, are common to the contested-election law and the judiciary act of 1789. Observe, however, that the law regarding contested elections makes it the duty of the commissioner to immediately

forward the evidence by mail.

Observe, also, that the law regarding contested elections states that

OFFICERS WHO TAKE TESTIMONY SHALL CERTIFY THE SAME.

Our forefathers who framed the judiciary act in 1789 did not think it necessary to state that commissioners should add their certificate to depositions taken by them, as such a verification was admitted by every one to be an essential requisite to papers claiming validity, and there fore they seem to have omitted such a provision, but even without such a requirement the Federal courts have never allowed a deposition to be read or used in evidence when the certificate of the commissioner was

defective, much less if it was omitted.

It is obvious, therefore, that decisions of the Federal courts on the provision of the judiciary act for the writing out of the depositions and with regard to their being certified by the commissioners, and the transmission of evidence by said commissioners to the Clerk of the House of Representatives, will be authoritative in cases which may come before Congress under the corresponding provision of the statute relating to contested elections. I will read from Bell vs. Morrison, 1 Peters, 351. Judge Story, delivering the opinion of the court, held—

That, under section 30 of the judiciary act, a deposition is not admissible if it is not shown that the deposition was reduced to writing in presence of the magistrate.

In Edmonson vs. Barrett, 2 Cranch C. C., 228, the plaintiff's attorney offered in evidence on the trial the deposition of John Marshall, of Charleston, South Carolina, taken before Hon. John Drayton, district judge of the United States.

will read the certificate of the judge, which was in the following

DISTRICT OF SOUTH CAROLINA, 88:

DISTRICT OF SOUTH CAROLINA, 38:

On this 28th day of May, 1818, personally appeareth the under-named deponent, John Marshall, of Charleston, merchant, before me the subscriber, John Drayton, district judge of the district aforesaid, and being by me carefully examined, cautioned, and sworn in due form of law to testify the whole truth and nothing but the truth, relating to a certain civil cause, &c., &c., he maketh oath to the deposition above written, and subscribes the same in my presence, the said deposition being first reduced to writing by the deponent.

The attorney for the defendant objected to the deposition on the ground that the judge had not certified that it was reduced to writing in his presence, as required by section 30 of the judiciary act of 1789.

The attorney for the plaintiff contended that it was to be presumed to have been so written because the law required it.

But the court unanimously sustained the objection and rejected the deposition.

I will now read from the case of Pettibone vs. Derringer, 4 Wash. 1 will now read from the case of Pettibone rs. Derringer, 4 Wash., 215, tried in the circuit court of the United States for the third circuit at Philadelphia, in 1818, before Justice Washington, of the Supreme Court of the United States, and District Judge Peters.

It will be observed that objection was made on the trial to the introduction of a deposition on the ground that the officer who took that deposition had not certified that it was reduced to writing by the witness in his pressure. The court suprained the chiestion

ess in his presence. The court sustained the objection.

The words I read from the decision are:

That a deposition taken under the thirtieth section of the judiciary act can not be used unless the judge certifies that it was reduced to writing either by him-self or by the witness in his presence.

I next read from the case of Rayner es. Haynes, Hempst., 689, de

cided by the United States circuit court for the ninth circuit, in 1854. It appears that defendant's attorneys offered certain depositions in evidence to which plaintiff objected on the ground that the magistrate

failed to state that the depositions were reduced to writing in his presence; and the objection was sustained by the court.

I will now cite the House to the case of Cook vs. Burnley, 11 Wall., 657. It appears that in the course of the trial the defendants offered to read a deposition taken under section 30 of the judiciary act. There was no certificate by the magistrate that he reduced the testimony to writing himself, or that it was done by the witness in his presence. The deposition was excluded by the district court. Upon appeal to the Supreme Court of the United States, that tribunal said:

There is no certificate by the magistrate that he reduced the testir writing himself, or that it was not done in his presence, which omission to the deposition.

In Baylis vs. Cochrane, 2 Johnson (New York), 416, Chief-Justice Kent, delivering the opinion of the court, said:

The manner of executing the commission ought not to be left to inference, but should be plainly and explicitly stated. It would be an inconvenient precedent and might lead to great abuse to establish the validity of such a loose and informal system; matters which are essential to the due execution of the commission ought to be made to appear under the signature of the commissioners. Among these essential matters is the examination of the witness on oath by the commissioners, and the reducing of his examination to writing by them, or at their instance and under their care.

I will read a case to show the exacting character of the practice of the circuit court of the United States upon this subject of evidence by deposition. There was at the time no law in Pennsylvania requiring the deposition. sition to be reduced to writing in the presence of the officer. no rule of court to that effect. The only regulation on the subject was a rule of court requiring the deposition to be taken before a justice. It is the case of Summers vs. McKim (12 S. & R.). I read the opinion as delivered by Judge Tilghman, page 404:

The third bill of exception contains two distinct points. The first point is on the admissibility of the deposition of George Leech; several exceptions were made to this evidence, but there was one which was decisive; and, as it involves a principle of great importance in practice, I am glad that an opportunity is offered to the court of settling it. This deposition was taken under a rule of court before a justice of the peace of Clearfield County, but it was drawn up in the city of Laneaster from the mouth of the witness by Mr. Hopkins, counsel for the defendant, and then sent to Clearfield County and sworn to there. Now, although the character of the counsel in the present instance puts him above all suspicion of unfair dealing, yet it would be a practice of most dangerous tendency if depositions so taken were to be admitted as evidence.

The counsel of the party producing the witness is the last person who should be permitted to draw the deposition, because he will naturally be disposed to favor his client, and it is very easy for an artful man to make use of such expressions as may give a turn to the testimony very different from what the witness intended. I know that depositions are sometimes taken in this manner by consent of parties; and when the counsel on both sides are present the danger is not so great; but in the present case there was no consent, nor was the counsel of the plaintiffs present. The rule of court is that the deposition shall be taken before a justice; it ought, therefore, to be reduced to writing from the mouth of the witness in the presence of the justice, though it need not be drawn by him; and in case of difference of opinion in taking down the words of the witness, the justice should decide. In chancery, if the counsel of one of the parties draws the deposition before the witness goes before the commissioners, it will not be permitted to be read in evidence. (I How.Ch., 360.) This certainly is a good rule; the taking of testimony by deposition is, at best, but a very imperfect way of arriving at the truth; every precaution should, therefore, be taken to guard against abuses. It is very clear to me that the mode in which the deposition of George Leech was taken is subject to great abuse, and should be put down at once. I am of opinion, therefore, that it was very properly rejected.

These decisions show that the law is scrupulously particular in de-

THE SPOTLESS INTEGRITY OF DEPOSITION

shall be preserved. It is sensitive to the highest degree in considering a complaint such as we find here. Even in mere matters of form it demands the most exact compliance with such formalities as the various statutes may require.

I will call attention to a few cases in which motions to suppress depo-sitions were sustained where mere formal rules were disobeyed:

sitions were sustained where mere formal rules were disobeyed:

A commission which had been executed and returned was set aside because it had been opened by one of the officers of the Government before it came into the hands of the clerk. (United States 12. Price's Administrator, 2 Washington Circuit Court Report, 18496 356.)

The law requires the deposition taken under act of Congress to be retained by the officer until he deliver the same into court, or shall, together with a certificate of the reasons for taking it, &c. (Shankwiker 12. A. Reading, 4 McLean's Reports, page 240.)

Independently of all other grounds, the court are of the opinion that the fact of the depositions not having been opened in court is a fatal objection. (Read 12. Thompson, 3 Cranch, 70, J. Story.)

Though a deposition be taken under a stipulation, waiving all objections as to the form and manner of taking, it must still be returned to court in all respects as required by law. (I Brown's Admiralty Reports, page 66.)

In the case of Beverly vs. Burke (14 Georgia, 70) the court uses these

Words:

In deciding as we do, we establish no new rule. We hold that the same presented to us falls within a rule already well settled, and that rule simply is that there must be no circumstances of unfair advantage obtained by one party over the other in having testimony taken by depositions. \* \* \* Many written cases may be found in which it has been held that such depositions should always be taken in good faith. I content myself with referring to but one. In Beau vs. Quimby (5 New Hampshire, 98) the court says: "The invariable rule by which this court is governed in the admission of depositions is not to receive any which have not been taken fairly and with the utmost good faith."

There is no limit to the cases that I find in the Supreme Court and There is no limit to the cases that I find in the Supreme Court and the circuit courts of the United States, but the cases I have read illustrate very fully the principle which I invoke. I will, however, cite a few cases which are quite as strong as those I have read: United States vs. Smith, 4 Day, 121; Railroad Company vs. Drew, 3 Woods C. Ct., 692; Beale vs. Thompson, 8 Cranch, 70; Hunt vs. Larpin, 21 Iowa, 484; Williams vs. Chadbourne, 6 Cal., 559; Stone vs. Stillwell, 23 Ark., 444. The time during which I am permitted to occupy the floor for the purpose of presenting my views in this case is so short that I shall devote myself principally to calling the attention of the Heave to the

vote myself principally to calling the attention of the House to the CHARACTER OF THE EVIDENCE

upon which the contestant relies.

I have read the above authorities to the House as the basis of my argument to show that under the rules of Congress it is impossible with pro-

ment to show that under the rules of Congress it is impossible with propriety to proceed with this cause.

I find (pages 10-25 of the Record) a motion to suppress the evidence, supported by uncontradicted affidavits; at least I may say that no material point in said affidavits appears to be controverted. I find the most of these affidavits dated in December, 1881, and the greater part of the balance dated in January, 1882. The grounds upon which Mr. Frost bases his motion to suppress the depositions offered by the contestant error. testant, are:

I. That without his knowledge or consent, and without the knowledge or consent of his counsel, since the taking of the same by the notary, they have been out of his care, custody, and possession, and were not safely kept and preserved as required by law.

II. That since the taking of the same they have been in the possession.

sion of strangers to the proceedings, who were in no wise under the control of said notary.

III. That they have been left open and exposed on tables in the office

III. That they have been left open and exposed on tables in the office of the counsel for the contestant, and by him, and by his office boy, and by strangers to the case, read, handled, written upon, and altered.

IV. That all of said depositions since the taking thereof have been withdrawn from the care of the notary by one of the counsel for contestant, and were in his office, part for many days and in part for many weeks, and were by him mutilated, changed, and altered.

V. That the alterations and changes made were material, in this, that a large portion of contestant's case was concerning the accuracy of the registration lists, both with regard to the names and residences of voters.

registration lists, both with regard to the names and residences of voters, and the alterations in the spelling of a name or the number of a house, to make which full opportunity and license was given by the notary, and which alterations might serve the purpose of contestant in establishing the validity of votes for himself or impeaching votes for contestee.

VI. That for the reasons stated in the accompanying affidavits the integrity of said depositions has been destroyed.

For the purpose of investigating the character of the changes alluded

to in this motion, a committee was appointed consisting of Mr. DAVIS of Missouri and Mr. RITCHIE to examine the depositions and to ascertain if it was a fact that contestant's attorney had written upon them and made changes, as charged.

Each of these gentlemen took a portion of the very voluminous depositions, and found the fact to be true that the counsel for the contestant

had written upon them.

Mr. DAVIS, in a hurried examination, found over one hundred instances of Metcalfe's marginal writings, and in each and every instance the body of

THE TESTIMONY WAS ALTERED

to conform to the marginal direction.

Upon the report of Messrs. DAVIS and RITCHIE, both of whom were upon the Committee on Elections, an investigation was ordered and the notary who took the depositions was summoned to Washington as a witness for the purpose of comparing the evidence before the House with his original stenographic notes, but upon his arrival he stated that he could not make the comparison demanded. He had destroyed the original notes of testimony. It further appeared that he had destroyed these "original notes" after he knew, both from personal information and from the newspapers of Saint Louis, that the integrity of his depositions was attacked.

The developments revealed that all the voluminous depositions, which, according to law, should have been sealed and certified by the notary and by him sent to the Clerk of the House not later than March or April, were as late as and even after the 18th of August being

MANIPULATED AND ALTERED BY THE CONTESTANT'S ATTORNEY

Let me ask this honorable body if they can allow a fellow-Representative to be driven from this Hall by such evidence as this? Do not the authorities show that it would not be received in any court, even in a civil suit where a right of property of the smallest value was in controversy; and that being true, how can it be made the basis for determining a right and a question of the greatest possible magnitude?

If the facts I have recited and the laws I have read have no effect

upon you, gentlemen of the opposition, where is the

VIOLATION OF OFFICIAL INTEGRITY

regarding the determination of election cases to end? When is your party, gentlemen, to cease its work of decapitation? Have you become crazed by excesses? Have you become drunk carousing with power? Have you lost the reason with which God endows all men?

I will beg that you will allow me to carry you back to the scenes you enacted on this floor in May, June, and July of last year; and in doing this I beg to assure you it is not in an unkind spirit or in a spirit of

recrimination.

This session of Congress is almost over. We are all soon to part, many of us never to meet again; and in these last moments I do not desire, I am not willing, to say one word which would leave unpleasant memo-But I would not be doing my duty to you and to the country did I not, as a sentinel on the watch-tower, warn you of the dangers to our system of government if the will of the people, as expressed by their votes, is thus

REVERSED BY THE ARBITRARY ACTION

of a Republican majority

In reviewing and recalling to your mind some of the features in the cases decided by you last summer, I shall hope that you will be so shocked at the enormity of what occurred that you will hesitate before proceeding with the case now being urged for consideration. member, my friends, that-

While the lamp holds out to burn. The vilest sinner may return.

So, also, the most extreme Republican who has

SUBORDINATED ALL RIGHT AND PRINCIPLE TO PARTY EXPEDIENCY

can now, while the lamp of the Forty-seventh Congress still glimmers. return from the errors to which he has been led by party devotion, and close his career with an act of justice to a party opponent. Can you do it, gentlemen? Can you rise to such a height? It is well worth an effort to try. It would be a

CROWN OF GLORY TO A DYING PARTY;

you could all your lives point back to your action to-day and refute the charge that in a question of party it was impossible for a Republican

to be just.

In illustration of the course pursued by this Congress in regard to election cases I will make some allusion to the contest in the eighth district of Alabama, with which, being personally interested from having had forced upon me the rôle of "contestee," I am of course familiar. In so doing I shall confine myself to the unanimous conclusion arrived at by all the members of the committee except those belonging to the partisan majority. This conclusion was reached by them after a careful and exhaustive study of the evidence. From my own familiarity

with the case I am convinced that their statements regarding the evidence and their enunciation of the principles contained therein are cor-

The four Democrats of the Committee on Elections staty in their report that the evidence in said case shows that on November 2, 1880, when the polls closed, 12,808 legal votes of legal voters had been polled for the contestee

Although fifteen lawyers assisted the contestant in taking evidence, and nearly a thousand witnesses were summoned to testify for the contestant, not one of said votes was proven to be in any way otherwise

than legal in all respects.

The report by these sworn Democratic Congressmen also shows that there were polled for the contestant less than 11,000 votes of legal voters, showing the contestee's majority to have been fully 2,000. This report was signed by these four Democrats, Mr. Beltzhover of Pennsylvania, Mr. Davis of Misseuri, Mr. Atherton of Ohio, and Mr. Moulton of Illinois; and this report is the only report which was signed by any one. With such uncontroverted facts I felt it my duty to defend the cause

before Congress and to use every possible effort to vindicate the assailed

rights of the people.

In July last, soon after the contestee was unseated, Mr. Calkins, the Republican chairman of the Committee on Elections, in answer to the charge that the reports of his committee were partisan decisions in violation of law, and not sustained by the evidence, and that they were the mere decrees of a Republican caucus,

ADMITTED THAT HIS REPORTS WERE PARTISAN

and not judicial. But he said his committee were not alone to blame, as his party both in and out of Congress had persistently demanded that they should admit the contestants, whom the party had decided to favor with their support.

Mr. Calkins also said he would favor a law removing contested-election cases from Congressional committees to a court as the only way to secure judicial decisions, and he further said that owing to the pressure made upon election committees to make partisan decisions without regard to law and justice he would never again be a member of an election committee.

When the great Democratic party presented the issue to be determined by the American people at the election of November 7, they issued millions of copies of a campaign book in which they plainly set forth the action of the Republican party in the Forty-seventh Congress. It was the

SHAMEFUL AND ARBITRARY ACTS OF THIS CONGRES

which were passed upon and condemned by the American people at the late election that resulted in an overwhelming and irretrievable defeat of the Republican party.

In that book they state the facts regarding this case, and on page 31

they use these words: Lowe vs. Wheeler.—The decision of the House in unscating Wheeler and installing Lowe as Representative from the eighth Congressional district of Alabama is, without doubt, the most arbitrary and shameful act of the first session of the Forty-seventh Congress.

It is not stated that this was only as shameful as the other shameful acts of the Forty-seventh Congress which were so severely condemned by the people from Massachusetts to California and from the lakes to the Gulf, but they say it was the most shameful of all the shameful acts

of this Congress.

I respectfully submit, therefore, that the Democracy has been sus-

tained and defended-

First. By Democratic members of the Elections Committee who signed a report saying that the contestee was elected by over 2,000 majority Second. By Mr. CALKINS, the Republican chairman of the Committee on Elections.

Third. By all the Democrats in Congress who were so shocked at the course pursued by the Republicans that every measure in their power was employed to frustrate the consummation of these acts.

Fourth. By the national Democratic party, who made this illegal conduct an issue, yes, a

MAIN ISSUE OF THE NATIONAL CAMPAIGN.

and stated it to be the most shameful of all the shameful acts upon which

and stated it to be the most shameful of all the shameful acts upon which they asked a decision of the people.

Fifth. Finally the Democratic party was sustained by the American people at the polls on November 7, when in determining these issues they held aloft the Democratic banner and like a cyclone swept the country from lake to gulf and from ocean to ocean, including in the defeated hosts the members of Congress who were most prominent in the enactment of this disgraceful proceeding, namely, Mr. HAZELTON of Wisconsin, Mr. THOMPSON of Iowa, Mr. ROBESON of New Jersey, Mr. JONES of Texas, and Mr. BURROWS of Michigan.

It is not improper for me to here assert that I never knew of the intention of the committee to allude to me until the book fell into my hands after the campaign commenced.

hands after the campaign commenced.

I do not wish to be understood as insinuating that the country was in the slightest degree influenced in the elections last November by any knowledge of or interest in this particular case. On the contrary, I emphatically state that it did not and could not have been at all considered,

but I insist that the violation of law and the infraction of parliamentary precedent and the trampling of right and justice under foot which characterized the Republican majority in this House caused a distrust in the minds of the people which determined this great change. striking down of the constitutional and parliamentary

#### RIGHTS OF MINORITIES

by a change in the rules of the House of Representatives, which appeared to be done solely to enable the Republican majority to unseat a few Democrats upon forged testimony, was very properly denounced in the scathing protest which was signed and placed in the records of this House, May 29, 1882. I read from the CONGRESSIONAL RECORD,

page 4326:

Whereas the minority of this House have heretofore, under the rules of the House, successfully resisted the efforts of the majority to consider the case of Mackey es. O'Connor, because a proper hearing has not been granted to the contestee by the Committee on Elections as to the allegations of forgery and fraud in the evidence submitted by the contestant; and Whereas the minority have offered to proceed to the consideration of the case as soon as said allegations have been duly investigated; and Whereas the majority, in order to prevent and avoid such an investigation, have proceeded to change the rules, in a manner not provided for in the rules by which alone they can or ought to be changed; and Whereas the Speaker has made a ruling which justifies a proceeding unknown to the principles of constitutional and parliamentary law and subversive of the rights of the minority: Therefore,

The undersigned, representatives of the people, hereby protest against the proceedings of the majority and the rulings of the Speaker as unjustifiable, arbitrary, and revolutionary, and expressly designed to deprive the minority of that protection which has been established as one of the great muniments of the representative system by the patient and patriotic labors of the advocates of parliamentary privilege and civil liberty.

From the very commencement of parliamentary proceedings the right and power accorded to the minority in a legislative assembly to stay the action of a bare majority upon any question was most jealously guarded. The principle upon which this power was founded was this: The minority in taking upon themselves so grave a responsibility as to

# STOP LEGISLATION

upon any subject assume that the legislation is not such as will be sustained by the people. They therefore arrest proceedings until at the next succeeding election the people may express their will.

In England this

ABSOLUTE VETO POWER

resides in the sovereign, who has the right at any time to dissolve Parliament and thus prevent the enactment of any law that the sovereign regards to be adverse to the interest of the government. An election immediately follows, which determines whether the people sustain the Parliament or the sovereign. In our country the President has power to veto any act passed by Congress, and after such veto it can only be-

come a law by receiving the sanction of two-thirds of each House respectively.

In accordance with this principle the rules of the House of Representatives prescribe that a sufficiently

#### LARGE MINORITY

could by dilatory motions prevent any action on the part of the House and thus transfer the decision of the question to the people.

The circumstances under which the Republican party

DESTROYED THIS TIME-HONORED PRINCIPLE

of parliamentary law was this: The question was raised regarding the consideration of the contested-election case of Mackey vs. Dibble. The entire Democratic party resisted any action in the case, on the ground that Mr. Dibble had presented proof that every item of the testimony upon which the report of the committee was founded was false and forged. It is necessary to here state that the contest was originally against Mr. O'Connor, but after the death of the latter Mr. Dibble was elected and became the contestee. I will read the affidavit of the ste-nographer who took the testimony alluded to. It shows you have a perfect precedent for your present proceedings. I read from the Con-GRESSIONAL RECORD, first session Forty-seventh Congress, pp. 4342-

THE STATE OF GEORGIA. Richmond County:

The State of Georgia, Richmond County:

Personally appeared before me, a notary public in and for the county of Richmond, E. H. Hogarth, who, being sworn, says that he was a resident of the city of Charleston, State of South Carolina, during the year 1881, up to the 30th of September; that deponent held the office of notary public during said time, and was a stenographer by profession; that he was employed by E. W. M. Mackey, esq., as stenographer and notary public in the contest between E. W. M. Mackey, and M. P. O'Connor for a seat in the Forty-seventh Congress of the United States, and that deponent acted as stenographer and sometimes notary public in Orangeburgh County, in behalf of the Hon. M. P. O'Connor; that deponent took the testimony on the part of E. W. M. Mackey, esq., in the counties of Charleston, Orangeburgh, and Clarendon, with the exception of one or two depositions; that all of the testimony so taken by deponent as stenographer was transcribed from his stenographic notes in deponent's own handwriting, and testimony taken on behalf of E. W. M. Mackey, esq., was turned over to him in deponent's own handwriting, and such taken on behalf of the Hon. M. P. O'Connor was turned over in deponent's own handwriting, and such taken on behalf of the Hon. M. P. O'Connor was turned over in deponent's own handwriting, the deponent of the Hon. M. P. O'Connor was deponent by E. W. M. Mackey, esq., and also jurats at the foot of depositions; these deponent signed without comparison with his said stenographic notes taking it for granted that said testimony was the same as furnished by deponent to said test. W. M. Mackey, esq.; that the said certificates were often presented to deponent of signature by said E. W. M. Mackey, esq., when deponent was otherwise employed, and that deponent did not have his stenographic notes thand when no behalf of Hon. M. P. O'Connor in instances where deponent acted as notary public; that deponent did not forward any of said testimony to the Clerk of the House of Representatives, bu

Sworn to and subscribed before me this 17th day of February, 1882.

[SEAL.]

Notary Public, Richmond County, George

I also read the affidavit of Mr. C. Smith, who it appears wrote the testimony by which Mr. Mackey sought to obtain a scat in Congress (Record, first session Forty-seventh Congress, p. 4344):

STATE OF SOUTH CAROLINA, Charleston County;

(RECORD, first session Forty-seventh Congress, p. 4344):

STATE OF SOUTH CAROLINA, Charleston County:

Before me personally came C. Smith, in response to a summons to testify as to certain matters in a contest entitled E. W. M. Mackey w. M. P. O'Connor, and who, being duly sworn, says: "I was employed by E. W. M. Mackey to write out the testimony taken in his behalf in the contest between himself and Mr. O'Connor for a seat in the Forty-seventh Congress; this writing was done at the house of Colonel Mackey, and at the United States court-house, and at my room. The body of testimony was in the handwriting of E. H. W. M. Mackey; that the copy made by me omitted the erasures and inserted the interlineations; that sometimes whole pages of this testimony in the handwriting of Colonel E. W. M. Mackey would be inserted, and of which there was no original in the handwriting of Mr. Hogarth, the notary public, that I saw; that sometimes when I returned the originals and my copy of the same, Colonel Mackey destroyed the originals by placing them in a stove, or destroying them by tearing them up; that in some instances the copy made by me was returned interlined, and I made fresh copy with such corrections; the interlineations last mentioned were also in the handwriting of Colonel E. W. M. Mackey; that the notary public, Mr. Hogarth, placed hisseal and signature to the testimony as it was handed to him without making any comparison with the originals, as in many instances, as before stated, the originals had been destroyed, and also without making any comparison with his short-hand notes; that is, in every case in which I was present, my impression is that I saw him sign nearly all of the testimony a

Mackey's testimony was sent off, I was copying. That the packages hereinbefore mentioned as shipped by me were given to me by E. W. M. Mackey, and I handed to him the receipt for the same, the said receipt being in the name of E. H. Hogarth. C. SMITH.

Sworn to before me this 16th day of February, 1882.
[SEAL.]

H. L. P. BOLGER,

Notary Public

As these affidavits prove beyond question that every particle of Mr. Mackey's

EVIDENCE WAS FALSE AND FORGED.

the Democratic members of Congress announced that they would, if necessary, resort to dilatory motions to prevent the use of said testi-mony, unless the Republican members would either investigate the truth of these statements in these affidavits or produce testimony in refutation thereof.

So determined, however, were the Republicans to drive Mr. Dibble, who was a Democrat, from this floor, and place in his stead Mr. Mackey, who was a Republican, that they changed the rules of the House, sweeping away every vestige of the rights of minorities in questions of this character, thus giving absolute power on these questions to a bare

MAJORITY OF ONE,

By this means they succeeded in slightly increasing their voting power in the House for this Congress, but, as they must now admit, at an expense that can only hereafter be estimated. And you, gentlemen of the majority, have certainly exemplified the truth of the saying, Quem Jupiter, vult perdere prius dementat. Promptly following your action in this case, you proceeded to unseat that grand old gentleman, General Finley, of Florida.

And this brings us again to the consideration of the case from the eighth district of Alabama, which was immediately taken up by this body. The circumstances under which this was done I read from the CONGRESSIONAL RECORD of June 1, 1882, page 4445:

ALABAMA ELECTION CONTEST-LOWE VS. WHEELER.

ALABAMA ELECTION CONTEST—LOWE VS. WHEELER.

Mr. HAZELTON. I now call up the contested-election case of Lowe vs. Wheeler for present consideration.

Mr. KENNA. On that I raise the question of consideration.

The SPEAKER. The gentleman from West Virginia raises the question of consideration. The question is, Will the House now proceed to consider the contested-election case named by the gentleman from Wisconsin?

Mr. BLACKBURN. Upon that question I call for the yeas and nays.

Mr. WHEELER. I ask unanimous consent to make a statement which will occurry but a moment.

Mr. RIACKBUEN. Upon that question I call for the yeas and nays.

Mr. WHEELER. I ask unanimous consent to make a statement which will occupy but a moment.

The SPEAKER. Is there objection? [Cries of "Regular order!"] The regular order is called for. The question is on ordering the yeas and nays.

Mr. SPEINGER. The gentleman from Alabama asks unanimous consent to make a statement.

The SPEAKER. The Chair has submitted that question, but will again submit it. The gentleman from Alabama Mr. Wheeler, saks unanimous consent to make a statement.

It here objection?

Several MEMBERS. How long?

Mr. WHEELER. Not more than two or three minutes. [Cries of "Go on!"]

The SPEAKER. The Chair hears no objection. The gentleman from Alabama will proceed.

Mr. WHEELER. Mr. Speaker, twenty-eight days after the record in this case was printed, I was forced, against good objections as I thought which were offered, into the argument before the sub-committee. This case stands alone where such a hardship was inflicted upon the contestee in this House.

This case stands alone in this: that it is the only case where the argument was had before the committee when the only Democrat on the committee was necessarily absent.

This is the only case, too, Mr. Speaker, where the contestee's counsel was only allowed ninety minutes to argue a case involving more questions of law and fact than any other case before this House, and where the contestee himself was only allowed ninety minutes to argue a case involving more questions of law and fact than any other case before the contestee was forced into argument before his counsel or himself had prepared or printed a brief, or prepared argument before the sub-committee.

It is now proposed, Mr. Speaker, to force this case before the House on the very day the majority report is printed and sent to the House.

Again, sir, of the gentlemen who were selected by my friends to argue the case before the House, three are absent and the other is sick and confined to his room.

Finding that state of things, I

cure the reports in the case in order to ascertain what the facts were which they were to argue.

I do not think, Mr. Speaker, this House is going to subject any contestee to such hardship as that, to have his case brought up at this time. There is no reason why invidious distinction should be made against me from the beginning to the final termination of the cause.

I have a case which, if presented to this House, I know gentlemen, irrespective of party, will on their consciences be compelled to vote and say that this contestee was honorably and fairly elected to the position he now holds in this House. And I feel this House will not refuse a reasonable, moderate time for necessary preparation to be made to present this case to the House.

I thank you, Mr. Speaker, and the House for the unanimous consent to make this statement. [Cries of "Regular order!"]

Mr. CALKINS, May I be permitted to ask what time the gentleman wants?

Mr. WHEELER, I am informed the gentleman from Massachusetts [Mr. Raney] states that no man can learn the facts and make a respectable argument in two weeks. [Cries of "No!" and "Regular order!"]

The Speaker. The pending question is, Will the House proceed to consider the case of Lowe vs. Wheeler? The yeas and nays have been demanded.

I will now, by permission of the House, give some little account of

I will now, by permission of the House, give some little account of this case so summarily brought before this body. In doing so I desire to repeat that my purpose is not to assail the motives of the members of the majority. I feel it my duty to make a statement of fact, in the hope that it may impress this House with the importance of returning to the old system, when election cases were decided with the same judicial distances that is exercised in determining any other level sight. dicial fairness that is exercised in determining any other legal right,

and not as these cases have been disposed of, solely as apparent party advantage seemed to dictate.

In order to attain a party end and to deprive Mr. Frost of his seat you

have found it necessary to

NULLIFY THE ELECTION LAWS OF THE STATE OF MISSOURI,

and to declare that the registration in the third district of Missouri is not essential to a valid election.

The amount of fraud and riot this decision will create, time can alone determine.

determine.

Let me remind you, gentlemen, of a similar decision made by you less than twelve months ago.

Then for the purpose of unseating a Democrat you decided that registration in Alabama was not necessary to the validity of a vote, and already you have caused bloodshed by that iniquitous decision. Soon after the publication of your report, an election was held in the city of Opelika, Alabama. The opponents to the Democratic party availed themselves of this principle of law as announced by you. They brought illegal voters to the polls, some having been imported from Georgia, and for six months the persons voted for under this illegal ruling of yours have been contending for the offices. You have all heard of the Opelika riots and the bloodshed which ensued. The members of the Republican party of this House are and will be held by God and of the Republican party of this House are and will be held by God and the country accountable for all the suffering and death caused by the unfortunate events to which I have referred.

Let us look for a moment at your

DIAMETRICALLY OPPOSITE DECISIONS

upon the subject of registration.

The committee state (see pages 3, 4, and 16 of the report in the case of Bisbee rs. Finley) that the constitution of Florida commands:

That no person not duly registered, according to law, shall be allowed to vote. They then cite many decisions to sustain them in their position, and they decide very properly, with great emphasis, that under such a law

A VOTE WITHOUT THE VOTER'S BEING REGISTERED IS ILLEGAL and void, and they also say that if the proof fails to show that the vote was legal when cast, the omitted proof offered at the trial will not avail to make it legal.

The committee say (page 4):

The committee say (page 4):

The principle must likewise be maintained that the production of this evidence at the trial will not change the legal status of the voter, and thus make these votes in question legal votes. Such a decision would be at variance with a well-established principle of law, which forbids the making of an act valid at a subsequent period which at the time of its commission was void because prohibited by law.

The House will observe that the law of Florida uses the words that no person not duly registered according to law "shall be allowed to

It would appear that the duty was thus imposed upon the inspector of allowing or of not allowing; and if a person endowed with all the other qualifications of a legal voter was by the inspector

ALLOWED TO VOTE.

it might be argued that this decision of the inspectors was final, and that the vote could not afterward be rejected; but the committee insisted that such a view was wrong, and that the reception of the vote by the inspector did not aid its validity.

The constitution of Alabama, however, is more emphatic. It says: No one shall vote at any election unless he shall have registered as required

In Alabama all the duty and responsibility of registration is imposed upon the voter himself, and all the most rigid rules might be applied here with the greatest propriety. The words are:

No one shall vote at any election unless he shall have been registered as required by law.

That is, no one shall vote in Alabama unless he has first appeared before the registrar and sworn before God to "support and maintain the Constitution and laws of the United States;" and in addition thereto has sworn to other facts, and has also registered and signed his name and given his residence and various other facts, all of which the law equires to be recorded.

Mr. Speaker, you will observe that we were trying so hard to encourage loyalty in Alabama that we would not allow any one to enjoy the sacred privilege of franchise until he had sworn to "support and maintain the Constitution of the United States."

Another somersault, Mr. Speaker. Party interests demanded it and the Republican members were ranged in a row, and the handsome chairman commanded "heels up—heads down," and the committee makes another judicial somersault, deciding, without a precedent in the world to sustain them, that to vote in Alabama "registration is not a prerequisite. It is not compulsory."

They mean, I suppose, that the

VOTER MAY REGISTER OR NOT,

as he pleases. The reasoning by which this conclusion was reached was, however, so untenable that the member of the committee from Massachusetts [Mr. RANNEY] declined to subscribe to it. He, however, was true as steel to party interests. He in effect said; "Gentlemen, I

can not exactly somersault with you, but I will break the force of the fall by making several small somersaults, and will range myself side by side with you at the final determination of the case."

I will now attempt to show you that the Massachusetts Solon would have done himself more credit had he stood by his associates.

In the Bisbee vs. Finley case the gentleman from Massachusetts [Mr. Ranney] and the committee decide that under the law of Florida

POLL-LISTS CERTIFIED BY THE PEOBATE JUDGE ARE GOOD EVIDENCE.

In this case they were introduced by a Republican against a Demo-

In the Lowe vs. Wheeler case, the gentleman from Massachusetts [Mr. RANNEY], without any request or suggestion on the part of the contestant, decides that under the law of Alabama, which is substantially and almost precisely like the Florida law, a poll-list certified in precisely the same way is no evidence at all. More than this, he decides that a simple certificate of the probate judge is good for Bisbee against General Finley, but that under a similar law

POLL-LISTS ARE NOT GOOD EVIDENCE

for Wheeler, when in addition to having them certified precisely the same as those presented by Mr. Bisbee, he (Wheeler) also legally made a witness of the probate judge, who testified that the poll-lists were copies of the poll-lists of the precincts referred to; and worse still for Mr. RANNEY, the lawyer for the contestant, made objection to specific parts of the questions to the probate judge, omitting to object to that part of the question which asked him to designate the poll-lists, and therefore if there had been any valid objection (which there was not) the objection was waived; yet with all that Mr. RANNEY turned a full double somersault, thus proving himself much more of a judicial acrobat than any of his political brethren.

Now, a little later it became necessary in the Smith vs. Shelley case to slaughter General Shelley, whose sole offense was that he was a Democrat. The committee had already

OMERSAULTED FROM THE DECISION

for Mr. Bisbee, and now they found they must get back to the Bisbee standpoint to oust General Shelley.

This, Mr. Speaker, required additional acrobatic skill, but party behests demanded the effort, and the gentlemen of the Elections Committee were equal to the emergency. I think I can now see the handsome captain of the committee arraying his forces and urging them to the

In my imagination I now behold his Napoleonic air as he addresses them: "Gentlemen and patriots, you have done much, but much remains for you to do. You were selected by the generals of your party for great and grand purposes; let not your country and the great party of moral ideas be disappointed in their expectation. You were selected after three weeks of toil and investigation as the most worthy knights to wield the battle-ax and to slay the enemies of the God-like principles of Republicanism. You have charged and somersaulted forward. You have

DECIDED ONE WAY

nearly every principle of law; and then, my gallant soldiers, you have risen to the sublimity of greatness by deciding nearly all of these principles directly the other way, but a greater feat is necessary to be accomplished. The question now before us requires an acrobatic effort which appeals to every sentiment of greatness and grandeur. The eye of the general of the Congressional campaign committee is upon you. He has in his hands means which will determine your future promotion. With him rests the awful question whether you shall be among the chosen or among those cast into outer darkness. I therefore appeal to your courage. This question you have decided in one way for our brother from the land of flowers and oranges. You then turned a gallant somersault and

DECIDED IT PRECISELY THE REVERSE

for our brother from the beautiful valley of the Tennessee, but such things you have often done; somersaults and even double somersaults have ceased to elicit the highest applause, and now with one supreme effort of conscience and the physical system I call upon you to

TURN A DOUBLE BACK-SOMERSAULT

and forever restore to the party of moral excellence that country of sugar-cane and cotton where flow the murmuring waters of the Tom-

After this speech they all cried, "Ready!" and, at the command of their leader, all turned a double back-somersault, and this great question of the admissibility of a poll-list as evidence was

DECIDED THREE DIFFERENT WAYS

by the same men in the same session of Congress.

The same committee say in

ONE CASE TO BENEFIT A REPUBLICAN

that depositions are not good where the commissioner failed to stamp his seal upon them when he signed the certificate, notwithstanding that the depositions were taken in all other respects in the strictest compliance with the laws of Congress. In that case the depositions were taken pursuant to notice, duly served, the evidence written down in the presnce of the commissioner, the depositions signed by the witnesses, the

certificate of the commissioner properly attached and certified by him, and the depositions sealed up and transmitted by him to the Clerk of the House of Representatives.

The Revised Statutes, section 127, say that the commissioner taking depositions "shall certify and carefully seal and immediately forward the same," &c.

In Smith vs. Shelley the House committed itself to the principle that sealing the package that contained the deposition so that it would show that it had not been opened since it left the hands of the commissioner was not sufficient, but that under section 127 he should have stamped

a seal on the deposition itself when he certified it. In Strohbrand vs. Aikin the House decided that all the evidence taken by one of the parties could not be considered because it was taken before a United States commissioner, and such officers were not included among the enumerated officials that the statute said could take evidence.

Now, when it became necessary to deprive a Representative of his seat

who belongs to the party in the minority all this is reversed.

In the case of Lowe vs. Wheeler to deprive a Democrat of his seat the same committee decide that

DEPOSITIONS WITHOUT A SEAL

perfectly good.

Worse than this, they accept and use as good legal evidence mere fugitive papers, devoid of nearly every legal requisition, and upon such papers they drive a legally elected member from the halls of Congress.

Many of the papers referred to— First. Were not signed by the witnesses, as required by law econd. They were not taken pursuant to notice, as required by law.

Third. They were not sealed, as required by law.

Fourth. The contestee was not allowed by the commissioner to cross-

examine the witnesses, a right guaranteed to him by law.

Fifth. The deposition not only did not bear a seal to the certificate, but had not a certificate at all to which a seal could be affixed.

Sixth. Undisputed proof showed that the evidence was written by

the attorney for the contestant, and written falsely by him. Seventh. They did not show that the witnesses were sworn.

Among the

MANY GROSSLY ILLEGAL ACTS

and rulings that appeared in the report of the committee which was presented to this House by the gentleman from Wisconsin [Mr. HAZELTON] was the admission as evidence of certain papers, some of them false and forged and none of them such as would be received in any court of law where the smallest possible right of a citizen was in controversy. The proof showed that the man before whom it was pretended that the depositions were taken was not present, as imperatively required by section 127 of the United States Statutes, when the papers which the contestant had presented to Congress were written, and therefore that the commissioner could not from any personal knowledge be able to state that they contained what the witness stated when being examined; and uncontradicted evidence also showed that after the papers had been written out in long-hand they were materially changed; even questions asked by the contestee during his cross-examination of the witnesses had been changed, and the proof also showed that false or at least incorrect records had been inserted.

Under this state of things the commissioner (Mr. Figg) could not with

propriety, and did not, put any certificate to any of the papers relied upon by the contestant, except to those taken by him on the last day, namely, March 16, 1881. He may have been, and probably was, present when that day's evidence was taken, and he attached his certificate to the evidence taken on that day; but he either refused or failed to put any certificate to any of the other papers that appear in the record

and that the committee adopted as good evidence.

Without using these fugitive papers it would have been impossible to have made out a report such as the one presented; and as they had determined to

PUT IN THE CONTESTANT AT ALL HAZARDS,

they were compelled to make use of the best material that the facts of the case afforded, and to satisfy the conscience of the more scrupulous Republicans the less scrupulous or non-scrupulous ones were set up, or voluntarily set themselves up, to make untrue statements as to these

important and to an honest man most decisive questions.

The gentleman from Wisconsin [Mr. HAZELTON], in his closing speech, after the previous question had been called, stated (CONGRESSIONAL

RECORD, page 483):

a certificate on every one of the depositions but one.

It is astonishing that a man of intelligence should have made so RECKLESS A STATEMENT.

and it is more astonishing that he should have made a statement which is just the reverse of fact and so detrimental to the case of the contestee in the closing speech when these incorrect statements of facts could not be refuted. Particularly is this extraordinary when it came from the same lips which uttered these words (see CONGRESSIONAL RECORD, page 479):

In the exercise of that sovereign power we came here to-day to pass judicially upon this contested election case coming from the eighth Congressional district of the State of Alabama, to decide honestly and fairly, and upon all the evidence and upon all the law, which of these two gentlemen, the contestee, Mr. Wheeler,

or the contestant, Mr. Lowe, is entitled to the seat in controversy. In other words, we came here to determine the honest will of the people of that Congressional district, and we come to its consideration in the light of justice and of fairness and under the obligation of our oaths as members of this great legislafairness at tive body.

It is very fortunate that this statement was made by the gentleman from Wisconsin [Mr. HAZELTON], as the course pursued by him from the beginning to the end of the case indicated that he was willing to trample law under foot, pervert facts, misstate evidence, and give credence to perjury and forgery to attain the great party purpose of trading off

this seat for a few Greenback votes.

I had defended the gentleman and his party from aspersion by stating that I had credible evidence that before the Republicans knew the facts of my case their leaders had agreed to deliver my seat into the hands of the Greenback party, and as payment therefor the Greenback

AGREED TO SUSTAIN THE REPUBLICAN PARTY

in most of its important measures, and I endeavored to show that the enormities practiced by the Elections Committee were owing to this fact, and that the Republican party was in this difficulty. To decide my case rightly would compel them to violate a solemn agreement with

case rightly would compet them to violate a solemn agreement with their Greenback allies, and I argued that it was this and not a preference to do wrong which induced their action.

In emphatic denial of the statement of the gentleman from Wisconsin [Mr. HAZELTON] that "there was a certificate on every one of the depositions but one," I assert that the facts are and the record shows that every one of the seventeen pretended depositions which are found printed in the record of the case, from the beginning of the printed are considered in the record of the case, from the beginning of the printed in the record of the case, from the beginning of the printed was present and the record of the case, from the beginning of the printed of the case, from the beginning of the printed of the case, from the beginning of the printed of the case, from the beginning of the printed of the case, from the beginning of the printed of the case, from the beginning of the printed of the case, from the beginning of the printed of the case, from the beginning of the printed of the case, from the beginning of the printed of the case, from the beginning of the printed of the case, from the beginning of the printed of the case, from the beginning of the printed of the case, from the beginning of the printed of the case, from the case, from the case, from the case of th record up to page 197, have no certificate of any kind nor any pretension to a certificate.

I also make the same assertion regarding every one of the six pretended depositions printed in the record from page 206 to 265.

I also make the same assertion regarding an additional six pretended

depositions printed in the record from page 302 to 330.

I also make the same statement regarding the fifteen pretended depositions printed in the record from page 328 to 398.

I also make the same statement regarding the two pretended deposi-tions printed in the record from page 404 to 413.

I also make the same statement regarding the three pretended deposi-tions printed in the record from page 443 to 456, and these are the forty-nine pretended depositions which were referred to in the motion to recommit found on pages 4501, 4502, 4503, and 4504 of the Con-GRESSIONAL RECORD, first session Forty-ninth Congress.

I assert that there was nothing in the record to show that the pre-

tended evidence of said pretended witnesses was taken as required by the laws of Congress.

Take one of these forty-nine illegal papers, called by the contestant epositions. Take that of William Wallace, page 215. The heading reads as fellows:

William Wallace, being duly sworn to tell the truth, the whole truth, and othing but the truth, by Robert W. Figg, esq., before whom this examination being held, deposes and says as follows:

Then follows a series of questions and answers, and among them is a statement by the witness that he can not write, and finally at the end we see the words:

 $\begin{array}{c} \text{his} \\ \text{WILLIAM} + \text{WALLACE}, \\ \text{mark}, \end{array}$ 

As to who put the words there the record is silent. The statute of Alabama says that-

Signature or subscription includes mark when the person can not write, his name being written near it and witnessed by a person who writes his own name

And the supreme court of Alabama has decided that such an affix as appears to the paper above mentioned is not a signature at all.

So far from having proof that these pretended depositions were taken as required by law, the proof is positive that they

WERE NOT LEGALLY TAKEN.

It shows that, in violation of the Federal statute (section 122)-First. They were not written out in the presence of any person au-thorized by law to act as commissioner, and were not duly attested in his presence, as required by section 122

They were not certified and sealed and transmitted by mail to the Clerk of the House of Representatives as required by section 127.

The proof shows that many changes were made in the depositions

after they had been taken, and many other wrongs and errors were committed. These facts may have prevented the commissioner from attaching a certificate, as he certainly could not have truthfully attached a proper certificate to them. I also assert that the one hundred and ten papers called depositions had no certificate of any kind whatever except as follows:

Signed before me on the day and year above written.

ROBERT W. FIGG, N. P.

THE AFFIDAVIT.

The committee in more than one case committed themselves to the proposition that parties to election cases must place their evidence before the committee as required by law.

The chairman distinctly stated in his speech of July 20, 1882, that otherwise

You simply turn the committee into legal advisers of the parties litigant

After committing themselves to that principle they, so far as the record shows, without any application from the contestant, take the matter in their own hands, and without the knowledge of the contestee they themselves send nearly a

THOUSAND MILES TO GET AN EX PARTE AFFIDAVIT.

To use the language of the member of the committee from Wisconsin [Mr. HAZELTON]-

We sent down there to the officer and got a certificate.

The paper which the gentleman from Wisconsin [Mr. HAZELTON] calls a certificate was the main pillar upon which the case of the contestant rested. Without that he had not a particle of legal evidence to maintain the material allegations of his notice of contest, and the committee did not have a particle of legal evidence to maintain the material allegations of their report.

The same gentleman says:

It was sworn to there and it comes back here, and not only covers that deposition, but covers other depositions in the case.

A few days before the case was called the contestee heard of this paper and called daily upon the clerk of the committee and asked for it. He was told by the clerk that he

#### HAD NO SUCH CERTIFICATE:

that it had not arrived; contestee's last application to the clerk of the committee was the day the case was being argued before the House, and the clerk repeated that no such paper was in the hands of the committee. After the case had been argued, and after the previous question had been called and while the chairman of the sub-committee who made the report was closing his speech; after the mouth of every member of the House but his had been closed and to make that closing effectual and hermetical; after the gentleman who had the floor had refused to be further interrupted, this remarkable paper was for the first time pro-It contained several sheets of paper; contestee asked to see it, but before he had read ten lines it was called for; and all that the Democrats in the House were allowed to know concerning said paper were the statements regarding it made by the gentleman from Wisconsin [Mr. HAZELTON], and it was not until thirty-four days after the contestee was driven from the halls of Congress that this side of the House

### PERMITTED TO KNOW

what that important paper contained. Suspecting that it was a piece of forgery or perjury the contestee asked, as the RECORD shows (see CONGRESSIONAL RECORD, Appendix, page 483), three different times "to have it read," and three different times gave as a reason for having it read that "the clerk of the committee said there was nothing of the sort here [or there]."

Yet while the contestee was earnestly but respectfully appealing to the gentleman from Wisconsin and the House for information as to what was contained in this paper, which was to deprive him of the seat to which he had been fairly and honorably elected, it was given to the reporter with the words: "Here, reporter, take this and print the whole of it." [Laughter.] See RECORD, Appendix, page 483.

The paper

## WAS WITHHELD UNTIL THIRTY-FOUR DAYS

after the contestee had been unseated, and then for the first time it came to light. He first saw it on July 10, and I here assert that said paper which the gentleman from Wisconsin [Mr. HAZELTON] says foreclosed the contestee, and which he referred to as "covering all the cases," and to which he alluded in these words:

And not only covers that one deposition but every other deposition in the case and ends the question—

this clinching document, for which the same gentleman said his "committee sent down there [to Alabama] and got," and which no Democrat was allowed to see—I assert, Mr. Speaker, that the essential and material statements in said paper were the opposite to the truth; they were untrue, they were false; and therefore I assert that the paper was

PIECE OF FORGERY OR A PIECE OF PERJURY

In other words, if the paper was sworn to by Robert W. Figg, as is

alleged, it was perjury.

If it was not subscribed and sworn to by said Robert W. Figg it was Therefore the incontrovertible fact exists that a paper was used which was either perjury or forgery to deprive a member of this House of his seat as m representative of the people.

The record which it is claimed was made by Mr. Figg shows that the

certificate made by him and printed on page 1263 of the record in the case of William M. Lowe vs, Joseph Wheeler.

# DID NOT RELATE TO ALL THE DEPOSITIONS

taken before him as notary public in said case. It required no other proof to establish this fact, but I have sworn proof which I will read to further sustain this proposition. It is an affidavit of the clerk of the Committee on Elections, together with my own affidavit. The rec-

ord and the proof show beyond question that said certificate was only attached to four depositions.

The certificate referred to, printed on page 1263 of the record, reads:

In the eighth Congressional district of Alabama, Madison County, at Huntsville.

In the eighth Congressional district of Alabama, Madison County, at Huntsville.

I. Robert W. Figg, a notary public in and for said county and State, before whom the foregoing depositions have been taken, do hereby certify that the said witnesses are known to me to be the identical persons named in the notice to contestee, and subpoenas thereunto attached, and said witnesses were first duly sworn by me to speak the truth, were examined as above stated, touching a cause pending before the House of Representatives of the Congress of the United States of America, wherein William M. Lowe is contestant and Joseph Wheeler is contestee for a seat therein; that their evidence was taken down in their own language by Charles A. Buell, stenographer, was fully approved and attested by said witnesses in my presence on the days, respectively, asshown above in said depositions. And that I am not of kin or counsel to either of the parties in said sause, nor in any way interested in the result thereof.

In witness whereof I hereunto set my hand and official seal of office, in the city of Huntsville, district, county, and State aforesaid, on this the 16th day of March, A. D. 1881.

[SEAL.]

ROBT. W. FIGG, Notary Public.

The notice referred to in the above certificate, which was the only notice pursuant to which the deposition was taken to which the said certificate was attached, reads:

Pending in the House of Representatives of the United States.

William, M. Lowe, contestant vs. General Joseph Wheeler, contestee.

To General Joseph Wheeler, contestee:
You are hereby notified that on the 16th day of March, 1881, I will begin, between 8 o'clock a. m. and 3 p. m., and continue from day to day, to take testimony in the above-named cause, before Robert W. Figg, at the United States court-rooms, in Huntsville, in the county of Madison, State of Alabama, and shall examine the following-named witnesses, and many others; James H. Bone, William M. Lowe, Richard H. Lowe, Joseph H. Sloss, Huntsville, Alabama.

DAVID D. SHELBY Attorney for

(Indorsed:) William M. Lowe vs. Joseph Wheeler. Notice. (R. H. L., Exhibit No. 1.)

Executed by serving a copy of the within notice on Joseph Wheeler, contesfee, on this the 10th day of March, 1881.

R. H. LOWE.

No. 97. It will be observed that this certificate states that it refers only to the four depositions named in the notice; therefore it could not by any possibility legally or in any way whatever include any others.

I will read the alleged affidavit of Robert W. Figg, which was used to deprive me of my seat, and will then read the affidavit of Mr. Paul, who was the clerk of the Committee on Elections, to which I add my own affidavit, and I request the Public Printer to print them side by side. The Figg affidavit I take from the CONGRESSIONAL RECORD, first session Forty-seventh Congress, Appendix, page 483.

Here, Mr. Reporter, take this and print the whole of it. [Laughter.]
The certificate is as follows:
Circuit court of the United States for the northern district of Alabama

STATE OF ALABAMA, Madison County :

Circuit court of the United States for the northern district of Alabama.

STATE OF ALABAMA, Madison County:

Personally appeared before me, A. W. McCullough, a United States commissioner of said court, Robert W. Figg, who, being duly sworn, deposes and says: That the certificate signed by him, and printed at page 1263 of the record in the case of William M. Lowe ex. Joseph Wheeler, was duly made by him and was attached to and relates to all of the depositions taken before him as notary public in said cause, to wit: The depositions of Thomas W. White, record, page 37; William L. Goodwin, record, page 42; Nicholas Davis, record, page 47; Joseph H. Sloss, record, page 135; Lockard Promas B. Hopkins, record, page 110; Robert Brandon, record, page 128; Lockard Hibb, record, page 147; Edward C. Lamb, record, page 148; Robert J. Wright, record, page 149; William L. Christian, record, page 147; George W. Maples, record, page 149; William L. Christian, record, page 148; Robert J. Wright, record, page 147; Edward C. Lamb, record, page 148; Robert J. ROBT. W. FIGG.

Subscribed and sworn to before me this 24th day of March, 1882.

A. W. McCULLOUGH,

Mr. WHEELER. That is the first time our side ever heard of that

I will also read the affidavit which flatly contradicts the material statements contained in the above paper. The House will please bear in mind that this paper I have just read purports to be an affidavit of R. W. Figg, the commissioner before whom it is alleged most of contestant's depositions were taken.

I will now read the affidavit of Mr. Paul, the clerk of the Committee on Elections, which shows that the material allegations in the Figg

affidavit are false:

CITY OF WASHINGTON, District of Columbia:

affidavit are false:

City of Washington, District of Columbia:

Before me, Charles B, Beall, personally appeared Nathaniel S. Paul, who, being duly sworn, asys that during the latter part of December, 1881, and January, 1882, and several succeeding months of 1882, he was the clerk of the Committee on Elections of the House of Representatives. That it was a portion of his duty to open the packages of evidence in the various contested-election cases which were presented to the House.

That on Saturday, December 31st, 1881, he opened the packages containing evidence in the case of Lowe vs. Wheeler. That the evidence in behalf of contestant, Hon. William M. Lowe, contained a great number of depositions, each of which depositions were separate by themselves and not in any way fastened to each other. His recollection is that there were some sixty or more packages or parcels of separate or single depositions of contestant. By examining the printed record he sees that the numbers he placed on the said packages or reparate parcels were in most instances printed in the record, and with these numbers to refresh his memory, he says: That the deposition of Thomas W. White, record Lowe vs. Wheeler case, page 37, was separate and was not attached to any other deposition; and that the deposition of William L. Goodwin, page 42, was separate and was not attached to any other deposition; and that the deposition of J. H. Sloss, page 55, was separate and was not attached to any other deposition; and that the deposition of J. H. Sloss, page 55, was separate and was not attached to any other deposition; and that the deposition of J. H. Sloss, page 55, was separate and was not attached to any other deposition; and the makes the same statement with regard to the deposition of J. H. Sloss, page 55, was separate and was not attached to any other deposition; and the makes the same statement with regard to the deposition of Junes A. Pickard, page 161, Nother Page 173; Lowe 187; Robert J. Wright, page 147; Edward C. Lamb, page 149; William

Subscribed and sworn to before me this 25th day of January, A. D. 1883, CHAS, B. BEALL, Notary Public.

CITY OF WASHINGTON, District of Columbia:

CITY OF WASHINGTON, District of Columbia:

Before me, Charles B. Beall, personally appeared Joseph Wheeler, who, being sworn, says that he was present on December 31, 1881, when the depositions referred to in the above affidavit were opened and prepared to be sent to the printer by Nathaniel S. Paul. Affiant has carefully read the above affidavit and he states that he knows the facts therein stated to be true. Affiant further states that the pretended certificate on page 1263 of the record was attached to the deposition of William M. Lowe, and it was not in any way attached to any one of the other depositions referred to in the above affidavit of Nathaniel S. Paul. Affiant further states that he was present at Lanier's store on January 25, 1881, when the depositions of George Ragland, page 197, and James Jones, page 203, and Alex. Jamar, page 203, were taken, and affiant states that Robert W. Figg, eeq., was not present nor anywhere near the room when said depositions were taken. Affiant further states that said depositions were not taken before said Robert W. Figg.

JOSEPH WHEELER. JOSEPH WHEELER.

Subscribed and sworn to before me this 25th day of January, A. D., 1882.
[SEAL.]

CHAS. B. BEALI.,

Notary Public

It is here proven that the Republican party must for all time bear the odium of having deprived a regularly elected member of this body of his seat and a hundred thousand people of their representative rights upon papers which were never allowed to see the light until after the previous question had been called and after the mouth of every Democrat had been closed, and then in addition it must bear the terrible odium of the crushing exposure that every material point upon which they relied in these papers was basely false, and that every essential thing which they claimed was proven by them was in every

respect untrue, and that, therefore, the papers thus secretly held back

PERJURIES OR FORGERIES.

I will now say one word regarding the unwarranted and unjust decision of the Republicans of the committee regarding—

The SPEAKER. The time of the gentleman has expired.

How much time have I remaining. The gentleman has fifteen minutes. Mr. MOULTON. The SPEAKER.

Mr. WHEELER. The gentleman from Pennsylvania [Mr. MIL-

LER] yielded me five minutes of his time. The SPEAKER. The gentleman has The gentleman has not now the floor to yield

Mr. MOULTON. I yield to the gentleman two minutes

Mr. MILLER. I will yield the gentleman five minutes of my time.

#### MOORESVILLE BOX

Mr. WHEELER. The record, page 816, in the Lowe vs. Wheeler ase, shows that one of the State officers of election was a Democrat and the other two were Greenbackers or Republicans, and that all the Federal officials were Greenbackers or Republicans. This evidence is given witness who states the following as his reasons for knowing the politics of these persons:

I have lived in that beat for the last thirty-three years; have been a justice of the peace for thirty-one years; have been deputy tax collector for the last ten or twelve years; was census enumerator last year and have visited every house in the beat, and know every person who has been in the beat for any length of time. I have also acted as deputy assessor and have been a merchant.

And in reply to a question by Colonel Lowe's attorney, says:

My facilities for knowing were that I knew all the people down there and talked with them, and learned their political sentiments and what they were going to do, and it was no guess-work with me.

The law of Alabama says that the poll-lists shall be made in duplicate, each being made at the same time by different clerks. Both polllists are originals, and each stands with equal dignity as evidence. law directs that one be sent with the returns to the probate judge, who becomes its custodian, and that the other be sealed up in a box with the ballots and placed in the hands of one of the inspectors, who be comes its custodian, for the special and only purpose of its being called for to be used as evidence in case that the election is contested.

The probate judge of Limestone County was placed on the stand as a witness, and testified that the inspectors of Mooresville box (two of them being opposed to the Democratic party) did not send any poll-list to his with the returns. We then summoned the inspector of the election who was the custodian of the other poll-list. He appears before the commissioner, takes out the poll-list, and swears that it is the original poll-list of Mooresville box for the election in question, and that he is the custodian of said poll-list. We proved by that poll-list that 189 persons voted at that election who were not legal voters. This includes minors, convicts, and other persons who had not registered. We proved by the probate judge that the list of registered voters we presented included all the registered voters of the box, including the men who were registered on November 2, 1880, and we proved by Mr. Marten that 75 more persons were on the poll-list than there were on the registration-list. The vote returned at that box was—Wheeler 90, Lowe 619.

We prove positively the names of the 90 persons who voted for Wheeler, all of whom were legal voters in every respect. We then prove positively that 189 illegal voters cast their votes for Mr. Lowe, leaving many more regarding whom nothing could be learned, showing that they were fictitious names assumed by colored men who voted a second or third time, or that they were the names of men who were

imported for the purpose of illegal voting.

With this positive, overwhelming, and uncontradicted evidence of fraud, Mr. McCrary and all law writers say one of the following rules must be adopted:

First. Reject the poll, which would have made a change in my favor of 529 votes.

Second. Deduct all from him who has a majority at the poll, which

would have changed the vote in my favor 189 votes.

Third. Deduct the illegal votes pro rata, which would have changed the vote in my favor 137 votes.

This last rule was adopted by the gentleman from Massachusetts [Mr.

RANNEY] in the Bisbee case.

It did seem that we had everything essential to prove a fraudulent election at this poll established beyond question, and the cross-examination of the witnesses had only made their evidence, if possible, more conclusive.

The report submitted by the gentleman from Massachusetts [Mr. RANNEY] sweeps away with one stroke of the pen all the evidence by which it proved 189 illegal votes for the contestant.

He says, because the inspectors of Mooresville box (two of them being Greenbackers) failed to send a poll-list to the probate judge, that—

The conduct of the inspectors is the subject of grave distrust, and "the alleged discrepancies" are so great that the rejection of the evidence is fully warranted.

In other words, the remarkable principle of law is announced that at a box where a majority of the State officers and all of the Federal officers of election are Greenbackers, and where the duty is neglected of sending the poll-list to the probate judge, and therefore an obstacle is interposed which made it difficult to prove that 189 illegal votes were cast for the Greenback candidate, the failure of duty on the part of Greenback officials subjects the Democratic officer of election to such grave distrust that his evidence will not be regarded as worthy of credit; and it is also laid down that as so great an amount of fraud has been perpetrated in favor of the Greenback candidate, therefore the Demo-crat can not be trusted, and "the rejection of his evidence is fully warranted."

Here are two valuable principles of law established: First. The fact that a violation of law on the part of the Greenbackers justified their Republican allies in refusing to consider any testimony

from Democrats which would expose the fraud.

Second. While the court might consider a case where the proof shows one or two illegal votes for a Greenback ally, yet where the uncontradicted proof shows so stupendous a fraud as the counting of 189 votes of illegal voters for the Greenbacker, the magnitude of the fraud is so great that it elevates the case to a dignity which the great party of a proportion of the great party of t

moral ideas regards as worthy of the most sublime admiration.

This second principle is simply an enunciation of the doctrine now fully established in some of our moral-idea courts, namely, when a poor, ragged, hungry devil steals a piece of bread or cheese he shall be imprisoned, but when a well-clothed and well-fed man steals from fifty thousand to a million dollars he shall be worthy of all honor.

This, Mr. Speaker, is one of the results arrived at by this eminent judge of the modern Athens of modern Greece.

I will now make some allusion to the report submitted to this House by this gentleman [Mr. RANNEY] in the case of Jones rs. Shelley during this session. The report appears to be based solely upon a memorial which purports to have been presented to the Committee on Elections by a colored man, calling himself John W. Jones, who claims to have been a candidate for a seat in the Forty-seventh Congress from the fourth Congressional district of Alabama at the election held November 7,1882. The report based upon the memorial of said Jones claims that certain returns were rejected and not counted by the county commissioners, and the report says:

Some of the returns were rejected by the county commissioners; some because the poll-lists were not duly certified by the inspectors, and some because no registration-lists of electors registered on the day of the election at the polls were not returned, although it did not appear that there were any such.

The report now before the House apparently admits that the polllists referred to were not certified, and that the registration-lists were not returned by the inspector as required by law, and the allegations of the report show that the county canyasser had no proof that a fair election had taken place. It is most probable they had been studying a decision by a distinguished judge and a member of Congress. They probably had before them the report of Mr. RANNEY, of Massachusetts, in the case of Lowers. Wheeler. In that case Mr. Wheeler had introduced the probate judge of Jackson County as a witness. The judge, on his oath, produced copies of a great number of poll-lists, each of which he certifies to be "a full, true, and complete exemplification of the poll-list of said beat."

The judge then testifies that the poll-lists he presented in evidence were the poll-lists of the beats as stated and certified by him. The opposing lawyers enter an objection to a part of the questions and answers thereto, but make no objection whatever to the poll-lists or the evidence of the judge regarding them. Therefore if any objection existed it was waived by the act of contestant's attorney. The gentleman from Massachusetts [Mr. RANNEY] says that poll-lists so thoroughly roven as these were "can not be regarded as proof." (See twenty-first

line, page 35.)

Now, there was no proof before the gentleman from Massachusetts [Mr. RANNEY] that the poll-lists in the Lowe rs. Wheeler case were not certified by the inspectors, and the presumption is that they were. Inspectors very frequently write the returns and poll-lists on the same

paper, and when one sheet is too small several sheets are pasted together. making one large paper, and they at the same time certify as to the poll-list and tally-sheet and the returns.

It has always been the custom for probate judges or other officials who by law are made the custodians of returns to certify to the result of the election in their county by extracting the essential information from the various returns which have lawfully come to their possession, and from them compiling the results in one paper, which is usually, when practicable, put in tabulated form.

For instance, when a probate judge presents to Congress a certified statement of the returns from his county, he does not send up a certified copy of each return from the various precincts, each of which is certified by the inspectors of such precincts (and each of which may and frequently does contain the tally-sheet and poll-lists), but he takes all these returns, satisfies himself that they are correct, extracts from them what is necessary, and then taking what he has extracted compiles a tabulated statement, and he certifies this to be a correct return of the votes east in the county, and no one has ventured to say that such a return is not evidence of what it purports to recite.

Of course, if there were mistakes or errors of any kind this return would be assailed and impeached, but certainly the burden of proof is upon the other side to show that the return is not correct. If a copy of the poll-list is required of the probate judge he copies the poll-list out and certifies it to be a copy of the poll-list.

If a copy of the returns is required of him he copies the returns out and certifies it to be a copy of the returns.

In neither case is it necessary for him to include the certificates of the inspectors or anything else beyond what was required of him. In the case of Lowe vs. Wheeler we see this is the course pursued with regard to the certified papers put in evidence by Mr. Lowe. pages 464 to 470 of the record just such compiled statements of the votes of the several counties, and in none do we see any return certified by any inspectors.

In this case Judge Talley, adopting this plan, first certifies that each poll-list is the poll-list of the precinct referred to.

This is all the proof which is required by law. It is all that the committee has required of contestants.

Mr. Wheeler might have stopped there, but it seems he did not stop; he takes the deposition of Judge Talley, and the judge testifies that the poll-lists he puts in evidence are the poll-lists of the precincts he certifies them to be; but, as before stated, what makes it stronger, the opposing lawyers enter a long objection to the questions propounded to Judge Talley, but said objection does not in any way refer to the pollists or make any objection to them; therefore it is clear that even it valid objections existed they were waived when objections were made to other parts of the question without making any objection to the part of the question which asked for evidence regarding the poll-lists.

The poll-list which the gentleman from Massachusetts [Mr. RANNEY] says the county commissioner declines to regard as proof had less than Mr. Wheeler might have stopped there, but it seems he did not stop

says the county commissioner declines to regard as proof had less than one-hundredth part of the evidence of validity which was possessed by the poll-lists which under a similar law the gentleman from Massachusetts [Mr. RANNEY] says "can not be regarded as proof;" and for the purpose of argument on this point I will not make any insinuation that he was actuated by partisan motives in the Lowe vs. Wheeler case, but I would say if he was right in that case then eminently one hundred fold more right were the county commissioners in the Jones vs. Shelley

The minority of the committee, in their report in answer to Mr. RAN-NEY, Say:

The continuous cry of fraud rgainst elections in the South is itself becoming a fraud. On this theory the Elections Committee, consisting of eleven Republicans and four Democrats—a majority of two-thirds-and one to spare—vindicated the fundamental principles of republican government at the last session by unseating General Shelley, who had been elected by over 3,000 majority. They vindicated the same great and essential principles by ousting Mr. Finley, Mr. Dibble, Mr. Wheeler, Mr. Tighman, and others, but their appeal to the country resulted in ousting the ousters, and returned to their places again most of the victims of this unholy crusade with an overwhelming Democratic majority at their back.

will now refer to another inconsistency.

In the case of Bisbee vs. Finley, the committee decided (RANNEY's report, page 19) that a return of election "not signed by the officers of election is illegal, and no votes stated therein can be counted."

In this case a Democrat received ten times as many votes as the Re-

publican, and the committee deduct the votes from the official count;

thus deducting ten Democratic votes to one Republican vote.

In the case of Lowe vs. Wheeler, from Alabama, where the law was substantially and almost precisely the same as the Florida law, the committee turn a somersault and reverse this decision, and count a poll for a Greenback Republican, upon a paper purporting to be a return which showed that all the votes were for the Greenbacker and none for the Democrat; and this, too, when there was not a particle of proof that any election at all was held at that precinct.

Now, I insist that the committee was

WRONG IN ONE OR THE OTHER OF THESE DECISIONS;

and I ask, how can the honorable gentleman whose interests are involved repose confidence in and expect fair play from a committee which presents to this House two reports the same week, yes, the same day, one exactly the reverse of the other? I might go on and show that they turned other somersaults in like decisions in the cases of Lynch vs.

Chalmers and Smith vs. Shelley.

There is, in fact, but one thing in which we find the committee consistent; they were consistent in deciding nearly every essential ques-

tion against the Democratic member.

I would like to be able to acquit the gentleman from Wisconsin [Mr. HAZELTON] of

INTENTIONALLY DOING ME INJUSTICE,

but the course he pursued makes it impossible for me to do so.

Information as to when my case would be argued, and the nature of the decision of the sub-committee and many other facts first came to me through the headquarters of my opponent, and not directly from the committee. In nearly every case the full thirty days were allowed the contestee to prepare his brief. If in any case this was proper, my case

was eminently the one where it should have been granted, because the voluminous record was such that in less time the preparation of a brief was impossible. Yet with all these facts and the additional fact that it was impossible for the brief to be printed within the time, the sub-committee curtly refused an extension, and ordered that the argument should be commenced; and although the committee allowed contestant's attorney all the time of the first sitting and nearly two hours at the second sitting, they refused to allow contestee's attorney a moment beyond ninety minutes, and cut the contestee off in his argument after he had spoken less than seven minutes.

Worse than that. During the argument on nearly every point the committee indicated that they fully agreed with several principles and conclusions of law and fact which the lawyers of the contestee announced, which of course caused them to cease arguing points admitted by the court; and yet in their report they decided all these points contrary to the intimation given during the progress of the argument.

All that was said during the hearing of the case by the committee

was taken down by a stenographer, and I therefore give the exact words.

Mr. Shelby, one of the attorneys for Mr. Lowe, during his argument

made this remarkable and unwarranted assertion:

So far as regards the ballot and counting, Congress has made up its mind on it and taken the control of it from the State.

Neither the chairman nor any one else could see any law to justify such an erroneous assertion, and the chairman [Mr. HAZELTON] said, in an interrogative and sarcastic manner:

Has absorbed that special branch of the question; that is your idea? Mr. Shelby. Yes, sir.

Mr. Shelby then went on trying to argue that decisions of the Supreme Court upon State laws which had for their purpose the regulation of commerce were applicable to State laws which regulate elections, apparently thinking that the lawyers on the committee were ignorant that their utter inapplicability was evident from the fact that the Constitution of the United States specially gives Congress, not the States, the power "to regulate commerce;" and that the same authority directs that the "manner of holding elections for Representatives shall be prescribed in each State by the Legislature thereof."

While it is true that Congress is authorized to alter such regulations, yet it is also true it has not done so, except by stating that elections shall be by ballot, and that in certain cases certain persons shall not

be proscribed from voting.
To meet this view Mr. Shelby read as follows:

The act of Congress relied on is that of the 17th February, 1798, providing for the enrollment and license of vessels engaged in the coasting trade. The force and effect of this act was examined in the case of Gibbons vs. Ogden (9 vol., pages 210, 214), and it was there held that vessels enrolled and licensed in pursuance of it had conferred upon them as full and complete authority to carry on this trade as was in the power of Congress to confer.

Mr. HAZELTON, Nobody denies that that is the law.

This was said in an impatient manner, indicating that while no one denied it, yet it had no applicability to the election law. In his argument Mr. Shelby had read a part of the Siebold case, and unfortunately admitted the untenability of his position by stumbling on these words:

The paramount character of these laws made by Congress has the effect to upersede those made by the State as far as the two are inconsistent and no

This showed at once that the laws of Congress did not supersede the laws of a State unless there be a conflict. The committee adjourned after hearing Mr. Shelby and at the next meeting, after, as before stated, giving the contestee's attorney ninety minutes, they listened with great attention to Mr. Jones, another of Mr. Lowe's lawyers. This gentleman, finding himself overwhelmed with the proof that more than a thousand illegal unregistered voters voted for Colonel Lowe, insisted that registration was not required of voters by the constitution and laws of Alabama, and in support of that view he asserted that it had been the practice of the people to vote in Alabama without registering. The contestee gave Colonel Lowe full and due notice of these illegal

unregistered voters in his answer, which was served on Colonel Lowe,

December 16, 1880.

He charged that two thousand persons who voted for him were not registered, and that they did not have the right to vote for the reason

they were not registered.

Many of these illegal, unregistered voters were persons who were not residents of the State, or they were minors only 17 to 19 years of age, or they were convicts, and therefore not permitted to register, or they were persons who had registered under another name, or they were persons who lived in other precincts and therefore could not register in the precincts where they voted; and some were persons who declined to register for the reason that they feared it would tend to call the taxcollector's attention to their names and thus make it more difficult to avoid the poll-tax. Many of them were illegal voters for reasons other than because they were omitted from the registration-list.

The contestee, during the forty days which the law gave him to take evidence, took the evidence of the probate judges, and he served notices on the contestant that he would place the registration-lists and poll-lists

in evidence, and he did so place them in evidence, and took proof regarding said registration-lists and poll-lists.

The witnesses gave the names of hundreds of persons who voted for Colonel Lowe, and who were not registered.

The contestee then placed certified and sworn copies of the registra-

tion-lists and poll-lists in evidence, and the contestant did not prove that a single one of these unregistered voters had been deprived of the full opportunity to register.

He did not do this, because he could not do it.

Colonel Lowe's lawyer knew that the charge of the contestee was true, and he therefore, as a last resort, having no other ground to stand upon, urged that the constitutional provision was a nullity, and it was not the

I give his exact words as taken down by the stenographer:

Mr. RANNEY. Has it been the practice of the people there to vote without registering?
Mr. Jones. Yes, it has been the practice.

Mr. HAZELTON then said:

Did they have to make an excuse for not registering?

This question was not answered.

I had placed before the committee undisputed evidence that the illegal voters had voted for my opponent. I will refer to the pages of some of the evidence which proved

HOW ILLEGAL VOTERS VOTED.

Mr. McKernachan testified, page 969, that 25 of these illegal voters voted for Mr. Lowe, at Florence, November 2, 1880, and when a witness for Mr. Lowe, page 1391, he testified that he saw the name of William M. Lowe on the ballots when they were handed to the inspectors.

Gilbert Johnson, page 967, testified that 50 of these illegal voters voted for Mr. Lowe for Congress. His testimony is positive and uncontradicted. He gives the name of each person, and testifies that they voted for Mr. Lowe for Congress. Quintus Jones, page 1081, gives the names of 189 of these illegal voters, and testifies that each and all of them voted for William M. Lowe for Congress, November 2, 1880.

A. D. Lewis, pages 892 and 893, and W. K. Houston, page 895; H. C. Hyde, page 900; Benjamin Jones, pages 902, 963; George W. Miller, pages 500] and 510] Oliver H. Reid, page 1131; J. Milton Gray, page 1132; W. D. Burnett, page 1159, gave the names of more than 100 of these illegal voters, and they testified positively that each and all of these persons voted for William M. Lowe. Twenty-two of Mr. Lowe's witnesses each swears that they voted for Mr. Lowe at Meridianville box No. 2, and all of these persons are proven to be illegal voters. We might search further, but here we have cited the House to direct, positive, and uncontradicted evidence that over 1,000 of these illegal voters voted for Mr. Lowe. We insist that more positive, direct, unimpeached evidence regarding at least 1,000 of the persons could not be imagined. It is primary evidence, and besides it is frequently corroborated by two and sometimes three witnesses, some of the witnesses being those of Mr. Lowe, and in no instance has Mr. Lowe's array of lawyers been able to contradict this direct and positive evidence in a single instance or with reference to a single voter.

In his effort to reply to that evidence, Mr. Jones said (I take it from the stenographer's notes):

Now, what is the best thing to be done? Call the alleged illegal voter and ask him how he voted? If he declines to answer, then you can introduce your secondary evidence; but you must first lay the foundation. They have not done so in this case.

Mr. Ranney. Is this evidence you speak of what you consider primary evi-

Mr. Jones, Yes. Mr. Ranney, That does not answer my designation of it.

Mr. Jones attempted to evade the answer, and the chairman, Mr. HAZELTON, said:

What a man knows and sees another man do, do you not call that primary

Mr. Jones did not reply but turned the matter off and attacked some registration-lists because they were printed with type instead of being written with a pen.

The question was then asked:

Mr. Ranney. Do the printed names correspond with the poll-list?
Mr. Jones, No, sir.
Mr. Ranney. Are the names on the poll-list not in the registration-list?
Mr. Jones. A good many of them are not.
Mr. Hazelton. Now, why is it when these witnesses are brought up and inquiry made whether they are legal voters and their names are not on the registration, why is it that their names are not on the registration-list?
Mr. Jones. I can not say.

Mr. HAZELTON also said in the course of the argument:

When there is no legal registration there can be no legal voting.

The proceedings before the committee which sat, or at least ought to have sat, as a court, and which were taken down by a stenographer as the words fell from the lips of the parties, show that the committee admitted the correctness of the principles of law which governed the contestee's case, and in the report written by Mr. RANNEY after the argument was over he admitted that unregistered men were illegal voters and that their votes ought to have been deducted.

But he says the pleading does not justify it because the contestee did not set up non-registration as a ground for attacking the polls. Now, I will read what the contestee does set up. Here are the exact words

of Mr. RANNEY:

Contestee does not set up a want of legal registration as vitiating the election in any precinct; but alleges that persons not registered had no right to vote, and that all votes cast by such were illegal and must now be rejected.

Now, the minority report says that in making this statement Mr. RANNEY is mistaken. The following allegations are contained in the answer of contestee:

Contestee alleges that at the following precincts of Lawrence County, namely, Courtland, Red Bank, Avoca, Wolf Spring, Mount Hope, Kinlock, Landersville, Hampton's, Oakville, and Hillsborough, 450 persons were allowed to vote, and did vote, for contestant, who did not have a right to vote, for the reason that they had never been registered as required by law.

The proof shows that there was no legal registration at any of these precincts, and therefore all these should be rejected from the count, because where there is no legal registration there can not be legal voting.

I say that there can not be a more explicit statement that there was no legal registration than what has been read with regard to the Courtland precinct, and the same allegations are made with regard to the contributions are made with regard to other precincts; and if that position is sustained it would elect the contestee by over 3,000 votes instead of 2,000, as is shown by not counting these men whose names do not appear at all upon any list of any kind what-

This left the House but one of two positions to take. If the poll and registration lists were legal, then they were proof as to who registered and who voted, and as to who voted without being registered; and if they were illegal, if the registration was illegal, or was not as required by law, then, as the chairman of the sub-committee on elections that tried this cause asserted more than once during the argument, the elec-tion at that poll was null and void, and the result ought not to be counted. The only answer to that proposition is the one made by Mr. RANNEY, that we did not set up that point in the answer.

After that position was shown to be without foundation, and after it

was shown that the point was clearly stated in the answer of the con-testee, and that Mr. RANNEY was mistaken, it did seem as though there was no ground for maintaining the position taken by the committee

The evidence presented by the contestee was in all respects legal and primary

We also find that the probate judge of Lawrence County testifies in due and legal form that the registration-lists he attaches to his deposition are the registration-lists of Courtland precinct.

We also find in the record duly certified copies of the original registration-lists of the persons registered on November 2, 1880, at the following precincts:

Fit	ge.
Madison	625
	642
Meridianville, No. 2	642
	655
	685
Oakland	945
	941
Cherokee	436
South Florence.	427
	1171
	1177
Hampton's	
	118G
Avoca	
Wolf Springs.	1198
Maysville	609
Cluttsville	584
Brickville	1186
Moulton	1177
Centre Star	938
Cave Springs	954
	1153

All this positive evidence is not in any way contradicted by Mr. Lowe. This positive and primary proof that these men to the extent we claim are not registered stands without an atom of proof to controvert or contradict it.

The certificate of the probate judge, under his seal of office, is all that is necessary, and is all that is usual, but it will be seen that the contestee has in many cases gone beyond that and proved by evidence that

testee has in many cases gone beyond that and proved by evidence that the registration-lists were correct and complete.

The correctness of the lists is not denied or questioned.

Mr. RANNEY, of the committee, says it is possible that these certified registration-lists do not contain the names of all the voters. He says men may have moved away, and their names may have been stricken from the rolls, and after that they may have returned. We insist that even if this were so, such parties would be compeled to register again, and we insist that the certified and sworn reports of the product indees and we insist that the certified and sworn reports of the probate judges imply absolute veracity, and without proof to impeach them they must be taken as absolutely true.

The law did not require any further proof than this, but for our own satisfaction we procured certificates from the probate judges of the counties of Lauderdale, Madison, Jackson, Limestone, and Lawrence, which state as follows:

The lists of registered voters which were furnished Joseph Weeeler to be used as evidence in the contested-election case of Lowe vs. Wheeler were taken from the original registration-lists. The registration-lists had been increasing at every election, or nearly every election, and have therefore been constantly accumulating since the registry commenced in 1875. The persons who died and those who had become disqualified were included in the lists, and these lists having been accumulating for more than five years accounts for the large number of names on the registration-lists, and it shows why the number of registered voters at the various precincts exceeded the number of persons who vote at said precincts.

The next point considered in the committee was Courtland box No. 2. I will read the unanimous decision of the Democrats of the committee and House regarding this poll:

and House regarding this poll:

At Courtland precinct (the same place where the proof shows that there was no legal registration, and that one hundred and eighty unregistered persons cast eliegal votes for William M. Lowe) the preponderance of evidence decidedly shows that none of the inspectors were supporters of the party which sustained Mr. Wheeler, and Mr. Lowe's witnesses are compelled reluctantly to admit that they violated the law which required them to count the ballots immediately on the closing of the polls, and that they pretended to be occupied for nine hours in counting about 500 ballots, and then put the counted and uncounted ballots together in a rough box, and that one of their number took the box off and kept it until the next day, when a box was returned which contained some ballots which they counted in an illegal manner, and made a report that Mr. Lowe had received 419 votes, and that Mr. Wheeler had received 111 votes.

The proof also shows that this report was false, as the witnesses admit that Mr. Wheeler was polling a large vote (quite as large as that polled by Mr. Lowe) and some of the witnesses testified that he (Wheeler) polled two or three times as many votes as were counted for him.

Mr. Wheeler has proven, by uncontradicted and uncontroverted evidence of Republicans as well as Democrats, that over 200 persons voted for him at that box.

Mr. Wheeler's allegation with regard to this poll conforms to the proof, and we conclude that the box should not be counted.

We respectfully submit that we have never seen a case where the integrity of a ballot-box was more emphatically and essentially impeached, and where justice called louder for action.

While on this subject I will mention that in 1880 the vote at both

While on this subject I will mention that in 1880 the vote at both Courtland boxes as returned was: Lowe 611, Wheeler 235; and at Courtland box No. 2 it was: Lowe 419, Wheeler 111. Notwithstanding the difficulty of proving how persons voted, I beg to remind the House that I was enabled to lay before it positive proof that at my election in 1880 at least 225 legal votes were cast for me at Courtland box No. 2, while only 111 were returned, and I further proved that 189 illegal voters voted for my opponent; but then this remarkable committee, without any reason to justify their action, did not give me the benefit of the proof. The evidence shows that the sheriff of the county was my bitter politically. ical opponent, and at the election which returned me to this body not one of the inspectors at the two Courtland boxes were Democrats, and yet the vote at both boxes was, Wheeler 350, and formy opponent 282.

It should also be remembered that at Mooresville box the vote returned in 1880 was: Wheeler 90, Lowe 619. We proved that 215 of the 619 votes were illegal, and that more votes were counted than were on the registry.

There have been three elections since, and the opposition vote has been

200 less than the illegal vote returned in 1880. So also with regard to the vote at Triana. We proved over 200 illegal votes for my opponent at that box, and also proved that at the election which preceded that of November, 1880, the vote of the opposition was 200 less than that reported in November, 1880.

There have been three elections since; and at each of these elections

the opposition vote has been at least 200 less than the illegal vote of

When Courtland box No. 2 came up for discussion before the committee, Mr. Jones's only reply to the overwhelming proof against him was that the man who kept the box in his room, unlocked, during the night after the polls closed and before the votes were counted, was a Democrat; and therefore, says Mr. Jones, General Wheeler had no right

To this assertion Mr. PAUL, a Readjuster on the committee, made the following characteristic reply. I will give his exact words:

You are not sincere in saying that a man can not complain of a wrong done him by a man who has been a member of his party.

Mr. PAUL was right in this opinion, but Mr. Jones was wrong in his statement that the man who had the box all night was a Democrat. The proof shows that at previous elections he had opposed the Democratic party, and I assert that at elections since the one in question he has been a most earnest and active worker against Democratic candi-

With all this, the committee make a report in which they accord to the contestant substantially everything he asks; yes, I believe everything which his brief claims, whether supported by allegations of notice or not—even when proven by perjury, even when sustained by documents and exhibits which the evidence before the committee showed to be forged, even though based upon papers which were not depositions, and even though based upon no evidence whatever.

And after thus making out the contestant's case, the committee sweep away the uncontradicted, primary, and overwhelming proof of the contestee, which showed his majority to be at least 2,841, with scarcely a comment. They say:

The contestee has adduced a great mass of testimony and presented briefs of extraordinary length, but has, in our opinion, failed to sustain his case. His proofs fail to sustain his allegations. In regard to minors and non-residents, the marer statement of a witness that am elector is one of this class seems to be the sole reliance of the contestee. This is not sufficient.

For the benefit of this and future generations I will state the character of evidence which this extraordinary tribunal refuses to consider. The facts proven by the samples of evidence I give were not in any way questioned, and no evidence was introduced to in any manner contra-I will read the exact words of witnesses

John Wilson was not a resident of Alabama; he lives in Tennessee, and he sever pretended to claim this as his home.

Wesley Phillips was a non-resident of the State of Alabama; he lives in Ten-

Squire Holsten was a non-resident of the State of Alabama; he lives in Geora, and is an illegal voter.

John O'Neal was a non-resident of the State of Alabama; claims his home

John O'Neai was a non-resident of the State of Alabama; claims his home in Georgia.

Berry Blair was a non-resident of the State of Alabama; lives in Tennessee; was an illegal voter.

The witnesses also testified that all the non-residents whose names they gave voted for William M. Lowe, and all these names are found on the poll-lists.

We could go on with these details, but space forbids

It is evidence of this character which the majority of the committee say is "not sufficient." They also say "His (Wheeler's) proofs do not sustain his allegations.

Could it be possible to give more positive proof than that? By this character of evidence we prove that eighty-one men who were working on the Shoals Canal and were residents of Tennessee and North Carolina and Georgia voted for the contestant. Certainly no one will contend that such a person is a legal voter under the laws of Alabama. And this evidence is not in any way controverted by any other evidence But the majority report does not deduct a single one of in the cause. these votes from the vote of the contestant.

Again, on the question of votes of minors. We allege in our answer that minors voted for Mr. Lowe at various precincts, and we put in proof of this character:

Mr. Lewis swears that Jack L. Armestead voted for Mr. Lowe; that he had known him for ten years, and when he first knew him he was not more than for 7 years old. He also swears that Berry Coager voted for Lowe; that he had known him for twelve years, and when he first knew him he was not more

than 6 years old.

On page 894 of the record I proved that James Chandler was only 18 years old. Also, page 899, that Robert Smith was only 20 years old, and that Ephraim Springer was only 20 years old. All of these persons the proof shows voted for Mr. Lowe.

This is the character of the uncontradicted evidence which I produce to show that minors voted for William M. Lowe.

By such evidence I proved that voters who were minors, their ages varying from 17 to 20 years, voted for Mr. Lowe; yet the majority report says that there is no evidence showing that these minors voted.

Then again, with regard to convicts. We prove by the magistrates who convicted certain men that they were convicted; and we prove

also that they voted for the contestant.

Is it surprising that with all this overwhelming evidence in my favor I should have felt that Congress could not array sufficient members to vote me out of this Hall? I admit I felt confident that when the facts were known it would be impossible to draw the party line upon me. I know there were very many Republicans who desired to act conscientiously, but with all the pressure of party and the assertion of my opponent's friends that he would Mahonise Alabama, the execution of the caucus decree was inevitable. With all the party hope and desire for success in the South which would make up for losses they foresaw would befall them in the North, I now believe they would have voted my opponent in and myself out no matter what proof had been placed before them. It is hard to see how it could have been much more favorable to myself; but still, favorable as it was, a few words from a Republican committee were all that was necessary to dispose of the entire question.

It would be impossible, Mr. Speaker, at this time to enumerate all the wrong perpetrated in the preparation of and adoption of the report in that case, but to give some idea of them I will read the resolution to recommit which was supported by every Democrat in the House of Representatives. I will read from the RECORD, first session of the Fortyseventh Congress:

The SPEAKER. The regular order will be followed. The gentleman from Wisonsin moves the previous question. Pending that the gentleman from Illinois noves to recommit this case to the Committee on Elections with instructions. Mr. SPRINGER, I offer the resolution which I send to the desk and ask the lerk to read it.

The Clerk read as follows:

"LOWE VS. WHEELER.

"Lowe vs. WHEELER."

"Whereas forty-nine papers called depositions which are offered in evidence by the contestant in this case were never certified to be depositions by any commissioner, nor certified in any way whatever; and "Whereas fifty papers called depositions in this ruse have no signature recognized by law; and "Whereas one hundred and twenty depositions offered by contestant in this case have nothing on them or connected with them to show that any one of the pretended one hundred and twenty depositions have any certificate further than the following words:

'Signed before me on the day and year above written.
''B. W. FIGG, N.P.'

"And whereas in taking thirty of these pretended depositions the commissioner refused to allow the contestee to cross-examine the witnesses in any way whatever, or to propound any questions to them in any way whatever; and "Whereas fifty of said pretended depositions were taken pursuant to a false notice served upon contestee, said false notice stating that contestant would take evidence at or near Pleasant Hill, when the contestant intended to and did take said evidence at a place more than six miles from Pleasant Hill; and "Whereas the record in this case shows that in taking said evidence the amazucensis who wrote said evidence did not write it down as it was given by the witnesses, but that he wrote it down to convey a meaning different from the meaning expressed by the witnesses; and "Whereas in taking one hundred and ten of said pretended depositions the

commissioner refused to allow important, pertinent, and legal questions to be asked the witnesses—

"Whereas all these matters appear affirmatively in the record in this case, are not denied or questioned; and

"Whereas it is proven that some of these pretended depositions have been changed since the witnesses were examined; and

"Whereas certain exhibits used in evidence by contestant have been changed; and

"Whereas the above papers are the evidence upon which contestant relies to secure a seat in Congress; and

"Whereas none of said so-called depositions; and
"Whereas the House of Representatives of the United States should not deprive a member of his prima facie right to a seat except pursuant to law; and
"Whereas the contestee at as early a day as possible filed proper motions to suppress this pretended testimony; and
"Whereas the committee has failed to pass upon said motions—
"And whereas, after contestee's counsel had only taken ninety minutes to argue all facts and the law of the above cause, contestee himself, though requesting more time, was allowed but seven minutes to argue his cause before said committee. Therefore,
"Be it resolved by the House of Representatives, That this case be recommitted to the Committee on Elections, and that said committee be authorized to allow contestant to retake such of said illegal evidence as he desires to retake, and that upon the receipt of said evidence said committee again report said case to this House, and with further instructions to ascertain the number of itssue ballots, or ballots printed on tissue paper, cast for either party, as shown by the evidence, and to report a resolution giving the seat to the person who received the highest number of legal votes, after rejecting all such tissue ballots."

I desire to remark that in all I have said in this speech I do not wish

I desire to remark that in all I have said in this speech I do not wish to be understood as saying any word reflecting upon the contestant in

My criticism is confined to those who manipulated his case and the committee who rendered the unwarranted decision. There is one matter, however, to which I ought to refer.

After the proof had revealed that certain papers filed in behalf of the contestant were devoid of integrity, and that they were false and forged, the reply was the publication of a falsehood regarding myself and some of those who assisted me in taking evidence. And although the record showed and now shows the utter and absolute falsity of every statement made which in any way charged by intimation or otherwise my friends who assisted me or myself with any action which was not strictly professional and honorable, yet certain newspapers—the National Republican, under its former management, the National View, and the New York Tribune—printed and published these falsehoods, and discreditable to them as it was, yet each and all of these papers declined to or at least did not correct the libels, although they were apprised of their absolute and utter falsity.

In reply to efforts at exculpation and excuse which have been made to the effect that all political parties are partisan, I desire to say that my investigations, which have been pretty thorough, show that decisions from Democratic election committees have been always based upon law and facts, and that the Republican party stands alone in making a party question out of a matter which should be decided solely on judicial

The Forty-sixth Congress was strongly Democratic. It decided a number of election cases, and all but one were decided in favor of men who were opposed in politics to the party in power. Bear in mind these cases I give were decided by a Democratic House of Representa-

In the case of Horatio Bisbee vs. Noble A. Hull the committee reported for a Republican.

In the case of James McCabe vs. Godlove S. Orth the committee reported for a Republican.

In the case of J. C. Holmes vs. W. F. Sapp the committee reported

for a Republican.

In the case of John J. Wilson vs. Cyrus C. Carpenter the committee reported for a Republican.

In the case of E. M. Boynton vs. George B. Loring the committee

reported for a Republican.

In the case of Ignatius Donnelly vs. William D. Washburn the committee reported for a Republican.

In the case of Sebastian Duffy vs. Joseph Mason the committee re-

ported for a Republican.

In the case of Anthony Eickhoff vs. Edward Einstein the committee

reported for a Republican.
In the case of Andrew G. Curtin vs. Seth H. Yocum the House decided in favor of a Greenbacker; and only in the case of Jesse J. Yeates vs. Joseph J. Martin, as I remember the facts, did the committee report for a Democrat.

Just, Mr. Speaker, eminently just, have been the Democratic majorities of this House in their treatment and decision of contested elections; never were they actuated by blind party zeal in the adjudication of questions which by their very nature should be removed from the field of politics. Receiving its power from a free people, the efforts of the Democratic party have always been to guard their interests, their rights, and their honor. Conservative in all things, it has never felt itself prompted to set aside the right, and to practice the wrong, for party advantage. Would to God that as much could be claimed for the Republican party. But that party has for years gloried in the perpe-

tration of frauds and injustice so stupendous that the political history of the most corrupt ages and nations furnishes only weak parallels to them; it is mired in the slough of party devices and wrongdoing. True to its nature and habits, it will now once more annul the clear rights of a member of this House, and will seat a man here in his stead who was never elected as a Representative to Congress, and who rests his claim to a seat here upon the overthrow of the election laws of his State, and upon less than worthless, upon perjured testimony.

No legal evidence has been adduced by the contestant in the case of

Sessinghaus vs. Frost which could overcome the plurality of 197 votes with which Mr. Frost is credited; no part of that plurality was proven to have been fraudulent. But what of that? It required but the dictum of the majority of a partisan committee that this plurality of 197 votes should be wiped out by the acceptance of ballots which it was claimed had been offered on election day by a few ignorant people who help to make up the rabble and sans-culottes of the great city of Saint Louis, that disdem-crowned Queen of the West, enthroned upon the banks of the Mississippi where the current of the equally great Missouri does homage at her feet ere yet it loses itself in the Father of Waters.

I beg the House will not fail to observe that neither the contestant

nor the committee pretend to overcome Mr. Frost's plurality by increasing the contestant's votes by votes actually cast. The committee The committee do not make any such claim, but they base their report upon allega-

tions that certain votes were refused.

The committee does not say that these men voted. It says their votes had been refused-refused by the judges of election; yes, and promptly o, as having been offered in violation of law.

But this difficulty costs the majority of that committee no trouble to overcome, for are they not "a law unto themselves?"

It would almost seem incredible that they could have the hardihood to urge this House to the adoption and execution of their recommen-dation to unseat Mr. Frost; a recommendation wholly arbitrary, wholly devoid of every fabric of legal evidence, whelly contrary to law, and it would seem that this House should spurn the incentive to unfairness and wrong which this recommendation so glaringly presents. But in the light of history, in the light of the experience which sents. But in the light of history, in the light of the experience which the minority has gained during the last two years upon this floor, no such thought will and can be entertained. True to its record and instincts, the majority of this House will within a short space of time deprive Mr. Frost of his seat and a constituency of a great State of its lawful Representative. The place which has so ably been filled by a man of talent and culture, by the bearer of a name ever illustrious in a State which boasts of noble and illustrious names, by the son of an officer whose valor on the battlefields of Mexico is recorded in the pages of the nation's history, the place heretofore filled by Mr. Frost is now to be given to an usurper, a fit representative of those persons by whose worthless testimony he claims admittance as a member of his House. His presence on this floor during the final hours of the Forty-seventh Congress will only be a reminder of the means by which I protest, in the name of our country, in the name of free government, in the name of the men who have stamped our institutions with the impress of their greatness, in the name of posterity, in the name of justice I protest, yes, most solemnly do I protest, against the perpetration of this great wrong, and I speak in this matter for the entire minority of the House. But in vain do I protest, in vain do I appeal to the conscience of the majority. The decree for the unseating of Mr. Frost has been issued, and its execution will not now be stayed

# Internal Revenue and Tariff.

# SPEECH

# HON. JOSEPH WHEELER,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1883,

On the report of the committee of conference on the bill (H. R. 5538) to reduce internal-revenue taxation, and for other purposes.

Mr. WHEELER said:

Mr. SPEAKER: For five years the Republican party has promised the people of our country a reduction of internal-revenue taxation and ma-terial relief from the onerous system of tariff which for twenty years has oppressed them. More than forty years ago the speeches of Henry Clay and Sargent S. Prentiss abounded in assertions that the system of protective tariff which they then advocated was only a temporary expedient to sustain the infant industries of our country. The idea of a PROTECTIVE TARIFF AS A PERMANENT INSTITUTION

in our country would at that time have caused a revolution. tors and statesmen of those days assured the people that ten years was the extreme limit during which the manufacturing interests of our

the extreme limit during which the manufacturing interests of our country would require protection from foreign imports.

As far back as 1830 we were assured that within ten years we could with certainty safely reduce the tariff to a revenue basis. It was upon this principle that Mr. Clay provided for the gradual reduction of tariffs, which continued until the Republican party came into power in 1861. I give below, Mr. Speaker, a table showing receipts from customs during the last sixty-one years, also the amount of imports free of daty, the amount of imports upon which duty was collected, the total amount of imports, the rate per cent, upon dutiable goods. the total amount of imports, the rate per cent. upon dutiable goods, and the aggregate rate per cent. on all imports:

1			Imports.		le, on	te.
Year.	Receipt from customs.	Free.	Dutiable.	Total amount imported.	Per cent.	Per cent.
1821	\$18, 475, 704	\$10,082,313	\$52, 503, 411	\$62,585,724	35.6	29.5

I ask special attention to this table, and shall refer to it in the course of my remarks.

It was my earnest hope that the bill for the

REDUCTION OF THE CUSTOMS DUES

would be one for which I would be justified in casting my vote. In the discussion of this bill I repeatedly asserted, and I assert now, that I do not wish, and the people I represent do not wish, a law which will be destructive or even injurious to the interests and industries of any section of our land. I, however, endeavored to point out what I regarded as some of the inconsistencies and hardships contained in the various sections of the bill which was presented to us for our consideration. I also tried to explain how

INJURIOUS A HIGH PROTECTIVE TARIFF

was to the agricultural classes of the South and West. I appealed to this House to consider this question as a matter affecting material interests of all the people of a great country, and I begged that they would divest it of party influences and let a matter so purely one of business in its nature cease now and forever to be a party question.

endeavored to show that although you might succeed in building up interests which you sought to protect, yet in doing so you destroy other important industries which, if cherished, would be equally potent in enhancing the wealth of our country.

I have not in any remarks I have made gone so far as, in the landary the first that the country is the country.

guage of Justice Miller of the Supreme Court, to say it is

None the less a robbery because it is done under the form of law.

I have not, in the language of Sir Robert Peel, alluded to the monopolist as one-

Who, from less honorable motives, clamors for protection because it conduces to his individual benefit,

In all I have done I have sought to urge views which I felt were for the benefit of our whole people.

To show the country the straits to which the high protection men are

To show the country the straits to which the high protection men are driven, let me look back to the RECORD of February 8.

In reply to our argument that this iron tariff legislation was arranged in the interest of Pennsylvania, and that the South with her rich and abundant minerals, industrious and thrifty people, generous soil and healthy climate, could compete with the world, and that the legislation needed by us was of a character to facilitate and not to block the wheels of commerce—in reply to this, the gentleman from Pennsylvania [Mr. Kerlykyl englet.] vania [Mr. KELLEY] said:

I now ask the Clerk to read the marked passage of the slip I send up, which will serve to show how Alabama, if not Georgia, can produce iron lower than other States. Not only has she cheap land, abundant fuel, and all the elements of iron in extraordinarily close juxtaposition, but you will find she has practically re-established slave labor.

The Clerk will please read.

"The abolition of slavery has created a class of black convicts in the South. In the old days these men would have been soundly whipped and set to work in the cotton-fields. Now they are tried and sentenced to long terms of hard labor. The policy of the State is to make the prison system self-supporting. To do this the convicts, both white and black, in Alabama are leased to the highest bidder. The highest bidders are the workers of the Pratt and Elyton coal-mines, near Birmingham. The price paid for this convict labor is about \$12 per month."

To show the perversion of truth in this article I will read from page 9, report of the inspectors of the Alabama penitentiary from September 30, 1880, to September 30, 1882:

Table showing name of each contractor and number of convicts employed by each contractor.

Name of contractor.	Occupation.	Number of convicts employed.
Comer & McCurdy J. W. Comer Milner & Caldwell R. J. Thornton J. F. B. Jackson H. Clay Armstrong Pratt Saw Mill Company Thomas Williams Chas. T. Pollard, jr. Farriss & McCurdy B. S. Smith B. B. Comer N. J. Stallworth Penitentiary (walls). Prom sheriff (before delivery).	Mining. Mining. Mining and railroading Getting lime rock Getting cross-ties Saw-milling Farming Farming Farming Farming Farming Farming Farming Walls	26 14 123 38 37 9 28
Total	***************************************	522

The report shows that of the convicts sentenced to the penitentiary but one hundred and thirty-one are engaged in mining and forfy-four are engaged in mining and railroading.

A recent law gives authority to our courts to sentence persons to

hard labor and some of such cases are not included in the table; but it is a great perversion of fact to hold out to the world the idea that convict labor has any appreciable effect upon the cost of mining or iron manufacturing in Alabama

The speeches made to us last winter when we were urged to cast our votes for the appointment of a tariff commission were fulsome in their assurances that the bill which would result from the investigations of such a commission would very materially lighten the burdens of the people, and from all that had been said on the subject we had a right to believe that after six months' work of a commission and six weeks' work of the Committee on Ways and Means the bill presented to the House would be one that would meet the approbation of the entire country.

I am compelled to say, Mr. Speaker, that the bill No. 7313, which was reported to this House by Mr. Kelley on January 16, 1883, is not such a measure as we had the right and the hope to expect. I gave this bill, which consists of one hundred and forty pages, a most careful investigation; and I regret to say that while it certainly does reduce the revenue which would be derived from imports, it very

MATERIALLY INCREASES THE BURDENS OF THE PEOPLE.

It is true that an elaborate table was prepared by the Committee on

Ways and Means, in which they state their estimates of the probable | the table, Mr. Speaker, and then will say one word to show the great duties which they hope will be collected under the bill. I will read | error into which the gentlemen of the committee have fallen:

	Merchandise year	Merchandise imported during the fiscal year ended June 30, 1882.		House bill.		Duty estimated.	
Schedules.	Values.	Duty received.	Average ad valor em rate.	Estimated amount of duty.	Average ad valor e m rate.	Decrease,	Increase.
A. Chemical products. B. Earthen-ware and glass-ware. C. Metals. D. Wood and wooden-wares. E. Net decrease of revenue, \$20,855,799.08.

Note.—In the estimate of duties under the House bill no account is taken of the abolition of duties upon packages, inland freights, charges, and commissions It is not claimed that the column of estimated receipts, under the House bill, is an absolute exhibit of results as compared with the operations of the present law That column merely shows what the receipts would be under the bill with the proposed rates substituted for existing rates and without considering changes made in classifications, changes made in the law, and without regard to conditions other than the changes in the rates of duty.

Let us look at one item in Schedule C. Our imports of articles contained in that schedule were last year \$74,427,988.69; the duty collected was \$30,358,936. The committee inform this House that they expect under the new rates proposed upon the articles in Schedule C to collect \$28,533,863.59, enly \$1,825,072.41 less than was collected on said articles for the fiscal year ending July 1, 1882. To show the utter unreliability of these estimates I will first refer the House to lines 733, 734, 735, which fix the proposed tariff upon

#### IRON COTTON-TIES.

Under the present law the duty is 35 per cent. We imported last year to the amount of \$723,868.21 and collected a duty of \$253,333.87. This bill proposes to increase the duty from 35 per cent. ad valorem to a specific duty which the committee assumes to be 81.66 per cent. but which according to the present and average value of iron ties would be at least 100 per cent. This would be an absolute prohibition. No iron ties could be possibly imported with such a tariff tax as is proposed by the bill, and therefore no revenue whatever could be collected upon the bill, and therefore no revenue whatever could be collected upon those articles by the Government. And yet the Ways and Means Committee, in order, it may be presumed, to create the impression that the bill they propose will give sufficient revenue, state to this House in their report that under the proposed tariff on iron ties they estimate that the annual duty collected by the Government will be \$608,037.81.

Next, Mr. Speaker, take fire-arms, enumerated in lines 961 to 965, the duty by the present tariff is 35 per cent. ad valorem. Under the tariff proposed by the House bill, which is specific, and amounting in some cases to an

in some cases to an

### INCREASE OF AS MUCH AS 900 PER CENT.,

this committee report to the House that they estimate, under the proposed law, that the revenue to the Government will be \$360,478.66.

Does it require any argument, Mr. Speaker, to show that a tax of from 300 to 900 per cent. is an absolute prohibition?

By what principle can this committee conceive of collecting such sum by a duty which is absolutely prohibitory? These are but two items, Mr. Speaker, and of these two items our total imports last year amounted to \$2,178,782.84, which is but one two hundred and fiftieth part of the imports for the last fiscal year. If I had time to go through all the items of import for the last fiscal year, amounting as they do to \$508,645,657.41, is it not clear that it would demonstrate that the estimate of the Committee on Ways and Means is very many millions above what

would result from the practical operation of the bill which they propose?

The tariff bill passed by the Senate after a most elaborate discussion by that body, while it contained many objectionable features and was by no means the character of bill required by the condition of our country, yet it was so far preferable to the bill proposed by the House that many members of this body were

# DISPOSED TO ACCEPT IT,

so that the commercial relations of our country should not be longer held in suspens

The rules of this House required that the Senate bill should be placed before us in order that we might cast our votes, upon the question of

concurrence in the Senate bill. I read from our Manual and Digest of Rules and Practice, page 245:

#### CONCURRENCE.

The question which first arises on a resolution, amendment, or conference a port, is on concurrence. And as the negative of concurrence amounts to the numerical firmative of non-concurrence, no question is afterward put on the latter motion.

Under this rule the Representatives of the people are enabled to vote for a bill which comes from the Senate or from a conference committee and thus make it the law of the land, subject only to the action of the President. The Senate bill was not a Democratic measure, nor was it a low-tariff measure, nor even was it a bill providing for a revenue tariff. It was a bill prepared by a Republican committee, which was universally recognized as a

### HIGH PROTECTIVE BODY

of Senators. Senator MORRILL, the father of the present onerous system, was the chairman of the Senate committee, and as far as could be observed from the Senate debates, the bill had his hearty and unqualified approval. Certainly it seemed to us that no one could be so extreme in his demands for protection as to say to the Representatives of the people, "You shall not even have an opportunity to cast your votes for this measure." What was our surprise, Mr. Speaker, and what was the astonishment of the people throughout the land to see an effort made by the Republican majority in this House to

### DISFRANCHISE EVERY MEMBER

of the Representatives of the people in the Forty-seventh Congress.

On February 26—but six days before, under the provisions of the Constitution, this House would cease to exist—a gentleman from the Committee on Rules [Mr. Reed] rose in his seat and said:

I desire to call up at this time the proposed amendment to the rules reported by the Committee on Rules and laid over.

After a colloquy, in which several members participated, the Speaker directed the proposed rule to be read. It was in these words:

During the remainder of this session it shall be in order at any time to me to suspend the rules, which motion shall be decided by a majority vote, to the from the Speaker's table House bill No. 5528, with the Senate amendment there entitled "A bill to reduce internal-revenue traxation," and to declare a disagreement with the Senate amendment to the same, and to ask for a committe conference thereon, to be composed of five members on the part of the House upon the Speaker's table unfected by the decision of the House upon said motion.

This proposed rule, Mr. Speaker, or rather proposed plan of procedure, for no proposition can be considered to be a rule of the House of Representatives which by its terms can only be once applied and which sentatives which by its terms can only be once applied and which would be functus officio twenty-four hours after its adoption—a rule by its very definition, given to us by all writers, means something which is permanent, uniform, and universal—no proposition which has for its object the carrying out of a single purpose can under the most strained construction be defined as a rule of action.

I insist, Mr. Speaker, that this proposed rule is the grossest infraction of the rights of the Representatives of the people, and therefore of the new terms are the three properties.

the people themselves, and one that has never before been presented to

a popular assembly which pretends to be guided by the rules of par-

Notwithstanding its gross transgression of right, the proposition, miscalled a rule, was adopted by a Republican majority, and we are now called upon to consider the measure reported to this House by the committee of conference. It is entitled

AN ACT TO REDUCE INTERNAL-REVENUE TAXATION.

It consists of one hundred and sixteen pages of printed matter, not one line of which was ever officially within the Hall where we stand until a few hours ago. And under this proposition from the Committee on Rules we are called to intelligently vote upon this measure within the next two hours, before it is possible for any member of this House to with the utmost rapidity glance over the pages. With the investigation I have been able to give the measure, I regret to say that the rates of duty fixed upon many items in the bill are

#### MUCH HIGHER THAN THEY WERE

when the bill originally passed the Senate.

And very many important items which are used by the poorer people of our land are fixed at a rate far above what was proposed by the House bill, which has been so universally condemned by the advocates of the farming interests of the people of the South and West. Some of the

#### BATES ARE HIGHER

than the Morrill tariff of 1862, higher than any recommended by the Tariff Commission, and higher than anything previously suggested by the Committee on Ways and Means of this House. The chairman of the Ways and Means Committee, in the very be-

ginning of his remarks, as if to prepare the country for

#### A GREAT DISAPPOINTMENT

in the amount of revenue which will be derived from this bill-because I insist, Mr. Speaker, that the revenue from imports will be many millions less than the estimates which the Committee on Ways and Means have submitted to this House—as if to prepare the country for this result, the member from Pennsylvania [Mr. Kelley] says:

It is always difficult to estimate the effect of changes in import duties upon the revenues of the Government.

I do not agree with the distinguished chairman of the Committee on Ways and Means. If we seek to make an estimate with an eye single to

#### ARRIVING AT THE TRUTH,

the accuracy of our calculations will be very satisfactory to us and to the country. But if we allow ourselves to be biased and influenced by a desire to attain certain objects and figure up estimates not based upon reason, but solely for the purpose of attaining a certain object, we will be very apt to find that the result will be as suggested by the gentleman from Pennsylvania [Mr. Kelley].

I shall tell the people who are wronged by this bill, when, as I fear,

#### in a year from this time they will be in PECUNIARY DISTRESS

caused by the great error committed to-day by this House—I shall tell them it is not because of any difficulty in making estimates, but it was because the Republican majority of this House and the Committee on Ways and Means substituted

# SOPHISTRY FOR REASON

and evinced a desire to benefit a few hundred proprietors of manufactories at the expense of 12,000,000 of the producing classes throughout

The first part of this bill, Mr. Speaker, is an internal-revenue bill, similar in many of its features to the one before this House during the first session of this Congress. It is true that there is a reduction in internal-revenue taxation, but the reduction is not upon articles which will give relief to the body of the people. More than one-fourth of the reduction is in the interest of the banks in our large cities; and while it relieves the people of greatest wealth to the extent of more than a million dollars.

## NOT ONE FARTHING OF BENEFIT

accrues to the people who labor for their daily bread. Not a single official of the Internal-Revenue Department will be dispensed with, and the expense of collecting this tax, which now amounts to near five millions a year, will not be subjected to the slightest diminution. The whole machinery of internal taxation will continue with all its evils, oppressions, and impositions. The armies of informers and spies which have for twenty years perambulated our land, who have exercised their influ-ence and given their time for party purposes, are retained in full force

I will here suggest, Mr. Speaker, that

# THERE IS A LEGAL OBJECTION

to that portion of the bill which regulates the tariff. Any one who examines the source from which this portion of the bill emanates must admit that it is in clear violation of the Constitution. Section 7, article 1 of the Constitution, reads:

All bills for raising revenue shall originate in the House of Representatives.

This is a bill for raising revenue by tariff taxation, and let me ask. WHERE DID THIS BILL ORIGINATE?

Not one line of it, as before stated, was ever in the House of Representatives until to-day. It is the Senate bill, letter for letter, modified, it is true, in a few words and phrases, by the committee of conference. But it is a bill which in truth and fact originated in the Senate of the United States. The highest courts of many of our States which have similar provisions in their constitutions have repeatedly decided that such a bill is clearly

Let me, Mr. Speaker, briefly call attention to some clauses of the conference report where they have changed the bill so as to raise the

On page 38 there is

#### AN INCREASE OF 100 PER CENT.

on one of the compound elements of all galvanized iron or steel wire except fence wire, and on iron and steel wire rope and wire strand the increase is still greater.

On page 42 metallic pens are increased from 45 per cent. ad valorem, as proposed by the House bill, to 12 cents a gross, a specific duty equal to more than 100 per cent. ad valorem on many classes of pens used by the common schools and by all people of moderate means. On line 884, the same page, I find a verbal change, the word mineral being substituted for the word "metal." The effect of this I can not at this time fully explain in detail, but it is very clear that the term "mineral" is far more comprehensive than the term "metal," and would include many substances not included in the term "metallic substances." On line 891 there is

#### AN ENORMOUS INCREASE.

It is a change from 35 to 45 per cent. ad valorem upon an immense class of metal goods, which I will read:

Manufactures, articles, or wares, not specially enumerated or provided for in this act, composed wholly or in part of iron, steel, copper, lead, nickel, pew-ter, tin, zinc, gold, silver, platinum, or any other metal, and whether partly or wholly manufactured, 45 per cent. ad valorem.

I present a table arranged to show, first, some and probably most of the articles included in the paragraph just read; second, the value of importations of said articles last year; third, the duty collected on said importations; and fourth, the rate of duty under the present law.

Articles as classified in the impost schedule of the Bureau of Statistics.	Imported entered for during the June 30, 188	Present tariff.	
	Values.	Duty collected.	Rate.
Brass, manufactures of, not other- wise provided for.	8400, 477 14	\$140, 266 99	35 per cent.
Bronze or Dutch metal, manufact- ures of, not otherwise provided for.	787,770 70	275, 719 75	35 per cent.
Eyelets of every description	1.483 00	216 66	flets. per M.
German silver, manufactures of	18, 107 00	7,242 80	40 per cent.
Gold and silver manufactures, not otherwise provided for.	74,572 87	29, 829 15	40 per cent.
Iron squares— Marked on one side	6 00	3 60	3 cts, per lb and 30 per ct
All other, of iron or steel	71.00	63 30	6 cts. per lb and 30 per ct
Iron, manufactures of, not otherwise provided for.	3, 158, 199 00	1, 105, 369 99	55 per cent.
Lead, manufactures of, not otherwise provided for.	2,449 05	857 17	35 per cent.
Music strings, of metal as the component of chief value.	5,937 00	1,781 10	30 per cent.
Pewter, manufactures of	2,923 00	1,023 05	35 per cent.
Skates, costing over 20 cents per pair	34,904 00	12, 216 40	35 per cent.
Steel, manufactures of, or of which steel shall be a component part, not otherwise provided for.	1, 280, 179 59	576,080 86	45 per cent.
Total	5,767,079 35	2, 150, 570 82	

It will be observed that the average duty on all this five and threequarter millions of importation is 371 per cent. ad valorem. The exact figure is 37.26

The Senate bill fixed the rates at 35 per cent. ad valorem, but the

# CONFERENCE REPORT RAISES IT 10 PER CENT.

and fixes the rate of duty to be collected on all those articles at 45 per cent, ad valorem.

The Committee on Ways and Means of this House coolly inform us that they estimate that 45 per cent. will yield a revenue of \$2,595,185.71. In other words, just in proportion as the duty is increased the committee seem to estimate that the revenue will be increased. This business management reminds me of the shop-keeper who marked up his goods to double prices and imagined he had doubled

He forgot that he might have difficulty in finding purchasers at the increased prices, and the committee seemed to forget that with a 45 per cent. tariff importations would be less than they were at a 371 per

Had I not seen

THE INFLUENCES WHICH CONTROL THE REPUBLICAN PARTY

in this House, and I might say the Republican party of the country, I should have been astounded to see in this bill a

REDUCTION OF THE TAX UPON SILKS,

which are only for the wealthy, and a largely increased tariff tax put

LOW-PRICED COTTON GOODS

and bunting, which are used to clothe people in moderate circumstances Under the present law a very large amount of cotton goods is admitted under a tax of 35 per cent, ad valorem, and the bill proposed by the conference committee, now before this House, increased the tax on many of these articles to

40 PER CENT. AD VALOREM.

I will read lines 1240-1244:

On stockings, hose, half-hose, shirts, and drawers, fashioned, narrowed, or shaped wholly or in part by knitting machines or frames, or knit by hand, and composed wholly of cotton, 40 per cent. ad valorem.

Also lines 1249-1252:

Cotton laces, embroideries, insertings, trimmings, lace window-curtains, cotton damask, hemmed handkerchiefs, and cotton velvet, 40 per cent. ad valorem.

As near as I can ascertain more than \$10,000,000 of the above enumerated articles were imported last year, upon which this increased tax is imposed. The reduction in the tariff tax on silk will, I think, exceed \$3,000,000, and in keeping with this provision the present bill

REMOVES THE TAX UPON DIAMONDS ALTOGETHER.

For the year ending June 30, 1882, the value of imported diamonds as reported by the Bureau of Statistics was: Diamonds, rough or uncut, including glaziers' diamonds, \$449,513; diamond dust or bort, \$92,853; the total amount of importation of diamonds therefore being \$542,366, and the duty collected on diamonds amounted to \$54,236.60.

I have just received a very tastefully arranged circular from a firm largely engaged in the importation of diamonds, in which they say:

The wearing of diamonds is every year becoming more and more general among those who can afford them. This is a sign of refinement and of advancing high civilization.

Now, I do not choose to quarrel with these importers of gems on account of their conclusion that the "wearing of diamonds is an advance of high civilization or a sign of refinement." That question does not concern the law-maker in his measurement of taxation. I take issue with our friends, the importers of gems, and deny or much doubt that the wearing of diamonds is a sign of "refinement or of advancing high civilization.

I hold, and the entire Democratic party always have contended and always will contend, that, in a matter like this, if the \$54,000 that is removed from the tax on diamonds was taken off

# ARTICLES OF PRIME NECESSITY

that the poorest people in the country are compelled to buy, enabling them to spend that amount on the education of their children, it would do much more toward the advancement of refinement and high civilization than would result from brainless dandies having 10 per cent. more diamonds in their shirt-studs, rings, and other ornaments with which they are so glitteringly adorned. The country is assured, however, that this reduction of revenue is compensated by

### AN INCREASE OF THE TAX UPON EARTHEN-WARE,

which is used by the people who have no influence with the Republican party of our country. this bill. We have here a There is another very serious objection to

### COMPOUND DUTY UPON WOOLEN GOODS

and an examination of the schedule shows that it will be a very large and an examination of the schedule shows that it will be a very large increase, and more particularly will this increase be severe upon all articles of wool wear of the cheaper class. All wool dresses for women's and children's wear are increased from 6 to 8 cents per square yard. I also call attention to a most unwarranted and unnecessary and, I may say, oppressive change in the articles enumerated in lines 1464–1471. This includes ready-made clothing and wearing apparel for children and ladies; the tax on these articles is

# INCREASED FROM FORTY TO FORTY-FIVE CENTS

n pound, and an ad valorem tax from 35 to 40 per cent.

I will now, Mr. Speaker, read a series of six tables prepared from the census reports for the years 1850, 1860, 1870, and 1880, which present at a glance the progress of manufacturing interests in our country since 1850.

Table showing the progress of manufactures for the census years from 1850 to 1880, inclusive, showing number of establishments.

I want now, Mr. Speaker, to call special attention to some lessons taught us by these tables. From 1850 to 1860, with a gradually decreasing tariff upon all articles manufactured in this country, the

INCREASE IN MANUFACTURED PRODUCTS was from one to almost two billions of dollars—an increase of 100 per cent. From 1870 to 1880, with a tariff tax from two to three times larger than it was during the decade from 1850 to 1860, we have only increased the value of our products from four and one-fourth billions to five and one-third billions; and what is more instructive for us is the fact that nearly all of this increase is found in the new States of the Union and in the States which have but recently commenced developing their industries and resources

The value of manufactured products in Rhode Island and Vermont,

which almost

DOUBLED UNDER A SMALL TARIFF DUTY

from 1850 to 1860, has actually decreased in amount under the high from 1850 to 1860, has actually decreased in amount under the high protective tariff during the period from 1870 to 1880; and I ask the House also to observe that the products of manufactures in Massachusetts which increased 70 per cent. from 1850 to 1860, increased but about 10 per cent. from 1870 to 1880, and the States of New Hampshire, North Carolina, Pennsylvania, Vermont, Mississippi, and Louisiana, in which the value of manufacturing products increased in value 100 per cent. from 1850 to 1860 scarcely made any appreciable increase from 1870 to 1880. Are not these facts matters which have been overlooked by the people at large when they have listened to the false cry and the

FALSE ASSERTION

that just so as you increase the tariff tax you benefit and encourage the manufacturing industries of our country ?

I hope and trust, Mr. Speaker, that the cloud which menaces the financial horizon of our country may pass away. I hope and trust that the great energy and perseverance of our people may overcome the evils which Republican legislation has inflicted upon our country, but I very much fear that the strain put upon our financial structure will be too great and that there will be a break, a fall, and a crash. Republican legislation is

BUILDING UP A TREMENDOUS AUTOCRACY

and plutocracy—a great body of people whom it is sought to have supported by percentages levied upon the hard earnings of the people. The laboring masses are rapidly learning of this great wrong that has supported

THOUSANDS UPON THOUSANDS OF PEOPLE IN IDLENES

for twenty years under the decrees and laws enacted by the Republican party. And now, when they ask for relief from the burdens of taxation too onerous for them to bear, you see a Republican Congress enact a law increasing the tax upon nearly everything used by the laboring people-you see the same law remove the taxes from silks worn by the wealthy, from perfumeries only used by the pleasure-seeking idler, from wine only purchased by people of the same class; and, to cap the climax of wrong, you see that, pursuant to demands from this same class of people, all tax is taken from diamonds which none but the most wealthy can enjoy.

Mr. Speaker, I intentionally refrained from making any remarks upon the wood schedule, as I saw the gentleman from Michigan [Mr. HORR] and the gentleman from Kansas [Mr. Anderson] were handling the lumber question with sufficient earnestness to develop its feature suffi-

ciently for us all to understand the matter.

I have not had time to give it a very careful study, but as lumber business is governed by the same rules which control other interests, the injectment of a little common sense will not be out of place in exposing the sophistical tendency toward which the argument finally traveled.

The gentleman from Michigan [Mr. HORR], whose lectures are always amusing, CONCEDED A STRONG POINT.

Another reason why lumbering is more expensive in Michigan than in Canada is that the price of many articles used in this business is much higher than in Canada. For example, on horses alone we pay a large duty; I do not remember the exact rate, but I know that on teams I once bought it was about \$40 to each horse—\$30 to \$100 on a team. This is what we have to pay in order to get a span of Canadian horses into the United States.

Now, his argument is this: Horses haul lumber; horses are subject to a tariff tax of \$80 to \$100 a team. This makes lumber cost more in Michigan than in Canada. Then we must have a protection of \$2 per thousand on lumber.

This same argument will apply to nearly everything.

Because of a duty on iron ore we must have a high duty on pig-iron. Because of a duty on pig-iron we must have a higher duty on bar-iron. Because of a higher duty on bar-iron we must have increased duty on steel.

Because of a duty on wood which is made into handles for tools used to make machinery we must have an increased duty on machinery

Because of the duty on steel and the increased duty on machinery

Because of the duty on steel and the increased duty on machinery we must have an increased duty on pens, knives, razors, screws, tracechains, iron ties, and every other article.

Because of a duty—but, Mr. Speaker, we need not carry this any further. I could keep on and on in this matter. The climax need not stop at manufactured articles. We could carry it on almost without

limit, but this is sufficient to show where these extreme protection arguments lead.

Mr. Speaker, there is very much to be admired in the earnest, persistent determination of the New England character. Notwithstanding their sterile soil, ungenial climate, and the absence of mineral wealth, they by energy,

SELF-RELIANCE, AND RESOURCES

have, in spite of their natural disadvantages, made New England the most prosperous section of our country. They have made a garden on Plymouth Rock. They have commanded the very waters to do their bidding and run their machinery. They have invented everything, from the cotton-gin to the telephone, and from war monitors which cost a million dollars to wooden nutmegs which are sold to confiding people two for 5 cents.

When a boy I was told how both of two Yankee lads got rich trading

jackets while locked alone in a room.

The chance for a fair divide which the rest of mankind has even in an open trade with people trained in such a school of incisive acuteness can be imagined and is somewhat illustrated in the anecdotes as well as in the history of our country.

You have all heard the story of the hunt between the Yankee and

They traveled together until coming to a hill they agreed to separate and meet on the other side, where they would divide the game. Upon reaching the spot the Indian had a fine wild turkey and the Yankee had a crow; and with the same complacency which the chairman of the Committee on Ways and Means presents this bill the Yankee offered the following equal (?) share to the Indian: "You may take the crow and I will take the turkey, or I will take the turkey and you may take the crow." The Indian scratched his head, looked at the birds earnestly for a moment, then, looking up, said: "You no give me turkey

Now, when I, like the Indian, looked earnestly into the matter and failed to see how protection on cotton-seed oil benefited us, the distinguished gentleman says:

If gentlemen on the other side of the House generally say that they desire to ave cotton-seed oil made free I will yield to their wishes.

Now, here is the proposition: You may have \$1.50 worth of protection on cotton-seed oil and we will take \$100,000,000 on iron; or we will take \$100,000,000 protection on iron and you may take \$1.50 protection on cotton-seed oil.

Here is the whole question: Take a dollar and a half or take nothing. All we require of you is that for this dollar and a half you of the South give up all your principles of tariff for revenue and give in your

adhesion to our principles of tariff for protection.

The chairman of the Committee on Ways and Means again says:

By some accident the duty on cotton-seed oil was reduced or dropped. We heard from the cotton-growing country that a great wrong had been done.

Now, the idea advanced is this: We have made the trade. Protection on iron for us; protection on cotton-seed oil for you. It is a bargain with a consideration, and therefore valid. I will give exact words: Now, if the gentlemen on the other side of the House generally say that they

to give up the consideration-

I will yield to their wishes

I will here, Mr. Speaker, say one word in reply to the five separate speeches made by the chairman of the Committee on Ways and Means upon this question. When my investigations revealed that our greatest market for cotton-seed oil was in the ports of the Mediterranean, and that Trieste, which is but a few days' travel from the cotton-fields of Egypt and India, purchased largely from us, I admit that I could not see the logic of this 30 cents a gallon on an article which we never have imported. After a diligent search I found its origin in the law of July 14, 1870. I will read from page 265:

On sesame oil or cenne oil and cotton-seed oil, 30 cents a gallon.

For twelve years this law has remained on the statute-books. I could not possibly see any use for protection on crude cotton-seed oil, but I did think it might possibly be a good plan to encourage the inauguration of factories in this country for making an imitation of olive oil. I knew that Europe bought our crude oil and after sub-

jecting it to a process returned it to us in the form of salad or offive oil.

I thought that possibly we could make something of the same character in Memphis, New Orleans, Mobile, Savannah, and other cities near our cotton-fields. And as these articles made in Europe could be returned to us under the name of such oils and similar fluids as are almost exempt from duty it appeared to me that our legislation ought to be framed to meet this status.

I wrote, therefore, to persons who were interested in cotton-seed mills, asking if they could not add to the enterprise of cotton-seed oil manufacture the more lucrative one of converting the oil into something that would answer for a table oil, and if that were done, suggested the striking out line 230, which reads:

Oil, cotton-seed, 30 cents per gallor

and amending line 379, which now reads:
Oils, olive and nut, as salad oil, 60 cents per gallon-

by adding after the word "oil" the words:

And all preparations of which cotton-seed oil is an ingredient.

This I felt might be of benefit to the South, and might enable us to build up a new industry. Every reply but one to my letters emphatically concurred with me, and were positive in expressing the opinion that a tax of 30 cents a gallon on raw cotton-seed oil was of not a particle

of benefit to the South or to any interest in the South.

The president of a large mill, a very intelligent gentleman, by merest accident throws a flood of light on this matter. He says:

I, as a manufacturer of crude oil, am perfectly willing to see it on the free-list. Why other crude manufacturers hold different views from those entertained by me may be accounted for, possibly, by the fact that they are interested in the refineries of this country.

Bear in mind that the refineries are in the North, I believe largely in Rhode Island, and when by our high tariff we have provoked retaliatory laws on the part of foreign nations, thus destroying our market in those countries, our Rhode Island refiner has fewer competitors in his purchase of crude oil. Five other oil manufacturers wrote me that the cotton-seed-oil tax was of no benefit to them.

The secretary of the Memphis company wrote that-

After getting as full an expression from the oil-mills of this and other places possible on the subject, I write to say that they agree fully with your views.

All this goes to illustrate what the North calls a fair division of the

benefits to be derived from tariff taxation.

I want to say the South has had this sort of divide long enough. The North has taken the turkey and has given us the carrion for twenty ears, and I for one don't want the cotton-seed oil protection, and I

believe all the best informed people are with me.

Now comes another insult to our intelligence. They say we will make another even, fair divide. We will take a

PROTECTION OF 100 PER CENT. ON TRACE-CHAINS

and iron ties which you planters use, and about the same on cottonfactory machinery which you have to buy; but in return therefor we give you protection on common cotton yarns and common cotton cloth. You manufacture common yarns and common domestic and we have put a duty on such things to the amount of from 25 to 50 per cent.

One word upon this tariff on common cotton goods and yarns. My letters from cotton manufacturers confirm my statements that we can and do find a market in England for our goods, side by side with the products of English factories. Could anything further be said to show the absurdity of this tariff duty? If we can make cotton goods and undersell the English spinners in their own country, then how could they compete with us in our own?

That distinguished protectionist from Michigan [Mr. HORR] probably arranged this quid pro quo.

In reply to the assertion that "the only thing the South wants is to be let alone," and that "she (the South) can take care of herself," Mr. HORR said:

It is not best for you to be let alone. That is not what you want.

You may not know yourselves what you want. A man outside can always tell what the people away off want better than they can themselves.

Now, Mr. Speaker, the spirit which animates the Northern people could not be better expressed nor could it come from more appropriate

For a century the Puritan and his descendants have insisted that KNEW MORE ABOUT OTHER PEOPLE'S BUSINESS

than they knew themselves.

That distinguished gentleman, Oglethorpe, came and founded a colony in my dear native Georgia. He came with a spirit of liberty, and the first law he prescribed was that all people should be free; that slaves should not be landed on the shores of Georgia, and that servile labor

should be unknown in this new land of freedom.

For twenty years this was the statute of the colony of Georgia, but the Puritan of Connecticut and Rhode Island said, "You do not know

what you want,"

YOU NEED SLAVES,

and our ships and our New England slave-traders will furnish them to you.

The persistent Yankee overcame our scruples and subdued our prejudices, over-rode our judgment, and we yielded and allowed him to flood us with slaves.

When we made our constitution we sought to prohibit this unnatural and as we thought unchristian traffic; but again New England with fervor said, "You do not know what you want," and we again

SUCCUMBED TO THEIR PERSISTENCY and reluctantly consented to provisions which gave them slave traffic until 1808, and in less than a quarter of a century from its limitation by constitutional provision these same persons, while enjoying the fruits

of this traffic. COMMENCED DENVING OUR RIGHT

to the use of this class of property.

I have heard much said, Mr. Speaker, since I have been a member of this House regarding fillibustering. If a Democrat offers an amendment the cry comes that he is

FILIBUSTERING

and delaying legislation.

Who was it, Mr. Speaker, who filibustered and called "no quorum" and retarded important business during the tedious details of counting by tellers after an amendment had been defeated, had been defeated by only two votes, which sought to reduce the tariff on sugar?

It was the gentleman from Pittsburgh, from the blazing furnaces of Allegheny County, where a cloud of smoke by day and a pillar of fire by night has for half a century illumined the horizon; where the sound of a thousand hammers night and day beats out untold wealth, every dollar of which is due to the tariff laws which the Allegheny gentleman denounced.

This amendment which the gentleman [Mr. Bayne] fought for, and to prevent the defeat of which he inaugurated filibustering tactics, would have caused an enormous reduction in our tariff revenue. Mr. BAYNE's amendment reduced the revenue of the Government to the

amount of \$27,653,365.25. The tariff law upon sugar is for revenue, and not to give bounty and protection to Southern planters.

This amendment was upon a class of sugar of which we imported last year 1,925,586,170 pounds, and upon that class of sugar we last year collected a revenue of \$46,909,176.95. The entire crop of cane sugar raised in the United States last year was not greater than 170,-000,000 pounds, and of the class of sugar under consideration it was but about 150,000,000 pounds.

Therefore, for

ONE POUND OF SUGAR WHICH RECEIVES PROTECTION, TWELVE AND THREE-QUARTER POUNDS

pay duty to the Government; and for three and a half millions which it is claimed go to the sugar-planters and laborers in the way of pro-tection, forty-seven millions are paid into the Treasury on that class of imports.

Now, I can simply say to the distinguished gentleman that this side of the House is anxious to

REDUCE THE TARIFF ON SUGAR

the moment such a reduction will be consistent with the necessary revenue to carry on the Government, and already we have reduced the tariff on sugar very materially; but I will with great respect submit that there is no member of the House that this filibustering mantle would fit with less grace than it would the distinguished gentleman from Pittsburgh. The course pursued by him could have been adopted with more propriety by any other of the two hundred and ninty-one members of this House.

I will now say one word regarding the internal-revenue part of the It commences with the words

TO REDUCE INTERNAL TAXATION.

And this attractive heading, I regret to say, covers a mass of hideous

wrongs and inconsistencies and oppressions.

It will be with feelings of sorrow that I shall be compelled to return to my constituents and inform them that while there is but little in the proposed law which commends it favorably to them, there is a great deal that it contains which is very objectionable and to which I can not give my support. I will read the first ten lines, Mr. Speaker, which follow the enacting clause:

That the taxes herein specified imposed by the laws now in force be, and the same are hereby, repealed, as hereinafter provided, namely: On capital and deposits of banks, bankers, and national banking associations, except such taxes as armow due and payable; and on and after the 1st day of July, 1883, the stamp tax on bank-checks, drafts, orders, and vouchers, and the tax on matches, perfumery, medicinal preparations, and other articles imposed by Schedule A following section 3437 of the Revised Statutes.

This sweeps away a revenue of millions, more than nine-tenths of which is a relief to banks, corporations, and wealthy manufacturers. In order to show who is benefited by the latter part of the clause I will read these figures, which I take from the census reports for 1880 regarding chemical products. The figures I will read show the amount of capital employed in that industry in four States and the total in the United States. They also show the annual amount of wages paid and the total amount produced of such articles: the total amount produced of such articles:

States.	Amount capital employed.	Annual amount paid as wages.	Annual value of products.
New York	\$20, 141, 596 18, 349, 930 7, 371, 400 6, 828, 473	\$2,901,960 2,151,799 1,172,654 963,784	\$29, 805, 614 20, 884, 991 9, 499, 577 10, 604, 662
Total for four States	52, 691, 389	7, 180, 197	70, 794, 844
Total for United States	85, 394, 211	11,840,704	117, 877, 324

The figures I have tabulated need no explanation. They clearly show that the clause relating to medicinal preparations is in

THE INTEREST OF THE ESTABLISHMENTS

where nearly two-thirds of them are located.

It is very evident that so much of the bill as I have read will be of

no material benefit to that portion of the land whose property was de-stroyed and whose industries were crushed by the war. These provis-ions will make no appreciable change in the price of articles which no longer require a 1 or 2 or 4 cent stamp attached to them. A 25-cent bottle of medicine without a 1-cent stamp will still sell for 25 cents, and a bottle or package of medicine which formerly sold for \$1, and upon which we found a 4-cent stamp, will still be sold at the same

The gentlemen on the other side of the House, as an answer to all objections to this bill, have repeatedly called our attention to the word matches, and they seem to think taking a 1-cent tax from a box of matches is all the relief people from the rural districts ought to demand.

A prudent, economical family will make a box of matches last them

a month, and if all the reduction accrued to the consumer the extreme benefit he would derive would be 12 cents a year. But, Mr. Speaker, it will not accrue to the consumer. The appeal for a removal of this tax did not come from the people. It came from the manufacturers. The census tells us that the capital invested in that industry now amounts to \$2,114,850, and the products last year amounted to \$4,668,446, nearly all of which is confined to the Northern States, Ohio alone manufacturing to the amount of \$935,529.

The consumer will find that this 1 cent deduction will mostly if not entirely add to the profits of those who urged the change which we are

I trust my allusion to Ohio will not be construed as indicating that I have any jealousy or ill-feeling regarding that grand old State. On the contrary, I rather concur with those who think we owe her a debt of gratitude. She has given us three Presidents; has offered us a dozen more, and, as if never tiring of good deeds, she still generously tenders so bountiful a quota that we need have no apprehension of being without a President not only during our own lives, but including the full

terms of the lives of the youngest of our children.

Ohio has given us the most versatile and most talented member of this House, my valued and esteemed friend, Mr. Cox.

Ohio has given us—but, Mr. Speaker, I will not tarry. The history of Ohio and what she has done is recorded.

Removing the license tax of \$5, now charged to farmers who sell

tobacco to their laborers, is a mockery when we consider that for this \$5 reduction, the tax the average planter pays now on other articles is increased at least \$500.

The great mass of thinking people will never tolerate a political organization which forces upon the country a law removing or reducing taxes upon bankers, tobacco-chewers, and people who use perfumeries and other articles which are not essential to the ordinary purposes of

What the people demand is substantial reduction upon the necessi-

ties, not the luxuries, of life.

There is very much more that ought to be said on this important subject, but as the question has been ably argued by other gentlemen on this side of the House I will close this imperfect analysis of this bill, the general effect of which upon the interests of the whole people is greater than that of any other measure considered by this Congress or any other Congress for many years.

# Lee vs. Richardson.

'Οψε Θεού μύλοι άλεουσι το λεπτον άλευρου.

# SPEECH

# HON. JOSEPH WHEELER, OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1883,

On the contested-election case from the first Congressional district of South Carolina.

Mr. WHEELER said: Mr. SPEAKER: I regret in these closing hours of the Forty-seventh Congress to see the purposes for which we came here neglected and to see the last night of the session consumed in an effort to consider a case where the seat of a member of this body is contested. The people

A RIGHT TO EXPECT THAT

much shall be done during these last days of Congress. there are many measures that demand and ought to have our attention. We ought to consider the

EDUCATION BILL.

We have the startling fact presented to us that 6,239,958 of our fel-

low-citizens are unable to read or write, and yet the House refuses to take steps to correct so great an evil.

We are reflecting upon the whole country when we allow the bill to

lie dormant which would grant a meager pension to the

BEAVE MEN WHO CARRIED THE FLAG

that floats over this Dome from the Rio Grande to Buena Vista and from Vera Cruz to the City of Mexico. The valor of these men gave this country a wealth which has enabled it to pension 400,000 soldiers, all, or nearly all, of whom are younger than the ten or twelve thousand men who would be benefited by this bill.

men who would be benefited by this bill.

Then, too, Mr. Speaker, the passage of the bill to do tardy justice in rectifying the wrongs done to Fitz-John Porter would be a very proper work for Sunday morning. But that measure is allowed to lie on the table while the call of the House and vote after vote is repeated, in the efforts which have absorbed the thoughts of the majority of this House. The responsibility of these occurrences during the twelve hours which have elapsed since 6 o'clock last night rests entirely with you gentlemen of the left. Excuse me if I give expression to the thought suggested by this word "left," that far as you were "left" in November 1882 the signs of the tipes indicate that still forther be-

thought suggested by this word "left," that far as you were "left" in November, 1882, the signs of the times indicate that still farther behind will you be "left" in November, 1884.

The Republican party, aided by Greenback and Readjuster allies, finds its majority still further increased by the men who, though candidates for Congress, were repudiated by the people at the polls, but who, because they belong to the party which for two years has controlled the legislation of this House, have by gross violation of law and right been placed in the seats of the duly elected representatives of the neonle.

Your majority, gentlemen of the opposition, is now so great that you have it in your power to

CARRY THROUGH EVERY MEASURE,

unless we resort to the only method which remains to the minority, and, by refraining from voting, thus place

THE ENTIRE RESPONSIBILITY

upon you, and require you to keep in this Hall a constitutional quo-

rum of your own party.

Mr. Spofford, in his almanac for 1883, classifies the parties of the House as one hundred and fifty-one Republicans, nine Greenbackers, two Virginia Readjusters, making a combination of one hundred and

sixty-three votes against one hundred and thirty Democrats.

We have now been here since 11 o'clock yesterday. We have remained here during the entire night, and I see that the last day of this Congress is now dawning upon us. There are many other measures equal in importance to those I have mentioned which demand our consideration, and yet, with all these imperative duties pressing upon us,

THE REPUBLICAN MAJORITY IS WASTING THE TIME

of this body in an effort not to sustain but to overthrow a report of the Elections Committee, more than two-thirds of which are of their political party.

The general excuse we have heard given by Republicans for always voting to unseat Democrats is that they must sustain the reports of the committee. In this case they certainly have no such excuse, as the vote taken just before miduight developed the astounding fact that one hundred and twenty-four Republicans cast and recorded their votes to

PUT OUT A DEMOCRAT,

even though the Elections Committee, with its overwhelming Republican majority, had decided and reported that the Democrat, Mr. Richardson, was duly elected, and that Mr. Lee, the Republican, had been clearly and fairly defeated. It did seem to me that after the majority of this House had committed so many inconsistencies they would not during the last hours of their occupancy of this Hall, seek a new field in which to exercise this propensity.

This vote has been recorded. The record can not be erased. It is a

part of the history of our country. I will read from yesterday's pro-

It is true, as no adjournment has taken place, that in legislative parlance we designate all as one legislative day, and call these proceedings as a part of those of Saturday, but we know and the world knows that the sun of heaven has arisen on Sunday morning, March 4, 1883, and at noon to-day we will adjourn forever.

The SPEAKER. The question is on agreeing to the resolution, which the Clerk

The SPEARER. The question is on agreeing to the resolution, which the Clerk will report.

The Clerk read as follows:

"Resolved, That Samuel Lee have leave to withdraw his papers, and this case is dismissed without prejudice."

Mr. PETTIBONE. I move to substitute the resolutions of the minority of the committee.

Mr. Calkins. The minority resolutions were presented at the time the case was called up, but I believe were not read.

Mr. CALKINS. I ask unanimous consent that the resolutions of the minority may be offered now.

There was no objection.
The SPEAKER. The Clerk will read the resolutions which are proposed as a substitute for the report of the majority.
The Clerk read as follows:
"I. Resolved, That John S. Richardson was not elected as a Representative to

the Forty-seventh Congress of the United States from the first Congressional district of South Carolina, and is not entitled to occupy a seat in this House as such. "II. Resolved, That Samuel Lee was duly elected as a Representative from the first Congressional district of South Carolina to the Forty-seventh Congress of the United States, and is entitled to his seat as such."

The Speaker, The question is on agreeing to the resolutions offered as a substitute for the resolutions reported by the majority of the committee.

Mr. Ranney and Mr. Horr called for the yeas and nays.

The yeas and nays were ordered.

Mr. Hammond, of Georgia. I desire to make a parliamentary inquiry.

The Speaker. The gentleman will state it.

Mr. Hammond, of Georgia. Are we to vote on both resolutions at once, or can they be divided?

The Speaker. The yeas and nays have been ordered on both. They might have been divided; but the division was not called for in time. The Clerk will call the roll.

The question was taken; and there were—yeas 124, nays 114, not voting 53; as follows:

YEAS—124.

So the substitute was agreed to.

It will be seen by the record that but one Republican raised his voice, and but two recorded their votes against this great wrong, against this effort to overthrow and

# REVERSE THE SWORN DECISION

reported by Mr. MILLER, a Republican, and adopted by a committee of fifteen members, only four of which are of the Democratic party.

This vote is the last link in a long chain of events, which illustrates the dominant passion which has actuated a dying party during its control of the popular branch of the Congress of the United States. It may seem eminently reasonable that a party should desire to close this Congress in the same way they inaugurated its proceedings. The

last pages of its record reveal an effort to destroy representative government, and a reference to its first pages shows that its first actions

were directed toward the same purpose.

Its last hours are consumed in an effort to drive from his seat the duly elected member from the first district of South Carolina, and the first act even before administering the oath to a single member except the Speaker was an

EFFORT TO DISFRANCHISE

the noble and chivalrous people who live in the eighth district of Ala-

Let us look back from the record of the last to the record of the first hours of this body, which has done so much to reflect discredit upon the Government, which at the cost of blood and battle, suffering and privation, was implanted upon the soil of America by a Franklin, a Washington, and a Jefferson.

I read from the CONGRESSIONAL RECORD, No. 1, December 6, 1881, page 9, these words:

When the State of Alabama was called Mr. Jones, of Texas, said: "I object to administering the oath to Mr. Wheeler."

On page 11 we find these words:

Mr. Jones, of Texas. The ground of objection is that Mr. Wheeler has not been duly returned or elected a member of the Forty-seventh Congress. I send to the Clerk's desk the following resolution, which sets forth very clearly the ground of objection, and I ask it be read.

I will now read from page 12. It is the solemn assertion of a member of this House by which he seeks to prevent the swearing in of a fellow-member. I will read his exact words:

iellow-member. I will read his exact words:

Mr. Jones, The case now before us presents itself to the House—if the objection be fully expressed to the House—as a very simple proposition. Mr. Wheeler presents the certificate of the governor of the State of Alabama. The contestant, Mr. Lowe, presents the official returns made by the supervisors of election, from which returns, being the original record of the election, it appears that Mr. Lowe received upward of 400 majority.

Now, the position is this: That it is thus officially shown that the certificate of election offered here by the gentleman from Alabama is not what it purports to be, a prima facie certificate. I ask, in support of the objection I make to the swearing in of the gentleman from Alabama, that the return or port of the chief supervisors touching this election be read, so that the House may be fully advised of the real merits of the point involved; in other words, as to the prima facie case.

may be fully advised of the real merits of the point involved; in other words, as to the prima facic case. The objection assumes that the prima facic case is against or at variance with the certificate of the governor, in that the certificate or certified report of the chief supervisor shows that his competitor, the contestant in this case, received an actual majority of the legal votes cast.

I send the paper to the desk to be read.

The brief presented in the cause by the contestant and his attorneys states, on page 61, that Wheeler has an unquestioned vote was 12,808, and it admits (page 62) that Wheeler has an unquestioned vote of 12,668. Now, if it was true that this paper which the honorable gentleman from Texas presented to the House was the return or report of the chief supervisor of election, and if it is true that said paper showed that contestant received upward of 400 majority, then the report or return of the chief supervisor must have shown that the contestant received more than 13,000 votes.

Singular as it may appear, this important report or return which was thus used to attack the certificate of the governor of Alabama was not placed in evidence, and has never been presented to the Committee of

This suspicious circumstance induced the contestee to procure a certified return or report from the same officer, namely, the chief supervisor of elections, with regard to the matter referred to, and he has placed it before the committee. The following is a copy of the report:

Office of the Chief Supervisor of Elections,
Northern District of Alabama,
Huntsville, Ala., March 30, 1882.

Statement of the number of votes received by William M. Lowe for Representative in Congress from the eighth Congressional district of Alabama, election 2d day of November, A. D. 1880, as shown by the face of the United States supervisors' returns, as follows to wit:

supervisors returns, as follows, to wit:	
Madison County	3,517
Jackson County	
Limestone County.	
Lauderdale County	898
Colbert County	1, 180
Franklin County	354
Lawrence County	1,862
Morgan County	1, 139
Morgan County	1, 86

I hereby certify that the above and foregoing is a correct and true statement of number of votes cast for William M. Lowe for Representative in Congress from the eighth district of Alabama, at an election held on the 2d day of November, 1880, as shown by the face of the original returns made by the various United States supervisors of said election in the eighth Congressional district of Alabama, now on file in my office.

JAMES H. BONE, Chief Supervisor of Electi

To be certain, and do no one any injustice, we procured from the chief supervisor certified copies of all the original returns of supervisors of election, including all the remarks and indorsements of these officers,

at least most of whom were friends and supporters of the contestant.

These returns, I respectfully submit, prove that there do not exist any returns made by supervisors of election which show that William M. Lowe received 400 more votes, or even a single vote more than he admits was received by Joseph Wheeler, page 62 of his brief.

I insist that nothing on these returns, whether on the back or face, shows that any claim was made that William M. Lowe received as many as 12,400 votes, and I insist that, to establish the integrity of the statement which is recited on pages 11 and 12 of the CONGRESSIONAL RECORD, first session, it is incumbent upon the parties who are responsible for the statements, to present to this House a certified report of the chief supervisor, or official returns made by supervisors of election, by which it will appear that my opponent, Mr. Lowe, received at least 13,000 votes on November 2, 1880. (See middle of first column, page 12, CONGRESSIONAL RECORD, December 6, 1881.)

If those parties who are responsible for the statements referred to, byj

which it was sought to prevent the seating of a duly elected member of this House, can not present a certificate or certified report of the chief supervisor, or can not present "the official returns made by the supervisors of election," which show that he (Colonel Lowe) received more than 12,400 votes, then they must admit that the papers by which they sought to attack the certificate of the governor of a sovereign State were false or forged.

It will certainly be admitted that in attacking the certificate of a governor of a State on the floor of Congress, and thus preventing, or attempting to prevent, a member from taking his seat, the person or member who assumes so grave a responsibility should be literally accurate in all his statements to the House on the subject, and I trust that this is the last time that such a gross impropriety will be committed. It is now nearly a year since I filed with the Committee on Elections printed copies of these statements and up to this time the responsible parties have failed to in any way extricate themselves from the unenviable position in which they are placed by these records.

To prevent the perpetration of the wrong you seek to commit, I, together with a band of true representatives of the people, sat in our seats during the entire night, and by refusing to vote have for a few

## HELD YOU POWERLESS AT OUR FEET.

You were twenty short of a quorum and your efforts have been thwarted. I regretted to let the record show that I did not vote, because at every call of my name in this entire session of Congress I have been present and my vote has been recorded except when my withholding it was necessary to the preservation of right. For the same reason I withheld my vote when the effort was made to change the rule to enforce the tariff measure upon the country, without debate or consideration. On all other occasions the record shows that I cast my vote; not only that, but that it was cast on the side of the great people and

## AGAINST THE AUTOCRACY AND PLUTOCRACY

which have seized upon and controlled the dominant party of this House. I admit, Mr. Speaker, that the course pursued by our Government has caused brave men and earnest patriots to fear for its safety; and were it not for the great virtue of the people in whom all power resides I too would despair.

But hope and courage are aroused as I recall, from the touching tragedy of Talfourd's, the words of Ion, when, in his last interview with his beautiful Clemanthe, she asks:

## And shall we never see each other again?

# Looking in her face he replied:

I have asked that dreadful question of the hills which look eternal; of the clear streams which flow forever; of the stars, amid whose azure fields my raised spirit hath trod in glory. All were dumb! But when I look upon thy living face, I feel there is a something in the love which kindles through its beauty that can not wholly perish. We shall meet again, Clemanthe.

When asked: shall the glorious dream of virtue and liberty planted and sanctified by the blood of our forefathers of '76 live or perish?

When we see the action of the majority of this House upon the vital question of elective franchise-

When we see principles of popular government trampled under

When we see the duly and legally elected representatives of the people driven from this Hall, and when we look back only for the last de-cennium and see the corruptions which have impregnated every department of our Government-

When we see sovereign Legislatures disbanded by brutal soldiery—When we see the voice of the people stifled by the bayonet—When we see armies with bristling steel arrayed to hold a sovereign

people in subjection-

When we see a Minister of the Interior openly announce that in vio-lation of his oath he was sending soldiers and money to protect per-ured returning boards in proclaiming false and fraudulent returns of vereign States

When we see scores of men holding the highest trust, exposed as culprits, guilty of the base crimes of bribery and subornation of perjury, by which they enabled a de facto President to sit in the chair of Washington and Jefferson—
"When the annals of this Republic proclaim the disgrace and censure

of a Vice-President, a late Speaker of the House of Representatives, marketing his rulings as a presiding officer; three Senators profiting secretly by their votes as law-makers; five chairmen of the leading committees of the late House of Representatives exposed in jobbery; a late Secretary forcing balances in the public accounts; a late Attorney General misappropriating public funds; a Secretary of the Navy enriched or enriching friends by percentages levied off the profits of contractors with his Department; an embassador to England concerned in a dishonorable speculation; the President's private secretary barely escaping conviction, upon trial, for guilty complicity in frauds upon the revenue; a Secretary of War impeached for high crimes and confessed misdemeanors 17

When we see all this we admit that we are dumb; we admit we are

But when we look again and reflect upon the glorious struggles of our forefathers of 1776; of their virtues, their courage, their exalted patriotism; when we think of their godlike example to all future generations; their Christian devotion to liberty; and when we reflect look again and see the same devoted courage and endurance and patriot-ism displayed by their sons in the struggle which so recently drenched this fair land in blood, and now commemorated by a million green graves of our dearest and bravest and our best; and when we see the virtue and nobility and adherence to principle displayed by the people in the southern half of our country, when I look upon the great mass of Americans throughout our land; when I behold their living faces, and see courage and determination and love of liberty and virtue beaming from their noble brows, I think I see in all this a something that can not wholly perish, and that will not let liberty wholly perish, and my heart tells me that this effort of the American people to establish the godlike principle of self-government shall be eternal.

Let us, Mr. Speaker, to-day start with a new determination. We are the start with a new determination.

about to part. We are to have time for reflection. Let those reflections dwell upon this great and free country of ours. Let us remember the principle for which our fathers bled one hundred years ago. Let us determine to stretch forth our hands for action and rescue our country from the dangers which lower over it. Let us rescue the country of which a great free and virtuous people are the ornaments.

Let us save it that they may continue to adorn it. I ask all to aid

in this work who love the principles of free and independent government. I ask all to assist in the perpetuation of liberty and freedom, an effort for ourselves and posterity.

With such a purpose, amid such surroundings, I ask all to view the past in the light of Christian philosophy.

And from the sunny memories of joys common to us all, and from the grave of all painful recollections never to be disturbed here or elsewhere by thought, word, or deed, will spring up among us a closer brotherhood, a purer patriotism, and a more abiding love of country.
