form their duty." This confession of political faith has been maintained to this day. Accordingly, before the close of President Grant's second term, the *Evening Telegraph* was found arrayed against his administration, and earnestly opposing his renomination for a third term. The same course was pursued in the preliminary Presidential campaign of 1880, when the "third-term conspiracy," as the *Evening Telegraph* persistently styled it, was revived. State and city administrations have been dealt with on the same principle. The *Evening Telegraph* was an outspoken antagonist of Governor Geary during the latter portion of his administration, and was almost as severe in its criticism of some of his Republican successors, while in the State campaign of 1882 it was one of the most influential journals in the State that supported John Stewart, the Independent Republican candidate for Governor. As to municipal affairs, it has labored persistently and consistently for the purification of the city government, and has frequently stood alone in supporting the ticket opposed to that of the regular Republican organization. This was notably the case in 1876, when it triumphantly carried its point by the election of the Democratic candidate for sheriff, even in the excitement of a Presidential campaign; and in the spring election of 1881, when it stood alone among Republican journals in supporting the successful coalition reform ticket, including Samuel G. King, Democrat, for mayor, and John Hunter, Independent Republican, for receiver of taxes.

But it has been as a newspaper, rather than as a political journal, that the *Evening Telegraph* has appealed to the reading community. It has introduced innovation after innovation into evening journalism, and seen them gradually adopted by its contemporaries in this and other cities. It started out with one of the most important of these new ideas,—that of presenting every day in the week the leading editorials of the most influential journals of New York and other cities, both at home and abroad. This feature gave a decided impetus to the *Evening Telegraph* from the beginning, its readers fully appreciating the opportunity which it presented of learning the views on all questions of the day of the ablest writers in the whole field of journalism. Publishing the dispatches of the Associated Press from the start, it has always supplemented them by liberal installments of special dispatches from all points of interest, and by voluminous correspondence from all parts of the world. It also accompanies all important news items by illustrative and explanatory notes, placing the subject in hand fully before the reader at the moment it first claims his attention. For this purpose it has at its command a cabinet of material—biographical, historical, political, and descriptive—that is probably unequalled in any city in the world. It is seldom that an imperfect or unintelligible dispatch from any part of the world appears in its columns without being made clear, if the matter is worth the space

that the explanation would require. It is always ready for any emergency, and on that memorable Sunday in July, 1877, when several regiments of Philadelphia militia were shut up in the blazing round-house at Pittsburgh, at the mercy of a blood-thirsty mob, the *Evening Telegraph* was the only journal in the city that supplied the craving of the people for news throughout the day. Sunday journalism had not yet assumed the enterprising proportions and character of the present day. The *Evening Telegraph*, however, recognized the necessity for violating the announcement at the head of its editorial columns—"published every afternoon except Sundays"—and went to press with its first and, so far, only Sunday issue. The city was wild with excitement, and the demand for the paper was so great that the press was kept running far into the night, until the pressmen were utterly exhausted and refused to remain at their posts any longer. The newsboys sold many copies at the extravagant price of a dollar, and twenty-five cents each was eagerly paid for thousands of copies.

Aside from the special features already alluded to, the *Evening Telegraph* has always preserved a high literary character, and presented in its columns the choicest extracts from current publications in every branch of knowledge. As occasion has seemed to demand, it has ventured into the field of fiction, and reproduced in daily installments, romances that have been attracting unusual attention abroad. Many of these have been translated from the French expressly for the paper, the most notable instance of this kind being Victor Hugo's "93." The *Evening Telegraph* published a special translation of that remarkable work in 1874, which was far more carefully made than the version authorized in England, and which, after running through the paper, was reprinted in pamphlet form, and commanded an enormous circulation. The paper also pays especial attention to elaborate criticism in all departments of literature and art, including music and the drama.

The editorial staff of the *Evening Telegraph* has undergone comparatively few changes for the greater part of the twenty years during which the paper has now been published. Watson Ambruster, the managing editor, has been in continuous service since June, 1866. He was first employed as a reporter, but was made city editor in a few weeks, on the death of J. Mason Grier, who had held that position from the establishment of the paper. A year later he became news editor, and subsequently musical and dramatic critic, and since 1868 has been managing editor, and representative of the proprietor during his absence from the city. Next in length of continuous service is William J. Clark, Jr., who has been a member of the editorial staff since September, 1868. Mr. Clark's labors have taken a wide range, embracing, besides political and general editorial writing, the special departments of literary, art, musical, and dramatic

criticism. In December, 1869, George W. Allen joined the editorial staff, and has remained connected with it ever since as a general editorial writer and musical and dramatic critic. Among the other members of the editorial staff who have seen several years of service are Edwin K. Hart and Joseph Marshall. Edward J. Swartz, who acted as a reporter, and subsequently as news editor, from December, 1866, to December, 1869, returned to the staff in January, 1871, as city editor, and has remained in continuous service in that capacity ever since. Among those who have seen service on the editorial force at different times may be mentioned Frederick W. Grayson, T. Dwight Thatcher, now of Kansas; Alhert E. Lancaster, Lewis Waln Smith, Col. Alexander K. McClure, before the establishment of the *Philadelphia Times*; Rev. Dr. B. H. Nadal, of the Drew Theological Seminary; J. Luther Ringwalt, James C. Purdy, Charles Robson, Dalton Dorr, L. Clarke Davis, and the latter's wife, Mrs. Rebecca Harding Davis, the popular novelist. Among the Washington correspondents have been D. W. Bartlett, now a secretary of the Chinese legation to this country; Crosby S. Noyes, for years past the editor of the *Washington Star*; and Henry R. Elliott, who has held the position for several years past. Mrs. Lucy H. Hooper has been the Paris correspondent since 1875, and H. Cameron Richardson, the London correspondent since 1878. Among other foreign correspondents, it has been served by the late John T. Dexter, at London, Miss Anne H. Brewster, at Rome, Miss Costanza Hall, at Florence, and C. R. Heap and Reginald Soudamore, at Constantinople.

The *University Medical and Surgical Journal of Philadelphia*, published monthly by Joseph S. Longshore, J. Lukens, and Charles Murphy, was commenced in October, 1864, as the organ of the Penn Medical University of Pennsylvania. In 1865 it was consolidated with the *Eclectic Medical Journal of Philadelphia*.

The *National Baptist* first appeared in January, 1865, published by the American Baptist Publication Society. Its editors have been Kendall Brooks, D.D., Lemuel Moss, D.D., and H. L. Wayland, D.D.; and assistant editors, Joseph Stockbridge, D.D., J. Eugene Reed, A.M., and Rev. Philip Berry. In January, 1883, it became the property of Dr. H. L. Wayland, as publisher and editor. It has paid especial attention to the questions involved in social science, regarding social science as the gospel applied to the social affairs of mankind. It has aimed, within reasonable limits, to afford opportunity for freedom of discussion on social and religious topics.

The *Hahnemannian Monthly* is a journal of medicine and surgery, published in the interests of the homœopathic system. It was established in August, 1865, by the faculty of the Homœopathic Medical College of Pennsylvania, its first editors being Drs. A. Lippe and J. H. P. Frost. In 1868, the late Dr. R.

J. McClatchey became its editor, and continued in that position for ten years. During most of the time the periodical was owned by Boericke & Tafel, and upon Dr. McClatchey's retirement, the editorship was transferred to Dr. W. H. Winslow, of Pittsburgh, though the journal was still published in Philadelphia. At the beginning of 1880, Boericke & Tafel disposed of their interest to an organization of homœopathic physicians, known as the Hahnemann Club of Philadelphia, consisting of Drs. R. J. McClatchey, Bushrod W. James, A. H. Ashton, C. S. Middleton, Aug. Korndorfer, E. A. Farrington, M. M. Walker, John E. James, B. F. Betts, W. H. H. Neville, and Pemberton Dudley. The new proprietors appointed Bushrod W. James, M.D., business manager; E. A. Farrington, M.D., contributing editor; and Pemberton Dudley, M.D., general editor. Under this ownership and management the journal has been since issued, having now reached the nineteenth year of its publication.

The *Carriage Monthly*, a mechanical and trade journal, containing one hundred pages of information, was started in 1865.

The *New Era*, the first copy of which appeared on Saturday, Sept. 23, 1865, was the third paper published in Manayunk. After continuing nearly a year it was merged into *The Independent*, and removed to Norristown, Pa.

The *American Journal of Conchology*, commenced in 1865, was published until 1872 by the members of the Conchological Section of the Academy of Natural Sciences.

*Saturday Night* is a literary weekly, published by its proprietor, James Elverson, at the northwest corner of Ninth and Spruce Streets. It was first issued by Mr. Elverson and his former partner, Robert S. Davis, on the 30th of September, 1865, from No. 108 South Third Street. The design of the proprietor originally was to make it chiefly of local interest, and to its literary features were added society gossip, letters from the people, notices of chess, billiards, and other games, criticisms on music and the drama, and whatever could be of general interest to the reader. It was a handsome and spirited journal, and rapidly rose in public favor, so much so, that the increasing circulation forced a removal to more commodious quarters at the northeast corner of Third and Chestnut Streets.

But the proprietors, after the experience of eighteen months, were not satisfied with their success, and looking into the future saw a more promising field for enterprise in the placing of their paper before the country in a purely literary character. After careful deliberation this step was taken, and with the issue of April 20, 1867, *Saturday Night* became emphatically a weekly literary journal, that was not to appeal in vain to the sympathy and taste of intelligent readers throughout the land.

A corps of able story-writers and novelists was se-

cured, and serials, sketches, poetry, and brief essays combined to make its columns attractive. To bring it at once before the public, "supplements," containing several chapters of new stories, were printed and scattered broadcast throughout the country. This proved a most effective mode of advertising, and brought in subscribers by the thousands; while to win over the news-agents, Mr. Elverson traveled through every State of the Union, and obtaining the name and business card of each dealer, had them printed on a certain number of supplements, which were sent free for distribution in his locality. With these supplements were forwarded packages of *Saturday Night* for sale, the news-dealer having the privilege of returning, and having deducted from the bill all copies remaining unsold. This unprecedented liberality at once enlisted the self-interest of the agents, and from that time forward the success of the paper was assured.

In the spring of 1868 the proprietors purchased the large building at the southwest corner of Eighth and Locust Streets, and put in four first-class cylinder presses. Before the year closed two additional presses were required, the circulation having nearly doubled, and in 1869 another press was bought, and all seven were kept running day and night to print the edition, which had now become enormous, while an eighth press was ordered to run off three thousand copies an hour. This wonderful prosperity seemed to stimulate the proprietors to greater efforts, and in 1870 some ten million supplements (with the news-dealers' cards) were distributed to the seven thousand dealers handling their paper.

The career of *Saturday Night* thenceforward was successful and prosperous, and such as to add to the honor and fortune of its proprietors. In the latter part of 1878, Mr. Elverson bought his partner's interest in the paper, and at once proceeded to carry out his views of progress by further enhancing the value of the splendid property (of which he was now sole owner) and in starting new enterprises. The old and long-untenanted mansion at the southwest corner of Ninth and Spruce Streets was bought, and on its site Mr. Elverson erected one of the most spacious, convenient, substantial, and imposing buildings for the purposes to be found in the United States.

The *Printers' Circular*, devoted to typographical and lithographical matters, was started in March, 1866, as a monthly periodical, R. S. Menamin being the editor and publisher, at No. 36 Hudson Street. A sub-title was afterward assumed, "Stationers' and Publishers' Gazette." The present office is at Nos. 515 and 519 Minor Street.

The *Philadelphia Abendpost*, founded by Waldemar Cursch, in 1866, as a Republican paper, was the first German evening paper published in Philadelphia. Its first number was issued on New Year's day, 1866. On the first day of January, 1873, Fried-

laender & Co. acquired the *Abendpost*, and it has been independent in politics since. It is published from Nos. 612 and 614 Chestnut Street.

The *Evening Star*, a daily afternoon paper, made its first appearance on April 2, 1866. It was printed on a single-cylinder Hoe press, capable at the most of printing fifteen hundred copies an hour; but there never was a day that the machine was not kept going from noon till six o'clock at night. In less than two weeks the new-comer had earned a welcome, and felt perfectly at home; and it was able to make this editorial announcement:

"In printing the *Star* we have struck a chord in the popular heart. The people at last see that a paper which costs but a penny, prints all the news, and instead of many columns of gab—what Carlyle would call woob-woohing and soo-soogbing of the wind—gives sharp, clear comments on men and things. The *Star* belongs to no clique. It is the organ of no party."

On July 29, 1867, the paper was enlarged to five columns and printed on a double-cylinder Hoe press, giving twice the capacity of the former machine. The circulation still kept rising, and on Feb. 29, 1868, the stereotyping process was employed for the first time, which, by means of duplicate plates of each page, again doubled the working capacity of the machinery, affording a speed of about six thousand papers an hour. As the supply of papers became more ample, the news-dealers and news-hoys were prompt to avail themselves of the fact; so that before three months had passed, the necessity of much more rapid printing facilities became manifest; and an order was given for the construction of a Bullock perfecting press, a machine at that time in use by only one other paper in the city, the *German Democrat*.

On Aug. 30, 1869, the Bullock was started for the first time; and it has done faithful service from that day until the present time without rest or intermission, running out papers regularly at a rate of over twenty-four thousand copies an hour, and sometimes running incessantly from forenoon till late in the day, without fairly keeping pace with the demand,—though those, of course, were extraordinary occasions. Still, the necessary result of making a newsy, cheap, impartial journal, always brightly printed, was a continuously large circulation; and this in turn brought a gradually increasing pressure of advertising business.

Then double sheets were resorted to, as the next forward step. Originally they were published on Saturdays only, during the spring and fall trade seasons; but their popularity soon made them a necessity twice and even three times a week; and, as another way of securing additional space, much of the news was put in smaller type.

These expedients, however, failed to meet the exigency created by the wants of advertisers, and it became manifest that another enlargement, entailing entirely new machinery, was the only solution of the problem. The result was the purchase of a new Scott perfecting press, of the fastest possible capacity; and

such is the machine on which the *Star* is printed to-day.

The following features concerning the development of *The Evening Star* are worth noting: It was the first penny evening paper started in the country after the war; it was the first afternoon paper in the city to stereotype; it was the first evening paper in the country, it is claimed, to use a perfecting press; it was the first evening paper in the city to run a Bullock press, of which a dozen or more are now in use here; and it was the first evening paper in Philadelphia to start a Scott printing-machine. The publishers are School & Blakely.

**The Dental Times**, a quarterly journal of dental science, edited and published by the faculty of the Pennsylvania College of Dental Surgery, appeared in July, 1866, and was discontinued in April, 1873. Volume seven was edited by James Truman; volume eight, by G. T. Barker; and volume nine, by E. Wildman and James Tyson.

**The Chronicle-Herald** is the combination of *The Evening Herald* and *The Evening Chronicle*.

*The Evening Herald*, a penny paper, had its first issue Monday, Aug. 27, 1866, from the corner of Hudson and Harmony Streets. Party feeling ran high, and the new journal was intended to reach the Democratic masses. It was received with favor, and on Jan. 1, 1868, was increased in size by the addition of a column to each page, with a proportionate increase in length. April 13, 1867, the publication-office was removed to 708 Market Street, thence, in March, 1868, to the southeast corner of Fourth and Chestnut Streets, and the next year to 105 South Fourth Street. The high price of printing-paper and the limited capital of the owners interfered greatly with the enterprise required to compete with the opposition journals, and on March 20, 1870, the *Herald*, by purchase, became the property of Dennis F. Dealy. He instituted many new features, which were duly appreciated by the public; the carriers' circulation became very large, and to increase the facilities, Mr. Dealy removed the office to No. 23 South Seventh Street, Nov. 12, 1870, and purchased a large double-cylinder press. Close application to business injured Mr. Dealy's health so greatly that by advice of physicians he relinquished journalism, and, June 23, 1873, sold the *Evening Herald* to Barnholt & Hazleton, two Western gentlemen, who associated with them as business manager A. E. Smythe, and the paper was made independent of politics. The next year the publication-office was removed to 27 South Seventh Street, and the price of the paper increased to two cents. Too many wild schemes brought trouble, and the services of the sheriff became necessary. He sold the *Herald*, together with the *Sunday Press*, owned by the same management, at public sale Nov. 28, 1877, Dennis F. Dealy becoming the purchaser. He combined it with the *Evening Chronicle* and issued both as the *Chronicle-Herald*.

*The Evening Chronicle* was originally the *Germantown Chronicle*, a weekly, started in Germantown by Dr. Tingley in 1868. The following year it was purchased by G. Wharton Hamersly, who, in October of that year, converted it into a daily afternoon newspaper, independent in politics, but with a leaning toward Democracy. The next year it was changed to a morning paper, and continued to be published in Germantown until May 1, 1874, when the office was removed to the city, at 23 South Seventh Street, and the time of issue changed to the afternoon. July 1st the office was removed to 21 South Seventh Street, and Oct. 19, 1874, the *Evening Chronicle* was purchased by Dennis F. Dealy, who at once made it a stalwart Democratic organ. The election of that year was a tidal-wave, and the *Chronicle* was given a boom, being at that time the only daily Democratic newspaper in the city published in the English language. As before stated, the *Chronicle* and *Herald* became united Nov. 28, 1877, as the *Chronicle-Herald*, and continued to be published at 21 South Seventh Street until Nov. 1, 1882, when the office was removed to its present quarters, No. 719 Chestnut Street.

**The Bulletin of the American Iron and Steel Association** was first published in 1866. It contains eight pages of matter, and is issued each Wednesday, from No. 261 South Fourth Street.

**The Catholic Standard**, published by Hardy & Mahoney, every Saturday, at No. 505 Chestnut Street, was first issued in 1866.

**The Children's Friend**, a monthly juvenile paper, containing thirty-two pages, was first issued in 1866, and is published at No. 1020 Arch Street, by the Friends' Book Association of Philadelphia.

**The Christian Statesman**, a weekly evangelical paper, is published on Thursdays, at No. 1520 Chestnut Street, having been founded in 1866.

**The American Naturalist**, published monthly by McCalla & Stavely, is the leading organ of the natural sciences in the United States. It is in its eighteenth year of publication, having been established in January, 1867. Its editors-in-chief, Professors A. S. Packard, Jr., of Providence, R. I., and E. D. Cope, of Philadelphia, are known throughout the scientific world. The magazine has eleven departments, and the sub-editors in charge of their specialties reside in different portions of the United States. Three are in Philadelphia, one in Boston, two in Washington, one in Providence, one in Iowa, and one at Ann Arbor, Mich. A special feature is the preference it gives to American work and workers. It claims to be the only magazine in the world that keeps its readers *en rapport* with the work of Americans in the field of the natural sciences. Three new departments have recently been added to it, those of mineralogy, physiology, and psychology. Its typographical dress and illustrations are of the best. Throughout it is not only scientific, but popular, so as to interest not only specialists, but the general reader and the young

naturalist. The leading scientists of the country write for its columns, and it is to the credit of Philadelphia that so sterling and leading a scientific publication should have its home in this city, and be conducted with such ability and success. It is published at Nos. 237-239 Dock Street.

**The Guardian Angel** was started in January, 1867, by Daniel F. Gillin, James P. McGuigan, and Martin I. J. Griffin as publishers, and was edited by Revs. James O'Reilly and William F. Cook. It was then the only publication for Catholic children in the United States.

The first number was issued from the old United States Hotel, and the publishers, in 1868, bought the printing-office at No. 701 Chestnut Street. They continued there for seven years, meeting with much success.

*The Guardian Angel* is now published by Daniel F. Gillin at No. 717 Sansom Street, is edited by John Arthur Henry and Daniel F. Gillin, is issued monthly, and has a large circulation.

**The Proof-Sheet**, issued by Collins & M'Leester, type founders, No. 705 Jayne Street, was published for the first time in July, 1867. It was printed bimonthly, on tinted paper, each number containing sixteen pages. It was chiefly devoted to matters typographical and bibliographical. In 1870-72 there were published in *The Proof-Sheet* a series of valuable historical articles upon the contemporary newspapers of Philadelphia, chiefly daily, prepared by Eugene H. Munday, who was the editor of the paper.<sup>1</sup>

**The Keystone**, the only Masonic weekly newspaper published in Pennsylvania, and, with one exception, the only one published in the United States, was first issued, July 20, 1867, by William A. Maas, and is now in its seventeenth year of successful publication. In 1868 it was purchased by McCalla & Stavely, a long-established Philadelphia publishing and printing-house, then fifty years old, who shortly after obtained from the Legislature of Pennsylvania a charter for the Masonic Publishing Company, and since that time this company has been the publishers and proprietors of *The Keystone*. The paper has had able editors from the outset. The late Rev. Robert H. Pattison had charge of its editorial columns for a time. He was succeeded by Richard Vaux, of the Philadelphia bar, and since 1870, Clifford P. MacCalla, also a member of the Philadelphia bar and the present Junior Grand Warden of the Grand Lodge of Free and Accepted Masons of Pennsylvania, has been its editor. It is acknowledged to be leading exponent of Freemasonry in the United States, and has a wide circulation in Great Britain and the English possessions, as well as in America. It is issued in a handsome eight-paged sheet, and includes both general

literary and Masonic reading-matter. Since there are thirty-six thousand Freemasons in Pennsylvania, and five hundred and ninety thousand in America, there is a wide field of usefulness for such a journal.

**The American Journal of Homœopathic Materia Medica**, edited by Dr. C. Hering and Dr. H. N. Martin, was issued for the first time in September, 1867, and continued until August, 1871, the last number being issued in that month. The publisher was A. J. Tafel. In the following month was commenced the *American Journal of Homœopathic Materia Medica and Record of Medical Science*, edited by A. R. Thomas, and published by J. M. Stoddart & Co.

**The Philadelphia Post**, a daily morning newspaper, made its first appearance as *The Morning Post* on Oct. 7, 1867, without previous announcement. It was established by a number of enterprising journalists of strong convictions and indisputable ability. They were John Russell Young, John Davis Stockton, James Rankin Young, Charles McClintock, and James McConnell. Mr. Stockton was made editor-in-chief, and Mr. McClintock was selected as the business manager. In August, 1868, the latter was succeeded by John M. Carson. For some time after its institution the affairs of the *Post* were prosperous, but the capital invested in it proved to be insufficient to maintain it in the character it had assumed long enough to assure its success as a business venture. Finally, in the latter part of 1870, the Philadelphia Post Publishing Company was incorporated, and the *Post* establishment passed under its control in January, 1871. The title was changed to *The Philadelphia Post*, the object being to give it a more specific local character than it had previously possessed. During its brief career—for it was suspended a few years subsequently—the *Post* was conducted by as strong an editorial staff as any paper in the city. Every department was under the supervision of an experienced journalist. The original publication-office of the *Post* was at No. 740 Sansom Street, and in May, 1868, the office was removed to No. 32 South Seventh Street.

**The Sunday Republic** was commenced by Aaron K. Dunkel, Nathan S. Hales, Thomas S. Keyser, and Thomas W. Swain. Messrs. Dunkel, Hales, and Keyser were engaged as compositors on *The Press*, while Mr. Swain held a similar position on the *Morning Post*. The first publication office was at No. 111 South Third Street, the composing-room being in the building in the rear of No. 132 South Third Street, and the paper printed on the press of the *North American*. After some years the office was removed to the south side of Chestnut Street, below Fourth. It is now situated at No. 38 South Seventh Street. The original firm remained intact until 1878, when Mr. Dunkel withdrew, the title of the partnership becoming Hales, Keyser & Swain. Mr. Dunkel continued as one of the proprietors, however, until Jan. 18, 1884, when he disposed of his interest in the establishment to his partners. Mr. Dunkel was a member of the Pennsyl-

<sup>1</sup> In the preparation of this chapter the writer has had occasion to make use of a portion of Mr. Munday's material, for which due credit is here given.

vania State Senate from the Sixth District for two terms, and was, in 1878, elected Secretary of Internal Affairs of the commonwealth, his term of service expiring in May, 1883. The *Sunday Republic* has for years been under the efficient editorial direction of J. Robley Dunglison, son of the distinguished Professor Robley Dunglison, and maintains a high position among the journals of the city.

**The Christian Standard and Home Journal**, issued every Saturday from No. 921 Arch Street, is published in the interests of the Methodist Episcopal Church, and has a very large circulation. The first issue of the paper was in 1867.

**The Camp News**, a twenty-four-page journal, issued monthly, was commenced in 1867, is devoted to the interests of the order of the Sons of America, and is issued from No. 524 North Sixth Street.

**The Philadelphia Trade Journal**, a commercial newspaper, issued every Monday, was printed for the first time in 1867, and is published at No. 236 South Fifth Street.

**The Busy Bee**, issued monthly in the interests of the Lutheran Church, was published for the first time in 1867.

**Lippincott's Magazine** was established in 1868, and has always maintained a high reputation as a literary and popular miscellany. While fiction, in the form of serials and short stories, holds a prominent place in its pages, it has attracted particular notice by its sketches of travel and adventure, studies of life and character, and articles on natural history and similar topics, written with the freshness that comes from personal observation and experience, in a lively style, and with abundant anecdotal illustration. The editorial departments—"Our Monthly Gossip" and "Literature of To-Day"—are managed with skill and critical taste, and the general character of the magazine, as described by the *New York Tribune* and other authorities, is that of being "eminently readable."

Many novels which have attained a high reputation were originally published in *Lippincott's Magazine*. Among them are George Macdonald's "Malcolm" and "The Marquis of Lossie;" William Black's "Princess of Thule" and "Strange Adventures of a Phaeton;" "Dallas Galbraith" and "A Law unto Herself," by Rebecca Harding Davis; "Adam and Eve," by the author of "Patty;" "The Vicar of Bullhampton" and "Sir Harry Hotspur," by Anthony Trollope; "The Atonement of Leam Dundas," by Mrs. Lynu Lintou; "Through Winding Ways," by Ellen W. Olney; and "The Jewel in the Lotos," by Mary Agnes Tucker. During the Centennial year a series of illustrated articles, under the title of "The Century, its Fruits and its Festival," by E. C. Bruce, ran through the magazine, and were afterward republished and widely circulated in book-form. Similar republications from its pages have been "The New Hyperion," by Edward Strahan; "Summerland

Sketches" and "Zoological Curiosities," by Dr. Felix L. Oswald; and various works of travel. Articles on medical and physiological subjects, by Drs. S. Weir Mitchell, H. C. Wood, W. M. Hunt, C. W. Dulles, and other eminent members of the profession, and a series of papers on "Evolution," by Professor E. D. Cope, have been among the weightier contributions to the magazine; while its lighter and more characteristic attractions have included the short stories of Ouida, all of them originally published in *Lippincott's*, and considered by some critics her finest productions; admirable sketches of negro life, by Jennie Woodville; many striking tales by Sarah Wister Kellogg, M. H. Catherwood, Mrs. J. H. Burnett, Lizzie W. Champney, and numerous other writers; with sketches of various kinds by contributors whose names are familiar to the reading public. Poetry, while not so conspicuous a feature as in some other magazines, has been well represented, the contributions in verse including productions by Longfellow, Swinburne, George H. Boker, Bayard Taylor, Sidney Lanier, Emma Lazarus, Frances Anne Kemble, R. H. Stoddard, C. G. Leland, H. H. Boyeson, and others. The first editor was Lloyd P. Smith, librarian of the Philadelphia Library, who was succeeded in 1870 by J. Foster Kirk, author of the "History of Charles the Bold," and editor of Prescott's Works. The typographical execution of the *Magazine* combines with its literary excellence to render it a worthy representative of the great publishing house whose name it bears.

**The Druggists' Reference**, a monthly folio, published by Iredell & Co., appeared in January, 1868, but did not live long.

**The Frankford Gazette**, formerly the *Holmesburg Gazette*, was commenced in the spring of 1868, by William F. Knott, who continued to publish it until Oct. 1, 1883, when he disposed of his interest to James France. The *Gazette* was commenced and continued to remain as a thoroughly independent local paper. The originator of the enterprise commenced publishing the paper without *one cent of capital* (borrowing enough to purchase the white paper for the first issue), renting type, etc., and doing the entire work connected with its publication for the first six months himself. The *Gazette* is published every Friday at the southwest corner of Main and Church Streets, Frankford.

**The Architectural Review and American Builders' Journal** had its inception in 1868, conducted by Samuel Sloan, and published by Claxton, Remsen & Haffelfinger. It lived three years.

**The Daily Globe**, a morning penny paper which had but a year of life, was first published on Oct. 6, 1868, by Henry H. Holloway, at the northwest corner of Seventh and Chestnut Streets. It was intended to be "strictly neutral in politics, uniformly unsectarian in its religious intelligence, and thoroughly impartial in its discussions of all topics of general interest."

**The People's Magazine** is published monthly, at No. 915 Arch Street, by P. W. Ziegler & Co. The first number was issued in October, 1868. It is literary in its character, containing choice stories, interesting and useful information, etc.

**The Young People's Magazine**, published monthly, made its appearance in 1868, and was in existence until 1880.

**Our Own Home**, a monthly family journal, comprising twenty pages, was issued for the first time in 1868.

**The United States Review**, a semi-monthly publication, devoted to insurance subjects, was first issued in 1868, and is still published at No. 406 Walnut Street.

**The Dental Office and Laboratory**, a monthly journal of dental intelligence, published by Johnson & Lund, was commenced in 1868, and closed its career November, 1872.

**The Chronicle and Advertiser**, the fourth newspaper published in Manayunk, was first issued Jan. 1, 1869, by James Mulligan, at No. 105 Grape Street, Manayunk. Its office is now at the corner of Main and Levering Streets. For many years the paper was printed in the city, at various places, but is now printed as well as issued from its own type and press at its own office.

**The Legal Gazette** came into existence July 2, 1869, as a weekly journal, published by King & Baird, at Nos. 607-609 Sansom Street. It suspended publication June 1, 1876.

**The Day** made its appearance on Nov. 4, 1869, the publisher being Alexander Cummings, who established the *Evening Bulletin* in 1847. *The Day* was originally a morning paper, and was issued for one cent, from the northwest corner of Sixth and Chestnut Streets. In his salutatory, the editor said, "Today we give to Philadelphia a new newspaper. Entering into no rivalry—certainly no offensive rivalry—with existing journals, we propose to furnish to this community, whose intellectual necessities are growing with its material growth, a new organ of independent action." *The Day* began its career with a full and able corps of editorial writers, which included, as occasional contributors, several of the foremost scholars of Philadelphia. Charles N. Pine was the principal editor, until H. H. Cobb (now at the United States Mint), who had been engaged for this position a long time before *The Day* was started, was ready to enter upon its duties. Mr. Pine, however, remained upon the editorial staff of the paper for many years. Besides Messrs. Cobb and Pine, D. Brainerd Williamson, Lawrence W. Wallazz, and Harry Brown were regularly engaged as assistant and news editors. Editorial matter was also furnished by William B. Reed, Joseph J. Reed, and others. The local department was in charge of William P. Cunnington, the financial department was supervised by Stephen N. Winslow and William F. Palmer (of the *Commercial List*),

and the business department was under the management of James S. Chambers. In January, 1872, *The Day* was purchased by Lewis C. Cassidy. On the 5th of the following month it was converted into an afternoon paper. Mr. Chambers assumed full control of the business department of the paper, while Mr. Pine became editor-in-chief. After a further existence of a few years, *The Day* was discontinued.

**The Travelers' Official Railway Guide**, issued monthly, came into existence in 1869. It is of great value to tourists and to the general public.

**Scattered Seeds**, a juvenile publication, issued monthly, originated in 1869, and is published by the Friends' Book Association of Philadelphia, at No. 1020 Arch Street.

**The Building Association and Home Journal** has been published monthly since 1869, and is devoted to the interests of the building and loan associations of the city.

**The Business Advocate and Price Current**, a commercial journal issued every Thursday, is published at No. 727 Sansom Street, and dates back to 1869.

**Public Opinion**, a journal of Republican proclivities, has been published every Saturday since 1869.

**The Underwriter**, a fifty-two-page journal, published monthly, devoted to insurance interests, came into existence in 1869, and is published at No. 329 Walnut Street, by S. E. Cohen.

**The Baptist Teacher** was first issued in January, 1870. It is edited by P. S. Henson, D.D., who is assisted by Edward G. Taylor, D.D., Dr. C. R. Blackall, and Mrs. M. G. Kennedy, with an able corps of contributors; it is entitled to a place in every Baptist home. It is published by the American Baptist Publication Society, No. 1420 Chestnut Street.

**Our Once-a-Week Visitor** was established at Manayunk, by Josephus Yeakle, March 24, 1870. It met with very considerable success, but was suspended October 27th of the same year, the proprietor having determined to publish a larger paper and under a different title. In accordance with this purpose *The Manayunk Sentinel* was established the following week.

**The Record** made its first appearance on the morning of the 14th of May, 1870, as the *Public Record*. It was a four-page, twenty-four-column sheet. In typographical appearance it resembled the *Public Ledger*. The design of its proprietor, William J. Swain, a son of William M. Swain, one of the founders of the *Ledger*, was to compete with that paper, and for seven years Mr. Swain adhered to his original idea of supplanting it.

A boom was started for the paper in September, 1874, by the enlargement of each page to seven columns. Arrangements were made with one Lloyd, a map publisher, to supply each yearly subscriber with a map of the United States. A generous commission was paid to canvassers for each subscriber obtained by them, and a small sum was paid Lloyd for every name

THE PHILADELPHIA RECORD,  
NOS. 917 AND 919 CHESTNUT STREET,  
PHILADELPHIA, PA.

added to the subscription-lists. This had the effect of swelling the circulation to one hundred and two thousand copies daily. This success was short-lived. It was soon discovered that many of the names returned by the canvassers were fictitious, whereupon Lloyd refused to distribute all the maps. Mr. Swain claimed that the refusal of Lloyd to carry out the contract had injured him to such an extent that he entered suit for sixty thousand dollars damages. Pending the adjustment of this suit the circulation of the *Public Record* fell off with the same rapidity as it had advanced.

In 1877, Mr. Swain sold the *Record* establishment to a stock company, in which William M. Singerly had a controlling interest. The character of the paper was entirely altered, its name was changed to *The Record*, its price was reduced from two cents to one cent, its pages were brightened with display headlines, and every effort was made to present to the community a sheet attractive in appearance and full of news. The idea of printing a one-cent daily, containing all the doings of the hour, was stamped by experienced publishers as a practical impossibility, they alleging that the price received, after deducting for agents' profits, would not pay for the white paper on which the news was printed. It was argued that the larger the circulation the greater would be the loss. Yet *The Record* lives. It pays a handsome profit, and aims to merit the support which the people have given.

In the fall of 1879, Mr. Singerly purchased the entire stock of the paper. The size of the Saturday issue was doubled, and the extra space filled with the cream of the exchanges, while special prominence was given to the "Religious," "Agricultural," "Sporting," "Household Knowledge," and other departments. In 1882 a Sunday edition was issued, the initial number being printed on June 25th.

The printing machinery which was in use when the paper was purchased from Mr. Swain was replaced with two new Hoe perfecting presses, each having a capacity for printing thirty thousand copies an hour. Even these were insufficient, and two additional Hoe presses have been added to the stock, so that the establishment is equipped with machinery for turning out one hundred thousand single copies of *The Record* in one hour.

The recent management of *The Record* has been characterized by many evidences of journalistic enterprise. The exposure of the wholesale theft of dead bodies and the wholesale robbery of the city by the coroner's employés, published in the summer of 1879, gave the paper a character for fearlessness. And when, in 1880, the misdoings of the bogus medical colleges were thoroughly sifted and the malefactors brought to justice, the journal was made the recipient of the thanks of the entire people.

For many years the publishing office was established in the building at the southwest corner of Third

and Chestnut Streets, but soon after Mr. Singerly assumed the direction of the paper, steps were taken toward securing more commodious and more modern quarters. The old Markoe property on Chestnut Street, adjoining the new post-office, built in 1809-11, a famous family mansion in its day, was purchased, the building thereon was torn down, and a massive granite structure was speedily erected, *The Record* being issued from it for the first time on Monday, June 19, 1882. The building is a splendid specimen of architecture, and it is one of the finest newspaper establishments in America. The structure is six stories in height, besides a basement extending underneath the entire property. The building, constructed at a cost of two hundred thousand dollars, has a front on Chestnut Street of fifty feet, and is built of Fox Island granite. A series of piers and lintels, hewed in apparent strength, rise tier over tier to a height of ninety-six feet. The openings are large, most of them having square heads. The pilasters of the piers are fluted at intervals, and the raised panels on the lintels are polished, and the coves embellished with a series of carved leaves in relief, extending entirely around the front of the building. Above the main entrance opening into the ground floor corridor there is a semi-circular projection, upon the polished surface on which is carved the word "RECORD." The entrance leading to the ground-floor corridor is guarded on each side by a group of triple columns in two sections, each column being sixteen inches in diameter, surmounted by projecting massive piers which batten to the pilasters above. These pillars are of polished dark-blue Quincy granite. The space between the face of the pedestals upon which the columns rest gives a recessed entrance of six feet. One of the handsomest of the details of the general plan is in the embellishment of the capitals of these doorway columns, which are carved in graceful grouping lines, springing naturally from the stone, and designed to represent an interlacing succession of easily-curving leaves. The massive front doors of this corridor swing upon great brass hinges of unique and elaborate design. These doors are heavily and richly paneled and carved, and embellished with brass mountings of various designs, the brass used in the construction and adornment of the doors costing seven hundred dollars. From the lintels of the fifth story massive bond stones extend through the wall and project from the face of the pilasters, to receive four polished columns, seventeen inches in diameter, which are united to the wall by two bond stones between the base and cap. The columns are finished below the bond stone upon which they rest in pendants of graceful design. They support two brackets which receive the cornice below the tower, the appearance being not of pendent but of supporting columns. The building is surmounted by an ornamented balustrade, original in design and artistic in finish. A tower rises forty-one feet from the cornice, thus making an altitude from the foundation

to the top of the complete structure of one hundred and thirty-seven feet. The corridor on the lower floor is elaborately finished in marble and plaster. The cornice moulding from the ceilings is of plaster cast, as well as the wall coverings, which are handsomely frescoed. The floor is tiled with Vermont white marble, Glens Falls black marble, and Champlain red marble. The sides of the corridor, as well as a border along the broad stairway, are wainscoted four feet six inches with Glens Falls black marble, French gray marble (the latter from the Isle La Motte (Swanton dove color), and Birgilla and Swanton chocolate marbles. The artistic arrangement of these wainscoting marbles shows what beautiful effects can be produced by arrangement and contrast of color in marble as well as in anything else. The business office is upon the first floor, as is also Mr. Singerly's private sanctum. The editorial department occupies the entire fifth story of the building, while the composing-room takes up two-thirds of the sixth floor. The engine- and press-rooms are situated in the basement. The remainder of the building is occupied as private business offices, etc. It is claimed that *The Record* has the completest newspaper establishment in the country. The handsome quarters, the electric lights, the elevator, and other features have been designed with regard solely to the comfort and convenience of the employés. Pneumatic tubes whirl the news from the telegrapher's desk at Tenth and Chestnut Streets to the news editor's desk in twenty-eight seconds, thereby saving much valuable time, particularly in the early morning. The stereotyping machinery turns out a pair of plates ready for the press in ten minutes after the forms have been closed. The four Hoe perfecting presses, as already stated, have a capacity for throwing out one hundred thousand copies an hour, and the *Record's* paper-mill makes five tons of paper every day. If stretched out in one continuous line, the copies of *The Record* printed and sold in one week would cover a length of seven hundred and seventy-two miles, Saturday's issue alone reaching one hundred and thirty-two miles.

Many evidences of prosperity characterize the management of *The Record*, and every indication leads to the belief that its recent and present phenomenal success will be long continued.

The present editorial staff of *The Record* comprises the following: Editor-in-chief, Theodore Wright; financial editor, Charles M. Town; managing editor, M. M. Gillam; telegraph editor, A. S. Chambers; commercial editor, Howard Austin; railroad editor, C. D. Crutchfield; associate editors, J. H. Filler, W. R. Leshar, and W. N. Lockington; and city editor, John Norris.

William M. Singerly, the publisher of the *Record*, was born in Philadelphia, on the 27th of December, 1832. He is the eldest son of the late Joseph Singerly. Mr. Singerly graduated from the High School of this city in 1850, and immediately entered mercan-

tile life. After ten years passed amidst commercial surroundings he was called to the management of the Germantown Passenger Railway, in which his father was a large stockholder. The sagacity, energy, and ability which characterized Mr. Singerly's administration of the affairs of this road were so marked that toward the close of his father's life he controlled the line absolutely.

At the time of his father's death, in 1878, Mr. Singerly came into possession of some fifteen thousand shares of the Germantown Passenger Railway stock, appraised at \$750,000. As a result of his superior management he disposed of this stock for \$1,500,000.

On the 1st of June, 1877, Mr. Singerly secured control of *The Philadelphia Record*. The almost incredible progress made by this journal under Mr. Singerly's liberal management has already been referred to.

Mr. Singerly has, however, not given his time of late to journalism alone. Other important enterprises have also engaged his attention. In 1873, four years prior to his advent into the newspaper world, he purchased sixty-eight acres of ground on the Wissahickon Creek, above Gwynedd Station, on the North Pennsylvania Railroad. Here has been gradually established a magnificent stock-farm, where can be found the purest breed of Holsteins, and the finest of Cotswolds and Southdowns. The farm, which now comprises six hundred acres of land, is furnished with all modern machinery and appliances necessary to its complete development.

Mr. Singerly's attention is also largely absorbed at the present time with extensive building operations; probably the most extensive ever inaugurated in Philadelphia by one person at any one time. He is engaged in the erection of several hundred houses, approximating a thousand, upon a tract of land in the Twenty-eighth Ward of this city, comprising in all about eighty acres, lying between Seventeenth Street and Islington Lane and Diamond and York Streets. Over two million five hundred thousand dollars worth of improvements have already been made within the past five or six years.

Among other enterprises in which Mr. Singerly has heavy financial interests may be enumerated the following: The Brighton Knitting Mills in this city; a gleaner and binder factory at Norristown, in this State; a paper-mill at Fair Hill, Cecil Co., Md., and various other operations of vast magnitude.

**The Episcopal Register**, published by McCalla & Stavely, is the only newspaper issued weekly in the interest of the Protestant Episcopal Church in Pennsylvania. It represents the three dioceses of Pennsylvania, Central Pennsylvania, and Pittsburgh, and has the confidence and approval of Bishops Stevens, Howe, and Whitehead. It is in its fourteenth year of publication, having been established in May, 1870. The Rev. Dr. Childs and Clifford P. MacCalla were the first editors, and were succeeded by the Rev. Dr.

Engr. by A.H. Fitch

J. M. Sargent

C. George Currie and the Rev. S. D. McConnell. The present editor is the Rev. W. F. C. Morsell, who is aided by a large staff of regular correspondents and special contributors, the Rev. Thomas L. Franklin being city editor. This paper is an able exponent of the important church which it represents, is conservative in tone, and all of its departments are distinguished by brightness and substantial worth.

**The Medical Independent**, devoted to domestic medicine, physiology, hygiene, science, arts, and information for the people, was commenced as a weekly in June, 1870. Three volumes, and a portion of a fourth, were published, edited by William Paine. A periodical with the same title, and practically the same sub-title, was commenced on May 1, 1872, as a semi-monthly folio journal, which was virtually a continuation of the first named. It was edited by R. H. Kline and A. H. Lindley.

**The Philadelphia Medical Times** was issued for the first time in October, 1870. The first editor was Dr. Edward Rhoads, but sickness prevented him from doing any work upon it, and until his death, which occurred Jan. 15, 1871, it was conducted by Dr. William Pepper, at the present time provost of the University of Pennsylvania. Dr. Pepper continued in charge for a short period, but Drs. James H. Hutchinson and James Tyson jointly assumed control before the expiration of the first year. Dr. John H. Packard was made editor upon the resignation of Dr. Hutchinson, in August, 1872, and conducted it until June, 1873, when he was succeeded by Dr. Horatio C. Wood, who continued in charge until October, 1883. Dr. Frank Woodbury became connected with Dr. Wood in the editorial management in March, 1882, and in October, 1883, he took complete editorial control.

**The Medical Times** was issued semi-monthly during the management of Drs. Rhoads, Pepper, Hutchinson, Tyson, and Packard. It was in October, 1872, changed to a weekly, but in September, 1875, was again changed to a bi-weekly, which it is at present. It is issued every other Saturday, and contains thirty-six to forty pages of original lectures, original communications, notes of hospital practice, translations, editorials, leading articles, special correspondence, reports of medical societies, reviews, gleanings, miscellany, notes and queries, and army and navy news. It is published by J. B. Lippincott & Co., at Nos. 715 and 717 Market Street.

**The Photographic Review of Medicine and Surgery**, a bi-monthly illustration of interesting cases, accompanied by notes, was commenced in October, 1870, and concluded in 1872. It was published by J. B. Lippincott & Co., the editors being Drs. F. F. Maury and L. A. Dubring.

**The Manayunk Sentinel** came into existence Nov. 5, 1870, Josephus Yeakel editor and proprietor. At the present time the *Sentinel* is issued from Nos. 4402-4406 Cresson Street, Manayunk. With the issue

of Nov. 7, 1879, it was considerably increased in size, and its position among the suburban papers of the city is excelled by no journal.

**The Christian Woman**, a monthly publication, was originally issued in 1870, Mrs. Annie M. Wittenmyer being the editor. By 1873, so successful had been its brief career, it had reached a circulation of sixteen thousand, but the panic in the fall of the year seriously affected its income. In 1881 it was sold to a Germantown printer; but it did not succeed in recovering its former prestige, and was discontinued for some time in 1883. Recently, however, it passed under the control of William Syckelmoore, No. 1420 Chestnut Street, who is succeeding in making it a first-class journal. Mrs. Wittenmeyer is now the assistant editor.

**The Penn Monthly** was started in 1870 by an association of young men, graduates of the University of Pennsylvania, who wished to do something for the promotion of a pure and earnest literature in Philadelphia, and indirectly to show what the University had been, and, still more, what it might be, in relation to the social life of the city and the discussion of public questions. A committee of editors was appointed, and the stock was disposed of among their own number. By degrees the other editors fell off, and Professor Robert E. Thompson, of the University, remained in charge alone, and so continued until the transfer of the magazine to the Society of the Alumni in 1881. For some time before this transfer the magazine had been issuing a supplement, called *Weekly Notes*. This grew into a weekly paper by October, 1880, and was called *The American*, under which name it still is published, with Professor Thompson as editor. Finding the management of both too much for one man, the proprietors of the magazine effected its transfer; but the new publishers relinquished it after publishing it for several months. **The Penn Monthly** was in its principles American, Republican, Protectionist, and progressive. The first proposal of Mr. Garfield as a candidate for the Presidency was made in its issue of July, 1879. Its serious character and the ability shown in its management enlisted the praises of Mr. Lowell, Mr. Longfellow, Mr. Whittier, and other eminent men of letters. Its circulation never was large, but the list of its *bona fide* subscribers was remarkable as showing the quality of the audience it commanded. While advocating definite political principles, and stanch in its loyalty to the Christian religion, it was tolerant of discussion, and opened its pages to writers whose convictions differed widely from those of its managers. Its articles generally were signed by their authors.

**The Playbill**, which originated in 1870, was published daily, except Sunday, for ten or eleven years, when it came to an end. It was devoted to matters dramatic and operatic.

**The Stage**, a theatrical paper, was started in 1870, and continued daily, except Sunday, until 1881.

**The Advocate of Christian Holiness**, a monthly religious publication, evangelical in its character, was founded in 1870, and is still in existence.

**The Junior American Mechanic**, issued monthly, was published for the first time in 1870.

**The National Independent**, a weekly journal, edited by W. Y. Leader and William Paine, was commenced in 1870, C. H. Leader & Co. being the publishers, and was in existence two or three years.

**The Photographic World**, a royal octavo publication, was begun in January, 1871, by Berman & Wilson, and edited by Edward L. Wilson.

**The Medical Cosmos**, a monthly abstract of medical science and art, had its inception on May 15, 1871, George J. Zeigler editor and proprietor, and was discontinued in October, 1872.

**The Guide**, a weekly paper published in Germantown, was projected by the present editor, William U. Butcher, who was connected with the *Germantown Telegraph* for a period of nearly twenty-four years. It was first issued Dec. 21, 1871, under the firm-name of W. H. Bonsall & Co., and has been conducted without any change whatever in its management down to the present time. Both the publisher and editor, who comprise the firm, are outgrowths of the old newspaper office referred to. *The Guide* has always been an independent local sheet, mainly devoted to temperance and municipal reform.

**The Bible Banner**, originated in 1871, is published by the Bible Banner Association, at No. 506 Minor Street, every Thursday.

**The American Historical Record**, an illustrated magazine, edited by Benson J. Lossing, and published by Chase & Town at No. 142 South Fourth Street, had its origin in January, 1872. In January, 1875, having passed into the hands of John E. Potter & Co., the title was changed to *Potter's American Monthly*, and its character became that of a general literary magazine. In this form it was published until September, 1882, inclusive, and was then merged into *Our Continent*, established in that year.

**The Philadelphia Volksblatt**, a German morning paper, is published by the Philadelphia Volksblatt Publishing Company. Its first number was issued at No. 1226 North Fourth Street, on Monday, Jan. 8, 1872, as an independent Democratic paper. It soon won so many friends, especially among the German Catholics, that the publishers deemed it necessary to secure more commodious quarters in the centre of the city. In consequence, on the 31st of December, 1875, the office was removed to No. 23 South Seventh Street, where the paper is published to-day. Since the date of removal the *Volksblatt* has largely increased in circulation and influence. The present manager is Jacob Kirchem; the editors are Dr. Joseph Bernt and E. W. Ditges.

**Archives of Science and Practical Medicine and Surgery**, edited by C. E. Brown-Sequard and E. C. Seguin, a monthly publication, was started in Janu-

ary, 1873. Two numbers only were issued in Philadelphia, the publishers being J. B. Lippincott & Co., when it was removed to New York.

**Our Little Ones** is published weekly by the American Baptist Publication Society, at No. 1420 Chestnut Street. As its name implies, it is for the very little people in the primary class and the nursery. It was first issued in January, 1873, and has gained a very large circulation.

**The I. C. B. U. Journal** is the official organ of the Irish Catholic Benevolent Union of the United States, and is devoted to the interests of that organization and to the affairs of all Catholic societies. It was established in March, 1873, by Griffin & White. Since Jan. 1, 1877, the publisher and editor has been the national secretary of the Irish Catholic Benevolent Union, Martin I. J. Griffin. The office of publication is at No. 711 Sansom Street. The journal is now publishing "Catholicity in Philadelphia," a sketch of the Catholic Church in this city.

**The Centennial** was first issued in April, 1873, by H. W. Crotzer, at No. 521 Chestnut Street, as a monthly publication devoted to subjects connected with the Centennial celebration of 1876, and to general topics, local and national.

**Paine's Journal of Domestic Medicine**, a monthly periodical, commenced in April, 1873, under the editorial direction of Dr. William Paine, had a brief career.

**The Nord Amerika**, a German weekly newspaper, published by the Nord Amerika Publication Society, issued its first number on Sept. 13, 1873. It is strictly Catholic, and has a wide circulation, not only among the Catholics of Philadelphia, but those of the whole United States. The present publication-office is at No. 23 South Seventh Street. *The Nord Amerika* is published for the benefit of the St. Vincent Orphan Asylum of Tacony, and issued on Saturdays.

**The Journal**, an eight-page weekly paper, published in the interests of the Society of Friends, was started in 1873, and is also dated at Lancaster, Pa.

**The Grocers' Price-Current**, published at No. 109 South Street, was first issued in 1873, is a trade journal of sixteen pages, and has been prosperous from the outset.

**The Traveler and Every Saturday**, which is published at No. 126 South Second Street, was first issued in 1873, and is an independent weekly paper.

**The Westminster Teacher**, first issued in 1873, is published at No. 1334 Chestnut Street, by the Presbyterian Board of Publication, and devoted to Sunday-school work.

**The Sunday Tribune** was first issued on Sept. 13, 1874, from No. 21 South Seventh Street, and edited by William Moran. Its career was short.

**Weekly Notes of Cases** "argued and determined in the Supreme Court of Pennsylvania, the County Courts of Philadelphia, and the United States District and Circuits for the Eastern District of Pennsylvania,"

was first issued Oct. 1, 1874. The publishers are Kay & Brother, Nos. 17 and 19 South Eighth Street. The late Elias Boudinot edited it for a time, and was replaced by Alvert A. Outerbridge, who still continues.

**The Monthly Abstract of Medical Science** was established in 1874 by Henry C. Lea, who already published the *American Journal of the Medical Sciences* and the *Medical News*. It was under the editorial supervision, as were also the two periodicals named, of Drs. Isaac Hays and I. Minis Hays. In 1880 the *Monthly Abstract* and the *Medical News* were consolidated under the title of the *Medical News and Abstract*. In 1882 the journal became the *Medical News* simply.

**The Cash Grocer**, a weekly trade journal, issued every Tuesday, made its appearance in 1874, and is published at No. 3 North Water Street.

**The Coin Collector's Herald**, a quarterly journal, devoted to numismatic subjects, had its inception in 1874.

**The Confectioner's Journal**, a monthly periodical, devoted to interests indicated in its title, was first issued in 1874, and is published at No. 223 South Fifth Street.

**The Germantown Express**, issued every Saturday, was started in 1874.

**The Commonwealth**, a Democratic journal, published every Saturday, was established in 1874, and lived seven years.

**The Evening Republican**, published every day, except Sunday, was started in 1874, and suspended after six or seven years.

**The Voice of Peace**, a monthly publication, was commenced by the Peace Society in 1874, and lasted seven or eight years. The publisher was T. Elwood Chapman, at No. 813 Arch Street.

**Woman's Words**, a family paper, issued monthly, made its appearance in 1874, and was suspended in 1882. Mrs. Juan Lewis was the editor.

**Words of Faith**, a monthly journal "for the perfecting of the Saints in the knowledge and practice of true holiness," edited and published by G. W. McCalla, was first issued in January, 1875. The office of publication is at No. 819 Arch Street.

**The Times**, a daily newspaper, was first issued March 13, 1875. Its originators were Col. Alexander K. McClure and Frank McLaughlin. In the previous year Col. McClure had been a candidate for the mayoralty of the city. After his failure to reach the chief magistracy he determined to return to journalism, and to reach out into a broader field than he had ever before occupied. Col. Forney and *The Press* had been his uncompromising friend in the political struggles he had made outside of the Republican party. He therefore approached the man who for so many years was the controlling spirit of *The Press*, and made him an offer for the property. It is said the proposition was considered and accepted. The preliminaries were all arranged, and Col. Forney was to retain about a one-third interest in the paper and

write letters for it from Europe, where he was when the negotiations began. Every arrangement was made for the transfer of the property to the new hands, when Col. Forney, at the request of a number of personal friends, declined to receive the money and transfer the property.

Col. McClure's effort to establish *The Times* after this failure shows the quality of the man in most favorable light. People who were willing to contribute to the purchase of *The Press* could not be induced to risk capital in a new venture, and Col. McClure was so hemmed about in his efforts to get such persons into the enterprise as he wanted that he scarcely dared approach men with the story of his new paper. It would have been easy to get capital, but not easy to get it from those whom he could afford to take into such an undertaking. Finally he and Mr. McLaughlin met, exchanged views, and eventually began the preparations which led to the establishment of *The Times*. The features of this initial meeting, before which the two gentlemen were only slightly acquainted with each other, were characteristic of the men, who are nothing if not business-like and quick in reaching conclusions. One day Mr. McLaughlin walked into the law-office of Col. McClure, on Sixth Street, and stating to the veteran journalist, legislator, and lawyer that it was rumored that he purposed starting a new daily journal, asked if such reports were true.

"Yes," said Col. McClure; "I was thinking something about it."

"If you make it such a paper as Philadelphia wants, and such as I think Philadelphia will support, I wouldn't mind joining you in the enterprise," said Mr. McLaughlin.

"What kind of paper is that?" asked the colonel.

"A newspaper entirely independent in politics, and one that will depend on its own merits for support rather than on the crumbs of politics and the favor of corporations," was the reply.

"That is my idea," said Col. McClure; "but in what shape do you think such a paper as the one proposed should appear?"

"Compactly, like this," replied the publisher, laying his hand on a copy of the New York *Tribune's* four-page supplement, which happened to be spread upon the table.

Col. McClure nodded his assent, and from that moment *The Times* had its positive inception. As a result of the combined enterprise and individuality of these two aggressive men, *The Times* appeared on the 13th of March, 1875, as already stated.

When *The Times* was started, in order to obtain admission into the Associated Press it paid thirty-five thousand dollars for the franchise of *The Age*, a moribund Democratic organ of small circulation and no particular value as a newspaper. A cash capital of one hundred thousand dollars was paid in, with the expectation that the paper would sink one thousand

dollars a week for the first year. When it was passed a paying basis might be established. During the first three months the capital was drawn upon to the extent of twelve thousand dollars. After that there never was any draft upon that fund for ordinary expenses. Before the expiration of nine months the profits had made the first draft good, and the year closed with a handsome profit on its business. From the day *The Times* was started it has never issued a note and never had a bill unpaid after maturity or borrowed a dollar of money in its business. It had a phenomenal success from the start. The people, curious to see the work of the man who had been such a famous politician and such a successful country journalist, bought the paper first out of curiosity, and then gave it cordial support, because of its audacity in dealing with public questions and its enterprise in giving the news. It was set afloat avowedly "as a thoroughly independent journal, confessing allegiance to its own convictions, making no hollow pretense of neutrality on the leading questions of the day or in political conflicts as they pass." At the outset it took a vigorous stand upon all political questions, following out the principle enunciated in the above platform. Col. McClure was once asked,—

"Do you believe that aggression is very necessary in a newspaper?"

"Yes," he replied; "the time has passed when the people want to read about what has passed. They are decidedly more interested in what is going to be. No man can discuss the future without being aggressive. If he would mould the future, he must lead off."

Every form of political chicanery and official profligacy was assailed, especially in municipal matters; rogues and tricksters were exposed, masqueraders and hypocrites in high places and low were unveiled, and every phase of evil in public government was denounced. The field and the era were inviting ones. The powers of the machine were without limit; there was practically no check upon official misconduct; a high tax-rate prevailed, and an enormous municipal debt had been accumulated; in fine, maladministration was the order of the day. At these numerous and startling evils of party and public management Col. McClure hurled his arrows of condemnation and satire. At first his assaults did not seem to make an effective impression, but gradually his victims began to wince and writhe under his persistent attacks. This was evidenced by the fact that suits for libel began to be entered against *The Times'* management. Its experience in this particular is unprecedented in the history of American journalism. As the foe of official misconduct and the champion of honest, efficient government, *The Times* has not ceased to battle up to the present time; and it is but the merest justice to attribute in a great measure to this journal much of the improvement in the line of economical, honest, and conscientious discharge of public duty which of late characterizes municipal matters.

It was chiefly the vigor with which *The Times* assailed official dishonesty and incompetency which brought to the paper hosts of readers and a very satisfactory patronage. But in other particulars as well did the new journal impress itself upon the community and upon the nation at large. It was not simply a political journal; it was a live, comprehensive newspaper in the broadest sense of the term, and such a newspaper as had long been needed. It was metropolitan in its scope and in its editorial cast of thought. Its motto has always been to give "all the news, and the truth about the news." In giving all the news it remembers that the world is too busy to hunt for information upon current matters throughout dozens of columns, when half as many columns will hold all that is of value. It is to the point when handling the news, and incisive when it comments upon the news. Every item that is taken into the office must be weighed as to its interest. In this way only a dozen lines are sometimes used of a two-column report which appears in full in some of the other papers, while a twelve-line Associated Press dispatch is supplemented by specials, until the twelve lines become twelve hundred. Moreover, news is sought in a legitimate way outside the beaten tracks. The discovery of a new quack, a new trick, and a myriad other new evils to society is regarded in the light of news, and *The Times* feels it to be a mission to probe here and expose there. In its war against frauds *The Times* has brought upon itself no less than twenty libel suits, and all of these suits have been decided in its favor. It has never permitted a libel suit to be compromised or to be settled in any other way than by a verdict of the jury. This originality in treating news, which is as marked as the typographical face of the paper itself, has been achieved by the great care taken by Col. McClure in the selection of his staff.

So great was the prosperity which flowed in upon *The Times* that it was early found necessary to remove from the circumscribed quarters in the old *Age* building, Nos. 14 and 16 South Seventh Street. Accordingly, the lot of ground situate at the southwest corner of Eighth and Chestnut Streets was purchased for one hundred and forty-five thousand dollars, and building operations were vigorously inaugurated. During the summer of 1876 *The Times* building was erected on the chosen site, at a cost, as it stands on the company's books, of two hundred and twenty-five thousand dollars. This most attractive structure—a model of convenience—is a representative Philadelphia building, of rich, red Philadelphia brick, deepened by the dark mortar in which it is laid, being surmounted, at a height of one hundred and fourteen feet, by an octagonal clock-tower. The company has expended ninety thousand dollars in putting in the very best machinery the world can produce, and has one of the most complete press-rooms in the United States. As a part of its equipment there are two web-perfecting presses, which turn out one thousand copies

"THE TIMES,"  
CORNER OF EIGHTH AND CHESTNUT STREETS,  
PHILADELPHIA.

of *The Times* a minute, without being touched by hand, the papers coming from the press folded and ready for delivery. Every other improved article that can be put to use about a first-class newspaper-office may be seen in the building. The employés of the company are given every accommodation. There is plenty of room to work, and yet such was the economic forethought in the erection of the building that the rents from it, exclusive of the room occupied by *The Times*, pay the interest on the investment. Though it had started without a list of subscribers, *The Times* within a year circulated, with a single exception, more than all the other morning newspapers of Philadelphia combined. Such skill in suggestiveness and such original thought were put into the make-up of *The Times* that its typographical features were soon acknowledged as without a superior. It has since served as a model for a number of newspapers which have been established in various parts of the country. In March, 1877, the management having long felt the want of extending the influence of *The Times* into very distant fields, issued the initial number of the *Weekly Times*, twice the size of the daily. A special feature of this weekly edition was the introduction of a series of papers upon various incidents and experiences of the Rebellion, written by leading participants in both armies, entitled "The Annals of the War." These articles, which are still continued, have been the means of saving to future historians of the great civil strife valuable material which otherwise would probably have been lost. Such of these annals as appeared in the first three or four years of the weekly have been published in a large octavo volume. In the following year *The Times* managers determined to make another advanced stride, by the publication of a Sunday issue. This purpose was carried into effect with some misgivings as being against all tradition, which had long ruled that no reputable daily paper could be issued on the Sabbath. In this new sphere *The Times* prospered from the outset, being the first daily paper of Philadelphia to successfully establish a Sunday issue. This was attempted by Col. Forney after his retirement from Washington to resume control of *The Press*, but he found public opinion so deeply set against it that his advertising was menaced, and he had to give the Sunday issue to outside parties. With the boldness of a paper whose advertising was yet in great part to be won, *The Times* came into the Sunday field at a period when the Quaker community had been liberalized by the Centennial Exposition, and now the Sunday issue of *The Times* is thought by many to be its strongest issue.

*The Times*, whose prosperity has hardly been preceded in American journalism, has not made itself, however. Its creators have been the master-minds which have given it intelligent editorial direction, and have made it a facile instrument in the moulding of public opinion.

Alexander K. McClure, the editor of *The Times*,

was born in Sherman's Valley, Perry Co., Jan. 9, 1828, and spent the early years of his life on his father's farm. He divided his time with his elder brother week about at the country school whenever it was held. Of his early school-days, a friendly biographer has said,—

"He was a leader in all the mischievous deviltry in the neighborhood and in the school, and one of his associates once told me that it was next to a standing custom with the country teacher 'to have prayers, and then thrash Alexander McClure. I have often known him to get whipped eight times a day.'"

When fourteen years of age he left school and entered the service of James Marshall, of New Bloomfield, as an apprentice to the tanner's trade. During his apprenticeship, which came to a close in the spring of 1856, he had been in the habit of making frequent visits to the office of the *Perry Freeman*, where he used to rummage among and read the exchanges during odd moments. It was in this little printing-office that he had learned much more that was useful to him than he had gathered at school. He read a great deal there and often talked Whig politics with the well-informed editor, and before his apprenticeship with Mr. Marshall ended he had scribbled a few articles for the paper and they had been printed. Judge Baker, who now, as then, owns and edits the *Freeman*, had taken an interest in the boy while he was learning to be a tanner, and encouraged him not only to read the exchanges but to write. To the accident of this association he is indebted for his initiation into the sphere of journalism in which he is now so prominent.

Within a few months after the completion of his apprenticeship, the Whigs of Juniata County had written Judge Baker, the editor of the *Freeman*, asking him to recommend a good man to start a paper for them at Mifflin. He advised young McClure to undertake the task. The lad expressed grave doubts of his ability to edit a newspaper. He was not yet nineteen years old, and was only a tanner. The judge expressed perfect faith in his capacity. Grati-fied as he was at Mr. Baker's confidence in him, he still distrusted his power to successfully conduct a newspaper. He therefore asked the advice of the plain old man who had taught him the tanning business.

"Alexander, it won't do. You don't know anything about printing, but you are a good tanner. Take my advice and stick to the business you understand and are fit for," was Mr. Marshall's matter-of-fact reply to his former apprentice's inquiry.

Again young McClure sought Judge Baker, who still urged him to take his advice and go to Mifflin.

"Go there," said Judge Baker, "start your newspaper, then go to case; master the mechanical details of your office, and I am sure you will succeed."

The boy finally went home with full-fledged newspaper aspirations, and consulted his father. He re-

ceived much the same advice from him as the tanner had given. Again Judge Baker came to his relief, and finally the father, with many misgivings, helped the son to five hundred dollars. With this money he bought some second-hand type and an old-fashioned hand-press that had seen service before, and in the fall of 1846 issued the *Sentinel*, which is still published, the leading Republican newspaper of Juniata County.

The little paper at Mifflin did well from the day it was started. Young McClure followed Judge Baker's advice, and started in at the first to master the details of the printing business. He went to the case, learned to set type, and took his hand at the press every week. At the end of the first year he dispensed with all the help in the office, and besides editing the paper, set up the type, did the press-work, and all the other labor incident to publishing a country newspaper with the help of a single apprentice.

Young McClure had taken a great deal of interest in politics from his early boyhood. His father was a fearless, slavery-hating Whig, and he brought his children up in the same school. When Alexander K. went to learn the tanner's trade he did not forget either the political precepts or examples of his home. Judge Baker and himself often talked politics, and he was so wrought up in the election of 1844 that when it was announced that Mr. Clay had been defeated for the Presidency, he thought there was no use of opening the tannery in the morning, as the country had gone to the dogs. Even at this early age he developed the spirit and qualities that have since made him a noted political leader. After he left tanning for the newspaper office, his taste and aptitude for politics began to grow amazingly, although at the time he started his paper at Mifflin he was not nineteen years of age.

Before reaching his majority, he was a conferee in a Congressional conference, as the friend of Andrew G. Curtin. The fight lasted for some time, and was a very bitter one. Mr. Curtin was defeated, but the contest created a friendship between them that has lasted through all the wonderful changes of politics in the politics of the State and nation from that day to this. In this same year his opposition to Gen. Cameron was born. Mr. Cameron was then the leader of a faction of the Democratic party known as State Improvement men, and upon the leader, as well as upon the rank and file, Mr. Clure made vigorous onslaught in his paper.

In 1848, when Governor Johnson, the Whig nominee, was elected by the tidal wave that carried Gen. Taylor into the Presidential chair, young McClure took an active part in the campaign. Not only had his paper attracted attention by the vigor of its editorials, but the editor had appeared upon the stump, and given ample evidence of the powers that have since made him noted as a man and advocate. He went to Harrisburg, in common with all the Whigs

in the State, to take part in the inauguration of the man he had helped to elect. The day of Governor Johnson's inauguration he crossed the threshold from youth to manhood, and when the new Governor was installed, one of his first acts was to appoint young McClure an aid on his staff. The late Joseph B. Myers, to whom Col. McClure had applied for a position in his tannery only two years before, went to the new Governor, and said, "I know you are going to appoint McClure on your staff, but you must do it to-day, for this is his twenty-first birthday."

Governor Johnson had the commission made out at once, and Mr. Myers took the tanner-boy of two years before a commission on the Governor's staff the evening of the day he was old enough to vote.

In 1850, Andrew G. Curtin got his first opportunity to repay Col. McClure for the fight he had made for him for Congress in 1848. He secured his appointment as deputy United States marshal for Juniata County, to take the census of that year. He had just finished that work, and returned to his newspaper office and his law-books, when he received a message from John M. Pomeroy, of Chambersburg, saying, "I have purchased for you a half-interest in the *Chambersburg Repository*; come over and take charge."

This was the first intimation he had of the good fortune that awaited him, and he went over to confer with his friend. The conference ended in his selling the *Juniata Sentinel* for twelve hundred dollars to John J. Patterson, who has since been a United States senator from South Carolina.

The Whigs held their State convention of 1853 in Lancaster, and Morton McMichael and the elder John Price Wetherill had been so attracted by the young editor's ability that they made up their minds to put him upon the State ticket. He was not a candidate, nor had his name been mentioned for any public office. When the convention met Mr. McMichael presented him for auditor-general in a stirring speech, and he was nominated by acclamation. He was then only twenty-five years old,—the youngest man ever nominated for a State office in Pennsylvania. He was, of course, defeated, as the Whigs were in a hopeless minority.

The year 1855 marked a new era in the politics of Pennsylvania and of the nation. It witnessed the formation of the Republican party from the dissatisfied elements of the Whig and Democratic parties.

No paper in this commonwealth had done more to arouse the people of Pennsylvania against the aggressions of the slave power than the *Chambersburg Repository*. It was therefore natural that its young editor should be in at the birth of the party born of strife with the slavery question. When the convention met at Pittsburgh, in 1855, that organized the Republican party, Col. McClure was one of its members.

The young editor was, however, bitterly opposed to Know-Nothingism, the outgrowth of the unrest in the Democratic party, and when the Whigs of Franklin

A. A. A. A.

County in that year joined with them, he would not advocate the alliance, and sold the *Repository*. In the early part of 1856 he went to the bar, and was admitted to practice almost immediately after leaving journalism. He entered into partnership with his former preceptor, William McLellan, and the firm enjoyed a large practice.

The year 1856 was an important as well as an exceedingly busy one for him. The Erie and North-eastern Railroad, the property of the State, had been the cause of much difficulty for more than a year. Soon after Col. McClure began the practice of law Governor Pollock appointed him superintendent of this line. He at once directed his attention to the source of the trouble that had caused the well-known Erie riots, and in a very short time permanently adjusted the difficulties to the satisfaction of all the contestants. The same year he was a delegate to the national convention that nominated John C. Fremont for the Presidency. He made a brilliant canvass in behalf of the first National Republican ticket. It may be truly said then that having been one of the founders of the party in this State in 1855 and of the National party in 1856, that he began his active political career with the birth of the Republican party.

In 1857 he appeared before the people of Franklin and Fulton Counties as a candidate for the Legislature. The Republicans, Americans, and Whigs made a union ticket that year, and he was regularly selected by the Whigs as their representative. The Democrats defeated every man on that ticket but him, and he was elected by more than two hundred majority in a Democratic district.

In 1858 he was again elected to the Legislature by the same Democratic district by over eight hundred majority. Active and successful as he had been, his political career up to this time, the year 1859, is marked in his calendar as witnessing the most desperate and important struggle of his remarkable political career. He was that year nominated for State senator by the Republicans in a district that was considered reliably Democratic. The different elements composing the Republican party had not yet crystallized into a working party organization. It was a year of political chaos, and Col. McClure was literally forced to make the contest, not so much in the hope of securing the election, as of putting the party in fighting trim for the Presidential campaign of 1860. He reluctantly accepted the duty, and made the most memorable campaign of his life. He organized every township in the district, made a speech in every school precinct, and night and day devoted himself to the details of political work. He polled more votes than were ever polled for President in the same district, and was elected by four hundred majority. He came within fifteen votes of carrying Adams, the strongest Democratic county in the district.

Col. McClure played a very prominent part in the State and national campaigns of 1860. Andrew G.

Curtin was the Republican candidate for Governor. Gen. Cameron had received the indorsement of Pennsylvania for the Presidency, and its delegation in the national convention had been instructed for him. In inducing the delegation to disregard their instructions and vote for Mr. Lincoln, Col. McClure played an important part; so significant, indeed, that he was chosen chairman of the Republican State Committee, and charged with conducting the campaign in the most important Republican State in the Union in that year. He organized the party with great care, and conducted a campaign which for vigor and brilliancy has never been excelled in any State in the Union. The result was Governor Curtin's election in October, which was followed by the election of Mr. Lincoln in November. He took his seat in the Senate at the beginning of Governor Curtin's administration, and was then the most conspicuous figure in that body, and recognized as one of the foremost leaders in the State. He was a central figure in most of the historical scenes through which Pennsylvania passed while the angry billows of war were rolling toward the nation. He stood as one of the rocks against which they broke when the storm of the contest fell upon us. He made a speech in the Senate in the spring of 1861, in which he foreshadowed that we were upon the eve of a bloody war, in which the South would fight to the bitter end, and that it would result in the destruction of African slavery. This speech was repudiated by his fellow-Republicans at the time, but in the fall of that year was printed and circulated by them as a campaign document.

The night of the day that Fort Sumter was fired upon was a memorable one in the Pennsylvania Legislature. The Republican members held a caucus for the purpose of exchanging views upon the situation. In this conference Col. McClure was a conspicuous figure, and made an aggressive speech, in which he urged upon its members a vigorous war policy and preparation for a long and bloody contest. He said the South would fight to the last, and we must be prepared to meet the most bloody and extended war of modern times. This speech met with the marked disapproval of the caucus, and was openly hissed, for a large number of the members believed that the South was simply playing brag, and that there would be no determined hostilities.

He served during the first years of the war as chairman of the committee on military affairs, and as such had important duties in connection with the war policy of the State and general government. Into the discharge of the duties of his position he carried his aggressive notions, and being the close friend and adviser of Governor Curtin, he was naturally closely identified with his war policy. He also, at a very early day, formed close relations with President Lincoln and his cabinet, and began playing a broad hand in national politics. Upon the expiration of his service as State senator he was not a candidate for re-

election, but was appointed an assistant adjutant-general in the army, and assigned to the duty of supervising the draft in Pennsylvania. Seventeen regiments were quickly raised and placed in the field, and the quota of the State having been filled, he resigned his position and retired to Chambersburg to the duties of his law-office. The firm of McLellan & McClure had prospered ever since its organization in 1856, but the experience of five years had shown the latter that he had little taste for the conservative duties of the law. His mind was too active and his mental powers too versatile and brilliant to repose in the dust of a country law-office. He never felt more in love with journalism than in 1862, so he again purchased the *Chambersburg Repository*, and returned to the business he had so suddenly left for the law in 1856.

His editorial page showed all the vigor of his earlier years, to which were added the qualities of wider experience and maturer judgment. In 1863 he was asked to again take the chairmanship of the State Central Committee. He declined, but devoted himself with unexampled zeal to secure the re-election of Governor Curtin. He was a delegate to the Republican National Convention of 1864, and was again formally tendered the chairmanship of the State Central Committee by three-fourths of the delegates. He declined it in order to be a candidate for the Legislature from the Chambersburg district, which was strongly Democratic. He accepted the nomination for the Lower House, and was elected by over four hundred majority, although every other man on the Republican ticket was defeated. He was therefore in the Legislature of Pennsylvania to witness the close of the war, as he had been to see its beginning. He lived to admonish some of his fellow-members, who had been likewise honored, of the words he had spoken the day Sumter was fired upon: "The South will fight to the last, and we will have the longest and bloodiest war of modern times."

The year that witnessed his last political contest in Franklin County was a memorable one for himself and the State, and he was a prominent actor in its events. He took an active part in the second election of President Lincoln, while conducting his own canvass for the Legislature. He was one of the most serious sufferers by the Confederate invasion of Pennsylvania in July, 1864. He barely had time to get out of Chambersburg before the invaders' torch was applied to all the property he had in the world. His losses, added to the cost of rebuilding, swept away a fortune of seventy-five thousand dollars, and left him almost as poor in the world as when he began. In 1866 his health failed him, and he spent nearly a year in the Rocky Mountains. He returned to Pennsylvania much improved in health, but still more seriously impaired in fortune. He was a delegate to the national convention that nominated Gen. Grant for the Presidency in 1868, and took an active part in the campaign that resulted in his election. He spoke not only in Pennsylvania, but in several of the leading

States of the Union. After the burning of his property at Chambersburg he had resumed the practice of the law with John Stewart, of that place. But after the campaign of 1868 he decided to give up politics, move to Philadelphia, and devote himself entirely to the practice of the law.

For four years after he came to Philadelphia he led a quiet, methodical lawyer's life. The longing for the old-time life returned, and in 1872 he went into the Greeley movement of that year. He was chairman of the Pennsylvania delegation to the Cincinnati convention that nominated Mr. Greeley, and was chairman of the Liberal Republican State Committee. This campaign took both him and Governor Curtin out of the Republican party. Col. McClure did not go squarely over to the Democracy, as Governor Curtin did, but, from his place astride the fence, his free lance is more dangerous to the party he helped to organize than if he were down on the other side.

He did not content himself with playing a bold hand in national politics in 1872, but when a thousand citizens of the Fourth Senatorial District asked him in a petition to become an Independent Republican candidate for the State Senate against Mr. Gray, the regular Republican nominee, he consented. The canvass that followed the announcement of his candidacy was a remarkable one. He put into it all the peculiar energy which he many times employed among the hills of the Franklin district. He added all his maturer experiences of organization, and spoke on almost every street-corner of the district. His opponent was returned as elected by eight hundred majority, while he claimed his election by two thousand. He announced a contest, but had great difficulty in getting the Senate to permit him to file his petition. After two weeks of hard work, Senators Strang, Billingsfelt, and Davis left the majority, and took ground with the Democrats in favor of hearing Col. McClure's petition. When the case got before the Senate it was speedily tried, and Col. McClure got his seat. In that body he occupied much such a position as David Davis, of Illinois, did in the United States Senate, except that he cut a much wider swath and made much better use of his opportunities. He was a party all to himself, and he was a continual and dangerous thorn in the side of both of the regular organizations. He formulated and proposed reform measures of the most aggressive type, and to cut his claws as much as possible they would pass them in the Senate and then kill them in the House.

To point out a tithe of the brilliant and significant things he did during his last legislative term would require many columns. His interesting and affecting speech of farewell to the Senate was a masterpiece of eloquence and forensic power.

The next year, 1873, was important to a summary of the career of Col. McClure, because it witnessed his final political contest in his effort to become mayor of Philadelphia. The Republican party was

then in entire control of the city and all its political machinery. He therefore began the contest with mighty odds against him. It took courage of a high order and matchless physical powers to withstand the strain Col. McClure imposed upon himself during that campaign. He spoke sixty-one times in twenty-two days, and gave evidence of not only wonderful, but versatile powers; for he would often make three speeches in one evening at separate points, so diverse in matter and manner as to excite admiration and amazement. He assailed without stint the machine managers of both political parties, and carried on a warfare which for audacity and vigor challenged the admiration of friend and foe alike. He was defeated by a small majority, but that fight gave vitality to the municipal reform spirit, and it may be regarded as the foundation upon which all subsequent operations in that line have been built. He began his efforts in this direction so early that he may be said to be the pioneer in the reforms that have been made in the politics of Philadelphia, and to have led the movements that created them.

It was not long after his defeat for the mayoralty that Col. McClure left the field of politics for that of journalism, and for the past ten years the history of *The Times* is the history and, it might be said, the biography of its talented and aggressive editor.

Dr. Alfred C. Lambdin has been managing editor of *The Times* since its publication was begun. He was, indeed, one agent in the establishment of the paper, having been identified with the reform element in the fight against the municipal ring whose corrupt acts gave occasion for the birth of the corrective journal. When not thirty years of age, as editor of the *Germantown Chronicle*, he had been aroused to the necessity of giving Philadelphia an honest government, and wrote the first article nominating Col. McClure as the Reform candidate for mayor, although the two gentlemen were entire strangers to each other. Dr. Lambdin's untiring devotion to his work has so occupied him that perhaps few managing editors are so little known to the journalists of the country. He is largely to be credited with that literary grace and sparkle which distinguish *The Times*.

James H. Lambert is the chief editorial lieutenant of Col. McClure and Dr. Lambdin. He is a journalist of wide experience, quick grasp, and deep insight. He has been trained to the work from boyhood. He began his newspaper career in Wisconsin, but has since been associated with journalistic enterprises in St. Louis, Chicago, New York, and elsewhere. He left an editorial position on the New York *Sun* to make a study of Pennsylvania politics, and his knowledge of the ins and outs of the State is so thorough as to make him of the greatest utility to *The Times*. He is the main writer of the column of short, crisp, minion paragraphs which are a great feature in *The Times*.

*The Times* for years past has spent its money freely

to procure information, assemble writers, and tempt professional men into journalism. Indeed, the advent of *The Times* marked a new era in the journalism of the city. *The Times* opened a field for journalists in this city, because it took for itself a standard that required the highest order of ability and experience. It gave young men an opportunity to show their strength as news-gatherers as well as writers. In other words, it broadened the field of journalism, and made it possible for such a great newspaper as *The Times*, with its manifold demands and expenses, to be published with success in a city where, ten years ago, such effort would have been looked upon as foolhardiness. When Col. McClure began daily journalism the papers of Philadelphia had long been following a beaten rut. Salaries were ridiculously low, and the bars were practically up against material advancement. A higher professional spirit has been built up, and now Philadelphia commands competent men because its journals are willing and able to pay them, for its citizens demand and support newspapers which conform to the best type of American journalism.

**The Jewish Record** was established by the present editor, Alfred T. Jones, and the first number was issued April 16, 1875. Its columns are devoted to subjects of historical and religious interest to Israelites, to Jewish literature, to current events of the day at home and abroad, and to the advocacy and defense of Judaism whenever the occasion demands.

It is independent in its tone on all subjects, and is not the organ of either orthodoxy or radicalism. It admits into its columns the views of all the different schools into which the Jewish Church is divided. Contributions from most of the prominent Israelites of the country are to be found in its pages.

It is the only Jewish paper published between New York and Cincinnati, and the only one that ever succeeded in Philadelphia, though several attempts had been made prior to its establishment. It is now published at No. 614 Chestnut Street every Friday morning.

**The University Magazine** has been edited and published since November, 1875, the date of its foundation, by the Philomathian Society of the University of Pennsylvania. Its motto is, "*Literæ sine Moribus Vanæ*," which is the motto of the University.

**The Presbyterian Journal**, published at No. 15 North Seventh Street, by R. M. Patterson & Co., is one of the youngest of the religious papers in the country, having been established in 1875. In 1880 its publishers were appointed the official publishers of the volume containing the papers and proceedings of the second General Council of the Ecumenical Presbyterian Alliance, which met in Philadelphia in that year. This placed the paper upon a high and prominent position, and gave it a great impulse. One of the editors of the volume, R. M. Patterson, D.D., also appointed to that office by the Council, then became the editor of the paper. Its circulation is ex-

tended and extending. Its aim is to be pre-eminently a *family* religious paper. Its correspondence is wide. Editorially its platform is that of orthodox conservative Presbyterianism, but with a catholic feeling toward all the denominations, and a belief that the freest discussion and sifting of the old views by progressives cannot in the end be harmful.

**The Augsburg Sunday-School Teacher**, published monthly, in the interest of the Lutheran denomination, has been in existence since 1875.

**Faith and Works**, a monthly evangelical journal, of sixteen pages, published at No. 141 North Seventh Street, had its inception in 1875.

**The Germantown Commercial**, a local paper, published every Saturday, was started in 1875.

**The Philadelphia Grocer**, a weekly commercial paper, devoted to the grocery trade, was first published in 1875, and continues at No. 201 South Front Street.

**The Sunday Mirror**, commenced in 1875, is published at No. 23 South Seventh Street, and for some years was under the editorial direction of John W. Forney, Jr.

**The Real Estate Reporter** was started in 1875, and was discontinued in 1880 or 1881.

**The Carpet Journal**, a monthly periodical, had its origin in 1875, and its end seven years later.

**The Christian Fireside**, an evangelical monthly, first published in 1875, had an existence of seven or eight years.

**The Ocean Grove Record**, a weekly publication, first issued in 1875, is published at No. 14 North Seventh Street, and devoted to the interest of Ocean Grove, N. J., a summer resort under the direction of the Methodist Episcopal Church, and to the general cause of Methodism.

**The American Catholic Quarterly Review** is published by Messrs. Hardy & Mahony, at No. 505 Chestnut Street. It was established in January, 1876. Upon the cover of the magazine is this motto, indicating the principles upon which the work of criticism and review is sought to be carried on,—“*Bonum est homini ut eum veritas vincat volentem, quia malum est homini ut eum veritas vincat invitum. Nam ipsa necesse est, sive regantem sive confitentem. S. Aug. Epist. cccxxviii. ad. Pascent.*”

**The Polytechnic Review**, “devoted to science as applied to the useful arts,” was first issued in February, 1876, and published monthly, at the Forrest Building, No. 119 South Fourth Street, by William H. Wahl and Robert Grimshaw, who were also its editors. In March, 1878, it was removed to New York.

**The Sunday World** came into being in 1876, the first number having been issued February 6th. Hugh A. Mullen was the originator of the paper, and still is its editor and proprietor. It was started as an independent Republican sheet, and Mr. Mullen has kept it within the channel originally outlined. It is published from the southwest corner of Eighth and Sansom Streets.

**The Familien Journal**, a German weekly paper, was founded in 1876 by Messrs. Lisiewski & Schulte, who established the *Sonntags Journal* in the same year. In February, 1881, both were purchased by William Regenspurger.

**The Philadelphia Sonntags Journal** was issued for the first time Dec. 3, 1876. Prior to this the German population of Philadelphia was without any paper issued on Sunday containing not only entertaining literary matter but also the latest telegraphic and local news. When, therefore, Messrs. Lisiewski & Schulte founded the *Sonntags Journal*, it immediately met with the most favorable reception from the German element of the city, and within a short time it secured a large circulation. Independent in politics and religion, it has never swerved from its course to discuss political and religious questions from a non-partisan view, and mainly to this fact it owes its great popularity among all classes of the city's German population.

On Feb. 13, 1881, it passed by purchase into the hands of William Regenspurger, and from that day the prosperity of the paper received a new impulse; for Mr. Regenspurger, a journalist of experience, and himself a popular writer, immediately secured the co-operation of a force of efficient contributors and correspondents, besides introducing various improvements in the telegraphic and reporters' departments. Owing to the enterprising endeavors of Mr. Regenspurger it now takes its rank among the most popular and most extensively read of German-American papers, and has a large circulation even in Germany. It is under the editorial direction of Max Stumpf.

**The Christian Worker**, a monthly periodical, published at No. 526 Brooklyn Street, was started in 1876, in the interest of the Methodist Episcopal Church.

**The Merchant and Salesman**, a monthly commercial journal, published at No. 212 Carter Street, had its origin in 1876.

**Our Second Century** was commenced in 1876 as a family journal, and is issued weekly.

**The Journal**, a literary periodical, published every Saturday, was issued for the first time in 1876.

**The Farm Journal** was first issued in March, 1877, at No. 610 Chestnut Street, by the present publisher and proprietor, Wilmer Atkinson. It is devoted to agriculture in its various departments and to household economy, and has a national circulation which is claimed to be above that ever obtained by any other agricultural paper in the world. The present office of publication is at No. 125 North Ninth Street.

**The West Philadelphia Telephone** is now published weekly, by John D. Avil & Co., at Nos. 3941-3945 Market Street, who are also proprietors of the Telephone Printing-House, one of the largest establishments of the kind in Pennsylvania. The *Telephone* was first issued May 8, 1877, by James Miller, and was then called the *Philadelphia Progress*. On April

20, 1878, it became the property of John D. Avil, who continued its publication under its original title until Dec. 14, 1878, when, at the earnest solicitation of the late Col. John W. Forney, who had fixed upon "Progress" while in Europe for the title of a journal he had resolved upon publishing on his return from abroad, he relinquished its original title and adopted that by which it is now known. The *Telephone* is now the only journal published in West Philadelphia proper. It is in its eleventh volume (sixth year), and is prosperous and justly popular.

**The Pennsylvania Magazine of History and Biography**, published by the Historical Society of Pennsylvania, was begun in 1877 as a quarterly, and is sustained by the publication fund of the society. The first six volumes were edited by the librarian of the society, Frederick D. Stone. The seventh volume, that for 1883, was edited by Professor G. B. Keen. It is chiefly devoted to the history of the middle colonies, although it is open to anything of interest connected with American history. It is rich in matters relating to the Swedish settlements on the Delaware and to the settlement of Pennsylvania by Penn. Townsend Ward is the secretary of the trustees, and it is largely owing to his indefatigable exertions that the fund has been obtained.

**The Illustrated Fashion Bazar** came into being in 1877, and existed three or four years.

**The Ladies' Journal of Fashion** was started in 1877, and came to an end in 1880.

**Robinson's Epitome of Literature**, a monthly periodical which had several years of life, was issued for the first time in 1877, by Frank W. Robinson & Co., at No. 1309 Chestnut Street.

**The West End** was published for three or four years, having been started in 1877.

**The West Philadelphia Advertiser** was published in West Philadelphia every Saturday for several years, beginning with 1877.

**The Agents' Herald**, now published monthly, at No. 912 Arch Street, was originally issued in 1877.

**The American Cricketer**, a sporting paper, devoted to the game of cricket in America, was started in 1877, and is published as a weekly from May to November, and as a monthly from November to May.

**The St. George's Journal**, published every Saturday, by and in the interest of the Sons of St. George, was originated in 1877.

**Saturday Morning**, a weekly paper, was started in 1877.

**The Philadelphia Tageblatt**, a German morning newspaper, was issued for the first time in 1877, and has its office at No. 613 Callowhill Street.

**The New Northwest**, started in 1877, was published monthly for four or five years, when it went out of existence.

**The Philadelphia Gazette** is a German afternoon paper, published and owned by Carl Theodore Mayer.

Its first number was issued Jan. 25, 1878, and its present office is at No. 618 Race Street.

**The Protestant Standard**, owned and published by Francis George Bailey, made its first appearance in February, 1878, and is an exponent of the principles of the Protestant reformation. It pleads for an open Bible, defends the American school system, advocates the separation of Church and State, and urges the sanctification of the Sabbath, and a vigorous enforcement of the laws. It is the recognized organ of the Loyal Orange Institution and the American Protestant Association. The editor of the *Standard* is Rev. James A. McGowan, and the publication office is at No. 709 Filbert Street.

**Flowers' Eclectic Magazine**, published monthly, by William P. Flowers, was started in April, 1878.

**The Frankford Dispatch**, a weekly newspaper, the first number of which was issued June 22, 1878, was established by B. C. Tillinghast and Thomas B. Foulkrod, the former of whom was the editor. The publication office was then, as at present, at the southeast corner of Frankford Avenue and Sellers Street, Frankford. On February 7, 1880, Mr. Tillinghast withdrew from the enterprise, and Mr. Foulkrod became the sole editor and proprietor. It has uniformly supported measures and men representing efficient and honest municipal government. As an evidence of its tendency in this latter direction it is notable that on March 1, 1879, being the first journal in the city to agitate the matter, it called for an investigation of the books of the tax collector of the Twenty-third Ward, and secured an inquiry which resulted in the unearthing of frauds.

**Progress**, a weekly journal, was established in November, 1878, by Col. John W. Forney. While in Europe, in 1877, he was strongly urged by many Americans residing in London, and by others with interests there and on the continent, to establish an American weekly journal in the English capital. He gave this matter serious consideration, and, but for the objections of his wife to crossing the ocean, would in all probability have carried the plan into effect. Having found it impossible, for this reason, to publish such a paper in London, he conceived the idea of printing, on his return to America, a periodical, modeled in great part upon the *London World*, owned and edited by Edmund Yates. The result was that, having returned to Philadelphia in the summer of 1878, the first number of *Progress* appeared on the 16th of November of that year, being the first paper of its kind in the United States. The original intention was that *Progress* should have very little to do with politics; to be not so much what is called a society journal, but rather a periodical independent upon all subjects, and chiefly of a literary character. This policy was continued for some time, but, as was entirely natural, considering Mr. Forney's long associations, it soon drifted into the political stream, and became earnestly Republican, though outspoken in

its criticism of party acts. It followed that course until the nomination of Gen. Hancock for President, on June 23, 1880, when it declared for the Democratic candidate. Previously Mr. Forney had been unable to agree in all respects with the Republican leaders, and when he indorsed Hancock he had become thoroughly dissatisfied with the policy they pursued. After the defeat of Hancock *Progress* remained Democratic until the time of Mr. Forney's death, Dec. 9, 1881. Then, on the 20th of March, 1882, it was purchased from Mr. Forney's estate by the Forney Publishing Company, an incorporated body, which consists entirely of the members of Mr. Forney's family. John W. Forney, a son, was made editor, and since then it has been conducted as a literary and social periodical under his editorship. The present editor of *Progress*, during his father's ownership of *The Press*, was the managing editor of that journal. Mrs. Mary Forney Weigley and Miss Tillie May Forney are regular contributors. *Progress* to-day circulates widely among the cultured classes, who look to it for sprightly discussion of pleasant topics. It also makes a feature of articles by specialists upon educational art and kindred topics.

John W. Forney, the founder of *The Press* and of *Progress*, was born in Lancaster City, Pa., Sept. 30, 1817. He was the only son of Peter and Margaret Forney, and had but one sister. His paternal grandmother was Susan Carpenter, sister of Christian Carpenter, at one time high sheriff of Lancaster County. The Carpenters were among the first settlers of that county, and held numerous positions of trust. His maternal grandfather, John Wein, was one of the most influential citizens of the old borough of Lancaster. He was a scrivener, and for a time private secretary to Gen. Haud, one of Gen. Washington's staff during the Revolutionary war. The father of John W. Forney conducted what was for that age a large coach-making establishment, and built what was then thought an exceedingly handsome barouche for the Marquis de Lafayette on the occasion of his visit to Lancaster. Peter Forney was a first lieutenant in a military company, "the Lancaster Phalaux," and in 1812 marched to the defense of Baltimore. He died when but thirty-five, leaving his widow with their two children and with a small share of the world's goods. But she was a woman of great strength of character and of decided executive ability. She opened a boarding-house, to which came several New England schoolmasters who were aiding the people of Lancaster County in the reorganization of educational institutions. One of these schools was held in the upper story of Mrs. Forney's residence, and it was there the future journalist had his first instruction. When still a small boy he was placed in a store, but his taste for reading and scribbling soon took him to the printing-office. He was regularly apprenticed, and worked for several years at the case and the hand-press, though often writing for the paper,—the

*Lancaster Journal*. When only sixteen he was a recognized editorial contributor, and before he reached his majority he became the editor.

In the heated partisan contests of 1838, 1840, 1841, and 1844 he was incessantly active with pen and tongue, publishing, during one of these struggles, a campaign paper called the *Plaindealer*, which circulated widely beyond the limits of Lancaster County. This training prepared him for the more responsible position of editor and publisher of the *Pennsylvanian*, in Philadelphia, which, under his guidance, for years swayed the councils of the Democracy of this State, and repeatedly led their hosts to victory. It was in 1845 that Mr. Forney removed from Lancaster to Philadelphia, and became surveyor of the port and editor of the *Pennsylvanian*. This change of residence and promotion was rendered necessary by his growing popularity and fame, as well as by the demands of the leaders of the party, that he should give it the largest benefits of his admitted talents. He retained his interests in the *Pennsylvanian* until 1851, when his reputation having become national, and his position as an editor established equally with that of Greeley, in New York, or Ritchie, in Richmond, he was elected clerk of the House of Representatives of the Thirty-third Congress, and re-elected by the Thirty-fourth Congress, serving from 1851 to 1855. In the scenes of excitement that attended the organization of the Thirty-fifth Congress, Mr. Forney, as clerk, was the acting Speaker. In that turbulent body he gave signal proof of the fairness and impartiality which always distinguished his conduct. The struggle over the election of a Speaker lasted for two months, and was marked by more violence and excitement than before or since attended an election to that office. It was the preliminary skirmish to the coming war, and did much to hasten that conflict. But during all that time Mr. Forney presided over the House with firmness and dignity, discharging the trying duties of his position with entire satisfaction to both parties, and receiving at the end the unanimous thanks of the House.

In 1852-53 he was one of the editors of *The Union*, the Democratic organ at Washington. The nomination and election of Mr. Buchanan were due more to the zeal, activity, and perseverance of Mr. Forney than to the labor of any other man in the Union. Mr. Forney, at the head of the Pennsylvania delegation at Cincinnati, gave such assurance of the certainty of carrying Pennsylvania with Buchanan that the nomination of Mr. Buchanan was easily made. Chosen chairman of the Pennsylvania State Central Committee, the labor and responsibility of the campaign rested upon his shoulders. Nothing was omitted to organize the party. Success was attained in the face of desperate odds. Pennsylvania was carried by the Democrats in October, and again in November. Mr. Buchanan was elected, and Col. Forney was recognized as the central figure in that success.

*J. W. Conway*

His opposition to the administration of Mr. Buchanan, which followed so quickly after the election, turned chiefly upon the Kansas question. In 1857, Mr. Forney was the Democratic candidate before the Pennsylvania Legislature for United States senator, but was defeated by Simon Cameron. The States-Rights party of the South, in 1856, at Cincinnati, united with the Northern Democracy upon a platform of principles which received different interpretations in the two sections. In the North it was believed to express the doctrine of popular sovereignty for the government of the Territories, while in the South a contrary interpretation obtained. Upon this dual translation the Democratic party wrecked. Col. Forney held to the Northern interpretation. He well knew that upon no other reading of the Cincinnati platform would success have been possible in a single Northern State. Mr. Buchanan acquiesced in the doctrine that a Territorial Legislature was vested with power to determine the question of slavery for the Territory, and in that agreed with the Southern interpretation of the platform. The Supreme Court of the United States, in the Dred Scott decision, affirmed the correctness of the Southern interpretation of the question of slavery in the Territories. The breach between Mr. Buchanan and Col. Forney was, therefore, the result of political difference of opinion.

Mr. Forney was too positive in his convictions, too earnest in his faith, to hesitate between his political friend and his political principles. His knowledge of the temper of the Northern mind taught him the utter futility of attempting to bring the Northern anti-slavery sentiment into accord with the overthrow of that ancient compromise, and the opening to slavery of territory dedicated to freedom since 1820. Transferring his allegiance to Stephen A. Douglas, with whom the whole Northern Democracy agreed upon the question of slavery in the Territories, he commenced open warfare upon Mr. Buchanan, and espousing the cause of freedom in the Territories, he broke off all connection with the administration, and endeavored to effect the election of Douglas in 1860. His political sagacity foresaw not only the certain defeat of his party upon any other platform than that of freedom in the Territories, but the possible ruin of his country in the conflict which would follow the election of a Republican President. It was with these convictions and guided by such principles that he founded *The Press*, Aug. 1, 1857, and from their advocacy he never swerved, but with earnest zeal followed whither they necessarily led,—into the Republican ranks. *The Press* was established to make war on its own party, to antagonize the pro-slavery wing, then the controlling wing. Its warfare was bold and unrelenting, widening by its every blow the interval between itself and the party it professed to support. There was no political inconsistency on the part of Col. Forney; he was an honest Free-Soiler; he believed the Northern Democracy had voted with the Demo-

cratic party to transfer the slavery agitation from Congress to the people of the Territory, and the moment he thought that idea to have been departed from he severed his allegiance with what he regarded as a fraud and a cheat.

When open war followed, or indeed as soon as violence was threatened to the Federal authority, Col. Forney enlisted his every energy in the cause of the Union. He converted the *Sunday Chronicle*, which he had established in Washington, into a daily paper, and his "two papers, both daily," were earnestly devoted to the support of the Union. The daily *Chronicle* was the organ of the administration in Washington, and one of its strongest supporters in every measure that tended to preserve the authority of the government or to effect the efficiency of the army. Col. Forney resided in Washington from 1859 to 1870. He was the familiar friend of President Lincoln, Secretary Stanton, and Senator Sumner, and held the most intimate relations with Thaddeus Stevens, Daniel S. Dickinson, Lewis Cass, Benjamin F. Wade, Gen. Grant, Gen. Meade, Gen. Sheridan, John Hickman, Henry Winter Davis, Howell Cobb, John C. Breckenridge, J. P. Benjamin, Owen Lovejoy, Gerritt Smith, Jefferson Davis, Alexander H. Stephens, Salmon P. Chase, William Pitt Fessenden, Hannibal Hamlin, Andrew Johnson, Edward C. Baker, William H. Seward, and James G. Blaine. It was this extensive acquaintance with public men and intimate knowledge of public affairs that gave to his "Occasional" letters their interest and their influence. They literally beamed with hope even in the darkest hours of defeat, and cheered many a desponding heart when the cause of the Union looked dark and hopeless.

In 1868 he resigned the secretaryship of the United States Senate, which he had held since 1861. He had been again elected clerk of the House of Representatives in the Thirty-sixth Congress, serving from 1859 to 1861. In 1870 he sold the *Washington Chronicle*, and returning to Philadelphia, gave his entire attention to *The Press*, but writing at intervals his "Anecdotes of Public Men," which have been reprinted in book form. Shortly after his return to his editorial chair in Philadelphia, Gen. Grant offered him the position of collector of the port, which he accepted with reluctance, as he did not wish to again hold official place. He resigned the collectorship after eleven months, having proved himself an admirable officer.

Mr. Forney made three long visits to Europe; the first was in 1867, and the second in 1875, when he was centennial commissioner abroad, rendering great aid to that ever-memorable enterprise. The last was in 1877, after he had disposed of *The Press*. It was in the beginning of October of that year that he sold *The Press*. His withdrawal, at the close of "forty years of journalism," during which almost every constitutional and economic measure had been under discussion, brought forth from all his contemporaries

expressions of regret, without the least color of resentment, although he had borne a prominent part in all the bitterly-contested political campaigns. The *Philadelphia Record* of Oct. 11, 1877, said,—

“Col. Forney has been an editor for the most of the time during the last forty years, and is one of the princes of American journalism, as well as one of the most popular and genial gentlemen in a social way that this country has ever known. No editor in America has made a deeper impression on the public mind, nor done more honor to his profession. He rose by the force of his own ability and merits from the ‘case’ to his present position; from the position of a ‘printer’s devil’ to that of a leader among journalists, and a Warwick among statesmen.”

The following is from the *Evening Telegraph* of the same date:

“Col. Forney’s own personality always pervaded it (*The Press*) and more than any other Philadelphia journal it has been a personal organ. The natural journalistic aptitudes of its editor made it a success and a power, and there can be no doubt that to the influences of *The Press* are in a considerable measure due some of the positive changes that have come over Philadelphia journalism during the past twenty years.”

The *Evening Bulletin* of Oct. 11, 1877, commented as follows:

“Col. Forney’s almost unrivaled acquaintance with political men and things, his enthusiastic temperament, his great editorial experience, and his free use of a bold and eloquent pen have long ago made for him one of the most prominent places among American journalists. Enlisted in a good cause, whether of politics or any question concerning the welfare of society, Mr. Forney has made himself felt as a marked power in the community, and that power has only been weakened when he has suffered other interests to direct him from the legitimate duties of his chosen profession.”

The *Philadelphia Inquirer* of Oct. 12, 1877, said,—

“The story of his life during the last forty years is largely the story of journalism and politics in Pennsylvania, for while he was the foremost editor of Pennsylvania, he was also among the foremost of Pennsylvania’s politicians. His knowledge of the leading men and events of his country—of the men and events which made the history of the country for forty years—was thorough. Not only was he fitted for the position of editor by his wide culture and experience, but he brought to the editorial desk a real love and respect for his profession which helped to make him conspicuous and eminent in it. Though a strong, emphatic writer, feeling strongly and expressing himself strongly, Col. Forney made few personal enemies, either in politics or journalism. He hit hard blows; but it was generally recognized that it was the *cause* he battled for, and that personal animosity directed not a single blow.”

Expressions of like kindly sentiments might be multiplied from contemporaries, not only of Philadelphia and Pennsylvania, but from newspapers in New York, Boston, Baltimore, Richmond, Va., Cincinnati, St. Louis, Chicago, and from sectarian and other sources. He was everywhere respected and esteemed. He truly said in his “Farewell” to *The Press*,—

“I have done my best to make a good, honest newspaper. It has lived through many tempests and changes. It has received and returned many blows. But I can say, for myself, that, in all this long course of time, I have never deliberately wounded or injured a human being, even in the fiercest struggles of political or sectional difference; and I hope I may be permitted to add, that in more than fourteen years of official responsibility, with millions of public money to hold and disburse, not a dollar has been misapplied or devoted to my personal use.”

As previously stated, it was in November, 1878, a little over a year after his disposal of *The Press*, and two or three months subsequent to his return from his third European trip, that Col. Forney established *Progress*.

Mr. Forney’s literary labors of the more permanent character than the newspaper form are, in addition to his “Anecdotes of Public Men,” “Letters from Europe,” “A Centennial Commissioner Abroad,” the “New Nobility,” and the “Life of Winfield Scott Hancock.”

It has been truly said of Mr. Forney that—

“He belonged to a class of men who build themselves into the civilization of their times, and who heartily greet every advance that is made on this line of human interests and human happiness. By his ready and versatile pen, by his eloquent and ringing voice, by his splendid and magnetic presence, he gave without stint, through nearly half a century, a prompt recognition and a masterly advocacy to every phase of genius, and skill and industry, and thought that makes up the sum of human welfare. He loved the people, and lived for them.”

Such was the life of John W. Forney. He died at the age of sixty-four, after a short illness, leaving a widow and five children. His eldest son died some years previously. The expressions of regret and kindly sympathy that followed Col. Forney’s death from the newspapers of the country, attest the esteem and affection with which he was regarded. The resolutions adopted by public meetings and journalists, after his death, form an appropriate conclusion to this brief sketch of his life:

“WHEREAS, Col. John W. Forney, the distinguished journalist and public man, the founder, and for nearly twenty years the proprietor, of the *Press*, on which journal those present were employed for a long term, has been suddenly called from among us, therefore,

“Resolved, That we deeply deplore an event which removes from his profession one of its brightest lights, and deprives this community of a ripe scholar, an experienced journalist, and a valuable citizen, the nation of a sage counselor, a devoted patriot, and all those who were ever associated with him of a devoted and sincere friend.

“Resolved, That we hereby desire to give expression to our appreciation of the kindly encouragement which he at all times gave to scores of young and struggling members of the profession, and of the advice, counsel, and sympathy by which their labors were cheered, and they were enabled to rise, if not to eminence, to prominent places in the field of journalism.

“Resolved, That his old employes recognize in him the kindest, fairest, and most generous of employers, and testify to the fact that during all the years of our association with him there was never a cause for any difference of opinion or any bickerings between us.

“Resolved, That a copy of these resolutions be conveyed to the afflicted family.

“Resolved, That as a further mark of respect the gentlemen of the meeting attend the funeral in a body.”

Appropriate resolutions were also passed by numerous other public bodies, expressive of his many manly qualities.

*Mind and Matter* is a weekly publication, that is issued from No. 713 Sanson Street, by J. M. Roberts, in the interest of the Spiritualistic belief, and was first published Nov. 30, 1878.

*Benedict’s Fashion Journal* has been published monthly since 1878, at No. 636 Arch Street, by Frances Benedict.

*The Gazette* is issued every Saturday, at No. 98 Chelton Avenue, Germantown, and was begun in 1878.

*The Ice Trade Journal* has been published monthly since 1878, at No. 501 Market Street.

*The Librarian*, started in 1878, is devoted to matters connected with local libraries, and is issued ir-

regularly, by Samuel P. Ferree & Co., from No. 1104 Walnut Street.

**The Foreign Mail**, a monthly commercial journal, started in 1878, was an export edition of *The Grocer*, and was edited and published by Ward & Lipman, at No. 123 South Third Street. It has since been discontinued.

**The Pennsylvania Law-Journal**, commenced in 1878, was published every Tuesday for two years, and then went out of existence.

**The Propagator**, started in 1878, was published until 1880, semi-monthly, as an organ of the American Order of United Workmen.

**Pepper's Musical Times and Band Journal**, a monthly paper, is published by James W. Pepper, at No. 234 South Eighth Street. It was commenced in 1878, under the title of *Pepper's Band Journal*.

**The Daily Legal News**, "a journal of the law and of the court," was first issued Monday, Jan. 6, 1879, by Joshua T. Owen, editor and proprietor, and ran a few weeks only.

**The United Service**, when first issued, in January, 1879, was a quarterly review of military and naval affairs. A year afterward the publication was made monthly, and ever since then it has been the recognized authority in this country upon all matters connected with the army and navy of the United States, as well as the military and naval history of foreign nations. Its pages may at any time be consulted for all that is important in the progress of the art of war, while they also contain most valuable contributions to the records of past events. An important feature of *The United Service* is its development of the literary gifts of officers of the American army and navy who have been and are its contributors. It may be added that it is not at all deficient in articles from the pens of men who were in high command on the side of the Confederacy. Originated by L. R. Hamersly & Co., at No. 1510 Chestnut Street, it has been continuously published by that firm.

**The Teacher**, an educational journal, published monthly by Eldredge & Brother, at No. 17 North Seventh Street, was first issued in January, 1879. It is devoted to the interests of schools, teachers, and the cause of education in general.

**The Monthly Register** of the Philadelphia Society for Organizing Charity was issued for the first time in September, 1879, from No. 1602 Chestnut Street.

**All the Year**, a literary journal, commenced in 1879, was issued every Saturday for about two years.

**The Advertiser** was started in 1879, as a weekly, but was discontinued within a year.

**Afield and Afloat**, a sporting paper, issued every Tuesday, made its appearance in 1879, and was discontinued two or three years later.

**Archives of Dermatology**, a quarterly medical publication, was commenced in 1879, and went out of existence in three years.

**The Bayerische Wochenblatt**, a German paper,

issued every Saturday, had its inception in 1879, and lived a year.

**The Catholic Advance**, a weekly religious paper, was issued in 1879, and ran a few weeks.

**The Covenant**, published on every other Saturday, was first issued in 1879, as the organ of the Reformed Episcopal Church, but was absorbed by the *Episcopal Recorder*.

**The Farmers' Magazine and Rural Guide** had its origin in 1879, and was published monthly for one or two years.

**The Grand Army Review**, published monthly in the interests of the Grand Army of the Republic, was issued for the first time in 1879. A year later it had gone out of existence.

**The Musical Times and Art Journal** was started as a weekly in 1879, and had about a year of life.

**The North Philadelphian**, issued every Saturday, made its appearance in 1879, and is now published as the *North Philadelphia Journal*.

**The Open Fire-Grate** came into existence in 1879, and was discontinued within a year.

**The Presbyterian Monthly** was first issued in 1879, and was continued for two years.

**The Review of Medicine and Pharmacy** had its inception in 1879, and was in existence two years.

**The Sunday Argus**, a Democratic sheet, was first issued in 1879, and perished within two years.

**The Labor World**, started in 1879, the organ of the laboring classes, is issued every Thursday from No. 441 Chestnut Street.

**The Philadelphia Methodist** was started in 1879, and is issued every Thursday from the Methodist Episcopal Book and Publishing House, No. 1018 Arch Street.

**The Quaker City Review**, published on Saturday, at No. 627 South Fifth Street, dates back to 1879.

**The Merchants' Guide** has been published every Saturday since 1879.

**The Medical Bulletin**, a monthly journal, had its origin in 1879, and has met with substantial success.

**The Sunday Herald** was begun in 1879, and published at No. 716 Sansom Street, where it went out of existence in four years.

**The Quinologist**, a monthly medical publication, was first issued in 1879.

**The Textile Colorist**, a scientific monthly magazine, published at No. 506 Arch Street, has been in existence since 1879.

**Items of Interest**, devoted to the advancement of the dental profession, was started in 1879, and is published monthly at No. 607 Sansom Street.

**The Tribune and Farmer** was established in 1879, and is issued every Saturday from No. 441 Chestnut Street.

**Association News** is published monthly by the Young Men's Christian Association, at the southeast corner of Fifteenth and Chestnut Streets, and has been issued since 1879.

The **Barber's National Journal** was established in 1879, and is published at No. 120 North Seventh Street, as a semi-monthly.

The **Enterprise**, published upon alternate Saturdays, has been in existence since 1879.

The **Evening News**, a Republican daily afternoon paper, published by the Evening News Company, at No. 713 Chestnut Street, was started in 1879.

The **Falls Advertiser and Riverside Gazette** is published weekly, on Thursday, at Falls of Schuylkill, and was started in 1879.

The **College and Clinical Record**, a monthly medical journal, "conducted especially in the interest of the graduates and students of the Jefferson Medical College," made its appearance Jan. 15, 1880. It is published by E. Claxton & Co., at No. 930 Market Street, and is edited by Dr. Richard J. Dunglison, who was originally assisted by Dr. Frank Woodbury, now the editor of *The Medical Times*.

The **Sugar Beet**, a quarterly scientific and agricultural journal, was first issued in February, 1880, and is chiefly devoted to the discussion of the various aspects of sugar-beet culture. The general phases of sugar production are not neglected, however. The publishers are Henry Carey Baird & Co., at No. 810 Walnut Street. The editor is Lewis S. Ware, who is the author, among other works, of "The Sugar-Beet; including a History of the Beet Sugar Industry in Europe," and "A Study of the Various Sources of Sugar."

**Golden Days**, a juvenile publication, is a weekly paper whose columns teem with stories, instructive reading, sketches of adventure, and such matter as will interest, delight, and benefit boys and girls. To its columns many of the principal scientists, educators, and clergymen of the day contribute articles which are illustrated in the highest style of the artist and the engraver.

The first number was issued March 6, 1880, and in his salutatory, James Elverson, the publisher, said, "It will be my aim to give to the young warm, interesting, and vivid narratives prepared by the most popular and competent writers,—writers who understand childhood and comprehend their own responsibilities in that respect."

The proprietor never does anything in a half-way, half-souled manner, and when he printed two million seven hundred and fifty thousand copies of the first edition, at a cost of fifty thousand dollars, and distributed them free, through the newsdealers, and by the agency of over four hundred horsemen in sections where there were no railroads and newsdealers, he felt that his enterprise and judgment would be appreciated by American boys and girls. *Golden Days* is published by Mr. Elverson, at the northwest corner of Ninth and Spruce Streets.

The **Textile Record of America** was first published in September, 1880, by James W. Nagle and John W. Ryckman. During the two succeeding

years there were some changes in the ownership, and in February, 1883, the entire property was purchased by Mr. Charles Heber Clark, who had been identified with the daily journalism of Philadelphia for nearly twenty years, and the journal is issued monthly at 425 Walnut Street. Under his administration *The Textile Record* has advanced to the very first rank among publications representing the textile industries. It is regarded all over the world as an authority upon the topics of which it treats.

It considers the transformation of fibres into fabrics; treats of the nature of fibres (as, for example, in papers upon fibres under the microscope); of all the processes of preparing them for the loom and knitting-machine; of dyeing in all its branches; of the manufacture of woollen, cotton, silk, jute, flax, and other fabrics; of economical and political questions belonging to the industry; of all kinds of new machinery produced for the benefit of the textile arts; and of mill construction, prevention of fires, etc.

It also gives large space to faithful representation of the knitting industry, which is conducted upon a huge scale in Philadelphia, and it is accepted by the knitting interests as their spokesman.

The **American** is a weekly journal "of literature, science, the arts, and public affairs," and was begun in 1880, the first issue being dated on October 10th of that year. Its origin may be traced to the weekly issue of a small folio, called *Weekly Notes*, which was sent out for some time as a supplement to the *Penn Monthly*, and was made up of original comment on current affairs, home and foreign, by the editor of the *Penn Monthly*, Robert Ellis Thompson, one of the faculty of the University of Pennsylvania. When *The American* was begun this feature was transferred to it, and the latter deals largely and freely with all political topics, at the same time treating editorially a wide range of social, industrial, and other questions, apart from its departments of literary review and criticism, art criticism, scientific information, etc. The first managing editor was William Ralston Balch, by whose energy and taste the start of the journal was particularly marked. He was succeeded in October, 1881, by Howard M. Jenkins, who continues, Professor R. E. Thompson being the chief editorial writer. Essays, reviews, criticisms, etc., are procured from a large number of writers throughout the country. The ownership of the journal is, as it has been from the beginning, substantially in the hands of Wharton Barker, a banker and manufacturer of Philadelphia, who has liberally sustained the enterprise.

The **Baptist Family Magazine** was commenced as a monthly in 1880, and continued less than two years.

The **Commercial World**, a monthly mercantile paper, was started in 1880, and discontinued in 1882.

**Stoddart's Review** was issued for the first time in 1880, and in 1882 consolidated with *The American*.

The **Ingleside** was commenced in 1880, and suspended in two or three years.

**The Carpenter** was started in 1880, and issued monthly for a couple of years.

**The American Journal of Photography** was started in 1880, and is published monthly.

**Quiz**, a weekly society journal, is published at No. 912 Arch Street, under the editorial direction of Florence I. Duncan, and was founded in 1880.

**The Bullion Miner and Coal Record** was started in 1880, and is published every Saturday at No. 225 Carter Street.

**The Eagle Journal**, published on Saturday, was first issued in 1880.

**The American Textile Manufacturer**, a monthly trade journal, has been in existence since 1880, and is published at No. 506 Arch Street.

**The Northwest** was first issued in 1880, and is published on Saturday.

**The Citizen**, a literary and political journal published on Saturday, came into existence in 1880.

**The Monarch City World**, a monthly commercial journal, was started in 1880, but did not last long.

**New Leaves**, a monthly temperance journal, was first issued in 1880. It is the official organ of the Grand Division of the Sons of Temperance of Pennsylvania.

**The Picture World**, published by the American Sunday-School Union, was established in January, 1881, as a monthly publication for children.

**Our Young People** was first published in January, 1881, and is specially adapted to the older boys and girls in the Sunday-school, and to the young men and women in Young People's Associations. It is edited by Rev. Dr. A. Judson Rowland, and published by the American Baptist Publication Society, at No. 1420 Chestnut Street.

**The Farm and Garden** was established in 1881 by E. S. Child, and is now owned by Child, Boos & Co., and published from No. 125 South Fourth Street.

**The Sunday Independent** had its inception in the early part of 1881, the publishers being Riter & Harrington Fitzgerald, and was discontinued within a few months.

**The Advance and Review**, a quarterly periodical devoted to spiritualism, was started in 1881, and went out of existence within a year.

**The American Pulpit and Pew**, a monthly unsectarian religious journal, was issued for the first time in 1881, and lasted only one year.

**The Bridesburg Standard**, issued every Wednesday, was commenced in 1881, at Bridesburg, and within a year publication was suspended.

**The Easy Hour**, a literary journal, issued every Saturday, had its origin in 1881, and is not now in existence.

**The Golden Year**, a semi-monthly, issued in the interest of the American Order of United Workmen, had its origin in 1881, and came to an end in less than two years.

**The Medical Advisory** had its inception in 1881, but its career was brief.

**The Oar**, a sporting periodical, came into being in 1881, and soon died out.

**The North American Manufacturer**, published every Thursday, was started in 1881, and discontinued inside of two years.

**The Quaker City Gazette**, a society journal, published every Saturday, had a short career in 1881.

**The Educational Visitor and Temperance Ensign**, commenced in 1881, enjoyed but a brief existence.

**The Family Herald**, a family paper, published every Saturday, was started in 1881, and suspended the next year.

**The Brewers' and Dealers' Journal** has been published monthly, at No. 705 Sansom Street, since 1881.

**The Commercial Bulletin**, issued on Monday, had its origin in 1881, and is devoted to commerce and trade.

**The Mining Journal**, the publication office of which is at No. 330 Walnut Street, was begun in 1881, and is issued every Saturday.

**Life**, an eight-page illustrated society journal, was started in 1881, the publication office being in *The Press* building. Only a few numbers were issued.

**The Grand Army Scout and Soldiers' Mail**, an organ of the Grand Army of the Republic, published every Saturday, was issued for the first time in 1881.

**Bennage's Musical Library** has been published on Monday of each week since 1881.

**The Educational Visitor** was first issued in 1881, and still continues.

**The National Brewer and Maltster** is published at No. 126 South Second Street, on Saturday of each week. Its first issue was in 1881.

**L'Avenir**, a monthly religious journal, was started in 1881, in the interest of the French Protestant population of Philadelphia, and is still in existence.

**The Graphic World**, an illustrated family paper, was commenced in 1881.

**Iron**, a weekly mechanical journal, issued on Thursday, has been in existence since 1881. The publishers are A. C. Farley & Co., at No. 413 Walnut Street.

**The Hosiery and Knit Goods Manufacturer**, a monthly trade journal, entered the journalistic field in 1881, and publication was discontinued not long afterward.

**The Post and Camp**, issued on Saturdays, in the interest of the Grand Army of the Republic, had its inception in 1881, and has died out.

**Kind Words**, an evangelical juvenile journal, published every Saturday, came into existence in 1881.

**The Household Visitor**, published every Saturday, was started in 1881 as an independent family paper.

**The National Agent**, a monthly periodical of sixteen pages, whose publication office is at No. 711 Sansom Street, was first issued in 1881.

**The New Church Life**, a religious journal, issued

monthly, is published in the interest of the Swedenborgian denomination, at No. 1802 Mount Vernon Street. It is a sixteen-page periodical, and was commenced in 1881.

The **Tacony New Era** was established Dec. 8, 1881, by William C. Watson and Daniel Muncy, and ran for one year. At that time Mr. Muncy sold his interest to Thomas J. Mills, and the paper is still continued.

**Truth in Life**, a children's journal, devoted chiefly to temperance, and *The Illustrated Treasury of Knowledge*, also a juvenile periodical, the purpose of which is to illustrate Bible truths from science, were established by the American Sunday-School Union in January, 1882.

The **Family Review**, devoted to legal, medical, educational, and social affairs, was first issued in January, 1882, and published at No. 355 North Fourth Street, by M. G. Taylor.

The **Medical Register**, a record of the literature of medicine and the allied sciences, was commenced Feb. 15, 1882, as a monthly publication, the publishers being P. Blakiston, Son & Co., at No. 1012 Walnut Street.

**Our Continent**, an illustrated weekly journal, published by "Our Continent Publishing Company," was issued for the first time Feb. 15, 1882. The officers of the company were Albion W. Tourgée, president; Daniel G. Brinton, M.D., secretary; and Robert S. Davis, treasurer. The first named was also the editor of the journal. Among the contributors to the initial number were George Parsons Lathrop, Sidney Lanier, Donald G. Mitchell, George H. Boker, Oscar Wilde, E. P. Roe, William M. Baker, J. T. Trowbridge, John Habberton, Max Adeler, Louise Chandler Moulton, Kate Field, William Pepper, M.D., Noah Porter, Helen Campbell, and Rebecca Harding Davis. Before the close of the second volume the title was changed to *The Continent*, and in the latter part of 1883 it was removed to New York City.

The **Law and Order Advocate**, a weekly paper, was issued for the first time on Sept. 4, 1882, from No. 126 (old number 134) South Fourth Street. Its object was the maintenance of the "American Sabbath," and the suppression of intemperance and vice.

The **Caterer**, a gastronomic monthly, was conceived by its publishers and editors in the beginning of 1882, but the initial number was not issued until the 1st of October of that year. Its character was not intended to be simply that of a cook-book, but of a nature that would interest and instruct upon general topics relating to the household and to domestic economy. It met with instant favor, and it has since received substantial patronage from thousands of readers. It is under the general direction of Joseph Whitton, and is published at No. 1013 Chestnut Street. The editor, James W. Parkinson, has long been known as a chief in gastronomic science.

The **Germantown Independent** was started Oct.

7, 1882, as a four-page, six-column weekly paper. Departments were added from time to time, embracing news items from Olney, Branchtown, Chestnut Hill, Mount Airy, and other suburbs of the town and out-of-the-way corners of the ward. A special feature was the introduction of portraits and biographical sketches of home celebrities, historical buildings of the town, etc.

Its proprietors are Horace F. McCann and J. Alex. Savage (McCann & Savage). Both are practical printers, McCann being a graduate of the *Germantown Telegraph* office, and Savage an early apprentice of the *Guide*; also afterward a contributor to and compositor on a number of city papers.

The publication office is at No. 4958 Germantown Avenue, where a large job business is done in addition. The paper has now a very large circulation for a suburban journal.

The **Sower**, "published every other Saturday (except from July 1st to September 15th) under the auspices of the Philadelphia Unitarian Churches," made its appearance Nov. 4, 1882.

The **Literary Era**, "a monthly repository of literary and miscellaneous information," was established in December, 1882, by Porter & Coates, at No. 900 Chestnut Street, and has met with substantial success from the outset.

The **Clerk**, a commercial paper, issued monthly, came into existence in 1882, and was printed only a very short while.

The **Oriental Casket** was started in 1882, but only a few numbers were issued.

The **Record of Growth**, a miscellaneous journal, had its inception in 1882, and is not now in existence.

The **Hearthstone**, an illustrated literary paper, started in 1882, is issued every Monday.

The **American Silk and Fruit Culturist** was started in 1882, and is published monthly at No. 1328 Chestnut Street.

The **Saturday Journal**, started in 1882, is published at No. 5125 Kershaw Avenue, Hestonville, West Philadelphia.

The **Echo** was started in 1882 as a monthly literary periodical.

The **Home Protector**, a temperance and literary journal, published every Saturday, was commenced in 1881.

The **Agents' Bulletin**, published monthly, was first issued in 1882.

**Chaff**, a monthly paper, came into existence in 1882. It was established as an illustrated college paper of the University of Pennsylvania, by eight graduates of the classes of 1881, 1882, and 1883. It contains original verses, illustrations, and light sketches of a humorous and satirical character, and has attained great success both in and out of the college. This paper is thoroughly original, all the articles, designs, illustrations, and engravings being by the members of the Chaff association.

**The Hammer**, a German monthly mechanical journal, was started in 1882.

**The Home Circle**, a Baptist family magazine, issued monthly, from No. 1420 Chestnut Street, had its origin in 1882.

**The Modern Reporter**, a stenographic periodical, issued every month, was commenced in 1882.

**True Blue**, an independent weekly paper, entered the field of journalism in 1882.

**The Thoroughbred Stock Journal**, published monthly, at No. 27 South Seventh Street, had its beginning in 1882.

**The Peacemaker**, a twenty-page periodical, issued monthly by the Peace Society, was started in 1882.

**Edison's Review**, issued monthly, was published for the first time in 1882.

**Knights of the Golden Eagle** was started in 1882, as an organ of the order of the Knights of the Golden Eagle.

**The Textile Monitor** is published monthly, at No. 220 Church Street. The initial number was printed in 1882.

**The Industrial Review** was established in 1882, by the Industrial Review Publishing Company, and is issued monthly, at No. 806 Walnut Street.

**The Miller's Review**, devoted to milling interests, is published at No. 610 Chestnut Street, and had its origin in 1882.

**The Spectator**, published weekly, in the interest of the colored race, was started in 1882, but only a few numbers were issued.

**The Review**, a literary journal, published in behalf of the Society of Friends, was started in 1882, and issued monthly.

**Strawbridge & Clothier's Quarterly**, a family journal, published by Strawbridge & Clothier at No. 801 Market Street, has been in existence since 1882.

**Terpsichore**, a monthly periodical, was started in 1882.

**The Scholar's Quarterly**, a periodical intended to aid in the Sunday-school work of the Reformed Church, was issued for the first time in 1882.

**Stewart's Banjo and Guitar Journal** was originated in 1882.

**The Sunlight** was begun in January, 1883, and is published by the American Baptist Publication Society, at No. 1420 Chestnut Street, every other week, alternately with *The Reaper*, and at the same price. It has already gained a large circulation.

**The Sunday Hour**, an illustrated religious journal, was commenced in January, 1883, by the American Sunday-School Union.

**Boogher's Repository**, "devoted to the preservation of history, biography, and genealogy," was started in March, 1883, as a monthly magazine, and published by William F. Boogher, and edited by Horace Wemyss Smith. After the issue of the first number the latter assumed full control of the publication, and the May number was changed in title to

the *American Repository*. Only three numbers were issued.

**The Illustrated World** was established by James Elverson, of the *Saturday Night*, who, on the 14th of April, 1883, published the initial number from the northwest corner of Ninth and Spruce Streets. Money was liberally expended on American talent, and in importing the plates of the finest and latest contributions to art in the Old World. But the fair prospects of the paper were doomed to come shortly to an end, in what was generally termed "The Saturday Night Injunction Case," brought by a citizen who complained that the running of the presses at night disturbed his rest, and otherwise made him uncomfortable. In refusing the injunction asked for, namely, that Mr. Elverson should be restrained from running his presses between six o'clock in the evening and six o'clock next morning, Judge Hare gave "leave to the complainant to apply for a further order, should circumstances render it expedient." This compelled Mr. Elverson to suspend the publication of *The Illustrated World* or have it printed elsewhere. As the latter alternative would have brought about unsatisfactory complications, he finally announced, in the number for Nov. 17, 1883, that he was forced by the decree of the court "to suspend the publication of the paper."

**The American Psychological Journal**, issued by the National Association for the Protection of the Insane and the Prevention of Insanity, had its inception in April, 1883, as a quarterly publication. It is published by P. Blakiston, Son & Co., at No. 1012 Walnut Street, and is under the editorial direction of Dr. Joseph Parrish.

**The Sporting Life**, published by Francis C. Richter, was commenced on the 15th of April, 1883. Office on Ninth Street below Walnut.

**The Polyclinic**, a monthly journal of medicine and surgery, conducted by the faculty of the Philadelphia Polyclinic and College for Graduates in Medicine, appeared July 15, 1883, and is published by P. Blakiston, Son & Co., at No. 1012 Walnut Street.

**The Philadelphia Tobacconist**, published in the interest of the tobacco trade, was started early in 1883, being issued from No. 126 South Second Street.

**The Agents' Telegraph**, a monthly paper, was first issued in 1883.

**Schwaebisches Wochenblatt**, a German paper, was commenced in 1883.

**The Evening Call**, an independent afternoon newspaper for the people, was first issued Sept. 17, 1883. From the beginning the number of copies daily printed and sold has exceeded sixteen thousand. *The Weekly Call* was first issued Dec. 15, 1883, and sold of its third issue twenty-six thousand four hundred copies, which is unprecedented in the history of weekly journalism. The following is the platform upon which both *The Evening Call* and *The Weekly Call* are conducted:

"OUR PAPER—A Newspaper for the People, of the Peoples, and by the People.

"OUR POLITICS—A candidate's fitness for office, irrespective of his Party name.

"OUR RELIGION—Character instead of Creed. He believes truth who lives truth.

"OUR AIM—The greatest good to the greatest number."

Robert S. Davis, the publisher and editor of *The Call*, is a native of Philadelphia, and received a collegiate education. In 1860-61 he studied law, but finally abandoned it, and became a general writer for newspapers and magazines. In 1863 he went to Washington, D. C., where he was the correspondent of several papers. While in that city he made the acquaintance of James Elverson, and the two became room-mates and warm friends. Joining their small savings, they entered into various speculations, in which they were quite successful. Possessing considerable means, they came to Philadelphia in 1865, and started the *Saturday Night*, the phenomenal success of which is generally known to the public. In the early part of 1882, having disposed of his share in the *Saturday Night*, Mr. Davis, together with two or three others, issued *Our Continent*, an illustrated weekly literary journal. Within less than a year, however, he withdrew from the new enterprise, and thereafter his thoughts were turned toward daily journalism. Finally he set about carrying into effect his resolution to establish a daily newspaper, and in accordance therewith issued *The Evening Call* in September, 1883. Mr. Davis is an energetic, enterprising man of business, and his tendency is to bring success where many others might fail.

*The Home Companion*, a monthly family paper, was started in the early part of 1883.

*The Chestnut Hill and Montgomery News*, a weekly paper, issued on Saturday, was published for the first time in 1882.

*Truth*, a Sunday paper, was started in 1883, and after a life of several months publication was suspended.

*The Daily Register*, a morning paper, devoted to the publication of the arrivals at the principal hotels of the city, was started in 1883, the office of publication being in *The Press* building, at the southwest corner of Seventh and Chestnut Streets.

*The Dental Practitioner*, a monthly periodical, had its beginning in 1883.

*The Baptist Superintendent* was first issued in January, 1884. It is edited by Dr. C. R. Blackall, and has already taken foremost rank. It contains general articles by the best writers relating to Sunday-school management, notes and queries on practical questions, blackboard reviews of every lesson, discriminating notices of books that are helpful to superintendents, and such other matters as are considered as having special value. The journal is published quarterly by the American Baptist Publication Society, the publication office being at No. 1420 Chestnut Street.

## CHAPTER XLIX.

### SECRET ORDERS AND SOCIETIES.

**The Masonic Order.**—The weight of evidence, official and unofficial, direct and collateral, goes to substantiate the claim of Philadelphia to be the mother-city of Masonry in America. We do not know the date or the circumstances of the formation of the first lodge, but it is reasonably inferred that some of the brethren, who had been initiated in England or elsewhere, met together more than a century and a half ago in this city, and resolved to establish an organization.<sup>1</sup> It is, however, positive that, on June 5, 1730, the Duke of Norfolk, Grand Master of the Grand Lodge of England, issued a deputation to Daniel Cox,<sup>2</sup> of New Jersey, as Provincial Grand Master of the provinces of New York, New Jersey, and Pennsylvania. This document, which is still in existence, speaks of application having been made by a number of brethren, then resident in the provinces named, which fully demonstrates the fact that prior to 1730 there were Masons in Philadelphia who united in asking recognition from the supreme head of the order. Moreover, Benjamin Franklin, in his *Pennsylvania Gazette*, of Dec. 8, 1730, said there were then several lodges of Freemasons erected in the provinces.<sup>3</sup>

<sup>1</sup> John Moore, in 1703, was commissioned by the king as collector of the port of Philadelphia. In 1715 he wrote a letter, in which he mentions having "spent a few evenings of festivity with my Masonic brethren." This is the earliest written evidence in existence of the fact that members of the craft dwelt within the present jurisdiction. Many descendants of John Moore attained professional and political, as well as Masonic, prominence.

<sup>2</sup> Daniel Cox was the son of Dr. Daniel Cox, of London, Governor of the province of West Jersey, and its largest landed proprietor, who, in 1691, sold the territory and the government to the West Jersey Society for nine thousand pounds. In 1703 the second Daniel Cox was appointed commander of all the royal forces in West Jersey, and was thence known as Col. Cox. Between 1705 and 1716 he was a member of the Council and of the Assembly, and in the latter year went to England. The minutes of the Grand Lodge of England show that at its meeting on Jan. 29, 1731, he was present, and his health was drunk as "Provincial Grand Master of North America." In 1734 he was appointed associate justice of the Supreme Court of New Jersey, and in 1739 he died in office. He was the author of a collection of voyages and travels, and "A Description of the English Province of Carolina, by the Spaniards called Florida, and by the French La Louisiana; as also of the great and famous river Meschacebe or Mississippi, the five vast navigable Lakes of fresh water, and the parts adjacent, with an account of the commodities, and their growth and production in the said Provinces."

<sup>3</sup> A very interesting discovery was made in the early part of 1884 by Clifford P. McCalla, R. W. J. G. W. of the Grand Lodge of Pennsylvania, who found among the MS. held by the Historical Society of Pennsylvania the original ledger of St. John's Lodge of Philadelphia from June 24, 1731, to June 24, 1738, which establishes the claims of Philadelphia to be the metropolis of Masonry in America. The oldest record previously known bore date two years later, and the oldest record in this State, that of Lodge No. 3, is dated 1767. The book was exhibited by its discoverer on the evening of the 28th of February at his lecture before Lodge No. 51, on "A Remarkable Masonic Life,"—that, namely, of Benjamin Franklin.

The book is bound in stiff vellum, and is labeled on the front cover, "Philadelphia City, St. John's Lodge, Libr. B." The entire volume is well preserved. It is of the blank-book pattern, five and a half by twelve inches, and two inches thick. It has an alphabetical index of

Thomas Cadwalader's letter of Nov. 17, 1754, to Henry Bell, of Lancaster, has an allusion to the writer as one of the originators of the first Masonic lodge in Philadelphia, which was sometimes opened by a party that used to meet at the Tun Tavern in Water Street. In the fall of 1730 they designed obtaining a charter from the Grand Lodge of England, but Grand Master Cox coming into office, they procured it from him. Then on St. John's day, June, 1732, a Grand Lodge was held at the Tun Tavern, when W. Allen was chosen Grand Master, William Priugle, Deputy Master, and Thomas Boude and Benjamin Franklin, Wardens, for the ensuing year. The notice of this meeting in the *Pennsylvania Gazette* says "Sun Tavern," which is undoubtedly a misprint, as the most diligent search of the local antiquarians has failed to discover any such establishment. The Tun Tavern was kept by Thomas Mullan, and was on the east side of the street then indifferently called Water Street or King Street. The lodge, which before and after the Revolution was "No. 3," bore the additional title of Tun Lodge, an unquestionable allusion to the place of its origin. In 1734, Dr. Franklin, then Grand Master of the province of Pennsylvania, had some correspondence with Henry Price, who had been appointed by Lord Montague Grand Master of England, Provincial Grand Master of New England and dominions and territories thereunto belonging. Franklin's letter bore date Nov. 28, 1734, and in it he said that as he had heard that "Mr. Price's deputation and power were extended over all America," the brethren in Pennsylvania requested from him a charter confirming them in their privileges of holding a Grand Lodge. It is not known that Price made any reply to Franklin. It has been stated on June 24, 1734, a deputation was granted by the St. John's Grand Lodge of Massachusetts, but there is no evi-

the names of the brethren of the lodge. A curious thing about it is that some of the pages are occupied with commercial entries in reference to the publication of seventeen hundred and ninety copies of the Prayer-Book, New Testament, and the Laws of Pennsylvania, a fact which shows that some member of the lodge devoted to its service one of his business ledgers. The B on the cover shows that an A preceded it, though probably not a volume of accounts, as the lodge originated only in the latter end of 1730, and in 1732 had but nineteen members, as appears from its vote when one of its members, William Allen, was elected Provincial Grand Master of Pennsylvania.

Among the names of the members are those of Henry Pratt, William Paschal, Jamee Bligham, Owen Owen, Thomas Hopkinson, Capt. William Plumet, John Waugh, James Hamilton, Joseph Shippen, Thomas Bond, Philip Syng, Richard Howell, Dr. Thomas Cadwalader, David Humphrey, and Henry Lewie, all of whom are still represented in Philadelphia society. The tenth name on the list is that of Benjamin Franklin, and the book establishes the fact of his having been made a Mason on June 24, 1731, when "the remainder of his £3 entrance-fee is £2." He had probably paid one pound previously, for he is charged with five months' dues, dating, no doubt, from his "apprentice" days. His publication on Masonry appeared in his *Gazette* of Dec. 8, 1730. From this it is apparent that Franklin became affiliated as an entered apprentice at least four months previously, say in or before February, 1731. By comparison with the register in the "Freemason's Pocket Companion," published in Dublin in 1735, St. John's Lodge is identified with No. 116, and it met on the first Monday of each month; the place of meeting in this register is placed at the Hoop, in Water Street.

dence that it was ever acted upon, and even the fact of the grant rests under a shadow of doubt. Franklin's application was caused, as he writes, by the "fear of some false and rebel brethren, who were foreigners, and who were about to set up a distinct lodge in opposition to the old and true brethren, and pretending to make Masons for a bowl of punch, the craft coming into dissension unless the true brethren are countenanced and distinguished by some such special authority as desired."

In 1735 the Grand Lodge changed its place of meeting from the Tun Tavern to the Indian King, the oldest and one of the celebrated public resorts of that day, situated on the South side of High [now Market] Street, below Third, at the southwest corner of Biddle's Alley [between Bank Street and Third Street]. In 1749, about the time of the appointment of William Allen as Provincial Grand Master, the Grand Lodge removed to the Royal Standard Tavern, located on High Street, near Second Street. By this time the members wearied of meeting in taverns, and, on March 12, 1752, they resolved to erect a separate building for Masonic purposes. It was finished in 1754, and was a three-story brick building on the south side of Norris [afterward Lodge] Alley, just west of Second Street. Erected by subscription at a cost of about seven hundred and thirty pounds, it was called the Freemason's Lodge, and the title was vested in trustees of the three lodges. On St. John's day, 1755, the Masons had their first public procession and celebration. They marched from the Norris Alley hall to Christ Church, where they listened to a discourse from Brother William Smith upon the precept, "Love the Brotherhood, fear God, and honor the King." This was the order of the procession:

1. The Sword Bearer carrying a drawn sword.
2. Six Stewards with white rods, walking two-and-two.
3. The Grand Secretary and Grand Treasurer, who bore each a crimson damask cushion, on one of which was laid the Bible, and on the other the Book of Constitutions.
4. A reverend brother.
5. The Grand Master, supported by two brethren of rank and distinction.
6. The Deputy Grand Master, supported in like manner.
7. The two Grand Wardens.
8. Two members of the Grand Lodge.
9. The three orders, Doric, Ionic, and Corinthian, carried by three Tylers.
10. The three Masters of the three regular lodges of the city.
11. The two Wardens of the First Lodge.
12. The two Wardens of the Second Lodge.
13. The two Wardens of the Third Lodge.
14. The three Secretaries of the three lodges.
15. The three Treasurers of the three lodges.
16. The visiting brethren walking two-and-two.
17. The members of the First, Second, and Third Lodges walking two-and-two.
18. The six Stewards with their rods, walking two-and-two.
19. The Grand Masters, Governor Morris', Governor Tinker's, and others of the brethren's coaches and chariots, empty.

Cannon thundered their salutes and a curious populace gazed upon the pauply and display as the line marched to the church and returned to the hall. There a banquet had been prepared, which the Masons

and their guests enjoyed until the very modest hour of five o'clock in the afternoon.

Up to this time there were two Grand Lodges in England,—the Grand Lodge of England (at London), and the Grand Lodge of All England (at York). Harmony and discord alternately marked the relations of these two bodies, and in 1753 certain brethren complained of the encroachment of the Grand Lodge at London on their rights, declared that the ancient landmarks had been removed, and they seceded, assuming the title of "Ancient York Masons," and denominating the followers of the regular Grand Lodge at London as "Moderns." From the Grand Lodge of Ancients the present Grand Lodge of Pennsylvania had its origin. The Provincial Grand Lodge (Ancients), which was numbered one, has left no official memorial to show the circumstances which attended its origin. Lodge No. 2 claims its date from July 7, 1758, when it was chartered by the London Grand Lodge as English Lodge No. 69. On June 20, 1764, the London Grand Lodge issued a patent to Lodge No. 69, Ancient York Masons, at Philadelphia, authorizing them to form and to hold a Grand Lodge for the province of Pennsylvania. This warrant was acted upon. The Provincial Grand Lodge was organized, and it is enumerated in the list of lodges as No. 1. Recognizing the authority of this Provincial Grand Lodge, No. 69 surrendered its warrant, and a new warrant was issued to the same brethren, authorizing them to hold Lodge No. 2, A. Y. M., of Pennsylvania. Lodge No. 3 must also have been in existence under a prior English warrant. Its earliest record bears date Oct. 22, 1767, at which time it was organized under a warrant from the Provincial Grand Lodge. Hugh Stewart was at that time Worshipful Master. Up to the Revolution the Masters of No. 3 were as follows: 1767, Hugh Stewart; 1768, Robert Moore; 1769, James Loughhead; 1770, William Shute; 1771, John Fox; 1772, John Fox; 1773, Alexander Kidd; 1774, James Fulton; 1775, Dr. Anthony Yieldall; 1775-76, Charles Allen. Before the Revolution the place of meeting of the lodges of Ancient York Masons was probably in Videll's Alley, a small court which ran from the west side of Second Street, below Chestnut, westward. There was in this alley a building used occasionally for lectures, religious meetings, and other purposes.

Lodge No. 3, according to a notice in a newspaper published before the Revolution, met in Videll's Alley, and most likely the other lodges met at the same place. Afterward, it is probable, they met at the City Tavern, where it appears the meetings were held in 1777. In the interval between the establishment of the Provincial Grand Lodge, No. 1, and the Revolution, nineteen lodges had been chartered under its authority. Of these Nos. 2, 3, 4, 9, 13, and 19 were held in Philadelphia.

According to Ahiman Rezon, the first Royal Arch Chapter in America of which any account exists

was held in Philadelphia before 1758. This chapter worked under the warrant of Lodge No. 3, and had communication with the military chapter working under Warrant No. 35, granted by the Grand Lodge of All England, which proceedings were subsequently ratified by that body.<sup>1</sup>

The subject of Royal Arch Masonry was for many years one of difficulty to the order in this State. In 1795 a man named Molan was at the head of the attempt to introduce innovations into the Royal Arch degree, and to form an independent Royal Arch Chapter in Philadelphia, under the warrants of Lodges Nos. 19, 52, and 67, held in this city, and a Maryland and a Georgia lodge. The Grand Lodge of Pennsylvania nullified these proceedings, but acknowledged the right of the subordinate lodges to exalt their members to the Royal Arch degree. To secure uniformity in the work, it established a Grand Royal Arch Chapter (the first in the United States), and in 1798 decreed that no warrant for a chapter should be granted by the Grand Chapter except to be worked under the warrant of a regular existing lodge. In the previous year a convention of chapters, attended by delegates from Massachusetts, New Hampshire, Rhode Island, Connecticut, Vermont, and New York, had met at Boston, and had repudiated the authority of Grand Lodges over Royal Arch Chapters.

In 1798 a Grand Chapter was erected, having jurisdiction over all the States mentioned, and made provision for organizing State Grand Chapters, to which authority was given to institute subordinate chapters. The Grand Lodge of Pennsylvania protested against all this, and much inconvenience was caused to the Royal Arch Masons of this State. The trouble was healed in 1824, when the Grand Lodge of Pennsylvania agreed to a separation between itself and the Royal Arch Chapter, which was thenceforth to be independent, with authority to confer the Mark Master's and the Most Excellent Master's degree, the Grand Lodge retaining control of the Past Master's

<sup>1</sup> The military, or traveling lodges, were established in both armies. Before the Revolution, Masons of the Seventeenth British Regiment were granted a warrant as Lodge No. 18 by the Grand Lodge of Pennsylvania. The present Montgomery Lodge, No. 19, was established by warrant granted May 13, 1779, to the First Regiment of Pennsylvania Volunteer Artillery. During the war this lodge traveled with the Pennsylvania line, and some time ago the brethren of that lodge had in possession an old-fashioned chapeau-de-bras which belonged to the traveling lodge, and might have been worn by the Master. No. 19 worked under the original charter until after the war. In 1784 the warrant was surrendered to the Grand Lodge. In 1786 a new warrant was issued to supply the place of that which was surrendered, and it was directed to Thomas Proctor, of the First Regiment of Pennsylvania Artillery. Under the latter warrant, Montgomery Lodge, No. 19, is still worked. The Grand Lodge of Pennsylvania also issued warrants to North Carolina, Maryland, and New Jersey Regiments of the Continental army.

After the Revolution, Warrant No. 58 was issued to officers connected with St. Clair's expedition to the Northwest Territory. The Masonic jurisdiction of the Grand Lodge of Pennsylvania was without limit. Upon the records there are entries of warrants issued to lodges in Pennsylvania, New Jersey, Delaware, Virginia, South Carolina, Georgia, Hayti, and the West Indies.

degree. By this action the Grand Chapter became assimilated with the Royal Arch Chapters of the United States, although it was not acting under the charter of the so-called Grand Chapter of the United States, and the difficulties in the way of Pennsylvania brethren visiting other jurisdictions were renewed.

The Grand Lodge (Moderns) almost ceased to exist during the Revolution, the members being much divided on politics, and Grand Master Allen, who was a Royalist, having left for England. The new Grand Lodge (Ancients) kept up its organization, and met in the Modern Freemason's Lodge. In June, 1775, Lodge No. 3 met at Daniel Smith's City Tavern, in Second Street, at the corner of what was subsequently called Gold Street, and celebrated St. John's day with a dinner, at which there were thirteen members, who ate thirteen dishes, drank thirteen toasts, sang thirteen songs, swallowed thirteen bottles of wine and thirteen bowls of toddy, and paid a landlord's bill of thirteen pounds. They were loyal to the inchoate republic, for it is recorded that their toasts were all patriotically American. At least one meeting of the new Grand Lodge was convened at the same place in 1777. The city lodges were greatly interfered with while the British troops occupied the city. A lodge met at Second Street and Elfreth's Alley, but it is believed to have been made up of soldiers of the royal regiments. But when the English evacuated the city, in June, 1778, the Masons prepared to reconstruct their organizations, with the feeling that every tie had been ruptured which had bound them to obedience to the Grand Lodge of England. The Grand Lodge was reformed, and in conjunction with subordinate lodges it commemorated the anniversary of St. John the Evangelist, Dec. 28, 1778, the occasion being honored with the presence of Gen. Washington. A procession was formed at the college, Fourth below Arch Street, and in the following order marched to Christ Church :

1. The Sword Bearer.
2. Two Deacons, with blue wands tipped with gold.
3. The three orders, Doric, Ionic, and Corinthian, borne by three brethren.
4. The Holy Bible and Book of Constitutions, on two crimson velvet cushions, born by the Grand Treasurer and Grand Secretary.
5. A reverend brother.
6. Four Deacons, bearing wands.
7. His excellency, our illustrious Brother George Washington, Esq., supported by the Grand Master and his deputy.
8. The two Grand Wardens, bearing the proper pillars.
9. The Past Masters of the different lodges.
10. The present Masters of lodges.
11. The Senior Wardens of the different private lodges.
12. The Junior Wardens of the different private lodges.
13. The Secretaries of the different private lodges.
14. The Treasurers of the different private lodges.
15. Brother Proctor's band of music.
16. Visiting brethren.
17. The members of different lodges, walking two-and-two, according to seniority.

The "Modern" Grand Lodge had ceased to exist before or about 1778, some of the members connecting themselves with the more prosperous lodges of the "An-

cient's." The Grand Lodge of that year was a united body. How long it remained at the City Tavern is uncertain. In 1785, some of the brethren determined to open a Sublime Lodge of Perfection, according to the rites recommended by the King of Prussia, extending the Masonic degrees to the number of thirty-three, which lodge was constituted December 23d, in the "new Grand Lodge room in Black Horse Alley." The room could have been occupied only a short time, as during the next year the meetings were again being held in the old hall on Lodge Alley, which in 1792 was sold to the First Universalist Church. In 1789 or 1790 the Grand Lodge erected a temporary building on a lot on Walnut Street, that had been presented to it by Joseph Dean, Junior Grand Warden, for the nominal consideration of one penny ground-rent per annum, and which in 1807 the Grand Lodge sold for one thousand eight hundred dollars.

A memorable event in the history of the order was the meeting of the Grand Lodge and the subordinate lodges, Sept. 25, 1786, when connection with the Grand Lodge of England was severed. "It was improper," in the language of the resolution, "that the Grand Lodge of Pennsylvania should remain any longer under the authority of any foreign Grand Lodge." In consequence of this action the Grand Lodge adjourned *sine die*. A convention was called by the representatives of all the lodges, and the present Grand Lodge of Pennsylvania was formed by the following resolutions :

"Resolved, That the lodges under the jurisdiction of the Grand Lodge of Pennsylvania, lately holden as a Provincial Grand Lodge, under the authority of the Grand Lodge of England, shall and do form themselves into a Grand Lodge, to be called 'The Grand Lodge of Pennsylvania and Masonic Jurisdiction thereunto belonging,' to be holden in the said city of Philadelphia."

Between 1790 and 1802 the Grand Lodge had several official residences in succession, besides that on the lot presented by Mr. Dean. It leased for nine years, from Aug. 23, 1790, the second story of the Free Quaker meeting-house, southwest corner of Fifth and Arch Streets, at seventy-five pounds per annum. The expiration of the lease was looked forward to with so much anxiety that, in 1796, it was proposed to form the Mason Hall Association of Pennsylvania, but the subscriptions to the stock were so small that the undertaking was fruitless. In 1779 the Grand Lodge might have been homeless but for the kindness of Governor Thomas Mifflin, who granted permission that its meetings should be held in the room of the secretary of the Senate, in the second story of the western part of Independence Hall. There the communication was held at which the Grand Lodge prepared for the commemorative procession in honor of Washington, soon after his death, December, 1799, Congress, by resolution, having requested the Society of Freemasons to act as mourners. After an address by the Grand Master, the Masons marched to Zion Lutheran Church, at Fourth and Cherry Streets, where an address was delivered by Richard Henry Lee. Soon

afterward the French Lodge L'Amenite held a Lodge of Sorrow for Washington.<sup>1</sup>

On January 22d, the day of the general funeral solemnity throughout the nation in memory of Washington, the Masons again assembled at the State-House, and took up the route of march from Zion Church. In the line three lights extinguished were borne by three Past Masters. A trophy in honor of Washington, surmounted by a golden urn, bearing an eagle, and appropriately inscribed, followed. The following Blue Lodges were in the procession: L'Amenite, No. 73, Joseph E. G. M. De La Grange, Master; Philadelphia Lodge, No. 72, Christian Sheetz, Master; Orange Lodge, No. 71, William Nelson, Master; Concordia Lodge, No. 67, Henry Voight, Master *pro tem.*; Washington Lodge, No. 59, John McElwee, Master; Harmony Lodge, No. 52, George Springer, Master; Lodge No. 19, Capt. John Coyle, Master; Lodge No. 9, Capt. Andrew Nelson, Master; Lodge No. 3, Col. John Barker, Master *pro tem.*; Lodge No. 2, John Phillips, Master. Between three hundred and four hundred Masons were in this parade. At the church an oration was delivered by Rev. Samuel Magaw. Solemn odes in the German language, composed by Rev. Dr. Helmuth, were sung by a choir.

The accommodation extended by Governor Mifflin was of course understood to be merely temporary, and the Grand Lodge would probably have purchased an unfinished building on the south side of Arch Street, above Ninth, except for the objections of some of the members that it was "too far out of town." Consequently a purchase was made from William Hunter, for three thousand dollars, of a plain three-story brick building, on Filbert Street, above Eighth, which was dedicated as the Pennsylvania Freemasons' Hall, on Dec. 27, 1802. Pending the repairs to the edifice the lodges met at the house of Brother William Francis.

Twenty-four lodges were in the display with which this Filbert Street hall was opened.

The rent paid per annum by the lodges was forty dollars; by chapters and encampments, twenty dollars. The second and third stories were in use for Masonic purposes. The room on the ground-floor was rented to a brother of the order for the purposes

<sup>1</sup> L'Amenite Lodge, No. 73, was instituted by French refugees, who had fled to Philadelphia from the reign of terror in France and the negro insurrection in San Domingo. It was chartered by the Grand Lodge of Pennsylvania, May 20, 1797, the first officers being Tanguy de la Beiseliere, W. M.; Gabriel Decombaz, S. W.; and Armand Cagnet, J. W. Among its members were the Abbe La Grange, Belin, Gardette, and Chaudron, the orator. It was in this lodge, on Jan. 1, 1800, that Chaudron, in the presence of the Grand Lodge of Pennsylvania, delivered the first Masonic eulogy in the French language upon Washington. This address and that of La Grange, who was then Worshipful Master of the lodge, were printed in French and English editions. The commemoration had some political significance, as a crisis in the relations of France and the United States was at hand, and the French brethren in Philadelphia desired to testify their ardent hopes for peace between the two nations, and their appreciation of the amity that had prevailed under Washington's administrations. L'Amenite went out of existence about 1823.

of a school, and the education of the children of poor brethren without charge, it was agreed, should be the rent which he was to pay for the premises. The order flourished greatly while the brethren occupied this building. Charters were granted for lodges in various portions of Pennsylvania and in foreign countries, among the latter, Les Frères Unis, No. 77, Port D'Espagne, Trinidad; No. 78, old Mingo Town, Northwest Territory; No. 85, Alexandria, Va.; Nos. 87, 88, 89, San Domingo; Nos. 90, 98 (Loschavite), New Orleans; Nos. 97, 98, 99, San Domingo; No. 103 (Les Temple des Vertues Theogialis), Cuba; No. 105 (Amity), Zanesville, Ohio; No. 107 (Western Star), Kaskaskia, Ill.; No. 109 (Louisiana), Ste. Genevieve, Miss.

The only Philadelphia lodges chartered were Columbia, No. 91, No. 102, and Jerusalem, Frankford.

MASONIC HALL IN 1802.

The old building on Filbert Street was torn down a few years ago.

In a few years the Masonic order outgrew these quarters, and in 1807 a committee, consisting of George A. Baker, Peter Le Barbier Duplessis, Richard Tybout, and Thomas Passmore, bought from William Waln a lot of ground on the north side of Chestnut Street, between Seventh and Eighth, for a ground-rent of eight hundred and fifty dollars per annum, with privilege of extinguishment at any time by the payment of sixteen and two-thirds years purchase. A really handsome and ambitious building for that epoch was erected, eighty-two feet front and one hundred and sixty-nine feet deep. The brickwork and pillars were supported by buttresses of parti-colored marble, enriched with niches for statues, capped by triangular pillars, connected together by an embattled parapet capped with marble. A wooden steeple, one hundred and eighty feet high,

rose from the centre of the roof. The first floor embraced a large hall, and several smaller rooms intended for public purposes and the celebration of the grand feasts, while the second floor was devoted entirely to Masonic purposes. The corner-stone was laid April 17, 1809, by the grand officers. It was presented by John Griffith, and bore a Latin inscription, of which the following is a translation :

" On the 17th day of the month of April,  
in the thirty-third year of the  
Independence of the  
United States  
of America,  
of the Christian era  
one thousand eight hundred and nine,  
this foundation-stone of the Pennsylvania  
Free Masons' Hall  
was laid  
by JAMES MILNOR, ESQUIRE,  
Most Worshipful Grand Master of Masons in  
Pennsylvania,  
attended by  
Peter Le Barbier Duplessis, Esq., Right Wor-  
shipful Deputy Grand Master; Richard  
Tybont and Robert Poalk, Right  
Worshipful Grand Wardens,  
amidst the acclamations of a numerous  
assembly of brethren."

Very little work had been done before the Grand Lodge found itself on the verge of a financial slough. It was proposed to raise money by means of a lottery, but the difficulty was tided over by issuing four hundred shares of stock at one hundred dollars each, and asking non-Masons to contribute towards the erection of the steeple, as it was at the suggestion of citizens, who considered "that it would greatly add to the beauty of this flourishing and increasing metropolis," that the addition was made. The Filbert Street hall had been sold for four thousand five hundred dollars, and the assets of the Grand Lodge at this time were fourteen thousand seven hundred and two dollars and seventy-seven cents. On the day of St. John the Baptist, June 24, 1811, the building was dedicated. The committee of arrangements, with a view of adding to the funds, recommended that the price of tickets to the ball should be three dollars to each member, and five dollars to the banquet. The members were directed to meet at the old college in Fourth Street, whence they marched to St. John's Lutheran Church, on Race Street, between Fifth and Sixth, where the Grand Master, James Milnor, delivered an oration, after which the procession reformed and marched to the new hall. The following city lodges took part in the parade: Industry, No. 131; Phoenix, No. 130; Temple, No. 128; Philanthropy, No. 127; Rising Star, No. 126; Hermann, No. 125; Union, No. 121; St. John, No. 115; Solomon, No. 114; Columbian, No. 91; L'Amenite (French), No. 73; Philadelphia, No. 72; Orange, No. 71; Concordia, No. 67; Washington, No. 59; Harmony, No. 52; No. 51; Montgomery, No. 19; Nos. 9, 3, and 2. There were also country lodges, and the grand officers of New Jersey and Maryland. At the church was

sung a grand chorus, written by Brother John Nesbit, of Lodge No. 126, and composed by Brother R. Taylor; a Masonic hymn composed by Brother Taylor and written by Brother Joseph Clay, Past Master of No. 3; music, composed by Brother Carr and sung by Brother Nesbit; prayers and benediction by Dr. Rogers and the Junior Chaplain. At the church there attended as guests the judges of the courts, the attorney-general of the State, the mayor and recorder of the city, the clergy of various denominations, the directors of the Academy of Fine Arts, and a brilliant assemblage of ladies. At the hall the ceremonies of dedication were celebrated in the ancient and solemn form. The Grand Lodge, with the officers from New Jersey and Maryland and about two hundred of the brethren, dined in the banqueting-hall. The members of Lodge No. 2 marched to the house of Brother Patterson, near the Schuylkill, where an address was delivered by Brother David Neilson, and a prologue by Brother John Phillips, Grand Pursuivant.

Thirty-one lodges took part in the dedication ceremonies, and from the amounts charged for admission and for the banquet there was a profit of \$2300.25. The building cost \$67,850.67½; the furniture, with other expenses, \$4962.78. The ground-rent was eventually purchased for \$14,166.67. Total cost of ground and building, \$86,980.12½.

Up to the beginning of the year 1811 there were added in the Filbert Street hall to the city lodges the following: Solomon, No. 114; St. John's, No. 115; Union, No. 121; Hermann, No. 125; Rising Star, No. 126; Philanthropy, No. 127; Temple, No. 128; Phoenix, No. 130; and Industry, No. 131.

On May 30, 1810, the order lost its Venerable Patriarch, William Ball, Right Worthy Past Grand Master, who, in 1761, received the first warrant for a Grand Lodge of Ancient York Masons in Pennsylvania. He was in the eighty-first year of his age, and for fifty-nine years he had been a constant attendant on the services of the lodges.

Masonry in Philadelphia was most gratifyingly stimulated by the construction of the new hall, but there came a sudden and grievous check to this career of success on March 9, 1819, when the edifice, of which the brethren were so proud, was entirely swept away by fire. One feature of the calamity was that nearly all the old books, documents, and historical data of the grand and subordinate lodges were lost.

The indomitable energy of the Masons was exhibited in the meeting on March 11th, at which it was resolved to rebuild at once. As to the financial situation the trustees of the Masonic loan reported that the loan amounted to sixty-six thousand dollars, the sinking fund was fifteen thousand one hundred and eighty-eight dollars, the insurance on the burnt hall twenty thousand dollars, and the value of the lot was more than equal to the balance of the loan. The Grand Lodge and most of the subordinate lodges went back to the Filbert Street hall during the time

required for rebuilding on Chestnut Street. In view of the debt pressing on the Grand Lodge, the temple was finished in a manner plainer than its predecessor, and the steeple was omitted from the plan. An apparatus was introduced to illuminate it by means of carburetted hydrogen gas made from tar, and this was the first use of gas for lighting in this city. In order to help the fraternity the Legislature passed an act releasing the property from taxation for twenty years. The hall that had risen from the ashes of the finest structure that the Masons of Philadelphia had ever erected was dedicated Nov. 1, 1820, the lodges listening in the morning to an oration at Zion Church. Rebuilding expenses amounted to fifty-five thousand three hundred and thirty-three dollars and five cents, and on March 1, 1824, the debt of the Grand Lodge was one hundred thousand dollars.

The Masonic order took part in the ceremonies of the reception of Gen. Lafayette, Sept. 28, 1824, and the lodges joined in the general procession. Lafayette being himself a Mason, a formal reception and dinner were tendered him at the hall on September 30th, and the banquet-room was decorated with the portraits of the two brethren, Washington and Lafayette. Between 1811 and 1824, the following new lodges were instituted: Franklin, No. 134; Roxborough, No. 135 (meeting at Manayunk); Rising Sun, No. 139; Mount Moriah, No. 155; Meridian Sun, No. 158; La Reconnaissance (French), No. 160; Eastern Star, No. 186; and Integrity, No. 187.

The controversy which had arisen in consequence of the grievance of some of the country lodges, that the Grand Lodge was conducted too much in the interests of the Philadelphia brethren alone, was happily adjusted in 1822. The anti-Masonic excitement, which about 1827 began in a small way, disastrously influenced the fraternity in Philadelphia, so much so that in 1835 the Grand Lodge sold the Chestnut Street hall to the Franklin Institute for one hundred and ten thousand five hundred and fifty dollars, and bought Washington Hall for twenty-five thousand dollars. This hall was on the west side of Third Street above Spruce, and was the property of the Washington Benevolent Association, which presented to the Grand Lodge the Masonic apron once the property of George Washington. This relic is still in the possession of the Grand Lodge in a perfect state of preservation.

Washington Hall was dedicated Dec. 8, 1831, at which time twenty-eight lodges were represented. In 1852 it was decided to erect a new hall on the Chestnut Street site, which had reverted to the Masons through the failure of the Franklin Institute to keep up its payments. The corner-stone of this, the third Chestnut Street Masonic temple, was laid Nov. 21, 1853, by Grand Master Anthony Bournonville, Grand Warden Dr. John K. Mitchell delivering the oration. The building committee were James Page, Francis Blackburne, Philip R. Engard, James

Hutchinson, William M. Swain, William Carr, and George Smith.

On Sept. 26, 1855, this hall, which was of Gothic architecture and had a brown stone front, was dedicated, the day being the sixty-ninth anniversary of the independence of the Grand Lodge of Pennsylvania. Four thousand Masons marched in column from Washington Hall to Independence Square, where Rev. James King delivered an oration, and the line then moved to the new Temple, which was one of the most magnificent buildings of the kind in the country, costing in all one hundred and eighty-three thousand three hundred and twenty-eight dollars. Here Masonry prospered exceedingly, and in 1866 the site of the present Grand Temple, on Broad Street, appropriately styled "the wonder of the Masonic world," was bought. The committee that conducted the purchase were Past Grand Master Henry M. Phillips, Charles H. Kingston, John U. Giller, Henry J. White, James C. Adams, Daniel Brittain, and Jacob Laudenslager. Grand Master Richard Vaux laid the corner-stone June 24, 1868, in the presence of ten thousand Masons. The articles deposited in the corner-stone were a copy of the Holy Bible, copy of the Ahiman Rezon of the Grand Lodge of Pennsylvania, list of lodges in this jurisdiction, copy of the last annual publication, copy of the resolutions of the Grand Lodge in reference to the building of the Temple, copy of the *Masonic Register* for 1868, coins of the United States, a Washington penny of 1791, a Franklin penny of 1787, piece of wood cut from one of the cedars of Lebanon, a piece of marble that was part of the Golden Gate of the Temple of King Solomon, piece of stone from the foundation of the Temple at Jerusalem, a gold Masonic medal (keystone), silver medal of Past Grand Master Peter Williamson, copper medal struck in commemoration of the election of the Prince of Wales as Grand Master, Nov. 24, 1790, gold Masonic medal (circle), silver set of lodge jewels and the working tools of a Master Mason's Lodge, biography of Brother Stephen Girard, newspapers of the day, resolutions of the Grand Lodge in relation to the new Temple, the list of the building committee, and the list of lodges and grand officers.

The architect was James H. Windrim, and the building committee was the same as the purchase committee already named, with the addition of the election officers of the Grand Lodge. The trustees of the building fund, who had charge of the finances, were Past Masters James Page and John Thomson, Joseph N. Piersol, Peter A. Keyser, and Francis Blackburne. Under the wise and skillful management of these brethren, who earned for the Grand Lodge \$35,544.84 in the shape of interest, all the money required for the execution of the great work was secured just as it was needed. During the Masonic year 1868 the amount spent on the structure was \$209,344.77; in 1869, \$190,000; in 1870, \$189,367.19; in 1872, \$335,722.19, and the remainder of the total in 1873. The entire receipts

of the building fund were as follows: From surplus fund of Grand Lodge, \$144,686.24; from Masonic loans, \$1,385,425; from interest on loans, \$35,544.84; from old material, \$1,256.74; a total of \$1,566,912.82. The payments were for the lot, \$156,793.16; for the building, \$1,390,018.14; interest to Grand Treasurer, \$9061.45; brokerage, \$3750.00; expenses of trust, \$170.79; a total of \$1,559,793.54, which, as deducted from the receipts, left a surplus of \$7119.28. John Bolt was superintendent of the building till Nov. 8, 1871, when he was succeeded by Allen Bard, who carried it on to completion.

This Temple was dedicated Sept. 26, 1873, by Grand Master Samuel C. Perkins. Beside the Grand Lodge of Pennsylvania there were represented in the procession the Grand Lodges of Connecticut, Delaware, District of Columbia, Florida, Indiana, Iowa, Kansas, Illinois, Maryland, Massachusetts, Mississippi, New Hampshire, New Jersey, New York, North Carolina, Nova Scotia, Rhode Island, West Virginia, Wisconsin, Ireland, Alabama, Arkansas, and Canada. One hundred and fifty-eight subordinate lodges made up the twenty-eight divisions of which the procession was composed, George W. Wood being Grand Marshal. Over twenty thousand Masons were in line, and made a most noble and impressive display. Moving at 8.30 in the morning from Broad and Chestnut Streets up to Columbia Avenue, and countermarching to Arch Street, the procession was four hours and a quarter in reaching the Temple. The people who viewed the imposing spectacle could be numbered by hundreds of thousands, and Masonic decorations were everywhere visible. The formal dedication ceremonies were proceeded with at the Temple, and the oration was delivered by Past Grand Master Robert A. Lamberton. In the evening a banquet was given, and a "Table Lodge" was held. On September 29th the Grand Chapter Hall of the Royal Arch Masons was consecrated, addresses being made by Grand High Priest Charles E. Meyer and Acting Grand King Andrew Robeno, Jr. The next day the Knights Templar consecrated their Asylum in the Temple with the most brilliant pageant ever seen in Philadelphia. Twenty-six Grand Commanderies and subordinate Commanderies were in the public parade, of which Charles H. Kingston was Division Commander. The orator of the day was the Right Eminent Grand Commander Sir Grant Weidman.

Much has been written of the dimensions and beauty

of this Temple. The four fronts—on Broad, Cuthbert, Juniper, and Filbert Streets—are perfect specimens of Norman architecture, unlike anything else in the city. Granite of a grayish white color is the material of the exterior. The grand tower at the southeastern angle has an elevation of two hundred and fifty feet. Like Solomon's Temple of old, this one has three gates, of which the western, on Broad Street, is the grand entrance. The important divisions are the apartments of the grand officers, the Library, Ori-

MASONIC TEMPLE, 1884.

ental Hall, the Banquet Hall, Corinthian Hall, Renaissance Hall, the Ionic Hall, Egyptian Hall, the Norman Hall, and the Gothic Hall, the name of each of which suggests the style of its construction and decoration. They are all spacious and stately interiors, ornamented with chaste and truthful art. Since the ceremonies of dedication-week, the Masons of Philadelphia have but had to review a career of progress, upon which there has not been a serious

drawback. The fraternity is now one hundred and fifty-four years old in this jurisdiction, and in 1886 will celebrate the centennial anniversary of the independence of its Grand Lodge.<sup>1</sup>

**Colored Masons.**—The introduction of Masonry into Philadelphia among the colored people was accomplished by means of authority conferred by the African Grand Lodge of Boston, Mass., and on Sept. 20, 1798, a charter was issued to the Second African Lodge, No. 459. There were eleven petitioners for the charter, among whom were William Harding, James Fosten, and Peter Richmond, who asserted in their memorial that they were Ancient York Masons, and others averred that they were made Masons in the Golden Age Lodge, No. 222, of the city of London. It is not known where the meetings of the African Lodge, No. 459, were first held. The books and papers of the organization have been scattered, and very much rests upon tradition. In the *Aurora* of Dec. 21, 1808, appears a notice that on the succeeding St. John's day the African Lodge, No. 459, would proceed from the lodge-room, No. 155 Lombard Street, to St. Thomas' Church to hear a sermon, after which a collection would be taken up for the benefit of the church. No. 155 Lombard Street was between Fifth and Sixth, on the north side. After some years of prosperity the African Lodge found itself in a sufficiently satisfactory financial condition to undertake the building of a hall for itself. On Oct. 25, 1814, it laid the corner-stone of such a hall on Eleventh Street, next door to the southeast corner of Barley Street, which was dedicated in June, 1818.

In 1798 there was also constituted in Philadelphia African Lodge, No. 544, the originators of which were colored seamen, who obtained a charter from a Grand Lodge in Germany. No. 459 had no authority beyond the Master Masons' degree, while No. 544 could work Royal Arch and higher degrees, and could create new lodges. It gave a warrant to still another lodge of colored Masons. The conflicting

claims of these rival organizations were injurious to both, and good sense prevailing among the members, they finally concluded to come together and form one body. There were now three lodges, it was claimed, and sufficient to constitute a Grand Lodge,—namely, Second African, No. 459, African, No. 544, and the lodge created by the latter. This union was effected in 1815, and the lodges took the title of the First Independent African Grand Lodge of North America. The following officers were elected: Rev. Absalom Jones, R. W. G. M.; Peter Richmond, Dep. G. M.; Alexander Logan, Sen. G. W.; Matthew Black, Jun. G. W.; William Coleman, G. Sec.; Anthony Kane, G. Treas.

At a meeting of the Grand Lodge, on the 4th of March, 1816, the minutes show that there were four lodges represented. Among these were the Second African (Prince Hall Lodge), No. 1; the African (German), No. 2; Phoenix, No. 3; and Union, No. 4; which were constituted on the 31st of January, 1816. A warrant was granted Nov. 25, 1817, to constitute Harmony Lodge, No. 5.

In July, 1818, a trouble arose in the order which led to the adoption of extreme measures. Sixteen signers gave notice that, as members of the African Grand Lodge, they declared themselves "dissenting from and independent of that body." The Grand Lodge expelled them, charging them with "endeavoring to split and destroy this society and its harmony."

On the 4th of January, 1819, the warrant of Union Lodge, No. 4, which was in the hands of Benjamin F. Chase, was ordered to be restored to the Grand Lodge, while the lodge was ordered to be expelled for ninety years, nine months, nine weeks, and nine days. These expulsions led to the formation of an opposition to the Independent African Grand Lodge—which was composed of Union Lodge and other organizations made up at the beginning from the members expelled—in July, 1818, which was known as the Hiram Grand Lodge. They established themselves in Seventh Street, below Lombard, west side, and were in operation there for many years.

In 1825 some members of Harmony Lodge, No. 5, were also expelled by the Independent African Grand Lodge. They continued to hold meetings and engage in the work without giving any attention to the action which was taken against them, and claimed, in after-years, to have obtained a charter from the Grand Lodge of Ohio, meeting at Chillicothe.

The following were Grand Masters of the First Independent Grand Lodge of North America between the time of its institution, in 1815, and 1825: Rev. Absalom Jones, 1815–16; Peter Richmond, 1816–20; Freeman Latimore, 1820–21; Peter Richmond, 1821–25; Richard Parker, 1825–26.

Notwithstanding the dissensions that have been alluded to, the colored Masons of Philadelphia have increased in numbers and influence until they now

<sup>1</sup> Masonic Templarism was established in Pennsylvania by Encampment No. 1, of Philadelphia, in 1793, and between that date and 1797 Encampments No. 2, of Philadelphia, No. 3, of Harrisburg, and No. 4, of Carlisle, were formed. These commanderies came together in 1797, and on the 12th of May established a Grand Encampment for Pennsylvania, being the first encampment of Knights Templar in the United States. This branch of the Masonic order continued its meetings without attracting any public attention. The Grand Lodge recognized it in the new hall on Chestnut Street by appropriating the room of the Royal Arch Chapter for the meetings of the Templars. The work of the encampments was derived from the English, Scotch, and Irish rituals. In 1812 Commanderies Nos. 1 and 2, being weak in numbers, resolved to consolidate, and were recognized as No. 1.

On the 8th of June, 1819, the Most Eminent Sir William McCorkle, General Grand Master of the Pennsylvania Encampment of Knights Templar and the appendant orders, issued a charter by which he created Sir Knights Stephen P. Barbier Grand Master, John W. Kelly Generalissimo, and John D. Ferguson Captain General of an encampment of Knights Templar, to be held in the city of Philadelphia, and to be known as St. John's Encampment of Knights Templar, No. 4. After that period there were difficulties in the order as to jurisdiction, and Nos. 1, 2, and 3 went out of existence, and in 1824 St. John's, No. 4, was the only commandery in Pennsylvania.

form an important element of the community. Among them are many of the colored citizens of the first standing.

**Odd-Fellowship.**<sup>1</sup>—The Independent Order of Odd-Fellows is a beneficial, benevolent, and charitable organization, an offshoot of the Manchester Unity of Odd-Fellows, in England. The payment of weekly and funeral benefits to its members is one of its predominant and peculiar characteristics, and its past record shows that it has been second to none in its contributions for the relief of the afflicted and distressed, not only of its own membership, but to those entitled to public sympathy and assistance whenever unforeseen calamities demand it.

It was not unusual with the early Odd-Fellows to profess an origin of great antiquity; but nothing is known of it beyond the existence of a few scattered self-constituted convivial clubs in London and some of the adjoining districts in England, under the name of the Ancient Order of Odd-Fellows,—at the latter part of the eighteenth century a sort of a necessary appendage to the taverns of that day,—extending incidental relief to their fellows very much after the plan of the Saxon guilds, but without any recognized head or system, and apparently without a thought of perpetuating its existence by properly adjusted dues and benefits, that would secure to any or all of its members the needed relief as a right, until 1813, when, under the leadership of an intelligent marble mason, by the name of Bolton, in Manchester, some of these scattered and self-instituted lodges were formed into a united and fraternal brotherhood, under the name of the “Manchester Unity of Independent Odd-Fellows,” which has continued to grow and increase with the population and industries of that country, and is at this day among the largest and most useful of the friendly aid societies of England, with over half a million of members, enjoying the unbounded confidence of the government and people of that country. The institution, therefore, as we know it, is of modern time, grown in our midst and fashioned by our hands, and however attractive the origin of antiquity may be, we put forth no claim to such distinction.

The order was introduced into the United States, in 1819, by Thomas Wildey, of Baltimore, who had been a member of it in London before he emigrated to this country, and the first lodge in the State of Pennsylvania (Pennsylvania, No. 1) was organized in the city of Philadelphia, at the house or hotel of John Upton, then No. 66 Dock Street, west of Second Street, Dec. 26, 1821, with John Pearce as the Noble Grand or presiding officer, John Upton as treasurer, and two others, James Day and Samuel Croucher, all that could be found in Philadelphia at that time, and James B. Robinson, who came over from New York

City (afterward the first Grand Master of the State of New York) to make up the requisite number to institute the lodge.

They were all Englishmen, joining together to revive and introduce into this country the social and convivial assemblies of the respectable middle classes of the English people, as they had seen and known them in London and Manchester.

UPTON'S HOTEL, DOCK STREET, 1821.

There had been previous to this, and there were at this time, lodges in Baltimore, New York, and Boston, all of them self-instituted, as this one was, having no official head or connection with each other until Thomas Wildey, who had been instrumental in establishing the order in Baltimore, and subsequently obtained a charter from one of the Manchester Unity Lodges in England, took steps, in June, 1823, to unite these self-instituted lodges under one head, in which they mutually agreed to recognize the Maryland organization and the Grand Lodge of Maryland as the head of the order on this continent, which was thereafter to be composed of representatives chosen annually from these and subsequent Grand Lodges as the order should extend to other States, each of these States accepting from the Maryland organization a Grand Lodge charter, which gave them the exclusive authority to institute subordinate or working lodges within the limits of their respective States. The Grand Lodge of the United States, or Sovereign Grand Lodge, reserved to itself the exclusive right to introduce the order into the other States and Territories of the United States and foreign countries, and this general plan of organization has been maintained to the present time, until the order has been successfully established in every State and Territory of the Union, Canada, the British provinces, Australia, Germanic

<sup>1</sup> Contributed by John W. Stokes, Past Grand Sire, author of the history of the first decade of the order in Pennsylvania.

Europe, Mexico, South America, Netherlands, Switzerland, Denmark, the Sandwich and West India Islands.

Pennsylvania Lodge, No. 1,<sup>4</sup> considering its novelty in this country, was a success both in the numbers and character of the members that were attracted to it. Its financial system, if it had any, was at first a crude one. Relief by voluntary contributions, as the occasions required, for a while answered all practical purposes, but when the alluring features of the original founders became distasteful to our people a properly-digested system of dues and benefits became necessary, and was adopted, which has steadily improved ever since, and, though not so perfect as it might be, is enabling the lodges and encampments to live up to their promises to a degree that inspires the members with an abiding confidence in the performance of their engagements whenever sickness and misfortune befall them.

The increase in numbers of the Odd-Fellows soon overrun Upton's accommodations, and they were compelled to seek other quarters. In the latter part of 1823 they removed to No. 14 Broad Street, above Arch, where they remained until the early part of 1826, when they again removed, to the northwest corner of Seventh and Chestnut Streets. The English influence and customs here lost their force, and the convivial practices which had characterized the lodge-meetings were forever abandoned. Samuel Pryor, who was by birth and education a Quaker, became the Grand Master of the State. He was a man of culture, of easy and affable manner, and good address, popular and highly esteemed in the Grand Lodge, as well as in the community. He and his co-laborers devoted their best efforts to Americanize this ephemeral scheme of Anglo-Saxon social good-fellowship into an organized plan of perpetual blessing to millions of the human family. The change gave a new impetus to the order, and it continued to increase and extend under the new system of things to the upper and outer districts of Frankford and Germantown, and to the distant cities of Pottsville and Pittsburgh. Lodges No. 2, 3, 4, 5, 6, and 7, the latter to work in the German language, sprung up in rapid succession. There was a necessity for better accom-

modations, which was recognized by the Grand Lodge in leasing and fitting up several commodious rooms in the Adelphi Building, on Fifth Street, below Walnut, in 1830, where they remained until September, 1846, when they removed to the new hall on Sixth Street, below Race, which the lodges located within the old city limits had previously united in building, at a cost of about sixty-five thousand dollars. By the contributions of one cent per week per member of each lodge and encampment composing the association, with the rents received during the payments of these contributions, the lodges paid for the building and furniture in about twelve years. The order still continued to increase in numbers and popular favor, and to keep pace with the industries and population of the city and State, until out of the forty-three

places of meeting in the city of Philadelphia for the accommodation of one hundred and forty-one lodges, they now have fourteen large and substantial buildings that are owned by the order and clear of debt, yielding handsome returns upon the investments.

In looking over the early records of the order, we are forcibly struck with a long list of names of those who, doubtless, foresaw the future possibilities for good that could be accomplished by this novel organization, if the proper direction was given to it in the beginning, and to whom posterity are much indebted for the wonderful success and prosperity that followed. Few of them sur-

JOHN UPTON.

vive, but they have left names behind them that their descendants and contemporaries should be proud of. The writer of this sketch came into this order over fifty years ago (1833), and found them actively engaged in this benevolent and unselfish work, building up an organization designed solely to benefit and help their fellow-men in times of need. They were from all the varied pursuits of life, earnest workers in whatever their hands found to do. In justice to their memories, the names of a few of them are given that have passed from works to rewards, that it may be an incentive to those that survive to encourage every good effort to improve the condition and alleviate the misfortunes of their fellow-men, however humble may be its beginnings, to wit: John Pearce, Samuel Pryor, Samuel H. Perkins, Jesse R.

Burden, John H. Campbell, William C. Rudman, William Wilkinson, Dr. William J. A. Birkey, Ezra T. Garrett, Howell Hopkins, Dr. Anson Jones (afterward president of the republic of Texas), William Skinner, Charles Oakford, Marshall Sprogall, James Goodman, Richard G. Laning, Stephen Child, Samuel R. Brick, Joseph S. Brewster, Jacob Hubeli, Peter Fritz, John W. Forney, Horn R. Kneass, Dr. Henry S. Patterson, John G. Potts, John McMichael (father of the late Morton McMichael, whose statue adorns our beautiful park), and many others of like worth and reputation. They were representative men of the times, twelve of them afterwards Grand Masters of the State and three—Perkins, Hopkins, and Kneass—Grand Sires of the United States.

The wonderful results that have followed the humble efforts of these five adopted citizens to bring their fellow-men together, regardless of their country or creed, into closer fellowship and sympathy with each other in prosperity or affliction, upon a platform that the whole human family can harmoniously stand upon, recognizing God as the Father of all and themselves as a family of brethren, which the last report of the Grand Lodge of the State exhibits, attests the value of its continued existence. From a single lodge in this city, sixty years ago, with but five members, meeting in the upper room of a hotel, we have now one hundred and forty-one lodges, with over thirty thousand members, owning fourteen substantial halls for their accommodation, with over four hundred of their numbers specially and constantly charged with the duty of visiting the sick, burying the dead, and caring for the widows and orphans entitled to the aid and sympathy of the fraternity.

The following comprises a list of the principal officers since the establishment of the order in Philadelphia :

Year.	Grand Master.	Grand Secretary.	Grand Treasurer.
1823.	Aaron Nichols.	W. H. Mathews.	Joseph Richardson.
		Benjamin Daffin.

The following figures from the last official report of the Grand Lodge of Pennsylvania show the outgrowth of the establishment of the first lodge in Philadelphia, and also bear witness of the growth, vitality, and appreciation of its purposes by the people throughout the State :

Subordinate lodges.....	895
Members.....	80,389
Brothers relieved.....	11,355
Widowed families relieved.....	926
Paid for the relief of brothers.....	\$277,620.31
" " burying the dead.....	85,706.57
" " relief of widowed families.....	7,790.59
" " education of orphans.....	460.45
Total relief during the year.....	\$371,557.92

And as showing that the people of this city and State are not alone in the enjoyment of the advantages of this organization, these statistics from the last report of the Sovereign Grand Lodge are appended :

RETURNS FOR THE YEAR 1882.	
Sovereign Grand Lodge.....	1
Independent Grand Lodges (German Empire and Australasia).....	2
Grand Lodges.....	50
Grand Encampments.....	41
Subordinate lodges.....	7,514
Subordinate encampments.....	1,864
Rebekah Degree Lodges.....	995
Lodge initiations.....	47,549
Encampment initiations.....	10,044
Lodge members.....	493,997
Encampment members.....	85,110
Relief by lodges.....	\$1,704,290.98
Relief by encampments.....	166,806.91
Relief by Rebekah Lodges.....	11,345.99
Total relief.....	1,882,443.88
Revenue of lodges.....	4,756,702.10
Revenue of encampments.....	441,884.78
Revenue of Rebekah Lodges.....	43,369.12
Total revenue.....	5,245,945.00

## THE ORDER FROM 1830 TO DEC. 31, 1882.

Initiations in subordinate lodges.....	1,273,368
Members relieved .....	1,044,480
Widowed families relieved.....	138,685
Members deceased.....	101,461
Total relief.....	\$34,690,988.23
Total receipts.....	92,838,831.83

The American Legion of Honor is a secret benevolent order, which was established at Boston, in 1879. It embraces a membership ranging from eighteen to sixty-five years, and pays death benefits of \$500, \$1000, \$2000, \$3000, and \$4000. Assessments are graded according to the age of the candidate when becoming a member. It was introduced into this city in 1880 by the institution of Philadelphia Council, No. 48. There are now seventy councils in Philadelphia, named as follows:

Harmony, No. 23; Philadelphia, No. 48; Anthracite, No. 49; Eureka, No. 53; Pennsylvania, No. 57; Quaker City, No. 58; Germantown, No. 63; Keystone, No. 75; Washington, No. 76; Fidelity, No. 94; Apollo, No. 96; Kensington, No. 98; Provident, No. 105; Corinthian, No. 107; Excelsior, No. 119; Progressive, No. 125; Anchor, No. 129; Knickerbocker, No. 130; Franklin, No. 131; West Philadelphia, No. 132; Empire, No. 133; Advance, No. 155; Mercantile, No. 200; Lincoln, No. 310; Enterprise, No. 331; Theodore H. E. Gruel, No. 335; Sylvania, No. 339; Unity, No. 479; Phoenix, No. 487; Milton, No. 488; Spring Garden, No. 551; Columbia, No. 621; Invincible, No. 628; Minerva, No. 645; Aggressive, No. 681; Merchants', No. 707; Grand, No. 740; Security, No. 748; Equity, No. 759; Royal Oak, No. 806; Iowano, No. 815; Major, No. 823; Belmont, No. 831; Royal Arch, No. 845; Mentor, No. 907; Rittenhouse, No. 927; Diamond, No. 928; Live Oak, No. 964; William Penn, No. 981; Hand-in-Hand, No. 990; St. John's, No. 1030; Norris, No. 1040; Welcome, No. 1062; Oak, No. 1082; Eli S. Beery, No. 1096; Prosperity, No. 1122; Mutual, No. 1173; and Schuyler, No. 1174. Michael Nisbit, of Philadelphia, is Supreme Commander of the Supreme Council of the State of Pennsylvania.

**Order of Elks.**—The Benevolent and Protective Order of Elks was the outgrowth of a social club of actors known as the "Jolly Corks," and was originally established in New York in 1868 by members of the dramatic profession, who modeled it after the analogous Order of Buffaloes in England. At the start the object of the Elks was but little more than the cultivation of a sociable feeling among the members, and none but actors or persons in some way connected with the stage were admitted; but in about six months the benevolent feature was introduced, and the restriction on the membership was removed. The second lodge instituted was Philadelphia, No. 2, which is one of the largest and most prosperous of all. It was established in 1872, and occupies rooms at the northeast corner of Tenth and Chestnut Streets. By the constitution of the order only one lodge is permitted to exist in any city.

Philadelphia Lodge now has one hundred and sixty members, and its officers are as follows: Exalted Ruler, John Christie; Esteemed Leading Knight, C. E. Henney; Esteemed Lecturing Knight, Albert Armstrong; Secretary, Lou Frazer; Treasurer, David B. Hill.

The Artisans' Order of Mutual Protection is beneficiary in its purposes. Philadelphia Assembly, No. 1, was organized in 1873. Six other assemblies have since been instituted in this city, and are now in existence. They are: Keystone, No. 2; Pennsylvania, No. 3; Nonpareil, No. 5; Commonwealth, No. 9; Fidelity, No. 21; and John A. Duncan, No. 28.

The Iron Hall, a beneficiary secret order, originated at Indianapolis in March, 1881, and on the following September 1st, Dr. James R. Ward instituted Branch No. 26, with seventeen members, which was the first in Philadelphia. There are, in 1884, fifteen branches in this city, having an aggregate membership of six hundred and forty.

The Knights of the Golden Rule, also beneficiary, is an organization which was introduced into Philadelphia, Nov. 7, 1881, by the formation of Castle Penn, No. 192, which is still the only one in the city. It numbers thirty members. Throughout the country the order has two hundred and forty-seven castles and a membership of four thousand eight hundred.

The Ancient Order of Good-Fellows is nearly half a century old in this city, Philadelphia Lodge, No. 1, having been organized in 1840; including it, there are now ten lodges in Philadelphia. The other nine are: Pennsylvania, No. 4; American Star, No. 5; General Washington, No. 6; Keystone, No. 11; Humane, No. 14; Mount Vernon, No. 17; Washington, No. 20; Welcome, No. 40; and Penn Township, No. 45. There are also two encampments,—Philadelphia, No. 1, and Washington, No. 8. The total of the membership here is about one thousand.

The Knights of Honor, a secret beneficial organization, paying a death benefit of two thousand dollars, collected on the mutual assessment plan, was established at Louisville in June, 1873, and now has two thousand seven hundred lodges and a membership of one hundred and forty thousand. The first lodge in Pennsylvania was Philadelphia Lodge, No. 1638, which was instituted in 1876, and has since been merged into another. The Philadelphia lodges in 1884 are as follows:

Name and Number.	Members.
Columbia, No. 1639 .....	229
Triple Tau, No. 1792.....	98
Eagle, No. 1868.....	68

Dr. Jacob Roberts, of Philadelphia, is present Grand Director of the State of the Knights of Honor.

The Order of United Friends is regularly chartered under the insurance laws of the State of New York, where the first council was instituted in November, 1881. Philadelphia Council, No. 44, was the earliest in this city, having been organized Sept. 29, 1882. On April 25, 1883, the Grand Council of the State of Pennsylvania was formed by sixteen councils, most of which were situated in Philadelphia. The existing councils in this city are ten in number, viz.: Philadelphia, No. 44; Corona, No. 50; Pennsylvania, No. 52; George G. Meade, No. 54; Orient, No. 56; Hand-in-Hand, No. 71; Mercantile, No. 84; Southwark, No. 105; Keystone, No. 108; and Quaker City, No. 120. Their membership sums up five hundred and fifty-five. Dr. Jacob Roberts, of this city, is Imperial Councilor of the Grand Council of Pennsylvania.

The Royal Arcanum is a secret benevolent order which pays a death benefit of three thousand dollars, collected from members in proportion to age. It arose in Boston in June, 1877, and was introduced in this city in April, 1879, when Philadelphia Council, No. 293, was instituted. The councils and their membership in this city now are:

Name.	Members.

The Home Circle is a secret and beneficiary association that was originated in Boston in 1879. Adelpi Council, No. 38, was the first in Philadelphia, and was organized in December, 1881. The other councils in this city at present are: Woodland, No. 41; Fidelity, No. 42; Pennsylvania, No. 61; Mizpah, No. 62; Olivet, No. 69; and Southwestern. The membership is between three hundred and fifty and four hundred.

The Order of United American Mechanics was founded at meetings held July 8th and July 15, 1845, at Jefferson Temperance Hall, Philadelphia, when an organization, styled the American Mechanics' Union, was formed for the protection and encouragement of workmen, and the providing of relief funds. On July 22d this society took the name of Experiment Council, No. 1, of the Order of United American Mechanics of the United States. It chartered Enterprise Council, No. 2, Sept. 2, 1845, and Perseverance Council, No. 3, Oct. 21, 1845. In November of the same year these three instituted the State Council of Pennsylvania. In 1858 the order completed its fine hall, corner Fourth and George Streets, at a cost of forty-five thousand dollars. It has three hundred and fifty-four councils in the State,

including forty-three in the city. The following are the Philadelphia councils:

The Patriotic Sons of America is an order that, under the title of Junior Sons of America, originated in Philadelphia in 1847, the membership being exclusively of young men under twenty-one years of age. It was suspended during the civil war because of the general enlistment of its members, but was reorganized in 1866 under the new name as above. Its main purpose is the cultivation of patriotism. Members must be over seventeen years old, must favor free education, and oppose the union of church and state and foreign encroachment in America. It also provides death benefits running from five hundred dollars to fifteen hundred dollars. The State Camp of Pennsylvania, chartered in 1868, is located in Philadelphia, as is also the National Camp, which was organized in 1872. There are three degrees in the order,—the red, the white, and the blue. The subordinate organizations of the red are called camps; of the white, councils; and of the blue, commanderies. There are nearly two hundred of these divisions in Pennsylvania, with a membership of over fifteen thousand. They have a monthly publication of twenty-four pages, called the *Camp News*. In Philadelphia there are sixteen camps and one commandery. The superior officers in 1884 are as subjoined:

*Officers of the National Camp.*—National President, Richard Peterson, Broad and Noble Streets, Philadelphia, Pa.; National Vice-President, George P. Smith, 42 Corbitt Street, Denver, Col.; National M. of F. and C., Hewitt T. Ellis, Connersville, Fayette Co., Ind.; National Secretary Henry J. Stager, 524 North Sixth Street, Philadelphia, Pa.; National Treasurer, Arthur S. Welch, 41 Leonard Street, New Haven, Conn.; National Inspector, I. A. Heald, 111 First Street, San Francisco, Cal.

*State Camp of Pennsylvania.* (Headquarters in Sons of America Building, North Sixth Street, above Spring Garden, Philadelphia).—State President, J. H. Hoffer, Lebanon, Lebanon Co.; State Vice-President, J. B. Reed, Mount Carmel; State M. of F. and C., J. I. Hollenbeck, Audenreid, Carbon Co.; State Treasurer, I. S. Smith, 145 North Fourth Street, Reading; State Secretary, William Weand, 524 North Sixth Street, Philadelphia; State Commander, John Wallower, Jr., Harrieburg.

The **Great Senate of Sparta** was founded in Philadelphia in the month of December, 1879. The first Venerable High Priest was Rev. Charles Logan, and the first Great Regent was John B. Moffatt. The present officers are: Venerable High Priest, William B. Kinsey; Regent, J. Palmer Chesebrough; King, George R. Wilkinson; and Captain of the Guards, J. R. Welsh. There are eighteen subordinate senates in Philadelphia, which have nearly seventeen hundred members. Membership is limited to persons residing within one hundred miles of this city, and no senates can be established beyond those bounds.

The **Sons of Temperance** was instituted in New York, Sept. 29, 1842, to give discipline, permanency, and united effort to the temperance movement. Its classifications are the subordinate divisions, the Grand Divisions of States or Territories, and a National Division, the latter the supreme power of the order, which is a secret one. Philadelphia Division, No. 1, instituted April 7, 1843, was the first in this city or State. Within the next year it was followed by Washington Division, No. 2; Hope Division, No. 3, and Pennsylvania Division, No. 4; representatives from the four forming the Pennsylvania Grand Division, April 26, 1844. In 1847 there were in Pennsylvania 267 divisions and 23,440 members, including 70 divisions and 9180 members in Philadelphia, and in 1849 the number in the State had increased to 285 divisions with 27,241 members. The receipts in this State for that year were \$87,769, of which \$43,727 was spent in the relief of sick and disabled members. The National Division of North America was organized June 17, 1844, and in 1847, when it met in Philadelphia, it had under its jurisdiction 22 Grand Divisions, 1300 subordinate divisions, and about 100,000 members. From 1849 to 1859, inclusive, it initiated 756,487 members, and received in fees and dues \$5,084,477. The order of the Temple of Honor and Temperance, the order of Good Templars, the Rechabites, the Sons of Jonadab, and the Sons and Daughters of Samaria have grown out of the Sons of Temperance, which was the pioneer of all secret organizations in opposition to the liquor traffic and liquor-drinking. By a tax of two cents per quarter upon each member in the State, the Grand Division of Pennsylvania raised its display at the Centennial Exhibition,—the ice-water fountain that stood at the junction of Fountain and Belmont Avenues, and furnished, free of charge, refreshment to more than a million visitors. At the close of the Centennial, the Sons of Temperance removed the fountain to Independence Square, where they supply it with ice at their own cost from June to October every year. They contemplate erect-

ing another free ice-water fountain in the court-yard of the Public Buildings as soon as they are completed. In this year (1884) there are fifty-five divisions of the order in Philadelphia, with an aggregate of over five thousand members.

The office of the Grand Division is at No. 118 South Seventh Street. The officers for 1884 are Rev. John Peacock, G. W. P.; William Davis, G. W. A.; John C. Maguigan, G. Scribe; Alfred Miller, G. Treas.; Rev. Wesley C. Best, G. Chap.; William McCaughn, G. C.; George Giles, G. Sent.

The **Grand Army of the Republic**<sup>1</sup> is a secret semi-military order, the requirements for admission to which are that the candidate shall hold an honorable discharge from the army or navy of the United States. It was organized soon after the close of the civil war for the purpose of continuing the associations formed among the soldiers and sailors, to care for comrades in distress or their widows and orphans, and to serve the government in any emergency wherein it might be called upon. Its aims are expressed in its motto of

<sup>1</sup> Contributed by John M. Vanderlice.

"Fraternity, Charity, and Loyalty." The founder of the Grand Army was Col. B. F. Stephenson, who established the first post at Decatur, Ill., in the spring of 1866. Posts multiplied rapidly in the State, and a Department Encampment was organized July 12, 1866. The order spread quickly to other States, and on Nov. 20, 1866, delegates from Illinois, Missouri, Kansas, Wisconsin, New York, Pennsylvania, Ohio, Iowa, Kentucky, Indiana, and the District of Columbia met at Indianapolis and formed the National Encampment. Gen. Stephen A. Hurlbut, of Illinois, was chosen Commander-in-chief; Gen. James B. McKean, of New York, Senior Vice-Commander-in-chief; Gen. Nathan Kimball, of Indiana, Junior Vice-Commander-in-chief; and Col. B. F. Stephenson, Adjutant General.

The exact date of the formation of the first post in the Department of Pennsylvania is still a disputed question, the honor being claimed by Posts Nos. 1, 2, and 19, of Philadelphia, and No. 3, of Pittsburgh. In Philadelphia the organization grew out of the Boys in Blue, who, in 1866, appointed Col. S. B. Wylie Mitchell, Col. Robert B. Beath, and Capt. William J. Mackey, a committee to apply to the Department of Wisconsin of the Grand Army of the Republic for a charter for a post in this city. The charter was granted, bearing date of Oct. 29, 1866. Col. William McMichael and others, also of Philadelphia, had applied to the Commander-in-chief for a charter, which was granted, and bore date Oct. 17, 1866. On the question of seniority between these two posts being referred to the Commander-in-chief, he decided that Col. McMichael's post should be No. 1, and Col. Mitchell's post No. 2.

Being unaware of the existence of any other post in the State, and, desiring to extend the organization, at once comrades of Post 2, living in different parts of the city, withdrew for the purpose of forming other posts, and charters were granted by Post Commander Mitchell to the following:

November 7th, Post No. 2, Third Ward, Philadelphia, afterward renumbered 5, R. B. Beath, Post Commander; November 16th, Post No. 3, Twenty-second Ward, Philadelphia, afterward renumbered 6, Louis Wagner, Post Commander; November 19th, Post No. 4, Eighteenth Ward, Philadelphia, afterward renumbered 7, Jacob M. Davis, Post Commander; November 20th, Post No. 5, Fourteenth Ward, Philadelphia, afterward renumbered 8, Nicholas Baggs, Post Commander. These posts are all in vigorous existence at this date. Post No. 6, of Camden, was also formed by Post No. 2.

The charter of Post No. 9, at Gettysburg, was granted by the Department of Illinois, and is dated Nov. 24, 1866, being the last post organized by authority from other States.

Gen. Louis Wagner, of Philadelphia, was appointed Commander of the Provincial Department of Pennsylvania by Special Orders No. 1, Headquarters

Grand Army of the Republic, Springfield, Ill., Nov. 22, 1866, and he assumed command Nov. 27, 1866, at once issuing circulars and forms for the formation of posts throughout the State.

By General Orders No. 3, Dec. 20, 1866, he called a convention for the purpose of effecting a permanent department organization, which met in Philadelphia, Jan. 16, 1867; and, in his report, Commander Wagner called attention to the fact that all of the posts known to exist had reported to him as required in general orders, except two in Pittsburgh.

These two posts were represented in convention under the titles of Posts No. 1 and 2 of the District of Alleghany, and claimed to have been organized prior to any others in the State.

It was claimed that Post No. 1, District of Alleghany, was organized in September, 1866, by L. Edwin Dudley, Aid-de-Camp to the Commander-in-chief, but the records on file place the date of organization November 3d, and that of Post No. 2, District of Alleghany, Nov. 5, 1866.

These posts were numbered 3 and 4 respectively.

Post No. 19, of Philadelphia, also claimed to be No. 1. Gen. A. L. Pearson, Aid-de-Camp to the Commander-in-chief, in a letter to the post, gives the date of their organization as Oct. 11, 1866, when Col. Worrall and associates were initiated in Pittsburgh, but the minutes of the post show that the first meeting was held in Philadelphia, Nov. 30, 1866. They were represented in the first convention as from the Twentieth Ward, Philadelphia, and are classed on the list of posts as No. 17, being afterward changed to No. 19 by the introduction of Posts Nos. 3 and 4, not given on that list.

The Grand Army was organized at a time when party spirit ran high, and when many ex-soldiers and sailors were being put forward for official positions on account of their peculiar claims upon the country. Many of the men who took a prominent part in the political movements of soldiers and sailors in 1865 and 1866 were also prominent in the formation of the order.

The transition from the "Boys in Blue" to the "Grand Army" seems so easy and natural that the uninitiated public at once inferred that the motives and objects were the same, and consequently the members were subject to the attacks of one political party because of supposed affiliation with the other, and from the latter met with as determined opposition on the part of those who feared that the Grand Army, appealing to popular sympathy for those who had served their country in the field, might seriously interfere with their disposition of the offices of trust and profit, and the opposition thus made could not but be injurious to the organization.

In 1869 and 1870 there was a virtual reorganization of the order, under which all political or partisan action in any form is prohibited to the posts. The fruits of this wise policy are now shown in the min-

gling together of men of all shades of political opinion, working together in the cause of fraternity, charity, and loyalty.

The growth of the order in Pennsylvania has taken place during the past seven years mainly. The Commanders of the first few years labored zealously, with but little immediate apparent result. Since 1876 the progress has been steady, reaching, in 1878, at the close of the administration of C. T. Hull, the number of 8339 comrades and 126 posts. During the year 1879, in which George L. Brown was Commander, there were gained 5004 comrades, or sixty per cent., thus carrying the membership far beyond the 10,000 line, as will be seen by the statistics which follow. Commander Chill W. Hazzard gained, in 1880, 4218, a percentage of nearly thirty-two. Comrade John Taylor, Commander in 1881, pushed the column across the 20,000 line, making a gain of 3022 comrades, a gain of seventeen per cent. on the large basis upon which he started out. During 1876-81, Comrade John M. Vanderslice was Assistant Adjutant-General, and contributed much to the work of organization which characterized these years. In the course of the year 1882, Comrade John M. Vanderslice, as Commander, contributed an addition of 4953 comrades, a percentage of twenty-four. Comrade Thomas J. Stewart was first appointed Assistant Adjutant-General by Commander Vanderslice in 1882. During the year 1883, Commander E. S. Osborne pushed the membership to the 30,000 line, with a gain of 5419, or twenty-one per cent.

The following table indicates the number of posts and the membership at the end of the years named:

Date.	No. of Posts.	No. of Comrades.
1875 .....	79	4,515
1877 .....	88	4,658
1877 .....	106	5,607
1878 .....	126	8,339
1879 .....	150	13,343
1880 .....	200	17,561
1881 .....	233	20,583
1882 .....	305	25,536
1883 .....	408	30,955

The following is a roster of the posts located in Philadelphia:

George G. Meade, No. 1, mustered Oct. 17, 1865.  
 No. 2, mustered Oct. 29, 1866.  
 No. 5, mustered Nov. 7, 1865.  
 Ellis, No. 6, mustered Nov. 16, 1866.  
 Capt. W. S. Newhall,<sup>1</sup> No. 7, mustered Nov. 19, 1866.  
 Col. E. D. Baker, No. 8, mustered Nov. 20, 1868.  
 Lieut. Greble,<sup>2</sup> No. 10, mustered Dec. 1, 1866.  
 Hetty A. Jones,<sup>3</sup> No. 12, mustered Dec. 13, 1868.  
 U. Dahlgren, No. 14, mustered Oct. 2, 1875.  
 No. 15,<sup>4</sup> mustered Jan. 20, 1877.  
 Col. W. L. Curry,<sup>5</sup> No. 18, mustered Dec. 19, 1866.  
 Fred Taylor, No. 19, mustered Dec. 22, 1868.  
 C. Sunderland,<sup>6</sup> No. 21, mustered Jan. 12, 1887.  
 Admiral Dupont, No. 24, mustered April 27, 1878.

<sup>1</sup> Reorganized Sept. 23, 1871.

<sup>2</sup> Reorganized May 12, 1873.

<sup>3</sup> Reorganized March 9, 1874.

<sup>4</sup> Reorganized Nov. 2, 1878.

<sup>5</sup> Reorganized July 6, 1875.

<sup>6</sup> Dishanded March 20, 1869; reorganized August 5, 1875.

John W. Jackson,<sup>7</sup> No. 27, mustered Jan. 31, 1867.  
 "The Cavalry," No. 35, mustered Oct. 15, 1879.  
 Col. Gus. W. Town,<sup>8</sup> No. 46, mustered June 17, 1874.  
 Phil. R. Schuyler,<sup>9</sup> No. 51, mustered April 1, 1867.  
 Gen. Phil. Kearney,<sup>10</sup> No. 55, mustered April 15, 1867.  
 John W. Moore,<sup>11</sup> No. 55, mustered Aug. 24, 1875.  
 Gen. D. B. Birney,<sup>12</sup> No. 63, mustered Aug. 21, 1874.  
 Gen. John F. Reynolds, No. 71, mustered July 16, 1867.  
 No. 77, mustered March 29, 1875.  
 Robert Bryau,<sup>13</sup> No. 80, mustered Sept. 23, 1877.  
 Anna M. Ross,<sup>14</sup> No. 94, mustered Nov. 17, 1874.  
 Charles Sumner, No. 103, mustered May 27, 1878.  
 Winfield Scott, No. 114, mustered Dec. 30, 1878.  
 No. 115, mustered Jan. 22, 1879.  
 Hector Tyndal, No. 160, mustered April 5, 1880.  
 Pennsylvania Reserve, No. 191, mustered June 18, 1880.  
 J. A. Koltes, No. 228, mustered Nov. 21, 1873.  
 Gen. R. Patterson, No. 275, mustered July 29, 1882.  
 Lieut. E. W. Gray, No. 312, mustered March 15, 1883.  
 No. 334, mustered May 9, 1883.  
 "The Naval," No. 400, mustered Dec. 12, 1883.

**Independent Order of Good Templars.**<sup>15</sup>—In 1851 the order of Good Templars sprang up in Central New York as an antagonist of the liquor traffic. Though in some respects private, it is not a secret society. It admits both sexes upon terms of equality, and recognizes the ballot as a mighty engine of power in securing the triumph of temperance reform. Its members take a life-long pledge not to make, buy, sell, use, furnish, or cause to be furnished to others as a beverage, any spirituous or malt liquors, wine or cider; and in all honorable ways to discountenance their use in the community. It is essentially a missionary organization, employing competent lecturers, publishing and circulating temperance literature, and forming temperance libraries. The Grand Lodge of Pennsylvania was instituted Dec. 28, 1853, at Mansfield, Tioga Co., by Rev. D. W. Bristol. Its present officers are:

G. W. C. T., Rev. George C. Hart, Waymart, Wayne Co.; G. W. C., W. R. Fraser, Houtzdale, Clearfield Co.; G. W. V. T., Mrs. Anna J. Weichmann, 1610 Cherry Street, Philadelphia; G. Secretary, Miss Abbie A. Hinkle, 1824 North Eleventh Street, Philadelphia; G. Treasurer, John P. Connard, 1409 North Eighth Street, Philadelphia; G. Chaplain, Rev. J. S. McMurray, Tyrone, Blair Co.; P. G. W. C. T., A. Bestwick, New Brighton, Beaver Co., Pa.; Assistant G. S., W. H. Schwartz, *Morning Tribune*, Altoona; G. M., Ambrose Close, Westfield, Tioga Co.; G. D. M., Miss Hannah M. Mingle, Lock Haven, Clinton Co.; G. G., Mrs. M. Smailes, Beltzhoover, Alleghany Co.; G. Sent., Rev. H. A. Grant, Elizabeth, Alleghany Co.

The first lodge established in Philadelphia was Mount Vernon Lodge, No. 37, organized at Frankford, Oct. 22, 1861, by J. Newton Pierce, with eighty-five charter members, and William W. Axe, Wortby Chief.

Relief Lodge, No. 28, was organized at Darby (near

Philadelphia) in March, 1860. It removed to Philadelphia April 13, 1865, and met at the northwest corner Tenth and Spring Garden Streets. The charter was surrendered several years ago.

Philadelphia Lodge, No. 76, was instituted January, 1865, and is still meeting, but its membership is now small.

Lincoln Lodge, No. 95, was organized April 14, 1865, the date of the assassination of President Lincoln, for whom the lodge was named. It met at the southeast corner Eleventh and Catharine Streets for many years, and reached a membership of nearly two hundred. The charter was surrendered in October, 1881.

At one time in Philadelphia there were fifty-eight lodges holding regular meetings, but through untoward circumstances many of these were obliged to disband. Those now in existence are as follows:

**Knights of Pythias.**—The secret and beneficial order of the Knights of Pythias was established at Washington, D. C., Feb. 19, 1864. It has "endowment sections," paying death benefits of one thousand, two thousand, and three thousand dollars, and "uniform divisions" in which members enjoy the advantages of strict military drill. On Feb. 19, 1867, a meeting was held at the residence of George Henslee, corner of Brown and Fifteenth Streets, to organize the first lodge in Philadelphia, when the objects and system of the order were explained by Past Grand Chancellor Barton, of the District of Columbia; and on February 23d, Excelsior Lodge, No. 1, was instituted in the hall of the Mechanics' Fire Engine Company. At the session of the Grand Lodge, July 9, 1867, the petition of Excelsior Lodge that all its first officers be made Past Chancellors was granted. Six days later Keystone Lodge, No. 2, of Philadelphia, sent up an application for a charter, under date of June 29, 1867, with twenty-six members.

Applications for charters poured fast into the Grand Lodge of the District of Columbia, and within the next two months of 1867 it issued and instituted the following in this city: Chosen Friends Lodge, No. 3, July 20th; Quaker City Lodge, No. 4, July 31st; Star of Bethlehem Lodge, No. 6, August 12th; Adelpia Lodge, No. 7, August 17th; Damon Lodge, No. 8, August 24th; Apollo Lodge, No. 9, September 6th; Sparta Lodge, No. 10, September 7th; Liberty Lodge, No. 11, September 9th. At this time there were

eleven lodges in the State, Friendship Lodge, No. 5, of Reading, having been chartered August 3d. These lodges united in requesting the Grand Lodge of the District of Columbia for a charter for a Grand Lodge for the State of Pennsylvania, which was accorded, to take effect Jan. 1, 1868. In December, 1867, there were thirty-one lodges in the State, and it was determined to organize the Grand Lodge at once. On December the officers of the Provisional Supreme Lodge of the United States and of the Grand Lodge of the District of Columbia arrived in Philadelphia, and at American Mechanics' Hall, corner of Fourth and George Streets, installed the following as the first grand officers of the Grand Lodge of Pennsylvania: Wilbur H. Myers, V. G. P.; Frederick Coppes, G. C.; George W. Crouch, V. G. C.; William Blancois, G. R. S.; William T. Slocum, G. F. S.; William T. Rose, G. B.; C. T. Prentiss, G. G.; Joseph L. Nichols, G. I. S.; Edwin T. Martin, G. O. S.

The office of the Grand Lodge of Pennsylvania has been continuously located in Philadelphia.

In 1871 a building at No. 1027 Race Street was purchased from the Diligent Hose Company, and fitted up for its occupation. Its officers in 1884 are H. O. Kline, P. G. C., Altoona; Austin Long, G. C., Philadelphia; John H. Carr, G. V. C., Altoona; Edward V. O'Neill, G. Prel., Frankford, Philadelphia; George Hawkes, G. K. R. and S., Philadelphia; Julius Mountney, G. M. of E., Philadelphia; Henry W. Mohr, G. M. at A., Allentown; John H. Colton, G. I. G., Philadelphia; Edward B. Emrey, G. O. G., Spring Garden, Chester Co.; Thomas G. Sample, Rep. to Supreme Lodge, Allegheny City; Smith D. Cozens, Rep. to Supreme Lodge, Philadelphia; George Hawkes, Rep. to Supreme Lodge, Philadelphia; Charles K. Neisser, William A. M. Love, John W. Beebe, trustees, Philadelphia.

There are four hundred and thirty lodges and forty thousand members in the State. In Philadelphia there are ninety-five lodges, with twelve thousand members. The city lodges are as follows:

Name and Number.	Members.

**Knights of the Golden Eagle.**<sup>1</sup>—The order of the Knights of the Golden Eagle is a secret benevolent institution, founded in the city of Baltimore, Md., Feb. 6, 1873, by John E. Burbage, in conjunction with a number of prominent business men. It has for its motto "Fidelity, Valor, and Honor." For the proper administration of its affairs the order is divided into Supreme, Grand, and Subordinate Castles.

The Supreme Castle is the source of all true and legitimate authority over the order, and possesses as such exclusive power, and is composed of all Past Grand Chiefs in good standing.

Grand Castles exist by virtue of a charter or dispensation issued by authority of the Supreme Castle, or Supreme Chief during its recess, have exclusive jurisdiction over all Subordinate Castles within their territorial limits, and are composed of all Past Chiefs

in good standing in their Subordinate Castles. Subordinate Castles exist by virtue of charters granted by the appropriate Grand Castles.

In September, 1875, M. S. Ilgenfritz, a member of the order in Baltimore, made a visit to Philadelphia, and explained the objects of the order to a number of gentlemen, most of whom were active Odd-Fellows, and so well pleased were they that arrangements were made for a meeting for the purpose of introducing the order into Philadelphia, and a few evenings later the meeting was held at the office of C. K. & W. D. Hammitt, No. 119 South Fourth Street, when it was resolved to form Keystone Castle, No. 1.

On Friday evening, Oct. 1, 1875, the officers of the Grand Castle of Maryland visited Philadelphia and instituted Keystone Castle, No. 1, at Broadway Hall, corner of Broad and Spring Garden Streets, with the following charter members:

Edward S. Rowand, C. K. Hammitt, J. H. Christ, M. E. Gibson, W. A. Witherup, S. R. Richards, L. F. Bailey, T. J. Butler, S. W. Rowand, W. S. Cunningham, A. C. Lukens, Jacob Heritage, John Little, George L. Keller, Edward Christ, William Christ, A. H. Fenn, George W. Graham, W. D. Hammitt, William Hilt, G. F. A. Hofius, George C. Hoster, S. W. Meixell, W. W. Moore, D. S. Paul, D. R. Paul, T. H. Potts, L. Robinson, George Richardson, H. P. Schetky, V. W. Walter, L. B. Milson, T. A. Delaney, George B. Robinson, J. W. Tindall, C. C. Banke, W. J. Dornan, George H. Fenimore, J. Warner Goheen, F. H. Iddings, F. S. Irwin, J. S. Muschamp, Wilfred Patterson, W. L. Suddards, John R. Cantlin, Timothy McCarthy, and William Culbertson.

The following officers were installed:

P. C., C. K. Hammitt; N. C., Edward S. Rowand; V. C., George H. Fenimore; H. P., J. H. Christ; V. H., M. E. Gibson; M. of R., W. A. Witherup; C. of E., Charles Zane; K. of E., S. R. Richards; Sir H., L. F. Beiley; W. C., A. O. Cox; Ensign, Thomas J. Butler; Esq., William Mustard, Jr.; 1st G., S. W. Rowand; 2d G., W. S. Cunningham; W. B., C. C. Maurer.

The institution of Keystone Castle met with such unqualified success that it was deemed advisable to form other castles, and for that purpose Sir Knights W. S. Suddards, J. Warner Goheen, F. H. Iddings, F. S. Irwin, J. S. Muschamp, and Wilfred Patterson withdrew from Keystone Castle and organized Ivanhoe Castle, No. 1, and Sir Knights John R. Cantlin, Timothy McCarthy, William Culbertson, and William J. Dornan withdrew and organized Apollo Castle, No. 3. On Dec. 17, 1875, the officers of the Grand Castle of Maryland again visited Philadelphia, and in the room of Keystone Castle instituted the two new castles, making three castles formed in about three months.

The necessary number of castles for the formation of a Grand Castle being now in successful existence, a meeting of the Past Chiefs of the three castles was held at the rooms of Suddards and Fenimore, No. 820 Arch Street, on Wednesday evening, Jan. 12, 1876, followed by several other meetings. The organization being completed, the Grand Castle of Pennsylvania was duly instituted in the room of Keystone Castle on the evening of April 27, 1876, by authority of the Grand Castle of Maryland, the then supreme authority in the order, and the following installed as officers:

<sup>1</sup> Contributed by Edward S. Rowand.

G. C., Edward S. Rowand, of No. 1; G. V. C., John R. Cantlin, of No. 3; G. Sir H., W. H. Landell, of No. 2; G. H. P., J. H. Christ, of No. 1; G. V. H., A. Moore, of No. 2; G. M. of B., W. A. Witherup, of No. 1; G. K. of E., W. J. Dornan, of No. 3; G. W. C., J. R. Cantlin, of No. 3; P. G. C., W. L. Suddards, of No. 2.

At the semi-annual session, Oct. 4, 1877, a plan was adopted for the formation of the Supreme Castle, and on Jan. 22, 1878, the Past Grand Chiefs of Maryland and Pennsylvania met in Golden Eagle Hall, No. 51 West Fayette Street, Baltimore, and organized the Supreme Castle. During the past two years the order has grown very rapidly, and now exists in Maryland, Pennsylvania, Massachusetts, Delaware, and New Jersey, with prospects of its early introduction into several other States.

The officers of the Supreme Castle, the headquarters of which is at present in Philadelphia, are as follows:

S. C., Edward S. Rowand, Philadelphia, Pa.; S. V. C., John W. Simpson, Baltimore, Md.; S. H. P., M. S. Eigenfritz, Baltimore, Md.; S. M. of B., Timothy McCarthy, Philadelphia, Pa.; S. K. of E., William Culbertson, Philadelphia, Pa.; S. Sir H., J. M. Correll, Baltimore, Md.; S. 1st G., George O. Wiley, Boston, Mass.; S. 2d G., B. B. Hough, Wilmington, Del.

The Grand Chiefs of Pennsylvania have been—

Edward S. Rowand, John R. Cantlin, Timothy McCarthy, William Culbertson, Thomas W. Brooks, Joseph B. Howell, John Dickinson, William Hilt, Harry C. Stout.

The Philadelphia castles are Keystone, Ivanhoe, Apollo, Ingomar, Crusaders, Pilgrim, Fidelity, Philadelphia, Columbia, Kenilworth, Waverly, Pennsylvania, Aurora, Welcome, Warwick, Oliver, St. John, Harris, and Southwark. The order has a membership in Pennsylvania of about two thousand five hundred.

**Ancient Order of United Workmen.**<sup>1</sup>—This fraternal and benevolent order was founded in Meadville, Pa., on Oct. 25, 1865, by J. J. Upchurch, with seven members. Since then it has extended over nearly every State in the Union and into Canada. The object of the order, besides those of a social and fraternal character, is to provide for the families of deceased members by contributions from the members of an amount equal to two thousand dollars for each deceased member. It was the first order having this purpose in view. Since the order was started there has been distributed by this means over one million five hundred thousand dollars in Pennsylvania, and over eight million dollars throughout the United States. The order consists of a Supreme Lodge, having general supervision and control over the whole, and of Grand Lodges in each State where there are over two thousand members. These Grand Lodges are composed of representatives from subordinate lodges located in various parts of the State.

In the State of Pennsylvania there are two hundred and one lodges and a membership of fourteen thousand. Throughout the United States the order has a membership of over one hundred and thirty thou-

sand. The assessments upon the members in Pennsylvania have averaged seventeen dollars per annum.

The main office of business of the Grand Lodge of Pennsylvania, that of the General Recorder, is at Pittsburgh. The subordinate lodges meet weekly or semi-monthly. The Grand Lodge meets on the second Tuesday of January in each year. The Grand Lodge of Pennsylvania was incorporated by an act of Assembly approved March 9, 1871.

The order was started in the city of Philadelphia on April 27, 1874, by J. C. Davitt, the first lodge, Philadelphia Lodge, No. 73, being instituted with seventeen members. In this city in February, 1884, there were twenty-four lodges, with a membership of three thousand eight hundred and forty-three, as follows:

**The Improved Order of Red Men.**<sup>2</sup>—The society known as the Improved Order of Red Men claims to be the oldest secret beneficial organization whose entire ritual and speculative work is founded upon purely American customs and traditions, existing in this country, and as far as is known, with one exception, the oldest of this character. There may be others claiming to have been founded earlier, but the writer is not aware of the fact.

The celebration of the day of St. Tammany, the tutelar saint of Pennsylvania, was begun in Philadelphia probably as early as the time of the agitation in consequence of the passage of the British Stamp Act. The fact is shown by the address hereafter quoted made in 1773. The first public notice of such a celebration appeared in the newspapers of May, 1772, in which it was stated that "the sons of King Tammany met at the house of James Byrne, in Philadelphia, on the 1st of May, 1772, to celebrate the memory of that truly noble chieftain, whose friendship was most affectionately manifested to the worthy founder and first settlers of this province." There was a dinner and toasts, and the account of the meeting said, "It is hoped that from this small beginning a society may be formed of great utility to the distressed, as this

<sup>1</sup> Contributed by William H. James.

<sup>2</sup> Contributed by W. G. Hollis, Past Sachem.

meeting was more for the purpose of promoting charity and benevolence than mirth and festivity." On the 1st of May, 1773, the Tammany Society had a grand celebration at Byrne's house, in accordance with a circular from which the following is an extract: "As all nations have for seven centuries past adopted some great personage remarkable for his virtues and love for civil and religious liberty as their tutelar saint, and annually assembled on a fixed day to commemorate him, the natives of this flourishing province, determined to follow so laudable an example, *for some years past* have adopted a great warrior, sachem, and chief named Tammany, a fast friend to our forefathers, to be the tutelar saint of this province, and have hitherto on the 1st of May done the accustomed honors to the memory of so great and celebrated a personage."

The names of one hundred and twenty-one gentlemen who intended to participate were also given, and they comprised the most eminent and influential persons in the city, among them Chief Justice Chew, Rev. Jacob Duché, Rev. Thomas Coombe, Rev. William White, John Dickinson, James Allen, and Andrew Allen, Governor William Franklin (of New Jersey), Tench Francis, Joseph Galloway, Governor James Hamilton, and his brothers Andrew and William, Dr. Adam Kuhn, John Lawrence and Thomas Lawrence, William and James Logan, Samuel Mifflin and Thomas Mifflin (afterward major-general and Governor of the State), John Cadwalader (afterward brigadier-general in the Revolutionary army), with his brother Lambert (afterward colonel), Lieutenant-Governor Richard Penn, Richard Peters, Jr. (afterward United States District judge), John Ross, Joseph Reed (afterward president of the State), David Rittenhouse (the astronomer), Dr. Benjamin Rush, Edward Shippen, James Tilghman, Thomas Willing, Thomas Wharton, Jr. (afterward president of the State), and others.

The Sons of St. Tammany met annually on the 1st of May during the succeeding years of the Revolution, except when public disturbances would not allow, and celebrated St. Tammany's day after the institution of the Federal government. On the 1st of May, 1794, the celebration began to take a political form. In that year the Democratic and German Republic societies and citizens met in commemoration at Israel Israel's country-place, on the Schuylkill, below Gray's Ferry, "in honor of the late successes of their French brethren." About this time the name seems to have been changed to the Tammany Society or Columbian Order, and the object became distinctly political and Democratic. For some years after 1800 the members met at the wigwam in Sixth Street, near Spring Garden Street, where there were long talks on public affairs by such Indians as William Duane, John Binns, Dr. Michael Leib, and others conspicuous in the Democratic party of the day.

The Order of Red Men had its origin among the garrison of Fort Mifflin, in the Delaware, a few miles

below the city of Philadelphia, in the year 1813.<sup>1</sup> The city was at that time threatened with an attack by a British squadron, under Commodore Beresford. He entered the lower bay with the frigate "Belvidere," the "Poictiers," of seventy-four guns, and the schooners "La Paz" and "Ulysses," and laid the country on both sides under contribution for supplies, and threatened bombardment and confiscation if his demands were not complied with.

The only defense of the approaches of the city by water was the old national fort just mentioned, and at this time very feebly garrisoned by about eleven or thirteen United States regulars, and these invalids under the command of Capt. James N. Barker, the rest of the garrison having been sent to reinforce the army at other points, thus leaving the city in a defenseless state.

When the news of the arrival of the British ships in the bay reached the city there was great consternation. A meeting was hastily called at the Coffee-House to devise means of protection on the 19th of March. James Madison Porter, son of Gen. Porter, of Revolutionary fame, at once grasped the situation, and felt it was time to act promptly and decisively. He was a member of the Young Men's Democratic Association of Philadelphia, and its secretary. He at once proceeded to Binn's printing-office, where, finding that a portion of the regular edition of the paper had already been struck off, he had the work stopped, and a notice inserted calling a meeting of the association that very evening. This accomplished, he informed several of the members whom he met during the afternoon of what he had done.

The meeting was held as advertised, at Stratton's Hotel, on Chestnut Street, on the 20th of March, 1813, and was well attended. About seventy young men of respectable families enrolled themselves as volunteers to garrison Fort Mifflin. The next morning they formed themselves into a company under the name of "Junior Artillerists." The president of the association, Jacob H. Fisler, was chosen captain; William Roderfield, first lieutenant; James Madison Porter,<sup>2</sup> second lieutenant; Jacob Cash,<sup>2</sup> Jr., first sergeant; John Wilson,<sup>2</sup> second sergeant; Doyle E. Sweeny,<sup>2</sup> third sergeant; Jonathan Stoddart, Jr., was made first corporal; Peter Perpignan,<sup>2</sup> second corporal; Joel B. Sutherland, acting surgeon; and Jonathan B. Smith, acting quartermaster.

The company was mustered into service by the

<sup>1</sup> Judge George W. Lindsey, of Baltimore, claims that lodges of the society of Red Men existed in Annapolis, Md., as early as 1771. The Tammany Society of Annapolis, which is supposed to be the first society of Red Men, celebrates May 1st as the anniversary of the order. This society had its origin in, or was an offshoot of, an organization known as the Sons of Liberty, which took an active part in the resistance to the Stamp Act. For many years it was the custom of the Annapolis Red Men to clothe themselves as Indians on May 1st, and imitate the war-dance and other customs of the savages.

<sup>2</sup> These were among the number who founded the first society of Red Men.

commandant of the district, Gen. Bloomfield, at his office on Sixth Street, on the 23d, having first received their equipments from the brigade inspector, Maj. Sharp, when they at once proceeded to Fort Mifflin.

While on duty there the society of Red Men was organized. Its object was mutual aid and support in time of necessity, for social enjoyment, and members were pledged to stand by each other at all hazards in defending their country.

The garrison was shortly afterward strengthened by United States regulars, and there being no further need of the volunteers, they were discharged. The volunteers left the fort on the 7th of April following, and the nearest we can fix the date of the organization of the society, as many of the early records are lost, is between the 23d of March and the 7th of April, 1813.

In the latter part of 1816 notice was published in some of the papers of the city calling a meeting of all then living in the city who had been identified with the society of Red Men at Fort Mifflin, to meet in council, to revive old associations, and, if possible, start the society anew. The call was responded to by a number of the former members, and at this meeting the society was reorganized under the name of the "Red Men of Pennsylvania."

It is to be regretted that a more definite point of time cannot be given as to this interesting event, but the early minutes were for the most part kept on loose sheets of paper or in small account-books, which have been lost.

The society name was the Tribe of Columbia, Society of Red Men. Under this title it existed with varying success until about 1832 or 1833. There were at least three, if not four, other tribes formed between the years 1818 and 1831,—the Northern and Southern Tribes, one in Germantown, and one in the Northern Liberties.

In its early days the society was semi-military and civil in its organization, although strictly non-partisan. Nothing of a sectarian or party political nature was allowed to be introduced during the burning of its council-fires. The old preamble to their constitution declared that they held as a sacred truth that all men were born equally free, and endowed by their great and beneficent Creator with the right of enjoying and defending their rights and liberties, and pursuing their own happiness so far as they conform to the known and salutary principles laid down in the constitution and laws of our beloved country, and that they had formed themselves into an association for mutual benefit, to assist each other when in need, and minister to each other's necessities in sickness, and in case of death to care for the widow and orphan.

It was a cardinal principle of these early Red Men that no one having or holding a slave or being connected with the traffic in human beings could be a member of the society. They were thus the pioneer Abolitionists of our city, and it is a remarkable fact that,

notwithstanding this feature of their principles, they had established a flourishing tribe of the society in the city of Charleston, S. C., as early as 1819 or 1820, which continued to exist until its membership was scattered by a fearful epidemic which broke out in that city about the year 1824. Under the old organization the presiding officer was called Generalissimo; his powers were quite extensive. The first to hold this office was Francis Shallus, who was known among the initiated by the Indian title of Yeough-eowana-wago (Yeo-wauna-wa-go), or Split Log. In addition to the Chief, there were two Captain-Generals, four Lieutenant-Generals, twenty Major-Generals, thirty Brigadiers, and a large number of subordinate officers. These, whenever traveling or going from the city permanently, were commissioned to institute new tribes wherever they might locate, and were all considered aids to the Generalissimo. The society worked upon this plan until 1834, when the Society of Red Men—Tribe of Maryland, No. 1—was organized at the house of D. McDonald, on Bond Street, Fell's Point, Baltimore, mainly through the instrumentality of William Muirhead, a former member of the Philadelphia Tribe, acting under a commission from the third Generalissimo, "Old Warrior" (Richard Loudenslager). The society name of Mr. Muirhead was "Withea of Missouri, or Hospitality."

This new tribe continued until 1835, when a change was made by a number of members withdrawing and forming Logan Tribe, No. 1, and on the 20th of May, 1835, the Grand Council of Maryland was formed by Past Chiefs and representatives of this tribe. Several modifications in the work of the order were made, and when the Grand Council was incorporated, by a surreptitious act of the brother having charge of the matter, the name was changed to Improved Order of Red Men, instead of Order of Improved Red Men, as had been adopted. In 1847 the Great Council of the United States was organized by representatives of the Grand Council of Maryland and District of Columbia and the various tribes then in existence.

In the year 1848, the order, under its new phase, was re-established in Philadelphia, although the old one still held its existence in Lancaster and Reading, and continued to do so until about 1860. In December of 1848, Metamora Tribe, No. 2, was instituted at Lancaster, Pa. Tecumseh Tribe, No. 1, had already been instituted at Norristown, June 14, 1847. Lenni Lenape Tribe, No. 3, was instituted in February, 1848; Kuquenuku, No. 4, in April, 1848; Pocahontas, No. 5, October, 1849; Mohegan, No. 6, Waynesborough, Franklin Co., February, 1849. On the 23d of May, 1849, the Great Council of Pennsylvania was instituted in the wigwam of Lenni Lenape Tribe, No. 3, by the Great Sachem Incohonee, John Smith, of Virginia. Since then the order has had a steady and healthful growth, and to-day it numbers in this State nearly one-half of the entire member-

ship. There are now one hundred and forty-five tribes in the State, with a total membership of about eighteen thousand. In the city of Philadelphia there are sixty-one tribes, numbering about nine thousand five hundred members. The tribes in the city are as follows :

Name and Number.	Members.
Lenni Lenape, No. 3.....	684
Kuquenuku, No. 4.....	38
Pocahontas, No. 5.....	322
Wyoming, No. 7.....	128
Shawnese, No. 8.....	62
Sakima, No. 9.....	100
Delaware, No. 10.....	134
Mohawk, No. 14.....	30
Shackanaxon, No. 16.....	80

Mondamin, No. 238.....	85
Ponemah, No. 239.....	244
Panca, No. 244.....	191

For many years the order has been without a permanent home. In this respect the Independent Order outstripped the Improved Order. During the past year this want has been met in the purchasing and fitting up of a fine and commodious wigwam, known as the Wigwam of the Great Council of Pennsylvania, Improved Order of Red Men. It is located at No. 928 Race Street, in this city. The lower rooms are used as offices of the Great Council. The second floor is devoted to social gatherings of members, and the third and fourth floors are handsomely fitted up as tribal wigwams or meeting-rooms. This building was appropriately dedicated to the uses of Redmanship on the 1st of January, 1884.

About the year 1850, Metamora Tribe, of Maryland, withdrew from the order, and set up under the

title of Independent Order of Red Men. In Pennsylvania, a few years afterward, a number of tribes became insubordinate, and united with Metamora Tribe, of Maryland, and thus aided in building up the order as established by that tribe. This latter organization is composed exclusively of Germans.<sup>1</sup>

## CHAPTER L.

### BANKS AND BANKERS, AND CURRENCY.

WHEN the Swedes and Dutch first occupied the banks of the Delaware the currency in use among the Indians was mainly wampum, or peag, or wampum-peag, as it was variously called. It consisted of dark purple and white beads, made out of shells or stone, and pierced for stringing. The purple beads had twice the value of the white, and when arranged in strings or belts were used as articles of jewelry. As currency, wampum was used in strings, and valued according to measure; a fathom or belt consisted of three hundred and sixty beads. At an early period the settlers, in trading with the Indians, and in many operations among themselves, when it was certain that it could be disposed of to the Indians for furs and peltries, sometimes used wampum; but as it was liable to deterioration by wear and use, and became over-abundant, besides not being of a character to satisfy foreign debts, it soon ceased to be current, and was abolished as a nuisance.

When the early settlers received gold and silver they hoarded it up to pay for foreign commodities, and to supply its place for making "change," began to use a "barter currency." Beaver, otter, bear, fox, raccoon, and other fur skins and country produce constituted the first currency of the early settlers. In many instances taxes were collected and fees were paid in barter. The Duke of York's laws exacted a quit-rent of one bushel of wheat per one hundred acres of land patented. Wheat, we find by the Upland records, was taken for taxes (and of course for rent likewise) at the rate of "five guilders per scipple,"—five guilders per *scheepel*, or bushel, thirty pence sterling, or sixty cents, or thirty pence Pennsylvania currency, equal to forty-four and one-fifth cents,—a rent, therefore, of three-fifths or two-fifths of a cent per acre.<sup>2</sup> "Country money," by which a large

<sup>1</sup> Within the limits of this history the facts have been given regarding the organization and progress of the oldest and most important of the secret societies of this city. It has been found impossible, however, to fill out the details concerning all the associations of that character which have existed or do exist in Philadelphia.

<sup>2</sup> In March, 1680, Thomæ Kerby and Bobberd Drawton, servants, sued Gilbert Wheeler for wages, and Upland court allowed Kerby and Drawton each fifty stivers (two and a half guilders) per day, the latter to be paid "in corne or other good pay in y<sup>e</sup> River." "Corne in y<sup>e</sup> river"

number of the early settlers bought and sold, was produce in barter, such as furs, tobacco, grain, stock, etc., at rates established by the courts in collecting fees, etc.; "ready money" was Spanish, or Holland, or Sweden, or New England coin, which was at twenty-five per cent. discount in Old England.

From a very early day the money accounts of the business of the people were conducted in pounds, shillings, and pence. The colonies could not legally coin money, and whenever they were in financial straits were compelled to issue paper money of various kinds. At a very early period there seems to have been invented an ideal Pennsylvania currency, which was different from the British standard of coinage. In 1682, before Penn came, a Boston shilling was ordered to pass for a shilling, and a piece of eight, a Spanish or a Mexican dollar—the modern dollar—at six shillings, for debts and purchases. In 1682 the Assembly enacted a law ordering that every old English shilling should pass for fifteen pence, and every piece of English money in a like proportion. This act established a difference between Pennsylvania and English money, so that a pound sterling of British money was worth more than a pound sterling of Pennsylvania money. A British guinea was made to pass at twenty-seven shillings, and other coins at a like advance. In 1693, King William and Queen Mary abrogated the law fixing the value of the English shilling at fifteen pence Pennsylvania money. In the same year the Assembly passed another law to adopt the Mexican, Peruvian, Spanish, and French rate of money in the province. In 1698 another act was passed upon the same subject of foreign money. There was an act passed in 1700 to settle a rate of money or coin, which was repealed in 1703. Another act was passed in 1709 (which was repealed) to ascertain the rates of money.

The growing importance of the city and the want of financial assistance impressed a number of substantial citizens of Philadelphia in 1688–89, and they proposed the formation of a bank. The scheme is thus mentioned in the minutes of Council, February 7th :

"The petition of Robert Turner, John Tissick, Thom. Budd, Robt. Ewer, Samll. Carpenter, and John Fuller was read, setting forth their designe in setting up a Bank for money, &c., requesting Incuragement from the Governor and Council for their proceeding therein. The said Robert Turner and Samll. Carpenter, two of the said Petitioners, being present and constituting the present Council, and beside when there were but four more present the Governor acquainted them that something of that nature had been proposed and Dedicated to ye Proprietor by himself some months since out of New England, which he believed he should receive his answer by ye first shipping hither out of England; yett withal acquainted them that he did know no reason why they might not give their personal bills to such as would take them as money to pass, as merchants usually did bills of Exchange, but that it might be suspected that such as usually Clipp'd or Coyn'd Money would be apt to Counterfeit their bills, vnlesse more than Ordinary Care were taken to prevent it, which might be their Ruine as well as ye People's that should Deale with them."

(that is, delivered where it could be shipped) was valued at three guilders per scipple or bushel. At the same court Claes Jansen was ordered to pay a debt, twenty guilders in wheat and twenty-six in pumpkins.

No further action was taken, and it is not known whether the proposed bank was established.<sup>1</sup>

The people of Philadelphia, in 1722, experienced great embarrassments from the loss of trade and the want of a circulating medium.<sup>2</sup> On the 2d of January, 1722–23, they presented a petition to the Assembly, in which they set forth, "That they are sensibly aggrieved in their estates and dealings, to the great loss and growing ruin of themselves, and the evident decay of this province in general, for want of a medium to buy and sell with, and praying for a paper currency."

Notwithstanding the objections raised by Isaac Norris and James Logan, a bill for issuing fifteen thousand pounds became a law on March 2, 1722–23. Charles Read, Francis Rawle, Benjamin Vining, and Anthony Morris were appointed signers of the notes, and Samuel Carpenter, Jeremiah Langhorne, William Fishbourne, and Nathaniel Newlin trustees. On the 5th of February the Assembly also passed "an act to make country produce a lawful tender."

The good effects of the first emission of paper currency in Pennsylvania induced the Assembly, in 1723, to issue thirty thousand pounds more, and the following merchants and business people of Philadelphia agreed to take the paper money of New Castle and the lower counties at par :

Andrew Hamilton.	John Renshaw.
Clem. Plumetted.	Matthias Aepden.
Sam. Hazell.	Jacob Shute.
Pat. Graeme.	William Tidmarsh.
Arent Haseert.	Christian Van Horn.

In 1729 the Assembly issued £30,000 more currency, and in 1739 enough to make £80,000, to remain in circulation for sixteen years. This last act perfected the loan-office system, with a branch in each county, which was to loan money on real security or plate of double the value at five per cent. interest.<sup>1</sup>

The amount of "bills of credit," as the paper currency was styled, issued by the Assembly, aggregated in 1760 the sum of £385,000; and between that year and 1769 the amount was increased by the issue of £175,000, while during the same period £200,000 of paper currency was destroyed. The interference of Parliament was invoked to prevent these bills of credit from being made a legal tender, in the hope that this would prove a means to check the ruinous flux of paper money. The merchants of Philadelphia were upon several occasions prominent in their efforts to take charge of the matter of the currency. In 1742 they established the value of the dollar at 7s. 6d., at which it finally rested.

An advertisement in the *Pennsylvania Gazette*, Sept. 16, 1742, fixes the exact time when the change of the dollar took place. Clement Plumsted, and seventy-four other merchants, by that advertisement gave public notice and severally obliged themselves to receive in all payments, English guineas at 34s., French guineas at 33s. 6d., the large Portugal pieces at £5 15s. (and so in proper proportion for all lesser Portugal gold coins), Dutch or Guinea ducats at 14s. The German pieces called Carolines at 34s., Arabian chequins at 13s. 6d., all milled French pistoles at 26s. 6d., all Spanish pistoles weighing under 4 dwts. 6 grs. at 27s. On all sorts of gold coins of whatsoever denomination, not mentioned above, after the rate of £6 5s. per ounce. This agreement was to be in force for three years from its date, and to be published in the newspapers, and bore date Sept. 1, 1742.

As early as 1763 the increased business of the port of Philadelphia encouraged some of its principal

merchants, among them Robert Morris, to entertain the design of establishing a bank. To this end negotiations were accordingly entered into in Europe, and, though opposed by many influential men, the bank would have been established but for the breaking out of the war of the Revolution.

In December, 1766, an association of merchants was formed to issue paper money. They issued £20,000 of five-pound notes, payable to bearer, with five per cent. interest, payable in nine months. This aroused the jealousy of other persons doing business in the city, who claimed that the example might be followed by others, to the prejudice of trade. An agreement that they would not take the notes was signed by about two hundred persons. They also petitioned the Assembly, which coincided with their views, and in February, 1767, resolved "that the issuing of the said notes by a company of merchants has a manifest tendency to injure the trade and commerce of the province and to depreciate the value of the currency thereof."

In 1769 the colony authorized two issues of £30,000. In 1771 the alarm felt for the safety of the colonies from the hostile attitude of the French induced the Assembly to issue £15,000 for the defense of Philadelphia, which amount, never having been called into use for the defense of the city, was applied towards paving and grading the streets of the city.

The temptation to overcome present wants and to ease the friction of reluctant trade continued to hover over and around the Legislature, and the issue of paper money was again resorted to in 1772, and twice in 1773, and in 1775 for the purpose of erecting a jail in Philadelphia.

These early notes maintained their credit, and, had not the Revolution intervened, would have been redeemed at par, as ample funds were always provided by taxation or excise duty in the act that authorized the issue for their gradual but certain extinction, and in the annual reports by the treasury of the colony mention is always made of the hills of credit brought in and destroyed.

The "resolve money" of the colony, so called from being issued by resolution of the Assembly without reference to the Governor, and against the provisions of the charter, were acts of rebellion, notwithstanding they bore the name and effigy of "his Majesty, King George the Third."

At the opening of the Revolution Israel Whelen became an enthusiastic supporter of the patriot cause, and was appointed a commissioner by the Continental Congress, in which capacity he signed the first issue of Continental currency. Though a member of the Society of Friends, he was a prominent actor in the military operations of the Revolution. His grandfather, James S. Whelen, a native of Hampshire, England, was married in New York, May 29, 1694, to Sarah Elizabeth Dennis, granddaughter of Maria Jacques, one of the French Huguenots who fled to

BORN DEC 13 1752 -- DIED OCT. 21 1806

*From the original picture by Kneller, about 1790*

South Carolina after the revocation of the Edict of Nantes.

Dennis Whelen, son of James and Sarah Whelen, settled in early life at Uwchlan, Chester Co., Pa. His wife was Sarah Thompson, of Virginia. Their son, Israel Whelen, was born on the 13th of December (O.S.), 1752. On the 13th of May, 1772, he married Mary Downing. His entry into active service in the army under Washington was a step by which he incurred the censure of his brethren, the Friends. In a letter to his wife, bearing date Philadelphia, Aug. 10, 1776, he anticipates the blame of his friends, but adds, "Had I been fully convinced that it was wrong to resist lawless tyranny, bearing down all before it, I hope I should have had resolution enough to have stuck to my principles; but as that was not the case, I can see no reason why I should be expected to follow any opinion that I was not convinced in my own mind was right. I never was able to draw a line of distinction between the law punishing offenders it could take hold of, and the sword [punishing] those that were too strong for the law. If I had, I should not have taken the part I now have; and when I can draw that line I will take a different one." He ended by saying that "the real cause was in expectation to be serviceable to my friends and my country. If I can serve the latter faithfully, it may yet be in my power to render some small service to the former."

From this time Israel Whelen's personal services and his fortune were given to the patriotic cause. He rose by degrees to the rank of commissary-general of the army, and was a financial agent of the government, in which capacity he made large remittances to Antwerp and Amsterdam. Although he was a Revolutionary soldier, his connection with the Society of Friends was only interrupted, not severed, and his family were trained in their tenets and faith. With the return of peace he was again a Friend, in full sympathy with the Society.

He conducted an extensive shipping business on Market Street, at the corner of Fourth Street. In 1793 his place of business was at No. 196 (old number) High [now Market] Street, above Eighth, and at another time his location was at the northeast corner of Sixth and High Streets. With his brother, Col. Dennis Whelen, he served as a member of Senate of Pennsylvania from Philadelphia. In April, 1796, he was one of the committee on which were Robert Waln and Francis Gurney, appointed to secure the ratification by Congress of the Jay treaty with England. He was at the head of the Pennsylvania Electoral College that assisted to make John Adams President, and for some time he held a position in the Navy Department of the United States. He was the Philadelphia agent of the Phoenix Insurance Company of London, and was one of the directors of the Bank of the United States when that institution was established at Carpenters' Hall, in 1791. At a later period he was president of the Board of Brokers, and was

one of the corporators of the Lancaster Turnpike Company, of which he was also president. On that turnpike, below Downingtown, he erected a fine mansion house, the cost of which, together with heavy losses resulting from French spoliations, involved him in financial embarrassment. Seven cotton-laden ships, which he had consigned to French ports, were seized by the government of Napoleon I., under one of the imperial decrees. In the acquirement of the Territory of Louisiana from France, damages for these and other seizures were allowed by the French government to the United States, but the individual sufferers were never reimbursed.

Mr. Whelen was nominated for collector of the port of Philadelphia at the same time with Langdon Cheves, and appointed purveyor of public supplies by John Adams May 13, 1800. He died Oct. 21, 1806, in his fifty-fourth year, and his remains were interred in the Friends' burial-ground, at the corner of Fourth and Arch Streets. A paper of that date says,—

"Few men have experienced greater vicissitudes of fortune, or supported them with equal moderation; as a senator, conciliating, active, and intelligent; even his political opponents were unable to withhold from him the tribute of their esteem and affection. In private life his exalted integrity secured to him, under the most trying exigencies, the unlimited confidence of his numerous friends. In his domestic relations, every endearing quality united to render his loss irreparable. Such a man will be long remembered and deeply lamented. Whilst we regret his loss, let us endeavor to imitate his virtues."

His wife survived him twenty-five years, and died May 14, 1831. She was buried in the ground of the Friends' meeting-house at Downingtown. Among the descendants of Israel Whelen was Townsend Whelen, son of Israel, and grandson of Israel Whelen, Sr., who was born in Philadelphia, April 3, 1822, and had only reached the age of five years when his father died. He acquired his early education in the schools of the city. His first employment was that of an office-boy with Samuel Nevins, with whom he remained a short time, after which he became a book-keeper in the commission house of Wright, Fisher & Co., and later was employed in the same capacity with Charnley & Whelen, stock and exchange brokers. He subsequently entered the service of James Nevins, as clerk and book-keeper, and ultimately became a partner in the business.

About the year 1855, Mr. Whelen retired from this connection and entered into partnership with his brother, Edward S. Whelen, in the brokerage business, under the firm-name of E. S. Whelen & Co. In 1865 he became senior member of the firm, which was then changed to Townsend Whelen & Co., the other partners being his brother, Henry Whelen, and his nephew, Edward S. Whelen, Jr. At different times he was a member of the finance committee of the Philadelphia board of brokers, and an executor of the estate of James Nevins, his deceased partner. He traveled quite extensively, visiting the principal cities of the United States, several of the West India Islands, and made a protracted tour of Europe.

Mr. Whelen was always deeply interested in everything that had for its object the advancement of education or elevation of the morals and condition of society. He served twenty-five years as a vestryman and warden of the Protestant Episcopal Church of the Atonement, was a trustee of the Yeates Institute Fund, and the time of his death (Oct. 26, 1875) was a member of the Standing Committee of the Diocese of Pennsylvania. He was thoroughly devoted to his church, and he carried out his Christian principles in all the relations of life. To his integrity he added great dignity of character, and his influence in ennobling the sentiments and actions of men was felt in all the circles in which he moved.

The issue of Continental currency began May 10, 1775, and continued until the aggregate amount reached \$385,000,000. This currency was still further augmented by the continued issue of paper money by Pennsylvania, and as both were dependent upon the success of the Revolution, both lost the confidence of the people, and depreciated in value until, in 1781-82, all value departed from the notes, and as the United States never redeemed the Continental currency, they were a total loss to the holders. The depreciation of the currency, deranging values of every kind, produced confusion as well as distress, and induced Congress to adopt the expedient of regulating prices by law. Amid these distressing circumstances, with a government without a policy, the State without means, the army without clothing, the first banking institution of the country sprang into existence, the happy thought and bold expedient of Philadelphia merchants. Prominent among the promoters of this first bank were Robert Morris, Blair McClenachan, Thomas Willing, John Nixon, James Wilson, George Clymer, William Bingham. On the 8th of June, 1780, a largely-attended meeting of citizens at the Coffee-House resolved that a subscription should be instantly set on foot "to be given in bounties to promote the recruiting service of the United States." The subscriptions soon began to indicate the spirit that moved the citizens of Philadelphia: within nine days there was raised no less a sum than £400 in *hard* money and £101,360 in Continental money. The fall of Charleston caused a total change of plan, and a meeting of the subscribers was held<sup>1</sup> on June 17th, at which it was "proposed to open a security subscription to the amount of £300,000 Pennsylvania currency in real money," the subscribers to execute bonds to the amount of their various subscriptions, and the whole amount to form the capital of a bank, by the aid of which it was proposed to supply and transport food to the army.

The plan found a ready acceptance among the business men of Philadelphia.

"Whereas, in the present situation of public affairs," recited the subscription-list, "the greatest and most vigorous exertions are necessary for the successful management of the just and necessary war in which we are engaged with Great Britain, we, the subscribers, deeply impressed

with the sentiments that on such an occasion should govern us in the prosecution of a war on the event of which our own freedom and that of our posterity, and the freedom and independence of the United States are all involved, hereby severally pledge our property and credit for the several sums specified and mentioned after our names, in order to support the credit of a bank to be established for furnishing a supply of provisions for the armies of the United States."

The subscription-list<sup>2</sup> was completed in a few days with an aggregate amount of £315,000, and an organization was effected under the name of the Pennsylvania Bank. Ten per cent. of the subscriptions were agreed to be paid at once, and the residue from time to time as it should be needed. The directors were authorized to borrow money on the credit of the bank for six months or less time, and to issue notes bearing interest at the rate of six per cent. All money borrowed or received from Congress was to be applied to the sole purpose of purchasing provisions and rum for the use of the Continental army, to transportation, and to discharging the notes and expenses of the bank. Congress was expected from time to time to reimburse the bank for the amounts expended, and when the whole amount laid out should have been thus returned, the notes were to be paid off and canceled, the accounts settled, and the bank wound up. On June 21, 1780, Congress was officially notified of the organization of the bank, and that it awaited only the recognition and co-operation of that body. These were immediately given in resolutions pledging the faith of the United States for the effectual reimbursement of the subscribers, and ordering that bills of exchange to the amount of £15,000 should be deposited with the bank, and that further assistance would be given if needed. The bank began operations on July 17, 1780, on Front Street, two doors above Walnut, and remained open for nearly one year and a half, and provided 3,000,000 of rations and 300 barrels of rum for the army. The tenth and last instalment of the subscriptions was called in on the 15th of November, 1780, and the bank's affairs were finally wound up toward the close of 1784. The Pennsylvania Bank served the patriotic purposes of its Philadelphia founders and subscribers; no hope of gain inspired its inception or prompted its management; it was pure patriotism that led to its establishment and conducted its business successfully. A picture of the financial situation, drawn by Gen. Cornell, in his letter to Gen. Greene,<sup>3</sup> will illustrate some of the embarrassments that beset the bank:

"The situation of our finances is such as to make every thinking man shudder. The new money ordered into circulation by the resolution of the 18th March meets with so many obstructions I almost despair of the credit it will have in the States that comply with the resolution. If it should fail, good God, what will be our fate, without money or credit at home or abroad? We have not one farthing in the treasury, and I know of no quarter from which we have a right to expect any. Yet we go on contented, pleasing ourselves with the sanguine hopes of reducing New York. I have seen many new schemes before I came to this place, but what I have experienced since exceeds anything I have ever seen before. I never saw a set of men that could quietly submit to every kind of difficulty that tended to the ruin of their country, without en-

*Jamesend Whelan*

deavoring to make one effort to remove the obstruction. I believe they wish their country well, but suffer their time almost wholly to be taken up in business of no consequence."

"This Congress is finally bankrupt," said a Tory paper of May, 1781.

"Last night a large body of the inhabitants, with paper dollars in their hats by way of cockades, paraded the streets of Philadelphia carrying colors flying, with a dog tarred, and, instead of the usual appendage and ornament of feathers, his back was covered with the Congress paper dollars. . . . This example was directly followed by the jailer, who refused accepting the bills in purchase of a glass of rum, and afterwards by the traders of the city, who shut up their shops, declining to sell any more goods but for gold and silver."<sup>1</sup>

The ratification of the Articles of Confederation on the 1st of March, 1781, established more definite relations among the States,—all charges of war and other expenses incurred for the common defense and safety were made payable out of a common treasury, and Congress was given express power to borrow money and emit bills of credit, and all debts so contracted were deemed a charge against the United States, for the payment of which the public faith was pledged. Another important act was the election by Congress of Robert Morris as superintendent of finance, which took place on the 20th of February, 1781. These two events put a different and more hopeful aspect upon all public events. Morris, full of energy and self-reliance, and deeming no sacrifice too great to be made for the service of his country, laid his splendid personal credit at the service of his country, and, sparing neither labor, time, nor thought, brought to bear upon the financial condition of the country a zeal, intelligence, and experience unsurpassed in the country. He entered boldly and with zeal into Hamilton's scheme of a national bank. Unable to approve Hamilton's scheme for a bank with a capital of \$3,000,000, and to be carried on in close relations with the national government, he drew up a scheme on a scale more adequate, in his opinion, to the national wants, and more likely to secure popular approbation, and on the 17th of May, 1781, presented to Congress his plan for the establishment of the Bank of North America.

The details of Mr. Morris were simple,—a subscription of \$400,000 was to be raised in shares of \$400 each, payable in gold or silver. Every subscriber of five shares or upward was to undertake to pay one-half the sum on the day of his subscription, and the other half within three months of that date. The organization was to be effected when the whole sum was made up. A directory of twelve was to be chosen annually to regulate the affairs of the bank. Congress, by resolution, approved of the plan for establishing a national bank in the United States, submitted by Mr. Morris, and that they would promote and support the same by such ways and means from time to time as might appear necessary for the institution and consistent with the public good. The

subscribers were incorporated under the name of the President, Directors, and Company of the Bank of North America by resolution of Congress May 26, 1781; the States were recommended by the same resolutions not to permit the incorporation of any other bank; and the notes of the bank, payable on demand, were made receivable in payment of all taxes, duties, and debts due, or that may become due, and payable to the United States.

The subscriptions came in so slowly that great uneasiness was felt as to the success of the bank. The prospects of profits were very remote, the danger of a total loss of capital evident. The country was engaged in an arduous and doubtful conflict. If unsuccessful, the whole capital was lost. It was not until the fall of 1781 that the subscriptions presented a respectable appearance. The identification with the bank of the gentlemen most prominent in the management of the Pennsylvania Bank gave confidence to the public, and the opportune arrival of a French frigate at Boston with \$470,000 in specie for the Government, which was immediately brought to Philadelphia and deposited with the bank, gave an assurance to the stockholders, who resolved upon organization. For this purpose the following gentlemen met at the City Tavern on Nov. 1, 1781: *Gouv'r Morris, James Crawford, Charles Pettit, Michael Hillegas, Samuel Osgood, B. Fuller, Samuel Meredith (for George Clymer), William Turnbull, John Wilcocks, John Mitchell, Samuel Meredith, Mease & Caldwell, John Donaldson, James Wilson, John Nixon, Timothy Matlack, Andrew and James Caldwell, Robert Morris, Francis Gurney, George Meade & Co., Thomas Fitzsimons, Thomas Fitzsimons (for George Meade), George Haynes, David H. Conyngham, and John Ross.*<sup>2</sup> The meeting selected the following board of directors: Thomas Willing, Thomas Fitzsimons, John Maxwell Nesbitt, James Wilson, Henry Hill, Samuel Osgood, Cadwalader Morris, Andrew Caldwell, Samuel Inglis, Samuel Meredith, William Bingham, and Timothy Matlack.

Thomas Willing was elected president, and Tench Francis cashier. The fortunate selection of Thomas Willing for president gave a decided impulse to the subscription to the stock. By December \$85,000 in cash had been raised, and it was resolved to apply to Congress for a charter of incorporation. The opinion widely existed that Congress did not possess the power to incorporate; however, having by resolution of May 26, 1781, pledged its word to the incorporation of the bank, the act was passed Dec. 31, 1781, perpetually incorporating the subscribers under the name and style of "The President, Directors, and Company of the Bank of North America."

The operations of the bank commenced on the 7th of January, 1782, in the commodious store belonging to its cashier, Tench Francis, on the north side of

<sup>2</sup> Those in italics were subscribers to the Pennsylvania Bank.

Chestnut Street, west of Third. Mr. Morris subscribed for 633 shares of the bank on account of the United States, paying therefor \$254,000, but, owing to the necessities of the government, he was almost immediately compelled to borrow a like amount from the bank, so that the institution derived but little benefit from the government subscription. The great scarcity of money delayed very much the payment of the individual subscriptions, and, as a consequence, the amount of specie in the vaults decreased to an alarming extent; nor would the notes of the bank readily circulate, but were returned very speedily to the bank. Devices of an amusing, if not creditable, character were resorted to to inspire confidence, and stories were circulated and believed that the bank, by an ostentatious display of silver on its counters, and of men engaged in carrying boxes of silver (or supposed to contain silver) from the bank-room to the vaults and from the vaults to the counter, contrived to dazzle the eyes of the ignorant with its vast amount of specie, and create the impression of immense wealth.

Such subterfuges, if they were practiced, soon became unnecessary. The arrival of considerable sums of specie from the West Indies and Europe and the payment, little by little, of individual subscriptions soon overcame all difficulties, and the deposits gradually assumed large proportions. The depreciation of the bills of the bank ceased, and they were sustained at their par value without further difficulty, and by November the minutes of the stockholders show that the skill and attention manifested by the officers in arranging an institution altogether new in America were deserving of congratulation, and that the public had already experienced the good effects of the bank upon business of all kinds. Some of the States in the mean time gave to the bank the assistance of their recognition. Connecticut made the notes receivable in payment of taxes, Rhode Island provided punishment for counterfeiting its issues, and Massachusetts created it a corporation according to the laws of that commonwealth.

The doubts as to the validity of the charter granted by Congress continued to embarrass the institution until the directors deemed it to be necessary to the credit and efficiency of the institution that a charter should be obtained from the State of Pennsylvania. A memorial to that effect was drawn up and presented to the Assembly on February 21st, and on the 25th of the same month a bill was introduced providing for the incorporation of the bank, which bill became a law on the 25th of March, 1782. The feature of perpetual existence and the capacity to hold a large amount of property were regarded by some members as dangerous to the true interests of the State, but notwithstanding these objections all amendments looking to their correction were rejected. The election of Mr. Willing as president gave offense to many, because of his alleged indifference (or want of suffi-

cient zeal) in the success of the national cause. For these reasons some of the extreme Whigs refused their assent to his confirmation, but notwithstanding all opposition the bill passed in its original shape.

The operations of the bank were almost immediately attended with a restoration of confidence and credit, at least in some degree, to the commercial interests of the country, while to the government of the United States its assistance was not less valuable. The requisitions upon the States in 1782 amounted to \$8,000,000, but by the end of June not more than \$30,000 had been raised. "Public credit," says Mr. Morris, "had gone to wreck, and the enemy built their most sanguine hopes of overcoming us upon this circumstance, but at this crisis our credit was restored by the bank." During February, March, and April of 1782, the bank loaned to the government \$300,000, and by July 1st \$100,000 more had been advanced, making a total of \$400,000 during the year. The loans to the government aggregating so large an amount caused some uneasiness to the directors, and Mr. Morris sold out \$200,000 of the government stock and paid off \$300,000 of the amount borrowed. Before the 1st of July, 1783, the discounts to the government amounted to \$820,000, an amount of aid and assistance without which, Mr. Morris said, "the business of the department of finance could not have performed." The State of Pennsylvania being unable to pay the officers of its army, relief was found in the bank, which advanced the money for the State, and received its reimbursement when the revenue was collected. The public enemy infested the Delaware River and Bay, and seized vessels in the port of Philadelphia. The bank advanced \$22,500, which enabled the merchants to fit out a ship of war, which not only cleared the river and bay of the enemy, but captured a cruiser of twenty guns belonging to the British fleet. The defense of the western frontier was promoted by an advance of £5000 by the bank in 1782, and in 1785 it loaned the city wardens \$2400, and the managers of the house of employment \$4000. It was well said that "the instances of its services were innumerable."

The success of the bank, great as it had been, was not equal to the demands of the public for loans. Accordingly, on Jan. 12, 1784, the stockholders authorized the opening of books for the subscription of 1000 shares of \$400 each, which were rapidly taken up. This increase of capital excited an envy, which set on foot a scheme for a rival bank, to be known by the name of the Bank of Pennsylvania. Large subscriptions rapidly followed, and an organization was effected, and an application for a charter made to the Assembly on the 10th of February, 1784. To meet the threatened competition of a formidable rival, the Bank of North America resolved to extend the new subscriptions to 4000 shares of \$400 each, all of which were promptly taken, and the subscribers to the Bank of Pennsylvania prevailed upon to relin-

quish their scheme. The application for a charter was withdrawn, and on June 13th the books of subscription to the Bank of North America were closed, and the capital was found to amount to \$830,000.

The difficulties which beset the bank ended not with the removal of its threatened rival. The paper money of colonial days loaned for a period of ten years, and secured by a mortgage on real estate, had been a source of great convenience to the people, and kept, by prudent measures, at a par with specie had not been productive of any great injury to the public. In 1785 a numerous party rose in the State, which demanded and obtained a renewal of that policy. But without the co-operation of the bank, the new currency bills could not be got into circulation. Opposed at first to aiding the paper-money scheme, the bank drew upon itself the charge of being hostile to the currency bills, and though the policy of the bank underwent a material change, and it received on deposit by March, 1786, £107,280 14s., or nearly the whole of the amount issued, it, nevertheless, incurred much unpopularity. The financial distresses of the mercantile community, incident to a long war which had annihilated all specie currency, could not be entirely relieved by a bank with the limited capital and resources of the Bank of North America. To the total prostration of business by the war was to be added that languishing condition of trade which followed the restoration of peace. An excess of British importations following, drained the last remaining specie from the country. In consequence of these unavoidable incidents to war, money became scarce and usury common. Upon the bank was charged the evils, which it may have to some extent augmented, but certainly had not created. Its accommodations, under the pressure which in common with the public bore upon the bank, were curtailed and called in, to the great inconvenience of all, and to the ruin of some customers. Under the impulse of inconvenience and loss, the opposition to the bank took a tangible and threatening aspect. Petitions to the Assembly from citizens of Chester County and elsewhere were presented on March 21, 1785, praying a repeal of the charter of the bank, and assigning as due to the bank all the ills and evils to which extravagance, overtrading, and improvidence are heir. Usury, extortion, favoritism, harshness to creditors, opposition to the paper money of the State, the possession of dangerous political and commercial influence were alleged as evils which followed the powers conferred by the charter and exercised by the bank.

Under the pressure thus brought upon the Assembly a committee was appointed, to which was referred all the memorials for consideration, with instructions to "inquire whether the bank established at Philadelphia was compatible with the public safety and with that equality which ought to prevail between individuals of a republic." The weight of popular opinion was too strong to be withstood, and on March

28, 1785, the committee reported a bill repealing and annulling the charter of the bank, which became a law on September 13th. Deprived thus of its State charter, the bank turned to Congress for relief from its embarrassments. The letter of President Willing to Congress producing no effect, and the Legislature persisting in its repeal, the bank turned to the State of Delaware for the protection which Pennsylvania had withdrawn. Though Delaware granted the charter, and though at one time it was seriously contemplated to remove to some proper point in that State, yet the dangers that threatened the safety of the bank in so desperate a step induced the directors to make another effort with the Legislature of Pennsylvania for the preservation of its franchises. This last effort, made in 1787, though more successful than the former, was nevertheless accompanied with conditions and restrictions which were far from satisfactory. However, the directors conceived it best to act under its provisions, notwithstanding they deprived the bank of all its national features, and reduced it to a mere State institution.

The critical period of the bank's existence was now passed,—peace had been established, and to some extent the disastrous effects of the war upon trade and commerce were beginning to disappear. In March, 1789, the Constitution of the United States went into operation, and gave a vigorous and responsible executive to the country, as well as an immense impulse to all schemes of national importance. Mr. Hamilton, at the head of the Treasury Department, was the strong advocate of a great National Bank, and in bringing forward his measure, dealt with great clearness upon the aid which the Bank of North America has given to the government during the war. His scheme contemplated the rehabilitation of the Bank of North America with national powers and duties. No steps were taken by the bank responsive to the suggestions of Mr. Hamilton, the institution preferring to remain under the auspices of the State. President Willing resigned on Jan. 9, 1792, and John Nixon was elected president. The business of the bank continued to increase rapidly, and the profits declared a dividend of twelve per cent. During the year 1791 the bank advanced \$160,000 to the State, and in the following year \$53,000. The State, in 1793, made overtures to the bank for a participation in its business and profits, which not being successful, resulted in the incorporation of the first rival,—the Bank of Pennsylvania.

In 1801 the charter of the Bank of North America expired, but the Legislature by the act of March 20, 1799, extended the charter for a further term of fourteen years. The number of banks in the country had largely increased, and in 1804 were estimated at forty-five in active operation, consequently the business of the bank had not been as favorable as when it alone reaped the profits of banking operations. In 1806 the profits of the bank very sensibly decreased. The

cause was attributed by a committee of the directors to a variety of circumstances, enumerating among others that the policy pursued by the management had been such as to prevent the bank from partaking in any degree of the patronage from the General and State governments which other banks enjoyed, and also that for many years the directors had been discounting large amounts of accommodation paper, which they renewed from time to time, thus making a great part of the bank's capital comparatively inoperative. Immediate efforts were made to do away with the evils pointed out by the committee, and so successful were their efforts that by the close of 1809 the bank had regained its former prosperity, as shown by the laying aside of a surplus of \$15,000. This surplus was increased from sales of shares to \$80,000 during that year, and it was agreed that the annual interest on this sum should be accumulated until it reached \$100,000. John Nixon, the president, died Dec. 24, 1808, and at the first meeting of the board, in 1809, on January 10th, John Morton was elected president. In 1810 the charter of the first Bank of the United States being about to expire, memorials to Congress for its recharter flowed in from many sources, among which was one from the directors of the Bank of North America. They urged the recharter because, in their opinion, the termination of the National Bank's operations would be attended with great suffering on the part of the commercial and agricultural interests.

The government received great assistance during the war with Great Britain from the bank, which received and paid out the government notes, opened subscriptions to the loan of 1813, and advanced the government \$650,000 before the close of 1815. The disastrous system of over-issues and excessive trading during the war compelled, in August, 1814, the suspension of specie payments. It was not until Feb. 20, 1817, that resumption was effected. The Legislature, on March 28, 1814, renewed the charter of the bank for a term of ten years, but accompanied it with the old as well as with new restrictions. The capital was restricted to \$1,000,000. Its affairs were to be open at all times to legislative scrutiny, and a bonus of \$120,000 was to be paid to the State. The charter was formally accepted May 11, 1814.

In 1822, President John Morton resigned, and was succeeded by Henry Nixon, the son of John Nixon, the second president of the bank. In 1825 the charter was again to expire, and a new charter was approved March 21st of that year, by which the title of the corporation was changed to "The Bank of North America."<sup>a</sup>

From 1830 to 1835 the business activity of the country was greatly increased, and with the prosperity of trade the operations of the bank increased. This course was followed by all the banks, until, on May 10, 1837, the crash came, led off by the suspension of the New York banks, and followed on the 11th by all

the Philadelphia banks. A partial resumption took place in May, 1838, and on the 13th of August all the banks resumed. This, however, was only temporary, and on the 9th of October, 1839, the Bank of the United States suspended, and was followed by the Philadelphia Bank and the Farmers' and Mechanics' Bank. This action forced the Bank of North America to similar action, except that it continued to redeem its own notes of a denomination of \$5 or under. On Aug. 8, 1840, Henry Nixon, the president, died, and was succeeded by John Richardson, who was elected Sept. 3, 1840. The severe penalties of the laws of the State upon banks who failed to meet their obligations was called to the attention of the banks by the proclamation of the Governor, and the Legislature intervening, by the act of April 3, 1840, fixed Jan. 15, 1841, as the time when the banks should resume payment in specie. This minatory legislation had the desired effect, and on the day appointed the city banks generally resumed. But just three weeks after, the Bank of the United States suspended for the third time, and ended its long career. It was found by a meeting of delegates, February 4th, from the Philadelphia banks, to be impossible for the banks to continue specie payments, and on the following day every bank in the city announced its suspension. Declining to participate in the "Relief Act" of May 4, 1841, the Bank of North America, at the beginning of 1842, had redeemed all its notes except \$24,000, which it could pay on demand in specie. It had but few deposits which were not by express contract payable in current funds. Its outstanding loans were strictly on business paper, in small amounts, and it was prepared to resume as soon as the currency was raised to the standard of gold and silver. Notwithstanding that condition of its affairs, as the year went on it became apparent that the actual assets of the bank had greatly depreciated in value. Application was made to the Legislature for a reduction of capital, which, by the act of March 24, 1843, was reduced to \$750,000, and the par value of the shares to \$300. Two years of prosperity availed to place the bank upon a footing so firm that it felt warranted in asking for a return to the capital to its old volume. This was effected by the act of April 16, 1845.

The charter was renewed by the act of April 8, 1846, and accepted on Jan. 11, 1847. This charter reduced the par value of the shares to \$100. The bank removed into temporary quarters adjoining the Philadelphia Bank, at the southwest corner of Fourth and Chestnut Streets, on June 11, 1847, and into its new building, Chestnut Street west of Third, on March 11, 1848. The charter was again renewed on April 26, 1855, for a period of twenty years. During the panic of 1857 the bank suspended, on September 26th. John Richardson resigned the presidency on April 27th, and James N. Dickson was elected on July 16, 1857. On the 9th of August, 1860, he resigned, and on the 20th of the same month Thomas Smith was elected,

and remained in office for a period of twenty-two years, when he was succeeded by Charles F. Lewis.<sup>1</sup>

Important and radical changes in the currency followed the adoption of the Constitution of the United States in 1787. Bills of credit were no longer issuable by the States, and gold and silver were the only legal tender allowable in the payment of debts. This prudent measure was nevertheless productive of much embarrassment in all the branches of trade and commerce. The only specie left in the country by the drain of war and excessive importations was the savings of thrifty and non-speculating individuals, which, if not hoarded and concealed, would be most reluctantly parted with. The best estimate of the specie in the Union placed the amount available for banking capital at \$2,000,000.<sup>2</sup>

The only banks in existence at the time of the adoption of the Federal Constitution were the Bank of North America, in Philadelphia, the Bank of New York, at New York, and the Bank of Massachusetts, at Boston.

Among the first acts of Congress was the incorporation, on the 14th of February, 1791, of the Bank of the United States, which was approved on the 25th of February. The capital of the bank was fixed at \$10,000,000, for one-fifth of which the government

<sup>1</sup> The "History of the Bank of North America," prepared by Lawrence Lewis, Jr., has been the chief source of information consulted in preparing the account of that bank. We take great pleasure in acknowledging our indebtedness to Mr. Lewis, as well for the information conveyed in this work as for pleasure derived from the perusal of other publications from his pen.

<sup>2</sup> Congress, in 1793, established the United States Mint at Philadelphia, for the coinage of American specie. Notwithstanding the small amount of specie in the country at the time of the establishment of the Mint, and notwithstanding also the embarrassed condition of all kinds of business, the conversion of gold and silver into coin and bullion was immediately commenced, and has been continued to the present, with the vast sums set forth in the following table, kindly furnished by Col. A. Londen Snowden, superintendent of the Mint, for this work:

TABLE OF COINAGE AT THE UNITED STATES MINT FROM 1793 TO JUNE 30, 1883.

<i>Gold Coinage.</i>	
Double eagles.....	\$378,773,960.00
Eagles.....	120,346,830.00
Half eagles.....	111,817,540.00
Three dollars.....	1,303,932.00
Quarter eagles.....	22,486,197.50
Dollars.....	18,095,469.00
<b>Total gold.....</b>	<b>\$652,823,928.50</b>
<i>Silver Coinage.</i>	
Standard dollars.....	\$71,006,749.00
Trade dollars.....	5,100,960.00
Half dollars.....	82,286,681.50
Quarter dollars.....	28,102,075.75
Dimes.....	11,490,825.40
Half dimes.....	3,877,345.90
Three-cent pieces.....	1,260,250.20
Twenty-cent pieces.....	11,342.00
<b>Total silver.....</b>	<b>\$203,237,930.75</b>
<i>Minor Coinage.</i>	
Five-cent pieces.....	\$7,018,583.40
Three-cent pieces.....	890,483.97
Two-cent pieces.....	912,020.00
One-cent pieces.....	6,900,328.43
Half cents.....	39,926.11
<b>Total minor coinage.....</b>	<b>\$15,761,341.91</b>

could subscribe. The limit of its existence was fixed at twenty years, and it was prohibited to charge more than six per cent. interest. Individual subscriptions were payable one-fourth in gold or silver, and three-fourths in six per cent. stocks of the government, then bearing interest, or in three per cents at one-half their nominal value. Authority to establish offices of discount and deposit in the several States was conferred, and its notes were made receivable for all taxes and dues to the government. Of the capital, \$5,700,000 were reserved for the parent bank, which was to be established in Philadelphia, and the balance, \$4,300,000, was to be divided among eight branches that were to be established in the principal cities of the Union. The active capital was immediately subscribed, and the presidency tendered to Oliver Wolcott. Upon his declension of the presidency of the bank, Thomas Willing, of Philadelphia, was elected. Mr. Hamilton, the author of the plan of a Bank of the United States, contemplated the restoration of the Bank of North America "to the situation in which it originally stood in the view of the United States," and not the creation of a "new establishment." That incorporation and union he contemplated should be made "under the auspices of an act of the United States, if desired by the Bank of North America, upon terms which shall appear expedient to the government." No steps appear to have been taken by the Bank of North America to effect the purposes contemplated by Mr. Hamilton in his report. The quiet and prosperous condition of the Bank of North America, under its State charter, were deemed preferable to the anxieties and hazards of a new national connection. The scheme of a separate institution was therefore pushed forward, and the Bank of the United States began its corporate existence on the 19th of February, 1791. Mr. Willing resigned the presidency of the Bank of North America on Jan. 9, 1792, and was succeeded by John Nixon.

The Bank of the United States continued its operations until the expiration of its charter, March 4, 1811. Albert Gallatin, Secretary of the Treasury, in sustaining the application of the bank for a renewal of its charter, in his report of March 3, 1809, exhibited the following condition of the affairs of the bank:

<i>Cr. :</i>	
<b>I. Debts due to the Bank—</b>	
1. Six per cent. stock, remaining part of the original subscription.....	\$2,230,000
2. Loans to individuals, consisting chiefly of discounted notes at sixty days.....	15,000,000

Mr. Gallatin contended that this statement proved that, as a bank, its affairs "had been wisely and skillfully managed." This bank was certainly beneficial to the country, and profitable to its stockholders, for it paid them an annual dividend of eight and one-half per cent. It must suffice to state here that all the efforts of its friends, supported by the weight and influence of Mr. Gallatin, failed to induce Congress to renew the charter. Mr. Pitkin observes, "The influence of State banks was also brought to bear on the great question then before Congress; and when it is considered that the number of these banks had at that time increased to nearly ninety, located in most of the States, with a capital of more than forty millions, their influence could have had no inconsiderable weight. With this union of views and interests against the bank, it is not strange that the charter granting it should be suffered to expire."

These State banks, during the war of 1812-15, furnished to the government the greater part of its loans for carrying on the war, and at the same time aided in the collection and disbursement of the revenue. This increased issue of paper, accompanied by the depression of commerce incident to war, and consequent upon the embargoes and other *restrictive energies*, occasioned a general suspension of specie payments by the banks south of New England.<sup>1</sup>

During the September session of Congress, in 1814, Mr. Dallas, of Philadelphia, then Secretary of the Treasury, submitted a plan for a national bank, with a capital of \$50,000,000, three-fifths to be subscribed by individuals and corporations, and two-fifths by the United States. Neither the efforts of Mr. Calhoun nor of Mr. Webster to modify the plan of Mr. Dallas succeeded, and Congress passed the bill for the second Bank of the United States, which the President, Mr. Madison, approved on the 10th of April, 1816. This bank was also located at Philadelphia, with branches elsewhere. The bank was chartered to continue until the 3d of March, 1836. It did not commence operations until January, 1817, and soon after, in pursuance of a mutual arrangement between this bank and the State banks of New York, Philadelphia, Baltimore, and Virginia, specie payments were resumed. It was of this second Bank of the United States that Nicholas Biddle, of Philadelphia, became, on the nomination of President Monroe, in 1819, a director, and, upon the retirement of Mr. Langdon Cheves, in 1823, president.

This bank was to have \$35,000,000 capital, of which \$7,000,000 was to be subscribed by the government in five per cent. stock; \$28,000,000 by the public, of which \$7,000,000 was to be in specie and \$21,000,000 in six per cent. United States stock. It was to pay a bonus of \$1,500,000 in one, two, and three years, and to issue no note under \$5, and was forbidden to sus-

pend specie payments under twelve per cent. penalty. The expectations and pretensions of the friends of the bank were that it would correct the currency and control exchanges. Mr. Langdon Cheves became president of the bank on March 6, 1819, and found the bank practically bankrupt, but already engaged in a vigorous effort to contract its obligations.

The financial condition of Europe, as well as of America, was in a most uncertain and disturbed condition. Commerce, industry, and finance were groping their way back to the natural forms and channels of peace from which they had been diverted by the unnatural developments of a long war. The United States had participated in the struggle, and felt the full effects of its consequences. In 1816, paper money all over Europe was depreciated equally with that in the United States. But the exchanges of commerce were favorable to the United States, and an opportunity for resumption of specie payments offered. In the midst of this favorable condition of financial affairs came the breakdown of the bank. Its efforts to recover itself prostrated the whole industry of the country. Prices fell, exchange on England rose to 105 and 106, which carried off gold and silver, and a general liquidation set in, which extended through a period of three or four years. Andrew Jackson became President on the 4th of March, 1829. Hostile to the bank, and inimical to Mr. Biddle, the President was not slow to seize upon the first event that would enable him to begin those hostile demonstrations which in politics, as well as war, lead to actual engagements. The refusal of Mr. Biddle to remove Jeremiah Mason, a friend of Mr. Webster, from the presidency of the branch at Portsmouth, in the summer of 1829, was the first indication of the approaching conflict. The message of 1829 astonished the country by its intimations of the unconstitutionality of the bank charter. Though the first indication of hostility met with little favor in the Congress, the President took no step backward.

In 1832 a bill for the renewal of the charter passed both houses of Congress, but was vetoed by President Jackson. On January 1st following, the directors of the bank prepared and delivered to the Committee of Ways and Means a statement of the condition of the bank, which exhibited—

<sup>1</sup> The Philadelphia bank suspended specie payment for the first time on the 30th of August, 1814, and the suspension became general in a few months after.

This statement being considered highly satisfactory, the funds of individuals as well as of the government continued to be intrusted to the Bank of the United States, and the price of its stock was a proof of the confidence in its condition and management. In 1833 the treasury withdrew from the bank nearly \$8,000,000 of the public deposits, and at the same time the bank and the State banks curtailed the amount of credit upon which the business of the country had been carried on. The consequences which followed were innumerable failures, the depreciation of property, the arrest of public and private enterprise, and universal distress. When it became apparent that no recharter of the bank could be obtained, a plan was projected to combine the advantages of the long-established correspondence, name, and machinery of the bank, by incorporating its stock with a new institution, under the name of "The President, Directors, and Company of the Bank of the United States of Pennsylvania," which was chartered on the 18th of February, 1836, by the Legislature of that State. The transfer of the funds of the old bank was made into the new. More than fifteen per cent. beyond the subscription of the government was returned, besides a dividend of three and one-half per cent. every six months; not a dollar of money was lost to the United States nor to any of the stockholders of the Bank of the United States. No financial institution ever preserved its credit and character, as well as the means and interests of its customers, with more good faith and better practical results. It restored a stable currency to the nation, and distributed its accommodations with impartial fairness to all sections. If it had been wound up there would have been full payment of all demands, and the return to the stockholders of their principal and a surplus.

The Pennsylvania Bank of the United States succeeded to the "good-will and fixtures" of its predecessor. Mr. Biddle became its first president, and gave to it all the vast experience and ability which he possessed, and from 1836 to 1839 the new bank seemed to prosper, under the favor and confidence of both the government and public of Philadelphia. Its stock attained a premium of sixteen per cent., but not resting upon the broad foundation of national aid, and restricted to a narrow and local basis, it was unable to secure and maintain that national confidence upon which its usefulness and success depended. A period of general expansion, over-trading, and over-banking set in with the beginning of the career of the Pennsylvania Bank of the United States. The system of banking all over the country was not built upon the basis of specie. Currency did not represent coin; banks were mere paper-money mills. In consequence there could be no definite postponement of financial disaster. The bank made an assignment Sept. 4, 1841, and by its failure brought widespread ruin and disaster to business and trade

throughout the Union. The estate of Stephen Girard sustained a heavy loss from the amount it had invested in the stock of this bank.

The Bank of the United States had suspended specie payment Oct. 10, 1839. The Legislature had fixed Feb. 1, 1841, as the date for its resumption. Action was not taken to bring it about until R. D. Wood, transiently meeting James Martin, one of the directors of the United States Bank, remarked to him that the period was fast approaching, and it was quite time to put things in order for it. This remark led to an agreement of views by the two gentlemen, and the subject was brought before the board of the Philadelphia Bank by R. D. Wood. Whereupon committees of the city banks examined the condition of the United States Bank, and agreed to lend it \$5,000,000, taking its notes at an average of thirteen and a half months. The banks so lending borrowed upon these notes \$2,500,000 from the New England and New York banks, and resumption took place.

These negotiations occupied over four months. They were conducted on the behalf of the borrowing banks by John White, Robert Howell, and R. D. Wood, and on the part of the New England banks by P. Marett. They involved reciprocal visits by these gentlemen to Boston, New York, and Philadelphia, correspondence with William Appleton and Abbott Lawrence, and a short conference with Daniel Webster.

The Bank of Pennsylvania was incorporated March 30, 1793, for twenty years. Its original capital was \$2,000,000, divided into 500 shares of \$400 each, with

BANK OF PENNSYLVANIA.

permission to increase the shares to 7500. The charter was extended, in February, 1810, for the term of twenty-one years, upon the condition that the Governor shall be allowed to subscribe at par, on behalf of the commonwealth, for 1250 shares of the reserved shares of the bank, and also for the same number of shares, all at par, at any time after the expiration of ten years from the 4th of March, 1813.

The banking-house on Second Street, between Chestnut and Walnut, was designed by B. H. Latrobe, of the pure model of Grecian architecture. The

design was from the temple of the Muses, on the Ilyssus, near Athens, with two Ionic porticos, of six columns each, supporting entablatures and pediments. The whole building, one hundred and twenty-five feet by fifty-one feet, was of white Pennsylvania marble. In 1811 the State of Pennsylvania had \$1,509,000 invested in this bank. Its branches were at Lancaster, Pittsburgh, and Easton. Its management was in a president and twenty-four directors, three of whom were annually appointed by each house of the Legislature, and the rest by the stockholders. In 1811 Joseph Parker Norris was president, and Jonathan Smith cashier. The president in 1835 was John Read, and Quintin Campbell was cashier. The bank failed in 1837.

The Bank of Philadelphia was formed in 1803, with a capital of \$1,000,000, and incorporated in 1804 upon conditions of paying \$135,000 cash; permitting the Governor to subscribe for 3000 shares, and to pay herefor \$300,000 in six per cent. stock of the United States, which was at that time ten per cent. below par; to loan the State when required \$100,000 at five per cent. for ten years; and the privilege of subscribing \$200,000 at the end of four years, and at the end of eight years to subscribe another \$200,000 on the part of the State, both sums to be at par. The practice of paying for charters to banking companies marks an era in legislation of the State. The enormous bonus paid by the Bank of Philadelphia, and the other privileges granted to the State, became necessary, in consequence of the violent opposition to the institution which was manifested by the Bank of Pennsylvania, and the offer on the part of that bank to pay \$200,000 to the State, provided no new bank should be incorporated.

The Philadelphia Bank, before 1836, stood on the lot at the southwest corner of Fourth and Chestnut Streets, now occupied by the Wood building. The bank was a rough-cast, queer-looking Gothic building, with a great, wide, and high arch of entrance on Fourth Street. It occupied the southern half of the lot. The northern half was vacant ground, inclosed with a wall and railing on Fourth and on Chestnut Streets. There was grass in the inclosure, and at one time two or three trees.

In 1836, the building was removed to give place to a marble structure which was built in conjunction with the Western Bank. When completed, the eastern division was occupied in the second story by the Philadelphia Bank till its removal to the granite building opposite. The Commonwealth Bank then occupied the lower story until its removal, in 1876, to the southwest corner of Fourth and Walnut Streets.

In March, 1809, the Legislature chartered the Farmers' and Mechanics' Bank with a capital of \$1,250,000, and to continue until May 1, 1824. The Legislature demanded \$75,000 for the charter, and provision was inserted that the debts of the corporation should not exceed double the amount of the

capital; one-tenth part of the capital was required to be loaned, if applied for, to the farmers of the State, on sufficient security by bond, mortgage, or note. For many years the bank was in a brick building on the lot of ground now occupied by it, formerly the Lawrence mansion, and in which it is said Admiral Howe lived during the British occupancy of the city. The bank opened business there Jan. 25, 1819; the new building was first used for banking purposes in 1854. Edwin M. Lewis is president.

The only incorporated State banking institutions in Philadelphia in 1811 were,—

	Capital 1811.	Circulation 1811.
Bank of Pennsylvania.....	\$1,425,303	\$1,400,356
Philadelphia Bank.....	713,309	654,420
Farmers' and Mechanics' Bank.....	804,730	504,700

In 1810 the Legislature enacted a law to prohibit unincorporated associations from issuing notes or pursuing any of the operations of banks; but in defiance of its provisions the system was persevered in, and even companies incorporated for the purpose of constructing bridges departed from the spirit of their charters, converted themselves into banks, and issued notes for circulation. This mania for banking would soon have been checked by the return of the notes for redemption, had not the war of 1812-15 intervened, and the cessation of the demand for specie for exportation to India and China removed the usual check against the excessive issue of bank paper. During the session of the State Legislature of 1812-13, a bill was passed by a majority of one in each branch to incorporate twenty-five new banks with an aggregate capital of \$9,525,000, but it was vetoed by Governor Snyder, and returned with his objections, among which he said, "It would, by readiness to give credit, unite visionary speculations, divert men from useful pursuits, damp the ardor of industrious enterprise, and consequently demoralize the community." In March, 1814, the subject was renewed, and a bill passed incorporating, as has been stated, forty-one banks, with capitals amounting to upward of \$17,000,000, of which only one-fifth part was required to be paid in. Although the bill passed both houses by large majorities, Governor Snyder returned this bill also, with his objections, but two-thirds of both houses voted for its passage notwithstanding; it became a law, and thirty-seven banks went into operation under its sanction. The immediate commencement of a number of these banks, whose *bona fide* capital was little more than the first installment required, increased the amount of circulation, already too abundant, and the depreciation of the currency grew worse and worse, until all confidence in its convertibility was lost. The new banks discounted stock notes to meet the remaining installments, and hence only one-fifth part of their capital was ever paid in. In 1819, of the thirty-seven banks which went into operation under the State law of 1814, fifteen failed, and were officially announced as "dissolved, unlawful, and

unincorporated," and there were at the same time twenty-two banks more in the State transacting business without charters.

In 1820 there were thirty-six banks in existence in the State, with capital amounting to \$14,681,780, and an indefinite number of *freebooters*. There is nothing cheering and but little useful or entertaining in the history of banking in this country in the decade from 1820 to 1830. Throughout almost that entire time there was a rapid succession of untoward events, leading to embarrassment, insolvency, litigation, dishonesty, and crime. It is a continuous history of bankruptcy and fraud. Banks were *bribed* to fail, that the stockholders might pay their indebtedness in the currency of the same bank, after it had reached its minimum point of depreciation, commonly fifty per cent. In 1829-30 the gloom which had settled so long upon the country was dispelled, and a brighter prospect dawned. The natural course of trade for the first time in eight years had brought a balance in specie of \$8,500,000 into the country, and a large share of this fortunate result is due to Pennsylvania for her effective act for the suppression of the circulation of small notes within her borders. This abolishment of small notes extended the functions of metallic currency, by allowing it to take the place of these notes. Another cause of this influx of gold, in 1830, and retention for a time in the country, was the partial cessation of the exportation of specie to India and China, occasioned by the substitution of bills of exchange and letters of credit on London for the imports for those countries.

"In 1830 there were in Philadelphia twelve joint-stock banks, exclusive of the Bank of the United States. Allowing for the share of the capital of the latter employed in banking speculations in the city, the total capital engaged in bank business in Philadelphia that year may be taken at \$10,667,000, on which a dividend accrued of \$698,075, being at the rate of 6.497 per cent. The bank of the late Mr. Girard, being a private establishment, is not included in this estimate (statement by I. H. Goddard, Esq., *New York Daily Advertiser*, 29th January, 1831). None of the Philadelphia banks issue notes less than five dollars. They all discount good bills, having sixty or ninety days to run, at six per cent. In Philadelphia the banks have been pretty successful, but in Pennsylvania generally there have been many failures."<sup>1</sup> The banks of Philadelphia suspended specie payment May 10, 1837, and the city of Philadelphia began the issue of "shinplasters." The banks resumed specie payments Jan. 15, 1841.

Most prominent among the bankers of Philadelphia was Stephen Girard, born in Bordeaux, France, on the 21st of May, 1750. In 1764 he sailed for St. Domingo as a sailor on the ship "Pelerin," commanded by Capt. John Coarteau; returning to his

home, he again sailed for the French West Indian possessions, and continued to make frequent voyages during a period of nine years between those islands and Bordeaux. His experience as a sailor, acquired by these voyages, obtained a license on the 4th of October, 1773, "to Stephen Girard, of Bordeaux, full authority to act as captain, master, and patron of a merchant vessel." His attention was now turned to commercial affairs in connection with the pursuit of the sea. His record, in the shape of a journal kept by himself, contains the invoices and sales of a quantity of goods suited to a West India market. These goods, amounting in value to about three thousand dollars in Federal money, were disposed of in St. Domingo in February, 1774. From the West Indies he sailed to New York, and arrived in July of the same year. Here his business tact and shrewdness in disposing of his goods attracted the notice of Thomas Randall, a merchant of that city. For the next three years he traded with New York, New Orleans, and Port au Prince, on his own account and jointly with Mr. Randall. In the month of May, 1777, he arrived for the time at Philadelphia. He now changed his profession of sailor to that of merchant, and com-

STEPHEN GIRARD'S BANK.

menced business in a rented store on Water Street, a short distance from the spot where he afterward permanently located. He married, in July, Mary Lumm, of Philadelphia. The approach of the British troops to Philadelphia drove Mr. Girard to Mount Holly, in New Jersey, where he remained until the evacuation of the city by the enemy, on the 17th of June, 1778, when he returned and resumed his business. His mercantile business had grown so profitable and his fortune had increased so rapidly that in June, 1812, he determined to devote his attention to banking. To this end he purchased the banking-house of the Bank of the United States, the business of which and the funds in its vaults remained with his bank, and he thus began a new career with unusual advantages and

<sup>1</sup> McCulloch's Commercial Dictionary.

prospects of success. His new occupation did not withdraw him from mercantile pursuits, but his trade with China, the East Indies, the Cape of Good Hope, and Europe continued to be pushed with unabated industry, and was attended with unexampled success. From the period of the establishment of his bank until his death, in 1831, he continued to prosecute both commercial and financial business. He died on the 26th of December, 1831, leaving the largest fortune accumulated by any single man in America up to the time of his death. His extraordinary regard and care for the interest entrusted to his management was illustrated by his executing and recording a deed of trust providing that in the event of his death "no delay nor abstraction on the payment of the moneys deposited with him may ensue, but that all business may be transacted with like promptitude and punctuality" that it was in the lifetime of Mr. Girard himself.

The Bank of Germantown was chartered by the Legislature of the State in 1813, and went into operation July, 1814, with a paid-in capital of \$55,000; Samuel Harvey, president, and John F. Watson (author of "Watson's Annals of Philadelphia"), cashier. The first board of directors was composed of Samuel Harvey, Charles J. Wister, Richard Bayley, Peter Robeson, Michael Riter, George Bensell, John Johnson, Edward Russell, William Rodman, Robert Adams, Samuel Johnson, Conrad Carpenter, John Rogers.

Capital, January, 1815, \$91,000; July, 1815, \$150,000; January, 1816, \$152,000; and in 1853, \$200,000.

From the minutes of the bank of July, 1814, it appears that "the committee for procuring and fitting out a banking-house report that they have leased from Dr. George Bensell, for the term of six years and six months from the 15th of June last, at a rent of three hundred dollars per annum, payable quarterly, a three-story stone house opposite the sixth mile-stone in the village of Germantown, and that they have purchased from Mr. James Stokes the iron doors, etc., belonging to the vault of the late Bank of the United States in Germantown, that they have employed masons and carpenters to make the necessary alterations, which they expect will be completed by the 23d inst." The location was changed from the above place (which is the second house above School Lane on the Main Street) to Main Street, below Shoemaker Lane, in 1825, and again, in 1868, to Main Street and School Lane, next door to the original location.

Samuel Harvey died in 1848, and was succeeded by Charles Magarge as president. John F. Watson resigned the cashiership in 1848, and was succeeded by Lloyd Mifflin, who resigned in 1850, and was succeeded by Samuel Harvey, Jr.; he resigned in 1860, and Charles W. Otto, the present cashier of the bank, was elected in his place. Mr. Magarge resigned in 1866, and William Wynne Wister, the present president, was elected to fill the vacancy.

The Commercial Bank was chartered in 1814, with a capital of \$1,000,000. The charter was renewed in 1824, and renewed again in 1836, while James Dundas was president. Mr. Dundas was prominent for many years among the leading financiers of the city.

He was the second son of John and Agnes Dundas, the latter a native of Alexandria, Va. He was born June 21, 1786, graduated at Princeton College, and was admitted to the Philadelphia bar. He married Anna Maria Pratt, a daughter of Henry Pratt, an eminent merchant of Philadelphia; by his second wife Elizabeth Dundas, herself a daughter of James Dundas, a younger son of John Dundas, of Manour. This last-mentioned James Dundas came from Scotland to America<sup>1</sup> shortly after the battle of Culloden, and settled in Philadelphia. He died Jan. 10, 1788. The James Dundas who is the subject of this biography succeeded to the family estate of Manour, in Perthshire, Scotland, which he held and enjoyed for a short time, until dispossessed of it by the alien laws of Great Britain.<sup>2</sup> He was the great-grandson of John Dundas, of Manour, and Anne, daughter of John Murray, of

<sup>1</sup> Douglas' Baronage, page 180.

<sup>2</sup> "The Dundases," says Lord Woodhouselee, in the Transactions of the Royal Society of Great Britain, "are descended of a family to which the historian and the geologist have assigned an origin of high antiquity and splendor, but which has been still more remarkable for producing a series of men eminently distinguished for their public services in the highest offices in Scotland." The family of Dundas, in common with the families of Dunbar and Hume, traces its descent in the male line from the Earls of March and Dunbar, who were sprung from the Saxon princes of Northumberland and the Saxon monarchs of England. According to the Douglas Baronage, "Uthred, a son of Cospatrick, first Earl of March, lived in the reign of King David I., who succeeded to the Scottish crown in 1124, and died in 1153. The genealogical chart of the family, retained in its archives, points out that Uthred was seated as Baron of Dundas, at Dundas Castle, in West Lothian, which was built eight hundred years ago. John Dundas, of Dundas, in the thirteenth generation, succeeded his father in 1480, and in 1487 was created Earl of Forth. In 1491, King James IV. granted him the island of Inchgarvie, with liberty to build and fortify a castle upon it. Sir William Dundas succeeded John Dundas in 1494, and married Margaret, daughter of Archibald Wanchope, of Niddrie, by whom he had sons,—Sir James and William Dundas. Sir James Dundas was the ancestor of the families of Dundas of Dundas; Dundas of Arniston; Dundas, Viscount Melville; Dundas, Baronet of Dunire; and William Dundas, from whom are descended the Dundases of Duddington and Manour." Burke's "Visitation" says on page 38, "Staniehill Tower, one of the properties which lay nearest to the Earl of Hopetown, was once the seat of Dundas of Manour, a cadet of the ancient and distinguished family of Dundas of Duddington. Lord Hopetown had for some time tried to induce the old laird of Manour to sell to him the tower of his fathers, but in vain. However, he bided his time, and found the young laird less impracticable. He induced him to listen to what was indeed a very advantageous proposal, and exchanged with him the beautiful estate of Aithreg for Staniehill Tower, which now forms a fine object in the midst of the pleasure-grounds of Hopetown House."

"Dundas of Manour: George, the first of this family, was the second son of David Dundas of Duddington, himself a second son of William Dundas of Duddington. George Dundas acquired several estates. He acquired a charter under the great seal Magistro Georgio Dundas, filio quondam, Davidis Dundas de Duddington, terrarum de Smiddie Hill, etc., dated July 19, 1625; also a charter of the lands and barony of King's Power, alias Manour, in Perthshire, dated Nov. 19, 1628, which last hath continued ever since to be the chief title of this family."—*Baronage of Scotland*, by Sir Robert Douglas, pp. 178-179.

"Sir David Dundas, late solicitor-general, and Sir John Dundas, Baronet of Richmond, are also descended from John of Manour."

James O'Connell

Polmair,<sup>1</sup> who was the sixth in descent from William Dundas, of Duddington and Manour, the second son of Sir William Dundas, of Dundas, who represented the fourteenth generation of that ancient family in a direct male line.

The death of James Dundas, of Philadelphia, occurred on July 4, 1865. A newspaper notice of his decease says that "the coal interest of this State is largely indebted to him for its development, both from his counsel and his large investments." Another account has the following: "Mr. Dundas was formerly president of the Commercial Bank, which position he filled with distinguished ability. He was also for many years a director of the Philadelphia Savings-Fund Society, an institution of very high character and extended usefulness." With the Pennsylvania Horticultural Society he was long identified as one of its vice-presidents. His taste for horticultural pursuits was strongly marked, and his liberality rendered his gardens and conservatories quite celebrated. In beauty and rarity they were not surpassed by any in Philadelphia. His gardener had become quite a well-known personage, and generally took a number of prizes at the exhibitions of the Horticultural Society. Few conservatories in the country can show so good a collection of air-plants as the one he had in charge, and the great tank containing the Victoria Regia was an unerring resort for the curious. Mr. Dundas was ever liberal, and he was the friend of all praiseworthy public enterprises. His residence, at the northeast corner of Walnut and Broad Streets, has long been a theme of public admiration. Mr. Dundas was a man of strict integrity, of the utmost punctuality, prompt and quick of action, kind and just to all with whom he had intercourse, and a true friend; those who knew him best learned to respect and love him.

The Philadelphia Loan Company was organized in 1836, and was for a time active. It went out of existence in 1838. The capital was \$500,000. George S. Schott, M. D., was president, and T. M. Moore, cashier. The board of directors consisted of George S. Schott, Joseph R. Chandler, William Stephens, Benjamin E. Carpenter, John F. Ohl, Nathaniel C. Foster, Thomas E. J. Kerrison, John R. Walker, Bartholomew Graves, William E. Whitman, James Simpson, Benjamin Duncan, and T. M. Moore. When the company went out of existence it had no assets.

In October, 1839, the "Great Western" and the "British Queen" carried nearly \$1,000,000 each in specie to England, and the demand for exchange on London was unsatisfied; an immense pressure on the commercial community followed, and strong fears were felt not only that the banks would suspend specie payments, but that many failures would follow.

On Oct. 8, 1839, all the banks of the city were requested to meet by committee, and a committee was

appointed by the Board of Trade to take into consideration the embarrassed state of the commercial affairs of the city. The banks met by committee, and the question being taken on immediate suspension or resumption resulted as follows. Those voting yea were the United States, Girard, Western, Moyamensing, Schuylkill. Those voting no were the Philadelphia, Farmers' and Mechanics', Mechanics', Merchants' and Mechanics', Commercial, North American, Southwark, Penn Township, Kensington; Pennsylvania and Northern Liberties not represented.

On October 9th, at a meeting of the directors of the Philadelphia Bank, a communication from the directors of the Bank of the United States was received, saying that they had suspended. The Philadelphia Bank resolved to follow their course, and the same was adopted by all the banks in the city except the Commercial.

The number of banks in the city in 1840 was sixteen, with capital amounting, exclusive of that of the Bank of the United States, to \$18,050,000.<sup>2</sup> In 1848 there were in Philadelphia County thirty-four banks, with an aggregate capital of \$7,866,000; circulation, \$6,400,000; specie, \$1,800,000; in Philadelphia fourteen banks, with \$9,222,000 capital and \$4,200,000 circulation and \$3,900,000 specie.<sup>3</sup>

From 1848 to 1860 the capital and accommodations of the banks of Philadelphia did not materially vary. To the above list the Tradesman's Bank must be added, with a capital of \$150,000; discounts, \$495,000; circulation, \$182,730; specie, \$215,061; deposits, \$518,871,—making for 1854, \$10,700,000 of capital, \$25,285,319 of loans, \$14,942,602 of deposits, \$4,692,146 of circulation, and \$3,940,139 of coin.

The following abstract statement of the condition of banks of Philadelphia is taken from the auditor's official report to the House of Representatives, Jan. 19, 1848:

Bank.	Bills Discounted.	Circulation.	Specie and Treasury Notes.	Due Depositors.
Bank of Pennsylvania	\$ 2,354,644.34	\$492,092.50	\$272,640.09	\$823,249.91
Philadelphia Bank	2,781,045.60	693,384.04	649,718.87	1,409,571.95
Bank of North America	1,869,664.24	430,426.41	981,993.02	1,278,491.08
Commercial Bank of Pennsylvania	1,583,539.32	258,429.00	257,462.80	721,226.95
Farmers' and Mechanics' Bank of Philadelphia	2,414,399.63	613,925.27	416,349.44	1,468,751.28
Girard Bank	648,550.20	255,335.00	320,356.68	422,030.20
Bank of Commerce	460,816.40	155,545.00	185,473.61	252,239.80
Southwark Bank	590,117.82	237,020.00	298,925.44	525,292.29
Mechanics' Bank of City and County of Philadelphia	1,359,186.22	367,055.00	192,702.64	604,062.16
Western Bank of Philadelphia	1,252,448.83	277,365.00	189,841.24	551,606.80
Bank of Northern Liberties	961,232.91	310,147.00	246,089.87	744,495.69
Bank of Penn Township	957,000.96	242,770.00	263,050.29	500,330.84
Manufacturers' and Mechanics' Bank of Northern Liberties	781,879.53	280,715.00	164,272.33	323,759.85
Kensington Bank	692,542.16	221,517.50	143,765.27	408,767.61
Bank of Germantown	215,605.20	80,670.00	25,915.83	114,128.09

The long suspension of specie payments which began Dec. 30, 1861, and ended Jan. 1, 1879, was attended with many circumstances and events in the history of banking and currency.

The first suspension of specie payments by the banks took place Sept. 1, 1814, and extended throughout the United States. From 1817 to 1837 there were no suspensions of specie payments, but on the 10th of May, of the latter year, the banks suspended, and the city and corporations issued their "shinplasters." This suspension continued over a year. The New York banks resumed in 1838, but the Philadelphia banks declared they were unable to resume. Governor Ritner, in July, 1838, by proclamation declared that the banks by suspending specie payments had violated their charters, and he ordered them to resume on the 13th of August following. This intimation of trouble ahead induced the banks to resume payments in specie, which they continued to do for over thirteen months, when, on the 9th of October, 1839, they again suspended, but were driven to resumption on the 15th of January, 1841. This lasted but three weeks, when the failure of the Bank of the United States (Thomas Dunlap, president) caused all the other Philadelphia banks to suspend specie payments. There was no general day of resumption, but each bank in its own good time commenced to pay out specie in small sums, which continued for several years. The continued issue of bank paper, unrestrained by resumption, stimulated speculation and excessive importation until, on the 21st of September, 1857, the Bank of Pennsylvania succumbed in total failure, and every other Philadelphia bank suspended, which was speedily followed by all the banks throughout the country. Resumption was gradual and slow, but steadily progressed until the threatening condition of the country, produced by the approaching war between the States, produced a general suspension of specie payments, which were resumed for a short period in 1862, which, with exceptional instances of payments of small amounts of specie, continued until Jan. 1, 1879, when all the banks of the country resumed the payment of specie.

Intimately connected with the suspension of specie payments are those crises of monetary affairs called "panics," in which men take more counsel of their fears than of their judgments. The first distinct and well-defined "panic" occurred in May, 1837, and under its baleful influence some of the oldest and stanchest houses of Philadelphia went down. Among these may be mentioned those of Samuel Comly, Jackson, Riddle & Co., R. & J. Phillips & Co. Another "panic" broke out in 1841, when Pope & Aspinwall and John Brock, Son & Co. were sacrificed. There was a general depression in business all over the country from 1812 or 1813 to 1819 or 1820. Again, in 1857, the sudden failure of the Ohio Life and Trust Company of Cincinnati produced that remarkable condition of financial nervousness which has taken

the generic name of "panic;" and "Black Friday," in September, 1869, is a memorable instance of panic.

One of the most widely known of our business men thirty or forty years ago was Enoch W. Clark, the senior partner in banking-houses in Philadelphia, New York, St. Louis, and New Orleans, all of them leading houses in the domestic exchange and banking business. Mr. Clark is well remembered by our older merchants as an enterprising and honorable business man, and as a very bright and genial companion. He was born in 1802, in East Hampton, Mass., and was a direct descendant of Capt. William Clark, who settled near there in 1639. He received his business education in this city with Solomon Allen, whose firm of S. & M. Allen & Co. was one of the most prominent of the banking firms existing in the early part of this century, with principal houses in New York and Philadelphia and branch houses in all prominent cities North and South. Mr. Clark, on attaining his majority, in 1823, was sent by Mr. Allen to Providence, R. I., to open a branch house, not because that was a very promising business point, but it was the only good opening not already occupied by a branch or allied house.

Mr. Clark met with marked success almost at once, but after a few years he severed his connection with the Allens, and was less successful in another branch of business. He moved to Boston in 1833, and resumed the banking business; was at first successful, but was later carried down in the reverses of 1836. He then moved to Philadelphia, and in January, 1837, established, in connection with his brother-in-law, Edward Dodge, the banking firm of E. W. Clark & Co., on Third Street, on the site now occupied by the building erected by himself in 1852, and always the headquarters of his own or succeeding firms of the same name.

After the failure of the United States Bank, in 1837, domestic exchanges were very much disturbed for many years; specie payments were twice suspended; banks were everywhere established, generally on an insecure basis, and many of them were short-lived. Losses as well as profits were large in the exchange business, but the most enterprising and well-informed exchange dealers were afforded a fine opportunity to do a remunerative business. Exchange on Southern cities, or notes issued there, purchased at a large discount because no direct returns could be obtained in either specie or exchange, were forwarded with instructions to remit to some other point on which exchange could be obtained, and perhaps from that second point remittances came only through a third. The readiness in buying drafts on all points, promptness in making collections, and the cultivation of business relations with leading houses in different cities, and finally the opening of branch houses in St. Louis, New York, and New Orleans, brought the new firm into prominence, and secured to it a very large and remunerative business in domestic exchanges. Those whose financial experience

*Engraved by Samuel Sartain Phil<sup>da</sup>*

*W. Hawk*

does not extend beyond the time when the present banking system was established know nothing of the condition of the currency and exchanges after the failure of the United States Bank, and the extent to which private banking firms transacted the different branches of the exchange business now monopolized by the National Banks.

The profits resulting to Mr. Clark from seven years' business, between 1837 and 1844, were all used by him in the payment of debts incurred in Boston in 1836, and the considerable fortune which he left to his family in 1856 was acquired in 1844 and later.

His eldest son, Edward W., became a partner in the house in January, 1849. Jay Cooke had then been a partner for five years, and Mr. Clark gradually withdrew from active participation in the business. Clarence H. Clark was admitted in 1854.

Mr. Clark did not live long to enjoy the rest thus afforded. He was attacked in 1855 by a painful disease due to nicotine poisoning, and died in 1856, before completing his fifty-fourth year.

Jay Cooke, who had been at one time a partner of Enoch W. Clark, was born in Huron County, Ohio, Aug. 10, 1821. His business life commenced at the early age of thirteen in a store in Sandusky, where he remained nearly a year, and then went to St. Louis, from whence he returned home to continue his education. He soon removed to Philadelphia, and accepted a position with William G. Moorhead, who was then largely engaged in railroad and canal enterprises. He subsequently obtained a position in the banking house of E. W. Clark & Co., of this city. He was about seventeen when he entered this house, but his earnest zeal to understand the business of banking, and his close attention to all details, so impressed his employers that before he attained his majority he was intrusted with full powers of attorney to sign the name of the firm; and in 1842, when twenty-one years of age, he was admitted a partner, in which he remained until 1858. In the early part of 1861 he went into partnership with W. G. Moorhead, under the style of Jay Cooke & Co. When the first of the war loans was advertised, this house obtained and sent to Washington a large list of subscriptions; afterward the house placed a large part of the war loan of Pennsylvania. The subsequent success of the house in placing the war loans obtained for its head the name of *the Financier of the Rebellion*. The house continued to prosper until it became the bankers and fiscal agents of the Northern Pacific Railroad Company. The heavy advances made by the firm to this company, depending for reimbursement on the sale of bonds, caused the suspension of the company on the 18th of September, 1873, after which the concern was placed in bankruptcy, from which Mr. Cooke emerged with loss of fortune, but with preservation of character.

Sacrificing all his properties to meet the demands of his creditors, and disdaining to resort to the legal

technicalities which might have largely protected him, he passed into an honorable retirement, leaving behind him the example of a man who was as brave in meeting disaster as he had been wise and energetic in financially holding up the hands of the government, and in opening to civilization and settlement the magnificent and fertile empire of the new Northwest. Recalling now the financial strength of the government, its untarnished credit, and the high valuations of its securities in all the money markets of the world, no person familiar with its history can avoid acknowledging the influence of Mr. Cooke in the policy which has led to such proud results.

The Drexel Banking House, in broad influence and honorable reputation, occupies the front rank. It was founded in 1837 by Francis M. Drexel, deceased, father of the two brothers of that name who are now at its head. It became large, prosperous, and of high credit in his lifetime. Their New York house (now Drexel, Morgan & Co.) dates from 1850; and the Paris house (Drexel, Harjes & Co.) was established in 1867. The loans, credits, and other financial operations of these three Drexel banks extend all over the commercial world. The London connection is J. S. Morgan & Co. The Drexel brothers above referred to are Anthony J. and Francis A., and a brief sketch of the former is given here.

Anthony J. Drexel was born in Philadelphia in 1826, and long before he was through with his school studies entered the bank at the age of thirteen. Since then (or rather since his school education was finished) the history of the banking establishment has been his life. Its progress, its great growth, its high repute, its wide influence, the extent of its operations, furnish the material that would go into his biography, his brother's, and his father's. Otherwise the writer can only speak of his character, and the admirable qualities which give him prominence in business and in private life. First, as to his breadth of view as banker. The Drexel houses are money-furnishing establishments, their principal transactions being to supply capital for individual and corporate enterprises or needs,—for government use, national, State, and municipal,—and for times of public emergency. In all such negotiations, but especially those of a large or public nature, Mr. Anthony Drexel has a quick and intuitive perception, his mind taking in all the prominent bearings of the proposition at once, and enabling him to decide promptly what ought or ought not to be done; and with him what should be done takes notice not only of the interests of his own banks, but just and generous regard for the interests of the client and for the public also, whenever the negotiation has its public side. If it is an occasion when solvent business men or fiduciary institutions are hard pressed or might be compelled to suspend or break owing to panic in the money market, the means are furnished to save the men or the institutions from breaking or discredit. Mr. Drexel has

many times done this under all sorts of circumstances, from the humblest to those involving safety or ruin to very large corporations, where if the relief had not been extended there would have been peril of widespread disaster. For all such matters he has instinctive insight, the broadest view, and the quickest decision.

The Drexel houses have supplied and placed hundreds of millions of dollars in government, corporation, railroad, and other loans and other securities. These securities are placed for investment; they have no dealings with speculative bonds or stocks. Sound and sure transactions are the invariable rule. Along with safety, the honor of their banking-houses for fair dealing is maintained on the highest plane. An illustration of this occurred at the outbreak of the Franco-Prussian war, in 1870. A large number of travelers and tourists having Drexel letters of credit were at the time in Germany, Switzerland, France, and elsewhere on the Continent, cut off from communication and compelled to remain where they were, because the railways and telegraphs were seized for exclusive government use.

In this emergency, the Paris house directed a large amount of gold to be sent to Geneva and other places on the Continent to protect their letters of credit, and authorized the holders of them, wherever they were, to draw through the local banks, in francs or sterling or marks or dollars, as would be most available to them. This cost the Drexels a great deal of money, but it gave instant relief to the holders of their letters, and shows the high standard of credit they set for their house. This spirit of scrupulously honorable dealing, characteristic of Mr. Drexel, is shown in all transactions, including the treatment and preferment of the employés of the several houses.

In the promotion of all good works, in Philadelphia especially, Mr. Drexel is always among the very foremost, and is relied upon usually as the person to take the lead, and in this he does with generous heart and full hand, whenever a charitable or benevolent purpose is to be helped, an educational, art, scientific, or industrial institution or enterprise to be encouraged, or any project for the general welfare is to be advanced. A catalogue of instances illustrating this would be very long indeed.

In all matters outside of his business, in which he is strong and incisive, Mr. Drexel is one of the most retiring and unpretentious of men, disliking everything in the nature of display or self-assertion. His habits are of the quietest kind, with a strong inclination to art, especially music, both brothers being expert musicians. No one, observing his quiet demeanor, could suppose that he is the great banker whose name is like gold and inspires confidence everywhere, who has been sought for to accept the highest fiduciary position, and who has declined the high financial office of Secretary of the Treasury of the United States.

The year 1862 opened with a general suspension of specie payments by all the banks throughout the Union. On February 25th of that year Congress authorized the issue of \$150,000,000 of treasury notes, known as "greenbacks," and made a legal tender for all private as well as public indebtedness. July 11th another issue of \$150,000,000 of greenbacks was provided for. The price of gold began to rise with the issue of greenbacks, and between January and July of 1862 the premium reached twenty per cent. In January, 1863, another issue of \$100,000,000 was authorized, and gold rose to fifty per cent. premium. A great scarcity of specie and small change was experienced all over the country, and cents sold at a premium in Philadelphia. Even postage-stamps and car-tickets entered into circulation. October 9th, gold was held at a premium of twenty-five per cent. and silver at seventeen per cent., while on the 16th the former reached a premium of thirty-seven per cent. and the latter of twenty-five per cent.

The National Banking Act, approved Feb. 25, 1863, authorized \$300,000,000 of bank capital, to be distributed, one-half according to the banking capital and one-half according to population, and on the day of its approval the premium on gold in Philadelphia was seventy-two per cent. March 5th and 6th witnessed great excitement in the gold market. The subscriptions to the five-twenty loan for the week ending October 31st, amounted in Philadelphia to \$16,500,000, the total subscription in the city amounting to \$36,600,000. The act of June 30, 1864, limited the amount of greenbacks to \$400,000,000, and such part of \$50,000,000 more as might be needed to redeem temporary loans. The premium on gold continued to rise, until, in July, 1864, it reached \$2.85. The fluctuations in prices of all kinds were frequent and rapid, following as much the vicissitudes of the war as the volume of the currency. Suffering and distress prevailed among all classes dependent upon fixed incomes, while stupendous speculations in gold, stocks, and provisions were carried on. The temptation to speculation and fraud seemed to grow and expand as well as the currency, while heavy losses and depressions followed almost all legitimate trade and business.

The Fidelity Insurance, Trust, and Safe Deposit Company was incorporated March 22, 1866, and began business on September 1st of that year. It receives deposits of money at interest, deposits of securities and other valuables, rents burglar-proof safes, furnishes letters of credit, collects incomes and manages estates, and acts as executor, administrator, guardian, assignee, receiver, and trustee, under appointment by courts, corporations, or individuals. It has a capital of \$2,000,000, and has, at Nos. 327, 329, and 331 Chestnut Street, a building of sufficient magnitude, thoroughly fire-proof, with vaults of impregnable strength, and a complete system of watching. The officers are Stephen A. Caldwell, president;

*J. A. Caldwell*

John B. Guest, vice-president; Robert Patterson, secretary and treasurer; and George S. Clark, safe superintendent. Stephen A. Caldwell, the president of this company, was born in Newburyport, Mass., Sept. 19, 1822. His ancestors lived in Ipswich, a neighboring town in the same county (Essex). The first of the family, John Caldwell, presumably came from England; at all events, he was in Ipswich in 1654, a landowner, and a man in good circumstances.

FIDELITY INSURANCE, TRUST, AND SAFE DEPOSIT COMPANY.  
329 Chestnut Street.

In 1654 he married Sarah Dillingham, who was born in Ipswich in 1634, and from them has descended a numerous progeny. The eldest son for eight successive generations was named John, and inherited the father's estate, according to English custom. The family for two hundred and twenty years lived in the same home. Mr. Caldwell was educated at the high school, a public school in his native town. He left school early, having, in the spring of 1834 (he not having reached his twelfth year), entered the counting room of a shipping merchant on one of the wharves of Newburyport; but, finding too much leisure ungenial, in the fall of the same year he left his situation for one of greater activity in the employ of a mercantile firm, largely engaged in the West India

and coastwise trade. He remained in that situation, which was one of considerable labor, for some two and a half years, when he accepted a situation as clerk in a bank just then going into business. There he remained, filling the position of clerk and book-keeper, until February, 1841. On the 22d of that month he entered the counting-room of David S. Brown & Co., of this city. On June 1, 1848, he became associated with Benjamin T. Tredick, of the firm of David S. Brown & Co., and Samuel E. Stokes, of the firm of Thomas & Martin, and commenced the dry-goods commission business, as the firm of Tredick, Stokes & Co., which continued until Dec. 31, 1865, and was succeeded by the firm of Stokes, Caldwell & Co., which remained in business until Dec. 31, 1879, when the firm was dissolved by the death of Mr. Stokes. Of the six members comprising the firm at various times, he is the only survivor.

In March, 1875, Mr. Caldwell was elected president of the Fidelity Insurance, Trust and Safe Deposit Company, to succeed N. B. Browne, then lately deceased. He had been a director in the institution from its commencement, and for some years a vice-president. He is, and has been, a director in the First National Bank from the date of its organization. He was also a director for eight years in the Union League, and was for one year its secretary. In May, 1880, Mr. Caldwell was appointed by the United States Circuit Court one of the receivers of the Philadelphia and Reading Railroad Company and of the Philadelphia and Reading Coal and Iron Company. Mr. Caldwell married, May 29, 1845, Miss Frances R. F. Dodge, in Ipswich, Mass. He has two daughters, the younger of whom is the wife of Henry Markoe.

The second general bankrupt act was passed by Congress on March 2, 1867; the Fourth National Bank of Philadelphia closed its doors on Feb. 23, 1869, in consequence of the defalcation of one of its officers, but subsequently resumed business. In September a corner in gold was made which belongs to the financial history of the country, since it was the legitimate fruit of the then existing financial system. The Secretary of the Treasury interposed by a sale of gold, and put a stop to the proceedings of a clique of speculators. But "Black Friday" remains a noted period in the financial history of the country.

In the summer of 1873 the Granger agitation in the West frightened investors from railroad bonds, and crippled the enterprises which depended on the continuance of these investments for funds. The New York Warehouse and Security Company failed on September 8th, confidence became impaired, and a run on persons known to be burdened with railroad securities followed. September 18th Jay Cooke & Co. succumbed to their demands, and a panic followed from the effects of which the country did not recover for several years.

The Resumption Act was approved by President Grant on the 14th of January, 1875; the title was

"An Act to Provide for the Resumption of Specie Payments." The premium on gold had declined from 42 in 1865 to 12 in 1875, and diminishing at the same rate, it would have disappeared in four years more. By the act, the coinage of silver was designed to replace the fractional currency. The charge of one-fifth of one per cent. for coining gold was abolished, so as to prevent the owners of gold bullion from sending it abroad, where no coinage charge was made. The restriction on the volume of bank-note currency to \$354,000,000 was repealed, so that any person who desired might engage in the banking business, and all banks might issue as many notes as should be needed, provided only that such notes should be fully protected by securities deposited for that purpose with the Treasurer of the United States. The act furthermore declared that after the 1st of January, 1879, the Secretary of the Treasury shall redeem in coin the United States legal-tender notes then outstanding on presentation for redemption at the office of the Assistant Treasurer of the United States, in New York, in sums of not less than fifty dollars. To provide money for this purpose, the Secretary was authorized to use any surplus revenue not otherwise disposed of, and to sell at not less than par in coin United States notes bearing interest at the rate of five, four and one-half, or four per cent. In January, 1878, a year before the time set for redemption, the premium on gold had declined to a fraction over one per cent.; in March the quotations were a fraction below one per cent. The paper dollar had appreciated in three years from 89 cents to 99 and a fraction. The purchasing power of the currency was greatly diminished by the enormous issues during the war. But while property did not shrink after 1865, the dollar grew in purchasing power as its value increased.

The Resumption Act was the culmination of American finance, and perfected the National Banking Act, which revolutionized banking and currency all over the Union. Together they have restored national control and supervision, and provided a uniform currency to the whole Union.

The Guarantee Trust and Safe Deposit Company was organized Nov. 2, 1872. Its capital is \$1,000,000, and its business includes the safe-keeping of valuables, renting of safes in its burglar-proof vaults, receiving of deposits of money at interest, the collection of interest or income, execution of all manner of trusts, management or settling of estates as executor, administrator, assignee, receiver, guardian, trustee, agent, or

attorney, etc. It has erected, at Nos. 316, 318, and 320 Chestnut Street, a building that is claimed to be not only absolutely fire- and burglar-proof, but is also one of the finest architectural adornments of the principal thoroughfare of the city. The present administration consists of, President, Thomas Cochran; Vice-President, Edward C. Knight; Treasurer, John S. Brown; and Secretary, John Jay Gilroy.

Thomas Cochran, the president of this company, was born near Mercersburg, Franklin Co., Pa., on the 12th of April, 1832, both of his parents being of Scotch-Irish descent. The father died when his son was but little more than an infant, and the family removed shortly afterward to Harrisburg, and subsequently to

GUARANTEE TRUST AND SAFE DEPOSIT COMPANY.

Philadelphia. He received a thorough academic education, and then began the study of law, having chosen that profession. He was admitted to the bar of Philadelphia on the 2d of December, 1854, and opened an office in this city.

Although early evincing a strong aptitude for the practice of law, his wide-reaching abilities and popularity were such that he was gradually brought into other relations, mainly of a public character, and he eventually abandoned the profession of his choice. He was chosen in October, 1861, a member of the Pennsylvania House of Representatives from the Seventh Legislative District of this city. By suc-

*W. H. Woodcut from Phil.*

*Thomas Cochran*

cessive re-elections he continued in this body until the close of 1865, his majority being increased at each election. During his term of service the American civil war was in progress, and many important questions were brought before the State Legislature bearing directly or indirectly on the great domestic struggle. In both Houses there were an unusual number of able men, who were called from private walks of life by the disturbed condition of the country, and who had already, or have since, attained high distinction in various spheres of public life. During all these years Mr. Cochran was an active member of the House, serving upon the most important standing committees, being, in 1865, chairman of the Committee of Ways and Means. He exerted a powerful influence in securing uninterrupted State aid for the Union cause, and advocated every measure looking toward the abolition of slavery. One of his most noteworthy acts relative to State legislation was upon the establishment throughout the commonwealth of home schools for the orphans of those dying in the service of the nation. Certain measures had been presented to the House of Representatives looking toward the establishing of such institutions, but, owing to differences of opinion as to details, defeat was certain. At this juncture Mr. Cochran presented as a substitute a bill drafted by him, the simple but effective provisions of which commended themselves to his colleagues, and it became a law, under which these charities have been established and incalculable good has been done.

In 1865 the city of Philadelphia was on the verge of financial embarrassment, occasioned by the large expenditures incident to the civil war and the small amount of revenue received from taxable property, mainly due to inequality in assessment. At this juncture the Board of Revision of Taxes was created by act of Assembly, and given power to assess and adjust the valuation of property, and to control all the details looking toward an equitable basis of taxation. By appointment of the judges of the city, Mr. Cochran was made a member of that board, with two associates. Under his able administration the entire tax system was remodeled, and the valuation of property returned at three times its former amount. No unjust discriminations were made, and the city, by obtaining its fair tax return on the valuations so adjusted, was lifted from its financial difficulties. This was not the work of an instant,—it required the steady and untiring labor of several years. And when Mr. Cochran resigned his position, at the close of 1876, he left to his city a tax system that is equal, if not superior, to that of any other municipality in our land. In the department of taxation in social science Mr. Cochran was regarded as an authority, and his treatises on the methods of valuation and local taxation are standard papers on the subject to-day, and are frequently quoted.

From the very inception of the Centennial Exhibi-

tion Mr. Cochran took an active part. He was selected by the stockholders as a member of the Centennial Board of Finance at their first meeting, and being continuously re-elected, served to the end. He was its vice-president, and chairman of the committee on grounds, plans, and buildings. In this last position he worked with his accustomed vigor and industry, and it is to him, as much as to any one, that Philadelphia's great exhibition owed its success. For three years previous to 1876 he gave it his entire service daily, on the ground or in its offices, personally directing all that pertained to his most important committee; for to him was entrusted every plan or theory for the location, arrangement, and supervision of the grounds and buildings and the supply of water, gas, etc., together with all the specifications and contracts for the buildings. So well did he perform his work that, in the face of many difficulties, the grounds and buildings were in readiness by the opening of the exhibition; and not only in readiness, but so perfectly and tastefully had every detail been arranged, that the Centennial city of the park was the admiration of the world for its completeness and yet compactness, as well as for the beauty of its arrangements.

On the 1st of June, 1877, Mr. Cochran entered upon his present position as president of the Guarantee Trust and Safe Deposit Company, which he has placed among the foremost of the financial institutions of the country. His financial and executive ability is sought after in other directions. He was selected by Councils as the citizens' representative on the Sinking Fund Commission, a body which controls the management of all the city loans. He is a director in the Philadelphia Saving Fund, North Pennsylvania Railroad, Pennsylvania Museum and School of Industrial Art, and the Union League, and is a member of the Board of Trade. In every sphere of usefulness, public and private, Mr. Cochran is a man of unquestioned integrity, varied ability, and vigorous industry.

The Union Trust Company acts as agent or executor, receives deposits of money, and assumes charge, under guarantee, of such valuable properties as may be intrusted to its vaults. It has a capital of \$1,000,000, and was chartered Oct. 16, 1882, with W. C. Patterson as president, who has been succeeded by James Long. M. H. Stokes has been secretary and treasurer from the foundation of the company. The offices are at Nos. 611 and 613 Chestnut Street.

The Philadelphia Trust, Safe Deposit, and Insurance Company does a general trust company business, provides safes for the keeping of valuables, and receives money on deposit. It was incorporated April 15, 1869, with a capital of \$500,000, which has since been increased to \$1,000,000. In 1874 the company removed from its original office, in the Philadelphia Bank building, to a fine white marble structure which it erected at Nos. 418, 415, and 417 Chestnut Street.

In 1884, J. L. Erringer is president and William L. Du Bois secretary and treasurer. A surplus of \$600,000

PHILADELPHIA TRUST, SAFE DEPOSIT, AND INSURANCE COMPANY.  
Nos. 413, 415, and 417 Chestnut Street.

attests the success of the company and its financial solidity.

**Philadelphia Clearing - House Association.**—Previous to the institution of a clearing-house in this city settlements between the various banks were made as follows: Each bank sent around with a clerk all the bank-notes in its possession issued by other banks, and all checks drawn on them, to the Girard Bank at half-past eight o'clock in the morning. The checks or notes on each particular bank were handed to its representative in a package or "book," as it was called, and memoranda were made showing the amount given and the amount received. Each bank was thus enabled to ascertain whether it was a debtor or a creditor. The clerks then departed to their own banks, but returned again at twelve o'clock to complete their settlements. Each one of the debtor banks handed over to its creditors due bills for the separate amounts of indebtedness, which were payable in gold upon presentation to the drawer. There was no manager to direct the operations, and consequently proceedings were carried on in considerable confusion.

This system of exchange, though immensely superior to the primitive system of presenting notes and checks at each separate bank for payment, was nevertheless clumsy compared with that which is in vogue at present. To New York belongs the honor of being the first to establish the present clearing-house system. Philadelphia was the next city to adopt it, the Philadelphia Clearing-House Association being organized on Jan. 25, 1858, with seventeen banks as members. The clearing-house was opened for business on the 22d of March, 1858, in the rooms in the Farmers' and Mechanics' National Bank which it still occupies. The condition of the banks constituting its membership was as follows:

Total capital.....	\$11,300,915
" loans.....	21,020,198
" specie.....	5,661,782
" deposits.....	13,201,599
" circulation.....	2,296,444

During the first year the average daily amount of exchange was \$2,991,939.90, and of balances \$147,434.21.

In 1883 there were thirty banks (all national) holding membership in the association. State banks and private banks sent their checks to the various members to be cleared through them. A comparison of the condition of all banks members of the Clearing-House in 1883 with that of the members in 1858 will show how immensely the banking business has grown. In 1883 the united capital of the associated banks was \$17,078,000; the loans, \$76,814,658; lawful money, \$20,894,699; deposits, \$58,015,749; and circulation, \$9,286,548. The average daily exchanges were \$9,192,214.01, and the balances \$789,167.37. The total exchanges during 1883 were \$2,812,817,488.59, and the balances \$241,485,216.40.

The ease, the precision, the safety, and the quickness with which settlements involving millions of dollars are made by banks with one another through the Clearing-House render it one of the marvels of the day. In Philadelphia there are two clearances daily, the first being known as the morning exchange, and the second as the runners' exchange. Preparation for the first commences at three o'clock in the afternoon of the day previous, when all the checks received by each bank during the course of the day against other banks in the city (except those checks coming in the early morning mail) are distributed, and placed in envelopes or packages, directed to the proper banks. These packages are well gummed and sealed with wax, and the amounts within are indorsed on the outside with ink or indelible pencil. In the morning the representatives of the banks assemble at the Clearing-House promptly at 8.30 o'clock, each bank sending two persons, a package clerk and a settling clerk. Precisely at that hour the package clerks begin to move in regular order before the desks at which the settling clerks are stationed, and as they pass, deliver to each of them the package containing checks against his bank. The settling clerk receipts for the amount on a slip held by the package clerk. When the de-

liveries are ended, each package clerk obtains an account of the amounts received by the bank which he represents, and then departs. All this portion of the operation is completed within ten minutes. The settling clerks remain with the manager, and see that the settlements have been completed without mistake, and if mistake exists, they work until enabled to strike a balance. They are generally through with their labors in half an hour from commencing. The proceedings are superintended by the manager. Debtor banks bring their payments to the Clearing-House before twelve o'clock, and settlement is made with the creditor banks at a later hour. Payments are made in gold certificates, legal-tender notes, or due bills. The Clearing-House Association receives on deposit such United States gold coin as any of the associated banks may choose to send to it for safe-keeping for Clearing-House purposes, and certificates in exchange are issued to any of the depositing banks in sums of \$5000. These certificates are negotiable only among the Associated Banks, and are used in the payment of balances at the Clearing-House. Due bills are secured by collateral deposited in the following amounts: Banks with capitals of \$800,000 and over, ten per cent.; banks with capitals of \$500,000 and under \$800,000, fourteen per cent., but the deposits in each case need not exceed \$80,000; banks with capitals of over \$250,000 and under \$500,000, twenty per cent., but the deposits in each case need not exceed \$70,000; and banks with capitals of or under \$250,000, not less than \$50,000.

The runners' exchange takes place precisely at 11.30 o'clock in the morning, and is confined to notes, acceptances, and checks payable on the day of the exchange, a large portion of the items being received through the morning mail. It is conducted in the same manner as the morning exchange.

The officers of the association are a president and a secretary, who are elected annually. The general management is intrusted to a committee of six, known as the Clearing-House Committee. The annual expenses are met by the assessment of dues as follows: Banks having capitals of less than \$500,000, \$100 each annually; banks having capitals of \$500,000 or more, and less than \$1,000,000, \$200 each annually; and banks having capitals of \$1,000,000 and upward, \$300 each annually. Controversies among members of the Association are settled by a committee of arbitration.

The first president of the Clearing-House Association was Mr. J. B. Mitchell, President of Mechanics' National Bank, who retained the position until his death, in September, 1868, when he was succeeded by Joseph Patterson, the president of the Western National Bank, who is the present incumbent. George E. Arnold has been the manager since its opening for business.

The mention of the Clearing-House Association of Philadelphia naturally suggests the name of Joseph

Patterson, who has been since 1869 its president and an active member of its executive committee, and who, by length of service, is the senior of the presidents of the banks of Philadelphia. Born and bred in this city, Mr. Patterson has been long and honorably connected with its financial history. In August, 1842, while still young in years, he retired from an active and successful mercantile business to accept the presidency of that financial institution which is now known as the Western National Bank. His administration of the trust committed to him had been in the highest and best sense successful. He entered upon the management of the bank when the country was slowly recovering from the disastrous panic of 1837. Under his faithful and intelligent direction that bank has made large gains in times of prosperity, and in periods of financial depression it has met with no serious losses, so that to-day, after having returned in dividends to its shareholders many times the amount of its capital, it holds intact its original capital and a large surplus. Nor should it fail to be mentioned that, when the bank was reorganized in November, 1864, under the provisions of the National Banking Act, in addition to a large semi-annual dividend which had been previously regularly paid, a dividend of *one hundred per cent.* was declared out of the profits accumulated during preceding years, and paid in cash to its shareholders.

Mr. Patterson, while recognizing as the primary duty of a bank-officer the conservation of that capital which is the property of the shareholders, and its employment in such manner as to yield the largest return to its owners, has, nevertheless, had the intelligence to see that it is impossible to dissociate the prosperity of banking institutions from that of the business community. Therefore it is that, in periods of commercial distress, his action in the management of the bank, whose chief executive he is, and in the administration by the Clearing-House Association of the combined resources of all the banks of Philadelphia, has been marked by a wise liberality in the extension of financial relief. Especially in the panic of 1873 did the banks of Philadelphia, by their prompt and courageous action, render to the city and to its great business interests, services that never have been fully appreciated; and a debt of public gratitude, which never has been and never will be paid, is due to those whose financial skill and courage averted a great calamity. The keenness of perception and breadth of view which has shown Mr. Patterson that his duty to the bank of which he is president can best be performed by directing his thought and his energies to the protection of general business interests against impending peril, led him in 1861 to render a signal service to the government of the United States. On the 15th of August of that year, at the request of Mr. Chase, the then Secretary of the Treasury, representatives of the banks of New York, Philadelphia, and Boston met the secretary in New York.

It was a crisis in the history of the country. That magnificent outburst of national enthusiasm which followed the firing upon Sumter had spent its force. The defeat at Bull Run had dispirited the army, and disheartened the people. The daily expenditures of the government in the prosecution of the war exceeded \$1,000,000, and to meet these large disbursements the estimated income of the government from all sources for the current fiscal year was less than \$80,000,000, thus leaving nearly \$300,000,000 to be supplied by loans. The money markets of Europe were closed to the government, and no loan, if offered to the people, would be taken save at ruinous rates of discount. When the secretary frankly put this alarming state of affairs before the assembled representatives of the banks of the three cities, it is not surprising that they hesitated to accede to his request to loan \$50,000,000 in gold to the government. Then Mr. Patterson stepped forward, and, voicing that loyal sentiment of Philadelphia, which at all times in its history has supported the national authority, he reminded his associates, in a few earnest and well-chosen words, that the cause of the Union was their cause, that its interests were their interests, and that motives of patriotism and considerations of enlightened selfishness concurred in dictating that course of action upon their part, which would not only support the national credit, but also avert a financial disaster which must necessarily overwhelm the national government, the banks, and the commercial interests of the country in a common ruin.

As a result of Mr. Patterson's eloquent appeal the associated banks of the three cities loaned to the government, at par, \$50,000,000 at that time, and later in the same year an additional \$100,000,000. The effect of this timely action by the leading banks of the country cannot be overestimated. It furnished to the government the money required to meet the pressing demands of daily expenditure; it sustained the public credit; it reanimated popular confidence in the stability of the government; and it rendered possible that subsequent administration of the Treasury Department by which the means were provided for the suppression of the Rebellion.

The recognition and appreciation of Mr. Patterson's abilities have not been confined to his own city and State. From and after the meeting in New York, in 1861, Mr. Chase was accustomed to consult Mr. Patterson with regard to the fiscal policy of the government, and at various times other Secretaries of the Treasury, as well as committees of the Senate and House of Representatives, have benefited by his financial skill and experience. High and responsible public offices have also been pressed upon his acceptance, but, preferring the comparative independence of private life, he has never yielded to the solicitation. Nor has Mr. Patterson devoted all his time to business pursuits. He has been at various times connected with the public charities of his city, serving

as a director of the public schools, and for many years as a manager of the House of Refuge. He has long been a director and is now vice-president of the Deaf and Dumb Asylum, a vice-president of the American Sunday-School Union, and a trustee of the Jefferson Medical College. Throughout the war he was the treasurer of that Christian Commission which, in its humane action in relieving sick and wounded soldiers from North and South alike, justified the name it bore, and through his hands passed the millions of dollars that were so generously given and liberally expended, and was also a member of the Board of Finance of the Centennial Exhibition.

In 1876, Mr. Patterson was appointed by the Governor of Pennsylvania one of a board of commissioners, to whom was intrusted the duty of erecting a hospital for the insane of the Southeastern District of Pennsylvania; and at the first meeting of the commission he was elected its president, and thenceforward, and until the commission had completed its work, devoted much thought and time to it. The commissioners served without compensation, and well and faithfully discharged their trust. They selected a tract of land within the borough of Norristown, combining every advantage in location, in convenience of access, and in topographical features; and upon that ground they erected, within the limits of the State's appropriation, those admirably-planned and appointed buildings, whose construction marks a new era in the treatment of the insane poor, and which will be an enduring record of the liberality of the people of Pennsylvania, and a monument to the commissioners' faithful fulfillment of the trust committed to them.

After more than forty years of continuous service as a bank-president, Mr. Patterson performs with unimpaired force and vigor the duties of his responsible office.

The Philadelphia Stock Exchange is the scene of transactions which involve annually a larger amount of money than those of any other institution in the city; and next to the similar organization in New York, it is the largest and most important in the country. Though the dealing in stocks is full of excitement, and at times the room of the Exchange is resonant with the frantic shouts of the "bulls" and "bears," yet the history of the institution itself is a quiet and uneventful one. It originated about the beginning of the century, and at first the meetings were held in one corner of a room at the old Merchants' Coffee-House, corner of Second and Gold Streets, which was at that time the place of resort for the business men of the city. In this limited space the small number of brokers met each day to deal in stocks, bills of exchange, and promissory notes. A removal was made to another room in the same building, and subsequently another change was made to the Merchants' Exchange, corner of Third and Walnut Streets. Various rooms in that building were occu-

W. P. M. & Co. Boston 1847

*W. P. M. & Co.*

pied from time to time, until, in 1876, the Exchange took possession of its present quarters in the rear of the Girard National Bank.

Upon removing to the old Merchants' Coffee-House, a permanent organization was effected. The roll of membership at that time contained the following names: Matthew McConnell, James Glentworth, Clement Biddle, Andrew Summers, Jr., Thomas McEuen, George Eddy, William W. Biddle, Thomas Newman, James McCurrach, and Thomas Orr. Shortly after were added T. G. Laroche, Nicholas Arnous, James Musgrave, John Donaldson, Richard Hill Morris, Mark Prager, Thomas Greeves, Nalro Frazier, Kearney Wharton, Israel Whelen, Norton Pryor, and George Taylor, Jr. In 1818, the roll contained eighteen names, which were as follows: Thomas Biddle, James Musgrave, Nicholas Arnous, William J. Bell, Thomas McEuen, Thomas Hale, William Davidson, William M. Walmsley, Samuel Nevins, James Nevins, George Rundle, Brittain White, Mark Prager, R. Hill Morris, George Taylor, Jr., Thomas Greeves, John Wharton, and A. M. Prevost.

The first president of the Exchange was Matthew McConuell. He was followed in succession by Capt. James Glentworth, Israel Whelen, John Donaldson, James Musgrave (who filled the chair for many years), William M. Walmsley, and William F. Emlen. After Mr. Emlen's time the presidents were chosen monthly, and each member was obliged to serve once in two years, or submit to a fine of twenty-five dollars. This rule remained in force until August, 1861, when George McCamblos was made president. He held the office until August, 1871, and was followed by Henry G. Gowen, who was succeeded on the 4th of March, 1878, by Abraham Barker. Mr. George Gilpin was elected president on March 4, 1881, and was succeeded in 1883 by Nicholas Brice, who gave way, in turn, in 1884, to Henry Connelly, the present incumbent.

At first the fee for admission was \$30, but it was subsequently raised, successively, to \$50, \$250, \$300, \$400, \$500, \$1000, and \$2000. In November, 1868, the funds having accumulated to such an extent as to be more than sufficient to cover its expenses, and the association having reached a degree of importance that made a membership valuable, it was decided to raise the price of admission to \$5000, and to allow the sale of seats under certain restrictions. In 1881 the admission fee was advanced to \$10,000.

The most important changes in the Exchange in fifteen years have been the establishment of a Clearing-House in August, 1870, which greatly facilitates the transaction of business; the formation of a gratuity fund in December, 1875; and the institution, in February, 1880, of a governing committee, which has the management of the Exchange.

The number of members at present is 230. An idea of the amount of business transacted may be gained from the fact that as many as 271,000 shares

of stock have passed through the Clearing-House in one day, aggregating in value \$7,816,000. In 1881 the number of shares passing through the Clearing-House was 23,873,500, representing a cash value of \$1,207,516,600. There were, besides, transactions in bonds to a very large amount, and many sales of stock which were settled by members themselves without the aid of the Clearing-House.

The Clearing-House was instituted for the purpose of clearing such stocks as might be, from time to time, indicated by the governing committee. Members, however, have the right to receive their stock direct from the seller or deliver it direct to the buyer, if they prefer to do so.

Applicants for membership must be at least twenty-one years of age. The initiation fee for members admitted by election is \$10,000, and for those admitted by purchase \$250. Members have the right, if no unsettled claims from other members exist against them, of selling their memberships. The annual dues are \$25 for each member.

Any member who fails to comply with his contracts, or who becomes insolvent, is required to notify the president or chairman of the Exchange of the fact, and such notice forthwith works his suspension unless he makes settlement in accordance with rules adopted by the Exchange. If failure is made to give the notice of insolvency, and no sufficient reason appear for the omission, the member is suspended. If a suspended member fails to settle with all his creditors within one year from the time of his suspension, his membership is sold, and the proceeds are paid *pro rata* to his creditors in the Exchange.

The minimum rates of commission charged by members are as follows: one-quarter of one per cent. on the par value of bonds and loans, excepting United States securities and gold, on which commission may be one-eighth of one per cent.; on bank shares, twenty-five cents a share; on all other shares selling at or over ten dollars, twelve and a half cents a share; selling at or over five, but under ten dollars, six and a quarter cents a share, and selling under five dollars, three and one-eighth cents a share. If any member transacts or offers to transact business for less than these rates, he is for the first offense fined one thousand dollars, and suspended at the pleasure of the governing committee; and for the second offense, upon conviction, his membership terminates and is disposed of.

Upon the death of a member the sum of \$3000 is paid out of a gratuity fund to his heirs. To maintain this fund every member is required to pay the sum of \$15 on admission to membership; on the 1st of December of each year, \$15; and on the death of any member, \$10.

Good order is enforced by means of very strict rules, and fines of more or less severity are inflicted for their violation, according as the gravity of the offense seems to demand.

## STATISTICAL HISTORY OF THE FINANCIAL

NAME OF BANKS.	Began Business.	Incorporated.	First President.	First Cashier.	Original Capital.	Original Location.
Bank of North America.....	.....	Dec. 18, 1781.	Thomas Willing.	Tsach Francis.	\$100,000	Adjoining present site.
Centennial National Bank (U.S.D.).	.....	Organ. Nov. 26, 1878. Chart. Jan. 19, 1876.	E. A. Rolline.	H. M. Lutz.	Same as present.	Same as present, with formerly a branch at Centennial grounds.
Central National Bank.....	Feb. 1885.	Organized 1864.	G. M. Troutman.	Wm. H. Rhawn.	750,000	Same as at present.
City National Bank.....	.....	Chart. as "City Bank" March 30, 1855.	A. M. Eastwick.	James M. Riley, to 1863.	500,000	Same site as at present.
Commercial National Bank.....	.....	Established Feb. 7, 1810.	Andrew Bayard.	J. Williams.	750,000	About 3 doors below present location, and afterward on Market St., cor. Grindstone Alley.
Commonwealth National Bank.....	.....	1814.	.....	.....	afterward raised to 1,000,000	.....
Consolidation National Bank <sup>1</sup> .....	.....	Nov. 5, 1857.	Robert Morris.	Henry Gramho.	.....	S. W. cor. Fourth and Chestnut Streets.
.....	.....	Started August, 1855.	Jas. V. Watson.	Jos. N. Piersol.	300,000	In the old Commissioners' Hall of the Northern Liberties, 3d St., below Green, until 1857.
Corn Exchange National Bank (U.S.D.).	.....	August, 1858.	Alex. G. Cattell.	John W. Torrey.	130,000	2d St., near Walnut.
Eighth National Bank.....	.....	1885.	Jacob Naylor.	R. H. Williams.	275,000	1017 N. Second Street.

<sup>1</sup> So called because of the "consolidation" of the districts of the city about the time of its institution.

<sup>2</sup> First bank organized under the National Banking Act.

<sup>3</sup> Building erected for the first bank of the United States in 1798, and afterward, in 1812, was occupied by Stephen Girard as a bank. Organized under articles of association, Jan. 28, 1810.

<sup>5</sup> Will move to 311-313 Chestnut Street in 1886.

<sup>1</sup> First meeting of stockholders, Jan. 23, 1874. Named the "Iron Bank."<sup>2</sup> Down-town Branch at Fourth and Chestnut Streets.<sup>3</sup> Organized from the "West Philadelphia Mutual Savings Fund and Trust Company," which was chartered May 20, 1857, and April 19, 1859, with a capital of \$5000, Albert S. Aehmead being president, and Robert Glendenning cashier.<sup>4</sup> First meeting of stockholders, Nov. 8, 1872.<sup>5</sup> Same officers as the Spring Garden Bank, of which it is an attachment, the charter of the bank not allowing it to act as a safe deposit.

## CHAPTER LI.

## INSURANCE IN PHILADELPHIA.

To trace the history of the insurance business in Philadelphia we must go back one hundred and sixty-three years, and in doing so we find that while its original department in America—that of marine risks—was first established here, this city was also the scene of the earliest efforts to introduce its other branches,—fire and life insurance. In not more than a quarter of a century after Philadelphia had sprung into being its enterprising merchants owned vessels that traded to foreign ports as well as along the American coast, and upon which policies of indem-

nity were sought. But there were at that time no insurers in the colonies, and the ship-owners were forced to be content with placing their risks with the private underwriters of London, whose guarantees were not always of the most reliable character, and transactions with whom involved a serious loss in time and trouble. Still, this slow and annoying system prevailed until 1721, when John Copson perceived that the merchants and traders would probably be glad to support an agency which would place them in immediate connection with facilities for insurance. He consequently announced in the *Pennsylvania Mercury* for May 25, 1721, that on the following Monday he would open an office "at his house in the High Street where all persons inclining to be assured may

<sup>6</sup> Occupies a rather peculiar position, combining the functions of an insurance and trust company.<sup>7</sup> Has a branch in Germantown, with assistant cashier. Charles Antile is cashier. Is the agent for the American Exchange in Europe.<sup>8</sup> Will move during 1884 to a handsome granite edifice, corner of Main and School Streets.<sup>9</sup> The oldest and first institution of its kind in the city.<sup>10</sup> A benevolent institution, having no stockholders. The aim is to invest deposits for the purposes of the safety and profit of the depositors.

apply; and care shall be taken by the said J. Copson that the assurers or underwriters shall be persons of undoubted worth and reputation and of considerable integrity in this city and province." It seems that Copson's aim was the encouragement of underwriting in America; but, however commendable his purpose and however solid the security that he offered, he was so far from achieving success that for at least seventy years later marine insurances—"sea risques" they were then called—were effected abroad. The specifications and classes were almost as numerous and intricate as at the present day, but the business was upon a speculative basis, and the rates were calculated upon exceedingly narrow margins. Still, the system afforded some protection against the perils of the

ocean, and the London underwriters added to their bank accounts many thousands of dollars received as premiums from the opulent and thrifty ship-owners and shipping merchants of Philadelphia.

In the middle of the last century the "Old Insurance Office," as it was called in 1758, was kept at the Coffee-House, where the clerks of the office, Kefeltas and Sharp, attended every day, from twelve to one in the day and six to eight in the evening. A rival office—the New York Insurance Office, with Anthony Van Dam for clerk—was established the same year, and a permanent office taken next door to the Coffee-House. This was the office patronized by the Walters, Crugers, Janneys, and other city capitalists. In 1778, when the destruction of vessels and

convoys by the adventurous American privateers had greatly enhanced the risk of navigation, the "New Insurance Office" was opened at the Coffee-House. The mode in which the business was done is shown by an announcement of Cunningham & Wardrop, insurance brokers, who advertised, in 1779, that "they had opened a public insurance office, where policies are received and offered to the merchants and underwriters generally." Each underwriter subscribed his name for the sum he engaged. An interesting hand-book of the insurances of William Walton, in sums varying from £50 to £400, is still preserved. All these offices were for marine insurance.

Fire insurance was next to claim consideration. The Union Fire Company was established Dec. 7, 1736, when not a single building in the city or province was protected by a policy of insurance. On Feb. 18, 1752, there appeared in the *Pennsylvania Gazette* a notice that "all persons inclined to subscribe to the articles of insurance of houses from fire, in and near the city, are desired to appear at the court-house, where attendance will be given to take in their subscriptions every seventh day of the week, in the afternoon, until the 13th of April next, being the day appointed by said articles for electing twelve directors and a treasurer." The tenor of this notification indicates that articles of insurance had before been presented to the public attention, and that this meeting was the crystallization of the plan.<sup>1</sup>

Accordingly, on April 13, 1752, the subscribers convened at the court-house, and organized "The Philadelphia Contributionship for the Insurance of Houses from Loss by Fire," which was the first fire insurance company in America. The Lieutenant-Governor of the province, James Hamilton, was the first who subscribed, and the first private name is that of Benjamin Franklin. Twelve directors were elected, — Benjamin Franklin, William Coleman, Philip Syng, Samuel Rboads, Hugh Roberts, Israel Pemberton, Jr., John Mifflin, Joseph Norris, Joseph Fox, Jonatban Zane, William Griffiths, and Amos Strettell. John Smith was chosen treasurer, and it has been recently proved by papers in the possession of his grandson, John Jay Smith, that the prominence or leading interest in the concern is to be attributed to him. The insurance on his two houses on King [Water] Street was the first business transacted by the company.

<sup>1</sup> At the centennial meeting, on April 12, 1852, of the Philadelphia Contributionship Company, Horace Binney delivered an address, in which he said of the manner of formation, that it was very simple and direct. Two or three persons of activity, no doubt, and of sufficient esteem in the city, caused to be prepared the articles of association and agreement creating the company, and declaring the terms and conditions upon which they would insure the houses and buildings of each other, in and near the city of Philadelphia, against loss by fire, and the extent and limitation of the liability of the association for the loss. These articles of agreement they called a deed of settlement, and it was to be signed at first by all who were willing to insure with the company, and after the first election of directors and treasurer, who were to be chosen annually for the government of the company, by all who should in fact insure with them."

The plan was that of mutual assurance, and the members were denominated contributors. Policies were issued for a term of seven years upon the payment of a deposit, the interest of which, during the continuance of the policy, belonged to the company. In 1768 it adopted as a seal the "Hand in Hand," a badge or mark that was also placed on every property insured, that all contributors would be encouraged to save it from destruction by fire.<sup>2</sup> At the end of the first year the sum insured under its policies was \$108,360, and the deposit premiums amounted to \$1291.63. At the end of the first ten years the sum insured was but \$67,773, and deposits only \$982.29. The war of the Revolution somewhat embarrassed its operations, but did not seriously affect its financial standing, as at that day, as at the present, its investments were chiefly in mortgages. The old scheme of management proved a failure about that time, and under later modifications the existing principles are: Policy now perpetual to determine by mutual consent; no personal liability beyond deposit; profit and loss principle expunged.

The progress of the old company has ever been a pleasant and prosperous one, and what Director Binney said of it at its centennial, in 1852, is true in 1884: "There never was a period when a loss of any extent disturbed the finances of the company."

James Somers Smith is now the secretary and treasurer, and Charles Willing is chairman of the board of directors. The offices of the company are at No. 212 South Fourth Street.

As Philadelphia was the first city in the colonies to adopt a system of indemnity for loss by fire, so it was the first to establish a scheme of life insurance. In 1759 a charter was granted on the petition of the Synod of Philadelphia by the proprietary government to "The Corporation for the Relief of Poor and Distressed Presbyterian Ministers, and of the Poor and Distressed Widows and Children of Presbyterian Ministers." Easy and certain means were to be presented to the clergy of the church for making provision for themselves in old age, or for their families in the event of their decease, by the payment of advances, in consideration of which the company entered into a contract with the individual for the payment of a stipulated amount to his heirs at his death, or to himself in his declining years. In 1875 the name of the corporation was changed to that of "The Presbyterian Annuity and Life Insurance Company." It is the oldest organization for life insurance in the United States, and up to this time is conducted in pursuance of the objects for which it was founded.

Very similar in its form and scope was the "Corporation for the Relief of the Widows and Children of Clergymen of the Communion of the Church of England in America," which was established under a

<sup>2</sup> In this special mark, as in its general scheme of organization, the company was patterned upon the "Amicable Contributionship and Hand-in-Hand Fire Office," of London.

proprietary charter of Feb. 7, 1769. It was also chartered in New York and New Jersey. In 1797 the Legislature of Pennsylvania authorized a division of the aggregate funds among the three States, and the members of the Philadelphia branch then organized as the institution which still continues under the title of "The Corporation for the Relief of the Widows and Children of the Clergymen in the Communion of the Protestant Episcopal Church in the Commonwealth of Pennsylvania." Dr. Franklin framed the rates for the company when it was founded. It is not now in existence.

The Contributionship was the only fire insurance company in existence in Philadelphia up to 1783, but in that year it was directly the cause of the birth of a rival. A house belonging to one of the members caught fire from a burning shade-tree, and the officers thereupon resolved that they would demand an additional premium on all buildings in contiguity to inflammable trees. As a hundred years ago the streets of Philadelphia were lined with trees, and many houses were surrounded with groves, this was quite a serious matter. The dissenting members settled the question for themselves by seceding from the Contributionship and organizing the Mutual Assurance Company for the Insurance of Houses from Loss of Fire. By adopting the "Green Tree" as its badge the company signified its origin. Its policies were issued for a period of seven years, but on Aug. 12, 1801, they were made perpetual, and it now confines itself to this class of business.

It has in assets \$1,500,000 of good securities, and is carrying over \$10,000,000 of insurance. Its office is at 526 Walnut Street, and the president is Samuel Welsh.

The Insurance Company of North America comes next in the chronological order, and may be said to have had its origin in the meeting at the State-House, on Nov. 3, 1792, of citizens who had subscribed to a project to be known as the "Universal Tontine," on the plan of securing funds for various purposes that was then so prevalent in Europe. After some discussion the members decided to employ the inchoate capital in such a manner as would be most feasible and advantageous to the subscribers, and they appointed a committee to settle upon what might best be done. On November 12th the committee made its report that the Tontine enterprise should be abandoned, and that in view of the necessity of a corporation to effect marine insurances, a society should be instituted to be called the "Insurance Company of North America," with a capital stock of \$600,000. The intention was that the company should take very much heavier risks than those accepted by the Philadelphia underwriters, who would enter into no higher engagement than £200 on any vessel, which was entirely too small to meet the demands of the commerce of the port. On December 10th the stockholders met again, and chose a board

of directors, with J. Maxwell Nesbitt as president and Ebenezer Hazard as secretary. Application was made for an act of incorporation, which was not granted until April 14, 1794. This was the first joint-stock company created in the New World, and is the historical office of the land. In 1798 it wrote nearly the entire marine business of the country, its premium receipts being nearly \$1,500,000. Chartered to do all sorts of insurance business, it has confined itself to fire and marine, in which its success has been pre-eminent. In its ninety years the company has received over \$60,000,000 in premiums, has paid about \$7,000,000 in dividends, and nearly \$50,000,000 in losses. Its total income last year reached the great sum of \$4,279,935.01, and the expenditures \$3,415,925.57, leaving a balance of \$864,009.44, of which \$630,000 was paid out in dividends and the tax thereon, while the remainder, \$234,009.44, was added to the company's handsome surplus. Its present capital stock is \$3,000,000, and its aggregated business is about \$240,000,000 of outstanding insurance. A few years ago it erected for its own uses the stately and massive building at No. 232 Walnut Street.<sup>1</sup>

Of almost equal antiquity with the North America is the Insurance Company of the State of Pennsylvania, which obtained its charter April 18, 1794, for fire, life, and marine insurance, and on October 6th, Mordecai Lewis, Francis Gurney, William Smith, Archibald McCall, Joseph Anthony, John G. Wachsmuth, Thomas Fitzsimons, Jesse Waln, James Yard, Thomas M. Willing, Miers Fisher, and James Cox were elected as the first board of directors. Mr. Lewis was chosen president, and the office was opened at No. 137 South Front Street. The capital was \$500,000, which in 1841 was reduced to \$200,000. On Jan. 1, 1884, its assets were \$699,016; surplus, \$417,433; and it had paid in losses \$14,164,495. The offices are in the Exchange building, and Henry D. Sherrerd is president.

Mutual marine insurance was inaugurated with the incorporation of the "Union Mutual Insurance Company," in 1804, with a capital of \$500,000. International maritime troubles caused the marine offices of the city to secure themselves against the precipi-

<sup>1</sup> Barring out of the question the annuities granted by the Presbyterian and Episcopal societies already mentioned, it appears that this company issued the first life policy in the United States, which bore date of May 21, 1796, for the term from the 6th of June to the 19th of September, inclusive, on the life of John Holker for \$24,000, at one and a half per cent. The same day \$5000 was insured "on the life of Don Albert Brion De Beaumez, about to sail for India, at ten per cent." On the 27th of September following \$8000 was effected "on the life of Col. Toussard for one year at eight per cent, with permission for him to go and remain in the West Indies for that period." In reply to some queries from Mr. Henry Remsen, on behalf of the Manhattan Company, as to the mode of conducting the insurance business in its different branches by the North America, dated New York, Nov. 20, 1799, Ebenezer Hazard, the secretary, answers his query on the life branch as follows: "There have been but few instances of this kind,—perhaps half a dozen,—in each of which we have gained the premium."

tate abandonment of vessels to them, and in 1807 they agreed that their policies should provide against abandonment until sixty days after advice received, in cases of capture or detention, unless the property should be sooner condemned; and in cases of embargo, until after four calendar months; and against any abandonment on account of seizure or detention in port under French decrees, or on account of the port of detention being blockaded. The "Union" passed safely through all these complications. One of its incorporators was Stephen Girard, and associated with him were some of the most noted citizens of Philadelphia eighty years ago. They held their first meeting at the old Coffee-House, at the corner of Front and Market Streets. Since 1865 the company has been transacting a general marine and fire insurance business, and has increased its capital to \$1,000,000. Some years ago it fixed its offices at the southwest corner of Third and Walnut Streets. Colson Hieskell is president, who, in January, 1881, succeeded the late Richard Somers Smith, who had served since his election to the position in 1837.

Mr. Smith was born in Lombard Street, between Second and Third Streets, in the city of Philadelphia, on Aug. 16, 1789. He was the son of Daniel Smith, and grandson of Richard Smith, of Cape May County, N. J.

His father, Daniel Smith, removed early in life to Philadelphia, and entered the store of Francis Gurney, doing business (at the "Drawbridge") with the West Indies. He afterwards served with conspicuous gallantry in the Revolutionary war. As lieutenant of marines he assisted in the capture of a British transport with three hundred troops, and brought vessel and troops a prize to port. A sword surrendered to him by the commanding officer of the captured vessel still remains in the family. He was on his next voyage captured by a British frigate, and confined for nine months in the hold of a prison-ship at Providence, R. I., suffering privations which cost more than half of his fellow-prisoners their lives, and which left him almost helpless for a long time after his release. He afterward served for two years in a regiment commanded by his old friend, Gen. Francis Gurney.

In October, 1780, he married Elizabeth Shute, daughter of William Shute, whose brother, Atwood Shute, was mayor of the city of Philadelphia during the years 1756 and 1757.

Daniel and Elizabeth Shute Smith had thirteen children, seven of whom survived them, the eldest of these, James S. Smith, dying at the age of eighty, Francis Gurney at the age of eighty-nine, William S. at eighty, and their sister, Mrs. Poulson, at seventy-six. Richard S. Smith, the subject of this memoir, died Feb. 28, 1884, aged ninety-four years and six months, leaving two surviving brothers,—Daniel Smith, in his ninety-fourth year, and Charles S., over eighty-five. All of these brothers celebrated their

golden weddings, and all resided in Philadelphia from their youth.

Richard S. Smith, after graduating from the Philadelphia Academy, under the charge of Rev. Dr. Abercrombie, in 1804, entered the counting-house of Messrs. Pratt & Kintzing, large ship-owners and commission merchants, with whom he remained until the year 1810. At that time, when not yet twenty-one years of age, he was selected supercargo of the ship "Eclipse," sailing from Philadelphia for "port or ports" in the Baltic. For this position he was proposed by Messrs. Pratt & Kintzing, who parted with him with the warmest testimonials of regard, and who recommended him to the owners as entirely competent to take charge of their property and interests at a time when to reach his destination required the utmost diligence and good judgment.

To avoid capture by the Danes, then at war with England, and who did not hesitate to capture all American vessels they fell in with, he passed round the north of Scotland and reached the convoy of the English fleet and port in safety. He was obliged, however, to discharge and store his cargo, awaiting for a market, and reloading his ship with iron at Gottenburg, sent her on her return voyage for Philadelphia. While thus detained at Gottenburg, he was chosen to act as the American consul, and while so acting, by his constant vigilance in anticipation of what he believed must occur, was the first person in Europe to hear of the declaration of war between England and the United States in 1812. This information was brought by a pilot-boat, sent from New York by Messrs. Minturn & Champlin, of that city, with the important intelligence. Mr. Smith, being apprised of the arrival of such a vessel at quarantine, suspected her errand, and, after much persuasion, prevailed upon the captain not to deliver his letters until he should have time to advise the American ministers at St. Petersburg, Copenhagen, and Stockholm, and to warn all American vessels in the Baltic, then under British consort, to seek protection in Swedish ports. Some thirty-five sail of American vessels were thus saved from capture, while some fifteen others, disregarding the warning given, were captured and taken to British ports.

On his return to Philadelphia in 1813, he married Miss Eliza Beach, daughter of John Beach, of Gloucester, Mass., then visiting at the house of his father's friend, Gen. Gurney. This union existed for fifty-eight years, Mrs. Smith dying in March, 1871, in the eighty-first year of her age.

Mr. Smith was largely engaged in commercial pursuits, part of the time with his brother Daniel and Mr. Joshua Haven, under the firm-title of Haven & Smith, and, after the death of Mr. Joshua Haven, with his brother, Thomas Haven. The commercial crisis of 1834 caused the suspension of this firm, and Mr. Smith retired to a small farm at Rockdale, Delaware Co.

Rich<sup>d</sup> S<sup>r</sup> Smith  
Aged 95

In the year 1824 he became the agent of a Boston Marine Insurance Company, the first agency of a non-State company opened in Philadelphia, and afterward was the first representative of a foreign insurance company to enter the State after the legal exclusion of 1810 as to foreign companies and the prohibitory tax of 1829 on all non-State insurance companies. In June, 1837, at the suggestion of his old employer, Henry Smith, he was elected president of the Union Insurance Company, of which company he had long been a director. Here he continued, carrying the company successfully through many trials and reverses, until January, 1881, when, on account of accumulated years, being then ninety-two years old, he resigned, to be elected a director and emeritus president, which position he held at the time of his death.

In the year 1851 he was appointed agent of the Liverpool and London (now the Liverpool and London, and Globe) Insurance Company, acting as such until 1861, when he was succeeded by his son, Atwood Smith.

He was chosen by Mr. Henry Pratt as one of the executors and trustees of his large estate, which position he held at the time of his death.

Mr. Smith was an earnest and active member of the Protestant Episcopal Church, and for many years a member of the standing committee of the diocese.

In commemoration of the many acts of kindness conferred by him upon natives of Sweden resident in this country, King Oscar decorated him with the order of Knight Commander of the Order of Wasa, under date of May 16, 1880.

Mr. Smith is buried in the grounds attached to Calvary Episcopal Church, Rockdale, a parish created and largely sustained by the efforts of himself and his two daughters, who survive him.

In 1810 the colored people of Philadelphia opened an insurance office at the old number of 159 Lombard Street, under the title of the African Insurance Company of Philadelphia, and with a capital of \$5000, in fifty-dollar shares. The first president was Joseph Randolph; Cyrus Porter was treasurer and William Coleman secretary. There are good grounds for the belief that this was the first attempt of persons of color to establish an insurance company in this country; but it was probably a voluntary association, not incorporated, and must have proved a failure.

The American Fire Insurance Company, organized Feb. 28, 1810, was the first joint-stock fire insurance company in the United States. Its first president was Capt. William Jones, a distinguished naval officer, and afterwards Secretary of the Navy under President Madison. Edward Fox and his friends were the active persons in organizing the association, and he was its secretary until the time of his death, which occurred in 1822. He was an uncle of John Sergeant, who was a director of the company until his death, in 1850. There have been nine presidents, as follows:

Capt. William Jones, from March 3, 1810, to Feb. 9, 1813.  
 Guy Bryan, from Feb. 9, 1813, to May 2, 1815.  
 James Vanuxem, from May 2, 1815, to May, 1817.  
 Charles Price, from May 6, 1817, to Dec. 20, 1824.  
 Joseph Reed, from Dec. 20, 1824, to June 17, 1829.  
 William Davidson, from June 17, 1829, to Oct. 27, 1847.  
 Samuel C. Morton, from Oct. 27, 1847, to May 13, 1857.  
 George Abbott, from May 13, 1857, to January, 1860.  
 Thomas Ross Maris was elected on the 11th of January, 1860, and now holds that position.

The American was the earliest corporation of its kind to establish an agency business, which it did in the year of its organization. Its original capital was \$500,000, which was reduced in 1847 to \$277,500, because of the heavy losses it had sustained, the surplus then being but \$2538. It lost \$103,942 by the great Philadelphia fire of July 9, 1850, and \$457,801 by the Boston fire of 1872, but all its risks were promptly paid, and the capital is now fixed at \$400,000, while the assets are nearly \$1,090,000. Thomas H. Montgomery is now president, and the offices are at No. 308 and 310 Walnut Street.

For more than a half-century after the establishment of home insurance companies there was no general legislation by the commonwealth regarding them, but it was recognized that the functions and limitations of so rapidly extending an interest should be legally defined. The earliest legislation on the subject is the act of March 10, 1810, by which foreigners were forbidden to issue any contract of insurance in Pennsylvania, and all such policies were declared void. Any person acting as agent for a foreign company was subject to a penalty of \$5000, and the citizen who became a party to such insurance was fined \$500. The penalties were, however, not to be extended to any case of marine insurance made in a foreign country by the agents of American merchants, nor did the statute prevent any foreigner, unless he were an alien enemy, from insuring his property in the State. In this legislation is evident the spirit of retaliation for the aggressions of England and other European powers, and it was further manifested by clauses in acts of incorporation limiting the privileges of holding stock to American citizens. Up to the year 1812 no public life insurance office existed, and the only species of life assurance known in the United States was the relief and annuities granted by the Presbyterian and Episcopal corporations, and the few policies issued by the Insurance Company of North America. But on March 10, 1812, the Pennsylvania Company for Insurance of Lives and Granting Annuities was incorporated, with a capital of \$500,000, and the earliest life contracts were made in the following year. The annuities have long constituted the most important part of the company's operations, and a few years ago it entirely discontinued the issuing of life policies. At this time the war with England had begun, and the marine underwriters were moving very cautiously in order to weather the storm. One instance of their extreme prudence was their refusal to accept at less than sev-

enty-five per cent. a risk upon one of Thomas P. Cope's ships, the "Lancaster," homeward bound from China at the opening of hostilities. Mr. Cope refused to pay such an exorbitant demand, and his ship came safely into port without having seen a British cruiser during the long voyage.

There were in 1813 but three offices doing a fire business exclusively, four marine offices, and one life office,—a total of eight in Philadelphia,—but in the twelve years following six more were organized, of which only the Fire Association and the Pennsylvania Fire Insurance Company are now in existence. Those that have passed away are the United States, Marine, Philadelphia, and Phoenix Mutual. The Fire Association of Philadelphia commenced business in 1820, and is a standard, stalwart, and wealthy corporation.

The Pennsylvania Fire Insurance Company was organized in 1825 by a number of leading citizens, who selected R. A. Caldcleugh as first president and Jonathan Smith the first secretary. The capital stock was placed at \$100,000, and the first board of directors comprised Paul Beck, Jr., David Carrey, John H. Stephenson, Henry Toland, John R. Neff, and William Boyd. The first president, Mr. Caldcleugh, served up to 1835; then Jonathan Smith, to 1839; next, Quintin Campbell from 1839 to 1853, when he resigned, and was succeeded by Jonathan Patterson, who died in 1865. Daniel Smith was the next executive, until 1873, when he resigned, and was succeeded by Mr. Devereux, the present president. Mr. Smith is still living, at the age of ninety-four. In 1863 the capital was increased to \$400,000, at which figure it now remains, and the assets have increased to nearly \$2,500,000. For many years John Devereux has been president. The offices are at No. 510 Walnut Street.

The Franklin Fire Insurance Company has a most interesting history. Chartered in 1829, its capital stock of \$400,000 was all subscribed on the first day by some of the most noted men in Philadelphia. The first president was Richard Willing, who has been succeeded in that office by Clement C. Biddle, Henry C. Carey, Charles N. Bancker, Alfred G. Baker, and James W. McAllister. The commissioners for receiving subscriptions were Charles Graff, Benjamin W. Richards, John K. Kane, Robert Toland, Levi Ellmaker, Robert Taylor, James Schott, Peter Hertzog, Thomas Carr, Charles N. Bancker, and Robert O'Neil, and the books were opened May 13th at the house of Daniel Ruhicam, No. 20 South Sixth Street. Business was commenced in one of Stephen Girard's houses on Chestnut Street. In 1844 an adjoining building was taken in, and in 1873 the company removed to its present location, at No. 421 Walnut Street. Perpetual insurance has always been one of its plans, and since 1831 it has never passed a dividend. It has met some immense losses, including \$635,429 in the Chicago fire, \$451,500 in Boston, and \$294,855 in St. Louis, but the risks were settled without delay

or litigation. It is the parent of the agency system of fire companies, having established the first agency at Lexington, Ky., in 1831. At the semi-centennial anniversary of its foundation, held in 1879, Hon. George W. Biddle remarked,—

"No company can, in the course of a half-century, have reached the magnificent financial results which now exist without having conducted its affairs upon the sound basis of justice to its customers and good sense and liberality in the administration of its business. These results are not chance. Chance may be for a year, or a half-dozen years, but for half a century of unintermittent prosperity, which shows itself in the average of dividends of twenty per cent., it is impossible that it can repose upon any other basis than the basis of eternal truth in the administration of human affairs. Dividends beginning a year or two after the inauguration of the company and ending with quarterly dividends of eight per cent., or thirty-two per cent. per annum, are the product of no chance. It is, therefore, justice to the customers, justice to the stockholders."

The Fire Insurance Company of the County of Philadelphia was chartered May 3, 1832. A supplement to the charter changing the day for annual meetings of stockholders was passed April 15, 1834, and a further supplement repealing the section of the charter which required the location of the company to be north of Vine Street, and also permitting the election of a vice-president, was passed the 2d of March, 1863.

The first meeting of the directors was held at the house of John Dungan, corner of Third and Wood Streets, on Saturday evening, Feb. 9, 1853, when the certificate was received from the judges of election certifying that Augustus Stevenson, Thomas H. Craige, Samuel Williams, Charles Elliot, Robert V. Massey, Joseph Reakirt, Samuel Heintzelman, Samuel Bonnell, Osmon Reed, and Benjamin E. Carpenter were duly elected directors to serve the ensuing year.

On motion the board proceeded to an election for president, when Augustus Stevenson was unanimously elected, and at the same meeting Jacob F. Hoekley was elected secretary.

At a meeting held at the house of John Dungan, Feb. 23, 1833, the committee on location reported that they had secured the premises No. 248 North Third Street (present number, 432), between Callowhill and Willow, and were then authorized to purchase the same for the use of the company.

By a provision of section 32 of the charter, the company was permitted to effect insurance and issue policies when \$100,000 of the capital stock was actually paid in by the stockholders. The capital authorized by the charter was \$200,000, subscribed in 2000 shares of \$100 each, with permission to increase it to any sum not exceeding 4000 shares of \$100 each, or \$400,000, "if the holders of two-thirds of the stock shall at any of their meetings so order." At the meeting held March 8, 1833, \$50 having been paid in on each share, the company began business agreeably to their charter.

Mr. Augustus Stevenson continued serving as president until the 24th of January, 1851, when Mr. Charles J. Sutter was unanimously elected in his stead. The directors at that time elected were Au-

gustus Stevenson, Robert V. Massey, Joseph Reakirt, Samuel Bonnell, Osmon Reed, M. M. Gill, Henry Crilley, Charles J. Sutter, John Horn, and Frederick Klett.

Mr. Sutter served continuously as president from Jan. 24, 1851, until Feb. 1, 1872, when he resigned, and was succeeded by the present president, James N. Stone.

Mr. Jacob F. Hoeckley served as secretary from Feb. 9, 1833, until his death, Jan. 6, 1854, when he was succeeded by his brother, Benjamin F. Hoeckley, who served continuously until Feb. 15, 1878, when John Welsh Dulles was elected in his place, and is at present secretary and treasurer.

The present directors are Messrs. James N. Stone, Andrew H. Miller, Edwin L. Reakirt, Robert V. Massey, Jr., Philip H. Horn, Jacob Naylor, Alexander M. Fox, J. Howard Mecke, Gillies Dallett, and Jacob Grim. The officers are James N. Stone, president; Jacob Naylor, vice-president; John Welsh Dulles, secretary and treasurer.

At a special meeting of the board, held March 26, 1883, it was resolved to increase the capital stock to its chartered limit, viz., \$400,000. This being acceded to by the stockholders, it was agreed to make the payments in three instalments, viz., July 5 and Oct. 5, 1883, and Jan. 5, 1884. As the payment of each instalment had been anticipated, the company started Jan. 1, 1884, with a full-paid capital of \$400,000 and assets of over \$635,000.

Until the year 1881 the company confined itself to strictly Philadelphia risks, but after that date the directors resolved to do a general agency business, which has thus far been greatly to their advantage.

The Spring Garden Fire Insurance Company was organized in 1835 by practical and conservative business men, and has mainly confined its operations to this city. Its capital is \$400,000, on which for many years past it has declared dividends averaging sixteen per cent. For losses by fire it has paid out about \$1,750,000.

The Delaware Mutual Safety Insurance Company was originally chartered in 1835 as the Delaware County Insurance Company, its offices being in that county, and the risks limited to the property of its citizens. On March 17, 1843, a supplementary act was secured, authorizing removal to Philadelphia, and changing the title to its present form. In 1853 the company built a handsome brown stone edifice at the southeast corner of Walnut and Third Streets, where it still has its headquarters, and issues fire, marine, and inland transportation policies. Its authorized capital is \$500,000, of which \$360,000 has been paid up.

In 1836 the Girard Life Insurance, Annuity, and Trust Company, which has a capital of \$450,000, was organized with eighteen corporators, of whom Thomas Ridgway, its late president, is the sole survivor. It has had but three presidents, the first being Benjamin

W. Richards, the second Thomas Ridgway, and the third John B. Garrett, the present incumbent. In 1860 the company gave up the business of life insurance, and has since confined itself to the receiving of deposits and execution of trusts.

It will be seen that in the year 1839 fifteen insurance corporations that are now in business had been chartered. They were the strong ones, while the weak and badly-managed concerns, of which there were many, have been forced to the wall, and left no trace behind them except the financial damage inflicted upon owners of stock and holders of policies. The solvent companies were hard hit in 1839 by a fire which, on October 4th, destroyed fifty-two buildings, and involved a loss of half a million dollars of Philadelphia capital invested in fire insurance, the law of 1810 excluding foreign agencies from the State being still in force. Still worse fortune was visited upon the marine companies during the succeeding four years. There were more of them than the then restricted commerce of the port required, and the result was that in their competition for engagements the rates were ruthlessly slaughtered, and were reduced to figures which forbade the idea of profit. Some of the offices sacrificed a considerable proportion of their capital, and quite a number wound up their affairs. In order to recover from these calamities, and to establish uniform and remunerative rates, the Philadelphia Board of Marine Underwriters was organized July 3, 1844. Its five committees, as then established, were charged with the duties of fixing a tariff of risks and premiums, preparing a form of policy, procuring statistics, supervising the financial accounts, and surveying and reporting upon the grades of vessels and damaged goods. There was a board of surveyors, consisting of "five experienced nautical men," to examine every vessel belonging to or arriving at the port of Philadelphia, and fix their standing, for purposes of insurance. This association of underwriters has been continued up to the present day, and in it have been represented many companies, of which there now remain nothing but their names.

Notwithstanding the discouragements that prevailed about 1840 and in the immediately subsequent years, the formation of insurance companies was not materially checked. The Frankford Mutual Fire Insurance Company was established in 1842, and is now located at No. 4610 Frankford Avenue.

The Mutual Fire Insurance Company of Germantown was incorporated April 15, 1843, and organized May 11, 1843, with Henry S. Mallery as president and Wyndham H. Stokes as secretary. On May 20, 1847, Mr. Mallery resigned the presidency, and was succeeded by Benjamin Lehman, who was the incumbent until his death, in December, 1867. Spencer Roberts was then chosen to the office, and still continues to fill it. Mr. Stokes died in April, 1870, and William H. Emhardt was elected secretary and treasurer, continuing up to the present time. The com-

pany was originally located at the corner of German-town Avenue and East School Street, from whence it removed to its present location, at No. 4829 German-town Avenue. Its risks in force at this time amount to \$13,650,000, and its assets are something over \$625,000.

The Penn Mutual Life Insurance Company of Philadelphia was chartered Feb. 24, 1847, and on the following 25th of May was authorized to transact the business of life insurance, having by that time secured applications for a sufficient amount of insurance to enable it to meet the requirements of its charter. The first divisions of surplus was made in 1849, and annual divisions have been made since that year. The company now has in force 16,483 policies, representing an aggregate of \$41,521,678, and the net assets amount to \$8,406,379. The office is at No. 921 Chestnut Street, and the officers are Samuel C. Huey, president; Edward M. Needles and Horatio S. Stephens, vice presidents; Jesse J. Barker, actuary; and John W. Hornor, secretary.

Towards 1850 risks on health began to engage the attention of insurance men, but the early experiments in that line were conducted with so little knowledge that they were crowned with disaster; operated upon the general theory that any yearly rate would allow the same sum to be paid weekly in the event of illness, such an unscientific calculation caused the collapse of many of these health associations. It was utterly impossible that they could thrive, when, for a payment of seven dollars annually, each sick member received seven dollars per week during his illness. With the inevitable disappearance of these societies, corporate life and health companies grew into being. The Philadelphia Life Insurance Company on March 20, 1848, obtained a charter which empowered it to transact business in the fire, marine, life, and health branches. It was not successful under such a liberal grant, and was dissolved after changing its title to the Philadelphia Fire and Life Insurance Company, and writing fire risks alone.

The American Life Insurance Company was founded in 1850 by some gentlemen identified with the cause of temperance, who deemed that interest in that movement might be promoted by a practical exemplification of the value of total abstinence in prolonging life. In connection with its other departments, it embraced a class in which risks not exceeding \$1000 each were taken at low premiums upon the lives of non-users of intoxicating liquors, the policies to be forfeited if the insured ceased to practice total abstinence habits. The company has always been both joint-stock and mutual, and also does a trust business, receiving money on deposits, making investments, etc. It has a paid-up cash capital of \$500,000, and is a solid institution.

These years of 1849 and 1850 saw the resources of the Philadelphia fire insurance companies severely strained. Four of them were compelled to pay losses

aggregating \$371,000 on the conflagration at St. Louis, May 17, 1849; and the Philadelphia Contributionship and the Mutual Assurance had covered with their policies the district in this city that was swept by the great fire of July 9 and 10, 1850. The total loss was \$1,500,000, and Mr. Binney said in his address at the Contributionship centennial, before cited, that if it "had occurred in the year 1808, it would have swept away the whole amount of our funds, deposits, and accumulations for half a century. Our insurances in the quarter where that fire occurred are supposed to have been of the same amount, or nearly so, in 1808 as in the year 1850. The two mutual assurance companies of this city bore the brunt of the storm, and, as it was to come, it was well for us that it came no sooner."

In 1850 the deposit life assurance system, which combines the features of a life office and a savings-bank, was inaugurated in this city by the United States Life Annuity and Trust Company, but the public did not appreciate it, and it remained to be developed in later years. In January, 1852, the centenary of the establishment of fire insurance in the Western World, the first regular insurance serial in the United States made its appearance. It was published in Philadelphia, owned and edited by Capt. Harvey G. Tuckett, and was entitled *Tuckett's Monthly Insurance Journal, Health and Friendly Societies' Monitor*. It thus appears that insurance journals, as well as fire, marine, and life insurance in America, had their origin in Philadelphia. Tuckett had held a commission in the British army, and had been forced to quit England in consequence of fighting a duel with Lord Cardigan, his superior officer. As a mathematician and statistician, he possessed considerable ability, and his literary style, though coarse, was vigorous and direct. He died two years after issuing the first number of his magazine.

Another memorable incident of 1852 was the organization of the Board of Fire Underwriters, which was formed on April 16th at a meeting of representatives of a portion of the fire companies. It was quickly beneficial in introducing order and regularity into the business, which had been suffering from improperly low rates. The tariff was advanced, with the consent of most of the corporations and agencies. Additional stories to houses, extra occupants, skylights, narrow streets, and other augmentations of risks were subjected to increased premiums. In 1883 the president was Thomas C. Hand; secretary and treasurer, John Williams.

The Girard Fire and Marine Insurance Company was organized under a perpetual charter in 1853, and its first president was Hon. Joel Jones, whose successors have been Hon. George Woodward, Thomas Craven, and Alfred S. Gillett. With a capital of \$300,000, it has a net surplus over all liabilities of \$565,251. Its total assets foot up \$1,259,967, and it has paid out in losses since its organization over

\$2,650,000, has received in premiums over \$5,000,000, and has paid cash dividends of over \$800,000. Writing both marine and fire risks, it has passed through many ordeals, only to come out stronger each time. It owns and occupies a fine building at the northeast corner of Seventh and Chestnut Streets.

In February, 1854, the Commonwealth Insurance Company of the State of Pennsylvania was organized to do a fire business, with William Bucknell president, Dr. David Jayne vice-president, and Samuel S. Moon secretary. In 1857, Dr. Jayne succeeded to the presidency, and for some years the transactions were very large. In 1862, however, some of the stockholders became discouraged by losses, and Dr. Jayne purchased their shares. In November of that year it was decided to close business. Stockholders received ninety-three per cent., and all losses were paid. On term policies premiums were paid *pro rata*, while perpetual policies were settled in full.

The Mechanics' Fire Insurance Company, chartered in 1854, was especially founded with a view of doing business for the building associations and the owners of small homes. Three or four years ago the capital was increased from \$125,000 to \$250,000, agencies were opened in other cities, and a bold push made for new business. It now shows cash assets of \$538,537, and a surplus to policy-holders of \$355,402, while the income for 1883 rose to \$114,817. In 1881 the company completed its handsome building at the corner of Fifth and Walnut Streets. Its presidents have been William Morgan, Francis Cooper, Bernard Rafferty, and Francis McManus.

The Jefferson Fire Insurance Company obtained its charter April 25, 1855, and began operations in the following August on a capital of \$100,000. George Erety, the first president, was succeeded, in 1867, by William McDaniel.

In the beginning of 1857 the Underwriters' Association of Philadelphia was formed as a union for protection against dishonest persons who effected insurance for fraudulent purposes. It proposed a new classification of risks, rating the hazards of mere business adventurers higher than those of established mercantile houses, yet no scale of premiums was adopted as binding upon the members, and from this cause it died out in a year or two. Among the companies represented were the Merchants', the Farmers' and Mechanics', the Great Western, and the Howard, all of which are now extinct. They were, however, but a few of the companies that were started in quick succession in 1855-56, and whose number led to that demand for legislation which culminated in the passage of acts providing for the incorporation of State insurance companies and regulating the agencies of outside companies. The financial panic of 1857 wiped out a score or more of new and weak concerns, including the Robert Morris Insurance Company, the Alliance, the Lombard, the Continental, and the Im-

porters' and Traders', originally named the Merchants' and Mechanics'. Most of the victims of the crisis were flimsy companies, trading on narrow capital, and an investigation of the manner in which business was being done was called for. In the case of the Importers' and Traders' it was shown that, while the company was claiming assets to the amount of nearly \$300,000, there never was "any really substantial and available capital which could afford any security to the insurers."

The Board of Trade appointed a committee to examine into the affairs of the insurance offices, and "to report whether, in any of the charters granted by the State of Pennsylvania, there seems to be that absence of wholesome provisions deemed necessary to secure to directors annually chosen by stockholders the supervision of the general affairs of the company, and particularly to inquire whether, in any of said charters, there are provisions for vesting in executive committees an absolute control of all financial matters, while trustees are nominally provided for as a governing department thereof." Much information was collected throwing light upon insurance frauds, and the Legislature was petitioned for enactments that would guard against them, but nothing was effected at Harrisburg. To protect themselves against the insolvency of makers of premium and guarantee notes, the fourteen companies then represented in the Board of Marine Underwriters reduced the length of their credits, but this precaution did not save four marine offices from passing out of existence with the close of the year 1857. In January, 1858, the steam fire department was inaugurated by placing in active service the apparatus of the Philadelphia Hose Company, and a beneficial effect was at once exerted upon fire insurance. The Legislature which adjourned in 1860 granted twenty-one charters for new companies.

The Mutual Fire Insurance Company dates its organization to 1859, and now has its office at No. 813 Arch Street. Benjamin Malone, the first president, has been succeeded by Caleb Clothier and Calvin Taggart.

The United Firemen's Insurance Company, whose charter was granted April 2, 1860, is the creation of members of the the old volunteer fire department, who alone were permitted to take its shares. Its capital of \$100,000 was increased in 1879 to \$200,000, and in 1881 to \$300,000, having been reorganized in the latter year with Joseph L. Caven as president. The comparative statement for 1883 and 1882 shows a gain in assets of \$44,761.44; in surplus, \$2934.54, and in reserve, \$24,469.97. The total assets of the company are now \$781,613.51, and the liabilities \$410,951.72, showing a net surplus of \$70,061.79. In 1882 it entered into occupancy of its new house at No. 419 Walnut Street, where it erected a notably imposing building.

The Reliance Fire Insurance Company has a history as a mutual and stock company combined running back to April 21, 1841, when it was chartered; but on

April 24, 1862, the mutual feature was dropped in pursuance of an act of the Legislature, and the capital was made \$300,000. George W. Toland was the

THE PROVIDENT LIFE AND TRUST COMPANY BUILDING.

first president, and was succeeded by Clem Tingley, and he, in 1869, by Thomas C. Hill, the present incumbent. Its offices are at No. 429 Walnut Street.

The Provident Life and Trust Company was chartered March 22, 1865, and commenced business July, 1865. It was organized by members of the Society of Friends, and while the company is not under the control of that religious body, the board of directors has always been composed of Friends. A company in some respects similar, The Friends' Provident of England, organized in 1832, which is confined in its operations exclusively to Friends or their descendants, had met with such a favorable mortality experience as to suggest the formation of a like company in this country. The founders of the Provident Life and Trust Company, however, wisely decided not to make the company denominational nor to limit the membership to Friends.

The capital is \$1,000,000. The business is two-fold,—the insurance of lives and management of trusts. The progress in both branches has been very rapid. The total assets, Jan. 1, 1884, were \$14,583,444. The amount of insurance in force at the same date was \$37,500,000. The first building erected by the company was No. 108 South Fourth Street. At the time this seemed to be adequate for a long period, but the growth of the business necessitated the erection, in 1879, of the elegant and commodious building which they now occupy at No. 409 Chestnut Street. There have been few changes in the management since the organization. The first president was Samuel R. Shipley, who is still at its head. Mr. Rowland Parry, the first actuary of the company, retired a few months since by reason of advanced age. The present officers are: President, Samuel R. Shipley; Vice-President, T. Wistar Brown; Vice-President and Actuary, Asa S. Wing; Manager of Insurance Department, Joseph Ashbrook; Trust Officer, J. Roberts Foulke; Chief Medical Examiner, Dr. Thomas Wistar.

In 1883 the Provident issued 2212 policies, insuring \$7,085,628, and at the close of the year had outstanding 11,766 policies, insuring \$37,499,951,—a very marked increase in business. Indeed, from the very beginning of its history, this company has shown a steady and constant progress, with scarcely a reverse. It is its boast that it has never had to contest a death claim.

The United States Plate Glass Insurance Company of Philadelphia has a capital of \$100,000, and was chartered in 1867. It insures plate glass of every description, adjusting its losses by replacing the destroyed glass with the same kind and quality or paying the amount insured.

The Teutonia Fire Insurance Company began business in 1870 as a stock corporation, with a capital of \$200,000, and is located at No. 424 Walnut Street.

The German Fire Insurance Company was organized in 1871, on a capital of \$100,000, under the presidency of Charles P. Bower, who has since continuously filled the office. In 1877 it removed from

Third and Chestnut Streets to its present quarters, at No. 412 Walnut Street. It has paid an average of six per cent. annually to its stockholders, and has never passed a dividend.

The Sun Fire Insurance Company was incorporated April 26, 1870, as the Safety Insurance Company, and the above title was taken in accordance with an order of court Jan. 27, 1874. It has a capital stock of \$150,000, and owns its building at No. 434 Walnut Street. Nelson T. Evans has been president since the organization.

The Lumbermen's Insurance Company, founded in 1873, owes its existence to the fact that the lumbermen of Philadelphia, in consequence of the increase of rates upon lumber, decided to start a company of their own and restore the old rates. The company was formed, the principal stockholders being lumberdealers, but a compromise was made upon the rates, and it was decided to do a general business. A new principle in insurance matters was adopted, that all profits over six per cent. should go to the surplus of the company. The subscribed capital is \$500,000; paid in, \$250,000; assets, \$585,000; surplus, \$141,800. Joseph H. Collins is president, and the company's offices are at No. 427 Walnut Street.

The New Era Life Association of 1876 was chartered on the last day of the year 1875, and commenced its operations with the centennial year. It is based upon the mutual system, its policy-holders being the members of the association. It is designed to afford life assurance at the smallest cost practicable to its members. It has no assets and no liabilities. Members are assessed for each death, and no assessment can be made for other purposes. Expenses are provided for by admission fees and annual dues. Hon. James Pollock is president.

The Real Estate Title Insurance and Trust Company has a paid-up capital of \$285,000, and was incorporated in 1876, to offer security against errors in property titles, mortgages, etc. It also transacts all business of a trust or fiduciary nature. Craig D. Ritchie is president.

The Fidelity Mutual Aid Association was chartered Dec. 2, 1878, for the payment of death benefits, upon which it disbursed in 1883 \$102,165.

The Philadelphia Manufacturers' Mutual Fire Insurance Company was chartered Aug. 23, 1880, and is operated on the system long in vogue in New England, and known there as the Factory Mutual. The idea is that of an association of mill-owners, who combine to do away with fire losses, as far as may be possible, by the adoption of such methods as their aggregated expenses may prove to be wise, economical, and effective, and to provide an equitable, simple, and thoroughly reliable means by which a member may be substantially indemnified when overtaken by the misfortune of fire. Upon this plan the Philadelphia Company was organized, and now transacts business at No. 411 Walnut Street.

The Manufacturers' Mutual was the last company chartered in Philadelphia. A recapitulation of those now in existence presents nineteen fire and marine companies, which, in 1882, had a total stock capital of \$8,210,000, and assets of \$29,548,000. There are six mutual companies, with assets of \$4,278,634, making a grand aggregate of \$33,826,634 of assets held in trust by the Philadelphia fire and marine insurance companies. The seven life companies were in possession at the same time of assets footing up \$32,575,600.

It has already been stated that in 1860 a large number of miscellaneous charters were granted for various mixed styles of insurance, but all these corporations were short-lived. From that time up to 1870 the business was decidedly depressed in this city, but from 1870 to 1876 the reckless speculators in illegitimate methods of insurance scandalized the name of Philadelphia by their exploits. In the latter year they and their wild-cat companies were stamped out by State supervision, and it may now be said that without exception the home companies are stable and trustworthy institutions.

The first foreign insurance company to establish an agency in this city was the Phoenix Fire Office, of London, which opened an office here early in 1810, but its stay was of short duration, owing to the passage in the same year of the State law laying a heavy penalty on any foreigner issuing a contract of insurance in Pennsylvania. This statute was not abrogated until 1849, when a new enactment was passed admitting the agents of companies not incorporated by the State to transact business in Pennsylvania on the payment of a license fee, with a tax of one per cent. on life premiums and three per cent. on fire and marine premiums. Under these conditions the Liverpool and London (now the Liverpool and London and Globe) Insurance Company opened its Philadelphia office, Feb. 18, 1851, under the management of the late Richard Somers Smith, who continued in charge of the agency until April, 1861, when he was relieved at his own request, and the company appointed as his successor his son, Atwood Smith, its present agent. One of the greatest of the many great corporations of England, it has for many years done an immense business in fire risks in the United States, outstripping every competitor in the field.

The company's total assets for this country alone reach the figures of \$5,771,959.71, exceeding the liabilities by \$2,516,511.28. The income for 1883 was \$3,605,840.98, and the losses and expenses \$3,023,276.73, the receipts of the American branch being fully one-half of the total receipts of the company. In the course of its history the company has received the grand aggregate of \$114,000,000, and has paid to claimants \$71,000,000 in indemnity for losses. The assets have reached the vast sum of \$35,000,000, an amount sufficient to cover ten times any possible losses liable to ensue on the company's outstanding policies. In dividends the stockholders have received

over \$13,000,000 since the organization of the company in 1836. Its yearly receipts in Philadelphia are about \$200,000, and the profits of this agency are in excess of \$600,000. The splendid marble building

LIVERPOOL AND LONDON AND GLOBE INSURANCE COMPANY BUILDING, PHILADELPHIA.

at No. 331-337 Walnut Street was erected by the company, and under the supervision of Mr. Atwood Smith.

There are twenty-five other European and two Canadian fire and marine companies having agencies in Philadelphia. Their capital is altogether \$32,556,000, and their assets \$191,279,000. Then we have here the offices of twenty-three Pennsylvania fire and marine companies other than those chartered in Philadelphia, and they show \$3,545,000 of capital, with \$5,340,000 of assets. The offices of the fire and fire-marine companies of other States are ninety-nine in number, representing capitals of \$45,744,000 and assets of \$100,426,000. Thirty-five life or accident companies of other States have agents in this city, who trade on assets of \$432,737,000. Bringing all these figures into a mass, we find that we have a grand total devoted to indemnity and represented here reaching beyond \$820,000,000.

The Philadelphia Fire Underwriters Tariff Association.—A carefully-prepared statement of the experience of the local fire insurance companies for

the ten years extending from 1873 to 1883, compiled by George E. Wagner, of Philadelphia, showed that their losses and expenses, exclusive of dividends, had fallen but little below the income from their premiums, and in some years were in excess of them. In 1873 the ratio of the losses and expenses to the premiums was 100.23 per cent.; in 1874 it had fallen to 78.45 per cent., but after that there was a gradual increase, and in 1881 it stood at 102.71 per cent., and in 1882 at 101.37 per cent. As a result of this condition of affairs, the number of local fire insurance companies decreased in the period from 1873 to 1883 from twenty-eight to nineteen, and the existence of the remaining companies unprovided with a large surplus was endangered. The Philadelphia Fire Underwriters' Association was organized to remedy this evil, and to regulate temporary and term rates of insurance so as to obtain appropriate profits to the companies, and at the same time increase the security of parties insured.

The preliminary meeting to organize the association was held on Oct. 29, 1883, pursuant to a call issued two days before by Henry Darrach, secretary of the Board of Fire Underwriters. The meeting was held in the main room of the Merchants' Exchange, and the only business done was to secure the appointment of a committee to make nominations for officers. At the adjourned meeting held on the second day of November following, the nominees reported by the committee were elected as follows: President, Thomas H. Montgomery, president of the American Fire Insurance Company; Vice-President, George E. Wagner; and Secretary and Treasurer, Henry Darrach. A constitution and by-laws were adopted at the same meeting. These officers continued to hold their positions until Nov. 15, 1883, when they were re-elected to serve for the ensuing year.

The headquarters of the association are in the Merchants' Exchange, northeast corner of Third and Walnut Streets. Out of the 159 insurance companies at present in the city, 133 are members, being represented by forty-eight gentlemen. The expenses are met, as in similar organizations, by an assessment on the premiums received by each company on insurances within the city limits during the previous year, after deducting reinsurances and cancellations.

The primary object of the association has been to establish uniform rates of fire insurance, and this object has been pursued with noticeably beneficial results. Companies doing business in the city who are not members, nevertheless have concurred in the rates established by the association.

A second object, which naturally follows the first, is to secure greater precautions against fire. A standard is adopted for every class of buildings, and those coming up to it are charged a certain rate of insurance. If extra hazards are found to exist, the rates are correspondingly increased, fixed prices being charged for each deviation from the standard. In

order to get a reduction of rates, the party insured is compelled to remove the hazard, and this has been done in a great many cases. Buildings presenting great hazards are sometimes rendered uninsurable. If the owner of a building makes certain provisions against fire above and beyond those required by the standard, or if the building is of superior construction, he is enabled to obtain a rate even below the standard. Every building in the city is examined by an inspector, who presents the results of his investigations to the tariff committee of the association, and they, after careful examination, decide upon the rates to be charged upon it. The magnitude of the work can be easily seen, and the beneficial results likely to flow from it must also be apparent. Already, owing to the examinations made by the association, precautions against fire have been adopted in hotels, theatres, churches, car-stables, and other buildings, which are calculated to be not only the means of saving thousands of dollars, but valuable lives as well.

As an example of the workings of the association, the insurance of theatres may be cited. Among its various qualifications, the standard theatre must be constructed of brick or stone, the roof must be of slate, metal, or other substantial composition; the floors in the boiler-house must be of cement or brick; the wood-work must be at least eight inches distant from the boilers, and two inches distant from a steam pipe, unless in the latter case protected by an iron shield; the border and foot-lights must be lighted by approved electric apparatus; the auditorium must be separated from the stage by a strong brick or stone proscenium wall, arched over the stage, opening and extending at least two feet above the roof; and the heating must be done by the steam or hot water system. The rate of insurance for such a theatre is \$3.50. Deviations and deficiencies are charged as follows: if the structure is two-thirds or more frame, one dollar; if the roof is of shingle or defective, ten cents; if the floor of the boiler-house is of wood, five cents; if the lighting is by petroleum or its products, not insurable; if open torches are used to light the foot-lights, thirty cents; if there is no stone or brick proscenium wall, fifty cents; and if hot air flues are insecure, uninsurable. Among provisions against fire which, upon being adopted, will secure a reduction below the standard rate, are such as the following: night and Sunday watchman, and improved time-detector, five cents reduction; approved fire force pump, with two and one-half inch hose connection run by gearing, ten cents reduction; and automatic sprinklers protecting the stage and repair-shop, twenty-five cents reduction. For certain improvements in the construction of the proscenium, and for an approved fire-proof curtain, a reduction of one dollar is made; for impregnating all scenery, gauze, etc., by an improved process, there is a reduction of twenty-five cents; and for approved electric lighting exclusively, a reduction of ten cents.

The officers of the association are elected annually at a meeting in November.

Membership may be had by a written application from (or by nomination of) any fire insurance company authorized to transact business in the city of Philadelphia on approval by the association and by signing the constitution.

Stated meetings of the association are held on the third Tuesday of every month, at twelve o'clock noon.

There are two standing committees,—a tariff committee, consisting of nine members, and a committee on rooms and supplies, consisting of five members.

The tariff committee have power to fix rates on such risks and classes of risks as may be referred to them by any member of the association, provided that two-thirds of the committee approve thereof. The rates fixed by them are binding when approved in writing by three-fourths of the members of the association.

Three of the nine members composing this committee are chosen each month for a term of three months.

Such figures convey, perhaps, even more thoroughly than the details, an adequate comprehension of the immensity of the insurance business in its many and divers branches. They represent guarantees upon real estate of every description, and amounting to many millions of dollars in value,—the great manufacturing establishments, warehouses, stores, and public buildings, as well as the residences of private citizens, from the stately home of the millionaire to the shelter which covers the thrifty workingman. The vessels whose owners are secured from loss by this huge capital float upon every sea, and carry the flags of all the maritime nations of the world. As to the beneficent power of life insurance, it is impossible to conjecture the number of persons who, because of it, rest assured that their deaths will not leave in distress the families dependent upon them. In commerce and in the home-life alike, insurance fills a most essential function, and may not inappropriately be styled a basis upon which some of the greatest practical interests of civilized humanity rest. In its ramifications it touches all departments of industry and investment, and holds them safe against the contingencies of peril and loss. Copson's and Bradford's humble enterprises of nearly two hundred years ago can be accepted as the foundation of the vast insurance business of Philadelphia in the present time, and as we follow its development from epoch to epoch it reflects the growth of the community in wealth, in population, and in the improvement and aggregation of resources. In past years unscrupulous men have founded companies for illegitimate purposes, and have defrauded those who placed confidence in them, but in recent years wise legislation has placed a ban upon illicit speculation in insurance, while guarding and encouraging the substantial corporations and agencies.

STATISTICAL HISTORY OF THE INSURANCE

NAME OF COMPANY.	Commenced Business.	Incorporated.	First President.	First Secretary.	Original Capital.
<b>JOINT-STOCK FIRE INSURANCE.</b>					
American <sup>1</sup> .....	Mar. 15, 1810	Feb. 28, 1810.	Capt. Wm. Jones.	Edward Fox.	\$500,000 authorized; \$200,000 paid in.
Fire Association <sup>2</sup> .....	Sept. 1, 1817	March 27, 1820; re-incorporated April 3, 1833.	Sec. and treas. the only active officers at first.	Caleb Carnalt, sec. and treas.	.....
County.....	April 9, 1833	May 3, 1832; organized Feb. 9, 1833.	Aug. Stevenson.	J. F. Hoeckley.	\$200,000 authorized.
Franklin.....	June, 1829	April 22, 1829.	Richard Willing.	C. N. Bancker.	\$400,000.

Provident Life and Trust Company <sup>9</sup> .....	.....	March 22, 1865.	Samnel R. Shipley.	Rowland Parry, actuary.	\$150,000.

<sup>1</sup> First company chartered in the State for a general fire insurance business.

<sup>2</sup> Organized Sept. 1, 1817, as the Fire Association, and was an association of fire companies, who designed to render themselves self-supporting by the profits arising from insurances.

<sup>3</sup> Originally the Safety Insurance Company; name changed Jan. 27, 1874.

<sup>4</sup> \$400,000 allotted in shares of \$400 each.

<sup>5</sup> Risks in force December, 1883, \$2,012,000.

<sup>6</sup> Risks in force December, 1883, \$13,850,000.

<sup>7</sup> Oldest life insurance organization in the United States. Granted by the Penna to Rev. Francis Allison, vice-provost of the University, in 1755. Organized as "The Corporation for the Relief of Poor and Distressed Widows and Children of Presbyterian Ministers."

<sup>8</sup> Originally chartered in three States,—Pennsylvania, New Jersey, and New York. It was resolved to separate into three corporations,—one for each State. The Pennsylvania branch was incorporated March 23, 1797.  
<sup>9</sup> Both an insurance and trust company. Other trust companies of chapter on "Bankers and Currency," though having a provision in their charter allowing them to do an insurance business, do not exercise the right to any extent, or not at all. Policies of the Provident Life and Trust Company outstanding March 31, 1883, represent \$37,499,951.

## CHAPTER LII.

## TELEGRAPHS, TELEPHONES, AND ELECTRIC LIGHTS.

THE first telegraph of any kind by which intelligence was brought to Philadelphia was established in 1809, under the patronage of the Chamber of Commerce, and according to the plan of Jonathan Grout, who set it up. Grout was a schoolmaster, and of somewhat testy disposition and eccentric in character. He was a native of Belchertown, Mass., and had at an early period turned his attention to the subject of telegraphic communication. In 1798 he had established a line of telegraphs between Boston and Martha's Vineyard, ninety miles, over which it is recorded messages were sent in ten minutes. He received a patent from Congress in 1800. The character of his invention is not exactly known, but it is probable that it was upon the semaphore plan. There was enough merit in it to interest the merchants of Philadelphia sufficiently to raise the means for the establishment of a line of telegraph to Reedy Island, at the head of Delaware Bay, from which early news of the arrival of ships was important to business interests. A charter was granted by the Legislature to the Reedy Island Telegraph Company March 24, 1809. The line was shortly afterward constructed, and on the 8th of November of the same year the first dispatch received in the city announced the arrival in the Delaware of the ship "Fanny," from Lisbon. How long this telegraph was continued is not exactly known. Statements made years afterward were to the effect that it was soon abandoned, not for reason of inefficiency, but because the peculiar temperament of Grout led him into controversies and quarrels with his customers, who gradually withdrew their confidence from him, and eventually the line proved to be a failure.

Dr. John Redman Coxe took great interest in the subject of telegraphs, and published in the *Emporium of Arts and Sciences* for 1812, vol. ii. p. 99, a description of his plan for a revolving telegraph for conveying intelligence by figures, letters, words, or sentences. The machine consisted of a semicircular frame fixed upon a wooden frame, which could be made to rotate upon a turn-table upon rollers on the top of a tower or other high place. There were thirteen chambers or windows in the upper part of the frame managed by ropes. The telegraphing was done principally by the windows, in opening or shutting them, wholly or partially, and an arrangement was proposed by the use of lights for telegraphing at night. Dr. Coxe afterward turned his thoughts to the use of galvanism for telegraphic purposes, a suggestion which it has since been ascertained had already been acted upon by Dr. Samuel Thomas von Soemmering, in Munich, in 1807. The latter sent the galvanic current through ten thousand feet of wire, and arranged his signals to be produced by the decomposition of water. There is no suspicion that Dr. Coxe

ever knew of these experiments, which attracted no attention at the time, and could not be suspected to be of the importance which was afterward manifested, when electricity was applied to the wires instead of galvanism. Dr. Coxe, in 1815, wrote to Thomson's *Annals of Philosophy* a letter published in London, February, 1816, vol., vii. 1st series, in which, speaking of galvanism, he said,—

"I have, however, contemplated this important agent (galvanism) as a probable means of establishing telegraphic communication with as much rapidity, and perhaps less expense, than any hitherto employed. I do not know how far experiment has determined galvanic action to be communicated by means of wires, but there is no reason to suppose it confined as to limits. Certainly not as to time. Now by means of apparatus fixed at certain distances, as Telegraph Stations, and by tubes for the decomposition of water and of salts, etc., regularly arranged, such a key might be adopted as would be requisite to communicate words and sentences, or figures from one station to another, and so on to the end of the line. I will take another opportunity to enlarge upon this, as I think it might serve many useful purposes; but like all others it requires time to mature. As it takes up little room and may be fixed in private, it might in many cases of besieged towns, etc., convey useful intelligence with scarcely a chance of detection by the enemy. However fanciful in speculation, I have no doubt that sooner or later it will be rendered useful in practice."

Actually this suggestion differed only in degree from the plan afterward adopted in the working of the Bain Electric Telegraph. It has been said that Dr. Coxe subsequently demonstrated the merits of his plan to his students by setting up wires and using the voltaic pile in the lecture-room of the University of Pennsylvania, for telegraphic purposes; but if such experiments were made, there is unfortunately no record of them.

There was for some years prior to 1846 a private telegraph between New York and Philadelphia of the existence of which the majority of the people were profoundly ignorant. It was established perhaps as early as 1840, and its operations were not made known to the public. The proprietor was William C. Bridges, stock and exchange broker of this city, and the dispatches were principally used to convey the drawn numbers in lotteries, and the prices of stocks for the benefit of the brokers who were interested in the line. The telegraph stations were placed on the high points across New Jersey, and there must have been some station in Philadelphia at a sufficient altitude from the nearest station on the east side of the river to observe the signals. The operations in daytime were somewhat upon the semaphore plan, and were visible from station to station, and sent on from one to the other. At night the signals were given by lights with flashes. This was done by the use of a box in which a lamp was placed in front of a parabolic reflector. A common wooden drop in front of the box, operated by a lever, could be raised so that the light would be shown, and allowed to fall so as to shut it off. By the length of time during which the light was shown signals were made, analogous to the short and long dashes and dots afterward used in the Morse telegraph. Long and short flashes conveyed the information, and these

being arranged formed sentences and words. A telescope to the apparatus at each station kept the light in view although at a long distance. Subsequently the principle of the heliostat was adopted, by which flashes of sunlight upon a mirror could be conveyed to long distances, and would not be visible to other persons who were not within the direct line of the flash. This telegraph was superseded, as a matter of course, when the electro-magnetic telegraph came into operation. In January, 1846, the *Public Ledger* published the following :

"The private signal telegraph from Philadelphia," the *Burlington Gazette* says, "has just been abandoned, having no doubt done good service to its owners. It has been in use several years. One of the stations was on the hill at Mount Holly, while the others were on different elevations a few miles apart, so that a good telescope could distinguish the signals. Intelligence was conveyed from one city to the other in about ten minutes, by elevating boards on a pole in a particular way by means of machinery at the foot of the pole. At night lamps of different colors were used. The whole concern was sold for about three thousand dollars. It was a great affair when first established, and many mysterious movements in the Philadelphia stock and produce markets were laid at the door of the speculators who worked the telegraph. No doubt the speculation paid them well. But though a good thing at first, it has been superseded by a better,—Morse's electro-magnetic telegraph has prostrated all rivals."

For the present purpose it is not necessary to expatiate upon the claims made upon behalf of rival scientists to the invention of the magnetic telegraph. Several minds were engaged with the subject in this country and in Europe. There is no difficulty about the fact that Samuel F. B. Morse was the first person who demonstrated the practicability of the magnetic telegraph in the United States. The means by which he arrived at sufficient perfection in his plans to establish the first practical line are well known. He petitioned Congress in 1838 for assistance in establishing a line of telegraph between Baltimore and Washington without immediate success.

In 1842 Congress, on the 3d of March, passed an act appropriating thirty thousand dollars for the purpose, and "to test the practicability of establishing a system of electro-magnetic telegraph in the United States. Professor Morse at once set to work. His first idea was to lay the wires near the sleepers of the Baltimore and Ohio Railroad in lead pipes and underground. The preparation of the wires was very imperfect, and the experiment was a failure, the pipes having been laid about ten miles from Baltimore to the Relay House. The plan of constructing a line of wires stretched upon poles was then resorted to, the wires being carried over the cross-arms in notches insulated by being placed on prepared canvas saturated with some composition. At this time the line was commenced at Washington, about the beginning of the year 1844. It was tested as it proceeded, and on the 1st of May the cars from Baltimore to Washington were appraised, when twenty miles from Washington, of the Whig nomination, at the National Convention in Baltimore, of Henry Clay and Theodore Frelinghuysen, which had been made after the cars

started. The line was completed on the 24th of May, 1844, and Miss Annie Ellsworth, daughter of the chief commissioner of patents, a young lady who was the first to give to Professor Morse the joyful intelligence of the passage of the bill by Congress two years before making an appropriation for the purpose of testing the telegraph, was sent for to dictate the first message ever sent between the two cities, and it was in these words, "WHAT HATH GOD WROUGHT!" The next day the telegraph was thrown open to business between Washington and Baltimore, and at one o'clock the first press message was sent over the line from the capitol to the *Baltimore Patriot*, announcing that the House had refused to go into committee of the whole on the Oregon question, a motion to that effect having been defeated. The proceedings of the Democratic National Convention at Baltimore, and of the Tyler National Convention also meeting there, were telegraphed to the *National Intelligencer* at Washington regularly. That paper, speaking of the unusual occurrence, said, "During the whole day a crowd of persons, including a number of members of Congress, were in attendance at the capitol to receive the reports by the telegraph of the news from Baltimore, which were made at successive intervals with striking dispatch and accuracy, and were received by the auditors as the responses of the ancient oracle may be supposed to have been, with emotions corresponding to the various and opposite sentiments of those composing the assembly. Whatever variety of impression the news made upon the auditory, however, there was but one sentiment concerning the telegraph itself, which was that of mingled delight and wonder."

The line was continued in operation for several months, but the receipts were not sufficient to maintain it. It was announced on the 30th of January, 1845, that it would be discontinued on the 1st of February, but some arrangements were made for its continuance, and during the session Congress appropriated eight thousand dollars for the service of the line under the direction of the Postmaster-General, thus making the line a postal-telegraph. He appointed as officers under him: Superintendent, Professor Morse; Assistant Superintendents, Alfred Vail and Henry J. Rogers; Battery-Tender and Line-Repairer, Henry W. Cleveland. During the remainder of that year, from March 31st to December 31st, the charge for telegraphing being one cent per word, the whole amount received for the business of the line was \$725.48, of which \$352.80 were paid at Washington, and \$372.68 at Baltimore. During that first period the public value of the service was demonstrated by reports of election news and returns. The method of sending dispatches was limited, in consequence of the defective character of the apparatus. It was found that the receiving-magnet could not be worked so as to transmit more than twenty words per minute. Mr. Vail, therefore, invented a dictionary, in order to

meet the demands of the Baltimore afternoon press. Each phrase was indicated by a word taken from an ordinary dictionary, and the words were arranged alphabetically and placed opposite the phrase to be transmitted. The phrases were also arranged in alphabetical order, and grouped together under appropriate headings. The names of the officers and members of the two Houses were numbered, and by this means a large amount of Congressional business was transmitted in a brief space of time. Mr. Rogers, at Baltimore, deciphered the messages for the reporters of the Baltimore newspapers, and they wrote them down and transmitted them to the respective journals. Shortly after the return of Professor Morse from Europe, in the winter of 1844-45, with a new receiving-magnet, he was able to dispense with the use of the dictionary. It was used, however, in transmitting the report of the proceedings at the inauguration of President Polk.

The success of the enterprise between Baltimore and Washington, although not very flattering during the year 1845, was sufficient to stimulate capitalists to engage in the building of lines between the principal Atlantic cities. The first telegraph company was organized March 15, 1845, under the name of the Magnetic Telegraph Company. It was not incorporated until Feb. 4, 1847, with the following incorporators: S. F. B. Morse, George C. Penniman, Henry J. Rogers, John S. McKim, J. R. Trimble, John O. Stevens, and A. Sidney Doane, and William M. Swain, one of the proprietors of the *Public Ledger* at Philadelphia. The object was to build a line from Washington to New York, and application was made to the New Jersey Railroad for permission to erect posts and build a line between New York and Philadelphia. Strangely enough the privilege was refused, upon the ground that the telegraph would interfere with travel by enabling persons to transact business by its means instead of using the railroad.<sup>1</sup>

In consequence of this refusal the company was compelled to construct the line over the old stage road by the way of Somerville, N. J., New Hope, Pa., and thence by way of Norristown to Philadelphia.

The construction commenced in 1845. On the 10th of October the *United States Gazette* made the following announcement:

<sup>1</sup> The first subscribers to the company were Corcoran & Riggs, \$1000; B. B. French, \$1000; Elliphalet Case, \$1000; Charles Munroe, \$1000; Peter G. Washington, \$200; John F. Holly, \$1500; John E. Kendall, \$300; James E. McLoughlin, \$350; Amos Kendall, \$500; Daniel Gold, \$1000; Simon Brown, \$500; A. J. Glossbrenner, \$500; E. Cornell, \$500; Charles G. Page, \$500; D. George Templeman, \$200; Henry J. Rogers, \$100; J. W. Murphy, \$100; A. W. Payne, \$500; Francis O. J. Smith, \$700; Furman Block, \$200; T. L. & A. Thomas Smith, \$200; Keller Greenough, \$500; J. C. Broadhead, \$500; A. Thomas Smith, \$100; John W. Norton, \$1000. These subscriptions were not sufficient, and application was made for further assistance. Moore N. Falls, John S. McKim, A. S. Abell, of the *Baltimore Sun*, and his partners, William M. Swain and A. H. Simmons, of the *Philadelphia Ledger*, and George H. Hart and other prominent Philadelphians subscribed liberally.—*Scharf's History of Baltimore*, p. 506.

"The work of placing a magnetic telegraph on the line between this city and New York is rapidly progressing. The workmen are now putting up the wire on the eastern portion. The first terminus will be on the Columbia Railroad, about fourteen miles from the Schuylkill, whence the wires will be brought into the city. Messrs. J. R. Chandler and George Campbell presented in Councils at the meeting, October 9th, a petition for the Magnetic Telegraph Company to put up poles on the sidewalks and place the wires thereon. Mr. O'Reilly is building a telegraph line from Harrisburg to this city."

On the 27th of the same month it was stated that the wires from New York were taken across the East River in a lead pipe. There were four wires, and the pipe was manufactured by Tatham Brothers, of Philadelphia. Unfortunately, this method failed at first, for want, no doubt, of sufficient insulation. On the 6th of December the same paper stated, "The operation of placing the wires on the telegraph poles commenced December 5th. The wire is of copper, without covering or coating of any kind to insulate it; and the mode of fastening is to coil it twice around a glass button securely fixed in the cross-piece on the top of a pole, so that in case the wire should accidentally break the double coil will sustain the remainder. The wires are to be taken into the room No. 31 of the Merchants' Exchange (which was in the third story), where the galvanic battery will be placed." The portion of the telegraph to New York situate between Norristown and Philadelphia was tested on the 2d of January, 1846, and on the same day the *Ledger* received its first telegraphic dispatch from Norristown, giving an account of the condition of the river Schuylkill, swollen by rains. On the 5th it was announced that the western telegraph had been completed between Harrisburg and Lancaster, with this notification, "The Harrisburg train leaves for Lancaster at one o'clock, arrives at Lancaster at four. News may be telegraphed from Harrisburg to Lancaster up to half-past three, and be brought to Philadelphia by railroad." On the 15th of January, 1846, the *Public Ledger* published the following:

"ABOUT THE MAGNETIC TELEGRAPH.—The utility of this undertaking has not been even yet properly estimated. An individual leaving this city for New York can transact his business here with the same facility that he could were he personally present. Several striking instances of this fact have already been exhibited. While a man was absent in another city his place of business was visited, and some important business matter was to be attended to about which his clerks had no authority. The communication was made through the telegraph, the principal was sought out, and brought to the office at the other end, and the business was transacted with the same facility as if the two persons had been confronted in the same room.

"No inconvenience whatever resulted from the absence of the principal from his affairs. Again, a man in one city away from home loses his money or by any other means becomes short of funds; a communication stating these facts is sent to his friends; the amount he wishes is deposited in the office of the telegraph; notice of the fact is conveyed by the wires to the operator at the other end, who pays it to the man. Such has been actually done on the telegraph between Baltimore and Washington; and the presumption is that the occasions will increase in proportion as the connections are established between the principal cities of the

Union. How much would many a family in New York and Philadelphia now give could they communicate with New Orleans daily, even if it were to inquire after the health of some absent father or son? Instances occur to our mind now where the opportunity would be considered cheap at almost any price, and when that communication could be hourly kept up, the privilege would be invaluable."

A great achievement was accomplished on the day that this article was published. The news from Europe by the packet-ship "Oxford" arrived at New York, was received by way of Somerville, twenty-one miles from Newark, and placed on the *Ledger* bulletin-board. On the 19th of January telegraphic communication with Newark, N. J., from Philadelphia was established and tested. Five days before this the connection had been made with Somerville, N. J. On the 21st the telegraphic rates between Philadelphia and New York were published as follows: "For ten words, every figure being counted a word, exclusive of signature and address, and the direction of the writer as to the disposition of the communication, fifty miles and under, ten cents; between fifty and one hundred miles, twenty cents; from New York to Philadelphia, twenty-five cents; for all distances over one hundred miles twenty-five cents." The messages were sent to Newark by the telegraph, and from that place to New York by messengers six times per day. Difficulty soon arose in consequence of the breaking of wires. Such an accident occurred on the 21st of January from the weight of ice upon them, and the *Ledger* said, "This is an accident to which the line will always be liable as long as the present small copper wire is used. The company will soon be compelled to substitute it by the large iron wire now being used in the construction of the line between Philadelphia and Baltimore." Officers were chosen at a general meeting of the New York, Philadelphia and Washington Telegraph Company at New York, on January 27th,—President, Amos Kendall; Secretary, Thomas M. Clark, of New York; Treasurer, A. Sidney Doane, of New York; Directors, R. H. French, J. J. Holly, John W. Norton, John O. Stearns, of New Jersey, William M. Swain, of Philadelphia, and J. R. Trimble, of Wilmington. A large number of messages were sent January 27th. Charles Cummings, glue manufacturer of Philadelphia, drew upon a gentleman through the line for twenty-five dollars. The money was paid to the superintendent at Newark to send it to Philadelphia, "and Mr. Vail, the superintendent here, paid over the money to Mr. Cummings; the whole operation took less than thirty minutes." This method of transferring money might have become a great feature in the business of telegraphing, but it was soon found to be inconvenient, and would have required the placing of capital at each office, and the employment of cashiers and clerks to conduct it, so that it was not largely carried out, and if ever meditated seriously, was soon abandoned. On the 4th of February, a letter appeared from Amos Kendall, stating that the telegraph to Newark worked perfectly, and on one occasion the

line had been worked as far as Fort Lee, on the Hudson River, above New York, one hundred and thirty miles. "We stop for the present at Newark, N. J., ten miles from New York, not having succeeded in crossing the river." Mr. Kendall spoke at some length of the difficulties of the undertaking, and said, "We cannot try experiments for projectors, but he who can and will take us across the North River without erecting supports in the river itself, and in such a manner as will promise durability, will entitle himself to a liberal compensation."

On the 12th of the same month the *Ledger* said that the completion of the line by carrying the wires into the city of New York was very important. "All that is now wanted to effect such completion is a plan by which to cross over the river (Hudson) at the Palisades, some ten or fifteen miles above Jersey City, without obstructing the navigation. This plan, it appears, has not yet been hit upon to be carried out with certainty." The same article stated that the Legislature of New York had already passed a law making it a felony to cut the wires. But it was also a felony to cross rivers by telegraphs in such manner as to obstruct the navigation. "Unfortunately, the Legislature of New York has not defined what will be an obstruction. Piers on each side of the river might not be held as an obstruction, but whether a pier in the middle of the river, upon which to stretch the wires, would be allowed by the State, is doubtful." From this it seemed that the experiment of carrying wires in a leaden pipe submerged in the stream had been a failure. The place where the experiment was tried is not stated. It was probably at Fort Lee. The *Ledger* suggested that "a branch line ought to be constructed to Jersey City, to which boats cross every fifteen minutes, giving frequent access to New York." Later in the same month the *Ledger* contained an article stating that the telegraph was worked on the 18th of February to Fort Lee, on the Hudson River, twelve miles from New York. The route by Norristown and across Pennsylvania and New Jersey to that place was so circuitous that the distance worked was stated to be one hundred and sixty miles. An attempt was made to cross the river in a boat and send the dispatches by wires to New York. The ice in the river interfered, and the boat did not get across again for several hours. "The fact is, this mode of communication with New York is liable to greater objections than that by way of Newark. It is slower and much more uncertain, and unless the wires can be speedily carried over the river or under its bed, so as to make the connection continuous, it will have to be abandoned, and a permanent station established at Jersey City." On the 30th of April the *Ledger* had the following article:

"MAGNETIC TELEGRAPH.—Our brother of the *New York Mirror* is taking a kaleidoscope view of the operations of the magnetic telegraph, which, according to him, is to make Wall Street, in New York, the great central 'ganglion' of the business nerves of the country. Which pair

of nerves these are we cannot say, but from generals our esteemed contemporary descends to particulars, and thus defines:

"For instance, John Smith must pay at bank to-day ten thousand dollars or suffer a protest, which will ruin him in business. After struggling all the morning to make up the amount, he finds the dread hour approaching, with but half the sum ready for deposit. He cannot horror, though his credit is good, for his neighbors are all as hard up as himself. To use a Yankeeism, he is "in a fix." Now the telegraph holds out a new horn to his dilemma. John Smith recollects that he has accounts due him in Albany, Philadelphia, or Buffalo for more than double the amount required to put him through the day,—help him over three o'clock. He steps over to the telegraph-office, and asks his correspondent at Buffalo to deposit to his credit in the bank of that city five thousand dollars. In fifteen minutes he receives an answer that it is done, the agent here pays him over the amount, the note is taken up, and John Smith breathes easy once more, and goes home with a light heart and a smiling face. In this way the whole bank capital of the country can be used every day in Wall Street, without the transportation of a single dollar."

"We have seen nothing more effective than the above since Capt. Bobadil made known his scheme for reducing an antagonist army. That highly respectable citizen, John Smith, Esq., may be in want of funds, and he may send to Philadelphia, Albany, or Buffalo by telegraph, and he may get an answer, but it is very doubtful whether he can get a 'certificate of deposit' at such a notice, though he may, for we heard of a lady some time since who was detained from a wedding-party by missing the cars to Wilmington, and sought to save time and to secure her passage by applying at the telegraph-office."

Satisfactory means were eventually found to carry the news to New York. On the 3d of June the *United States Gazette* published the following: "The magnetic telegraph between this city and New York worked yesterday to a charm. Nearly two columns of foreign news was conveyed hither with as much precision as usually attends any written or printed correspondence." The news by the steamer "Hibernia," in this paper, was headed "by telegraphic dispatch to the *United States Gazette*, the following news is received." In the same paper was an important paragraph stating that the telegraph line had been completed to Baltimore. "The line wire of the telegraph from this city to Baltimore was tested the whole distance last evening, and found to work sufficiently well for short messages. We may, therefore, expect to have it in successful operation by Thursday (June 4th) or Friday (June 5th) of this week." The next day a paragraph was published from Baltimore, dated June 3d, as follows: "The telegraph between this city and yours was put in operation yesterday at four o'clock, and immediately afterward communicated the fact that the steamer 'Hibernia' had arrived in Boston on Monday evening. An attempt was made to send an abstract of the news, but the instrument got out of order, and we are disappointed." The *United States Gazette* of June 4th contains Congress news, dated "Washington, June 3d, two P.M. Correspondence of the *Baltimore Patriot* by telegraph." This was probably sent by mail to Philadelphia by an afternoon train. On June 8th Mexican news from Washington by telegraph to Philadelphia was published in the same paper. The business had so much increased that in September it was announced that a new wire was to be constructed between Philadelphia and New York, and in October that new ranges of poles and

wires for New York were being put up, and that there was to be another wire constructed to Baltimore.

When first established the telegraph was considered a great curiosity, and in February notice was given that the office at the Exchange was open for inspection, and that certain hours were arranged for the reception of ladies either coming alone or attended by gentlemen.

It was not long after the Magnetic Telegraph Company got into operation that it encountered an energetic rival. The House Printing Telegraph was set up at 46 South Third Street in 1849, and in the succeeding year removed to the large brown stone building at the southeast corner of Third and Chestnut Streets. Subsequently, about 1854, the office was removed to the northeast corner of Third and Chestnut Streets, where it was doing business in 1856. It was finally absorbed by the Magnetic Telegraph Company, probably about 1860.

The Magnetic Telegraph Company continued its principal office at the Exchange five or six years, but removed to 101 Chestnut Street, north side, above Third, about 1853. The location was changed in a year or two to 98 Chestnut Street, adjoining the *Public Ledger* building, subsequently known under the new style of numbering as 302. This company went, eventually, with several others, into a new combination, called the Western Union. The Western Telegraph had its office in 1864 at No. 105 South Third Street, and in 1867 the Western Union was in the building at the southeast corner of Third and Chestnut Streets, formerly occupied by the House Telegraph, and numbered sometimes 101 South Third Street. Upon the completion of the splendid building of the New York Mutual Life Insurance Company, at the northwest corner of Tenth and Chestnut Streets, Aug. 25, 1875, the office was removed to that building, where it has since been established.

During the period under consideration there were several telegraph companies established, which continued for limited spaces of time, and were generally absorbed by stronger companies, which eventually were themselves absorbed by the Western Union, although it seems to be an inevitable thing that new companies should spring up to take the place of the latter. Among these may be mentioned the New York and Washington Telegraph Company, which had its office at the northeast corner of Third and Chestnut Streets in 1855; National, 101 Chestnut Street, 1855; Wilkesbarre, in the same building, 1855; and New York and New Orleans, at the same place, in the same year; American, 105 South Third Street, 1861; Atlantic and Ohio, at the same location, in the same year; Susquehanna River, North and West Branch, 1861; People's, 411 Chestnut Street, 1864; Bankers' and Brokers', 1866; Insulated Lines, 1866; Franklin, 1868; Automatic, 1873; Pacific and Atlantic, 1873; Franklin Atlantic and Pacific, 1875.

The Philadelphia Local Telegraph was established

at 107 South Third Street, about 1873, for the purpose of a city service. There were branch offices in various parts of the city, at which messages were received, and from which dispatches were sent to the persons and places within the respective districts by special messengers.

It was perceived not long after consolidation, and when the government of the city had got into working order, that the distances between the central office of the mayor and the police stations were in some parts of the city so great that communications between them were much delayed. The telegraph for commercial and business purposes had been in use sufficiently long to be well understood, and the establishment of a municipal telegraph would naturally suggest itself. This object was effected by the passage of an ordinance in 1855 for the creation of a police and fire-alarm telegraph. The line was constructed by William J. Phillips, who, until 1884, was the superintendent, and went into operation in the spring of 1856. It was constructed for two purposes,—to furnish complete communication between the police stations and the central office, and also to connect the stations with each other, and also for the purpose of a fire-alarm which could be worked by signal-boxes placed in the streets and public stations. The operation was simple, and required but little skill, the machinery being nearly automatic. When the system went into operation, there was communication with the police stations in the various wards, and to the latter in the central station, with eighty signal stations. The celerity with which alarms can be given and conveyed to the stations of the fire companies has rendered this system extremely useful.

The American District Telegraph Company was founded in 1873, partly for local service, but on a much more extensive plan than the Local Telegraph. Its aim was, in the first place, to furnish to its customers a speedy communication with central and branch offices. For this purpose, instruments in the dwellings, offices, stores, and manufactories of the subscribers were connected by wires with branch offices, and instruments furnished by which instantaneous communication could be had, messages sent and received, and messengers summoned. In addition, burglar-alarms and fire-alarms were set up, acting automatically, and giving notice to the branch offices that something was wrong, so that, when necessary, officers vested with the powers of policemen would go at once to the place from whence the signal came; and, in case of a fire-alarm, the company's firemen with extinguishers would be promptly on the scene. Add to this the services of a trained corps of messenger boys, fleet and intelligent, and the service sums up a great public convenience. The first officers were: President, Daniel M. Fox; Vice-president, Henry Bentley; Secretary and Treasurer, M. Richard Muckle; Managing Director, William J. Phillips. The central office was set up at the corner

of Third and Chestnut Streets, and branch offices were established in various parts of the city.

The Baltimore and Ohio Railroad Company in 1879 began to extend its telegraph lines and invite commercial business, forming a working co-operation with the American Union, to compete with the Western Union and other older corporations. In 1881 the American Union was bought out by the Western Union, which also endeavored to obtain control of the Baltimore and Ohio telegraph system; but its managers then, as they ever since have done, refused to listen to any proposition or to enter into any combination that would limit their absolute independence. Within the past two years, under the able management of Robert Garrett, the first vice-president of the Baltimore and Ohio Railroad, it has entered the field as a regular commercial company, and, besides constructing thousands of miles of new lines, it has made alliances by which it reaches all the chief cities and towns of the country. Mr. Garrett has shown most remarkable sagacity and enterprise, particularly during 1884, by engaging the services of the highest class of electricians and operators, and organizing his telegraph department on the broadest principles of efficiency. His plans, however, go beyond what has already been accomplished, and he is steadily increasing his telegraphic equipment, and pushing it out in new directions. His company has a close connection with the new cables to be laid across the Atlantic in the coming summer by Messrs. Bennett and Mackay. There are now in this city ten offices of the Baltimore and Ohio telegraph, all of which are in receipt of a large share of general business, and it has lines in successful operation leading to all the great cities of the world. In 1884 the Postal Telegraph Company opened an office in Philadelphia.

The multiplication of telegraph poles in the streets of the city, the stretching of wires along them (to the number sometimes of eighty and one hundred on a single pole) became of late years a great nuisance, and particularly hurtful in cases of fire by preventing ready access to buildings by the fire department. One of the first complaints against the telegraph system, in 1846, was that the poles were crooked, unsightly, rough, and unpainted. Some concession was made to taste by having the poles painted, but no effort could get them straight. The placing of them upon the streets was submitted to as a necessity in the interests of business. At the beginning the telegraph pole was like the letter T, with a short arm at the top upon which the wire was carried. As communication increased lower cross-arms were added, and many poles carry ten or twelve of them, each also sustaining a large number of wires. Such arrangement became to be considered by the public at large as an imposition, and the clamor commenced in the newspapers for the removal of the poles and wires. The telegraph companies generally insisted that it would be impossible to maintain an underground telegraph service, but

incredulous persons, who knew what had been done in that direction in Europe, were quite determined in their opinion that the inconvenience of telegraph poles ought to be abated. On the 22d of March, 1880, City Councils passed an ordinance in which it was said, "In order to test the practicability and deficiency of several underground systems of telegraph, authority is hereby given to lay an underground line or lines of telegraph wires, tubes, or cables under the following streets: Beginning at Walnut Street wharf, thence west on Walnut Street to Dock Street, thence along Dock Street to Third Street, thence along Third Street to Chestnut Street, thence along Chestnut Street to Juniper Street, thence along Juniper Street to the new public buildings. . . . Each and every person or persons who may desire to lay underground wires, tubes, or cables, under the provisions of this ordinance, shall notify the superintendent of Police and Fire-Alarm Telegraph within ten days after the passage of this ordinance, in order that all such wires, tubes, or cables may be laid at one time in the same trench. The trench shall not exceed eighteen inches in breadth, and shall only be open between the hours of seven o'clock P.M. and six o'clock A.M., and not more than five hundred feet of the streets under which said lines, tubes, or cables are to be laid shall be opened at one time, and shall be placed in condition for travel as fast as the said lines, tubes, or cables are laid."<sup>1</sup>

<sup>1</sup> Up to 1884 there has not been much advantage taken of this privilege. An electric wire for lighting, peculiarly prepared by lead insulation, has been laid down between the *Public Ledger* office, at Sixth and Chestnut Streets, and the clothing establishment of A. C. Yates & Co., on the south side of the same street, near Seventh. Underground conductors for electric lighting upon the public lamp-posts have been laid down on the south side of the same street, communicating with the *Record* building on the north side, and extending as far as Eleventh Street. By ordinance of April 3, 1883, the Metropolitan Underground Telegraphic, Telephonic, and Electric Light Cable Company was authorized to lay down wires, tubes, and cables upon the same streets mentioned in the ordinance of 1880, with extensions on Fourth Street, south from Chestnut, to the office of the Pennsylvania Railroad Company; on Eighth Street, from Chestnut and Walnut, and along Walnut to West Washington Square and the office of the American District Telegraph, below Walnut Street; also along Delaware Avenue, between Dock Street and Washington Avenue; and on Ninth Street, from Chestnut Street to Fairmount Avenue, this work to be done by underground conduits. At the same time privileges of laying conduits on several streets were granted to Henry C. Gibson, Thomas S. Harrison, George Philler, and Winfield S. Russell, upon the following streets: Chestnut Street, from the Delaware River to Thirty-second Street; Twenty-third Street, from Chestnut to Sansom, and down the latter to Sixth, and down Sixth to Walnut, also Walnut Street, from Sixth to the Delaware River; Tenth Street, between Sansom and Filbert; Filbert, between Merrick and Ninth Streets; Market Street, between Sixteenth and the Delaware River; Third Street, between Market and Washington Avenue; Washington Avenue, from the Delaware River to Broad Street; Ninth Street, from Filbert to Green; Front Street, from Market to Norris; and Berks Street, from Front to Tenth. These grants were subsequent to an authority given to the Underground Conduit Company to lay a conduit on Market Street, from Broad Street eastward, the expectation being that telegraph, telephone, and electric light companies would make use of it. Except by the Thomson-Houston Electric Light Company, there has been little use of this convenience. The hope that the telegraph-poles would be shortly done away with entirely has not been strengthened by the passage of the ordinance, March 21, 1883, which gave to the Baltimore and Ohio Telegraph Company authority to erect poles and wires between Fort

In 1884 the following telegraph companies were in operation in Philadelphia:

American District, principal office southeast corner Third and Chestnut Streets, with twelve branch offices.

American Rapid, 103 Chestnut Street, eight branch offices.

American Union, 517 Chestnut Street, two branch offices.

Baltimore and Ohio, 304 Chestnut Street, ten branch offices.

Bankers and Merchants, 229 Chestnut Street, three branch offices.

Baxter Overland, 1001 Chestnut Street.

Continental, 30 South Third Street.

Delaware and Atlantic, 400 Chestnut Street.

Mutual Union, 103 Walnut Street, five branch offices.

Philadelphia Local, 107 South Third Street, twenty-three branch offices.

Philadelphia, Reading, and Pottsville, 204 South Fourth Street, one branch office.

Western Union, corner of Tenth and Chestnut Streets, thirty-six branch offices.

**Telephone Lines.**—The honor of the invention of the telephone is disputed between the friends of Elisha P. Gray, of Chicago, and Professor Graham A. Bell, of the Massachusetts Institute of Technology. These scientists were engaged in experiments to demonstrate the practicability of conveying sounds by telegraph in 1873 and subsequent years. Each of them demonstrated the possibility of sending such sounds. At the Centennial Exhibition at Philadelphia, in 1876, the uses of this invention were shown by Professor Bell to Gen. U. S. Grant, President of the United States, and to Dom Pedro, emperor of Brazil, by wires stretched between the Main Building and Machinery Hall, and this seems to have been the first public notice of the invention. Before this time, in the early part of 1876, Bell, in Massachusetts, succeeded in carrying on a conversation between two different houses, the recipients of the sound being drum-heads of goldbeaters' skins, with a circular piece of clock-spring glued to each membrane. The tones of an organ were transmitted some distance about the same time. On the 13th of February, 1877, Bell made very successful demonstrations at Salem. He sent messages from Salem, Mass., to Boston, twenty miles away, and answers were received. On the 27th of the same month Gray, at Chicago, received by this means the tones and airs of a musical instrument which was connected with the telephone and played at Milwaukee, eighty-five miles away. The sounding apparatus had already become so much

Mifflin, crossing Penrose Ferry bridge, and by way of Penrose Avenue and Pasayunk Avenue to Mifflin Street and to Second, up the latter to Callowhill, and down Callowhill to the Delaware River, and along Delaware Avenue to Pier 19. A general ordinance to regulate the introduction and use of underground conduits, electrical cables, and wire for electrical conductors in the streets of the city of Philadelphia, was passed June 21, 1882. It was intended to encourage the laying of wires underground, but did not make that course an absolute necessity.

improved that the music was heard through the large hall in which the demonstrations were made. About the same time Professor A. C. Dolbear, of Tufts College, Massachusetts, and Thomas A. Edison, of Menlo Park, N. J., were making experiments of the same kind. In 1878, Appleton's "Annual Cyclopædia," speaking of the inventions in 1877, said, "The telephone has been regarded as a toy, or a curiosity to play with; but, while it is undoubtedly extremely interesting as a novelty, it is very much more than this; it is scientifically and practically a great success. There are, undoubtedly, difficulties in its use, but, considering that it is a contrivance but of yesterday, the wonder is that it is so perfect. The telegraph was much longer regarded as an impracticable invention, and it is impossible to say how soon the telephone may not take rank among the necessities of common life."

This prophecy was substantially fulfilled in the same year. The "Cyclopædia" also said, "The impression produced by listening to a communication through this instrument has been aptly described as follows: 'The voice, whether in speaking or singing, has a weird, curious sound in the telephone. It is in a measure ventriloquial in character, and, with the telephone held an inch or two from the ear, it has the effect as if some one were singing far off in the building, or the sound were coming up from a vaulted cellar or through a massive stone wall.' The singing or speaking is heard microscopically, as it were, or rather microphonically, but wonderfully distinct and clear in character. The longest distance at which conversation has been carried on so far through the telephone is about two hundred and fifty miles. With a submarine cable conversation has been carried on between England and France across the English Channel. Conversation has also been held through the bodies of sixteen persons standing hand in hand."

About the beginning of the year 1878 the first company formed for the purpose of telephone communication was established in Philadelphia as the Bell Telephone Company. It located its central office at No. 400 Chestnut Street, in the old Philadelphia Bank building, for the purposes of an exchange. The wires used by the subscribers led from this place, and subsequently from the Wood building erected on the same site. Communication can be had with the office at any time, and every subscriber upon request is put in communication with any other subscriber which he may require by connecting the wires. By this means persons at each end of the terminus have direct speaking communication with each other.

The telephone companies in 1884 are as follows:

Bell Telephone Company of Philadelphia, No. 400 Chestnut Street.

Baxter Overland Telephone Company, 1001 Chestnut Street.

Clay Commercial Telephone Company, 1017 Chestnut Street.

Delaware and Atlantic Telephone Company, 400 Chestnut Street.

**Electric Lights.**—The first attempt at electric lighting was made in December, 1879, at the store and warehouses of John Wanamaker, at Thirteenth and Market Streets. The dynamic power was furnished by means of a steam-engine in the establishment. About the same time the keeper of a lager-beer saloon at the southeast corner of Ninth and Locust Streets put out an electric light and lighted his bar-room by electric lamps. The Continental Hotel followed shortly after with electric lights in the first story, and a large light displayed from the top of the building at Ninth and Chestnut Streets. The Girard House put out an electric light at Chestnut and Ninth Streets shortly afterward. Castor's tailor-store, at Eighth and Chestnut Streets, was brilliantly illuminated inside and out with electric lights, and Wilson's silversmith establishment, on Chestnut Street, near Fifteenth, made a grand show with a Jablakov candle. A large laboratory for furnishing dynamic electricity was built on Lee Street, west of Nineteenth, in 1881, and the company succeeded in obtaining authority from Councils for the erection of poles, lamps, and wires, in 1881, upon an undertaking to light Chestnut Street, from the Delaware to the Schuylkill, free of cost for one year. There were forty-seven electric lights, and they were first put into operation Dec. 3, 1881. On the 16th of May, 1882, the office of the *Public Ledger*, at Sixth and Chestnut Streets, was illuminated in all the stories by the Edison incandescent electric lights. Some time afterward the office of the *Record*, on Chestnut Street, between Ninth and Tenth, was lighted by the Edison system, and the electric lights were adopted in the Philadelphia post-office. City Councils, by ordinance of June 21, 1882, granted to the Maxim Electric Light and Power Company authority to supply electric lights, etc., between Bainbridge Street and Vine Street, and from the Delaware to the Schuylkill Rivers; also between Vine and Green Streets from the Delaware to Twentieth Street, and on all the streets running north and south between the Delaware and Schuylkill from Washington Avenue to Columbia Avenue. On the same day a general ordinance was passed regulating the introduction and use of underground conduits for electrical cables and wires. It was of a general character, specifying the manner of laying down the cables and wires, with other regulations. Electric lights were placed in the new public buildings, at Broad and Market Streets, in 1882, and the new Pennsylvania Railroad Depot opposite was lighted by electricity from the date of its opening. In a short time this method of lighting was employed by storekeepers and others on Chestnut, Market, Arch, Race, and Eighth and Ninth Streets, and has been extending since. Delaware Avenue was lighted by electricity in the early part of 1883. There are several companies engaged in that business, using the systems and lamps of Brush,

Maxim, Jablakoff, and Thompson & Houston. In the latter part of 1883 the gas lamp-posts on Chestnut Street, between Ninth and Eleventh, were, by permission of Councils, used for electric lighting, carried underground by the Thompson & Houston method, the electricity and power being furnished from the *Record* building.

### CHAPTER LIII.

#### FERRIES, BRIDGES, PUBLIC LANDINGS, AND WHARVES.

**Ferries on the Delaware.**—The earliest road between New York and Philadelphia crossed the Delaware at the Falls, and below where the town of Trenton was subsequently located; but the increasing necessities of the settlements and, more particularly, the founding of Burlington soon called for united action on the part of Pennsylvania and New Jersey to provide another point of crossing lower down the river. Governor Andrew Hamilton, of New Jersey, took the initial step by writing to Governor Markham in October, 1696,—

“That it was formerly with great difficulty that the post could goe to Philadelphia by Land, to the great inconvenience of correspondants and trade, and yt for remedie whereof and accomodation of Travellers a ferry hath been erected on Jersey side att a great charge, but that the way was not yet returned from the Landing on the pennsylvania side to King’s road wch is three quarters of a mile and easily cleared; and therefore Requesting the Gov and Council to approve the said road and give the necessarie orders for clearing it.”

Governor Markham complied with this request by issuing a warrant to Surveyor Thomas Fairman “to lay out the kings road from dunck Williams Landing (the nearest & most convenient yt may be had & Least prejudicial to the Lands and improvements of the neighborhood) Into the King’s great road that leads to phila, and that a Return in words of Courses etc protracted figure thereof be made into the Secries office in order to be filed and recorded there as a final Confirmation thereof, and the Justices of the Peace for the County of Bucks be ordered to expedite the clearing of the road.” Situated a little north of the upper boundary of Philadelphia County, this crossing was for many years known as Dunck’s Ferry, and, as it connected with a road leading directly into the city, it afforded the readiest and most convenient passage of the Delaware for travel and transportation. In the Revolutionary epoch it became known as the Bake-House, on account of being the location of a bakery that supplied bread to the army. In 1700 “an act about erecting and regulating the prices of ferries” was passed, by which it was ordered that no ferryman be permitted to ply the river Delaware “in this government” without first giving bond that “they shall not carry out of or into this Province any strangers that may be suspected of piracy or being

criminals or runaways.” This statute was in force until 1712, when it was superseded by the act of XII. George I. for “establishing and regulating ferries over the Delaware River and Neshaminy Creek.” In 1716 the Assembly of New Jersey established the rates of ferriage between Philadelphia and Burlington, as follows: Hire of a boat in winter (from Michaelmas to Lady Day) for a single passenger, 5s. 9d.; single passenger in company, 1s.; in the summer, 4s. 6d.; single passenger in summer, 9d. New Jersey also required the boatmen to take out a license.

A ferry between Philadelphia and the Jersey shore immediately opposite was authorized in June, 1695, by the court of Gloucester County, N. J., by this decree: “The Grand Jury consenteth and presenteth the property of Daniel Cooper for keeping a ferry over the River to Philadelphia at the prices following, that is to say: for a man and horse one shilling and sixpence; for a single horse or cow, one shilling and threepence; for a single man ten pence, and when ten or more six pence per head, and six pence per head for sheep, calfs or hogs. To which ye bench assents.”<sup>1</sup>

Feb. 22, 1718, an act was passed by the Pennsylvania Assembly for “erecting a ferry at or near the land of Daniel Cooper, deceased,” and also “to Gloucester in the Western division N. J.” When, on the following 31st of May, the Assembly adopted a provision to continue the ferries at Bristol to Burlington, and at the Falls of Delaware, it precipitated a controversy with the Governor, Sir William Keith, both parties claiming the original prerogative of establishing ferries. Four members of the Council—Richard Hill, Isaac Norris, Jonathan Dickinson, and James Logan—withdrew from the Council, on the plea that sufficient time had not been allowed them for consideration of the bill; but the Governor was not disposed to continue the opposition, and it was approved by himself and the three remaining councillors,—Samuel Preston, Anthony Palmer, and Robert Assheton. On Aug. 18, 1727, another act was passed “for establishing a ferry from the city of Philadelphia to the Landing at or near the house of Wm. Cooper, and another from or near the city bounds to Gloucester, in New Jersey.” The eastern terminus of Cooper’s Ferry was at what is now Federal Street, Camden. By this act a jurisdiction was conferred upon the Common Council of Philadelphia, which it

<sup>1</sup> Daniel Cooper is supposed to have been a son of William Cooper, a worthy and eminent member of the Society of Friends, who emigrated from Cole’s Hill, in the parish of Amersham, Hereford County, England, and built a mansion on a high bank above Cooper’s Point, called by him Pyne Point, from a dense pine forest which grew there. Cooper took up the land between Pyne Point and Cooper Street, Camden. On Sept. 30, 1681, William Royden bought the land on the Delaware from Cooper’s south line to the line of John Kaighn, from whom Kaighn’s Point was named. In the succeeding year Cooper bought out Royden’s right, with a guarantee deed from Talacca and other Indians, and so acquired ownership of the river front from Cooper’s Point to Kaighn’s Point. Daniel Cooper’s son Joshua and grandson William were long connected with the Delaware ferries.

exercised by appointing Sylvanus Smout ferryman, with a lease for one year from September, 1727. Smout ran his boats across from the foot of High [Market] Street; and when, in 1735, the act of 1727 had expired, the Assembly proposed to vest the ferry right at that point in the corporation of Philadelphia. The Governor contended that he alone possessed the power to create such a franchise, and he did convey it to the city by a patent bearing date of Feb. 4, 1735, addressed by John Penn, Thomas Penn, and Richard Penn to the mayor and commonalty. It recites that the grant covered "the full and exclusive privilege of keeping and maintaining said ferry on this side of the Delaware," and that it should—

"extend northward to the mouth of Cohocksink Creek, wherein the mille some years since built by Thomas Masters dec'd now stands, and so far southward from the mouth of said Cohocksink Creek along ed river side to the dwelling house or lots of ground now in tenure of Wm. Hayee, a little below the south bound of the city, & for the better support & continuance of the ed ferry, and that the same may be duly kept & attended with sufficient flats boats & able men for the purposes aforesaid, with right to establish & take tolls etc. Rent one Beaver Skin per annum as of our manor of Springettsbury."

The landing on the Philadelphia side was probably that long known as the "Old Ferry," just below Arch Street, and William Rawle was chosen ferryman and given a lease for seven years, at the rental of thirty pounds per annum. He died before Feb. 24, 1748, as on that date William Cooper, one of his executors, applied for a new lease in his own name, to run until Francis Rawle, son of the former ferryman, should reach his majority and be able to undertake the business for himself. In 1755 the lease was renewed to the younger Rawle on the same terms as had been paid by his father, and as he was also dead by the time of its expiration in 1762 or 1763, it was awarded to his widow, Rebecca Rawle, and his executors paid the rental up to March, 1769. After the death of Daniel Cooper the ferry on the Jersey side is supposed to have been kept by his son, Joshua Cooper, and then by William Cooper. It got the name, at an early period, of "Lower Billy's," to distinguish it from "Upper Billy's," at Cooper's Point. The Federal Street ferry-house had on its front wall a tablet lettered "D M C, 1764," which were doubtless the initials of Daniel Cooper and his wife. From the earliest settlement of Camden up to about 1810 three classes of ferry-boats were in use. The smallest were the wherries, which would carry twelve or fifteen persons; and next larger were the "horse-boats," for the transportation of horses, carriages, cattle, etc. The principal craft were the "team-boats," which were propelled by horse-power.<sup>1</sup>

<sup>1</sup> Dr. L. F. Fiesler, in his "History of Camden," gives the following: "Team-boats propelled by horses walking in a circle, and giving motion to the wheels. Bridgway, built by Benjamin Reeves, ran from the foot of Cooper Street; Washington from Market Street, Camden, to Market Street, Philadelphia; Phoenix, Constitution, Moses Lancaster, Independence. The team-boats employed sometime as high as nine and ten horses. They were arranged in a circle on a tread-wheel connected with the main shaft. By stepping on the wheel the shaft would turn,

Even in the primitive days there seems to have been a great deal of travel across the Delaware. The long, roomy, clinker-built wherries, with iron-shod stems, were admirable boats of their class. If the ice was broken up in the winter they would be rowed through the channels, and when the river was hard frozen they were dragged across the ice by hand. Ladies and children were then allowed to remain in the boats, but it was expected that the men passengers would turn out to man the ropes. Neither in winter or summer was there any particular time assigned for the departure of the boats, which would, as a rule, only make their trips when they had obtained full complements of passengers.

The year was divided by the ferrymen into summer and winter seasons, one extending from March to December, and the other from December to March. In the summer they charged for each passenger twelve and a half cents; for wagon and horses, one dollar and fifty cents; for man and horse, fifty cents; and for cattle per head, fifty cents. These rates were doubled in the winter, but it generally depended on the oldest ferry-master to decide just when the condition of the weather warranted the advance. So long as the horse-boats were kept at anchor in the river only the single tolls were to be collected, and when they were brought in to the wharves that was understood to be the signal for enforcing the double tariff. There were several ferry-houses at Market Street and below it, but it is not easy to determine the connection between them and those on the Camden side. The ferry on the north side of Market Street was kept by William Phares in 1800, and by Asa Curtis, of Moorestown, N. J., in 1801. Capt. William Poole followed Curtis and remained until about 1815, when he was succeeded by Clement Reeves, who died some four years afterward. The latter's widow kept up the business, but about 1823 relinquished the ferry tavern to her son, Benjamin Reeves. As it was then customary for the ferry-master to keep an inn at the landing, the names of the ferry and the public-house became identified, so that in the course of a quarter of a century the Market Street Ferry was known at various intervals as Phares' Ferry, Curtis' Ferry, Poole's Ferry, and Reeve's Ferry.

Not later than 1810 steam ferry-boats came into use, the first being the "Camden," commanded by Capt. Ziba Kellum. It was the first steam ferry-boat built in Philadelphia, and plied between the lower side of Market Street and Cooper Street, Camden. In 1813 "the accommodating steamboat 'Twins'" ran from Poole's Ferry to James Springer's Ferry, at Camden, which was that previously known as Cooper's Ferry. Benjamin Reeves built the "Twins," and it was so named from being two hulls decked over. The "Franklin" was another of his constructions, as was also the "Benjamin Rush," a double-hull craft with

and thereby propel the boat. Every day at noon there was an intermission of one hour, from twelve until one o'clock, which was devoted to feeding the horses."

the wheel in the centre,—a type upon which numerous boats were afterward patterned. In 1828 the ferry steamers made up quite a fleet, among them being the "William Wray" and the "Philadelphia." The "Lehigh," commanded by Capt. Joseph Taylor, was the first vessel on the Delaware to employ coal for making steam. The "Vigilant" was built for the Cooper Street Ferry, but was burned after a few weeks of service. The "Delaware," which exploded its boiler on Oct. 31, 1837, was considered a curiosity, on account of having a vertical cylinder and a walking-beam.

In addition to the ferry that started from between Arch and Market Streets, there was one south of Market Street, which was kept, in 1785, by Richard Thorn, and after him by William Phares, John Negus, Joseph Bispham, Asa Gibbs, and John Nicholson. On Mellish's map, dated in 1816, three ferries to Camden are marked at Market Street. In 1819 the rates for passengers were reduced to six cents in the summer, and double that sum in the winter.

Duhious questions and some litigation were connected with the Kaighn's Point Ferry, which between 1809 and 1815 came into the possession of Christopher Madara through his lease of the property of Joseph Kaighn, below Camden. When the Pennsylvania and New Jersey Steamboat Company was incorporated, in 1815, it proposed to put on a line of boats from Kaighn's Point to Philadelphia; and as Robert Fulton, Robert Livingston, and John Stevens then claimed the sole right of running steamboats in the United States, it bought from them the exclusive privilege for the Delaware River within five miles north or south of Kaighn's Point, and thus the other companies were almost entirely restricted to the use of the old "team-boats" until the Supreme Court overthrew the claim of Fulton and his associates. But in the mean time the Pennsylvania and New Jersey Company had leased the ferry privileges at Kaighn's Point for ninety-nine years, and begun to run the "Union," the finest steamer on the river. Landings were made on the Philadelphia side at South and Washington Streets, and the enterprise might have proved remunerative but for the expense of building wharves and houses on both sides of the river. The income not being sufficient to meet these drains, the "Union" was taken off; and to hold the lease, which contained a clause that it should be forfeited if the ferry was not maintained, a small boat, the "Norristown," was substituted. Not long afterward the line was suspended, in consequence of the destruction of the "Norristown" by fire; and then the widow of Clement Reeves, who had bought Kaighn's Point and opened a hotel, brought suit against the company under the forfeiture clause of its lease, and won her case. She managed the ferry only a short time, and sold out to Ebenezer Toole, and at his death it was purchased by the Camden Ferry Company. He and Mrs. Reeves had done well in their administrations,

having furnished four new steamers for the river transit.

Permission to establish a new ferry at Arch Street was granted by Common Council, on May 27, 1760, to Samuel Austin, he to pay thirty pounds annually to the city, and the lease to continue for three years. It was operated in connection with the house at Cooper's Point, and north of the old ferry landing on the Jersey side. Sarah Austin was credited with the payment of a portion of the rent in 1770, being then a year in arrears. Thomas Austin was, in 1776, a member of the committee of inspection, but proved so unfaithful to the popular cause that he was compelled to resign and sign an abject apology for his conduct. William Austin, yeoman, "late keeper of the New Jersey ferry," was proclaimed as a traitor May 21, 1778. This ferry was frequently called the New Ferry, and after a time the Upper Ferry and Cooper's Point Ferry, being the point of departure for "Upper Billy's." William Cooper was popularly known as "Uncle Billy," and his wife as "Aunt Becky," so that when the owners of the ferry christened their first steamer the "Rebecca" in her honor, the boat also got the nickname of "Aunt Becky." It had a wooden boiler clamped like a cask, but with iron flues, and was the first stern-wheeler on Delaware waters, from which feature it derived its second nickname,—"The Wheelbarrow." There had been several attempts to establish ferries to Cooper's Point besides those from Arch Street, and in 1819 a boat made the trip across from Green Street wharf. A ferry from Laurel Street to Cooper's Point was in operation for some years, and was known about 1840 as Burnap's Ferry.

In December, 1786, the Lower Ferry to Daniel Cooper's, which started on this side from Robert Waln's wharf, second below the Drawbridge, was begun by Joseph Wright. It touched at Windmill Island, where he erected a half way house, and announced that passengers "would always meet with hearty welcome and a hospitable fire in the cold season to warm and refresh themselves while waiting for an opportunity of evading those large fields of ice which generally float up and down with the tide and obstruct the passage during winter." This ferry was the inciting cause of the efforts made for some years after 1800 to build a bridge between Camden and the island, from which access by a short ferry to Philadelphia would be easy. There were many efforts for that purpose, and a bridge company was chartered.<sup>1</sup> But when the sanguine projectors were ready to put their stock upon the markets they found that there was no overwhelming anxiety to invest in such an improvement, and it was abandoned.

<sup>1</sup> The leading spirit in this enterprise on the Jersey side was Edward Sharp, of Camden. In order to accommodate the expected travel, he laid out Bridge Avenue, opposite Windmill Island. It was broader than usual with the Camden streets, and was utilized after the establishment of the Camden and Amboy Railroad for the use of its tracks.

The establishment of a ferry at Gloucester Point, N. J., was sanctioned by the County Court of Gloucester, Jan. 1, 1688, by the following minute, which Muckle has preserved in his "Reminiscences of Old Gloucester.":

"It is proposed to ye bench y<sup>e</sup> a ferry is very needfull and much wanted from Jersey to Philadelpbia, and yt Wm. Roydon's house is looked upon as a place convenient for, and the said William Roydon a person suitable for that employment; and therefore it is ordained from ye Bench that a ferry may be fixed, &c., to which ye Bench assents, and refers to ye Grand Jury to methodize ye same and fix the rates thereof."

Before the middle of 1695 the Roydon Ferry is supposed to have been abandoned. On the 1st of June of that year the following entry was made:

"The Grand Jury consenteth to and presenteth ye proposals of John Reading for keeping a ferry over Gloucester River, and from Gloucester to Wickaco at ye prices following,—that is to say, for a single man and horse two shillings and sixpence, and four shillings per head for more than one horse or cow, and one shilling and sixpence for a single man, and one shilling per head when more than one from Gloucester to Wickaco, . . . to all which ye Bench assents."

This crossing must have been included in the ferries legislated for as to rates by the Pennsylvania act of 1700, and re-established by the act of Feb. 22, 1718, to Gloucester and the western division of New Jersey. Greenwich Point, the landing on the Pennsylvania shore, was, before Penn's settlement, near the most populous section of the territories on the Delaware. The Swedes were numerous at Kingsessing and Wickaco, and a ferry to the Jersey shore must have been an early necessity. In the first part of the present century the Widow Marshall kept the Greenwich Point ferry-house, and was succeeded by G. De Vries. Caldwell & Brown were there in 1823, and in 1825 Mrs. Sprogell, daughter of Mrs. Marshall, became the proprietress.

The Kensington and Richmond Ferry, the route of which extended from Port Richmond directly across the Delaware to the Jersey shore north of Petty's Island, is indicated on the map of 1811.

In anticipation of the completion of the Camden and Amboy Railroad, the Camden and Philadelphia Steamboat Ferry Company was chartered in March, 1836, and in the following year it obtained permission from the Pennsylvania Legislature to cut the canal through Windmill Island. This company first ran its boats from the foot of Chestnut Street, but soon built its house at the south side of Walnut Street. The hotel was leased to J. B. Bloodgood, and the location became one of the great centres of trade and transportation. Rates of ferriage were reduced one-half by this company, which eventually removed its offices and docks to Market Street. Two of the boats with which it began business were the "State Rights" and the "John Fitch."

**Ferries and Bridges on the Schuylkill.**—It is probable that a ferry was established across the Schuylkill River at High Street almost as soon as the city was founded, as the first Assembly passed on Dec. 7, 1682, the following enactment:

"That there shall be ferry boats for men and horses, built within One year, ensuing the first Session of this General Assembly, over the Creeks; commonly called Neshaminess, Scuilkill, and Christeen, at the charges of the Counties they belong to, to be equally leaved upon the inhabitants thereof, according to the proportion of Land they hold, by the several Courts of Justice of their respective Countys. And the price shall be two pence a head for carrying over every person, and with an horse, four pence and for every led horse or other beast three-pence; The Income of which shall be equally divyded into the publick stock of the several counties, which rate shall hold for 7 years, from the date hereof.

"Provided always that if any private persons, will Undertake to provide the said places with boats at his own charge, he shall have the profit as afore said; And if any person that lives convenient for a ferry, shall refuse to keep the ferry, it shall be lawful, for another person that will, to build a house and have twelve acres of land, in such convenient place, paying yearly for it, so much as the county court shall adjudge reasonable, to the Owner of said land."

Philip England was keeper of this Schuylkill ferry in April, 1685, and elicited from Christopher Pennock and others a complaint to the Provincial Council that he did not provide the requisite facilities, whereupon the Council warned him "to Expedite a sufficient ferry boat for horses and cattle to pass to and fro over the Schoolkill as also to make the way on both sides Easy and passable both for horses and man to Loe water marke; otherways ye Council will take care to dispose of it to such as will perform ye same." England may have made a pretence of complying with these instructions, but about fourteen months afterward there was another complaint against "ye abuses of ye Schoolkill Ferry." In the act of May 10, 1690, the Schuylkill ferriage rates were fixed at "two pence a head for oxen, bullocks, cows, heifers, horses and mares, and a half a penny a head for sheepe and hoggs, and two pence for a single passenger and a penny apiece for all passengers above the number one; but for a man's horse loaden or unloaden three pence." In 1693, England's monopoly was confirmed to him by Governor Benjamin Fletcher, of New York, to whom he had exhibited his license under the hand and seal of William Penn, and who had been appointed by the crown in supersession of the Penn interest. The record of Fletcher's action is, that "in order to prevent hurtful competition it was said that he would discharge all others from Transporting anie persons over the Skuilkill near the said ferry for monie or reward until the Proprietaries' pleasure be knowen, which was approved. And some of the Council on behalfe of the Proprietary did return his Excell. thanks." This same year some of the Swedish residents made complaint to the Assembly that they lived three miles distant from the Schuylkill, that their meeting-house on the other side was three miles distant, and that they were "restrained from passing the river the nearest way to their worship on Sundays and Holy dayes by Philip England, keeper of the ferry at Schuylkill." The trouble was that England contended that no one had a right to cross the river except at his ferry, but the Swedes procured permission to transport themselves to and from their church, "provided they doe not abuse this libertie to other

The project for a Schuylkill bridge was revived in 1774, when another committee of the Assembly reported that it could not be better located than at the Middle Ferry, but as alternative sites they mentioned the Falls of Schuylkill and Watson's Island, and estimated that at the Falls it would cost seven thousand five hundred pounds, and at the Island nine thousand five hundred pounds. No action was taken by the Assembly, and the first bridge across the Schuylkill at Philadelphia was constructed as a military necessity. In December, 1776, Gen. Israel Putnam was sent by Washington to command the defenses of Philadelphia against the advancing British army, and part of his instructions were to secure means for the speedy passage of the Schuylkill for citizens and troops. On this point Putnam consulted Capt. Richard Peters, and as no pontoons or boats were available, it was decided to construct at the Middle Ferry a bridge of the floating stages used by ship-carpenters. In a few days it was completed, and although the battle of Princeton rendered it not immediately needful for military purposes it was allowed to remain in place, and found to be a great public convenience. On Aug. 24, 1777, the Continental army marched across it and took the road to Wilmington and the Brandywine, and when the British were approaching Philadelphia shortly afterward, Maj. Casdorp removed it as one of the measures preparatory to the evacuation of the city by the Americans. During the British occupation they built another floating bridge at Gray's Ferry, which was finished Oct. 20, 1777, and two days later was moved up to the Middle Ferry. Capt. John Montessor, of the Royal Engineers, had charge of the work, and recorded its history in his journal. The bridge was destroyed by a storm on October 28th, and some of the boats ran aground on the west shore of the Schuylkill, and were set on fire by the American militia. Inside of two weeks it was rebuilt, and after the fall of Fort Mifflin Lord Cornwallis crossed it with two thousand men to cooperate with Sir Thomas Wilson in his movements.

When the British fled from the city they were too much hurried to destroy the bridge, and the Americans found it intact upon their re-entry. They moved it down stream to Gray's Ferry, and restored their old bridge to its original location at the Middle Ferry, where it was carried away by a freshet in the spring of 1780, just as Gen. Lacey and Capt. Hambricht were, in pursuance of instructions from the Supreme Executive Council, considering whether it should be improved or sold. Col. John Mitchell then offered, on behalf of the quartermaster's department of the army, to replace it on condition that the troops and teams should pass over free of toll; but the Council thought best to rent the bridge to him for £8400 per annum. Seemingly an enormous charge, it is not so great when we remember that it was calculated in Continental currency, which was then so depreciated that a single individual crossing the bridge had to pay a toll

of 2s. 6d., and the rich merchant was taxed 45s. if he desired to go over in his chariot and four horses. Joseph Ogden, keeper of the ferry, was ordered to consider himself a tenant of the quartermaster-general, and all passengers not connected with the army were required to pay the full tolls. The bridge was replaced, and Benjamin G. Eyre brought to the Council a bill of £6432 for doing the work, stating that Col. Mitchell could not discharge the debt on account of not having the money. This difficulty was adjusted by the Council agreeing to advance the amount if Mitchell would give Eyre an order for it. The armies under Count Rochambeau and Washington passed over this and the Gray's Ferry bridge going to Yorktown in 1781. It and the house of Joseph Ogden were swept away by ice and high water on March 15, 1784, and in 1786 the controller-general made a report upon the accounts of Thomas Davis and Thomas Casdorf for constructing still another bridge at that spot. Ogden and his family narrowly escaped drowning in the flood, and their condition was so pitiable that a donation of three hundred dollars was made to him, and the city remitted two years' rent of the ferry.

None of the bridges erected up to 1786 were of a permanent character, and the community was demanding that the Schuylkill should be spanned by one that would resist the attacks of storm and freshets. Thomas Paine then came forward with the first plan of an iron bridge that was ever proposed. It was to be a single arch twenty feet in height from the chord line, and three hundred or four hundred feet span. Paine stated that the design was suggested to him by a spider's web, a resemblance to which was shown in a section of his model, and his fundamental idea was that the small segment of a large circle was scientifically preferable to the great segment of a small circle. After making the model at his home, in Bordentown, N. J., he set it up at Dr. Franklin's house in this city, from whence it was taken to the State-House, and eventually carried to Paris for exhibition to the Academie des Sciences. Paine's novel device interested the Philadelphia Agricultural Society, which petitioned the Assembly to examine it and grant a charter for a permanent bridge at the west end of High [Market] Street, and the Assembly resolved to incorporate any company that would agree to build the bridge and reserve to itself the tolls until they equaled the principal and interest of its obligations. In the next year Paine produced another model, and the Assembly chartered a bridge company, included in whose members were John Paine, Samuel Powel, and Robert Morris, with a nominal capital of \$66,666.66. The company made a start by inviting designs for a bridge, and constituting as a committee to examine them Thomas Mifflin, David Rittenhouse, George Clymer, Samuel Powel, David Evans, Richard Wells, Francis Bailey, Francis Hopkinson, John Kaighn, John Sellers, Thomas Har-

risson, Tench Coxe, Thomas Moore, John Chaloner, John Ross, and Stephen Pascal. Before they could make any progress all the bridges were destroyed by the flood of 1789. In December of that year Councils resolved that a permanent bridge should be built, but as the city treasury was much depleted, they applied to the State for aid, suggesting at various occasions that the ferry tolls, the floating bridge receipts, and the auction dues be devoted to a bridge fund.

The undertaking was dormant until the Legislature passed the act of March 16, 1798, constituting Richard Peters, John Perot, Godfrey Haga, Matthew McConnell, and William Sheaff to organize the "President, Directors, and Company for erecting a permanent bridge over the river Schuylkill at or near the city of Philadelphia." Five years were allowed for the construction of the bridge; the capital of the company was fixed at \$150,000, and when the receipts from tolls should exceed fifteen per cent. on that amount, the surplus was to go into a redemption fund for the ultimate purpose of making the bridge free. The Legislature also reserved power to make it free after twenty-five years on the payment of its appraised value. Councils had now ascertained that the revenues of the ferry and the floating bridge were but \$3500 yearly, and they sold the Middle Ferry rights to the bridge company for \$40,000.

Timothy Palmer's design for a wooden structure was accepted, and the corner-stone of the eastern abutment was laid Oct. 18, 1800. Reynolds, the constructing engineer, encountered many obstacles, some of which were caused by the malice of the opponents of the bridge; but he conquered them, and on Jan. 1, 1805, it was thrown open to travel. There was no roof, and the wagon-way was in the centre, with foot-walks on either side. On account of the flatness of the ground, it was necessary to build great embankments that led up to the entrances, which were surmounted by large flat arches. Mainly through the efforts of Judge Richard Peters, president of the company, the bridge was covered in the year of its erection. The eastern pediment was crowned by a wooden statue of "Commerce," and the western by one of "Agriculture," both carved by William Rush, and the toll-house stood in the centre of the causeway, near the eastern entrance. To render the western approach conspicuous, the company set up a marble obelisk bearing a sun-dial and inscriptions giving the main facts in the history of the bridge.<sup>1</sup>

<sup>1</sup> This obelisk and sun-dial, after the bridge company had parted with its rights to the city of Philadelphia, was removed to the northeast corner of Twenty-third and Market Streets, upon the premises of the gas-works, where it still occupies a position near the street. The inscriptions are as follows, according to the original position of the monument:

*Western Tablet.*—"This bridge was erected at an expence of near \$300,000 by a company incorporated the 27th of April, in virtue of a law passed the 16th of March, 1798. The coffer-dams, foundations, and other sub-aqueous works consumed a great proportion of the expediture. It was commenced by laying the first stone of the Eastern pier. After many difficulties had attended the dam, on Sept. the 5th, 1801, and

Philadelphians were very proud of this bridge, so much so that when in January, 1806, it was in danger of catching fire from the burning of Howland's Tavern, five thousand citizens made their way to the Schuylkill on a bitterly cold night and over the ice and snow to save it, but the flames did not touch it. On April 22, 1834, the Whigs had a celebration at Powelton, the seat of John Hare Powel, on the west bank; and the party committee bought from the companies, for that day, the privilege of free passage over Market Street and upper ferry bridges to everybody. This incident set the people to thinking of the advantages of free bridges, and notwithstanding that the permanent bridge company persistently opposed it, the Legislature passed the act of March 16, 1839, "to authorize the construction of free bridges over the Schuylkill at or near Philadelphia."

By threatening to erect a free bridge at Mulberry [Arch] Street, the county commissioners brought the owners of the High Street bridge into negotiations for its sale to them, but there was still some haggling over the price. The commissioners were empowered to pay only \$80,000 for it, and they were further restricted by the provision that one-third of the sum should first be subscribed and paid into the county treasury. But the company demanded \$110,000, and the difficulty was adjusted by allowing it to remain in possession of the property until the difference was made up from the receipts of tolls, provided that the term was not to exceed one year from the execution of the conveyances. Thus the city became the owner of the bridge in 1840,

completed for passage Jan. 1st, 1805. The cover was begun and finished in the same year."

*Northern Tablet.*—"The Eastern pier was first erected in a depth of water of 21 to 24 feet in a coffer-dam. The lower course of masonry is bolted on the rock. The Western pier—attended with greater difficulties, constant bazard, and unavoidable expence—was commenced in the midst of an inclement winter, within a coffer-dam of original and appropriate construction, in which 800,000 ft. of timber were employed. The depth of water from the rock is 41 ft. No pier of regular masonry in so great a depth of water is known to exist in any other part of the world. The masonry of this pier was begun on Christmas day, 1802, and erected from the rock to low water mark in 41 days and nights, after 7 months had been occupied in preparing the dam and retrieving its misfortunes. These piers are in length 71 ft. 6 in., and in thickness 30 ft. at the bottom, battering to the top, where they are in length 60 ft. 10 in., and in thickness 19 ft. 4 in. The height of the Eastern pier from the rock is 40 ft., and that of the Western pier is 55 ft. 9 in. The first contains 3659 perches, and the latter 6178 perches of masonry. The Eastern abutment is 18 ft. thick, and its wings are founded on the rock. The Western abutment of equal thickness, and its wings are built on a platform supported by piles. Splay of the wings 60 ft."

*Southern Tablet.*—"Dimensions of the bridge: Length, 562 ft.; abutments and wings, 750 ft. Total, 1300 ft. Span of smaller arches each 150 ft.; of middle arch 194 ft. 10 in. Width of the bridge 42 ft. Curvature of the middle arch 12 ft.; of the smaller arches 10 ft. The curves are catenarian. Rise of the carriageway 8 ft. Height over the platform to the cross-ties 13 ft. From the surface of the river to the platform in the greatest elevation 31 ft. Elevated above all floods ever known in this river. Inclined plane to entrances  $3\frac{1}{2}$  degrees."

*Eastern Tablet.*—"The bridge is in itself the most grateful reward expected from its institution. A recompense the most honorable to those who by liberal advances and long privations of profit, unassisted by public pecuniary aid, encouraged and supported; and a memorial the most acceptable to those who by enterprising, arduous, and persevering exertions achieved this extensively beneficial improvement."

and the tolls were abolished. Nine years later it was reconstructed to accommodate the tracks of the Pennsylvania Railroad, which were placed on the north side; and the south side was afterward occupied by the tracks of the West Philadelphia City Passenger Railway. This bridge remained in constant use until Nov. 20, 1875, when it was totally destroyed by fire. Much embarrassed by this disaster, the Pennsylvania Railroad Company erected, a little north of the old piers, a trestle work upon which to cross their trains; but this arrangement was so unsatisfactory that under authorization of a Council ordinance of December 2, the company undertook to put up at Market Street a bridge that should last three years, and be completed within thirty days. It was actually finished in two hundred and seven working hours, and outlasted for some years the time specified in the contract. In 1881 it was observed that the timbers showed signs of decay, and Councils passed the ordinance under which the construction of a new stone bridge of great dimensions was provided for.

Benjamin Chambers was probably licensed to operate the Lower Ferry on the Schuylkill shortly after the Swedes made complaint, in 1673, that Philip England was obstructing their passage at the Middle Ferry. In 1696 it was directed that the king's great road he laid out from the lower ferry on the Schuylkill, commonly called Benjamin Chambers' Ferry, "to come into the southernmost street of the town of Philadelphia, and which street runs from the Delaware River unto the Schuylkill." This was our present South Street, then styled Cedar Street, and the highway established between it and the ferry was the Gray's Ferry road. Another order was made to lay out a road on the west side of the Schuylkill, "from Benjamin Chambers' ferry, to goe so far in the road that leads to Darby as may be, and from thence the nearest best and most convenient that may be had, and least prejudicial to improvements of the neighborhood, to the town of Hertford." Chambers made complaint to the Council, in 1706, that after he had erected his ferry and rendered it more commodious by the invention of a boat of a kind never known before, some one was attempting to set up a rival ferry near him. Three years afterward he was complaining that while repairing his long causeway he was interfered with by Rev. Andrew Sandle, the Swedish minister, who objected that it passed through his land; whereupon the Council admonished Sandle to refrain from obstructing the Queen's road. About 1711, Joseph Growden, owner of the mills at Mill Creek, complained that Chambers himself had obstructed the road at the ferry by placing his house in the middle of it. The idea of Growden was not so much to benefit the public by widening a highway, as it was to obtain for himself a ferry-right at the mouth of Mill Creek, where, he represented, there was an easy road and a better passage, but the Assembly nevertheless refused to grant him any privileges.

Chambers was followed as ferry-master by George Gray, who died in 1748, and bequeathed his interests to his widow. The next year she, in protesting against the proposed reduction of tolls, declared that her husband had bought the ferry for £1150, subject to proprietors' quit-rent, and had expended £300 more in improvements. Gray gave his name to the ferry.

While the British were in occupation of the city during the Revolution, they had for a short time a bridge of hoats at the Lower Ferry, and the Americans may be said to have made it a fixture there. Washington crossed it April 20, 1789, traveling from Mount Vernon to New York to assume the Presidential office, and it was gayly decorated in his honor, being walled in and arched over with laurel, and ornamented with flags. Among the ensigns displayed was the one which Captain Bell had when abroad hoisted on his ship as the Pennsylvania colors, the commonwealth not having then adopted any device. Another banner showed a sun more than half way above the horizon, with the motto, "The Rising Empire," while the old Revolutionary emblem of the rattlesnake and the warning, "Don't tread on me" was of course prominent. As the President passed under the western arch a child lowered a laurel wreath, which rested on his brow, while the guns of Captain Fisher's artillery saluted, and the people cheered. A week afterward Mrs. Washington, on her way to New York to join her husband, received a public welcome at the bridge.

The bridge was carried away by the flood of 1789, but was quickly rebuilt. George Weed became tenant of the ferry about 1794. George Ogden succeeded him, and after a time George Weed returned. Curtis Grubb was next tenant, and then came the Kochesbergers, who were in occupancy before and after 1835. In 1806 a movement was made for the incorporation of a company to build a permanent bridge at Gray's Ferry, but the scheme was strongly antagonized, unless the interests of navigation were protected by a draw, or by making the bridge high enough for vessels to pass under; and in granting the charter the Legislature stipulated that the floor should be seventy-five feet above low water. George Gray was to get two hundred shares of the stock in payment for his ferry franchise, but the company failed to obtain large subscriptions, and the floating bridge continued in use. Two or three times it was carried away by floods and renewed, but on each occasion a controversy occurred, the Schuylkill watermen declaring that it obstructed navigation, while the residents on the river shores protested that the draw was so often open to permit the passage of vessels that their own movements were seriously delayed.

These contestants could arrive at no compromise, and so the floating bridge remained in place until 1838, when the Philadelphia, Wilmington and Baltimore Railroad Company built its bridge, at a cost, including the ferry rights, of nearly \$200,000. The

tracks occupied the south half, and the remainder was opened to general travel; but since the Pennsylvania Railroad has acquired control of the Philadelphia, Wilmington and Baltimore Railroad, its only use for railway purposes is the transfer of cars from the Delaware River Front Railroad by way of Washington Street. It was at first a toll bridge, but by a contract between the company and the county commissioners, in 1839, it was made free.

The Upper or Callowhill Street Ferry, on the Schuylkill, must have been in the possession of William Powel previous to 1693, as on June 27th of that year Philip England, who has already been shown to have been so jealous of his monopoly at the Middle Ferry, memorialized the Provincial Council that Powel "did ferrie people over the Schuylkill to the petitioner's great damage." Powel responded by exhibiting a paper signed by the grand jury in 1692, and indorsing a ferry at his house as "a convenience." On this showing the court issued an order that he might continue the business, and then there was once more sprung the constantly-recurring question as to the authority for granting the valuable ferry franchises, which earned so much revenue that the jurisdiction over them was worth a controversy. The proprietary and his agents, in Powel's case, maintained that neither Assembly, court, or grand jury possessed the power to grant a license, and he was warned that he must not act under the supposed franchise obtained from the court. If he promised obedience to this mandate from the Governor he did not keep his word.

In February, 1794, the accusation was brought against Powel that, in contempt of the Governor's order of 1693, he was still virtually the ferry-master, although he pretended that he had sold his boat to certain persons, who had employed Nathaniel Mullinax to do the ferriage. Powel and Mullinax were summoned to answer this charge, and the latter replied that "most of the people of Harford and Merion and some of Darhie employed and hyred him to ferrie ym over, and that they were to pay him his wages, and that he knew no reason why he might not work for his living as well as others." This plea did not satisfy the Council, which ordered that Mullinax be sent to prison until he gave security that he would "ferry no more persons, horses, or cattles over the Schuylkill at Wm. Powel's for gift, hyre, or reward, directly or indirectly." The security not being forthcoming, the sheriff seized the boat, and in applying for its return the owners declared that they meant no contempt, and that they needed it "for their more easie coming to their meetings, fares [fairs], and marketts, and to the election of representatives to serve in the ensuing Assembly, they might be permitted to transport ymselves therein." The intimation in regard to the exercise of political rights was very shrewdly conceived. The Council might have denied their claims for speedy access to markets and

fairs, but when they declared that they might be injured in their suffrage rights if they could not cross the Schuylkill in their own boat, the Council could do nothing but restore it to them, under a proviso that they must not do ferriage for pay until William Penn could arrive and give a final decision. Practically, this was the end of the dispute.

In 1695 the Welsh settlers petitioned the Council for a ferry at Powel's, and they were too important in numbers and influence to be turned away with a refusal. A liberal concession was granted by the Assembly, and when Penn returned from England in 1700 he ordered the two ferry proprietors, Chambers and Powel, "that they do not after daylight is shutt in transport any persons yt if not well known to you or yt cannot give a good account of ymselves." In June, 1703, authorization was given for a road to be opened from Powel's house, passing by Haverford Meeting to Goshen, in Chester County, and this was the establishment of the Haverford road, which has always been directly connected with the Upper Ferry.

Powel had maintained his own claims against those of England and the Council, and he was no less successful in 1706, when he procured an order forbidding the competing ferry that the people of Merion and the Welsh tract had established. Some time after the Revolution a floating bridge was set up at his ferry, but the first date that we have in connection with it is derived from the record that it was swept away by the freshet of January, 1789. Having been restored, it met with another calamity of the same kind in 1810, and the Legislature then chartered a company with a capital of forty thousand dollars to construct a permanent bridge and hold the vested right in the property for twenty-five years. As soon as the toll receipts exceeded nine per cent. yearly upon the investment, the surplus was to be converted into a redemption fund. In order to increase facilities of travel, the company was permitted to construct an artificial road from the intersection of the Lancaster turnpike at the west side of Schuylkill to the bridge, and thence on the east side to Ridge Avenue at Ninth Street. Lewis Wernwag built the bridge on what was then a novel plan, by spanning the river with a single arch and discarding a centre pier. This span was by ninety-eight feet greater than any other in the world. The corner-stone was laid with Masonic ceremonies on April 28, 1812.<sup>1</sup>

<sup>1</sup> A piece of copper was placed upon the corner-stone upon which the following inscription was engraved:

"THIS BRIDGE

was founded in the year of our Lord one thousand and eight hundred and twelve under the superintendence of the following

Board of Managers:

Phillip Wager	Cadwallader Evans
John Britton	Martin Dubhs
Abraham Sheridan	Samuel Breck
Samuel Richards	and

Louis Wernwag architect."

On Sept. 1, 1838, a fire, supposed to have been of incendiary origin, destroyed this bridge, and no attempt was made to rebuild it until operations were commenced under the free bridge act of 1839, when the city of Philadelphia appropriated thirteen thousand dollars toward purchasing the rights, and the county commissioners contracted with Charles Ellet, Jr., to erect a wire suspension bridge of his own design. With the exception of White & Hazard's bridge near the Falls, which was finished in 1816, it was the first of its character in this country. The commissioners of Spring Garden had control of it, and it was opened to the public on Jan. 2, 1842. For more than thirty years it stood unimpaired, but in 1875 the fact became apparent that it had nearly filled its period of usefulness, and the rapid improvement of Spring Garden Street westward to the abutments of Fairmount basin led to the inquiry whether the passage from that street could not be accommodated at Fairmount. The chief engineer of the city designed a double-decked bridge by which, on the lower story, Callowhill Street could be carried across the Schuylkill, and by a plane rising at Twenty-fifth Street, and winding around the base of the reservoir, a sufficient height was obtained to carry Spring Garden Street by the upper deck across the river to intersect Bridge Street [now Spring Garden] at grade. This bridge was built in 1874 by the Keystone Bridge Company of Pittsburgh, and has a length of twelve hundred and ninety-five feet from shore to shore, to which must be added fourteen hundred and thirty-five feet for the abutments and approaches.

Penrose's Ferry, or the Rope Ferry, was a consequence of the establishment, in 1742, of the pest-house or hospital on Fisher's Island, afterward called Province Island and State Island, on the west side of the Schuylkill. The opening of a road from the lower part of the city through the Neck to the point where the ferry was established probably followed immediately afterward. In the Pennsylvania Archives, Samuel Penrose is named as the keeper of the ferry in 1776. Faden's map of 1777 leaves it to be inferred that the road plunged into the marshes at some distance from the shore, but Hill, in 1806, carries it out to the Schuylkill, and marks the ferry and the ferry

tavern. The opening of a new road between the old pest-house and the new lazaretto hospital added much to the revenues of Penrose's Ferry. In an act of the Legislature passed March 31, 1806, this was called the Lower Ferry, and Gray's Ferry was denominated the upper bridge. An act of Assembly was passed April 9, 1853, authorizing the incorporation of the Penrose Ferry Bridge Company. They put up a bridge there which soon proved to be weak and dangerous, and a new one was thrown open to the public on June 30, 1860, although it was not converted into a free bridge until some years subsequently. On July 7, 1876, the centre span fell into the river, and on Jan. 20, 1878, another bridge was completed.

Mendenhall's Ferry was north of the Upper Ferry, and at the point where the old ford was established, between what is now North and South Laurel Hill Cemetery. It was on a road that led up to the Ridge road. Previous to the Revolution it was known as Garrigue's Ferry, and as Mendenhall's after the commencement of the present century.

On April 19, 1807, an act of the Legislature granted to Robert Kennedy, who then kept a tavern at the Falls of Schuylkill, rights for the use of the water-power, on condition that he would build locks around the falls for the accommodation of the boats that navigated the river, which, coming from Reading, were called "Reading," or "long" boats. Although Kennedy failed to construct the locks, he and Conrad Carpenter built a chain bridge in 1809, which broke down in 1811. In the mean while Kennedy had sold his rights to Josiah White and Erskine Hazard, who had erected a rolling-mill and a wire-factory. By authority of the act of April 2, 1811, a company put up another chain bridge, and when it gave way, in 1816, White & Hazard constructed a wire suspension bridge across the river from the top windows of their mill to some large trees on the western side, from which there was a descent by steps. It was for foot passengers only, and but eight persons were permitted on it at any one time. This was certainly the first wire suspension bridge in the United States, and probably in the world. It cost the builders one hundred and twenty-five dollars, and they charged a toll of one cent until they were compensated for their expense, when they made it free. About the end of 1817 the Schuylkill Falls Bridge Company completed the wooden bridge that was destroyed by the flood of Feb. 21, 1822. In 1829 another company under the same name erected a new bridge that stood until burned on Aug. 26, 1842, and was succeeded by the "Old Red Bridge," which was swept away by the freshet of Oct. 23, 1878.

On March 22, 1809, the Legislature incorporated "the managers and company for erecting a permanent bridge over the Schuylkill, opposite Flat rock, with a capital of \$10,000 in shares of \$50 each." The bridge was finished in 1810, was the second permanent bridge in Philadelphia County, and extended

On the reverse was the following inscription:

"In the name of Almighty God  
In the thirty-sixth year of American Independence  
And of Masonry 5812  
Jonathan Bayard Smith R. W. past Grand Master of  
Masons  
Attended by the  
R. W. Deputy Grand Master Peter Le Barbier Duplessis  
And the Grand Officers  
The honorable James Milnor being R. W. Grand Master of  
The State of Penna.  
And a numerous assemblage of brethren  
Laid the first stone of the  
BRIDGE  
On the 28th of April, 1812,  
Which May God Prosper."

from Flat Rock, above Manayunk, over to Lower Merion township of Montgomery County. On the 19th of September, 1833, it was broken down by two teams drawing wagons on which were heavy blocks of marble crossing at the same time, but this damage was soon repaired. In 1850, September 2d, Conshohocken bridge, four miles above, was carried away, and came down with such force as to sweep off the Flat Rock bridge. This bridge crosses opposite the end of Domino Lane leading toward Mount Airy.

The Schuylkill Navigation bridge is immediately south of the Falls bridge, at the foot of canal navigation on the east side of the river, and was constructed to facilitate the transfer of the boats. It is built at a slight angle, so that its eastern landing is not far from the entrance to Manayunk bridge.

In 1828 an act was passed "to authorize John Towers to erect a bridge on the canal and river Schuylkill at a town called Manayunk in the County of Philadelphia." Towers was the first mill-builder at Flat Rock, afterward called Manayunk, and entitled to the distinction of being the founder of the village. Under the act of Assembly Towers was compelled to finish the bridge in three years. At the expiration of twenty years the county commissioners were to be privileged to apply to the Court of Quarter Sessions to appoint a jury to view and value the bridge, taking into consideration the tolls received, and report the same to the Quarter Sessions, and upon approval and payment of the amount settled upon, the bridge was to become the property of the county. Capt. Towers did not build the bridge within the specified time. On the 24th of March, 1832, an act was passed "to incorporate a company for erecting a bridge over Schuylkill river and canal at the town of Manayunk." The preamble recited that Towers had failed to erect the bridge within the three years, in consequence of which the new company was incorporated. There was a provision in this act that whenever the tolls received for passing over the bridge exceeded nine per cent. annual profit on the capital, the excess should be appropriated to purchasing the stock. In order to prevent the failure of this plan by the indisposition of stockholders to sell their shares, it was directed that the subscribers should determine "by lot" from time to time whose share or shares were to be paid off, the price to be at par, and whenever the whole number of shares were purchased, "then the bridge shall be free except as to a small toll to keep the same in repair." The bridge was finished in 1833. The site was that of Righter's Ferry, an establishment which probably went back in point of date to 1707 or 1708. Application was made in 1706 for a road from the Lower Merion meeting-house to the river Schuylkill, a distance of two and a half miles, "where a ferry is to be established."

The Philadelphia and Columbia Railroad was carried across the Schuylkill on a wooden viaduct just below the residence of Judge Richard Peters. It was opened

in March, 1834, and was also used by the Philadelphia and Reading Railroad. After the Pennsylvania Railroad was chartered and the general traffic operated by way of the Market Street bridge, the Schuylkill viaduct was purchased by the Reading company. For twenty years this structure was known to Philadelphia only as the Columbia Railroad bridge. A new generation which has come forward within the thirty years succeeding knew it only as the Reading Railroad bridge. It has been an exceedingly lucky structure, withstanding floods and ice without harm and never having suffered by fire.

The Reading company also constructed at the Falls of Schuylkill a wooden bridge that was opened Jan. 10, 1842, and destroyed by fire on the following 26th of August. In 1843 a stone bridge was begun, but the railroad company became entangled in financial difficulties, and it was not completed for a long time.

By the act of March 27, 1852, the county commissioners were required to build a new bridge at Chestnut Street, and one at or near Girard Avenue, cost not to exceed one hundred and seventy-five thousand dollars each. The Girard Avenue bridge was finished in the summer of 1855, but proved so poorly constructed that in December, 1872, the grand jury made presentment that its condition was dangerous. This admonition not being heeded, the grand jury found a true bill against Select and Common Councils for maintaining a nuisance in permitting the bridge to remain open. Councils then had a temporary structure put up, which has been replaced by the present magnificent bridge at an outlay of one million four hundred and four thousand four hundred and forty-five dollars. It is one thousand feet long and one hundred feet wide,—the widest bridge in the world,—is constructed of iron and stone, and was ready for travel July 4, 1874.

Although a bridge at Chestnut Street was contemplated by the act of 1852, it was not until 1857 that Councils decided to build it. The expense had acted as a deterrent, but it was partially overcome by a requirement in the charter of the Chestnut and Walnut Streets Passenger Railway Company that it should contribute one hundred thousand dollars toward the cost. The bridge was built on the designs of Strickland Kueass, and opened June 23, 1866. Its whole length is fifteen hundred and twenty-eight feet, and it is a finely ornamental specimen of bridge architecture.

As a consequence of the building of the elevated railway by the Pennsylvania Railroad from West Philadelphia to its Broad Street Station, it became necessary to bridge the Schuylkill at Filbert Street, and the work was finished Feb. 16, 1881. The Filbert Street bridge was built by the railroad corporation.

The building of a bridge over the Schuylkill at South Street was not considered a public necessity, but was forced upon the city by the Pennsylvania Legislature, which, on April 1, 1861, passed the act

requiring Councils to construct a bridge at a cost of not over two hundred and fifty thousand dollars. In compliance with the protests of citizens of Philadelphia, Governor Curtin disapproved the bill, but it was passed over his veto. Two days later the Lombard and South Streets City Passenger Railway Company was incorporated, with right of way for its tracks over any bridge that might be constructed at either of those streets. For five years Councils refused to obey the legislative mandate, and on April 5, 1866, the Legislature passed a supplementary act appointing commissioners to build a bridge at South Street, the cost of which should not exceed six hundred thousand dollars. There was a proviso that if Councils would order the erection of the bridge prior to July 1, 1867, the powers vested in the commission should be superseded and devolve upon the city. But Councils refused, and a resolution was passed Jan. 21, 1867, requesting the Legislature to repeal the acts of 1861 and 1866. No notice was taken of these petitions at Harrisburg; in fact, another supplement was passed directing the "Chief Engineer of the City to build the bridge under the supervision of the Commission, and to place a draw in it." Permission to add two hundred thousand dollars to the cost was also given, and although the city carried the case into court, it was defeated on all points. The Legislature then ordered the city to make a loan of eight hundred thousand dollars to pay for the bridge, and the commission was increased to thirteen members, with as its president the president of the railway whose interests were so deeply involved. On March 30, 1870, a contract was made with John W. Murphy, and the bridge was opened for pedestrians Nov. 30, 1875, and for general travel Feb. 17, 1876. It has a draw, and, including approaches, is two thousand four hundred and nineteen feet in length. In less than two years a considerable portion of the structure fell in on account of the slipping of the piles on the shelving rock of the river-bed. Arch after arch went down, and the bridge was not much more than a wreck. A trestle-work was erected, and still continues in use.

#### Ferries and Bridges Over Tributary Streams.

—In the years immediately succeeding the foundation of the city Dock Creek was a clear and pretty stream, and navigable as far as Third Street. The common name of Drawbridge would indicate that there was an opening at Front Street through which vessels might pass, and it was known by this name in 1713, according to John F. Watson's statements. Watson says that Charles Thomson told him he had often seen such vessels as sloops and schooners loading with flour for the West Indies on Dock Street, near to Second Street, and a very aged informant (Mrs. Powel) had seen a schooner once as high as Girard's bank. Charles Thomson came to this city in 1740, and it is quite possible that in his day vessels passed up the creek. But the statement ascribed to Mrs. Powel is difficult of credence, if she was the widow of Samuel Powel

and daughter of Charles Willing. Miss Willing was born in 1743, and her reliable recollections might extend back as far as 1753, but before that time the bridges over the creek at Second Street and Walnut Street must have been permanent, as they are designated as brick bridges in the minutes of Common Council. There is no evidence that they were furnished with draws, and unless they were so provided they closed the stream to navigation. According to Council minutes of June 1, 1705, Henry Badcock and John Budd were appointed overseers of the repairs of Second Street bridge; and, in 1717, Thomas Bradford, Thomas Wharton, and Thomas Radley were "overseers of the work to be done in repairing the two brick bridges, one in the 2nd St., and the other in Walnut St." In the succeeding year Samuel Powel, being called upon by Common Council to pay his stall rents, "prayed a discount, he being considerable out of Pocket in Building of ye Bridge over ye Dock in Walnut St. It is ye opinion of the Board that such discounts may be Inconvenient; Nevertheless how farr this city is obliged to pay off Samuel Powel's demands is ord<sup>d</sup> to be Examined by Alderman Carter, Thomas Griffiths and George Claypoole," on whose report Powel and John Parsons were paid £35 3s. 11d. "for building a stone and brick bridge over Walnut St. Dock."

In May, 1720, Councils contracted with Edward Collins to build, for one hundred and twenty-five pounds, a bridge twenty-five feet wide over the dock at Second Street, but as numerous citizens wished it the full width of the street, Councils agreed to pay thirty-five pounds more toward the increased breadth if the citizens would pay the remainder of the cost. There is no allusion to draws in these proceedings, and the creek must have become gradually filled up as the city grew.<sup>1</sup>

Mr. Watson ingeniously suggests as a way out of the difficulty that vessels passing beyond Second Street struck their masts in order to go under the bridges. If such had been the case the bridges would of necessity have been well set up above the water, requiring causeways as a means of approach, or extensive filling up of the streets, at large expense, but no such items of cost appear. The bridge at Third Street was first of wood, which gave way, in 1740, to a stone structure, costing seventy-nine pounds.

Coconoon was the Indian name for Dock Creek, and on account of its width and depth in the early colonial days, it seems to have much impeded intercourse between the northern and southern sections of the town. We may presume that under the general

<sup>1</sup> About 1835 or 1836 the culvert which brought down the entire discharge of Dock Creek, when the building of that means of relief was agreed upon, after the yellow fever experiences of 1793, 1797, 1798, fell in, and left a great opening near the front of the Merchants' Exchange. The entire work was exposed. The culvert, which came down Walnut Street, was probably seven feet in diameter, and the discharge into it at that time was very small.

law of 1682 a bridge was built over it. In 1704 the grand jury presented it as being "insufficient and dangerous to man and beast." Two years afterward another grand jury reported that it had viewed the place where the bridge was, and that it had been broken down and carried away by storm, so the recommendation was made that it be rebuilt. In the minutes of Council, June 1, 1705, it was called Society Hill Bridge, as it gave passage to Society Hill, where most of the property had originally been owned by the Free Society of Traders. Up to 1716 the work still lagged, as we are informed by the following extract from the minutes of that year:

"The Bridge over the Dock at the South End of the front Street, and the causeway from thence to Society Hill, being as yet unfinished, And the Water having waht away some part of the Causeway, inasmuch That it is not only become very Dangerous but if not speedily finish, will create a much Greater Charge, And the persons who were appointed Overseers for Doing the same, having not Sufficient in their hands to Carry it on. It is Agreed And Ordered that if the sd Overseere will Advance money for the Compleating the ed work, they shall be paid their Disbursement out of ye publick Stock of this City, and so shall the overseers for the Market Wharf wch is yet unfinished." In August, 1717, Messrs. Dickinson, Morris, and Venning were "Desired to continue the Care abt ye Bridge & Causeway at ye South End of the town, & Get the same finish with all speed and afterwards present their acct's."

In 1739 Dock Creek had grown exceedingly offensive. Many citizens charged the nuisance to the tanneries on its banks, and petitioned the Assembly to remove them, but the tanners defeated this attack on their interests. On Feb. 24, 1748, a committee made report to Councils that the contagious swamp between Budd's buildings and Society Hill should be made into a dock sixty feet wide, as far as the swamp extended westward, with a branch thirty feet wide on the southwest and forty feet wide on the northwest, and that the remainder be filled up and walled in, the property-holders agreeing to dig out, cleanse, and wall their premises on condition of being granted the wharf rights. Dr. Franklin was one of the signers of this report, which gravely urged that the improvement was necessary on the ground of the public health, but it was so expensive that the municipality feared to undertake it. In 1763 the county commissioners made application to Common Council for a loan to finish the stone bridge over the dock at Front Street; and in 1764 Council determined to rebuild the two walls between this bridge and the wooden bridge in Water Street. About the same time the locality was utilized for the Fish Market, between King and Front Streets.

The public landing at Dock Street became a matter of early contest. It was called "a low sandy beach on the north side of the creek," but at a distance of one hundred feet the ground rose abruptly. On the south side, near to the Delaware, the additions had not been sufficient to bring the ground up to what might be called a permanent position. It was swamp for many years after the foundation of the city, so low that the building of a causeway down to the line of about Spruce Street was necessary in order to

secure convenient access to the Drawbridge. South of Spruce Street the ground rose rapidly on Society Hill. Dock Creek ran through a little valley, and the low, sandy beach at Front Street stood at the highest level of the ground, near the creek, on either side, as far west as Third Street. The expectation seemed to be that the landing here would be reserved as public property. Its value as private property was soon discovered, so that nine years after the settlement the agents of Penn were ready to sell it. In 1691, Jeremiah Elfreth and others had attempted to build on this beach, and remonstrance was made by several citizens. References made to the affair in 1700 authorize the statement that the justices stopped Elfreth's building, and that the rights of Elfreth in a lot on Front Street, opposite the Blue Anchor, had been interfered with. The matter was quieted by the city charter of 1701, by which Penn granted that the landing-places at the Penny Pot House and Blue Anchor should be left open, "saving to all persons their just and legal rights and property in the land so as to be left open, as also the swamps between Budd's buildings and Society Hill shall be left open and common for the use and service of said city, and all others with liberty to dig docks and make harbor for ships and vessels in all or any part of the said swamp." Under this grant the city became owner of property which was put to valuable use. Between Water Street and the Delaware River a row of large stores was subsequently built, some of which were incorporated into the Pennsylvania Railroad freight depot.

Jeremiah Loxley leased the swamp west of Front Street and south of the creek, and, by filling it in, made it available for his wood wharf. The water front was rapidly appreciating in value, and in 1753 the city government advertised to sell in fee, or for five years, a hundred feet on Front Street, extending two hundred and fifty feet into the Delaware. The city wardens protested that the inhabitants had a right to free use of the landing-place, and a compromise was effected, by which a landing was made at the Fish House, and the beach between King Street and the river was kept open.

By city ordinance of March 4, 1818, it was directed "that the part of the Dock at the Drawbridge west of Front St. and which is now used as a place of deposit for sand shall be arched over in such a manner as to continue the passageway for Drays carts & carriages and passengers in the same manner as the rest of the street." This carried Dock Street all the way to Front.

In the presentment of the first grand jury (1683), it was demanded that "Coquenakar Creek [Pegg's Run], at the north end of the city, be also made passable for footmen." This must have been attended to at once. In April, 1686, the grand jury presented "the want of a finished road by the new bridge to the Governor's mill," which was on Cohocksink Creek near the road to Germantown, and about the inter-

section of the present Third Street. This first hridge over Pegg's Run got out of order before the end of 1701, and the controversy which the question of repair provoked is thus set forth :

"THE BRIDGE at the north end of the Town, being broken down by the last great Rain, and the country much Incommoded thereby, in being obstructed in their passages to and from the Town, It was laid before the Gov'r and Council that some effectual course might be taken to have the same redressed; upon which several Persons concerned in the said Road appearing, part urged that the late Bridge might be repaired without any alteration. The moulder dyke over the swamp having already engaged the country in a great expense, & yrefore was not proper to be alter'd. others alledged that the forst laying the road that way was Indirect, & the Bridge ever proved expensive, being so low down & near the creek's mouth. That it being now destroyed the road might be layed another way about half way between the other bridge and the Propy's mill which would equally accomodate frankfort and the Riverside with the other and much the greater part of the Body of the county & would by that means cast both Roades into one, which would be easier Maintained both by Requiring less repairs, and those also would have many more hands to snport it."

A great deal of discussion followed, hut the old road remained for the time. It was not in the exact line of the present Front Street above the Creek, hut the crossing was about the line of Emlen's Court, which was north from Willow Street to Noble Street, as appears by the petition to the Governor and Council in 1712 for the establishment of a new road, which had been surveyed farther east, and which it was proposed to unite with the old road at Norris and Goodson's land. The courses and hearing of the new road, when it was opened, were as follows :

"Beginning at the north side of Vine Street, in the middle of the Front Street of the city of Philadia, on Delaware side; thence proceeding north by east to Mr. Pool's house; then north by east to Daniel Pegg's porch, north by east, and then north by west to the Marsh & Mill Creek; and thence north, with variations west and east, to the Norris and Goodson lane."<sup>1</sup>

In 1725 the Governor and Council received a complaint from the commissioners of Philadelphia County in regard to the high road to Frankford road, hut, although various inquiries were ordered, nothing practical was done until 1747, when a commissioner made a report marking out the courses as "Beginning at the place of intersection of the north side of Vine Street and the east side of Front Street, near Penny Pot Landing; thence north by east to a point opposite the hridge, near Pool's Point; thence by the same course by various hearings to the causeway of Long Bridge [over the Cohocksink]." The road then ran by various points and boundaries, not now ascertainable, to Gunner's Run and to Frankford Creek bridge, and to Pennypack bridge, and to the ford over Poquessing

<sup>1</sup> Nathaniel Pool lived on Pool's Hill, a little west of Front Street, about Callowhill. He was a ship-builder, and his ship-yard must have been near the mouth of the creek and its intersection with the Delaware River. A person of that name, whether the original or his son is not known, passed Friends' Meeting in marrlage with Ann Till, in the year 1714. William Pool was the part owner of a vessel in 1709. Boards and staves were for sale on Pool's Hill, "at the upper end of Front Street," in 1754, by a person named Carpenter.

Creek, near the Widow Amos', heing in all eleven and three-quarters miles.

About this time it is supposed Front Street was constructed and located nearer the Delaware, so that the bridge most in use was at the present Front and Willow Streets. Watson quotes a letter from Secretary Peters to one of the Penns, in 1747, in which he speaks of "a new hridge made on the present line of Front Street, over Pegg's Run, whereby the street now makes a fine view by the north entry of the town."

Pool's hridge shifted its name to the new bridge, hut in time "the hridge over Pegg's Run at Front Street" was the only name known after the old road had been abandoned and the line of the street altered. In 1812 the commissioners of the Northern Liberties granted the Northern Liherty Fire Company permission to place its engine-house at Pool's hridge, and the structure did partially rest on the east side of the hridge. It was removed in 1829, when the culverting of Pegg's Run had been nearly accomplished. This stream is said to have heen navigable at one time as far west as Ridge road, and even to Twelfth Street. It ran through a valley, and there was a considerable descent to it from the neighborhood of Callowhill Street, while on the northern side the ground was low and swampy. Although great changes have been made in the configuration of the ground, all the streets which cross this run, although raised and paved, still show the descent all the way between the Delaware to Tenth Street.

In time Pegg's Run, the original name of which was Cohoquinoque Creek, was clogged up by the surface discharges into it, and, like Dock Creek, became a nuisance. In 1826 the commissioners of the Northern Liberties ordered that a culvert or sewer be constructed along it from Delaware Sixth Street to the east side of Oak [afterward Beach] Street. Thus it was covered in by a thoroughfare, to which, in 1829, was given the name of Willow Street.

The hridges over Pegg's Run were built from time to time, hut it cannot be ascertained exactly when. An inference may be derived from the circumstances that in March, 1749, Second Street was ordered to be opened from Vine Street to the Germantown road, and in the early part of 1812 the United States Fire Company was permitted to build its engine-house on the hridge across Pegg's Run at Second Street. It is probable that it was bridged at the Ridge road at an early date, although that far up it could only have been shallow and narrow. For several years after the heginning of the present century wooden bridges, slightly protected at the sides, spanned the creek, and its banks were occupied by tanneries, slaughter-houses, skin-dressers, soap-boilers, etc.

A presentment which was made by the grand jury of 1683 related to the necessity that "the creek called Coanxen [Cohocksink] be bridged or cannowed." The inhabitants of Germantown and the upper western parts of the county, speak of the "long stone

bridge" and the causeway over to Kensington in a petition, in 1701, for the settlement of a road across the creek (which they also called Stacy's Creek), to divide into branches to Frankford and Germantown. This bridge was somewhere about the present line of Budd Street, where it crosses Canal Street. In 1713 the grand jury inspected it, and a tax of one penny per pound was authorized "to repair the new bridge by the Governor's mill," and for other purposes. In 1797 the Legislature passed an act to declare Cohocksink Creek a public highway. It was to be—

"opened from the mouth thereof to the bridge on the road leading to Frankford . . . for the passage of all kinds of vessels and rafts which can float therein. And it shall and may be lawful for the inhabitants desirous of using the navigation of the said creek to remove all natural and artificial obstructions from the mouth thereof, up to the aforesaid bridge, so as that the said creek shall be navigable forty feet in width; Provided, nevertheless, That it shall and may be lawful to throw such drawbridge or drawbridges across the said creek as shall not obstruct the passage of the same."

Before the Revolution small vessels with falling masts occasionally went up the creek to the Governor's mill, at Frankford road, carrying grain and returning with flour. The highway mentioned crossed Beach Street near Brown, and extended by a long causeway to Laurel Street and Frankford road, near Otter Street. The bridge over the Cohocksink nearest the Delaware, and on the line of Beach Street, was called the High bridge, perhaps because it was on the high-road to Bristol and New York. The creek was partially, if not entirely, the northern boundary of the tract of three hundred and fifty acres patented in 1676 by Governor Sir Edmund Andros, of New York, to Julian Hartsfelder. It extended down the Delaware to the Cohoquinogue, or Pegg's Run, and westward about as far as Sixth Street, and included in after-times the whole district of Northern Liberties. The ground was marshy in the neighborhood of the mouth of this stream, from a point near Green Street, at the Delaware, up to Point Pleasant, say at about Shackamaxon Street. There was a shallow bay, and it is even said that at Coates Street the head of the dock came up to the line of Front Street, the wharf extending farther eastward. The wooden drawbridge on the line of Beach Street commanded toward the river a view of a space of water at high tide, and of mud at low tide, which was well covered with "spatterdocks."

Front Street, when put in order for travel, was raised above the adjacent ground as far as Poplar Street. When a street was opened from Frankford road toward Front it was raised on made ground, and was named Marsh Street, subsequently becoming a portion of Poplar Street. Under the law of 1795 the Cohocksink was laid out as a public thoroughfare, with the name of Canal Street, and the Court of Quarter Sessions confirmed the plan, but it was not culverted and covered until a much later date. Culvert Street, running in a crooked course from Canal Street to Charlotte and Poplar, was originally a branch of the creek.

In the second presentment of the grand jury, February, 1683, was specified the want of a bridge at Gunner Rambo's, or of canoes to carry people across. The Indian name of this creek, Tumanaranaming, was never in use after Penn's time, and it was called Gunner Rambo's Creek, which has been shortened in modern times to Gunner's Run. A bridge must have been erected here as soon as the road to Bristol was in traveling order. The road to Point-no-Point also crossed Gunner's Run near the Delaware at an early time. A fine, substantial bridge was erected near Dyott's glass-works in December, 1834, and at Prince Street in December, 1835. On the 15th of March, 1847, an act was passed in which a large number of persons were nominated commissioners to open books of subscription to the stock of Gunner's Run Improvement Company, which was to have authority to construct a canal commencing at the northwest side of Queen Street, on Gunner's Run, and terminating at a point near where the Philadelphia and Reading Railroad crosses that stream, to be supplied at all times with tide-water and to admit the construction of basins, docks, wharves, and places of deposit and shipment for merchandise. Suitable bridges were ordered to be built over all crossing streets, and the commissioners of Kensington directed that they should be permanent.

In 1853 an iron bridge was erected over Gunner's Run on the line of Queen Street. The Canal Company was organized and considerable improvements were made, but there was evidently miscalculation as to the amount of business likely to be done, and the speculation was practically a failure.

While the grand jury of 1682 was looking after transit facilities in the young colony, it did not forget to allude to the demand for a ferry or bridge at "Tankanny" (Tacony or Frankford) Creek. A bridge was soon established, over which passed "the King's road from Scuilkill through Philadelphia to Nesheminy Creek," and in 1701 Frankford and Oxford were directed to equally contribute toward its repair, and Thomas Parsons was ordered "to cut open the old water course or pay the sum of 40 shillings toward the same." In 1726 a petition was presented by the inhabitants in and about Frankford, setting forth—

"The inconveniences of the road on both sides of the bridge there, for that on the farther side, there is occasion also for another bridge over the other branch of the creek, which is there divided & to prevent the Charge of the two bridges; that the Road also between the Mill House and the Creek is much too narrow; all which inconveniences might be prevented by turning the Road a little lower, and building one bridge, which would fully answer the end of two where the Road now passes, and therefore praying that the said road may be reviewed."

The consideration of this petition was postponed, and there is nothing on the minutes to show that it was ever called up again. Yet the change recommended seems to have been made. The old road was a little west of the present high-road to Frankford, just beyond the forks of the creek. Two bridges would have been necessary, but by shifting the road

eastward the true object of convenience was gained. The long bridge at the south end of Frankford has the peculiarity that while it crosses the creek at the lower end by a span of forty or fifty feet, it continues up alongside of the branch of the creek, which just there turns northward for a considerable distance. The building of a bridge at Frankford was one of the subjects of dispute between the mayor and the corporation of the city and the justices and grand jury of the county in 1708. The justices proposed to lay a tax for the building of two county bridges and a court-house. The two bridges were "on the northern road." The county justices represented that the case was one of necessity, "for people now sometimes passed in Danger of their Lives over those two mentioned Bridges. Tho' upon one of the greatest and most principal Roads in the province." The bridge at Frankford was one of these, and the justices averred that the building of it was "a very considerable thing."

East of Frankford, on the Point-No-Point road, and near Point-No-Point, Joseph Kirkbride was the keeper of the ferry in 1811, and for some years previously. In the latter year an act of Assembly was passed, giving to Kirkbride authority to erect a bridge over Frankford Creek, "where his ferry is now kept." It was directed to be provided with a draw eighteen feet wide, and the floor must be eight feet clear above the water for the passage of rafts and vessels. Kirkbride built the bridge, which he maintained for many years. Eventually the county of Philadelphia bought the rights of his representatives in the bridge, and it was made free. Near the ferry-house there gradually grew up a village, which was occasionally known as Point-No-Point. In time a change of the name was advocated, and the locality came to be known as Bridesburg.

**Public Landings and Wharves.**—In his instructions to the commissioners, William Crispin, John Bezar, and Nathaniel Allen, dated Sept. 30, 1681, William Penn said, "Be sure to settle the figure of the town so as that the streets hereafter may be uniformed down to the water from the country bounds." The main streets were to run to the rivers, and the landings at the ends upon the Delaware and Schuylkill were soon understood to be valuable. As early as 1689, Humphrey Murray, Philip Richards, Philip James, and William Lee presented a petition asking leave "to build a wharfe ou the side of Delaware River against ye eud of ye Chesnutt St., which was read and some things spoken to it." But the matter was postponed, and there is no immediate entry in regard to it. In April, 1690, Benjamin Chambers, Thomas Peart, and Francis Rawle presented a petition "that a bridg might be built over and a wharfe made against Mulberry St." They proposed to cut a cart-way through the bluff some twenty feet broad, commencing west of Front Street and extending by a gradual descent to low-water mark. The passage

was to be paved and walled up with stone on each side. A bridge was to be built over the line of passage-way on Front Street, and at the river end they proposed to make a free wharf, twenty feet in breadth, which, including the width of the passage, would make the Mulberry Street wharf sixty-three feet wide, the full width of the street upon the city plans. The Council assented to this proposition. As a consequence of its adoption, it was found necessary to carry the bridge at Front Street over the cut, either then, or afterward, by an arch. And this circumstance gave the common name to the highway Arch Street, which, although not sanctioned by law, was kept up by usage until, in time, the name Mulberry Street was discontinued altogether.

In 1690 a controversy was begun in relation to the public landing at the intersection of Dock Creek and the Delaware, in front of the Blue Anchor Tavern, and hence known as the Blue Anchor Landing. Griffith Jones bought the ground and sold it to John Townsend, from whom it was purchased by Henry Elfreth. The latter complained that he had suffered damage by being restrained from building on his property, but, as already said, Penn's charter granted the public landings to the city, and it does not appear that Elfreth obtained any satisfaction.

In 1720, Governor Sir William Keith obtained a grant from the city corporation, for seven years, of the piece of land on the southwest side of the dock, "over against the house he now lives in, he proposing to drain and ditch the same." John Jenkinson applied for the use of a piece of ground at the south side of the dock, near the bridge over Front Street, in 1735. In 1746, Recorder Allen produced to the Common Council a deed from George Grey to the mayor and commonalty of Philadelphia, "for a Lot of Ground over against the blue Anchor near the Drawbridge Which has been in Mistake deemed to belong to the City, and has been us'd as a free landing." It was resolved that the assessors should be acquainted with the right of the corporation to the said lot, and an account be made of the expenses of improving the same previously incurred. The latter reported the improvements to be worth fifty-seven pounds, and the money was paid in 1751 to Common Councilman John Stamper, who had advanced money to the use of the city.

In 1757, Loxley's term at the drawbridge wharves had expired, and it was proposed to lease the public ground on the south side of the dock, between Front and Secoud Streets, the public wharf on the north side of the dock, and the ends of the dock streets on the river. Whoever became the lessee was to be entitled to the benefit of wharfage and the cording of wood. Some improvements were directed to be made. It was resolved, for the improvement of the premises, "that a Peer or Wharff of fifty Fcet wide to Extend eighty or one hundred Feet Eastward be built near the middle of the said Landing place; and

that a Slip or Cartway of Forty Five Feet wide be made between Hamilton's Wharff and the said Peer." At this time there was a complaint that Loxley, "under Color of hiring the Publick Grounds on the South Side of the Dock had taken upon him to erect some Buildings thereon, Contrary to the Intent of this board, wherefore it was resolved that the building should be taken down and removed." William Clark became the lessee, and died in about a year. He was succeeded by Thomas James, and the rent increased to sixty pounds per annum for the pier and the whole property. Thomas Overend became tenant in 1760 at the rate of sixty pounds, and Jonathan Hood was tenant at the same rate in 1762.

In November, 1764, Thomas Penn released to the city corporation the piece of ground, claimed to be public property, lying on the dock, and bounded on the east by Front Street, and on the south by Spruce Street. Robert Lumsden was tenant in 1767-68. In 1768 it was resolved to extend the pier at the draw-bridge thirty or thirty-two feet into the river. Lumsden's lease was renewed for three years in 1783.

**Penny Pot Landing.**—Penny Pot Landing was the only available place of disembarkation, with the exception of the Blue Anchor landing, at Dock Creek, from vessels on the Delaware in the neighborhood of the city at the time of the foundation. A high bluff extended from Dock Creek up to Vine Street, which was originally called Valley Street, from the fact that the ground there was depressed, and there was easy access to the water side. The Penny Pot House was a tavern, which was famous for its sale of beer at a penny a pot or quart, which was less than the allowed price at ordinaries. One of the provisions of the great law of 1682 was, "And to Prevent Exaction in publick Houses be it etc. That all Strong Beer and Ale made of Barley Malt, Shall be sold for not above Two pennies Sterling a full Winchester quart; and all Beer or Drink made of Molasses shall not exceed One Penny a quart." This act was abrogated by William and Mary, in England, in 1693. In 1684 a further act was passed, which decreed "that if anie Person shall sell any strong Beer made wholly of Barley mault above the rate of 3 pence a full Winechester quart and all Beer or drink made of Molasses above One penny a quart bottled or Unbottled mixed or Unmixed Sweetned or Unsweetned the party shall be liable if convicted within 10 days after the fact committed, to pay a penalty of 5 pennies per quart and proportionally for a greater or lesser measure." The Penny Pot House, therefore, being a place at which beer could be bought for one-half or one-third the legal price, achieved an early popularity. Watson says of the house, "It was a two-story brick house of good dimensions, having for its front a southern exposure. At first it had no intervening houses between it and the area of Vine Street, but when I last saw it, as many as three houses had filled up that space."

The landing at Vine Street was broader than other portions of the city. The Penny Pot Landing lot was north, and contained fifty-seven feet in breadth, and extended at that width from Front Street into the river Delaware. In 1850 a controversy arose between the district of Northern Liberties and the city of Philadelphia as to the right of the city to the Penny Pot Landing, being the piece of ground fifty-seven feet in width, lying north of fifty feet in width, the ordinary width of Vine Street, west of Front. It was contended that the northern portion of the space east of Front Street was in the jurisdiction of the Northern Liberties, and this ownership carried with it the right to the wharfage and tolls. Among other things shown on the argument was a survey to James West, in August, 1689, for a lot sixty feet front, bounded on the west by a street [since called Water Street], and extending into the Delaware, bounded north and south by a vacant lot. In March, 1690, West obtained another grant of forty feet "of the bank where the Penny Pot House stands, and in addition to 60 feet formerly laid out to him for a conveniency to build ships and vessels upon." West also stated that he had bought the Penny Pot House of the widow. The grant was made upon the condition that West would "make a convenient slip with timber and fill it up with earth, and pitch it with stones, against the street which is to be left 100 foot wide."

Having purchased the Penny Pot House from the widow, the final survey was made to West through to Front Street. The argument on behalf of the Northern Liberties was that, as originally laid out, the city boundary extended no farther than the fifty-foot wide Vine Street, and all north of the latter was part of the county of Philadelphia, and afterward was included in the boundary of the Northern Liberties. It was clear enough, that if this contention was correct, the Penny Pot Landing and the Penny Pot House never were in the city of Philadelphia, as originally laid out. Against this claim Justice Coulter, of the Supreme Court, before whom the case was tried, charged strongly in favor of the city. The jury brought in a verdict for the city, and the case was taken to the Supreme Court.<sup>1</sup> The court sustained the opinion of the judge at *Nisi Prius*, and held "this enlargement of Vine Street consisted of a part of the Penny Pot Landing adjacent to West's lot, and to which the widened street was appurtenant as a boundary; and as a public highway it enured not only to his use and that of the other lot-holders in the vicinity, but to the use of the public. William Penn, having by his agents and accredited officers granted this addition to Vine Street for the public use and accommodation, in 1690, could not revoke that grant by any subsequent act or deed. In addition to the right of the city to the space thus annexed to and made part of Vine Street, the same piece of

<sup>1</sup> Penny Pot Landing, 4 Harrie's Reports, 79.

ground was expressly granted to the corporation by the charter of 1701, as Penny Pot Landing.

After the year 1800 the Penny Pot House was known as the Jolly Tar Inn, says Watson, and kept by one Tage. The grand juries took considerable interest in the maintenance of this landing. In 1706 a presentment was made that the "free landing of Vine Street is . . . necessary to be secured with the banks of the same, whereby the Front Street may not become, as it threatens to be, unfit to be passed with carts." In 1713 they presented as a nuisance the east end of Vine Street, where Front Street crosses it. In 1718 a gully running down Vine Street and crossing Front was represented to be "not passable" by coaches, wagons, or carts, to the endangering of lives. The bank at the end of Vine Street was represented, in 1724, to be worn away to the middle of Front Street, and very dangerous. In 1740 the Penny Pot Landing and the east end of Vine Street was presented by the grand jury as encumbered with timber and plank by Samuel Hastings and Charles West. The cave in which John Key, the first-born child in Philadelphia, saw the light, was at or near the Penny Pot Landing.

A committee of Common Council in 1704 reported that it would require £50 "to repair Arch Street and High Street wharfs,—£20 for Chestnut Street wharf, and £30 for Walnut Street wharf,—altogether, £150," from which it appears that High and Chestnut Streets wharves had been established before that time. In October, 1706, an ordinance was ordered to be drawn "for laying a small duty upon wood, etc., landed upon the public wharves in this city." This was followed, in 1710, by a proposition that an ordinance should be prepared "to oblige foreigners and others who load and unload their vessels at the public wharves of the city to pay wharfage."

In 1719 it was proposed that an ordinance should be drawn "to compel masters of vessels loading or unloading their vessels at the free wharves at this city to pay so much per ton." The price agreed upon was one shilling per ton for unloading and the same for loading, all vessels being allowed to lay five days to unload, and ten days to load; and if they exceed fifteen days, to pay after that time two shillings per day; new vessels loading after ten days lying at the wharves to pay two shillings per diem. Wood-staves or other things were not to be suffered to remain on the wharves for more than twenty-four hours, under penalty of paying afterward one penny per cord per hour, for wood, and in that proportion for a cart-load of staves, shingles, and other things. Daniel Radley was appointed wharfinger, and was to have one-quarter of his receipts for his trouble, the rest to be paid into the city treasury. Shortly after this, one Robert Wnod desiring authority "to request the charity of all persons in this province towards the repairing of his damage by reason of his shallops being taken by pirates," the Common Council decided

"that in regard of the many Taxes the inhabitants of this City are Subject to Beyond any other part of this Province, providing for the poor, Building & Supporting of ye Publick Wharves, etc., it would be Unreasonable to Impower ye Petitioner (Especially Since he is an Inhabitant of another Government) to Request the Charity of the Inhabitants by any Publick Instrument of Writeing from the Mayor, for that ye Same would be a very Ill president." In 1719, Bentley Cooke was appointed the common corder of wood for the city in accordance with an ordinance then passed "for the Prevention of Carters huying Up & Ingrossing for fire wood." An ordinance "for cording and measuring fire wood" was also passed, and another "that the common carters should receive for carting half cord of wood seven pence half penny." Draymen were allowed for every pipe of wine carried, one shilling; rum, sugar, and molasses, ten pence per hoghead; porters, eight pence per every pipe of wine, six pence for every hoghead of rum, sugar, and molasses, and for every one hundred bushels of salt six shillings three pence.

In the matter of hauling by the carters there were difficulties, in consequence of the had condition of the streets, which were paved here and there by citizens under encouragement of ordinance, leaving large intervals where the original soil had not been interfered with. The ordinance which was intended to regulate the method of hauling articles through the streets by carters and wagners, prescribed the number of horses to be used, and the width of wheels,—broad wheels being considered better than those with narrow tires in preventing the cutting up of road surface. It was soon found, according to report to Common Council, that it would be "Impracticable to hawl half a Cord of wood with 2 Horses in ye Winter time, and therefore think it proper to allow the Carters to haul wood with 3 Horses, provided they do not carry more than half a cord, And in Drawing any other thing they shall Comply with s<sup>d</sup> Ordinance as also farther time is Given them to Go with the Wheels they now Use, viz.: till the twenty-fifth day of March, In the year One Thousand and Seven Hundred and twenty-one, in order to provid<sup>e</sup> Such Wheels as are Directed by s<sup>d</sup> ordinance."

The wharfage system was found to be a failure. The income fell behind expectation, and it was resolved, in May, 1720, that it would be of more advantage to let the wharves out upon yearly rent. The mayor, William Fishbourne, took the lease of Walnut and Chestnut Street wharves for seven years, and Alderman Redman became the lessee of High Street wharf for six pounds per year for the same term. The wharf at the end of Chestnut Street was ordered to be repaired in 1723. The rebuilding of the Mulberry Street wharf led to application, to the regulators of the city, that they would regulate Front Street southward as far as occasion should require, there being necessity for dirt to fill up the wharf.

In 1725 measures were taken to finish a wharf at the end of Sassafras or Race Street, and to repair the street so as to make it passable. Arch Street and Race Street wharves now being in order for occupancy, the ordinance regulating the rates of wharfage was renewed, and Richard Armitt was appointed wharfinger. The High Street wharf was carried out sixty feet with logs, and filled in.

The work on the Sassafras Street wharf was slow. Sylvanus Smout had agreed to build it, but, being taken sick, declined the business, whereupon John Bater agreed to build a wharf six feet farther in the river for twenty-five pounds. This happened in 1730.

In October, 1733, Peter Cahoon, wood-corder, got into trouble, and it was ordered that he should be removed from his position; that a new ordinance should be drawn up for the regulation of wood-corders, and that a petty rate should be paid by importers of wood for every cord landed in the city. Under this ordinance wood-corders were appointed as follows:

"For High St wharf Richard Pummer and Peter Calahoon [Cahoon]

"For Mulberry et Wharf John Joiner

"For the Cheetnut St wharf Walnut St Wharf and the landing at the Blue anchor Jeremiah Willie"

Peter Cahoon was forgiven for his previous conduct at High Street wharf, but did not justify the liberality shown. In 1739 he was removed by the Council, and John Joiner, wood corder at Mulberry Street wharf, appointed in his place.

In January, 1748, John Church and Thomas Stewart petitioned Common Council, stating that they were the owners of water-lots adjoining the south side of Cedar Street, which they were about to improve by building wharves. They conceived that it would be an advantage to the city if a wharf was built at the end of Cedar Street, and they proposed to construct such a convenience at their own expense, if the board would allow them the profit for thirty years. A committee was appointed to make an examination of the premises, and report. In 1753, nothing having been done in the mean time, Church and Stewart again presented proposals.

In May, 1748, the corporation entered into comprehensive leases of nearly all the public wharves on the Delaware. There had been some complaint of the mismanagement of the wood-corders who occupied the city wharves, most of whom carried on the business of receiving and selling fire-wood. Owen Roberts and John Pickel applied for the privilege of acting as wood-corders, and offered to give security for their good behavior, and to pay a rent of fifty pounds per annum on a lease of four years. The amount was greater than the revenue from the wharves previously. It was therefore determined that Roberts & Pickle "be appointed the Wood Corders for this City, and be Empowered to receive & take the Cordage, Wharfage, Fines & Forfeitures settled & imposed by virtue of the Laws & Ordinances of this Corporation for the Cording, Landing, or Lying of

Cord Wood, Boards, Planks, Timbers, or other Things on the Several Wharffs." Under this lease was transferred to Roberts & Pickle the wharf at the end of Vine Street, with the Penny Pot Landing adjoining thereto; also the wharves at Sassafras, Mulberry, High, Chestnut, Walnut, and Spruce Streets, together with the landing-place at the foot of Dock Street, thirty feet in breadth above and as much below the Drawridge. At the end of the lease to Roberts & Pickle, John Hill became lessee of all the wharves except those at Dock Street for fifty pounds per year. The latter were taken up by Benjamin Loxley. After a year's experiment Hill threw up the lease. Thomas Bourne succeeded him for a four years' term. Joseph Allen, when Bourne's lease expired, offered to pay ninety pounds per year, but upon inquiry discovered that he had been too liberal. There was a compromise with him, by which a lease was extended for one year at the rate of sixty-eight pounds. The next tenant was John Kneass, who leased the wharves for five years at seventy pounds per annum, the city to keep them in repair. A new ordinance for regulating the cording of wood was passed in 1760.

In 1763 a committee of Councils appointed to view the public wharves made the following recommendation:

"The Slip at the North End of the Town to be regulated & some Earth dug up at the End of the Wharff.

"The Dock at Arch St. to be dug out.

"The Slip at the Blue Anchor to be regulated and some Earth dug out at the End of the Pier.

"A Pier to be carried out from Market St. Wharff about 28 or 30 feet wide & about 50 feet long."

The public landings in the county of Philadelphia were considered to be vested in the county commissioners for the benefit of the public. By act of April 4, 1796, those officers were directed to continue in their jurisdiction over the landings, and that whenever the profits arising from them should authorize it, to purchase new landings to be held in the same manner. By act of March 6, 1819, the public wharves or landing-places at the end of Coates Street, and at the end of Callowhill Street, and "the public wharf or landing place commonly called the Hay scale landing" (at Nohle Street), and a wharf or landing-place south of and adjoining Callowhill Street, which before that time had been held in trust by the commissioners of the county, were vested in the commissioners of the Northern Liberties. The Hay-scales landing was established by authority of an act of Assembly of Feb. 20, 1768, under which the sum of two thousand pounds was ordered to be raised by lottery for the "purchase of a public landing nearly opposite the barracks," to be held by the county commissioners in trust for the public. The ground embraced in this purchase, which was made in the same year, extended west of Front Street. The portion of the ground beyond that street was authorized to be sold by act of Assembly passed in 1801. The money received was added to the public landing fund. In 1828 representations

were made on behalf of the inhabitants of the districts of Kensington and Spring Garden and the inhabitants of the unincorporated townships of Northern Liberties and Penn who claimed a right to the use and benefit of portions of the income of the Hay-scales landing, and also of the public wharf on the south side of Callowhill Street. Under the act of Assembly the Supreme Court was given authority to inquire into the merits of these claims, and to do justice; and if the decision should be against the Northern Liberties, to appoint appraisers and auditors to ascertain the value of the said landings, upon which the commissioners of the Northern Liberties were to make compensation to the other districts and townships. The Supreme Court decided in 1834 that Kensington and Spring Garden districts and Northern Liberties and Penn townships had no right to those wharves or either of them. The Callowhill Street landing, fifty feet wide, was left open by the proprietaries. The Coates Street landing had been dedicated of the width of forty feet by William Coates and others, owners of the soil, by deed, Nov. 28, 1771. The landing south of Callowhill Street was purchased by the county commissioners out of the public landing fund, under an act of Assembly passed in 1796. This wharf was bought in 1802 from the estate of John Harrison, and was one hundred and twenty-five feet long and fifty feet in depth, north and south.

The landing at Green Street was purchased by the district of Northern Liberties, out of the landing fund, in 1826. It extended from the river sixty-five feet to the east side of Oak Street, where the width was sixty-five feet. Another lot over forty feet front and one hundred and fifty feet deep, adjoining and extending to Fleet Street, was purchased at the same time.

In 1848 a landing on the south side of Coates Street was purchased from Michael McGill, and was eighty-two feet eight and a half inches in front or breadth on the east side of Oak Street and south side of Coates, and extended of that width into the river Delaware.

Under the act of Sept. 29, 1787, the commissioners appointed by the district of Southwark laid out Wharf Street, "in order to a communication from wharf to wharf between the stores erected by the owners of water lots in Southwark and the heads of Docks hereafter to be formed for the accommodation of ships." Wharf Street was widened to fifty feet, under authority of an act of Assembly passed in 1807. Actually, Wharf Street was a plan, and never an accomplished fact. The projected line was out in the water, some distance from the wharf-line. It passed at the navy-yard out into the deep water, and at Moore Street would have been more than five squares east of Front Street. On the eastern lines, north of Prime Street, Wharf Street went past near the ends of the longest wharves, and might have been useful. The purchase of the United States Navy-Yard and the building of great wharves there rendered it impossible to carry out this

plan. In 1854, when the district of Southwark was consolidated in the city of Philadelphia, the public landings of the district were at the end of Almond Street, Davidson's Landing below, and at Catharine and Queen Streets, the upper side of Christian Street and the lower side of the same street, and at Prime Street or Washington Avenue.

Shackamaxon Street landing, in the district of Kensington, was bought by the county commissioners out of the public landing fund in 1818.

Under the act of Assembly of March 6, 1820, incorporating the Kensington District of the Northern Liberties, there was a more liberal concession as to the ownership of public landings than had been granted to any municipal corporation other than the city. Section 30 of that act said, "All public landing places at the junction of any of the streets of the said district with the river Delaware or otherwise which are now or may hereafter be laid out, shall be and the same are hereby vested in and the title thereto confirmed to the aforesaid board of commissioners and their successors for the use and benefit of the inhabitants of the said district." The commissioners were also given authority to appoint persons to measure cord-wood and to fix the rates of tolls and wharfage.

By the act of incorporation of the district of Richmond, Feb. 27, 1847, the landing-places at the junction of streets in that district with the river Delaware were vested in the commissioners of the district.

By act of Assembly passed March 25, 1805, it was recited that "the charter granted to the citizens of Philadelphia by William Penn doth not grant to the citizens the same right to occupy and use the ends of the streets which extend to the river Schuylkill which was granted on the river Delaware, and as such a public benefit will now be highly useful to the inhabitants of the said city and to other citizens of this commonwealth;" therefore it was enacted that the city corporation should have in the streets extending to or into the Schuylkill River the same rights which the corporation had to the east ends of the same streets which extended to or into the river Delaware, that part of the west end of High Street belonging to the bridge company only excepted. The wardens of the port of Philadelphia were authorized to fix and determine the extent to which the owner or owners of ground extending into the Schuylkill, from the lower falls to the junction with the river Delaware, might build wharves.

The district of Spring Garden possessed no public landing before the year 1830, at which time was passed a law vesting in the commissioners "all that certain landing on the river Schuylkill at the western extremity of Francis's Lane or Coates St. formerly laid out by Tench Francis as a public landing;" also another landing in the Schuylkill, north of Coates Street, and at "the southwestern extremity of a certain 33 feet wide road leading from the said river to the Ridge turnpike road." This was called Schuylkill

Street landing. The commissioners of this district obtained some other landings by purchase. Wood Street landing was bought from Cadwalader Evans, Dec. 1, 1829, under a ground-rent of \$234.50. It was sixty-seven feet wide, and extended from Williams Street to the river Schuylkill. Fairmount Street landing was bought from Thomas Cadwalader, Henry Nixon, and Henry J. Williams in September, 1831, and was fifty feet wide, and extended into the river Schuylkill. Another lot of fifty feet front and three hundred and thirty feet in length, extending into the river, was bought of Jacob Ridgway in 1833. Fairmount Street was formerly John Street, and extended from Francis' Lane or Coates Street south into the Schuylkill. It is now known as Twenty-fifth Street.

By act of Feb. 17, 1847, all public landing-places at the junction of any streets in the district of Penn with the river Schuylkill, then or thereafter to be laid out, were vested in the commissioners of the district.

Clarkson & Biddle's map, published in 1762, contains the names of the owners of private wharves along the city front, commencing at a point about Noble Street and extending southward. The owners were as follows :

Huston, about Noble Street.  
 Mower.  
 Clifton.  
 Allen & Salter, on a line with the south side of Margaretta Street (not opened).  
 Shoemaker, south side of Callowhill Street.  
 Hewlings.  
 West, north of Vine Street, at Penny Pot House landing.  
 Mifflin, in a line parallel with Key's Alley (not opened).  
 Goodman, south of a line parallel with George's Alley (Coates).  
 Parrock, south side of Race Street.  
 Hasell.  
 Hodges.  
 James.  
 Shoemaker.  
 Hopps.  
 Wilkinson.  
 O'Kill.  
 Austin's Ferry, north side of Arch Street.  
 Warner, south side of Arch Street.  
 Old Ferry slip, Rawle & Pell, Clifford.  
 Aepen & House.  
 Bickley.  
 Potts.  
 Hoopes, north side of Market Street.  
 Masters, south side of Market.  
 Henry.  
 Allen.  
 Lawrence.  
 Sims.  
 Crooked Billet.  
 Pemberton, north side of Chestnut.  
 King, south side of Chestnut.  
 Morris.  
 Flower.  
 Carpenter.  
 Meredith, north side of Walnut.  
 Fishbourne, south side of Walnut.  
 Dickinson.  
 Penrose.  
 Hamilton.  
 The Corporation.  
 The Dock.  
 Stamper, south side of the Dock.  
 Powel, south side of Spruce.

May & Allen.  
 Sims, opposite the end of Union Street (not opened).  
 Plumsted, north side of Pine Street.  
 Rhoades & Emlen, south side of Pine Street.  
 Edgar & Nixon.  
 Willing, on a line parallel with the north side of Lombard Street (not then opened).  
 Moore.  
 Mifflin & Morton, north side of South or Cedar Street.  
 Church, south side of South or Cedar Street.  
 Hockley.  
 Macs (Mease).  
 T. Penrose, north of Almond.  
 Penrose, south of Almond.  
 Allen.  
 Lewie.  
 Nieman (two wharves), north of Catharine.  
 Trotter, south side of Catharine Street.  
 Penrose, north side of Queen Street.  
 Reynolds, south side of Queen Street.  
 Wharton, north side of Queen Street.  
 Dennis, opposite Swedes' Church.  
 Coates, north of Weccaceo Lane.

Just as land-stages were of the utmost importance to intercourse and trade before railroads were established, so were water-stages, which were numerous, and contended with the land-stages for custom quite successfully, when by navigation it was possible to compete. Roads were rough, and during many seasons of the year in bad order for traveling. But rivers, and even the great ocean, were accessible by easy methods when there were fair and favoring winds. The water-stages were matters of continual interest. In 1796 it was given out, "the New York Packet boat starts from Arch St. wharf on every Sunday and Wednesday and proceeds to Burlington or Bordentown etc., from one of which places, one or more good carriages start on the succeeding morning for South amboy; from which port a convenient packet will sail for New York immediately after their arrival." The Baltimore packet set off from the Crooked Billet wharf, between High and Chestnut Streets, daily, Saturday excepted, and proceeded to New Castle, where a carriage received passengers, and carried them to Frenchtown, whence they proceeded by water to Baltimore.

In 1803 the water-stages had increased considerably. The New York packet sailed from the old ferry on Sundays, Tuesdays, Wednesdays, and Saturdays. The Baltimore packet daily, from 3 South Wharves, had a rival in a line twice a week from Hamilton's wharf. The Burlington boat sailed every day from the old ferry, and the Bordentown packet from Smith's wharf twice a week. Wilmington received its passengers from Beck's wharf every day; Sassafras River, from Hamilton's wharf, on Wednesdays and Saturdays; Apoquinimink, from Hamilton's wharf, twice a week. The Boston packet was ready to leave Chestnut Street wharf "as freight offers."

In 1814 the Alexandria, Apoquinimink, Baltimore, Fredericksburg, Georgetown, Norfolk, Petersburg, Richmond, Sassafras River, and Washington packets sailed from Hamilton's wharf. The Union Line for

Baltimore also had its depot there. The same Union Line's sailing-vessels left Market Street wharf. The "Phoenix," the first steamboat on the New York line, left the upper side of Market Street for Trenton, and the "Philadelphia" and "Eagle" steamboats left the wharf at the south side for the same place; and there was a steamboat from Bickley's wharf for New York. The number of sailing-packets had been increased by a line to Chester, from Waln's wharf; to Marcus Hook, from Massey's wharf, below Market Street; to Wilmington, from the same place. A line to Boston from Chestnut Street, and to Savannah, Ga., and Charleston, S. C., from Clifford's wharf, between Market and Arch Streets, were also proofs of the increase of commerce.

Packet ships belonging to Stephen Girard were usually to be found at the wharves near his stores above Market Street. They included the "Montesquieu," "Helvetius," "Voltaire," "Rousseau," and others. In later years, Joseph Hand, who was an extensive shipper, had the stores north of Market Street, at which were moored his vessels, flying his signal-flag,—a black hand in a red field. They were bound for New Orleans, Savannah, Charleston, and other Southern ports. Clifford's wharf was north of Stephen Girard's, and subsequently became the property of the latter. Girard's dock ran up almost to the line of his store-houses, at a distance above. Adjoining the old ferry slip on the south, two stores, occupied by Samuel Crawford & Elliston and John Perot, between 1800 and 1810, extended out upon their wharf far beyond the line of any other building in that square. To get round it there was a narrow, dirty alley on the south, a passage in front over the mud, near the end of the wharf, and then another alley on the north, from which access might be had to the old ferry alley and old ferry slip.

Above Arch Street, adjoining Austin's ferry slip and ferry house, there was no passage. The red stores, a block of frame buildings, stood out almost to the wharf's edge, leaving considerable space between them and the houses and stores fronting on Water Street. They were quite conspicuous on the river front until they were destroyed by fire, an occasion also memorable. The wharf and stores of Henry Pratt, of Lemon Hill, were just below Race Street.

Between Race and Vine Streets, the passage in front, along the wharves, in 1800, was tolerably straight. North of Vine Street access was cut off entirely, about half way up, by Taylor's dock, which ran in to the extreme edge of Stewart & Knight's board-yard. It was impossible to pass directly along the wharves from Vine to Callowhill Street at this time.

South of Market Street the passage by the wharf was good to the Crooked Billet dock, near which a block-maker's shop extended out from the line of the adjoining buildings almost to the river. By passage around it, turning eastward, a store in the middle of the wharf was encountered, and was also called "the

red store." It might have been as deep in color, but it was not near as large as the red store between Arch and Race Streets.<sup>1</sup> From the first wharf below the Crooked Billet, about 1805, a line of packets for New York sailed regularly. It was established by D. and P. L'Hommedieu, of New York.

From Chestnut Street to Walnut Street the passage was straight along the wharves, although somewhat narrow, in 1810. India wharf occupied the width from the south side of Tun Alley to the second alley below; it was the harbor for the East Indiamen. Robert Morris, of Revolutionary memory, had his store-house there. It was occupied also by Peter Whitesides in 1789, and John Wilcox in 1795. The India stores were large, and the wharf was one hundred and seventy-five feet front. The store of Jacob S. Waln was adjoining the India stores. This wharf was for many years a most famous one for the reception, loading, and unloading of ships engaged in the China and East India trade. Below the India wharf, and extending one hundred and sixty feet to Walnut Street, was Cope's wharf. It was established by Thomas C. Cope about 1815, and became in time the great shipping wharf for his line of Liverpool packet-ships, among which were the "Lancaster," "Alexander," "Algonquin," "Monongahela," and "Montezuma," which were but small vessels, but were succeeded by much more splendid craft, the "Tuscarora," "Alleghany," "Saranak," "Wyoming," "Tonawanda," and "Thomas P. Cope."

The buildings from Walnut to Spruce Street, fronting on Water, were built on a regular line toward the river, and it was always a clear and easy passage. Morris' stores, below Walnut, were the property of persons originally belonging to a family of brewers of that name. Hamilton's wharf was the first one north of Drawbridge landing.

Spruce Street wharf was from early time the resort of the oystermen, and the vicinity was always lively with the fleet of oyster-boats moored there and the active trading which was going on. Citizens went there to buy their oysters by the hundred, and they were opened into the tin butter-kettles which were meant to receive them. Hotel and restaurant keepers were frequently present, and there was always something going on which was of interest. South of the

<sup>1</sup> "Ritter" (Philadelphia merchant) says, "The most remarkable feature in this square was the famous 'Crooked Billet,' deriving its name from several crooked pieces of wood transversely arranged and designating the tavern at the head of the dock kept by Edward Byrne in 1799. There was a deep cut into the wharf intercepting the straight course of the wharf or passage, leaving a very narrow pass to and from the tavern above, and the wharf proper below; while a blockmaker's-shop at the corner of the narrow pass ever impeded or delayed the wayfarer as he would pass onward. The passage in itself around this corner up the north side of the dock to the alley, and again down the south side to the tavern and the wharf proper, was a dangerous route even in daylight, but much more so at night; and the life of one of our valuable citizens, Mr. Isaac Jones, paid the penalty of an adventure here after nightfall, Dec. 2, 1807, in his sixty-fourth year. It was a dingy dismal spot and a complete man-trap, for several others were drowned in their ignorance of the interruption of the line."

• • Spruce Street oyster-wharf was Waln's wharf, which stretched out into the Delaware to a considerable distance, and for years was occupied by the vessels of the Walns in the London and East India trades. An extensive, broad dock, immediately below, was guarded at each corner by a small brick store, belonging to Levi Hollingsworth. Vessels could be loaded or unloaded at these structures with great convenience, and the merchandise guarded from the weather. The Hollingsworths were in the flour business. The wharf of Joseph Sims was near Pine Street, in front of his two stores, and was quite extensive, and in its time the seat of an extensive trade.

East of Water Street, at Pine Street, Penn Street was opened, nearer to Front Street than to Water Street. The houses extended from Penn Street much farther toward the Delaware than on the north side of Pine Street. Lombard Street was not opened through until late in the present century, but there was a small passage opposite called Lombard Alley. Below Pine and north of Lombard were the stores of Thomas Willing and Willing & Francis, with the wharf in front. It was the seat of a very large business before the Revolution and afterward. Passing around Willing's wharf, at Lombard Alley, a second street opened between Penn Street and the river; it was called Little Water Street. After the passenger got around the store of Jacob Girard Koch, the way was straight to South Street.

## CHAPTER LIV.

### TRANSPORTATION.

Roads—Stage-Coaches—Steamboats—Railroads—City Passenger Railways.

**Roads and Stages.**—Neither the Dutch nor the Swedes were road-builders,—they were hardly path-finders,—the water being their only medium of conveyance. "The Swedes used boats. The roads were mere paths through the woods made by the Indians."<sup>1</sup> The Delaware River afforded communication with the settlements along its banks, and was likewise the highway of the vessels that brought supplies and colonists from Europe. The settlements spread along its borders, extending but a very short distance back into the country, the river being the great and only thoroughfare, on the waters of which all transportation was carried. With the colonists under Penn the era of road-building began. The "horse-way" is first spoken of, where the pack-horse with sacks, wallets, and baskets or panniers, was the mode of transportation, and surrounded with poultry, pork, butter, flax, and followed by calves and sheep would bring to mar-

ket the products of the early settlers. The same mode of transportation many years later carried into the interior the necessities of life which were purchased in the town. "Five hundred pack-horses had been seen at one time in Carlisle, going thence to Shippensburg, Fort London, and farther westward, loaded with merchandise, also salt, iron, etc. The pack-horses used to carry bars of iron on their backs, crooked over and around their bodies, barrels or kegs were hung on each side. . . . The pack-horses were generally led in divisions of twelve or fifteen horses, carrying about two hundredweight each, all going single file, and being managed by two men, one going before as the leader and the other at the tail to see after the safety of the packs. Where the bridle-road passed along declivities or over hills, the path was in some places washed out so deep that the packs or burdens came in contact with the ground or other impeding obstacles, and were frequently displaced. However, as the carriers usually traveled in companies, the packs were soon adjusted and no great delay occasioned. The pack-horses were generally furnished with bells, which were kept from ringing during the day, but were left loose at night, when the horses were set free and permitted to feed and browse. When wagons were first introduced the carriers considered that mode of transportation an invasion of their rights; their indignation was more excited, and they manifested greater rancor than did the regular teamsters when the line of single teams was started some thirty years ago."<sup>2</sup>

Day, in his "Historical Collections," says that "Mercersburg, in Franklin County, was in early days an important point for trade with Indians and settlers on the Western frontier. It was no uncommon event to see there fifty or one hundred pack-horses in a row, taking on their loads of salt, iron, and other commodities for the Monongahela country. The iron made in the Juniata Valley was first conveyed to the Philadelphia and Pittsburgh markets in this expensive way." Edward Howland, in *Harper's Monthly*, says that in 1784 the cost of transportation by pack-horses from Philadelphia to Erie was two hundred and forty-nine dollars a ton, and in 1789 the crank for the first saw-mill in Ohio was carried by pack-horses over the mountains to the Youghioghny River, and thence shipped by water to its destination on Wolf Creek, sixteen miles from Marietta. The crank weighed one hundred and eighty pounds, and was made in New Haven, Conn., for the New England Ohio Company. The first heavy hauling was done in winter on the snow in sleds, and wagons came gradually into use only as the roads improved. The Conestoga wagon, Rupp says, was first used in 1760. In course of time, or rather in the course of the improvement of roads, these huge vehicles, drawn by six, eight, or more horses, superseded the pack-horse, and became the principal mode of transportation. In 1792

<sup>1</sup> Martin's History of Chester.

<sup>2</sup> Rupp's History of Cumberland County, published in 1848.

the turnpike from Philadelphia to Lancaster was commenced by a private company, and was finished in 1794 at a cost of four hundred and sixty-five thousand dollars, and was the first stone turnpike in the Union. The dates at which the turnpikes from Philadelphia were commenced are as follows: Philadelphia and Lancaster, 1792; Germantown and Perkiomen, 1801; Cheltenham and Willow Grove, 1803; Chestnut Hill and Spring House, 1804; Philadelphia, Bristol and Morrisville, 1804; Philadelphia, Brandywine and New London, 1810; Perkiomen and Reading, 1811; Ridge, 1812; Spring House and Bethlehem, 1814.

The transportation of mails and passengers was unknown among the earliest settlers, because, perhaps, there were neither mails nor passengers; letters were carried by travelers or traders, or by messengers specially intrusted with them. It was not until population had widened and extended from the river banks that any regular conveyance of letters was necessary. The weekly post-routes between Philadelphia, Chester, New Castle, and other settlements, established by William Penn in 1683, are the commencement of the public mail facilities of Philadelphia. A line of "stage-wagons" between Burlington, N. J., and Amboy is mentioned in Davis' "History of Bucks County" as having commenced in 1732, and it was probably the first public conveyance of passengers. This line of "stage-wagons" connected at the Amboy end with New York by water, and with Philadelphia by the same from the Burlington end. These wagons made but one trip a week, and had no springs, which were not invented until 1787. In 1752 this line carried passengers twice a week.

In that year (1752) the following notice, which was published in Bradford's paper, gave a clear idea of the method of traveling between Philadelphia and New York, a transit which in those times occupied three days:

"This is to give notice to all persons that shall have occasion of transporting themselves, goods, wares, or merchandise, from Philadelphia to New York, or from the latter to the former, that by Joseph Borden, Jun., there is a stage-boat, well-fitted and kept for that purpose, and, if wind and weather will permit, will attend at the Crooked Billet wharf in Philadelphia every Tuesday in every week, and proceed up to Bordentown on Wednesday. On Thursday morning a stage-wagon, with a good awning, kept by Joseph Richards, will be ready to receive them and proceed directly to John Cluck's, opposite the city of Perth Amboy, who keeps a house of good entertainment. On Friday morning a stage-boat, well-fitted and kept by Daniel Obryant, will be ready to receive them and proceed directly to New York, and give her attendance at the White Hall slip, near the Half-Moon Battery. If people be ready at the stage days and places, 'tis believed they may pass the quickest thirty or forty hours, the cheapest and safest way that has yet been made use of, if due attendance be given by us, the subscribers, which we shall endeavor to do as near as possible. All people living on or near the road may have business, by letters or otherwise. Due care shall be taken in the delivery of letters or verbal messages, &c., by us.

"JOSEPH BORDEN, JUN.,

"JOSEPH RICHARDS,

"DANIEL OBRYANT.

"All passengers or goods that shall come to Bordentown on Sunday or Monday in every or any week, by any Trenton shallop, White Hill shallop, or Bordentown shallop, or boats, or in any other whatsoever whose wagon-hire shall amount to 16s. or upwards, shall, upon first notice, have a wagon, and be transported to the above John Cluck's,

opposite Amboy, where, if the stage-boat be not ready to receive them, (but it's intended she shall,) it must be allowed they have a greater chance for dispatch of any other place whatsoever—for all the Brunswick, the place above Brunswick, called 'the Landing,' and all the river boats, must pass that place, in whom people may have passages.

"JOSEPH RICHARDS.

"N. B.—For the future, attendance will be given at the Crooked Billet wharf in Philadelphia every Friday and Saturday, and proceed to Bordentown on Sunday and Monday. The stage-wagon will set out for Amboy, passengers or not."

In "Poor Richard's Almanac" for 1753 is an advertisement of the same line, in which it is said, "If people be ready at the stage days and places 'tis believed that they may pass quicker by twenty-four hours than by any other way, as our land carriage is ten miles shorter than by way of Burlington, and our wagon does not fail to go through in a day."

In 1757, Reuben Fitz.Randolph gave notice that he drove the Philadelphia and New York stage-wagon by way of the Blazing Star, in New Jersey, starting from White Hall slip, in New York, every Tuesday and Friday, carrying goods and passengers in boats to the Blazing Star, from which a good stage-wagon, kept by Isaac Fitz Randolph, set out every Wednesday and Saturday for New Brunswick, where another stage-wagon, kept by Francis Hollman, set out every Monday and Thursday for Trenton. Thence another wagon, kept by Humphrey Mount, set out every Tuesday and Friday direct to the sign of the George, which was at the southwest corner of Second and Arch Streets, in Philadelphia, where the stage arrived some time during the afternoon of Friday. This was in the winter, and made the time of passage between the two cities more than three days.

In 1757 stages went from John Butler's, at the sign of the Death of the Fox, in Strawberry Alley, to Nathaniel Parker's, at Trenton Ferry, who conveyed passengers and goods across the Delaware River to George Moschel's, in Trenton. Francis Hollman then carried them in a stage through Princeton and New Brunswick to the house of Obadiah Aeries, at Perth Amboy, whence boats, sailed by John Thompson, carried passengers to New York. This trip occupied three days. In the same year Joseph Richards set up a line to New York, which went to Isaac Doles'; thence, through Staten Island (load or no load), to John Watson's, Mrs. Duckett's, and Mrs. Vantile's.

In 1759 a stage-line was set up to New York, starting from Daniel Cooper's Ferry, opposite Philadelphia, and traveling (by the way of Mount Holly) through Monmouth County to Sandy Hook, thence to Middletown, and thence, by the bay and Kill von Kull, to New York. Another line, in 1762, went to Bordentown by stage-boat, and thence by wagon across New Jersey. In 1766 great improvement was made by decreasing the time occupied in transit between the two cities.

John Barnbill set up a stage-wagon, which he called "The Flying-Machine," which went to New York in two days. The performance of this wonderfully swift coach was exceeded in 1771, when the

passage was made (between the 1st of May and the 1st of September) to New York in a day and a half. One Abraham Skillman contested with Barnhill as to which should make the quickest time, and Charles Bessonet, of Bristol, in 1772 set up another flying-machine, which proceeded to New York by the way of Princeton.

The stages to Baltimore went by way of boat to New Castle, and across the country to the head of the Elk River, from which water conveyance was taken, partly by way of Chesapeake Bay, to Baltimore. In 1757 a line was first set up between Philadelphia and Annapolis, Md., by John Hughes & Co. Stage-boats left Floyd's Wharf, Philadelphia, and sailed down to a point opposite Reedy Island, at Cornelius Carty's, where a wagon attended and proceeded to Fredericktown, from which a stage-boat went to Annapolis. The Rev. Andrew Burnaby, who traveled through North America in 1759 and 1760, left Annapolis on the 13th of June, 1759, for Fredericktown, upon the Sassafras River, in a schooner, and was greatly pleased with the scenery of the bay and with "innumerable porpoises playing about the haws of the ship." At Fredericktown he hired an Italian chaise, with a servant and horse, to attend him as far as Philadelphia. They went to New Castle, which is thirty-two miles, and thence, by the way of Wilmington, Chester, and Darby, to Philadelphia, ferrying across the Schuylkill about three miles below Philadelphia, probably at Penrose Ferry.

Between Philadelphia and the West there were no means of passage except such as were specially obtained by the persons who intended to travel. In 1766, Matthew Clarkson, merchant, of Philadelphia, left the city on a journey to the Mississippi, and kept a diary of the events connected with his journey. He set out on horseback, with a servant, August 6th. On the first day he met wagons loaded with skins coming from the West, and overtook others "loaded with pork going for the King's use to Fort Pitt." He lodged at The Ship, thirty-five miles from Philadelphia.

"The next day, (August 7), dined at The Duke of Cumberland, and reached Lancaster in the evening. On the 8th crossed the Susquehanna at Wright's ferry and reached York. On the 9th crossed Conewago creek, and arrived at Carlisle, where he reined till the 12th, when he resumed his journey with a stronger horse, dined at Shippensburg and lodged seven miles further on. On the 13th, at the Burnt Cabins, he overtook thirty-two horse loads of flour on the way to Fort Pitt, and mentions cattle going in the same direction and 'skine' coming eastward. 'This day's journey [thirty-four miles] has been extremely tedious and fatiguing; the road, except the first ten miles, was nothing but hills, mountains, and stones, until you pass the Burnt Cabins, when it is tolerable, but hilly.'

"Aug. 14th.—From Littleton to breakfast at the foot of Sideling hill; dined at the crossing of the Juniata; lodged at Bedford. Here he stopped for a day, and purchased an interest in five tracts of land in Cumberland valley, Danning's creek, and Woodcock valley, mostly in the vicinity of Bedford, containing in all eighteen hundred acres, for one-half of which he paid £90 (\$240).

"Aug. 16.—At the foot of the Alleghanies he found an encampment of Indians, under the command of Captain Green, who were engaged in gathering and drying whortleberries. Lodged at Stony creek. Next day dined at Ligonier, and lodged at the Twelve-mile run.

"18th.—To Brushy run, Turtle creek, and reached Fort Pitt just after dark."

"Thus he got 'through in ten days,' without counting stoppagee.

"When he reached Fort Pitt he says, 'I was stored away in a small crib, on blankets, in company with fleas and bugs.' He took a walk to 'the ship-yard; found four boats finished and in the water, and three more on the stocks; business going on briskly.'"

The fort was under the command of Maj. Murray, who gave Mr. Clarkson his lodging in the barracks, but on account of the miserable condition of accommodations for hoarding, he usually made his meals on bread and milk "at the store. The other officers of the garrison were Capt. Belneavis, Lieuts. McCoy, McIntosh, C. and G. Grant, and Hall. Dr. Murdock and Rev. Mr. McCleggan, chaplain, preached alternately in Erse [Scotch] and English."

Philadelphia STAGE-WAGGON, and New-York STAGE BOAT performs their Stages twice a Week.

**JOHN BUTLER**, with his waggon, sets out on Mondays from his House, at the Sign of the Death of the Fox, in Strawberry ally, and drives the same day to Trenton Ferry, when Francis Holman meets him and proceeds on Tuesday to Brunswick, and the passengers and goods being shifted into the waggon of Isaac Fitzrandolph he takes them to the New Blazing Star to Jacob Fitzrandolph's the same day, where Rubin Fitzrandolph, with a boat well fitted, will receive them, and take them to New-York that night. John Butler returning to Philadelphia on Tuesday with the passengers and goods delivered to him by Francis Holman, will again set out for Trenton Ferry on Thursday, and Francis Holman, &c. will carry his passengers and goods, with the same expedition as above to New-York. Tectf.

The first stage-coach which ran directly between Philadelphia and New York was put on by John Butler in 1756, and ran in three days from city to city, crossing the Delaware by means of a ferry-boat from Morrisville to Trenton. Before John Butler and his stage-coach between the two great cities in 1738, conveyance to New York was had by passengers going to Trenton by boat or private conveyance at separate expense. The line to New York was then by stage from Trenton to Brunswick twice a week. From the latter place water communication was again necessary. The proprietors were William Atlee and Thomas Hootin. The fare between New Brunswick and Trenton was two shillings sixpence. This was an experiment during a few months. The line was discontinued on the approach of cold weather. It was not revived in 1739. In 1740, Atlee & Yates, encouraged, as they said, by the success of the experiment of 1738, set up another line between Trenton and New Brunswick, running twice a week. Passengers were charged two shillings sixpence by the stage; merchants' goods

two shillings per hundred. In 1740, William Meghee established a stage-wagon, running once a week, between Bordentown and Amboy Ferry, "to go twice a week, when there is occasion, if the passengers pay what is reasonable in their case." In 1796 four daily stages ran from Philadelphia to New York, a daily stage to Baltimore, and once or twice a week to Lancaster, Bethlehem, Wilmington, Dover, Harrisburg, Reading and Easton.

Before 1786 all correspondence with Pittsburgh was conveyed by travelers or special messengers, but in that year an order was issued by the government to establish a post from Philadelphia; in 1790 the postage on the route was only one hundred and ten dollars and ninety-nine cents. A line of stages was established between Philadelphia and Lancaster by Frederick Shaeffer in 1784, which took three days for the round trip. A two-horse coach between Reading and Philadelphia was started in 1789, taking two days to make the passage through. A weekly stage commenced to run between Philadelphia and Easton in 1796. The following description of the traveling in those days is from the *American Annual Register*, Jan. 19, 1797: "The Roads from Philadelphia to Baltimore exhibit, for the greater part of the way, an aspect of savage desolation. Chasms to the depth of six, eight, or ten feet occur at numerous intervals. A stage coach which left Philadelphia on the 5th of February, 1796, took five days to go to Baltimore. The weather for the first four days was good. The roads are in a fearful condition. Coaches are overturned, passengers killed, and horses destroyed by the overwork put upon them. In winter sometimes no stage sets out for two weeks."

Upon Scull & Heap's map, 1750, are marked the ferries. There is a house at Greenwich Point. The Lower Ferry on the Schuylkill is Gray's; the Middle Ferry, Gardiner's; the Upper, Scull's; the ferry below the Falls, at the ford, near the present Laurel Hill, Garrigues'. There is a ferry-house also marked just above the Wissahickon, where the river was crossed by a ford. Upon this map the roads leading south are as follows: From Front Street, continued to the Point House; Moyamensing road, running in an irregular direction; from Second Street, continued and bending to the southwest, and stopping at the boundary line of Moyamensing and Passyunk; Passyunk road, running south and bending west, and reaching the Schuylkill near the site of the present gas-works. From this road another one struck off as far as the estate of — Brock. It was eventually continued to Penrose Ferry. Sober's Lane, or Long Lane, commenced at Cedar Street, near the intersection of Schuylkill Sixth [Seventeenth] Street, and ran southwest, intersecting Passyunk road not far from the Schuylkill. The road to the Lower (Gray's) Ferry ran from Cedar Street, at Schuylkill Front [Twenty-second], to the ferry, precisely as at present. There was a road intersecting most of these running in a

northwesterly direction, commencing on the Moyamensing road, near Dam creek, below Cox's house, and extending over to the road to the Lower Ferry, near Kinsey's place, on the west side of the Schuylkill. The road to Chester, by way of the Lower Ferry and the Bell Inn, was intersected near the latter by the road to Province Island. The road now called the West Chester ran in a direction somewhat crooked, but nearly west. Near the ferry the Lancaster road intersected the other, and extended in a northwest direction. The Haverford road, which commenced at the Upper (Scull's) Ferry and ran northwesterly, was cut by the Lancaster road. From Garrigues' Ferry a road inclining northwest ran into the Lancaster road below the Merion Meeting. A road extended from the Lancaster road, running northeast, and crossed the Schuylkill above the Wissahickon creek, where it ran into the road bearing the same name. The Wissahickon road ran from Ninth and Vine Streets in a northwesterly direction. The Germantown road ran from Second Street, above the sugar-house. The road to Frankford, a continuation of Second Street, ran nearly in its present direction. The Point-no-Point, or Richmond road, extended near the Delaware, as at present. There were cross-roads and connecting roads between these, which made communication somewhat convenient. But many means of travel were afterward necessarily opened. The distances from the city are given upon this map as follows:

The most important bridge in the neighborhood of the city was that which crossed the Cohoquenoke [Pegg's Run] near the house of one Poole, a ship-builder. It was constructed of stone, and Mr. Watson says that "its erection was a matter beyond the skill of our city masons." It was built by Israel Roberts, who was sent for to Maryland for the purpose of building it. It changed slightly the course of Front Street, which had run west of the present site at Willow Street, and crossed it by a low wooden bridge. Poole's bridge was for many years a noted landmark.

Before the Revolution there were only three roads by which passage northward could be had from the city of Philadelphia. One was by way of Front Street, passing to Frankford, and so to New York. Another was by the road to Germantown, and still another by the Ridge road to the valley of the Schuylkill. In summer the route to New York was generally by stage-boat to Burlington or Bordentown, and thence across New Jersey, by stage to Amboy, and then by boat to New York. What is now in the built-up parts of the city called the Old York road is actually the new New York road, and it was opened after the Revolution. It runs into the old stage route, or Front Street road, at some distance from the city. The old road to Baltimore was by the Darby road to Chester, and so on. What is called the Baltimore pike was laid out after the Revolution. The usual route to Baltimore in spring, summer, and fall was by stage-boat to New Castle, thence by stage over the peninsula to Elk River, and thence by boat to Baltimore. Washington, when he came to Philadelphia, on his way to New York, after he was elected President, came up the road leading through Chester and Darby, and crossed at Gray's Ferry floating bridge. His route to New York was by Front Street to Frankford, etc. The route of the traveler in 1773 from Philadelphia to Harris' Ferry, now Harrisburg, would have been, from Philadelphia to Schuylkill, two miles; Black Horse, four miles; Prince of Wales, one mile; Buck, one mile; Sorrel Horse, one mile; Plough, one mile; Unicorn, three miles; Blue Ball, four miles; Admiral Warren, three miles; White Horse, three miles; Downing's, seven miles; The Ship, two miles; The Wagon, six miles; Miller's, six miles; Douglass', three miles; The Hat, four miles; Duke of Cumberland, three miles; Red Lion, three miles; Conestoga Creek, four miles; Lancaster Courthouse, two miles; Scott's, nine miles; Bayley's, five miles; Hugh's, four miles; Sample's, three miles; Swatara, three miles; Taylor's, three miles; Harris' Ferry, eight miles. The above is an itinerary in an almanac for 1766. The traveler might go also from Philadelphia to Reading, where he had choice of two roads. The road from Reading to Lancaster was different from that from Reading to Harris' Ferry. The road to Lancaster was not very different from that of the turnpike, which was mainly constructed on the old King's road to Lancaster.

Charles William Jansen, who resided in America from 1793 to 1806, thus describes in his book, "The Stranger in America," a journey from New York to Philadelphia:

"Having been safely ferried over to Paulus' Hook—a miserable place supported by travellers, all the New York stages and horses for proceeding with being kept there—we saw a number of horses with wagons, yoked, ready to depart, and groups of passengers assembled, forming a truly curious scene. I now mounted for the first time an American stage—literally a kind of light wagon. . . . The vehicle, which is of the same construction throughout the country, is calculated to hold twelve persons, who all sit on benches placed across, with their faces toward the horses. The front seat also holds three, one of whom is the driver; and as there are no doors at the sides, the passengers get in over the front wheels and take their seats as they enter. The first of course get seats behind the rest. This is the most esteemed seat, because you can rest your shaken frame against the back part of the wagon. Women are therefore generally indulged with it; and it is often laughable to see them crawling to their seats. If they happen to be late they have to straddle over the men who are seated further in front. . . . Stumps of trees, left uprooted for Time to consume, yet impede your progress even in the much frequented road between the two largest cities in the United States. Several miles immediately before you enter Trenton the road is so bad in some places that the driver, with whom I chose to sit, told me his horses stalled—that is, they were for some time unable to drag the wagon over the worst places. He also said that the road had not been repaired within his memory; and he did not cease cursing and swearing until we entered Trenton late in the day, a distance of sixty-six miles."

Mr. Jansen further remarks that he set off from Trenton at six o'clock the next morning, and arrived in this city at the Franklin Head, on North Second Street, at two in the afternoon. The average rate of charge was not quite fourpence per (English) mile. Until the year 1802 the stages that set out from Philadelphia did not go farther south than to Petersburg, Va., which is about three hundred miles from Philadelphia; but in the month of March in that year a new line of "correspondence" was formed between the latter city and Charleston. The journey was about a fortnight, the distance about fifteen hundred miles, and the fare fifty piastres. There were stages also between Philadelphia, New York, and Boston, as well as between Charleston and Savannah, in Georgia, so that "from Boston to Savannah . . . a person may travel by stages." Michaux in 1802 went from Philadelphia to Pittsburgh. He reached Shippensburg by way of Lancaster, York, and Carlisle, and remarked: "Shippensburg, about one hundred and forty miles from Philadelphia, is the furthest place that stages go to upon that road. A person must either travel the remainder of the road to Pittsburgh on foot, or purchase horses."

Samuel Breck, who visited the city of Washington in 1809, says that he went with his brother George "in his tandem, accompanied by a groom." They left the city at ten o'clock in the morning, dined at Chester, and supped and lodged in Newport, Del., from which they set off the next morning after breakfast, passed through Elkton, dined at Charlestown, and supped and lodged at Havre de Grace. The next day they dined at the Red Lion, thirteen miles from Baltimore, where they lodged at the Indian Queen, kept by John Gadsby, a hotel so capacious

that Mr. Breck could not refrain from mentioning that it accommodated two hundred lodgers, that the table was laid for thirty-six people, that the bed-chambers all had single beds, and that the servants were more attentive than in any public or private house that he ever knew. When they left Baltimore they dined about fourteen miles from the city, and slept at Bladensburg, and did not reach Washington until some time on the morning of the next day. The traveling time occupied by this journey was four days.

In 1810, Samuel Breck went to Boston in a hackney-coach drawn by four horses. His wife, daughter, and maid-servant were of the party. They reached Trenton by night, where they slept. On the second day they dined at Brunswick, and slept at Elizabethtown. They arrived in New York before dinner the next day. After walking around the city, they left New York at noon of the 24th, and slept at Rye. Next day they dined at Stamford, and slept at Stratford.

OLD STAGE-COACH.

On the succeeding day they dined eight miles beyond New Haven, and slept at Berlin. The day following they breakfasted at Hartford, and slept at a tavern near Ashford. The seventh day of the journey brought them to Thompson's tavern for dinner, and they slept at Merriam. On the 29th of July they dined at Dedham, and arrived at Boston before sundown. Deducting the twenty-four hours spent in the city of New York, this journey from Philadelphia to Boston occupied seven days. Mr. Breck says "it was one of the most pleasant rides imaginable. The roads are turnpiked all the way, and of the seven ferries that a traveler was obliged formerly to pass, there remains now but that at Paulus Hook, which can never be bridged. The roads are not only extremely improved, but they are shortened thirty-six miles between Philadelphia and Boston." Mr. Breck "returned to Sweet Briar on the 15th of August, after an absence of twenty-six days on a delightful journey of six hundred miles going and returning, . . . meeting with exceeding good inns. . . . The expense of this journey was about five hundred dollars."

John Palmer, who went from Philadelphia to Baltimore in 1817, says,—

"After dinner we proceeded on board the steamboat 'Ætna,' part or wholly owned by the above-named ex-King [Joseph Bonaparte]. Having never been in a steamboat, I was much pleased with its size, beauty, convenience, and swiftness—going six miles an hour against the tide. . . . The boat was full of passengers for Baltimore. I observed that an

amazing quantity of trunks and portmanteaus were used by American travelers, and even by people going on short visits. I think we had two wagon-loads on board, and not a box among them. The people on board appeared almost invariably genteel in their dress and manners. The reason for this is, I conceive, that equality which reigns among Americans, no distinction being made—all having the same cabin to sit in and the same table to dine at. The passenger who aspires to be thought respectable, knowing the rule, spruces himself up accordingly."

Henry Bradshaw thus relates his tribulations, on reaching the steamboat wharf in Philadelphia, on account of the business anxiety of the porters and hackmen :

"When our host arrived we were inundated with porters, the greater part of whom were blacks. The rest were Irish. They had tin plates on their hats or breasts, upon which were written their names and residences. I, for the first time, allowed my trunk to go out of my sight. In England, among strange porters, I would have been more particular, but here such things are done without hesitation. I should not suppose that this proceeded from any peculiar feelings of national honor, nor from a general spirit of integrity. The real cause lies, I rather think, in the simple fact that any man may obtain work, and, when it is completed, he will be liberally paid. The inducements to dishonesty are thus lessened at their true source."

In "The Crosby Family" are given the experiences of Nathan Crosby, in 1818 :

"After spending a few weeks with my brother Asa, I made a trip to Philadelphia,—by stage to Bristol, and thence by boat. There were three grades of coaches on the line, at different prices,—three, four, and five dollars. There were a dozen or more of them running together. Of course, being a member of college, I entered the highest-priced coach, expecting to go forward and to be treated with especial respect and favor. But I soon found out that the coaches ran for luck, outstripping each other, and trying to escape each other's dust as best they could. I found, too, that my companions were dashing young chaps and flashy people, while the four-dollar coaches were filled with solid-looking business men; so when I returned I took another grade. It took two days to get from New York to Philadelphia; but I stopped over a day to attend commencement at Princeton, where a little balloon was sent up in the evening, to the great admiration of everybody, and much to my surprise. I had learned in New York that our ninepence was a shilling there, and that a half-penny was sixpence; but when I came to pay for a dinner in New York, and was required to pay 'two levies, a fipeny bit, and two cents,' I did not know what the fellow meant. So I gave him half a dollar, and by the change returned I ciphered out the value attached to the names. The York shilling had become an elevenpence, and the sixpence a fivepence, with fractions."

James Flint said, in 1822,—

"On the morning of the 20th of September I went to the coach office in Philadelphia to take my seat. Such is the number of travelers that I found it necessary to take out a ticket two days previously. The mail-coach is a large, clumsy vehicle, carrying twelve passengers. It is greatly incumbered by large bags, which are enormously swollen by the bulk of newspapers. As a substitute for glass windows, a large roll of leather is let down on each side in bad weather."

The Duke of Saxe-Weimar, who was in Philadelphia in 1825–26, and who came from New York, says that when he left the steamboat "Thistle," at New Brunswick,—

"eight stages were already waiting for us, having each four horses, and the passengers were so numerous that each stage carried from eight to nine persons. We had hardly time to have our baggage packed, and consequently could see nothing of the neighborhood. We continued our journey through New Brunswick—apparently a busy and well-built place—thirty miles by land to Trenton, on the Delaware. The road led through a hilly country, but carefully turnpiked, several pits being filled up to make the road even. This road is formed somewhat according to the manner of German turnpikes, of small beaten stones, with side-roads and ditches. The neighborhood is mostly woody, consisting of chestnuts and oaks. The forest has been regularly cleared of

undergrowth, and has a cleanly appearance. In places where the wood has been felled the land is well cultivated with corn and fruit trees. Most of the good-looking houses we passed were provided with cider-presses. About four o'clock P.M. we arrived at Trenton, and immediately embarked in the steamboat 'Philadelphia.' . . . The banks of the Delaware are hilly, well-cultivated, and covered with elegant country-seats and villages. The neighborhood and the breadth of the river reminded me of the river Main, near Frankfort. Unfortunately we could not enjoy this handsome landscape, because as soon as we arrived on board we sat down to dinner, and afterward it became dark."

Stages to Long Branch were advertised in the Philadelphia papers of 1800 by Samuel Gordon and Samuel Coward, the route being from Philadelphia to Trenton, thence, by way of Allentown and Monmouth Court-House, to Long Branch. In 1802, Samuel Gordon and Henry Alley ran the Long Branch coaches on Wednesdays and Saturdays, at six cents per mile. In 1806 the increase of travel to Long Branch induced the running of coaches from Thomas Anderson's Sorrel Horse Tavern, on Second Street, above Market, on Mondays and Thursdays. The route to Long Branch changed, in 1811, in consequence of the use of steamboats. The daily line started from Burlington upon the arrival of the steamboat "Phœnix."

The first through line of coaches from Philadelphia to Pittsburgh was established in August, 1804, the time occupied in making the journey one way being seven days. The route lay through Lancaster, Harrisburg, Carlisle, Shippensburg, Bedford, Somerset, and Greensburg. A daily line between Philadelphia and Pittsburgh was established in 1828, the price of passage being from eighteen to twenty-two dollars. The opening of the main line of State improvements, in 1834, diverted travel from the stage line, but as the canals were frozen over in the winter, recourse was then necessary to the stages, and they were not wholly dispensed with until the opening of the Pennsylvania Railroad, in 1832.

The roads immediately around the city were in a very bad condition at the beginning of the century. The Germantown road, in 1801, was pronounced by the Philadelphia *Gazette* to be "the worst in the United States." There were numerous accidents upon it by the stoppage of wagons, spraining of horses, breaking of wheels and axles, and other injuries occasioned by the deep mud through which passage was required to be made. This condition of the road forced the Germantown people to seek the city either by way of Frankford, or to make their way, fox-hunting fashion, "across country," pulling down fences and invading the property of owners of land adjoining the road. In that year the Germantown turnpike was incorporated, and various other "pikes" established, as already stated. In those days of bad roads, families of wealth did not go out of town in summer, as at present; watering-places, summer resorts, and country hotels were not known until after the war of 1812. Country-seats at short distances in the suburbs were owned by many families, to which

their city friends made frequent, sometimes troublesome, and often unwelcome visitations.<sup>1</sup>

The earliest mention of water transportation, other than that by large sea-going vessels, is made by Thomas Budd in his "Account of Pennsylvania and New Jersey," published in 1685, where he says that "after great rains we may bring down great quantities of goods in flat-bottomed boats, built for that purpose, which will then come down by reason of the floods with great speed." The removal of obstructions to the navigation of the Schuylkill was agitated through the *Gazette* in 1760. In consequence of this a petition was presented to the Assembly to appoint proper persons to view the river, estimate the expense, and receive subscriptions for carrying on the work. The House appointed Messrs. Potts, Pawling, Bird, Waln, Roberts, and Davis commissioners to examine the condition of the river, and to estimate the expense of making it navigable from Reading to Philadelphia. This committee reported in September that they had viewed the river from Palmer's saw-mill, near the lower falls, to Reading. If the fishing-dams were removed and the loose stones at certain points were also taken away, so as to throw the water into that part of the channel which was cleared for navigation, it was believed that the Schuylkill might be made navigable for flat-bottomed boats and other craft of a proper construction and of considerable burthen; and that the removal of the rocks at the falls near Reading and below Morris' mill might be effected for three thousand pounds, so as to render the river navigable through the greatest part of the year for rafts, timber, boards, scantling, and to boats even of the burthen of four thousand pounds' weight. The application to the Assembly for the sanctioning of measures necessary for rendering the Schuylkill navigable was again renewed at a later period. In furtherance of this important object a law was passed on the 14th of March, 1761. Messrs. Joseph Fox, John Hughes, Samuel Rhoads, John Potts, William Palmer, David Davis, Mordecai Moore, Henry Pawling, James Coultas, Jonathan Coates, Joseph Millard, William Bird, Francis Parvin, Benjamin Lightfoot, and Isaac Levan were appointed commissioners "for clearing, scouring,

<sup>1</sup> John Binns, in his "Recollections," gives a somewhat humorous statement of the disadvantage of this fashion. He says, "In the years 1814-15 I had a summer residence—a very neat establishment—distant about three miles from the city on the upper Harrowgate lane. I generally went out every afternoon, and came to the city every morning. I was in the country all day on Sunday. I had about five acres of land. It was a very handsome house, with balconies all around it. I had no conception of the many friends—ladies and gentlemen—I had until I purchased that place. We pass over weekdays and come to Sunday, which, if it did not pour rain, was always with us a gala day. There was tea and coffee, and wine and other liquors suitable for the palates of ladies and gentlemen who had taken the trouble to go so far to taste their flavor, and to do honor to the host and hostess and their amiable family. In a word, the house and garden were so well frequented, and the fare so highly relished, that the host and hostess, after a trial of two seasons, sold their country seat for five hundred dollars less than they gave for it, and were ever after content to live in the city, and give their visiting friends no further trouble."

and rendering the Schuylkill navigable." They were empowered to receive all moneys already subscribed for that purpose, and to collect more. They were granted authority to clear, scour, open, enlarge, straighten, or deepen the said river, and to cut, blow up, remove, and take away all trees, rocks, beds of gravel, mud, sand, fishing-weirs, dams, baskets, pounds, stones, or other impediments, and to make dams and pens for locks or other suitable works, and to make towing-paths for hauling boats, rafts, or other small craft. The merchants of the city petitioned the House in relation to the navigation of the Delaware River in winter. Upon account of the ice there were frequent losses from the want of a place of safety for ships between the capes and Philadelphia. As the merchants paid the excise, upon which there was a surplus of money over the amount for which the impost was laid, they asked that the extra sum should be appropriated to the erection of piers in some part of the river for the protection of vessels from ice. The Governor approved of this request, and the petition and bill were sent back to the House, which agreed to allow of a rider to that effect to be annexed to the bill to sell the provincial ship of war.

**Steamboats.**—The use of steamboats in travel and transportation supplanted that of stages along all routes which steamboats connected. The location of Philadelphia upon the broad waters of the Delaware made the steamboats popular at an early day. The first boat ever moved by steam upon the Delaware River—and, indeed, there is cause for belief, anywhere in the world—was a small skiff, which was propelled by means of a small steam-engine. It was built by John Fitch, and was first tried July 20, 1786.<sup>1</sup> Fitch was a native of Connecticut, born on the 21st of January, 1743 (old style). The son of a farmer, he received a limited education, and was apprenticed to learn the business of clock- and watch-making. He afterward engaged in the manufacture of potash without success, and after his failure in that business removed to Trenton, N. J., where he secured profitable employment as a silversmith. As armorer to the State of New Jersey, he was engaged in preparing guns and other weapons for the troops during the early part of the Revolutionary war; but on the approach of the British, in 1776, he removed to Bucks County, Pa., and for a short time attempted to carry on his business there. He afterwards became a sutler, and supplied the American troops at Valley Forge with goods and provisions. The profits of this business were invested in Virginia land-warrants, and in order to locate these he visited in 1780 the country now included in the State of Kentucky. Having learned something of surveying in his early boyhood, he obtained an appointment as assistant surveyor from the

State of Virginia, and after some dangerous adventures, succeeded in locating his warrants in Jefferson, Nelson, Lincoln, and Fayette Counties. Believing that this section of the country was destined to develop rapidly, he raised all the funds he could, and made another trip to Kentucky in 1781. But while descending the Ohio in the spring of 1782, he and his companions were captured by Indians near the mouth of the Muskingum, and handed over to the British. Fitch was sent to New York, where he arrived on Christmas day, 1782.

Having been released, he went to Bucks County, and was employed by a company formed for the purpose of surveying and taking up lands in Ohio. Returning to the Ohio River he surveyed eighty-four thousand acres from the Hockhocking up to Wheeling Island and back into the woods, and in the spring of 1785 made surveys of the Hockhocking and Muskingum Rivers, covering two hundred and fifty thousand acres. Upon returning to Pennsylvania he applied for a situation as surveyor under the United States, and while awaiting the result of his application at his home in Bucks County, engraved a map of the country through which he had traveled, which he printed on a press that he made for the purpose. While thus employed the idea of the steamboat occurred to him. In April, 1785, having been passed while walking along the road by a vehicle drawn by a fine horse, the thought suggested itself whether some other means of locomotion on land might not be invented. He had noticed the expansive power of steam, but was ignorant at the time of the existence of the steam-engine. At first he set to work to invent a vehicle that might be propelled by steam on land, but in consequence of the roughness of the roads and the difficulties which have not been overcome even yet, in the way of constructing such a machine, he abandoned the attempt. It occurred to him, however, that, as water offered less resistance to the propelling power, steam might be applied with more success to boats. Accordingly he prepared a model with brass machinery and wooden paddle-wheels, of the pattern used on side-wheel steamboats, which was tried on a small stream on Joseph Longstreth's farm, in Southampton township, Bucks Co. In August, 1785, he brought his model to Philadelphia and exhibited it to Dr. John Ewing, provost of the University of Pennsylvania, Dr. Samuel Smith, provost of Princeton College, and William C. Houston, formerly a member of Congress for New Jersey, who gave him letters in which they expressed their belief in the practicability of applying steam as the motive power for vessels. With these certificates Fitch went to New York, where, on the 29th of August, 1785, he laid a petition before Congress for aid to complete his invention on the ground that it would facilitate the internal navigation of the United States, and was "adapted especially to the waters of the Mississippi." This petition was referred to a com-

<sup>1</sup> The application of steam to the propulsion of boats was the subject of conversation, as early as 1776, between Mr. Henry, of Lancaster, Pa., and Andrew Ellicott, and the former laid a drawing of a steamboat before the Philosophical Society.

mittee, which does not seem to have thought it worth while to make a report upon it. Fitch then applied to the Spanish minister, who was not unwilling to extend some aid, provided the invention was secured exclusively to his king. To this condition, however, Fitch would not consent.

In September, 1785, he laid a model of his steamboat, which was fitted with paddles at the sides moving on an endless chain, before the American Philosophical Society. Soon afterward—in the fall of 1785—Fitch again set out for Kentucky, but stopped at Richmond in order to petition the Virginia Legislature for assistance to complete his invention. No

FITCH'S FIRST STEAMBOAT.

formal report was made in the Legislature, but Fitch executed a bond to Patrick Henry, Governor of Virginia, pledging himself, if he sold one thousand copies of his map of the western country in Virginia at 6s. 8d. each, that he would in nine months thereafter exhibit a steamboat in the waters of Virginia or forfeit the penalty of three hundred and fifty pounds. As the sales of the map were very small, the contract was never fulfilled. Returning to Philadelphia, Fitch applied to the Pennsylvania Legislature for assistance, and soon afterward made a similar appeal to the Maryland Legislature, but neither body responded favorably. An attempt to induce the State of New Jersey to appropriate one thousand pounds of loan certificates for the construction of a steamboat also failed. Shortly afterward, however, the New Jersey Legislature passed a law giving to John Fitch for fourteen years the exclusive right of making and using all and every species of boats or water craft which might be urged or propelled by the force of fire or steam in the waters of the State. Armed with these franchises, Fitch returned to Philadelphia and succeeded in forming a company with stock divided into forty shares, of which Fitch was to have twenty for his invention and services in conducting the experiments. The original subscribers were Samuel Vaughn, Richard Wells, Benjamin W. Morris, John Morris, Joseph Budd, John and Chamless Hart, Thomas Say, Magnus Miller, Gideon Hill Wells, Thomas Palmer, Thomas Hutchins, Richard Wells, Jr., John Strother, Israel Israel, William Reubel, and Edward Brooks, Jr., each of whom had one share;

Richard Stockton, of Princeton, three shares; and Benjamin Say, two shares. Stacy Potts, of Trenton, was an early member of the company, but soon withdrew.

In constructing the steam-engine the assistance of Henry Voight, a Philadelphia clock- and watch-maker, was secured, and shares in the company were made over to him, until, in 1787, he had received five of them for his services. The subscribers generally paid in twenty dollars on their shares, and with this small fund the experiments were commenced. The model of a steam-engine was made, but proved to be too small to accomplish anything, and another model, with a three-inch cylinder, was constructed, and placed in a small skiff. Trials were made on the Delaware about the 20th of July, 1786, with "a screw of paddles," a screw propeller, the endless chain and side-wheels, without much success. That night Fitch thought of a plan for propelling the boat by means of oars or paddles at the sides, to be moved by cranks worked by machinery. The plan was approved by Voight, who suggested some modifications, and the apparatus was constructed and applied to the skiff containing the steam-engine. The experiment was successful, "and the first boat successfully propelled by steam in America was moved in the Delaware on the 27th of July, 1786, with flattering promises of the future usefulness of the invention."<sup>1</sup> Fitch and his associates were so well pleased with the success of the experiment that they determined to attempt the construction of a steamboat for practical use. The original subscriptions were now exhausted, and the shareholders were slow in responding to the appeal for additional contributions. Fitch persuaded a committee of the Assembly to report in September in favor of loaning him one hundred and fifty pounds, but the House, by a vote of twenty-eight to thirty-two, refused to make the appropriation. Application was also made to Gen. Mifflin without success, and the project began to lose ground. The State of Delaware confirmed Fitch's right to the invention; but the general impression seemed to be that the idea was chimerical and not likely to produce any substantial results. In February, 1787, however, a new agreement was signed by the shareholders, and additional sums advanced. It was decided that the engine for the proposed steamboat should be of twelve-inch cylinder, and that the vessel itself should be forty-five feet in length and twelve feet beam. The engine was completed in May, 1787, but "the wooden caps" to the cylinder admitted air and the piston was leaky. It was necessary to take out all the works to the foundation and set them up again, but when this was done the condensation proved to be imperfect. New condensers and other machinery were provided, and a speed of three or four miles an hour was attained. Owing to the deficient character of the workman-

<sup>1</sup> Thompson Westcott, "Life of John Fitch."

ship, the mechanics being ordinary blacksmiths, the machinery was very imperfect, and Fitch was harassed by repeated failures and accidents.

On the 22d of August, 1787, the boat, forty-five feet long, was propelled on the Delaware in the presence of nearly all the members of the convention who framed the Federal Constitution, and certificates as to the success of the experiment were given by Governor Randolph and Dr. Johnson, of Virginia; David Rittenhouse, the astronomer;<sup>1</sup> Dr. John Ewing, of the University of Pennsylvania; and Andrew Ellicott, professor at the Episcopal Academy. Fitch was not satisfied with the rate of progress attained, and decided that more power must be applied. Accordingly, a new cylinder, of eighteen inches diameter, was cast in New Jersey; but, proving defective, was broken up. At this stage of his invention, Fitch was disturbed by a report that James Rumsey, of Berkeley County, Va., who had obtained legislative acts in 1784 and 1785 protecting appliances for propelling a boat against a rapid stream, had invented a steamboat. He at once applied to the Virginia Legislature for the passage of a law confirming his claim to the invention of the steamboat. Three members of the Virginia Legislature who had seen Rumsey's boat tried at Bath, in 1784, testified that it was *not* a steamboat, nor in any way moved by steam. The boat was fitted up with paddle-wheels at the sides, but these wheels, when the bow of the boat was placed so as to stem the current, revolved with the stream, giving motion to certain setting-poles or pushes, which, bearing against the bottom of shallow rivers, pushed the boat up the stream, working faster as the current became stronger. This was the kind of boat for which Rumsey had obtained special laws, and the committee of the Legislature of Virginia, satisfied that this invention was not a *steamboat*, recommended the passage of a law to encourage the rights of Fitch, which was accordingly passed Nov. 7, 1787, with the condition that, unless Fitch should have in use within three years boats or craft navigated by steam, the grant should become void. Fitch next repaired to New York, where, about the beginning of March, 1788, he presented a petition to the Continental Congress for assistance, wherein he set forth the great importance of steamboats, especially in western waters, in developing the resources of the country, and increasing the value of the public lands. The report of the committee of Congress was favorable,

<sup>1</sup> "This may certify that the subscriber has frequently seen Mr. Fitch's steamboat, which, with great labor and perseverance, he has at length completed; and has likewise been on board when the boat was worked against both wind and tide, with considerable velocity, by the force of steam only. Mr. Fitch's merits in constructing a good steam-engine, and applying it to so useful a purpose, will no doubt meet with the encouragement he so richly deserves from the generosity of his countrymen, especially those who wish to promote every improvement of the useful arts in America.

"DAVID RITTENHOUSE.

"PHILADELPHIA, Dec. 12, 1787."

but no action was taken on it in consequence of the limited powers possessed by that body under the Confederation.

During Fitch's absence Rumsey had made his appearance in Philadelphia, claiming to be the inventor of the steamboat. He had built a steamboat on the plan suggested by Franklin of sucking in water at the bow and discharging it at the stern, which was tried at Shepherdstown, on the Potomac, Sept. 3 and 11, 1787, more than a year after Fitch's steam-skiff had been tested on the Delaware, and more than three months after the steamboat had been propelled on the same river in the presence of members of the Federal Convention. Rumsey, while not claiming that his pole-boat was a steamboat, asserted that he had projected a steamboat in 1784, the construction of which was commenced in the summer of 1785, the machinery being finished and on board by December of that year. The ice coming on, however, the works had been taken out and the experiment postponed. In support of these assertions Rumsey relied on the evidence of Charles Morrow, his brother-in-law and partner in the enterprise, Joseph Barnes, another brother-in-law, also interested in the invention, and two others. Rumsey and Fitch both published pamphlets in support of their respective claims, and Fitch's statements were replied to by Barnes, the agent of Rumsey. Fitch alleged that Rumsey had attempted to deceive the public by publishing the certificates in favor of his pole-boat as having been given for the steamboat which he claimed to have constructed, and produced a number of witnesses, neighbors of Rumsey, who testified that they had seen his experiments with the pole-boat in 1784, 1785, and 1786, at the time he said he was trying the steamboat, but had never seen or heard of Rumsey's plan for a steamboat until the spring of 1786. They asserted, also, that Rumsey's steamboat was not in operation until December, 1787. Incidentally it was shown by Fitch that Rumsey had made no opposition when he (Fitch), in August, 1785, applied to Congress, and subsequently petitioned the Legislatures of different States—among them Virginia, Rumsey's own State—for aid in the application of steam as a motive power. A society, however, was formed in Philadelphia, under the name of the Rumseian Society, which bought Rumsey's rights, and sought to secure the repeal of the laws passed in favor of Fitch in Pennsylvania, Virginia, New Jersey, and New York, but failed in every instance. Fitch and his associates were much embarrassed by the controversy, but persevered in their efforts to solve the problem of steam transportation. After the old eighteen-inch cylinder had been broken up it was determined to put the old machinery in a new boat of better proportions. A boat of eight feet beam and sixty feet in length was accordingly constructed, and the position of the oars or paddles was changed, being placed at the stern instead of at the side and pushed against the water.

After various delays the machinery was made to work satisfactorily, and in July, 1788, the steamboat set out for Burlington. On reaching the wharf at the latter place the boiler sprung a leak, and the boat, which had become unmanageable, drifted back to Philadelphia with the tide.

Shortly afterward, however, the trip to Burlington and back was made successfully, being repeated several times during the season without any accident. On the 12th of October, with thirty passengers on board, the boat made the voyage to Burlington, a distance of twenty miles, in three hours and ten minutes, against a tide which set at the rate of two miles an hour. On the 16th of the same month Dr. John Ewing, Robert Patterson, Andrew Ellicott, John Smilie, David Redick, James Hutchinson, Timothy Matlack, Charles Pettit, Jonathan B. Smith, David Rittenhouse, and Capt. John Heart (of the United States army) were on board, and they certified that "the boat went at least four miles an hour."

FITCH'S STEAMBOAT.

But neither Fitch nor his company was satisfied with this rate of speed. To render the vessel profitable against the competition of sailing-packets and land-stages it was deemed necessary that she should be able to make the distance to Trenton, thirty-eight miles, in five hours. The sum of sixteen hundred pounds had been spent in the enterprise, but an auxiliary company was formed, under certain conditions, with forty new shares at ten pounds each. The members of this new association were Dr. William Thornton, Isaac W. Morris, Samuel Wetherill, Jr., Richard Hill Morris, Hon. James Wilson, Capt. John Heart, Wood Lloyd, Francis White, Stacy Potts, and Robert Scott. A new cylinder of eighteen inches in diameter was ordered in March, 1789, and an entirely new steam-engine built. The boat, thus provided with new machinery, made several trips, but defects in the machinery interfered with the complete success of the invention, and the experimenters were still further disheartened by the partial destruction of the vessel by fire. Large sums were spent, and Fitch, reduced to poverty, was the object of general ridicule as an enthusiast and visionary. In the spring of 1790 the

machinery was tried again, and a successful trip made during a severe northeast storm. On the 11th of May the boat went to Burlington against a strong head-wind, the tide in its favor, in three hours and a quarter, and on the 16th of June Gen. Thomas Mifflin (president) and the other members of the Executive Council took a trip in Fitch's boat. They were so much pleased with the results that they presented the boat with a set of flags. An accurate measurement taken at dead-water showed that the steamboat traveled at the rate of eight miles an hour. On the 14th of June, 1790, "the steamboat" was advertised as "ready to take passengers from Arch Street ferry every Monday, Wednesday, and Friday for Burlington, Bristol, Bordentown, and Trenton, to return on Tuesdays, Thursdays, and Saturdays. Price for passengers, 2s. 6d. to Burlington and Bristol; 3s. 9d. to Bordentown; 5s. to Trenton." Between that time and September 12th the Philadelphia newspapers contained no less than twenty-three advertisements, stating the times of twenty-one trips. Some of these were to Chester, to Wilmington, and round the Schuylkill to Gray's and the Middle Ferries. During the summer and fall the steamboat is estimated to have traveled nearly three thousand miles.

According to Fitch's journal, no accident occurred that could not be repaired in an hour or two. On one of the trips the boat traveled ninety miles in twelve and a half hours, an average of seven and a half miles.<sup>1</sup> The success of this boat induced the company to undertake the construction of a larger one, to be called the "Perseverance." It was to have been finished in time to send it with the other to Virginia, in order to comply with the terms of Fitch's privileges, which were important, as they involved the right of navigation of the Ohio. Owing to the lukewarmness of some members of the company, however, the work progressed very slowly, and when the boat was nearly finished, a violent storm detached her from her moorings and blew her ashore on Petty's Island. Before she could be got off the Virginia law had expired, and on the approach of winter work was abandoned. Fitch's weary struggle was now nearly ended. His company had become tired of the project, and, although he secured some additional subscriptions by interesting his friends in a project for the navigation of the Mississippi, his resources were soon exhausted by the failures and discouragements which still attended his efforts to construct a satisfactory steam-engine. He endeavored, without success, to raise money on his lands in Kentucky. In a letter to David Rittenhouse, dated June 29, 1792, he begged an advance of fifty pounds to finish the boat,

<sup>1</sup> In 1807, Fulton's boat, the "Clermont," only made four miles and three-quarters an hour on the Hudson. In 1811, Fulton offered Dr. Thornton, one of Fitch's associates, one hundred and fifty thousand dollars if he could construct a boat that would make six miles an hour. Thornton was willing to undertake it, but Fulton declined to reduce his proposition to writing.

and with faith in his invention still strong in him, said, "This, sir, whether I bring it to perfection or not, will be the mode of crossing the Atlantic, in time, for packets and armed vessels." But those who had assisted him were not disposed to risk anything more in the venture, and all his efforts to raise additional funds having failed, Fitch was reduced to a miserable state of penury and want.<sup>1</sup>

Fitch was granted a patent for the steamboat on the 23d of April, 1791. In October, 1792, he sealed up the account he had written of his life and invention, with the request that the manuscripts should not be opened until the year 1823. At this time he contemplated suicide, but gave over that idea for the time being in order to visit France, under a contract with Aaron Vail, United States consul at L'Orient, who had intended to introduce the steamboat in France and other European countries. The French revolution, however, put a stop to this project, and, after a short stay, Fitch returned to the United States, working his passage in a vessel bound to Boston, where he landed in 1794. After remaining some time with his sister in Connecticut, he went to New York City, where, in 1796, under the patronage of Chancellor Livingston, he moved a yawl by steam with a screw propeller on the Collect Pond. He then went to Kentucky, where he found his land in the possession of intruders, and became involved in a series of vexatious lawsuits. At last, in June or July, 1798, utterly disheartened and worn out, he committed suicide.<sup>2</sup>

During the summer of the previous year (1797), however, a steamboat was again seen moving on the Delaware, in front of the port of Philadelphia. This machine was built near Bordentown by Samuel Morey, of Connecticut. He was aided by Dr. Burgess Allison, of Bordentown, who had been a member of Rumsey's Steamboat Company. This boat was propelled by paddle-wheels at the sides, in the modern fashion. It was exhibited for some time at the wharves of the city, and differed in no material principle from the boats afterward built by Fulton. Morey

<sup>1</sup> "Often have I seen him," said Thomas P. Cope many years afterward, "stalking about like a troubled spectre, with downcast eyes and lowering countenance, his coarse, soiled linen peeping through the elbows of a tattered garment." Speaking of a visit he once paid to John Wilson, his boat-builder, and Peter Brown, his blacksmith, in which, as usual, he decanted on his favorite theme, Mr. Cope says, "After indulging himself for some time in this never-failing topic of deep excitement, he concluded with these memorable words: 'Well, gentlemen, although I shall not live to see the time, you will, when steamboats will be preferred to all other means of conveyance, and especially for passengers; and they will be particularly useful in the navigation of the river Mississippi.' He then retired, on which Brown, turning to Wilson, exclaimed, in a tone of deep sympathy, 'Poor fellow! What a pity he is crazy!'"

<sup>2</sup> "A subsequent generation," says Thompson Westcott, "gave to Robert Fulton the fame and credit due to Fitch, although it is a matter of fact that Fulton obtained from Aaron Vail, in France, all of Fitch's papers, plans, and drawings. This was lamentably carrying out the foreboding prediction of Fitch, made in his lifetime: 'The day will come when some more potent man will get fame and riches from my invention, but nobody will believe that poor John Fitch can do anything worthy of attention.'"

began to experiment in steamboats in 1790, on the Connecticut River, and afterward tried experiments at New York. In 1794 he propelled his boat by steam from Hartford to New York, by a wheel at the stern, at the rate of five miles an hour. On one occasion it went from the ferry at New York to Greenwich, with Chancellor Livingston, Judge Livingston, Edward Livingston, and John Stevens on board. Want of funds prevented the boat exhibited at Philadelphia from being brought into public use.

In 1804, Oliver Evans, whose improvement of the steam-engine has placed his name high among the mechanical celebrities of his day, constructed a machine for cleaning docks at his shop in the vicinity of Broad and Market Streets, placed wheels under it, connecting them with the engine, propelled it to the Schuylkill, there attached a stern paddle-wheel, launched the affair, and by steam proceeded down that river to the Delaware, and up as far as Dunks' ferry (now Beverly), sixteen miles, and returned to the city without accident or detention. The next steamboat that appeared on the Delaware was the "Phoenix," with cross-head engine, built at Hoboken by John C. Stevens in 1807. She was the first steamboat that navigated the Atlantic Ocean. (Before his boat was finished Fulton had procured special legislation and secured a monopoly of the New York waters.) The navigation of the Delaware being free, his son, Robert L. Stevens, conceived the idea of taking her round by sea, which he did successfully. She commenced regular trips to Bordentown in 1809, in charge of Capt. Moses Rodgers. New York passengers were taken by stage from Bordentown to Washington, N. J., thence to New York by boat. She continued on this route until 1813, when she was laid ashore at Trenton and torn up. A steamboat called the "New Jersey" was placed on the river during the summer of 1812, making regular trips to Whitehill, a landing two miles below Bordentown. What was the name of her captain, where she was built, or who owned her, we are unable to say. The "Eagle," built at Kensington by Capt. Rodgers, formerly of the "Phoenix," was placed on the Burlington route June, 1813, making three trips a week. She was taken to Baltimore at a subsequent period, and was blown up on April 24, 1824, while running on Chesapeake Bay.

As early as 1774, a line of sailing packets, now known as Bush's Daily Steam Freight Line, was established between Philadelphia and Wilmington, Del. Three steam propellers are now engaged in this trade. The line is owned by George W. Bush & Sons, with office at Pier No. 2 South Delaware Avenue. Another packet line between Philadelphia and Wilmington was established in 1776, and is now known as Warner's Philadelphia and Wilmington Propeller Line. The office is on the first wharf below Chestnut Street.

The Ericsson Line of steam propellers, between

Philadelphia and Baltimore, by way of the Chesapeake and Delaware Canal, was chartered on Feb. 25, 1844, as the Baltimore and Philadelphia Steamboat Company. A line of steamboats was run over the route by private firms for several years before the formation of the present company. From the two steamers with which the present company began business, its success has authorized the increase to five large iron steamers. The office is at 28 South Delaware Avenue, and from Pier 3 South Delaware Avenue, as well as from Pier 7 North Delaware Avenue, freight and passengers are received.

The foreign lines of steamers and sailing-vessels from the port of Philadelphia are the Red Star Line and the American Line.

The Red Star Line organized in 1871 to run a line of steamers between Philadelphia and Antwerp. The line began with two steamers, to which a third has been added. The agents of the line are Peter Wright & Sons, 307 Walnut Street.

The American Steamship Line was also organized in 1871, with a capital of \$2,500,000. It built four steamers of three thousand tons each. The "Pennsylvania," launched August, 1872, made her first trip in May, 1873; and was followed by the "Ohio," the "Indiana," and the "Illinois." The line is engaged in freight business only; and runs between Philadelphia and Queenstown and Liverpool. The agents are Peter Wright & Sons, 307 Walnut Street.

The Ocean Steamship Company, of Savannah, was established in 1881, with two steamers running to Philadelphia. The office is at No. 13 South Third Street, William L. James, agent.

The Philadelphia, Albany and Troy Line of steamers was established in 1844, by George W. Aspinwall, as a freight line. Four vessels at first were employed to carry coal. The route was *via* the Delaware and Raritan Canal. A consolidation was made with the Commercial Transportation Company, which was started as a rival by Fraziers & Aspinwall. This consolidation continued until the death of Mr. Aspinwall, when the name was changed to the Commercial Transportation Company, and so continued until 1864, when the name was again changed to the Philadelphia, Albany and Troy Line, with D. L. Flanagan as agent at Philadelphia. Feb. 1, 1882, it became a stock company. The line has one steamer and three barges.

In 1842, Thomas Clyde commenced the freight business between Philadelphia and New York. At first a single steamer was competent for the business, but as the facilities were understood, the business enlarged and demanded others, which were added. Lines to other cities were also established, and soon the Clyde Line embraced Charleston, S. C., Richmond, Norfolk, Portsmouth, Alexandria, Va., Washington, D. C., Baltimore, and the West Indies. Lines from New York were also established, and from Baltimore the firm reached the interior of North Carolina

through Pamlico and Albemarle Sounds. At one time the house controlled the Pacific Mail Steamship Line, of which William P. Clyde was president. Thomas Clyde, the founder of these extensive lines of water transportation, is still living, and is one of the largest owners of coast-line steamers in this country. The wharves of the lines extend one thousand feet along Delaware Avenue, and are supplied with ample depots. The active business is now conducted by William P. and B. F. Clyde, sons of Thomas Clyde. They have twelve steamers between New York and Philadelphia, two between Philadelphia and Charleston, a tri-weekly line to Richmond, Va., a line to St. Domingo and the West Indies, weekly service to Washington, Alexandria, and Wilmington, N. C. In all between fifty and sixty steamers are owned by the company.

The Boston and Philadelphia Steamship Company was organized in 1832. Two steamers, the "City of Boston" and the "City of New York," were placed on the line, and as trade increased others were added. At present there are four steamers employed, the "Spartan," "Roman," "Norman," and "Saxon," with capacity of from twelve hundred to fifteen hundred tons each.

In 1872 the Providence Line was established, with two steamers, the "Hunter" and the "Whirlwind," which are still running. In 1882 a line was established to Fall River, with the steamer "Aries." The success which has attended the lines of this company is due to Henry Winsor, who was born on the 31st of December, 1803, in Duxbury, county of Plymouth, Mass. His parents were Thomas, the son of Joshua Winsor, and Welthea, daughter of Seth Sprague, who was for some years a member of the Senate of Massachusetts. Mr. Winsor's grandfathers were strong, resolute men, not inclined to doubt or hesitation, but going always with firm step straight toward the end they had in view. Thomas Winsor was of cheerful mind and sanguine temperament. He was diligent in business, and, though with some reverses, he was, on the whole, successful in it. Education in the schools of small towns at the beginning of this century was not of an extensive kind, and Mr. Winsor got only such as could be had in those of his native village at that time. But the natural and practical education which he obtained by personal observation and inquiry was of wider scope and more efficacious. Duxbury was on the seashore, and its industries were, for the most part, such as pertain to the sea. In the ship-yards there were vessels in every stage of construction, from the laying of the keel up to the completion of the ship, and at the wharves schooners were constantly receiving their outfits of provisions, salt and the like, or were discharging their cargoes of fish, caught on the banks of Newfoundland or along the shores of Labrador.

The active boy, running about among all this work, and sometimes himself lending a hand to it, learned

*Engraved by Currier, Stoddard & Phillips*

*Henry Winston*

much that remained with him throughout, and shaped, to a great extent, the course of his life. In his sixteenth year he went to Boston, and into the counting-room of Joseph Ballister, a commission merchant, where he learned book-keeping by double entry, and much else appertaining to commerce. After four years of service there, he went into the office of his father, who at that time (1820) opened one in Boston. He continued with him, and with his uncles, P. and S. Sprague, who afterward became interested in the business, till the father's death, in 1832. Thereupon he went into business upon his own account, but was unsuccessful, owing to speculation in "Eastern lands," having been infected with the "fever" which then raged. Being thus thrown out of regular business, he made a voyage, in 1836, to Pernambuco, as supercargo, and another subsequently to Rio Janeiro, in the same capacity. Under the National Bankrupt Law of 1841, he served as assignee of many insolvent estates, by appointment of Judge Sprague, of the United States District Court for Massachusetts, who was an uncle. The settlement of these estates gave him work for three years or more.

In 1850 he became a member of the firm of Phineas Sprague & Co., but withdrew, in 1852, to take charge, in Philadelphia, of a steamship line which that firm, in conjunction with Sprague, Soule & Co., were about to establish between that port and Boston. In 1872, the owners of the steamships having increased in number, they were incorporated under the title of the Boston and Philadelphia Steamship Company. In the same year the company established a line between Philadelphia and Providence, and in 1882 another to Fall River. On the organization of the company Mr. Winsor was chosen its president, which office he yet holds.

In 1862 one of his sons, William D., and afterward another, James D., became his partners in business, the style of the firm being Henry Winsor & Co. Under their management, as general agents, the affairs of the steamship company have been carried on successfully up to this present time.

In addition to Mr. Winsor's connection with the steamship corporation, of which he is president, he is also officially connected with many other institutions, commercial, industrial, and financial. He is a director in the following: Bank of North America, Insurance Company of North America, Westmoreland Coal Company, Logan Iron and Steel Company, Crane Iron Company, and Delaware Avenue Market Company, and a manager of the Western Savings-Fund Association.

He has been for many years an active member of the Board of Trade, serving with great acceptance upon the executive council from January, 1867. He represented the local board at the organization of the National Board of Trade, at Boston, and has attended many subsequent annual sessions as a delegate.

In 1832, Mr. Winsor married Mary Ann, daughter

of James Davis. She died in 1881, in consequence of an accident, having been thrown from a carriage in Boston. He has four children,—Louise, William Davis, Henry, and James Davis, who were born in the order here named.

Mr. Winsor is still vigorous in body and mind to an extent that is uncommon at the age to which he has attained. But though somewhat attentive to the duties imposed on him, he seems more and more inclined (as is natural) to narrow his sphere of action, and make way, as he says, for those who have this world *before* them.

**Railroads.**—COLUMBIA RAILROAD.—The first suggestion in Philadelphia of the construction of railways for the purpose of transportation was made in the *Aurora*, in January, 1801, in some remarks relative to the construction of canals, in which there was reference to the success in England of the Duke of Bridgewater's canal of thirty-three miles in length, cut at his own private expense. In that article the writer represented that Mr. Gilbert, of Wasley, the engineer, said, "He thought wooden railways might profitably supersede canals. Railways are strips of oak plank laid upon a level road about nine feet apart, two and a half inches thick, and about three and a half inches broad. The carriage runs upon these, the wheels being made to fit the rails thus laid. The horse goes in the middle of the track. In this way nearly three times the weight can be moved by one horse that he could manage on a common road." Another writer in the same paper, signing himself "T. E.," recommended that railroads should be of iron instead of wood, asserting that the friction would be no greater. The use of steam for locomotion was not suggested by these writers because they had never heard of the use of it in the propulsion of laud carriages. But there was a citizen of Philadelphia then living who had thought upon the subject years before, and had perfected in his mind plans of machinery whereby wagons and vehicles might be run upon the land. This was Oliver Evans, who announced as early as 1773 that he could apply his steam-engine to propel carriages upon the land, and as early perhaps as 1778, certainly prior to 1781, he declared that the same principle could be applied to the navigation of boats by means of paddle-wheels. Within four years after the *Aurora* had spoken of the feasibility of the use of railways, Evans had constructed the "Eruktor Amphibolis," or amphibious digger, a dredging-machine, with which he achieved a double triumph of propelling it by steam on land and navigating it through the water as a steamboat. This land-scheme carriage was exhibited at Centre Square, in June, 1805, and it was run around that inclosure for several days. Subsequently by steam the boat was moved on the steam-wagon to the Schuylkill, where it was launched and propelled by the same power down that river and up the Delaware to the wharves in front of the city. Thomas Leiper's experimental railroad, the first set

up in America, was built in the Bull's Head Tavern yard, Third Street above Callowhill, Northern Liberties, in 1809. The railroad was laid of two parallel courses of oak scantling about four feet apart, supported on blocks or sleepers about eight feet distant from each other. The ascent was one and a half inches in a yard, or two degrees and twenty-three minutes. The track was twenty-one yards sixty-four feet in length. On this road, on the 31st of July, a single horse, under the disadvantage of a path of loose earth to walk on, hauled up a four-wheeled carriage loaded with a weight of ten thousand six hundred and ninety-six pounds. Mr. Leiper was not content with this demonstration. Somerville, a Scotchman, laid down this experimental track. He had seen a similar one in England or Scotland. He issued proposals immediately afterward for contracts for digging the road-bed and making the rail parts of a wooden railway for the Leiper Quarries, on Crum Creek, to the landing in Ridley, Delaware Co., three-quarters of a mile.

This was the first practical railroad built in the United States, and was in operation for many years, until it was superseded in 1828 by a canal. The first proposition for the incorporation of a company to build a railroad was made by John Stevens, of New Jersey, in 1822. In his petition to the General Assembly of Pennsylvania, presented in that year, he stated that he had invented a mode of transportation by railroad, and asked for a charter to himself and associates as a corporation to build a railroad from Harrisburg to Pittsburgh. Nothing was done in regard to the matter that year, but in 1823 an act was passed, on the 31st of March, to incorporate "The President, Directors, and Company of the Pennsylvania Railroad Company," with authority to lay out a railroad from Philadelphia to Columbia, in Lancaster County. This was the first railroad act passed in the State. The preamble recited the representations made by John Stevens. The incorporators were John Conolly, president; Michael Baker, of Arch Street, Horace Binney, Stephen Girard, and Samuel Humphries, of Philadelphia, Emnor Bradley, of Chester County, Amos Ellmaker, of Lancaster City, and John Barbour and William Wright, of Columbia, directors. The term of existence of the company was fifty years. The shares might be six thousand at one dollar each, and in the act it is specified that the road should be laid out under the superintendence of John Stevens. So little was known about railroads at this time that a correspondent of the *Philadelphia Gazette* in April inquired, "What is a railroad? What does this plan mean?" The editor, in response, suggested that some of his correspondents might be able to explain. A short time afterward there was published in the same paper a description of some railroads in England, upon which it was asserted that ordinarily one horse could draw a load of from twenty to fifty tons. No allusion to steam was made in this

paper. At the same session the House passed a bill to incorporate a company to build a railroad from Harrisburg to Pittsburgh, but it was not successful in the other House. The *United States Gazette*, in May, said, "The Pennsylvania Iron Railroad is to commence at Hamiltonville." In the succeeding year the Society for the Promotion of Internal Improvements energetically pressed upon the community the necessity of giving a hearty support to the schemes of building railroads, as well as those for the construction of canals.

A town-meeting, called in January, 1825, in reference to the plan of building a canal to unite the waters of the Susquehanna River with the Alleghany, was somewhat a scene of confusion, in consequence of the introduction of other schemes. Mathew Carey, supporting the original proposition, desired to introduce an amendment advocating a canal between the Alleghany River and Lake Erie. The arguments upon these plans were so animated that the meeting adopted no resolutions, but referred to an adjourned meeting the original proposition and the amendment, and a second amendment by Charles J. Ingersoll, directing the committee to inquire into the expediency of making railroads in Pennsylvania. At the adjourned meeting John Sergeant, chairman, reported that the Schuylkill navigation was completed, that the Union Canal was rapidly advancing, and would soon reach the Susquehanna. The resolutions reported by the committee declared in favor of both canals between the Susquehanna and the Alleghany, and between the latter and Lake Erie. What was more important, the committee, laying aside the hope of success through the creation of corporations, boldly declared that "the work ought to be undertaken by the State and executed at the expense of the State, because it requires for its completion large powers which may be safely intrusted to the public authorities of the commonwealth, under the direction of the Legislature, but which would be regarded with jealousy in the hands of an individual or corporation." There was no report made to this meeting on the subject of railroads, but the Society for the Promotion of Internal Improvements was strongly in favor of the building of such ways. Several publications upon the subject were made by the society, and a history of railways in Europe published. At a second town-meeting, held at the courthouse in May, resolutions were passed in favor of the assembling of a convention upon the subject of internal improvements, to be held at Harrisburg in August. This conference resolved in favor of a canal between the Susquehanna and Alleghany or the Ohio River, and from the Alleghany to Lake Erie, and that the State should favor that work. At the same time William Strickland, who had been sent to Europe by the Society for Internal Improvements to examine into the canal and railway system there, made a report. Mr. Strickland was strongly impressed in favor of railways, and said, "I state distinctly my full convic-

tion of the utility and decided superiority of railways above every other mode as means of conveyance, and one that ought to command serious attention and adoption by the people of Pennsylvania." This opinion was attacked by persons dissenting. The *United States Gazette*, in September, republished a long article from the *Williamsport Gazette*, in which the writer insisted that railways were inexpedient in Pennsylvania, and that their construction was a visionary scheme, whereas canals were much more available and economical. The building of a railway between Columbia and Philadelphia was advocated at a meeting held in the former place in October, on which occasion James Buchanan, of Lancaster, afterward President of the United States, made the principal speech.

Under the incentive of strong expressions of opinion, the Legislature was incited to the work. On the 7th of April, 1826, an act was passed to incorporate the Lancaster, Columbia and Philadelphia Railroad Company. The route was to be from the Susquehanna, in Lancaster County, to Lancaster City, and thence to the west side of the Schuylkill near to and below the permanent bridge. It was intended to be a stock company, but for some reason, probably because of the difficulty of obtaining large subscriptions, the scheme was never carried into effect. The State undertook the work under a provision in the act of March 24, 1828, which authorized the location of a railroad from the city of Philadelphia through the city of Lancaster to Columbia, on the Susquehanna River, and from thence to the borough of York, in the county of York. The canal commissioner entered upon this work with energy, and caused the necessary surveys to be made as soon as practicable, under the authority of Maj. John Wilson, principal surveyor. The route agreed upon brought the tracks to Belmont, on the west side of the Schuylkill, very near the mansion of Judge Peters; from thence the design was to construct an inclined plane by which cars could descend to the margin of the Schuylkill, from whence the road might be continued by a single level on either side of the river. A contest immediately arose as to the manner in which the road should be brought into the city. The controversy was warm, and the rival jealousies of the city and districts were aroused. The terminus being on the west side of the river, there was a strong effort to keep the business there, and to make the western shore of the Schuylkill the seat of the traffic in freight and passengers that might be brought over the road. A line down the west side of the Schuylkill was advocated, to cross the river and to come into the city between Fairmount dam and the permanent bridge either at Arch or Race Streets. The canal commissioners were in favor of this plan, and were of opinion that the tracks on the west side of the river would afford "complete communication with the ocean."

This was advocated as the most sensible plan. But

Spring Garden and the Northern Liberties on the north and Southwark on the south wanted their share of the business and increase in real estate value. Maj. Wilson's plan was probably the best to reconcile these conflicting interests. His proposition was that the railroad should descend the inclined plane of about one hundred and eighty feet and cross the Schuylkill River, and enter upon the bed excavated for the old Delaware and Schuylkill Canal, following the bed of that canal to a position east of the Bush Hill foundry (Rush & Muhlenberg); thence southwardly, entering Broad Street near its intersection with Callowhill Street, and proceeding down the centre of the former until it crossed Vine Street and terminated, "conformably to the law, within the limits of the city of Philadelphia." It was assumed that the route by the way of Peters' farm was the best, and several surveys were made, commencing as far out as the seven-mile stone on the old Lancaster pike, to discover better routes toward the city. The difficulties were too great for the engineering of that day. These experts reported that whenever they left the line which they had adopted "the country became either exceedingly broken and intersected by ravines or its surface depressed too rapidly for our graduations." The influence against the route chosen by the surveyors was sufficient upon the Legislature to cause the passage of a resolution, April 20, 1829, requesting the canal commissioners to make a re-examination and survey of the route from the foot of the inclined plane to Broad and Vine Streets, and also to examine and report upon any other route to some other points on the line of the city and on the tide-waters of the Schuylkill at the head of sloop navigation (which was at Market Street bridge), and also to state whether they deemed it expedient to make more than one line of railroads from Peters' farm, and in the meanwhile not to contract for the construction of any railroad east of the inclined plane. The controversy was more serious because of differences of opinion among the engineers. Messrs. Moncure Robinson and William R. Hopkins were inclined in favor of continuing the railroad to Fairmount and crossing there, thus affording means of railroad conveniences along the line of the Schuylkill west of that river to a point on sloop navigation. One route passed back of Mantua village, near the junction of the Haverford and Lancaster roads, while the other would pass along the bluffs and sloping banks of the Schuylkill to the first wharf below the permanent bridge. If the crossing was made at Fairmount and Callowhill Street, it was thought that the southern branch might be carried down Schuylkill Front [Twenty-second] Street or Ashton [Twenty-third] Street to Chestnut Street.

Councils of the city favored Maj. Wilson's plan of bringing the road by the canal-bed to Broad and Vine Streets, and resolutions were adopted in April requesting the Legislature to confirm that route. It was stated in the preamble that it met with the appro-

bation of nine-tenths of their constituents, would save expense to the commonwealth, and "would give to each a fair proportion of the immense trade of which it is to be the outlet." Maj. Wilson and several of his associates had resigned before action had been taken in this matter. Maj. D. B. Douglas, professor of Engineering in the United States Military Academy, was invited to make the new examination. He reported upon the advantages and disadvantages of bringing the line down on the west side of the Schuylkill to Fairmount, preferring the crossing there to either that at Race or Arch Streets, representing also that it would be disadvantageous to bring the road down either of the latter streets, because it would go through the heart of the city and be exposed to the constant flow of carriages and foot passengers upon all the cross-streets. The route by the canal crossing by Peters' Island was not varied in the recommendation, but there was a proposition to carry one branch of the road downward round the eastern side of Fairmount, so that it should continue on the east side of the Schuylkill to the permanent bridge, under the eastern abutment of which it would pass by an archway. In January, 1830, City Councils again, after the reception of a long report from the watering committee, unanimously adopted resolutions in favor of the crossing at Peters' Island and the termination of the road at Broad and Vine Streets, and with the branch on the eastern front of the Schuylkill, as proposed by Maj. Douglas. The expression of the committee was strong against the route on the west side of the Schuylkill and the bridge at Fairmount. The commissioners of the Northern Liberties, Spring Garden, and Southwark had also approved of the route from Peters' Island to Broad and Vine Streets. The question remained open for nearly two years, and was kept alive by meetings held occasionally in the city and districts.

In 1830 an exhaustive argument was made by John M. Read on behalf of the persons who constituted a public meeting held in January at the court-house to protest against the change of the original Wilson plan to bring the road to Broad and Vine Streets. It was not until March 24, 1831, that the canal commissioners were directed to complete as soon as practicable the whole of the railroad between the Schuylkill and Susquehanna Rivers, with a provision that no part of the road between the western shore of the Schuylkill and the intersection of Vine and Broad Streets should be put under contract, unless the city of Philadelphia should undertake to construct a railroad from Vine and Broad Streets, down the latter to Cedar, or South Street, with authority to intersect the Columbia or Pennsylvania Railroad, and construct branches not further north than Francis Street [now Fairmount Avenue], and carry the same to any point or points on the rivers Schuylkill and Delaware, with power to collect such tolls thereon as the canal commissioners might charge. West of the Schuylkill the

commissioners were ordered to complete the first twenty miles directly west from Philadelphia, finished with double tracks and engines. "Provided that before the contract was made for any part of the said railroad between the western shore of the river Schuylkill and the intersection of Vine and Broad Streets, the city of Philadelphia shall engage to construct and continue a railroad from Vine and Broad Streets, down Broad to Cedar Street, with authority to intersect and construct a branch or branches from any point of the Pennsylvania Railroad east of the Schuylkill, not farther north than Francis Street, and carry the same to any point or points on the river Schuylkill or Delaware within the limits of the city." The power to build such a road had previously been asked for by resolution of Councils addressed to the Legislature. There was no delay in assuring the canal commissioners that the city would build the Broad Street road. This was promised by a special resolution.

The time necessary for the completion of the bridge over the Schuylkill and the construction of the road to Vine and Broad Streets was considerable. It was not until May, 1832, that Councils took measures to build the railroad in Broad Street, by the passage of a resolution authorizing contracts to be made. The ordinance to continue the road from Vine to Cedar Street was passed in January, 1833. This railroad was finished in December, 1833, and opened on the 9th of that month in connection with the Northern Liberties and Penn Township Railroad, by Councils, accompanied by the engineers, Trautwine, of the city road, and Campbell, of the Northern Liberties and Penn Township road. The cars were run on Broad Street to the intersection, and out to the Columbia Railroad bridge. No sooner was the railroad on Broad Street finished than an agitation commenced to carry the tracks to the Delaware River. Spruce and Walnut Streets were suggested as proper for the purpose, the road to extend to Dock Street, where great warehouses were to be built, while others considered Market Street the proper avenue. Efforts in favor of these routes were met by protests against them. The newspapers were plentifully supplied with communications for and against particular routes, while occasional public meetings enlivened the controversy.

The Board of Trade, in January, 1835, memorialized Councils in favor of the establishment of some system of tramways or railways which would bring the products transported from Pittsburgh to Philadelphia by canal and railway "to the vicinity of the business part of the city, and also to facilitate the transportation of merchandise destined for the interior." The cost of drayage of the heavy produce of the country was equal to one-third the freight from the city to Boston or Charleston by water, or from Lancaster to Philadelphia on the railroad. If a proper single- or double-track tramway or railway were laid from the Delaware to the Schuylkill, the board was of opinion that the cost of transportation to and from

the Schuylkill would be reduced at least seventy-five per cent., and by the Columbia Railroad to comparatively nothing. A scientific and experienced engineer was of opinion "that tramways or solid pieces of hewn granite of proper proportions, laid perfectly level with the surface of the street, would be most advantageous, as they would not only answer all the purposes of a railroad, but be a decided improvement on the present mode of paving the streets, and prove economical, . . . and by a slight change in the present manner of constructing the wheels, railroad cars could be used with the same advantage on the tram as on the railway." On the reception of this memorial Councils appointed a commission of citizens, which took cognizance of the subject and made report in May. The majority of the board declared that the plan of a tramway was objectionable, because the cars which ran on the Columbia Railroad could not travel on them without important alteration in the form of their wheels. A railroad of the same pattern as the Columbia Railroad was recommended. For the line of this road they suggested that it should commence on the Delaware at the Drawbridge, and pass up Dock Street to Third, up Third to High, up High to the Broad Street Railroad, and along High to Ashton Street, on the Schuylkill front, where it might be connected with other lines along Delaware Avenue and along the Schuylkill.

A railroad on this route, the commissioners were of opinion, would be less inconvenient than upon any other street. The private dwellings were few, business was largely concentrated on those streets, and even the travel was of a business character. The cost of this improvement from the Delaware to the Schuylkill was estimated to be two hundred and seventy thousand dollars, including the continuation of the tracks down High Street to Front, with pivots for the return of cars toward Broad Street. Against this proposition there was a serious objection,—that it involved the destruction of the market-houses on High Street, between Eighth and Front Streets. The commissioners believed that market-houses might be erected elsewhere at moderate expense, which would accommodate the public as well or even better than those structures on Market Street. There would be a great benefit to the wholesale business of the street if the markets were entirely removed so as to restore the original plan of the city. In expectation, however, of some delay in the removal of the markets, the commissioners recommended the immediate commencement of the railroad from the Schuylkill to Eighth Street, to which latter the markets extended from Front Street. Until those buildings could be disposed of they suggested the laying of a temporary track from Eighth and Market Streets down Eighth to Walnut, and along the latter to Dock. A portion of the commissioners protested against this part of the recommendation, and represented instead that Councils should continue a single track along on each

side of the market-houses from Eighth Street eastward, which might be so laid as to connect with the side tracks on various streets, and be available without change when the market-houses should be taken down. Immediately upon the reception of these reports and suggestions there sprung up a strong agitation against the removal of the market-houses. Town-meetings were held and warm protests adopted; in the remonstrance to City Councils, prepared by a committee appointed at a general town-meeting on the 3d of June, it was stated that public opinion was hostile to the removal of the market-houses. It was supposed to be scarcely possible that Councils would be willing to relinquish an annual income equal to that of a capital of three hundred thousand dollars, and then incur an expenditure probably of a million of dollars. The opposition was reinforced very considerably by the Broad Street interest. On the opening of the Columbia Railroad, forwarding houses and warehouses were built upon that street, between Arch and Callowhill Streets, in such numbers and with such conveniences as were quite sufficient to accommodate a trade which was then in its beginning. The persons thus interested were not desirous that the traffic should be carried away for the benefit of property on Market Street, or the eastern portion of the city. They set forth as reason for the opposition to the Market Street railway plan that they on Broad Street had every accommodation for dispatch of business; that they were removed at sufficient distance from the busy haunts of trade to prevent annoyance by their occupation of the street, while at the same time their warehouses were accessible to every one. There was much delay in considering the question. It was precipitated toward the end of November in Common Council by a resolution offered by Mr. Earp, that the construction of the railroad from Broad Street eastward on High Street should be commenced, and that there should be a double track so located on that street east of Fifth Street "as not to interfere with the accommodation now afforded by the present market-houses." When this came up for consideration Mr. Hinchman, of Common Council, offered an amendment directing inquiry into the practicability and expediency of constructing a railroad along Ninth Street northward to connect with the Northern Liberties and Penn Township and the Philadelphia and Norristown Railroad. Mr. Gilder suggested a track down Filbert to Eighth, down Eighth to Walnut, along Walnut to Dock, and along Dock Street to the river Delaware. These were rejected, and Mr. Earp's resolution was finally adopted by a vote of eleven to seven. In the other chamber there was no practical obstruction. The committee on public highways, under amendment, was ordered to report an ordinance providing for such alterations in the market-houses as might be necessary to permit the construction of the railway, in which the other chamber concurred. The committee which had charge of the matter adopted a

plan for taking down the market-houses already standing. They occupied considerable space. The roofs were supported by heavy brick piers or pillars, and the overhanging eaves extended to a considerable distance on each side of them. The new market-houses were constructed with scarcely any overhanging eaves, and the roofs were supported by slender iron pillars. The tracks were laid close toward the sides, there being no passage under the eaves as formerly. Practically the new markets were more sightly, while the accommodation within was nearly as great as before. Before this railroad was ready to be used, it was settled by ordinance of Councils that the cars should be drawn by animal power.

In April, 1832, the proprietors of the Lancaster and Pittsburgh stages placed a car on the Columbia Railroad, at the head of the inclined plane, which was drawn by horses as far west as the extension of the road would permit, when stages were again resorted to. By the middle of September the cars were run from Broad and Callowhill Streets to Paoli, Chester Co., the passengers being carried across the Schuylkill to the bottom of the inclined plane by boats. The first trial of a locomotive was made between Broad Street and the Schuylkill at the end of September, 1832. The road was finished as far as Lancaster by the middle of April, 1834, and a practical example of its advantages was given by an excursion by members of the Legislature, canal commissioners, and others, who left Harrisburg, and were towed to Columbia by a canal packet, and thence carried by railroad to Lancaster, where they remained all night. In the morning they took passage in the cars, which were drawn by horses, and reached the West Chester Depot, on Broad Street, in eight and one-half hours, including stoppages. The second track was opened in October of the same year. Before winter the cars were in full operation to Columbia, and various lines were established, principally by stage owners. The Union Line was formed by the proprietors of several of the old stage-lines, and was sometimes called the Amalgamation Company. J. Tomlinson ran his own cars, and gave notice that he had nothing to do with the other lines. In November the People's Line to Pittsburgh, the cars of which started from Third Street Hall, at the corner of Willow, advertised that they made the trip from city to city in fifty-six hours. There was still considerable staging to be done on the western portion of the road. In the summer of 1835 cars and boats ran to Columbia and through to Pittsburgh, partly by canal and portage railroad, in three and one-half days.

The original intention in laying out the Columbia Railroad and all other State improvements was to furnish the best means whereby traveling might be effected either by land or water, and to allow citizens to furnish their own motive-power. On the canals there was no difficulty in carrying out this design. Horses and mules for towing could be used by each trans-

porter or boat-owner without interference with others. But on the railroads it would have been almost impossible on account of the cost of locomotives and cars for many transporters to furnish their own motive power. The Legislature had anticipated this difficulty in 1834 by the passage of an act to authorize the canal commissioners to procure locomotive engines and tenders to be used on the railroad. A company was chartered to construct a railroad from Portsmouth to Harrisburg in March, 1835. It was entitled the Harrisburg, Portsmouth, Mount Joy, and Lancaster Railroad Company. It was an extension of the Lancaster and Portsmouth Railroad from Portsmouth to Harrisburg, and gave clear railroad communication to the capital. The work upon it was done with great dispatch, and it was opened September 16th. The opposition line to Pittsburgh, owned by Leach & Co., by canal and railroad, advertised in September to carry passengers in four days by boats and portage railroad for ten dollars, and in seven days for seven dollars.

Two pleasure cars—the first run upon the eastern division of the road—were placed upon it in May, 1832, by Robinson, Carr & Co., who were the contractors for building that section. The road was finished as far as Lemon Hill, and the cars were run from Callowhill Street to that point hourly every day for twenty-five cents.

**Germantown Railroad.**—Attention was drawn to the propriety of building a railroad from the city to Germantown and Mount Airy, in a series of articles published in the *United States Gazette* about the end of March, and in April, 1830, sufficient interest was excited to justify the calling of a public meeting which was held on the 13th of November, at the house of Jacob Mason, in Cresheim. The call included invitation to the inhabitants of Philadelphia, Germantown, Mount Airy, Chestnut Hill, Flourtown, White Marsh, Plymouth, and Norristown. The suggested route was from Philadelphia to Norristown, to run on the east side of Germantown. Reuben Haines was chairman and Benjamin Chew, Jr., secretary. The persons present resolved that it was expedient that such a road should be built, passing along the east side of the village of Germantown. A committee was appointed to defray the expenses of a survey, which consisted of the following gentlemen: Peter Dager, Joseph Thomas, Col. A. L. Roumfort, Thomas R. Fisher, Edward H. Bonsall, Charles M. Pastorius, Capt. Daniel Davis, Erasmus J. Pierce, Col. John G. Watmough, Daniel Hitner, Samuel Maulsby, Reuben Haines, and B. Chew, Jr. This movement was stimulated by Edward H. Bonsall, who had previously made an amateur survey of a route for the road, and was of opinion with the friends that were with him, that it was practicable to lay it out. The committee went to work with industry, and in five weeks was ready to make a report to an adjourned meeting. Major John Wilson, engineer, had been employed to make the

surveys, which, without any determination as to the point at which the railroad should connect with the city, commenced at Broad Street, and terminated "at a very commodious harbor at the mouth of Stony Creek, at the upper end of Norristown, which termination the committee were assured would secure . . . a large amount of coal transportation." The whole cost for a stationary engine, supposing that wooden sleepers and wooden rails plated with iron were used, was \$263,456; if stone blocks were substituted for under sleepers, \$299,956; and if stone rails plated with iron were adopted, \$341,956.<sup>1</sup>

The committee congratulated the stockholders that the average cost of the road would not be more than eighteen thousand dollars per mile, while the cost of the Baltimore and Ohio Railroad between the city of Baltimore and Ellicott's Mills, thirteen miles, in consequence of the necessity of deep cuts and high embankments, was more than fifty-three thousand dollars per mile. The committee recommended that it should not be absolutely required that the road should be taken on the east side of Germantown, but stated that the road should be near the village. On the whole, they were so much pleased with the prospect that an application to the Legislature for a charter for the railroad company was recommended, which proposition was adopted. The route to be from Norristown to Philadelphia, passing through White Marsh, Plymouth, and as near to the village of Germantown as might be found practicable, the average distance not to exceed one-half mile from the main street of the village. Application was made without delay to the Legislature, and on the 17th of February, 1831, an act to incorporate the Philadelphia, Germantown and Norristown Railroad Company was passed, and eight thousand shares, at fifty dollars each, were authorized to be issued. The dividends were not to exceed twelve per cent. per annum, and whenever they exceeded six per cent., a tax of eight per cent. on the excess was ordered to be paid into the State treasury. The route specified was exactly the same as approved at the public meetings previously held. The termination in the lower part of the county was provided for in a peculiar manner: "thence to approach the city of Philadelphia with two branches, one to terminate as near as practicable to the northern side of the said city, at or between Delaware Sixth Street and Broad Street, and the other to terminate at or near the Delaware River at

Kensington." The road was directed to be made with double tracks, and to be not more than four rods in width. There was great interest taken in this enterprise, and when the subscription-books were opened, at Heiskell's Hotel, the number of shares that were subscribed for was very great. The excitement was carried to such an extent that assignments of subscriptions were soon at a premium. As a consequence, complaints were made to the Legislature of unfairness by the commissioners in awarding the stock, and a committee was appointed by the Senate to investigate the matter, and report was made that the stock was fairly taken and generally divided.

At the organization of the board of directors, in May, 1831, John G. Watmough was elected president, and Edward H. Bonsall treasurer. In the succeeding year Mr. Bonsall was elected president. Col. Douglas was elected chief engineer. He reported, under authority of the company, to a meeting of citizens held in Germantown, August 31st, the route which had been adopted and the character of the survey. There was some feeling about the direction to be taken, and a committee appointed by town-meeting reported that there had been no undue influence exerted to bring the road to the line chosen by the engineers, which was on the northeast side of the town. It was determined to lay the rails on cut granite sills with imported iron, and all bridges to have iron barriers. A judicious resolution was made to cross all the lanes and streets in the neighborhood of Germantown by bridges or viaducts, thus avoiding the dangers of tracks at grade of cross-streets. The rails were laid to Germantown by the beginning of June, 1832, and the road was formally opened on the 6th of June of that year. The president, stockholders, and invited guests were drawn in the cars to Germantown by horses. There were nine cars built in the style of the mail-coach of the day, except that they were much larger, with a driver's seat in front, with another seat at the hack. The tops of the cars were also fixed with a central double bench, running from the front to the back, with iron guard-railings at the side. There were seats for twenty inside passengers and fifteen or sixteen outside. The decoration of the cars excelled anything that had been seen in the style of coach-painting; there was variety and brilliance in the colors, and a liberal amount of gilding. The cars were named as follows: Germantown, Benjamin Franklin, Robert Morris, Penn Township, Jefferson, Philadelphia, William Penn, and President. Each car was drawn by one horse. This was the first railroad operated in Philadelphia, and the occasion of its opening brought to the line of the road large crowds of people. The start was made at fifteen minutes past twelve o'clock P.M., and the first car arrived in Germantown in three-quarters of an hour, which, comparison being made with the slow progress necessary in ordinary traveling, was great speed. The company, on disembarking, marched to Mrs. Heft's

<sup>1</sup> "Plated with iron" meant that the wooden rails or stone supports should be covered with iron bars flattened out. They were secured either to the wooden beam or to the stone by iron spikes. This was the first rail on American railways. The disadvantage was that through exposure the fastenings would decay, and the plates become loose. Frequently the loosened ends of the rails turned up and were called snake-heads. When struck by the wheels they would often be forced up through the bottom of cars, and were thus the cause of accidents and of injuries to passengers, and sometimes death. These disasters stimulated invention, and produced the solid iron rails called the "T" rail, and other improvements.

tavern, where there were the customary refreshments and some speeches. In the afternoon the cars returned in little more than half an hour. The regular traveling commenced on the 7th of June, in compliance with the following announcement:

"The cars will start from the depot, at the corner of Green and Ninth Streets, to Germantown, and from Germantown to Philadelphia, at the following hours, viz.:

From Philadelphia.	From Germantown.
At 7 o'clock A.M.	At 8 o'clock A.M.
" 9 " A.M.	" 10 " A.M.
" 11 " A.M.	" 12 " M.
" 2 " P.M.	" 3 " P.M.
" 4 " P.M.	" 5 " P.M.
" 6 " P.M.	" 7 " P.M.

The cars will start punctually at the hours above mentioned, and the company have made arrangements to accommodate a very large number of travellers.

"Parties and families can be supplied with whole cars.

"Tickets can be had at the depot, at the corner of Green and Ninth Streets.

"Fare, each way, 25 cents. Children under 12 years of age, half price.  
"E. H. BONSALE, Presd."

For six months horse-power was employed. On the 23d of November, 1832, there came upon the road a greater novelty than had yet been seen in Philadelphia, in the shape of a locomotive engine, which had been built for the company by Matthias

"OLD IRONSIDES" ENGINE.  
[Copyright 1883, by Hoopes & Townsend.]

W. Baldwin. The track was made clear in the afternoon of that day, after the passenger-cars had come in, and steam was raised sufficient for use in twenty minutes after fire was set in the furnace. The engine went off to half a mile beyond the Union Tavern, at the township line, and returned immediately, a distance of six miles, at a speed of about twenty-eight miles per hour, it being slackened at the crossings, and it being after dark.

On the 24th the locomotive drew four cars loaded with passengers to Germantown, making the six miles in twenty-eight minutes. On Monday, the 26th, another trip was made with six cars and passengers, which was not quite successful, a derangement of the machinery causing the stoppage of the engine when about five miles out. In a short time

the locomotive was at regular work, and one of the sights of the early part of the next year was to see this big machine come down from Germantown bringing six or seven burden-cars freighted with stone. In April a second locomotive was added to the road's stock. It was built by the West Point Foundry Association. The two engines were now at regular work, concerning which the *American Sentinel* remarked, "Their continual passing and repassing each other with their trains of cars at great speed afford a spectacle at once highly novel and interesting to our citizens." The road had been finished to Germantown, and it was expected that it would be carried forward in a northward direction from that point. But when the engineers came to examine closely it was found that the route would be difficult, abounding with heavy grades, requiring deep cutting and embankments, and making necessary frequent curves, the whole work being very costly. They were of opinion that a much better route could be found near the valley of the Schuylkill, and they recommended that the road should terminate at Germantown, for the present at least, and it would be better to reach Norristown by a branch passing through or near Manayunk and up the Schuylkill.

By supplement of April 7, 1832, the company was authorized to charge two cents per mile for each passenger carried, and to own locomotive engines, and place them on the road, the same to be subject to the order of the Court of Quarter Sessions for such rules and regulations "for the said locomotive engine as will render secure the traveling and the safety of property situate at or near the line of the said railroad." The location between Spring Garden Street and the west branch of the Cohocksink Creek was sanctioned upon the same course as Ninth Street was laid out, but not opened.

By act of March 1, 1833, the company was authorized to build a single track on Ninth Street from Spring Garden to Vine Street, and to have authority to use locomotive engines on that track with the consent of the owners of

adjoining property. By the same act the necessity of building a branch to the river Delaware, in Kensington, which had been stipulated for in the original charter, was repealed.

The representations of the difficulty attending a location of the road beyond Germantown induced the application for an act of Assembly to alter the route, which was passed Feb. 8, 1834. Under that law the line to Germantown was ordered to terminate at a point within one hundred yards of the main street. The road was authorized to be extended from a point at or near Robeson's mills, on the Wissahickon Creek, in the township of Roxborough, to intersect the road already laid down to Germantown, and to carry the rails to Manayunk, Spring Mill, and Norristown.

One of the difficulties of the route by way of Man-

Engraved by Samuel Sarasin, Phil<sup>a</sup>

*My Band*

ayunk was the necessity of crossing the Wissahickon. The engineers found a point at Robeson's mills, near the mouth of that stream, where a viaduct might be built at an elevation of about seventy feet. A wooden bridge was thrown across this chasm. It was considered to be an immense structure, being four hundred and seventy-three feet in length, and a height above the Wissahickon which was far beyond anything attempted in bridge-building at that period. It was finished and the road was opened to Manayunk Oct. 18, 1834. The opening to Manayunk was, as usual at that time, an excuse for a festivity, at which speeches were made at Snyder's Hotel by Samuel Nevins, president of the company, Henry Troth, William D. Lewis, Thomas Biddle, Benjamin Chew, of Germantown, and others. The whole road was opened through to Norristown on the 15th of August, 1835, and a round of feasting was necessary to celebrate the event, with speeches by Col. Thomas L. McKenney, Joseph R. Chandler, Nathan Sargent, Willis Gaylord Clark, Samuel Chew, and William D. Lewis, of Philadelphia, and Gen. Joly, of Norristown. When the road was completed the fare from Norristown to Philadelphia was thirty-seven and a half cents.

To this railroad is to be given the credit of introducing or encouraging many important improvements in locomotive engines. While, in 1854, bituminous and anthracite coal had come into general use as fuel for locomotives, it was felt that the best results had not been accomplished in consuming the smoke of the former variety, and deriving its maximum of useful effect. As an experiment, an engine was placed under the direction of Matthew Baird, for the trial of some of his designs. Simply by fixing a sheet-iron deflector in the fire-box of the engine he obtained a much better combustion of the fuel, and when he substituted a fire-brick arch for the destructible iron plate, the appliance was found so valuable that it was adopted on all roads where bituminous coal was used for creating steam. There was nothing complex in the invention, but it was one of those achievements of practical science that have been highly beneficial in the railroad world.

Mr. Baird, who was at that time associated with Matthias W. Baldwin in the management of the great locomotive-works of Philadelphia, made their construction a subject of careful study and investigation, and, being a practical mechanic, he made many improvements in locomotive machinery. Mr. Baird was born of Scotch-Irish parentage, near Londonderry, Ireland, in 1817, his parents emigrating to Philadelphia and fixing their residence on Lombard Street when he was but four years old. His father was a copersmith by trade, and gave him an education in the common schools of the city. His first employment was in a brick-yard, but he soon quitted it for the position of an assistant to one of the professors of Chemistry in the University of Pennsylvania. In 1834 he went to

New Castle, Del., to go into the service of the New Castle Manufacturing Company, which had a copper and sheet-iron works. While in that town he was made superintendent of the railroad shops located there. In June, 1838, the proffer of the foremanship of the sheet-iron and boiler department of the Baldwin Locomotive-Works brought him back to Philadelphia. He remained at the Baldwin factory until 1850, and subsequently, up to 1852, was engaged in the marble business with his brother John, on Spring Garden Street, below Thirteenth. In 1854 he became a partner of Matthias W. Baldwin in the locomotive-works, and sole proprietor when the latter died, in September, 1866. He reorganized the establishment, and joined with himself as partners George Burnham and Charles T. Parry, under the firm-title of M. Baird & Co. In 1873, Mr. Baird withdrew from active business life, but maintained his interests in numerous public and private enterprises. He sat for many years in the board of directors of the Central National Bank, and at the time of his death he was director of the Texas and Pacific Railroad Company, the Pennsylvania Steel Company, the Andover Iron Company, the Philadelphia and West Chester Railroad Company, and the Philadelphia Academy of Fine Arts. He was one of the incorporators and directors of the American Steamship Company, and was a large investor in the Pennsylvania Railroad Company. He was a citizen of eminent public spirit, and there were few enterprises for the general benefit or of a charitable character among whose promoters and supporters he was not numbered. He was a manager of the Northern Home for Friendless Children, and contributed much to other benevolent institutions. He died May 19, 1877.

**West Chester Railroad.**—By act of Feb. 18, 1831, the West Chester Railroad Company was incorporated, with power to locate and construct a railroad of one or more tracks from the borough of West Chester to a convenient point on and connecting with the Pennsylvania Railroad. This measure was popular, and the work was carried on without much delay, so that by the 4th of July, 1832, three miles of the road were completed, and a car, with accommodations for thirty persons, was run upon that day. By the middle of August cars could be driven from West Chester to the Pennsylvania Railroad intersection. There was but a single track, but there was a turnout, by which cars might pass each other at every mile. On the 13th of September of the same year this road was opened from West Chester to the Pennsylvania Railroad by the directors, stockholders, and invited guests. This road was finished a considerable period of time before connection could be had with the city of Philadelphia. In 1834 the company bought for the purposes of a depot a lot of ground on the east side of Broad Street, south of Race (upon which, in later years, a market-house, subsequently, the City Armory, was erected), where a combined depot and hotel building

was built. The back part of the lot was used as a shelter for the cars and a place of starting. The tracks led out beneath a broad passage-way on the north. The hotel parlors were south of the railway tracks on the Broad Street front, and extended over the passage, with considerable available space in the upper stories. The first car which passed over the entire road from the city to West Chester made its trip on Christmas day, 1833. It was called "the mahogany car," and proceeded from the depot across the bridge at the Schuylkill, up the inclined plane, and so on to West Chester, in time for dinner.

**Delaware and Schuylkill Railroad.**—The meetings in favor of a Delaware and Schuylkill Railroad produced an effect in 1829, when, on April 23, an act was passed to incorporate a company to build a railroad in the northern section of the county of Philadelphia, from the river Delaware to the Schuylkill, or to terminate at the junction with the Columbia and Philadelphia Railroad. The corporation was to be called the Northern Liberties and Penn Township Railroad Company; capital stock, eight hundred shares, at fifty dollars per share. Authority was given to make the railroad over any expedient route, beginning at the west side of Front Street, at or near Willow Street, in the Northern Liberties, and running on or in the neighborhood of Willow Street, westerly, to the western boundary of the Northern Liberties district, and then by such route as the commissioners of Spring Garden might permit, until the Columbia Railroad was intersected, with authority to carry the road farther on to the Schuylkill River, north of Vine Street. Exception was that the road should not be carried through the city property at Fairmount without consent of Councils, nor through the property of the Lehigh Canal and Navigation Company, which was at that time on the Delaware, in the neighborhood of Willow Street wharf. This project languished for three years. New commissioners were appointed to dispose of the stock, and general authority was given to construct the railroad anywhere north of Vine Street. Eventually the company decided on placing the rails upon Willow Street as far west as the culvert extended. At Ninth Street James Street opened west about the western line of the culverted street. Here a straight connection carried the railroad to Broad Street, where it intersected the Columbia or Pennsylvania Railroad at what was called Pennsylvania Avenue, and north of Callowhill Street, so that it did not occupy any public streets, except at crossings.

This railroad was finished and opened from Broad Street to the Delaware River in April, 1834, and on the 23d of that month public notice was given that pleasure-cars would run at stated periods from the Third Street hall to the Schuylkill bridge at Peter's Island. They were drawn by horses, and this may be said to have been the first passenger railroad, according to the modern idea, in the city. The depot of

this company at Willow Street wharf was completed and ready for use about the beginning of January, 1835. The store-house was fifty by one hundred feet. At the wharf, which was two hundred feet long, there was a depth of twenty-seven feet of water, so that vessels of the largest size could lay to and discharge cargo and take in merchandise brought by the railroad.

**West Chester and Philadelphia Railroad and Baltimore Central Railroad.**—A new railroad line to West Chester was projected about 1847. The people of that town were not satisfied with the means of communication by connection with the Columbia Railroad, which made a route necessary upon the two sides of a curvilinear angle. They hoped to obtain a more direct route. The agitation in favor of the enterprise was followed by the passage of a law, April 11, 1848, to incorporate the West Chester and Philadelphia Railroad Company, with a capital of six thousand shares or more at fifty dollars per share. The route was thus specified: Beginning at or near the borough of West Chester in the county of Chester, and terminating at some suitable point at or near the permanent bridge in the county of Philadelphia." The projectors of this enterprise did not meet with the success which they expected at the beginning. It was more than two years before the charter was enrolled, and it is to be found in the Appendix to the Pamphlet Laws passed in 1850. Eventually, instead of the building of an air line, the road was united with the tracks of the Philadelphia and Baltimore Central Railroad Company, which was incorporated March 17, 1853, and had authority to lay a railroad from a point on the State line of Pennsylvania and Maryland between Elk Creek and the western boundary of Peach Bottom township, York Co., to a point of intersection on the West Chester and Philadelphia Railroad at or between West Chester and Philadelphia, or to the city of Philadelphia. This route was quite as curved as the other Westchester route by the Columbia Railroad. It was carried southwest to a point beyond Media, and thence northwest to West Chester. The Baltimore Central was continued on to Oxford, where it branched off to the southwest, in the direction of Baltimore. When the railroad was built, the tracks were brought up the west side of the Schuylkill on the line of Thirty-first to Chestnut Street. For convenience' sake, the freight and passenger depot was established at the northeast corner of Eighteenth and Market Streets. From that place the City Railroad was used from Market Street to the permanent bridge, and, crossing the same, the track was carried by means of the Pennsylvania Railroad as far as Thirty-first Street, where a branch ran south on the line of Thirty-first across Market and Chestnut Streets, and so south and southwest. For some years the terminus was at Media. When the Philadelphia and Baltimore Central Railroad got into operation, a large brick passenger depot

was erected at Chestnut and Thirty-first Streets. The depot at Eighteenth and Market Streets was devoted to freight business only. The passenger trains for the West Chester and Baltimore Central roads were carried from the depot on Chestnut Street.

**Southwark and Philadelphia, Wilmington and Baltimore Railroad.**—The movement which led to the construction of the railroad between Philadelphia and Baltimore had its origin in an act of Assembly, passed April 2, 1831, to incorporate the Philadelphia and Delaware County Railroad Company, with a capital of two million dollars, four thousand shares at fifty dollars per share. Authority was given to the company to construct a railroad of one or more tracks at or near the city of Philadelphia; thence along the route of the Baltimore post road, or as near thereto as the ground would permit, making the post towns of Darby and Chester, or their vicinity, points in said road to the Delaware State line. The plan upon which this road was to be established was like that of the ordinary turnpike road. The company was to lay the tracks, and whoever chose might use them on a payment of toll. A curious section in the act was that copied from turnpike laws, which made it an offense to drive past a tollgate without stopping to pay the toll. The charter declared that if any person driving a car should pass by a place appointed for receiving tolls without stopping to pay, he should be liable to a penalty of twenty dollars. Under the same act the commissioners were authorized to receive subscriptions for the Southwark Railroad Company, capital two hundred thousand dollars, shares fifty dollars each. This company had authority to construct a railroad of one or more tracks from the river Delaware, in the district of Southwark, and thence, in the county of Philadelphia, to Broad and Cedar Streets, in such direction as might be deemed best, to connect with the termination of the Delaware County Railroad, there being power to construct a railroad from Broad Street, in the county, to the river Schuylkill. Attention was first given to the Southwark Railroad. The subscriptions were not speedy and enthusiastic, and in the succeeding year an act was passed authorizing the commissioners of Southwark to guarantee the stockholders of the Southwark Railroad Company any amount of deficiency on the stock of the company not exceeding six per cent. per annum on the amount expended for constructing the railroad from Broad and Cedar Streets to the river Delaware. This enactment was not popular, and it was repealed in the succeeding year. Sufficient subscriptions were obtained, however, to justify the building of the road. Instead of taking it from the Delaware at South Street, or near there, along Shippen or some parallel street, the Southwark Railroad was laid out in the shape of the U, commencing at South and Swanson Streets, and extending down the latter to Prime or Washington Street, thence to Broad, and up Broad to South, connecting with the City Railroad. This track

was finished in the latter part of November, 1834, and on the 29th of that month five or six cars passed over the road from the Delaware to Broad Street, and continued thence along the Columbia Railroad to the bridge at Peter's Island. It is probable that this passage was only made from Prime Street and the Delaware, the extension along Swanson Street to South being of later date. The engineers of the Philadelphia and Delaware County Railroad made report of their plans to the stockholders in the latter part of 1835. They had surveyed a route from the centre of the Southwark Railroad, near the junction of Broad and Prime Streets, and laid their course down Broad Street to a point south of Federal, from where they diverged westwardly, inclining southwardly, crossing the Passyunk road near the Girard school-house, and passing along the eastern side of the Penrose Ferry road to the crossing of that ferry at the river Schuylkill, where it was recommended that a bridge should be built upon piles, thirty feet wide, with a single-track railway in the centre, and carriage-ways of ten feet on either side, with a draw thirty-five feet wide. After the Schuylkill was crossed the route was continued to Chester and the State line, a distance of fifteen and a half miles.

In 1836 a supplement to the act to incorporate the Philadelphia and Delaware County Railroad Company authorized the increase of the capital stock to eight thousand shares, and repealed the provision in the former law which made it necessary that the company should proceed along the Baltimore post road, or near thereto, making Darby and Chester points on the route. Authority was also given to build a bridge over the Schuylkill, by which the navigation of the river should not be injured nor obstructed, and the name of the company was changed to the Philadelphia, Wilmington and Baltimore Railroad Company. In the succeeding year authority was given to build the bridge at or near Gray's Ferry, for the accommodation of the railroad and other travel by pedestrians and vehicles. For the latter service tolls were allowed to be taken, at the same rate as the High Street bridge. A draw of thirty-three feet in width was stipulated for, the piers to be at least forty-two feet distant from each other. By the same act authority was given for the first time to make this an inter-State railroad. With the consent of the State of Delaware, it was provided that the company might extend its tracks from the Delaware State line to Wilmington, so as to connect with the works of the Wilmington and Susquehanna Railroad Company. A few months afterward, December 19th, an act was passed authorizing the Philadelphia, Wilmington and Baltimore Railroad Company, of Pennsylvania, to unite with the Wilmington and Susquehanna Company, of Delaware and Maryland, and the Baltimore and Port Deposit Railroad Company, of Maryland, the three companies to be known as the Philadelphia, Wilmington and Baltimore Railroad Company. To facilitate the

entrance of the railroad into the city, another act was passed in April, 1838, which gave the company a right to unite with any other railroad company which terminates in the county of Philadelphia. Under this provision a union with the Southwark Railroad Company and an extension of the tracks to the Delaware River was possible. It was also directed by another act of Assembly, February 27th, that Prime Street, from Broad Street to Gray's Ferry road, should be laid out of the same width and in the same direction as already opened from Eleventh Street to Broad, one-third of the expense of the increased width in grading to be paid by the railroad company, which was authorized to lay a double track of rails along the street. The work upon this road was most vigorously prosecuted upon the southern portion. The rails were laid between Wilmington and the Susquehanna River in the early part of 1837. A trial excursion was made May 5th. There was a formal opening July 4th, and general travel commenced July 22d. The route was from Philadelphia to Wilmington by the steamboat "Telegraph," Capt. Whilldin; thence by cars to the Susquehanna River, which was crossed by steamboat, the passengers being transferred by cars to the other side. Eventually a large ferry steamboat, called the "Maryland," was constructed, upon which the railroad cars were run upon a track, and at Havre de Grace were again transferred to land, and whirled by locomotive to Baltimore. This arrangement was done away with when the permanent bridge was built across the Susquehanna.

The first president of the Wilmington and Susquehanna road was James Canby, of Wilmington, elected in 1835. He was succeeded by James Price in 1837, and the latter, in 1838, by Matthew Newkirk, upon the combination of all the companies between Philadelphia and Baltimore. The bridge across the Schuylkill at Gray's Ferry was finished in 1838. Until 1842 the company owned no depot in Philadelphia. In that year the property at the southeast corner of Eleventh and Market Streets, partially occupied by the Mansion House Hotel, was secured, with adjoining property, and a large building extending along Eleventh Street from Market Street to Marble Alley was erected. The front part of the building on Market Street and the upper stories over all were used for the officers of the company and as a hotel. The cars found space in the first story, into which the railroad tracks were run. The cars were drawn by horses out Market Street to Broad and down the latter to Prime Street, where locomotives were attached. In May, 1852, the large depot or station was finished at Broad and Prime Streets. It was at that time and for many years after the finest railroad station in Philadelphia in architectural beauty, size, and internal arrangement. The front on Broad Street, of brown stone, was two stories high, flanked by wings of one story. The depot behind it was of a single story, one hundred and fifty feet wide by four hundred feet deep. West of the depot,

which ran to the line of Schuylkill Eighth [Fifteenth] Street, was a large yard in which were engine-houses, wood-sheds, tracks, switches, and other conveniences. The whole plot was about seven acres. The building was occupied in May, 1852, at a cost of one hundred thousand dollars. The station at Eleventh and Market Streets was then abandoned by this company, and went into the use of the Pennsylvania Railroad Company. In February, 1881, it was stated that a controlling interest in the Philadelphia, Wilmington and Baltimore Railroad Company had been secured by the Pennsylvania Railroad Company, and at the annual meeting of the stockholders of the latter company on July 2, 1881, the purchase of the stock of the former company was announced by President Roberts, and the stockholders immediately ratified his action, and authorized the issue of four hundred thousand shares of new stock, from the sale of which the requisite funds were supplied to complete the purchase. The total amount of the purchase was sixteen million six hundred and seventy-five thousand six hundred and ninety-two dollars.

**Camden and Amboy Railroad.**—The first report to the stockholders of the Camden and Amboy Railroad and Transportation Company was made in June, 1831. The president of the company was John Stevens, who had projected the first railroad from Philadelphia to Columbia. It was noticed that this was not only a railroad, but a transportation company, and one of the first things done was to make arrangements with the proprietors of the two lines of stages and steamboats across New Jersey between the two great cities. With a locomotive engine the directors believed that an average of fifteen miles to the hour might be obtained with security to the road as well as to the passengers. At that rate it was thought that the trip could be made from Camden to New York City, by railroad and steamboat, in six hours, which, observed Mr. Stevens, "it is thought will be found to be sufficiently rapid for all useful practical purposes." The receipts and revenues upon which the stockholders might depend, from regular passengers and light freight, was set down at half a million of dollars. The surveys for this road were commenced on the 16th of June, 1830, by Maj. John Wilson and his assistant engineers. The railroad was finished with single track between Bordentown and Amboy by the middle of January, 1833. The steamboat "Trenton" commenced running on the Delaware, carrying passengers as far as Bordentown, on the 22d of that month. By the beginning of January, 1834, the railroad had been extended within eleven miles of Camden; but there were delays upon other portions of the work. The United States mail was sent for the first time from the Philadelphia post-office to Camden, to be sent to New York, on the 29th of December of the same year. In January following passengers were taken over on the ice, and shortly afterward the railroad company sent round a steam ice-boat from New York, to be employed in keeping

the Delaware River open. It was called the "States Rights," and was very strongly built. The entire track from Camden to Amboy was in full use by the commencement of spring, 1835. The large steamboats connected with the line ran to Bordentown, where the passengers took the railroad. The lines by way of Camden, of which there were one or more, daily left Chestnut Street wharf by ferry-boat to Camden.

About 1838 the Camden and Amboy Railroad Company shifted its point of departure to the south side of Walnut Street wharf. A hotel of moderate size was built at the southeast corner of Delaware Avenue and Walnut Street, which was kept by J. B. Bloodgood. There the ticket- and freight-offices of the united companies were placed. The upper portion of the building was devoted to hotel purposes. It was convenient for travelers who desired to stop over for a short time, and the establishment for some years did a successful business. There were two locomotive engines in use on the road up to the summer of 1833. The third, constructed by Robert L. Stevens, was tried in July of that year, and made the wonderful speed of running with a train of cars from Bordentown to Hightstown, more than thirteen miles, in thirty-six minutes, returning in thirty-one minutes. In the succeeding year it was noted as "one of the most extraordinary instances of rapid traveling on record that passengers were taken from Philadelphia to New York, distance computed to be ninety-four miles, in four and three-quarter hours, including the land and water transportation." The newspaper writer indulged in the idea that under the improvement it might be possible hereafter to bring New York and Philadelphia "within one hundred and sixty-five minutes' ride of each other," and added, "the utterer of such an idea twenty years ago would have been declared a fit object for a lunatic asylum."

**Philadelphia and Trenton Railroad.**—All interests involved in the business of transportation between Philadelphia and New York were not united in the movements for the establishment of the Delaware and Raritan Canal and the Camden and Amboy Railroad. Consequently another line of railroad was projected, and Feb. 23, 1832, the Legislature of Pennsylvania passed an act "to incorporate the Philadelphia and Trenton Railroad Company, with a capital of six hundred thousand dollars. "Authority was given to this corporation to locate and construct a railroad of one or more tracks from a suitable point in the district of Kensington, through the borough of Frankford, intersecting the Delaware Division of the Pennsylvania Canal in the borough of Bristol, and to continue to a point at or near the Trenton Delaware bridge, in the borough of Morrisville. To this company also was given power to place on the railroad machines, wagons, vehicles, carriages, and teams of any kind, and to transport goods and passengers, said road to be a public highway for conveyance of passengers, and

transportation under rates to be charged by the company. There was no difficulty in disposing of the stock, and the work of construction was immediately entered upon. It was estimated at this time that the amount received by the Union and Citizens' Lines jointly during the year 1831, for way passengers alone, between New York and Philadelphia, exclusive of through passengers and transportation of goods, was one hundred and six thousand dollars, and that, allowing the opposition line, which might go by the Camden and Amboy route, a greater proportion of the business, the net annual receipts would be sixty thousand dollars, from which, deducting interest on the capital, there would still be sufficient profits to allow a dividend of fifteen per cent. This flattering estimate was not sustained by subsequent experience. The track was finished from Morrisville to Bristol on the 14th of November, 1833. The People's Line for New York, *via* Bristol and Trenton, was established immediately, with the announcement, "No locomotive, no monopoly, fare only \$1.50." In order to make a virtue of a necessity, the People's Line claimed that it desired to protect the community. It said, "As it has always been their first care to provide a safe and comfortable conveyance, they have resolved not to use steam-carriages, and thus not to place it in the power of an agent to sport with the lives of passengers at forty miles an hour. Col. Reside's best drivers and horses are constantly employed on this route, by which the United States Eastern mail is carried." These precautions were not of long continuance.

The railroad was completed from Kensington to Morrisville on the 1st of November, 1834, and a locomotive was immediately placed upon it, which ran to Morrisville, twenty-eight miles, in one hour and thirty minutes. The depot of the road was established on a lot of ground between Front Street and Frankford road, north of Harrison Street. By act of March 27, 1834, this company, with the consent of the commissioners of the Northern Liberties, was given authority to connect its track with the Northern Liberty and Penn Township road at or near Front Street, with authority to "occupy such street or streets as shall be most convenient." In view of this authority, the office of the company was established at Third Street Hall, a large building erected at the northeast corner of Third and Willow Streets, partly for use as a hotel and partly for a railroad depot. In February, 1835, the Pennsylvania Legislature passed a law empowering this company to build a bridge over the Delaware River and lay tracks to New Jersey. Shortly afterward authority was given to the road to purchase stock in turnpike bridges and railroad companies, not only in Pennsylvania, but elsewhere. There was a feeling of opposition among the people of the Northern Liberties and Kensington which was sufficiently understood, and had its effect in preventing the company from making the junction

with the Northern Liberties and Penn Township road, on Willow Street, which had been intended. This had the effect of delaying the connection some time. On March 23, 1839, another act of Assembly was passed authorizing the company to continue its tracks from the depot in Kensington along the Frankford road and Maiden Street for one year, until another railroad could be conveniently constructed upon another route from the Kensington Depot to the depot at Third and Willow Streets. The privilege of continuing the tracks upon Frankford road and Maiden Street was not to extend over one year, and James Ronaldson, Thomas D. Grover, and Daniel Smith, carpenter, were appointed commissioners to ascertain what damages had been suffered by the corporation of the district of Kensington and the people along the route. The second section of this act permitted the company to locate a railroad between the Kensington and Willow Street Depots "by the best route along the streets between said depots, and for that purpose they may occupy such street or streets as shall be most beneficial and convenient." The route might be approved by the Court of Quarter Sessions, upon the report of a jury of view of six persons, appointed to consider its advantages and its disadvantages.

Under this authority, license was obtained to lay a track on Front Street between Willow Street and the Kensington Depot. No sooner had the proposition taken shape than an excitement arose among the people not only upon the line of the proposed tracks, but throughout the Northern Liberties and Kensington. It was urged that the establishment of a railroad to be carried through the thickly-built portions of the districts would be dangerous to the lives of citizens and injurious to property. The law of 1839 was criticised unfavorably, upon the allegation that it was smuggled through the Legislature without notice to the people of the districts. When the workmen began to tear up the pavement for the purpose of laying the rails, they found themselves surrounded by crowds of discontented persons, who talked loudly against their proceedings. The women, who were active, scolded them, and resorted to many annoyances, in which they were countenanced and aided by men. From words the discontented opponents resorted to acts. On July 26, 1840, several feet of the rails which had been laid down were torn up, and the roadway injured. On the following day the company procured the protection of over one hundred police officers, who were stationed in the neighborhood of the road; but the workmen were obliged to desist by the menaces of the crowd. A pitched battle ensued, in which the mob used paving-stones and the officers tried to resist them with their maces; some men and one woman were arrested, but the police who held the prisoners were attacked, severely handled, and compelled to retire from the fury of the mob, which was increasing every hour. These occurrences took place in the afternoon of the 27th, and they created much

excitement. The news of the encounter spread to all parts of the city, and at night large numbers of persons resorted to the scene. The rails that had been laid were again torn up, and the mob proceeded to a tavern upon Front Street, which was owned by John Naglee, president of the railroad company, and was occupied by John Emery. The place was offensive to the crowd because it had been occupied by the police. An attack upon the building followed; the doors were battered in with paving-stones, and, the house being abandoned by the tenants, was entered by the rioters, who set it on fire. The usual alarm being given, the firemen came to extinguish the flames, but they were assaulted with a shower of stones, and driven back.

The police were as active as was possible under the circumstances; they arrested, or endeavored to arrest, the persons concerned in the riot and arson, and ten men charged with rioting were brought into the Court of Criminal Sessions the next morning, and indictments were framed and presented against them. The grand jury responded speedily, and two of the persons charged, Joseph Jennings and David Ortman, were arraigned immediately, tried, and found guilty. The court was as passionate as the mob. Jennings was sentenced immediately to seven years' imprisonment in the Eastern Penitentiary, and Ortman to ten years' confinement in the same institution. They had been in the station-house all night, were taken thence to the court, and the preliminary examination took place in the court-house before the judge and in the presence of the general jurors. The accused had no time to summon witnesses or to obtain counsel. Ortman was imperfectly acquainted with the English language, and he and Jennings were strangers to each other, and had no opportunity to consult as to the best methods of defense. The court was denounced on account of the indecent haste and feeling exhibited by the judge, prosecuting attorney, and jurors. At a public meeting held in the Northern Liberties strong resolutions of condemnation were passed. Petitions for the pardon of the prisoners were prepared and passed and extensively signed. They were so strong in their influence that they produced an effect upon the Governor of the State, and in a short time Ortman and Jennings were pardoned. An effort was also made to repeal the law creating the Court of Criminal Sessions, which had been passed in 1838. It was not successful at the time, but the feeling had its influence in the passage of the act of Feb. 22, 1840, by which the Court of Criminal Sessions was abolished and the Court of General Sessions erected in its stead. The company was not disposed to yield to the opposition. New authority was obtained from the Legislature by act of May 3, 1841, which extended to the company the right to use the railroad tracks along Frankford road and Maiden Street for three years, and gave the same time for the construction of the railroad along Front Street from the Kensington Depot to the depot

at Third and Willow Streets. No immediate attempt was made by the company to exercise this authority, and in the next year an act was passed to repeal the law of the year previous, reaffirming the right to construct the railroad on Front Street. Practically the Front Street route was abandoned for many years. The Kensington Depot remained at Harrison Street, and trains arrived and departed there. For passengers, particularly on the through lines, the station for starting by cars was established at Tacony. City passengers were carried by steamboat from a central wharf in the city as far north as Tacony, where they took cars and proceeded on their journey. Certain trains arriving from New York were accommodated by the same method.

**The Philadelphia and Reading Railroad Company.**—The charter for this railroad was passed April 4, 1833; surveys were immediately made, and forty-one miles put under construction during the year. The original object of the company was to construct a railroad from Peter's Island, four miles from Philadelphia, where connection was made with the Philadelphia and Columbia Railroad to Reading, a distance of fifty-four miles. Work on the line was commenced in 1835, and portions of the road were opened for travel in 1838. The branch, five miles long, from Falls of Schuylkill to Port Richmond on the Delaware, was completed in 1842. The Little Schuylkill Railroad Company having failed to complete its road from Tamaqua to Port Clinton, twenty miles, its privileges were transferred to the Philadelphia and Reading Railroad Company. The act of March 20, 1838, authorized the Philadelphia and Reading Railroad Company to extend its road to Mount Carbon or Pottsville, these two points being already connected by the Mount Carbon Railroad, and the extension was made to Mount Carbon. Subsequently the Mount Carbon Railroad was leased and absorbed by the Philadelphia and Reading Railroad Company, which opened the road from Pottsville to Peter's Island, Jan. 1, 1842. After the State railroad line was relocated, in 1850, the old line from Broad and Willow Streets, Philadelphia, to Peter's Island, now Belmont Station, was purchased by the Philadelphia and Reading Railroad Company, and is now used for the passenger and general city freight trade, while the Port Richmond branch is almost exclusively used for coal. The terminal facilities at Port Richmond consist of wharves extending from three hundred to eight hundred feet into the Delaware River; each wharf is provided with chutes, allowing a direct discharge of coal from the cars into vessels. On these wharves thirty-six miles of tracks are distributed for the accommodation of the immense shipping business. The grade of this railroad is a continual descent from Schuylkill Haven to the Falls of Schuylkill, a distance of nearly eighty-three miles, which enables locomotives to draw extraordinarily long trains of loaded cars, largely economizing the railroad service. This company penetrates

the great anthracite coal-fields, which it has covered with a net-work of roads, reaching every accessible point. Its branches touch Columbia, Harrisburg, and Williamsport, as well as Philadelphia and Chester. Having leased the Susquehanna Canal from Columbia, Pa., to Havre de Grace, Md., it possesses water communication with Baltimore. It secures the trade of the Schuylkill Valley by its lease of the Schuylkill Navigation Company's canal, and the Philadelphia, Germantown and Norristown Railroad. In 1858 the absorption of lateral roads was inaugurated, and has continued until *Poor's Railroad Manual* for 1882 exhibits the following:

Line of Road.	Philadelphia, Pa., to Reading, Pa.....	Miles.
		98.4
<b>Branches.</b>		
		Miles.
<i>Northern Liberty and Penn Township</i> , in Philadelphia.....	1.4	
<i>Port Kennedy</i> . Port Kennedy to Lime Kiln.....	1.2

Total length of line owned, leased, and controlled.....		846.3

In addition must be added: Schuylkill Navigation, 108.23 miles, leased for nine hundred and ninety-nine years, from Jan. 1, 1870, and Susquehanna Canal, 45 miles, leased for nine hundred and ninety-nine years, from Jan. 1, 1872. The lease of the North Pennsylvania and the Delaware and Bound Brook Railroads was made in May, 1879, for nine hundred and ninety-nine years, at an annual rental equal to the fixed charges of the companies, and annual dividends of six per cent. for the first two years, seven per cent. for the next two years, and of eight per cent. for the remainder of the lease. The rentals of the North Pennsylvania Railroad are estimated to equal \$673,344 per annum for the first two years, \$718,615.50 for the next two years, and \$763,887 for the remainder of the lease. The payments are to be made quarterly, and also \$12,000 per year for expenses of organization, etc. The rentals of the Delaware and Bound Brook Railroad equal \$195,840 per year for the first two years, \$210,980 for the next two years, and

\$266,120 for the remainder, in equal quarterly installments, and \$6000 for expenses. The company has also leased the Central Railroad of New Jersey, which connects with the North Pennsylvania and the Delaware and Bound Brook Railroads, forming a through line from Philadelphia to New York.

The president of the Bound Brook Railroad, Edward C. Knight, has long been identified with the internal improvements of Pennsylvania. He was born in Gloucester (now Camden) County, N. J., on the 8th of December, 1813. His ancestor, Giles Knight, of Gloucestershire, England, came to Penn's new province in the ship "Welcome" with William Penn, at its settlement, locating in Byberry, where he died in 1726. The parents of E. C. Knight—Jonathan and Rebecca Collings Knight—were members of the Society of Friends. The son entered mercantile life, in 1830, as a clerk in a country store at Kaighn's Point, N. J. Two years later he came to Philadelphia, and engaged as a clerk in the grocery store of Atkinson & Cuthbert, South Street wharf, on the Delaware River. In May, 1836, he established himself in the grocery business on Second Street, giving his mother an interest in it. Several years later he became interested in the importing business, acquiring a share in the schooner "Baltimore," which made regular trips between Cape Haytien, San Domingo, and Philadelphia, chiefly laden with coffee. In September, 1846, he removed to the southeast corner of Chestnut and Water Streets, where, for nearly thirty-eight years,—at first alone, and subsequently as the senior partner of the firm of E. C. Knight & Co.,—he has carried on the wholesale grocery, commission, importing, and refining business. In 1849 this house became, and thereafter continued to be, interested very largely in the California trade, the first steamer that ever plied on the waters above Sacramento City having been sent out by this firm. The business at present is principally that of sugar-refining, for which purpose the firm occupies two large molasses-houses and one extensive refinery at Bainbridge Street wharf, on the Delaware, and that of importing molasses and sugar from Cuba, in which latter business this house was the pioneer in America. The capacity of the refinery belonging to this firm can be fairly comprehended when it is stated that it is usual to turn out from one thousand to fifteen hundred barrels per day.

But, while for many years Mr. Knight has been looked upon as one of Philadelphia's most prominent and most honored merchants, he has of late been mainly recognized as one of the leading railroad managers of the Quaker City. Years ago he was a director in the Lackawanna and Bloomsburg, the West Jersey, and other railroad companies. Finally he became a director in the Pennsylvania Railroad Company. It was largely through his instrumentality, as chairman of a committee of the latter corporation, that the American Steamship Line, between Philadelphia and Europe, was established, and Mr. Knight

was president of the steamship line in question. He finally withdrew from the Board of Directors of the Pennsylvania Railroad Company, and thereafter his interests were centred elsewhere. He is now a director in the Central Railroad Company of New Jersey, and was, from 1876 to 1880, its president. It was largely owing to his superior intelligence and industry that this corporation was placed in its present solid condition. In 1874, also, Mr. Knight was chosen president of the Bound Brook Railroad Company, a position which he now holds. He is also a director in the Philadelphia and Reading and in the North Pennsylvania Railroad Companies.

Mr. Knight has been, at various times, connected with a number of financial institutions in this city of high standing. He has, however, withdrawn from all banking and trust companies, except the Guarantee Trust and Safe-Deposit Company, of which he is at present the vice-president.

While not an office-seeker, Mr. Knight is, in every sense of the word, a public man. In 1856 he was nominated by the American, Whig, and Reform parties for Congress, in the old First District of Pennsylvania. In 1860 he was an elector on the Republican Presidential ticket from the same district. He was a member of the State Constitutional Convention of 1873, his sound opinions and advice as a business man having had material weight in the formulation of much of the best material in the present organic law of the commonwealth. In December, 1883, Mr. Knight was appointed a member of the Park Commission by the judges of the Court of Common Pleas. In semi-public affairs Mr. Knight has likewise been a prominent factor. He is, and has for years been, one of the directors of the Union League. He was also the president and one of the most active promoters of the Bi-Centennial Association of 1882.

Mr. Knight is, in every sense of the word, one of Philadelphia's most public-spirited citizens, and a man whose name is a synonym for integrity and honor.

The Laurel Ruu Improvement Company was chartered May 18, 1871. Its name was changed by act of Dec. 12, 1871, to the Philadelphia and Reading Coal and Iron Company, which was organized under the auspices of the Reading Railroad Company for the purpose of purchasing and operating the coal properties with which the railroad was connected. The entire stock of the Philadelphia and Reading Coal and Iron Company is owned by the Reading Railroad Company, the bonds and mortgages on the coal-lands amounting to \$39,737,965.53. The serious interruption of the business of the company caused by the "strikes" in the coal region and the many fluctuations in the coal trade resulting from alternate periods of expansion and depression, induced the management in 1871 to obtain some control over the production of coal, and thereby, if practicable, prevent a recurrence of the difficulties previously experienced. To this end the Reading Railroad Company became

*G. B. Wright*

the owners of the coal-lands situated upon the lines of its several branches. To effect this object a mortgage of \$25,000,000 was executed to secure a loan, from the proceeds of which all outstanding mortgages were to be retired, and the balance, \$19,000,000, applied to the purchase of the coal-lands. The loan was very successful, and at the close of 1871, 70,000 acres of the best coal-lands in Pennsylvania had been acquired at a cost of \$11,962,000; the Philadelphia and Reading Coal and Iron Company being the auxiliary company by which the title to these lands was held. The total amount of the indebtedness of the Reading Railroad Company when these bonds were issued, in 1871, was \$5,801,200; 7 per cent. bonds, payable in 1872, \$110,400; 7 per cent. bonds, payable in 1874, \$43,000; 7 per cent. sterling bonds, payable in 1877, \$134,400; 5 per cent. sterling bonds, payable in 1880, \$182,400; 6 per cent. sterling bonds, payable in 1880, \$976,800; 6 per cent. convertible dollar bonds, payable in 1880, \$133,000; 6 per cent. dollar bonds, unconvertible, payable in 1880, \$1,521,000; 7 per cent. bonds, payable in 1890, \$2,700,000. For the payment of these bonds, 6000 bonds of the above mortgage loan were pledged to be reserved, and it was further covenanted that a sinking-fund should be established, which by its accumulations would retire the indebtedness as it matured.

The Philadelphia and Reading Railroad Company made default on the 21st of May, 1880, in the interest of its maturing obligations, and its road and property were placed in the hands of receivers by the United States Circuit Court, May 22, 1880.

The Philadelphia and Reading Railroad Company's system of cheap tickets has been of vast service to the company, and one of the branches—the Germantown and Norristown Railroad—has the largest local travel per mile, and runs the largest number of passenger trains of any single road in the United States. The company also owns a fleet of iron steamships, which it employs in carrying coal from Port Richmond to cities along the coast. The united length of all the railroads under control of the company is 846.3 miles, all of which lie within the borders of Pennsylvania, and have Philadelphia for their commercial *entrepôt* and business terminus.

In 1870, Franklin B. Gowen was elected president of the Philadelphia and Reading Railroad, which position he held until he resigned in 1884, and was succeeded by George de B. Keim. His administration of the road was marked by great ability, and notwithstanding circumstances over which he had no control compelled the placing of the road in the hands of a receiver in May, 1880, the ability and management of Mr. Gowen continued to direct the operations of the road and the administration of its finances until it was fully restored to the stockholders, and placed upon a paying and successful basis.

Mr. Gowen was born at Mount Airy, Philadelphia, on Feb. 9, 1836. He adopted the profession of law,

and was admitted to the bar in May, 1860, and quickly acquired an extensive and lucrative practice. It is not only as a lawyer of great ability, but as a financier and railroad manager, that Mr. Gowen stands pre-eminent among his contemporaries. In the Constitutional Convention of 1872 he took a conspicuous position, and, as chairman of the Committee on Revision and Adjustment, shaped to a considerable extent the work of constitutional revision; he also served on the Committee on County, Township, and Borough Offices.

**North Pennsylvania Railroad.**—In consequence of movements in the city and districts in 1851 and 1852, considerable interest was taken in the construction of a railroad to connect Philadelphia with the Lehigh coal region. The benefit of the trade of Bucks and Northampton Counties and upon the upper Delaware was duly set forth, and resulted in the incorporation, April 8, 1852, of the Philadelphia, Easton and Water Gap Railroad Company. The title of the company was changed by act of April 18, 1853, to the North Pennsylvania Railroad Company.<sup>1</sup> Subscriptions by the city and district corporation and citizens were obtained with energetic effort, and the construction of the road entered upon. It was finished as far as Gwynedd, in Bucks County, in the early part of 1855, and formally opened for travel on Monday, the 2d of July, 1855, by an excursion from the Co-hoquinoque Station, at Front and Willow Streets, to Fort Washington. From that time the road has been in operation, the distance traveled being gradually extended as new sections were finished. Travel was opened through to Bethlehem in 1857, and subsequently connection has been had with the Lehigh Valley Railroad and extension of lines in Northern Pennsylvania, together with the line known as the Bound Brook route to New York. The passenger depot remained at Front and Willow Streets until about 1864, when it was removed to Germantown Avenue and Thompson Street. This was not a very convenient place, and was subsequently abandoned, a very large and commodious depot having been erected at Berks and American Streets, from which the locomotives could be run without interference upon the unobstructed tracks northward. Soon after the company was established a lot of ground on the north side of Walnut Street, west of Fourth, was obtained for the purposes of a main office, and a fine large building with a brown stone front erected there.

The North Pennsylvania Railroad, as has been stated, is now a part of the Reading Railroad system, and since January, 1857, Franklin A. Comly, of this city, has been its president. Mr. Comly is descended from Henry and Joan Comly, of Bedminster, near Bristol, England, who came over with Penn in 1682, bringing with them their son Henry. The elder Comly, who was a weaver by trade, bought and set-

<sup>1</sup> See vol. i. p. 707.

tled upon a tract of five hundred acres in Warminster, Bucks Co., Pa., where he died in March, 1684. His son Henry married, on Aug. 17, 1695, Agnes, daughter of Robert and Alice Heaton, and two years later purchased from his father-in-law three hundred acres of the estate called Manor of Moreland. Naming his new acquisition Green Briar Spring, he made it the homestead of the family. Their children were Mary, born 1699; Henry, born 1702; Robert, born 1704; John, born 1706; Joseph, born 1708; Walter, born 1708; Agnes, born 1715; Isaac, born, 1717; and Grace, born 1721.

Henry, the second child, married, in 1728, Phœbe, daughter of Joseph Gilbert, and settled on the Green Briar Spring homestead. He died in 1772, aged seventy years, and his wife in 1773, aged seventy-two years. They had eight children, of whom Jonathan and Joshua were twins. Joshua Comly married Catharine Willett, and the offspring of the union was twelve children. One of their sons was James Comly, born Nov. 23, 1787, who married Eliza, daughter of Samuel Ayres, of Huntingdon Valley. They resided for some time at Ashton's mill, now known as Walton's mill, on the Pennypack. This property was sold by James Comly in 1831, when he purchased a farm near the Fox Chase, and lived on it until his death, which occurred in 1837. He was a member of the Pennsylvania Legislature, and a justice of the peace.

Franklin A., son of James and Eliza Comly, was born March 12, 1813, at the family residence on the Pennypack, now known as Bethayres. After passing through the rural schools, he received a higher education at an academy in Philadelphia, which stood on Seventh Street, south of Chestnut, the present site of the *Press* building. At seventeen years of age he was apprenticed to Robert A. Parrish, who kept a hardware-store at the old number of 238 North Third Street, in the district of the Northern Liberties. At manhood he was admitted as a member of the firm, and he also accepted the agency of a Sheffield (England) cutlery hardware-factory, whose goods it was desired to establish a market for in this city. In 1844, Mr. Comly became connected with the mining and shipping of coal, and was elected president of the Buck Mountain Coal Company, whose mines were situated in what is now Carbon County. In January, 1857, he was chosen president of the North Pennsylvania Railroad Company, which position he has now continuously filled for more than twenty-seven years. He has other and almost equally as important business interests, being president of the Longdale Iron Company of Virginia, treasurer of the Andover Iron Company of Phillipsburg, N. J. (of which he was one of the incorporators), and director in the Glendon Iron Company of Easton, Pa., the Allentown Rolling-Mills, East Broad Top Railroad Company, Cranberry Iron and Coal Company of North Carolina, East Tennessee and Western North Carolina Railroad Company, the Hi-

bernia Mine Railroad Company, the Pennsylvania Fire Insurance Company, and the Delaware and Bound Brook Railroad Company, of which Edward C. Knight is president, the building of which established a new line from this city to New York.

**Lehigh Valley Railroad.**—The Lehigh Valley Railroad, although no part of its tracks are in Philadelphia, was naturally the outcome of the great enterprises upon the Lehigh River and the anthracite regions in the neighborhood of Mauch Chunk began by Josiah White, Erskine Hazard, and George F. A. Hauto, in 1817, for the development of the coal trade, which afterward led to the establishment of the Lehigh Navigation Company. Subsequently the canal navigation was not considered sufficient, and the scheme of a railroad was devised. The company was incorporated as the Delaware, Lehigh, Schuylkill and Susquehanna Railroad Company, by act of Assembly passed 21st of April, 1846. Sufficient stock was subscribed for in the course of fourteen months to justify the Governor in issuing letters patent on the 20th of September, 1847. The road was not commenced by a survey of the route until the autumn months of 1850. Work in grading commenced in the spring of 1851. On the 7th of January, 1853, the name of the company was changed by act of Assembly to The Lehigh Valley Railroad Company. The work was not finished until the 24th of September, 1855. Up to this time the president of the company had been the Hon. James M. Porter, and the office was at Easton. In the beginning of 1856 the majority of the stockholders resolved that it was to the interest of the company to remove the office to Philadelphia. Judge Porter then resigned the presidency, and was succeeded by William M. Longstreth, elected on the 3d of February, 1856. He held the office for three months, and was succeeded, May 13th, by J. Gillingham Fell, who held the office for several years, and was succeeded by Hon. Asa Packer, a large owner of the stock. The office was established at No. 412 Walnut Street for some years, but was finally removed to the building formerly occupied by the Pennsylvania Railroad Company, at Third and Willing's Alley, after the latter had removed to Fourth and Willing's Alley.

Charles Hartshorne, the vice-president of the Lehigh Valley Railroad Company, was born at Philadelphia, Sept. 2, 1829. He is a son of the late Dr. Joseph and Anna Hartshorne, and a descendant in the seventh generation from Richard Hartshorne, who settled in New Jersey in 1665, nearly twenty years prior to Penn's settlement on the Delaware. His grandfather, William Hartshorne, of Alexandria, Va., was treasurer of the first Internal Improvement Company in this country, of which Gen. Washington was president.

Mr. Hartshorne was educated at Haverford College and at the University of Pennsylvania, graduating from the latter in the class of '47.

Engraved by Samuel Garrison, Phil<sup>a</sup>

F. A. Bondy  
" "

Yours truly  
Chas. Bartlow

Mr. Hartshorne's early tendencies were in the line of railroad enterprises, which began to take a strong hold upon the attention of capitalists and of the public about the time of his emergence from college life into the more practical experiences of business and public affairs. Having embarked in railroad interests, Mr. Hartshorne has continued therein to the present time as an active and influential participant in various important transportation movements. In 1857 he became president of the Quakake Railroad Company; in 1862 he was chosen president of the Lehigh and Mahanoy Railroad Company; in 1868 he was elected vice-president of the Lehigh Valley Railroad Company, and in 1880 was elevated to the presidency, but in January, 1888, resumed the position of vice-president to make room for a son of the late Judge Packer, whose estate holds a controlling interest in the company. In addition to his important railroad interests, Mr. Hartshorne is connected with a number of commercial organizations, notably the Provident Life and Trust Company and the Western National Bank, in each of which he is a director.

He is also officially connected with a number of public enterprises of an educational and charitable character. Among such may be mentioned Haverford College, Bryn Mawr College, and the Pennsylvania Hospital, of each of which he is a member of the board of managers.

Although engaged in a number of enterprises of great magnitude, and burdened with a multiplicity of responsible duties, Mr. Hartshorne has found time to indulge in a considerable amount of domestic and foreign travel, having visited Europe in the years 1852, 1868, and 1882.

On the 8th of June, 1859, Mr. Hartshorne was married to Miss Caroline Cope Yarnall, a daughter of Edward Yarnall and a granddaughter of Thomas P. Cope. As a result of this alliance there have been five children,—two sons and three daughters.

**Pennsylvania Railroad.**—The aim and advantage of railroads has been said to be "to obtain with the minimum expenditure of power the maximum result of speed, draught, and safety in the carriage of passengers and freight." The Pennsylvania Railroad has, to a greater extent than any other, attained that "*maximum result*" first as to speed. In the month of June, 1876, a railway "trip across the continent," from the Atlantic Ocean to the Pacific, was completed in the remarkably short time of eighty-three hours, fifty-nine minutes, and sixteen seconds,—less than three and a half days.<sup>1</sup>

<sup>1</sup> The following is the record of that unequalled achievement of the Pennsylvania Railroad:

"Left Jersey City, on the west bank of the Hudson River, opposite New York City, at 12.58 A.M., railroad time, June 1st, by way of the Pennsylvania Railroad and its connections; arrived at Pittsburgh at 10.58 A.M. same day; Chicago, at 10 P.M. same day; Council Bluffs, at 10 A.M. on 2d instant; Ogden, at 10.30 A.M. on 3d instant; and San Francisco, at 9.29 A.M. on 4th instant, or 12 o'clock 32 minutes P.M., New York time.

This achievement for distance and time has never been equaled, and the Pennsylvania Railroad stands pre-eminent for speed. Second, as to great increase of draught. It was stated about 1857 that experiments on the Massachusetts railroads showed that the cost of merchandise transportation was 3.095 cents per ton per mile, with an average speed of ten miles an hour. In 1881 the Pennsylvania Railroad moved 18,229,365 tons at a charge of .779 cents and at a cost of .437 cents per ton per mile. Third, as to increase of safety. In the period from 1834 to 1840 there were 74 persons killed and 2073 wounded while traveling by horse-coaches in France, while not one passenger was either killed or wounded, and only three employes wounded out of 1,889,718 passengers who traveled 316,945 miles over French railways. Unfortunately, there are no statistics of "killed and wounded" furnished by American railways, but as, according to Dr. Lardner, the chances of a passenger meeting with a fatal accident in traveling one mile on a railroad are 65,363,735 to 1, and of his meeting with bodily injury the chances are 8,512,486 to 1, and also as 366,036,923 passengers must travel one mile in order to cause the death of one railroad employe, the 9,077,714 passengers transported by the Pennsylvania Railroad in 1881 incurred very little risk of either death or bodily injury while in the cars of that company. The great care and precaution taken by that company for the safety of the traveling public is seen in the strength and durability of its engines and cars, in the construction of its tracks, and in the watchfulness that always supervises the running of its trains.

This railroad company grew out of the mixed railroad and canal system constructed by the State between Philadelphia and Pittsburgh. From 1834 to 1845 the State system continued to illustrate its disadvantages until public sentiment was thoroughly educated to the fact that the great object of through freight and travel was not to be obtained by the mixture of two incongruous systems. A canal all the way or a railroad all the way was found to be necessary to meet the competition of the Erie Canal at the north, and of the Baltimore and Ohio Railroad at the south. The agitation for a continuous railroad from Harrisburg to Pittsburgh began to take definite shape at the convention of the 6th of March, 1838, at

"Distance from New York to San Francisco, 3317 miles.

"Number of hours from New York to San Francisco, 83 hours, 59 minutes, 16 seconds.

"Average speed per hour, 39 $\frac{1}{2}$  miles.

"Distance from New York to Pittsburgh, run without a single stop on Pennsylvania Railroad, 444 miles.

"Number of hours from New York to Pittsburgh, Pennsylvania Railroad, 10 hours and 5 minutes.

"Average speed per hour, Pennsylvania Railroad, 44 miles.

"Maximum speed on Pennsylvania Railroad, per hour, 62 miles.

"Minimum speed on Pennsylvania Railroad, per hour, 25 miles.

"Average speed of Pittsburgh, Fort Wayne and Chicago Railway, per hour, 48 miles.

"Average speed on Chicago and Northwestern Railway, per hour, 45 miles."

Harrisburg, at which twenty-nine counties were represented. Robert T. Conrad, of Philadelphia, presided, and the subject was thoroughly and ably discussed, with the effect of securing a survey of a route under the authority of the State. Hother Hage, an engineer of distinction, made the survey through the counties of Franklin, Bedford, Somerset, Westmoreland, and Allegheny, and the following year the canal commissioners appointed Charles L. Schlatter to survey similar lines from Harrisburg to Pittsburgh. These surveys demonstrated the practicability of a continuous railroad between Harrisburg and Pittsburgh. But it was not until 1846 that the subject took a practical shape. "On the 13th of April of that year the act to incorporate the Pennsylvania Railroad Company was passed. The capital stock of the company was fixed at \$7,500,000, with the privilege of increasing the same to \$10,000,000. The company was authorized to build a road to connect with the Harrisburg, Portsmouth, Mount Joy and Lancaster Railroad, and to run to Pittsburgh, or other place in the county of Allegheny, or to Erie, as might be deemed most expedient. The act also provided that in case the company should have \$3,000,000 subscribed, and \$1,000,000 actually paid into its treasury, and have fifteen miles of its road under contract for construction at each terminus of its road prior to the 30th of July, 1847, the law granting the right of way to the Baltimore and Ohio road from Cumberland, Md., to Pittsburgh, should be null and void.

All these conditions were complied with, and on the 25th of February, 1847, Governor Shunk granted a charter to the company, and on the 2d of August he issued his proclamation declaring the privileges granted to the Baltimore and Ohio Railroad abrogated. This action created considerable dissatisfaction in Alleghany and the other southwestern counties of Pennsylvania, and it required the lapse of time to satisfy those sections that it was for their advantage, as well as for the best interests of the State of Pennsylvania. The energy with which the work of construction of the Pennsylvania Railroad was constructed and the careful manner in which its route was located soon changed the antagonism of Western Pennsylvania to the East to friendship and sympathy."<sup>1</sup> Books of subscription were opened on the 22d of June, 1846; committees of the originators of the enterprise visited the citizens of Philadelphia, and obtained subscriptions to a large amount; public meetings were held; the press was active in advocacy of the great work. Two thousand six hundred subscriptions were reported in the first annual report of the directors, of which nearly eighteen hundred were for five shares and under. J. Edgar Thomson, afterward president of the company, was appointed chief engineer of the road early in 1847, and, with Edward Miller, William B. Foster, Jr., S. W. Miffin, G. W.

Leuffer, Strickland Kneass, Edward Tilghman, Oliver Barnes, located and supervised the construction of the road.

The grading of the first twenty miles of road west of Harrisburg was let on the 16th of July, 1847, and fifteen miles east from Pittsburgh was also put under contract on the 22d of the same month. Thus the work was pushed east and west vigorously. On the 26th of November of the same year forty miles additional were let, carrying the eastern portion under contract to Lewistown. During the same year the city of Philadelphia subscribed two million five hundred thousand dollars to the stock of the company, and the next year the county of Allegheny subscribed one million dollars. Sixty-one miles of the road from Harrisburg to Lewistown were opened Sept. 17, 1849, and one year later the "Mountain House," one mile east of Hollidaysburg, was reached, and connection made with the State Portage road, over the Alleghany Mountains, and thus the work progressed until, on the 10th of December, 1852, the cars were run through from Philadelphia to Pittsburgh. The Eastern and Western Divisions were connected by using the Portage road over the mountains. This connection continued until Feb. 15, 1854, when the inclined planes of the Portage road were abandoned for the company's own road. Before the completion of the road, in 1854, the chief engineer, J. Edgar Thomson, was elected president on the 2d of February, 1852. J. Edgar Thomson was born in Delaware County, Pa., on the 10th of February, 1808. He was the son of John Thomson, who, in 1809, laid out and constructed the first experimental railroad in the United States, extending from Leiper's stone-quarries, in Delaware County, Pa., to the Delaware River. John Thomson, father of J. Edgar Thomson, was a man of extraordinary energy and ability. His ancestors came from England with William Penn, and settled in the vicinity of Philadelphia. He attained a high reputation as a civil engineer toward the end of the last century, and was employed in the construction of some important works, among which was the Delaware and Chesapeake Canal. For several years he was in the service of the "Holland Land Company," an organization which controlled much of the land in Northwestern Pennsylvania, and while thus engaged he, in 1793, encamped at Presque Isle (now Erie), and, with one assistant, without other tools than usually attend an engineering expedition, built the schooner "White Fish," which he conveyed by ox-teams from the Falls of Niagara to Lake Ontario, thence to where Oswego now stands, and up a small river to Oneida Lake, passing through which, and carrying his vessel again by land to the Mohawk, he followed that stream to the Hudson, and thence to the Atlantic Ocean. From this he entered the Delaware Bay and reached Philadelphia, when his schooner was taken to Independence Square, where it remained until destroyed by decay. This was the first vessel

<sup>1</sup> "Pennsylvania Railroad," etc., by William B. Sipes.

*J. Edgar Thompson*

that ever passed from Lake Erie to New York and Philadelphia. Mr. Thomson died in 1842.

The son, after the requisite preparation received from his father, commenced his professional career, in 1827, in the engineer corps employed upon the original surveys of the Philadelphia and Columbia Railroad, having received his appointment from the secretary of the Board of Canal Commissioners of Pennsylvania. He continued in this service until 1830, when, the State failing to make the necessary appropriations for the continuance of the construction of the road, he entered the service of the Camden and Amboy Railroad Company as principal assistant engineer of the Eastern Division. After leaving their service he visited Europe to examine the public works of that continent, and shortly after his return, in 1832, was appointed chief engineer of the Georgia Railroad, extending from Augusta to Atlanta, in that State, with a branch to Athens, in all two hundred and thirteen miles of railway,—the longest amount of railway at that time under the control of one company in the United States. He continued in that service, as chief engineer and general manager, until his unsolicited election to the position of chief engineer of the Pennsylvania Railroad.

Mr. Thomson entered upon his duties as chief engineer of the road in the early part of 1847. The directors say, in their first annual report, that "in the selection of a chief engineer the board was fortunate in obtaining the services of Mr. John Edgar Thomson, a gentleman of enlarged professional experience and sound judgment, who had obtained a well-earned reputation upon the Georgia road, and in whom the board place great confidence."

On the 2d of February, 1852, Mr. Thomson was elected president of the company, and it was in that capacity he saw completed many important enterprises which he had inaugurated as chief engineer. He was continued in the position, without interruption, up to the time of his death, devoting to the great enterprise twenty-seven years of his life, and bestowing upon it an amount of care and attention never given by any other American to a similar work.

His reputation was established South as well as North, and he confessedly stood at the head of his profession. He did more than any one man who ever lived to establish, create, and perfect the railway system of the American continent.

Occupying the important business position he did, it was natural that Mr. Thomson's influence should be sought for many enterprises. So far as these were for the general good, he cheerfully promoted them. One of his favorite objects was the thorough development of the mineral resources of Pennsylvania, in the value of which he had unlimited faith. Every coal and iron field was thoroughly understood and appreciated by him; and if the great corporation over which he presided could facilitate its development,

the work was promptly done. The American Steamship Company of Philadelphia was largely indebted to his sagacity and unwavering interest in the business of the city for its existence. As a member of the Park Commission of Philadelphia, he gained the esteem of his associates, who, after his decease, placed on record a tribute to his high character as an engineer, a citizen, and a gentleman of many accomplishments.

Burdened as he was by such a multitude of duties, and of so arduous and complex a character, it is not surprising that the strain of such labor, continued for nearly half a century, brought his life to a close before he had numbered the threescore and ten years allotted to mankind. While his intellectual faculties remained unclouded, and his strong will evinced no signs of relaxing, yet the human machinery that for near fifty years they had propelled in the wearing grooves of railroad life faltered in its work, and, on the 27th of May, 1874, death came to release him from the turmoil and exactions which had so long harassed him.

Noticeable traits of Mr. Thomson's character were reticence and taciturnity. Devoting all his life and his great natural abilities to the cultivation of one set of ideas, his accumulation of professional information was enormous. This vast knowledge made him exceedingly cautious and careful,—conservative in his ideas, and generally slow to execute. But when his conclusions were reached, and the emergency required it, he became grandly enterprising, and permitted no obstacle to stand in the way of success. His thoughts and opinions were rarely made known, while he displayed infinite patience in listening to the views, desires, hopes, fears, and plans of others. Actions spoke for him, not words. He absorbed the knowledge of others, weighed, considered, and digested it thoroughly, and reached conclusions by cool, methodical reasoning. When convinced, he knew no hesitancy or doubt. The determination was as fixed as the laws of nature, and success appeared to come as a result of his faith. His conception of the future of American railroads seems now almost supernatural. For twenty years he marked out and reiterated in his annual reports the plan of the Pennsylvania Railroad Company, and he never deviated from that plan,—pursuing it persistently, patiently, and faithfully until it was fully accomplished. To such a man system was everything; and there can be no question that much of the success attending the Pennsylvania Railroad was owing to the almost military rigidity with which its workings were arranged and managed under his inspiration. He had that great faculty of a general,—a good judgment of character and capabilities. In this he was rarely mistaken; and, his confidence once placed, he was loyal to its recipients, never abandoning or failing to sustain them. This friendship was undemonstrative except in acts. He had few intimate associates outside of his own family, and was utterly indifferent to popular applause. His affections

seemed centred in the great corporation he controlled, and whatever conduced to the success of that, present or remote, was the thing to be done,—the end to be attained.

The peculiar bent of his mind is illustrated by the fact that the larger portion of his fortune was devised for the foundation of an institution for the benefit of a class of people connected with the railways he had been instrumental in creating.

This charity, which was opened Dec. 4, 1882, is called St. John's Orphanage. It has been started in two houses, Nos. 1720 and 1722 Rittenhouse Street, and in a modest way is doing active good. It is open to receive the daughters of employés who have died in the service,—first, of the Pennsylvania Railroad; secondly, of the Georgia and Atlantic Railroad; and then of any railroad in the United States. The girls are taken from the age of six to ten, given free of charge a home in the orphanage and a plain education, being taught household work and sewing until they are sixteen, when they will be put out to service or taught a trade. It is intended to open a boarding-house for those who have left the orphanage, that the girls may have protection while they are learning to support themselves.

After his death various public bodies united in posthumous tributes to his sagacity and enterprise, leaving no room for doubt as to the respect and esteem his quiet, unobtrusive services had gained in the community where so many years of his laborious life were passed.

Under the supervision and direction of Mr. Thomson, as engineer and as president, the Pennsylvania Railroad was constructed in a superior manner, and has become the most perfect road in America. It was constructed to overcome the barrier of the Alleghany Mountains by a gradual ascent, of which the heaviest gradient, to Altoona, does not exceed twenty-one feet to the mile. A short distance west of Altoona this gradient increases to ninety-five feet per mile on straight lines, and to eighty-two feet on curves, until it reaches the culminating point at the west end of the great tunnel, at an altitude above tide of two thousand one hundred and sixty-one feet. Its maximum gradient is twenty-one feet per mile less than that of the Baltimore and Ohio Railroad.

The completion of the through line of railroad from Philadelphia to Pittsburgh induced the people of the State to rid themselves of the burden of the unprofitable improvements constructed by the State at an enormous cost, and supported and maintained by taxation rather than by their revenues. The heavy debt incurred in the construction of the State line had been borne for twenty-five years, and there was no prospect of any relief therefrom by the income from these works. It was felt that the sacrifice must ultimately be made, and, this having been determined, it was obvious that the sooner the sale was complete the better for the taxpayers. Individual enterprise

had not secured to the State benefits and advantages which the State improvements had failed to obtain, and they could be disposed of without the loss of transportation, and at the same time relieve the State from an unprofitable investment. In 1854 the Legislature enacted a law providing for the sale of the State line, but the provisions of the act were such that no purchaser could be found. Again, in 1855, another law was passed, which also proved ineffectual. An unwise policy had imposed a tonnage tax upon all traffic on the Pennsylvania Railroad, against which the company had been protesting. This tax, like most all others, was transferred to the goods shipped over the road, and was paid by the people in the shape of increased freight. This fact brought to the aid of the company the influence of trade, and together the demand for repeal became effectual. In 1837, the commonwealth again determined to sell the State works, and fixed a minimum price of seven million five hundred thousand dollars, and provided that if the Pennsylvania Railroad would purchase at that price, and pay also one million five hundred thousand dollars additional, the tonnage and all other taxes should stand repealed. Under this act the company became the purchaser, and by proclamation of the Governor, of Aug. 1, 1857, the main line of the State works became the property of the Pennsylvania Railroad Company. The Supreme Court of the State pronounced that provision of the act of 1837, which related to the general taxes imposed upon the railroad company, to be unconstitutional.

The company thus found itself the owner of the State improvements, and still subject to onerous taxation imposed by the State, and the company refused to pay the tonnage tax, but held it subject to judicial decision or amicable adjustment. This was not effected until the passage of the act of March 7, 1861, for the commutation of the tonnage tax. This act provided that the railroad company was to pay in annual installments the sum of thirteen million five hundred and seventy thousand dollars in full for the purchase of the main line, and in consideration of the repeal of the tonnage tax. The tax retained by the railroad company pending the settlement of the disputed question, from 1857 to 1861, amounting to eight hundred and fifty thousand dollars, was to be used in aiding eleven different local railroads in the State. Thus was settled a controversy which for six years had existed between the State and the company, and by the settlement the State was enabled to rapidly extinguish her indebtedness, and to relieve her people from burdensome taxation, and the railroad company was freed from a tax imposition which subjected it to the mercy of its competing rivals.

In 1858, Col. Thomas A. Scott was appointed general superintendent of the road. It is not often that two exceptionally able men are successfully called to the administration of the same high trust and the discharge of the same difficult duties, and it is less frequent

that the latter takes up the work of the former and carries it forward, enlarging, developing, and improving. The Pennsylvania Railroad was fortunate in finding J. Edgar Thomson at the right time, but it was equally fortunate when, losing him, it could yield the helm to Thomas A. Scott. This remarkable man was born in the township of London, Franklin Co., Pa., on the 28th of December, 1824. His early educational advantages were only those derived from the village school, and were, necessarily, of a limited character. His father having died when the son was only ten years old, the young lad was compelled to forego all further attendance at school, and, at the early age mentioned, began to earn his livelihood. After occupying a number of minor clerical positions, he commenced his long and eminently successful railroad career on the main line of State improvements Aug. 1, 1841, when he was appointed clerk to the collector of tolls at Columbia. From there he was, in 1847, transferred to the collector's office, at Philadelphia, as chief clerk. In 1850 he entered the service of the Pennsylvania Railroad Company as station-agent at Duncansville, the then western terminus of the road, from whence he was transferred to the Western Division as its superintendent. It was there he displayed that wonderful executive ability and indomitable energy which made him famous wherever American railroads are known. During Col. Scott's management of the road as general superintendent, many improvements were introduced, and the transportation facilities of the company greatly increased.

In 1860, William B. Foster, Jr., the vice-president of the company, died, and on the 4th of March Col. Scott was elected to succeed him.

Col. Scott had displayed such rare executive capacity in the discharge of the various duties incident to his connection with the Pennsylvania Railroad that, at the outbreak of the Rebellion, Governor Curtin called him to his assistance, and placed him in charge of the transportation of troops rallying by thousands at the call of the President. Col. Scott in a few hours had constructed a telegraph line to the executive chamber in the capitol, and, seated at the instrument, directed the movement of trains bearing troops from the time they entered Pennsylvania until they left her borders. The system was perfect, and there was no delay until Mason and Dixon's line was reached.

Unfortunately, however, Maryland, and particularly Baltimore, was divided in sentiment on the issues involved in the contest, and the element sympathizing with the South soon determined to interrupt the passage of Northern troops to Washington. This feeling first exhibited itself in Baltimore by attacks on regiments passing through the city, and was followed soon after by the burning of the bridges on the Northern Central Railroad. This road had been relied upon by the government as the principal channel for receiving reinforcements from the North and

West, and on the 22d of April, 1861, the Secretary of War had sent the following telegram to Col. Scott, at Harrisburg:

"DEAR SIR,—This department needs at this moment a man of great energy and decision, with experience as a railroad officer, to keep open and work the Northern Central Road from Harrisburg to Baltimore, for the purpose of bringing men and munitions to this point.

"You are to my mind the proper man for this occasion and this duty. Will you report to me to-morrow morning?"

"Very respectfully,

"SIMON CAMERON,

"Secretary of War."

To this Col. Scott replied that he was then serving on the staff of Governor Curtin, and could not, in the judgment of the Governor, be at that time spared from Harrisburg. He expressed himself willing to perform any duty required of him in the emergency, and if the Governor would relieve him he would go to Washington, or to any other point where he could be most useful.

The destruction of the Northern Central Railroad rendered it indispensable that some other channel of communication with Washington should be opened, and the repeated calls for Col. Scott's assistance in this work induced Governor Curtin to relieve him from duty at Harrisburg. In company with one or two friends he made his way, by private conveyance, through Maryland and Virginia, and reported for duty to the Secretary of War. He was instructed by that officer and the President to open a line, by way of Annapolis, to Philadelphia and the East and North. The following order was issued, dated the 27th of April, 1861:

"TO WHOM IT MAY CONCERN.

"Thomas A. Scott has been appointed to take charge of the railways and telegraphs between Washington City and Annapolis. Parties in charge thereof will place Mr. Scott in possession, and in future conform to his instructions in all matters pertaining to their management.

"SIMON CAMERON,

"Secretary of War."

The Pennsylvania Railroad Company placed all its resources at the disposal of Col. Scott to accomplish the work he had undertaken,—a work upon which, in the judgment of the President and others in responsible positions, the safety of the national capital depended,—and, calling to his assistance men whom he knew as efficient railroad managers, he completed, in connection with Mr. Felton, president of the Philadelphia, Wilmington and Baltimore Railroad, as if by magic, a line by way of Perryville and Annapolis to Washington. President Lincoln took a deep interest in the opening of this line, and very soon after Col. Scott had demonstrated to him the practicability of constructing it, he met that gentleman and asked him how the work progressed. "The road is completed," replied the colonel. "Completed!" he exclaimed, in astonishment. "When may we expect troops over it?" "A train is already in with a regiment, and others are on the way," was the response. "Then, thank God! we are all right again!" ejaculated the President.

Operating in a military capacity, in connection with the War Department, it was soon found essential that Col. Scott should possess military rank, and he was therefore mustered into the service of the United States, as colonel of the District of Columbia Volunteers, on the 3d of May, 1861. His name stands first upon the roll preserved in the War Department, and is followed by others that have since become historic. Following his appointment as colonel came an order extending his jurisdiction and powers, dated the 23d of May, as follows :

"TO ALL WHOM IT MAY CONCERN.

"Col. Thomas A. Scott has been appointed to take charge of all government railways and telegraphs, or those appropriated for government use.

"All instructions in relation to extending roads, or operating the same on government account, must emanate from his department.

"SIMON CAMERON,  
"Secretary of War."

Col. Scott continued to perform the duties required by this appointment until Aug. 1, 1861, when he was appointed Assistant Secretary of War,—being the first man ever appointed to that position. His wonderful faculty for the dispatch of business will be remembered by thousands who, during that exciting period, visited the War Department. He was never confused, never at a loss as to what to do or how to do it, and his courtesy to all who approached him made him many and lasting friends in all ranks of life.

While chaos was giving way to order in and around Washington, confusion prevailed in other fields of military operations, and on the 20th of January, 1862, Col. Scott was sent by the Secretary of War to various points in the West, with specific instructions looking to the organization, equipment, and transportation of various bodies of troops. In compliance with these instructions, Col. Scott visited all the points designated, organized thoroughly the means of transportation, and materially assisted the great States of the Northwest in preparing their volunteers for actual service. He returned to Washington on the 14th of March, 1862, having traveled near five thousand miles. Immediately after his return he went to Fortress Monroe to facilitate the movement of the Army of the Potomac, and on the 26th of March again proceeded to Cairo, under orders from the Secretary of War, to perfect the military transportation on the Western waters. He returned to the War Department in May, having traveled over ten thousand miles in three months in the performance of a vast amount of arduous official service.

On the 1st of June, 1862, Col. Scott resigned his position as assistant secretary, and in a letter of June 1st, addressed to Col. Scott, the great war secretary, Edwin M. Stanton, said,—

"In taking leave of you, in consequence of your resignation of the office of Assistant Secretary of War, it is proper for me to express my entire satisfaction with the manner in which you have discharged your duties during the whole period of our official relations. Those duties have been confidential and responsible, requiring energy, prudence, and discretion, and it gives me pleasure to say that to me you have proved to be, in every particular, an able and valuable assistant."

Having left the service of the United States government, Col. Scott resumed his duties as an officer of the Pennsylvania Railroad. But his abilities were of too great value to the War Department to permit of a permanent severance of his relations with it, and on the 24th of September, 1863, Mr. Stanton recalled him to his assistance, appointing him colonel and assistant quartermaster, and ordering him to report to Gen. Hooker for "special service" on his staff. The service performed by Col. Scott under this appointment consisted in forwarding Hooker's and Howard's corps to Chattanooga with wonderful rapidity. He connected railroads by improvised tracks, utilized the resources placed under his control, and poured almost a ceaseless stream of cars through half a dozen States, until nearly fifty thousand men, with their artillery, cavalry, and complete field equipment, were safely deposited where they were most needed. With this service his connection with the government terminated, and he again resumed his railroad duties. He had at no time severed his connection with the Pennsylvania Railroad, but had retained his position as vice-president during all the period of his absence, and it was with feelings of gratification that he returned to duties and associations dearer to him than any political honors.

Col. Scott remained in the position last named until the death of the president of the road, J. Edgar Thomson, on the 27th of May, 1874, soon after which date he was chosen to fill the vacancy. It was largely owing to his liberal and efficient direction of affairs that the Pennsylvania Railroad attained its present high position as one of the leading trunk lines of the country.

Col. Scott, although burdened with the multifarious duties incumbent upon him by reason of his position as the head of the Pennsylvania Company, was also heavily interested in various other railroads and kindred enterprises. Notably among these collateral interests was the Texas and Pacific Railroad, which, to Col. Scott, proved an extraordinary financial success.

In the discharge of the vast corporate duties imposed upon him, Col. Scott was eminently a man of system. His movements were rapid and far-reaching, yet thoroughly methodical. He was thus enabled to perform an almost incredible amount of arduous labor without serious difficulty. But finally the burdens became very onerous, and the mental and physical strain became intensified. At last, in the fall of 1878, acting upon the positive instructions of his physicians, he went abroad, with a view to the restoration of his impaired constitution. He never fully recovered, however, but continued in bad health, and on the 1st day of June, 1880, he resigned the presidency; finally, on the 21st day of May, 1881, his well-rounded and notable career was brought to a close by his death.

In 1851 the company established its offices for the

*Engraved by Samuel Sartain Phila<sup>a</sup>*

THOMAS A. SCOTT.

use of the president, directors, and other officers at No. 70 Walnut Street, above Third, on the south side. In 1859 the Willing mansion and lot, at the southwest corner of Third Street and Willing's Alley, was secured for that purpose, and a magnificent building of drab sand there erected. After some years this building was found to be insufficient; a fine building, stately and excellent for the purpose intended, was erected at the southeast corner of Fourth Street and Willing's Alley, which has since been enlarged by the addition of adjoining buildings. In 1853 the company bought the lot bounded by Market, Thirteenth, and Juniper Streets, extending southward to an alley near Chestnut Street. Here an extensive range of one-story buildings were erected for a freight station, with connection with tracks on Juniper and Market Streets; after some years a freight station was established upon Market Street, between Fifteenth and Sixteenth, north side; and a very large one was built on the block of ground bounded by Walnut, Dock, and Water Streets, and Delaware Avenue.

In 1854 the company secured the building at the southeast corner of Eleventh and Market Streets, previously occupied as a depot by the Philadelphia, Wilmington and Baltimore Railroad Company, and established there its principal passenger station. In 1864 this building was abandoned, and a very plain passenger depot erected on the ground of the company at Thirtieth and Market Streets. This after some years' service gave way to a much finer building at Thirty-second and Market Streets. In 1880 the company bought the properties on the south side of Filbert Street, extending from Merrick [now Broad] Street out to Twenty-first, and erected there an elevated railroad constructed upon brick arches, and extending from Fifteenth Street. A very large and elegant passenger depot in the Gothic style, of brick, terra-cotta, and granite, was erected on Merrick Street. The first passenger train, a formal opening of the road, ran Feb. 16, 1881, and the first freight train May 3, 1881.

Upon the death of Col. Thomas A. Scott, Mr. George B. Roberts was elected to the presidency of the company. The high standard of efficiency which has always characterized the Pennsylvania Railroad has been maintained by Mr. Roberts during the term of his presidency. About the time that Mr. Roberts was elected to the presidency Mr. Edmund Smith was promoted to the first vice-presidency. Mr. Smith was born in Philadelphia in 1829, and entered the service of the company in the engineer department in June, 1847, and was engaged in the surveys and locations of the road until 1852, when he was transferred to Philadelphia to take charge of the building of stations and shops in the city. In 1855 he was elected secretary of the board of directors, and discharged the duties of that position until 1869, when he was elected third vice-president. During a part of the years 1873 and 1874 he was treasurer of the company.

In 1874 he was elected second vice-president, which position he filled until promoted to his present place. For thirty-seven years he has been connected with the company, rising gradually by merit and the intelligent and faithful discharge of duty. He has been longer in the service of the company than any other of its officers. His duties for a number of years have been in the supervision of its finances. The long service of Vice-President Smith has made him familiar with all the details of the vast business of the road.

The Pennsylvania Railroad Company in 1862 leased for a period of nine hundred and ninety-nine years the Philadelphia and Erie Railroad. The track of the Pennsylvania Railroad had been doubled, a connecting link with the Delaware River below Philadelphia had been built, its depots enlarged, its curves straightened, its wooden bridges replaced by stone and iron structures, and modern improvements of every kind introduced. Steel rails began to be used in 1864, and their manufacture in this country encouraged, and improvements in their construction to adapt them to the climate and railroad system of the country introduced.

The importance of securing connecting lines west of Pittsburgh had engaged the attention of the management of the road from a very early period of its existence. The transit of the products of the Mississippi Valley had been diverted from Philadelphia to other cities, and over the roads of other States. The through trade and travel must be competed for if the Pennsylvania Railroad was to become more than a mere local road. To effect this end the system of aiding in the construction of lines west of Pittsburgh was begun, and continued until the Western connections of the road are most complete and extended, and its facilities for the expeditious and economic movements of passengers and freight are unsurpassed by any of its competitors.

The first of these Western roads to receive encouragement and assistance was the Pittsburgh, Fort Wayne and Chicago, which, running from the western terminus of the Pennsylvania Railroad at Pittsburgh to Chicago, the metropolis of the Northwest, was an essential link in the chain which was to bind together the Atlantic seaboard, the Mississippi Valley, and the Pacific Ocean. This road, after many difficulties, embarrassments, and even a suspension of work, was finally completed on the 25th of December, 1853, and a practical through line was then opened from Philadelphia to Chicago.

On the 7th of June, 1869, the Pittsburgh, Fort Wayne and Chicago Railroad was leased by the Pennsylvania Railroad for nine hundred and ninety-nine years. The lease embraced not only the main line, but also the Akron Branch, from Hudson and Millersburg, the New Castle and Beaver Railroad, the Lawrence Railroad, and the Massillon and Cleveland Railroad, as well as the Cleveland and Pittsburgh and the Indianapolis and St. Louis. The Pittsburgh

and Steubenville Railroad was purchased at auction Nov. 6, 1867, by the Pennsylvania, which road, commonly called the "Pan Handle Road," was promptly finished, and its checkered and by no means agreeable financial history ended by its absorption by the Pennsylvania. From this purchase arose by consolidation the Pittsburgh, Cincinnati and St. Louis, of which the Pennsylvania owns a majority of the stock. The Pittsburgh, Cincinnati and St. Louis owns lines to Indianapolis, Chicago, and State Line. These roads had previously been consolidated under the title of the Columbus, Chicago and Indiana Central Railroad, and as such were leased by the Pittsburgh, Cincinnati and St. Louis Railroad on Feb. 1, 1869. The Cincinnati and Muskingum Railroad, sold and reorganized in 1869, is now operated in the same interest. The St. Louis, Vandalia and Terre Haute Railroad, leased by the Terre Haute and Indianapolis Railroad, is operated jointly in the interest of the latter company and the Pittsburgh, Cincinnati and St. Louis Railroad. This last-mentioned road secured by lease of the 1st of December, 1869, the Little Miami Railroad, and on the 24th of March, 1870, the Erie and Pittsburgh Railroad was leased for nine hundred and ninety-nine years, and the Cleveland and Pittsburgh for the same period on the 25th of October, 1871. A controlling interest was at this time obtained by the Pennsylvania Railroad in the Jeffersonville, Madison and Indianapolis Railroad, extending from Indianapolis to Louisville, Ky., with branches to Madison and Cambridge, Ky., which gave a control of the bridge over the Ohio at Louisville, and offered to the lines of the Pennsylvania a direct connection with the railroad system of the Southwest.

The Chartiers Railroad, extending from Mansfield, on the Pittsburgh, Cincinnati and St. Louis, to Washington, Pa., was completed in 1871, the Pennsylvania holding a majority of the stock. Control was also obtained over the Mansfield, Coldwater and Lake Michigan Railroad, and similar arrangements were effected with the Cairo and Vincennes Railroad for the purpose of obtaining access to the trade of Arkansas and Southwestern Texas upon the completion of the Cairo and Fulton and the International Railroads. The bridge over the Ohio at Cincinnati, completed April, 1872, was built by means furnished by the Pennsylvania, which owns a majority of the stock and all the bonds of the bridge company. In 1866 the connecting railroad from Mantua, near Philadelphia, to Frankford, on the Philadelphia and Trenton Railroad, was built for the purpose of decreasing the heavy cost of passing its New York and Eastern trade through Philadelphia. In 1871 the Pennsylvania Railroad effected the lease of the railways and canals of the United Companies of New Jersey for nine hundred and ninety-nine years, which, with the Philadelphia and Trenton Railroad, are now operated as a part of the through line between New York and Pittsburgh, under the title of the United Railroads of New

Jersey, and are a division of the Pennsylvania. The lines leased are the Camden and Amboy Railroad and Transportation Company, incorporated Feb. 4, 1830; the Delaware and Raritan Canal Company, incorporated at the same time, and which, in 1831, was consolidated with the Camden and Amboy Railroad Company; the New Jersey Railroad and Transportation Company, incorporated on the 7th of March, 1832; and the Belvidere Delaware Railroad Company, incorporated March 2, 1836. These companies were authorized to consolidate their capital stock, or to consolidate with any other railroad or canal company or companies in New Jersey or otherwise, with which they are or may be identified in interest, or whose work shall form with their own continuous or connected lines; or make such other arrangements for connection or consolidation of business with any such company or companies, by agreement, contract, lease, or otherwise, as their directors may deem expedient. It was under these general powers that the above-mentioned lines were leased to the Pennsylvania Railroad. A connection with the Southern Atlantic States through Baltimore and Washington was acquired by the purchase of a controlling interest in the Northern Central Railway Company, which had its origin by a charter from the Maryland Legislature, under the title of the Baltimore and Susquehanna Railroad Company, on the 13th of February, 1838. In 1854, the Northern Central Railway Company was formed by the consolidation of various roads forming a line to Harrisburg, Pa. The control of the Northern Central opened to the Pennsylvania Railroad an outlet at Baltimore, and made possible an important connection with Washington City, which was realized in 1866, by means of the Baltimore and Potomac Railroad, an incomplete line which had been incorporated in 1833. Under the authority thus obtained the line to Washington City was opened in 1873, the connection in Baltimore being by means of a tunnel under nearly the whole length of the northern portion of the city.

In 1881 the Pennsylvania Railroad Company purchased a controlling interest in the Philadelphia, Wilmington and Baltimore Railroad Company. This latter company was the result of a consolidation, Feb. 5, 1838, of the Philadelphia and Delaware County Railroad, chartered by Pennsylvania, April 2, 1831, the Wilmington and Susquehanna Railroad, chartered by Delaware, Jan. 18, 1832, the Delaware and Maryland, chartered by Maryland, March 14, 1832, and the Baltimore and Port Deposit Railroad, chartered March 7, 1832. The line was completed in 1837, and the viaduct over the Schuylkill in 1838. The Southern Division forms a link between the main line and the Delaware Railroad, and originally consisted of the New Castle and Frenchtown Railroad, chartered Feb. 7, 1829, and opened in 1832, and the New Castle and Wilmington, chartered Feb. 19, 1839, and opened in 1834. Both of these roads were purchased—the first in 1840 and the latter in 1876—

*Edmund White*

by the Philadelphia, Wilmington and Baltimore. The West Chester and Philadelphia and the Philadelphia and Baltimore Central Railroads, both practically owned by the Philadelphia, Wilmington and Baltimore, were consolidated in 1881, and passed with the latter road into the possession of the Pennsylvania. By this purchase another line to Baltimore and the South Atlantic was assured to the Pennsylvania.

Thus extended East, West, South, and North, the Pennsylvania Railroad Company has under its control lines of communication with outlets at New York, Philadelphia, Baltimore, and Washington in the East; Chicago, Erie, Cleveland, Toledo, on the Lakes; St. Louis and the cities on the Mississippi; Louisville and the Southwest; Richmond and the South Atlantic; while running arrangements with other lines open to it the trade and traffic of every State and section of the Union, and carry its splendid equipments to the Pacific Ocean at San Francisco. For the better management of the vast extensions of this great corporation, and for a more harmonious control of its connecting leased lines, the Pennsylvania Company was incorporated, to which all lines west of Pittsburgh, with a single exception, were transferred on the 1st of March, 1837. The capital of the Pennsylvania Company was fixed at twelve millions of dollars, the Pennsylvania Railroad Company receiving eight millions of dollars, which fully covers the cost of all lines and leases transferred, with interest up to the date of transfer. This sum is preferred six per cent. stock, and participates in all profits of the company above six per cent. Other lines of railroad have been leased by the Pennsylvania Company, which have become feeders of the Pennsylvania Railroad Company. The Junction Railroad, from Gray's Ferry to Belmont, a distance of three and one-half miles, double track, connects the Philadelphia, Wilmington and Baltimore Railroad with the Pennsylvania. By means of this link the whole system of the Pennsylvania Railroad is connected,—its North and South line with its East and West line.

**Baltimore and Ohio Railroad.**—While the Baltimore and Ohio Railroad properly belongs to the history of another city, yet the active construction of another outlet for the trade, commerce, and manufactures of Philadelphia with the West and Southwest, now in progress by the Baltimore and Ohio Railroad, will, when completed, render that great corporation also a part of the facilities of transportation of the city of Philadelphia. With the completion of the Philadelphia Branch of the Baltimore and Ohio Railroad, another great trunk line of transportation will connect this city with the South, Southwest, West, and Northwest.

The value of the transportation, both of passengers and freight, which this city offers to railroads, is attested by the fact that the Baltimore and Ohio Railroad Company finds that its interest will be promoted

by constructing a competing line of railroad between Baltimore and Philadelphia, and onward to New York City.

The principal cause which led to the construction by the Baltimore and Ohio Railroad Company of an independent line from Baltimore to New York, through the city of Philadelphia, grew out of troubles, difficulties, and embarrassments which, in 1880, were interposed by the Pennsylvania Railroad to traffic facilities to the Baltimore and Ohio over the Junction Railroad at Philadelphia. The obstruction to free use of that connecting link between the railroads north and east of Philadelphia with the only line, the Philadelphia, Wilmington and Baltimore, to Baltimore, led to the formation by Robert Garrett, first vice-president of the Baltimore and Ohio Railroad Company, of a syndicate for the purpose of purchasing a controlling interest in the Philadelphia, Wilmington and Baltimore Railroad Company. The New Jersey Central, through its vice-president, Mr. Haven, and Robert Garrett, of the Baltimore and Ohio Railroad Company, were the active parties in that syndicate, by which, in February, 1881, it was announced that a controlling interest in the Philadelphia, Wilmington and Baltimore Railroad Company had been secured from Director N. P. Thayer, of Boston, where eighty-five per cent. of the stock of that company was held. This stock had been sold by Mr. Thayer to the syndicate at seventy dollars a share. The Pennsylvania Railroad immediately authorized Kidder, Peabody & Co. to offer a larger figure for the stock than that at which Mr. Thayer had contracted to deliver it to the representatives of the Baltimore and Ohio syndicate. A stop was thus immediately put to Mr. Thayer's delivery of stock, and a committee of stockholders, already appointed, was able very soon to offer to Kidder, Peabody & Co. more than one-half of all the stock of the Philadelphia, Wilmington and Baltimore Railroad Company at eighty dollars per share, which was accepted by the Pennsylvania Railroad Company. At the annual meeting of the stockholders of the Pennsylvania Railroad Company on July 2, 1881, the purchase of the stock of the Philadelphia, Wilmington and Baltimore Railroad Company was announced by President Roberts, and the stockholders immediately ratified his action, and authorized the issue of four hundred thousand shares of new stock, from the sale of which the requisite funds were supplied to complete the purchase. The total amount of the purchase was \$16,675,692, of which \$14,949,052 went to the Boston stockholders, and the remainder to stockholders residing in Philadelphia and elsewhere.

The possession, thus obtained, of the Philadelphia, Wilmington and Baltimore Railroad Company, by the Pennsylvania Railroad Company, carried with it the virtual ownership of the Philadelphia and Baltimore Central Railroad Company from Lamokin Junction to Octoraro, Md.; the Chester Railroad Company, from Lamokin to West Chester; and the West Chester

and Philadelphia, and cut the Baltimore and Ohio Railroad Company off from all connection with Philadelphia and New York over existing railroads, except upon the terms and conditions exacted by the Pennsylvania Railroad Company. These were of such character as were not satisfactory to the independent enterprise of Robert Garrett, whose sagacity had planned and almost secured the possession of the control of the Philadelphia, Wilmington and Baltimore to Philadelphia, and of the Bound Brook road to New York City. Thus temporarily defeated, Mr. Garrett was by no means dismayed, and immediately set to work influences and forces to complete the construction of an independent railroad, wholly under the control of the Baltimore and Ohio, from Baltimore to Philadelphia, from which he already had the control of a connection with New York *via* the Bound Brook road.

Connection with Philadelphia and New York by the Baltimore and Ohio road was not regarded by some of the leading merchants of Baltimore as altogether desirable. Some of them felt and expressed apprehensions that the securing of an independent line to New York and Philadelphia would deprive Baltimore of the advantages secured to it by its shorter line to the West and the differential rates of freight which that shorter line had secured in favor of Baltimore. The contest over differential rates began in 1869, and after the war of rates in 1870 the Baltimore and Ohio Railroad Company succeeded in securing a recognition of their rights to transport products to and from Baltimore at a less rate than the New York lines carried like products from the city of New York to and from the same points in the West. The rate controversy was renewed in 1875, by the New York lines, asserting again that the rates from Western points to all seaboard cities should be the same, without regard to distance; and again the Baltimore and Ohio Railroad Company was forced to sacrifice its revenues in an effort to maintain the principle that it would carry to and from Baltimore at less rates than the New York lines carried to and from the city of New York, or, in other words, that distance from the seaboard should have a determining effect in fixing the rate to be charged for the transportation of freight; and again in 1876 the same controversy was renewed; and as late as 1882, William H. Vanderbilt began another fight against the principle of distance and charge, so often asserted and maintained by the Baltimore and Ohio Railroad Company. Out of that last controversy grew the advisory board, composed of three of the ablest railroad men in the country, whose decision on "differential rates" was in favor of the principle contended for by the Baltimore and Ohio Railroad Company.

The actual difference in freight charges for which the Baltimore and Ohio Railroad Company contended amounted to sixty cents per ton on fourth-class freight,

and \$1.60 per ton on first- and second-class freights, in favor of Baltimore as against New York. Small as these amounts may seem, they involved a great principle which underlies the whole schedule of freight charges,—that the distance over which merchandise is transported should govern the cost of transportation; the management of the New York lines contending that equal rates, without regard to distance, should be charged by all the great trunk lines between the East and West. In all the rate wars, the Baltimore and Ohio Railroad Company has boldly gone into the territory of its rivals, and, reducing the rates, has drawn traffic therefrom as a means of bringing its rivals to terms, and for the better accomplishment of its ends, has been compelled at times to put on an outside line of steamers from Baltimore to New York, because it did not own an independent line to New York. Philadelphia as well as Baltimore is interested in the principle contended for and maintained by the Baltimore and Ohio Railroad Company. Everything that lessens the cost of transportation reacts to the benefit of trade and commerce, promotes the business of merchants, and prospers that of cities and *entrepôts*. Hence with its own independent line from New York and from Philadelphia it will be able to go into each of those cities upon an equality with its competitors, and bringing to the trade of those cities another competing line, conducted on the principle that distance and charge of transportation shall bear their proper ratio of cost, will afford greater facilities of transportation than exist at present, and be an ever-threatening power of defense against the pretensions of New York railroads to lay down the law of transportation for all seaboard cities.

The Baltimore and Ohio Railroad Company, under the management of its first vice-president, Robert Garrett, who has virtually succeeded his father, John W. Garrett, the president of the road, has boldly met every encroachment upon either its own business or upon the trade of the city of Baltimore. It has positively refused to accept the law of transportation from New York lines, and has not hesitated at any sacrifice of temporary prosperity for the greater benefit of managing its own affairs by its own experience and knowledge. This firmness and independence is not likely to be abated under the boldness and courage of Robert Garrett, should he come to stand in the place of his illustrious father. The trade of Philadelphia with the West, South, and Southwest cannot be injured by another connection managed by men who have positive convictions of railroad duty and management, accompanied with the courage of those convictions, and who will not be intimidated, controlled, or cajoled by any railroad influence or authority. Such management of railroad interest cannot but prove beneficial to the business prosperity of any city with which it may be connected.

The success won by the Baltimore and Ohio Railroad Company in maintaining its position on the

question of rates was mainly due to its small cash capital and its immense surplus fund, amounting to nearly fifty million dollars, against the large watered capital of its New York competitors. This positive factor of strength was aided by its conservative policy and its geographical position. But that success was not won without immense sacrifice of revenue, made not only in its own defense, but also in the best interest of the public, and which might have been lessened by the ownership of an independent line to Philadelphia and New York.

The interest taken in Philadelphia in the connecting line between this city and the Baltimore and Ohio Railroad Company is shown by the fact that a syndicate, composed of the most astute business men in this city, made a proposition to the Baltimore and Ohio Railroad Company to build the road between Baltimore and Philadelphia, and that William H. Vanderbilt offered to furnish the money to build it, and actually acquired part ownership in the Delaware and Western line, looking to the construction of the new line between Philadelphia and Baltimore. When these propositions were made Mr. Vanderbilt "believed the territory would be occupied, and that the line would be a paying one, and that in promoting its construction he was seeking a good investment purely."

This new line, upon completion, will secure a percentage of west-bound freight out of Philadelphia, as well as open to that city a competition with Baltimore for the productions of all the territory permeated by the Baltimore and Ohio Railroad and its connections.

As a trade centre, Philadelphia requires all possible avenues of communication with the producing and consuming sections of the country. The annual value of her manufactures alone amounts to nearly five hundred millions of dollars; the volume of her internal trade is immense; her commerce, already growing, will still further expand, when the Federal government shall awake to the necessity of building anew the shipping interests of the whole country, and all these interests will be promoted and encouraged by this new line of railroad connection with the West, Southwest, and Northwest.

**Omnibus Lines.**—As Philadelphia grew in population, her citizens demanded quick, regular, and cheap conveyance from the business centres to the outskirts of the city. This demand, as early as 1831, was felt and recognized as a means of profit, and hence the omnibus became the public conveyance for business men, laboring men, and all classes of society. The first of this mode of conveyance in the city was the "Boxall," which was started by James Boxall, Dec. 7, 1831, as will be seen by the following advertisement:

**CHESTNUT STREET HOURLY.  
STAGE-COACH**

will commence running on Wednesday, the 7th of December, 1831.

"JAMES BOXALL, having been requested by several gentlemen to run an hourly stage-coach for the accommodation of the inhabitants of Chestnut Street, to and from the lower part of the city, begs to inform

the citizens generally that he has provided a superior new coach, harness and good horses, for that purpose. Comfort, warmth, and neatness have in every respect been peculiarly studied.

"This conveyance will start from Schuylkill-seventh and Chestnut streets every morning (Sundays excepted) at 8.30 o'clock, every hour until 4.30 in the afternoon, down Chestnut street to the Merchants' Coffee-House in Second street; and return from the Coffee-House at 9 o'clock, and every hour until 5 in the evening. This accommodation will be conducted and driven solely by the proprietor, who hopes to merit patronage and support.

"Fare each way, 10 cents; or tickets may be had of the proprietor at twelve for one dollar.

"JAMES BOXALL."

James Boxall was an innkeeper at the Upper Ferry bridge (Callowhill Street), and his "stage-coach" was like a chariot. It had about four or six seats running from side to side, and was well set up on its wheels, showing a broad back. It was painted a rich dark-green color, and access into it was obtained by iron steps at the side. It was called "Boxall's Accommodation," and bore upon the back the words, in gilt letters, "Fairmount Observatory," in allusion to a request from the American Philosophical Society, which at that time proposed to erect at Fairmount an astronomical observatory. "Boxall's Accommodation" had a short life.

The first omnibus line in this city was established in 1833. The first omnibus was called the "Jim Crow," after Thomas D. Rice, the famous minstrel, whose picture was painted in the panels on each side of the coach. The name was afterward changed to "Cinderella." It was a square coach, much like the style of omnibuses yet seen in the city.

The earliest omnibus line was established between the navy-yard and Kensington, running from the latter, by way of Second Street, to Deschamps' Hotel, on Beach Street, near Shackamaxon, every hour. The fare was twelve and a half cents. This line afterward increased rapidly, and there were many coaches. Deschamps died at an early period in omnibus history. His widow, due reverence of mourning paid, married Joseph Glenat, a Frenchman, and a man of considerable capacity and enterprise. He had been in partnership with Deschamps. The line of Deschamps & Glenat became Glenat's line, an extensive establishment with many coaches, which not only ran upon Second Street, but upon other routes. The second line established was from the Merchants' Coffee-House, on Second Street, out Chestnut to Beach Street, near the Schuylkill, and down the latter to Walnut, and return over the same route. The first coaches were the "William Penn," "Benjamin Franklin," "Stephen Girard," and "Independence." The coaches were queer. They were built of the shape of the Troy mail-coach, drawn out to the width of twelve or fifteen feet, and could hold ten passengers on each side. Access was obtained by clumsy steps in the rear. It has been asserted that this line was established by James Reeside, the famous contractor for carrying the United States mails, well known all over the country as Admiral Reeside. Evans & Caldwell soon succeeded on the Chestnut

Street line. In time the long, narrow "shad-belly" coaches were succeeded by square-shaped omnibuses, some of which were gorgeously adorned with paintings and gilding. The "Nonesuch" and "Nonpareil" were of this character. The Chestnut Street line was ready to maintain a quarter-hour service in July. The success of the coaches was immediate, and citizens generally clamored for like accommodations on other routes. In August there were three lines in operation,—between the navy-yard and Kensington, Delaware and Schuylkill on Chestnut Street, and from the Coffee-House (on Second Street) to the depot of the Columbia Railroad, at Broad and Vine Streets. "Thus," said Poulson, "by purchasing a season-ticket the citizen who rides four times a day incurs an expense of little more than one penny for each ride."

The subscribers were the main support of the omnibus lines. They gave the proprietor a sufficient guarantee of paying expenses. The chance riders at ten and twelve and a half cents each made up the profits. Meetings were held in various places of citizens in favor of the establishment of omnibus lines. One at the Bull's Head Tavern, Sixth and Callowhill Streets, in July, advocated the establishment of a line from the Coffee-House up Second to Arch Street, up Arch to Sixth, up Sixth to Buttonwood, up Buttonwood to John [Marshall], up John to Spring Garden Street (which had not at that time been opened to Sixth), and out Spring Garden Street to the Germantown Railroad Depot, at Ninth and Green Streets. Other routes were afterward established upon all the principal streets. The fare came down to six cents and in some cases to five, four, and three cents where there was opposition, and for twenty-three years these vehicles were the only convenient and accessible means of local travel.

**City Passenger Railways.**—As soon as the Northern Liberty and Penn Township Railroad was finished and there was connection by the Columbia Railroad as far west as the Peter's Island bridge, passenger cars for local travel were placed thereon. The cars ran from Third and Willow Streets, and were drawn by horses to Fairmount, Fountain Green, and Mount Pleasant, near to the bridge, and returned the same way. Subsequently pleasure cars, drawn by horses, were run from the Exchange by the Third, Broad, and Market Streets routes, to Peter's Island, and sometimes by way of Market and South Broad Streets to the Philadelphia, Wilmington and Baltimore Railroad Depot, at Washington Street, and along the tracks of the latter to Gray's Ferry. At a later period the tracks were brought up Swanson Street to South, near the Delaware River, and the Southwark Railroad ran horse-cars from that terminus to Washington Street, and along the same, by way of the Baltimore Railroad tracks, to Gray's Ferry, and sometimes by way of Broad Street Railroad to Fairmount. These cars were forerunners of the modern passenger railway

cars. The latter were introduced about 1857, in a peculiar way. The Philadelphia and Delaware River Railroad Company was incorporated April 4, 1854, with authority to construct a railroad, beginning at a point north of Cherry Street, Kensington, in the county of Philadelphia. Thence through the eastern part of Montgomery County by way of Pennypack Creek (in Philadelphia County), to the village of Hatborough, and thence by way of New Hope to Easton, Northampton County. It was to be a steam road operated by locomotives. The enterprise was not successful in the manner intended. The incorporation of the Philadelphia, Easton and Water Gap Company, in 1852, gave to that corporation an advantage which was more important by reason of the large municipal subscriptions which the projectors were able to obtain. There was little chance for the Delaware River road to Easton. The parties interested were therefore constrained to look out for some new opportunity. They conceived the idea that a tramway upon the same plan as had been previously tried in the city of New York would offer a fruitful local field for cultivation. Accordingly, on the 9th of June, 1857, a supplement was passed to the original act of incorporation which gave the company a right—

"to extend their road southerly from its present terminus at Sixth and Cherry Streets, Kensington. Along the former street to Morris Street, in Southwark, with a single track; thence easterly along the same to Fifth Street; thence northerly along the latter street to the aforesaid Cherry Street, with the privilege of occupying Germantown road from its intersection with Fifth Street, until the said Fifth Street shall be declared open: *Provided*, That the said road shall be used exclusively for a city passenger railway by horse locomotion: *Provided further*, That the gauge of the said road shall be five feet two inches, and that before the said company shall use and occupy the said street, the consent of the Councils of the city of Philadelphia shall be first given, and said consent shall be taken, and deemed to be given, if the said Council shall not within thirty days of the passage of this act, by ordinance duly passed, signify their disapproval thereof; and said Councils may from time to time, by ordinance, establish such regulations in regard to said railway as may be required for the paving, repaving, grading, culverting, and laying of water-pipes in and along said streets, and to prevent obstructions thereon."

This consent was given by ordinance passed on the 7th of July, 1857. By act of April 8, 1858, the company was given a right to cross with their tracks the Philadelphia and Reading Railroad at Frankford Avenue at grade, and level with the Reading Railroad tracks. Under this authority the railroad was extended to Frankford, and by act of May 16, 1861, the title of the company was changed to the Frankford and Southwark City Passenger Railroad Company. By subsequent acts of Assembly the routes of the company have been greatly extended. In accordance with the permission given, the company proceeded to lay its tracks on Fifth and Sixth Streets, and to Frankford, and commenced operations by running the first car on the 21st of January, 1858. The shape of the car was not substantially different from those placed afterward and still in use by all the city passenger railways. They were drawn by two horses. There was a driver, and a conductor to take the fares.

The fare originally was five cents for any distance upon any street between Cherry and Morris Streets. It may also be said in this connection that, after cross-roads were established, a system of "exchange ticket" was devised, by which passengers might be transferred from the Frankford and Southwark roads to the cross-roads, and from those roads to the Frankford and Southwark. The rate for an exchange ticket was seven cents, which carried the passenger on both roads for that sum. About the time the war of the Rebellion broke out, "in consequence of the high price of horse feed," it was said, the single fare was increased to seven cents and exchange tickets to nine cents, and, at a still later period, the single fares were reduced to six cents. In later years the Union Passenger Railway Company, which extended like an X from Kensington on one line over to Washington Street and Broad, at the Baltimore Depot, and, on the other branch, from the old navy-yard, at Front Street, to Fairmount, by consolidation with or lease of several other roads, established a system of transfers, by which the passenger could be taken for one fare to any point on the branch routes, and eventually might be transferred to the cars upon the leased routes at proper junctions. About 1882 the Lombard and South Street Passenger Railway and Spruce and Pine Street Companies broke off from the six-cent fare, and established a five-cent fare, a measure which seems to be to their benefit, although it has excluded them from the privilege of exchanges with the six-cent roads. The Ridge Avenue Company established also a limited five-cent fare, by selling tickets five for a quarter-dollar, the chance passenger not supplied with a ticket being still charged six cents.

The success of the Frankford and Southwark road was so great that the establishment of similar passenger railways on other streets became an object of great interest to speculative persons. A large number of railway companies were projected, and the Legislature was very liberal.

No man in Pennsylvania was more closely identified with its works of internal improvement than Coffin Colket, who died April 5, 1883. At the time of his death he was president of the Philadelphia City Passenger Railway (from January, 1867), of the Philadelphia, Germantown and Norristown Railroad Company (from Jan. 10, 1867), and of the Chestnut Hill Railroad Company. He was also a director in the City National Bank and the Northern Savings-Fund. In the latter company he was also one of its thirteen incorporators (June 14, 1871). Beside holding the various important trusts, he has served as a director in the following corporations: Morris Canal Company, Tioga Improvement Company, Long Island Railroad (afterward president), North Pennsylvania Railroad (elected Jan. 23, 1856), Fremont Coal Company (afterward president), Penn Township Bank, Township Line Turnpike Company, Citizens' Passenger Railway Company (Tenth and Eleventh Streets—

elected May 11, 1858), City Bank (elected Nov. 19, 1860), Philadelphia and Darby Railroad Company (elected January, 1867), Plymouth Railroad Company (elected Dec. 12, 1867), Green and Coates Streets Passenger Railway Company, and president of the Chestnut Hill Railroad (elected Jan. 12, 1852). This road was completed and leased to the Philadelphia, Germantown and Norristown Railroad Company March 17, 1852.

Coffin Colket was the son of Peter and Phœbe (*née* Hamilton) Colcord, and was born at Epping, N. H., Oct. 15, 1809. He was a descendant of Edward Colcord, who came to America from England some time before the year 1638, as his name appears as one of the first settlers of Exeter, which place was settled in that year. The name Colcord was changed to Colket. In 1829, Coffin Colket left his home, and, traveling to Baltimore, worked on the bridge over the Patapsco River, on the Baltimore and Ohio Railroad, and in laying track from Harper's Ferry to Martinsburg, until 1831. In 1831-32 he was at work on the New Castle and Frenchtown Railroad, but the road being finished shortly after his arrival, he came to Philadelphia and obtained contracts for laying the granite blocks and edge rails on two sections of the Eastern Division of the State road (Columbia and Philadelphia Railroad), between Philadelphia and Lancaster. About this time he became acquainted with John O. Stearns, with whom he formed a partnership, under the firm-name of Colket & Stearns, a connection which lasted a number of years. Among their first contracts was one with the Philadelphia, Germantown and Norristown Railroad Company. Among other roads on which they had contracts may be mentioned the Philadelphia and Trenton Railroad, Rensselaer and Saratoga Railroad, and Central Railroad of New Jersey (then the Elizabethtown and Somerville Railroad). In regard to the latter, the original road, which extended from Elizabethport to Somerville, a distance of twenty-two miles, was built by them at different periods between the years 1834-42, at a cost of \$431,414.75. Afterward it was leased to and run by them. Still later, in 1846, when the embarrassments of the company led to a foreclosure, the road was bought in by them, and a new company organized, of which Mr. Colket was elected a director. In 1833-34 he laid a double track for the Northern Liberties and Penn Township Railroad, and for the Southwark Railroad, on Washington Avenue, from Broad Street to the Delaware River. He made a contract with the Rensselaer and Saratoga Railroad, Feb. 17, 1835, to lay "all that part of their track between the southern extremity of the road, in Troy, and the bridge which crosses the Champlain Canal at or near the borough of Mechanicsville," a distance of thirteen miles. The price received was \$8604.93.

In 1836 they obtained contracts on the Norristown and Valley Railroad and Philadelphia and Trenton Railroad. On the former road they had the contracts

for grading one section (in Tredyffrin township, Chester Co.), for the masonry and the excavation of foundations on seven sections, for supplying all the cross-ties, and laying the whole track. This road (now known as the Chester Valley Railroad) is controlled by the Philadelphia and Reading Railroad Company, and runs from Bridgeport to Downingtown, a distance of twenty-one and a half miles. The contract on the Philadelphia and Trenton Railroad was for grading a portion of it and supplying twelve miles of superstructure, the latter, however, being finished in 1834. On the Philadelphia, Wilmington and Baltimore Railroad, in 1837, Colket & Stearns had their largest contract. It included "76,631 cubic yards of excavation, 58,913 cubic yards of embankments, 13,540 perches of stone-masonry, and under it they delivered the material and constructed six lattice bridges and laid twenty-six miles of railway, for which they have received \$96,154.44." The whole contract was completed within six months, which was considered remarkably quick time for those days. About this time they built the West Philadelphia Railroad, and the Market Street Railroad for the city. The tracks of the last two roads have since been removed. Jan. 10, 1839, a contract was signed with the Tioga Navigation Company (now the Tioga Railroad) to lay a single track between Blossburg, in Tioga County, Pa., and Lawrenceville, at the State line (New York), a distance of twenty-six miles, at \$1000 per mile, and on the same date a contract was signed with the Tioga Coal, Iron, Mining and Manufacturing Company (now the Blossburg and Corning Railroad) to lay a single track between Lawrenceville, Pa., and Corning, N. Y., fourteen miles. These roads were finished the same year. The Blossburg and Corning Railroad was rebuilt in 1852. In 1840, Mr. Colket built the road from Plainfield, N. J., to Bound Brook, now forming a part of the Central Railroad of New Jersey. In 1841-42 he had a contract on the Baltimore and Ohio Railroad. In 1857 he entered into a large contract at Painted Post, N. Y., to cut the timber from 5818 acres, a contract he immediately suhlet, and which turned out very satisfactorily for all concerned.

Mr. Colket married, March 21, 1839, Mary Penny-packer Walker, daughter of William and Sarah Walker, of Tredyffrin township, Chester Co., Pa. Miss Walker was a descendant of Louis Walker, who came to this country from Wales in 1687. Thrown entirely on his own resources at an early age, with neither friends nor money to assist him, Mr. Colket made a name for himself as an upright, conscientious, and successful business man. Among many letters of recommendation received by him from prominent engineers and railroad men,—such J. Edgar Thomson, John C. Trautwine, Henry R. Campbell, and others,—the following is given as a sample. It is taken from a letter to the "President and Directors of the Tioga Railroad Company," and is dated Feb. 13, 1838.

After briefly stating the contract of Colket & Stearns on the Philadelphia, Wilmington and Baltimore Railroad, the letter reads as follows:

"To their untiring energy the Directors of the Philadelphia, Wilmington, and Baltimore Railroad Company are indebted for the early completion of their works. And we are satisfied by their past labors of their ability to faithfully perform any contract they may conclude with your company, and we shall be gratified if the slight notice of their worth can secure to them your favorable regard.

"Very respectfully yours,

(Signed) "M. NEWKIRK, *President Philadelphia, Wilmington and Baltimore Railroad Company.*

"AUBREY H. SMITH, *Treasurer.*

"S. WILSON WALLACE, *Secretary.*"

The following are the dates of charters of the various passenger railway companies, with their titles, as well as by the names commonly given them by the public:

Frankford and Southwark, Philadelphia City Passenger Railroad Company (Fifth and Sixth Streets), April 4, 1854, end March 12, 1856.

Philadelphia and Gray's Ferry Passenger Railroad Company (Spruce and Pine), April 9, 1858.

Second and Third Streets Passenger Railway Company, April 10, 1858.

North Branch Passenger Railway Company of the City of Philadelphia (Fifteenth and Sixteenth), April 10, 1858.<sup>1</sup>

Fairmount Passenger Railway Company (Race and Vine), April 13, 1858.

North Philadelphia Plank-Road Company, incorporated March 29, 1852 (Schuylkill Sixth Street and Germantown). Passenger railway rights granted by act of April 9, 1858.<sup>2</sup>

Citizens' Passenger Railway Company (Tenth and Eleventh), March 25, 1858.

Fairmount and Arch Street Passenger Railway Company (Arch Street), April 16, 1858.

Girard College Passenger Railway Company (Ridge Avenue), April 15, 1858.

Greene and Coates Streets Passenger Railway Company, April 21, 1858.

Germantown Passenger Railway Company (Fourth and Eighth), April 21, 1858.

Hestonville, Mantua and Fairmount Passenger Railroad Company (Bridge Street [now Spring Garden] and Lancaster Avenue), April 6, 1859.

Philadelphia and Darby Railroad Company (Woodland Avenue), April 28, 1857.<sup>3</sup>

<sup>1</sup> This company was incorporated with power to lay tracks on Fifteenth Street from Chestnut north to Vine Street, along Vine to Sixteenth, and down Sixteenth to Walnut, with power "to connect with any passenger railway now constructed, or hereafter to be constructed, so as to give the said company a complete route from Fairmount to the Exchange." Also to have power to convey passengers over the said route to and from Fairmount to the Exchange. This privilege would have given authority to run the cars of the company over other passenger railways between the Exchange and Fairmount, and to interfere with the business which would have resulted to the other companies. There was a provision in the charter that the other companies should agree as to the compensation to be paid, but when the North Branch company came to make overtures the other roads refused to make any agreement, not being willing to share their custom with the projectors of this short line. The law was appealed to, and the decision was against the North Branch Company; consequently the speculation turned out to be a failure, and the tracks laid down on Fifteenth and Sixteenth Streets were abandoned.

<sup>2</sup> This company, originally chartered as a plank-road company, never went into operation as a passenger railway company. It was given passenger railway privileges by act of April 9, 1858, and the name changed to the Central Passenger Railway Company of the City of Philadelphia by act of March 14, 1863.

<sup>3</sup> This was originally chartered with authority to operate a railroad by steam between Darby and the river Schuylkill, but southeast of the Philadelphia and Chester post-road. At the option of the company, a passenger railway might be constructed instead on the line of the Darby turnpike or plank road.

*C. Colker*

West Philadelphia Passenger Railway Company (Market Street), May 14, 1857.

Philadelphia City Passenger Railway Company (Chestnut and Walnut), March 26, 1859.

Richmond and Schuylkill Passenger Railway Company (Girard Avenue), March 26, 1859.

Ridge Avenue and Manayunk Passenger Railroad Company (Ridge Avenue, from Girard Avenue to Manayunk), March 28, 1859.

Schuylkill River Passenger Railway Company (Twenty-second and Twenty-third), April 16, 1866.

Empire Passenger Railway Company (Twelfth and Sixteenth), Feb. 10, 1869.

Continental Passenger Railway Company (Eighteenth and Twentieth), Sept. 8, 1873.

People's Passenger Railway Company (Callowhill Street), April 15, 1873.

West End Passenger Railway Company (West Philadelphia) April 15, 1873.

Lehigh Avenue Railway Company, Dec. 18, 1873.

The passage of so many railway charters required the attention of Councils in order to preserve the rights of the city. A general ordinance regulating passenger railway companies was passed April 11, 1858, and established a code by which those companies have been bound ever since. There was haste in getting into operation with a majority of the first companies incorporated. Cars commenced running on the Market Street road to Eighth Street in July, 1858, on the Tenth and Eleventh Street road, July 29th, Race and Vine Street, September 8th, and Spruce and Pine Street, December 4th, in the same year. The cars on the railways did not run on Sunday for several years. Efforts made by the Green and Coates Streets Company led to a lawsuit, and a decision against the companies by the Court of Common Pleas (case of Commonwealth *vs.* Jeandell) that the running of a railway car on Sunday was a breach of the peace. Some years afterward the Union Line put mail-boxes in their cars and ran them on Sunday, under the claim that they were engaged in the United States

<sup>1</sup> This company had the right to lay tracks from Federal Street and Wharton Street, at Front to Broad and along the same to Spring Garden Street, and thence to Fairmount. The privileges granted were adjudged by the Supreme Court to be unconstitutional and conflicting with a previous act, which declared that Broad Street should be free from railroads.

<sup>2</sup> This company was authorized to lay tracks from Lehigh Avenue to the village of Olney, in the Twenty-second Ward, with right of extension to the Fox Chase, in the Twenty-third Ward. It never went into operation.

<sup>3</sup> This road extends from Frankford road and Lehigh Avenue to Mill Street, Paul Street, and Frankford Street. It is substantially an extension of the Second and Third Streets Passenger Railway to Frankford.

mail service, and could not be stopped legally. This led to further proceedings and a decision about 1867, in the case of Sparhawk and others against the Union Passenger Railway Company, that the running of a passenger railway car on Sunday was not a breach of the peace. Upon this favorable decision all the railroads ran cars on their tracks on Sunday, and they have continued without interference ever since.

Another of the representative men of Philadelphia, and a large stockholder in the city passenger railways of this city, is Charles J. Harrah. After Mr. Harrah returned home from Brazil, where he spent several years of his life engaged in active business, he invested largely in the stock of the People's Passenger Railway Company and became its president, a position which he now holds. He is also a director of the Independence National Bank, which institution he assisted to organize, and is a director in the Winifrede Coal Company, of West Virginia. Mr. Harrah was born in Philadelphia, Jan. 1, 1817. His educational advantages were of the most meagre character. The only school he ever attended was that of a Mr. Ketter [the Adelphi School], at the northwest corner of Pegg and New Market Streets, at that time the only public school north of Vine Street, where he remained exactly three days, in the early part of 1824. But, as he possessed an indomitable will and an innate intellectual force, his after-successes in life were none the less positive because of his lack of educational privileges in his youth.

From 1824 till the latter part of 1831 his life was spent chiefly on farms in the vicinity of Philadelphia, on which he earned a precarious living as cow-boy and farm-hand. Among his employers was Samuel Jones, the father of Jacob P. Jones, a friend whose kindness to him in his boyhood has never been forgotten.

In February, 1832, he bound himself as an apprentice to Jacob Teese, a ship-builder of this city, and continued in his service until Dec. 19, 1836. He worked at his trade in this city, New York, Erie, and elsewhere, until the spring of 1843. His health, which had never been good, finally compelled him to leave Philadelphia on the 10th of April, 1843, for Rio Grande de Sul, in the southern part of Brazil, where he had contracted to go for the purpose of building a steamer for Charles Deal, of that city, and where he subsequently established a ship-yard. With varying fortunes, but steadily increasing reputation, he remained in Rio Grande and Porto Alegre until 1852, when he removed to Rio de Janeiro, the capital, and immediately established a yard for the building and repairing of vessels, in which business he was engaged until the latter part of 1857.

On the 1st of September, 1857, he sailed from Rio de Janeiro, *via* Marseilles, for this country, for the purpose of gathering information and knowledge applicable to the construction of a steam railroad. He returned to Rio on the 1st of March, 1858, and there

established a copartnership with W. Milner Roberts, of Philadelphia, Jacob Humbird, of Cumberland, Md., and Robert Harvey, of Richmond, Va., under the firm-name of Roberts, Harvey & Co. This firm contracted to build the second section—the mountainous portion—of the Dom Pedro II. Railroad, a work more difficult to accomplish than any which, up to that date, had ever been undertaken on the South American continent. This enterprise covered a period of over six years, and resulted in Mr. Harrah's complete financial ruin. With unyielding perseverance, however, he set about retrieving his fortunes, and, with this end in view, he engaged in business with F. M. Brandon, under the firm-name of Brandon & Harrah. Shortly afterward their commercial operations became sufficiently extensive to warrant the establishment of a house in London, England, under the style of Harrah, Brandon & Bro. He remained engaged in business eight years, finally retiring in December, 1871. During the last ten years of his sojourn in Brazil he was identified with many important public enterprises. In 1869 he was president of the first telegraph company organized in the empire, and which has since been absorbed by the imperial government. In the same year, in company with C. B. Greenough and a few other gentlemen of New York City, he organized the Botanical Garden Railroad Company of Rio de Janeiro, of which he was subsequently a director. In 1870 he assisted in the reorganization of the Brazilian Navigation Company, the official representative of which he became in this country when that company was involved in its suits with the Garrisons, of New York. In 1872 he organized the Leopoldina Railroad Company, of Minas Geraes, Brazil.

Besides the enterprises mentioned, Mr. Harrah was connected, at various times during his thirty years' residence in the Brazilian Empire, with many institutions of high financial and political standing. Indeed, he attained and maintained what was a very eminent position, for a foreigner, in the great South American nation where he so long lived. Great confidence was reposed in him by the emperor and the imperial government. As an evidence of the existence of this close intimacy and deep esteem, Mr. Harrah was sent to the United States, in 1865, to purchase iron-clads and armaments for the Brazilian government, bearing a letter of credit to the amount of £1,000,000, which was shortly followed by another letter for £1,000,000. A few years later, in 1867, he was sent on a confidential mission to the river Platte, by the imperial cabinet, to investigate certain irregularities and abuses then prevailing in the commissariat department of the Brazilian army. Then, too, in 1870, when he and a few other merchants established a public school in Rio de Janeiro, the first of the kind in the empire, the emperor made him a Knight of the Imperial Order da Rosa, and shortly afterward made him a commander of the same order. In 1874, how-

ever, Mr. Harrah returned permanently to the country and city of his nativity, having made a handsome fortune during his residence in Brazil.

He has never been a holder of or an aspirant for public office; but he takes a deep interest in the subject of popular government. As a member of the Citizens' Committee of One Hundred for two or three years past, he has given liberally of his time and means to the cause of honesty and reform in the administration of municipal affairs.

During his residence in Brazil, Mr. Harrah was an active member of the Masonic fraternity, and passed through every degree of that order, inclusive of the thirty-third.

On April 14, 1839, Mr. Harrah was married to Anna Margaret Reel, a daughter of Michael and Margaret Reel, a long-established family of the old district of Kensington. Nine children have been born to them,—four sons and five daughters.

<sup>1</sup> Passengers, expenses, and receipts included in report of Union Passenger Railway Company.

<sup>2</sup> Leased to the Seventeenth and Nineteenth, and Tenth and Eleventh Street Companies. Receipts and expenditures included in the reports of those companies.

<sup>3</sup> Leased to People's (Callowhill Street) Passenger Railway Company. Passengers, expenses, receipts, and length of road included in the report of that company.

<sup>4</sup> Leased to People's (Callowhill Street) Passenger Railway Company. Passengers, expenses, and receipts included in the report of that company.

<sup>5</sup> This line operates the Arch and Fairmount, and Race and Vine Streets Roads. Length, passengers, expenses, and receipts are included in the report of the Hestonville, Mantua and Fairmount road.

<sup>6</sup> Operated by Philadelphia City (Chestnut and Walnut). Passengers, receipts, and expenses in report of that company.

<sup>7</sup> Operated by the Philadelphia and Gray's Ferry Passenger Railway Company. Passengers, receipts, and expenses included in that report.

<sup>8</sup> Under lease to Union Passenger Railway Company. Passengers, receipts, and expenses included in report of that company.

C. J. Harrah

**Board of Presidents of the City Passenger Railways of Philadelphia.**—On Tuesday, May 24, 1859, the presidents of the several railway companies of Philadelphia were invited by James Verree, president of the Second and Third Street Passenger Railway, to meet at the office of that company, No. 226 Walnut Street, to consider matters of interest pertaining to passenger railways. The following companies were represented:

Citizens' (known as Tenth and Eleventh), George Williams, president; Germantown (known as Fourth and Eighth Streets), William Millward, president; Race and Vine Streets, Robert F. Taylor, president; Frankford and Southwark (Fifth and Sixth), Henry C. Harrison, president; Ridge Avenue, Henry Croskey, president; West Philadelphia (Market Street), William Wright, president; Fairmount and Arch Street, S. H. Paulin, president; Philadelphia and Darby, Thomas S. Ellis, president; Spruce and Pine Streets, William D. Lewis, president; Second and Third Streets, James Verree, president. George Williams was elected chairman, and James Verree, secretary, and it was resolved that the meeting be a permanent organization.

On January 17, 1860, George Williams was elected president of the board, and Henry Croskey, secretary. Mr. Williams retained his position until his death, when he was succeeded by the present incumbent, Thomas W. Ackley. Mr. Croskey is still secretary. The board meets in a room of the Merchants' Exchange, on the corner of Third and Walnut Streets.

The number of members at present is eleven, as follows: Thomas W. Ackley, president of the Thirteenth and Fifteenth Streets Railway Company; P. A. B. Widener, president of the West Philadelphia Railway Company; Matthew Brooks, president of the Philadelphia and Gray's Ferry (Spruce and Pine Streets) Railway Company, embracing also by lease the Schuylkill Passenger Railway Company; William H. Colket, president of the Philadelphia City (Chestnut and Walnut Streets) Passenger Railway Company, embracing also by lease the Philadelphia and Darby Passenger Railway Company; Henry Geiger, president of the Frankford and Southwark (Fifth and Sixth Streets) Passenger Railway Company; John W. Parsons, president of the Lomhard and South Streets Passenger Railway Company; Alexander M. Fox, president of the Second and Third Streets Railway Company; Henry C. Howell, president of the Empire (Twelfth and Sixteenth Streets) Railway Company; William H. Kemble, president of the Union Railway Company, embracing also by lease the Seventeenth and Nineteenth Streets, and Continental (Eighteenth and Twentieth Streets) Railways; Charles J. Harrah, president of the People's Railway Company, embracing also the Green and Coates Streets Railway Company, and the Germantown (Fourth and Eighth Streets) Passenger Railway Company; and John McCarthy, president of the Citizens'

(Tenth and Eleventh Streets) Passenger Railway Company.

The membership of the board is limited to presidents of railway companies whose roads lie in whole or in part within the city of Philadelphia, and their successors. The object of the association is to reciprocate information, confer, and consult upon subjects of common interest, so as to enable and induce the companies represented to act in unison, and to contribute to expenses for the common benefit.

The officers are a president and a treasurer and a secretary, who are elected annually, on the third Tuesday of January. The stated meetings of the board are held on the third Tuesday of every month.

## CHAPTER LV.

### TRADE AND COMMERCE.<sup>1</sup>

WITH the landing of William Penn, in 1682, the commerce of the city may be said to have actually begun, everything prior to that date having been relatively unimportant. That the Swedes and Dutch kept up communication abroad, exchanging the commodities of this country with those of Europe, cannot be doubted, but of this limited commerce few records exist. We only know that in 1644 the Swedes sent home in the "Fame" and "Key of Calmar" 2127 packages of beaver-skins and 70,421 pounds of tobacco. By misfortune the vessels were compelled to put into Friesland, where the Dutch West India Company claimed duties and recognitions as the lawful sovereigns of the country. A long correspondence ensued, but the vessels were finally released upon payment of the regular import duties, without the recognitions claimed, which were eight per cent. The twenty-six ships which, during the first year of Penn's administration, arrived with passengers, together with forty trading vessels, great and small, that visited the port, fix the date of the commencement of the commerce of the port. That "trade and commerce in which the Quakers were known to excel" then took its start, with the furs and skins obtained from the Indians, and was increased and extended as the settlement and development of the country produced the necessary articles of commerce.<sup>2</sup>

<sup>1</sup> It has been found impossible within the space of this history to make individual mention of houses engaged in the extended trade and commerce of this city. The authors have been compelled to treat this subject solely in its relation to the city, and to exhibit its volume and extent by statistical tables, rather than by descriptive accounts of individuals and firms.

<sup>2</sup> Penn, in his early instructions, evidently had in view the future great importance of the port of Philadelphia. His instructions of Sept. 30, 1681, point out the necessity of a river-front reservation being "a measured quarter of a mile, because of building streets hereafter down to the harbor." In 1684, Carpenter was granted a lot between Walnut Street and Dock "in order to erect a wharf or key, and to build houses thereon, for the better improvement of the place, as well as for his own particu-

In 1683-84 twenty-four ships arrived with passengers, but it was not until 1688-89 that there was any export of importance made from the city. In that year fourteen cargoes of tobacco were exported, probably purchased from the Indians, and ten vessels dispatched with the productions of the province to the West Indies. The growth of commerce must have been very great, comparatively, in the early years of the city, for Logan writes to Penn,—

"This year, 1702, the customs upon goods from Pennsylvania amounted to eight thousand pounds; the year I arrived there (1699) but fifteen hundred at most—a good argument for me and the poor country. It has a greater regard here, and made the care of an officer (as well as Virginia and Maryland) at the custom-house—New York not the half of it."

The first Provincial tariff was imposed in 1683, when the Assembly laid a duty upon rum, wine, brandy, and strong liquors imported of two pence per gallon, and upon cider one penny per gallon.<sup>1</sup> In 1705 the Assembly resolved that £1200 should be raised for the support of the government, and an "impost on all wines and cider imported in foreign bottoms." To this, in 1706, was added a duty of forty shillings per head on the importation of negroes, with a drawback of one-half for re-export.<sup>2</sup>

lar profit." The ground was granted upon a lease of fifty-one years, at a rent of twenty shillings a year, and the patent was indorsed, "I will and ordaine that the within wharf be called, and be it called Carpenter's Wharf."

Robert Turner received a patent on the day after Carpenter for a bank lot below Arch Street, which Penn called "Mount wharf." Penn indorsed on this patent, "I intend to allow Robert Turner to digg the bank and to make vaults for securing the highway." William Frampton on the same day received a patent for "Lown wharf," between Walnut and Spruce Streets. Further care for the improvement of the port is shown in 1687, when the Assembly adopted a request to the President and Provincial Council, that a speedy account be taken of all moneys paid for the erecting of buoys, "and that, with all convenient speed, the said buoys be erected for the safety and preservation of vessels coming in and going out of this province and territories, to prevent the clamours of masters of vessels who are obliged to pay the money and reap no benefit thereby."

<sup>1</sup> See vol. iii. p. 1800.

<sup>2</sup> As late as 1761 the subject of taxing the importation of negroes came up by a remonstrance presented to the Assembly in February from citizens of Philadelphia against the importation of slaves, which was considered by them a matter of injury to the province by introducing a class of persons who were troublesome and demoralized. The House prepared a bill laying a duty of ten pounds per head on each negro or mulatto brought from abroad. A remonstrance against this bill was presented on the 1st of March. The signers represented that the province suffered great inconvenience for the want of servants, in consequence of the number of white persons enlisted in the king's service, and the diminution of the importation of Germans, English, and Irish, which had nearly ceased. They said, "An advantage may be gained by the introduction of slaves, which will likewise be a means of reducing the exorbitant price of labor, and in all probability bring our commodities to their usual prices." They represented that they had "embarked in the trade" of importing slaves through the motives they had mentioned, and that they would labor under hardships by the law taking immediate effect without giving them time to countermand their orders. This memorial was signed by John Bell, Humphrey Robinson, Reed & Pettit, William Cox, Charles Batho, Phillip Kearney, Jr., James Chalmers, Joseph Wood, Willing, Morris & Co., Thomas Riebo, David Franks, Hugh Donaldson, Benjamin Levy, Henry Harrison, John and Joseph Swift, John Nixon, Daniel Rundle, Francis & Relfe, Stocker & Fuller, Scott & McMichael, John Inghis, David McMurtrie, Samuel and Archibald McCall, and Joseph Marks.

The mild protest of these slave merchants had no effect on the House, for the law to lay the duty on negroes was passed two weeks afterward.

The nine years of war between France and England, from 1688 to 1697, operated most injuriously to every interest of the colony, and at the end of this period the *poverty* of the province, with the injuries to its commerce inflicted by the war, is frequently mentioned, and it is stated that "in Philadelphia, even, pieces of tin and lead were current for small change." From that early day to the final separation from England no material change took place in the course of trade, except its extension. England, at that time a grain-exporting country, offered no market for the products of agriculture from this country. The exports, consisting of grain, salt, provisions, pipe-staves, etc., and, at a later date, of flour, bread, flaxseed, iron, etc., found a market in the West Indies, and subsequently in Portugal, Spain, and several European and African ports of the Mediterranean. The returns from this commerce were all carried to England, where all the available funds of the city were required to pay for the manufactures which were there exported, and which, from the restrictions imposed by Parliament on colonial manufactures, embraced, to a very great extent, every article of clothing and even household utensils of the simplest form.

The following table shows the imports and exports of Philadelphia from 1697 to 1776, inclusive. It will be seen from this table that the imports greatly exceeded the exports, and the effects of war and other causes on the amounts of importations may be noticed.

COMMERCE WITH GREAT BRITAIN FROM 1697 TO 1776 INCLUSIVE.

Year.	Exports to G. Britain.	Imports.
1697.....	£3,347	£2,997

The clearances from the port of Philadelphia for 1721 were 130 vessels, for 1722 110 vessels, and for 1723 85 vessels, from which it appears that the commerce of the port had at that early day reached a point where marine insurance became a matter of importance and profit. Accordingly, John Copson opened an insurance office on High Street, on the plan of the Lloyds,—“to prevent the necessity of sending to London,”—adding that “he will take care that the assurers or underwriters be persons of undoubted worth and reputation, and of considerable interest in the province.” The ship “Dorothy,” Thomas News, master, brought, in 1728, from Bristol, England, passengers afflicted with a “malignant fever.” Governor Gordon called together the Council, and also invited the attendance of Thomas Lawrence, the mayor, and Andrew Hamilton, the recorder of the city. Authority was granted to Dr. Thomas Graeme and Lloyd Zachary to inspect the vessel, and report her sanitary condition. In consequence of their report, the “Dorothy” was ordered not to come nearer to the city than one mile, and the sheriff was directed to provide some place on shore for the sick. The Blue House Tavern, at the corner of Tenth and South Streets, thus became the first quarantine hospital. The sick recovered, the vessel was fumigated with tobacco-smoke, and washed with vinegar; the bales of goods were aired

before removal, and the ship ordered to remain in the stream and not come up to the wharf.

A work published at London, in 1731, on “The Importance of the British Plantations in America,” gives the following account of the productions and trade of Pennsylvania at that time, and the benefits derived thereby to Great Britain :

“The product of Pennsylvania for exportation is wheat, flour, biscuit, barreled beef and pork, bacon, hams, butter, cheese, cider, apples, soap, myrtle-wax candles, starch, hair-powder, tanned leather, beeswax, tallow caudles, strong beer, linseed oil, strong waters, deer skins and other peltry, hemp (which they have encouraged by an additional bounty of three half-pence per pound weight over and above what is allowed by Act of Parliament), some little tobacco, lumber, *i. e.*, sawed boards and timber for building houses, cypress wood, shingles, cask staves and headings, masts and other ship timber; also drugs of various sorts, as calamus aromaticus, snake root, etc. The Pennsylvanians build about two thousand tons of shipping a year for sale, over and above what they employ in their own trade, which may be about six thousand tons more. They send great quantities of corn to Portugal and Spain, frequently selling their ships as well as cargo; and the produce of both is sent thence to England, where it is always laid out in goods and sent home to Pennsylvania.

“They receive no less than from four to six thousand pistoles from the Dutch isle of Curacao alone for provisions and liquors. And they trade to Surinam in the like manner, and to the French port of Ilepaniola, as also to the other French sugar islands, from whence they bring hack molasses, and also some money. From Jamaica they sometimes return with all money and no goods, because their rum and molasses are so dear there. And all the money they can get from all parts, as also sugar, rice, tar, pitch, etc., is brought to England to pay for the manufactures, etc., they carry home from us, which has not, for many years past, been less than one hundred and fifty thousand pounds per annum. They trade to our provinces of New England, Virginia, Maryland, and Carolina, and to all the islands in the West Indies, excepting the Spanish ones; as also to the Canaries, Madeira, and the Azores isles; likewise to Newfoundland for fish, which they carry to Spain, Portugal, and up the Mediterranean, and remit the money to England, which, one way or other, may amount to sixty thousand pounds yearly. But without their trade to the French and Dutch colonies in the West Indies they could not remit so much to England; neither could they carry on their trade with the Indians if they did not take off the rum and molasses, as well as the sugars, of those colonies in part of payment of the cargoes they carry thither.”

In 1723 the scarcity of currency greatly embarrassed all trade. Complaints were accordingly made to the Assembly, and referred to a committee, which reported that, in their opinion, persons not residing in the province, who imported goods and servants into Pennsylvania, should pay three per cent. on the net profits of their importations, unless they could make it appear that they had shipped off at least three-fourths of the value of said goods in country produce, and that merchants should pay five per cent. on money shipped. Another plan was brought forward in the petition of several inhabitants of the county of Philadelphia, desiring that wheat and other grain, beef, pork, hemp, and flax shall pass on all occasions as ready money; that gold, English money, and other silver should be raised in value, as at New York; that no paper money be raised; that ports should be free of taxes, and foreigners encouraged; that a duty be laid on deer-skins; and that brewers put a certain quantity of malt into strong beer, according to the price of barley. Upon consideration of these petitions the Assembly voted that a paper currency

1 England vs. Spain.

2 England vs. France and Spain.

3 England vs. France.

4 England vs. Spain and France.

5 Non-importation agreements were adopted in this year at most of the ports in the British North American colonies.

6 Revolutionary war.

should be authorized, and that country produce should pass as currency.<sup>1</sup>

The imports in 1730 were very heavy,—so great in value that it was found easier to liquidate the obligations by an insolvent law than to pay them; so an insolvent law was passed for the relief of debtors.

Isaac Norris, in a letter to William Penn, in 1707, gives the following facts as to the commerce of the province:

"I presume that the province consumes annually of produce and merchandise of England to the value of fourteen or fifteen thousand pounds sterling, and this is imported directly from England and the other plantations,—Virginia, Maryland, Barbadoes, Jamaica, New England, and New York. Returns are made for the same in part direct for England, and partly through the other plantations, viz., the West India Islands, Virginia, Maryland, and South Carolina, who take off our provisions and produce. The direct returns are chiefly tobacco, furs, and skins, which have for two or three years past yielded no encouraging prices here, for which reason less of those commodities have been imported from thence, and the more returns made by way of the plantations above mentioned. 'Tis reasonable to presume that upon a peace or advance of those commodities in price the direct return will increase considerably, of which there already appears some prospect, there being now in England four vessels,—two at London and two at Whitehaven,—which loaded at Philadelphia, and brought at least seven or eight hundred hhds. of tobacco, besides twenty-five or thirty tuus of skins and furs; and I have advice that there are four vessels more likely or intending to come this summer that may bring eight hundred or a thousand hhds. more. I shall not presume to say that the tobacco of [the] province is of more advantage to England, hhd. for hhd., than that of Maryland or Virginia; but perhaps it is considerably more to the Crown in proportion, it being mostly of a sort that is spent in England. The account of duties paid, and with drawbacks made in exportation, will be best known from the Custom House; and I am of opinion, if the vessels get well hither, the duties for this year will surmount any year before it."

The raising of revenue was further expedited in 1710–11 by the passage of a law granting to the Governor two shillings in the pound and two shillings on the head of all single men worth more than fifty pounds, with the same poll-tax on servants; also a tax of forty shillings per head on imported negroes, four shillings per gallon on rum and wine imported from other places than New Jersey or the lower counties, three shillings per barrel on cider, and nine pence per ton on vessels. Among the matters of legislation which engaged the attention of the Assembly in 1713 was the consideration of duties to be laid on liquors imported. The following table was furnished of the commerce of the port in these articles between March 25, 1711, and Feb. 6, 1713:

WINE IMPORTED FROM THE PLACE OF GROWTH.	
411 pipes.	23 quarter casks.
13 hhds.	
WINE IMPORTED FROM OTHER PLACES.	
48 pipes.	2 quarter casks.
2 hhds.	
RUM IMPORTED.	
574 hhds.	1 pipe.
360 tierces.	19 casks.
185 barrels.	2 puncheons.
1 kilderkin.	4 gross of bottles.
200 gallons.	

<sup>1</sup> See chapter on Banks and Bankers.

The disproportion between rum and wine in this statement shows that the taste of the greater number of the inhabitants was in favor of strong drink.

The following account of the number of vessels, with their tonnage, which cleared from Philadelphia from 1719 to 1725, will give an idea of the condition of commerce at that period:

Year.	Number of vessels.	Tonnage.	Year.	Number of vessels.	Tonnage.
1719.....	128	4514	1723.....	99	3942
1720.....	140	3982	1724.....	119	5450
1721.....	111	3711	1725.....	140	6655
1722.....	96	3591			

From 1729 to 1732 the exports from Philadelphia were as follows:

Year.	Bushels		Barrels		Casks		Value.
	Wheat.	Flour.	Flour.	Bread.	Bread.		
1729.....	74,800	35,438	9,730			\$62,473	
1730.....	38,643	38,570	9,622			57,500	
1731.....	53,320	56,639	12,436			62,582	

The population of the city, in the latter year above mentioned, was estimated at twelve thousand; the commerce annually employed six thousand tons of shipping, and about two thousand tons were annually sold in foreign ports, principally West India. The arrivals and clearances from March 25, 1735, to March 25, 1736, were as follows:

	Arrivals.		Clearances.			Arrivals.		Clearances.	
	Ships.	Brigs.	Ships.	Brigs.		Ships.	Brigs.	Ships.	Brigs.
London.....	11	10	Newfoundland.....	3	1				
Bristol, England.....	9	3	Boston.....	17	10				
Liverpool.....	2	0	Rhode Island.....	8	7				
Ireland.....	14	23	New York.....	4	2				
Gibraltar.....	1	6	Maryland.....	7	13				
Lisbon.....	6	13	Virginia.....	5	2				
Cadiz.....	6	2	North Carolina.....	7	5				
Turk's Island.....	3	0	South Carolina.....	1	15				
Antigua.....	20	20	Georgia.....	1	2				
Barbadoes.....	19	26	Not specified.....	30	22				
Jamaica.....	9	16							
St. Christopher.....	9	9	Total.....	199	212				

Of the arrivals fifty-one were ships, forty-four brigs, and the remainder vessels.

The price current for 1735, published in the *Mercury* of the 27th November, reduced to provincial dollars and cents was as follows:

Flour, \$1.40 per hundred pounds; white biscuit, \$2.40 per hundred; middling biscuit, \$1.73 do.; brown biscuit, \$1.47 do.; ship biscuit, \$1.60 do.; muscovado sugars, \$4.27 do.; ginger, \$4.27 do.; powder, \$26.27 do.; tobacco, \$1.87 do.; turpentine, 80 cents do.; loaf sugar, 22 cents per pound (wholesale); cotton, 13 cents per pound; salspice, 20 cents per pound; indigo, \$1.33 per pound; rum, 29 cents per gallon; molasses, 20 cents per gallon; pork, \$4.67 per barrel; beef, \$4.00 do.; pitch, \$1.87 do.; tar, \$1.07 do.; wheat, 49 cents per bushel; Indian corn, 20 cents do.; flaxseed, 53 cents do.; fine salt, 22 cents do.; coarse salt, 20 cents do.; pipe-staves, \$14.00 per thousand; hoghead-staves, \$5.33 to \$6.67; barrels do., \$4.67 to \$5.33; Madeira wine, \$5.67 per pipe.

From 1739 to 1749, the war between Great Britain and Spain continued, and inflicted upon the commerce of the province great annoyance and loss from privateering. The "Wilmington" and the "Delaware," fitted out in Philadelphia, were dispatched to sea to retaliate. The return of peace in 1749 gave a great impulse to commerce, the imports for the year being nearly equal to those of the three succeeding years. The values of wheat, flour, bread, and flaxseed were in 1749 £148,104 currency; in 1750, £155,175; and in 1756, £187,487; and the number of vessels that cleared

from 1749 to 1759 averaged annually four hundred and three; the population of the city being estimated at fifteen thousand. This activity in commerce continued, notwithstanding the embarrassment arising from the scarcity of currency, until interrupted, in 1755, by the difficulties arising from the French and Indian troubles on the western frontier. In 1753, the schooner "Argo," Capt. Swaine, was dispatched by the merchants of Philadelphia in search of a northwest passage. Touching first in New England, he afterward entered Hudson Straits, and came in sight of Revolution Island. Forced out of the straits by vast quantities of floating ice, and the season of discovery on the west side being over, he sailed for the coast of Labrador, from 56° to 65° north latitude, discovering six inlets, of which he prepared charts. The vessel returned in safety to Philadelphia, and was again, in 1754, dispatched on a similar mission under the same captain. Upon their last voyage Captain Swaine lost three of his crew.

The commerce of the province suffered severely during the continuance of the Seven Years' war (which was commenced by a collision between English and French troops on the western province of Pennsylvania in 1755, although war was not declared until the following year). This is shown by the value of the imports from Great Britain, varying from £144,456 sterling, in 1755, to £707,998 sterling in 1760, this latter sum including military stores. Serious losses were occasioned by the mercantile community on account of the provincial government prohibiting the exportation of provisions and military stores to French ports in 1756-57.

The embargo imposed by the Earl of Loudon was continued so long that it became very injurious to all kinds of business. The merchants complained of a total stagnation of trade and commerce, there being in June, 1767, forty sail of vessels, with full cargoes, detained in the harbor. Commodities were perishing, and the manufacture of grain into flour was stopped. The Assembly in June sent a remonstrance on this subject to Governor Denny, who promised to forward it to Earl Loudon. He did so with no warmth. He said in his letter to the earl that it was "an extraordinary remonstrance," and that "he could have wished that for their own sakes they had observed a greater decency." He admitted that the distress was great in the province, and that on that account abundance of flour had already been condemned. Besides, the ports and people who had depended on importations of provisions from the American colonies were in great straits, and many of them were almost reduced to starvation. Nevertheless, the supposed interests of the British navy were considered of more importance than the prosperity of the colonies, and it was not until a week after the fleet had put to sea on the 27th of June that the embargo was removed. The restoration of peace with France and Spain relieved commerce of many restrictions and embarrass-

ments, but the heavy debt which the long years of war had created, together with the impoverishment of the people incident to the war and the measures of defense, depressed trade generally, while the merchants found themselves largely indebted to those of England for goods imported. Those financial troubles were in a measure prolonged by the continuance of the difficulties with the Indians on the Western frontier after the restoration of peace with France.

The effect of these disturbing influences had not passed away when the British Parliament, in 1764, began that system of taxation which eventually severed the political connection of the colonies with the mother-country. The British principle that taxation and representation are inseparable, "founded on the laws of nature,—itself an eternal law of nature,"—was deeply fixed in the hearts of the colonists. It was their unalterable purpose to resist the collection of any and all kinds of taxes imposed without their consent. It is no part of our purpose to trace the history of that contest with the mother-country. The effects of the non-importation agreements, those peaceful remedies of resistance which both in their direct and indirect action came home to the people of Great Britain, may be seen by contrasting the value of imports from Great Britain in 1769 (£199,999 sterling), when these agreements were generally adopted throughout the colonies, with that of the imports in 1771 (£728,744 sterling), when the non-importation restrictions were removed, save in reference to tea.

Petitions were sent to the Assembly in 1765 for the regulation of pilotage. It was complained that many incompetent persons undertook to guide vessels up and down the Delaware, whereby many valuable vessels and their cargoes had been lost. The consideration of the subject was deferred until the following year, when a proper law upon the subject was passed, and Abel James, Robert Morris, John Nixon, Oswald Eve, Michael Hulings, and Thomas Penrose were appointed wardens of the port of Philadelphia.

By an act for the recovery of duties, tonnage, etc., the commissioners had been authorized to erect piers in the Delaware for the protection of vessels during storms. After a survey they agreed that the inside or west shore of Reedy Island was a proper place for erecting two such piers. For this purpose the lower end of the island had been purchased, and in 1762 one pier had been finished, one hundred feet long and about thirty feet in width, having, at the outer end, a depth of three fathoms at low tide. The next summer another pier was built at the distance of five hundred and seventy-one feet from the other, to the northward of it. The length was about two hundred and five feet, the breadth about thirty feet, and the depth at the outer end about three and a half fathoms. The commissioners also banked in and drained eight acres of land adjacent to the piers, and built a house on one of the piers for the accommodation of the workmen. The cost of this work they reported to be

£3356 14s. ¼d. The light-house at Cape Henlopen was also finished. It was situated, the commissioners reported, "a mile south of the point of the Cape, and a quarter of a mile from the ocean, westward, in latitude thirty-eight degrees fifty-six minutes north." Sixpence a ton was levied upon vessels to maintain the establishment, which sum was received by T. Coombe, collector, at the office, corner of Norris and Front Streets. This matter was renewed in January, 1785, when the merchants of the city memorialized the Council in favor of erecting piers in the Delaware for the protection of vessels during storms. On consultation it was considered that Marcus Hook was the proper situation for these piers. An agreement was entered into by one Thomas Davis to build four of them, but the contract was subsequently revoked and given to others. The wardens of the port purchased a small lot at Cape May "with the view of erecting a beacon thereon." Application was made to the Governor of New Jersey for authority to carry out that measure. Delay occurred, and in 1787 the wardens, having visited the proposed site of the beacon, were of opinion that it would be too expensive, and that it would be better to put a beacon on Crow's shoal.

Benjamin Franklin, in his examination before the British House of Commons, in 1766, gave an account of the commerce of the port, in which he computed the imports from Great Britain into Philadelphia at five hundred thousand pounds sterling, and the exports to Great Britain at forty thousand pounds sterling. The difference between these sums was the annual indebtedness of the colonies to the merchants of England. To discharge that indebtedness the produce of the province, which could find no market in England, was exported to the British, French, Spanish, Danish, and Dutch West India Islands; to New England, Nova Scotia, Newfoundland, Carolina, and Georgia, and to Spain, Portugal, and Italy, from which either money, bills of exchange, or commodities suitable for remittance to England were received. These, together with their profits, as well as the freights earned in their circuitous voyages, all finally centred in Great Britain to pay for British manufactures used in the province, or sold to foreigners by American traders. Notwithstanding all the impediments which the policy of England threw across the pathway of the colony to successful commerce, the rapid development of her resources enabled that commerce to grow in volume and value until actual conflict in 1776 put an end to its progress. The exports for the years 1771, 1772, 1773 were as follows:

Year.	Value of Exports, pounds sterling.	Clearances.		Total Tonnage.
		Square-rigged Vessels.	Ships and Schooners.	
1771.....	631,554	361	391	46,654
1772.....	784,254	370	390	46,841
1773.....	720,185	426	370	46,972

In January, 1776, the Committee of Inspection and Observation detected some tea in the city which had been brought from New York. They gave notice

that any more of the same article which they discovered, procured from that or any other place, would be sent back. Congress resolved, in April, that tea which was on hand before the passage of the act of Parliament, might be sold at stipulated prices,—Bohea at seventy-five cents per pound; other teas to be regulated, as to rates of selling, by the Committee of Inspection. By a resolution of Congress this committee was invested with power to prevent shipments of provisions, goods, or merchandise, and such as were allowed to be exported must first receive their license for the voyage. In March complaints were made that the engrossing of salt, rum, sugar, spice, pepper, molasses, cocoa, and coffee had created an artificial scarcity of these articles. "Some persons," it was said, "had formed the cruel design of adding to the sufferings of their fellow-citizens by collecting great quantities of these articles, and exacting exorbitant prices for them." The committee resolved to stop such "arbitrary practices" by fixing the following prices upon the articles named: Common West India rum, 4s. 6d. per gallon, by the hogshead or in greater quantity; molasses, 2s. per gallon, by the hogshead; coffee, 11d. per pound, by the bag or barrel; cocoa, £5 per thousand; chocolate, 16d. per pound; pepper, 5s. per pound, per bag or barrel; loaf sugar, 14d. per pound; lump sugar, 10d. per pound; Muscovado sugar, first quality, 65s. per hundredweight; Lisbon salt, 4s. per single bushel, or greater quantity; Liverpool blind salt, 5s. per single bushel or greater quantity; Jamaica spirits, common, 5s. 6d. per gallon. Any person violating these prices were to be "exposed by name to public view as sordid vultures, who were preying on the vitals of their country in time of common distress." The Committee of Privates seconded this resolution by an address, in which they said that, while the Committee of Inspection was "to be praised for having taken measures against monopolizers and forestallers, Congress ought to be petitioned to open trade with such countries as supply us with needful articles, so that we might export the produce of our own country in exchange."

These representations had a good effect, for four days afterward Congress resolved that goods might be exported to any country but Great Britain, and that merchandise might be imported into the American provinces from any part of the world except Great Britain and the East India provinces, the tea from which was totally prohibited. It was also declared that no slaves should be imported into the united colonies. The powers of the Committee of Inspection, under this policy, were soon found to be injurious to the interests of the commerce which it was now resolved to foster. It was therefore determined that, as the stocks from other countries were nearly exhausted, and as their attempts to regulate prices would be a hindrance to trade, their powers to do so ought to cease.

An ordinance was also passed against the engross-

ing or forestalling of bar iron, leather, salt, wheat, cattle, or other merchandise or victuals, in greater quantity than any person could make to appear to be suitable for his or her own need and supply, with an exception in favor of millers buying grain to grind into flour, graziers purchasing lean cattle to fatten them, and persons buying goods for the purposes of their trades with intent to manufacture or improve them. The price of whiskey was fixed, by special ordinance, at 8s. 6d. per gallon, Pennsylvania currency, when sold by other persons than sutlers in camp. Committees were also appointed to seize and take from all persons who had not subscribed the oath of allegiance and abjuration, or who had aided or assisted the enemy, blankets, stockings, cloths, linens, at certain fixed prices.

The regulation of prices by authority continued to be the policy of the times, and William Henry, chairman of the committee on the prices of provisions, published, under date of June 6, 1779, the regulations for the markets and shops, for buyers and sellers, who are warned to take notice and abide the consequences. The "murmurings and discontent respecting the price of butter" were very great, and the committee "Resolved, That if any inhabitant of this City shall give more than Fifteen Shillings for a pound of butter, such person or persons so purchasing, whether man or woman, shall be summoned to appear at the next Town Meeting, or pay Twenty Shillings into the hands of this Committee, to be applied to the relief of the poor, one-half thereof to the poor of this city, and the other half to the poor of the township where the seller of such butter shall live." The following were the prices established for the following articles on the 1st of April, to continue for the month of July:

	Wholesale.			Retail.		
	£	s.	d.	£	s.	d.
Coffee, per pound.....	0	15	0	0	16	0
Chocolate, per pound.....	1	17	6	2	0	0
Bohea tea, per pound.....	4	10	0	4	15	0
Common green tea, per pound.....	5	10	0	7	10	0
Best Hyson tea, per pound.....	18	0	0	20	0	0
West India rum, per gallon.....	6	5	0	6	12	6
Country rum, per gallon.....	4	10	0	4	15	0
Fraunch rum, per gallon.....	4	10	0	4	10	0
Madeira wine, per gallon.....				10	0	0
Muscovado sugar, from £70 to £95 per cwt.; from 15s. to 20s. per pound.						
Loaf sugar, from 42s. 6d. to 50s. per pound; from 47s. 6d. to 52s. 6d. per pound.						
Rice, per pound, 3s.						

	£	s.	d.	
French indigo, per pound.....	2	15	0	60s.
Carolina indigo, per pound.....	2	0	0	45s.
Black pepper, per pound.....	1	17	6	42s.
Cotton, per pound, from.....	40s.	to 55s.;	45s.	to 60s.
Hemp, per pound.....				5s.
Candles, per pound.....	14s.	6d. to 15s.		
Best hand soap, per pound.....	10s.	6d. to 12s.	6d.	
Butter, per pound.....				15s.
Bloomery bar iron, per ton.....	£500	per cwt.,	£25	
Refined bar iron, per ton.....	700	"	38	
Nail rod iron, per ton.....	1000	"	55	
Sheet iron, per pound.....	12s.	per pound,	15s.	
Best duntle eole-leather, per pound.....			20s.	
Neat's leather, by the side.....			150s.	
A calfskin that will cut four pair of shoes.....			150s.	
Best boot-legs, per pair.....			150s.	
Harness leather, per pound.....			20s.	
Bridle leather, per alde.....			150s.	
Boots, per pair.....	from	£37 to	£40	
Men's best leather shoes.....	from	135s. to	150s.	
Women's shoes.....			120s.	

The committee continued the price of flour, middlings, etc., as of the last month's prices, and were "happy to inform the public that the price of molasses and the various kinds of salts are at present lower than on the 1st of April, and the committee expect they will not be appraised higher than at present." The committee also "resolved that if any goods, exceeding the value of one hundred pounds, be removed or offered to be removed from this city, without first obtaining a permit from this committee, such goods so removed or offered to be removed shall, on detection, be detained under the care of the committee until the next town-meeting, and the owner to abide the consequences."

From 1776 to 1783, the period of the Revolution, there existed no foreign trade whatever from the port of Philadelphia. From 1783 to 1789, commerce groped its way among the difficulties that beset it on every side. Peace removed the barrier that war had erected; but abroad, the obstacles of the protective system, with which each country was hedging its manufactures and domestic interest, barred its onward movement, and at home the conflicting laws of thirteen colonies were not only ruinous to its development, but demoralizing, as they were productive of smuggling. Not less serious than these was the deranged condition of the currency of the country, which was no measure of value, and would hardly pass when out of sight of its place of issue. These difficulties and embarrassments continued, until, by the adoption of the Federal Constitution, in 1789, the thirteen States transferred to the Federal government the power to regulate commerce with foreign nations, between the States, and among the Indian tribes, in fact, all control of every kind over commerce.<sup>1</sup> Commercial relations were then opened by one central authority with the nations of the world; preference between

<sup>1</sup> The conflicting legislation of the States on the subject of commerce, and the want of proper commercial regulations were due to the anomalous condition of the thirteen independent States of the Confederacy, each of which attempted to regulate foreign commerce without reference to the others, producing confusion abroad, and operating against American enterprise. The merchants of Philadelphia took up this subject at a meeting held at the State-House on the 20th of June, 1785, to hear the report of a committee "to suggest means of relief for the present state of trade and manufactures." They declared that it was necessary that Congress should have full power over the commerce of the United States, and that to withhold such power would be injurious. Agriculture and manufactures, it was said, were the great employments of the people, and constituted the wealth of the country, and that, as the former must decline with our export trade, it became necessary to extend the latter. It was urged as the opinion of the meeting that manufacturers interfering with our own ought to be discouraged, some by absolute prohibitions, others by impost.

From the peace of 1783 to the adoption of the constitution, in 1789, there is no data of American tonnage. Some of the States, Pennsylvania among that number, laid discriminating duties in favor of vessels belonging to citizens of the United States, and in some instances in favor of nations having treaties with the United States. Pennsylvania laid a tonnage duty on American vessels at four pence sterling, and the vessels of foreign nations at eight pence sterling. In August of 1794, there was formed an association called "The Philadelphia Society for the Information and Assistance of Persons Emigrating from Foreign Countries."

ports of different States could no longer be given; hindrances in trade by exactions were no longer possible. Commerce and trade consequently revived, as the resources of the province increased, and the establishment of the Bank of the United States, in 1791, provided a currency universally received as a measure of value and medium of exchange. In all these improved conditions, the commerce of Philadelphia participated.

The first adventure after peace from the port to the East Indies was made early in 1786. The ship "Canton," Captain Thomas Truxton, was the pioneer from Philadelphia.<sup>1</sup>

In favor of the good ship "Canton," and her commander, Congress, on the 2d of January, granted a sea-letter directed to the "Most serene and most puissant, high, illustrious, noble, honorable, venerable, wise, and prudent emperors, kings, republics, princes, dukes, earls, barons, lords, burgomasters, counselors, as also judges, officers, justiciaries, and regents of all the good cities and places, whether ecclesiastical or secular, who shall see these presents or hear them read." There are few particulars of this voyage, except the fact that the "Canton" returned to Philadelphia in May, 1787, after a successful trip. In those days shipments were not made on individual account; the cargo was a joint-stock affair, and dividends of the profits were made to each shareholder.

In three years after the adoption of the Federal Constitution, the French Revolution was turned by Napoleon against all European powers. These wars continued from 1792 to 1815, with a very short intermission. The demand of the armies for men depleted the number of agriculturists, and created a demand for supplies from America. The naval armaments of European nations, in all parts of the ocean, rendered neutral vessels absolutely necessary for the carrying of commodities from the colonies of European nations to the parent States. The "carrying trade" became a fruitful source of profit, in which the ships of Philadelphia shared very largely. The commerce of Philadelphia, in common with that of the whole country, prospered beyond any previous period of its history; her population increased from 42,000, in 1790, to upwards of 96,000 in 1810. That "carrying trade," a term now almost lost to commerce, was at the beginning of the present century a fruitful source of wealth and prosperity to the city. Intercourse with the West Indies exchanged the agricultural productions of the State, such as beef, pork, flour, apples, onions, butter, lard, and other products, for sugar, coffee, oranges, lemons, pineapples, and other tropical productions. Abraham Piesch, a prominent shipping-merchant in

the fast-sailing schooner "Fly," braved the savage blacks of San Domingo in 1792-93, and in the midst of insurrection and civil war reaped the reward of his pluck and courage in a profit on coffee purchased at five cents per pound, and paid for in apples, onions, lard, and other things bought at an equally low figure. He built more vessels, large and small, than any other ship-builder of the time, and during the war of 1812-15 he had twelve schooners engaged in running the blockade. He was later engaged in the East India and European trade. Europe, Asia, China, and "Afric's sunny fountains rolled down their golden sands" on the margin of commercial enterprise, in which Girard's ships, the "Voltaire," the "Rousseau," the "Helvetius," the "Montesquieu," were the philosophic names that bore the products of republican America. Stephen Girard, Henry Pratt, Pratt & Kintzing, Willings & Francis, Smith & Ridgway, Summerl & Brown, Louis Martial Jacques Crousillat, Eyre & Massey, Blight, Montgomery, Sims, Waln, and others whose names are forgotten, were the active leaders on the wharves of the city, where their ships were loading and unloading for and from every country.

Henry Pratt was an eminent shipping merchant of Philadelphia in these early days. He was born in the city on the 14th of May, 1761, and was the eldest son of Matthew Pratt, a portrait-painter. Before his majority Mr. Pratt was engaged in the china and crockery trade, and afterward in the grocery business. He finally became identified with the shipping trade, and became known far and wide. He amassed a large fortune, and built "Lemon Hill," on the Schuylkill, near Fairmount. Great perseverance and energy characterized his life, and marked him as a merchant of uncommon and unusual qualities. No calamities of trade or commerce unnerved him. Mercantile pursuits were to him a passionate pleasure, and the adventures and speculations which follow unusually attractive. The unlimited credit and confidence which he enjoyed among the merchants of the city enabled him to weather all paucities and pressures in the money market, and to escape unhurt all the vicissitudes of his long business career. He died Feb. 6, 1838, aged seventy-seven.

Abraham Kintzing withdrew in 1812 from the firm of Pratt & Kintzing, and organized that of Kintzing, Son & Coxe (Francis S. Coxe). Impaired health and blindness soon compelled him to retire. His business life was one of such exemplary integrity that he became the arbitrator of differences among business men, and recognized as an honest judge, though never on the judicial bench. His commanding personal appearance, his great dignity of hearing, yet gentleness of disposition, united with unostentatious charity, made him exceedingly popular and beloved. He was a director of the Bank of North America and of the old Philadelphia Insurance Company. He died in June, 1835, aged seventy-two years.

Louis Martial Jacques Crousillat was born in France

<sup>1</sup> As early as February, 1784, the ship "Empress" of China, Capt. Green, sailed from New York bound to Canton, where she arrived on the 26th of August. This was the first vessel that left the United States for that distant region. The sloop "Experiment," Capt. Dean, of New York, is said to have been the second. The "Canton," Capt. Truxton, was the third.

*James L. McPhlin*

in 1757, and emigrated to Philadelphia in 1780. He was attached to Count Rochambeau's army for eighteen months in the capacity of purchasing agent in New Jersey and Pennsylvania, in which employment he gave great satisfaction, and by his commissions made about seven thousand pounds, with which he established himself as a shipping merchant, trading to St. Domingo and Marseilles. He was the first French shipping merchant in Philadelphia after the Revolution. He opened the import trade of fine French china. In 1794 he purchased of Mr. Mulligan a farm on the Schuylkill, "Point Breeze," on which he raised fruit from imported stock. He retired from business about 1802. He was an enterprising, upright merchant, a kind and hospitable gentleman. He died in July, 1836, in his eightieth year.

The house of Jesse and Robert Waln was largely engaged in the West India and English shipping business, and afterward in East India and China trade. Robert Waln was a member of the Legislature for some years, and of Congress in 1798. He was an unwavering Federalist. During the war of 1812-15 he erected a cotton-factory in Trenton, N. J., which was one of the first built in that State. He had large interests in the iron-works at Phoenixville. His interests in these manufactures made him an ardent protectionist. The tariff acts of 1816, 1824, and 1828 drew out the "Boston Report," by Henry Lee, by the reasoning and figures of which the cause of "protection" seemed to have been overthrown. The Pennsylvania Society for the Encouragement of Manufactures selected Mr. Waln as the person most fitted by abilities and familiarity with the subject to make the reply to the "Boston Report." His reply was able, and by its friends regarded as "triumphant." His "Seven Letters to Elias Hicks" are papers on Quaker subjects. He filled many places of honor and trust, and died in 1836, aged seventy-one.

The patriarch of the illustrious Mifflin family in Pennsylvania was John Mifflin, who emigrated to America from Wiltshire, England, at some date prior to 1684, in which year he married, in this country, Elizabeth Hadley, a native of Derbyshire, England. The issue of the union was five children,—Edward, George, John, Jonathan, and Jane. George, the second son, wedded in Philadelphia, Feb. 18, 1714, Esther, the daughter of Hugh and Deborah Cordry, by whom he had six children. One of them, John Mifflin, who became a provincial councilor, was born Jan. 18, 1715. He entered mercantile life, in which he attained the highest rank, but his business pursuits did not prevent him from sparing much of his time to that public service for which his ability and integrity thoroughly fitted him. For twelve years he was a director of the Philadelphia Library. He was elected in 1747 a member of the Common Council of Philadelphia, and an alderman in 1751. On Nov. 2, 1755, he was chosen to the Provincial

Council of Pennsylvania. He died in February, 1759, and was interred in the Friends' burying-ground. The eldest of the sixteen children that he had by his two wives was the celebrated Governor Thomas Mifflin. George, the second son of John, was a Philadelphia merchant, and was for some years in business partnership with his brother Thomas. He died July 14, 1785. His wife, whom he married Oct. 15, 1772, was Martha, the daughter of Joseph Morris. Their children were Thomas and Elizabeth, the latter becoming the wife of Dr. Caspar Wistar. Thomas Mifflin followed his ancestors in a commercial career, and, like them, was a member of the Society of Friends until, in 1794, he was "read out of meeting" for engaging in military duty in suppressing the Whiskey Insurrection. His death occurred in April, 1820. On June 20, 1799, he was married to Sarah, the daughter of Ebenczer Large, of Bristol, Bucks Co., a prosperous flour merchant. James Large Mifflin was their eldest son, and was born June 18, 1800, at the family residence, on the north side of Spruce Street, below Fourth. He was educated in his native city, and on April 16, 1818, when still three years under his majority, he entered into partnership with John Jennings, George W. Jones, and Joseph Archer, to conduct an auction business in all goods pertaining to the Canton (China) trade, on the west side of Front Street, above Chestnut. Each partner contributed twenty-five thousand dollars to the joint capital, and Mr. Mifflin acted as cashier and financial manager. The business was very prosperous, and grew to large proportions, as much as eight hundred thousand dollars in cash passing through Mr. Mifflin's hands in the single month of June, 1819. In 1823, the auction commission of Mr. Jones having expired, the firm was dissolved, after five years of an honorable business career. In 1824, Mr. Mifflin entered into partnership with a son of Joseph Archer, in the legitimate Canton trade in all its branches. They were established on Front Street, a short distance north of the old firm, and on a property that has ever since been retained in the Mifflin family.

Mr. Mifflin was the first Canton merchant who brought into this country the well-known Caykar (or cocoa) matting, the original lot coming over in his ship, the "Nassau," commanded by Capt. Hewitt. The business connection of Mr. Mifflin and Mr. Archer ran through some fifteen years, when Mr. Archer withdrew, and Mr. Mifflin became the sole head of the house, whose operations he extended by dealing very largely in cotton. The great fire of 1839 swept away such a large proportion of his stores and offices that he decided to retire to private life. This he did, and was not again engaged in any commercial ventures. He was a member of the Society of Friends. In June, 1844, he was married to Theresa, daughter of Curtis and Mary Worrell, of Chester County, who survived him, and is still living. Their

three children are James, Dorothea Theresa, and Thomas Mifflin. James Large Mifflin died on Sept. 25, 1872, and was buried in Laurel Hill Cemetery.

In those early days of Philadelphia, countries gave their name to different "trades,"<sup>1</sup> and the East India

<sup>1</sup> The following is a list of vessels engaged in "trading" from Philadelphia in 1800. Those engaged in West India trade were as follows:

Here are forty vessels in the trade to East India and China alone. It is true, they were not large in comparison to present burthen; but they would average two hundred and fifty to three hundred and fifty tons. They were able to make about one round trip a year, including the time spent in port; some might do it ten months. The passages were from one hundred and twenty-five to one hundred and fifty days. In this year there was an arrival of the ship "Charles Blythewood," from the coast of Africa, with ivory, palm, oils, dyewoods, etc., consigned to Peter Blight, and the ship "Iris," Crosby, was cleared for Alexandria, in Egypt.

The following will show what Philadelphia was doing in trade with

trade, the China trade, the Liverpool trade, the London trade, the St. Croix, Spanish main, and Havana trade were distinct in their goods, and often conducted exclusively by different mercantile houses. The "East Indiamen" at the "India wharf," between Walnut

Great Britain eighty-four years ago. It is condensed from the ship news of 1800, and shows a more extensive commerce with the old country than with the East Indies:

"Sept. 19, 1788, the ship 'Alliance,' Thomas Reed commander and George Harrison supercargo, arrived from Canton, consigned to Isaac Hazlehurst & Co." (of which Robert Morris was the company). Such is the record of her first and only voyage as a merchantman, after which she found her resting-place at Petty's Island, where, 'tis said, some of her ribs yet (1860) perpetuate the fact of her existence." In these "India stores" Thomas Willing and John Swanwick carried on their share of the "East India trade." Jesse and Robert Wain, in 1796, at Wain's wharf, near Spruce Street, were extensively engaged in the East India trade, as well as in the London trade. Willings & Francis, at 21 and 23 Penn Street, were among those who engaged most extensively in the

The above comprises most, if not all, the vessels in the China trade from say 1822 to 1830, or perhaps some of them a few years later, Doubtless a few have been omitted, but not many. Enough is shown, however, to indicate the great loss Philadelphia has sustained in her commercial interests by what must be attributed to the apathy of her merchants. In this connection it may not be out of place to state that a few years ago there were three lines of packets—twelve ships—sailing regularly to Liverpool, two regular ships to London, two to Amsterdam, several vessels to the west coast of Africa, and quite a fleet of brigs and barks to Rio de Janeiro and Pernambuco. It should be borne in mind that the sizes of vessels at the beginning of this century were very different from what they are at the present time. For instance, the ships "Woodrop Sims" and "Rebecca Sims" registered 566 and 565 tons respectively. They were built in 1800, and were the largest ships in the American merchant marine. In fact, they were so until 1822 or 1823. We have at the present day many coasting schooners that could carry the cargoes of both the said ships, with about all their material also. The difference in the number of men carried by ships then and now is simply wonderful. One of the above ships carried 25 all told. This would give 50 for the two ships; while we have coasting schooners that carry 1400 tons of coal, with a complement of 9 and 10 all told. The "Rebecca Sims," after many voyages in the whaling business, ended her career as one of the "stone fleet" which were sunk off Charleston harbor in 1862 to obstruct the navigation thereof. About 1825 three ships arrived from China in one afternoon. They always fired a salute of 21 guns when coming round the "Point House," now Greenwich. They always went well armed, as the Atlantic Ocean, and particularly the China Sea, were greatly infested with pirates. The vessels always carried the funds for purchasing their cargoes in Spanish "Carolus" (dollars), as Chinamen had not learned the advantages of drafts, bills of exchange, etc. The "Montesquieu," a China packet, was captured by the British fleet at the Capes of the Delaware in April, 1813, and Stephen Girard ransomed her for \$180,000 specie.

The result of this examination is a sum total as follows:

Vessels trading with the East Indies and China.....	40
" " " British ports.....	52
" " " Continental Europe.....	50
" " " West Indies.....	26

East India, as well as the China trade. The "Woodrop Sims," the "Rebecca Sims," and the "Fame" brought the teas and other East India luxuries for Joseph Sims, whose country-seat was on the Ridge road, at the Laurels. Samuel Archer, in 1799, was an importer of East India muslins, at No. 35 Front Street, and afterward extended his business to the importation of all East India goods. Morris L. Hallowell, the founder of M. L. Hallowell & Co., was a clerk for Mr. Archer, and sailing to China in his employ, returned and began business as M. L. Hallowell & Co., whom Morris L. and Joshua Hallowell succeeded. Gurney & Smith, in 1799, were actively engaged in the European and Calcutta trade.

Thomas P. Cope was a prominent and became a wealthy shipping merchant in the Liverpool trade as early as 1807. He established the house of Thomas P. Cope & Son in 1821, and the same year, with the "Lancaster," of 290 tons, commanded by Capt. Dixey, and the "Tuscarora," of 397 tons, commanded by Capt. James Serrill, opened the Liverpool Packet Line. The line was sustained through all adverse circumstances. Their ships—the "Montezuma," "Algonquin," "Monongahela," and "Susquehanna"—were for many years famous. The business was enlarged, the firm being successively Thomas P. Cope & Son, Thomas P. Cope & Sons, Henry & Alfred Cope, H. & A. Cope & Co., and Cope Brothers. Several fine ships were added to the Cope Line in the course of years, among them the "Tonawanda," "Wyoming," and "Thomas P. Cope," all vessels of the largest size.

Mr. Cope was the contemporary and often the rival of Mr. Girard. He filled many places of honor and trust, serving in the Legislature and Congress, member of the Select Council of the city, president of the board of commissioners of the Girard estate, a director of Girard College for orphans, president of the Board of Trade, and also of the Mercantile Library Company. Mr. Thomas P. Cope died in March, 1834, and was succeeded by his son, Alfred Cope, who died in 1875. Mr. Alfred Cope left two sons—Professor Edward D. Cope, member of the Academy of Natural Sciences, and James B. Cope, graduate of Oxford University—and a married daughter. Mr. Cope was a member of the Society of Friends (Orthodox), and a member of Germantown Meeting. He was a man of wealth, and has given largely to charities. He might be considered one of the founders of Fairmount Park, having, with his brother Henry, contributed twenty thousand dollars for the purchase of the Sedgely estate (adjoining Lemon Hill), which was the first movement made toward expanding the park to its present dimensions. He also gave twenty-five thousand dollars to the Zoological Society, and forty thousand dollars to the Institute for Colored Youth, in Bainbridge Street, for the purpose of founding a scientific school.<sup>1</sup>

<sup>1</sup> There was another line of Liverpool packets sailing from this port, which had more vessels than the Copes had during the early part of their history. This line was called the New Line, and the agent for some

Jacob Gerard Koch, in 1796, was a prominent importer of German linens. Robert Ralston was in the China trade, and of him it was said, "Take him altogether, he has been justly considered as a beautiful model for the character of the merchant. . . . He did not make haste to grow rich, and thereby preserved himself from many of those sorrows with which multitudes have pierced themselves through." It was in the house of Mr. Ralston that John Welsh laid the foundation of that business character which made him pre-eminent among the early business men of the city. He retired in 1806, leaving the house of S. & W. Welsh his successors. John R. Evans purchased the store of Mr. Welsh, and in 1807 the firm of Welsh, Maris & Evans, and afterward the concern of Maris & Evans; and in 1818, Joseph R. Evans continued the "London trade" business. The ships "Electra" and the "Thames" were well known in that trade. John Welsh was among the pioneers in the shipping business of Philadelphia. Apprenticed, in 1786, in the counting-house of Joseph Russell, a prominent shipping merchant of that day, he went as supercargo to Port au Prince, and upon his return entered the counting-house of Robert Ralston as clerk. In 1794 he began mercantile business on his own account, and such was his success that he retired with wealth in 1806. He was one of the originators of the Philadelphia Bank, in 1803, of which he was a director until his death. He died in March, 1854, aged eighty-four years.

It is no exaggeration to say that at the beginning of this century the commerce of Philadelphia was co-extensive with the globe, since, for instance, the ships of Eyre & Massey touched and traded at Archangel, Tonningen, Hamburg, Amsterdam, Antwerp, Havre, Bordeaux, Bayonne, Lisbon, St. Ubes, Oporto, Cadiz, St. Lucar, St. Sebastian, Gibraltar, Malaga, Barcelona, Marseilles, Sardinia, Genoa, Leghorn, Palermo, Madeira, Teneriffe, Cape de Verd Islands, Vera Cruz, Alvarado, Jamaica, St. Jago de Cuba, Havana, New Providence, San Domingo, St. Thomas, Guadaloupe, St. Croix, Curaçoa, Lagaira, Maracaibo, Cayenne, Pernambuco, Corunna, in Spain, Bahia, Rio de Janeiro, Santos, Paranaquay, Buenos Ayres, Montevideo, Valparaiso, Irico, Coquimbe, Copiapo, Lima, Guayaquil, Panama, Sandwich Islands, Java, Sumatra,

years was Samuel Spackman, No. 21 Church Alley. It was founded about 1822, and at first sailed regularly between Philadelphia and Liverpool, but subsequently the course was altered, so that the ships sailed from Philadelphia to Savannah, and from thence to Liverpool, and returned from Liverpool to Philadelphia direct. It appears from a newspaper of 1825 that at the beginning of that year this line was composed of the following ships: "Julius Cæsar," Capt. Francis M. French, 346 tons; "Globe," Capt. James Hamilton, 500 tons; "Colossus," Capt. Robert Marshall, 399 tons; "Courier," Capt. George H. Wallace, 388 tons; and "Delaware," Capt. John Hamilton, 412 tons. Their sailing days from Philadelphia were on the 20th of each month. The ship "Minerva," Capt. John C. Mayol, 380 tons, was added to this line about the middle of the year 1825, and the new ship "Bollvar," Capt. Josiah L. Wilson, took the place of the "Globe" in the latter part of the same year.

Manilla, Canton, Calcutta, Madras, and ports in Great Britain and the United States.<sup>1</sup> One of the ships of this house, "The Globe," made eight voyages to China and returned. It is a remarkable fact that in the risks and adventure of this ancient shipping-house, they never made a total loss.

Mr. Massey was for many years a member of the Select Council of the city, and in turn also of the Common Council, in which he took an active part. He was chairman of the committee on opening Delaware Avenue, agreeably to the will of Stephen Girard, in 1834; also appointed by the Court of Quarter Sessions a juror of valuation of the wharf fronts; and for his general knowledge of wharf property, selected as chairman of that jury; and he, with his fellow-jurors, valued by critical arithmetical estimate, the property required for the avenue from Arch to Chestnut, and from Walnut to the lower side of Spruce Street; being owner of part of the intermediate square, he was ineligible for that duty.

Manuel Eyre, who was also brought up in the counting-room of Henry Pratt, was no less energetic or public-spirited. He was a member of the City Council, and a director of the United States Bank of 1816, and again of the same under the charter of Pennsylvania of 1836; but he was more of an agriculturist than a merchant, and he devoted mainly the last twenty years of his life to rural cares, being the owner and operator of two farms near the city, and three in the State of Delaware, indeed, a very projector of Delaware City.

Mr. Eyre was of full size, being six feet in height, square-built, and well proportioned; he had an independent but not a haughty carriage; he had a very prominent nose and strong features generally, with a thoughtful and observing eye, shaded by his hat of broader brim than fashion called for. He was a man of integrity and respectability, unmoved by any adverse crook in trade, or flow of incidental success.

He was the son of Manuel Eyre, Sr., of Kensington, an eminent shipwright there, who had been a colonel in the Revolutionary war, and subsequently a member of the Legislature of Pennsylvania.

Among the eminent merchants of Philadelphia none filled a higher place in usefulness than Paul Beck, Jr., who, at an early age was apprenticed to William Sheaff, a prominent and successful lime merchant. Upon the opening of hostilities with Great Britain he enrolled himself in the company of Capt. John Linton, of the first battalion of Philadelphia Infantry. The Revolution being over, he formed a copartnership with James Caldwell, in 1787, and from that date until his death, in 1844, his career was one of steady increase in prosperity and wealth, which latter aggregated over a million and a half dollars. He was appointed port warden, and in the exercise of

the duties of his position was remarkable for his efforts to preserve and extend the facilities of the port as a resort of commerce. His designs for the restoration of William Penn's original plan of a broad and noble quay, occupying the entire space from the western side of Front Street and extending from one extremity of the city to the other, though rejected, were in a measure the means of bringing Mr. Girard to provide for the avenue along the Delaware, and to widen and straighten Water Street. He was more successful in his next effort for the general benefit of the city in connecting the Chesapeake and Delaware Bays by a canal. He was among the founders of the Pennsylvania Academy of Fine Arts, to which he bequeathed a number of his pictures. He was an efficient patron and friend to all the institutions of philanthropy, and as treasurer of Christ Church Hospital received the thanks of the vestries of Christ Church, St. Peter's and St. James'. The Institution of the Deaf and Dumb, the American Sunday-School Union, and the different churches experienced the benefits of his kind charities and valuable services.

Among the eminent early mercantile houses of Philadelphia none stood higher in character than that of Elliston and John Perot. These brothers were born in the island of Bermuda, the former on the 16th of March, 1747, and the latter on the 3d of May, 1749. After many vicissitudes of fortune in the West Indies they arrived in 1784 in the United States, and commenced business at No. 41 Water Street, between Market and Arch. Elliston Perot died Nov. 28, 1834, and John Perot on the 8th of January, 1841. The death of the former caused the dissolution of the firm, upon which the latter retired from business. The members of this ancient house were the parents of those who since that early day have also made their mark among the merchants of Philadelphia. Sansom, son of Elliston, and James, son of John, were as early as 1816 in business in the firm of Perot & Williams, and Perot & Ridgway; James and Sansom Perot, Francis and William S., sons of Elliston, together with Charles and Edward, sons of John, were in the brewing business. C. & J. Perot and Perot & Hoffman are the lineal and business descendants of this house.

Levi Hollingsworth, descended from Valentine Hollingsworth, who accompanied William Penn to Pennsylvania, was the son of Zebulon Hollingsworth, and was born at Elkton, Md., Nov. 29, 1739. He settled in Philadelphia in 1760, where he remained for sixty-four years, a conspicuous example of honesty, enterprise, economy, and industry. He was a zealous and active supporter of the American cause, using liberally his means, and exposing his person in the defense of the country. He was a member of the Philadelphia Troop of Light Horse, commanded by Abraham Markoe. This troop was equipped at its own expense, and Mr. Hollingsworth was among the first of the associates. He was sent to Canada with

<sup>1</sup> List furnished from the books of the concern, by Mr. Samuel Eyre, in 1845, to Mr. Abraham Ritter, for his book "Philadelphia and her Merchants," p. 61.

specie for the payment of Gen. Montgomery's army when investing Quebec, and employed in many special services, all of which were performed with fidelity.

Among the leading houses which in Philadelphia were eminent in her commerce from 1783 to a late period in the present century may be mentioned Peter Whitesides, Isaac Hazlehurst, B. & J. Bohlen, Harvey & Davis, John Wilcox, Samuel Beck, Peter Blight, Buckridge Sims, Joseph Sims, John Swanwick, Wharton & Palmer, Savage & Dugan, Joseph

Among the merchants of Philadelphia who have given the councils of the city, State, and Union the benefits of their experience and capacity, not one has risen to a higher place in the public estimation than the Hon. Samuel J. Randall, who, without abandoning the counting-room, has filled nearly every position of honor and trust in the gift of the people among whom he lives. Born on the 10th of October, 1828, he received an excellent practical education, chiefly in the public schools of the city; at the age of seventeen he

*Sam J Randall*

Carson, Gustavus & Hugh Calhoun, Montgomery & Newbolds, Joseph Harrison, Robeson & Paul, Latimer & Murdoch, Timothy Paxson, James Vanuxem, James Crawford, Daniel & Vincent Thunn, Ducoing & Lacombe, Hartshorne, Large & Co., James C. and Samuel W. Fisher, Ambrose Vasse, Nottnagel, Montmollin & Co., Thomas Peacock, Cornelius Comegys, Baker & Comegys, William Lippincott, John Morrell, Blair McClenachan, Lewis Tarascon & Victor Journal, Brugiere & Tessiere, Robert Ralston, and Gurney & Smith.

entered a large dry-goods house, but immediately on attaining his majority he entered the political arena, and became a member of the City Councils, serving for three years immediately after the consolidation of the city. His service in the City Councils won the gratitude and confidence of the people he represented. In 1858-59 he served for the unexpired term of Charles B. Penrose in the State Senate, and in 1862, by an overwhelming majority, was elected from the First Congressional District of Pennsylvania to the House of Representatives. He was re-elected to the Thirty-ninth Congress, and, with unbroken success, has been returned to the Fortieth, Forty-first, Forty-second, Forty-third, Forty-fourth, Forty-fifth, Forty-sixth, Forty-seventh, and Forty-eighth Congresses. On almost every important committee he has served to shape legislation, and as chairman of the Committee on Appropriations in 1875, and again in 1884, he has been recognized as the leader in all measures of economy and policy looking to reform and retrenchment. As Speaker of the House he was recognized as the first and ablest parliamentarian of the country; as a leader of a party he has shown sagacity, tact, courage, and ability; and as a statesman he has elucidated some of the most intricate problems in political economy. A Democrat of the strictest kind, he has never failed to take his stand in advance of his party on all

questions where principle was involved or the economies or industries of the people were threatened. Whether the goal of American ambition will yet be won by Mr. Randall is uncertain, but there is no question that his integrity of purpose, faithfulness in trust and ability, entitle him to the highest honor of his country.

France and England, as well as Spain and other European powers, endeavored to restrict the trade of neutral nations by decrees, orders in council, and embargoes, which resulted in frequent depredations upon

American commerce. The French decree of May 9, 1793, was followed by the British order of June 8, 1793, prohibiting flour and meal from being carried to France or to any port occupied by French armies. The treaty of 1794, commonly called the Jay treaty, compensated the commerce of this country by the payment by England of \$10,000,000 for property illegally taken. France, viewing this Jay treaty as violative of previous engagements made with her during the Revolution, commenced a general seizure and confiscation of American vessels and cargoes. The treaty of 1800 with France settled these difficulties with that nation.

The Treaty of Amiens, in 1801, gave a short respite to Europe, and materially reduced the exports from Philadelphia, which, in 1801, were \$17,438,193; in 1802, \$12,677,475; and in 1803, \$7,525,710. The registered tonnage in 1801 was 109,036; in 1802, 64,637; and in 1803, 67,629. The resumption of hostilities in Europe in 1803 gave an immediate impulse to her commerce. In 1804 the value of her exports was \$11,030,157; in 1805, \$13,762,252; in 1806, \$17,574,702; and in 1807, \$16,864,744. Her registered tonnage rose in 1804 to 71,199; in 1805, to 77,239; in 1806, to 86,728; and in 1807 to 93,993. In 1803, Great Britain revived and put in force the celebrated rule of 1756 as to neutrals, which declared that neutrals in time of war could engage in no trade which they had not been accustomed to carry on in time of peace. Her Admiralty Courts enforced this arbitrary rule against the American vessel "Essex," which, with her cargo, was condemned. Under this ruling many American vessels were seized and brought into English ports.

The commercial feature of Jay's treaty expired in 1804, and there existed no treaty with England in relation to commerce. President Jefferson rejected the treaty made by Monroe and Pinckney with the Fox administration in 1806, and resorted in 1807 to the Embargo Act, by which the whole external commerce of the country was withdrawn from the ocean. Under this act the commerce of Philadelphia fell in 1808 to \$4,013,330.<sup>1</sup>

The "continental system" of Napoleon began with the Berlin Decree of Nov. 11, 1807, prohibiting the importation of British produce and manufactures on the continent. It was retaliated by the English order of Nov. 11, 1807, by which vessels trading with France or her allies were ordered, on pain of condemnation, to stop at a British port, submit their cargoes to in-

spection, and pay a duty on the same. Napoleon rejoined with his Milan Decree of Dec. 17, 1807, declaring any vessel which submitted to search by an English ship or to a voyage to England for that object should be a good and lawful prize. It was a knowledge of these decrees and orders that induced President Jefferson to resort to the long embargo, which was raised March 1, 1809, and non-intercourse established with France and England, which was abandoned in May, 1810, but renewed as to England in November of the same year, and followed by a declaration of war, June 19, 1812.

The commerce of Philadelphia during the four years from 1808 to 1812 was as follows: 1809, \$9,049,241, tonnage 106,622; 1810, \$10,993,398, tonnage 109,692; 1811, \$9,560,117, tonnage 78,518; 1812, \$5,973,750, tonnage 71,281, a decrease of nearly 50 per cent. in value and 30 per cent. in tonnage.

During the war of 1812-15 the commerce of Philadelphia was greatly restricted. The value of imports and exports of the port of Philadelphia for three years was: 1812, \$5,973,750; 1813, \$3,577,117; 1814, not given; 1815, \$4,593,919. The tonnage during the same years was, respectively, 71,281, 64,537, 64,183, and 77,199 tons.

The return of peace in 1815 revived the commerce of the United States, and particularly that of Philadelphia, but new conditions confronted the growing commerce. European nations now at peace turned their attention to the development of their own commerce and the protection of their own manufactures. The "carrying trade" was virtually at an end, so far as Philadelphia shipping was concerned; the parent State and her colonies, no longer separated by intervening hostile navies, fostered their own shipping, and gave employment to their own capital. In addition to this, the direct trade of the ports of the United States with the British West India Islands was laid under heavy restrictions that confined it almost exclusively to British ships as carriers.

The temporary protection enjoyed by domestic manufacturers during the war of 1812-15 with Great Britain having been withdrawn by the treaty of Ghent, a common ruin seemed to await all those enterprises and industries which had been fostered by the policy of the government incident to a state of war. The impolicy of withdrawing adequate protection from manufactures was strongly presented to Congress, the capacity of the country for their profitable extension being shown by the remarkable stimulus given to them by a few years of non-intercourse and war. The period of twenty-six years intervening between the peace of Paris in 1763 and the adoption of the Federal Constitution in 1789 had laid the foundation of a diversified national industry, as well as considerably relaxed its dependence on foreign countries. Another period of twenty-six years to the peace with Great Britain had witnessed a growth of domestic manufactures unparalleled in the history of

<sup>1</sup> The custom-house records of the port of Philadelphia show that in 1806 thirteen American vessels arrived from Canton at this port alone, of which twelve were ships, whose aggregate tonnage was 4,038.91 tons, and one brig of 187.19 tons, and each of them brought home very valuable cargoes. This fact alone contradicts the assertion of Lord Sheffield, that "it would hardly be the interest of the Americans to go to Canton, because they have no articles to send thither, nor any money." In 1816 twenty-four vessels, of which twenty-two were ships, and all belonging to the port of Philadelphia, had proceeded to ports beyond the Cape of Good Hope.

any country. In 1815 they had become one of the principal sources of national prosperity.

The blight that overtook their prosperity will be shown in the chapter on Manufactures. For some years after the peace of Ghent they contributed little or nothing to the commercial movements of the country. Among the impediments to the expanding commerce of Philadelphia, as well as of the whole country, a mere mention can only be made of the commercial regulations of foreign countries, by which heavy duties were imposed upon the exports of this country, which greatly limited, and in some instances prohibited, their consumption. At home the manufacturing interest was strong enough in political power to shape the revenue policy of the Federal government for its own protection, and thus commerce, hampered abroad, was hindered at home. The fluctuations in the tariff laws were probably as injurious as the duties imposed.

It was not long after the peace of 1815 that public attention was turned to the improvement of the means of internal communication with the great valley of the Mississippi. The State of New York completed the Erie Canal in 1825, and immediately began to reap the benefit of that improvement. Pennsylvania, Maryland, Massachusetts, and Virginia have since followed with connections with the great West. The commercial benefits derived from this communication have not been as great to Philadelphia as to New York, probably owing to the greater cheapness of water transportation over that by rail. Be the cause whatever it may, the fact stands out prominent that from the completion of the Erie Canal New York became what Philadelphia had previously been,—the commercial emporium of the United States.<sup>1</sup>

The facilities of foreign commerce, as well as of domestic trade, were greatly promoted by the system of internal improvements set on foot in the State. To these works the capital of Philadelphia was largely devoted. "To aid these," Mr. Freedley says, "her

<sup>1</sup> A writer in "Notes and Queries" of the *Sunday Dispatch* says that "the last clearance and arrival of a ship to and from Canton from Philadelphia was the ship 'Globe,' Capt. Dixey. She left this port in August, 1832, and arrived back in the month of July, 1833. The ship 'Osage' left this port for Canton in 1842, but on her return she went to New York. The 'Globe' was sent out by the house of Eyre & Massey, at that time one of our leading mercantile firms. It is rather mortifying to think that our foreign commerce has dwindled down to nothing, and every project that has been started in that way has been a failure. For instance, our line of steamers to Europe. In 1851 the 'City of Glasgow' arrived from Liverpool, and there was a great jollification with the members of the Legislature, and a banquet at the Chinese Museum. After a few trips the enterprise fell through. I can mention many other projects: the 'grain elevator,' for instance, at the foot of Washington Avenue. As Col. James Page remarked, when he was in Select Council, 'Heaven save our city, when all the grain and produce brought by the Pennsylvania Railroad leaves us at Pittsburgh and goes to New York!' At the time I speak of (1832) I was a young man in the counting-house of S. & T. G. Hollingsworth, on the wharf below Spruce Street, and our wharves had a different appearance then from what they have at the present time. Walk from Vine Street down along the avenue, and you see nothing but a collection of little fruit and produce stores now."

merchants sold their ships; to sustain them, her capitalists declined the profits of bottomry and respondentia." Under these conditions her commerce declined, while her manufactures increased, and the vast internal trade, of which no public records are taken, followed the tracks of her railroads and canals. It was a substitution of railroads and trade with the interior for ships and foreign commerce. Mines, railroads, iron-works, and manufactories were developed to an extent never before known. By the 1st of January, 1858, \$135,166,609 had been invested in railroads, and in 1877-78 that sum had been increased to \$594,380,597.

The following statement of entrances and clearances will exhibit the number, nationality, and tonnage of all vessels trading to foreign ports from Philadelphia during the year ending Dec. 31, 1882:

Country.	Entered.		Cleared.	
	No. of Vessels.	Tonnage.	No. of Vessels.	Tonnage.
American.....	456	283,374	337	242,883
Austrian.....	35	18,981	30	16,614
Belgian.....	8	21,039	9	23,876

" " in ballast.....	9	12,294		
Total.....	159	364,603		

The value of the foreign commerce of the port of Philadelphia for the year ending June 30, 1882, was 4.90 per cent. of the whole commerce of the United States, and made Philadelphia rank fifth in the order of ports,—New York, Boston, San Francisco, and New Orleans exceeding her. The number of immigrants arriving in the same fiscal year was 36,284; the duties collected amounted to \$11,610,326.29, or 5.37 per cent. of the whole amount collected, making her the third in rank of collection districts. The tonnage of the port was, in 1860, 185,162 tons, or 3.70 per cent. of the whole tonnage of the country; in 1870, 300,000 tons,

or 4.79 per cent.; in 1882, 1,055,961 tons, or 7.20 per cent.

The amount of duties collected at the port of Philadelphia on imports on account of customs was, for 1881, \$10,445,371.90, and for 1882, \$12,994,813.70, showing an increase of \$2,549,441.80. The value of imports in American vessels at Philadelphia, for 1882,

was \$15,414,524, and in foreign vessels, \$22,251,965; total, \$37,666,489.

The following statement of the direct imports at the port of Philadelphia will show the total values of free and dutiable commodities on American and foreign vessels from each country, with the grand totals for the year ending Dec. 31, 1882:

COUNTRIES.	Free.	Dutiable.	American Vessels.	Foreign Vessels.	Total Values.
Argentine Republic.....	\$64,218			\$64,218	\$64,218
Belgium.....	130,760	\$1,251,344	\$20,620	1,361,584	1,382,104

The decline of the commerce of Philadelphia was more apparent than real. The foreign arrivals in 1851 were 576, while those of 1852 were 676. In 1852 the coastwise arrivals were 30,715, an increase of 4251 over those of 1851; to these must be added the 7830 arrivals at Port Richmond, making a total of 38,505, and for 1852, 39,224.

In 1851 a line of steamships was established between Philadelphia and Liverpool; the ships were the

"City of Manchester," the "City of Glasgow," the "City of Pittsburgh," and the "City of Philadelphia." The "City of Glasgow" foundered at sea (as is supposed) in March, 1854. She left Philadelphia March 1, 1854, and was never heard of afterward. The "City of Philadelphia" struck on Cape Race, Sept. 15, 1854, and was lost. At the outbreak of the Crimean war, in 1854, the others were taken by the British government for transport service, and the

Philadelphia line was broken up. After the conclusion of the war it was re-established, but instead of coming to Philadelphia, its place of destination was changed to New York. The coastwise trade extended by regular lines to New York, Boston, Charleston, New Orleans and the other intermediate cities, carrying the coal, iron, lime, the products of great manufactories, as well as wheat, corn, and flour, and bringing back naval stores, cotton, rice, timber, and the agricultural products of the Atlantic seaboard States. The extent and gradual growth and development of the commerce of the port of Philadelphia will be seen in the following table of the value of the exports and imports at Philadelphia for sixty-three years, ending June 30, 1883.

For fiscal year ending June 30, 1883.	38,147,744	33,738,556

The decline of the foreign commerce of Philadelphia was made the subject of a series of letters in 1851 by Job R. Tyson to William Peter, Her Britannic Majesty's Consul for Pennsylvania. In these letters the causes of that decline were examined and the means of reviving it discussed. Mr. Tyson re-

viewed the past, examined the present, and forecasted the future. The fact that New York had stepped in between Philadelphia and her foreign commerce and drawn the same away could not be denied, but the former position of pre-eminence might, in Mr. Tyson's opinion, be recovered by the exhibition of more "pluck and energy," on the part of Philadelphia merchants. "The merchants of 1851," he said, "have only to echo the sentiments of one of the non-importation resolutions of 1765 as steadfastly as they were uttered and observed by their fathers, the merchants and traders of the city of Philadelphia do unanimously agree, and the work is done." It is not within the power of individual, corporate, municipal, or State resolution to command the circumstances that make up the commerce of any port. It is not upon every fine harbor or navigable river that the marts of commerce are to be found. There are innumerable elements which, combined, fix and determine whether commerce will grow and prosper, without regard to the unanimous resolutions of merchants, or any other part of the population. The Erie Canal poured into New York the vast productions of the Northwest, and thirty years ago one city was equal to their distribution. New York and not Philadelphia reaped the benefit of that trade. The revolutions which the last thirty years have made in the material wealth of the great Northwest, the West, the Southwest, and the South, no longer put it within the capacity of any one city on the seaboard to distribute the thousands of millions of dollars worth of products raised annually by the trans-Alleghany section of the country. Philadelphia has regained very much and will regain much more of her ancient commerce, as transportation is cheapened and the products of the country are delivered at her wharves at the same or less cost than at New York. The common reason given why the trade of the country seeks New York is because New York has more capital than any other American seaport. But money or capital is only a convenient medium of exchange, and is attracted by the product which is the real value. Nor has it any more power to draw the product to it than the eagle has to draw the carcass. Money gathers at New York because the products are there, and the products go there because it is cheaper to carry them there than to Philadelphia. Transportation is king. Neither cotton, iron, coal, or any other product is sovereign. The conditions that fix the cost of transportation to market fix the amount and value of the products and their place in the commerce of the country.

The statistics which thirty years ago astonished Mr. Tyson are to-day so far excelled that even his enthusiastic predictions comprehended a commerce scarcely one-fourth of the value of that Philadelphia now enjoys. The steamship lines, which Mr. Tyson hoped would be aided by "British capitalists," are the natural result of that development of transportation which has been perfected within the last

thirty years. By that system of transportation the products of the country came to Philadelphia, and when once the shipping interest learned that freights for their vessels could be obtained in Philadelphia as certainly and conveniently as in New York, regular lines of steamers were established to and from Antwerp and Liverpool, and irregular steamers began to arrive from other European ports. The products required by commerce being at Philadelphia, sailing vessels for India, China, the West Indies, South America, and Europe, were quick to load and unload at her wharves. The Red Star Line to Antwerp was established in 1873, the American Line to Liverpool in 1871. These lines followed, they did not precede, that wonderful development of transportation which the Pennsylvania Railroad has effected. The agricultural products of Pennsylvania alone amount in value to over \$200,000,000 annually,<sup>1</sup> and when to this sum is added the \$400,000,000 worth of goods annually produced by the manufacturers of the city, and the large amount produced by the manufacturers of the State outside of the city, together with the products from distant parts of the country, it will be seen that the basis of a commerce is already laid of which the older merchants never dreamed. }

The *internal trade* of this country, in contradistinction to *foreign commerce*, has been created by the complete union of the States. Prior to the adoption of the Constitution, a cordon of State custom-houses hedged in the several States and confined within their boundaries the products of their people. The

<sup>1</sup> Philadelphia is the chief *entrepôt* for the agricultural productions, not only of Pennsylvania, but in part of the great Northwest, the South, and the Southwest. At her wharves, in her manufactures, and for the consumption of her vast population, the cereals of the West, the cotton of the South, and the wool of every section find as good a market as is afforded by any port in the United States. The fertile soil and quick harvest of "New Sweden" charmed the Swedish farmers, and "the green country town" of Philadelphia was the delight of Penn and his colonists. The German and Scotch-Irish settlers were farmers, and their descendants to this day possess almost all the farming lands of the State. Of the 17,994,200 acres in Pennsylvania, 11,515,965 are improved, being sixty-six per cent., and the value of her farms per acre averages \$57.98, New Jersey at \$86.14 being the only State which exceeds Pennsylvania in this particular. The productions of her farms are immense, being,—

	Bushels.	Value.
Corn .....	42,250,000	\$23,237,500
Wheat.....	18,740,000	23,425,000
Rye.....	3,240,000	2,397,600
Oats.....	33,150,000	11,602,500
Barley.....	560,000	476,000
Buckwheat.....	2,100,000	1,554,000
Potatoes.....	6,800,000	5,780,000
	Pounds.	
Tobacco.....	13,200,000	1,188,000
	Tons.	
Hay.....	2,900,000	36,264,000
Live stock.....	4,672,000	108,097,642

In addition to these, there are 6,000,000 pounds of wool, 60,834,644 pounds of dairy products, 1,545,917 pounds of maple sugar, 39,385 gallons of syrup, 796,989 pounds of honey; and the total annual value of farming products is \$183,946,027. The lumber products were worth \$28,938,985. When to these are added petroleum, leather and its manufactures, glass, iron and its manufactures, the textile fabrics, and other industries, some idea may be formed of the support given by the "back-country" to the great city between two rivers, and the terminus of thousands of miles of railroad.

Constitution prohibiting transit duties on goods passing from one State of the Union to another, and releasing vessels employed in the coasting trade from the necessity of *entering*, the extension of trade was made possible. With the increase of population and of facilities for the transportation of merchandise by the improvement of country roads, and afterwards by the construction of canals and railroads, the interchange of commodities between the States steadily and rapidly increased, until the internal trade far exceeds in bulk and value that of the foreign commerce.

The trade of Philadelphia with the States of the Union embraces all of them, and extends into nearly every neighborhood. Her railroads not only traverse the continent from ocean to ocean, but they enter into every valley, penetrate mountain ranges, and carry the products of her industries into every hamlet of the Union. Of the volume and value of this immense trade no statistics are preserved.

What proportion of the \$476,817,402 produced from the manufactures of the city in the year 1882 was absorbed by the internal trade cannot be ascertained; but as the 525 classes of manufactures embraced nearly every article which enters into consumption, and as the means of transportation were at hand for their conveyance into every section and quarter of the country, it may be fairly conjectured that the exchange of these manufactures facilitated a large and remunerative internal trade. The growth of the trade in breadstuffs has been shown in the tables of this chapter. In those tables the quantity and value of wheat flour, rye flour, and corn-meal are set forth for each year. An inspection of these records will exhibit the growth and expansion of this trade more fully than any comments. The conditions of the early trade were far different from those of the present; and if the transactions of this century far outreach those of earlier years, yet there were advantages also in those times which are unknown at present. It is of interest to recall briefly some of the earlier grain and flour dealers of Philadelphia, and trace the elements of character which made fortunes in the earlier years of this century.

Samuel Smith in 1780 occupied No. 126 North Delaware Avenue as a "flour house." He was succeeded, in 1782, by Timothy Paxon, who continued there for *forty-three years*, and he was followed in the same place and business by A. Derbyshire for nearly, if not quite, a half-century. In the days of Smith, Paxon, Latimer, Hollingsworth, Potts, and the earlier flour merchants, the business of breadstuffs was conducted on different principles and in different ways than at the present time. Then trade, if very *slow*, was also very *sure*. Levi Hollingsworth, sailing his shallop from Christiana to Philadelphia, bringing flour from the mills of Christiana, Elk, and the neighboring country, *consigned to himself*, and returning with the proceeds of sale to account with the millers, is not only an illustration of this primitive trade, but

also gives a fair idea of the business of an early flour merchant. In those days there was no standard weight for flour, and each barrel differed in size, and the invoices were long and complex. Nevertheless, Hollingsworth continued to be, during a business life of sixty-four years, a conspicuous example of honesty, enterprise, economy, and industry. During the period from 1760, when he settled in Philadelphia, to 1824, when he died, he saw generation succeed generation, revolution follow revolution, but still he kept his integrity unquestioned and his character unclouded by a single doubtful transaction. He knew nothing of "corners," "futures," or "margins;" if he speculated at all, it was with his *own grain*, fully paid for. He was a patriot above reproach, and a soldier without fear: a politician of the old Federalist school, and a leader by force of character and honesty of conviction.

The flour and grain commission house of J. & T. Ridgway (Jacob and Thomas) was formed in 1816, the year when frost in every month so injured the grain crops that flour rose to \$14 per barrel and wheat to \$3 per bushel. In 1821, Jacob Ridgway retired, and a cousin, Benjamin Ridgway, entered the house, which became that of Thomas & Benjamin Ridgway, and so continued until 1823, when Benjamin retired, and the firm became Ridgway & Livesey, by the accession of John Livesey. About this time Henry Budd was a clerk with Thomas Latimer & Co., composed of Thomas Latimer and William B. Potts; in the same house was James Steele; with Timothy Paxon was Alexander Derbyshire; Henry Sloan was in the office of R. Neff,—all men who have since made their names and characters known and respected among the merchants of Philadelphia. The house of Latimer & Livesey was dissolved in 1836 by the retirement of Livesey, and Henry Budd became a partner, the style being changed to Ridgway & Budd, which continued until 1830, when Ridgway retired, and Budd & Comly (D. J. Comly) continued the business. Mr. Ridgway was made president of the Girard Life Insurance, Annuity, and Trust Company in 1851. In the house of Robert Fleming, dealer in flour and grain, in 1832, Hugh Craig, a boy from Coleraine, Ireland, learned the mysteries of the trade as taught by a man who "retired with the comfortable sum of a million and a half of dollars." In 1838 the house of Craig, Bellas & Co. was formed, which continued in active and extensive trade until Thomas Bellas retired, in 1854.

Another Irish boy, James McHenry, whose mother kept a retail dry-goods store at No. 36 South Second Street, laid the foundations of his mercantile character among the busy scenes of Market Street, Philadelphia, where he was a clerk. James McHenry was born in Larne, Ireland, May 3, 1817, and was brought to Baltimore in 1818. His parents came to Philadelphia in 1824. From 1835 to 1838 he was employed by Trevor, Spering & Mixsell, a dry-goods jobbing house on Market Street. In 1838 he went to Eng-

land and became, about 1840, a member of the house of A. R. & J. McHenry, in which house he remained until 1846, when he became a member of the firm of Allen & Anderson, one of the largest provision, grain, and flour commission houses in Liverpool. This firm failed, and in 1855, Mr. McHenry associated with Mr. Crow, and formed the house of James McHenry & Co. The operations of this house from September, 1853, to September, 1854, are given from Hunt's *Merchants' Magazine*, as follows: Cotton, bales, 59,140; flour, bbls., 348,871; wheat, bush., 424,188; Indian corn, bush., 1,066,071; Indian meal, bbls., 12,442; bacon, boxes, 31,230; bacon, hhd., 865; bacon in bulk, cwt., 7731; hams, hhd., 198; lard, tierces, 7137; lard, bbls., 7923; lard, kegs, 160; beef, tierces, 7441; pork, bbls., 1669. The great Manchester house of A. & S. Henry & Co. was of Philadelphia origin, in which city Alexander Henry "was tutored in commercial knowledge" and grounded in commercial integrity.

William B. Thomas, who was one of the founders of the Corn Exchange Association and likewise its first president, commenced the flour business at the "Gulf Mills" in 1832, where he continued until 1843, when he removed to Philadelphia, and commenced milling at Thirteenth and Willow Streets, and later with another mill at Thirteenth and Buttonwood Streets. The popularity of his flour continued to increase and his business to grow until he became the largest manufacturer of flour in the city.

Alexander G. Cattell removed from his native State, New Jersey, to Philadelphia in 1846, where he rose to the highest place in the confidence of business men for integrity, enterprise, and all that forms the basis of mercantile success. In the development of the growing grain trade of the city he was an active and zealous worker. Prominent among the founders and one of the early presidents of the Corn Exchange Association, Mr. Cattell did much to build up and extend the grain trade of the city.

Samuel Bispham, head of the house of Samuel Bispham & Sons, wholesale grocers and commission merchants, was born Oct. 14, 1796, in the house on the north side of Market Street, between Front and Second, in which Samuel Bispham, his father, lived and carried on the business of a hatter. His grandfather, Joshua Bispham, was one of the Society of Friends, and emigrated in 1738 from the town of Bispham, Lancashire, England, to settle in New Jersey as a farmer. In 1798, when the yellow fever was raging in the city, the Bispham family quitted Philadelphia, and took up residence on a farm at Moorestown, Burlington Co., N. J. From there young Samuel Bispham was often sent to Philadelphia to vend the farm produce, and in the bustle of Market Street in the first decade of the century he evinced business aptness and energy. The death of his father in 1808 threw him upon his own resources, and he accepted employment in the grocery-store of William Carman, Market Street, above Front. There he remained until 1810, when

Eng<sup>d</sup> by A. H. F. 1844

*Samuel Bospham.*

he went to the grocery house of John Snyder, Market Street helow Ninth, as hook-keeper and salesman, where he became versed in the secrets of the Western trade, then swelling into magnitude. By economy and a studious attention to business opportunities, he amassed enough capital in 1815 to go into partnership with Jacob Alter, and open a store at No. 825 Market Street, helow Niuth. Those were the days of the trade between the cities and the interior by the "Conestoga wagons," and the young firm of Alter & Bispham was so successful that there was not a house on the great road between Philadelphia and Pittsburgh in which it was not known. It dealt in all kinds of groceries and country produce.

Between 1819 and 1821, an epoch of commercial distress, Mr. Bispham determined to make a tour among his country customers to collect what was due his firm. He rode horseback, and was about three weeks on the way from Philadelphia to Pittsburgh. The results, however, were so eminently satisfactory that on reaching Pittsburgh he had collected enough money to meet all the obligations of the firm of Alter & Bispham, which, on account of the general stringency, had been in a dangerous condition. The money was immediately forwarded to Philadelphia, and with this timely assistance the house was enabled to maintain a good standing, while many other firms on Market Street were prostrated or totally ruined. Mr. Bispham's reputation for energy and business talent was much enhanced by this exploit. On the retirement of Mr. Alter, in 1830, Mr. Bispham took the business entirely under his own control, and in December, 1834, he bought of Horner & Wilson the building now known as No. 629 Market Street, to which he moved at once. In September, 1851, he took into partnership his two sons, Samuel A. and John S. Bispham, and the title of the firm was changed to Samuel Bispham & Sons, as it is at present. The house commands a large trade with the West and South in groceries and dried fruits. Samuel Bispham was one of the original directors of and subscribers to the Bank of Penn Township, which is now the Penn National Bank, and of which he has been continuously a director. He was for many years a member of the board of managers of the Schuylkill Navigation Company, and from the institution of the Reliance Insurance Company has been one of its directors. In his younger days he was a Henry Clay Whig, but his opinions in religion and in politics have always leaned to the side of conservatism. He was actively interested in the public schools when, in 1834, they were first established in Pennsylvania. The name of no Philadelphian has been current in business circles for a longer number of years. He is still living, being now in the eighty-eighth year of his age, yet he attends to business daily, and overlooks the details of the house that bears his name.

The following tables exhibit the receipts of bread-stuffs from the interior from 1874 to 1882:

RECEIPTS OF FLOUR.

The following is a statement of the exports of petroleum, naphtha, and benzine from the port of Philadelphia during the year 1882: crude petroleum, 4,961,890 gallons, valued at \$314,441; refined petroleum, 78,471,280 gallons, valued at \$6,591,799; naphtha and benzine, 1,356,021 gallons, valued at \$84,148. The exports of breadstuffs and provisions from the same port for the same period were: breadstuffs, \$8,929,882; provisions, \$7,833,143.

The value of domestic exports shipped to foreign ports were: American vessels, \$9,770,654; foreign vessels, \$24,758,805,—total value of exports to foreign countries during the year 1882 from the port of Philadelphia, \$34,539,459.

## CHAPTER LVI.

MANUFACTURES.<sup>1</sup>

THE history of the manufactures of Philadelphia is the story of the intelligence, pluck, energy, and perseverance of her individual citizens; neither accumulated capital nor corporate powers nursed their infancy nor supported their maturer years. The patient industry of the Quaker settlers planted them, the untiring energy of their descendants prospered them; and their present magnificent development is due to an individuality which recognized and followed only "the light which shineth in every man." The founders of these industries never practiced the cohesion that promotes self-interest by combination of means, purpose, and action; but by zealous individual work originated and improved their various manufactures, perfecting while developing the industry. Under this system there arose that diversity of labor which multiplies both the product and the establishments. Two centuries have passed away, and the beginning of the third witnesses 525 classes of industries prospering in the city, conducted in 11,844 establishments, employing 241,433 persons, and producing annually \$476,817,402.

To trace the gradual development of this grand

<sup>1</sup> The immense number of manufacturing establishments in Philadelphia, numbering in 1882 nearly twelve thousand, made it impossible within the limited space of this history to do more than trace the size and development of manufactures with their statistical features, and compelled the authors to confine their descriptions to the leading and most prominent houses in each class.

result, from its initial, in 1682, to the present day, with any degree of accuracy and particularity is an impossibility. To follow its traces along the pages of annals and biographies, culling a fact here and a date there, and periodically gathering the data together, is all that is possible through the earlier years of the province.<sup>2</sup> The energy of the founders and their successors was employed in *work* which left its *result* as the only *record* of its life. Neither date nor fact exist as to many, and those more fortunate in these respects are merely chronicled in time, without any account of trials suffered and difficulties overcome.<sup>3</sup> The difficulties which beset every attempt to investigate the development of manufactures are set forth by Mr. Freedley, who says,—

"Numerous attempts have been made at different times to investigate the manufacturing industry of Philadelphia. Several years ago a statistical society was organized, we believe for the express purpose of ascertaining the capital in trade and manufactures, the number of hands employed and wages paid, and the aggregate of production; but its officers, we understand, have not as yet submitted their report. More recently, a committee of highly respectable and trustworthy gentlemen, appointed by the Board of Trade, undertook the commission, but the most important information that they could ascertain and reported was that 'inquiries of this kind are exceedingly impertinent and offensive, and they will not be answered; nor can any authority compel a response to them. They will be either treated with silence or, if replied to, they will elicit no full and reliable intelligence. We do not make this assertion without ample reason.'"

The Board of Trade consequently recommend, and their advice has been heeded by us, not to extend inquiries beyond what can be precisely and accurately ascertained. It has not been the purpose of this work to investigate the private affairs of any citizen, but to trace from public records the rise and development of the industries of the city as far as practicable; examining those influences which have retarded or promoted their development, and grouping the facts as ascertained by official reports, to present, as well their existing state of development as the causes under which they have grown. The influence of legislation and the effect of political events upon manufactures are matters connected with political economy which take their color and complexion from the political education and principles of individuals. Whether protection best protects, or free trade best promotes manufactures, does not come within the scope of our inquiries.

The earliest efforts of the colonists at the manufacture of coarse woolen fabrics for their own use, excited the jealousy of English manufacturers of the same kind of fabrics, lest they should not only supply

<sup>2</sup> To the valuable "History of American Manufactures," by J. Leander Bishop, A.M., M.D., and to Edwin T. Freedley's work on "Philadelphia and its Manufactures," and to "The Manufactories and Manufactures of Pennsylvania of the Nineteenth Century," and the "History of Philadelphia," by Thompson Weetcott, the author is indebted for most valuable assistance.

<sup>3</sup> "It would be desirable to trace chronologically the successive steps marking the progressive development of the manufacture of textile fabrics in this city; but, unfortunately, there are no records within our knowledge containing sufficient data for the purpose."—*Philadelphia and its Manufactures*, by Edwin T. Freedley, p. 232.

their own necessities, but in course of time should export to foreign nations; and to prevent this, as early as 1699, Parliament declared by acts of 10 and 11 William III. that no wool, yarn, or woollen manufactures of the American plantations shall be shipped there, or even laden in order to be transported from thence to any place whatever; and again, in 1719, it was also declared "that the erecting of manufactories in the colonies tended to lessen *their dependence* upon Great Britain." Complaints continued to be made by British manufacturers, and in 1731 orders were issued to the Board of Trade to inquire and report "with respect to laws made, *manufactures* set up, or *trade* carried on detrimental to the trade, navigation, or manufactures of Great Britain." This report of the Board of Trade in respect to Pennsylvania was that her people "have fallen into the manufacture of woollen cloth, and linen cloth, for the use of their families only;" for the products being chiefly cattle and grain, "the estates of the inhabitants depended wholly on farming, which could not be managed without a certain quantity of sheep; and their wool would be entirely lost, were not their servants employed during the winter in manufacturing it for the use of their families;" and the report further remarked that "the trade of Pennsylvania lay in their exportation of provisions and lumher; no manufactures being established, and their clothing and utensils for their houses being all imported from Great Britain," and "the last letters from the Deputy Governor of Pennsylvania" showed that he did "not know of any trade carried on in that province that can be considered injurious to this kingdom. They do not export any woollen or linen manufactures; all they make are of a coarse sort, being for their own use. We are further informed that, in this province are built many brigantines and small sloops, which they sold to the West Indies."

By the act (5 George II. 1732) the exportation of hats was prohibited, and even the number of apprentices to be taken by hat-makers restrained. In 1750, while the importation of pig and bar iron into London was permitted duty free, the erection or continuance of any mill or other engine for slitting or rolling iron, or any planing-forge, to work with a tilt-hammer, or any furnace for making steel was to be punished with a penalty of two hundred pounds, and every such mill, engine, furnace, or forge was declared to be a common nuisance, to be abated by the Governor within thirty days. In 1764-65 the Stamp Act followed, declaring null and void any instruments in writing, if not upon stamped paper.

The bill received the royal assent in March, 1765, and was the unexpected cause of stimulating American manufactures. By the non-importation agreements which were entered into generally by the people of the colonies, it was determined not to import goods from Great Britain, and to promote home manufactures in all possible ways.

The new Pitt ministry in England was convinced that the policy of its predecessors was unwise, and that the continuance of the Stamp Act would be injurious and useless. About the 26th of March, 1766, news that the bill for the repeal of the Stamp Act had passed one house of Parliament was received at Philadelphia, and it occasioned the most lively expressions of joy. Bells were rung, bonfires were kindled, and the health of the royal family was drunk. About a month afterward, and before news of the repeal of the act had been received, the brig "Lark" arrived from England with goods shipped contrary to the agreement of the merchants of the city. The committee of merchants met immediately and resolved that the merchandise should be locked up until the repeal of the Stamp Act was announced. In the mean while the attention given to American manufactures was more general than had ever been before. "A market for home-manufactured goods" had been opened about the beginning of the year on the north side of High Street, one door below Water, by William Smith, which was kept open from nine o'clock until noon every Monday, Wednesday, and Saturday. Daniel Mause, hosier, announced that he had set up a number of looms at the sign of "The Hand-in-Hand," on the west side of Second Street, between Race and Vine, where he manufactured thread and cotton stockings, hoping that the good people of this and the neighboring provinces would encourage the undertaking at a time when America called for the endeavors of all her sons. The repeal of that objectionable statute, in 1766, may have caused the suspension of some plans of commencing new industries which were under consideration, but manufactures at this time were not very successful. John Penn, writing to the Lords Commissioners for Trade and Plantations, Jan. 21, 1767, says, in reference to an inquiry as to the number of manufactures in the province, that very little encouragement was given to such schemes.

"Nor do I know of any actually carrying on at this time except two. One of them was set up about three years ago in this city by private subscription for the making of sail-cloth, ticking, and linens; but the persons concerned have already sunk money by the project, for the high price of labor will not allow any of the articles to be made at so cheap a rate as those of the same quality and goodness manufactured in England are sold for by the retailers here; they have therefore lately resolved to discontinue the undertaking. The other a glass manufactory, which was erected about four years ago in Lancaster County, seventy miles from this city, by a private person. It is still carried on, though to a very inconsiderable extent, there being no other vent for their ware, which is of a very ordinary quality, but to supply the small demands of the villages and farmers in the adjacent inland country."

In 1768 Parliament passed the act laying duties on paper, glass, painters' colors, and other articles, when imported into the colonies. New non-importation resolutions were generally agreed upon by the people of various towns and counties. These imposts remained until March, 1770, when they were removed as to all the articles except tea. The partial release did not satisfy the people, and thenceforth for some years much attention was given to the subject of do-

mestic manufacture, and to the best method of encouraging it.

The meeting of citizens at the City Tavern, May 20, 1774, which preceded and led to the conventions which have been elsewhere explained, related primarily to political movements and measures. Manufactures and their promotion were incidental and secondary. The committees of correspondence, created for political purposes, were also intrusted to some extent with the encouragement of domestic manufactures, and their recommendations were seriously obeyed. In January, 1775, a convention of delegates from the counties of Pennsylvania was held at Philadelphia, Joseph Reed, president; Jonathan B. Smith, John Benezet, and Francis Johnston, secretaries. This convention earnestly enforced the observance of the non-importation agreements, and, to provide against the inconvenience which might result, recommended the preservation of sheep until they were four years old, and the establishment of manufactures of woolens, salt, saltpetre, iron, nails, wire, steel, paper, glass, wool, combs, cards, copper in sheets, kettles, malt liquors, and tin plates. Among other matters, they were careful to mention gunpowder, "inasmuch as there existed great necessity for it, particularly in the Indian trade." They suggested the utility of raising flax, hemp, madder, wood, and dye-stuffs. They advised the exclusive use of home-manufactured articles, recommended the patronage of the printing-type foundry at Germantown which was established by Mr. Fox,<sup>1</sup> and urged that associations should be formed for the encouragement of domestic productions.

The woolen manufacture was also recommended, and various schemes were proposed and discussed in the newspapers by writers under the signatures of "Pennsylvania," "A Hibernian," "Jason," etc. The Hibernian proposed the formation of a patriotic society for the manufacture of woolen, with permission to raise one thousand pounds annually by lottery. Weavers, he said, could be had from Ireland. The expense of importing twenty-nine workmen, with yarn and worsted, wheels, reels, looms, steel, three pitched combs, a press, and bedding for the twenty-nine hands, he estimated at five hundred and fifty pounds. Six thousand pounds of wool, he said, could be bought for four hundred and fifty pounds. The profits of the manufacture he did not calculate. The proprietors of the china factory advertised for zaffer or zaffera, without which they could not make blue ware. This was obtained, and the desired specimens of their workmanship were made. The proprietors of these works applied to the Assembly for assistance, but nothing was done for them.

In the latter part of the year, Michael Washington exhibited at the Coffee-House several pieces of cloth manufactured by himself. It was announced that a

gold medal would be given to the person who produced the best piece of woolen cloth in Lancaster County. "One had been given the previous year, weighing one ounce, having on one side a bust of the Pennsylvania farmer," with the motto, "Take away the wicked from before the King, and his throne shall be established in righteousness." On the reverse was a woman spinning with a big wheel; motto, "Frugality and industry make rich, free, and happy." Christopher Colles offered his services to the public to put up mills and hydraulic engines and the proper buildings, and to act as engineer and architect.

A seizure had been made by the Committee of Inspection in the year 1775 of goods of Joshua Fisher & Son, consisting of lead, sailcloth, Russian sheeting, duck, paints, etc., which were necessary for the public service. The Fishers were very obstinate and uncivil about the matter, and finally the Committee of Safety ordered the goods to be sold at public vendue, where they were bought for the use of the province. The scarcity of salt caused Congress soon to repeal its general disallowance of the exercise of the powers of the Committee of Inspection, at least as regarded that article. A resolution was passed on the 30th of May against the exorbitant prices exacted for salt, and again granting to the committee power to regulate the rates of sale. Accordingly, it was determined that coarse salt should be sold for 7s. 6d. per bushel, and fine salt at 8s.; Bohea tea at seventy-five cents per pound, and green tea at 32s. 6d. per pound. Joshua Fisher & Sons had a large quantity of salt, which they had endeavored to import in violation of the recommendation of Congress, and which was in the possession of the Committee of Inspection. Efforts were made without avail to get them to allow a sale of it. They were not disposed to be agreeable in anything that would recognize the authority of those whom they denominated "the present rulers."

In 1778 an act to encourage the manufactures of this State was passed, prohibiting the exportation of manufacturing machines for two years. John Hague received from the Assembly £100 as a recompense "for introducing into this State useful machines for carding cotton." John Hewson, calico-printer, was an applicant to the Assembly for assistance. Robert Leslie, who had invented three different methods of attaching and suspending the pendulums of clocks, whether of metal or of wood, upon entirely new principles, desired an act to protect him in his invention. James Rumsey, of Virginia, asked an act to give him special privileges in his steamboat, which petition was contested by John Fitch and Henry Voight, who also asked encouragement for their invention of a pipe boiler. Alexander Lewis, having invented "a water engine for raising water thirty-six feet above its level, and having constructed a boat of twenty-five tons burthen, capable of proceeding up any stream that would float the same, with the assistance of three men only," desired a special law to protect his in-

<sup>1</sup> It was unfortunately burned down in April, 1775.

terests.<sup>1</sup> Thomas Paine transmitted from Paris a long report, made to the Académie Royale des Sciences by De Borda, Bosutt, and Le Roy, favorable to his iron bridge. He apprised the Assembly that there was a prospect of erecting it on the Seine, with a single arch of iron of four hundred feet; and that, in such case, it should be manufactured in America. "A second series of potash-works" were set up in the Northern Liberties, so as not to interfere with those established in Southwark.

The action of the people and government, in their purpose of freedom and independence, promoted the steady growth of domestic manufactures. Many industries, of which there exist no record, took their start and maintained a quiet growth during the years of the Revolution. With the return of peace, and the acknowledgment of the independence of the States, manufacturers put forth bolder efforts, but were soon clamoring at the doors of the Assembly for encouragement.

Mechanics of various kinds challenged attention, and asked for patronage. John Biddis, in 1783, set up a manufactory of white lead in Vine Street, between Second and Third, "opposite the sign of General Washington." He said that his lead "was allowed by the best judges in this city to be equal to any imported from Europe." He offered to sell his tavern property at Chestnut Hill, "sign of the Bonny Jockey," for pig lead to be used in this manufactory. James Sutter manufactured pure American glue in Southwark. In relation to this article, he said, "He flatters himself that he can supply the thirteen States with an article as good, if not better than, and at as low prices as imported from Europe." James Juhan, who had arrived in the city after the peace, advertised "the great American piano-forte, entirely his own invention." He lived at Fourth and Arch Streets. William Somerton, from London, took the air-furnace at Eighth and Walnut Streets, where he prepared his new invented boxes for wheel-carriages. Mason & Gibbs entered into the business of making fire-engines "of the newest construction." George Brassin, having erected a mill for making rappee snuff, and having discovered the art of manufacturing an imitation of window-glass from horn, asked encouragement from the Assembly. To the same body other persons applied for like privileges. Peter Allaire, having discovered the art of making yellow paint, and an alkali or soda for manufacturing flint-glass, desired an exclusive right for manufacturing and vending those articles. Edward Clegg, of Great Britain, being about to establish a manufactory for making corduroys and fine jeans, asked the patronage of the Assembly. So did Whitehead Humphreys,

who had discovered the art of making steel from bar iron, "as good as in England"; William Shepherd, who was about to erect a mill for sawing and polishing marble. James Rumsey, of Virginia, who declared that he had invented a boat to go by the action of poles against the streams of rapid rivers, by mechanical powers (which was not a *steamboat*), had his claim resisted by Abner Cloud and Hugh Cunningham, each of whom averred a prior discovery of the same principle. Arthur Donaldson, for the invention of the "hippopotamus for cleaning out docks," was also an applicant to the Legislature. John Hewson, calico printer, asked for a loan of money from the State. The distillers of rum from molasses in Philadelphia petitioned in a body for encouragement. Robert Taylor, of Lower Merion, linen, cotton, and calico printer and bleacher, and Henry Boyle, calico printer, also asked assistance.

In 1786, John Stephens applied to the Assembly in March for a loan of £200 to enable him to prosecute to perfection his discovery of the art of making blue-stone melting-pots equal to black lead crucibles. John Fitch, having discovered a method by which boats and vessels might be navigated by steam, asked exclusive right to his valuable invention. John Eve, manufacturer of gunpowder, desired the imposition of a duty on the importation of that article from foreign countries, and a bounty for the introduction of rough saltpetre. Oliver Evans, representing that he had invented machines for making cotton and woolen cards in a new, easy, and expeditious manner, and having also invented for merchant mills a machine to clean wheat and manufacture it into flour, wanted the exclusive right to those improvements for twenty-five years. Whitehead Humphreys asked for the loan of £300 to enable him to prosecute his discoveries in the art of converting bar iron into steel, in which prayer he succeeded. The committee on John Fitch's steamboat recommended the Assembly to loan him £150, but the motion was lost. George Wall, having invented a new mathematical instrument useful in surveying, asked for an act giving him special privilege to manufacture it for twenty-one years. Emanuel Bantling, who had invented a tub-bellows for blacksmiths, also asked for a special law of encouragement.

Thomas Paine petitioned the Assembly in March to countenance his plan for the erection of an iron permanent bridge over the Schuylkill. A committee was appointed on the subject, which reported favorably, and leave was granted to the subscribers to the project to bring in a bill authorizing the construction. The new model of Paine was thirteen feet eleven inches in length, the centre being between six and seven inches in width. It was constructed of narrow strips of sheet iron, and had sufficient strength to bear a weight of seven hundred pounds. The subscribers to the bridge company did not absolutely agree to take Paine's plan. They adopted resolutions

<sup>1</sup> A vessel from Philadelphia that had been fitted out for the slave trade, after taking a cargo of negroes to the West India Islands, came back to this city with a cargo bought with the proceeds of the adventure. The *Freeman's Journal* published an article recommending that citizens should not purchase the goods.

in August to procure subscriptions. The bill incorporating the subscribers to the bridge named John Penn, Samuel Vaughan, Samuel Powel, Robert Morris, and others, as corporators, with a capital of \$66,666.66. A committee to receive models was appointed, consisting of Thomas Mifflin, David Rittenhouse, George Clymer, Samuel Powel, David Evans, Richard Wells, Francis Bailey, Francis Hopkinson, John Kaighn, John Sellers, Thomas Harrison, Tench Coxe, Thomas Moore, John Chaloner, John Ross, and Stephen Paschall. This effort was in advance of the public disposition to aid in its accomplishment.

In 1789, the Manufacturing Society awarded the premium gold plate for painters' colors to Sylvanus Bishop, of New Haven, for specimens of ochre. The Philadelphia Society for Agriculture offered premiums for improvements in farming operations, and the Philadelphia County Society for the Encouragement of Agriculture and Domestic Manufactures added its influence toward what was considered a most important object. The latter association was established August 4th in this year, in opposition to the old society for promoting agriculture, etc. As the former had many members who were residents of the city, the county society established a rule that none but farmers should be eligible to membership.

The adoption of the Constitution of the United States by the required number of States, and the inauguration of a permanent and efficient government of the whole country, put an end to the conflicting and restricting legislation of separate States, and gave to manufactures a wider scope and better guardianship.

The manufacturers of the city looked upon the Federal Constitution as conferring the power and right of protection to the infant manufactures; and to give expression to their conviction a meeting was held in March, 1789, of manufacturers and mechanics of the city, Northern Liberties, and Southwark, to take into consideration the propriety of petitioning the Congress of the United States to lay such duties on foreign manufactures imported into the State of Pennsylvania as would give a decided preference to our mechanics. The various trades were requested to send delegates to a convention to be held the ensuing month, but nothing further was done in reference to the matter.

In the same month the mechanics and tradesmen of Baltimore forwarded their first petition to Congress, praying that the government would render the country "independent in fact as well as in name," by an early attention to the encouragement and protection of American manufactures, by imposing on "all foreign articles which could be made in America such duties as would give a decided preference to their labors."

The manufacturing committee of the Pennsylvania Society at the opening of the year held their first sale

of printed cottons, corduroys, federal rib, jeans, flax, and tow linens; about the same time John Hewson was made calico-printer to the society, and the State became a subscriber for one hundred shares of the stock of the company. Edward Pole, of Philadelphia, presented a model of a silk-reel to the Philosophical Society; William Trumbull presented to the same society a specimen of petroleum found at Oil Creek, a branch of the Allegheny, and also a printed book, the leaves of which were made of the roots and bark of different trees and plants,—the first effort at that kind of manufacture.

The manufacturers of snuff and tobacco in the city numbered in 1790 at least twenty different establishments, employing not less than three hundred men and boys. These manufacturers memorialized Congress against a proposed tax upon these manufactures. The publication by Thomas Dodson of the first half-volume of the "Encyclopædia Britannica" was commenced in this year, with 246 subscribers; 1000 copies of the first volume were printed, 2000 of the second, and when he had completed the eighth the subscription extended so far that he had to reprint the first. This was the commencement of an increased enterprise in the printing business in the United States, as well as in the city. Benjamin Atkinson, of Byberry township, now a part of the city, commenced, in 1790, the first domestic manufacture of brooms from the pannicles of broom-corn (*Sorghum saccharatum*), a plant said to have been first raised in this country by Dr. Franklin, from a single seed taken from an imported whisk and planted in his garden. Mr. Atkinson raised the corn and made the brooms himself for four years, when he associated with Bezaleel Croasdale. They jointly supplied Philadelphia and neighboring towns, Baltimore, and occasionally New York, until 1815 or 1816, when others engaged in the business.

The city and suburbs, in a total population of 43,000, contained in 1790, exclusive of carpenters, masons, and other handicrafts, 2200 persons who might properly be denominated *manufacturers*, or over one-fourth part of the 8600 adult males the city was supposed to contain.

The first patents for machines for threshing grain and corn were awarded March 11, 1791, to Samuel Mulliken, of Philadelphia; and December 31st, William Pollard, of Philadelphia, patented a machine for spinning cotton by water-power. The years 1793 and 1794 were marked by the effort at increased manufactures: Arkwright spinning frames, the weaving and beating of sail duck, stocking frames, machinery for spinning and drawing gold and silver wire, the manufacture of thread, lace, and embroidery, of straw and chip hats. Wrought mohair and silk buttons were introduced and carried on with profit.

At the close of the last century there were in the city and suburbs of Philadelphia, ten rope-walks, which manufactured about 800 tons of hemp an-

nually; thirteen breweries, which consumed 50,000 bushels of barley yearly; six sugar refineries, seven hair-powder manufactories, two rum distilleries and one rectifying distillery, three card manufactories, fifteen manufactories of earthenware, six for chocolate and four for mustard, three for cut-nails and one for patent nails, one for steel, one for aquafortis, one for sal ammoniac and Glauber's salts (which supplied the whole Union with that article), one for oil colors, eleven for brushes, two for buttons, one for morocco leather, one for parchment; besides, gun-makers, copersmiths, hatters (of which there were 300 in the State, who made 54,000 fur and 61,000 wool hats annually), tin-plate workers, type-founders, coach-makers, cabinet-makers, ship-builders, and a variety of others. There were 31 printing-presses, printing four daily and two semi-weekly papers, one of them in the French language; two weekly journals, one of them in the German language. The catalogues of books for sale in the city contained upwards of three hundred sets of Philadelphia editions, besides a greater variety of maps and charts than was to be found anywhere else in America.<sup>1</sup>

Mathew Carey issued in 1798 the thirteenth volume of the *American Museum*, a periodical which contributed much to the advancement of manufactures and literature not only in the city but throughout the Union. Twelve consecutive volumes had been issued between 1787 and 1792. The eighteenth volume (quarto) of the "Encyclopædia Britannica," with numerous plates, was completed in the same year by Thomas Dodson. Three additional volumes were afterward published.

The Philadelphia Premium Society was instituted in 1801, for the purpose of fostering American industry by giving premiums for improvements in art and manufactures. Professor Robert Hare, of Philadelphia, this year invented the compound or oxy-hydrogen blow-pipe, by which many substances before deemed infusible were readily melted. By it lime and magnesia were raised to a white heat, and all well-known metals, gun-flints, and corundum gems, were burned, producing a light brighter than that of the sun.

In the invention and construction of machinery, and instruments for practical and scientific purposes, the mechanics and inventors of Philadelphia very early acquired great reputation and skill. The records of American inventions contain few names more distinguished for usefulness than Godfrey, the inventor of the quadrant; Rittenhouse, who made the first telescope constructed in America, and whose orrery and other scientific instruments displayed unusual inventive and mathematical genius; of Franklin, Evans, Fitch, Fulton, and others, whose inventive and constructive skill have added to the permanent wealth of the city, State, and Union.

The facilities of Philadelphia for a great manu-

facturing centre seem to have impressed foreigners very strongly. In "Travels in the United States of America in the years 1806-7, and 1809-11," by John Mellish, the writer said of Philadelphia,—

"The manufactures of this city are rising into great importance. The principal are leather of every description, a great variety of wood and iron works, ships, ropes, fermented and distilled liquors, earthenware, tin-plate, hats, stockings, and a vast variety of cloths of various descriptions. The printing business is better established here than in any other place on the continent, and gives employment to a great number of paper-mills, and to all classes connected with the book trade—printers, type-founders, engravers, bookbinders, booksellers, and stationers.

"The whole export trade of the State is carried on through this city. The exports are grain, flour, and provisions, flaxseed, timbers, various iron utensils, cordage, bark, skins, hosiery, gunpowder, sashes, candles, cider, &c. The imports consist of British manufactures to a great amount, West India produce, India goods, China produce, &c. The exports of the State in 1805 amounted to \$13,762,252, of which \$4,365,240 was the produce of the State; and the imports may be reckoned at considerable more, as Philadelphia supplies the inhabitants of an immense back country with manufactured goods, who find an outlet for their produce by another channel, and remit in domestic produce or specie, neither of which is exhibited in the custom-house returns.

"The city is under great obligations to the Quakers, who have given a tone to the manners of the people different from what is to be found in most other places of equal extent. They are industrious and sober, and, though sufficiently commercial, they do not conduct their business in the same dashing style which is done by some commercial cities, but confine themselves within bounds, and secure what they gain."

Among the early manufactures, there were none in which citizens took more interest, or which were more frequently spoken about, than the making of floor-cloth, oilcloth, and carpet. This operation was commenced in 1807 by John Dorsey, a merchant, at the factory on Chestnut Street, between Eleventh and Twelfth, on the north side, on a lot afterward occupied by the Gothic mansion,—a building subsequently tenanted by St. John's Catholic Orphan Asylum, and succeeded by Concert Hall. It was a matter worthy of particular comment and rejoicing that in this establishment there were two looms for making a strong cloth of a quality between sail-duck and Russia sheeting. One of these could weave a piece of seven yards in width, and one man could turn out from thirty-two to forty-five yards per day. The style was similar to that of Hare's patent imported oil-cloths, the material being plain and in colors, and sold at from \$1.25 to \$2 per yard. Old rag carpets were coated with composition at the same establishment. In 1808 the prices of Dorsey's goods were as follows: Floor-cloth carpets, one, two, and three colors, of any size, with or without border, \$2.25 per square yard; three colors, \$2; two colors, \$1.75; one color, \$1.50.

In 1808, Isaac Macaulay established a factory on Market Street, near the Schuylkill bridge, for the manufacture of oilcloth and carpetings of one, two, three, and four colors. In April, 1810, Macaulay purchased the interest of Dorsey in the factory on Chestnut Street, and he made preparations to carry on the manufacture on a more extensive scale. Mr. Macaulay removed the establishment almost immediately to the northeast corner of Broad and Filbert Streets. In the early part of 1815 he removed from

<sup>1</sup> Morse's Gazetteer, vol. 1.

Centre Square to the Hamilton mansion, at Bush Hill. Here he established his factory, and built for himself a fine dwelling-house adjoining. Afterward additional buildings were put up, which extended as far north on Schuylkill Fifth [Eighteenth] Street as Morris [now called Spring Garden] Street. The success in manufacturing oilcloth was very great. Macaulay was induced to undertake the manufacture of carpets. Workmen were imported from Kidderminster, England, and the carpet-looms were set up in the old Hamilton mansion. Here Mr. Macaulay spun his own yarn for carpets, and spun yarn for canvas, which was woven twenty-one feet wide, to be used for oilcloths. It is believed that in this establishment were woven the first Brussels carpets made in the United States. In 1821, Mr. Macaulay made the ingrain carpetings for the State capitol at Harrisburg. In April, 1825, a patent was granted to him for improvements in oilcloth.

The following is a summary of the principal manufacturing establishments of the city in 1811: Looms, 273; spinning-wheels, 3648; oil-mills, 3; carriage-shops, 17 (value of work in 1810, \$498,500); soap-and candle-works, 23; glue manufacturers, 14; distillers, 18 (gallons distilled in 1810, 1,283,818); sugar refineries, 10; rope-walks, 15; potteries, 16; tobacco-and snuff-mills, 27; copper-, brass-, and tin-factories, 44; hatters' shops, 102; paper-mills, 7; printing-offices, 51; cutlers' shops, 28; gun-factories, 10; glass-works, 3.<sup>1</sup> To these may be added, from the official digest of the marshal's returns, published afterward: looms and fly-shuttles, 186; spindles in factories, 4423; stocking-looms and factories, 165; print-works, 8; print-cutting establishments, 4; naileries, 20; saw-factories, 2; bell-foundries, 10; shot-factories, 3; morocco-factories, 7; breweries, 17; blacksmith-shops, 201; copper-shops, 124; drug-mills, 6; brush-factories, 24; drum-makers, 5; engraving establishments, 16; book-binders, 86; printing-press factories, 2; Spanish cigar-factories, 9 (making 3,900,000 Spanish cigars in addition to 26,900,000 American cigars); wheat-mills, 33; saw-mills, 17; mahogany saw-mills, 21; brick-kilns, 30, etc.<sup>2</sup> The population of the city in 1810 was 111,210, that of New York by the same census being 96,372. The total value of manufactures in the city proper was \$16,103,869, and for the State, \$44,194,740.

From the "Picture of Philadelphia," by Dr. James Mease, in 1811, it will be perceived that the city already possessed many manufactures:

"The various coarser metallic articles, which enter so largely into the wants and business of mankind, are manufactured to a great extent, in a variety of forms, and in a substantial manner. All the various edge-tools for mechanics are extensively made, and it may be mentioned as a fact calculated to excite surprise, that our common screw-awger, an old and extensively used instrument, has been recently announced in the British publications as a capital improvement in mechanics, as it certainly is, and that all attempts by foreign artists to make this instrument durable have failed.

"The finer kinds of metals are wrought with neatness and taste. The numerous varieties of tin-ware in particular may be mentioned as worthy of attention. But above all, the working of the precious metals has reached a degree of perfection highly creditable to the artists. Silver plate, fully equal to sterling as to quality and execution, is now made, and plated wares are superior to those commonly imported in the way of trade. Floor-cloths, of great variety of patterns, without seams, and the colors bright, hard, and durable; various printed cotton stuff, warranted fast colors; earthen-ware, yellow and red, and stone-ware are extensively made; experiments show that ware equal to that of Staffordshire might be manufactured, if workmen could be procured.

"The supply of excellent patent shot is greater than the demand. All the chemical drugs, and mineral acids of superior quality, are made by several persons; also carding and spinning machines for cotton, flax, and wool. Woolen, worsted, and thread hosiery have long given employment to our German citizens, and recently cotton stockings have been extensively made.

"Paints of twenty-two different colors, brilliant and durable, are in common use from native materials, the supply of which is inexhaustible. The chromate of lead, that superb yellow color, is scarcely equaled by any foreign paints.<sup>3</sup> There are fifteen rope-walks in our vicinity. We no longer depend upon Europe for excellent and handsome paper-hangings, or pasteboard, or paper of any kind. The innumerable articles into which leather enters are neatly and substantially made; the article saddlery forms an immense item in the list. The leather has greatly improved in quality; the exportation of boots and shoes to the Southern States is great, and to the West Indies, before the interruption of trade, was immense. Morocco leather is extensively manufactured. The superiority of the carriages, either in respect to excellence of workmanship, fashion, or finish, has long been acknowledged. The type-foundry of Binney and Ronaldson supplies all the numerous printing-offices in the United States. There are one hundred and two hatters in the city and liberties. Tobacco, in every form, gives employ to immense capital. The refined sugar of Philadelphia has long been celebrated; ten refineries are constantly at work. Excellent japaned and pewter-ware, muskets, rifles, fowling-pieces, and pistols are made with great neatness. The cabinet-ware is elegant, and the manufacture of wood, generally, is very extensive. The houses are ornamented with marbles of various hues and qualities, from quarries near Philadelphia.

"Mar's works, at the corner of Ninth and Vine Streets, on the Ridge road, the property of Oliver Evans, consists of an iron-foundry, mould-makers' shop, steam-engine manufactory, blacksmith's shop, and millstone manufactory, and a steam-engine used for grinding sundry materials for the use of the works, and for turning and boring heavy cast and wrought-iron work. The buildings occupy one hundred and eighty feet front, and about thirty-five workmen are daily employed. They manufacture all cast- or wrought-iron work for machinery for mills, for grinding grain or sawing timber, for forges, rolling- and slitting-mills, sugar-mills, apple-mills, bark-mills, etc., pans of all dimensions, used by sugar-boilers, soap-boilers, etc., screws of all sizes for cotton-presses, tobacco-presses, paper-presses, cast-iron gudgeons, and boxes for mills and wagons, carriage-boxes, etc., and all kinds of small wheels and machinery for cotton- and wool-spinning, etc. Mr. Evans also makes steam-engines on improved principles, invented and patented by the proprietor, which are more powerful and less complicated and cheaper than others, requiring less fuel, and not more than one-fiftieth part of the coals commonly used. The small one at use at the works is on this improved principle, and is of great use in facilitating the manufacture of others. The proprietor has erected one of his improved steam-engines in the town of Pittsburgh, and employed to drive three pair of large millstones, with all the machinery for cleaning the grain, elevating, spreading, and stirring and cooling the meal, gathering and bolting, etc. The power is equal to twenty-four horses, and will do as much work as seventy-two horses in twenty-four hours. It would drive five pair of six feet millstones, and grind five hundred bushels of wheat in twenty-four hours.

"All kinds of castings are also made at the Eagle Works, on Schuylkill, belonging to S. & W. Richards."

<sup>3</sup> George C. Osborne, it is said, was the first manufacturer of water-colors in this country. He came from London, England, in the year 1808, and started the business, in company with another man, in New York. A few years after that he came to Philadelphia, and started the same business again, in company with D. B. Smith, at the northeast corner of Sixth and Arch Streets, in 1824, and remained with that gentleman until 1837, when he died, on September 1st of that year. His son, George W. Osborne, continued manufacturing water-colors in this city.

<sup>1</sup> Mease's "Picture of Philadelphia."

<sup>2</sup> Cox's "Census Digest."

The Columbian Chemical Society of Philadelphia was formed in 1811. In the same year a patent was issued to Edward W. Carr for a machine for cutting wood screws, and to Thomas Massey for a water loom, and to Robert Hare for a mode of ripening and keeping malt liquors and cider, consisting of air-tight casks fitted with a pneumatic cock with two orifices, etc., and to Samuel Wetherell, Jr., for a mode of washing white lead, and another for setting the beds or stocks in making white lead, and for screening and preparing white lead, and also for separating oxidized from metallic lead, in the process of making red lead, and using a machine for that purpose. The white lead made at the extensive works of the Wetherells was at that time considered by painters equal to the imported. Red lead was made to the amount of \$13,000 annually by three factories in the city. The brilliant chromate of lead mentioned by Dr. Mease was first made by Mr. Godon, and the process was perfected by Mr. Henkel, of Philadelphia, who published an account of his methods in Cooper's "Emporium of Arts and Sciences," in June, 1814.<sup>1</sup> The material, chromic iron, was found abundantly near the city, in Chester County, imbedded in steatite, or soap rock. All the mineral acids and chemical drugs were made by several houses in Philadelphia at this date.

Oliver Evans, of Philadelphia, the first steam-engine builder in the United States, had in operation in 1812 ten of his high-pressure engines. They were in use in Florida, Louisiana, Kentucky, Mississippi, Ohio, Pennsylvania, and Connecticut. Among the patents issued this year was one to E. Hazard and Joseph White, of Philadelphia, for cutting screws; James Howell, for rolling wire; E. Gordon, a rolling-press for edge-tools.

Chemical manufactures, which received their first prominence in Philadelphia by the Wetherells, received considerable aid in 1814 from the chemical and metallurgic skill of Dr. Eric Bollman, of the city, who introduced Wollaston's method of working crude platinum into bars, sheets, and other forms serviceable in the arts. He succeeded in plating iron and copper with that metal, of which there was in the country a considerable and cheap supply. He also prepared the silver-colored metallic lustre or glaze for porcelain, with the oxide, and about this time made for John Harrison, an enterprising manufacturer of oil of vitriol, the first platinum, still used in the country for concentrating the acid. The still weighed seven hundred ounces and contained twenty-five gallons, and was used for fifteen years.

With the treaty of peace and amity with Great Britain in 1815 immense cargoes of foreign manufactures were imported, and many new and imperfectly-established branches of domestic industry were threatened with immediate destruction. Among the

petitions presented to Congress early in the year 1815 was one by Thomas Gilpin and other manufacturers of Philadelphia against the introduction of goods subject to *ad valorem* duties at one-fourth to one-half their real value, and asking a revision of the revenue laws, which they suggested might be found either in the substitution of specific for *ad valorem* duties, or in the appraisement of a Board of Appraisers at each custom-house, with power to decide on the value of merchandise entered. The importations of foreign goods for the first three-quarters of that year amounted to upward of eighty-three millions of dollars, and for the fiscal year next ensuing to one hundred and fifty and a quarter millions of dollars, of which one hundred millions paid *ad valorem* duties, about seven-tenths of which was upon woollens and cottons. It was supposed to be an object worth large sacrifices on the part of English manufacturers to break down the formidable rivalry of the growing, but immature, manufacturers in this country, and for the accomplishment of this object heavy consignments of goods were made to be disposed of at auction, and upon liberal credits. American importers were by no means averse to the encouragement of these excessive importations, by which large profits and ample fortunes were realized. The greatest activity prevailed in all the avenues of trade, the ship-yards were set at work, and the banks, no longer paying specie, liberally discounted mercantile paper, and stimulated all classes to seek their fortunes in mercantile ventures. Yet manufacturers suffered to a very great extent, and many factories were closed. The demand for raw cotton abroad increased, and raised the price of uplands from thirteen cents in 1814 to twenty-seven cents in 1815, thereby still further embarrassing the manufacture of that article. The introduction of the power-loom alone saved the manufacture of cotton from total destruction. In the city and neighborhood of Philadelphia there were employed at that time in the cotton manufacture 2325 persons; in the woollen, 1226 persons; in iron castings, 1152 persons; in paper-making, 950 persons; and in smithery, 750 persons. A special act of Congress renewed this year the patents of Oliver Evans for steam-engines, and Henry Tanner patented the etching end-pieces of bank-notes, and John Eberts, Philadelphia, a fall-top gig.

Jacob Perkins and Thomas Gilpin, of Philadelphia, patented, in 1816, water-marks in paper, and Thomas Gilpin the cylinder machine for making paper,—the patentee, who, during the war, had erected large cotton- and woollen-factories on the Brandywine, suspended the latter and devoted himself to the manufacture of paper. The banks in Philadelphia, New York, Trenton, Baltimore, and elsewhere resumed specie payments on the 20th February, 1817. The amount of paper in circulation was, however, but little reduced, and the banking mania continued to multiply banks all over the country. The distress among

<sup>1</sup> N. S., vol. III. 385.

manufacturers was made known to Congress by petitions, of which twenty-two were upon the subject of bar iron and iron manufactures, principally in New York, New Jersey, and Pennsylvania, as well as from the cotton and woolen manufacturers of New England, New York, Baltimore, and Philadelphia. The Philadelphia Society for the Promotion of National Industry was formed about this time, and had for its object the protection of national industry in general, but more particularly for manufactures perishing for want of protection. It exerted very considerable influence upon the public mind, chiefly through a series of published addresses from the pen of Mathew Carey and others, who appeared as ardent and uncompromising advocates for protection, and for several years labored in behalf of the manufacturers with a zeal and disinterestedness seldom equaled. Among the patents issued in 1817 was one to George F. Hagner, of Philadelphia, for manufacturing verdigris, and another for making white lead. At the Dover Paper-Mills of Thomas Amies, eight miles from Philadelphia, there was produced in this year a sample of paper thirty-six by twenty-six inches, weighing one hundred and forty pounds, and valued at \$125 per ream, and believed to be superior to any ever made in the United States. It was made from the finest linen rags, and the moulds and felts were of the best kind.

Charles V. Hagner in 1812 established the "pioneer drug mill." The Northern Liberty Pottery of Thomas Haig, Sr., was opened in 1813, and also the white lead factory of Mordecai and Samuel N. Lewis. The manufacture of fringe, laces, and trimmings was begun by William H. Horstmann in 1815, the gold-beating establishment of Marcus Bull in 1816, the manufacture of plain and carved umbrella sticks by — Tasker in 1817; in 1818 the manufacture of chemicals by Farr & Kunzi, and the boot and shoe establishment of Thomas Miles & Son. In 1819 the manufacture of chemicals by John & Daniel Eliott. In 1820 the manufacture of tin-work for cotton and woolen machinery by John Butterworth, the manufacture of umbrellas and parasols by Wright Brothers, and the manufacture of drugs and making of oil by Charles V. Hagner. The Upland Mills for cotton goods was established in 1821 by John P. Crozer and G. G. Leiper; in the same year the chemical laboratory of Rosengarten & Sons. The Pascal Iron-Works was also established in this year by Stephen P. Morris. In 1822 a stock company of farmers united and established the brewery now conducted by William Massey & Co. The hat-factory of Joseph Fareira was established in 1823, and in the same year John Maitland established, at 408 South Street, a distillery.

The year 1819 was marked by the culmination of all the embarrassments which had been heavily pressing upon manufacturers since the peace of 1815. Unchecked importation and a vitiated currency were now disastrous to merchants and agriculturists. The

fall in prices of all agricultural products diminished the power of a large portion of the population to purchase manufactures; a general paralysis fell upon all branches of industry, and the distress became more general and severe than had been known before. A committee of the citizens of Philadelphia reported, in October of that year, that in thirty out of sixty branches of manufactures there had been a reduction from the average of 1814 and 1816, in the number of persons employed, from 9425 to 2137; in their weekly wages from \$58,340 to \$12,822; and in their annual earnings from \$3,033,799 to \$666,744. The actual loss of wages was therefore \$2,366,935 per annum; and supposing the materials equal to the wages, the loss of productive industry in a single district not forty miles in diameter was \$7,333,870. In the cotton manufacture the hands were reduced from 2325, in 1816, to 149; in book printing from 241 to 170; in the potteries from 132 to 27; in the woolen branch from 1226 to 260; in iron castings from 1152 to 52; in paper-hanging and cards from 189 to 82. In the paper manufacture the hands were reduced from 950, in 1816, to 175, and their annual wages from \$247,000 to \$45,900; the annual production from \$760,000 to \$136,000. Again Mathew Carey came with his powerful pen to the defense and support of the manufacturing interests, and in his six addresses, published by the Society for the Promotion of National Industry, advocated the subject of protecting the manufacturers.

The year 1820 witnessed the first regular shipment of anthracite coal from Mauch Chunk to Philadelphia of three hundred and twenty-five tons. It was sent by the Lehigh Navigation Company and mined by the Lehigh Coal Company, both of which were organized in 1818, and in 1820 were merged into one association,—the Lehigh Coal and Navigation Company,—which was in 1832 incorporated.

Over four thousand looms were put in operation in Philadelphia in 1821, chiefly for weaving cotton goods; calicoes of firm and fine texture were made and printed and sold as low as the poorer qualities of British calicoes.

Notwithstanding these facts, in the growth of manufactures Philadelphia did not impress Flint with its facilities for manufacturing. In 1822 he wrote,—

"Philadelphia does not abound in manufacturing establishments. The predominance of British goods has shut up many workshops that were employed during the late war. Paper is made in great quantities in Pennsylvania. Foundries for cast-iron articles are numerous. In town there are two manufactories of lead shot. Printing is carried on to a considerable extent, and is executed in superb style. It is said that one of the late Edinburgh novels [Walter Scott's] was set up in types in one day. . . . On the Schuylkill there is a mill for cutting brads, which produces no less than two hundred a minute. Philadelphia is in various respects well adapted to manufactures. If the facilities it presents for its advancement are neglected, the city must decline, as the trade of New York and Baltimore is making rapid progress."

The Franklin Institute commenced its career of usefulness on the 28th of April, 1824. The objects, as expressed in its charter, were the "promotion and

encouragement of manufactures and the mechanics and useful arts by the establishment of popular lectures on the sciences connected with them; by the formation of a cabinet of models and minerals and a library; by offering premiums on all subjects deemed worthy of encouragement; by examining all new inventions submitted to them, and by such other means as they may judge expedient." Soon after its formation a regular system of lectures was adopted, and four professorships created. At this date Philadelphia had thirty cotton-mills, which averaged fourteen hundred spindles each, and together employed five thousand looms and three thousand persons. There were thirteen breweries in the city, and \$400,000 worth of umbrellas were manufactured annually.

The exhibition of domestic manufactures in the rotunda of the capitol at Washington, in 1825, was the result of a meeting of manufacturers of Philadelphia in 1824. Mr. Macaulay exhibited a great variety of patterns of oilcloth, the manufacture of which he had carried on for many years under patents of his own invention. The very great dexterity of the mechanics of Philadelphia was shown at the exhibition of the Franklin Institute in 1826, of a pair of scissors which weighed only one-fifth of a grain. David H. Mason, of Philadelphia, patented this year ornamental rolls and stamps for bookbinders.

The manufactures set up from 1826 to 1832 were as follows:

In 1836, the chemical-works of Charles Ellis, the decorative china business by Joseph Kerr, that of spades, shovels, and scoops by Jonathan Rowland. In 1827, the Frankford Woolen-Mills and the Phoenix Iron Company. In 1828, the Port Richmond Iron-Works, the Park Run Mills, and the Ripka Mills. Those in 1829 were for the manufacture of wagons by David G. Wilson and John Childs, the chemical-works of Christopher Weisner, the Conestoga Print-Works by Thomas Hunter. Those in 1830 were the Baldwin Locomotive-Works, the ship-building works of William Cramp & Son, the manufacture of japanned, pressed, and plain ware by Francis, Field & Francis, the carpet manufactory of Andrew & William McCallum, that of machine card clothing by James Smith. In 1831, the hosiery mills of John Button, the Tacony Chemical Works of Nicholas Lennig & Co., the children's carriage-factory of E. W. Bushnell, the Bible and publishing house of E. W. Miller. In 1832, the Oxford Carpet-Mills, by William Hogg; the Hinchley Knitting-Mills, by Aaron Jones; that of fine harness, by John Lacey.

In 1827 there were in Philadelphia and its vicinity 104 warping-mills at work, employing 4500 weavers, over 200 dyers, 3000 spoolers, and 2000 bobbin-winders. The manufacturing establishments were over 50; the wages of operatives amounted to \$1,470,000 per annum; the goods manufactured to 24,300,000 yards. A large manufactory of American china, owned by William Ellis Tucker, at 40 North Fifth Street, was the only factory which brought the domestic manufacture of china to any considerable degree of perfection.

There were in 1828 ten mills in operation and in course of erection at Manayunk, employing 636 persons, and embracing the manufacture of flour, drugs, saw grinding and polishing, carding and fulling cloth, cotton and woolen goods, paper, etc.

An improvement in the manufacture of caoutchouc

was made in 1830 by Dr. J. K. Mitchell, of Philadelphia, who showed that india-rubber bags, after maceration in sulphuric ether, could, by successive inflations and collapses, or by being rolled in its soft state, be made into thin bottles, or sheets of great size, and that, after being cut with a wet knife, the edges would adhere so that the place of union would be scarcely visible.

The porcelain- and china-ware manufacture established by William Ellis Tucker in 1827 was producing, in 1831, wares pronounced by competent judges to be second only in point of perfection to those of France. Mr. Tucker now started the first American queensware factory in the old water-works. He was this year joined by Judge Hemphill, of Philadelphia, and they established on a still larger scale the American Porcelain Manufactory, at Nineteenth and Chestnut Streets, which, after Mr. Tucker's death, in 1802, was carried on successfully by Thomas Hemphill, under his brother's capital. They owned a fine bed of kaolin in Chester County.

The blue broadcloth, known as the Lafayette blue, was dyed by F. Tassard, of Philadelphia, in 1832, with prussiate of potash, which was believed to have many advantages over indigo. This appears to have been the first use of prussian blue or dye in this country.

The year 1832 witnessed one of those political controversies over the tariff which have so often taken place without either political result or material advantage to manufacturers. Philadelphia was in that year the theatre where assembled the anti-tariff or free-trade convention of September 30th, and New York where the tariff convention of October 26th met. The free-trade convention originated with H. D. Sedgwick, of Massachusetts, who called the same through the New York *Evening Post*. The convention was composed of delegates from fifteen States, and was presided over by Judge P. P. Barbour, of Virginia, with Condé Raguet, of Philadelphia, as secretary. It adopted a series of resolutions expressing attachment to the Constitution, and declaring that the existing tariff laws of Congress, so far as they were designed to protect manufactures, were a manifest violation of the true interest and meaning of the Constitution, inexpedient, unequal, unjust, and oppressive, especially the act of May, 1828, which was oppressive to agriculture, commerce, and manufactures; that a solemn appeal should be made to the people to unite in obtaining such a modification of the tariff as might be essential to all the important interests of the people, and calculated to quiet the fears and satisfy the reasonable demands of every section of the Union. An address to the people of the United States and a memorial to Congress, prepared by Albert Gallatin, were adopted.

The tariff convention met in New York in October, and was composed of five hundred delegates. William Wilkins, of Pennsylvania, presided, and Heze-

kiah Niles was secretary. The object of the convention was to take "into consideration what proceedings might be necessary for the support and further extension of the American system as involved in the protection of the various pursuits of domestic industry." The convention affirmed the constitutionality of the tariff, for protection; memorialized Congress to continue the protection of domestic industry. These conventions were composed of men eminent for their respectability and practical knowledge of the important subjects discussed, and the addresses and memorials prepared under their direction are among the ablest expositions of the two great parties which then divided the country on the subject of protecting duties.<sup>1</sup>

Mathew Carey, of Philadelphia, died Sept. 17, 1839, in the eightieth year of his age, and by his decease the system of protection to home industry lost one of its most able and indefatigable advocates. For years he fought the battle of the American manufacturer almost single-handed, and it was not until after his death that his countrymen fully appreciated the wisdom of his political philosophy, and the ardor and sincerity of his philanthropy. Among the last acts of his political life was the effort to allay the political excitement throughout the South by the passage of the "Bill of Abominations," as the tariff of 1828 was called. His "Common Sense" essays, addressed to the people of the South, and his circular to organize a "Society of Political Economists" for the diffusion of what he considered sound views of political economy, failing to meet with support, he abandoned the cause, and devoted the remainder of his days to benevolent and charitable objects.

The manufactures of Manayunk, in 1834, consisted

of Ripka's silesia-factory with 7176 spindles, 224 looms, and 300 hands; 7 cotton-mills, with upward of 22,000 spindles and 1000 hands; Hay's woolen-factory, with 57 hands; Darrack's woolen and hat factory, employing 57 hands; Newman's dyeing establishment, with 11 large vats and 21 hands; the Flat Rock Iron-Works, with 36 hands; Rowland's saw-finishing mill, turning out 60 mill-saws per week; Echstein's paper-mill, making 300 reams weekly; and two flour-mills, making 215 barrels of flour daily.

In 1840 the official returns show that there were 184 foreign commercial and 44 commission houses, with a capital of \$2,049,501; 1791 retail stores, with a capital of \$17,082,384; 48 lumber-yards, with a capital of \$1,118,500; 2 furnaces, with a capital of \$259,050. Machinery was manufactured to the value of \$915,864; hardware and cutlery, \$154,400; the precious metals, \$2,651,510; of various metals, \$876,060; 15 woolen-factories, capital \$135,100; 17 cotton-factories, with 17,922 spindles; 14 printing and dyeing establishments, with a total capital of \$117,500; 11 distilleries, 16 breweries, with a capital of \$415,200; paints and drugs, \$1,835,050; 1 glass-factory and 1 glass-cutting establishment, with a capital of \$23,500; 6 potteries, with a capital of \$24,000; 12 refineries produced refined sugar to the value of \$890,000; 6 paper-factories produced \$31,250; 12 ropewalks, with a capital of \$82,900; 1 saw-mill, 1 flouring mill, 1 grist-mill, capital, \$8000; furniture to the amount of \$526,200; 808 brick and stone houses, and 62 wooden houses, cost, \$2,951,383; 46 printing-offices, 12 binderies, 8 daily, 16 weekly, 7 semi-weekly newspapers, and 26 periodicals employed 911 persons, with a capital of \$252,600. Total capital in manufactures, \$8,796,998.

In 1850 the old charcoal-furnace at Millville, N. J., upon the Maurice River, with its circumjacent tracts of timber lands, containing twenty thousand acres, fell into the hands of Richard D. Wood, one of the most active and enterprising merchants and financiers

of this city, through advances made to a former owner, who had there, in a primitive way, been making iron castings,—stoves, iron pipes, etc. Mr. Wood erected a small but well-appointed foundry for iron mains, and afterwards further utilized the water-power by building a cotton-mill, bleachery, and dye-house. These two industries are now conducted by his sons, and have grown to be one perhaps the largest, and the other among the largest of their kind in the country.

<sup>1</sup> Condy Raguet issued about the beginning of the year 1829, *The Free-Trade Advocate*, with Colbert's maxim, "Laissez nous faire," as the motto of the Free-traders. The *Advocate* was merged into the *Banner of the Constitution*, under the same editorial management and in the same political principles.

*Engraved by Samuel Sartain*

*R. D. Wood*  
1845

In the spring of 1855 the affairs of the Cambria Iron Company (which had been established in 1852, for the purpose of making railroad iron, at Johnstown, Pa.) having become embarrassed, Mr. Wood suggested that they should be temporarily conducted by a combination of its stockholders, under the firm-name of Wood, Morrell & Co., and selected for the active managers of this firm his brother, Charles S. Wood, his partner, Edward Y. Townsend, who, in 1844, had entered his dry-goods house as a young man, and Daniel J. Morrell.

This capable management, although its great rolling-mills were twice burned down, wrought a final success, and the company's output is supposed to be more valuable than that of any other similar establishment in the country.

C. S. Wood and Mr. Townsend have each been president of the Cambria Iron Company, and Mr. Morrell twice represented the Cambria District in Congress, was chairman of the Committee on Commerce of the House of Representatives, and introduced the bill authorizing the Centennial Exhibition in 1876. The company is without debt, has ten thousand men in its pay, and has expended twelve million dollars upon its plant and inventories of material.

Richard D. Wood, who took such an active part in the financial and manufacturing interests of the city at this time, was born at Greenwich, Cumberland Co., N. J., in 1799, and descended from one of the early Quakers, who came to Pennsylvania from Bristol, England, about 1682, and served on the first grand jury impaneled in Philadelphia. In early life he was in business at Salem, N. J., and in 1823 moved to this city, when he founded the wholesale dry-goods house soon widely known under the firm-name of Wood, Ahrott & Co., and which is still continued with the title unchanged. During his whole business life he was closely identified with the manufacturing interests of the city and State, and with the internal improvements of Pennsylvania and West Jersey. For a short period he was a director of the Girard Bank, but a difference of views regarding its management led to a severance of his relations with it. In 1835 he became a director of the Philadelphia Bank, serving in its board until 1863. In 1845 he accepted a seat in the board of the Schuylkill Navigation Company, in order to aid the enlargement of its canal, which was then about to be undertaken, to protect the trade of the company against the Philadelphia and Reading Railroad, which had been completed to Mount Carbon in January, 1842.<sup>1</sup> He continued to serve at intervals until 1863.

On March 16, 1847, he was a member of the committee which nominated the gentlemen who were elected the first president and board of directors of

the Pennsylvania Railroad Company. Having been efficient in obtaining the popular and corporate<sup>2</sup> subscription which had been made to the stock, he took a place upon the first board in order to aid in the organization of the company. Feeling this had been properly done, he resigned in November of the next year.

After eight years of effort, Mr. Wood, in 1860, finally prevailed upon the Camden and Amboy Railroad Company to build eighteen miles of railway south from Camden to Glassborough, simultaneously with the extension of the road twenty-two miles to Millville by other interested parties. Extensions and branches to the chief points in West Jersey quickly followed, and the whole system is now controlled by the West Jersey Railroad Company.

In 1861, trusting to the capacity of C. K. Landis, then a young and comparatively unknown man, Mr. Wood sold him twenty thousand acres upon the West Jersey Railroad. When sold this was a wilderness. The settlement of Vineland, containing nearly ten thousand souls, has been formed upon it.

In November, 1864, immediately after the second election of Lincoln, knowing that the Rebellion would not last, Mr. Wood sailed abroad for the second time, and spent nearly two years in European and Eastern travel. He looked upon these scenes with the eyes of one always quick to observe, and to whom a long knowledge of books, men, and affairs had given a true and keen insight into whatever touches the happiness of men wherever found. He observed the lives of men in the Old World, and thought of the greater prosperity to be enjoyed in the New. He foresaw his own country springing rapidly forward, no longer weighted with slavery, and wished that he were young again to participate in its movements.

In 1866, in something of the fervid spirit prevalent at the North towards a reconstructed South, he joined in an investment in Virginia.

His latest thoughts of business ran much upon finding ores for a proposed furnace on tide-water to supply his foundries with pig-iron.

In January, 1839, he commenced the system of making daily memoranda, and continued to do so until his last illness. The diary thus kept for thirty years is an object of interest. It is the minute record of an intelligent and active man, and the index of an earnest and noble life. It has briefly noted as they passed a wide variety of events, the prices of commodities and stocks, exports and imports, states of trade, panics in their coming and going, bank suspensions, defalcations, discoveries, prospects and troubles of railroads and canals, celebrities visiting the city, Wistar parties and other social concourses, lectures, literary or scientific, and political divisions and

<sup>1</sup> The interests of the companies were merged in 1870. Freights, which while competition was active fell to less than one dollar, have been restored to the ruling prices before the railroad was built, and are now about two dollars.

<sup>2</sup> The total subscriptions finally made by the city, the Northern Liberties, and Spring Garden amounted to \$5,000,000, upon which investment there has been made a profit of \$8,000,000 over and above six per cent. interest.

contests, with their rise and consequences. It reveals, too, the private acts and heartfelt aspirations of the writer, interspersed with his pithy reflections on the books he read, the men he saw, and his wise and courageous views of the world and of the Providence sustaining it. Mr. Wood died in 1869. He was married in 1832 to Julianna, daughter of Edward Randolph.

At his death the Board of Trade, which he aided to found, in 1833, upheld his example as the "constant friend and efficient counselor and assistant of

industrious and meritorious young men in their efforts to rise to eminence and usefulness in the relative positions of life." And note that it has been said of him, that "there are at least one hundred men now enjoying affluence as retired merchants, or elevated positions as active business men in this community, who owe their first success to a partnership in some of the various business enterprises inaugurated and prosecuted by Mr. Wood."

And herein may lie his best legacy.

## MANUFACTURES IN 1860.

Improvements in the mode of making straw-paper were made and patented in 1858, by Martin Nixon, of the Flat Rock Mills, Manayunk, which furnished the Philadelphia *Ledger* with the first straw-paper used by the newspaper press in this country. In 1864 a company of capitalists organized the American Wood-Paper Company, and erected a mill at Manayunk, which, in connection with the Flat Rock Mill, is the most extensive paper-works in the world.

The annual value of manufactured products was estimated, in 1866, by Mr. Freedly at \$225,139,014 within the city, and at \$25,000,000 "beyond the city limits within a radius of one hundred miles," making a total of \$250,139,014 for the city and vicinity.

## MANUFACTURES IN PHILADELPHIA IN 1870.

Amount of capital invested, \$181,076,919; in 1860, \$81,608,502; increase, \$99,468,417.

Value of raw material, \$182,103,594; in 1860, \$77,473,677; increase, \$104,629,917.

Total number of employes, 127,394; in 1860, 107,931; increase, 19,463.

Value of products, \$338,188,466; in 1860, \$152,355,318; increase, \$185,813,148.

Average production of each person, \$2662.36; in 1860, \$1411.60; increase, \$1250.76.

Average production of each establishment, \$40,930.58; in 1860, \$23,558.88; increase, \$17,371.70.

Total number of establishments, 8262; in 1860, 6467; increase, 1795.

The very defective machinery for taking the census provided by the law of 1850, and used in taking those of 1860 and 1870, did not give full returns of all industries, and the "special statistics" and "selected statistics of manufactures" published gave only partial, and these very often defective, returns. The omission of every industry the "gross production" of which did "not exceed the value of \$10,000" presented about as correct an idea of the manufactures as the returns of population, which omitted all chil-

dren under ten years of age, would give of the number of people in the city. To correct the errors and to supply the omissions, Lorin Blodget made his elaborate "estimates of manufacturing production for 1875-76," which, while they are *estimates*, were nevertheless so full and complete that their accuracy has never been questioned, and was sustained by the subsequent ascertained manufactures of the city. The aggregate of these estimates of the leading manufactures in 1875 was made by Mr. Blodget at \$423,769,475, and he placed the grand total of all manufactures at \$552,000,000. Apprehensions were felt that the industries of the city would suffer serious prostration during 1876, and particularly at its close, the state of business elsewhere being so extremely unfortunate. But as regards manufacturing interests these fears were not realized. While many were depressed, and suffered in sympathy with general business, others were fairly active, and still others were exceptionally busy through the entire year. This was especially true of the worsted manufacture, which had become very large, and of some varieties of cotton goods, constituting staples of consumption in the West and South. The large miscellaneous production of manufactured articles of the most diverse character long existing here had grown in 1876 to unusual proportions, and afforded employment to a very great number of persons. Altogether the state of activity on the 1st of December of that year had rarely been more satisfactory, and the proportion of unemployed persons among those accustomed to labor at wages was smaller than usual. There was no general discontinuance of either manufacturing establishments or of miscellaneous employment. Wages were low, it is true, and the prices obtained for many classes of manufactures gave a very moderate profit only, yet nearly all the

mills, on textile fabrics particularly, continued in operation throughout the year.

In worsted goods the activity of the latter part of the year was remarkable. The best machinery in the country was engaged in worsted spinning, amounting to nearly 50,000 spindles, with over 100 combs of the latest construction, and all the complicated and costly machinery connected with this class of work. Several of the mills actively engaged on this comparatively new industry were at that time conspicuously fine, particularly those of Fiss, Banes & Co., Tracey & Co., Grundy Bros. & Campion, George Campbell & Co. (on yarns only), and P. C. Garrett & Co., Schepers Bros., Thomas Dolan & Co., with several others, on worsted dress goods and coatings.

The next in activity were the establishments producing standard cotton and mixed goods of the classes so long made here for domestic consumption. Many of these increased their machinery, and the aggregate of business of this class, exclusive of cotton prints, was about \$12,000,000 in value.

The great carpet industry had been, on an average, much the same in 1876 as in each of the two preceding years. The increase in machinery of the better class, for the production of the higher grade of carpets, had more than compensated for the inactivity of the hand-looms. The decline had been in prices rather than in quantities, even of the standard ingrains; and they were carried into new and distant markets with unusual success.

The iron and machinery manufacture shared the general decline of business in 1876, and fell off more than textile fabrics. Hardware and tools were steadily increased, especially building and carriage hardware, with wood-working machinery, and machinery for the manufacture of textile fabrics. The extent of the use of minor forms of machinery greatly increased, almost compensating for the decline in the heavier forms employed in railroad equipment and iron-working.

In wood manufactures generally the business of 1876 was good, particularly in furniture and interior decorations. Building had made more progress than usual,—the addition of some six thousand dwellings and stores to the permanent city had called for an unusual amount of furnishing, and the external trade in finished furniture continued large.

The Centennial Exposition in 1876 was a national and international exhibition, yet its location in Philadelphia, though primarily because it was in that city one hundred years before that these States were declared "free and independent," yet there was a fitness in other respects in the location selected. These material reasons were set forth by the Hon. Daniel J. Morrell in his speech in the House of Representatives on the 9th of March, when presenting the memorial of the Select and Common Councils of Philadelphia. Among other reasons, Mr. Morrell said,—

"If it is conceded that an industrial exhibition is to be made in the city where the industries are found in greatest variety and perfection, no

further enumeration of Philadelphia's advantages or claims need be made. New York may justly claim to be the commercial capital, but Philadelphia is certainly the industrial capital of America. To-day Philadelphia is the first manufacturing city on this continent, and the second in the world, London being the first. The census just taken shows that the capital of its citizens invested in manufactures largely exceeds \$100,000,000, employing 150,000 workmen; and the product of its manufactures amounts to over \$200,000,000 annually. Unlimited command of coal and iron, and nearness to the rich food-producing lands of Pennsylvania, New Jersey, and Delaware, have given Philadelphia superior facilities; but there could have been no such marvelous development of productive forces if they had not been fostered by wise national legislation. As contrasted with the greed and demoralization caused by the predominance of foreign trade, Philadelphia strikingly exhibits all the beneficial results which flow from the employment of the people in productive industries. Capital and population are fixed and steady, industry is varied to suit all tastes and capacities, invention is stimulated, intelligence is quickened, the people are more constantly employed, the comforts of life are more abundant and more evenly distributed, vice finds a foe in well-regulated labor, the tiller of the soil and the common carrier are kept busy and well rewarded, and our own, and not a foreign land is benefited."

Philadelphia's exhibits at the Centennial amounted to two thousand three hundred and sixty-six; very largely in excess of those from any other one locality. The exhibits of her manufactures were distributed among the seven departments as follows:

Mining and metallurgy, 87; manufactures, 710; education and science, 203; art, 218; machinery, 400; agriculture, 677; horticulture, 71.

Philadelphia exhibitors received 1049 awards.

STATISTICAL SUMMARY FROM 1850 TO 1882.

Year.	Number of Establishments.	Capital.	Raw Material.	Total Labor.	Value of Products.
1850.....	.....	\$33,737,711	\$44,505,158	59,099	\$63,784,212

1882.....	11,844	.....	.....	241,493	476,817,402

The census of 1882 of Philadelphia industries was taken by the co-operation of the mayor and police department with a committee of citizens, beginning in November, 1882, and completed in February, 1883. The services of nearly three hundred officers were required to complete the canvass for the wards and districts in detail, and returns were obtained by them from about eleven thousand five hundred industrial establishments, especially applicable to the year 1882. These were placed in Lorin Blodget's hands for compilation and revision, and they were first summarized to obtain approximate results, then classified by wards, and rigidly examined to see that they were correct and all omissions supplied. Lastly, they were critically examined again in detail to prepare a summary, by industries, for the entire city.

In his report to the mayor Mr. Blodget says,—

"The general result more than sustains the preliminary estimate made to you on January 1st, and substantially shows the existence of about 12,000 industrial establishments in the city in 1882, the original returns from 11,482 being filed and transcribed in classified form on the ward hooks. These establishments employed in 1882, 146,307 men, 66,907 women, and 28,219 persons described as *Youths*, or being under

<sup>1</sup> Estimated.

sixteen years of age. This return was often construed to mean all persons under twenty-one years, and about 5000 should be taken from them to add to *Men*, in order to represent the division correctly.

"This productive force aggregates 241,443 persons, and the values produced make up the sum of \$474,317,402, exclusive of the Mint product,—of which about \$2,500,000 in value is purely a manufacture, making the total \$476,817,402. The total coinage of the Mint was \$48,309,395, and the total, including the Mint, amounts to \$522,626,797,—all being for the calendar year 1882."

The whole report forms a considerable volume, and gives full lists of all the leading classes of industries, supporting the figures given for each class. The printing and publishing, iron and steel manufactures, and in a part of the textile classes, this census shows twice as large aggregates as either form of the

United States census publications. Mr. Blodgett states some of the local differences as follows :

"The schedules of these final tabular statements enumerate 525 classes of industries, as compared with 195 in the compendium of the census of 1880. I have also the name and location of 3250 industrial establishments not embraced in that census, with 67,583 more of persons employed, and \$172,724,577 more in values produced. Yet for all the common industries and trades, as blacksmiths, coopers, painters, wheelwrights, plumbers, etc., the returns in the United States census of 1880 exceed those embodied in this report for 1882, the difference being wholly with larger industries. The report accompanying these tables will contain a description of leading industries and tabular statements for each ward or group of wards, and also specific lists of establishments for iron, machinery, textile fabrics, and all the leading industries, the whole forming a volume of 150 pages, and constituting a complete exhibit of the industries of Philadelphia for the year 1882."

SUMMARY TABULAR STATEMENT OF THE SEVERAL INDUSTRIES, THE NUMBER OF PERSONS EMPLOYED, AND THE VALUES PRODUCED, IN THE CITY OF PHILADELPHIA, FOR THE YEAR 1882.<sup>1</sup>

<sup>1</sup> All entries placed in parenthesis or inclosed in brackets are made for distinction of products only, and are not carried into the footings.

<sup>2</sup> Includes one at a sugar refinery.

<sup>3</sup> Many architects are direct employers, and a large number should be so reported.

<sup>4</sup> This designation should include about twenty of the "carpenters and builders." A number of establishments making furniture, or sash, doors, and blinds, also now make carved and finished interior work.

<sup>5</sup> Not including straw-bat manufacturers, four in number, who are also straw bleachers.

<sup>6</sup> All these are reported with dyers, print- and dye-works, or general cotton manufacturers.

<sup>7</sup> Also in most cases making blank-books to some extent.

<sup>1</sup> This covers non-friction bronzes, or the hard-bearing metals only; phosphor bronze, Ajax bronzes, hard Babbitt metal, Fullerton's and deoxidized bronze. Other compounds of zinc, tin, and lead for like purposes are under "soldier" and "metals, non-friction."

<sup>2</sup> Buttons covered with silk thread are made at other establishments, whose force is included under upholstery goods. Also, under bone buttons are included bone dice, chessmen, dominos, and bone- and ivory-turned articles.

<sup>3</sup> Several establishments in which some work is done in the city in preparing canned vegetables and fruits, employ a large force in country towns, where the vegetables are grown. The business, as controlled and directed by Philadelphia houses, is about \$3,000,000 in value yearly.

<sup>4</sup> Not including acids, alum, ammonia sulphate, animal charcoal, anthracene, and coal-tar products, chemical fertilizers, paints, and colors, soaps, white lead, etc. Pharmaceutical preparations are also excluded.

<sup>5</sup> See Anthracene.

<sup>1</sup> See "steel and iron tools," under which all tools, properly so-called, are classified; also see surgical instruments.

<sup>2</sup> These are simply grinding-mills, with machinery adapted to grinding drugs, chemicals, minerals, etc., and are not themselves producers of drugs in any form.

<sup>3</sup> These are jobbing dyers, not connected with other works, and not including dyers and scourers, but include six dyers of silk yarns. There are also thirty-five large dye-houses attached to cotton- and woolen-mills not included in this summary.

<sup>4</sup> With general dyers.

<sup>5</sup> Many large establishments do their own electro-plating, with gold, silver, or nickel; these are separate establishments only.

<sup>6</sup> Includes James Dunn, copper rollers, 247 South Third; Illman Bros., 605 Arch; John Sartain and Emily Sartain, 728 Sansom; and Samuel Sartain, 210 Franklin, with others.

<sup>7</sup> Wholesale envelope and tag manufacturers only. For envelopes lettered to order, see "paper, envelopes, and stationery."

<sup>8</sup> Representing the value of made-up bouquets and prepared floral ornaments only.

<sup>9</sup> Separated as a part of a larger establishment making hats.

<sup>10</sup> See under "watch cases, silver;" the product of Hagstoz & Thorpe, in cases of silver, all the persons employed on both gold and silver cases being included here. The weekly product of these larger works is 1200 cases of silver and 900 cases of gold.

<sup>1</sup> It is not possible to separate the number of establishments and the force employed on hosiery and knit goods into the several natural divisions of cotton hosiery, woolen and mixed hosiery, knit scarfs, hoods, operas, gloves, jackets, Jerseys, etc., because of the constant alterations of production in the same establishments. It may be said, generally, that hosiery wholly of cotton employs one-half the force, and the various grades of merino or mixed hosiery, jackets, etc., one-fourth of the entire force, leaving one-fourth to all wool or worsted goods. This would not be true of power-knit fabrics alone, but when the large and increasing proportion of hand-knit zephyrs and Shetland fabrics is considered, it has nearly the proportion of one-fourth. Cardigan jackets are now made very largely of cotton, and in a few establishments mixtures of silk are used. The rate of production varies from \$850 to \$900 for each person employed on cotton, to \$1000 on merino, and \$1250 to \$1500 for woolen power-knit goods, jackets, fancy articles, and especially for worsted Jersey cloths and Jerseys, which for 1883 will aggregate a larger product, occupying some large mills almost exclusively.

<sup>2</sup> Four establishments, belonging to the Knickerbocker Ice Company, for the manufacture of wagons, springs, and machinery for handling ice, to be sold to dealers in ice generally.

<sup>3</sup> Not including locomotive axles, which are largely made at the Baldwin works, nor steel axles, which are made at the Midvale works, and by Alexander Foster & Co.

<sup>4</sup> The wrought-nail industry has almost disappeared, but there are a few makers of wrought spikes, nails, and rivets for special uses, particularly for ship-building and repairs, and boiler manufacture.

<sup>5</sup> Including 200 men for the new ship-building works of Commander Gorrings, but no product counted for these works during 1882.

<sup>6</sup> All that are manufacturing finishers of stoves, heaters, and ranges, working up large quantities of iron, sheet and cast, and not mere dealers or repairers, although about half of them combine repair work to some extent with their manufacture. They are classed as manufacturers and not as dealers by the city authorities.

<sup>7</sup> See steel wire works of Bateman & Son, under "steel, etc."

<sup>1</sup> Shafting is also made by several of the larger works,—William Sellers & Co., and others.

<sup>2</sup> Sugar-making machinery is largely made, but usually in establishments chiefly engaged on other products; copper vacuum pans by Joseph Oat & Son; centrifugals by Disnelt & Eisenhardt and W. P. Uhlinger; and steam sugar machinery, pans, castings, etc., by the Southwark Foundry and Machine Company, I. P. Morris Company, and James Moore. Steam-pumps are made by several of the larger establishments, and by Ferrell & Muckle, 2218 Race Street.

<sup>3</sup> Not including watch and jewelry repairs, gold watch-cases, gold rings, nor optical goods.

<sup>4</sup> Including cases for watches and silverware, but not including instrument cases or medicine chests.

<sup>5</sup> Chiefly large establishments making up clothing, laces, or lace-trimmed articles of clothing.

<sup>6</sup> Not including the lard refining of butchers and small curers of meats, about ten more, and \$500,000 in value.

<sup>7</sup> The values produced are the cost of the work only, not including any part of the publishers' values.

<sup>8</sup> Iron power-looms are made in large numbers and widely distributed to the South and to foreign countries, but the number of persons so employed cannot be separately stated. A large share of the business of the Bridesburg Manufacturing Company, the James Smith Woolen Machinery Company, M. A. Furbush & Son, Thomas Wood & Co., W. P. Uhlinger, and several smaller works, is now on iron power-looms. An estimate of the men necessarily so employed would be perhaps 250, and of the product, \$400,000. Wooden looms for hand-weaving are made by many employes of the carpet, rug, and silk-mills. The compound looms for narrow silk or web fabrics, on which a large number of distinct webs are woven, are often made for the mills by workmen not connected with large machinery establishments. The number of carpet, silk, and upholstery looms of this class made in 1882 was about 800, valued at \$120,000.

<sup>9</sup> Logs of pine, hemlock, and oak are cut for ship frames, wharf timbers, horse building, and other like purposes, and mahogany and walnut logs are cut for furniture, but no lumber proper is made, nearly all the lumber cut from logs being further dressed in the same mills.

<sup>10</sup> Not including yards or works exclusively for stone-cutting.

<sup>1</sup> See pharmaceutical preparations for most of the non-proprietary medicines.

<sup>2</sup> Sheet metal wares are chiefly stamped from sheet iron, plain or tinned; but some are of mixed metals.

<sup>3</sup> Not bronzes. Solder or Babbitt metals are made by several of the establishments now chiefly making bronzes; two such have divided, taking half for each class, namely, the bronzes on one side, and the soft metals on the other. See "Bronzes."

<sup>4</sup> Spectacles or eye-glasses, opera-glasses, hand- and reading-glasses.

<sup>5</sup> Painters who keep a workshop and prepare their own materials only are included; about one-half of these make a business also of painting signs, which is a large industry, all the materials being in most cases furnished by the painter's shop.

<sup>6</sup> This industry is placed by the United States census with house-painting, as "painters and paper-hangers," a practice common in Northern States, but not in Philadelphia. Paper-hangers here are distinct, although they contract to perform work, and employ each a force of several men, as they do elsewhere; only those who are wholesale decorators and furnishers are here taken.

<sup>7</sup> A large business is now done in facing paper-boards with white or fine paper, and in cutting these for various uses.

<sup>8</sup> Ordinary envelopes printed to order and furnished as stationery for business or commercial uses, as distinguished from cards and invitation envelopes.

<sup>9</sup> This term embraces much that is often designated as "drugs and medicines;" also as medicinal chemicals; and many dispensing druggists now manufacture various preparations on a large scale for the trade.

<sup>10</sup> Nearly all the fittings of iron, brass, lead pipe, earthenwares, etc., appear under other headings; these are the returns of C. A. Bliss and F. F. Peal only.

<sup>11</sup> Not including drain-pipes or terra-cotta vases, garden statuary, etc. See "Earthenware," etc.

<sup>1</sup> Not including coverlets woven in looms, which are given under cotton.

<sup>2</sup> The amount of general rectifying was very much smaller than usual in 1882, mostly of those usually so engaged doing very little.

<sup>3</sup> Including only such seeds as are cleaned, prepared, and packed in the city, and garden implements made here.

<sup>4</sup> Several changes occurred during the year 1882.—George F. Hensel, fringes, Oldfeldt & Brother, upholstery goods, and George E. Jenkins, trimmings, discontinuing about the middle of the year. Three establishments make tram and organzins in connection with finished fabrics,—one on machine-twist, one on ribbons, and one on dress goods. Much spun silk is used by makers of both dress goods and coatings, which does not appear in manufactured fabric classed as silk, and much is used for embroidering, for shoes and other machine sewing.

<sup>5</sup> These establishments still plate by the old method of fusion, but most of the plating is by deposit from solution.

<sup>6</sup> It is not possible to separate a class exclusively as tools which would embrace all tools; and these are taken as affording only an approximate distinction. The large works of W. H. Sowers, placed with cutlery and edge tools, and the two steel-fork works, with several less important, might with equal propriety be classed with tools.

<sup>7</sup> See textile machinery, "card clothing."

<sup>8</sup> Cutting dies and stamps, for boot and shoemakers, clothiers, paper-makers, and others, are largely made.

<sup>1</sup> Silk and rubber surgical hosiery, elastic bandages, etc.

<sup>2</sup> Much varnish-making is also included under paints.

<sup>3</sup> But two or three regular wagon-makers can be stated separately, the principal ones being Wilson, Childs & Co. and H. G. Kessler. These are the returns of three leading works.

<sup>4</sup> A large share of this is new work, and only the establishments employing constant labor are reported. The census of 1880 returned only 14; the whole number is in fact 250, but of these about 100 are accustomed to employ workmen regularly, or to represent the labor of others than the proprietors.

<sup>5</sup> These three establishments are separated because they employ variable materials, and cannot be classed with cotton or worsted webbing, bindings, and braids; Aronia Fabric Company, and A. Sanchknecht, Germantown, and N. B. Bilger, 231 Race Street.

<sup>6</sup> Limited to the shops which do not make new wagons.

<sup>7</sup> Limited to the products of chalk, and not including barytes or other whites.

<sup>8</sup> Finishers of Germantown yarns, two of them being spinners also.

<sup>9</sup> This number of establishments represents eleven combers and spinners who do not further manufacture, and twelve establishments which comb and spin in connection with weaving. For convenience the worsted-weaving mills will have all their force of persons employed given under that head; the quantity of worsted yarns spun in the eleven spinning-mills was 3,453,000 pounds, nearly all high numbers; in cloth-weaving mills and in the carpet-weaving mills, 2,200,000 pounds, 500,000 pounds going into Shetland yarns and braids.

<sup>10</sup> The numbers employed at the Mint, in the coinage and general departments, are here entered with an equivalent of values produced as if working ordinary metals; those employed in assaying, melting, and refining are entered under those heads.

NOTE.—In the tables as they stand the number of establishments foots up 12,063, but the number of separations made to represent distinct products in chemical-works, iron, steel, and machinery, printing and publishing, etc., is 137, and the total of distinct proprietors is reduced to 11,942. There are about 1000 establishments in the building, clothing, boot and shoe making, blacksmithing, and like trades, including also many dealers who manufacture to the extent of \$500 not included in any of the foregoing schedules.

The following are the footings of the several publications of the Industrial Census of 1880, made by the Census Office and its agents :

	Establishments.	Capital.	No. Employed.	Wages.	Product.

In communicating this census of manufactures to the City Councils, Mayor King, in his message of Jan. 1, 1883, remarks that—

"The publication made a few months since of the census of these industries, which appeared to show a decline from 1870 to 1880, instead of the increase of which every citizen must be conscious, led to a movement on the part of some public-spirited citizens for the purpose of securing a recount of the statistics of establishments and of the numbers employed in manufactures, for which purpose a simple and apparently effective plan was proposed to me, and in which my co-operation was requested. Believing that a great public service would be done by a faithful re-examination of these great interests, I tendered the fullest practicable aid of the lieutenants and officers of the police in each ward and district of the city, and they were furnished with blank forms and instructions as to the manner of obtaining information. The work was done very promptly and in the most careful and official manner, and more than 10,000 manufacturing establishments were examined, and their statistics as to the class of products and the number of persons employed in each case were obtained and placed in the hands of Mr. Blodget for compilation and classification. I cannot speak too strongly of the care and spirit shown by the lieutenants and officers charged with this duty, and I am assured that their work is at least equal in value to that of any of the regular decennial census-takings, so far as the forms extend. The results already show a very large increase over the reported figures made public a short time since as for the census of 1880, there being over 11,000 industrial establishments instead of 8300, as then reported, and about 235,000 persons employed in these establishments instead of 173,000, as reported for 1880. The changes are so great and so striking in most of the greater industries as to show an absolute necessity for making the present revision thorough and complete, and for then making it public in proper official form. As instances of the omissions in some departments, the increase in printing and publishing is from \$9,000,000 to \$23,000,000 in value. In iron manufactories nearly 11,000 men are reported in excess of the former numbers, and in textile fabrics about 20,000 persons more are found, in fact, to be employed. The entire excess in the number of persons employed is about 65,000, as so far reported on the official forms.

"The superintendence and management of the present industrial census has been confided to Lorin Blodget, whose superintendence of both the former censuses, that of 1860 and that of 1870, has given him a very thorough knowledge of the entire city, and enables him to make the work as nearly perfect in its details as is practicable in anything so great in all its proportions, both of labor required and of results obtained. It has already been recognized by the statistical departments of both Pennsylvania and New Jersey, and it cannot fail to restore the reputation and honor of the city as the leading industrial centre in this country, if not in the world."

The growth of manufactures in Philadelphia from 1682 to 1883 has been traced from their early origin to their full development, as far as defective records would permit. The early history of these individual industries, scattered in detached fragments through many publications, have been collected and chronologically arranged, to present, as far as practical, a continuous narrative of their development. It was

not merely statistical information of the growth as a whole, but the individual exigencies whether for prosperity or adversity have been collected and recorded. The early history of infant industries presents much data connected with family history, and shows how, generation after generation, the same family have clung to the business their progenitors started, growing in knowledge and increasing in experience, as well as in fortune, until the manufacture has been perfected by the combined experience of father and sons directed continuously and perseveringly to the same great end. Perhaps to this cause, as much as to any other, is the perfection arrived at in Philadelphia manufactures to be attributed. But, be the cause whatever it may, the fact is incontrovertible that, in this year of 1884, Philadelphia stands at the head of manufacturing centres in the United States, as well as a prominent competitor in the same line with any city in the world.

## CHAPTER LVII.

### THE INDUSTRIES OF PHILADELPHIA.

SITUATED in the centre of the great iron district, Philadelphia has become the largest manufactory of iron in the United States. This industry, in 1882, was conducted in over 500 establishments, employing over 27,000 hands, and turning out a yearly product valued at more than \$50,000,000. When to these are added the large number of establishments in other branches of manufacture which use iron in some form, it will be seen that this industry ranks first in magnitude and value. The great supply of iron within immediate reach of the city, the abundant amount of coal, and the ease with which it is transported, all contribute to swell the volume and value of the industry. It was among the very earliest which the founder of Pennsylvania looked after, and endeavored by all means to promote and foster. In a letter to Lord Keeper North, in July, 1683, he mentions the existence of "mineral of copper and iron in

divers places" in the province.<sup>1</sup> Gabriel Thomas, a resident of the province from about that date, writing in 1698,<sup>2</sup> states that ironstone ore had been lately found, which far exceeded that in England, being richer and less drossy, and that some preparations had been made to carry on an iron-work." He also mentions copper "far exceeding ours, being richer, finer, and of a more glorious color. Backward in the country lies the mines, where is copper and minerals, of which there is some improvement made already in order to bring them to greater perfection, and that will be a means to erect inland market towns, which exceeding promotes traffic."

In 1702, James Logan wrote to Penn as follows: "I have spoke to the chief of those concerned in iron mines, but they seem careless, never having had a meeting since thy departure. Their answer is that they have not yet found any considerable vein."

In 1708, William Penn wrote to James Logan to "remember the mines, which the Governor makes yet a secret even to thee and all the world but himself and Mitchell. Pray penetrate the matter, and let us see the *ore* in as large quantity as thou canst."

Nine years later the first iron furnace in the province is thus described in one of Jonathan Dickinson's letters,<sup>3</sup> written in 1717:

"This last summer one Thomas Rutter, a smith, who lives not far from Germantown, hath removed further up in the country, and of his own strength hath set upon making iron. Such it proves to be, as is highly set by all the smiths here, who say that the best of Swedes iron doth not exceed it; and we have accounts of others that are going on with the iron-works. It is supposed there is stone (ore) sufficient for ages to come. The first projectors may open the way, and in all likelihood hemp and iron may be improved and transported home in time, if not discouraged. Certainly a few years may supply this place for its domestic services, as may be easily supposed."

Mrs. James, in her "Memorial of Thomas Potts, Jr.," says that on the 24th of September, 1717, Sir William Keith, Governor of Pennsylvania, "wrote to the Board of Trade in London that he had found great plenty of iron ore in Pennsylvania." The exact location of Rutter's iron forge, or bloomery, cannot be ascertained.<sup>4</sup> In July, 1718, Jonathan

Dickinson writes, "The *expectations* from the iron-works forty miles up the Schuylkill are very great." This probably referred to the Coventry Forge, in the upper part of Chester County, where Samuel Nutt had taken up land "on French Creek in 1717, and about that time built a forge there."<sup>5</sup> It is thought that Nutt's forge went into operation in 1720.

Jonathan Dickinson wrote in 1719,—

"Our iron promises well. What has been sent over to England hath been greatly approved. Our smiths work up all they make, and it is as good as the best Swedish. Many who have come over under covenants for four years are now masters of great estates. Our friends do increase mightily, and a great people there is in this wilderness country, which is becoming like a fruitful field. A gentleman, one William Trent, of our city, is forming a little town about his set of mills that he hath at Delaware Falls" (Trenton).

A forge also existed about this time in Manatawby (now Montgomery County), but then in Philadelphia.<sup>6</sup> The Elizabeth Furnace, near Lancaster, was owned in 1775 by Benezet & Co., of Philadelphia. It was built and managed by an eccentric and extravagant German baron, Henry William Steigel. He is said to have cast the first stoves that were made in this country, which were probably the same as the "Jamh Stoves" cast by Nicholas Sauer, at Germantown.<sup>7</sup>

In 1726 the Assembly, in an address to the descendants of Penn, adopted after the arrival of Governor Gordon, remarking upon the general prosperity of the colony, attributes it to the emission of paper money and notes that many iron-works had been built. Several companies were already engaged in carrying on iron-works. In 1728-29 the colony exported two

desired to frame and bring in an ordinance whereby they could be incorporated. In 1767 the silversmiths petitioned for the establishment of an assay-office to regulate, assay, and stamp gold and silver.

<sup>5</sup> Day's Historical Collections.

<sup>6</sup> The following obituary notice in the *Pennsylvania Gazette* for March 5 to March 23, 1729-30, establishes the priority of Rutter in the iron-making business: "March 13th.—On Sunday night last died here, Thomas Entter, Sr., after a short illness. He was the first that erected an iron-work in Pennsylvania."

<sup>7</sup> On the 4th of March, 1727, Jeremiah Langhorne, of Bucks, Anthony Morris, James Logann, Charles Reed, Robert Ellis, George Fitzwnter, Clement Plumsted, William Allen, Andrew Bradford, John Hopkins, Thomas Linsley, Joseph Turner, Griffith Owen, and Samuel Powel, of Philadelphia, the owners of the Durham tract, in Bucks County, formed themselves into a stock company for the purpose of making iron. The property was divided into sixty equal shares, and conveyed for fifty-one years to Griffith Owen and Samuel Powel, in trust for the owners. The first election for officers was held March 25th, and the company proceeded immediately to the erection of a furnace, thirty by forty and twenty feet high, and other improvements. The first blast was begun in the spring of 1728,\* but after running about one hundred tons of metal they were obliged to blow out. The second blast was begun late in the following fall, on a stock of five or six hundred tons. In November, 1728, James Logan shipped three tons of pig-iron to England as a specimen.

This was before a forge had been erected at Durham, and the company had their metal wrought up into bars elsewhere. The old date stone was preserved and walled in the new furnace. The first furnace was torn down in 1819, and a new one built a short distance from its site. A new furnace was erected in 1848, on the site of the old one, and has been in successful operation since. In 1864, Edward Cooper and Abraham S. Hewitt, of New York, became the owners of the property. The keystone of the Durham Furnace, bearing date "1727," was exhibited at the Centennial Exhibition in 1876.

\* Letter of James Logan, Nov. 6, 1728.

<sup>1</sup> The metrical composition entitled "A Short Description of Pennsylvania, or a Relation what Things are Known, Enjoyed, and like to be Discovered in said Province. Issued as a token of good-will . . . of England. By Richard Frame. Printed and sold by William Bradford in Philadelphia, 1692," mentions iron among other things, and says, that at "a certain place . . . about forty pounds" had been made. This pamphlet is in the Philadelphia Library.

<sup>2</sup> "An Historical and Geographical Account of the Province and County of Pennsylvania and of West Jersey, in America. . . . By Gabriel Thomas, who resided there fifteen years." London.

<sup>3</sup> Logan Papers.

<sup>4</sup> The minutes of the Common Council show that among the tradesmen admitted to the "freedom of the city" in 1717 and 1718 were George Plumley, Joseph Trotter, and Richard Gosling, cutlers; James Everet and Simon Edgell, pewterers; Peter Steel and James Winstnly, braziers; Francis Richardson, William England, and Edward Hunt, goldsmiths; Edmund Billington, whitesmith; and fourteen blacksmiths. In 1718, in consequence of a petition "from several tradesmen and manufacturers" complaining that notwithstanding they had taken out their freedoms, many strangers daily came in and settled who were not entitled to carry on business, the Common Council gave permission to such trades as

hundred and seventy-four tons of pig-iron to England, and the iron industry may be considered as fairly established at that date. In 1728, Mr. Logan wrote that there were four furnaces in Pennsylvania in blast. One of these was the Durham Furnace in Bucks County. Which of these four furnaces was the first, or who first made iron in them, is a thing which we presume nobody knows. A petition was presented in February, 1729, by the proprietors of iron-works lately erected in the province, praying that a duty be laid on all iron imported from Maryland. This was induced by a law passed by Maryland laying a duty on Pennsylvania produce; but, the latter being repealed, retaliation was not considered necessary. In 1742, William Branson, of Philadelphia, erected a forge on Conestoga Creek, near the Chester County line, which he called Windsor. This forge was afterward owned by an English company, and still later by David Jenkins. In Nicholas Scull's map (1759) two iron-works are marked down at Pottstown, at the mouth of the Manatawny, one on each side of the stream, but no names are given. From another source it appears that one of them was named Pottsgrove, the original name of Pottstown, laid out in 1752 by James Potts. Nicholas Scull's map shows above Pottstown, McCall's forge, Pool Forge, and Pine Forge. On the same map there are laid down Mayberry's forge and one or two iron-works on the east of the Schuylkill. Pine Forge was built by Thomas Potts in 1747, and owned by his son John in 1768; in 1785 it was connected with a rolling-mill. It is said by Mrs. James, that Samuel Nutt built the first steel-works in the province on French Creek in 1734, and that probably William Branson was associated with him. They were known as the Vincent Steel-Works, and were owned in 1756 by William Branson, and are thus described in Israel Acrelius' "History of New Sweden:—"

"At French Creek, or Branz's Works, there is a steel furnace built with a draught-hole, and called an 'air oven.' In this iron bars are set at a distance of an inch apart. Between them are scattered horn, coal-dust, ashes, etc. The iron bars are thus covered with blisters, and this is called 'blister-steel.' It serves as the best steel to put upon edge-tools. These steel-works are now said to be out of operation."

In 1750 there was a plating forge with a tilt-hammer, in Byberry township, in the northeastern part of Philadelphia County,—the only one in the province,—owned by John Hall, and two steel furnaces within the city limits, one of which—Paschal's—was built in 1747, and the other was owned by William Branson. Paschal's was at the corner of Eighth and Walnut Streets, and Branson's was located near where Thomas Penn "first lived in the upper end of Chestnut Street."

An act of Parliament was passed in 1749 entitled "an act to encourage the importation of pig and bar iron from his Majesty's colonies in America, and to prevent the erection of any mill or other engine for slitting or rolling iron, or any plating forge to work

with a tilt-hammer, or any furnace for making steel in any of said colonies." It forbade the use of any forges, furnaces, or mills that were not at work before the 24th of June, 1750, and required that a return of them should be made. In answer to a proclamation made to ascertain the number of these works which were then in operation, it was returned that Stephen Paschal's steel furnace, at the northwest corner of Walnut Street and Eighth, was built in the year 1747, and that blistered steel was made there; also, that William Branson was owner of a steel furnace in the city (location not mentioned), and that John Hall owned a plating tilt-hammer forge at Byberry, in the county of Philadelphia.<sup>1</sup> This act was passed in pursuance of a determination in Great Britain to discourage American manufactures.

The steel furnace erected by Paschal was, in 1787, owned by Nancarrow & Matlack, and when visited in that year by Gen. Washington was mentioned as "the largest and best in America." That partnership was dissolved in 1790, and the furnace, house, and lot offered for sale; the furnace was in good repair, and capable of making twenty-two tons of steel at a blast. White Matlack soon afterward conveyed the property to John Ireland; and his former partner, John Nancarrow, a Scotchman, removed to Seventh Street, where he continued the business of steel making. There was also, at this period, an air furnace at the northwest corner of Ninth and Walnut Streets, belonging wholly or in part to John Nancarrow, who is said, at one time, to have made steel under ground at that place. An anchor forge existed in 1755, in Front Street, opposite Union, and was then owned by Daniel Offley. It continued in operation during the Revolution. Newly-invented hoxes for carriage-wheels were made in 1785 at the air furnace of William Somerton, at Eighth and Walnut Streets.

Whitehead Humphreys was, in 1770, the proprietor of a steel furnace on Seventh Street, between Market and Chestnut, where he also made edge-tools. He received one hundred pounds from the Provincial Assembly for his encouragement, and in 1772, set up a lottery to raise seven hundred pounds to assist him in his steel-works. In 1778, Congress authorized the Board of War to contract with him for the manufacture of steel for the Continental artificers, from the iron of the Andover Works, New Jersey. The State Legislature, in 1786, appropriated three hundred pounds as a loan to Humphreys, for five years, to aid him in making steel from bar iron "as good as in England." Mr. Clymer, of Pennsylvania, in the debate in Congress in 1789, referred to this furnace of Humphreys as having made three hundred tons of steel in two years, and was then making at the rate

<sup>1</sup> In February, 1776, Uriah Woolman and B. Shoemaker, on Market Street, Philadelphia, advertised in the *Pennsylvania Packet*, "Pennsylvania steel manufactured by W. Humphreys, of an excellent quality, and warranted equal to English, to be sold in blister, faggot, or flat bar suitable for carriage springs."

of two hundred and thirty tons annually. Although an infant manufacture, with very little aid from the State, he believed it capable of making a supply sufficient for the whole Union. The importance of steel at Philadelphia had decreased very largely. The perfection attained here in its manufacture, and the reduced price, were regarded by the Society for the Encouragement of Domestic Manufactures as insuring the success of workers in that article. Henry Voight, a watchmaker of this city in 1798, made valuable improvements in the manufacture of steel.<sup>1</sup>

The amount of iron exported from this city in the year ending April 5, 1766, was 882 tons of bar, at £26 per ton, and 813 tons of pig-iron, at £7 10s. per ton. In the three years preceding the war, ending Jan. 5, 1774, the exports were respectively 2358, 2205, and 1564 tons. In the manufacture of steel, nails, fire-arms, machinery, and other metallic products, Pennsylvania early acquired the same prominence she had in the production of the raw material. Philadelphia, as the principal commercial city of the country, possessed a varied industry and a large proportion of skillful artificers, as well as many persons who were industrious promoters of all the mechanical arts. Her shipping created a large demand for nails, iron, and steel, material for which was chiefly furnished by her furnaces and forges. In the procession that celebrated the adoption of the Federal Constitution in 1788, a carriage, drawn by nine horses, contained the representatives of the blacksmiths, whitesmiths, and nailers in full employ. The blacksmiths completed, during the procession, a full set of plow-irons out of old swords, worked a sword into a sickle, turned several horseshoes, and did other jobs on demand. L. Goodman, whitesmith, finished and sold nails, spikes, and broad tacks. They were followed by two hundred others of their trades, with the device, "By hammer and hand all arts do stand." The goldsmiths, silversmiths, and jewelers followed their senior member, William Ball, to the number of thirty-five.

William Somerville opened the City Iron Foundry, at the northwest corner of Juniper and Filbert Streets, in the year 1818. The establishment occupied a lot fifty feet front on Filbert Street, and ran one hundred and fifty feet to an alley which was sometimes called Paper Alley. There were air-furnaces, a cupola, bellows, etc. This property was offered for sale in 1820. It was purchased by Cadwalader Evans and — Bracken after the death of Oliver Evans. Bracken ceased to be a member of the firm in 1822, and Cadwalader and Oliver Evans, Jr., continued

the business as iron founders and steam-engine makers. Subsequently, Cadwalader and Oliver Evans removed to High Street, between Schuylkill Fifth and Schuylkill Sixth, where they devoted themselves principally to the manufacture of plows and machinery. On the 14th of April, 1825, they obtained a patent for a self-sharpening plow.

The Eagle Works, at the corner of Callowhill and Nixon [now Twenty-third] Streets, established during the Revolution, were used for casting cannon, and afterward were turned to more peaceable lines of iron manufacture. Robert Morris, Jr., son of Robert Morris, financier of the Revolution, was at one time interested in them. In 1810 they belonged to Henry Foxall and William and Samuel Richards. There were a foundry, four air furnaces, and a blacksmith- and a carpenter-shop. There were prepared iron castings of every description, sugar-kettles, sugar-mill rollers, sugar-mill pumps, soap and other large boilers, screws, wheel works for machinery, cylinders for steam engines, and cannon. Twelve hundred tons of iron could be manufactured annually. Seven hundred tons had been made in some years before 1810, but at that time the demand had fallen to about three hundred tons per annum. At this furnace, about 1820, Samuel Richards cast the first large twenty-two-inch iron main-pipes that were made in America, and a good deal of iron-pipe casting was afterward done at these works. About thirty thousand feet, in sections nine feet in length, were cast at that time.

It has been shown that German blistered steel was made near Philadelphia prior to the Revolution. In 1810 there was one steel manufacturer in the city and one in the county of Philadelphia. In 1829 there were three steel furnaces in the city, and but fourteen in the whole Union. In 1850, the manufacture of steel in Philadelphia was carried on by James Rowland & Co., Kensington, who made 600 tons; J. Robbins, Kensington, 400 tons; Earp & Brink, Kensington, 100 tons; Robert S. Johnson, Kensington, 400 tons; and W. & H. Rowland, Oxford, 700 tons.

George Magee was a nailer at the corner of Front and Arch Streets as early as 1781, advertising for sale, wholesale and retail, all sorts of deck and other nails of his own manufacture. In 1789, Samuel Briggs, of Philadelphia, memorialized the Legislature and Congress on the subject of a machine for making nails, screws, and gimlets. He had, three years before, made the patterns for the castings of Fitch's steam-boat, and now deposited with the executive of the State the model of his nail-machine in a sealed box, subject to the order of the State or Federal Legislatures. He and his son, in 1797, received the first letters patent for nail-making machinery issued under the general patent laws of the United States. The second was granted in 1794 to Thomas Perkins, also of Philadelphia. In 1797 there were three manufacturers of cut-nails, and one of patent nails in the city.

<sup>1</sup> William Priest, in a letter dated March 1, 1794, written to a friend in London, said, "Peter Brown, a blacksmith of this city, having made his fortune, set up his coach; but, so far from having been ashamed of the means by which he had acquired his riches, caused a large *anvil* to be painted on each panel of his carriage, with two naked arms in the act of striking. The motto, 'By this I got ye.' The frontispiece is a well-executed engraving, in colors, of 'Peter Brown's arms.'" Peter Brown, blacksmith, in 1798, lived at No. 144 North Front Street, and is probably the same spoken of by this writer.

In 1789, David Folsom, claiming to be the inventor of a new method of making nails, sprigs, and brads, by cutting, without the usual mode of drawing, asked for an exclusive right to machinery. Samuel Briggs desired similar privileges for a machine to make spikes, nails, and gimlet irons.

The origin of the present Schuylkill Iron-Works dates from 1802, when James Wood commenced the manufacture of iron at the Pennypack Iron-Works in Philadelphia County. James Potts, who was associated with Wood, had been previously similarly engaged on Valley Creek,—the famous Valley Forge of the Revolution. In 1816, James Wood was proprietor of Valley Forge, and manager of the iron-works, where the manufacture of sheet- and plate-iron was carried on, also saws, shovels, and spades. Here was made the first cast steel manufactured in the country, except a small quantity produced by the same parties in New York. In 1826, James Wood and his son, Alan, leased the Delaware Iron-Works, near Wilmington, Del., and continued the same line of business until 1832. In this year James Wood & Son built the Conshohocken Iron-Works, which they ran by water-power, and operated until 1844. In this year the firm was dissolved, Alan Wood continuing the manufacture of sheet and plate iron at the iron-works in Delaware. In 1837, Alan Wood & Co., composed of Alan Wood and his sons and of Lewis A. Lukens, erected a steam rolling-mill at Conshohocken, called the Schuylkill Iron-Works, which from time to time have been enlarged and improved by the addition of other mills and machinery, until the annual production has exceeded fifteen thousand tons. The works cover ten acres, and give employment to five hundred hands.

The Port Richmond Iron-Works of I. P. Morris, Towne & Co., were founded by Levi Morris & Co., in 1828. At that early day the tools now deemed indispensable to a machine shop were scarcely known. It was not until 1838 that a planer was introduced. Anthracite coal was used in melting iron only to a limited extent. The blowing machinery was so defective that the best products did not exceed three thousand pounds of iron in an hour. By means of the improvements introduced in the blowing machinery and furnaces, the production has risen to eight tons in forty-six minutes. In 1846 the works were removed from Market and Schuylkill Seventh Streets to their present location on the Delaware River, adjoining the Reading Railroad coal wharves.

The Pascal Iron-Works—Morris, Tasker & Co., proprietors—were established in 1821 by Stephen P. Morris for the manufacture of stoves and grates. Henry Morris and Thomas T. Tasker, Sr., became partners in the concern in 1835. Their office then and for many years was at Third and Walnut Streets. Illuminating gas being introduced, they began the manufacture of gas-pipe by hand; but to supply the demand for gas-pipe made by machinery, the firm, in

1836, began the nucleus of the present Pascal Iron-Works. A demand for gas-fitting and gas-fitters' tools followed quick upon the introduction of gas, as well as for the construction of gas-generating machinery, and the whole plant for city gas-works. Apparatus for warming public and private buildings, both by hot water and by steam, are manufactured to a very large extent, the self-regulating hot-water furnace being the invention of Thomas T. Tasker, Sr. To these have been added the production of pipes and tubes for analogous purposes,—water- and steam-tubes, steam boilers, locomotive flues, etc. Nearly 600 hands are employed, and 25,000 tons of iron and 150,000 tons of coal are annually consumed.

Charles Wheeler, who was born in Philadelphia, on the 22d of August, 1827, entered the employment of Morris, Tasker & Co. as a clerk in 1847. Six years later Wister Morris, the founder of the firm, retired, and, much to the surprise of every one, sold out his interest to Mr. Wheeler, who was yet under thirty, and as yet without money. The preference was the more remarkable, as there were clerks in the office senior to Mr. Wheeler and of kin to his benefactor. The confidence, however, was not misplaced. He paid for Mr. Morris' interest the sum of \$500,000 out of his share in the profits of the concern within two years after he entered it. In 1864, Mr. Wheeler himself sold out his happily-acquired share in the business for \$800,000, and turned his attention to the Fairmount Iron-Works, which he owned, and the founding of the Central National Bank, of which he became one of the original directors and the largest shareholder in 1865. He continued in the direction of the iron-works until the land upon which they were situated was acquired by the city for park purposes. He was elected vice-president of the Central National Bank in 1873, and three years afterward re-entered and held a controlling interest in his old firm of Morris, Tasker & Co. Not content as yet with the vast business cares which he had taken upon himself, Mr. Wheeler entered as a senior partner, in 1878, the firm of John Farnum & Company, of 233 Chestnut Street, one of the largest dry-goods houses in the city. This is supposed to have been at the wish of John Farnum, whose daughter (Susan) Mr. Wheeler married in 1867, and who died some time before the latter succeeded him at the head of the firm. Mr. Wheeler was thus at the time of his death the directing head of two of Philadelphia's greatest business houses and one of its leading financial institutions. In addition to this he occupied positions in the directorate of the Girard and North America Insurance Companies, the Lehigh Valley Coal and Navigation Company, the Pottstown and Cambria Iron Companies, the Seaboard Bank, of New York, and the First National Bank, of Bradford.

Mr. Wheeler took an active interest in city charities, being connected with the Charity Organization Society, the Bedford Mission, and the Soup

Engr. by A. R. Peckham

Genas Wheeler

Society. He was a member of the Protestant Episcopal denomination, and was for many years connected with St. Luke's Church, at Thirteenth and Spruce Streets. An especial object of his care was the Church of the Redeemer, at Bryn Mawr, where his country-seat, one of the most remarkable in the vicinity of the city for taste and beauty, was situated. His town house was at 1217 Walnut Street.

In his politics, Mr. Wheeler belonged to the party of good government, a conviction he evinced by his activity and prominence in the Committee of One Hundred since the time of its organization. In appearance Mr. Wheeler was distinguished and of commanding presence, tall, and erect. He was a kindly, genial man, of a bright, warm nature, and of the most upright integrity and thorough business-like character. He was richly endowed with the faculties of quick perception, keen discrimination, and ready judgment. His high degree of executive ability is attested by the success which followed his efforts to create and incorporate the Central Bank, and by the impetus which his labors communicated to the several concerns with which he was associated.

Mr. Wheeler apparently enjoyed excellent health, and it was an emphatic shock to this community when there came an announcement of his sudden death in New York, on the 16th of August, 1883.

The Southwark Foundry—Merrick & Sons, proprietors—was started in 1836 as a foundry for castings only, but was soon enlarged. The manufacture of files, shoe-rasps, etc., was established in 1845 by J. Barton Smith, who removed his establishment from New Haven to Philadelphia, and located at No. 221 New Street. In 1872, Charles F. Cripps and E. Winslow Coffin became partners, under the style of J. Barton Smith & Co. The manufacture of iron by the Philadelphia Iron and Steel Company, North Delaware Avenue, was commenced in 1845. In the same year the Penn Rolling-Mill was established by individual enterprise. In 1847, Dougherty & McCall founded the factory known as McIlvaine & Co.'s Iron-Works, which came the same year into the hands of F. McIlvaine, an iron-founder since 1817.

In the manufacture of machinery there is no city in the Union that surpasses Philadelphia. The machine-shops were estimated, in 1867, by Mr. Freedley at "not less than one hundred," which "have in combination facilities for constructing any machine that the genius of man has invented or can invent." The engines for the Lake Erie steamer, the "Mississippi," cylinder eighty-one inches diameter, with twelve feet stroke of piston; the Cornish-Bull pumping-engines for the Buffalo Water-Works, each cylinder fifty inches diameter and ten feet stroke; the lever-beam Cornish pumping-engine, steam cylinder sixty inches diameter, ten feet stroke; the Bull-Cornish pumping-engine, cylinder forty inches diameter, and eight feet stroke, for Camden, N. J.; the blowing machinery for the Lackawanna Iron and Coal Company, the

largest ever constructed for making anthracite iron; the light-house of iron for Ship Shoal, Gulf of Mexico; the engines for the double-turreted iron-clad "Monadnock," for the "Agamenticus," for the "Lehigh" and "Saugamon," for the gunboats "Itasca" and "Sciota," for the "Tacony," and for the "Pushmataha" and "Antietam" were all constructed at the Port Richmond Iron-Works; iron light-houses all along the coast of the Florida reefs, some of them the largest in the world, together with the gasholder frame of the Philadelphia works; the heavy machinery for the United States ship "Mississippi," for the "Princeton," for the "San Jacinto," for the "Wabash," the boilers for the "Susquehanna" and "Saranac," for the "Corwin," the "Search," and the "New Ironsides" were made at the Southwark Foundry.

The Bush Hill Iron- and Steel-Works of Mathews & Moore were established in 1816, at Sixteenth and Buttonwood Streets. Oliver Evans was the founder of this firm, and was succeeded by Rush & Muhlenburg. At these works have been constructed, among others, the blast furnace and rolling-mills of the Bethlehem Iron-Works, the rolling-mill of the Abbott Iron-Works, Baltimore, the machinery for steel forging at Lewistown, Pa., for street rails at Harrisburg, besides steam-boilers, air- and cupola-furnaces. Morgan, Orr & Co., at 1219 Callowhill Street, manufactured the coining-presses for the Philadelphia Mint, for the Branch Mint at San Francisco, for the mint of the Peruvian government, and nearly all the coining-presses in use in South America and Mexico. The Bridgewater Iron-Works of Stanhope & Suplee, founded in 1837, which came under the proprietorship of Stanhope & Suplee in 1857, have constructed the largest saw-mills at Lock Haven and Williamsport, as well as a variety of heavy machinery for rolling and paper-mills, and nearly all the machines in the print-works in Philadelphia.

The manufacture in Philadelphia of machinery for textile fabrics may be traced back to 1777, when Oliver Evans, then engaged in making card teeth by hand, invented a very efficient machine for manufacturing them at the rate of 1500 per minute. His proposal to establish his factory under State patronage being rejected he told the secret to individuals, and in 1788 Giles Richards & Co. began the manufacture with newly-invented machinery, probably that of Evans, by which, in 1793, the factories of G. Richards, Amos Whittemore, and Mark Richards turned out 12,000 dozen annually. From that beginning the manufacture of cotton machinery grew by degrees and expanded with the increasing production of cotton until 1810, when Alfred Jenks established at Holmesburg the first regular manufactory of cotton machinery. Jenks had learned under Samuel Slater all that was then known of cotton machinery. He supplied the Holmesburg shop with its machinery, and also the Keating Mill at Manayunk, lately owned by J. C. Kempton. In 1816 he built for Joseph Ripka looms

for weaving cottonades. The war of 1812 having given to home manufactures a great impetus, Mr. Jenks, in 1819-20, removed to Bridesburg, and commenced the manufacture of woolen machinery for Bethuel Moore, at Conshohocken, the first woolen machinery mill in the State. In 1830, Mr. Jenks invented the power-loom for weaving checks, and introduced it into the Kempton Mill at Manayunk. Associated with his son, Barton H. Jenks, one of the most ingenious of American inventors, he established the works since incorporated as the "Bridesburg Manufacturing Company." They construct looms, Jenks' cotton-spreader, carding engines, Jenks' fly frame, the Jenks' patent spinning frames, Jenks' improved cylinder cotton-gin, as well as all the machinery required for cotton manufacturing.

According to the census of 1870 there were engaged in the manufacture of machinery, cotton and woolen, six establishments, employing \$1,384,000 of capital; with steam-power of 541 horse-power in 227 machines, worked by 658 men and 12 women, paying \$311,500 in wages; with \$378,542 value of material, and \$1,084,605 as the value of the product. In 1875, Mr. Lorin Blodget, in comparing the census of 1870 with probable estimates for 1876, remarks, "Machinery for the manufacture of textile fabrics is produced to three times the extent it was five years ago, and in far higher and more costly forms. Spinning, weaving, knitting, sewing, folding, and many other processes are performed with far better machinery; the costly Jacquard loom is in general use, and, while not all the machinery of this class employed in such factories is made in Philadelphia, a large share of every grade is made here."

John Butterworth, in 1820, commenced the manufacture of the work for cotton and woolen machinery, on Second Street, north of Brown. These works, in 1844, passed into the hands of H. W. Butterworth as sole proprietor, who removed to Haydock Street, east of Front.

The first locomotive constructed in Philadelphia was built in Kensington by Col. Stephen H. Long, of the United States Topographical Engineers, a gentleman of scientific culture and originality. This engine was designed upon the plan of the locomotives in England, but combined some original improvements. It was finished before 1831, and was tried on the 4th of July, of that year, upon two miles—all that were finished—of the New Castle and Frenchtown Railroad. The weight of the machine was about three and a half tons. This little motor would run with speed and success for a while, but then came to a stop because enough steam could not be generated for constant use. Some little changes were made by Col. Long, and he was extremely gratified the next day to find that his engine drew two cars containing seventy or eighty persons with ease, the full length of the track, two miles, and returned with them. This performance was hopeful, but the inventor was

not satisfied with it, and brought the machine back to the city. A new boiler was constructed for it at Rush & Muhlenberg's foundry, Bush Hill. When taken back to New Castle there was another failure. The engine would run very well for some distance, but could not make steam sufficient for constant work, particularly when a burden was to be drawn. Alone the engineer could run it at the rate of twenty-five miles per hour. Finally Col. Long became discouraged, and it was withdrawn from the road. In June, 1833, Col. Long ran his locomotive-engine on the Germantown Railroad, and a matter of great novelty connected with its use was that bituminous coal was burned beneath the boiler. He had associated with him in the construction of his locomotive William Norris and others. They formed the American Steam Carriage Company in March, 1831. In 1833 the business was so far successful that Messrs. Long and Norris determined to establish it permanently. They built their works at Bush Hill, near the Rush & Muhlenberg foundry, in such a situation that when the streets were opened they were found to be on the west line of Schuylkill Sixth [Seventeenth] Street, extending south from Morris [Spring Garden] Street to the Columbia Railroad. These workshops became famous in after-years as the Norris Locomotive Works, and a large business was transacted there.

The first locomotive steam-engine with cars attached that was ever seen in Philadelphia was exhibited at Masonic Hall in August, 1830. The car would carry three persons, and ran at the rate of nine miles per hour. This exhibition, it was announced, had previously been made in Rochester, N. Y. The inventor was Francis Schields,<sup>1</sup> of Cincinnati. The circular road laid round the Masonic Hall was ninety feet in circumference, and the speed was six hundred feet per minute.

The second locomotive of large size built in Philadelphia was constructed by Stacy Costell, and was ready for work in September, 1831. Costell had invented a vibrating cylinder steam-engine, and had some reputation as a scientific mechanic. This locomotive—

"had four connected driving-wheels of about thirty-six inches diameter with two six-inch cylinders of twelve-inch stroke which were attached to right-angle cranks at the end of a counter-shaft, from which shaft spur-gearing connected with one of the axles. The boiler was of the Cornish type, with fire inside of an internal straight flue. Behind the bridge-wall of this boiler and inside the flue, water-tubes were placed at intervals, crossing each other after the manner of the English Galloway boiler of the present day. The peculiar arrangement of this engine made it possible to use a very efficient and simple mode of reversal by the use of a disc between the steam-pipe and the cylinders, arranged with certain openings which changed the direction of the steam and exhaust by the movement of this disc on the steam-pipe near the cylinder something after the manner of a two-way cock."<sup>2</sup>

<sup>1</sup> In June, 1835, Isaiah Jennings gave notice that he was the patentee of a steam-engine in the United States several years before Mr. Stephenson adopted the same principle on the Liverpool and Manchester Railroad. Jennings' experiments commenced in 1809. His patent had not expired in 1835, and he gave notice that he expected compensation from the persons who should use or adopt his principle.

<sup>2</sup> Joseph Harrison, Jr., "The Locomotive Engine."

The Costell engine was tried on the Columbia Railroad in 1833 and 1834, but was not very successful in comparison with other machines, and was broken up, but the boiler having good steam making qualities was used for a long time with a stationary engine.

The third engine was begun in 1831 by Thomas Holloway, of Kensington, who had some reputation as a manufacturer of steam-engines for use in steam-boats, but it was never completed.

A Mr. Childs, in March, 1831, had completed a rotary locomotive engine, which it was given out would ascend an inclined plane at any elevation ever used in a railroad, and had the advantage of being remarkably compact. This was probably the engine which was exhibited in May, 1831, at Smith's Garden in Arch Street, west of Schuylkill Eighth [Fifteenth] Street. The garden extended to Cherry Street, and westward to Schuylkill Seventh [Sixteenth] Street, so that there was space for the building of considerable track. The Labyrinth Garden, the former name of this inclosure, gave way to the Railway Garden, and in its favor it was announced "a railway has been laid and a locomotive engine prepared on which two persons can conveniently ride. The first or outside passenger, working his passage by a small wheel, sets the machine in motion." The engine was of such limited power that it required to be started, but being set in motion, it went very well. The exhibition was kept up for some weeks, but on one unlucky day the engine burst its boiler, and the railroad was removed. Childs built a large engine upon his plan for the Baltimore and Ohio Railroad Company. It was of about fifty horsepower, and sent to Baltimore for trial. Harrison says, "A record of its performance cannot now be easily reached, but it is known that it was never heard of as a practically useful engine after this time."

The Baldwin Locomotive Works stand pre-eminent among all the companies engaged in the manufacture of railway machinery. Its origin is contemporaneous with the inception of railways in America; its growth has been a progress in every respect commensurate with the development of railroad construction; its history reflects the great advance made in transportation by steam. These great works owe their existence to and take their name from their founder, Matthias W. Baldwin, who was born in Elizabethtown, N. J., Dec. 10, 1795, and in 1817 entered the service of Fletcher & Gardner, jewelers and silversmiths, in this city. After a short time spent in

this business on his own account, he formed, in 1825, a copartnership with David Mason, a machinist, for the manufacture of book-binders' tools and cylinders for calico-printing. Their first shop was in a small alley running north from Walnut Street, above Fourth; but it was in a shop on Minor Street, to which his business was removed, that Mr. Baldwin illustrated inventive genius by constructing an engine adapted to the motive-power of a small factory, where economy of space was an object. It was an upright engine, combining power with such excellency of workmanship and efficiency that it not only performed

MATTHIAS W. BALDWIN.

all the duties expected of it, but has since successfully supplied the motive-power to six different departments of the works as they have been opened, and is to-day preserved in good order. From this success the manufacture of stationary steam-engines took a prominent place in the establishment. Mr. Mason withdrew from the firm soon after, and Mr. Baldwin continued the construction of engines. It was in 1829-30 that steam, as a motive-power on railroads, began to attract the attention of American engineers. A few English locomotives had been introduced, and for the gratification of public curiosity Mr. Baldwin constructed for Peale's Museum a minia-

ture locomotive, not copied from the English, but constructed from published descriptions and sketches of engines which had taken part in the Rainhill competition in England. The little machine was completed on April 25, 1831, and put in motion on a circular track made of pine boards, covered with hoop-iron, in the rooms of Peale's Museum. It drew two small cars, bolding four persons, and attracted great attention from the crowds that saw it. Both anthracite and pine-knot coal were used as fuel, and the steam was discharged through the smoke-stack to increase the draught.

The success of the model obtained for Mr. Baldwin an order for a locomotive for the Philadelphia, Germantown and Norristown Railroad Company. An examination of an engine imported from England for the Camden and Amboy Railroad Company, but which had not been put together, enabled him to improve upon the model of his miniature engine. There were few mechanics capable of doing the necessary work, and even suitable tools had to be first made. Nevertheless, obstacles were removed, and the difficulties overcome by the genius and perseverance of the builder, and the work was prosecuted to completion. "Old Ironsides" left the shop on Minor Street for that on Lodge Alley, where it was completed, and on Nov. 23, 1832, stood upon the rails like a "thing of life." Its light weight—between four and five tons—did not give it that tractive power necessary to draw a loaded train on wet and slippery rails, hence in the newspapers of the day it was termed a "fair weather" locomotive, because the notices specified that "the locomotive engine built by Mr. M. W. Baldwin, of this city, will depart daily, *when the weather is fair*, with a train of passenger cars. On rainy days horses will be attached."

The "Old Ironsides" was a four-wheeled engine, modeled essentially on the English fashion of that day, as shown in the "Planet" class, and weighed, in running order, something near five tons. The rear or driving-wheels were 54 inches in diameter, on a crank axle placed in the fire-box. The cranks were 39 inches from centre to centre. The front wheels, which were simply carrying wheels, were 45 inches in diameter, on an axle placed just back of the cylinders. The cylinders were 9½ inches in diameter by 18 inches stroke, and were attached horizontally to the outside of the smoke-box, which was D-shaped, with sides receding inwardly, so as to bring the centre line of each cylinder in line with the centre of the crank. The wheels were made with heavy cast-iron hubs, wooden spokes and rims, and wrought-iron tires. The frame was of wood, placed outside the wheels. The boiler was thirty inches in diameter, and contained seventy-two copper flues, 1½ inches in diameter, and 7 feet long. The tender was a four-wheeled platform, with wooden sides and back, carrying an iron box for a water-tank, inclosed in a wooden casing, and with a space for fuel in front. The engine had no

cab. The valve motion was at first given by a single loose eccentric for each cylinder, placed on the axle between the crank and hub of the wheel. On the inside of the eccentric was a half-circular slot, running half way round. A strap was fastened to the axle at the arm of the crank, terminating in a pin which projected into the slot. The engine was reversed by changing the position of the eccentric on the axle by a lever operated from the footboard.

The price of the engine was to have been \$4000, but the company claimed that it did not perform according to contract, and after correction had been made as far as possible, a compromise was effected, and Mr. Baldwin received \$3500 for his work.

The "Old Ironsides," on subsequent trials, attained a speed of thirty miles an hour with the usual train. Such was the first locomotive made by Mr. Baldwin, and such was his own disappointment that he said, with much decision, "That is our last locomotive." The "Miller," for the Charleston and Hamburg (S. C.) Railroad Company, was the next engine built by Mr. Baldwin. A visit to, and thorough inspection of, an English locomotive, built by Robert Stevenson & Co., of Newcastle, England, for the Mohawk and Hudson Railroad, enabled Mr. Baldwin to introduce improvements which obviated some of the defects which had made the "Old Ironsides" less successful than he anticipated it would be. During 1834 Mr. Baldwin completed five locomotives, and the business was now fairly under way.

The business of locomotive building, in 1834, compelled another change of quarters, and from Lodge Alley Mr. Baldwin removed his shops to the location on Broad and Hamilton Streets, where, in 1835, the present Baldwin Locomotive Works had their origin, and where they have since developed into their immense proportions.

BALDWIN ENGINE, 1834.

The financial difficulties of 1836-37 did not leave Mr. Baldwin unscathed. Great as his embarrassments were, a full consultation with his creditors resulted in the wise determination to leave him in full and complete possession of the plant and business, under an agreement to pay the full amount of his indebtedness, principal and interest, in three years; and extension of the time two years longer was afterward found to be necessary to complete the payment.

ESTABLISHED 1831.

BALDWIN LOCOMOTIVE WORKS,  
PHILADELPHIA, PA.

ANNUAL CAPACITY, 500.

These financial troubles had their effect in diminishing the orders for locomotives, and the establishment of other locomotive works also tended to decrease the business. In April, 1839, Messrs. Vail and Hufty became associated with Mr. Baldwin, the style of the firm being Baldwin, Vail & Hufty, which so remained until 1841, when Mr. Hufty withdrew, and the style was changed to Baldwin & Vail, which firm continued until 1842.

The problem of utilizing the weight of the engine for adhesion was not solved until his inventive mind had produced his six-wheel-connected locomotive, with four front drivers combined. The patent for this machine was secured Aug. 25, 1842, and has contributed more to the success of the Baldwin Locomotive Works, as well as to the fortune of Mr. Baldwin, than any other of his inventions.

BALDWIN SIX-WHEELS-CONNECTED ENGINE, 1842.

This machine seemed to revive business. In 1843 12 engines were constructed; in 1844, 22; in 1845, 27. The partnership with Mr. Vail was dissolved in 1842, and Asa Whitney became a partner under the style of Baldwin & Whitney, which continued until 1846, when the latter withdrew to form the house of A. Whitney & Sons, for the manufacture of car-wheels.

As early as 1840 the reputation of Mr. Baldwin attracted attention in Europe, and he received through August Belmont, of New York, an order for a locomotive for Austria, and in 1845 he constructed three locomotives for the Royal Railroad Committee of Würtemberg. In 1854, Matthew Baird, who had been connected with the works since 1836, was admitted to partnership, under the title of M. W. Baldwin & Co.

The year 1861, when the civil war was breaking out, witnessed a falling off in the production of locomotives, only forty being built during that year, and it was seriously contemplated to turn the resources of the establishment to the manufacture of shot and shell and other munitions of war. It was soon seen, however, that war had its advantages as well as disadvantages, and that the demand for transportation of armies, supplies, and munitions would more than compensate for all the diminution of ordinary freight caused by the disturbance of trade and commerce. The movement of armies and their *impedimenta* taxed the ca-

capacity of every railroad, and compelled the enlargement of all of their facilities. This, in turn, demanded of every Northern workshop the fullest exertion to supply the pressing demand, and the government became a purchaser of locomotives. In 1862 the works turned out 72 locomotives; in 1863, 96; in 1864, 130; in 1865, 115.

Mr. Baldwin died Sept. 7, 1865, after he had practically perfected the locomotive, and witnessed the rise and wonderful increase of the most important material interest of the age, to the completion of which he had contributed more than any other individual. His name was familiar wherever the locomotive was known, and his personal character as a Christian and a philanthropist was as highly esteemed by his associates and acquaintances as his scientific achievements were valued by his profession.

In 1867 the establishment was reorganized as "The Baldwin Locomotive Works," M. Baird & Co., proprietors, Messrs. George Burnham and Charles T. Parry, who had been connected with the establishment from an early period, being associated with Mr. Baird. In 1870, Edward H. Williams, William P. Henzey, and Edward Longstreth became members of the firm. The production of the works was: for 1866, 118 locomotives; for 1867, 127; for 1868, 124; for 1869, 235; for 1870, 280; for 1871, 331.

In 1873, Mr. Baird retired, and the style of the firm became Burnham, Parry, Williams & Co., and John H. Converse, who had been connected with the works since 1870, was admitted as a member of the firm. The product for 1873 was 437 locomotives, and nearly 3000 men were employed. Owing to the financial troubles of the fall of 1873 only 205 locomotives were turned out in 1874, and 135 in 1875. The number increased in 1876 to 232; in 1877 the number was 185; in 1878 it had increased to 298; in 1879 the number was 398, and in 1880 the number turned out was 515. In 1882 the works employed 3000 men and made an average of 12 locomotives weekly; 565 for the year 1882, and at the rate of 600 for 1883. These range in size from the steam motors and smaller engines for narrow-gauge roads to the heaviest freight engines known. Of the number made in 1882, one hundred were exported to Mexico, Brazil, and Australia. Nearly all the locomotives exported from the port of New York during the past ten years were from these works. All the processes of manufacture from the crude materials are conducted at these works, including the heaviest foundry work and forgings. Eleven steam hammers, ranging from 600 to 6000 pounds each, are in use, forging all the shapes and axles required by the works. The wheels are also made here, and the steel tires are the only parts not made at these works as recently enlarged.

In an existence of nearly half a century this factory has constructed over 5000 locomotives. The present capacity is equal to nearly two locomotives for each day of the year. Nine acres of ground are occupied

by the works; the number of hands employed ranges from 2600 to 3000; the plant comprises 734 machine tools; and drawings and patterns for over 500 different sizes or styles of locomotives, for all existing gauges and every description of service, are included in the working lists of this, the largest locomotive manufactory in the world.

In the spring of 1835 the firm of Garrett & Eastwick (Philip Garrett and Andrew M. Eastwick), manufacturers of stationary engines and light machinery, in Wagner's Alley, below Race Street, undertook to build a locomotive engine for the Beaver Meadow Railroad Company. This firm, not having built locomotives, employed as their foreman Joseph Harrison, Jr., then twenty-five years old, who had been ten years at work as a practical machinist, and for two years had been journeyman in the Norris Works. The result was the building of the locomotive "Samuel D. Ingham," named after the president of the road. There were some novelties in this engine invented and patented by Andrew M. Eastwick. It was the first upon which any shelter had been placed to protect the fireman and engineman from the weather. A roof was put over them, and this was subsequently improved by placing glass windows in the front and sides, with other conveniences, so that the inclosure was called in time "the cah."

Joseph Harrison, Jr., whose name is so intimately connected with railroad construction and the building of locomotives, was the grandson of a Harrison of New Jersey, who was once a large landholder, but, on entering the Revolutionary army, so neglected his personal interests that when he died, in 1787, he left very little for his family. His son, Joseph Harrison, Sr., came to Philadelphia, when fourteen years old, into the employ of Charles French, the proprietor of a grocery-store. Samuel Crawford bought out Charles French, and Mr. Harrison married his daughter, Mary Crawford, in 1803. The business did not prosper, and, as Joseph Harrison, Jr., has said of himself in his autobiography, when he was born, Sept. 20, 1810, it was at the dark hours of his family history. Obtaining what little schooling he was able to command, he developed a strong inclination for mechanical pursuits, and in 1825 he was indentured to Frederick D. Sanno to learn steam-engineering. Sanno failed, and he was then apprenticed to James Flint, of the firm of Hyde & Flint. In this shop he soon became more proficient, and at the age of twenty, before he was free of his indenture, he was made foreman of part of the establishment, and had under him thirty men and boys. When he was twenty-two years of age he took employment with Philip Garrett, who manufactured "small lathes, presses for bank-note engravers, and the like." In 1833 he went to Port Clinton, Pa., to establish a foundry for Arundus Tiers, with whom his father was engaged as an accountant. This was the end of his varied experience as a mechanician preceding his career as a constructor of locomotives. In

1834 he was employed by William Norris, then engaged with Col. Long in building locomotives on the the design of Long. He seems to have considered this part of his professional education rather of a negative character, for when, in 1835, he was engaged by Garrett & Eastwick as foreman, and was intrusted with the designing of the locomotive "Samuel D. Ingham," he says that he endeavored to avoid "the errors with which he had been made familiar." This locomotive proved a success, and led to the construction of others like it.

On Dec. 15, 1836, he married Miss Sarah Poulterer, whom he had met in New York in January of the previous year. In 1837 he became a partner in the firm of Garrett, Eastwick & Co., although his skill and energy were the only capital that he was able to contribute to the enterprise. Two years later Mr. Garrett retired, and the firm took the title of Eastwick & Harrison. In 1840, Mr. Harrison designed for the Reading Railroad an eleven-ton engine, named the "Gowan & Marx," which for its weight was "the most efficient locomotive for freight purposes that had been built anywhere." Two Russian engineers, Col. Melnekoff and Col. Kraft, who were in this country to investigate its railway system, saw this engine, took tracings of it, and introduced it into general use in Russia, where its value led to an official inquiry for its builder. The outcome was that Mr. Harrison was invited to Russia by the authorities, and there, in 1843, he and Mr. Eastwick and the late Thomas Winans, of Baltimore, concluded a contract with the government to build the locomotives and rolling-stock for the St. Petersburg and Moscow Railway. This contract amounted to \$3,000,000, it being conditioned that the work should be completed in five years, and should be done in St. Petersburg by Russian workmen or such as could be hired on the spot. The payments were to be made according to the amount of work completed, and government inspectors were to report upon the monthly statements. Official competition was rife in Russia, and it was perfectly well known that the inspectors would indorse any dishonest statement if they were paid for so doing, or, if they were not bribed, would, as Count Bobrinski told Mr. Harrison, wear out the contractors long before their term of contract was ended. But Mr. Harrison was too keen a business man and too competent in his profession to be thus imposed upon. He defeated the schemes of the inspectors, and he and his partners so fairly completed their engagements that they won the confidence of the Emperor Nicholas, and surprised the Russians by demonstrating that works of public improvement could be conducted without speculation or fraud. As an evidence of the Imperial favor, valuable diamond rings had been given to the members of the firm, and Mr. Harrison was made the recipient of the ribbon of the order of Saint Ann, to which was attached a massive gold medal bearing in the Russian language the words "For zeal." This honor

*Engraved from a daguerotype*

Joseph Harrison Jr.

was conferred upon him at the time of the completion of the bridge across the Neva, accomplished by the firm during the time of the first contract, which had been extended a year for that purpose.

The greatest of the later contracts with the Russian government was that of Aug. 25, 1850, to maintain for twelve years the movable machinery of the St. Petersburg and Moscow road. The parties to this contract were Mr. Harrison, Thomas Winans, and William L. Winans, the latter having bought the interest of Mr. Eastwick in the contract of 1843 previous to its completion.

Mr. Harrison returned from Russia to Philadelphia in 1852, to enjoy the rest and the wealth to which his labors had entitled him. Here he built his splendid mansion on South Eighteenth Street, and collected in it the paintings and other works of art that are everywhere known in critical and popular circles as the Harrison gallery. The erection of the mansion was something that he gave his personal attention to, and hidden within the walls are many ingenious devices to insure stability and economize space that he originated. He invested heavily in real estate, and the failure of his plan to concentrate all the railroad termini in the city at one point, and combine with a union depot commodious hotel accommodations, was a source of much regret to him. In 1860 he spoke with sorrow of the non-success of this and other projects which he had formed to benefit the city, and insisted that his motives had been misconstrued. He talked of going abroad for many years to reside, hoping that on his return to Philadelphia his ideas would be better appreciated. Before sailing, however, he had the pleasure of witnessing the practical and successful operation of the safety boiler designed by himself, and which marked a distinct era in the construction of boilers. It was a vast improvement as regarded safety and the pressure of steam that could be carried upon the common wrought-iron boilers. It is a well-established fact that its inception precluded all the forms of sectional safety boilers that subsequently came into vogue. Much of the detail of the machinery needed to produce these steam generators was perfected from 1860 to 1863, while Mr. Harrison was in Europe.

In 1863 he returned and erected a factory for the production of his boiler, evincing mechanical ingenuity of the highest order in the arrangement of this establishment. Toward the close of his life he turned his attention to recording some of his thoughts and experiences. After writing some verses, entitled "The Iron Worker and King Solomon," designed to impress his children's minds with "the value of what is but too frequently thought to be very humble labor," he published a folio volume of over two hundred pages, containing this poem and some fugitive pieces, accompanied by his autobiography, and many incidents of life in Russia, with the leading particulars of the invention of the Harrison boiler. He wrote a paper

on the part taken by Philadelphians in the invention of the locomotive, an account of the Neva bridge in Russia, and a paper on steam-boilers. For what he had himself done to insure safety in boilers he was awarded the gold and silver Rumford medals by the American Academy of Arts and Sciences, on May 30, 1871. On July 15, 1864, he was elected a member of the American Philosophical Society. He was also a member of other learned societies, but, with the exception of a few papers read by him, he did not take an active part in the business of any of them. During the latter part of his life he was connected with the Protestant Episcopal Church. He died March 27, 1874, after a lingering illness. He left a wife and seven children,—William, Henry, and Annie, who were born in this country before he went to Russia; Alice McNeil, Marie Olga, and Theodore Leland, born in Russia; and Clara Elizabeth, born in America after their return.

Henry R. Campbell, mechanical engineer, entered into the business of manufacturing locomotives on his own account, and turned out several six-wheel engines. This workshop was on Green Street, above Tenth, in 1839. James Brooks & Co., assisted by Samuel Wright, also built locomotives, in Kensington, and completed one or two. Charles and George Escoll Sellers, of the firm of Coleman Sellers & Son, built a locomotive somewhat after the plan of the Baldwin engine.

The first railroad cars for passengers, as was very natural, were constructed after the pattern of the stage-coaches of the day. The Germantown Railroad cars were simply enlarged copies of the Troy mail-coach, famous about this time by their use on Col. Reeside's stage lines. It is worthy of notice, as showing the anticipating character of American mechanics, that railroad cars began to be constructed before the railroads were finished upon which it was expected that they would be used. Richard Imlay, in November, 1831, constructed "two elegant railroad coaches to run on the Little Schuylkill Railway, between Fort Clinton and Tamaqua, carrying twenty-five passengers each." Subsequently Imlay went into this business extensively, and erected large car-shops on Schuylkill Second [Twenty-first] Street at the Columbia Railroad, which extended northwardly almost to Spring Garden Street. Cars for running curves of any given radii were to be had of Imlay at Bush Hill, according to an advertisement in November, 1832. They were designed by J. P. Fairlamb, civil engineer; and Philip Garrett, No. 11 South Fourth Street, and James Siddall, at the southwest corner of Fifth and Market Streets, were authorized to make contracts for them.

On Jan. 1, 1829, the *United States Gazette* contained a notice of a railway car which had been invented by Ross Winans, of New Jersey, and exhibited at the Baltimore Exchange. It was built upon a model railway laid in the Exchange, upon which one-half ton on the

car could be drawn along "by a slender thread attached to a half-pound weight and running over a pulley." Charles Carroll, of Carrollton, rode upon this car, and the Baltimore and Ohio Railroad Company intended to investigate the merits of the invention. In March this carriage of Winans was on exhibition at the Merchants' Coffee-House, in Philadelphia. Mr. Sullivan, one of the proprietors, said "two pounds by this machine will draw a ton weight. The ratio of advantage is not so great when ascending, because then gravitation is to be overcome. In the slopes of twenty-eight feet to a mile the English carriage will carry three and one-half tons loading to one horse, and Winans' carriage seven and one-half tons; but on a level the English will carry six tons and Winans' forty tons."

Mark Richards exhibited at his store on North Third Street, in March, 1830, a model of a railroad wagon, made by W. Robinson & Co., of the Phoenix Foundry, at Wilmington, Del. In the course of three or four years the passenger cars for railroads commenced to change their shape, and were made to carry a larger number of persons. In September, 1836, a car thirty-seven feet long, which had been drawn by four horses from Broad Street, was exhibited in front of the Exchange, and it was stated to be a matter of important improvement in this carriage that it would hold one hundred passengers.

In July, 1835, the railroad car "Victory" was run for the first time upon the Columbia Railroad out to the house of Mr. De Bauffry, near the Peter's Island bridge. Some invited guests were carried, accompanied by a band of music. It was considered to be a novelty, because the front and rear parts having each its two pair of wheels, the middle or principal part of the car was unsupported except by the union with the parts of the car over the wheels. The *Commercial Herald* remarked,—

"In this way more than two-thirds of the weight falls between the two sets of wheels. The effect of this arrangement is to give to the middle part a much more equable and uniform motion, the jar imparted to the wheels by any slight inequality in the road being scarcely perceived. . . . Some inconvenience has been apprehended on the short curves on the road from the two sets of wheels being at so great a distance. But this evil is entirely obviated by making the lateral motion of each set, by which it adapts itself to the curves in the road, wholly independent of that of the other. Considered as a new experiment in the art, we cannot but anticipate that it will prove a successful one."

Nicholas Garrison, Valentine Eckert, and Henry Voight erected works for drawing wire as early as 1779 in the city. They met with unexpected difficulty, in consequence of the defective character of the American iron. The manufacturers of the iron refused to remedy the evil, which might have been easily overcome. The projectors were therefore compelled to relinquish the works, which, upon memorial setting forth the facts, they tendered to the Assembly in February, but the offer was not accepted. Hand-cards were made by Oliver Evans and others before the Revolution. There were three manufacturers of

wire cards in the city in 1797. It was in the wire-mill of White & Hazard, at the Falls of the Schuylkill, that anthracite coal was successfully tried and proved as a "heater."

John Sellers was the first man in North America to manufacture wire-cloth, some fifteen years prior to the Revolution. It was Nathan Sellers, a son of John, who offered to manufacture the moulds for the Continental paper money, and which he did in a secluded place, under military surveillance. About 1781 the concern was N. & D. Sellers (Nathan & David), and during the whole period that hand-moulds were used for making paper, this house was the sole manufactory of them in this country. S., C. & J. Sellers were the successors of N. & D. Sellers. Then came the firms of S. & J. Sellers, and Sellers & Pennock, (Abraham L. Pennock). J. Sellers invented the process of riveting leather hose, for which he obtained a patent, and this constituted another feature of their business, and naturally led to the manufacture of leather helting. In the course of time Samuel Sellers and his son David constituted the firm of J. & D. Sellers, which subsequently became J. & D. Sellers & Co. In 1857, Samuel and Charles Sellers succeeded to the business, under the style of Sellers Brothers.

The iron wire and railing industry from 1860 to 1882 is shown in the census reports to have been as follows:

Census.	Number of Establishments.	Capital.	Raw Material.	Value of Product.
1860.....	17	\$54,900	\$27,848	\$115,794
1870.....	10	84,900	90,604	190,158
1880.....	15	100,250	99,648	180,032
1882.....	16	.....	.....	300,000

The progress made in the manufacture of stoves and fireplace heaters is to be measured only by the patents recorded in this industry. Charles W. Peale invented a fireplace in 1797, which he made considerable effort to bring into notice after the year 1800. James Truman, of Philadelphia, obtained a patent Dec. 3, 1811, for a portable kitchen cooking-stove. Henry W. Ahbett was granted similar rights for a boiling and cooking-stove, March 30, 1813. Samuel Bolton took out letters patent for a pipe or grate-boiler, or heater, July 7, 1809, and David Asher for a portable cooking-machine Feb. 18, 1825. David Launey obtained a patent for a fireplace March 18, 1813. Samuel Morey also secured rights for a fireplace and chimney January 18th of the same year. Elijah Griffith's fireplace patent was dated March 6, 1820. For wood stoves patents were obtained by Thomas Hurst, March 11, 1797; Henry W. Abbett, May 4, 1802; Nicholas Lloyd, Feb. 29, 1812; George Worrell, March 30, 1813; Burgess Allison, April 10, 1818; John Tasker, Feb. 23, 1823; and Louis Goujon, Sept. 22, 1823; Henry W. Ahbett obtained a patent Jan. 24, 1799, for a coal-stove for burning Virginia coal. Patents for stoves and grates for burning "stone coal"—a name very frequently given to the anthracite of the Schuylkill and Lehigh regions—

were taken out by Oliver Evans, Jan. 16, 1800; Robert McMinn, June 24, 1822; Philip B. Mingle, Oct. 24, 1822; George J. Fougeray, Sept. 11, 1822; and John Lovatt, June 16, 1825. Daniel Pettibone, who was the inventor of the warm-air furnace for warming houses, was so intimately connected with the iron manufacture that he deserves some notice here. He was in business as a manufacturer of edge-tools, etc., at No. 32 North Eighth Street, in 1813, at No. 267 Race Street in 1816-17, and in Watson's Alley in 1817. He received a patent for plane irons and scythes in 1813, was the inventor of an auger for boring guns, and brought forth many other ingenious improvements. Julia Plantou received a patent for a cook-stove Nov. 4, 1822. Robert Annesley received a patent for warming houses April 27, 1814. It was claimed to be superior to Pettibone's, and in the *United States Gazette* of November 28th and Dec. 2, 1814, there was considerable discussion as to the respective merits of the inventions. Annesley's heaters were manufactured by Pryor, and Pettibone's by Moore Harkness. Cook & Pettit, at No. 55 South Fourth Street, were among the first to apply themselves to the manufacture of grates for the burning of hard coal. They advertised, in October, 1823, that they were provided with "coal-grates of the newest and most approved patterns for burning Lehigh, Schuylkill, and Susquehanna coal." They were ready to furnish brass-mounted grates from ten dollars to one hundred dollars each. About the same time John N. Jackson & Co. advertised that they had opened a grate and fender manufactory at No. 50 Cherry Street. Cook & Pettit gave notice in August, 1824, that they had invented a slip-bottom grate. Charles Weaver advertised in September, 1825, that he had invented a coal-stove for cooking, which he declared was "safe, economical, and convenient, whereby the difficulty hitherto existing in burning the Lehigh coal is entirely obviated."

William W. Weaver obtained a patent, April 15, 1822, for a stovepipe. James Vaux turned his attention to improvements in kitchen-grates for the burning of anthracite coal, so that the same might be applied to cooking purposes. A committee of the Franklin Institute, to which his claims were referred, reported in 1826—

"that the object which Mr. Vaux had in view, in the experiments which he has made, was to ascertain whether anthracite might not be burned in an ordinary open fireplace, and applied to all the purposes of domestic economy for which wood or bituminous coal is generally used. As it is the intention of Mr. Vaux to describe his apparatus, and to communicate his observations to the public, the committee deem it unnecessary for them to enter at large on the subject, and they will therefore merely state that in their presence fires were readily kindled without using a blower, both in a grate—constructed for cooking and other purposes, and standing in an open fireplace in the kitchen—and also in a common cast-iron English grate, placed in a parlor fireplace, without altering the existing size or form of the opening or throat of the chimney; and that it appeared evident to them that all the purposes proposed by Mr. Vaux were perfectly attained. It was not pretended by the experimenter that he had made any discovery which could be denominated new, but only that he succeeded in proving erroneous an

opinion which is still generally prevalent, namely, that anthracite cannot be used for cooking excepting in a stove, a grate forbidding its convenient use in consequence of the supposed necessity for bringing forward the hack and closing the throat of the chimney."

It did not require a long time, after invention became directed to this subject, to very materially change the customs in relation to fuel. Coal, as a fuel, became fashionable. In houses of pretension the coal-grate, with its ornamentation of brass and steel, was a necessity in the parlor, even if the tennplate stove and the wide fireplace performed their duties with cordwood in the kitchen.

In April, 1823, the *United States Gazette* described an invention which had recently been perfected by Williamson & Paynter, stove manufacturers, southwest corner of Ninth and Market Streets, Philadelphia. It consisted of "a cast-iron box, fifteen to thirty inches in length, eight to ten inches wide, and six or seven inches deep. It has a grated bottom, and is calculated to burn anthracite coal as readily as charcoal. Upon one edge is placed a common tin-kitchen, or roaster, in front of which, on the opposite edge, is a sheet-iron fixture of the same length, which reflects the heat upon the contents of the tin-kitchen. Through the top of the reflector may be placed boilers for meats and vegetables. By means of false jambs, the size of the fire is reduced at will. By displacing the reflector and the tin-kitchen, the box or furnace may be used to heat water, roast coffee," etc. The contrivance was fixed on four iron wheels, and the cost of it, according to the *Gazette*, would not exceed nine dollars. This was undoubtedly the first improvement of the kind. Such an adaptation could not have been made until after anthracite coal came into common use. It was certainly a great addition to household economy, and was one of the most important improvements in stoves since Franklin invented the "Pennsylvania fireplace." We believe that Clement Letourno, stove and grate manufacturer, who in 1832 was at No. 76 North Sixth Street, was among the first in this city to make cook-stoves, and they were also probably made by Jacob F. Pleis, on Second Street, above Arch, about the same time.

In the year 1828, Messrs. Fering & Thudium commenced as a firm of stove-founders on Second Street, just above Arch, the latter then known as Mulberry Street. In a very small way did these gentlemen turn out rather clumsy nine-plate stoves. In 1840 this firm began casting a cylinder coal-consuming stove, which proved a very desirable means of utilizing the Schuylkill County coal, without the least inconvenience in parlor and kitchen, dining-room and hall, store and church, court-house and office. The cylinder stove was the practical answer to the riddle put to our ancestors by the ebony Sphinx of the anthracite coal-measures of Pennsylvania. The circular portable furnace was the beginning of a new era in American affairs, quite as much as was the Declaration of Inde-

pendence. And nearest did the domestic revolution affect Pennsylvania. In 1828 there was mined in our now great coal-producing commonwealth but 720 tons of anthracite. The millions of tons that now find consumption owe to this cylinder stove a very great deal of that activity which has developed the coal of Pennsylvania.

The manufacture of stoves, ranges, heaters, furnaces, etc., was established in 1840 by Daniel Mershon, on Market Street above Twelfth. In 1861 the oldest son of A. H. Mershon was admitted a partner, and in 1865, George B. Mershon entered the firm. In 1868 the business was removed to Twelfth and Filbert Streets. The manufacture of stoves, furnaces, etc., from 1860 to 1882, was as follows:

Years.	No. of Establishments.	Capital.	Raw Material.	Value of Products.
1860.....	45	\$453,100	\$264,543	\$664,053
1870.....	25	2,575,800	665,779	2,102,701
1880 <sup>1</sup> .....	.....	.....	.....	.....
1882.....	123	.....	.....	1,565,000

In 1768, Richard Mason, in Second Street, manufactured fire-engines, and was the first to place the levers at the ends instead of upon the sides, which became known as the Philadelphia levers. The house in 1785 was Mason & Gibbs. From that time the building of hand fire-engines has continued a distinctive branch of Philadelphia manufacture. For thirty years John Agnew was the chief constructor of these engines, and at his retirement, Jacob B. Haupt succeeded to the business.

The first successful *experimental* steam-engine was made at Philadelphia in 1773 by Christopher Colles.

In the previous year he had delivered lectures in the hall of the American Philosophical Society on pneumatics, hydrostatics, and hydraulics, illustrated with an air-pump of his own invention, and had exhibited the centrifugal and steam-engines and other machines. He was soon after engaged to construct a steam-engine for a distillery, but it having been made on a very cheap scale and of very slight materials, it was not successful. However, a committee of the Philadelphia Society reported that the builder had shown great practical knowledge of the principles and deserved encouragement. In 1786, John Fitch, assisted by Henry Voight, constructed the first *working* steam-engine built in the city. Neither of them reaped any advantage from their inventions, but "both were ingenious beyond their time, and both reaped a reward in poverty."<sup>2</sup> Before the end of the century two steam-engines were in successful operation at the city water-works, then the largest in the country. They were double engines, the one with a thirty-nine-inch and the other a thirty-one-inch cylinder, both with six-foot stroke and wooden boilers, and capable of supplying 4,500,000 gallons of water daily. They were built by Nicholas I. Roosevelt. The contract was for 1,000,000 gallons daily, and the surplus power

of the lower engine at Centre Square was leased for manufacturing purposes.

Daniel Large, who, in 1817, is designated in the City Directory as a "founder," and in 1818 as a "steam-engine maker," had his factory on Front Street, above Germantown road. In 1812, in association with Francis Grice, the latter a ship-builder, they took out patents for a steamboat. In the same year Large built the steam-engine for the steamboat "Delaware," of which Capt. W. Whilldin was commander. Large also built the boilers and machinery for the steamboat "New Jersey," Capt. Moses Rogers, launched in 1816, and placed upon the Baltimore line. Thomas Holloway was the builder of the engines for the famous steamboat "Robert Morris," which was constructed for the Baltimore Union Line in 1830, and which for many years was considered swifter than any other boat upon the Delaware River.

Another builder of steam-engines and machinery was James Smallman, who, with Nicholas I. Roosevelt, built one of the first steam-engines used at the Philadelphia Water-Works, Chestnut Street and Schuylkill River, in 1801. Smallman remained in Philadelphia after the completion of the water-works, and set up an establishment "for the making of steam-engines of all sizes and varieties." The Directory for 1802 gives his residence as Sassafraz Street, above Broad.

In his affidavit, made in 1814, Smallman says,—

"In the city of Philadelphia he was applied to by a certain Robert Fulton to make a steam-engine of which he, the said Robert Fulton, did to this deponent give a plan or drawing; that this deponent made an engine agreeably to the order and plan of said Robert as aforesaid; and that said plan, and the conversations of this deponent with the said Robert Fulton, convinced this deponent that the said Robert Fulton at the time knew but little about steam-engines, and was wholly, or almost wholly, ignorant of the true principles and proportions necessary to make them good and efficient; and that this deponent did, before the said Robert Fulton began to build the first steamboat on the North River,—generally called the North River steamboat,—inform him, the said Robert, of the plan proposed of putting the wheels over the sides, stated to him the total inefficiency of the Chancellor's (Livingston's) former plan, and strongly recommending to the said Robert to adopt the plan of vertical wheels, which the said Robert again agreed to do, and, by doing, produced useful steamboats."

In 1806, James Smallman built strong machinery for grinding flour by the use of steam, which was to be used in mills at Cadiz, in Spain. This was tried with the assistance of the city works steam-engine at the (Schuylkill) foot of Chestnut Street, in November of that year. In 1810 Robert E. Hobart, who was an insurance and merchandise broker, advertised for sale a steam-engine of thirty-two horse power, built by James Smallman and John Roebuck. Smallman built, in 1810, a small steam-engine for the use of the navy-yard at Washington City, which worked a saw-mill with satisfaction, and did other service. Smallman obtained a patent from the United States, in connection with John Phillips, Sept. 18, 1810, for a plan for steering vessels. On his own account, March 21, 1815, he received a patent for a double air- and water-pump, and in August of the same year he

<sup>1</sup> So mixed with other iron industry as not capable of being separated.

<sup>2</sup> Westcott's Life of Fitch.

obtained a patent for a double air-pump for steam-engines. He probably died about 1822 or 1823.

Several valuable modifications of the steam-engine were made by Philadelphia mechanics, the most important of which were those of Oliver Evans, who, in 1808, became the first regular steam-engine builder at the Mar's works, Ninth and Vine Streets. Thomas Hatton exhibited in October, 1822, at the Shakespeare Hotel, opposite the State-House, "a steam-engine upon an entire new principle, combining, as it were, the principle of Watts' engine with a complete rotary motion, increasing the stroke of the engine to four times that of Watts' engine, and reducing the cost of the working expenses and doubling the power." As he could not have expected many visitors, he put the price of tickets of admission sufficiently high to yield some profit if there was any patronage worth speaking of. The price of admission was one dollar. This engine was exhibited at the Merchants' Coffee-House in January, 1823. Hatton received a patent for this steam-engine on Feb. 28, 1822. Dr. James S. Ewing, who died Aug. 28, 1823, was the inventor of the methods by which cold-water pressure is used for testing the strength of steam-boilers. He paid considerable attention to the manufacture of mineral-water apparatus, which requires great strength to resist the explosive power of the carbonic acid gas forced into the acidulated or carbonated water. The instrument which he devised for the purpose was called a steno-meter. On the same principle the water-pressure upon steam-boilers is computed. Dr. Ewing, in 1823, also invented a new hydrant, which he called the hydraulic lever. The American Philosophical Society, in the early part of 1823, awarded him a gold medal for that invention. Joseph Hawkins exhibited, in 1824 and 1825, his plan of an engine which made steam by the discharge of a fine spray that entered the cylinders and became converted into steam. Anthony Plantou became interested with him, and a small steamboat was built and navigated upon the Delaware sufficiently long to prove the worth of the invention, but it did not meet with sufficient favor to obtain the support of persons who were interested in steam-machinery, and who might have put the principle to some profitable use. This steam-engine, "without a boiler," was exhibited at the grist-mill, corner of Ninth and Vine Streets and Ridge road, in 1824, and it was asserted at the time that the principle was the original one which Jacob Perkins, in England, had appropriated to himself.<sup>1</sup> "The whole apparatus

consists merely of a cylinder placed in a furnace, into which, when sufficiently heated, cold water is injected, which is instantaneously converted into steam. Three or four strokes with a hand-pump are sufficient to work the piston, after which the water is injected by the machinery from the condensing tub. The quantity of water necessary to be injected is in proportion to the power to be obtained. From the present experience half a gill is sufficient for a four-horse power." The value of this principle was certified to in April, 1824, by Rush & Muhlenberg, Oliver Evans, Jr., Joseph E. Ingersoll, David Paul Brown, and others. Hawkins & Plantou tried to raise sufficient funds by the sale of stock, at twenty-five dollars a share, to build a boat of sixty or eighty tons to ply from Philadelphia to Salem and Cape May.

At present nearly all the machine-shops of Philadelphia manufacture the steam-engine in some of its parts. In 1867, Mr. Freedly enumerated more than twenty establishments in the city which were provided with facilities for constructing any size or description of stationary and portable engines; but at that time there were no establishments devoted exclusively to this manufacture. Boilers, pumps, gauges, governors, grate-bars, and other parts of the engine are extensively manufactured in many establishments.

One of the largest manufacturing firms of Philadelphia is that of William Sellers & Co. William Sellers, the senior member, is the eldest son of John Sellers, Jr., and Elizabeth P. Sellers. His first ancestor in this country was Samuel Sellers, who came

<sup>1</sup> Jacob Perkins, a native of Newburyport, Mass., who came to Philadelphia in 1814, and resided here for some years, was a man of genius who was strongly possessed of the inventive faculty. In his boyhood, while yet an apprentice to a goldsmith, he invented a new method of plating shoe-huckles. Soon after he reached the age of manhood he devised a machine for cutting and heading nails at one operation. He was the discoverer of the method of substituting the steel-plate for copper-plate in fine engraving and printing. It was this improvement which associated him with the firm of Murray, Draper & Fairman, bank-note engravers in Philadelphia. To establish his invention in Europe he went

to London, in 1814, with his partner, Mr. Fairman. While there he perfected the steam-gun, the power of which he demonstrated before the Duke of Wellington and other high officers of artillery belonging to the British army. An iron target, at the distance of thirty-five yards, was shattered to atoms. Balls passed through eleven planks of the hardest deal, each one inch thick, and placed some distance apart. It was shown that this gun could discharge one thousand balls a minute, and it was declared to be the most terrible weapon ever projected. The cost of maintaining and working it was calculated at about one-two-hundredth part of the cost of the gunpowder and balls that would be required to be used with ordinary artillery. The objection to the gun was that it could not be made available in field operations, and, although its practicability was shown, it was never put to use for military purposes by any government. Perkins also invented the pieometer, to mark the speed at which a vessel would move through the water; also the orthometer, to measure the depth of water; and he was the first to show that water could be compressed. He received the Vulcan silver medal from the London Society of Arts for his method of warming and ventilating rooms and the holds of ships, and for an improvement in engine-hose. For an improved ship's pump and a method of filling water-wheels from back-water he received the Vulcan gold medal. In 1822, Mr. Perkins introduced into his manufactory, in London, his improved steam-engine, which, with great simplicity of construction, economy in cost, weight of metal, and quantity of water and fuel required, obtained, nevertheless, great increase of power. A cylinder two inches in diameter, eighteen inches long, with a stroke of only twelve inches, gave the power of ten horses, at an expense of only eighteen hundred and forty-eight cubic inches of water and two bushels of coals daily. No new principle was claimed, but a new application of known principles, and these were also made applicable during this year to boilers of the old construction, and the heat was at the same time made to return to the boiler and perform its services the second time. The improvement related chiefly to the boiler or generator. Mr. Perkins died in London, July 30, 1849, aged eighty-three years.

from Bristol, England, to America in 1682, and whose marriage is the first recorded in the minutes of Darby Meeting of Friends. Samuel Sellers took up a tract of land in Upper Darby, Delaware Co., under Penn's patent, and subsequently added another purchase. This property was in possession of their descendants to the present generation, and the portion of it on which the parents of William Sellers resided is still held under the original patent by William Sellers and his brother, John Sellers, Jr. On that estate William Sellers was born Sept. 19, 1824. His mother was Elizabeth Poole, of Wilmington, Del. Tradition relates that her grandfather, William Poole, was sent to this country by the Royal Geographical Society of England to observe a transit of Venus, and decided to remain here. Thus Mr. Sellers' ancestors on both sides have had a long and memorable connection with science, as his paternal great-grandfather, John Sellers, was appointed by the American Philosophical Society an observer of a transit of Venus, and was a member of that society at its foundation. Continuously since then some one of the family has been connected with that eminent society, which was established by Franklin, and William Sellers is now a member. He received his early education at a private school built and conducted by his relatives, who maintained it by private subscription for the children of the family. During his term of tuition it embraced about thirty-four pupils.

Having a love for mechanics, at the age of fourteen years he entered the machine-shop of his uncle, J. Morton Poole, on Brandywine Creek, three miles above Wilmington, where he served as an apprentice until he was twenty-one years old. Then he removed to Providence, R. I., to take charge of the shops of Bancroft, Nightingale & Co., manufacturers of steam-engines and mill gearing. After remaining with them about two years he returned to West Philadelphia, and began the same department of manufacturing on his own account in a location near Thirtieth and Chestnut Streets. In less than a year Mr. Bancroft, the former head of the Providence firm, determined to come to Philadelphia, and he and Mr. Sellers joined forces, going into partnership in 1848, on Beach Street, Kensington, opposite the Treaty Tree, to manufacture machine tools and mill gearing. The firm took the title of Bancroft & Sellers, and existed until the death of Mr. Bancroft, in 1855. Prior to that event John Sellers, Jr., had been admitted into the partnership. When Mr. Bancroft died the title of the house was changed to William Sellers & Co. Its members now are William Sellers, John Sellers, Jr., Coleman Sellers, John Sellers Bancroft, and James C. Brooks. In 1873, William Sellers became president of the Midvale Steel Company, Nicetown, which he subsequently reorganized, and which is now the only works in the country capable of supplying the gun material required by the government for its small-arms and ordnance, orders for such material being constantly

filled. Prior to this date he had, in 1868, established the Edgemoor Iron Company, for the manufacture of iron and steel structures, and has ever since been its president. This company made all the iron-work for the Centennial Exhibition, and has now the largest plant in the United States, or in the world, for building iron bridges and other structures of iron and steel. He accepted the onerous position of president of the Frauklin Institute in 1864, when it was in a critical financial condition. It was reconstructed and placed on a sound basis by his energy and wisdom, and its existence has ever since been prosperous. During his presidency he proposed the first formulæ ever offered for a system of screw-threads and nuts, which, after the lapse of some years, has become the standard for the United States. He was one of the members of the Union Club, out of which grew the Union League, and of the latter he was for several years a vice-president. He was also one of the first park commissioners, holding the position during the whole time that the Fairmount Park property was being acquired. Indefatigable in his exertions to create the Centennial Exhibition, he bore no small share in carrying the project in the direction of an assured success. He was chosen vice-president of the Centennial Board of Finance at its organization, but the business of his firm, and of the other two great works under his direction, required so much of his personal attention in the depressed condition of trade after 1873, that he felt obliged to resign from the board.

William Sellers was for several years a director of the Philadelphia and Reading Railroad, and has been for many years a director of the Philadelphia, Wilmington & Baltimore Railroad. In 1868 he was elected a trustee of the University of Pennsylvania, and still holds this honorable position. In 1873 he was elected a member of the National Academy of Sciences, and in the next year he was elected a corresponding member of the Paris Société d'Encouragement pour l'Industrie Nationale.

The record of Mr. Sellers' life is that of a triumph of mind and enterprise. Some of the chief honors of himself and of his firm were won at the Paris Exposition of 1867 and the Vienna World's Fair of 1873. J. Anderson, civil engineer, who was sent by the English government to report upon the machine tools exhibit at Paris, wrote a highly eulogistic official commendation of the display from the Sellers works of their machines for cutting the teeth of wheels, their lathes, their planing-machines, their steam-hammers, and their screwing-stocks and dies. Mr. Anderson concluded by saying, "This firm is said to be the most extensive manufacturers of such articles in the United States of America, and their display is well worth the unbiased study of our millwrights and of all others who are interested in such constructions. Altogether, the collection exhibited by Sellers probably contains more originality than that of any other ex-

*Wm*  
*u* *Sellers*  
*u*

hibitor in class 54 in this exhibition." The firm then received the most flattering testimonials for their skill and originality, in the form of gold and silver medals and diplomas, from the international jury.

At Vienna five distinct bronze medals marked the nature of awards to superior exhibits, but above all was placed the Grand Diploma of Honor, "designed to bear the character of peculiar distinction for eminent merits in the domain of science and its application to the education of the people and the advancement of the intellectual, moral, and material welfare of man." It was awarded exclusively by the council of presidents, upon the proposition of the international jury. This diploma reads thus:

"World's Fair, 1873, in Vienna.  
The International Jury have Decreed  
To the Firm of  
William Sellers & Co.,  
In Philadelphia, Pennsylvania,  
United States of North America,  
For Machine Tools,  
The Highest Distinction,  
The Diploma of Honor."

The recommendation for this award was to

"Sellers.—For pre-eminent achievements in the invention and construction of machine tools, many of which have been adopted as patterns by the constructors of tools in all countries."

At the Centennial Exhibition of 1876, the firm, in accordance with the report of the United States Commission, received commendations and awards for numerous exhibits.

Mr. Anderson, who had reported upon the exhibit of 1867 at Paris, was employed by the British government in the same official capacity at Philadelphia, and in his communication to his government he said, "The greatest display of machine tools, however, and that which dwarfed all others in the tool specialty, was made by W. Sellers & Co., of Philadelphia. This collection of machine tools was without a parallel in the history of exhibitions, either for extent or money value, or for originality and mechanical perfection."

The establishment of the Sellers firm, on the site bounded by Sixteenth and Seventeenth Streets, and Pennsylvania Avenue and Buttonwood Street, stands in the very foremost rank of the industries of Philadelphia. Its buildings cover a very large extent of ground, the plant is unrivaled, and in all their departments the works are an exemplification of mechanical skill and applied science. Nowhere in the world does more perfect machinery exist than in this great manufactory.

In 1811, Edward W. Carr, of this city, patented a machine for cutting wood screws, which was put in operation; and the following year a patent was issued to E. Hazard and Joseph White for cutting screws. In the printed schedule of the property of the late John Stoddart, a merchant of the city who failed in 1820, is the following item: "*Five-eighths of a patent wood-screw establishment at Falls of Schuylkill, \$10,000.*" A writer says that in 1816 the late

"Thomas Fletcher, the well-known jeweler, commenced the manufacture of wood screws at the Falls of Schuylkill, the first establishment of the kind in the United States. Mr. Fletcher had a great deal of ingenuity, enterprise, and perseverance. He made a well-finished screw, and in every respect fully equal to the English manufacture; but there was not sufficient protection on the American screw to enable Mr. F. to compete successfully with the foreign article. Mr. Fletcher's factory at the Falls did not prove profitable; but Mr. F. was not discouraged, and a year or two afterward he again commenced to make screws and located the establishment at No. 10 College Avenue, now known as Chant Street. While at College Avenue he entered into partnership with Rufus Tyler (a very skillful mechanic), under the name of Fletcher & Tyler. I cannot say how long this partnership continued, but after its dissolution Mr. Tyler removed to the Tivoli Building, on Prune Street, and commenced a general machine business, in partnership with George Fletcher, a brother of the late Thomas Fletcher. Some years afterward Mr. Tyler received the appointment of Chief Coiner of the Mint at New Orleans, which position he held until his death. Mr. Tyler was a native of Connecticut, and so was Mr. Fletcher. Thomas Fletcher died at Delanco, N. J."

The Industrial Works of Bement & Dougherty had their origin in 1851, when E. D. Marshall then carried on a machine shop at the present location at Callowhill Street and Pennsylvania Avenue, and Twentieth and Twenty-first Streets, around which have clustered the present immense works which are now conducted by William B. Bement & Son. The Industrial Works in 1882 employed 400 hands, making 2000 tons of castings, and paying wages amounting to \$250,000 annually.

William Barnes Bement is the senior partner of the firm of William B. Bement & Son. He was born on May 10, 1817, in Bradford, Merrimac Co., N. H., and was the son of a farmer who combined the trade of a smith with his agricultural pursuits. What education was to be had at that place and in that time he obtained whenever he could be spared from the farm and the forge. In 1834 he became an apprentice in a machine-shop at Peterborough, N. H., to serve three years, but at the expiration of two years his brother bought an interest for him, and he was taken into the firm, which had previously been Moore & Colby, and then became Moore & Bement. From 1837 to 1839 he was engaged in making machinery for cotton- and woolen-mills, and in 1840 he removed to Manchester, N. H., where he remained for two years in the Amoskeag machine shops. In 1842 he went to Mishawaka, Ind., to superintend some woolen machinery shops, but their destruction by fire just before his arrival threw him upon his own resources, which in money were nothing more than ten dollars. His enterprise and mechanical skill, however, soon took him out of his troubles, and he quickly huilt up a small business as a gunsmith, which he surrendered in order to accept the position of superintendent of the machine-shops of the St. Joseph Iron Company. While in that employ he designed and constructed an engine-lathe, and he also huilt a gear cutting-machine, the first ever seen in the West. Mr. Bement's ingenuity and perseverance were then displayed to a remarkable extent, as he personally manufactured the small tools by the aid of which the large machines were made. He returned East in

1847 with an enviable reputation, and at once undertook contracts to build cotton- and woolen-machinery for the Lowell machine shops, and ultimately assumed management of the pattern and designing departments. As draughtsman and inventor he was making rapid strides.

In 1851 he brought to Philadelphia his nephew, G. A. Colby, and the two engaged in a partnership with E. D. Marshall, the owner of the machine-shop from which the present works sprang. For about three years the business continued in their hands, under the firm-name of Marshall, Bement & Colby, during which time they manufactured machine tools. In 1854, James Dougherty became a partner, and the house was then known as Bement, Colby, Dougherty & Co. Subsequently, Mr. Colby retired, and the name was changed to Bement, Dougherty & Thomas, then Bement & Dougherty, which last existed until 1870, when Mr. Dougherty withdrew, and was succeeded by Clarence S. Bement, son of the senior partner. In July, 1874, John M. Shrigley entered the firm, and remained a member until January, 1884. William P. Bement, another son of the senior member, was admitted into the partnership in July, 1879.

In his private life, Mr. Bement is an ardent and discriminating patron of the fine arts, and possesses a most interesting collection of works from the studios of native and foreign painters. He is, and has been for many years, a director of the Pennsylvania Academy of Fine Arts and of the School of Design for Women. He is a director of the National Bank of the Republic and other institutions.

The manufactory of chandeliers, lamp- and gas-fixtures of Cornelius & Sons was founded about 1835, by Cornelius & Baker, which concern was dissolved in 1869, and was succeeded by that of Cornelius & Sons, formed by Robert, Robert C., John C., and Charles E. Cornelius and Charles Blakiston, Jr. Among the many splendid works of this house may be mentioned the apparatus which lights the Senate and hall of the House of Representatives at Washington, where two thousand five hundred burners are used and lighted instantaneously; the chandeliers and brackets of the capitol at Columbus, Ohio; the chandeliers of the hall of the House of Representatives at Nashville, Tenn., and the gas-fittings of the City Hall of Baltimore.

The oldest foundry in Philadelphia devoted to building-castings was erected in 1804, and its subsequent proprietor, James Yocum, was the first in this country to make iron fronts for buildings.

The sheet iron manufactory of Murray, Griffin & Bullard, on Water Street, at the corner of Arch, was established in 1776, and made camp-kettles, blazepans, tea-kettles, and other wares. Thomas Bales was also a maker of camp-kettles for the army during the Revolution. Pewter dishes, spoons, and other household wares of pewter and block-tin, were made many years before by Cornelius Bradford. The Phil-

adelphia Ornamental Iron Works, at 1136 Ridge Avenue, owed their origin and, for a time, success to Robert Wood, the senior partner of Robert Wood & Co., who in 1839, at his own forge, with one boy to assist him, commenced that work which in his era of prosperity was one of the most important of the iron manufactures of Philadelphia. Wrought-iron window guards, awning-posts, and other forgings were his first products, and the most artistic productions of his later years attested his excellence in workmanship. Those works were more widely known by their colossal bronze statues. In this, the most delicate labor known to modern mechanical pursuits, they rivaled the famous royal bronze foundry at Munich. Wood's bronze castings made Philadelphia famous the land over. The finest bronze statues in Central Park, New York, issued from this workshop of Philadelphia. Some years ago it occurred to Mr. Wood that he could cast bronzes of the largest size. Men skilled in the rare labor of casting bronzes were obtained; an air-furnace was erected with the capacity of receiving an entire cannon as a mere morsel, and fusing it into pure molten metal in the shortest possible space of time. All the necessary moulds and implements were secured, a pit ten feet in depth was dug, and the bronze shop was ready. Complete success crowned the first effort, and the admiration caused by the successful casting of the first statue brought in a stream of orders for others. Wood & Co. cast the following large bronzes: Bust of Col. Hawkins, for New York; group, "Taking the Oath," modeled by John Rogers; group, "Village Blacksmith," modeled by John Rogers; group, "Charity Patient," modeled by John Rogers; group, "School Examination," modeled by John Rogers; figure of "Hope," for Cincinnati, Ohio; figure of "Fame," for Glenwood Cemetery; "Indian Hunter and Dog," for Central Park, modeled by J. Q. A. Ward; "Shakespeare," for Central Park, modeled by J. Q. A. Ward; "Citizen Soldier," for Central Park, modeled by J. Q. A. Ward; "Commodore Perry," for Newport, R. I., modeled by J. Q. A. Ward; "Gen. Reynolds," for Gettysburg, Pa., modeled by J. Q. A. Ward; "Gen. Sedgwick," for West Point, N. Y., modeled by L. Thompson; "Standard Bearer," for Pittsfield, Mass., modeled by L. Thompson; "Napoleon," modeled by L. Thompson; figure of "A. Lincoln," for Prospect Park, Brooklyn, modeled by Brown; "A. Lincoln," for Union Square, N. Y., modeled by Brown; "Equestrian statue of Scott," for Washington, D. C., modeled by Brown; figure of "Willie Cresson," for Laurel Hill, modeled by J. A. Bailly; figure of "William H. Hughes," for Laurel Hill, modeled by J. A. Bailly; "Spirit of Resurrection," for Carlisle, Pa., modeled by J. A. Bailly; bronze monument for Erastus Corning, for Albany, N. Y.; figure of "Elias Howe," for Central Park, New York, modeled by S. Ellis; bust of "John Brown," for Union League, New York, modeled by Calverly; statue of "Gen. Scott,"

for Soldiers' Home, Washington, D. C., modeled by Launt Thompson; statue of "Governor Clinton," for Washington, modeled by Brown.

In 1832 the machinery and plant of the manufactory of bolts, nuts, washers, etc., established by Barton Hoopes and S. Sharpless Townsend, under the style of Hoopes & Townsend, in Wilmington, Del., were removed to Philadelphia, and Edward Hoopes was admitted a partner. The firm employ 525 hands, consuming in their manufactures 186,841 tons of iron, and paying wages amounting to \$1,271,120. The works produced in 1882 \$2700 for each workman.

Barton Hoopes, the originator and present head of the house of Hoopes & Townsend, manufacturers of bolts, nuts, rivets, wood-screws, washers, chain-links, etc., was born in West Goshen township, Chester Co., Pa., July 10, 1827. The family were of English descent, and had been in this country for several generations. He was educated in the common schools and at the Westtown Boarding-School, and went to Wilmington, Del., to learn the trade of machinist with J. Morton Poole, with whom he served three and a half years. In 1849 he commenced business. Early in 1851 he associated in partnership with himself S. Sharpless Townsend, under the firm-name of Hoopes & Townsend. In July, 1852, the plant was removed to Philadelphia, and located on Buttonwood Street, east of Broad Street. Additions were made from time to time both to buildings and machinery, and in 1881 very large additions were made. The operations of this establishment are extensive, its products amounting to about \$1,500,000 annually. While the trade of the house is chiefly confined to bolts, nuts, etc., it has extensive facilities for the manufacture of boiler-, bridge-, and ship-rivets, iron-work for bridges and cars, and for flat-link chain. Mr. Hoopes has brought cold punching to such a stage that he has succeeded in punching holes three-eighths inch in diameter through cold iron one and seven-eighths inches thick. The present firm of Hoopes & Townsend consists of Barton Hoopes, Clement R. Hoopes, and Barton Hoopes, Jr.

In 1830, Henry Francis, Charles Field, and Thomas Francis, under the style of Francis, Field & Francis, established the manufacture of japanned, pressed, and plain tinware at 130 North Second Street. They were succeeded in 1824 by the firm of Hadden, Carll & Menough, composed of John L. Hadden, Harvey Carll, and John Menough.

The manufacture of surgical and dental instruments was commenced in 1837 by Horatio G. Kern, with the small capital of \$200 saved during his apprenticeship to Wiegand & Snowden.

The largest lightning-rod manufacturing establishment in the country was established in 1849 by Reyburn, Hunter & Co., at the southwest corner of St. John and Buttonwood Streets.

In 1860 there were two establishments manufacturing lightning-rods in the city, and three in 1870. The

census of 1880 makes no mention of the industry, and that of 1882 gives two establishments. The capital in 1860 was \$12,000; in 1870, \$152,100. The product in 1860 was \$31,500; in 1870, \$335,700; and in 1882, \$351,700. The labor employed, in 1860, 16 hands, and had increased to 64 in 1882.

The first saws made in Philadelphia were manufactured prior to the Revolution by William Rowland in a tent in the suburbs of the city. In 1802 he founded the Rowland Saw-Works, the oldest establishment of the kind in this country, and the manufacture was continued by William Rowland & Co. In 1845 this firm began the manufacture of steel. Aaron Nicbols, in 1826, established the manufacture of saws, and Lindley, Johnson & Whitecraft were also among the early saw-makers. The works of Walter Cresson are located at Conshohocken, in Montgomery County, but the business is conducted at the warehouse, on Commerce Street.

The Keystone Works of Henry Disston are the largest in the country.

The founder of the great establishment known as the Keystone Saw-Works, and owned by the firm of Henry Disston & Sons, was Henry Disston, who was born in Tewkesbury, England, May 24, 1819, and came to this country, in company with his father and sister, when he was fourteen years of age. The father died three days after their arrival in Philadelphia, and the son apprenticed himself to a saw-maker when eighteen years old. Mr. Johnson, to whom he was apprenticed, failed in business, owing Mr. Disston money for wages, which he was unable to pay. Johnson had some unfinished brick-trowels on hand, and Mr. Disston took them, completed them, and sold them. The proceeds were his first capital, and he then began business on his own account in a room and basement in the vicinity of Second and Arch Streets, the room being used as an office and workshop, and the basement as the hardening department. The saws were sent out to be ground. He did all his own work, wheeling the first barrow load of coal from Willow Street wharf to his shop. The manufacture of hand-saws had already been attempted by other parties in the United States, but with indifferent success, and it remained for Mr. Disston to permanently establish the industry in this country, and to compete with foreign makers, although to do so he was frequently compelled to sell his products at a mere fraction over the cost of production. In 1846 he removed from his little establishment and rented from Mr. Miles a frame building, which was the germ from which sprang the present extensive works at Front and Laurel Streets and Tacony. After having been burned out in 1849, he erected, in ten days, on the adjoining site, a factory 50 by 100 feet, and four stories high. The business has grown steadily since that time, largely as the result of skill and persistence in the invention and adoption of new and more perfect forms, and the reduction in the cost of production brought about by

the use of labor-saving machinery. In consequence of the superiority of his saws, Mr. Disston never lost a market that he had once gained. The works now cover twenty-four acres of ground (sixteen at Tacony and eight at Front and Laurel Streets). Mr. Disston's inventive genius was displayed in discovering new forms of teeth for saws and combination tools, which are so useful that they find a ready sale, especially in new countries. He was the first man in this country to make his waste steel into ingots, the latter having been previously sent to England to be remelted. He effected a substantial economy in this way, and the works have produced over eighty tons of sheet steel per week, the whole being used in the establishment.

At Tacony there are branch works, where files, steel, and the brass- and wood-work for the other tools are manufactured. The file-factory was originally established to supply the saw-works with files, but a demand soon sprung up for them, and large quantities are now made for the general market. The variety of its manufactures enabled the firm to make one of the finest and most valuable display of steel tools in the Centennial Exhibition. The magnitude of the works is shown by the fact that in 1882 there were 1600 men employed, and the saw-factory was capable of making five tons of saws in a week. The growth of the business, the result of skill, integrity, and perseverance, is yet remarkable when we consider that Disston's saws had first to overcome in the home market a strong prejudice in favor of those of English manufacture, and then had to compete with such tools in foreign markets. These saws are now regularly exported to Great Britain and her colonies, and, indeed, to all parts of the world. The consumption of raw materials and the products in 1882 were as follows: The works used 21,000 tons of coal, 2,000,000 feet of lumber, 4000 tons of plate and sheet steel, and 450 tons of bar steel for files; they turned out 1,692,000 single saws, 3810 large and 39,000 small circular saws, 1,250,000 long saws, 201,500 dozen files, besides large quantities of miscellaneous tools made in the jobbing department.

No citizen of Philadelphia was ever more devoted to its welfare and that of his fellow-creatures than Mr. Disston. He was a man of deep religious and charitable nature, and although a member of the Presbyterian Church, all struggling Christian organizations found ready access to his purse and sympathies. At the outbreak of the war his patriotic feelings led him to equip those of his workmen who enlisted in the national army, and with whom marched his son Hamilton as a private in the ranks. His treatment of his employés was at all times so just and generous that harmony never failed to govern their relations. At one time he gave them an excursion on the Delaware, not only paying all the expenses, but also their wages for that day. Again, he presented them with five hundred dollars to be expended for admissions to the Centennial Exhibition.

Mr. Disston was a born mechanic in the comprehensive meaning of the term. He had the faculty of observing whereiu a familiar tool or implement or machine was defective, the genius to devise the means for improving it, and the skill to do the manual work to carry his own device into effect. He was never above doing with his own hands any of the labor incident to his trade. His qualities were those that command success and admiration. He was connected with the Society of St. George and the Masonic order, and was a trustee of the Presbyterian Hospital, and of the Oxford Presbyterian Church. Although steadily refusing official position, he was a firm Republican in his political opinions, and in 1876 was one of the Hayes and Wheeler electors. He left five sons,—Hamilton, Albert H., Horace C., William, and Jacob S.,—who inherited all the ambition of their father, and conducted the business with so much energy and judgment that in 1883 it was one-third larger than prior to his death. He died March 16, 1878, at his residence on Broad Street, Philadelphia. His second son, Albert H. Disston, died Oct. 21, 1883, and the others are still living.

From 1860 to 1882 the manufacture of saws is shown to have been as follows:

Year.	No. of Establishments.	Capital.	Raw Material.	Value of Product.
1860.....	6	\$182,500	\$126,468	\$258,600
1870.....	8	628,800	409,243	892,260
1880.....	3	1,402,500	566,780	1,517,000
1882.....	7	.....	.....	1,200,120

In 1867 there were eleven rolling-mills in Philadelphia, employing 1200 men, whose annual wages amounted to over \$1,000,000. They were the Kensington Iron-Works and Rolling-Mills, James Rowland & Co., proprietors; Penn Rolling-Mill, Verree & Mitchell, proprietors; Treaty Rolling-Mill, Kensington, Marshall, Phillips & Co., proprietors; Philadelphia Rolling-Mill, Kensington, Steven Robbins, proprietor; Oxford Rolling-Mill, Twenty-third Ward, W. & H. Rowland, proprietors; Fairmount Rolling-Mill, Fairmount, Charles Wheeler, proprietor; Fountain Green Rolling-Mill, two miles above Fairmount, Oliver W. Barnes, proprietor; Pencoyd Rolling-Mill, below Manayunk, A. & P. Roberts, proprietors; Gray's Rolling-Mill, Manayunk, A. P. Buchley & Son, proprietors; Cheltenham Rolling-Mill, Rowland & Heints, proprietors; Philadelphia Spike-Works, C. Winck, proprietor.<sup>1</sup>

The rolling-mills statistics from 1860 to 1882 are as follows:

Year.	No. of Establishments.	Capital.	Raw Material.	Labor.	Product.
1860.....	5	\$535,000	\$668,700	605	\$1,110,000
1870.....	9	2,033,100	2,543,770	1330	3,976,492
1882.....	9	.....	.....	1567	3,449,300

The production of iron within the city of Philadelphia and the surrounding country has been traced as closely as existing records will permit. The census records since 1860, inclusive, exhibit data which show

KEYSTONE SAW, TOOL, STEEL AND FILE WORKS,  
PHILADELPHIA, PA.

the extent and value of the iron business and its various manufactures within the city and the near-by counties. In 1860 the manufactures of iron and steel within the city numbered 649 establishments, with \$10,290,125 of capital, consuming \$346,329 worth of raw material, employing 10,916 males and 56 females, and producing a product yearly valued at \$14,775,213. The manufactures in part of iron and steel numbered 190 establishments, with a capital of \$1,961,050, consuming \$1,039,869 worth of raw material, employing 2539 hands, and producing \$2,930,733 of product annually. The iron manufactories immediately contiguous to the city numbered 34 establishments, employing \$3,044,610 of capital and consuming \$1,663,003 worth of raw material, giving employment to 2430 hands and producing a yearly value of \$3,888,151.

The total summary of Philadelphia industries in 1882 exhibits the following condition of iron manufactures :

	No. Estab-lishments.	Total Labor.	Value of Product.
Blast-furnaces.....	1	50	\$50,000
Rolling-mills, bar, sheet, and plate.....	9	1,567	3,449,300
Cut nails and spikes.....	2	120	210,000
Horse-shoes.....	1	52	104,000
Sheet, galvanized.....	6	280	1,280,000
Foundries, classified :			
Car-seats.....	1	20	40,000
Car-wheels.....	1	200	600,000
Hardware specialties.....	6	577	916,500
Hollow-ware and stoves.....	10	1305	1,985,000
Malleable iron-castings.....	4	897	1,479,600
Ship propellers.....	1	60	120,000
General building foundries.....	48	2,050	3,568,811
Wrought iron, classified :			
Architectural railings and fire-escapes, plain and galvanized.....	19	455	875,000
Axles, in part steel.....	2	72	118,000
Bolts and nuts, punched and wrought.....	9	62	1,369,600
Carriage-bolts, wrought.....	6	517	688,000
Chains and cables.....	4	218	345,200
Hardware, chiefly wrought.....	26	307	455,000
Nails and spikes, wrought.....	2	11	15,000
Pipe, wrought and welded.....	6	1,190	2,363,000
Railway-switches and track material.....	2	380	575,000
Safes and fireproofs.....	5	126	264,000
Scales and balances.....	7	113	188,000
Screws, for wood and iron.....	4	130	5,620,000
Ships and ship-building.....	4	7	283,400
Ship repairs, iron.....	5	197	320,000
Sheet iron, stamped wares.....	4	196	315,000
Shovels and hods, stamped.....	6	131	275,000
Steam heating apparatus.....	123	923	1,565,000
Stoves, heaters, and ranges.....	1	27	85,000
Wire, drawn.....	1	209	300,000
Wire manufactures.....	16		
Iron machinery :			
Steam-engines and boilers.....	48	975	1,742,500
Locomotives.....	5	3,809	7,506,200
Bookmakers' machinery.....	2	53	109,500
Brewers' and maltsters' machinery.....	2	31	62,000
Brickmakers' machinery.....	5	82	143,500
Cigarmakers' machinery, iron.....	2	21	20,000
Coining and mint machinery.....	2	99	250,000
Confectioners' machinery.....	2	24	36,000
Die-cutters' machinery.....	1	15	17,500
Elevators and hoisting machinery.....	9	208	385,000
File-making machinery.....	1	15	17,500
Flouring-mill machinery.....	5	129	225,000
Gas-engines.....	2	158	287,000
Gas-generating machinery.....	8	26	84,000
Hydraulic and pneumatic machinery.....	3	93	180,000
Iron-working machine tools.....	10	1,289	2,255,750
Jewelers' and gold-working machinery.....	2	27	45,000
Leather-dressing machinery.....	1	9	15,000
Mining and ore-crushing machinery.....	3	55	104,000
Paper-making machinery.....	3	88	175,100
Saw-making machinery.....	1	17	31,450
Shafting (exclusive).....	3	124	248,000
Sewing-machines.....	11	606	867,600
Sugar-making machinery, not separated.....	2	26	48,000
Texting machinery for tensile strength.....	40	1,730	3,059,250
Textile-manufacturing machinery.....	7	411	893,250
Wood-working machinery.....	36	1,131	1,973,000
Machinists.....	28	128	231,250
Totals.....	492	25,390	\$51,104,761

The iron manufactures, according to the census of 1870, numbered 520 establishments, employing an aggregate capital of \$33,478,192, with power in 6134 machines equal to 12,959 horse-power, giving employment to 26,290 men and 463 women and youths, whose wages aggregated \$10,261,194. The value of material used was \$21,163,039, and the aggregate value of the product was \$41,463,729. Mr. Lorin Blodget, estimating for 1875 the probable increase of the various manufactures of the city over the report of the census of 1870, says,—

"Iron manufactures exhibit various changes in 1875; the varieties largely increased are axles, bolts, rivets, etc., malleable castings, chains and cables, locomotives, machinery, hollow-ware, building fronts, corrugated and galvanized iron, safes and wrought doors, and small iron manufactures generally. Several of these are twice or three times as largely produced as in 1870, particularly builders' irons, wrought doors, vaults and safes, and the smaller miscellaneous manufactures. Great as the total of manufactures of iron in all forms was in 1870, \$41,463,729, the correction of the items in detail, as above indicated, would add at least one-third to this sum. All the secondary or more advanced grades of iron-working were increased to twice or three times the recorded production of 1869-70; builders' iron-work, both wrought and cast as store fronts, beams, frames, cornices, ornaments, etc., reached at least \$5,000,000 in value against \$500,000 in 1869-70. Rolled and cast iron of the ordinary mills, or a bar, sheet, and railroad machinery and ship castings, and like primary forms, could not be reported at so large an advance,—probably not more than twenty per cent. The forms of manufacture have changed so much within a very few years as to change the leading elements of value to more highly-finished products. Machinery has become more elaborate and more expensive: it is applied to greater variety of uses, and more labor being applied to its manipulation, it leaves the manufacturers' hands at a greatly increased value for the same weight of iron. . . . Counting establishments just as they were, and not counting any one a second time because different processes are represented in it, the number in 1870 was 520 in which iron was the chief manufacture. In 1875, there are more by at least one-fifth, and the capacity and actual production of an equal number are doubled."

The manufacture of steel in 1870 was carried on in fifty-eight establishments, with an aggregate capital of \$4,336,900, using \$2,785,292 worth of raw material, and producing annually goods valued at \$5,385,913. This manufacture was estimated, in 1875, by Mr. Blodget, as follows: Crucible and other cast steel at \$2,500,000; rolled in plates, sheets, and bars, at \$5,000,000; and manufactures of saw, tools, axes, springs, etc., at \$5,000,000. The industrial sum for 1882 enumerated the steel manufactures as follows:

	No. Estab-lishments.	Total Labor.	Value of Product.
Steel ingots and rolled-plate and sheet.....	5	540	\$1,559,200
Steel springs, car and carriage.....	11	315	638,000
Steel saws.....	7	681	1,200,120
Steel files.....	18	595	584,000
Steel and iron tools.....	20	731	1,034,000
Steel cutlery and tools.....	27	387	524,500
Steel wire, tempered, etc.....	1	10	20,000
Steel agricultural forks.....	2	145	253,750
Steel cutting dies and brands.....	5	20	29,000
Steel grate-bars.....	1	10	18,000
Totals.....	98	3635	\$6,100,670

Brass founding and copper, brass- and tin-works of all kinds for distilleries, sugar-mills in the West Indies, and refineries of sugar, and for household use, employed many tradesmen in Philadelphia from an early period. In May, 1717, Austin Paris and Thomas Paglan, "founders," were admitted to the freedom of the city, a process necessary to enable tradesmen to

carry on business for themselves. Paris was a founder in the city ten years after. Brass founding was carried on in 1723 in Front Street near Market by John Hyatt, and in 1759 by Daniel King in Second Street. In 1753, Norris states that a new bell for the State-House had been cast in the city, and had been used for some time; though he admits that he does not like it, and speaks of having another cast in England, which was not done, however.

In April, 1776, Benjamin Loxley made proposals for casting mortars, howitzers, cannon, and shells for Congress or the Committees of Safety. Some of the brass guns of Major Loxley were tested by Daniel Joy, of the Reading furnace, who was also engaged in casting cannon. In the Federal procession on ratification of the Constitution, Mr. King rode in a car with a furnace in full blast, and finished a three-inch howitzer which was mounted and fixed on Union Green. Ornamental brass work, in the department of lamps, chandeliers, gas-fixtures, the various military, Odd-Fellows, firemen and theatrical ornaments, as well as brass clocks, is carried on to a very large extent. In 1860 the brass founders numbered 31 establishments, with a capital of \$350,150; using \$274,024 worth of raw material, employing 340 hands, and turning out annually products valued at \$571,800. In 1870 the brass founders were 45, with a capital of \$688,150; the value of raw material was \$455,245, and that of the annual product, \$1,020,821; at the same time there were 3 bell founders whose capital was \$30,500, the raw material used was worth \$21,475, and the annual product \$62,000. In 1875, Mr. Blodget estimated the annual product of these industries to be worth \$1,531,231. In 1880, brass casting was carried on in 38 establishments whose capital was \$782,001; the raw material used was valued at \$832,830, and the annual product at \$1,369,151. At the same time bronze castings were made in 4 establishments with \$110,150 of capital, using \$394,589 of raw material, and producing annually \$501,412 worth of manufactured goods.

The exportation of fire-arms from Great Britain was forbidden in 1774, in consequence of which Congress recommended their manufacture by each State. The insecurity of the frontier settlements, especially during the French and Indian wars, the temptation of the chase, and particularly the Indian trade, had rendered fire-arms a general necessity, and created a steady demand for rifles and other weapons. Hence small-arms were made in considerable quantities in Philadelphia before the prohibition of their introduction by the British government. Soon after that proclamation a letter from Philadelphia to a member of Parliament informed him that the act would be of no avail, as there were gunsmiths enough in Philadelphia to make 100,000 stand of arms within a year at 28s. apiece, if needed, and that a manufactory of gunpowder had been already established. Governor Richard Penn, in his examination before the House of Lords, in 1775, stated

that the casting of cannon, including brass, in Philadelphia, had been carried to great perfection, and also that small-arms were made in as great perfection as could be imagined. The workmanship and finish of small-arms were universally admired for their excellence. The provincial gun-lock manufactory, ordered by the Committee of Safety in 1776, was established in Cherry Street, under the superintendence of Peter De Haven. Brass gun-mountings were made by Lewis Prah, and Lawrence Birnie erected an air-furnace and mill for the business of file-cutting, in connection with the gun-lock factory. The invention of percussion fire-arms was claimed by Joshua Shaw, of Philadelphia, who obtained, June 24, 1822, letters patent for improvement in percussion guns. For his wafer-primer for cannon he was granted \$18,000 by Congress. The manufacture of fire-arms is not carried on extensively in Philadelphia at present. In 1860 there were 25 establishments, with \$110,000 of capital, using \$82,332 worth of raw material, and employing 225 hands, the value of their annual product being \$251,150. In 1870 there were 15 establishments, with \$177,800 capital, using \$27,000 worth of raw material, and producing annually \$121,108 worth of goods. In 1880 this manufacture was conducted in 3 establishments, with a capital of \$65,000, and an annual product worth \$64,500. In 1882, by the tabular summary of Philadelphia industries, guns, pistols, and sportsmen's articles were manufactured in 16 establishments, which employed 64 hands, with an annual product valued at \$93,600.

Lead, together with gold, silver, copper, iron, marble, jasper, emeralds, and precious stones, are said by Campanius to have been found in the province in the time of Printz, and to have been known to exist in the days of the Swedes. In 1810 two establishments for the manufacture of shot existed on a large scale in Philadelphia, and of red and white lead, litharge, and some other preparations of that metal, 560 tons were made. In 1828, S. P. Wetherill & Co., of Philadelphia, were awarded premiums by the Franklin Institute for samples of one thousand pigs of lead, the product of the Perkiomen mines, smelted by them. The oldest and best-appointed and successful of the drop shot-works in the country is that of the Philadelphia Shot Tower of Thomas W. Sparks, which was built in 1808. In 1860 lead-pipe and shot making and lead smelting was carried on in 4 establishments, with a capital of \$275,000, using raw material valued at \$414,700, and employing 48 hands. Their annual product was valued at \$638,500. In 1870 there were 2 establishments manufacturing lead pipe, the capital employed being \$600,000, the raw material costing \$470,000, and the annual product being valued at \$620,000. Lead shot, at the same date, was manufactured at 1 establishment, with a capital of \$50,000, the raw material used costing \$80,000, and the annual product being valued at \$100,000. In 1875 the lead manufactures were estimated by Mr. Blodget at

\$936,000 value of product. In 1880, lead, bar, pipe, sheet, and shot were manufactured in 3 establishments, with a capital of \$365,000, the raw material costing \$620,500, and the annual product valued at \$758,000. In 1882 the tabular summary of Philadelphia industries gives the manufacture of lead, pipe, bar, and refining as being conducted by 5 establishments, employing 41 hands, and producing annually \$945,000, and white and red lead as being made by 4 establishments, employing 272 hands, and producing \$1,360,000.

It appears from a statement by William J. Buck (paper read before Historical Society of Pennsylvania, Jan. 4, 1875) that James Tilghman, of Philadelphia, addressed a letter to the proprietaries, Thomas and Richard Penn, at Spring Garden, London, on the 14th of August, 1766, in which he stated that his brother-in-law, Col. Francis, had gone—

"up the northeast branch as far as Wyoming, where he says there is a considerable body of good land, and a very great fund of coal in the hills which surround a very fine and extensive bottom there. This coal is thought to be very fine. With his compliments he sends you a piece of the coal. This bed of coal, situate as it is on the side of the river, may some time or other be a thing of great value."

Mr. Buck mentions that Charles Stewart, making a draft of a survey, in 1768, of a large tract of land on the west side of the Susquehanna, mentions that it had "stone coal" marked upon it. In 1769, Obadiah Gore, a blacksmith in the Wyoming Valley, used some of the coal found upon the surface there in his forge, and, finding it to answer his purposes very well, continued to use it, and afterward he was successful in burning it in a grate. Judge Fell, of Wilkesbarre, in 1808, made the following record of an experiment with this coal:

"February 11, of Masonry 5808. Made the experiment of burning the common stone coal of the valley, in a grate, in a common fire-place in my house, and find it will answer the purpose of fuel; making a clearer and better fire, at less expense than burning wood in the common way. Borough of Wilkesbarre, Feb. 11, 1808.—JESSE FELL."

Mr. Buck is authority for the statement that in 1776, and afterwards during the Revolution, "two Durham boat-loads of coal were annually sent to the shore of the Susquehanna, opposite where Harrisburg now is, and the coal landed there, taken in wagons to the armory at Carlisle, and used there." In 1790-91, Philip Ginter gave to Col. Joseph Weiss a "black stone" found by him in a hunt upon the mountains, near the present borough of Mauch Chunk, which Weiss carried to Philadelphia, where it was tested and pronounced "stone" or "anthracite" coal. An association for mining was formed in 1792, called the "Lehigh Coal-Mining Company," which did nothing more than organize, and "locate" 10,000 acres of land in the vicinity of Mauch Chunk. The coal was only used by blacksmiths in the neighborhood until 1806, when William Turnbull took two or three hundred bushels in an "arc" (ark) to Philadelphia, where experiments with it as a fuel failed, and in 1812 an attempt to work the mine was made, and also failed. The anthracite

of Schuylkill County was used in a forge by Whetstone in 1795, and William Morris, in 1800, took a wagon-load to Philadelphia and could not sell it; again, in 1812, Col. George Shoemaker brought to the city nine wagon-loads, with no better success; but at his earnest solicitation, Mellen & Bishop used the coal at their rolling-mills in Delaware County, and were pleased with the result. They called public attention to the usefulness of anthracite as a fuel, and this was the turning-point in the history of coal-mining in this country.<sup>1</sup>

When the qualities of Pennsylvania coal for fuel were demonstrated by actual experiment, firewood was becoming dearer and more scarce, and the methods of using it by the old-fashioned ten-plate stoves in kitchens, and for warming by the Franklin stove or open fireplace in parlors, sitting-rooms, and other apartments, were wasteful; yet the superior advantage of the use of Pennsylvania (or anthracite) coal was indifferently regarded, and as a fuel the article was difficult of introduction.

In the Philadelphia *Medical Museum*, in 1805, Dr. James Woodhouse published an account of some experiments made with Lehigh coal, of which he said,—

"The Lehigh coal promises to be particularly useful where a long-continued heat is necessary, as in distilling or evaporating large quantities of water from various substances, in the melting of metals, or in the subliming of salts, in generating steam to work steam-engines, and, in common life, for washing, cooking, etc., provided the fireplaces are constructed in such a manner as to keep up a strong draught of air."

In 1807, Samuel Breck, in his diary, gave the results of some experiments in the economy of using coal as a fuel, which were not encouraging unless the coal could be purchased "at thirty-three cents per bushel, which is the usual summer price."

The plan of Daniel Pettibone was the first glimmering of the present hot-air furnace; he called his stove "a rarefying air stove." According to certificates submitted by Mr. Pettibone, the managers of the Pennsylvania Hospital, as early as 1810, tried his plan upon six rooms, which were warmed by one stove of the middle size. They were so well pleased with their trial that they purchased the right for the use of the invention for the whole hospital in 1810. About the same time it was introduced into the almshouse, the Philadelphia Bank, the House of Representatives at Washington, St. Augustine's Roman Catholic Church, and various stores and shops. Pettibone afterward heated the chambers of Congress and other public buildings by means of his stove. Pettibone's invention was made during the wood-burning period, and without suspicion of the superior qualities of anthracite coal; but his principle was that of the modern hot-air furnace, and the first person to apply it to that use in the United States, by the aid of anthracite coal, was Prof. Walter R. Johnson, of the Franklin Institute. About 1824-25

<sup>1</sup> Lossing's "American Centenary," p. 154.

the latter had built in his cellar a furnace for burning anthracite coal, which was surrounded by an air-chamber of brick-work. Through the latter the smoke and gaseous production was carried by pipes through a cylindrical drum at the first story, and one in the third story, and thence out on the roof. There was an advantage by the rising of the hot air to the apartments by pipes or flues, and its delivery by a register. The drums in the first and third stories contributed their heat in the rooms in which they were placed. This method of warming was improved in later years by placing the drums in the chamber adjoining the grate of the furnace, and conducting the hot air by pipes, regulated by registers, to the various apartments.

In 1826 the *Journal of the Franklin Institute*, which valuable periodical had been but a short time established, devoted a paper to the subject of anthracite coal, and to its application to the various purposes of domestic economy.

In 1828 the first cargo of Pennsylvania hituminous coal reached Philadelphia from Karthaus, in Clearfield County. Mention of the first cooking-stove to use anthracite coal appeared in the *United States Gazette* in April, 1828, the stove being that made by Williamson & Paynter. The price at which two ark-loads of Lehigh coal which reached Philadelphia in 1814 sold was \$21 a ton, and the coal was used by White & Hazard in their wire manufactory at the Falls of Schuylkill. The average value per ton of Pennsylvania anthracite at the colliery in 1876 was \$2.53.<sup>1</sup> At this price the 360,564,832 tons mined from 1820 to 1876 brought the enormous sum of \$912,228,024.96. It was not an extravagant statement which the Philadelphia *Inquirer* made in 1855, when it said that "many farms" in Pennsylvania were "as precious as some of the mines of California."

The total anthracite coal production of Pennsylvania, in tons of 2240 pounds, from 1820 to 1883, is as follows: From the Wyoming region, 220,104,817 tons; the Lehigh region, 98,626,196 tons; the Schuylkill region, 250,024,255 tons; total from all regions, 524,699,328 tons.

The founder in point of time of the manufacture of chemicals was Samuel Wetherill, Jr., who about 1789 started the first white-lead factory in the United States, and who, though giving his attention to other manufactures, yet established at Wetherill's drug-store, No. 65 North Front Street, the oldest and most extensive manufacture of chemicals in the country.

There have been four generations of Wetherills druggists in Philadelphia. Samuel, the founder, was a Quaker preacher of such talents and virtues as to attract to his ministrations the most eminent people of his day. He wrote "An Apology for the Religious Society called Free Quakers," of which society he was among the prominent founders and active mem-

bers. In 1775 he became one of the promoters and managers of the United Company of Philadelphia for the Establishment of American Manufactures, and embarked with his whole energies in the business. There being no dyers at that time in Philadelphia, he undertook that branch; and from dyeing to chemicals the transition was natural. He died in 1816, and was succeeded in the drug business by his son, Samuel Wetherill, Jr., in the "Wetherill drug-store," an old landmark of earlier, if not of better days. John Price Wetherill, a grandson, succeeded his father, Samuel, the son of the founder, Samuel. He was born in 1794, was a member of the Academy of Natural Sciences in 1817, and a member of the American Philosophical Society, and of the Geological Society in 1832, an honorary member of the Boston Society of Natural History, a member in 1844 of the Mineralogical Society of St. Petersburg, in 1848 a member of the American Society for the Advancement of Science, and of the New Jersey Society of Natural History. He inherited the fighting propensity of his ancestor, and was captain of the Second City Troop for several years, and known as "Col. John Price Wetherill." His scientific attainments won him these and other marks of merited distinction. He died in 1853.

Samuel Wetherill and his son, Samuel, Jr., being anxious to do more than to sell a purchased article, commenced the manufacture of white lead on the 19th of September, 1809, at the northwest corner of Chestnut and Broad Streets. It is said that efforts were made by an agent of the English manufacturers to discourage the Wetherills from commencing this business. This subsidized adviser failed in his efforts. The Wetherills commenced the manufacture of their white lead as they had determined, but they did not continue it at that place much longer than nine months. Their factory at Broad and Chestnut Streets was totally destroyed by fire June 13, 1810. They changed its location, and erected their new white-lead factory at the northeast corner of Twelfth and Cherry Streets, to which they subsequently added facilities for the manufacture of other chemicals and drugs. In October and November, 1811, Samuel Wetherill, Jr., obtained patents for a mode of washing white lead, for setting the heds or stocks in making white lead; for screening and separating white lead, for separating oxidized from metallic lead in the process of making red lead, and using machines for that purpose.

Christopher Marshall, chemist,<sup>2</sup> began to manufacture sal ammoniac in 1790 so largely that his exportation amounted to six thousand pounds a

<sup>2</sup> From this Christopher Marshall a long line of druggists sprang. Christopher J., the fighting Quaker of the Revolution, "turned out of meeting" because his patriotism was too sharp and well defined to rest quiet in such times, was an active member of the Committee of Inspection and Safety of Philadelphia. He succeeded his father, and was succeeded by his son, Charles, who was followed by his son, Charles, Jr., about 1814. "Marshall's Remembrancer," edited by William Duane in 1839 and 1849, is a most interesting diary of Revolutionary times.

year. Some attention was paid to the manufacture of potash by William Henderson, on Fourth Street, between Spruce and Pine Streets, who, in 1772, advertised that he would give thirty pounds per ton, cash, for alkaline salts boiled from the lyes of wood or vegetable ashes. Benjamin Leigh, his superintendent, offered to instruct persons in the process gratuitously; also how to clear land from wood, so that the ashes from the same, when burned, would pay more than the expense of clearing. The value of the potash manufactured in America at that time was estimated at £50,000 sterling. John Rhea, in 1787, also established potash-works on Goodman's wharf, above Race Street.<sup>1</sup>

George W. Carpenter, another scientific druggist of Philadelphia, was born in 1802, and was initiated into the mysteries of the drug business in the establishment of Charles Marshall, Jr., where he accumulated a small sum of money and a large capital of knowledge. Forming the acquaintance and winning the friendship of the distinguished Thomas Nuttall, he developed that taste for natural history which was the foundation of his scientific attainments. While yet in Marshall's store he was elected an associate of the Academy of Natural Sciences. His favorite study was mineralogy, and he collected a valuable cabinet, of which Professor Silliman availed himself when preparing his *Journal of Science and Art*. He contributed various papers on medical subjects to the *American Journal of Science*, then edited by Dr. Nathaniel Chapman, and "Carpenter's Essays on Materia Medica" is a recognized text-book. In 1828 he began business for himself, and his success was extraordinary, he accumulating enough in eight years to purchase a farm in the upper part of Germantown, where "Phil Ellena," the name of his country place, became the home of hospitable kindness. He was a strong supporter of the Philadelphia, Germantown and Norristown Railroad, and a commissioner to organize the Pennsylvania Railroad Company, of which he was for many years a director, as well as in five other railroads, one bank, and one insurance company. W. C. Henszey became a partner in 1842, and succeeded to the business after the death of Mr. Carpenter, in 1860.

Dr. Adam Seybert, "druggist, chymist, and apothecary," whose shop, in 1801, was at No. 168 North Second Street, established about that time, in the

neighborhood of the Globe Mills, a laboratory for chemical manufacturing, and produced the first mercurials made in the United States. It is supposed that he gave up business about 1803-4. He became conspicuous in politics, was elected to Congress in 1809, and served continuously until 1815, when he lost a re-election; but he was again chosen in 1817, and served one term. He died in Paris, May 2, 1825, aged fifty-two years. His "Statistical Annals," published in 1818 by Thomas Dodson & Son, Philadelphia, was for many years the leading work on the statistics and industries of the country.

In 1804, John Harrison, druggist, at No. 10 South Second Street, was named in the City Directory for 1805 as "druggist and *aqua fortis* manufacturer." He was the first to attempt the production of nitric acid. He had made sulphuric acid (oil of vitriol) in 1793. As a result of his success in this profession he abandoned the apothecary and drug business, and in 1806 was set down as "chymist, No. 75 North Fifth Street." In 1808 he was "near No. 121 Green Street," between Third and Fourth Streets. Here he met with misfortune, his laboratory being burned May 14, 1809. Consequently he removed "away out of town" (as it was then considered), his name reappearing for the first time in the Directory for 1813, "John Harrison, chemist, first gate, Frankford road." In later years the direction was given, "Frankford road, near Orange Street." The place chosen was west of the Frankford road and Front Street, and south of Berks Street, near where the streets called Harrison Street and Fitler Street now go through. The manufacture of *aqua fortis* was not sufficient to satisfy the enterprise of Mr. Harrison. In 1807 it was announced in the newspapers that he had established an important business in the making of oil of vitriol (sulphuric acid). He was the first manufacturer of this acid in the United States. Mr. Harrison had accomplished himself in the science of manufacturing chemistry by a visit to Europe, where he remained for two years, and endeavored to become practically acquainted with processes. When he commenced to make oil of vitriol it was in a small way. His leaden chamber was of trifling capacity, and enabled him to turn out about one carboy of vitriol in a working day, or three hundred carboys a year, making altogether about forty-five thousand pounds. These experiments were made before 1807, in which year he had built for his use a leaden chamber eighteen feet high, eighteen feet wide, and fifty feet long, by the use of which he was enabled to manufacture thirty-five hundred carboys of sulphuric acid per annum, or over three hundred and fifty thousand pounds. Sulphuric acid at this time was worth fifteen cents a pound. The sons and grandsons succeeded to the business of John Harrison, and their large establishment at Gray's Ferry, with their works at Kensington, with factories in Maryland and New York, prepare, in addition to chemicals and white lead, chemicals for paper-stainers, fine

<sup>1</sup> Among the executive documents presented in Congress was a letter from Secretary Schurz, recommending an appropriation of five hundred dollars to purchase the first patent ever issued in this country. Accompanying it was a letter from E. T. Hall, of Columbus, Ohio, the present possessor of the document, in which he says it was issued at New York, July 31, 1790, to Samuel Hopkins, of Philadelphia, for an improvement in making potash and pearlsh. It is written on a sheet of parchment twenty inches square, in a round, old-fashioned hand, signed by George Washington, and certified by Edmund Randolph, Attorney-General, as being conformable to the act of Congress to promote the useful arts; and its delivery to the grantee is certified by Thomas Jefferson, with the seal of the United States. Secretary Schurz recommended its purchase as a valuable historical relic.

colors in pulp, dry, and in oil, and the various acids used in the arts.

William Partridge, an Englishman, came to Philadelphia in 1808, and set up business as a dyers' drug manufacturer, at No. 461 Market Street, between Thirteenth Street and Centre Square Water-Works. His principal business was the preparation of mordants for the dyeing of silk, cotton, and leather; "iron liquors" for cotton-dyeing and calico-printing, acids for gilders, silversmiths, etc.

Dr. Joseph Strong was one of the first persons who successfully manufactured white lead, red lead, and litharge. In November, 1808, he gave public notice that he had "succeeded in manufacturing these preparations after many expensive and arduous experiments," and that they were equal in quality to the European articles. His manufactory was No. 485 North Third Street, opposite the Glohe Mills. Among the miscellaneous manufactures in 1808, connected with medicine and chemistry, were annotto, made by Dr. Smith, South Second Street; refined camphor, made by Dr. Joseph Lehman and Windsor; and fancy soaps and sealing-wax, made by W. Lehman and W. Smith & Son, South Second Street. John Shinn, Jr., established at No. 282 North Third Street, about the year 1810, a laboratory for the manufacture of calomel, vermilion to correspond with that imported from Europe, and vermilion to correspond with that imported from China, red precipitate, corrosive sublimate, cinnabar, and every other preparation of mercury; also crystallized soda, aqua fortis, muriatic or hydrochloric acid, oxymuriatic acid, now called Chlorine, verdigris distilled and other chemical products for medical and other purposes. John White, in 1808 or 1809, opened his chemical laboratory at the corner of St. John and Tammany Streets. He produced pure nitre suitable for making the best gunpowder, the nitre of commerce or saltpetre in crystals, East India borax which was refined equal to the European, and brimstone, refined and put into rolls. In 1810, White manufactured 360 tons of those articles.

About 1812, Joseph Richards, who had formerly been in business as a merchant, established a factory for the manufacture of red and white lead on Race Street, near the Schuylkill. In 1817 he removed his laboratory to new buildings erected in Pine Street, above Broad. In the succeeding year he obtained a patent for manufacturing white lead. It is probable that Joseph Richards was one of the owners of a white-lead factory on Pine Street, between Schuylkill Seventh and Schuylkill Eighth, which, from 1812 to 1817, was conducted by White Richards. Joseph Richards removed from Pine Street to No. 322 High Street, where he was in business as a manufacturer of red and white lead in 1819. He remained at that place until about 1823, and then abandoned the business.

George F. Hagner, in October, 1818, was granted

patents for manufacturing verdigris and for making white lead.

Among the multifarious occupations of White & Hazard at the Falls of Schuylkill was the manufacture of white lead. The building in which this was done was on the west side of the river near the falls.

Dr. Gerard Troost, in company with his brother, Benoit Troost, attempted to establish the manufacture of chemical preparations as soon as he came to Philadelphia. In the "City Census Directory" for 1811 it is stated that at G. Troost's laboratory, in Coates Street, "are manufactured all kinds of chemical preparations, but more particularly mercurials, acids, salts, ether, saltpetre, borax, and alum refined." In 1813 the Troosts were at No. 154 Green Street. The establishment of peace with Great Britain, and heavy importations of foreign chemicals, probably drove Dr. Troost out of the business about 1815-16.

John Farr, a young Englishman, who had served in one of the best drug-stores in London, came to the United States, and was the first person to introduce the manufacture of Seidlitz powders into this country. About 1818 he became associated with Abraham Kunzi, and they formed a partnership for the manufacture of chemicals, on Arch Street, above Twelfth. In 1822 they removed their establishment to Coates Street, near Fourth, and remained there for several years. They commenced the manufacture of oil of vitriol in a small way, in lead, and concentrated their acids in glass. They made an assortment of chemicals, among them sulphate of morphia, shortly after the process was discovered by Pelletier, in Paris, and ether, acids, refined camphor, etc.

Farr & Kunzi continued the manufacture of chemicals until the retirement of Abram Kunzi, in 1838, when Mr. Farr associated with himself Powers & Weightman, under the firm-name of John Farr & Co., which continued until 1841, when the style became Farr, Powers & Weightman. The senior partner, John Farr, died in 1847, and upon his decease the style of the firm was changed to Powers & Weightman. The works at the Falls of the Schuylkill were commenced about 1847, where there are manufactured sulphuric, nitric, muriatic, tartaric, and acetic acids; alum, Epsom salts, blue vitriol, iron, magnesia, etc., all on a large scale. There are also extensive works at Ninth and Parrish Streets, which were destroyed by fire in February, 1884, but are being rebuilt. At this place were manufactured sulphate of quinia, sulphate of morphia, iodine, and mercurials, also a general assortment of medicinal and photographic chemicals. This is now one of the largest manufacturing chemical houses in the world.

Christopher Wesener, who was in business as a grocer at the northwest corner of Ninth and Cherry Streets in 1814, established himself as a manufacturing chemist on Broad Street, between Arch and Cherry, in the ensuing year. He was assisted by Elias Durand. About 1822-23 the laboratory was removed to Juniper

LOWE & CO  
POWERS & WEISHTMAN,  
MANUFACTURING CHEMISTS,  
PHILADELPHIA, PA.

Street, above Arch. Wesener made chemicals of various kinds. He went out of business about 1825-26, and removed to the Western country, but came back about 1829, and, as will be seen hereafter, again established himself as a manufacturing chemist. Elias Durand established himself in an apothecary and drug store at the southwest corner of Sixth and Chestnut Streets, which for many years was the leading retail establishment in the trade. John Carter successfully established the manufacture of red and yellow prussiate of potash about 1815. The business is still carried on by Carter & Scattergood on Gray's Ferry road. George D. Rosengarten entered into partnership with Charles Zeitler, in 1822, as manufacturing chemists, in St. John Street. Zeitler went out of the business in 1823. Rosengarten continued at the same place until 1825, when he removed to Adelphi Alley, near Second and Noble Streets. He manufactured successfully sulphate of quinine and other leading chemical articles. Lertuner, a German chemist, discovered the method of preparing morphia. Mr. Rosengarten commenced that manufacture, and was for some years the only chemist in the United States who prepared it. He also made ethers, pure acids, and other articles, bicarbonate of soda, salt of tartar, and various chemical preparations. In 1827 his laboratory was removed to Arch Street, west of Twelfth; in 1829 to Broad and Vine Streets; to Sixteenth and Vine in 1832; and in 1855 to the present extensive works, Seventeenth and Fitzwater Streets. About 1834 N. F. H. Denis, a French chemist of great ability, was taken into partnership by Mr. Rosengarten, and the firm was Rosengarten & Denis. The latter retired from business in 1855, when Mr. Rosengarten took his sons in partnership. The firm was dissolved by the retirement of the elder Mr. Rosengarten in 1878, and his sons now carry on the business. Charles Kurlbaum commenced, in 1823, in Front Street, near Oxford, Kensington, the manufacture of refined camphor, mercurials, sulphate of quinine, and other articles. John E. Schwartze was in partnership with him in after-years, and they had their warehouse at No. 22 Chestnut Street. Mr. Kurlbaum died about eight or nine years ago, and his sons continued the business. Joseph Richardson, in 1813, established a white-lead factory on Pine Street, between Fifteenth and Sixteenth Streets, which in 1819 passed into the possession of Mordecai and Samuel N. Lewis. The production of the works was increased from 100 tons in 1819 to 600 tons in 1830, and to 1000 tons in 1840. The manufacture of acetic acid was commenced in 1827, for their own use, in place of cider vinegar; and in 1830 linseed oil was made at the establishment. In 1849, a lot was purchased in Richmond, in the present Nineteenth Ward, on Duke Street and Huntingdon Street, on which a white-lead factory was in operation. The works were much enlarged, and, in addition to white lead, linseed oil, and acetic acid, the manufacture of red lead,

litharge, orange mineral, and acetate of lead and other paints was conducted.

Samuel F. Lewis, the founder of what is now the great white-lead factory operated by the firm of John T. Lewis & Brothers, was the son of Mordecai and Hannah Lewis, and was born in Philadelphia, Sept. 3, 1785. He received an excellent English and classical education at Friends' school, in this city, and in 1806, before he was quite twenty-one years of age, he entered into mercantile business with his elder brother, Mordecai.

The commercial relations of M. & S. N. Lewis, as ship-owners and commission-merchants, were very extensive, and were continued for many years. In 1819 they became the owners of a white-lead manufactory, which, by extension and the addition of other articles of manufacture, soon occupied the whole square of ground from Fifteenth to Sixteenth and from Pine to Lombard Streets. This property eventually becoming too valuable for such purposes, the works were removed, in 1848, to the present situation in Port Richmond, in the northern portion of the city. The firm of M. & S. N. Lewis, in 1806, established their counting-house at No. 135 (now 231) South Front Street, where their successors, John T. Lewis & Brothers, still carry on the business. In mercantile circles and in the community at large Mr. Lewis occupied a very high position, being noted for his strict probity and courtesy in all commercial dealings. Relative to this phase of his character the *National Gazette*, under date of Feb. 11, 1841, shortly after his death, thus speaks of him:

"Few men have passed their lives more usefully and less obtrusively than the late Mr. Samuel N. Lewis. Educated as a merchant, with the favorable principles which distinguished his ancestors, he soon became one of the brightest ornaments of our commercial circle. His unassuming and retiring nature, however, did not permit him to be much before the public, although his talents, especially as an able accountant and skillful financier, ever impressed all with whom he was engaged in business."

Although pre-eminently a man of business, Mr. Lewis was not neglectful of public interests or of the broader interests of humanity. He was, in 1814, one of the founders of "the Society for Supplying the Poor with Soup," which was the pioneer association of the kind in Philadelphia. In 1826 he became the treasurer of the Pennsylvania Hospital, holding the position until his decease, in 1841. This office was held by his father from 1780 until 1799; by his brother, Joseph S. Lewis, from 1799 until 1826; and by his son, John T. Lewis, from 1841 until 1881, the treasurership being in the one family for one hundred and one consecutive years. Mr. Lewis was likewise a director for many years of "the Philadelphia Contributionship for the Insurance of Houses from loss by Fire," and was also a member of the Welsh Society. Mr. Lewis was, furthermore, a member of that famous organization, formed in 1732, "The Colony in Schuylkill," which, after the Revolution, asserted its independence as "the State in Schuyl-

kill."<sup>1</sup> He was for many years treasurer of this old fishing company, of which, also, his brother, Joseph S. Lewis, was the first counselor for a long time.

Mr. Lewis was married on the 15th of June, 1809, to Rebecca Chalkley Thompson, daughter of John and Rebecca Thompson, at Friends' meeting-house. His highly useful and honorable life came to an end on the 3d of February, 1841. He left to survive him his widow and nine children, as follows: Martha S., John T., Saunders, Rebecca T., George T., James T., Samuel N., Lydia, and Francis S. The obituary notice in the *National Gazette* of Feb. 10, 1841, also embodied the following :

"In the few public trusts which he was prevailed upon to fill he was remarked for his usefulness and thorough performance of his duties. . . . In the social relations of life he was pre-eminently excellent. . . . He closed his career on the 3d instant, with the calmness and serenity which a life so well spent would naturally produce, strengthened and rendered still more exemplary and elevated by his steady preparation and firm convictions as a Christian."

Your ob<sup>d</sup> Serv<sup>t</sup>  
 Mordecai Lewis  
 Nov. 26 1788

Mordecai Lewis, the father of Samuel N. Lewis, was the only son of Jonathan and Rachel Lewis. He was

born in Philadelphia, Sept. 21, 1748. His great-grandfather, William Lewis, came from Glamorganshire, in South Wales, to the province of Pennsylvania, in 1686. Before leaving Wales he had become a member of the Society of Friends, and brought a certificate from the meeting at his old home, commending him and his family "to our dear and faithful brethren in Pennsylvania, or elsewhere where these may come." This certificate is now lodged in Haverford Meeting, Delaware County, Pa., where he was a prominent and useful member. The original emigrant was of the family of "Lewis of the Van." The ruins of extensive buildings bearing that name still remain in Glamorganshire, about four miles northeast of Caerphilly.

Mordecai Lewis acquired his early mercantile education in the counting-house of Samuel Neave, with whom he afterward entered into partnership under the firm-name of Neave, Harman & Lewis. At a later period he was extensively engaged as a ship-owner with William Bingham, under the firm-name of Mordecai Lewis & Co. Afterward, and until his death, in 1799, he continued in business alone, his trade more particularly extending to the East Indies. The following letter, written by Mordecai Lewis & Co. to their correspondents in London, on the 29th of May, 1788, besides giving a hint as to the scope of their business at that time, possesses something of general interest, when its date and the circumstances under which it was written are considered :

"The Restoration of peace upon the broad basis of Independence, we flatter ourselves will open scenes of the most extensive nature in the Commercial Line, and we shall be happy in every opportunity of executing your commands, which our thorough acquaintance with the Country, and many other advantages will enable us to do on the best terms."

When abroad in Europe, in 1772, he received the freedom of the city of Glasgow, recorded on a quaintly-embellished parchment, as follows :

"At Glasgow, the 13th day of March, 1772, the which day, in presence of the Right Honorable John Dunlop, Esquire, Lord Provost of the said city, Archibald Smellie, Hugh Wyllie, and James Brodie, Ballies thereof, George Brown, Dean of the Gild, and Sundry of the Gild Council of said city, Mordecai Lewis, Esquire, of Philadelphia, Merchant, is admilted and received Gild Brother of the said City, and the whole Liberties, Privileges, and Immunities belonging to an Burgess and Gild Brother thereof are granted to him in most ample form, who gives his oath of Fidellty, as use is. Extracted furth of the Gild Books of the said city, By John Wilson."

Mr. Lewis resided at No. 112 South Front Street, below Walnut, in a fine old double house, which was standing as late as 1848. Directly back of his dwelling, on Dock Street, was his counting-house. He lived for a portion of each year at his country-seat, near the Rising Sun Tavern, about four miles north of the old city, which was called Forest Hill.

Mr. Lewis lived a life of great usefulness, which was well-rounded and symmetrical, although the allotted limit of threescore years and ten was not attained. He died on the 13th of March, 1799, when in the fifty-first year of his age. An obituary notice

<sup>1</sup> The history of this famous association is given on page 233 of vol. I.

Sam: M Lewis

published at the time of his decease embraced the following:

"It may be said of this gentleman that he was an ornament to the profession, being just in his dealings, true to his promises, punctual in the payment of his debts, and correct in keeping his accounts. By the union of these qualities, joined to an unremitting attention to business, he acquired a very considerable estate. His well-earned wealth afforded the means of support and education to a numerous offspring. At the same time it enabled him to indulge his inclinations in dispensing no small portion of it to the relief of the poor, to whom his heart and his hand were opened with great liberality on every proper occasion. . . . The Bank of North America, the insurance offices in Philadelphia, and the City Library will long lament the loss of an able director; the managers of the Pennsylvania Hospital, of a friend and faithful treasurer; and united America, of a good citizen and firm supporter of her laws and Constitution."

The pioneer drug-mill in this country, and perhaps in the world, was established in 1812 by Charles V. Hagner at the Falls of Schuylkill. The idea of substituting machinery for mortar and pestle was suggested by a transaction between the proprietor and Dr. Haral, who had several tons of cream of tartar, which, under the old mode of hand-grinding, would have required the work of several men for many months. Hagner offered to grind by the same machinery which he used for grinding bark, plaster, ores, etc., and he did do it in twelve hours, to the great consternation of Dr. Haral, whose amazement and indignation were unbounded. He declared it had been ruined; that it was impossible in a single night to effect that which would have occupied his men months to accomplish. A meeting of the principal druggists and other experts was held at his office to consider the matter, and the cream of tartar was examined and tested in various ways, resulting in its being pronounced perfectly good, unusually white, and finer than any of them had seen before. The doctor was now well pleased, and, the affair becoming known, not only in Philadelphia, but also in New York, Boston, and other cities, the trade was completely revolutionized, and immense quantities of cream of tartar, Peruvian bark, ipecac, rhubarb, jalap, gentian, etc., were sent to the mills from all parts. This success determined the proprietor to extend the business, which increased to such an extent that in 1820 he erected mills at Manayunk, and was one of the pioneers in building up that town. In 1839 he purchased the Lancasterian school building in the city, on Pegg Street, and established the drug-mill business on a more extended scale.

Charles Ellis and Isaac P. Morris, in 1826, purchased the establishment of Elizabeth Marshall, who was the successor of her father, Charles, and her grandfather, Christopher, in the drug business at (old) No. 56 Chestnut Street. This old stand was established in 1740. Ellis & Morris at once took a front rank in the drug business, and when the latter withdrew, in 1837, William Ellis, a son of the senior partner, was admitted, the style becoming Charles Ellis & Son; in later years it has become Charles Ellis' Sons & Co.

The Frankford Chemical Works, on Oxford Street,

at Frankford Creek, were established by Christopher Wesener in 1829-30, and originally located on Kensington Avenue, above Harrowgate. Various changes took place in the works and the ownership until, in 1870, they passed into the hands of Savage, Keyser & Stovell. The present grounds embrace six acres of land, on which extensive and substantial stone buildings have been erected and supplied with improved machinery.

Nicholas Lennig & Co., in 1831, established the Tacony Chemical Works, formerly at Port Richmond. The firm was composed of Nicholas, the father, and Charles Lennig, the son. The father died in 1835, and Charles associated with himself Frederick Lennig, his cousin, the style of the firm remaining Nicholas Lennig & Co. until 1859, when it was changed to C. & F. Lennig, and so remained until 1863, when Frederick died, and Charles Lennig became sole proprietor. In 1842 the works were transferred to the then village of Bridesburg, now in the Twenty-third Ward of the city. The Richmond works were continued until 1848, and then abandoned, and the apparatus removed to the present location.

In 1819, John and Daniel Elliott commenced, at the corner of Pine and Schuylkill Fifth [now Nineteenth] Streets, the manufacture of chemicals. In 1834 the business was purchased by Carter & Scattergood, who removed to the northwest corner of Twenty-fourth and South Streets.

The statistical summary of the manufacture of chemicals in 1867 was as follows:

Chemicals, including dye-stuffs, chrome colors, and extracts..	\$3,335,000
Medicines, prepared remedies of druggists.....	300,000
"    patent and proprietary.....	1,000,000
White lead.....	960,000
Live paints, and products of paint-mills.....	770,000
Glue, curled hair, etc.....	775,000
Varnishes.....	230,000
Total.....	\$7,370,000

In 1882 these industries are returned under many different heads, the chief of which are:

	No. of Establishments.	Labor.	Product.
Chemicals (not designated).....	29	1473	\$1,241,925
"    fertilizers.....	4	280	1,360,000
Medicines, proprietary.....	5	243	1,801,880
Medicine chests.....	1	11	19,800

The manufacture of sulphuric, muriatic, and nitric acids in 1882 was conducted in 9 establishments, employing 313 men and 10 youths, and manufacturing yearly products amounting in value to \$1,365,000. In addition to these establishments, other chemicals were manufactured in 29 establishments, employing 1196 men, 186 women, 91 youths, and producing annually a value amounting to \$6,241,925. This estimate does not include acids, alum, ammonia, sulphate, animal charcoal, coal-tar products, chemical fertilizers, paints and colors, soaps, white lead, or pharmaceutical preparations.

The manufacture of glue and curled hair, by Kessler & Delany, had its origin in 1835, when Henry

Kessler and Thomas McRea purchased the site for a factory. At that time they engaged in the manufacture of wheat-starch, carrying on that business for six years with moderate success, till the extensive production of that article in the West rendered the enterprise unprofitable. Upon the death of Thomas McRea, a partnership was formed between Henry Kessler and Joseph Smith for the manufacture of glue and curled hair. These partners continued the business until 1865, when Smith sold out his interest to Theodore M. Delany.

The beverages of the early colonists were few and simple, coffee, tea, and chocolate being almost unknown. Among the Swedes a decoction was made from the sassafras root, beer and brandy from per-simmons, and small beer from Indian corn. The coffee-berry, according to Penn's account, was sometimes obtained from New York at 18s. 9d. per pound, and although a teapot is mentioned in the inventory of his goods, no tea is charged. Bradford, however, in 1729 advertised good Bohea for sale at twenty-two to thirty shillings per pound. The Dutch had several breweries in 1662. In the first Assembly under the proprietary government the question of taxing malt beer two pence per quart shows that already the brewing interest had reached a taxable status. A malt-house, brew-house, and bakery were attached to Penn's residence in Bucks County. The first brewery in the city was on Front Street, below Walnut, and belonged to William Frampton, of whom Penn wrote in 1685 that he was "an able man, who had set up a large brew-house in order to furnish the people with good drink, both there and up and down the river." Frampton died in 1686. Samuel Carpenter, who was one of the brewers named by Thomas, proposed, in the tax-bill of 1685, that a tax of five pence per gallon be laid on beer, mum, and Spanish wines. Penn remitted this revenue, and lived to regret his generosity, for, in 1687, when he proposed to renew the tax on beverages, the Assembly would not agree to do so. In 1698, Thomas noted the existence of three or four spacious malt-houses, as many large brew-houses, and many handsome bake-houses for public use, and it appears from the same authority that ale, equal in strength to London half-and-half, was sold at fifteen shillings per barrel. At that early day the reputation of the Philadelphia breweries was very high, and the exportation of beer very large. In 1704, upon the petition of the inhabitants of the city, an act was passed by the Assembly imposing an impost on imported foreign hops, in order to encourage the cultivation of that plant, and it was renewed in 1721. In that year George Campion, a brewer in the city, shipped his beer to Georgia, and a brew-house was offered for sale at Marcus Hook. In 1722 an act "for encouraging the making of good beer" prohibited the use of molasses or coarse sugar, or composition, or extract of sugar, foreign grains, Guinea pepper, or any liquor or syrup boiled up to the consistency of molasses in the brew-

ing, working, or making of beer or ale, under a penalty of £20, and also contained several important sections for the regulation of the sale at inns and taverns.

Reliable records as to the early breweries are very few, but it appears that Anthony Morris, the second brewer of record as to certain location, owned as early as 1687 a lot of ground not far from Frampton, on the east side of Front Street, north of Dock Street, and extending through to the Delaware River, and that he then purchased a lot on the west side of Front, extending through to Second Street. On King [or Water] Street he built a brew-house, where he continued the business for many years. In 1706, he conveyed the dwelling on Front Street, with the brew-house and utensils, to Anthony Morris, Jr., by the intervention of trustees, coupled with the power to dispose of the property by will. This brew-house on King Street remained for more than half a century. In 1741, Anthony Morris, Jr., built the Morris Brew-house, the oldest establishment of the kind in the city until its disuse a few years ago, on the west side of Second Street, above Arch.<sup>1</sup> Upon the death of this Anthony, the brew-house passed into the ownership of Thomas Morris, who conducted the business for some years after 1801, and was in it in 1835. James Abbott and Robert Newlin took charge of the old Morris brewery about 1836. Previous to that arrangement they had conducted the brewing business on the south side of Pear Street, near Dock.

The Pear Street brewery was, in 1791, conducted by Luke Morris and Isaac W. Morris, who retired about 1810, when William Abbott and Caleb Steward succeeded them.

Next to the Morris brewery in point of age came the building on the west side of Sixth Street, north of Carpenter [now Jayne] Street, which was for three-quarters of a century known as Gray's brewery. When the brew-house was built is not known. The lot on which it was erected originally belonged to Joshua Carpenter, who owned the whole square from Sixth Street to Seventh, and from High to Chestnut. In 1746 the property of the Carpenters was divided, and the brew-house on Sixth Street was set off in partition to one of the family. Robert Henderson & Co. became the tenants, and they advertised to sell out, in 1763, the lease of the brew-house and distillery, but they probably remained there until a later period. William Gray bought the property in 1772. The brewery stood back from Sixth Street, and had a double-pitch gable roof, and there were trees on the lot in front of it. Before 1820 a two-story building was erected in front of the old brew-house, on the line of Sixth Street, which was fitted up as stores, the brew-house being extended over it on the second

<sup>1</sup> The non-intercourse resolutions were fully sustained by the brewers of Philadelphia, who refused to buy any portion of a cargo of malt that arrived from Yarmouth, England, in July, 1769, consigned to Amos Strettel, and the captain of the ship was forced to return with it.

story. Joseph and William Gray carried on the business there for some years.<sup>1</sup>

Robert E. Gray gave notice in 1807 that he intended to brew ale, porter, and beer during the ensuing winter at his brewery, No. 24 South Sixth Street. Conrad Wile was taken in partnership by Robert E. Gray in 1811, and the firm was Gray & Wile. After Wile retired, Samuel N. Gray, a brother of Robert E. Gray, was associated with the latter. S. N. Gray died in 1837. A sister of the Grays had married — White, and in 1837 his interest went into the control of his nephews, George W. Gray and Samuel G. White. Robert E. Gray retired from business in 1840. Samuel G. White died in 1850, and his cousin, George W. Gray, continued the business until 1866, when he removed from the city. Whitney & Son succeeded, and continued the brewery until within a few years, when the buildings were abandoned and torn down in 1881.

The brewery of Reuben Haines, in 1785, was at No. 145 Market Street; Caspar Haines was also a partner in 1791. In the Federal procession of 1789 ten master brewers and seventy-two journeymen paraded, headed by Reuben Haines. Upon their banners were the mottoes: "Proper Drink for Americans," "Home-Brewed is best." About 1793, Tench Coxe, commissioner of the revenue, stated that the breweries of Philadelphia exceeded in the quantity of their manufactures those of all the seaports in the United States. Godfrey Twells succeeded the Haines in 1795, and in 1801 the brewery was conducted by Twells, Morris & Co., the new partner being Caspar Morris. In 1804, Caspar Morris and Frederick Gaul were brewing here, and here was established "The Gaul Brewery," which, in 1830, was in the hands of Frederick Gaul, Sr., and his son Martin. Frederick Gaul, Sr., came to this country prior to the Revolution, having been born at Frankfort-on-the-Main, and served an apprenticeship in the old country at brewing and malting. About 1841 the building was torn down and stores erected, and Frederick Gaul removed to the old Hare brewery, corner of New Market and Callowhill Streets, where

his son Frederick, Jr., had conducted business for some years.

In 1785 the brewery on the west side of Fifth Street, below Market, which is still in operation, was conducted by Joseph Potts. In 1791, Henry Pfeiffer, a name afterward changed to Pepper, was there. About 1802, Henry Pepper & Son were in business at the brewery. George Pepper succeeded. In 1831, David Pepper was in partnership with him. Frederick Seckel was interested, in 1836, in partnership with David Pepper. Robert Smith, who had been in the brewing business in St. John Street, near Noble, was admitted into the firm in 1837 or 1838.

Dr. Douglass mentions the manufacture of malt into beer, as well as of barley into malt, as a well-established industry in the city in 1750; and the exportation of strong beer, in 1766, was 1288 barrels, worth £1 10s. per barrel; the shipments in 1772 were 1236 barrels; in 1773, 1798 barrels; and in 1774, 1394 barrels. Adulteration was not practiced in Philadelphia, because by the act of Assembly the seller of adulterated liquors forfeited "the same, and three times its value;" and by the same act licensed tavern-keepers, etc., were required to sell beer and ale by wine measure to those who drank on the premises, and by beer measure to those who carried it away. By act of 1718 the justices were empowered to fix the prices for the sale of wine, beer, ale, etc., four times in the year, the prices to be proclaimed by the crier at the close of the sessions, and to be affixed to the court-house door. Porter was first brewed in 1780, by Robert Hare. Previously, ale, beer, and "two-penny" were the malt liquors in use; "half-and-half," or equal quantities of ale and beer; "three-treads," or one third of ale, beer, and "two-penny," were the immediate predecessors of porter, which Harwood invented, and called "entire brett." Its strengthening qualities recommended it to working-people and porters, and hence its name. In 1788 the porter made in the city was considered in all respects equal to the English make, and was greatly esteemed throughout the country. The price, in 1790, of Philadelphia beer was 30s. the barrel, and 8s. 4d. per dozen bottles. A sample of it made the voyage to Obina and back without detriment to its quality.

As early as 1737 there was a brew-house at the corner of Elbow Lane and White Horse Alley [now called Bank Street], with an entrance-way from Chestnut Street, between Second and Third. In 1752, George Gray, of Gray's Ferry, conducted the business there. After he died, Mary Gray, his widow, continued the brewery for some years. The property was offered for sale in 1770. In 1785, William Pusey occupied the old brewery. He was succeeded by William Dawson, who in 1791 was there, the number being 79 Chestnut Street. William Morrison went into partnership with Dawson about 1812, and finally conducted the business on his own account.

<sup>1</sup> In September, 1777, the judges for Philadelphia city and county adopted the following schedule of prices to be charged in public-houses:

	£	s.	d.
Madeira wine, per quart.....	2	0	0
Lisbon wine, per quart.....	1	5	0
Teneriffe wine, per quart.....	1	5	0
Spirit, per gill.....	0	3	9
Brandy, per gill.....	0	3	9
Whiskey, per gill.....	0	1	3
Good beer, per quart.....	0	1	6
Cider royal, per quart.....	0	2	6
Cider, per quart.....	0	1	3
Punch, per bowl of about three pints.....	0	12	6
Toddy, per bowl.....	0	7	6
Breakfast of tea or coffee.....	0	3	9
Dinner.....	0	5	0
Supper.....	0	3	9
Lodging.....	0	1	3
Good hay for one horse, per night.....	0	3	9
Oats, per quart.....	0	0	7

Whoever exceeded these rates was liable to prosecution,—a fine of 20s. for the first offense, 40s. for the second, and for the third £5 and loss of license.

Robert Hare & Son, with whom was associated J. Warren, of London, were the original manufacturers of Hare & Twells' porter. Hare's brew-house, in 1785, was in Callowhill Street, between Front and Second, No. 35. In 1802 it was at No. 155 Chestnut Street. Mr. Hare died March 23, 1810. This brewery was subsequently occupied by Frederick Gaul, Sr., and Frederick Gaul, Jr. Before 1790, George Rehn and John Rehn were established as brewers at No. 60 Elm Street [now New Street], below Vine, and between Second and Third Street, on the south side. George was succeeded there by John Rehn. But George Rehn removed to No. 383 South Front Street, below Almond, where he set up "the Southwark Brewery," which, in 1819, was managed by Thomas K. Pritchard, and at a later period by Hutchinson & Stump. Henry Widenburg, in 1795, was proprietor of a brew-house at No. 48 North Sixth Street, where afterward the "Pennsylvania Hotel" stood, and the brew-house covered the lot afterward occupied by Franklin Hall. John Whitesides was there in 1801, and Joseph Gray as tenant in 1802, who was succeeded in the following year by Michael Larer and his son John, in the family of whom the hewery remained until torn down for other improvements, about 1841-42. Before 1800, Leonard Snowden and James L. Fisher were brewing on Vine Street, between Third and Fourth Streets. Edward Hudson succeeded them, and in 1812 sold out to Croskey & Say. Francis Perot became owner about 1818, and, in partnership with William S. Perot, continued the business for some years, and finally went into the preparation of malt, and converted the hewery into a malt-house. At the northwest corner of Prune and Fifth Streets Thomas Billington began, in 1802, the construction of a brewery, but dying before its completion, Elisha Gordon purchased and completed the work, and commenced brewing in 1805. This establishment, in 1809, was conducted by Thomas F. & R. Gordon, as the Columbian Brewery.

Edward Hudson, in the latter part of 1809, leased the Philadelphia Brewery, in Moravian Alley, where he produced "fine malt liquors." He did not remain there very long, but was succeeded by Thomas Skelly, who was there in 1812 and afterward. In 1810 the large heweries of Philadelphia were said to consume annually about one hundred and fifty thousand hushels of malt. There were beside numerous small establishments in the city, the business of which could not be ascertained.

Richard and George D. Croskey and Benjamin Say were at the Pennsylvania Brewery, on George Street between Sixth and Seventh, in 1811. They left that establishment in the next year, and George D. Croskey managed it. Adam Seckel succeeded in 1818, and subsequently Frederick Seckel became a partner. The hewery had been abandoned for several years before it was torn down to make way for Sansom Street Hall. A. Boucherie, Nicholas Parmentier, E.

Fourestier & Co. opened a new distillery upon a patent process about 1810, at No. 180 Coates Street. They had facilities to distill yearly 30,000 gallons of molasses to rum, and 75,000 gallons of whiskey to gin, and the products were estimated to be worth \$100,000 a year. Essential oils and cordials were within the processes of the manufacturers. They also had a patent for refining whale-oil for the use of lamps, and had prepared 20,000 gallons before the beginning of the year 1811. Their method also covered the refining of linseed oil for the use of painters. The Northern Liberties Brewery, North Fourth Street, above Vine, was conducted in 1814 by Luders, Marbacher & Co. In January, 1815, the brewers in Philadelphia gave notice that after the 2d of January of that year, in consequence of the rise of prices in barley and hops, their terms would be as follows per barrel: Strong heer, \$7; middling heer, \$5.50; small beer, \$4; porter, \$8; ale, \$8. The card was signed by Dawson & Morrison, Nos. 79 and 81 Chestnut Street; George Pepper, corner Fifth and Minor Streets; Frederick Gaul, No. 147 High Street, below Fourth; William Ahcott, Pear Street, near Dock; Robert E. Gray, No. 24 South Sixth Street; Thomas Morris & Co., No. 86 North Second Street, above Arch; John Planck; Melchior Larer, No. 50 North Sixth Street; Will & McArthur, Bread Street; Luders, Marbacher & Co., Fourth Street, above Vine; and Sharswood & Say. Partenheimer & Pepper were at the Philadelphia Brewery, in Bread Street, in 1820. Jacob Pretz was a partner in that firm, and went out in the following year, Partenheimer & Pepper continuing the business. About 1829 the Farmers' Brewery, at the northwest corner of Tenth and Filbert Streets, which had been built by an association of farmers who were dissatisfied with the prices paid for grain by the brewers, and who thought they could do better by conducting a hewery for themselves, became a failure. William Morrison then gave up the Chestnut Street hewery, and, in partnership with Mordecai L. Dawson, purchased the Farmers' Brewery building. Subsequently Mr. Morrison died. Mordecai L. Dawson conducted the business on his own account and in partnership with others. Poultney, Collins & Massey succeeded, and now William Massey is proprietor of the extensive establishment.

This was one of the largest breweries in the city. It was greatly enlarged in 1855 by Poultney & Massey, and since then many improvements have been made.

The brewery of Frederick Lauer was established in 1826. Lauer emigrated to this country in 1823, from Gleissweiler, near the Fortress Landau, in the Palatinate. In 1831 the brewing of ale and porter was commenced, and in 1835 it passed into the hands of the son, Frederick Lauer.

Philadelphia was the first place in this country where lager beer was made, and the original brewer was George Manger, who had a brewery about 1846-

47, on New Street.<sup>1</sup> The Bergner & Engel brewery was established in 1849, by Charles W. Bergner, on Seventh Street, below Girard Avenue. In 1852, Gustavus Bergner took charge of the brewery. The business then was small, only twelve hands being employed, brewing about 7000 barrels of beer per annum. In 1870, Charles Engel entered into partnership with Gustavus Bergner, uniting the brewery of Engel, at Fountain Green, which had been sold to the park commissioners, with that of Bergner. The brewery is located on the square lying between Thirty-first and Thirty-second Streets, and between Thompson and Jefferson Streets. A cash capital of \$960,000 is represented in the numerous buildings and improved appliances, and 180 men find employment there. In 1879 the firm was incorporated as the Bergner & Engel Brewing Company, with a paid-in capital of nearly a million dollars.

Of the more than 200,000 barrels of beer coming from this great company, Philadelphia consumes one-half, and the other half finds its market along the Atlantic coast, especially in the South. Forty refrigerating-cars, representing an investment of over \$30,000, are needed to transfer the beer in proper condition to the company's own depots in other cities. In 1870 the product was 38,000 barrels; in 1871, 48,000; in 1883, 210,000; and 1884 it is expected to reach 250,000.

The breweries of Philadelphia in 1860 numbered 68, with an aggregate capital of \$2,122,600, consuming annually raw material valued at \$1,102,733, and giving employment to 593 men and 3 women, with an aggregate annual production valued at \$2,223,455. In 1870 the breweries numbered 69, with an aggregate capital of \$3,716,950, using steam-power equal to 485 horse-power, with 140 machines, employing the labor of 620 men and 12 women, to whom wages were paid during the year to the amount of \$504,372. The value of the raw material consumed was \$2,133,819, and the value of the product \$4,081,856. Mr. Blodget, in 1875, considered the production of beer and ale, as returned by the census in 1870, as—

"very imperfect, not more than two-thirds probably, but for 1875 the exact official report of tax-paid malt liquors for the First Collection District is 917,104 barrels. This embraces all but three wards in the city, the Twenty-second, Twenty-third, and Twenty-fifth, for which wards the census returns of 1870 gave a production of about 25,000 barrels. There have been removals to these wards in the natural growth of this city, and the present production cannot be less than 50,000 barrels, making 969,104 barrels in all. The average value was \$11 per barrel in 1870; now it is placed at \$10 by the best estimates. The value is therefore \$9,691,040, exclusive of the waste, or spent grain, which is worth not less than \$100,000. The malt product is also more than doubled, although the large importations of malted grains are made from Canada and elsewhere."

The value of products of the breweries was, therefore, \$9,691,040 in 1875, as against \$4,081,856 in 1870.

<sup>1</sup> The first place at which this beer was sold was in Dillwyn Street, below Callowhill, and probably not earlier than 1847. The brewery adjoined the saloon. Lager beer did not get to be a drink of much popularity for some years afterward. The first lager beer house in the central part of the city was that of William Hannings & Co., Carter's Alley, east of Third Street, which was opened in 1850.

The "Twenty Cities" Report of the census of 1880 mentions only "malt" as produced in 18 establishments, with an aggregate capital of \$2,075,000, whose raw material was valued for the year at \$1,441,230, and the annual product at \$1,879,460. If there were no other statistical information of this industry the conclusion would have been inevitable that the production of beer in Philadelphia had most unaccountably decreased. The summary of Philadelphia industries in 1882, however, gives figures that at once exhibit the unreliability of the census of 1880. According to this summary, there were brewers of ale and porter conducting 8 establishments, whose annual product was valued at \$1,328,000; brewers of beer in 75 establishments, whose annual product was valued at \$5,451,000; and brewers of weiss beer in 9 establishments, whose annual product was \$105,000,—making 92 establishments, whose annual products combined were valued at \$6,884,000, to which must be added the 15 malt-houses, with their annual product of \$1,640,750.

That William Penn cherished the hope of successfully introducing the manufacture of wine in the province is abundantly shown by his letters to the Free Society of Traders, in London, in 1683. The indigenous grapes, "the great red grape, called by ignorance the fox grape," was highly esteemed by Penn, for he had "drunk a good clarett, though small and greenish, of Capt. Rappe's vintage of the savage grape." The "skilful *vignerons*" among the Frenchmen were set to work upon his Springettsbury estate in Peun township, in the northwestern part of the present city, toward the Schuylkill, where a vineyard was planted upon what was afterward known as "Vineyard Hill." He brought from France a person qualified to conduct the process in all its branches, Andrew Doz, or Doze, who, with Patrick Lloyd and Dr. More, are mentioned by Penn as the laborers who bore the "heat and burthen of the day" in this vineyard.

The following extracts from letters of William Penn will show how deeply he was interested in this experiment. In Eighth month, 1685, he wrote to Thomas Lloyd that he had sent over Mons. De La Noe, "a French minister, of good name for his sincere and zealous life in his own country, and by men of his nation here. As he is used more will follow. The man is humble and intends to work for his bread, has two able servants, and a genius to a vineyard and garden. I intreat thee to speak to J. Harrison to use the Frenchman at the Schuylkill well. I hope a vineyard there for all this." In 1685 he wrote to Thomas Harrison,—

"Tho' the vineyard be yet of no value, and I might be out of pocket, till I come be regardful of Andrw Doz, the Frenchman. He is hot, but I think honest, and his wife a pretty woman in her disposition."

In his letters of 1686 he said,—

"All the vinns formerly sent, and in this vessel, are intnded for Andrw, at the Schuylkill, for the vineyard. I could have been glad of a taste last year; and I hear by Josh Harris he made some."

In a later letter he said,—

"I writt that regard should be had to Andrew Doze about the vineyard. I know it is a charge; but if wine can be made it will be worth the province thousands by the year. For many French are disheartened by the Carolinians, as being not hott enough. In seven years there would be hundreds of vineyards if the experiment takes; and I understand by D'd Lloyd and Dr. More that he produced ripe grapes the 25th of the 5th month [July], '86, when the roots were 15 or 16 months planted. 'Tis an high character of the country, and An. Doze, I am told, sayd he deserved the place, paying to me only an acknowledgment in wine."

Mons. De La Noe did not live long, having died in 1686. After the second visit of Penn we hear no more of the vineyard. The name, however, was retained by the tract, a part of Springettsbury, for more than a century afterward, and it is to be found upon Melish's map of 1816. In July, 1718, William Penn granted to Jonathan Dickinson ten hundred and eighty-four acres and one hundred perches of land, part of the manor of Springettshury. It was the old Vineyard estate, and extended along the Schuylkill River, immediately north of Fairmount, some distance, including therein what was then called "Old Vineyard Hill," and afterward, when owned by Robert Morris, "The Hills," and, under Henry Pratt, "Lemon Hill," now a portion of Fairmount Park. The tract stretched over to the line afterward opened as the King's or Wissahickon or Ridge road, commencing on the latter at Coates Street, and running on the southwest side of the road beyond Turner's Lane. Girard College is on a portion of this property, and it took in the whole of Francisville. The Vineyard House was upon an inclosure commencing about Coates Street and running some distance along the Ridge road. This property was bought by Dickinson for twelve hundred pounds.

The attempt to make wine was abandoned by Penn after his second visit, in 1700; and though an English writer speaks of good wine having been frequently produced by skilful *vignerons*, and of the encouraging prospects of ample supplies of wine for the home use and for exportation, yet the industry languished, and was abandoned. The importations in 1711 amounted to 68,000 gallons of wine and 383,000 gallons of West India rum. Peach brandy and perry were largely made in the province. The first volume of the Transactions of the American Philosophical Society contains a memoir on the distillation of persimmons, by Isaac Bartram, and a letter from Bethlehem, Pa., on the manufacture of currant wine by the Moravians. This last branch of wine-making was commended in 1810 by Mr. Tench Coxe as a more profitable business than distillation from the grape.

In 1793 the project of wine-making was renewed. A company for the promotion of the cultivation of the vine was formed by virtue of the act of Assembly of the 22d of March, 1793, and its supplement Jan. 13, 1794. Samuel Miles, John Fry, John Swanwick, Walter Stewart, Benjamin Barton, and Israel Whelen were the commissioners named in the act of incorporation. The stock was divided into one thousand shares

at twenty dollars each. The company was authorized to purchase one thousand acres of land, and to erect the necessary buildings. The charter was granted for twenty years. The vineyard of Peter Legaux, which was adopted by this company, was at Spring Mill, in Montgomery County, a few miles above the city. Legaux commenced the cultivation of vines in 1787, with one hundred and fifty plants from Burgundy, Champagne, and other portions of France. By careful cultivation these plants had, in 1793, reached the number of 18,000, and the number was now rapidly increasing. He calculated the expense of cultivating vines in four acres to be £69 11s. annually. The expense of vintage was £10 10s. Seven thousand two hundred glass bottles, worth three pence each, would he wanted to hold the wine, which, with casks, wire, etc., would amount to £171 10s. 6d. per annum. The yield of four acres would be 1440 gallons, and the net profits for the crop, including the sale of vines, was calculated at £661 14s. In 1811 there were 30,000 vines growing with good prospect of success.

In 1728 a petition was presented to the House by distillers of Philadelphia, setting forth that they "had been at great expouse in erecting distilling-houses for distilling molasses into rum; but large quantities of *New England* rum, lately imported and likely to be imported, tended greatly to the prejudice of the trade thereof and to the discouragement of the petitioners. They therefore prayed that a duty should be laid on the same, and also upon *West India* rum (to prevent frauds), except such as imported from the sugar-cane colonics." An effort was made in the Assembly to allow a duty of two pence per gallon on all proof spirits exported, but it failed. In 1749, Samuel Robeson, of Philadelphia, presented a petition stating that as the husiness of distilling spirits from grain, peaches, etc., had much increased in the province, it was found that the spirits had unwholesome qualities when distilled from copper worms, and that he had discovered a method of making pewter worms, but that the people generally preferring copper worms, he could not succeed in his husiness, wherefore he asked that measures should be taken as well for securing the health of the people as for his own encouragement. Prior to 1790, Philip Wager was conducting the rectifying and liquor business which early in the present century was under the management of Van Syckel & Garrison. This concern was succeeded by Van Syckel & Sons, who brought the business down to 1849, when Elijah Van Syckel retired, his interest having been purchased by William R. White, and the concern of White & Van Syckels was organized. In 1823, John Maitland established, at No. 408 South Street, a distillery for the manufacture of pure rye whiskey. The firm was Maitland & Young, and they were the first to discover the process by which a large increase of spirit could be obtained from the grain. Mr. Maitland withdrew in 1825-26, and in 1837, W. J. Maitland became a partner, under the style of

Young & Maitland. This firm continued until 1847, when it was terminated by the death of Mr. Maitland, and Alexander Young became sole proprietor. Mr. Freedley says, "There are said to be (1868) over three hundred persons and firms engaged at this time in the distillation of whiskey from rye, molasses, etc., but, with one or two exceptions, their establishments are not sufficiently extensive to be called manufactories. Nearly all the houses which are engaged in producing whiskeys have their distilleries located outside of the city limits, and some of them in other States."

The late John Gibson commenced the liquor distilling business in 1840, and in 1856 erected the Gib-son-ton Mills distillery on the Monongahela River. After his death, in 1865, his son, Henry C. Gibson, assumed control, and associated with himself Andrew M. Moore and Joseph F. Sinnott, under the firm-name of John Gibson's Son & Co.

The distillery and rectifying establishment of Dougherty's Sons was founded in 1849 by John A. Dougherty, Sr., who had been engaged for many years previous in the distilling business on Spruce Street, and afterward on Shippen Street.

The following are some statistics of the business :

1860.	No. Estab- lishments.	Capital.	Raw Ma- terial.	Labor.	Product.
Distillers and rectifiers...	39	\$712,400	\$1,171,516	135	\$1,499,031
1870.					
Distillery products.					
Distillers proper.....	28	1,281,000	742,750	164	2,000,005
Alcohol, refined.....	3	270,000	515,000	20	640,250
Restorers of spirits.....	1	5,000	13,000	3	20,000
Rectifiers.....	12	300,000	950,000	130	1,250,000

A note to rectifiers on the census says, "No return of rectifiers was originally made, and this account embraces only a few leading establishments."

The estimate for distillery products of first and second distillations for 1875 was \$4,000,000, and for rectifiers (not included as full manufacturers) \$3,500,000. The tabular returns of Philadelphia industries for 1882 gives the following :

	No. Estab- lishments.	Labor.	Product.
Distillers and rectifiers.....	8	67	\$579,000

The manufacture of soap (common) and candles is carried on in 31 establishments in the city, while perfumed soap is manufactured in 7 other factories. Perfumery and pomades, a kindred industry to soap, are made in 20 workshops. These 58 establishments give employment to 851 men, and produce annually goods valued at \$3,161,900. In the manufacture of soap the Dallett family of three generations were makers of fancy as well as common soaps, and of mould and dipped candles. The palm soaps produced by George M. Elkington more than half a century ago, as well as those made by his son, Lindley M. Elkington, at a later period, obtained and maintained a high degree of popularity. Alexander McConnell, in 1848, commenced the manufacture of soaps in the city, and his soap for fulling purposes,

as well as his other soaps, tallow candles, sal-soda, and chemicals, soon gave him a flourishing business.

The manufacture of soap was begun in 1858 by I. Eavenson & Co., at 731 Hubble Street.

The Pennsylvania Soap-Works of McKeone, Van Haagen & Co. were established in 1854 on Callowhill Street, near Fairmount Park. They are of great extent and capacity, and are the largest in the State. The productions of the works include both family and fancy soaps, the two kinds being kept entirely distinct. The manufacture of perfumery is carried on usually with that of fancy soaps, and the articles produced in both of these lines in Philadelphia have effectually driven the foreign goods out of the American market. The factories of X. Bazin and of the Taylors and Wrights were among the largest in the world. The Glenn perfumery and toilet soaps were known to a former generation, having been established in 1832.

The statistics of this manufacture present the following growth :

	No. Estab- lishments.	Capital.	Raw Material.	Product.
In 1860:				
Perfumery and fancy soaps.....	17	\$483,500	\$296,310	\$712,500
Soap and candles.....	45	954,333	1,421,123	2,076,590
In 1867:				
Perfumery and fancy soap, esti- mated.....	...	.....	.....	850,000
Soap and candles, estimated.....	...	.....	.....	1,500,000
In 1870:				
Perfumery and perfumed soap..	22	580,000	296,041	879,595
Soap and candles.....	54	1,376,000	1,331,059	2,540,331
In 1875:				
All kinds of perfumery, esti- mated.....	...	.....	.....	1,125,000
All kinds of soaps.....	...	.....	.....	3,048,397
In 1880:				
Perfumery and cosmetics.....	35	1,648,000	366,934	1,159,198
Soap and candles.....	32	1,410,262	1,412,038	2,033,403

In 1882 perfumery and pomades were made in 20 establishments, employing 88 men, 98 women, 40 youths,—a total of 226 employes,—and producing annually a value of \$491,300. Common soap and candles were produced from 31 establishments, employing 183 men, 38 women, and 32 youths,—a total of 253 employes,—the annual value of the products being \$1,182,600; and perfumed soap was manufactured in seven establishments employing 248 men, 64 women, and 60 youths,—a total of 372 employes,—the annual value being \$1,480,000.

The manufacture of oil for lubricating, illuminating, and other uses is extensively carried on in the city. Refined animal oil was produced in 1862 in 5 establishments, animal oil for lubricating in 6 establishments, mineral oil for lubricating in 5, mineral oil for illuminating in 12, and oils, vegetable, linseed, and rosin, in 5. These 33 establishments employ 3460 hands, and produced, in 1882, \$10,985,002 worth of goods. In 1875 the production of refined petroleum oil and products was estimated at \$3,500,000. In 1870 refined petroleum was produced to the value of \$1,573,582, and there were engaged in the production of whale and fish oil two establishments, with a

capital of \$65,000, employing 10 hands and using \$165,000 of raw material, the annual product amounting to \$195,000; lard oil in 7 establishments, with capital amounting to \$466,000, employing 46 hands and using \$1,073,650 of raw material and producing \$1,327,000; linseed oil in 4 establishments, with \$520,000 of capital, employing 104 hands, using \$424,275, and producing \$649,390. In 1860 the value of oils manufactured amounted to \$1,539,906, and in 1870 to \$4,874,410. In 1882 the manufacture of oils was conducted as follows:

	No. Estab- lishments.	Labor.	Value.
Oil, lard and refined.....	2	10	\$75,000
Oil, animal, lubricating.....	6	61	403,102
Oil, animal, refined.....	5	150	682,000
Oil, mineral, illuminating.....	12	3147	9,379,000
Oil, mineral, lubricating.....	5	31	76,110
Oil, vegetable, linseed.....	4	62	399,800
Oil, vegetable, rosin.....	1	9	45,000
Total.....	35	3470	\$11,050,002

The refining of sugar in the last century was a very different industry from that carried on at present. The sugar refined by Morgan, Douglass & Shaffer in 1797-98, at Nos. 54 and 56 North Third Street, would not stand comparison in quality and appearance with that produced by the processes and machinery of the present day. At that day there was a very considerable consumption of maple-sugar, half a ton of which was brought to Philadelphia from Stockport, on the Delaware, July 17, 1790, and mention is made of the arrival of a sloop with forty hogsheads of maple-sugar from the waters of the Susquehanna. These samples were regarded as equal to the best Muscovado. Edward & Isaac Pennington, sugar refiners, formerly of the West Indies, made loaf sugar from the maple-sugar. At that time the demand for sugars for the whole country was 42,000,000 pounds annually, and it was computed that the maple-trees of the country could supply that demand. Mr. Henry Drinker, Dr. Rush, and Tench Coxe jointly published a pamphlet detailing the utensils and process employed in the manufacture. To what extent the sugar refineries were successful at the beginning of the present century there are no data for determining. The admission of Louisiana, in 1812, with her 10,000,000 pounds of sugar production yearly, at once gave to cane-sugar the precedence over maple, and the latter ceased to be manufactured, except as a conserve, while the former became a leading article of consumption. Improvements in the refining followed, by which the quantity was increased and the quality greatly improved. The vegetable carbon used in 1805 was supplanted in 1811 by animal charcoal or bone-dust for discharging the color and impurities, and the vacuum-pan of Mr. Howard, of England, appeared next. With the increased quantity of sugar there came also memorials for its protection from competition with the foreign sugars. In 1831 there were 11 refineries in the city. The census of 1860 reports 8 refineries, with a capital of \$1,546,000, using raw

material valued at \$5,472,700, employing 478 men, and producing annually \$6,356,700. Mr. Freedley mentions in 1867, the houses of Fischer & Williams, Rogers & Mitchell, Harrison, Havemeyer & Co., which, with Davis, McKean & Co., successors to J. S. Lovering & Co., Newhall, Borie & Co., Taylor, Gillespie & Co., and E. C. Knight, constituted the principal firms then engaged in the business. The value of refined sugars the same author stated at \$20,000,000 for 1866, and, including molasses, at \$21,000,000. He estimated the capacity of the refineries equal to \$30,000,000 annually, if constantly in operation. In 1870 there were 13 refineries, with \$5,444,000 of capital, using raw material valued at \$23,093,575, and producing annually \$25,862,876. In 1880 there were 11 refineries, with an aggregate capital of \$6,072,000, using raw material valued at \$21,943,943, and producing an annual value of \$24,294,929. The same 11 refineries in 1882 produced an annual value of \$27,950,000, and employed 1789 hands.

The confectionery business is naturally associated with sugar. Some statements for different years are as follows:

Year.	No. of Estab- lishments.	Capital.	Raw Material.	Product.
1860.....	89	\$234,400	\$312,663	\$551,250
1870.....	138	762,050	842,221	1,933,972
1875. The estimated value was.....				3,550,000
1880.....	173	1,236,390	1,834,108	2,653,074
1882.....	204			5,345,650

The Grocers' Steam Sugar Refinery was established by B. H. Bartol and Alfred Kusenberg in 1859, on Passyunk Avenue. Alfred Kusenberg retired in 1864, and B. H. Bartol continued the business. This was the first house to manufacture sugar from molasses by the centrifugal process, as well as to make washed or high-grade sugars from molasses.

The Franklin Sugar Refinery was established in 1864 by Harrison, Havemeyer & Co., on the site of the first sugar refinery in the United States, which was conducted on the method existing in 1864. The location was on Vine, above Third Street. In 1875 the aggregate annual production of the works was 120,000,000 pounds of sugar, while the full capacity was 130,000,000 pounds.

The firm now occupies refineries covering 45,000 square feet of ground, bounded by Bainbridge, Swanson, and Almond Streets, and toward the river by Delaware Avenue. There is no larger or better-equipped refinery in the world, and the annual value of its product is over \$15,000,000.

The packing of meats and fish was established prior to 1729; as among the acts passed by the Assembly during that year was one very long and minute "for more effectually to prevent unfair practices in the packing of beef and pork for exportation." It directed the size and material of casks; that they should be branded with the marks of the coopers who made them; and that the contents should be inspected, after which the casks should receive an inspector's brand

representing a modification of the Penn arms. Under this act Nathaniel Griffiths was appointed iuspector.

Before this law was passed a petition was sent to the Assembly by "divers merchants" of Philadelphia wherein they set forth certain evils which they supposed would ensue if the bill was passed in the shape proposed. This memorial was signed by Thomas Lawrence, George McAll, White & Taylor, Thomas Willing, Alexander Woodrop, Peter Lloyd, Isaac Norris, Jr., Thomas Sober, Peter Baynton, William Attwood, and James Tuthill.

Governor Keith, in 1725, recommended the encouragement of the fisheries, and for that purpose suggested that means should be taken, in concert with other provinces, to obtain such an explanation of an ancient act of Parliament allowing the importation of European salt into New England as would justify its application to Pennsylvania, the argument being used that under the name "New England," used at the time when the act was passed, all the North American colonies were included.

The Assembly concurred in these suggestions, and alluding to the great quantity of shad, herring, and sturgeon in the Delaware, and the cod and other valuable fish to be taken not far from the Capes, declared that they could not be profitably cured for the want of salt, which had to be brought from Boston at great expense. Fifty years later, in 1775, the scarcity of salt was very distressing, and, as the means of importation had nearly ceased, an attempt to manufacture it was thought proper. Thomas Savage proposed to the Assembly a plan to make sixty thousand hushels a year at the seashore. The works, he estimated, would cost £1200. The Rev. Henry M. Muhlenberg, of Reading, says in his diary, Nov. 8, 1776,—

"There is complaint upon complaint heard among the inhabitants in town and country. The finest salt, which before the war could be got for two shillings per bushel, has risen already to twenty-five shillings, and not easily gotten. A pair of shoes which cost seven shillings sixpence now cost fifteen shillings. A pound of butter which at its highest price was one shilling, now costs two shillings and two shillings sixpence. Wool three times as dear as before the war. Linen, which could be purchased for three shillings per yard, now costs nine to twelve shillings. A pound of meat which cost four to five pence now costs eight to ten pence. A cord of wood which used to cost £1 now costs £2, and flour is beginning to rise in price, because the last crop did not turn out well."

From these comparisons it appears that while other articles had doubled, trebled, or quadrupled in price, salt was more than twelvefold dearer, being of all articles that which had most increased in price.

The manufacturers of tobacco in the city addressed a petition to Congress in March, 1790, remonstrating against a proposition to lay a tax or duty "upon snuff and other manufactured tobacco." They said that in the city of Philadelphia alone there were 30 manufactories of tobacco erected, in which 300 persons—men and boys—were hired and maintained; and that snuff-mills recently invented, and driven by water-power, were in use. Soon after, steam was

applied. Tobacco farms were not uncommon at that date in the neighborhood of the city. In 1794 the manufacturers of tobacco in the city petitioned Congress against the proposed excise on snuff and tobacco.

Mr. Freedley, in 1867, estimated the number of "places within the city where tobacco in some shape is sold" at "twenty-five hundred," and that the receipts of manufactured and leaf tobacco may be set down at 50,000,000 pounds per year. During 1865 over \$1,000,000 worth of tobacco was manufactured in the city, and about \$500,000 worth of cigars, and \$250,000 worth of smoking tobacco. These facts, Mr. Freedley says, appear on the books of the Internal Revenue Department. But this statement merely approximates the exact state of the trade. The statistics of the census of 1870 show,—

	No. Estab- lishments.	Capital.	Raw Material.	Product.
Cigars.....	389	\$1,005,390	\$872,953	\$2,042,123
Snuff.....	3	43,000	27,500	72,822
Tobacco.....	9	137,750	57,111	207,610
In 1880:				
Tobacco—chewing, smoking, and snuff.....	4	\$274,000	\$288,351	\$500,570
Cigars.....	473	1,268,465	1,085,525	2,617,725
In 1882:				
Tobacco manufacturers, pack- ing.....	6	.....	.....	\$485,000
Tobacco manufacturers, snuff... 4	.....	.....	.....	282,000
Tobacco manufacturers, cigars... 490	.....	.....	.....	3,164,900

In 1817 a man named Taskar originated the manufacture of plain and carved umbrella sticks in the borough of Frankford, in a building which was afterward used by the Frankford Dye-Works. Of this establishment Cherie Borie was the foreman, and when Taskar relinquished the business Borie succeeded, and commenced his operations at Rowlandville. In 1853, Edward Borie & Co. established a mill on Point Lane, and in 1854, Alexander Mackie was admitted, the style becoming Borie & Mackie. Five hundred thousand feet of maple plank were annually consumed in the establishments, shellac, drugs, alcohol to the value of \$1000 per month, and 140 hands were employed. From 7000 to 8000 gross of umbrella sticks were made annually. The manufacture of umbrellas, parasols, etc., conducted by Wright Brothers & Co., was established in 1820 by four brothers, natives of Oxfordshire, England, who came to the United States in 1816. This is now believed to be the largest concern in the world engaged in the manufacture of umbrellas. The umbrella and parasol manufacture of Joseph Fussel & Sons was commenced in 1835, by Lucas Gillingham, at Market and Fourth Streets. The umbrella frame manufacture was commenced by George W. Carr in 1842. In 1857, Samuel Warren was admitted as a partner, and the business was removed in 1862 to larger accommodations, at Twelfth and Noble Streets. In 1870, George W. Moore was admitted to the concern.

The statistics of this industry from 1860 to 1882 are as follows:

Year.	No. of Estab- lishments.	Capital.	Raw Material.	Labor.	Products.
1860.....	21	\$602,952	\$741,945	421	\$1,207,300
1867.....	.....	.....	.....	.....	1,250,000
1870.....	28	1,288,822	1,272,050	430	2,525,476
1875.....	.....	.....	.....	.....	3,250,000
1880.....	28	1,368,900	1,777,364	1777	2,804,874
1882.....	42	.....	.....	2210	3,552,450

In 1795 there were 11 extensive brush manufactories in Philadelphia; in 1860 there were 31, with a capital of \$206,400, and an annual product of \$415,034; in 1870, 38 establishments, with a capital of \$325,114, made an annual product of \$452,093; while brooms were manufactured in 18 establishments, with \$155,000 capital and an annual product valued at \$574,570. These industries were, in the census of 1880, combined under "brooms and brushes" in 60 establishments, having \$447,884 of capital and an annual product of \$792,179. The industrial returns of 1882 reported brooms and whisks made by 47 establishments, whose annual product was \$789,701, and brushes of all kinds in 29 establishments, with an annual product of \$825,093.

Blacking and ink, though totally different in their uses, are sometimes conjoined in their manufacture. The census of 1860 reported "blacking and ink" as made in 9 establishments, whose capital was \$184,000, the raw material used was valued at \$169,665, the persons employed numbered 162, and the product was valued at \$265,380. These industries were separated in the census of 1870, as follows:

	No. of Estab- lishments.	Capital.	Raw Ma- terial.	Labor.	Product.
Lampblack.....	4	\$183,000	\$85,350	36	\$117,700

It is probable that among the Dutch settlers of Pennsylvania were some who practiced tanning skins in a rude fashion. They imitated the aborigines in dress, using skins for clothing and moccasins for

covering their feet, and utilizing for both purposes the skins of wolves, hears, elk, and buffalo.<sup>1</sup>

The Swedes who succeeded the Dutch, and supplied the Swedish West India Company with neat cattle, are believed to have tanned their own leather and made their own shoes. It is established by Penn's letters that, in 1683, their "tannery was well supplied with bark." Tanners could purchase raw hides at three halfpence per pound, and sell their leather at twelve cents per pound. Curriers received 3s. 4d. a hide for dressing leather, and paid 20d. a gallon for oil. In 1699 the tan-yards of William Hudson and Mr. Lambert were on Dock Creek, and by 1739 four more had been established on that waterway. After the creek had been filled in tanneries were continued on Third Street, near the Girard Bank. The law of 1700 prohibited exportation of leather, and the restriction was renewed by an act of 1704. Upon the petition of the shoemakers, saddlers, and others engaged in the working of leather, and in view of the importance of this business, the Legislature, in 1721, passed the "Act for the Well Tanning and Currying of Leather, and Regulating of Cordwainers and other Artificers using and occupying Leather within this Province." This act provided that leather insufficiently tanned should be forfeited; that no tanner should be allowed to be a currier or cordwainer; that no persons but tanners should be allowed to buy raw hides or calf-skins in the hair, except for the private use of the party so purchasing, or for the necessary use of ships going to sea. The exportation of hides to any other place but New Jersey, and the counties of New Castle, Kent, and Sussex, was prohibited. The tanners were restricted from selling leather at more than 9d. per pound. Shoemakers were liable to a penalty for making hoots, shoes, or slippers for sale from any hut well-made and curried leather, and sufficiently sewed with good thread, "well twisted and made and waxed." It was an offense to mingle the leathers, being part neats-leather and part calves-leather, or to put sheep-skin, hull-hide, or horse-hide into the upper leathers of shoes or slippers. Shoemakers were allowed 6s. and 6d. for a pair of well-made men's shoes, and 5s. for a pair of women's shoes, and proportionately for lower sizes, the rates to be fixed by the mayor and aldermen of the city of Philadelphia, in their courts of record, and by the Courts of Quarter Sessions of the various counties. Searchers and triers of leather were also directed to be appointed to carry out the intention of the act.

In 1718 the tailors and cordwainers petitioned that they might be incorporated in companies, as was usual in English towns. The following order was made on the subject:

<sup>1</sup> "A good Glover with some onely of our own Elk skins maketh the best Buffs coat, our own Stag and Deer skins maketh best gentills and soldier clothes fittest for our woods; a Doe skin breeches with the fur inside, in our short winter, is better than two broadclothes and warmer, so we need no English clothes."—*Plantagenet: New Albion*, p. 31.

"Whereas, the severall trades or manufactors within the City complain that notwithstanding their taking out of their freedoms, severall strangers are daily coming into and settling therein not Qualified to exercise their traydes, whereby great damage accrues not only to the said traders themselves but to the Publick. And whereas severall of the said manufactors have petitioned to be incorporated the better to serve ye Publick in their severall capacities; it is therefore ordered that such of the Trades or manufactors aforesaid as desire to be soe incorporated doe with all Expedition advise with councill learned in the laws, and procure a draught of an Ordinance for that purpose, such as may be consonal agreeable to the Laws of England & this Governmt & for ye publick good, and lay ye same before the next Council."¹

In March, 1755, a contest arose before the Assembly between the cordwainers of the city and the tanners, during which the latter were accused of sundry malpractices, very much to the injury of the disciples of St. Crispin. The cordwainers declared that the exportation of leather from the province raised the home price of that article, and that the tanners, taking advantage thereof, used entirely too much lime in tanning, so as to render the process quick, which made the leather weak and unserviceable; that they did not properly scour the skins, and that they sold their leather by weight when damp, greatly to the injury of the cordwainers, as well as to the injury of the public. The latter, indeed, in many instances, on account of the badness of the leather in Philadelphia, sent to Europe for their shoes, whereby the cordwainer trade had declined and a number of industrious families of the province had been reduced to distress. The tanners made a prompt reply, denying that any great quantities of leather had been exported; that they had only asked high prices for their leather because the cordwainers showed a disposition to purchase leather from Carolina at greater prices than they would have to pay for that which was made in Pennsylvania. The cordwainers were also charged with wrong conduct, purposely buying bad leather from foreigners, with using bad thread, and with careless sewing. The House allowed these parties to state their respective grievances, but took no action in the matter.

Parchment was made in Philadelphia by Robert Wood, Fifth Street, below Walnut, in 1772, in which year was passed another "Act to Prevent Frauds and Abuses in the Manufacture of Leather." The exports of leather for this year amounted to 25,970 pounds, and in the two following years to 40,725 and 31,696, respectively. The manufacture of fancy leathers, in imitation of Turkey and morocco, began in Philadelphia immediately after their introduction in England in 1783. This business, ever since its establishment, has been a prominent one in this city, where the manufacture of morocco is more extensively carried on now than in any other city of the Union.

The Pennsylvania Society for the Encouragement

¹ In No. 17 of the *American Weekly*, April 23, 1719, published in Philadelphia, the following advertisement appeared: "These are to give notice that Matthew Cowley, a skinner by trade, is removed from Chestnut Street to Walnut Street, near the bridge, where all persons may have their buck and doe skins dressed. He also can furnish you with hindings."

of Manufactures and Useful Arts was established in Philadelphia in 1787, and the following year Tench Coxe and John Kaighn were appointed a committee to inquire into the process of coloring leather as practiced in Turkey and Morocco. They reported that the business had been attempted by two manufacturers in the city, by whom it was then carried on; but they were informed that the method of fixing the colors had not yet been obtained. Soon afterward Mr. Philippi, an American, communicated to the society the process for dyeing leather red and yellow, and was rewarded with £100 sterling and the gold medal of the society. This early process is described by Secretary C. Wistar, Dec. 24, 1788, in the *Pennsylvania Packet and Daily Advertiser* for Jan. 13, 1789. In 1790, in the article of shoe-leather, it was a matter for felicitation that it was supposed 400,000 pairs of boots, shoes, gaiters, clogs, and galoches were made in the State. In the Federal procession in 1768, 600 shoemakers of Philadelphia took part. At the beginning of the present century this city had become one of the principal seats of the shoe and leather manufacture of the country.

The blockade established by the navy of England in the war of 1812-15, cut off the importation of skins, and compelled the use of domestic sheep-skins. In 1817, John Gamble came to this city from England at the time when Hugh Doyle, Adam Smith, and Jacob Hummel were finishing native sheep-skins. They were located at Cobocksink Creek, on Third Street, below Girard Avenue. In 1818, John Gamble commenced the tanning of sheep-skins at the "High Bridge," over the Conshohocken Creek, corner of Laurel Street and Frankford road. In 1819, Gamble began the manufacture of goat morocco, and soon after Doyle, Smith & Hummel went into the business with goat-skins. Doyle associated William McNeely, his workman, with himself, and the business was continued at the same place. Hummel continued the business also for years, and his sons succeeded to the business, and now conduct it under the style of J. M. Hummel & Sons. The sons of Adam Smith succeeded to their father's business, the style now being E. A. Smith & Bros.

The apprentices of the firms mentioned were, with few exceptions, the men who followed their masters in the business. William Amer established his factory in 1832, at the northwest corner of Dilwyn and Willow Streets, and in 1844 built the present factory at Third and Willow Streets, which is operated by the firm of William Amer & Co. David Cloud, Christian Shorday, Fidell Fisber, Christian Bockius, George Adler, and William W. Adams entered into the trade between 1832 and 1844. In 1860 the census returns showed \$4,000,000 as the morocco product of the country, of which Philadelphia was credited with \$1,727,486.

The tanneries that dot the State of Pennsylvania have been compared in number to the old-fashioned

water grist-mills and country taverns, and their products naturally find in Philadelphia their principal market. The manufacture of calf-skin leather of a most superior quality has been long carried on in Philadelphia, one of her manufacturers taking the prize medal at the World's Exhibition in 1851. Deer-skins, for gloves, suspenders, etc., are largely manufactured into leather, while parchment, chamois-leather, and other productions of sheep- and lambskins are made in the city.

Patent iron-bound boots and shoes were manufactured in Philadelphia by Mr. John Bedford in 1807, by a process claimed to be a saving of three-fourths the labor, and of one-half the leather required by the common method, accompanied by greater durability. He continued the manufacture for many years, and subsequently patented a process of nailing on the soles of hoots and shoes. Mr. Bedford commenced business soon after the close of the Revolution in the old Anthony house, which once graced the northeast corner of Gray's Alley [Gatzmer Street] and Second Street, and afterward moved to the southeast corner of Taylor's Alley [Inglis Street] and Second Street. Many years after that he gave up the retail department and opened a wholesale hoot- and shoe-warehouse on Market Street, near Ninth, where he continued until his death. He was a very honorable, industrious, and successful tradesman, and the father-in-law of the late Samuel L. Shober, the well-known merchant.

The hoot and shoe establishment of Thomas Miles & Son was founded in 1818, and at the start occupied a small two-storied house in South Front Street, where it is said Franklin first met his wife. The original capital was \$500, and only four or five workmen were necessary. Before the introduction of machinery the concern employed from 350 to 400 workmen and 50 to 60 workwomen. Philadelphia is to-day one of the chief seats of the manufacture of hoots and shoes, particularly of fine goods. In 1860 there were 701 establishments engaged in the business, with a capital of \$1,730,815, using raw material of the value of \$1,912,657, employing 8434 hands, and producing an annual value of \$5,329,887. In 1870 there were 845 establishments, with \$3,879,381 of capital. The raw material was valued at \$4,467,914, and the annual production at \$10,669,343. The estimate of value made by Mr. Blodget for 1875 was \$18,000,000. The census of 1880 enumerated 581 establishments, with a capital of \$2,970,190, raw material valued at \$4,819,017, and the annual production at \$9,034,496. The tabular summary of Philadelphia industries for 1882 gives the following:

	No. Estab- lishments.	Labor.	Value of Product.
Boots and shoes.....	996	10,016	\$12,493,800
Boot and shoe uppers.....	17	133	149,500
Boot and shoes findings.....	7	20	24,300
Boot and shoes cut stock.....	2	24	43,200
Boot and shoes tools, not knives.....	2	5	6,000
<b>Totals.....</b>	<b>1024</b>	<b>10,198</b>	<b>\$12,516,800</b>

John Mundell, one of the leading representative boot and shoe merchants of this city, was born in 1829, in the town of Moneymore, County Derry, Ireland. He is the son of a shoemaker, and when but fourteen years of age left home to strike out in the world for himself, with a capital of some four or five dollars. Making his way to Belfast, the mate of a ship about to sail for New York concealed him on board, and he became such a favorite with the officers that he remained on the vessel as cabin-boy, and learned to be an able seaman. In a trip from St. John's, New Brunswick, to New York, in November, 1846, on the brig "Lady Napier," his hands were so frozen that he could not reshipe for Europe. The apparent calamity actually saved his life, as on the next voyage the vessel was lost with all on board. On recovering the use of his hands he shipped in a schooner carrying provisions to the United States army in Mexico. He arrived in Philadelphia, April 1, 1847, penniless, and as his only resource went to work at a shad-fishery on Crum Creek, near Chester. Shortly afterward he met at Ridley Park a fellow-townsmen from Moneymore, who had served his time as a shoemaker with his father. This friend offered to teach Mundell to do some part of the work, and in four weeks, with the knowledge he had received at home, he was able to make a good shoe. He was employed at the government shoe-shops in the Schuylkill Arsenal, and in 1848 he began business on his own account on a modest basis. In 1855 he began manufacturing for Joseph H. Thompson & Co. a special shoe for the Southern trade, and when the opening of the civil war wrecked that firm he found himself with \$10,000 worth of these goods on hand. Raising money upon them, he hid for government contracts for army shoes. His first contract was for 4000 pairs at \$1.75 per pair, which was renewed at \$2.10 per pair on account of the advance in price of leather. and this was followed by a contract for 20,000 pairs, on which the workmen received an advance of fifteen cents a pair. The advent of the McKay sewing-machine in 1863, and the strike of the Philadelphia shoemakers, caused many contracts to go to Eastern manufacturers; but Mr. Mundell continued to deliver the hand-made standard shoe with the utmost regularity, and at the end of the war the inspector-general complimented him upon having furnished the best shoes supplied the army. For three years he and Samuel M. Duffield were in partnership in the leather and shoe-finding business at No. 14 South Fourth Street.

In 1870 was formed the present house of John Mundell & Co., the junior member of which is E. F. Partridge. In 1872 the firm made, at the request of the government, a standard boot and shoe, the soles fastened by brass screws instead of being sewed. These were sent to troops on the western outposts, so that they might be tested by the roughest service, and the reports all spoke so favorably of them that they were adopted as the regulation shoe. The patent

E. T. ARLEY

*John Mundell*

of the machine by which the soles were fastened to the uppers was purchased by Mr. Mundell from the executors of Howe, the sewing-machine inventor, and after having been improved by Charles Tyson, it was sold to the organization now known as the Standard Sewing Machine Company. The business of the firm extended to such proportions that the Fourth Street establishment could not contain it, and in 1877 it was removed to its present location at the southeast corner of Thirteenth and Cherry Streets, where there are facilities for manufacturing thirty thousand pairs of misses' and children's shoes weekly. Mr. Mundell employs about 700 hands. Some of them have been with him thirty-five years, and their children have grown into manhood and womanhood in his shops. In this case, at least, the relations between labor and capital are most amicable, as might be judged from the views which Mr. Mundell holds. "Let all," he has said, "who employ people look into the grievances of their employés, for in a great many instances, to my knowledge, the employés are right; but many, instead of listening to the workmen's complaint, give them the cold shoulder, which they are apt to resent, and this brings about strikes and lock-outs." One of Mr. Mundell's daughters is the wife of Rev. Thomas P. Hutchinson, rector of Calvary Protestant Episcopal Church, in West Philadelphia; another daughter is married to George T. Smith, lawyer, and the third daughter is unmarried. His sons, John and James, are engaged in the firm, but not as partners. The business for the twelve months between April, 1883, and April, 1884, was \$1,200,000 of children's and misses' shoes manufactured and sold.

The manufacture of saddlery, harness, whips, trunks, etc., is conducted by many establishments, whose work has won for the city a reputation equal to that of any other. The prize medal awarded at London in 1851 was a recognition of the superiority of Philadelphia-made harness.

In 1860 the statistics of these trades were:

	No. Estab- lishments.	Capital.	Labor.	Raw Material.	Product.
Saddle and harness.....	79	\$394,780	718	\$417,535	\$959,786

<b>Totale.....</b>	<b>100</b>	<b>3386</b>	<b>\$10,467,184</b>

The spinnet, the harpsichord, and the piano-forte are the regular gradations through which modern music has worked its way to the present perfection of instruments. Who was the first maker of these instruments in the city? In 1775 we hear of the manufacture of an instrument probably unknown before that time in Philadelphia. It was made by John Behrent, joiner, Third Street, opposite Coats' burying-ground, below Brown Street, who advertised that he "had just finished an extraordinary instrument by the name of piano-forte, of mahogany, in the manner of a harpsichord, with hammers and several changes." James Julian, Fourth and Arch Streets, in 1785, announced "the great American piano-forte, of his own invention." We doubt whether any earlier instances of piano-forte making can be shown in the United States, and these are given by Bishop, "History of American Manufactures," as the first. James Julian, in 1785, and Charles Taws, about 1789-90, were manufacturers of these instruments, and one made by Taws is mentioned by a modern writer, who says that it "in comparison with the productions of the Steinways and Chickering's, would seem a very diminutive affair. Mr. Taws at one time was connected with the elder Astor in the business of importing pianos, and also was of some note as a builder of organs, which business, like the piano manufacture, he was among the

earliest, if not the first, to introduce into the United States. One or two of Mr. Taws' sons inherited their father's musical ability, and became, for their day, professors of some standing."

About 1793, G. E. Blake came over from England and settled in Philadelphia, and began to make pianos in this city, and teach the flute and clarinet over Aitken's music-store, on South Third Street, where he was threatened by Quakers with the prison, if he did not stop teaching their boys to blow the clarinet. Charles Albright was a musical instrument maker at 95 Vine Street, in 1796, and a piano of date "1787, maker, Charles Albright," is mentioned as in the possession of a correspondent of one of the papers of the city.

In 1800, English pianos, made by Longman, Clementi, Houston, Poland, and others, were advertised for sale by Charles Taws, who, in this manufacture, was one of the first in the city to bring that industry into the proportions of a regular avocation. His son, John B. Taws, succeeded to the business in 1824. The "grand portable piano" of John J. Hawkins, and his "Claviol," are mentioned among the new instruments in the early part of the century. The partnership of Thomas Loud Evenden, an Englishman, with Joshua Baker, in 1810, was dissolved in 1812, and the former united with his son, Thomas Loud Evenden, under the style of Thomas L. Evenden & Son, at Fifth and Prime Streets, where they claimed superiority for their pianos over any of English or foreign make, and they "confidently challenge any huckster in the city, who has the arrogance to call himself an importer, to disprove the assertion." This was pointed at Charles Taws, whose recent advertisement had mentioned an importation from Clementi & Co., London, of "elegant and fine-toned pianos." The result was a very bitter controversy, which became highly personal.

In 1817 the Evendens dropped their name of Evenden, and henceforth were known by that of Loud, announcing their partnership as that of Thomas & John Loud, which, in 1825, became Loud Brothers, and was composed of John, Thomas, & Philologus Loud. Charles Pommer, in 1824, at 106 North Third Street, was a manufacturer of upright and square pianos.

"James Stewart, from London, late of Baltimore, inventor of the harmonic piano-forte," gave notice in June, 1819, that he had opened his piano-forte room at No. 70 South Fourth Street. In December of the same year, Thomas Stewart took charge of the warerooms, which were removed from No. 70 South Fourth Street to No. 3 Cypress Alley, where the business was superintended by James Stewart, the inventor of the harmonic piano-forte. In 1820 this arrangement continued. Stewart & Co., in 1822, greatly lauded the detached sounding-board, and other arrangements which they had introduced into the piano-forte. F. R. Burkhardt, about the year 1821, commenced the

manufacture of pianos according to the German and English construction, at No. 83 North Fifth Street. The German pianos had four pedals. In 1825, Burkhardt's factory was located at No. 95 South Second Street.

Conrad Meyer, a native of Marburg, Hesse-Cassel, Germany, where he was born in 1793, came to the United States in 1819, having been twice shipwrecked on his way. He landed in Baltimore, and commenced to work in a piano-manufacturing establishment in that city, where he remained three years or more. He came to Philadelphia in February, 1823, and commenced the manufacture of piano-fortes at No. 160 South Front Street, between Dock and Spruce Streets. Subsequently he removed to Front and Callowhill Streets. Mr. Meyer, in 1832, invented the solid cast-iron plate-frame for pianos, the first application of that method of stringing to the instrument.

Emilius N. Scherr announced, in June, 1824, that he had just finished an upright piano, of fine tone and workmanship. In January, 1825, one of his advertisements stated that he had finished, at No. 264 Market Street, a six-octave upright piano of excellent tone. He finished also an organ with six stops, which was probably the one sold to the Moravian Church on Race Street.

John Lowe commenced business as an organ-builder, "near No. 107 South Seventh Street," in 1804. One of his first works was the organ in Peale's Museum. Lowe built the grand organ for Zion Lutheran Church, at Fourth and Cherry Streets, in 1811. It was considered, when finished, the finest musical instrument in use in the United States. Lowe was succeeded by Thomas S. Hall, who took possession of his factory on old York road, near the first turnpike gate, where he made, repaired, and tuned, in the year 1816, church, chamber, finger, and harrel-organs of every description. John Shermer was the builder of an organ with four stops, for the Moravians, in 1809, which cost four hundred dollars.

In the year 1824 the professional organists of Philadelphia were Benjamin Carr, at St. Peter's and Trinity Protestant Episcopal Churches; Thomas Carr, at Christ Protestant Episcopal Church; Benjamin Cross, at St. Augustine's Roman Catholic Church; and H. W. Darley, at St. Stephen's Protestant Episcopal Church.

The local manufacturers had to contend with a strong opposition among the importers of musical instruments, and against a prejudice in the minds of people in favor of foreign productions. Piano-fortes were imported during all this time in considerable quantities, and found ready sale. Merchants engaged in the English trade occasionally brought over one or two pianos as a venture, together with their other goods of a miscellaneous character, and managed to dispose of them. The regular music-stores made the sale of musical instruments a part of their business, the demand for

sheet and engraved music scarcely being sufficient to maintain them.

The first music-store established in Philadelphia was that of George Willig. He was a native of Germany, and as early as 1794 kept a music-store at No. 185 Market Street. He published the *Musical Magazine*. He afterward removed to Fourth Street, below Market, and subsequently to the building partly occupied by Sully & Earle's gallery, on Chestnut Street, above Fifth, on the north side. Willig made a specialty of the sale of piano-fortes. The next music-store was established by George E. Blake, who called himself a musical-instrument maker and keeper of a circulating library, as early as 1803, when he was established in the Cook building, at the southeast corner of Third and Market Streets. He removed to No. 13 South Fifth Street, near Chestnut, about the year 1814-15, and remained there until the time of his death, Feb. 23, 1871. In 1813, Allyn Bacon, afterward of the firm of Bacon & Hart, was the proprietor of a music-store at No. 11 South Fourth Street,—the north end of the building previously known as the old Indian Queen Hotel. Abraham L. Hart was partner with Allyn Bacon. He afterward kept a music-store on his own account at No. 30 South Fourth Street. John G. Klemm and — Klemm, sons of a firm of manufacturers and musical vendors in Germany, established themselves as importers of musical instruments about 1818, at No. 1 North Fourth Street.

This firm was dissolved in 1823, and John G. Klemm bought out at that time the stock of music and plates of Bacon & Hart, and removed his store to No. 3 South Third Street, where it remained until about 1825-26, when he removed to No. 287½ Market Street.

George Schetky, the musician, turned his attention to the importation of pianos about 1819. He dealt in grand harmonic, cabinet, and square pianos, which were made by Wornum, of London. He lived at No. 71 Locust Street, where he had his pianos for sale. He died Feb. 10, 1825. J. S. Richardson, from London, opened a new music-store on Chestnut Street, a few doors below Second, in 1817, which remained there for a short time only. George Catlin commenced

the manufacturing and repairing of musical instruments at No. 211 Arch Street, above Eighth, in 1816. He seemed to be a man of all work, and was skillful with any kind of musical instrument. He professed himself able to make or to mend organs, piano-fortes, harps, double-bass violins, violoncellos, violins, guitars, lutes, clarionets, and flutes. Catlin then had twenty years' experience, and added to his advertisement, "We tune all kinds of instruments."

Among the early music-teachers in Philadelphia, Benjamin Cross ranked with the foremost. He was born in this city on the 15th of September, 1786, of Scotch descent. He was educated at the University of Pennsylvania, and began his musical career about

1810. It was in June of that year he made his first appearance, the occasion being a grand oratorio at St. Augustine's Church, given under the direction of Benjamin Carr. He was busily engaged with nearly all the musical performances of that day. Many works in musical collections at the beginning of this century exhibit Mr. Cross as occupying a very high position. He was also eminently successful as a professor of the piano and singing. His "Mariner's Glee" received from the Philharmonic Society the award of a silver medal. He died March 1, 1857. His principal efforts in behalf of music were made in connection with the Musical Fund Society.

The Musical Fund Society, established in 1820, had for its objects "the relief of decayed musicians,

and the cultivation of skill and diffusion of taste in music." Previous to the institution of this society, several others had been formed for the performance of concerted music, solos, etc. The oldest was the Harmonic Society, which existed some time previous to the present century, and continued to the year 1802 or 1803. Various other societies for the same purpose had existed, among them the Apollonian, the Euterpean, the St. Cecilia, the Sacred Music, the Handel, the Anacreontic, and the Philharmonic. In 1816 Mr. C. Hupfeld formed a society for the practice of instrumental music. The difficulty of keeping a sufficient number together, in a mere band, suggested the propriety of forming a society, not merely for the per-

*Ben: Cross.*

formance of concerted music, but for the creation of a fund for the relief of decayed musicians and their families. Among its most prominent founders were Benjamin Carr, Benjamin Cross, the Louds, C. Hupfeld, and Mr. Schetky. Benjamin Cross was at this time closely identified with the progress of music in Philadelphia, and was known as an organist of exceptional power and culture. For many years he was the organist of St. Augustine's Church, and outside of that professional duty he took an enthusiastic interest in popularizing a knowledge of and love for good music. He assisted in the foundation of several musical societies, and was among their most active members.

The musical instruments made at present in the city are chiefly organs, piano-fortes, melodeons, accordions, violins, flutes, guitars, and band instruments.

These instruments, in 1860, were manufactured as follows:

	No. of Establishments.	Capital.	Raw Material.	Labor.	Product.
Pianos and accordions.....	15	\$200,500	\$83,196	272	\$440,300
Other than pianos and accordions.....	7	31,000	14,630	27	37,750
Music publishers.....	3	25,000	13,800	20	28,000

In 1875:

Musical instruments, small	9	24,000	6,939	18	32,225
Organs.....	5	38,500	11,318	47	53,513
Pianos.....	9	343,000	176,800	298	492,400
Piano movements.....	2	2,000	1,210	3	7,800
Music publishers.....	6	270,500	84,000	37	229,500

In 1875, it was estimated that the manufacture of musical instruments in that year would exceed that of 1870 by thirty per cent., and amount to \$761,459.

In 1880:

	No. of Establishments.	Capital.	Raw Material.	Labor.	Product.
Musical instruments, and materials not specified....	6	\$16,200	\$7,180	23	\$29,500
Organs and materials.....	8	38,000	8,340	45	32,164
Pianos and materials.....	5	169,500	81,145	154	217,924

The tabular summary of Philadelphia productions for 1882 gives the following:

	No. of Establishments.	Labor.	Product.
Music printers and publishers.....	5	77	\$154,000
Music typographers.....	2	24	43,200
Pianos and organs.....	9	252	615,000
Brass and other instruments.....	31	206	238,660

In 1882, the manufacture of musical instruments was as follows:

	No. of Establishments.	Labor.	Product.
Church organs.....	4	18	\$35,000
Pianos.....	5	232	580,000
Brass and other instruments.....	31	202	238,600

The earliest buildings of the colonists were "huts," which were—

"generally thirty feet long and eighteen feet broad, with a partition near the middle, and another to divide one end of the house into two small rooms. For this use they took eight trees of about sixteen inches square, cut off about ten posts of about fifteen feet long, upon which the house stood, and four pieces, two of twenty and two of eighteen feet long, for plates to lay atop of these posts. They had ten giests (joists) of twenty feet long to bear the lofts, and two false plates of thirty feet long to lie on the end of the giests for the rafters to be fixed upon. There were twelve pairs of rafters of about twenty feet to bear the roof of the house, with wind beams, braces, studs, etc. They used clapboard for the covering of the house, ends and sides for the loft; this clapboard is made feather-edged, five and a half feet long if well drawn, lies close

and smooth. They lined the lodging-rooms with it, and filled it up between, which made it very warm. The lower floor was earth, the upper clapboard. But these mean dwellings served only till the Pennsylvanians were settled a little. And then, having felled their trees, cleared and cultivated their ground, raised stocks, and planted a great part of their purchases, they began to leave their cottages for stately as well as convenient houses, and to imitate the inhabitants of the other colonies in the grandeur of their buildings."

Robert Turner's letter of the 3d of the Sixth month (August), 1685, gives the following account of the progress in building:

"Now as to the Town of PHILADELPHIA it goeth on in Planting and Building to admiration, both in the front & backward, and there are about 600 Houses in 3 years time. And since I built my *Brick House*, the foundation of which was laid at thy going, which I did design after a good manner to encourage others, and that from building with Wood, it being the first, many take example, and some that built Wood Houses, are sorry for it: *Brick building* is said to be as *cheap*: Bricks are exceeding good, and better than when I built: More Makers fallen in, and *Bricks cheaper*, they were before at 16 s. English per 1000, and now many *brave Brick houses* are going up, with good Cellars. *Arthur Cook* is building him a *brave Brick House* near *William Frampton's*, on the front; For *William Frampton* hath since built a *good Brick house*, by his *Brew house* and *Bake house*, and let the other for an ordinary. *John Wheeler*, from *New England*, is building a *good Brick house*, by the *Blew Anchor*; and the two Brickmakers a *Double Brick House* and Cellars; besides several others going on: *Samuel Carpenter* has built another house by his. I am building another *Brick house* by mine, which is three large Stories high, besides a good large Brick Cellar under it, of two Bricks and a half thickness in the wall, and the next story half under Ground, the Cellar hath an Arched Door (for a *Vault* to go under the Street) to the River, and so to bring in goods, or deliver out. *Humphrey Murry*, from *New York*, has built a large *Timber house*, with *Brick Chimnies*. *John Test* has almost finished a *good Brick House*, and a *Bake House* of *Timber*; and *M. Allen* a good house, next to *Thomas Wymms*, front Lot. *John Day* a good house, after the *London* fashion, most *Brick*, with a large frame of *Wood*, in the front, for *Shop Windows*; all these have *Belconies*.<sup>1</sup> *Thomas Smith* and *Daniel Pege* are Partners, and set to making of *Brick* this Year, and they are very good; also, *Pastoris*, the *German Friend*, Agent for the *Company at Frankford*, with his *Dutch People*, are preparing to make *Brick* next year. *Samuel Carpenter*, is our *Lime Burner* on his Wharf. *Brave LIME STONE* found here, as the Workmen say, being proved. We build most Houses with *Belconies*. *Lots are much desir'd in the Town*, great buying one of another. We are now laying the foundation of a *large plain Brick house*, for a Meeting House, in the Center, (sixty foot long, and about forty foot broad) and hope to have it soon up, many hearts and hands at Work that will do it. A large Meeting House, 50 foot long, and 38 foot broad, also going up, on the front of the River, for an evening Meeting, the work going on apace. Many Towns People setting their liberty Lands. I hope the *Society* will rub off the Reproaches some have cast upon them. We now begin to gather in some things of our great many Debts."

Robert Turner, in 1684-85, built the first brick house in the city erected by a citizen, at the southwest corner of Front and Mulberry Streets. According to Gabriel Thomas, the Letitia House was built before this time, but of that fact Mr. Westcott says "there

<sup>1</sup> It may be of interest to state where these primitive houses were situated. They were as follows:

- Arthur Cook, east side of Front Street, below Walnut.
  - William Frampton, east side of Front Street, below Walnut.
  - John Wheeler, west side of Front Street, below Walnut.
  - Samuel Carpenter, west side of Front Street, above Walnut.
  - Robert Turner, west side of Front Street, below Mulberry.
  - Humphrey Murray, west side of Front Street, southwest corner of Chestnut.
  - John Test, northeast corner of Third and Chestnut Streets.
  - Nathaniel Allen, west side of Front Street, above Chestnut.
  - John Day, west side of Front Street, between Susanna and Mulberry.
- These houses supplanted or were built in better style than the first dwellings.

may be some doubt." Thomas Masters, in 1704, built the first three-story brick house on the east side of Front Street, which was called "a stately house." It was torn down about 1840. It appears from the extract from the letter of Robert Turner, as well as from the instruction of Penn to his agent in 1684, that building with brick was at that early day very extensively carried on. Pastorius mentions the existence of "a sufficient number of mills, brick-kilns, and tile-ovens;" and we learn from Jonathan Dickinson (Logan Papers) that the city could even then furnish—

"a considerable quantity of the best bricks on the continent, made near this city, and limestone in great plenty in some parts, which prompts people to make substantial buildings, both in brick and stone. We have been upon regulating the pavements of our streets,—the foot-way with bricks and the cartway with stone,—and this with buildings have made bricks so scarce that the inhabitants would go to the kilns, and there strive for them at 28 per mill.; that is and will be the price here."

The bricks were mostly burned in clamps containing from 40,000 to 50,000, consuming half a cord of wood, and taking a week to burn. At the close of the last century, four-fifths of the buildings in the city were of brick, and the reputation of the kilns was very high for the beauty and durability of the bricks.

Another branch of the fictile art, that of "good, long, Taylern Tobacco pipes," is mentioned in Bradford's *Mercury* in May, 1719, and that they sold at four shillings per gross. "Richard Warden, tobacco-pipe maker, living under the same roof with Philip Syng, goldsmith, near the market place," was the ancient founder of this art. This is the earliest mention of this manufacture in Pennsylvania, although pipe-making was an old European occupation. In 1857 there were fifty brick-making establishments in the city, producing yearly 100,000,000 of common bricks, worth \$700,000, and also 8,000,000 of fine pressed bricks, worth \$14 per 1000, or \$112,000. The census of 1860 shows the condition of the manufacture of bricks, as follows:

	No. Estab- lishments.	Capital.	Raw Material.	Labor.	Product.
Bricks, common and pressed.....	49	\$1,208,500	\$70,025	1875	\$1,212,196
Bricks, fire.....	5	50,600	24,975	89	77,900
Totals.....	54	\$1,259,100	\$95,000	1965	\$1,290,096
In 1875:					
Bricks, common and pressed.....	78	\$1,780,500	\$354,190	2714	\$2,348,954
Bricks, fire.....	8	550,000	228,250	209	501,850
Brick-makers' machines.....	4	66,000	28,450	52	83,575
Totals.....	90	\$2,376,500	\$610,890	2975	\$2,934,379

The estimated value of this industry in 1875 was stated by Mr. Blodget at \$3,500,000.

	No. Estab- lishments.	Capital.	Raw Material.	Labor.	Product.
In 1880: Brick and tile.....	78	\$2,342,453	\$484,211	2957	\$1,702,636

In 1882 the tabular returns of Philadelphia industries give the following:

	No. Estab- lishments.	Labor.	Product.
Bricks, pressed, enameled, and common.....	63	3234	\$2,333,900
" and tile, fire.....	13	302	555,500
Bricklayers and builders.....	49	602	1,304,750
Totals.....	125	4138	\$4,274,950

Fire-bricks, as known at present, are of very recent origin. It is probable that the first establishment for fire-brick manufacture was that of Mr. Miller, the father of Abraham Miller, an extensive manufacturer of fire-bricks. The cognate branches of gas-house tiles, chemical ware, drain-pipes, pottery, stoneware, jars, jugs, stone-pipe, and the general manufactures in clay, such as china-ware, artificial stone, architectural decorations, cement, plasters, terra-cotta, scagliola, paving-tiles, roofing-tiles, are all to some extent carried on in Philadelphia, as appears by the following return in 1882:

	No. Estab- lishments.	Labor.	Product.
Pipes, smoking, wood and others.....	8	279	\$366,900
Pottery and stoneware.....	4	180	257,900
Terra-cotta ware and pipe.....	4	69	207,000
Plastering, casts, and stucco-work.....	24	175	329,400
Totals.....	40	703	\$1,160,200

Marble, now so extensively used as a building material, was first employed in this city to a large extent in the construction of the old Bank of the United States, now the Girard Bank, which was begun in 1795 and finished in 1798, and was the first building in the country having a marble front. Between 1799 and 1801 the Bank of Pennsylvania was built entirely of marble from quarries in Montgomery County. About 1800, Adam Traquair established a marble-yard at Tenth and Filbert Streets, which subsequently came into the possession of the great Struthers firm. William Struthers, who founded the establishment, was born in Irvine, Ayrshire, Scotland, Jan. 26, 1812, and was the third of his family to adopt the profession of architect and builder, his grandfather, William Struthers, and his father, John Struthers, having been prominent in it in their native city of Glasgow. John Struthers brought his family with him to this country in 1816, and entered into the service of William Strickland, an architect, who was without any superior in his own time. Strickland built the United States Bank (now the Philadelphia Custom-House), and under him John Struthers was the superintendent of construction, having settled in this city. He subsequently became associated with Thomas Wilson, who conducted a marble-yard at the corner of Tenth and Filbert Streets, and then opened at No. 360 High Street [now No. 1022 Market Street] an architect's office and marble-yard. His son, William Struthers, succeeded him in this business, which now consists of the marble-, granite-, and sandstone-works at Walnut Street wharf, on the Schuylkill, the oldest and largest establishment of the kind in Philadelphia, and now conducted by the third generation from its founder. Besides giving his personal attention to the details of this great industrial enterprise,

William Struthers took a wide and generous interest in public affairs, and liberally aided in promoting artistic and scientific projects. For many years he was treasurer of the Pennsylvania Academy of Fine Arts, and member of the Historical Society, the Franklin Institute, and the Academy of Natural Sciences.

His patriotic fervor during the civil war was manifested in more than one direction. He raised and equipped, at a very large expense to himself, a company of engineers, who rendered excellent service in the ranks of the national army, especially during the campaign in the Virginia peninsula. His private means and his individual efforts were employed without stint in aid of the Sanitary Fair, and the plans for the buildings were drafted in the office which he then occupied, at Eleventh and Market Streets. To him was awarded the contract for the marble-work of the new Philadelphia public buildings, which amounts to over \$5,000,000, and is the largest ever accepted by any one firm. He was connected with many charitable institutions, and his warmth of heart has become proverbial in the city of his adoption. To the firm of which he was the head he gave the name of William Struthers & Sons. After his death the business was conducted under the old title by the sons, William Struthers, Jr., and John Struthers, and is now managed by the latter alone. He died Nov. 21, 1876, and is buried in Laurel Hill Cemetery.

In 1829, Edwin Greble opened a marble-yard on Passyunk road, near Fourth Street, and removed from there to Thirteenth and Willow Streets, where his works were burned down in 1849. He reopened at 1708 Chestnut Street, and the business is now managed by his executors.

In 1837 a Mr. Harkness had works of the same kind at Tenth and Cherry Streets, and at the same time Stegagnui, who built the marble front of the house at the corner of Sixteenth and Walnut Streets, was in the business. Others of the marble-workers in the first half of the century were Black & Brown, Frederick Fritz, Peter Fritz, John Jordan, Alexander Holland, and John Baird.

The first *busts* ever executed in American marble were carved for James Traquair, stone-cutter, Tenth and Market Streets, Philadelphia, by Joseph Jardella, an Italian, who had been employed ten or twelve years before by the celebrated Italian sculptor, Caracchi, in making in this country, under his direction, busts of Washington, Jefferson, Hamilton, and Rittenhouse. The cost was \$100 each.

Statistics of marble-cutting in Philadelphia for various years are as follows:

In	No. Estab- lishments.	Capital.	Raw Material.	Labor.	Product.
1860:					
Marble-cutters.....	59	\$821,900	\$376,585	744	\$1,019,125
In 1870:					
Marble manufactures..	85	2,116,400	1,051,500	1857	2,662,648

In 1875 the return was estimated at \$3,998,581.

In 1882 there were 90 establishments, employing 1287 men, and producing yearly \$3,311,500.

Prior to the arrival of Penn the Dutch and Swedes had built saw-mills on the Delaware, and immediately upon the landing of the first settlers under Penn they proceeded to erect other saw-mills, and in 1683, Penn's letters show that the saw-mills and the glass-house were "conveniently posted for water-carriage." Townsend's saw- and grist-mill is mentioned, but the early records, not discriminating between grist- and saw-mills, do not enable us to arrive at any conclusion as to the number or locations of the latter. The demand for hand-sawyers in 1698, with the wages paid, six to seven shillings per hundred, would indicate a scarcity of saw-mills. In 1705 the price had risen to ten shillings, and as, in 1731, the houses of English Quakers in Bucks County were covered with "nice shaved boards, and "the boards for floors and partitions were all sawed by hand," there could not have been any great number of saw-mills in the vicinity of the city. In 1765 the exports of boards and scantling from the port was 783,000 feet, the value of which, at £3 10s. per 1000, was £2470. Staves, headings, and shingles were exported at the same time to the value of £28,450. The exports of planks and boards in the years 1772, '73, and '74 were, respectively, 1,724,000, 4,075,000, and 3,309,000 feet.

The census of 1810 returned 1995 common saw-mills and 21 mahogany-mills in Pennsylvania. In 1860 there were,—

	No. Estab- lishments.	Capital.	Raw Material.	Labor.	Product.
Hand- and saw-mills....	6	\$182,500	\$126,468	229	\$258,600
Sawed lumber.....	7	158,000	114,430	34	183,620

In 1870 the census includes saw-mills, with planing- and dressing-mills, the number of establishments being 30, with a capital of \$1,437,167; value of raw materials, \$1,056,577; labor, 451; and product, \$1,925,590. The census of 1880 makes no return of either saw-mills or planing-mills.

The tabular returns of Philadelphia industries for 1882 give the following:

	No. Estab- lishments.	Labor.	Product.
Saw-mills, mahogany and cabinet woods..	4	82	\$433,000
Saw- and planing-mills.....	23	534	1,075,550

At Jamestown, in Virginia, the early settlers, in 1608, inaugurated their colonization by an attempt at making glass, pitch, tar, soap-ashes, and clapboards, but the Swedish colonists, with more practical sense than was shown in Virginia, set up their first manufacturing establishment in the form of a grist-mill as early as 1643.<sup>1</sup> The first grist-mill in Philadelphia

<sup>1</sup> The site of this, the most ancient water-mill in New Jersey, Pennsylvania, or Delaware, is now ascertained to have been on the Darby road, the oldest highway in Pennsylvania, near the Blue Bell Tavern, where the holes in the rocks which supported the posts of the framework are still to be seen. The stream on which it was built is Cobb's Creek, a tributary of Darby Creek, which empties south of Tinicum. (See "Bishop's History of American Manufactures," vol. i, p. 139.)

*Engraved by Samuel Sartain, Phil<sup>a</sup>*

*Wm. Allen Smith*

County was set up in 1683-84<sup>1</sup> at Germantown, by Richard Townsend, a Friend, who came over with William Penn. It stood on Church Lane, one mile northeast of Market Square, and was at a later period known as Roberts' mill. On the left bank of Chester Creek, about one and a half miles northwest from Chester, Townsend had another mill, built of materials ready framed in England. The rocks bear traces of its existence, and its antiquated vane was, in 1843, "in the one hundred and forty-fourth year of its duty, on the top of Mr. Fowler's house." The owners of this mill were William Penn, Caleh Pusey, and Samuel Carpenter, whose initials were to be seen on the old vane. Townsend was the builder and superinten-

being great choice of good timber, and earlier corn than in the aforesaid place; they are made by one Peter Deal, a Famous and Ingenious Workman, especially for inventing such machines."<sup>4</sup> On the Wissahickon, the German and English settlers built mills about this time. The Rohesons at that early date built a grist-mill and bolting-house near the Schuylkill, in the old borough of Roxborough, which were known as "Wissahickon Mills."

In 1712, Joseph Growden owned a grist-mill at the mouth of Mill Creek, as appears in his petition of that year to the Assembly against the ferry privilege of Benjamin Chambers.

From a brief price-current of 1719-20 it appears

THE TOWNSEND (ROBERTS) MILL.

dent of the mill, but not a part owner.<sup>2</sup> Pastorius, the founder (in 1684) of Germantown, says, "Of mills, etc., we had the necessary number," and that at Frankford, "they had already established several good mills."<sup>3</sup> Thomas Parsons also owned a grist-mill at Frankford in 1698, and Richard Dungeford one in Oxford township,—both probably on Tacony Creek. "The water-mills of Darby Creek," says an Englishman, writing in 1698, "far exceed those in England both for quickness and good grinding of meal, there

that the price of flour at Boston was 28s. per hundred; at Philadelphia, 9s. 6d.; at New York, 14s. to 15s. This remarkable variation was due to the want of transportation, which compelled the citizens of each city to rely on the production of its immediate neighborhood. Indian corn-meal at Philadelphia was 1s. 8d. to 1s. 10d. per bushel; at New York, 22d.; at Boston, 4s.; tar in Philadelphia was 10s. per barrel; in New York, 12s.; in Boston, 22s.; beef at Philadelphia was 30s. per barrel; at New York, 36s. to 38s. At the meeting of the Provincial Council, July 15, 1716, a petition from Thomas Masters was presented,

<sup>1</sup> There had been a wind-mill previous to this somewhere in the colony.

<sup>2</sup> Day's "Historical Collection of Pennsylvania," p. 4.

<sup>3</sup> Memion's "Historical Society of Pennsylvania."

showing that upon representation of his wife, Sybella Masters, the king had issued to him two patents, for fourteen years, "one for the sole cleansing, curing, and refining of Indian corn growing in the plantations, fitter for shipping and transportation, in a manner not before found out and practiced." In his speech to the Assembly, 1st January, 1722, Governor Keith said that "his mind was fully bent upon doing the province some effectual service, and that he had lately formed the design of a very considerable settlement in order to manufacture and consume the grain for which there is at this time no profitable market." The place selected was Horsham, in the county of Philadelphia, and the Council ordered a convenient road to be built from Horsham to the Abington New York road. Several grist-mills were advertised for sale in 1721-22; two by Robert Hobart, baker, "in the Front Street," one of them furnished with cloths, and one without; another with a granary and other property, by Owen Roberts. In 1723, the executors of Jonathan Dickinson advertised for sale his interest in the grist- and saw-mills on Chester Creek, commonly called the Chester Mills. There were passed during the year 1725, by the Assembly of 1724-25, among other laws, "An act to prevent the exportation of bread and flour not merchantable," which provided for inspection at Philadelphia, and branding the barrels. It was a renewal of a former law, which had been the means of restoring the flour trade of the province, formerly lost by carelessness and fraud, to a high degree of credit abroad. Samuel Carpenter was the inspector. When Assembly met, upon the 19th of March, 1733, the Governor's speech called the attention of the members to the injury done to the merchantable flour of the province in consequence of negligence in inspection, which had very much injured the character of Pennsylvania products.

From the address of the Assembly to the Lords Commissioners of Trade and Plantations, in 1727, it appears that by "the general damp that was given" to trade in 1720, and the great fall of the price of produce about the same time, the city in the years 1721-22 was so effectually drained of coin that the "inhabitants of every degree were reduced to the greatest straits."

The mills upon Scull and Heap's map (1750) are as follows: The old Swedish mill, near the Bell Inn, is marked as the "snuff mill." Near Cobb's Creek, north of the Bell, is Coultas' saw-mill. A fulling-mill was on the south side of the road now called the road to West Chester, near the intersection of Cobb's Creek. Shultz's paper-mill is northwest of Merion Meeting. A mill is marked upon Mill Creek near the Schuylkill; the site afterward called Maylandville. A saw-mill is marked on the east side of the Schuylkill and north side of Falls Run, above the Falls. Sickles' mill is near the same stream, and on the east side of the Wissahickon road. Robeson's mill was farther north, at the mouth of Wissahickon

Creek. A paper-mill stood near a branch of the Wissahickon, about the site of Rittenhouse's mill. Buzby's mill was upon Tacony Creek, near the junction of the Wingohocking.

In 1760 the assessors reported in Philadelphia County eighty-three grist-mills and forty saw-mills.

Eight grist-mills were built in Roxborough (now the Twenty-first Ward of the city) previous to 1779, several of them belonged to the Rittenhouses. "We are all tillers of the earth from Nova Scotia to West Florida," wrote John Dickinson in 1767. The great agricultural capacities of the State developed by the Germans soon made Philadelphia the principal mart for the manufacture of both flour and meal, and for their exportation. The quality as well as quantity of her flour gave her prominence in commerce as well as manufactures, as will be seen by the following table of her exports:

Year.	Wbeat. Buehels.	Flour. Barrels.	Bread. Caeke.	Value of flour, wheat, and flaxseed.
1729.....	74,809	35,438	9,730	£62,473 currency.
1730.....	38,643	38,570	9,622	57,500 " "
1731.....	53,320	56,639	12,436	62,582 " "
1752.....	.....	125,960	.....	.....
1765.....	365,522	148,887	34,736	432,615 sterling.
1772.....	51,699	262,744	38,320	.....
1773.....	92,012	284,872	50,504	598,283 buehels of corn.

An informality in the patent of Oliver Evans for manufacturing flour and meal, issued in 1790, having deprived him of its benefits, Congress authorized the issue of a new patent, which was opposed by memorials denying that Evans was the original inventor of any portion of the machinery. Prior to 1838, steam was the motive power in the manufacture of flour was a novelty. About that year the first steam flour-mill erected in Philadelphia was completed. Since that day steam has become the preferred motor for grinding grain, and now Philadelphia's City Steam Mill flour has excluded the far-famed Genesee flour from her markets, and stands unrivaled either at home or abroad. Bakers were as necessary as mills, and all authorities agree that from the earliest date the colony was supplied with bakeries. Pastorius mentions Cornelius Bom, a baker, residing in the city when he arrived, and William Darvell, Marcus Kuhl, John Fitzharris, John Fernel, Daniel Britton, Francis Johnson, Samuel Reed, Joseph Clark, and Stephen Jenkins were city bakers in 1744, as we learn from the proceedings against them for keeping bake-houses not regulated according to law, and dangerous to the city on account of fire. Even earlier, on the 14th of February, 1700, there were presented before the Governor charges which caused certain of the bakers to be brought before the authorities:

"Upon complaint of ye poor ag't ye bread for sale, not being of the law'll and due aeseize, Justman Fox, John Sawtell, Arthur Holton, William Royal, George Abbott, Marie Merryweather, Tho. Hall, and Hugh Derburrow, being eumoned, appeared, to whom the Gov. notified, ye said complaint, who generallie anered yt tho' It was hard for ym

to live by it, wheat being now 5s. 6d. p. b bush., and yet they having but small stocks, were outt bid by the eminent mer'ts [mercants] and bolters, yt hoped ye bread was of ye due assize.

"The Prov. and Gov. advised ym to be conformable to ye laws in that behalf made, and said hee wold appoint a clark of ye markett to yt end. "The Prov. proposed William Southbee clark of ye markett. Ye Council approved itt."

This warning did not produce permanent results, as we find by a succeeding entry :

" July 3, 1700.—William Southbee (clerk of the market) and some of ye bakers appeared with their bread, which, being weighed, was found too light. In excuse they affirmed that if they came up to the assize they could not live by it, which was the general opinion of the Council; and therefore it was ordered by the Gov'r and Council that each baker should bake but three sorts of bread, viz.: white, wheaten, and household, and no more; and that the loaves should be a pennie loaf or roll, a 6d. loaf and a 10d. loaf, and no other; and if any of these should exceed the assize in fineness or weight, it should be equally seizable as if it were under the fineness or weight; and that each baker of soft bread be allowed sixpence on the bushell, above the assize, i. e., when wheat is at 5s. per bushel they shall make bread as if it were at 5s. 6d., and wheat being now 5s. per bushel, the said white bread shall weigh six oz., the wheaten 10 oz., and ye household 13 oz ¼, and so proportionable."

The statistics of the flour-milling from 1860 to 1882 are as follows :

Year.	No. Estab- lishments.	Capital.	Raw Ma- terial.	Labor.	Product.
1860 .....	30	\$614,860	\$2,648,645	195	\$3,098,328
1867 .....	.....	.....	.....	.....	3,200,000
1870 .....	20	618,500	3,519,865	156	4,920,516
1880 .....	17	237,300	1,699,306	98	1,636,034
1882 .....	24	.....	.....	182	2,403,400

Thomas Wattson founded, in 1810, the bakery which has passed through three generations without changing its location (157, 159, 161 North Front Street). The manufacture of ship-bread and crackers was early established, but up to 1834 the consumption by a single establishment of fifty or sixty barrels of flour per day was considered quite an extensive operation. In that year John J. Ricketts commenced his business career in Philadelphia, and by the introduction of steam-power and machinery the quantity of ship-bread and crackers has been enormously increased.

In 1860 baking was conducted as follows :

	No. Estab- lishments.	Capital.	Raw Ma- terial.	Labor.	Product.
Bakers' bread, ship-bread, and crackers.....	346	\$755,605	\$1,314,537	912	\$2,224,856
In 1870 :					
Bakery products, bread...	516	905,465	1,461,496	928	2,623,904
Biscuits and crackers.....	10	319,000	626,562	310	1,088,500

In 1875 the estimated increase was twenty per cent., amounting to \$4,454,685.

In 1880 :

	No. Estab- lishments.	Capital.	Raw Ma- terial.	Labor.	Product.
Bread, crackers, and other bakery products.....	849	\$2,633,908	\$3,613,201	625	\$5,735,533
Baking- and yeast-pow- ders.....	3	9,000	26,000	14	48,500

The tabular returns for Philadelphia industries in 1882 give the following :

	No. Estab- lishments.	Labor.	Product.
Bakers, hand.....	924	2595	\$6,648,585
" steam.....	10	645	1,369,821
Baking-powder.....	7	58	119,300

Among the efforts made for the promotion of early manufactures should be mentioned that relating to china-ware, in Prime Street, near the present navy-yard, about the same time that the glass-works were established. A saving of £15,000 to the people, it was stated, would result from manufacturing this article. In 1770 the proprietors of the china-ware manufactory established in Southwark (Bonnin & Morris) advertised for "Zaffre," and offered a reward for its production. In the *Pennsylvania Gazette* for January, 1772, the Southwark China Factory advertised for broken-flint glass and whole-flint stone, and the greatest encouragement was also promised to all painters, either in blue or enamel, from which it appears that the decorative branch was attempted in connection with the manufacture. But the china-works proved a failure. The proprietors stated that they had lost everything. They asked public attention and charity toward the workmen they had brought with them, who were now in want in a strange country. Bonnin sold the real estate and property of the factory and returned to England.

No immediate effort appears to have been made to re-establish the china- or earthen-ware manufactory after the failure of the factory in Southwark. In 1808, at Peale's Museum, Alexander Trotter, of the Columbian Pottery, exhibited some specimens from his manufactures in Philadelphia. An "elegant jug and goblets from the new queensware manufactory of Trotter & Co.," graced the table of the Republican dinner of July 4, 1808.

In October, 1810, an advertisement in the *Aurora* stated that at the Columbian Pottery, South Street, between Twelfth and Thirteenth, could be obtained "tea- and coffee-pots, pitchers, jugs, wine-coolers, basins, ewers, baking-dishes, etc., lower than imported." The warehouse of the Columbian Pottery was at No. 66 North Second Street. The capital of this company was said to be \$11,000, and the wares and the material manufactured were of a species similar to that of Staffordshire, in England. Trotter continued in business until some time in 1813. In 1808 Binney & Ronaldson, afterward very successful in the manufacture of printing-types, were making, in South Street, yellow and red tea-pots, coffee-pots, and sugar-boxes. Daniel Freytag, at No. 192 South Fifth Street, undertook the manufacture of a finer quality of china-ware than had yet been produced in the United States. It was made of various colors, and was decorated with gold and silver.

The Washington Pottery was established on the north side of Market Street, between Schuylkill Sixth and Schuylkill Seventh, as early as 1810. In April, 1811, it was advertised that this establishment produced the "Washington ware," and that the stock on hand was selling off, consisting of pitchers, coffee-pots, tea-pots, sugar-dishes, cream-pots, wash-basins, bowls, etc. Capt. John Mallowney, brick-maker, established

this manufactory, and remained its proprietor until some time in 1816. The pottery was continued afterward by other owners, and is still in operation at the same place.

The Northern Liberty Pottery was founded in 1813 by Thomas Haig, Sr., in a small building near the corner of Front and Maiden Streets, as a general manufactory of earthen-ware. The depression that overtook all kinds of trade at the close of the war of 1812-15 induced him to relinquish his business on Front Street, and remove to Fourth, above Poplar, where he remained until his death, in 1831, when the management of the business passed to his sons, James and Thomas Haig.

David G. Seixas established an earthen-ware manufactory near Philadelphia in 1817. He manufactured an imitation of the Liverpool white crockery from native clays with great success. His establishment was on Market Street, between Schuylkill Sixth and Schuylkill Seventh Streets. He continued there until some time in 1822. George Bruorton came to Philadelphia about 1817, and established himself as a china-gilder on Chestnut Street, above Twelfth. In the succeeding year he opened a factory for china-gilding and painting at the southwest corner of Schuylkill Sixth [Seventeenth] and Chestnut Streets. He announced that he would enamel and gild arms, crests, ciphers, borders, or any device on china and queens-ware, and warranted his gilding equal to any imported. He also announced "china mended by burning in, and warranted as sound for use as ever." Bruorton does not seem to have intended to manufacture china; but as there must have been small work for an enamer and ornamental gilder, the institution of a china manufactory seemed to be necessary to give him work. His name disappears from the Directory after 1822.

William E. Tucker, in partnership with Hulme, was engaged in the manufacture of American porcelain in 1828. They had their store in that year at Nos. 26 and 27 Arcade, at which place they announced that "they could sell American china of a quality equal in strength and beauty to any that can be imported, and upon the most reasonable terms. . . Initials or fancy work, to suit the taste of individuals, will be executed agreeably to order in the neatest style." Branch Green, opposite the Globe Mills, on Second Street, advertised in 1810 that he made "large stone jars for purifying and keeping cool fresh water."

In 1826, Joseph Kerr established the decorative china business on Market Street, near Eleventh, and afterward removed to the old Arcade, and then to Chestnut Street, opposite the State-House, where the business was continued for nearly a quarter of a century, during which time several changes took place in the firm, until the final retirement of Mr. Kerr, when the management devolved upon his three sons, —James K., Henry C., and Joseph W.

In 1830 this china-factory was at the corner of Chestnut and Schuylkill Second [Twenty-first] Streets.

The earthenware- and pottery-factories in 1860 were 14 in number, with capital amounting to \$59,000, raw material valued at \$29,992, and annual product of \$106,000.

The census of 1870 shows the following condition of this industry:

	No. Estab- lishments.	Capital.	Labor.	Raw Material.	Product.
Pottery.....	14	\$182,500	212	\$114,837	\$340,100
Terra-cotta.....	6	408,000	115	43,448	248,000
China and glass dec- oration.....	3	19,500	10	14,606	34,600
Porcelain wares.....	2	105,000	160	205,000	355,000

Neither pottery nor earthen-ware appear in the returns of the census of 1880. Terra-cotta is set down as made at 4 establishments, whose capital amounted to \$71,000, the raw material to \$18,150, and the annual product to \$57,000. In 1882 the earthen-ware and pottery establishments were 4 in number, employing 180 hands, and producing annually \$257,900. Pottery and stoneware were made in 7 establishments, employing 134 hands, and producing annually \$237,314.

The effort to manufacture glass was made at a very early day in or near Philadelphia. Penn's letter of 1683 to the Free Society of Traders alludes to their tannery, saw-mill, and glass-house; and soon after, at Frankford, near the city, a glass-house and pottery were set up by English Friends. In 1731 the *Pennsylvania Gazette* announced that Edward Bradley, "near the post-office, in Front Street," silvered looking-glasses; and sold window-glass by the box. A flint-glass manufactory was established about 1657 by an enterprising German, Henry William Steigel. In 1769, Richard Wistar transferred his glass-factory from New Jersey to his house in High Street, above Third, where he made glass lamps and bottles and brass buttons, which he said "were clear of duty, which Americans so justly complain of, and at present it seems the duty of Americans to encourage their own manufactures, more especially those on which duties have been imposed for the sole purpose of raising revenue." In October, 1771, Robert Towars, skinner or leather-dresser, and Joseph Leacock, watch-maker, determined to establish a glass manufactory in Kensington. They purchased from Robert Ball, goldsmith, owner of the land upon which the "town of Richmond" was laid out, a piece of ground on the east side of Bank Street [now called Richmond Street], one hundred feet front, and extending to the river. Towars & Leacock built upon the lot a glass-house, furnace, and other improvements. They must have entered upon the manufacture of glass as soon as the furnace and glass-house were ready, as there appears in Franklin & Hall's *Pennsylvania Gazette*, in January, 1772, the following advertisement: "The glass-factory, Northern Liberties, next door to the sign of the Marquis of Granby, in Market Street, where the highest price is given for broken flint-glass

and alkaline salts." The place designated was the store of Robert Towars, which was in Market Street, between Second and Third. In November, 1772, Towars & Leacock sold the premises to John Elliott and Samuel Elliott, druggists. They took into partnership and interest Isaac Gray. These partners built an additional furnace, and continued the manufacture of bottles for eight years. They sold the property in May, 1780, to Thomas Leiper, tobacconist, who must have needed many bottles, to be used for the reception of snuff. The latter was owner for twenty years, and sold the glass-house on March 6, 1800, to Joseph Roberts, Jr., James Butland, and James Rowland for \$2333, subject to £15 ground-rent. They carried on the works under the firm-name of James Butland & Co., and had their store at No. 80 North Fourth Street in 1801. Roberts soon sold out his one-third interest to Butland & Rowland for \$2548. They dissolved partnership in 1804, and Butland disposed of his interest to Rowland for \$2548. The latter advertised in 1808 that his store for the sale of bottles made at the Kensington Glass-Works was at No. 93 North Second Street. James Rowland died before the year 1833. In the latter year James Rowland, Jr., who had purchased the interest of his brother, Joseph W. Rowland, sold the works on July 10th to Dr. Thomas W. Dyott.

Dyott was at that time a conspicuous person. He was a native of England, and came to Philadelphia about 1806. In 1807 his name appears in the directory for the first time, "Patent medicine warehouse, No. 57 South Second Street." In 1809 the description of his business is "Medical dispensary and proprietor of Robertson's family medicines, No. 116 North Second Street." His brother John at that time seems to have been in business with him at the same place. Dyott was also a manufacturer of liquid blacking. In 1810, for the first time, there is attached the title "M.D., No. 116 North Second Street." About 1811 or 1812 he removed his drug-store to the northeast corner of Second and Race Streets. He must have engaged in the glass manufacture at the Kensington works as a tenant before 1833. In 1830, Mrs. S. Dyott, glass-store, is located at No. 143 North Second Street, which was above Race, next door but one to Dr. Dyott's drug warehouse, which was at Nos. 137 and 139.

In 1833 it was stated there were more than three hundred persons connected with the Dyottville Glass-Works, of whom more than two hundred were apprentices. Connected with the establishment were four hundred acres of land along the river, from which were got milk, butter, and vegetables for the use of the large apprentice household. Dr. Dyott was ambitious to have this manufactory conducted on strictly moral principles. He built a chapel on the premises for the use of the apprentices and workmen; employed a clergyman to preach to them three times on Sunday; arranged for prayer-meetings, lectures, and singing-

lessons during the week-day evenings; established a temperance society among his employés; and promised extra rewards and compensations to such as were faithful and did over-work. Unfortunately, his ambition went far beyond his prudence. In order to encourage saving habits, he established a bank at his former drug-store, Second and Race Streets, which was called the Manual Labor Bank. For a time he was successful in his enterprise. He succeeded in obtaining large deposits on promise to pay interest, pushed his notes into extensive circulation, and, when the day of distrust came, and he was called upon to redeem his notes, he could not respond. The Manual Labor Bank failed. There was a great outcry among the creditors. Dyott was prosecuted for fraudulent insolvency, and convicted and sentenced, Aug. 31, 1839, to three years' imprisonment in the penitentiary. He served out his punishment, and, after his release, went into business again as an apothecary, in Second Street, above Race. It may be said of him that he was unfortunate in consequence of the financial difficulties of the times. The banks had suspended specie payments in 1837, but, strong in their financial influence, had been enabled to tide over public indignation, and to control, to a degree, the legislation aimed against them. But Mr. Dyott, an individual with nothing to sustain him but his personal credit, and embarrassed by investments which he could not turn into cash in consequence of the hard times, was caught without hope of means of relief.

After Dyott's failure the glass-works remained idle for some years. The Lehigh Coal and Navigation Company got possession of the river front and used it for a coal-depot. After the passage of the tariff act of 1842, Henry Seybert rented the factory from the coal company, repaired the furnaces, and started them for the making of bottles, principally for the use of Eugene Roussel, mineral water manufacturer. He also made flint-glass in one furnace. In 1844, Seybert sold his interest to S. Decatur Smith, Quinton Campbell, Jr., and Henry B. Benners. In August, 1852, the firm of Benners, Smith & Campbell was dissolved. James M. Benners joined with his brother, H. B. Benners, in the management of the business. George W. Benners was admitted to the firm in August, 1856. In 1860, J. M. Benners withdrew. H. B. & G. W. Benners continued the business. In 1869 the firm purchased the portion of the Dyottville property not in use by the coal company. George W. Benners died Sept. 1, 1870, and Henry B. Benners, who went into the establishment under Henry Seybert when a boy, still continues this, the oldest glass-house in Philadelphia, with a record (in 1884) of nearly one hundred and thirteen years of work.

One of the earliest establishments for the manufacture of glass was at the Falls of Schuylkill, and was erected by Robert Morris and John Nicholson a short time before their failure. The glass-house was about

opposite the dwelling of Governor Mifflin. A row of stone houses, a little lower down the river, was built to accommodate the hands working in this establishment. John Thohurne, about 1808, altered the glass-house for the purpose of a calico-printing establishment. Thomas Harrison, Philip Jones, and Robert C. Martin, who were interested in other business,—which, however, they did not abandon,—invested a portion of their capital in the manufacture of green glass and flint glass, which they made at the glass-house, South Street, near the Schuylkill, in 1806-7, and manufactured largely in 1808. They made at that time green and white half-gallon, quart, and pocket-bottles. This establishment consisted of a brick glass-house forty-three feet square, a brick warehouse fifty by forty-three feet, and a small house and stable. Philip Jones & Co. were proprietors in 1810. The Schuylkill Glass-Works, “two miles from Philadelphia,” which were in operation in 1819, were the same South Street works. Edward Lowher, drug and color merchant, at No. 144 North Third Street, had for sale, in September, 1819, window-glass from those works. Caleb Foulke was agent for the Schuylkill Glass-Works, at No. 19 Minor Street. In 1820, George and Jacob Peterman, flour merchants, were agents at No. 366 High Street, for the Schuylkill Window-Glass Manufactory, in South Street, near the Schuylkill River. In May, 1822, H. & W. Lawrence advertised that the Schuylkill Glass-Works were to let. In February, 1823, George and Jacob Peterman gave notice that they had again undertaken the “agency of the Schuylkill Glass-Works, at South Street wharf, recently called the Philadelphia Works,” and that they had for sale window-glass of all sizes. Thum & Bitters, of North Third Street, made, in 1808, pint and half-pint pocket-bottles and phials. J. Benson, at No. 101 North Third Street, near the corner of Arch, in 1809 established himself as a lapidary and glass-cutter. “He is the only regular-hred working lapidary in America, having served his apprenticeship with one of the first lapidists in Europe. He is ready to cut and polish American topaz, ruhies, amethysts, sapphires, cornelian, etc.”

In 1810, a manufacturer of glass, similar to that made in Staffordshire, England, was established in the city with a capital of \$11,000. In 1867, there were thirteen factories, whose works were located in New Jersey, and outside the city limits, but whose headquarters were in the city,—viz., Whitall, Tatum & Co.; Whitney & Brothers, Bodine & Brothers, Burgin & Sons, Philadelphia Glass Company, John H. Moore, Benners & Brothers, Sheets & Duffy, Joseph Porter & Sons, Hay & Co.; Richards & Brothers, United States Glass Company, and Thomas Mills. The business is principally confined to the manufacture of green and crown glass bottles, but window glass is also made in several establishments, as well as double-thick and cylinder-plate glass for coaches, pictures, and large windows. Fruit-jars are also largely made,

as well as tubes for philosophical apparatus, syringes, etc. The glass ceilings of the House of Representatives and the Senate chamber in Washington were made at the establishment of J. & G. H. Gibson, 125 South Eleventh Street.

The statistics of glass manufacture from 1860 to 1882 are as follows:

Year.	No. of Establishments.	Capital.	Raw Material.	Labor.	Product.
1860.....	16	\$712,000	\$408,250	928	\$1,244,800
1867.....	..	.....	.....	.....	1,500,000
1870.....	14	1,254,116	577,032	1,448	1,660,823
1875.....	..	.....	.....	.....	2,000,000
1880.....	8	1,202,419	696,392	2,237	1,821,958
1882.....	35	.....	.....	3,116	3,132,500

The Swedish colony on the Delaware had 80 sheep in 1663, and ten years later their wives and daughters were said “to employ themselves in spinning wool and flax, and many of them in weaving.” The manufacture of linen and woolen cloth was among the first branches of industry that Penn endeavored to ingraft on his infant colony. Having, by one of his first legislative acts, in 1682, invested the Dutch, Swedes, Finns, and other foreigners, then amounting to 3000, with all the rights of citizenship, and by the proclamation of like privileges and full religious freedom opened his colony to all persons of good fame, he instituted fairs for the encouragement of domestic manufactures and trade in general.

These fairs, until they were abolished, in 1775, offered a ready market for all domestic products, and particularly for woolen and linen goods.

To stimulate the production of cloth of every kind the proprietary offered premiums for the first piece; that for linen cloth being awarded in 1686 to Abraham Opdengrafe. Wigert Levering, one of the German-town settlers, is mentioned as a weaver by trade, and his descendants are among the most enterprising men of the present day. Matthew Houlgate, who purchased land in 1698, erected a fulling-mill between that year and 1720. Among the manufacturers of the province in 1698 are mentioned those of wool, such as druggets, serges, and camlets, etc., which daily improved in quality; and among the tradesmen were dyers, fullers, comb-makers, card-makers, weavers, and spinners. The price in 1688 for spinning worsted or linen was about 2s. the pound, and for knitting coarse yarn stockings, half a crown a pair. Wool-combers and carders received 12d. per pound, and the pay for journeymen tailors was 12s. per week and “their diet.” The first in this line mentioned in Philadelphia was Charles Blackman, who enjoyed the Governor’s patronage. Fulling-mills are mentioned as in operation on Darby River, “about five miles from the city.”

The first settlers in the American colonies were from necessity compelled to adopt, to some extent, as regard their wearing apparel, the furs and skins of the wild animals, by which they were surrounded. The “buckskins” continued to be used by the poorer classes until after the Revolution, and are mentioned in the “schedules” of some of the wealthiest.

In 1721, Charles Lawrence, "lately come from Carolina," had for sale, at his place of business in Chestnut Street, "very good *slegs, tombles, and shuttles*, for weavers." The growth of woolen manufacture, checked and stunted by hostile British legislation, had yet a firm foundation in the spirit of self-reliance among the people. The assessors reported in 1760 twelve fulling-mills in Philadelphia. In February, 1765, the protection of sheep and the promotion of woolen manufacture was encouraged by the following action:

"We, the subscribers, desirous to encourage the raising of sheep, agree and pledge our honor to each other that we will not eat or suffer any lamb, or any meat of the *mutton* kind that we know or believe to be under twelve months old when killed, to be eaten in our families from this time until the first day of January, one thousand seven hundred and sixty-seven. And further, that we will not purchase, nor suffer to be purchased, for our families' use or otherwise, during said time, any kind of meat from any butcher or other person who, to our knowledge or belief, has killed any lamb from and after the first day of February instant, until the first day of January one thousand seven hundred and sixty-seven."

The Heart-and-Hand Fire Company, in February, adopted similar resolutions.

Similar action was resorted to in 1775, when the fires of the Revolution were kindling. Among the earliest measures for public safety was the determination not to purchase or use mutton or lamb between the 1st of January and the 1st of May, and no ewe lamb until the 1st of October, 1775. In this action they were nobly aided by the butchers, sixty-one of whom, most probably the entire fraternity of the city and county, determined that they would not kill animals of the specified description during the time mentioned.

The following were the names of the butchers who signed the agreement:

George George, Arnel Baker, David Everhart, Edward Ash, Joshua Ash, Jr., George Walker, Thomas Renshaw, Peter Rutter, George Gottfried Whellper (Woelpper), John Schreiber, George David Seckel, Ludwig Karcher, John George, Philip Hall, George Shollman, Philip Odenheimer, Peter Schreihser, Caleh Ash, John David Seckel, Adam Albourg, Jr., Edward Lushey, John Odenheimer, Ludwig Urn, John Everhartt, Martin Pica, Martin Borell, George Vettes, Caspar Haas, Christopher Hanckel, Philip Alburger, John Rusk, Christopher Philler, Michael Lauer, Michael Schreiber, Michael Boyer, Michael Milburger, Peter Lowry, Henry Weaver, Conrad Hoff, Frederick Welpert, Samuel Rusk, David Uber, John Runter, Jacob Danbendistil, George Kurtz, Adam Widenstein, Heinrich Pleiffer, Nicholas Leehman, Daniel Shoub, Peter Summer, George Fritt, James McCutcheon, Sebastian Seyberth, Jacob Ox, Jacob Speck, Frederick Lent, Johann Christian Better, Valentine Horter, Frederick Eggfng, Stephen Rigler, Caspar Hefft, and John Beyler.

Wool was less abundant at this time in Pennsylvania than in the more northern colonies, nevertheless a piece of broadcloth, the manufacture of the province, and "one of the finest and best perhaps ever made on the continent," was exhibited at the London Coffee-House in January, 1772. The German, Scotch, and Irish were chiefly employed in linen manufacture.

The non-importation resolutions of the general Congress in 1774 were instrumental in giving a decided impetus to all kinds of American manufactures.

In March of the following year a society was formed

for the purpose of encouraging woolen manufacturers, of which Joseph Stiles was the president, James Cannon secretary, Christopher Marshall, Richard Humphreys, Jacob Winey, Isaac Gray, Samuel Wetherill, Jr., Christopher Ludwick, Frederick Kuhl, Robert S. Jones, Richard Wells, Thomas Tilbury, James Popham, and Isaac Howell managers. In order to demonstrate to this society the availability of machinery to an extent not then dreamed of, James Hazle, through the columns of the *Pennsylvania Ledger*, in February, notified the community that he had invented a machine to go "by clockwork," by which a girl of ten years old could take care of forty-eight spindles, either of wool or cotton, and card three hundred and sixty pair of cards in proportion. This machine, Mr. Hazle declared, could be worked by horses or by water, as he was willing to demonstrate. The society hired a house at the corner of Ninth and Market Streets, fitted it up for the purposes of a factory, and invited farmers and citizens to bring forward their wool, flax, and hemp. The following appeal to the women of the county was published in August:

"TO THE SPINNERS IN THIS CITY AND COUNTY.

"Your services are now wanted to promote the American manufactory at the corner of Market and Ninth Streets, where cotton, wool, flax, etc., are delivered out. Strangers who apply are desired to bring a few lines from some respectable person in this neighborhood.

"One distinguishing characteristic of an excellent woman, as given by the wisest of men, is that 'she seeketh wool and flax, and worketh willingly with her hands; she layeth her hands to the spindle, and her hand holdeth the distaff.'

"In this time of public distress you have now, each of you, an opportunity not only to help to sustain your families, but likewise to cast your mite into the treasury of the public good. The most feeble effort to help to save the State from ruin, when it is all you can do, is, as the widow's mite, entitled to the same reward as they who, of their abundant abilities, have cast in much."

This appeal was not made in vain in a practical sense. The next month it was announced that the company had four hundred spinners in their employ, and that naught but capital by the accessions of new members was desired to increase the sphere of usefulness.

In August, 1770, the brig "Dolphin," Capt. Stephens, arrived from England, bringing no goods but such as were allowed by the non-importation agreement, six thousand pounds in specie, and a number of weavers as passengers. "Such," said the *Pennsylvania Journal*, "are the fruits of the agreement that, instead of dry-goods, which drained the colonies of their cash and kept them as poor as beggars, they are now receiving from England what may well be termed the nerves and sinews of any country."

The Revolution was unfavorable to industry of every kind, and the infant manufactures of the city, in common with those of the whole country, did not escape its influences. The great want of woolen clothing for the army, and the fact that Philadelphia was twice called on to furnish blankets, which could not be purchased in her stores, show to what limits the infant industry had shrunk. In May, 1775, Mr.

Samuel Wetherill, Jr., had a factory for woollens in South Alley, between Market and Arch and Fifth and Sixth Streets. His letter to the Board of War, in the same month, informs them that in consequence of the rise in the price of wool he would be unable to comply with his contract for a supply of cloth. This rise in price, from 7s. 6d. per pound to 10s., would not permit him to comply with his contract at 20s. per yard, and he asked for 27s. 6d. These prices in provincial currency enable us to comprehend the difficulties that beset the Congress, with an empty treasury and doubtful currency, and foretell the sufferings of the American army throughout the winters of the Revolutionary war.<sup>1</sup>

The increased attention which was given to the manufacture of wool and cotton during the war of the Revolution, created among Philadelphia weavers a desire to procure that machinery by which the British manufactures had been so greatly extended. The power-loom of Arkwright, invented in 1774; the mule-jenny of Crompton, invented in 1775, and which superseded the machines of Hargreaves; the improvements introduced by Arkwright and others in carding, drawing, and roving, and above all the adoption, in 1783, of the steam-engine of Watt to spinning and carding at Manchester, were all extensively used by British manufacturers. These improvements were guarded by that sleepless vigilance that has always watched over British interests. In 1786, a set of brass models of Arkwright's machinery was made and packed in England for the agent of Tench Coxe, of Philadelphia, but was seized on the eve of its shipment, and its objects defeated.<sup>2</sup>

In 1784 fulling-mills were very numerous throughout Pennsylvania, and so great was the demand for spinning-wheel irons that from one shop in Philadelphia, in 1790, there were sold 1500 sets, an increase of 29 per cent. over the previous year. The adoption of the Federal Constitution in 1789, and the enactment by the first Congress of the law for the "support of government . . . and the encouragement and protection of manufactures," gave immediate impulse to every manufacturing industry. In 1792-94 a number of carding-machines for cotton and wool were constructed, and eight spinning frames on the Arkwright principle, and several mules of 120 spindles were erected at the Globe Mills in the Northern Liberties. In 1803 Dr. James Mease, of Philadelphia, succeeded in importing two merino rams and two ewes, which arrived in December of that year.<sup>3</sup> This was the first

successful attempt to introduce the Spanish sheep in Pennsylvania.

The first merino sheep which came to this country, as far as is known, were sent over from Cadiz, in Spain, in the frigate "Alliance." They were consigned to Robert Morris, as agent for Louis Stephen le Couteulx de Caumont, a Frenchman, who came from France in 1786, and, after many experiences, finally settled at New Amsterdam (now Buffalo) in 1804. At the time when Mr. Morris received those sheep, Le Couteulx had left the United States, and returned to France as passenger in one of Morris' ships. The latter therefore sent his sheep to his country-seat at the Hills, and informed the owner that the flock would be restored to him when he returned to this country. The letter of Mr. Morris was dated Oct. 30, 1789. Le Couteulx returned to the United States in February, 1790.

The Philadelphia Domestic Society, incorporated March 2, 1805, had a capital stock of \$10,000, in shares of \$50, with power to increase the capital to \$100,000. The president of the society was Paul Cox, and the warehouse was at No. 11 South Third Street. The directors were empowered to make advances upon American manufactures, especially those of wool, cotton, or linen, to the amount of half the value of the articles when deposited in the warehouse, and to pay the residue when sold, deducting interest and a commission of five per cent. At the time of its establishment, it was ascertained that five hundred weavers were out of employment, and were being forced into other occupations. By aid of the society all found employment. The dividends during the first six years were of secondary importance, but they reached sometimes eight per cent.

In 1810 there were three woolen-mills and sundry smaller ones established at Philadelphia and one at Germantown. Cassinet (wool and cotton) was made in the Philadelphia mill, and merino wool into broad-cloth at Germantown.

The scarcity and high prices of woolen goods about 1809-10, created by restrictions upon trade, again turned public attention to sheep husbandry. A merino society was formed in the Middle States, of which Dr. Mease and Thomas Bulkley, of Philadelphia, were active members. At the auction that year at Philadelphia, sheep of that breed sold from \$250 to \$300 each, a lot of twenty-five sold for \$5900, another lot of thirty-three ewes sold for \$250 each, and bucks for \$350 each. The stimulus thus given to woolen manufactures is evidenced in the number of patents issued in 1812 for the processes of the manufacture of wool, cotton, flax, and hemp. Among these was a patent for a portable, or family spinning-machine, of very simple construction, invented by Rev. Burgess Allison, of Philadelphia. It drove from ten to fifteen spindles, and occupied very little more space than the common spinning-wheel. To Cyrus Shepherd, Philadelphia, a patent was issued for a water-loom.

<sup>1</sup> That very expressive French phrase, "*Sans-culottes*," was first used by Baron Steuben to express his admiration of the shabby and shirtless soldiers of the Revolutionary army.—Dr. Duglison's *Discourse in Commemoration of Peter S. Du Ponce-au, LL.D.*

<sup>2</sup> It is worthy of note to say in this connection that Samuel Slater, the father of American cotton manufacture, was induced to emigrate to America by having seen in a newspaper that £100 had been granted by the Legislature of Pennsylvania to John Hague, for introducing a machine for carding cotton, and of the establishment of a society, with legislative encouragement, for the manufacture of cotton.

RESIDENCE OF THOMAS DRAKE.

WASHINGTON AVENUE,

GERMANTOWN, PA.

J.P. Smith Del.

© 1880

In those days every farmer kept a flock of sheep, and wool constituted a large proportion of the clothing of the family. It was carded, spun, and woven at home, and made into garments for both sexes. The best clothes for the men and boys were made of what was called "fulled cloth." This was made at home, of the finest material, and taken to the mills known as "fulling-mills," where it was put through a process of thickening, dyeing, and finishing. The women used to wear gowns of cloth which was called "pressed woolen." This was simply home-made flannel, taken to the mills above named, and pressed, so as to present a glossy surface. Every farmer had a small patch of flax. This was pulled and spread out in rows on the ground, "rotted," and then "broken" and "swingled," and was thus prepared for the combing, carding, and the "little wheel," as the machine was called on which the flax was spun, to distinguish it from the larger machine for spinning wool. It was woven into cloth for table-covers, toweling, sheeting, and shirting. The "tow," which was the coarse portion combed out on the "hetchel," was spun into a coarse yarn, of which a cloth was made for summer suits for the men and boys. The tow shirt, so commonly worn, was, when new, an instrument of torture to the wearer, as it was full of prickling spines left from the woody part of the stalk. The tailor of the old days, with his goose, traveling from house to house to make up the clothes for the men and boys, or to cut and fit them for the gossiping tailoress to complete, is not known to the present generation.

The peace with Great Britain, in 1815, opening the country to foreign importations, produced injurious effects upon the woolen manufactures, and these disturbing influences continued in active force for several years. In 1819 the hands employed in the woolen manufactures of the city had been reduced from 1226 to 260.<sup>1</sup> The subject of protection to manufactures was again resumed and ably discussed by Mathew Carey, of Philadelphia.<sup>2</sup> The tariff act of 1824 increased the duties on woolen goods from twenty-five per cent. to thirty-three per cent., but this augmentation of duties on woolens was counteracted in some measure by the reduction of the duty on imported wool by Great Britain from sixpence per pound to one pence, enabling the British manufacturer of such goods to undersell the American manufacturer in the markets of this country. The failure of the Woolens Bill of 1827 was followed by the Harrisburg Convention of July 30th. From Hazard's "Register of Pennsylvania"<sup>3</sup> it appears that there were in Philadelphia and its vicinity in 1827, 104 warping-mills at work, sufficient to employ 4500 hands,—over 200 dyers, 3000

spoolers, and 2000 bobbin-winders. Weavers, dyers, and warpers averaged \$5 per week wages, spoolers 50 cents to \$1.50, and bobbin-winders \$1 and found.

It was in this year (1827) that William Divine, a son of an Irish linen manufacturer in Ireland, emigrated to America and settled in this city, and commenced work on a hand-loom. Promoted to a broad-cloth loom in the Penn factory, in the next eleven years his industry and economy enabled him to start in business, with one set of woolen-machines, in a mill on Pine Street, near Twentieth, in the manufacture of Kentucky jeans. In 1841 he built the Kennebec Factory, on Naudain Street, near Twenty-first, and in 1846 he purchased the Penn Factory, and added cotton manufacture to his other industry. Mr. Divine was an improver of machinery, and was made president of the Association of Manufacturers of Textile Fabrics in Philadelphia.

The founder of the extensive woolen manufactory at Conshohocken, near the city, was Benjamin Bullock, who was born at Yeadon, near Bradford, in England, in 1796, and emigrated to this country when nineteen years of age, and commenced his business life as a wool-comber in the establishment of Henry Korn. Having accumulated some capital, he associated himself with Anthony Davis, in 1822, under the firm-name of Bullock & Davis, on Front Street, above Poplar, in the wool-pulling business. In the next year he removed to 32 North Third Street, where he remained for nearly thirty-seven years. He embarked in manufacturing woolen goods in 1837, in the Spruce Street Factory, afterward owned by Mr. William Divine, then foreman in the mill. Subsequently Mr. Bullock purchased the Franklin Mill, on Haydock Street, near Front, and at a later period he bought from Bethuel Moore the property near Conshohocken, which is believed to be the first woolen-mill started in the State of Pennsylvania. During the war between the States, Bullock's Sons had in operation thirteen factories, making blankets and blue and army kerseys, in which three thousand persons were employed.

Twenty years ago it was written that the mention of the name of Thomas Drake brought with it "the entire history of the manufactures of the city of Philadelphia," and the remark is not less true now than it was then. Born at Leeds, England, April 9, 1807, he came to the United States in 1828 with his parents. His father, John Drake, was a manufacturer of woolen goods, and was in business at Manayunk up to the year 1846. Thomas Drake was employed in his youth in a factory at Blackwood, N. J., where was made the first lot of the goods called Kentucky woolen jeans. The little town did not embrace the business possibilities of which he had determined to take a grasp, and he returned to the more promising field of Philadelphia. He was in the employ of Richard Whitely, at Rock Hill, and others until 1837, when he set up business under the name of T:

<sup>1</sup> Report of committee of citizens, October, 1818.

<sup>2</sup> It was for the discussion of the condition and importance of protecting manufactures that the "Philadelphia Society for the Promotion of National Industry" issued in the fall of 1819 the six addresses to the citizens of the United States.

<sup>3</sup> Vol. i. p. 18.

Drake & Co. His partners were his brother, James Drake, George Sutton, and William Flynn. They produced from their factory, which was at Manayunk, woolen jeans and other similar goods.

In 1838 this firm was dissolved, and Thomas and James Drake began business for themselves on Pine Street, near what was then called Schuylkill Third Street. James Drake retired in 1840, and Thomas remained in that locality until 1841, when he built a brick mill at Twenty-third and McDuffy [now Naudain] Streets. This factory had 70 woolen looms and 6 sets of woolen cards. In 1845 he erected for the manufacture of cotton a mill at the corner of Twenty-first and Pine Streets, with 224 looms and 10,000 spindles, where he made large quantities of print cloths, which had previously been a specialty of the New England mills. In 1861, Thomas Drake retired from business, and built for himself a splendid mansion on Washington Avenue, Germantown, where he still resides. His success is largely attributed to the fact that he never failed to meet an obligation. He has prided himself on never giving a note. In 1864 he was chosen a director of the First National Bank, and in 1874 a director of the Fidelity Trust Company, which offices he still holds.

Charles V. Hagner, in 1820, rented fifty inches of water-power of the Schuylkill Navigation Company, and erected a mill, which he put in operation, grinding drugs and making oil, and shortly afterward added a fulling-mill. Alfred Jenks made him a number of power-loom for weaving satinets. These were the first power-loom used in the manufacture of woolen goods in Pennsylvania. Hagner continued to operate the mills until 1839, when they were purchased by Joseph Winpenny, who converted the mill into a woolen-factory. The mill in 1840 had 3 sets of machines making broadcloth and kerseys, and employed some 50 hands, producing 1000 yards of goods per week. In 1847 the firm of John Winpenny & Brother was dissolved by the withdrawal of Samuel Winpenny, and reformed under the same style, in 1848, with Joseph Winpenny, which continued until 1853, after which the business was continued by John Winpenny alone until his death, in 1856. The mills were then rented for a brief period by Philip A. Richard, and in 1858 they passed into the possession of Edward Preston, Jr., and Bolton Winpenny, as Preston & Winpenny, who introduced the manufacture of cotton and wooleu goods, and who continued to operate them until 1860, when Preston withdrew, and in 1861, Samuel Winpenny, and his nephew Bolton, assumed control, the latter soon after becoming sole proprietor.

The original Pekin Mills were erected by Moses Hey, who worked them until 1836, when they were sold to Joseph Solms, who enlarged and greatly improved them. He continued to operate them until his death, in 1852, when they became the property of his son, Sidney I. Solms, who raised the original mill

to five stories in height, and in 1862 erected a new mill with engine-house, picker-, dyeing-, and drying-houses. These mills contain 14 complete sets of woolen machinery, with 256 looms and all necessary appliances for preparing and finishing.

The Washington Woolen-Mills were established in 1840, by William Hammill. They were bought in 1858 by David McConkey, and in 1859 by Perry M. Hunter, who enlarged them, and in 1864 sold an interest to Samuel DeHaven. They were operated by Hunter & DeHaven until November, 1864, when they were sold to John B. Bishop. In 1868 they passed into the possession of William Watt.

The Glen Riddle Mills were established in 1842 by Samuel Riddle, for the manufacture of cotton and woolen goods. The goods manufactured are tickings, stripe and plaid shirtings, cottonades, canton flannels, brown drills, Wyoming sheetings, and tricot, cotton, and Kentucky jeans, which are widely known and appreciated throughout the country.

Benjamin Schofield and Thomas Branson, under the style of Schofield & Branson, in 1838, purchased a property on American, Jefferson, and Philip Streets, and erected their buildings for the manufacture of hosiery. A limited capital confined their early labors to 2 sets of woolen cards, 2 sets of knitting-frames, and 24 hands, but within three years their success in business required enlarged accommodations, and the outbreak of the war between the States multiplying many times the ordinary demand for stockings, it was found necessary, in 1863, to still further enlarge the plant.

The Lincoln Mills, at Manayunk, were founded by David Wallace, in 1859, for the production of cotton and woolen goods. In 1867, James Wallace, the son, was admitted, and the style became D. Wallace & Son. The manufacture of cotton goods at the Glohe Mills, on Germantown Avenue, below Girard Avenue, was begun in 1859 by Robert and James Mair. At starting these mills possessed 10 looms, and turned out weekly about 2200 yards of cotton goods. In 1866 the firm of J. & R. Mair built and removed to the Kirkland Mills, at the corner of Adams and Amber Streets, and a new feature was then introduced,—the mixture of woolen and cotton goods. In 1871, James Mair retired, and his son, James Mair, Jr., became a partner in the house of Robert Mair & Co. Isaac Stead commenced the manufacture of reps, terries, and cassimeres in 1863, at the corner of Sixth Street and Columbia Avenue, in the spinning of woolen yarns, employing only about 600 spindles. Very shortly afterward he opened a branch factory at Ninth and Wallace Streets, with 720 spindles, and in 1867 he commenced the manufacture of reps at Coral and Adams Streets, and in 1869 he removed to Taylor and Coral Streets.

The Steadfast Mills, at Frankford, were established in 1868 by Joseph N. Ruch & Co., and were purchased in 1870 by R. Greenwood & Bault, and filled with improved machinery.

*John B. Ellison*

John B. Ellison, who was in his day one of the largest cloth merchants of Philadelphia, was born in this city in the year 1794, his parents being James and Margaret Ellison. He was the oldest of four children, the others being Elizabeth, a prominent minister in the Society of Friends, William C., and Martha B. Ellison.

Mr. Ellison received an excellent academical education at the well-known Westtown School. His tastes developing in the direction of mercantile pursuits, he became, in early years, a confidential clerk with Benjamin Warner, a prominent publisher and bookseller of this city. In 1823 he established himself in the cloth business at the southeast corner of Second and Market Streets, thus inaugurating a mercantile house which eventually developed into one of the most extensive of the numerous commercial features of Philadelphia. In after-years his two sons, William P. and Rodman B., were admitted into partnership with him, the title of the firm becoming John B. Ellison & Sons. Under this name the business is still carried on, although the founder of it has been dead nearly two decades. The members of the firm now comprise, in addition to those named, Henry H., William R., and John B. Ellison, grandsons of the founder, together with William H. Lewis and Samuel Collier. The business of the house, mainly owing to the inflexible industry and unblemished integrity of him who established it, has attained extended proportions, as is evidenced by its handsome and commodious quarters, Nos. 22, 24, and 26 South Sixth Street, extending back to Nos. 13, 15, and 17 Decatur Street, together with its branch houses in London, New York, and Boston. The Philadelphia building was erected by the firm in 1881. There is no wholesale cloth-importing house in America more extensive in its operations than this. In addition to his connection with the great mercantile enterprise which he founded, Mr. Ellison was identified with several other institutions of high standing of a financial as well as of a public character. He was not, however, in any sense of the word, an aspirant for political preferment. His tastes led into entirely different pursuits. He was, nevertheless, emphatic in the interest which he took in the affairs of government, as well as in party development. He ardently espoused Whig principles, and as ardently transferred his attachment to the Republican party when it came into power, in 1861. His relief in the success of the war of the Rebellion was very earnest, but he died one month prior to the final establishment of peace.

Mr. Ellison was a member of the Society of Friends, as were also his ancestors for over a century. He was naturally of a retiring disposition, not at all inclined, as already indicated, to seek undue prominence or public applause. He was strongly given to the exercise of charitable deeds, although mainly in an individual and quiet manner. Early in life he took an active interest in the Philadelphia Society for the Establish-

ment and Support of Charity Schools, which was incorporated Sept. 8, 1801. He was treasurer of the society from Jan. 5, 1841, to Jan. 3, 1860, and chairman of the board of managers, of which he had been chosen a member on Jan. 6, 1829, from Jan. 11, 1860, until his death, which occurred on the 7th of March, 1865.

He was married, Feb. 5, 1824, to Hannah Moore, a daughter of John and Hannah Moore, who was born in the year 1796. She survived her husband over fifteen years, dying on the 14th of July, 1880. They had four children, namely, William P., Rodman B., Elizabeth M., and Margaret Ellison.

Whether Pastorius and his associates brought with them a knitting-machine, and thus founded, contemporaneously with Germantown, the great industry of hosiery and knit goods, which were long known as Germantown goods, will always remain a fruitful source of discussion. That John Camm in 1723 was a "stocking-weaver" is established by the *Weekly Mercury* of December 10th of that year; that he came from Ireland about 1708, as a wool-comber, is also established by records among the Friends; and the deed-hook of Chester County hears record that John Camm, a stocking-weaver, bought land from Elizabeth Booth. Alexander Mack, Jr., the son of the founder of the Dunkers, who emigrated from Germany and settled in Germantown, was also a stocking- and glove-weaver. He made a pair of "leg-stockings for his brother Christopher for 5s.; one pair of stockings for his man-servant, 5s.; another pair for his maid-servant, 4s. 6d.; a pair for himself as a Christmas-gift on the 25th of December, 1773, 6s.; one pair for his wife's sister, 5s.; and two pair of gloves for his children, 3s." The Sours, father and son, had under their superintendence at least twenty-four different trades or occupations, and among them that of stocking-weaving. At an early day, among the characteristics of Germantown was its unrivaled manufacture of superior stockings by hand-weaving. The Rev. A. Burnaby, who traveled through the country in 1759, hears testimony that "their manufactures are very considerable. The Germantown thread stockings are in high estimation, and the year before last, I have been creditably informed, there were manufactured in that town 600,000 dozen pairs. Their common retail price is \$1 per pair." An advertisement in the *Pennsylvania Gazette* of May 1, 1766, of "David Mause, hosier," at the "sign of the Hand-in-Hand Stocking Factory," shows that he had lately erected a number of looms for the manufacturing of thread and cotton stockings and other kinds of hosiery. John Murgatroyd advertises in the *Gazette* of Aug. 16, 1770, for stocking-weavers to go to North Carolina, showing that Philadelphia was then recognized as the chief seat of stocking-weaving. A letter from Jacob Morgan to V. S. Bryan, dated Reading, Dec. 23, 1777, shows that there were supposed to be one hundred stocking-weavers in Germantown out of

employment. The stocking-weavers were a prominent feature in the Federal procession to celebrate the ratification of the Constitution. "Their colors white, with a pair of blue stockings across, a cap above, a finger mitt below, encircled with a gilded heart, a gilded crown, with ten horns or points, each on a blue star; above all the motto 'The Union of American Stocking Manufacturers.'" These facts serve to show that the present great industry of woolen hosiery and fancy knit goods had its earliest plant in Germantown, where it has continued to grow and prosper. Whatever advance stocking-weaving may have made, it is nevertheless a fact that the *present* great industry, in its various branches, had its origin within the last half-century.

So late as 1840 all hoods, scarfs, and a greater part of the woolen knit hosiery consumed in this country were imported from Nottingham and Leicester.

It was not until 1850 that patents for knitting-machines were taken out. In 1840 workmen familiar with the hand-loom began to produce woolen hosiery and fancy knit goods at their homes, and from this small beginning, aided by the cheapness of American wool, the manufacture has developed until importation has almost ceased. So extensively has Philadelphia engaged in the manufacture of these goods that the name of "Germantown goods" has been stamped upon them,—descriptive both of their character and the location of their principal production.

The establishment at Germantown known as the Hosiery-Mills was founded in 1831 by John Button, a native of Leicestershire, England, who emigrated to this country in 1830. His father, Joseph Button, was a lace manufacturer, and the son brought with him as "tools" two small machines for knitting hosiery. These, upon his arrival in Philadelphia, he put in operation, and for twelve months manufactured children's socks, which, from their superior character, found a ready sale. Being the only manufacturer of hosiery by machinery, he enjoyed a monopoly for some years. He removed to Germantown, and set up his two machines on Negley's Hill, near the site of Henson Brothers' mill, and soon afterward added eight other machines. Following the manufacture of children's socks came that of men's hose, as the natural result of success in the former enterprise. Equally fortunate in the latter manufacture, he founded the large establishment, and "Germantown knit goods" became familiar in every city and village of the country. In 1835 he greatly enlarged and extended his manufacture, having purchased three acres at the corner of Main Street and Walnut Lane, and erected a building sufficiently large to accommodate his machinery. Other enlargements followed as the business grew in extent. Conyers Smith, a brother-in-law, was associated with the founder from the first, but withdrew in 1851, and returned to England, possessed of an ample fortune. Joseph Button, a son, was admitted to the partnership. In 1861 the father

retired from the business he had founded and so successfully conducted for thirty years. In 1865, Joseph Button withdrew, and his brother, Conyers, became sole proprietor. In 1869 the nephew, Theodore A. Flew, was admitted, the style of the firm becoming Conyers Button & Co.

Thomas Dolan is the senior partner of the firm of Thomas Dolan & Co., proprietors of the vast manufactory of men's wear known as the Keystone Knitting-Mills, which has been entirely built up by his foresight and energy. He was born in Montgomery County, Pa., Oct. 27, 1834. His early tendencies were in the direction of commercial life, and while yet a young man he became connected with a Philadelphia commission house, whose principal trade was in the sale of fancy knit goods and hosiery. It was while engaged in the service of this house that Mr. Dolan acquired his first knowledge of the possibilities involved in the manufacture of knit and kindred woolen goods.

In May, 1861, he began manufacturing, establishing himself at the corner of Hancock and Oxford Streets, on the spot where his present extensive factory buildings are erected. This was early in the era of Germantown goods, and he speedily built up a prosperous trade in them. By 1866, however, there had been a heavy overproduction in the line of knit goods, and the market became sluggish and rather unprofitable for a while. At this juncture Mr. Dolan inaugurated the use of the finest worsted yarns in the manufacture of various lines of goods, particularly of "Berlin shawls," as they were called. Within five years this latter business had been run up to \$1,000,000, when suddenly, in 1871, it began to decline with great rapidity. In 1872, Mr. Dolan abandoned the manufacture of Berlin shawls, and, instead, began making worsted materials for men's wear. In 1875 he introduced the manufacture of men's fancy cassimeres and ladies' cloakings, the knit goods trade still being maintained. About 1878 he abandoned the manufacture of hosiery, which he had instituted several years before, and in 1882 the manufacture of knit goods, which had been carried on since his start in business, in 1861, was also given up, and from thenceforth Mr. Dolan devoted himself exclusively to men's wear. At the present time his establishment is the largest in America producing its particular line of goods, and there are very few in the world engaged in so extensive a business.

For many years Mr. Dolan was individually engaged in the manufacturing business. He is now, however, the senior partner of the firm of Thomas Dolan & Co., under whose name the great industry is carried on. Mr. Dolan's partners are Rynear Williams, Jr., Charles H. Salmon, and Joseph P. Truitt. Mr. Dolan has general superintendence of the entire business. Mr. Williams supervises the financial affairs of the establishment. Mr. Salmon superintends the weaving and finishing department, while

Mr. Truitt's duties are mainly directed to the oversight of the spinning department.

Although distinctly engrossed in his industrial establishment, yet Mr. Dolan has many other business interests, and is officially connected with a number of commercial and public enterprises. He is president of the Quaker City Dye-Works Company, president of the Philadelphia Association of Manufacturers of Textile Fabrics, president of the Textile Dyers Association, vice-president of the National Association of Wool Manufacturers, vice-president of the Union League Club, trustee of the Pennsylvania Museum of Industrial Art, and director in the following-named corporations: Merchants' National Bank, Delaware Mutual Insurance Company, United Gas Improvement Company, Brush Electric Light Company, Philadelphia Traction Company, the School of Design for Women, and the University Hospital.

The Hinckley Knitting-Mills, of Germantown, owe their foundation to Aaron Jones, an Englishman, who came to this country in 1830, and in 1832 set up two old-fashioned knitting frames, thus commencing in a small way the manufacture of shirts, drawers, and woolen hosiery. His son Aaron followed the father's emigration, and was employed as a salesman of the goods. In 1834 the machinery was disposed of to Thomas R. Fisher, proprietor of the Wakefield Mills, Fisher's Hollow, Germantown, and Aaron Jones, the son, became the manager of the mills. He continued to manage the Wakefield Mills with great energy and sagacity, and with entire satisfaction to the proprietor, until 1840, when he retired, and commenced business on his own account. He started with two knitting-machines, in a small mill and house combined, which was the germ of the present establishment. In 1866 his three sons,—Thomas, Aaron, Jr., and John E.,—were taken into partnership, and they have since managed the establishment. The firm-name is now Aaron Jones' Sons, and they employ 200 persons.

Thomas Thompson commenced the manufacture of upholstery goods and cabinet findings, in 1838, at No. 134 Dock Street. The establishment is the first of its kind in the United States. In 1862, Mr. Thompson associated with himself two of his sons, Thomas M. and Lewis A., who, with Washington Nicholson, composed the firm of Thomas Thompson, Sons & Co. Every article which enters into the manufacture of cabinet-ware, cars, carriages, and undertakers' profession, are produced in the establishment. Formerly all their goods were imported, but at the present time, and to a great extent owing to the enterprise and energy of this firm, the American fabrics are finding their way all over the country.

The manufacture of hosiery was commenced by Martin Landenberger in 1843. His business steadily increased until 1847, when the financial panic, which ruined so many others, enabled him to purchase a considerable quantity of wool at very low figures, which, when trade revived, permitted him to extend

his works even more prosperously than before. In 1849, his business demanding more extensive quarters, he occupied a new building containing eighteen rooms. In 1856 he removed to the present site in Germantown. His two sons, Martin and Charles, with Charles Wyler, were admitted to the concern.

The Leicester Knitting-Mills originated in 1843, through the efforts of Charles Spencer, who that year in a garret on Main Street, Germantown, commenced operations. In 1846 he removed to the site of St. Stephen's Methodist Episcopal Church, and in 1848 to the flour-mill of Wyndham H. Stokes, on Mill Street, where he remained until 1850, when he erected the mill on Cumberland Street. Mr. Spencer, the father of the founder, was the superintendent of the works until his death, in 1863. Charles, the founder, was sole proprietor until 1857, when his brother William was admitted, and the style became Charles Spencer & Co. In 1867, Charles Poulson was admitted to the firm, and in 1868, Robert S. Spencer became a partner. William G. Spencer retired in 1869, and Charles H. was admitted in 1870.

The manufacture of worsted and woolen yarns was begun in 1847, by Benjamin Schofield, in the second story of a mill at Twenty-first and Hamilton Streets, employing twelve hands and turning out one hundred thousand pounds of yarn. He continued these for three years, and in 1850 removed to a factory at West Manayunk. Two sons, Benjamin, Jr., and John, were admitted into the concern, which continued under the style of B. Schofield & Sons until 1857, when the senior retired, and the firm-name became B. Schofield, Jr., & Brother. Another mill, contiguous to the first, was built in 1872. In 1874, Edward F. Mason was admitted into partnership, and the name was changed to Schofield, Mason & Co.

The manufacture of military trimmings, regalia, and theatrical goods was commenced by William G. Mintzer, at 131 North Third Street, in 1834, and was continued by him until his death, in 1870. His executors offered the establishment for sale, and the entire concern was purchased by R. M. Robinson and C. A. Hart, who formed a copartnership of R. M. Robinson & Co., and operated the business for a year, when Clarence A. Hart purchased the entire interest of his partner, and became the sole proprietor of the business.

The "narrow textile fabrics," commonly called small wares, and known on the continent of Europe as *passamenteries*, are largely manufactured in Philadelphia. Trimmings, embracing so much in a lady's vocabulary, and extending even to men's wear and to their carriages and beds, are in this country often all manufactured by the same parties, notwithstanding the different uses to which the articles may be applied. "Ladies' dress trimmings," as a distinctive branch, is of comparatively late date in the United States. Military goods and carriage-laces come under this branch of textile fabrics. These goods are manu-

factured in Philadelphia in over thirty establishments. That of William H. Horstmann & Sons, established in 1815, was in its infancy confined to the manufacture of coach-laces and fringes, but since that has embraced a wide circle of fabrics. In 1824 the founder, W. H. Horstmann, introduced from Germany the plaiting or braiding machines, and the next year the Jacquard machines. The fancy taffeta bonnet-ribbons of this establishment received the highest praise at the exhibition of the Franklin Institute in 1852. The manufacture of these goods was commenced by J. C. Graham in 1850, and are carried on by Henry W. Hensel, Fisher & Evans, J. B. Cornet, and many others. Sewing-silk, singles, tram, and organzine are manufactured at many establishments, the oldest in date being that of B. Hooly & Son. F. S. Hovey, since 1843, has been engaged in this industry.

There were, in 1880, 151 establishments manufacturing hosiery and knit-goods in operation, employing 100 engines (of 2568 horse-power); power-knitters (circular heads), 7886; balmorals, 441; rih-top frames, 813; sachets and gloves, 189; hroad frames, 445; sewing-machines, 2184; hand-knitters, 587,—producing in dozens per week: hosiery, 279,120; fancy articles, 20,870; gloves, 5100; and sachets, 5270.

The investigation of the manufacture of textile fabrics in Philadelphia, made by Lorin Blodget, exhibits the following census returns of the number of establishments and the value of hosiery made in each of the last three census years, as follows:

	Establishments.	Product.
1850.....	76	\$561,657
1860.....	103	2,114,315
1870.....	76	5,368,736

A more careful classification for 1870, made for Philadelphia alone, gave the following:

	Establishments.	Product.
Cotton hosiery.....	27	\$1,499,635
Cotton and woolen mixed.....	14	866,666
Woolen and worsted.....	34	1,673,648
Total.....	75	\$5,938,950

This Mr. Blodget considered “undoubtedly short by a considerable amount in value, and omitted nearly half the domestic manufactures; yet the greatest growth of this industry has taken place during the last ten years, increasing the number of establishments more than half, and more than doubling the total production.” This opinion was confirmed by the census of manufactures taken in June, 1883, by which it was ascertained that the hosiery and knit-goods establishments numbered 95, employing 8306 operatives, and producing \$8,173,415 of value annually.

The earliest mention of the manufacture of carpets in this country is that of William Calverly, of Loxley's Court, whose carpets were “asserted to be superior to those imported, and which was thought worthy of exhibition at the Coffee-House.” The date of this is supposed to be 1774. The manufacture of

Turkish and Axminster carpets was begun in 1791, in the Northern Liberties, by William Peter Sprague, who wove a national pattern with a device representing the crest and armorial achievements pertaining to the United States. John Dorsey, in 1807, was manufacturing carpets in Philadelphia which were “considered equal to the best imported.” In 1830 every description of carpeting made in Europe was produced in this country, and of a quality nearly equal to the imported; and this manufacture has continued to grow and increase in extent of production and beauty and variety of style until the country is nearly independent of all European competition.

The census of 1860 showed 124 establishments engaged in this manufacture, with an aggregate capital of \$882,625. The raw material annually used was valued at \$1,393,771, giving employment to 1925 males and 755 females, and producing an annual value of \$2,915,618. In 1870 the establishments had increased to 244, the aggregate capital to \$3,341,000; the value of raw material annually used to \$5,675,697; the number of males employed to 3453, and that of females to 1253; and the value of the annual production to \$10,191,784. Lorin Blodget, reviewing the census of 1870, says, “The carpet manufacture has an organized association, and its great advantages in the last five years can be definitely stated. The increasing use of the class most largely made here has taken the entire production as promptly as it could be offered, most of the trade being from the manufacturers direct to western consumers. Large establishments for the manufacture of Brussels, Axminster, velvet, and other higher grades have been erected since 1869, and these now amount to about one-fifth of the production.

The report of the society for 1875 claimed a total manufacture of nearly 19,000,000, and an increase in the machinery in the form of mills, steam-power, looms, etc., of more than 100 per cent., and says, “There is a considerable increase in the relation of steam to hand-power on the looms, and of steam power in the spinning machinery. The full diversity of forms desired in consumption being now supplied here, the quantity imported has greatly fallen off, and little attempt is made in Western cities to obtain any portion of foreign.” The estimated value of the carpet production of the city for 1875 was \$19,000,000. The census of 1880, as regards Philadelphia, was very unsatisfactory to her people and authorities. Its accuracy, as far as it went, was questioned, and the extent of its inquiries was not deemed wide enough. So far as carpets were concerned, the report fell far short of the estimate made by Mr. Blodget for 1875, the value of the annual product being stated at only \$14,263,510. The census returned but 170 establishments, while the census for 1870 reported 244, and that for 1860 enumerated 124. The capital employed in 1880 was set down at \$7,174,483, and the value of materials at \$8,964,381. These figures appearing

J. & J. DOBSON,  
CARPET, BLANKET, CLOTH AND PLUSH MILLS,  
PHILADELPHIA.

inconsistent with those of previous reports, and with the known increase in manufactures, the city authorities, in 1882, set on foot an enumeration of industries, from which it appears that in carpet manufacture there were as follows :

	No. of Establishments.	Total Labor.	Value of Products.
Carpets, Brussels, tapestry, ingrain, etc. ....	237	11,043	\$20,300,445
Carpets, rag, list and chain.....	99	187	235,000
Carpet, wood.....	1	55	82,500
Oilcloths.....	3	471	1,497,850
Total.....	340	11,756	\$22,115,795

The Monitor Carpet-Mills were established by John Dornan in 1863 with three looms and four hands. In 1866, the demand for increased room and the concentration of his workmen induced him to purchase the site on Oxford, Howard, and Waterloo Streets, at the same time raising the number of his looms to fifty. Robert Dornan, a brother, became at this time a partner, and in 1868, still larger quarters were demanded.

The carpet-mills of John Bromley & Sons originated in 1845, with a single hand-loom worked by John Bromley in a rented room at Germantown road and Fifth Street. In 1860, he had thirty-seven hand-loom in operation, and larger quarters being necessary, he removed to the corner of York and Jasper Streets. In 1868, his elder sons withdrew and established the carpet-house of Bromley Brothers, opposite to their father's mill.

In the manufacture of carpets in 1880, Mr. Blodget enumerated by name, location, power employed, looms, etc., 216 establishments, with 4132 hand-loom and 1346 power-loom, whose monthly production was 2,756,400 yards, making a yearly production of 33,076,800 yards. When the statement was made at the meeting of the National Association of Wool Manufacturers, held in November, 1879, in Philadelphia, that the carpet manufacture of the city would reach 20,000,000 yards for the year, it was received with much incredulity, yet the most absolutely faithful examination and record of looms in operation, afterward made, showed that over 30,000,000 was the product of the city's looms.

The carpet manufacture was begun in 1830 by Andrew and William McCallum, who had then recently emigrated from Scotland. In 1831 the three-story stone building erected in 1813 by Jacob Clemens, and which had been used by various occupants in many ways, was purchased by the brothers McCallum, and, from its location in a valley where there was a rather remarkable echo, received the name of the Glen-Echo Mills, by which they are known all over the Union. The firm is now McCallum, Crease & Sloan.

The origin of the Oxford Carpet Mills was in 1832, the founder being William Hogg, who continued the business until 1846, when he retired, having amassed a considerable fortune, leaving the business to his son, William, who, in connection with a younger brother,

continued the same until 1850, when the partnership was dissolved, William becoming sole proprietor.

The Falls of Schuylkill Woolen-Mills were established by John Dobson in 1855, who associated with himself, in 1861, his brother, James Dobson. Extensive additions were made from that time to 1874, when it became the largest individual enterprise in the United States, employing 1400 hands.

The manufacture of carpets by William Hunter & Sons commenced in 1857, on Hanover Street. In 1863 it was found necessary to enlarge the facilities, and he rented the adjoining property until that on Cumberland Street was purchased, in 1866, when the concern became known as the Cumberland Mills.

The early German and Irish population in the proviuce gave much attention to the cultivation of flax and hemp, and a duty was imposed at a very early day on the importation of these articles. As early as 1684 the productions from both flax and hemp won the commendations of the proprietary, and to stimulate their manufacture a premium was offered for the first piece of cloth. The export of flaxseed to the extent of 9895 hogsheads, valued at £22,263, shows the extent to which this article was cultivated as early as 1750. The bounty laid by Parliament on hemp, together with that granted by the Assembly in the "Act for Continuing the Encouragement for Raising and Imposing Penalties on Persons Manufacturing Unmerchantable Hempin to Cordage," gave an impetus to these manufactures, which Thomas Maskin illustrated in Latin hexameters as the happy condition of the farmer, fed and clothed from the products of his own fields.<sup>1</sup>

In 1698 the manufacture of a variety of linen goods is mentioned, which daily improved in quality, and Beauchamp Platagenet says, "The soil would yield a half-ton of flax and a ton of hemp, worth £12 to the acre, and a profit of 6s. a day to the labourer." The linens made at that day were for the most part of quite a coarse texture, but served the purpose of the colonist. The cost of labor, we learn from a letter of Penn, retarded the work and caused the stoppage of the one establishment engaged in the manufacture of sail-cloth, ticking, and linens. In 1727, Charles Brockden, Samuel Harrison, and Joseph Breintnall petitioned the Assembly, setting forth that they had advanced a considerable joint stock for the manufacture of sail-cloth, and, after many impediments, had manufactured a good merchantable piece; "but, as it happens to things new and useful, many must be made before the operators can become expert and ready, so that it is not yet capable to defray its expense without some suitable encouragement of the publick." For this reason they prayed that a bill should be brought in upon the subject. The petition was laid on the table. In 1764 efforts were

<sup>1</sup> "Esurise dulces epulas depromit inemptas  
Et proprio vestis vellere texta placet."

made to assist the poor in several ways. A number of the inhabitants, for the purpose of furnishing means of employment, agreed to form themselves into a company and to raise a common stock to be laid out in the purchase of hemp, flax, and land, in employing people to manufacture the same into coarse linen. For the better carrying this plan into execution, they agreed to purchase William Brown's interest on Penn Street, near Pine, and there to prepare and erect suitable buildings for carrying on the design. Buildings were erected, and more than 100 persons were employed in spinning and weaving. Others wanting to engage, it was resolved to reduce the shares to £100, the capital not being less than £75,000. This enterprise flourished until the troubles of a few years afterward distracted the attention of the company from the proper prosecution of their business. In 1774 a linen-printing establishment was set up on the Germantown road, near the three-mile stone, by John Walters and Thomas Bedwell, where it was advertised "a single gown may be printed; waistcoats, chair-bottoms, &c., in durable colors." In 1775, John Marshall, thread-maker, an Englishman, who had been employed by the managers of the House of Employment, requested patronage for a twisting- and throwing-mill of his own invention. A committee reported that he was worthy of encouragement, and in the same year the Society for Promoting American Manufactures applied for assistance, stating that they employed 700 spinners, weavers, and bleachers. The high price of flax operated as a discouragement. They desired the Assembly to offer bounties for raising it "on the Dublin plan."

In 1779, Hewson & Long re-established, in the latter part of the year, in Kensington, adjoining the glass-works, a linen-printing factory. In the advertisement they said,—

"They intend carrying on the printing of blue handkerchiefs with white spots; also neat gown-patterns of the same color, which they will warrant to be as durable in washing and color as any imported from Europe. Little need be said of the ability of the subscribers, as there are a number of yards now in wear, done by them, equal to any done by the boasted Britons. The savage followers of Great Britain have made such destruction of their works and materials that renders them unable to carry on their business in all its branches."

The number of oil-mills in the province in 1784 indicated a great production of flax, and as but few, if any, linen-factories existed, a vast household manufacture of linen was to be inferred. In the celebration of the adoption of the Federal Constitution there were about sixty representatives of the rope-makers of the city, who bore the motto, "May the production of our hands be the neck-cloth of him who attempts to untwist the political rope of our Union."

One of the earliest manufactories of any extent in the United States for spinning and weaving flax, hemp, and tow by water-power was that of James Davenport, put in operation with machinery, patented in 1791, at the Globe Mills, at the north end of Second Street. It was visited by Washington and sev-

eral members of Congress, who expressed their great satisfaction at the ingenuity and novelty of the machinery. The President, in particular, evinced a high opinion of the merits of the patentee, Mr. Davenport, and an earnest wish that a work so honorable to the infant manufactories of the Union might be extended to other parts of the country. The labor was performed by boys, one of whom was able to spin, in a day of ten hours, 292,000 feet of flax or hempen thread, using 20 to 40 pounds of flax or hemp, according to its fineness. One boy could also weave, on the machinery, 15 or 20 yards of sail-cloth in a day. Specimens of the spinning were deposited in Peale's Museum for public inspection. It was the purpose of Mr. Davenport to manufacture the machinery for sale, but he died soon after, and the apparatus of the Globe Factory was sold in 1798, and the business broken up.

John G. Baxter was recommended by Governor Snyder in a special message, sent to the Legislature in 1809, for patronage and reward as the meritorious inventor of a machine to manufacture flax and hemp into yarn, whereby four persons could do the work of thirty. Notwithstanding this strong indorsement, the committee to which the subject was referred grudgingly recommended an appropriation of three hundred dollars, but the Legislature, yet more niggardly, refused to give anything.

Two establishments for the spinning and weaving of flax existed in 1810 in the vicinity of the city, one of which produced annually 72,000 yards of canvas made of flax and cotton; in the other the flax was both packed and spun by machinery. Thirty looms were employed, and it is said 500,000 yards of cotton bagging, sail-cloth, and coarse linen might be made annually. The manufacture of linen goods fell off all over the country as the development of cotton manufacture progressed. The censuses of 1860, 1870, 1880, and the summary for 1882 do not enumerate one establishment in the city. The manufacture of cordage in this city was begun at a very early day, there being in 1689 several rope-makers having "large and curious ropewalks, especially Joseph Wilcox." Robert Graves' patent for a cordage-machine was purchased in 1827-28 by Tiers & Myerle, of Philadelphia, who established a large factory for the manufacture of cordage on a new principle, the threads being placed on different revolving spools, passed through perforated cast-iron plates, and then through a cast-iron tube of suitable diameter for any size of rope. The cordage factories of the city in 1860 numbered 7 establishments, with an aggregate capital of \$187,500, in which the raw material annually consumed was valued at \$131,339, giving employment to 183 men and 3 women, and producing an annual product of the value of \$252,850. In 1870 there were 9 establishments engaged in this manufacture, whose aggregate capital was \$528,700, in which the wages paid for the year amounted to \$114,720, the raw material

W. H. Fisher

Edwin H. Fisher

to \$438,882, and the annual product to \$969,570. In 1880 there were 10 establishments, whose capital was \$925,500, the material consumed being valued at \$1,090,500, and the annual product at \$1,541,748. The product in 1882 was valued at \$1,973,000. The flax spindles then numbered 1000.

The largest manufacturers of cordage in this city are the firm of Edwin H. Fitler & Co. Edwin H. Fitler, the senior of this firm, was born on the 2d of December, 1825, at the old Fitler homestead, at Second and Otter Streets, where his parents, William and Eliza Fitler, had resided for many years. He received an academic education, and decided to adopt the law, together with conveyancing, as a profession. With this purpose in view, he entered the office of Charles E. Lex, afterward city solicitor. He was also for some time in the office of his brother, Alfred Fitler. During this period of his life he acquired much practical information which has since been of great benefit to him. As he himself says, he learned enough law to know when and how to keep out of its entanglements. But his tastes and inclinations were almost entirely toward mechanical and industrial pursuits, and he finally concluded to abandon his legal studies for more congenial associations.

In 1846 he entered the cordage manufacturing establishment of George J. Weaver, which at that time was situated at the corner of Germantown Avenue and Tenth Street. Two years later he became associated with Mr. Weaver in the conduct of the business, the name of the firm being George J. Weaver & Co. In 1859, Mr. Fitler bought out his partner. After that, at various times, a number of partnership changes occurred, until the formation of the present firm of Edwin H. Fitler & Co., the members of which are Edwin H. Fitler, Conrad F. Clothier, Edwin H. Fitler, Jr., and William W. Fitler. Ever since 1859, however, Mr. Fitler has been the actual as well as the nominal head of the firm, the business operations of the establishment, under his vigorous and efficient direction, expanding year by year, until at the present time there is no other manufactory in the United States which produces so great a quantity of material as does the firm of Edwin H. Fitler & Co. In 1880 the establishment was removed to Bridesburg, in the northeastern portion of the city, about fifteen acres of ground being required to accommodate the plant. In all his business dealings Mr. Fitler bears an unsullied reputation for straightforward and conscientious conduct.

Besides his great cordage industry, Mr. Fitler is identified with other enterprises of wide scope and importance. He is a director in the North Pennsylvania Railroad Company, the Northern Liberties Bank, the Northern Liberties Gas Company, and the Arch Street Theatre Company. He is also president of the Cordage Association of the United States, as well as a director of the Edwin Forrest Home.

Although Mr. Fitler is essentially a business man,

and the active head of a vast industrial enterprise, he is, nevertheless, equally as active in his attention to public affairs. After such a statement it may appear paradoxical to say that he has never held office in his life, nor has he ever been an officer-seeker. Nominations for high positions, municipal and State, have been repeatedly offered him, but he has ever declined to enter a contest for political preferment. He has, nevertheless, for years maintained a very high position in the councils of the Republican party, whose principles he espouses, and there is, probably, no man in private life in Philadelphia whose name is more widely known throughout the State than is that of Mr. Fitler. He has also been of incalculable assistance to his party by reason of his generous pecuniary contributions, and by his valuable services as chairman of State Finance Committees, as well as through his active efforts looking toward the promotion of that oftentimes powerful political factor, the Union League, in which he is at present a vice-president. In every sphere and from every point of view, Mr. Fitler is undeniably a public-spirited citizen of wide influence in the community.

Among other manufactures, the possibility of making silk engaged the attention of Penn, and in 1726 he wrote of it that "Providence seems now to have pointed out one more method for employing even the Mean and Weak, as well as others of both sexes to considerable advantage by raising silk, *which, as I am credibly informed, is produced here as fine and good as the world affords, and with as much ease.*" From the same authority we learn that in 1736, "there was a distant prospect of some advances toward a silk manufacture, and some among them had shown how practicable a design of that kind was by making some small quantities equal to French or Italian."

This industry continued to grow in interest, for a London paper of Nov. 7, 1765, notes the departure, within four days, of 100 journeymen silk throwsters for New York and Philadelphia. The American Philosophical Society continued to encourage the young manufacture by setting on foot, at the suggestion of Franklin, then in London, a subscription for a flature of raw silk, which was established in Philadelphia in 1769, under the management of a skillful and intelligent Frenchman. To Franklin, among others, was intrusted the dispensation of the premiums of the Society of Arts in the province, and he also sent a copy of the work on rearing silk-worms, by Sauvage, which furnished valuable aid. A plan and address from the committee of the society asked public encouragement and power to grant premiums to the amount of £500 yearly. The amount of £900 was raised during the first year, in sums of from £10 to £15, and was headed by that of Governor John Penn for £20. Cocoons were purchased with this money, and the building of the reeling establishment commenced. Silk-worm eggs and mulberry-trees were imported, and a digest of instructions compiled, pub-

lished, and distributed. In January, 1750, the filature was opened on Seventh Street, between Arch and Market. In 1771, 2300 pounds of cocoons were bought and reeled by the society. The first and second prizes were awarded for silk culture to Susannah Wright, of Columbia, and Joanna Entween, of Bethlehem. Out of Mrs. Wright's silk a court dress was made for the queen of England, and samples of it were deposited in the Philadelphia Library. New premiums were proposed of £20 for any quantity of cocoons over fifty thousand, £15 for forty thousand, and £10 for twenty thousand. Nicholas Garrison, of Race Street, notified the public that he would have mulberry-trees to sell in the spring at two pence each; and John Kaighn, Second Street, next door but one to Christ Church, had silk-worm eggs for sale. The society prepared during the season 150 pounds of reeled silk of such quality as sold in England for 20s. and 25s. per pound, exclusive of the Parliamentary bounty.

A considerable quantity of silk stuffs was made by Grace Fisher, a minister among the Quakers, some of which Governor Dickinson presented to the celebrated Mrs. Catherine Macaulay. Dresses of domestic silk were worn before the Revolution by the mother of the Hon. Francis Hopkinson, and many other ladies, some of which, as heirlooms, have descended to, and are cherished by, their families. The reeled silk of the filature brought 19s. 2d. per pound, in London, while the China silk was selling at the same time for £1 2s. 6d. The filature undertook to reel silk for private owners at 6d. per ounce. The Assembly granted £1000 to the society in March. Nevertheless, the society lost by paying too much for cocoons, many of which were dried and useless.

This early effort at silk-raising and manufacture was terminated as a public enterprise by the Revolution. After the peace with Great Britain it was partially revived by individuals, and Dr. Aspinwall, of Connecticut, planted a nursery of Italian mulberries on Poplar Lane, in Philadelphia, but as the filature was never reopened, the cultivation was abandoned.

In 1827 Dr. James Mease, of Philadelphia, in accordance with a Congressional resolution, prepared a manual on the growth and manufacture of silk, and the business was resumed in this city by Mr. Tees and B. F. Pomeroy. The *Moris multicaulis* fever sprang up, and in April, 1828, the Pennsylvania Society for the Promotion of the Culture of the Mulberry and the Raising of Silk-Worms was organized, and offered premiums of various amounts for the greatest quantity of sewing-silk of the best quality, for cocoons, mulberry-trees, etc.

Another filature was opened in Philadelphia, but it did not succeed, although it turned out some products of the finest grade. Two banners of Philadelphia silk, each twelve feet long and six feet wide, were woven, and, having been dyed by some Germans in the city, were exhibited, with a few smaller articles, as

cravats, handkerchiefs, etc., at the fair of the Franklin Institute, in 1830, and at the ensuing session were presented one to the Congress and the other to the Legislature of Pennsylvania, and were received by both bodies with appropriate acknowledgments. The samples of silk from this filature were assayed for the Chamber of Commerce at Lyons by a sworn and licensed assayer, and declared to be of an extraordinary quality, and admirably adapted to the uses of fabrication.

The excitement upon the subject of silk continued through 1835, in which year the "Philadelphia Silk Culture and Manufacturing Company" and other associations were formed. The Legislature of Pennsylvania added to the excitement by offering, in 1838, a premium of twenty cents a pound for cocoons, and fifty cents for reel silk, produced in the State, until 1843. The reaction came in 1839, and silk-raising died out. The manufacture of goods from silk, however, is now an important industry in Philadelphia. In 1880, Mr. Blodget wrote, "There are several new classes of goods made in the mills in and near Philadelphia, seven or eight of them being occupied in making silk-mixed upholstery goods or furniture coverings, with as many more on reps and terry, not including silk. Fringes and trimmings of silk and of *Schappe* silk, or silk waste, chenille trimmings and ornaments are largely made, ten or twelve establishments being so occupied. The silk and silk-mixed ornamental manufactures will reach fully \$6,000,000 in value for the year 1880, if continued at the present rate of production." There were 51 silk-manufacturing establishments here in 1880, with 14,250 spindles.

The silk industry in 1882 was as follows:

	Establishments.	Value of products.
Silk, tram, organzine, and spun.....	5	\$710,000
" machine twist $\frac{1}{2}$ .....	1	140,000
" spun and noils yarn.....	4	170,000
" curtains and turcomans.....	10	524,000
" and mixed upholstery goods.....	14	1,682,000
" ribbon $\frac{3}{4}$ .....	1	261,000
" dress-goods $\frac{3}{4}$ .....	1	329,400
" and mixed trimmings.....	30	4,166,800
" gimp.....	2	111,600
" knit goods.....	5	114,000
" dyers' yarns.....	7	255,600
All silk.....	80	\$8,464,400

In both the wholesale and retail departments of the dry-goods trade Philadelphia has long been conspicuous among the commercial centres of the Union; and although the business is now so vast and diverges into so many channels that it is impossible to accumulate its statistics, yet, as a dealing and distributing point, this city undoubtedly surpasses all others, with, perhaps, the exception of New York. A brisk trade between Philadelphia and the English ports began soon after 1790, and "about this time," as an old chronicler says, "on the arrival of the spring and fall ships from England, the pavements all along Front Street, from Walnut to Arch Street, used to be lumbered and strewed before the doors of the importing dry-goods

Engr'd by A. H. T. 1852

James D. Forsythe

merchants with boxes and bales of English merchandise. . . . The city retailers, principally females, were to be seen hovering about as butterflies near the rivulet, mingling among the men, and viewing with admiration the rich displays of British chintzes, muslins, and calicoes of the latest London fashions." From such beginnings as these the dry-goods business of the city has, within some ninety years, grown to the proportions typified in the importing, jobbing, and retail houses that yearly handle many millions of dollars' worth of fabrics. At the head of these great dealers has long stood the firm of Hood, Bonbright & Co.

James Bonbright, now the senior partner, was born on the 19th of February, 1826, at Youngstown, Westmoreland Co., Pa. At the age of eighteen he came to Philadelphia, and entered the wholesale dry-goods house of Samuel Hood & Co., at No. 435 Market Street. A few years later he became a member of the firm, and upon the retirement of Samuel Hood, in 1849, the existing firm-name of Hood, Bonbright & Co. was adopted, Thomas G. Hood succeeding his father. The business of the house steadily increased, its requirements being met from time to time by removal to more commodious quarters. The present fine warehouse, on Market Street, running through to Filbert, was occupied in 1872, and has since been greatly enlarged by an additional structure on Filbert Street. The business of this firm is now by far the largest ever done by any dry-goods importing and jobbing house in Philadelphia, and extends into almost every State and Territory in the Union. Though Col. Thomas G. Hood retired from the firm in 1882, leaving Mr. Bonbright the senior partner and head of the house, the firm-name remains unchanged.

A memorable act of integrity in the history of the firm with which the subject of this sketch has been so long identified, deserves record in connection with his name. The following paragraph, relating to the act, is taken from *The North American*, in its issue of Nov. 18, 1881:

"Elsewhere in our columns this morning we publish a statement of a very remarkable and unusual character. It is such a statement as no business man of Philadelphia can read without a feeling of mingled pride and admiration,—admiration at the conscientious integrity which it illustrates, and pride at the fact that it is a representative Philadelphia firm which has furnished this striking and signal example of high-minded honesty. Nearly twenty years ago the firm which has since then developed into the great and well-known house of Hood, Bonbright & Co., sustained, through no fault of its own, reverses so disastrous as to compel its suspension. It made an honorable composition with its creditors and continued business. Its members then and there determined that the obligations which had been remitted should be paid to the last dollar, and from that time until now they have been engaged in accumulating a fund with that design. The fund has just reached the required amount, and distribution has accordingly been made to the amount of over \$100,000. The creditors who in 1861 gave an insolvent firm an opportunity to retrieve its fortunes, have lost nothing by their magnanimity, for they have now been paid principal and interest in full."

The event here referred to gave Mr. Bonbright the profoundest satisfaction. Worthily seconded by his associates, he had labored and waited for it with un-

faltering resolution. The final accomplishment of the cherished purpose was to him as the crowning success of his business career.

Cotton-seed were carried into Carolina by Mr. Purry, who settled a colony of Swiss near Purrysburg in 1733. From there it extended north, and was grown in the neighborhood of Philadelphia at the commencement of the Revolution. A letter from Richard Leake, of Georgia, to Thomas Proctor, in 1788, referring to the difficulty of cleaning the seed, says, "I am told they do this with great dexterity and ease in Philadelphia, with gins and machines made for that purpose." This passage has led to the inference that the foot gin had already been in use in Philadelphia. Through the influence of a society formed at Philadelphia, principally with a view to its manufacture, great increase in the growth of this plant was made. The invention of Eli Whitney, in 1793, conferred not only on the cultivators of cotton, but on all who use it, a benefit that cannot be estimated in money. On Dec. 20, 1791, William Pollard, of Philadelphia, patented a machine for spinning cotton, which is stated by Mr. White to have been the first water frame erected in the city. The want of success on the part of the inventor retarded the manufacture. At that time cotton machinery of all kinds was manufactured in the city, and John Butler, "cotton-machine maker and plane-maker," carried on the business at No. 111 North Third Street, and Mr. Garlich, from Great Britain, also made them. Felix Crawford, maker of flying shuttles, advertised himself at 364 South Second Street.

The first spinning-jenny seen in America was exhibited at Philadelphia early in the year 1775. In the *Pennsylvania Magazine or American Monthly Museum* for that year<sup>1</sup> may be seen a cut and description of this "new invented machine for spinning cotton or wool."

John Hague had invented at this time another spinning-jenny, and received from the Assembly £100 as a recompense "for introducing into this State a useful machine for carding cotton." In April, 1776, a committee of the Assembly reported "that upon examination they find the said machine was made and used in this province by both the persons above named (Tully and Hague) nearly at the same time, but unknown to each other, and that the committee think they are therefore alike deserving of reward." They recommended that £15 be awarded to each. On the recommendation of the United Society for Promoting American Manufactures in Philadelphia, the Assembly resolved to distribute one machine to each county at the expense of the State. An appropriation of £40 was awarded by the same society to John Marshall, an English thread-maker in the employ of the society, in 1776, for a silk-twisting and throwing mill of his invention. The encouragement

given to such inventions by the State Legislature, the American Philosophical Society, and by associations for promoting general or special manufactures was such that in 1789 some machinery of the kind was made in Philadelphia as well as in England. From the writings of Mr. Tench Coxe, it appears that a full set of Arkwright machinery for spinning cotton was in the city prior to 1790.

The first joint-stock company formed for the manufacture of cotton,<sup>1</sup> and by some authorities believed to be the first joint-stock company for any kind of manufactures in this country, was the United Company of Philadelphia for Promoting American Manufactures.<sup>2</sup> It was to continue three years from the date of the first general meeting, Feb. 22, 1775. The shares were £10 each, and the company was to begin the manufacture of woolens, cottons, and linens, and to carry it on to the greatest extent that their capital would admit. The first general meeting of the subscribers was held March 16th. Dr. Rush was elected president; Joseph Stiles, treasurer; James Cannon, secretary; Christopher Marshall, Jacob Winey, Isaac Gray, Samuel Wetherill, Jr., Christopher Ludwick, Frederick Kuhl, Robert Strettel Jones, Richard Wells, Thomas Tilhury, James Popham, and Isaac Howell, directors. On the 21st of March the house of William Smith, in Market Street, was leased for three years, at £40 per annum, for a factory. In October the factory employed 400 women. On November 8th, Robert Strettel Jones delivered the oration of the third year, from which it appears that the value of the linen goods manufactured amounted to £1443 1s. 7d., and the value of the woolen and cotton goods was £474 12s. With raw materials and other assets, the stock amounted to £5081 9s. 10d., exclusive of implements, new looms, and other machines valued at £254 14s. The value of one share, originally £10, was at the end of the second year £17 6s. 6d. It does not appear how long the original company conducted the business. Samuel Carpenter appears to have continued the woolen and cotton manufactory, as two years later he contracted with Congress to make woolens for the army. The business of the original company was resumed in 1787 by Tench Coxe and several of the first members in the same building, which was burned by an incendiary about 1790.

We have seen that to the United Company of Philadelphia belongs the honor of introducing the first spinning-jenny into this country, as well as that of first attempting to make cottons. This was in 1775. Two years after, the Pennsylvania Society for the Encouragement of Manufactures and the

Useful Arts was instituted. An effort to obtain Arkwright's machinery had failed, but the ordinary cotton goods were nevertheless being manufactured. The society was opened to all citizens of the United States, and its organization provided for a president, four vice-presidents, two secretaries, a treasurer, twelve managers, and a committee for manufactures. An admission fee of 10s. was required, with an annual fee of the same amount for expenses and premiums, and a manufacturing fund was to be raised by subscriptions of £10 or upwards, the profits from which were to be divided among the subscribers, who were to be the owners of the grounds, buildings, and improvements of the society, and the shares were made transferable. The development of the industry of the country was so fully aroused that there were eight hundred and fifty-three subscribers to the society in August, 1787.

Gen. Thomas Mifflin was elected president, and committees were appointed in the various wards to solicit further aid. The society also took measures to procure machinery for the manufacture of cotton from Europe, and in March, 1788, the managers obtained two complete machines for carding and spinning cotton, one of which would card forty pounds of cotton per day, and the other was capable of spinning fifty threads at a time. The news of the arrival of this apparatus was considered so important that it was thought worthy of special public congratulation.

The society immediately set to work to establish the enterprise. The machines were set up and some pieces of stuff were woven. In June, 1788, another bulletin of the progress of the undertaking was sent out.

By the 1st of November from the factory of the society there had been turned out 11,197 yards of jeans, satinets, and other goods.

The contributions to the Society for the Encouragement of Manufactures and the Useful Arts up to the 1st of November amounted to £1327 10s. 6d. The expenses were £453 10s. 2d. There were then 26 looms at work. Application was made to the Assembly for assistance. The managers stated that, by actual experiment, they had demonstrated the practicability of carrying on the manufacture of divers kinds of cotton goods to great advantage. They were of opinion that further beneficial results might be had by introducing the most approved machines used in Great Britain. An artist skilled in the management of them was in the city, and had offered his services. The society was too poor to engage him, and the encouragement of the Legislature was requested. The committee of the Assembly reported favorably; and on the 26th of March, 1789, was passed "an act to assist the cotton manufactures of this State," by which £1000 were appropriated as a subscription to one hundred shares of the stock of the society. The people were strongly in favor of

<sup>1</sup> "The first cotton-mill established in Philadelphia, Mr. Freedley is informed, was at La Grange Place, near Holmesburg, the machinery of which was supplied by Alfred Jenke, a pupil and collaborer with Samuel Slater, who established his manufacture of cotton machinery at Holmesburg in 1810. The oldest now in operation is the Keating Mill, in Manayunk, owned by J. C. Kempton."—*Philadelphia and its Merchants*, p. 232.

<sup>2</sup> This company is often spoken of as "the Manufacturing Society."

every measure that would tend to assist the manufactures of the country. Frequently arguments were written and published to add additional strength to the popular opinions. An article stated that jeans could be made so as to undersell those imported from England; and that the thread, cotton, and worsted hosiery manufactured in Germantown, Bethlehem, Lancaster, and Reading, which were sold at a dollar a pair, were of the same fineness as the imported stockings, which sold at 8s. 4d. and 8s. 6d. per pair. There were two hundred and fifty stocking-loom in the State, producing, on an average, one pair and a half of stockings per day, worth per annum £44,015 12s. 6d.

The manufacturing operations were under charge of the manufacturing committee. The address of Tench Coxe, before the society, on Aug. 9, 1789, in the University of Pennsylvania, furnishes somewhat in detail both the objects and the operations of the society. They seem to have been charitable as well as useful, and to design relief to the industrious poor as well as the employment of machinery. The interests of agriculture were not outside its care, and the encouragement of the cultivation of cotton came within its scope. Since 1762 great progress had been made in the manufactures of Philadelphia, which, Mr. Coxe's address shows, included hosiery, hats, gloves, wearing apparel, coarse linens and woollens, cotton goods, wool-cotton cards, and many other articles. The board of managers offered, in 1787, a gold medal of \$20 value for the most useful machine or engine to be moved by water, fire, or otherwise, by which the ordinary labor of hands in manufacturing cotton, wool, flax, or hemp, should be better saved than by any machine then in use in the State; also for raising and cleaning the greatest quantity of hemp, flax, or cotton; for the best specimens or patterns of printed linens or cotton goods stained within the State; for letter-press, in bound volumes, from Pennsylvania types and paper; for earthenware, flint-glass and bottles; for the greatest quantity of wool, and for bleached wax for candles. Premiums of \$30 were offered for the greatest quantity of hemp or swingled flax, and the greatest number of smiths' anvils; and premiums of \$50 for the greatest quantity of potash and pearlshes, and for the greatest quantity and variety of painters' colors made from the fossils and earths of the United States.

The premiums and awards of the society greatly promoted the cause of manufactures, and in connection with the large sum offered by the Legislature for a machine for making rolls for spinning, are said to have induced Samuel Slater, the father of cotton manufacturers in this country, to emigrate here. John Hewson, stimulated by these premiums, and with a loan of £200 from the State, under the act of March, 1789, was able "to enlarge and carry on the business of calico-printing and bleaching within this State." He was elected to print for the society in 1788, and

Gen. Washington was accustomed to point with pride to the domestic fabrics upon the person of Mrs. Washington from the establishment of Hewson.<sup>1</sup> The report of Samuel Wetherill, Jr., chairman of the manufacturing committee, made in 1788, shows the progress of the society in its first year. The contributions received in cash amounted to £1327 10s. 6d.; the expenditures for machinery, etc., to £453 10s. 2d., leaving a "circulating" capital of £874. Between 200 and 300 poor women had found employment and competent wages; a carding-machine and four jennies of 40, 44, 60, and 80 spindles had been set up. There had been manufactured 2959½ yards of jeans, 197½ yards of corduroys; 67 of federal rib, 57 of heavier fustian, 1567½ of plain cottons, 925 of linen, 1337½ of tow linen; total, 7111 yards. The net profit of their business was about thirty per cent. This exhibit of the operations for the first year was considered highly satisfactory by the Board of Managers, and being impressed with the importance of the cotton branch, they "beg leave to recommend in the strongest terms the prosecution of the manufacture by fresh subscriptions until a knowledge and due sense of its value shall induce some proper persons, either citizens or foreigners, to undertake the business.

This society succeeded the United Company of 1775, and occupied its building at the southwest corner of Market and Ninth Streets, which was rented from William Bingham at \$40 per annum. The building was burned by an incendiary on the night of March 24, 1790. The Supreme Executive Council offered a reward of \$300 for the apprehension of the author of an anonymous letter threatening to burn the manufactory, or for the incendiary. The perpetrator was never discovered. It was supposed that the place was burned by some enemy of American manufactures.

The influence of both of these companies upon the rising manufacturers of Philadelphia is traceable for several years through many of the branches of manufacture. Their influence extended even into political circles, and, together with that of Mr. Coxe, was exerted into so shaping the Federal Constitution that it would remedy many of the evils existing under the Articles of Confederation. Its success in manufacturing cotton caused many of the Southern delegates to the Federal convention earnestly to urge upon the people of their States an increased cultivation of cotton.

Tench Coxe, the ardent and able promoter of do-

<sup>1</sup> In November, 1789, the managers of this society addressed the Assembly in a petition. They stated that it was necessary, in order to protect the manufactures of the commonwealth, that a stop should be put to the practice of seducing artists and skilled mechanics to leave the State and take employment elsewhere. Another abuse was the exportation of machines and models, the evil effects of which had been shown in the purchase of two models for cotton factories, which had been sent abroad. They therefore proposed that the Legislature should pass a law to prevent such practices in the future. Under the influence of this memorial the Assembly was induced to pay attention to this subject, and in the next session, March 28, 1788, an act was passed to encourage and protect the manufactures of the State, which prohibited the exportation of manufacturing machines for two years.

mestic manufactures, deserves the gratitude of every American for the ability with which he encouraged their growth and his persistency in advocating their protection and advancement.

Both the United Company of Philadelphia for Promoting American Manufactures, in 1775, and the Pennsylvania Society for the Encouragement of Arts and Domestic Manufactures, in 1787, were aided and advanced by Mr. Coxe. Indeed, his whole life was devoted to encouraging and developing American manufactures. He early became an authority upon the subject, and his writings served both to encourage and develop the infant industries of this country. The cultivation as well as the manufacture of cotton received impetus from the life and labors of this leader in American industry, to whom Mr. Madison, in 1809, wrote, "Though tardy, I am not the less sincere in the acknowledgments of your two favors,—the one inclosing your printed remarks on the subject of cotton and wool. Your very early and continued attention to this important interest is entitled to the thankfulness of your countrymen."

The premium for calico and linen printing offered by the Pennsylvania Society for the Encouragement of Manufactures and Useful Arts, in 1775, probably led John Hewson, a Revolutionary soldier, to establish his calico-printing works about the year 1788-89. In the latter year he received a loan of £200 from the State of Pennsylvania "to enlarge and carry on the business of calico printing and bleaching in this State." He is said to have been an Englishman invited to America by Benjamin Franklin. He espoused the Revolution, and was taken prisoner at the battle of Monmouth by the British. Having made his escape, fifty guineas were offered for his recovery, dead or alive. His print-works were near Richmond, where Dyottville now is, and were continued by his son, of the same name, who inherited his father's probity and benevolence, and died at the advanced age of ninety-three. John Hewson, Jr., in 1808 manufactured calicoes, shawls, pocket-handkerchiefs, and bedspreads. His name appears in the Directory for 1817 as a calico-printer in Hall [Beach] Street near Warren, which was a short distance above Maiden [Laurel] Street. John Hewson, Sr., had retired at this time, and lived on Queen Street, near the Point bridge.

The calico-printing factory of Stewart at Germantown, and that of Thorburne, at Darby, date from 1803, in which year machinery for cotton-mills was made in Philadelphia by Eltonhead, which included carding-engines, drawing- and roving-frames, iron rollers, mules, and spindles. Seth Craige set up at the Globe Mills, about 1805, the first cotton-mill for the weaving of girth webbing. His business at the time was that of a saddler, and his shop was at No. 110 High Street. The webbing-mill was afterward developed into a cotton-mill of the most extensive character. About 1816 the establishment was en-

larged, and was considered the most extensive cotton-mill in the Union. Mr. Craige and John Houston conducted it. The sons of Mr. Craige,—Seth, Jr., and John Craige,—were afterward admitted to the firm, together with John Holmes, and the firm became Craige, Holmes & Co.

Among the earliest manufacturers of cotton and wool were the occupants of the Philadelphia Almshouse. In September, 1806, the managers of that institution gave notice that they would receive wool and cotton to be carded by machinery for batters and spinners at a moderate price. In subsequent years the managers of the almshouse received premiums for specimens in the manufacture of shirtings. At that institution, in 1808, Nicholas Mayer, formerly of the Northern Liberties, weaver and blue dyer, was superintendent of the manufactory. From the almshouse looms at that time were turned out flax and cotton sheetings, linseys, stripes, diapers, tickings, cotton and wool blankets, counterpanes, threads, etc. John Hill, whose office was at No. 247 South Second Street, in the new market, wove in 1808 on his own looms, and had for sale, satinets, muslinets, cotton stripes, shirtings, bed-tickings, and other cotton goods; and he said,—

"Of foreign gewgaws let's be free,  
And wear the webs of liberty."

John Thorburne & Son were in business in 1808, printing calico on North Third Street. They subsequently removed to the west side of the Schuylkill, near the Falls, where they carried on the same business. Their mill was at the mouth of Mill Creek, above the place where Flat Rock dam was afterward built. The construction of the dam by the Schuylkill Navigation Company backed the water around about Mr. Thorburne's mill and broke up his business. Their lines of manufacture in 1808 were printed calicoes, shawls, bedspreads, coatings, dressed cloths, tickings, dimity, shirtings, and sheetings of cotton.

Capt. John Towers, as early as 1808, wove and made seine twine, cotton bagging, and thread.

William Wood established the manufacture of cotton and woolen goods in 1838, and in 1860 occupied the Mount Vernon Mills, at Twenty-fourth and Hamilton Streets. The increase of the business in 1861 demanded larger quarters, and, by associating with himself John McGill, the house of William Wood & Co. was established. In 1867 additional premises were secured, embracing the area of ground from Twenty-first and Hamilton Streets to Twenty-second Street, and thence to Spring Garden Street. These mills are now the largest of their class in the city, employing 1000 people.

The firm of Thorp, Siddall & Co. established bleach- and print-works about six miles from the city, between Germantown and Branchtown, in 1809, upon a new method of printing. Previous to this time blocks were used for the printing of cottons, a tedious process, and not entirely satisfactory, even with the

PEQUA MILLS.

best attainable results. Mr. Siddall went to England in 1809, and brought back with him machinery and engraved rollers, which were used with the assistance of water-power. From this factory the first lot of cotton goods printed on the engraved rollers reached Philadelphia in October, 1810. The new process, as compared with the old, was considered wonderful. One man and two boys were able to print ten thousand yards of cloth, or fifty thousand children's handkerchiefs, in a single day. Within two or three years afterward, cotton and linen goods were stained and dyed in one color for various uses. In 1810, Alfred Jenks, who had worked with Samuel Slater in the cotton-mills at North Providence, R. I., came to Philadelphia, bringing with him drawings of cotton-working machinery, which he proposed to manufacture. It is probable that he built the machinery for the Globe Mill in Kensington. He built looms for weaving cotton lace for Joseph Ripka, and he constructed the first woolen-mill machinery for Bethel A. Moore's mill at Conshohocken. About 1819-20, Mr. Jenks removed his factory to Bridesburg. Francis C. Labbe, better known in later years as a dancing-master than as a manufacturer, came from France in 1812, and set up the business of calico-printer at No. 206 Cherry Street. After four years' trial he abandoned the effort, and found better remuneration in terpsichorean than in mechanical employment. About the year 1816, Capt. John Towers built at Flat Rock (Manayunk) two mills. On the 10th of April, 1819, he purchased the right to use one hundred inches of water from the Schuylkill Navigation Company at Flat Rock. Here he built a mill. He occupied the two lower stories as a woolen-mill for the manufacture of cloths. He afterward leased a part to Edward and John Preston. The third story was rented to Isaac Baird, cotton-spinner, who was the first to engage in that manufacture at the place, which was afterward the most extensive manufacturing neighborhood in Philadelphia County. Charles V. Hagner was the second mill-builder at Flat Rock. He commenced his operations in 1820, and probably had his mill buildings finished in the next year. Mr. Hagner devoted his water-power to the preparation of oil and grinding drugs; but subsequently he added a fulling-mill, the machinery of which was made by Alfred Jenks, of Holmesburg. These were power-looms for weaving satinets, and they were the first ever used in Pennsylvania for that purpose. Subsequently Mr. Hagner rented a part of his mill to Mark Richards & Co. They afterward erected a large cotton-mill farther up on the Schuylkill canal, at Manayunk. Moses Hey and Joseph Ripka were afterward part tenants of the Hagner mill, but eventually they built mill establishments for themselves. Mark Richards & Co. built a cotton-manufactory, operated with two hundred and fifty inches of water, at Flat Rock, in 1822. Samuel R. Wood built a mill for making white lead, the upper part of which was

rented to Borie, Laguerenne & Keating, for cotton-spinning. Ann Dawson, in 1822, built a cotton-mill at the lower end of the canal, which was operated by Morris & Wilson, and afterward by S. & T. Wagner. Borie, Laguerenne & Keating commenced the construction of a cotton-mill in 1825 at Manayunk.

David H. Mason and Matthias W. Baldwin, who were in business in 1825, manufacturing book-binders' tools and hydraulic presses for book-binders, formed a partnership for the purpose of engraving cylinders for calico-printing. They were the first engravers in the United States who undertook this sort of work, and they were assisted greatly by the increase of print-works throughout the country. Mr. Mason obtained a patent in 1822 for engraving and printing metallic plates. They began operations "in a narrow street, in the rear of Walnut Street, between Fourth and Fifth." Mason & Baldwin increased their business at No. 14 Minor Street, until they were ready to furnish not only engraved cylinders for calico-printers, but also calico-printing machines, drying calendering machines for the manufacture of cotton, silk, and paper, engravers' machines, stationary engines and machinery, and drop- and seal-presses. In the "Memorial of Matthias W. Baldwin," an account of the improvements of Mason & Baldwin in calico-printing cylinders is given.

This device had been previously used in bank-note engraving; but the application of the same principle to the preparation of copper cylinders for printing calico was a most useful process.

The following account of the construction of mills, comprising all that were erected at Flat Rock (afterward Manayunk), is compiled from "The Early History of Falls of Schuylkill, Manayunk," etc., by Charles V. Hagner. The dates are those of the sale of the water-powers. The mills were constructed afterward:

1819, April 10.—John Towers, 100 inches, woolen-weaving and cotton-spinning.

1820, September.—Charles V. Hagner, 100 inches, making oil, grinding drugs, fulling woolen cloth, weaving, and cotton-spinning.

1821, September 5.—William J. Brooke, 50 inches, flock for woolen rags, saw-grinding, and hat-body making.

1821, September 14.—James Elliot, 50 inches, oak-bark grinding and flax-spinning.

1822, January 8.—Mark Richards & Co., 240 inches, cotton-spinning and weaving.

1822, January 9.—Samuel R. Wood, 100 inches, white lead manufacturing and cotton-spinning.

1822, April 11.—Peter Robeson and George Smick, 100 inches.

1822, April 23.—William Alexander and William Rowland, 65 inches, saw-mill and grinding saws.

1822.—Ann Dawson, 150 inches.

1825, March 7.—Borie, Laguerenne & Keating, 100 inches, cotton manufacture.

1825, May 6.—Thomas B. Darrach, 100 inches.

1825, August 27.—Smick & Gorgas, 50 inches.

1825, September 3.—William J. Brooke, 25 inches.

An inch of water was "as much as will pass through an aperture one inch square under a bead pressure of three square feet measured from the surface of the water to the centre of the aperture."

The price at the commencement of the operations of the company was \$3 per inch. In 1822 it was increased, after the sale to Ann Dawson, to \$4.50 per inch, and after Sept. 3, 1825, it was raised to \$6 per inch. These prices were annual payments. In 1819 the Navigation Company advertised "the price is for the present, at \$3 per annum, in the nature of a ground- and water-rent for each square inch of an aperture under a three-foot head." One hundred square inches, it was computed, would yield enough power to grind ten bushels of wheat per hour.

The following is taken from an article published in one of the journals in 1823:

"The number of looms employed in the cotton manufactories in Philadelphia is estimated at 2000, requiring annually a supply of near 3,000,000 pounds of raw cotton, which produce 2,500,000 pounds of yarn. This is woven into 9,984,000 yards of cloth, of the average value of 20 cents a yard, and amounts to the sum of \$1,996,800. The value is supposed to be distributed as follows: To the planters, \$391,515; to the spinners, \$446,423; to the weavers and spoolers, \$648,960; to the master weavers, on the interest of money and profit, \$49,920; and to the merchant, for dye-stuffs, freights, and commissions, \$349,102."

It was believed that at that time the number of looms in Philadelphia would not fall short of 5000, and that there were in the city and its vicinity upward of 30 cotton-factories, most of them on an extensive scale. The average number of spindles used in these establishments was about 1400, and the number of persons actually employed was about 3000. "The Picture of Philadelphia in 1824," by Thomas Wilson, which included the well-known work of Dr. Mease, published in 1811, is a summary of "the principal factories of note in and near the city." A considerable number of them "near" were not in Philadelphia hut in adjoining counties, and some in New Jersey within a radius of thirty or forty miles from the city.<sup>1</sup>

<sup>1</sup> The following were noted as being in the city and county:

The Arkwright Steam-Mill in Front Street, Kensington, ten horse-power; calculated to spin annually about 90,000 pounds of cotton yarn. McCredy's cotton-factory on Darby Creek, 1700 spindles, 16 looms, works by water-power, employs about 60 hands, and manufactures cotton yarns and brown sheetings.

Frankford cotton-factory, 1816 spindles, manufactures weekly about 600 pounds of cotton yarn of Nos. 20-30.

Frasier manufactory, by steam-power, of sheetings, shirtings, and cotton yarn, corner of Fifth and Christian Streets, 1000 spindles.

Globe Mills, Northern Liberties, Germantown road, between Second and Third Streets, employs about 300 hands; manufactures gingham, drillings, checks, shirtings, and sheetings; has in use 3200 spindles, with carding and other machinery; weekly consumption of cotton, 18 bales, each weighing 300 pounds.

Holmesburg factory, 1800 spindles.

Kensington Cotton-Mill, employs constantly 163 persons, men, women, and children; uses 1500 pounds of raw cotton weekly into yarn Nos. 14-20; 1200 spindles.

Lodge's cotton-mill, Darby Creek, 924 spindles.

In 1824 there was a machine card-factory at No. 68 Market Street, which it was represented gave employment to 50 persons.

The cotton manufacturing establishments in 1827 numbered about 50, at an average annual rental of \$180; the houses occupied by weavers about 1500, at \$60 to \$80 a year; indigo used weekly, 2200 pounds; the goods daily produced were 81,000 yards, at an average value of 16 cents a yard. The whole wages of the operatives amounted to \$1,470,000 per annum; rents, to \$114,000; indigo, to \$228,800; flour for sizing, to \$9100; and the goods manufactured to \$3,888,000; requiring 20,050 bales of cotton, worth \$607,500. The goods made were gingham, checks, bed-tickings, and stripes, and were sold in the Southern and Western States, and shipped by packet to Boston. It was resolved at a meeting of cotton manufacturers, Feb. 3, 1829, to establish one or more private houses for the sale of their goods, and to discontinue sales at public auction, as having a tendency to reduce the prices below value and injurious to the interests of manufacturer, workman, dealer, and consumer.

Thomas Hunter established the Conestoga Print-Works at Hestonville, in 1829, in an old building which antedated the Revolution, and was during the war used as a foundry for casting cannon-halls; subsequently it was turned into a button-factory, and then altered to a dyeing and bleaching establishment, in which latter condition it was being used when Thomas Hunter purchased the property and commenced the business of calico-printing. In 1832 he began to work a copper cylinder made by John Agnew. The engraving of the rolls was the handiwork of Matthias W. Baldwin. When the cylinder for printing the cloth was introduced, steam-power was employed, and this is believed to have been the first use of a steam-engine in this connection. Thomas Hunter continued the business until his death, in 1848, when he was succeeded by two of his sons, James and John Hunter.

The Summerdale Print-Works owe their origin to John Large, who, in 1834, established the business of dyeing and printing cotton goods. In 1853, Charles H. Wilson became a partner. The business increased enormously, the production being 40,000 yards of finished goods per day.

The Richmond Dyeing and Finishing Works were established in 1838, on Richmond road, by James Martin, an experienced English dyer and weaver. In 1850 the works were removed to the corner of Richmond and Tioga Streets, where the introduction

McCalmont's factory, Bristol township, 18 carding-machines, gives work to about 100 persons.

Merion Cottou-Mill, Mill Creek, for the manufacture of cotton yarn, 940 spindles.

Richards' Flat Rock Canal cotton-factory, seven miles from Philadelphia, at Manayunk, 1500 spindles, employs 200 people.

The woolen manufactories were as follows:

Falls of Schuylkill, 7 carding-machines and other apparatus.

Fisher's woolen-factory, Germantown.

Kelly's woolen-factory, Germantown.

Rodman's woolen-factory, Germantown.

of machinery enabled the proprietor to carry on the business of dyeing and finishing to an immense extent. Thomas Martin, a brother of the founder, James Martin, and Thomas I. Martin, became members of the firm in 1851. In 1864, James T. Martin, son of Thomas, and John Thornley were admitted. In 1868, Edwin Martin was admitted. The firm is now James Martin & Co. Jacob Berges, in 1849, established on Amber Street the dye-works which bear his name, for fancy yarns, such as are used by hosiers or manufacturers of military goods. In its special lines this is the largest establishment in the city. The Arasapha Mills were erected in 1854, by John Larkin, and put in operation for the production of tickings, stripes, and denhams, by Abraham Blakeley, who, in 1860, associated with himself his son, Benjamin W. Blakeley, under the firm-name of A. Blakeley & Son, to which William S. Blakeley, another son, was admitted in 1874. The manufacture of bags, rope, and twine, by John T. Bailey and James Cascaden, under the style of John T. Bailey & Co., commenced in 1859, on Arch Street, west of Front. In 1860 the establishment was removed to Front, above Arch, where it remained until 1864, when it was removed to the northeast corner of Market and Water Streets, and in 1874 to No. 120 Chestnut Street. In 1868, James Cascaden died, and Christopher Bailey, a brother of John T., became one of the firm, the name being unchanged. The following year the extensive factory at Front and Tasker Streets was erected, and the manufacture of ropes and twines established on a very large scale.

The census of 1860 showed the following condition of cotton manufactures in the city at that time:

	No. Estab- lishments.	Capital Invested.	Value of Product.
Cotton goods, cloth.....	51	\$2,191,000	\$4,347,645
Cotton goods, hand-loom.....	18	69,000	256,743
Cotton yarns.....	15	612,000	849,253
Cotton wadding, laps, etc.....	10	63,500	164,360
Cotton and woolen goods, power.....	51	1,059,600	3,593,326
Cotton and woolen goods, hand.....	5	31,500	98,000
Cotton webbing, tape and braid.....	7	157,800	262,960
Cotton and woolen machinery.....	6	273,700	490,000
Coverlets, hand-woven, blankets.....	7	14,200	48,400
<b>Totals.....</b>	<b>170</b>	<b>\$4,472,300</b>	<b>\$10,112,687</b>

By the census of 1870 the following figures are shown:

	No. Estab- lishments.	Capital Invested.	Value of Product.
Laps and wadding.....	9	\$79,000	\$134,462
Bleacheries.....	6	9,500	37,200
Cotton yarns.....	7	524,300	766,130
Mixed carpet yarns.....	7	117,000	224,552
Print cloths.....	1	100,000	140,000
Prints.....	9	2,055,000	7,773,417
Checks and gingham.....	54	5,313,950	7,504,981
Linseys (mixed).....	38	1,925,400	3,846,249
Balmorals (mixed).....	9	254,750	1,341,750
Coverlets (mixed).....	14	193,120	519,060
Webbing and tapes.....	5	462,000	483,441
Hosiery (cotton).....	27	339,100	1,499,635
Hosiery (cotton and wool).....	14	389,400	866,666
<b>Totals—All cotton.....</b>	<b>118</b>	<b>\$8,882,850</b>	<b>\$18,350,256</b>
“ Cotton and wool.....	96	3,242,390	6,797,277

The census of 1880 reports cotton goods as made in 157 establishments, whose aggregate capital was \$9,539,550, employing at “one time” during the year 12,274 hands, paying in wages during the year \$3,446,-

440, and using in raw material \$9,026,672, producing products valued at \$16,349,238. The enumeration of Philadelphia industries in 1882 exhibits the following condition of the cotton industry:

	No. Estab- lishments.	Hands Employed.	Value of Product.
Cotton yarn goods.....	81	9,523	\$13,100,333
Cotton yarn goods, finishers.....	7	237	472,500
Cotton coverlets.....	18	484	697,800
Cotton towels, separate.....	4	81	113,400
Cotton laps and wadding.....	3	9	9,500
Cotton thread, cord, and twine.....	3	22	37,800
Cotton webbing, bindings, etc.....	4	414	622,000
Cotton yarns.....	15	783	1,245,200
Cotton waste, for packing.....	5	70	87,500
<b>Totals.....</b>	<b>141</b>	<b>11,623</b>	<b>\$15,286,033</b>

Authorities differ as to who first introduced ready-made clothing in Philadelphia. In 1794, William Smiley kept a ready-made clothing store, southeast corner of Water and Market Streets; also Thomas Dobbins, Front and Market Streets. A year or two later John Culin kept a similar establishment in Market Street, near Water, and a few years after (say 1805) John Ashton kept a ready-made clothing store in Market Street, above Front; and Charles Collins, in Front Street, above Chestnut; and, about this period, Alexander Dougherty, Front Street, near Chestnut; Enoch Allen, Chestnut and Water Streets; Henry Hugg, Market Street, below Second; Silas W. Sexton and Jacob Painter, Market Street, above Front; Charles Harkness, same locality; Charles Hill, southwest corner Water and Arch Streets; James Wilson, northwest corner of Water and Arch Streets; — Laurence, near Water and Market Streets; James Boyd, Water Street, near Race. Also in those days there were Samuel Owens, Auley Brown, S. C. & B. C. Cooper, and others. The first clothing establishments upon Market Street were those of Ashton, Harkness, Sexton, and Collins, all between Front and Second Streets. In those days the clothing business was carried on exclusively east of Second Street, and chiefly opposite to that which was so long known as the Jersey Market-House, and contiguous to the old court-house.

The “slop-shops” of other days still haunt the by-ways of the city, but the ready-made clothing houses of the present time are vast and elegant establishments. The Philadelphia houses in this trade have their work done in their own establishments, where the interested supervision of the managers secures a better article than any “contract system” can supply. The goods from which the clothing is made are manufactured to a very great extent in the city, thus enabling these large houses to select from first hands. Shirts, shirt collars, and underwear form another branch of ready-made clothing which in Philadelphia is extensively manufactured. The statistics of employment in these branches of trade show that there are engaged in making “clothing, men’s and boys’,” 562 establishments, where 20,396 persons are employed, producing a yearly value, in 1882, of \$31,220,-958; “clothing, women’s, suits and cloaks,” 276

establishments, employing 3132 persons, and producing, in 1882, \$3,138,333; "clothing, men's shirts and underwear," 109 establishments, employing 3804 persons, and producing, in 1882, \$4,010,450; "clothing, suspenders and web goods," 12 establishments, employing 144 persons, and producing \$149,000 in 1882; "clothing, neckwear, scarfs, etc.," 9 establishments, employing 295 persons, and producing, in 1882, \$334,500; "clothing, of rubber cloth," 3 establishments, employing 84 persons, and producing, in 1882, \$110,000; "clothing, of oiled cloth," 2 establishments, employing 15 persons, and producing, in 1882, \$30,000.

These 973 establishments in the ready-made clothing business give employment to 27,870 persons, and produced, in 1882, \$38,983,241 worth of goods. In 1860, "Clothing, men's," the only item of this kind mentioned in the census of that year, was made in 352 establishments, whose capital was \$4,369,575, and the value of the raw material used was \$5,147,344,

the number of persons employed 14,087, and the annual product was valued at \$9,984,497. In 1870 a division of the industry appears in the census for that year. "Clothing, men's and boys," was made in 420 establishments, "neckties" in 5 establishments, and "suspenders" in 2 establishments; "clothing, women's, cloaks, etc.," in 72 establishments, and "corsets and skirts" in 18 establishments; "gloves, men's leather," in 3 establishments. These 520 establishments in 1870 employed a capital of \$7,187,727, and used raw material valued at \$7,647,977; they employed 12,293 persons, and the value of their products in that year was \$15,015,493. The increase in this business has been from 520 establishments in 1870 to 973 in 1882, from 12,293 persons employed in 1870 to 27,870 in 1882, and from \$15,015,493 in 1870 to \$38,983,241 in 1882.

As an appropriate conclusion to the history of the rise and development of the manufacture of textile fabrics in Philadelphia, the following table is appended:

SUMMARY OF THE TEXTILE INDUSTRIES, CLASSIFIED AS BY THE CITY CENSUS OF 1882-83.

	No. Estab- lishments.	Men.	Women.	Youths.	Total.	Values.
Carpets, Brussels, ingrain, etc.....	237	6,402	3,622	1,019	11,043	\$20,300,445
Carpets, rag.....	99	169	10	8	187	235,000
Cloth-finishing, woolen chiefly.....	3	24	0	0	24	52,800
Cotton yarn goods.....	81	3,332	5,019	1,172	9,523	13,104,333
Cotton yarns.....	15	219	404	260	783	1,245,200
Cotton manufactures, all other*.....	44	530	615	172	1,317	1,940,500
Dye- and print-works.....	86	1,786	113	195	2,094	6,621,200

\* Includes cotton yarn goods finishers, cotton coverlets, cotton towels, cotton caps and wadding, cotton thread, cord, and twine, cotton webbing and bindings, and cotton waste for packing.

The American colonists were quick to introduce the manufacture of white paper after it had been made in England. The first paper-mill in Philadelphia was also the first in any of the colonies. In 1693 a mill for the manufacture of paper is believed to have been in existence in the borough of Roxborough. H. G. Jones, in a paper read before the Historical Society, and published in the *Historical Magazine*, vol. i. p. 86, has established this fact from unquestionable records:

"This mill was situated on a small rivulet, now called Paper-Mill Run, in Roxborough, near the southwestern line of Germantown township. It was owned by David Rittenhausen (now spelled Rittenhouse), his son Clause (Nicholas), William Bradford, of New York, and Thomas Tresee, of Philadelphia, each of the latter two owning a fourth part. . . . The precise date of its erection is not known; but as Bradford was interested as part owner, it was doubtless built before 1693, when he removed to New York. The Rittenhouses are said to have settled in Pennsylvania about 1690, having emigrated from Holland, where their ancestors were engaged in paper-making. We have positive proof, however, that paper was made at the Roxborough mill in 1697, for Gabriel Thomas, in his 'History of the Province of Pennsylvania,' written in that year, says, 'All sorts of very good paper are made in Germantown,' with which place Roxborough was often identified; and besides, there now lies before me a MS. lease dated 'this 24th day of September, in ye year of our Lord, 1697,' signed by William Bradford, who is described as 'having one-fourth part of ye paper mill, near Germantown.' He rented his share to the Rittenhouses for ten years, upon the following terms: 'That they, the<sup>s</sup> William and Clause Rittenhausen shall pay and deliver to said William Bradford, his executors or assigns, or their order, in Philadelphia, ye full quantity of Seveu Ream of Printing Paper, Two ream of good writing paper, and two Ream of blue paper, yearly, and every year during ye<sup>s</sup> terme of Ten years.'"

This mill was destroyed by a freshet, and aid was asked by Penn of his people to help Rittenhouse in rebuilding.

Rittenhouse, the elder, was succeeded by his son Nicholas.<sup>1</sup> This mill supplied Franklin with much of the paper used by him.

De Warville says there were forty-eight paper-mills in Pennsylvania in 1787, and mentions a paper-mill on the Brandywine owned by Mr. Gilpin and Myers Fisher, a Philadelphian, in which the process for grinding the rags was much more simple than that used by the French, and the specimens of paper made at this mill he regarded as equal to the finest made in France. The first machines for producing paper complete in all its processes were made by Thomas Gilpin, of Philadelphia, in 1816, but Col. Forney, in

<sup>1</sup> Among the "Notes and Queries" of the *Sunday Dispatch*, a writer says, "David Rittenhausen (now Rittenhouse), some forty-five years ago, told me one day—on a Sunday afternoon, on a visit at his house—that the first paper-mill built in Pennsylvania was on Crab Creek (now called Tulpehockea Creek), one-quarter of a mile northeast of the Wissahickon, directly opposite his house, now owned by his son Jonathan. He also showed me part of the foundation wall. They carried the rags in bags on the backs of horses from School Lane, and returned the paper in hampers in the same manner, by a bridle-path on the back-hills of the Wissahickon. School Lane was the first road opened from Germantown main road and Ridge turnpike. The rags were brought from Philadelphia in carts, and the manufactured paper was returned in the same manner." Tulpehocken Street is near the stream which may at some time have been known as Tulpehocken Creek, or, earlier, as Crab Creek. Paper-Mill Run is its present name.

*Engraved by J. H. Johnson*

*Mark Willcox*

his oration on the 4th of July, 1877, said, "Six paper-mills were started in and around Philadelphia by Franklin alone; but in 1800 it still took three months to transform a pair of old linen pants into a sheet of writing-paper." In those mills there was coarse machinery, but the paper was hand-made until Gilpin's machinery enabled paper to be made complete from washing and grinding the rags to the laying of the pulp in sheets, pressing and drying it, whereby the manufacture was greatly expedited. The industry grew rapidly, as has been shown by De Warville, and paper-mills arose within the city proper. In 1834, Jesper Harding established one at the corner of Pemberton Court and Lodge Alley. Quite a number of newspapers were printed in this same structure while the mill was in operation. At one time the *Sunday Dispatch* set up its presses in this establishment, where rags came in at one door and printed journals went out at another. The impossibility of obtaining a sufficient supply of water forced Jesper Harding to remove from Lodge Alley to Trenton, N. J.

James M. Wilcox, of Pennsylvania, in a letter dated Dec. 17, 1850, and addressed to Thomas Ewbank, commissioner of patents, gives the following facts as to the early manufacture of paper:

"About the year 1725 my grandfather, who was brought up to the paper business in England, came over and settled where I now reside. I have documents to prove that in 1732 he had erected a mill, and was manufacturing paper. The kind of paper then made was what is called fuller's press-board, and such as is now used by clothiers to press cloth. I believe there was another mill a little north of Philadelphia, and one near Boston, similarly occupied. I believe also, there existed an act of Parliament at that time prohibiting the manufacture of any other kind of paper in the colonies. As there were few books then published in the colonies, the progress of paper manufacture was very slow, and so continued until about the dawn of the Revolution. My grandfather manufactured the paper for Dr. Franklin, who was publishing a newspaper in Philadelphia, and who was a frequent visitor at the mill. About that time my grandfather made the paper for the Continental money; he commenced making writing-paper, supposed to be the first made in America. From the Revolution until the year 1820 very little improvement occurred that was important, very little machinery being introduced for facilitating the operation. The mills increased in number in proportion to the increased quantity of newspaper and book publishing. About the year 1810 we began to experience a deficiency of raw material (rags), and were obliged to resort to Europe for supplies. These were obtained from all parts of Germany and Italy, and have continued increasing up to the present time."

The census of 1860 shows that there were six paper-mills in the city, with an aggregate capital of \$490,000, the raw material of which was worth \$482,675, and that they employed 233 hands, and produced annually a value of \$682,000. The same number of mills existed in 1870, but the capital employed had increased to \$2,126,600, and the value of the raw material to \$1,314,609. Their labor consisted of 617 hands, and the value of the annual product was \$2,609,000. In 1880 the paper manufacture, other than paper-hangings, was conducted in 7 establishments, with an aggregate capital of \$960,000, with raw material valued at \$871,000, employing 452 hands, and producing annually \$411,830. In 1882 the paper-mills for "book, news, and roofing" numbered 9 es-

tablishments, employing 751 hands, and producing \$2,246,000.

Mark Wilcox, for many years the proprietor of great paper-making industries, was the great-grandson of Thomas Wilcox, a native of England, who married Elizabeth Cole, a native of Ireland, and in 1727 settled at Ivy Mills, Delaware Co., Pa., on a property purchased from William Penn. In 1729, Thomas Wilcox erected there the third mill established in America for the manufacture of paper. He furnished the paper used by Franklin to print the *Pennsylvania Gazette*, and also the paper on which the Continental notes were printed. From that time onward the Ivy Mills and the Glen Mills, the latter established in 1836 by James M. Wilcox, have been connected with the history of national paper currency in this country, furnishing the government with its bond and bank-note paper up to within a few years past. At various times the governments of Venezuela and other South American countries, and subsequently those of Japan, Germany, and Greece, were supplied from these mills. Thomas Wilcox had three sons, John, James, and Mark, the latter of whom lived upon the homestead. He married Mary Kaufman, by whom were born Joseph, John, and James M. Wilcox. The last-named was twice married. By his first wife, Eliza Orne, his children were Mark and William, and by his second wife,—Mary Brackett,—James M., Joseph, Edward, Henry, and Ida.

Mark Wilcox was born at Ivy Mills, Aug. 24, 1819, and after receiving an education at Mount St. Mary's College, Emmittsburg, Md., he entered into partnership with his father in the business of the mills, and continued in their management until his death, which occurred at his residence at No. 1628 Arch Street, in this city, April 17, 1883. Up to 1879 he was associated with his brother under the firm-name of James M. Wilcox & Co. In that year James M. retired, and Mark remained. Since his death the business has passed into the hands of his sons, James M. and William E., who retain the old title of the firm. He was one of the proprietors and for many years a director of the West Chester and Media Railroad, and director of St. Joseph's Orphan Asylum, the Beneficial Savings-Fund, St. Charles Theological Seminary, St. Vincent's Seminary, Germantown, and St. Joseph's Hospital. For more than forty years he was a director of the Girard Bank. From 1867 to 1874 he was proprietor and publisher of the *Catholic Standard*, the official organ of the Archdiocese of Philadelphia. The family is one of the oldest in the State attached to the Catholic Church, and it is related that mass was said in the old house at Ivy Mills prior to the time when St. Joseph's Church was built in Willing's Alley, Philadelphia. When the present mansion, which the family use as a summer residence, was erected, this room in which mass was celebrated in the last century was included in it, and is to this day used exclusively as an oratory and chapel. Generous

in all the relations of life, Mr. Wilcox's liberality to his church had scarcely any limits. The church at Ivy Mills, which was built by his father, was largely supported by Mr. Wilcox, and when the parochial residence was destroyed by fire he contributed the principal part of the cost of rebuilding.

Plunket Fleeson, who lived at the corner of Fourth and Chestnut Streets, commenced, in 1769, the manufacture of American paper-hangings "of all kinds and colors, not inferior to those generally imported, and as low in price. Also, papier-maché, or raised paper mouldings for hangings, in imitation of carving, either colored or gilt." He added: "As there is considerable duty imposed on paper-hangings imported here, it cannot be doubted but that every one amongst us who wishes prosperity to America will give a preference to our own manufactures, especially on the above proposition of equally good and cheap." Fleeson was an upholsterer, and this enterprise was certainly one of the earliest in this branch of manufacture in America. In 1774-75 Ryves and Fletcher established a manufactory of paper-hangings on Pine Street. In the autumn of 1789, Burrell Carnes, under the firm of Le Collay & Chardon, established another manufactory, in which 10,000 pieces were produced in nine months. The establishment, it was expected, when thoroughly in operation, might turn out between 20,000 and 30,000 pieces of wall-paper in one year. The manufacture of paper-hanging was continued in 1806 by Anthony Chardon and S. Austin. Their manufactory was at No. 323 Sassafras Street, and the warehouse was at No. 85 Chestnut Street. Samuel Law, who was originally a painter, engaged in business as a paper-stainer about 1799 at No. 324 South Front Street. Subsequently he removed his factory to Christian Street, above Second. In 1810 he employed twelve persons, and turned out 25,000 pieces of paper-hangings annually, worth \$16,666, on a capital of \$30,000. Robert A. Caldcleugh & Daniel Thomas, who were originally in business as stationers at No. 68 Chestnut Street, undertook the manufacture of paper-hangings in 1806. They announced in that year that they had on hand "many thousands of feet of paper-hangings and borders of their own manufacture, embracing the most extensive variety of all the new, tasty, and fashionable patterns suitable for dining-rooms, parlors, drawing-rooms, halls, entries, staircases, printed in various grounds and colors, or may be had in any color, to suit the taste of the customer."

In the early part of 1809, John Cook established a manufactory of paper-hangings on Race Street, near the Schuylkill, under the direction of Charles Smith, formerly of Caldcleugh & Thomas. This establishment was about the site of Honey's Garden (afterward D'Arras), between Schuylkill Second [Twenty-first] and Schuylkill Third [Twentieth] Streets, and extended from Race Street south of the line of Cherry Street. The warehouse of John Cook & Co. was at

the northeast corner of Fourth and Chestnut Streets. At the same time Orth, Cook & Co. were in business at the same place as vendors of paper-hangings. In 1811 the title of this firm was changed to Orth & Smith. Orth continued the manufacturing, while Smith remained in charge of the warehouse at Fourth and Chestnut Streets. Virchaux & Co. commenced the manufacture of paper-hangings about 1814, and gave notice, in the latter part of that year and in the succeeding year, of their having entered copyrights for certain designs, these probably being among the earliest of American patterns. Their warehouse was at No. 85 Chestnut Street, where they seem to have succeeded Chardon & Austin. John B. Howell, an Englishman, who had come to the United States from London about 1793, and who established a manufactory of paper-hangings at Albany, N. Y., came to Philadelphia about 1817, and commenced business as a paper-stainer back of No. 351 North Second Street. In 1820 his factory was at No. 125 North Front Street, in 1822 he was at No. 34 North Third Street, and in 1825 his shop was at No. 72 North Sixth Street. The business subsequently went into the hands of his sons, —John A. Howell, George Howell, Zophar Howell, Darius C. Howell, and William Howell,— who built up by their industry a great manufacturing house.

This manufacture in 1860 was returned in the census of that year as conducted by 4 establishments, with a capital of \$310,000, the raw material used being valued at \$201,100, and the labor employed numbering 299 hands, with an annual product of \$435,000. In the same year marbled and grained paper was produced in 4 establishments, with a capital of \$20,000, using \$12,026 worth of raw material, employing 35 hands, and producing \$32,500 annually. Paper boxes, band-boxes, and paper bags were produced by 20 establishments, with capital aggregating \$54,900, and using raw material of the value of \$62,576, employing 341 hands, and producing annually \$194,350. Pasteboard and binders' boards were manufactured in 2 establishments, with \$15,000 capital, the raw material being valued at \$11,960, and the hands employed numbering 13, with an annual product of \$22,000. In 1880 the census reported paper-hangings in 4 establishments, with \$820,000 of capital, employing 401 hands, with raw material valued at \$384,252, producing an annual value of \$708,979. The tabular returns for Philadelphia industries in 1882 gave:

	No. Estab- lishments.	Labor.	Product.
Paper pulp.....	1	187	\$748,000
Paper-hangings manuf.....	5	372	681,000
Paper-hangers.....	28	247	446,900
Paper boards.....	7	127	444,500
Paper-boxes.....	36	1919	1,877,400
Paper-cap tubes.....	2	8	12,000
Paper envelopes.....	4	94	150,000
Papier-maché.....	1	15	27,000

The statistics of paper in all its forms, from 1860 to 1882, are as follows:

Year.	No. Estab- lishments.	Capital.	Raw Ma- terial.	Labor.	Product.
1860.....	28	\$384,900	\$275,702	575	\$851,350
1867.....	.....	.....	.....	.....	3,065,824
1870.....	54	1,072,823	728,800	.....	1,228,991
1875.....	.....	.....	.....	.....	4,538,089
1880.....	11	1,780,000	1,255,252	452	2,120,809
1882.....	84	.....	.....	2969	4,405,900

John Baine, an aged type-founder of Edinburgh, established a type-foundry in Philadelphia soon after the war, and he cast the types for a portion of the "Encyclopædia Britannica," which was republished in Philadelphia by Thomas Dobson.

In Philadelphia a very crude substitute for stereotyping was introduced by the industrious publisher, Mathew Carey, in the year 1810. Mr. Carey had issued, in 1790, an edition, in quarto, of the Douay Bible in 978 pages. The price of this book was six Spanish milled dollars. So popular was this edition that Carey, when publishing his Protestant Bible, twenty years later, determined to find some improvement over merely setting the type, and made up his mind to have it stereotyped. He pursued this process in a very costly manner, merely keeping the type intact in pages, and placing them in a store-room, to be ready for instant use. In this way the indomitable Mathew Carey locked up in idleness 30,000 pounds of type.

Thomas' "History of Printing" supplies the following catalogue of booksellers in Pennsylvania from the first settlement of the country to the commencement of the Revolutionary war in 1775:

1692.—*William Bradford*, sold pamphlets and other small articles.

1718.—*Andrew Bradford*, "Sign of the Bible, in Second Street." He was also a printer and binder.

1718.—*John Copson*, bookseller, but dealt chiefly in other goods; he was concerned with Andrew Bradford in the first newspaper which was published in Pennsylvania.

1729.—*Benjamin Franklin*, in Market Street. He likewise was a printer and binder.

1741.—*Alexander Aunard*, "in Second Street, near the church."

1742.—*William Bradford*, the younger, "in Second Street."

1742.—*John Barkley*, "at the Sign of the Bible on Second Street; from Great Britain."

1742.—*James Reed*, "next door to the post-office," on Market Street.

1742.—*Joseph Goodwin*, "in Second Street, near Black Horse Alley." He afterward moved into Black Horse Alley. Goodwin was from England, and was a bookseller, binder, and stationer. It appears that he was a considerable dealer.

1743.—*Stephen Potts*, "at the Bible and Crown in Front Street."

1743.—*J. Schuppey*, "at the sign of the book, in Strawberry Alley." He was a binder, and sold a few books. It is probable that he was a German.

1743.—*Cornelia Bradford*, "in Second Street."

1748.—*David Hall*, "in Market Street." He was a printer and the partner of Benjamin Franklin. He dealt largely in books and stationery.

1755.—*Henry Sandy*, "Lætitia Court."

1757.—*William Dunlap*, "in Market Street." He was bred to printing, which he followed, but dealt somewhat extensively as a bookseller. About 1767 he removed to Virginia, and settled there as a minister of the Church of England.

1758.—*Black Harry*, "in Lætitia Court," was a binder, and sold small books.

1759.—*Andrew Stewart*,—"Lætitia Court," but removed in 1762 to "the Bible-in-Heart, in Second Street." He was a printer and dealer in pamphlets.

1760.—*James Rivington*, "in Second Street," by his agent, who became his partner in the following year.

1761.—*Rivington & Brown*, "in Second Street," but they some time after took another stand. They were both from England. Rivington

soon after opened bookstores in New York and Boston, and resided in New York.

1764.—*William Sellers*, on Arch Street, between Second and Third Streets. He was a printer and bookseller from England, and became the partner of David Hall.

1765.—*Samuel Taylor*, "corner of Market and Water Streets."

1766.—*John Dunlap*, "in Market Street," succeeded to the printing and bookselling business of William Dunlap.

1766.—*Robert Bell*, "at the Union Library in Third Street in 1770." He was from Ireland, became a printer, and was celebrated as a hook auctioneer.

1766.—*William Woodhouse*, "in Front Street, near Chestnut Street," afterward "in Second Street." He was a binder and bookseller.

1768.—*John Sparhawk*, at the London bookstore, on Market Street, afterward at the "Unicorn & Mortar, in Second Street." He published several books.

1768.—*John Anderson*, at the London Book Store on Second Street. He was from England, and was a binder, letter case and pocket-book maker, and as such first began business in New York. He sometimes advertised books for sale in his own name, and at other times as connected with Sparhawk.

1768.—*Roger Bowman*, merchant, sold books on consignment from England.

1769.—*Robert Aiken* commenced bookselling in Front Street; he was from Scotland, to which country he returned in 1770; but, in 1771, came back to Philadelphia, and opened a book store and printing-house on Market Street.

1770.—*Cruikshank & Collins*, on Third Street, were a short time partners as printers and booksellers. Afterward *James Cruikshank* opened his printing-house and a book-store on Market Street.

1770.—*James Stewart*, on Second Street, between Chestnut and Walnut Streets, from Glasgow, shopkeeper; sold Scotch editions on commission.

1770.—*Semple & Buchanan*, on Front Street, shopkeepers, from Scotland; sold Scotch editions on commission. Semple afterward sold books and British goods.

1771.—*Robert MacGill*, corner of Lætitia Court, binder and bookseller.

1771.—*John MacGibbons*, on Front Street, between Arch and Race. Not largely in trade. He published Josephus' works in four volumes, octavo.

1771.—*Samuel Dellop*, on Front Street, between Market and Arch. He kept a book- and print-shop.

1773.—*James Young*, at his book-store adjoining the London Coffee-House.

1773.—*Thomas MaGee, Jr.*, Second Street, nearly opposite Christ Church.

1773.—*George Reinhold*, on Market Street, traded in Dutch books, Germantown.

1735.—*Christopher Sowers*, from Germany, printed books in the German language.

1744.—*Christopher Saur, Jr.*, succeeded to this business of his father.

It was not until 1807 that the old balls for inking began to be dispensed with. In that year Hugh Maxwell introduced into three or more printing-offices in the city rollers in place of balls for inking type, which were estimated to save to each press six dollars per week in addition to the gain in time and superiority of workmanship. The cost of the machine complete was \$100. Barlow's "Columbiad" was issued in 1808, in a style that made it the most magnificent volume in America. It was in quarto form and illustrated with many engravings executed in London, of which several were designed by Robert Fulton. The printing-offices in the city in 1810 numbered 51 and the presses 153, and there were upward of 60 engravers. The petition of paper-makers, printers, and booksellers to Congress in 1822, for a reduction of duty on imported books, stated that the cash value of books manufactured annually at Philadelphia was over \$1,000,000.

Mr. Adam Ramage, press-maker of Philadelphia, in

Carter's Alley, was in 1804, a manufacturer of printing presses, copper-plate, and book-binders' presses and printing-house furniture of all kinds. In 1817 he imported the "Ruthven press" from Scotland, and manufactured a number of them. May 23, 1818, he patented the Ramage press, an improvement upon the "Ruthven." A patent hand press, called the "Columbian" press, was this year introduced in England in an improved form by George Clymer, of Philadelphia, the inventor. In style of finish and embellishments, with various devices emblematic of the art, it exceeded anything then known in the trade there, and the certificates and testimonials of masters and workmen were much in its favor. These presses were probably the earliest improvements on the old screw-press introduced into the city. The first book-trade sale in the city was held in 1824, according to the suggestion and plan of Henry C. Carey. The auctioneer was Moses Thomas, by whom these sales were generally conducted semi-annually under the name of Moses Thomas & Sons; they were, however, during a part of the intermediate time under the management of Cowperthwait & Lord, Lord & Carlisle, and George W. Lord & Son. They have been continued ever since. The city contained at that day 55 printing-offices with 112 presses, supporting 150 workmen. In 1833, Cary, Lea & Blanchard were said to have paid annually during the five preceding years to American authors and writers the sum of \$30,000.

Thomas S. Ellis, who has been identified for the last half-century with the business interests of the city, was born in Philadelphia on Nov. 24, 1815, and, after having had a limited education at the public schools, became engaged in the lower departments of the business in which he has since been so highly successful. He had quitted school and was but eleven years of age when his parents placed him in the auction-house of M. & S. Thomas, whose stores and offices were then on Chestnut Street, below Third. He was so assiduous in his attention to all the details of the business, and so quickly familiarized himself with them, that his employers selected him in the earliest days of his career for rapid promotion. The house had very numerous connections, the volume of its trade was immense, and an ambitious, energetic, and diligent young man, such as Mr. Ellis was, found in the members of the firm men who were quick to afford his talents a wide and fertile field of exercise. His progress was steadily upward, his grasp of the theory and system of a great auction business showing itself almost daily. In the course of years the house of M. & S. Thomas dropped that title, for which that of Moses Thomas & Son was substituted, and has ever since been retained. When the junior partner died, on Aug. 25, 1865, Mr. Ellis became the senior partner, and the death of John D. Thomas, which occurred in January, 1867, threw into his hands the sole control of the manifold interests of this great and important house. He associated with himself, under the firm-

name of Moses Thomas & Son, N. A. Jennings, for many years a partner in the firm, and a son-in-law of Moses Thomas; and there is perhaps no commercial centre in Philadelphia better known than their auction-rooms, at No. 139 and No. 141 South Fourth Street, both on account of the diversity of their operations and the vast scale upon which those operations are conducted. Their dealings are in household goods, real estate, books and periodicals, horses, carriages, and harness and every other valuable article of traffic that is sold and bought at auction. The value of the transactions amounts to many millions of dollars yearly. In recent years the partnership has been enlarged, and now includes, besides Mr. Ellis and Mr. Jennings, J. Harbeson Barnes, John H. Lafland, and Samuel S. Ellis.

Thomas S. Ellis was for many years actively connected with the old Volunteer Fire Department as a member of the Fame Hose Company, of which he was treasurer for over thirty years. He is now a director of the Franklin Fire Insurance Company and of the Pennsylvania Salt Manufacturing Company. He was chairman of the committee of auctioneers at the Sanitary Fair in 1864, and under his guidance that committee earned many thousands of dollars for the fund for the relief of the troops in the hospital and the field. He was then so successful that he was chosen chairman of the committee of auctioneers for the Centennial Exhibition, in which capacity he was largely instrumental in making the brilliant record of his department. Caring little for any allurements outside of business and social life, he has refused all invitations to a political career or official preferment, but he has been connected with numerous public enterprises of a commendable character. He was married in 1841.

Type-founding, commenced in Philadelphia by Christopher Saur in 1735, and continued, as has been stated, by John Baine, owes to Archibald Binney and James Ronaldson the improvement in the type-mould by which the number of type cast has been greatly increased. Both Binney and Ronaldson were from Scotland. Binney established his foundry in 1796, and Ronaldson was soon after associated with him; the latter died in Philadelphia March 31, 1841, aged upward of sixty years. He was a devoted horticulturist, and laid out, in 1831, the beautiful cemetery in the southwestern section of the city, between Ninth and Tenth Streets, which bears his name. The casting capacity of the Binney & Ronaldson mould was greatly multiplied by the patent of William L. Johnson, in 1808, by which also a much sharper outline and better face was acquired. In the successful house of Binney & Ronaldson Lewis Pelouze obtained a practical knowledge of the art and mystery of type-founding, and in 1842 this gentleman went into business for himself at the northwest corner of Third and Chestnut Streets. The later establishments in this line of manufacture in Philadelphia are those

*Engraved by Samuel Jarvis, Phil<sup>a</sup>*

*Wm<sup>s</sup> S. Ellis*

*Eng<sup>d</sup> by A. H. Ritchie*

*W. M. Mackellar*

of Mackellar, Smiths & Jordan, otherwise known as the Johnson Type Foundry, Collins & M'Leester, Pelouze & Son, and A. Robb, and Starr & Co., makers of type for marking linen. Stereotyping and electrotyping is also largely carried on. The quality of this manufacture in Philadelphia is not surpassed by that of any other city.

Thomas Mackellar, present head of the Johnson Foundry, printer, author, and poet, was born in New York Aug. 12, 1812. One of his maternal ancestors was the second man whose marriage was recorded in the records of the Reformed Dutch Church of New York, the date being 1644. When fourteen years old he was employed in the office of the *New York Spy*, where he evinced his adaptability for the printers' craft by learning the case the first day he entered the composing-room. On the failure of this paper, which had only a brief life, he found an engagement with the great publishing house of J. & J. Harper, where his ability quickly marked him for speedy advancement. He was promoted to the responsible post of proof-reader when in his seventeenth year. Death carried off his father and mother when he was eighteen years of age, and as the support of the family mainly devolved upon him, he sought to extricate the estate from the difficulties in which it had become involved, but the task was not possible of accomplishment.

Reluctantly relinquishing this task, he acted on the advice of the Quaker lawyer, Clark, who counseled him that if he would stick to his work he would make another fortune before he could recover the old one. His future career justified the prediction, and when he left the Harpers' establishment; in 1833, he was a thoroughly skilled printer. Coming to Philadelphia, he began work, on May 1st of that year, in the type and stereotype foundry of Johnson & Smith as proof-reader. His valuable qualities were soon recognized by Lawrence Johnson, senior member of the firm, who made him foreman of the department comprising the composing-rooms and stereotype foundry. In 1845 he was taken into the business as a partner, together with the two sons of George F. Smith, who had retired a short time previously. The style of the house then became L. Johnson & Co. He removed his residence to Germantown in 1856, partly on account of his health, which had been somewhat impaired by his arduous devotion to business and the loss of his oldest daughter in her eighteenth year. In 1860, Mr. Johnson died, and the surviving partners formed a new firm, adding the name of Peter A. Jordan, under the style of Mackellar, Smiths & Jordan. The establishment was named the Johnson Type Foundry, in honor of the deceased partner. Ever since Mr. Mackellar was associated with it it has increased in the magnitude of its transactions, until it is now the most important and most celebrated type foundry in the world. The specimen books, showing the numerous varieties of types made in this foundry, were got up under his

special direction. The matter was mostly original, and being uniquely adapted to the conformation of the differing styles of the types exhibited, attracted the attention of printers everywhere. An edition of 3000 copies of the quart volume of specimens cost about \$40,000. The book-fancier of the future will doubtless consider this work a striking feature in his collection. Years ago fifty dollars were offered for a copy.

In 1866 he published a work entitled "The American Printer." This proved to be the most popular work on typography ever printed, the fifteenth edition having been lately issued. In 1856 he established the *Typographic Advertiser*, for the purpose of showing the new productions of the foundry. This elegant sheet is known throughout typographic Christendom.

It is a fact deserving of record that Mr. Mackellar's firm has never given a note, but has promptly paid cash for all its purchases, and has always paid its workmen in full. Some of the employés have been with the house from twenty to forty years.

In 1833, Mr. Mackellar celebrated the fiftieth anniversary of his connection with the foundry, and the employés presented him a massive silver vase, the designs of which were symbolic of the art of type-making and printing. Shortly afterward he received the degree of Doctor of Philosophy from the University of Wooster, Ohio. Early in life Mr. Mackellar evinced a great fondness for reading and no little fitness for authorship, but constant duties then allowed him almost no leisure for the gratification of such tendencies. In his maturer years, however, he has become widely known as a graceful and popular poet. His first production, "The Sleeping Wife," was published in the *Public Ledger*. Rev. John Hall encouraged him, and published several of his compositions in the *Sunday-School Journal*. Joseph R. Chandler did the same thing for him in the *United States Gazette*, and for nearly two years he contributed to *Neal's Gazette*, under the signature of "Tam," poems that elicited much critical attention. He has since published several volumes; the first was "Droppings from the Heart," then came "Tam's Fortnight Ramble," followed with "Lines to the Gentle and Loving." In later years he revised these works and compiled them with other writings, and issued them with the title of "Rhymes Atween Times." Since then he has published a work containing his hymns and metrical psalms. A deep religious feeling pervades his productions. He was for many years an elder of the old Pine Street Presbyterian Church, which office he now holds in the First Presbyterian Church of Germantown, and has always taken a deep interest in the temperance cause. One of the earliest mission schools was started under his supervision in one of the vilest sections of Philadelphia, and some of his best years were spent in endeavors to benefit outcasts and the lowest classes of society. He was for twenty-five years corresponding secretary of the Philadelphia

Bible Society, and wrote its annual reports. He is director of several insurance and trust companies. Until recently he was president of the Philadelphia Book Trade Association, and is president of the Type Founders' Association of the United States. He is also a member of the Pennsylvania Historical Society, the Academy of Natural Sciences, and the Pennsylvania Museum of Art.

In 1834, Mr. Mackellar married Miss Eliza Ross, daughter of Samuel Ross, of Philadelphia, who was a staunch Scotch-Irish Presbyterian. His wife proved a true helpmeet, and aided him in his settled purpose never to contract a debt, and never to buy anything that he could not at once pay for. The union continued thirty-seven years, until her death, in 1871, and resulted in a family of two sons and eight daughters, of whom one son and four daughters survive. He has not married again, but finds his home enjoyments in the company of his children and grandchildren.

Jacob Perkins, a most ingenious artisan, at one time resided in Philadelphia, and in 1814 was a member of the house of Murray, Draper & Fairman. He patented, in 1799, an improvement for decarbonizing and hardening steel for the indenting cylinders of engravers. In 1819, Perkins, "late of Philadelphia," took out a patent in England for "machinery applicable to engraving, etc." He was awarded by the London Society of Arts the "thanks of the society" for communicating to it for publication certain parts of "the siderographic process for multiplying copies of engravings." The second lithographic establishment in the United States was opened in Philadelphia in 1828 by Kennedy & Lucas, but for want of practical printers was soon abandoned. About the same time Messrs. John Pendleton, Kearney, and Childs employed the late Rembrandt Peale, the great portrait-painter, who, together with Swett Pendleton, removed to New York, where they established the first lithographic establishment in that city, while the business in Philadelphia was continued by C. J. Childs and H. Inman. Two years later Mr. Lehman took the place of Inman, and the firm became Childs & Lehman, and continued until 1834, when P. S. Duval succeeded Childs, the firm becoming Lehman & Duval, and in 1836, Mr. Duval became sole proprietor. Prior to the establishment of a lithographic office the art had been introduced from Germany as early as 1819. The *Analectic Magazine* for July, 1819, vol. xxiv. p. 67, contained the first specimen of lithographic printing executed in America. The design, as well as the print itself, was made at the works of B. Otis, of Philadelphia, at the suggestion of Dr. Samuel Brown, of Alabama, and Judge Cooper, upon a stone brought from Munich, and presented to the American Philosophical Society by Thomas Dodson. Mr. Otis also executed specimens of lithography upon stone procured near Dicks River, Ky.

This city is also very intimately associated with the original experiments in what has now become

the art and science of photography. When that distinguished investigator and inventor, the late Dr. John W. Draper, was making his earliest tests in producing "sun-pictures," he regularly announced the results of his labors in the *Journal of the Franklin Institute*, and in its files between 1834 and 1839 many of the papers in which he reported his curious and interesting efforts may be found. In 1839 the success which Daguerre had achieved in France was noticed in the Philadelphia papers, and Dr. Bird, then chemical professor in one of the medical schools, was asked what he thought of this new mode of copying objects with a sunbeam. He laughed it down then as a hoax, but he soon had reason to change his opinion, and at the time of his death, in 1854, he was probably the ablest writer on the subject in the United States. Joseph Saxton, a thorough genius in mechanics, went to work to construct a camera and baths, and with this, the first apparatus of the kind ever made in Philadelphia, he took a picture of the old Arsenal and the cupola of the old Philadelphia High School. This view was made from a window of the United States Mint, in which Saxton was an employé. In the *Journal of the Franklin Institute* for October, 1839, Professor J. F. Frazer, of Philadelphia, published a translation, made by himself from the French, of a full description of the Daguerre process; and by following the directions therein contained he succeeded in making a daguerreotype picture. The earliest portrait from life taken in Philadelphia is believed to have been of Dr. Kennedy, principal of the Polytechnic Institute, made by Professor Walter R. Johnson in 1839. Robert Cornelius was the first to enter into the business of taking portraits, and the first picture made and sold in this city was that of John McAllister, the optician. Thompson, Retzer, and John Plumb soon afterward established their galleries. Much interest was stirred up among gentlemen given to scientific pursuits, and Dr. Goddard, at that time engaged with Dr. Hare, professor of Chemistry in the University of Pennsylvania, made a valuable improvement by the introduction of bromine as an accelerator. Dr. J. E. Parker at this early date surpassed all rivals in producing out-door views of street scenes and buildings, and he and a Mr. Reed did very much toward perfecting the apparatus. A Mr. Mason, in 1839, produced by the light of a small gas-burner an excellent copy of an engraving, which was probably the first picture ever taken by artificial light, and he also made a daguerreotype on steel.

Langenheimer was an artist who attained a great reputation shortly after 1840. He was a brother-in-law of Voigtlander, of Vienna, the inventor of the achromatic object-glasses, and, taking up the art where Cornelius left it, he was for several years the leading photographer, not only in Philadelphia, but probably in the world. He was succeeded, in 1850, by Mr. Schreiber. In 1844, Samuel Van Loan introduced into Philadelphia the Laborde process, by which

a pure natural white was produced on the plate. J. E. Mayall became, in 1845, the proprietor of a gallery at No. 140 Chestnut Street, which, in the next year, he disposed of to M. A. Root, who had previously been a member of the firm of Root & Collins. Samuel Broadbent, who had been a pupil of Professor Morse, went into the business in this city in 1851. John Quail, another Philadelphia artist, invented the multiplying camera in 1848. Some time about 1853, McClees & German were the original users here of the crystallotype, whereby pictures were impressed on glass. They copied and transferred to boxwood blocks, ready for the engraver, a fac-simile of the treaty with Japan, which was cut upon wood, stereotyped, and printed in the Japanese language. In 1852-53 the photographic process was taking the place of Daguerre's methods, and Dr. Charles M. Cresson and Dr. Giles Langdell, of Philadelphia, were making very good portraits and views on papers by the employment of collodion. One branch of this system, a solar impression upon a glass plate, was given the name of the ambrotype or "imperishable picture," which was devised in M. A. Root's gallery. In 1860 the leading photographers in Philadelphia were Gutekunst, Hipple, Turner, Morgan, Cooper, Rehn, Hurn, Willard, Keenan, and Reimer. One of the later and most useful improvements is the phototype process, invented by Jacoby, of Neuendorf, Germany. In 1878, F. Gutekunst, a leading Philadelphia artist, thought the right for the United States to Jacoby's patents, and brought over as his superintendent the son of the inventor, who directs Mr. Gutekunst's establishment, and has brought the phototype to a high degree of completeness and artistic value. By this process the negative is transferred by the aid of gelatine and bi-chromates to a glass plate, from which any number of impressions may be taken on a printing-press. Literally, it is photographing on printers' ink, and is applied to portraits, street scenes, landscapes, buildings, vessels, machinery, etc. Its simplicity, economy, and fidelity to detail are so generally appreciated that it is employed for every purpose that photography can fulfill.

In the twenty-four years that have elapsed since 1860 the number of photographers has not only become greatly enlarged, but the art has been correspondingly improved until now it commands the services of men of the highest artistic power and the widest technical skill. Many of the Philadelphia photographers are not surpassed in the world, and the work which they produce has a universal reputation.<sup>1</sup>

<sup>1</sup> Among the contemporary artists William T. Richards, a native and resident of Philadelphia, has won both fame and success. He owes his early encouragement in the artistic career to Paul Weher, and when, in 1854, he painted his first picture, a view of Mount Vernon, connoisseurs were quick to see that he possessed genuine gifts in composition and color. This work is now in the possession of Mrs. Joseph Harrison. Some of his principal canvases and their owners are the following: "Study of Tulip-Trees," William T. Walters, Baltimore; "Path in the Woods," Hugh Davids, Philadelphia; "Midsummer," Mrs. Charles

The typographical art was in its infancy as compared with the present day, when the ponderous tomes of Barlow's "Columbiad," Rees' "Cyclopædia," Hume's "History of England," Robertson's Histor-

Sharpless, Philadelphia; "Woods in June," R. L. Stewart, New York; "The Meadows," William Wiltach, Philadelphia; and "The Wissahickon" and "The Forest," George Whitney, Philadelphia. Since 1870, Mr. Richards has given most of his attention to marine subjects, and has produced "Mid-Ocean," and a series of studies at Atlantic City, which were purchased by William Sellers, and "Sea and Sky," now owned by Mrs. Zabricky, of New York. From his studies on the south coast of England he has painted "Land's End," now the property of George Whitney, of Philadelphia, "Cliffs of St. Levan," bought by Potter Palmer, of Chicago, and "King Arthur's Castle," which the artist has retained. In 1883, Mr. W. W. Corcoran ordered from Mr. Richards two large works for the Corcoran Art Gallery at Washington, one of which is a view upon the New Jersey coast. Another picture—"Thus far shalt thou go, and no farther"—was painted for William B. Bement, of Philadelphia. Between 1870 and 1880, Rev. E. L. Magoon collected eighty water-color drawings, mostly of marine subjects, made by Mr. Richards, and presented them to the Metropolitan Art Museum of New York. Mr. Magoon also gave an order to him for seven of the historical landscapes of England in water-colors, which in 1883 he presented to Vassar Female College. Mr. Richards has had the honor of exhibiting at the Royal Academy of London.

No Philadelphia artist is more widely known than Peter F. Rothermel, who, in the sixty-seventh year of his age, still paints with much vigor and expression. To the general public his name is most closely associated with the immense canvas upon which he has delineated the battle of Gettysburg,—a work which he produced in compliance with a commission from the Pennsylvania Legislature, and which is the great battle-piece of the civil war. His genius inclines to historical painting, and among his subjects have been "De Soto discovering the Mississippi," "Columbus before Isabella the Catholic," "Christian Martyrs in the Colosseum," "Patrick Henry before the Virginia House of Burgesses," and the "Noche Triste." A "St. Agnes," that he painted more than forty years ago, is owned in St. Petersburg. His "Christabel" and "Katherine and Petruccio" earned critical commendation in the early portion of his artist life.

Paul Weher was a German artist, whom many Philadelphians will remember as having had a studio in this city from 1848 to 1860, when he removed to Munich. He was at his best as a landscapist, and many of his pictures are still to be seen in the Academy of Fine Arts and in the private galleries of Mrs. Joseph Harrison, James L. Claghorn, and Mr. Tilgs. His son Carl, who was born here in 1850, returned to Philadelphia in 1873, after studying in Europe, and established his studio. Some of his pictures are in the Academy of Fine Arts, and others are in the possession of private patrons of art. Paul Weher's nephew, Philip Weher, is another Philadelphian by birth, and also opened a studio in this city in 1873. His "Yosemite Falls," "Heidelberg Castle," and two views of Rio Janeiro, belong to Charles J. Harrah, of Philadelphia. Mr. Craig, of Philadelphia, purchased his "Rainy Day in Munich" and "Twilight in Munich."

Charles E. Dana, who has taken a leading position among painters in water-colors, is young in the art world, not having established his studio until 1881, when he returned to Philadelphia from the foreign schools, but his ability is distinctly recognized, and he has already achieved an enviable reputation.

Pater Moran is one of the three Moran brothers, who are all distinguished as artists. His studio has been located in Philadelphia since 1865, and in 1872 he was elected a professor in the Philadelphia School of Design for Women. During the summers of 1878, 1880, and 1881 he visited the far West, and made sketches that have since been reproduced in most striking pictures of scenes in the new country. The greater portion of his works have been sold in New York, but the "Return of the Herd," which was on exhibition at the Centennial, is owned here. For ten years past he has been largely engaged in etching from original designs, and has done much to develop that branch of art. He is now president of the Etching Club, of which his brother-in-law, Stephen J. Ferris, is a member. Both of them rank among the most accomplished of American etchers. Mr. Ferris is, moreover, an admirable figure- and portrait-painter, and a teacher in the Philadelphia School of Design for Women, and his son, Garome Ferris, is following in his footsteps.

ical Works, Wilson's "Ornithology," and Marshall's "Life of Washington," were printed in the offices of the city. The war of 1812-15 did not advance the art of printing, but when, a few years later, the country began to accumulate capital, and the new art of stereotyping came in to supplement that of printing, there was a decided change. Not being obliged to pay for setting type for a new edition, the cost of book-making was reduced, and hence more customers were to be found around the counters of booksellers. It was about the year 1820 that Lawrence Johnson directed his attention to the new art of stereotyping. This eminent type-founder, son of Edward Johnson, a merchant of Hull, England, was born Jan. 23, 1801, in that city. While a mere boy he exhibited in his studies that industry, energy, and quickness of perception which characterized his whole after-life.

Newhold H. Trotter is a Philadelphia artist, who has been at work since 1853, and whose speciality is the painting of animals. His "Herd of Buffaloes Attacked by Wolves" and "The Last Stand" were in the Centennial Exhibition, and were bought by Gen. Sherman for the army headquarters at Washington. In the three years following he painted for the War Department "After the Combat," "Grizzly Bears," and "The Indian Camp." On a commission from Gen. Sherman he has since made a picture of the famous soldier on horseback, and he is now engaged upon painting the mammalia of North America for *Hayden's Journal*.

Isaac L. Williams, who has been since 1869 president of the Artists' Fund Society, is highly distinguished as a portrait-painter, although many landscapes have come from his easel. Among his portraits are those of Governor Shunk, Richard Penn Smith, Thaddeus Stevens, Dr. Frederick Muhlenberg, and Rev. Dr. C. P. Krauth. His other works include the "Castle of Balaie," and "Ruins of Cumæ." He painted a series of views of the historic mansions of Philadelphia, which are now the possession of the Historical Society.

James Hamilton was an Irishman by birth, and his style was strongly influenced by his study of Turner and Clarkson Stanfield. Previous to 1875 he had for some years a studio in Philadelphia. His best known works are "The Sceptre shall depart from Egypt," "The finding of Perdita," "The Home of the Sea Gulls," "What are the Wild Waves Saying?" and "The Ancient Mariner." He died in San Francisco after leaving this city.

Bernhardt Uhle, a native of Saxony, has a studio in Philadelphia, and his work is highly praised for the strength and fidelity that are features of the German schools in which he was a student.

George C. Lambdin is a son of James R. Lambdin, and studied with his father at the Academy of Fine Arts. In 1859 he was a portrait-painter in Philadelphia, and in 1868 he removed to New York, where he remained three years, becoming an academician in the mean time. He has since returned to Philadelphia, and made great success in flower-, figure-, and portrait-painting.

Hermann Herzog is now permanently settled in West Philadelphia, after spending some years in American and foreign travel. Mr. Wernwag, of this city, bought his "Waterfall in Norway," and others of his paintings are owned by William B. Bement and Mr. Hazeltine.

Prosper L. Senat, who has had a studio in Philadelphia for fourteen years, is a painter of massive subjects. A large picture from his brush is one of the Temple collection, and hangs in the Academy of Fine Arts.

James B. Sword was a pupil of William T. Richards. He has a studio in Philadelphia, but, as he principally paints pictures of New England and its sea-coast, most of his works are sold in Boston. Some, however, are in the private galleries of Philadelphia. Mr. Sword is president of the Philadelphia Society of Artists.

J. Henry Brown is the leading painter of miniatures in this city, and has produced in that style portraits of Buchanan, Lincoln, Commodore Stockton, Harriet Lane, Horace Binney, John M. Reed, Joshua Lippincott, and many others.

Samuel B. Wagh began his artistic career in Philadelphia about 1843, and has principally devoted himself to portrait-painting, in which he excels.

Having attained the age of nineteen years, he decided that the United States was his proper field of labor, as affording the scope which his ambition craved. He succeeded in inducing his parents to accompany him, and on July 4, 1819, they arrived in New York. His father, not liking that city, purchased land in Cayuga County, N. Y., on which he made his home. Lawrence Johnson remained in New York, and entered the employ of a Mr. Gray, a printer, where he devoted himself to his business with a diligence almost incredible, frequently protracting his labors from sixteen to eighteen hours a day. Not many months afterward his attention was directed to the comparatively new art of stereotyping, and, with a view of obtaining a knowledge of it, he entered the employ of Messrs. B. & J. Collins, of New York. This knowledge obtained, about 1820 he removed to Philadelphia, and set up a stereotype foundry. Owing to his imperfect knowledge of its details and his limited means, he met with many difficulties, but with that indomitable perseverance which never forsook him he overcame them all. In 1833, Mr. Johnson added type-founding to his previous calling. The original proprietors of the Philadelphia Type Foundry, Messrs. Archibald Binny and James Ronaldson, had withdrawn from the business with considerable wealth, and Mr. Richard Ronaldson, brother of one of the preceding firm, who then held it, felt himself unsuited to the progressive demands of the time. Mr. Johnson thought he saw what was needed, and, in connection with George Smith, purchased the establishment, connecting stereotyping with type-founding.

Throwing all his energies into the business, he soon found that he was not mistaken in his calculations that the foundry was susceptible of resuscitation, and under his judicious management the Philadelphia Type Foundry began to emerge from the slough of despond into which it had hopelessly drifted, and gradually but steadily advanced to the prominent position which it now holds. Availing himself of the newly-discovered art of electrotyping immediately upon its development, he bore down all rivalry in the production of a new quarto specimen-book that has no superior in the world of typography. Mr. Johnson was aware that there was no standstill in type-founding,—all must be onward and progressive. He was ever a patron of improvement, and encourager of the mechanic and artisan, and to his memory be it spoken he was never known to appropriate to himself the labor of an artist by electrotyping, but acquired the matrix by purchase; indeed, one of the last acts of his life, in conjunction with other leading type-founders of this city, was to procure, by petition to Congress, such a modification of the copyright law as to afford protection to letter-cutters, engravers, and originators of designs. In 1845 he associated with him Thomas Mackellar, John F. Smith, and Richard Smith, all of whom had been in his employ for many years, and who, after his death, which occurred

L. Johnson

April 26, 1860, continued the business. We may here add that it was by no means as a type-founder only that his influence was felt. He contributed largely to the development of other important industries and pursuits, such as coal-mining, banking, etc.

A friend, who for more than thirty years prior to Mr. Johnson's death enjoyed his uninterrupted friendship, traveled with him in foreign lands and in our own land, and for months was his only companion, has furnished the following excellent analysis of his character and proper tribute to his worth :

"Mr. Johnson's mental character was strong and well balanced. He possessed a vigorous understanding, great mental resources, remarkable powers of concentration and abstraction, and a well-cultivated mind. In his active and useful life he studied men and things continually, and was a precise and logical reasoner. Those who had intercourse with him cannot but have noticed how largely decision of character was developed. His mind was not only rapid in its operations, but of great grasp. While listening to the recital of anything in which he was concerned, his opinions (which he rarely found it necessary to change) were made up, so that when the statements were finished he was ready to act in the matter on hand at once, although involving large interests. He was a liberal and benevolent man. After his decease it became the duty of the writer to examine critically his books of accounts and papers. The goodly array of figures of his charity account abundantly attests that with his increasing means his charities extended. There was no ostentation in his benevolence. Many a widow's heart has leaped for joy in receiving a ton of coal or a barrel of flour from an unknown donor. Many a poor man's rent has been paid, and the landlord's acknowledgment been anonymously forwarded. Many a poor boy has been benefited by his counsels, and assisted with material aid, of which his own family, much less the world, knew nothing. He was a just man; while he expected and insisted on punctuality and strict probity from others, he was prompt and scrupulously exact in rendering to every man his due. All who knew him relied implicitly on his word, from which he was never known to swerve. Where his confidence was reposed, no amount of misfortune or difficulties could shake it; but when once forfeited by trickery, breach of faith, or otherwise, it could never be regained. In compounding or arranging with honest, but unfortunate debtors, his large liberality became almost proverbial, and many instances could be cited where, in meetings of creditors, his manly and liberal course so moved his fellow-creditors that arrangements were effected upon the spot whereby the unfortunate debtor was enabled to go on with his business, and in many cases afterward to attain prosperity. The many corporations and societies in Philadelphia with which he was connected have spread in their minute-hooks their estimate of his value as a citizen, and the personal loss they sustained when his wise counsels were withdrawn. At a meeting of book publishers held immediately after his death, the venerable chairman, Henry C. Carey, Esq., said of him, 'I have known him perhaps longer than any of you. One of his first business operations was undertaken for me. I have found him, in all his relations, honest, intelligent, and upright. We could scarcely find a better man, and I have no hesitation in saying that he was as worthy as any man I ever knew.'"

Among the resolutions adopted at that meeting was the following :

"Resolved, That in his decease the community has lost one of its worthiest citizens, for with an unswerving personal integrity and a heart of the kindest promptings he united clearness of judgment, activity of enterprise, faithfulness and diligence in an extensive business, and thus presents, in his finished character, a union of qualities rarely combined, which we shall ever cherish as an incentive and an example."

Contemporaneous with Johnson was that other great type-founder of Philadelphia, Jedediah Howe, who came to the city from New York in 1823, and soon after his arrival formed a copartnership with Lawrence Johnson, which continued in force until Howe's death, in 1834. After Howe's death his establishment was purchased by John Fagan, who, on his

accession to the business, increased it largely, and prosecuted it for thirty years. In 1863, Mr. Fagan retired from active business, and was succeeded by his son, the firm-name being J. Fagan & Son.

Conger Sherman, one of the old and wealthy printers of the city, was born at New Scotland, N. Y., Aug. 7, 1793, and came to Philadelphia in September, 1811. He purchased, in May, 1830, the printing establishment of Towar & Hogan, and began business with four or five hand-presses, printing the Bible and Henry's "Commentaries." His progress was very slow for the first four or five years. In 1837 he put up his first steam press,—the second press of the kind for printing books in the city. In 1864 the business passed into the hands of Roger Sherman, the son of Conger, with Messrs. M. F. Benerman and Andrew Overend, as Sherman & Co. Robert P. King and Alexander Baird in 1838 formed a copartnership in the printing business. In 1844 they commenced the publication of the *National Clay Almanac*, the pioneer of millions of other almanacs issued by them. They possessed rare facilities for printing in foreign languages, and issued a hymn-book in Cherokee, numerous works in Swedish, several in Norwegian, a stereotyped Episcopal prayer-book in the Grebo language, and also a dictionary of the Grebo dialects.

In addition to being the great centre of publication for medical and educational books, the city possesses the most extensive distributing concern in the world. The latter was founded by and owes its success to John Grigg. In 1816, Mr. Grigg came to Philadelphia, and made the acquaintance of Benjamin Warner, a bookseller, with whom he immediately became associated in business. Among the clerks were John Bouvier, afterward the eminent judge, Uriah Hunt, and John B. Ellison. In 1817, Mr. Grigg visited almost every part of Virginia for the purpose of replacing by a correct map the defective one then published. His map became successful, and was cordially acknowledged by the State Legislature. After the dissolution of Warner & Grigg, by the death of the former, a new firm was formed of Grigg, Elliott & Co., which continued until 1850, prior to which date, Jan. 1, 1847, Henry Grambo, Edmund Claxton, and George Remsen were taken in as partners. Upon Mr. Grigg retiring the firm became Lippincott, Grambo & Co., and afterward J. B. Lippincott & Co. Familiar as is the name of the great publishing house of J. B. Lippincott & Co. throughout the reading world, there are probably not many people who know from what small beginnings it has grown, or that it can trace its foundation back to a date more than a hundred years in the past. In that time extensions and the absorption of other establishments have aided in building it up; but it is a fact that it comes in direct descent from the book-shop that Benjamin Johnson kept on Market Street in the concluding quarter of the eighteenth century. Johnson relinquished the business by sale to Benjamin Warner,

and the latter sold it to John Grigg, a business man of rare sagacity and energy. Soon after 1825, Mr. Grigg took Hugh Elliott into partnership, and with their conjoint enterprise the firm of Grigg & Elliott was made the principal publishing concern of its day; but it was destined to be eclipsed by its successor, the house of J. B. Lippincott & Co. Joshua B. Lippincott, the founder and present head of the house, was born in Burlington County, N. J., of a family whose members belonged to the Society of Friends. Within two years previous to 1830 he came to Philadelphia, and obtained a situation in a book-store. It was not within his honorable aspirations to be a leader in his field of labor that he should remain a subordinate in his chosen career, and he only continued an employé until he had amassed sufficient capital to command an independent business. Still, while patiently waiting and working for his opportunity, he had thoroughly mastered the details of the book trade, and had so gained the confidence of his employers that he was entrusted with the entire charge of their store. The opportunity came in 1836, when he founded the publishing firm of J. B. Lippincott & Co., at the corner of Fourth and Race Streets. Its first issues, and those of some time afterward, were chiefly Bibles and prayer-books, which proved immensely popular on account of the elegant styles of print and binding, to which Mr. Lippincott gave special attention, and of which he had made a study.

The house gave other publications to the world, and its operations became so large that it removed to a six-story building at the corner of Fourth and Commerce Streets, erecting another edifice of similar dimensions in Fifth Street, above Cherry, for the manufacturing department. Many men in Mr. Lippincott's position would then have considered that they had garnered the full crop of success, but he had a loftier ambition, nothing less than that of placing his firm at the head of the Philadelphia book trade, and to do that it was necessary for him to buy out Grigg & Elliott. It was a bold stroke, and required almost his entire capital; but he did not shrink from it, and in the consummation he made himself the master of the field. The purchase was made in 1850, when Grigg, Elliott & Co. occupied premises on Fourth Street above Market. Their successors remained in the same location for thirteen years, steadily enlarging the business and adding to the list of their publications, which embraced every branch of English literature and translations from foreign languages. In 1860, Mr. Lippincott found that the Fourth Street premises were becoming too limited for his operations, and he bought a large lot on Market Street, above Seventh, on which were erected, in 1863, the buildings, Nos. 715 and 717 Market Street, that the house now occupies. They cover a ground surface of two hundred by forty-five feet, and are five stories high, and at the time of their erection it seemed to persons not familiar with

the needs of the business that so much space could not be possibly occupied with advantage. But in 1871 it was found that the firm had really not sufficient room, and to increase its facilities, property was purchased on Filbert Street, in the rear of the original building, and on it were erected the accommodations for the manufacturing department, in order to bring all the departments substantially under one roof. The ground space is run together in one vast room, extending northward three hundred and sixty-five feet from Market Street, and in its arrangement as a book-store is simply unsurpassable. The front section, nearly two hundred feet long, is used for the large retail trade, and on these long arrays of shelves and counters may be found the standard volumes of all the leading publishing houses in the English-speaking world. Mr. Lippincott gave early attention to the importation of the imprints of London publishers, with the result that his house has long been recognized as having no superior in the import trade. The arrangement and classification is exceedingly simple, and yet so perfect that a salesman can instantly put his hand on any work called for. The lover of books could have no keener enjoyment than permission to walk among and choose from this collection of all that is best in all departments of literature.

Back of the retail department, and occupying the middle of the ground floor, is the counting-room, where the members of the firm and their business assistants have their desks and offices. Here is centered the management of the divers affairs of the establishment, and how manifold these interests are may be judged from the fact that each morning's mail brings in an average of 250 letters, and as many postal cards. Here, too, is the especial sanctum of Mr. Lippincott himself,—an apartment which holds many a secret of aspiration and disappointment in the world of letters. "Could I relate the scenes that have occurred within that room," he has said, "you would fully appreciate the annoyances and trials of a publisher's life. But its mysteries are sacred, and the blank, sad histories of would-be authors, and the little foibles of the really great authors, must all slumber there untold."

At the rear of the counting-room is the publication department, with the various offices and desks of the salesmen and clerks. It opens at the farther end on Filbert Street, near which are situated the business offices of the magazines and the school-book department. The very heavy trade in these publications is conducted here, but the bulk of the shipping is done in the vast basement. On an average over twenty States are reached daily by the shipments from this department, which aggregate 25,000 boxes and packages yearly, independent of the local deliveries. A sub-basement in the rear contains the engines and boilers, and near by are the fire-proof vaults in which are stored stereotype plates representing an investment of half a million dollars.

J. B. Whippin

Above the first floor the front and rear buildings are connected by bridges. The second, third, and fourth floors of the front building are devoted almost entirely to the immense stationery trade, and at the rear of the second floor are the editorial offices of the "Gazetteer," dictionaries, and other works of reference. The fifth floor is used chiefly for storage purposes, especially of the stock of unbound sheets of various publications. Passing over the bridges from the front fifth story, the visitor finds himself in the midst of an industrial town with a population of over 450 persons. Book composition is conducted in light and airy quarters on the Filbert Street side of the third floor, containing facilities for employing several hundred printers. The remainder of this floor is taken up with the blank-book manufactory, and on the fourth floor are the press-rooms, equipped with twenty-seven printing-machines. The bindery is on the fifth floor, and is very complete in all its appointments. The remaining features of the factory are a stereotype foundry and an engraving department, which, though not owned by J. B. Lippincott & Co., furnish them with all the facilities of the kind required.

While the original trade of the house was largely in Bibles and prayer-books, the literary territory which it now covers includes miscellaneous books, history and biography, religious, fiction, poetry, gift-books, juvenile, medical, scientific, law, dictionaries, works of reference, and educational publications. These embrace the titles of over 2500 volumes, and the number is increasing at the rate of over 100 a year. The first five departments, taken together, constitute one of the finest lists of general literature issued and imported by a single firm to be found in the whole world. Beginning with the miscellaneous department, we find, among many others, the complete works of such standard authors as Addison, Carlyle, Goethe, Irving, "Junius," Lamb, Landor, Schiller, Sheridan, Sterne, and Swift; the philosophical speculations of Berkeley and Fichte; the graceful and favorite writings of Heine and Lamartine; complete sets of Bohn's valuable libraries; and Lippincott's famous edition of the Ancient Classics, translated under the editorial direction of Rev. Lucas Collins by some of the most eminent scholars of the day, and rapidly approaching the dimensions of a large library. History and biography are even more richly represented. Gibbon's "Decline and Fall of the Roman Empire," Hume's and Macaulay's Histories of England, Agnes Strickland's "Queens of England," Knight's "Popular History of England," the complete historical works of Prescott, Kirk's "History of Charles the Bold," Ranke's "History of the Popes," Henry A. Wise's "Seven Decades of the Union," Charles Francis Adams' "Memoirs of John Quincy Adams" and "Life of John Adams," Rev. William R. Alger's interesting "Life of Edwin Forrest," Bigelow's edition of "Benjamin Franklin's Autobiography," Bulwer's

"Life of Palmerston," Forster's "Life of Charles Dickens," Hazlitt's "Napoleon," Randall's "Jefferson" and "'Stonewall' Jackson." These titles sufficiently indicate the wealth of learning and reminiscence here accumulated.

Turning to the departments of religion, fiction, and poetry, we shall find each in its way equally complete and valuable. The former includes several special publications, such as Jamieson and Fausset's "Commentary on the Old and New Testaments," one of the greatest works of the kind ever put forth, and Kitto's "Comprehensive Biblical Cyclopædia," on which vast labor and large capital have been expended. In the same department is a very valuable collection of the hymn-books used in the Protestant Episcopal Church. To attempt to enumerate the authors and works included under the heads of fiction and poetry would be to name nearly everything of value in the long list of classic imaginative literature, besides much of the choicest in later writings. The standard novelists, like Scott, Thackeray, Dickens, Bulwer, and Charlotte Bronte, are found in a great variety of editions, cheap and costly, regard being had to every grade of taste and means,—as, for example, in the Waverley novels, which can be had in the paper edition at 25 cents a volume, or the substantial but plain "People's" edition, at \$12 per set, or the chaste and beautiful "Abbotsford" edition, at \$18 to \$39, or the "Walter Scott" edition, handsomely illustrated from steel plates, at \$25 to \$62, or, finally, the magnificent "Edinburgh" edition, containing over 1500 wood-cuts and steel engravings, and selling at \$84 to \$125, according to binding. The popular "Aldine" edition of the British poets includes the standard English authors, and recent American poets are represented in the works of Boker, Buchanan Read, and Sidney Lanier.

More attention is paid by this house than by most to the old favorites of fiction, the interest in which never diminishes. Among the later writers whom Mr. Lippincott may be said to have brought out is Mrs. A. L. Wister, whose translations from the German, embracing the Marlitt novels and others, are having an immense sale. The gift books include the superb artist's edition of Gray's "Elegy," issued in 1883 at a cost of many thousand dollars, Irving's "Sketch Book," and the variorum "Shakespeare." The scientific, medical, and legal departments reveal such names and titles as Drs. Agnew, Garretson, Duhring, Bartholow, Thomas, Da Costa, Hammond, Leidy, Mitchell, and Wood, the "United States Dispensatory," of which more than 100,000 copies have been sold, Sharswood's edition of "Blackstone's Commentaries," Bouvier's "Law Dictionary," and many more standard works. Of the works of reference, the first in order of publication was the "Dictionary of Authors," prepared by Dr. S. Austin Allibone, which was followed by Lippincott's exhaustive "Pronouncing Gazetteer of the World," which has now grown to a ponderous volume of nearly

2500 octavo pages. Side by side with the "Gazetteer" may be placed the "Pronouncing Dictionary of Biography and Mythology,"—a work of vast erudition.

J. B. Lippincott & Co. purchased, in 1876, from Brewer & Tileston, Boston, the entire rights in Worcester's Dictionary. Under the management of the new proprietors the sale has been pushed with such vigor that it has more than trebled, the increase in the European demand especially having been of late very marked.

Other standard reference works issued by this firm include Allihone's dictionaries of "Poetical" and "Prose Quotations," "Thomas' Medical Dictionary," the important "United States Dispensary," the "Encyclopædia of Chemistry," and Chambers' valuable "Encyclopædia," "Cyclopædia of Literature," "Book of Days," and "Information for the People;" also Brewer's "Reader's Hand-Book." The publication of Chambers' "Encyclopædia," which has enjoyed large sales, was begun in 1860.

As at present (1884) organized, the firm includes, besides its senior partner, Craige, Walter, and J. Bertram Lippincott, sons of J. B. Lippincott, J. Shoemaker, George Wood, R. P. Morton, and W. S. Washburn.

One of the great firms of publishers and booksellers in Philadelphia is that of Porter & Coates, one of the members of which is George Morrison Coates. He was born in this city Aug. 20, 1817, and traced his lineage to the Percys of England, a family that warmly supported the royalist cause during the bitter contest between Charles I. and Parliament, and some of whose members became Quakers, and emigrated to America with Penn. Educated in the Quaker schools of Philadelphia, his business life was commenced in the dry-goods trade, and he subsequently established with his brother Benjamin the firm of Coates Bros., which became one of the largest dealers in wool in Philadelphia; and in 1869 he and his brother also became partners in the publishing house of Porter & Coates. From a small beginning it has advanced to the front rank of American publishers, each succeeding year witnessing an increase of its transactions. Mr. Coates has all his life been engaged in large enterprises. For ten years he was a director of the Pennsylvania Railroad Company, which he entered into when many shrewd business men feared that its future laid in the direction of failure and bankruptcy. But foreseeing its coming prosperity, he not only invested his own means in its securities, but he persuaded his friends to purchase, and no one was more effective than himself in procuring from the city the subscription of \$5,000,000 toward the completion and equipment of the road. He was one of the early members of the Union League, and gave his time and money freely to movements in behalf of the national government. Although he would never accept any office of emolument, he was an elector on the Republican Presidential tickets of

1864, 1868, and 1872, and probably has had more votes cast for him than any other man in the United States. From 1863 to 1870 he was a member of the Board of Health, and for many years a director of the Board of Trade. He was married in 1840, and has several sons, who are associated with him in both the wool and the publishing business.

Maj. Louis H. Everts, the publisher of this history of the great city of Philadelphia, has qualified himself by long experience and large enterprise for the preparation and issue of local historical works, in which line of business he is not excelled by any competitor in the United States. He had but recently left the military service of his country, when, in 1866, he established a publication house in the West, and as his operations extended, a removal to a more central point of business facilities was found indispensable, and he therefore transferred his headquarters to Philadelphia in 1872. Since then he has been a very busy and successful man. In all he has issued over two hundred local histories, embracing cities, counties, towns, etc., in New York, Pennsylvania, Michigan, New Jersey, Massachusetts, Connecticut, Maine, Ohio, Maryland, Indiana, Tennessee, Missouri, New Hampshire, and California. In these many volumes are preserved, in an enduring and concise form, the valuable records of many American cities or other political divisions, from the day when they came into existence to that of the issue of the books, a fact the simple statement of which denotes the importance of his publications. In authenticity, in literary finish, in fineness of illustration, and in typographic style excellence is always aimed at and attained. Besides the histories, Maj. Everts has published the "Cyclopædia of Methodism," edited by Bishop Matthew Simpson; the "Baptist Encyclopædia," edited by Rev. William Cathcart, D.D.; and the "Cyclopædia of Freemasonry," edited by Dr. Albert G. Mackey.

Major Everts is the son of Samuel C. Everts, and is a native of Cattaraugus County, N. Y. In 1861 he resigned from the house of Potter Palmer, Chicago, to enter the army, assisting to raise a regiment in Kane County, Ill., and accepting a commission as lieutenant. He served with the western armies, and was detailed as aide-de-camp to Gen. Hackleman just before the battles of Iuka and Corinth, in the fall of 1862. From President Lincoln he received the commission of assistant adjutant-general of volunteers, with the rank of captain, and was assigned to the staff of Gen. T. W. Sweeny, commanding the Second Division, Sixteenth Army Corps. He marched with Sherman from Atlanta to the sea, and on to Washington.

At the close of this memorable campaign, the field and staff officers of the division united in a testimonial to the adjutant-general, which secured his promotion for meritorious services, and was indorsed by the major-general commanding as follows:

*Geo. Morrison Coates*

"HEADQUARTERS FOURTH DIVISION, FIFTEENTH ARMY CORPS,  
NEAR WASHINGTON CITY, D. C., June 3, 1865.

"Respectfully forwarded and earnestly recommended,—an officer  
able, faithful, and gallant, in every way deserving promotion.

(Signed)

"JOHN M. CORSE,  
"Brevet Major-General commanding."

The application was approved by corps and army  
commanders, and the promotion secured.

In 1882 the printing business was as follows :

	No. Estab- lishments.	Value of Product.
Printers, job.....	241	\$3,783,900
Printers and newspapers, etc .....	91	6,076,600
Publishers of serials.....	23	350,000
Printers of music.....	5	154,000
Plate printers.....	7	138,600
Lithographers.....	29	954,200
Printers' frames, etc .....	8	86,400
Book-binders.....	41	1,624,000
Book-binders' materials.....	3	43,200
Book printers and publishers.....	18	2,259,800
Book publishers.....	62	3,493,010
Total.....	528	\$18,813,710

The hauds employed in these establishments aggre-  
gated 9683.

Carriages were made in Philadelphia by George  
Bringhurst before 1790, who manufactured "all kinds  
of coaches, chariots, post-chaises, kittereans, phaetons,  
waggons, curricles, chaises, chairs, and whiskeys of  
the newest fashion, for home and abroad." The first  
great improvement made in the construction of riding  
carriages was the introduction of iron axles and steel  
springs, by which greater lightness, without loss of  
strength, was acquired. The law of 1794 imposed a  
tax of from one to ten dollars a year on public and  
private carriages. There were owned in Philadelphia  
in 1796, 307 four-wheeled carriages, of which 33 were  
coaches and 35 chariots, in addition to 553 two-  
wheeled carriages. It is stated in the report of the  
Pennsylvania Society of Arts that the importation of  
carriages had nearly ceased in 1801. The duty on  
imported carriages by the act of 1797, of twenty-one  
per cent. *ad valorem*, doubtless contributed to this  
result, as well as stimulated the manufacture at home.  
In 1846 the carriage repository of William D. Rogers  
was established, which in the process of time was en-  
larged in every respect until it became one of the  
greatest in the country.

The statistics of the manufacture of carriages and  
coaches in Philadelphia from 1860 to 1882 are as  
follows :

Year.	No. Estab- lishments.	Capital.	Raw Material.	Labor.	Product.
1860.....	52	\$510,600	\$326,321	1038	\$1,051,371
1870.....	54	874,900	340,728	708	1,199,411
1875.....	...	.....	.....	.....	4,081,254
1883. Carriages and wagons.....	...	.....	.....	.....	2,956,528
Of wagons, etc.:					
1860.....	96	836,650	453,910	975	1,161,431
1870.....	71	749,700	275,849	510	2,809,148
1880.....	110	1,921,300	823,643	1578	2,057,119
1882, wagon-makers, 3; wheelwrights, 12; product of wagon-makers, \$283,000; of wheelwrights, \$104,200.					

E. W. Bushnell was the first manufacturer of chil-  
dren's carriages entirely of iron and wood. This

business he established in 1831. Before that, little  
baskets were chiefly used. The *personnel* of the  
house underwent many changes in the course of  
time, which finally terminated in the ownership of  
J. A. Yost. The manufacture of children's carriages,  
sleds, velocipedes, etc., was not noted in the census  
of 1860. In that of 1870 it was as follows:

	No. Estab- lishments.	Capital.	Raw Material.	Labor.	Product.
In 1860:	5	\$65,600	\$31,690	43	\$90,807
Children's carriages and sleds.....	8	44,800	99,650	83	171,742
In 1882:					
Children's carriages...	7	.....	.....	138	193,100

Of the comforts that attend upon furniture the  
early colonist knew little or nothing. Penn was a  
wealthy man, and spent £5000 on "Pennsbury." His  
furniture was imported, and was equal in every re-  
spect to that used in England by those who had the  
*entrée* of Whitehall. But the character of the com-  
forts in the homes of his colonists must not be in-  
ferred from that which the proprietary enjoyed, al-  
though abundance of the necessaries of life, which  
soon surrounded that "collection of divers nations"  
which settled Philadelphia, would in a very short  
time enable them to supply themselves with much  
of the comforts which follow convenient furni-  
ture. We learn from Mr. Freedley that "in 1840  
there were but few furniture-stores in the city, and  
they mostly small ones, keeping samples of the styles  
of goods, but relying mainly on orders from their cus-  
tomers to supply work for their employés." A spring  
sofa was then a luxury, almost a novelty. The art  
of veneering was just beginning to be understood.  
Previous to this period a crotch of mahogany-wood  
(which was then mostly used for furniture) was cut  
into veneers by a narrow-blade saw drawn by two  
men.

The factory of the present firm of G. Vollmer & Son,  
Nos. 22-28 South Fifteenth Street, with warerooms at  
No. 1108 Chestnut Street and 1105 Sansom Street, is  
now one of the great establishments in this line of busi-  
ness. Gottlieb Vollmer, who founded it, was born in  
Ludwigsburg, kingdom of Würtemberg, on the 10th of  
September, 1816. His parents were Carl and Char-  
lotte Vollmer, of that place. His father was a cabinet-  
maker, and came to this country in 1830, leaving his  
son Gottlieb at home to finish his trade and to pass  
the military examination prescribed by law. Two  
years later, finding himself exempt from conscription,  
he followed his parents to America, settling in Phila-  
delphia. When he was eighteen years of age his  
father died, whereby the support of the widow and of  
five brothers and sisters, the eldest of them being  
nine years old, the youngest two years, was thrown  
upon the young man. Later he married Wilhelmina  
Gehhardt, and to them were born six children,—three  
sons and three daughters.

Mr. Vollmer confined himself strictly to his own

extending business, eschewing public life, and his success, which is to be measured by the business he established and maintained, was due to the most indefatigable perseverance and strict probity of character. Mr. Vollmer died May 17, 1883, leaving his business to be continued by his eldest son, whom he had practically educated for it in this city and in Paris.

The following are statistics of the manufacture of furniture from 1860 to 1882:

Years.	No. Estab-lishments.	Capital.	Raw Material.	Labor.	Value of Product.
1860....	161	\$1,008,550	\$638,623	1627	\$1,854,436
1870....	202	2,724,830	1,580,012	2295	4,578,583
1880....	218	3,239,953	2,025,819	3283	5,229,047
1882....	271	.....	.....	4953	7,594,979

Traces of gold had been found in this colony in the days of Printz. To search out the mineral treasures of the South River or Delaware Colony was enjoined upon the first Dutch Governors by the authorities at Amsterdam, and the inhabitants, as an inducement, were allowed for ten years the sole use of any valuable minerals they might discover; and at Minisink the evidences of their search are to be seen in the "mine-holes" and mine-road thence to the Hudson.

Watchmaking was carried on in 1745 by Robert Leslie, the father of the artist, C. R. Leslie, Maj. Leslie, of the United States army, and Miss E. Leslie, the authoress. In 1789 the Assembly granted him a patent for certain improvements in the mechanism of clocks and watches, which was extended under the United States patent laws.

Among the early clockmakers, advertisements and cards mention Augustine Neisser, who was horn in Sehlen, Moravia, in 1717, came to Georgia in February, 1736, and from thence removed to Pennsylvania in 1739. He settled in Germantown, and married Catharine Reisinger, a member of the Reformed Church, in 1770. By this marriage he had three sons,—George Henry, born in 1771; Augustine, born in 1774; and Jacob, horn in 1777. Augustine, the father, died in 1780, and lies hurried somewhere in Germantown. All the clocks of Augustine Neisser's make bear his name on their faces, but none of them have any date of manufacture affixed. John Wood, watch and clockmaker, had his shop at the southeast corner of Front and Chestnut Streets in 1785. He was there in 1791. His name does not appear in the Directory of 1793 or afterward. The locality was known in the middle of the last century as "Peter Stretch's corner." The latter died probably before the Revolution, and was succeeded by Wood. Edward Duffield, clock and watchmaker, was horn in Philadelphia County in 1720, and died in 1801. He made the first medals ever executed in the province of Pennsylvania, in honor of the victory over the Indians at Kittanning in 1756. He made philosophical apparatus for Dr. Kinnersly, Franklin, and others. He was in business in Philadelphia probably from about 1741 to 1747.

He removed to Lower Dublin, Philadelphia Co., in the latter year, and while there made many clocks and other machinery. David Rittenhouse made clocks from 1751 till 1777. Originally they were manufactured at Norriton, and during the last seven years at Philadelphia. Barton says that Matthias Rittenhouse, the father of David Rittenhouse, had ten children, four of whom were boys, and among whom was Benjamin. The latter is mentioned as the maker of a chronometer in 1786.

William D. Rapp was a well-known clockmaker and watchmaker who, as early as 1831, and probably before, had his shop on the south side of Race Street, between Seventh and Eighth. Benjamin Clark, clockmaker and watchmaker, at the southwest corner of Front and Market Streets, was the son of Ephraim Clark, clockmaker and watchmaker, who was at the same place in 1791. Benjamin succeeded his father about 1792-93. He and his sons were at the same place in 1830 and afterward. During his time the southeast corner of Front and Market Streets was one of the most conspicuous and well-known places in the city.

In "The Traveler's Pocket Companion," published by Mathew Carey, in 1804, mention is made of the Rittenhouse clock in the Philadelphia Library, which, the writer says, "gives notice by ringing an alarm every evening at the setting of the sun, and winds itself up at the same time." The Rittenhouse astronomical clock, in the possession of George W. Childs, was made for Joseph Potts, who paid \$640 for it. In 1774 this clock was purchased by Thomas Prior. Gen. Howe offered a large price for it while the British were in possession of the city. The ambassador of the Spanish court also made an effort to purchase it for the king of Spain. After Mr. Prior's death it passed into the hands of Professor Barton. The late Dr. James Swaim purchased it from Dr. Barton.

Another clock made by Rittenhouse is now the property of Ephraim Clark, of this city. This has a chime of bells, and shows the phases of the moon. Rittenhouse made several beautiful time-pieces containing the machinery of a musical clock, with miniature planetarium.

The manufacture of gold and silver ware in Philadelphia has maintained the front rank for many years. Mr. Freedley quotes from Mr. Wallis' "Report on the Industry of the United States" to show that there were "some twelve or fourteen establishments in which a considerable number of persons are employed, and the productions of which are of a varied, but, for the most part, of a useful, as well as ornamental, character. The presentation services of gold and silver plate bear the imprint of Philadelphia manufacture, while every variety of diamond and pearl jewelry, gold chains, gold and silver pencil- and pen-cases, and other articles of personal ornament are manufactured in her shops and sold in her splendid

stores." William Warner, prior to 1812, established his manufacture of watch-cases, and gold and silver watches are made to a very large extent. The state of this trade in 1860 was as follows:

	No. Estab- lishments.	Capital.	Raw Material.	Labor.	Product.
Gold leaf and foil.....	8	\$91,500	\$146,240	123	\$224,600
Gold pens, gold watchee, etc.	26	741,500	1,103,856	624	1,714,800

The Keystone Watch-Case Manufactory, Nineteenth above Wylie Street, owes its origin to patents which James Boss took out about twenty-five years

There is one five-story and one six-story building, both of brick, and connected by bridges on the various floors. Within they are perfectly equipped with machinery for every phase of the work, from the assaying of metals to the most elaborate ornamentation known to the art. In the basement the ingots of gold, silver, and other metals are melted, and by means of rolls and presses the combinations are formed and the cases cut out. Elsewhere the turning and jointing, the springing and polishing, the engraving and finishing are done, until out of the gold ingot and the composition amalgam are produced the best watch-cases in the world. Several hundred skilled artisans are employed in the different departments of the factory, and much of their work is of the finest and most delicate nature. The apparatus is in many respects a marvel of ingenuity and of adaptation to the purposes for which it is designed. Over 200,000 of these cases have been sold, and the manufacturers state that in every instance they have given entire satisfaction. The firm of Hagstoz & Thorpe continued under that name until July, 1883, when it was reorganized as C. N. Thorpe & Co., with Charles N. Thorpe as general partner and George W. Childs as special partner. H. L. Roberts is the manager, and E. C. Chappatte, superintendent.

KEYSTONE WATCH-CASE MANUFACTORY.

In 1816, Marcus Bull removed his gold-beating shop from Hartford, Conn., to Philadelphia, where it was established in Pearl Street. It was in this shop that dentists' gold-foil was first made. In 1835, when Charles Abbey, previously superintendent, was admitted as a partner, the making of gold-leaf was abandoned, and dentists' gold-foil exclusively produced.

In 1704, the felt-makers asked the Assembly to prohibit the exportation of beaver

ago upon his invention for making watch-cases of two thicknesses of gold, with one thickness of composition metal sandwiched between them, such a case being stronger than one of all gold, firmer, more durable, and yet much less expensive. His plan met with great favor, and in the course of time his business and patents were purchased by the jewelry manufacturing firm of Hagstoz & Thorpe, who so greatly enlarged the trade that it gave rise to the present factory, one of the largest and most complete in the world.

and other furs proper and needful to be worked up, and leave was granted to bring in a bill to that effect. Means were found to evade the statute, and hats continued to be exported to other provinces. Felts, which were the ordinary wear of the people, were made in large quantities, and much of the business was carried on in interior towns, where, wool being cheap, the manufacture was less exposed to official scrutiny than in the sea-ports. At the meeting of the Provincial Council, July 15, 1716, a petition from Thomas Masters was presented, showing that the king had issued to him a patent for "the sole working and weaving, in a new method, palmetto, chip, and straw, for

1 In 1873 gold and silver manufactures were estimated at \$9,038,755, and that of leaf, chains, cases, etc., at \$1,422,486.

covering hats and bonnets, and other improvements in that ware." He asked that he should have permission to record it, which was allowed, with right to publish it. The manufacture of wool hats was a very early and very considerable department of Philadelphia industry. In 1796, the hat manufacture had increased, as ascertained by a report of the Manufacturers' Society of Philadelphia, to over 160,000 wool and upwards of 54,000 fur hats annually. There were 68 hatters in the city. In 1810, Philadelphia made 92,000 hats worth \$5 each, in addition to 50,000 "country" hats, worth \$3.

The statistics of the manufacture of hats from 1860 to 1882 are as follows:

Years.	No. Establishments.	Capital.	Raw Material.	Labor.	Product.
1860.....	61	\$355,300	\$546,866	998	\$1,164,222
1867.....	...	...	...	...	1,250,000
1870.....	60	648,900	684,371	1074	1,720,933
1875.....	...	...	...	...	2,253,744
1880.....	69	831,853	1,138,291	606	2,432,886
1882.....	191	.....	.....	2827	3,546,168

Notwithstanding Pennsylvania from her earliest settlement was an agricultural community, the manufacture of the implements of husbandry was not undertaken in this city until a very late date. Mr. Freedley says that "regular agricultural machine-shops are of quite recent establishment, the larger portion of the implements formerly sold at the city warehouses having been imported from New England, whose sterile soil had compelled its energetic sons to seek more profitable occupation than tillage." Prior to 1854 certain kinds of implements, such as grain-drills, were made by Sleacy and by Penuock, but it was not until David Laudreth & Son, in 1854, established their steam works at Bristol that this manufacture began either in the city or in its vicinity.

The growth of this industry is best traced in its statistics from 1860 to 1882:

Years.	No. Establishments.	Capital.	Raw Material.	Labor.	Product.
1860.....	7	\$67,800	\$46,642	83	\$142,910
1870.....	4	62,000	80,500	80	184,700
1880.....	8	454,000	392,875	344	739,808
1882.....	19	.....	.....	429	710,735

The manufacture of artificial manures is naturally associated with agricultural implements. Those made in Philadelphia are the superphosphate of lime, bone-dust, plaster of Paris, poudrette, urate, bone-black waste, together with imported guano and blood manure.

There were, in 1860, 12 establishments engaged in the manufacture of bone-dust, phosphates, poudrette, etc., the value of whose products was \$207,450. In 1870 there were 17 establishments, the value of whose products was \$1,463,662. In 1880 there were 13 establishments, with an annual production of \$977,750. In 1882 there were 10 establishments, whose products that year were valued at \$1,697,500.

Ship-building was an industry at Philadelphia as early as 1683, when the ship-yard of William West, at the foot of Vine Street, had been established, and Penn in that year wrote that "some vessels have been

built here and many boats." West acquired considerable fortune, his orders coming chiefly from English and Irish houses. In 1698 the wharves and other facilities for receiving, discharging, and storing merchandise, for loading and unloading, building and repairing ships, were so numerous and convenient as to attract the notice of an English writer.<sup>1</sup> There existed a curious and commodious dock, with a drawbridge to it, "for the convenient reception of vessels, where have been built some ships of two or three hundred tons each. They have very stately oaks to build ships with, some of which are between fifty and sixty feet long, and clear of knots, being very straight and well grained. In this famous city of Philadelphia are several ropemakers, who have large and curious ropewalks, especially Joseph Wilcox."<sup>2</sup> Ship-carpenters, carvers, ropemakers, block-makers, turners are mentioned as receiving adequate compensation and full employment.

The ship-yards of Philadelphia, in colonial times, occupied the river front from Market to Vine or Callowhill, and were gradually driven north by the improvements in the city. Jonathan Dickinson, writing in July, 1718, says, "Here is a great employ for ship work for England. It increases and will increase, and our expectations from the iron works, forty miles up the Schuylkill, are very great." The vessels built at Philadelphia in 1722-24, were: 1722, 10 vessels of 458 tons; 1723, 13 of 507 tons; and 1724, 19 of 959 tons. The clearances from 1719 to 1725 averaged 119 sails annually, and, a few years later, it is said that as many as twenty vessels were to be seen upon the stocks at one time, so well adapted were the docks for ship-building. At that early day the city was said to contain a great many wealthy merchants, and the profits of its trade were prodigious. The return of new shipping, built at Philadelphia for 1769, was 1469 tons; in 1770, 2354 tons; in 1771, 1309 tons. The tonnage entered in 1771 was 50,901 tons, and that cleared amounted to 49,654 tons. Fully three-eighths of this tonnage was owned in the province. At the time of the Revolution Philadelphia had become among the first cities in naval architecture; her vessels being no less noted for beauty of form and finish than for their swiftmess. A species of ship, constructed at Philadelphia in early times, but scarcely belonging to naval architecture, perhaps, were huge raft ships,<sup>3</sup> similar to those constructed at a later period in Canada. These colossal structures were built for the purpose of carrying a great quantity of timber, and were designed to be broken up on

<sup>1</sup> Bishop on Manufactures, p. 70.

<sup>2</sup> History of Pennsylvania and New Jersey, by Gabriel Thomas, London, 1608.

<sup>3</sup> "Navis," a correspondent of the *Gazette*, said that "in the last one which left there were eight hundred logs of timber,—enough to build six ships of two hundred and fifty tons each." They were denounced as a means of depriving the colony of material for building ships, and of enhancing the price of timber. These ships twisted much in launching, but, in the water, they looked much like other vessels in form.

arriving at their destination. The last of this class from Philadelphia was constructed at Kensington a few years before the Revolution. The "Baron Renfrew," built at an earlier period, of upward of 5000 tons, or double the measurement of an ordinary seventy-four, made a safe passage to England.

The reputation of her naval architects had now become high; and the position of the city as the largest in the provinces, with an extensive commerce, numerous productive iron-works in the vicinity, and the greatest facilities for procuring the best timber and naval stores from the Southern colonies, gave her superior advantages. These were brought into requisition during the war for the naval defense of the port and the country generally. Of the thirteen frigates ordered by Congress under the law of December, 1775, the "Washington" and the "Randolph," of thirty-two guns each, the "Effingham" of twenty-eight, and the "Delaware" of twenty-four, were built at Philadelphia. One of the three seventy-fours ordered the next year, a brig of eighteen guns, and a packet-boat were also assigned to the ship-yards of Philadelphia. The flourishing commerce of the city was nearly destroyed by the war of the Revolution, and her shipping nearly swept from the sea. But it is doubtful if any other city in the country saw both resuscitated with more remarkable success after the return of peace. In 1793 there were eight thousand one hundred and forty-five tons of shipping built at Philadelphia, an amount double that built at any other port in the United States. The exports of Philadelphia, in 1793, exceeded those of all New England \$1,717,572, and those of New York by \$2,934,370. In 1792, the aggregate value of goods shipped to foreign ports was \$3,820,646, and in 1793, \$6,958,736. Her exports in 1793 were more than one-fourth of the exports of the whole Union.<sup>1</sup>

The success of Philadelphia in this branch of industry was due in a great measure to the genius of several of her eminent citizens. Thomas Godfrey, a native of Pennsylvania, if not the inventor, was the improver of the reflecting quadrant which bears the name of Hadley. It was first brought into use in West India vessels about the year 1731-32, and was thence carried to England, where Hadley acquired the credit of the invention. Dr. Franklin made many suggestions for the improvement of the model and sailing qualities of vessels, among them the *water-tight compartments* which have of late years been introduced into naval structures. Joshua Humphreys was the first naval constructor of the United States navy, and built many of the ships of war belonging to the government.

Thomas P. Cope, the great ship-owner, greatly encouraged the ship-builders of this city, and the most of his splendid ships were built here. As we have seen, Philadelphia was indebted to him for the estab-

lishment, in 1821, of the first regular line of packet-ships between this city and Liverpool, England, and the first ship employed in the line was, it is said, the "Lancaster," of two hundred and ninety tons, commanded by Capt. Dixey.

William Rush, the son of a ship-carver of Philadelphia, was born July 4, 1756. He was without a superior as a ship-carver and sculptor, having been apprenticed to Edward Outbush, of London, the best carver of his day. Walking attitudes were then unknown for figure-heads, but all rested astride the cutwater. He introduced the upright figure, and soon excelled all his competitors. His figures attracted notice in foreign ports, and soon orders were received for foreign vessels. His "Indian Trader," dressed in Indian habiliments, excited great admiration when seen from the ship "William Penn" in London. The carvers of London came in boats to sketch and make designs of it, and in Paris plaster casts of the head were taken. His "River God," as the figure-head of the ship "Ganges," attracted the wonder of the Hindoos, who came in numerous boats to express their delight. The house of Nicklin & Griffiths gave orders to Rush to carve two figure-heads for ships building in London. Among his most noted figures were the female personation of "Commerce," the full-size statue of Washington for the Academy of Arts, his William Penn, Franklin, Voltaire, Rousseau, Gen. Wade Hampton, and the representation of the crucifixion in St. Augustine Church, destroyed by the church by the mob of 1844. His figures of "Tragedy" and "Comedy" were owned by Edwin Forrest. Mr. Rush was often a member of City Councils, and died Jan. 27, 1833. Among the most skillful of the ship-carvers about the beginning of the century was Mr. Grice, who built the ship "Fanny," for Capt. Charles Macalester, the fastest sailing merchantman of that day, making her first voyage from Philadelphia to Cowes in seventeen days, and carrying the wealthy and distinguished citizen of Philadelphia, William Bingham, with his wife, as passengers. Capt. Macalester relinquished the sea in 1824, and engaged in mercantile pursuits. After a successful life therein, Capt. Macalester was elected, in 1825, president of the Insurance Company of the State of Pennsylvania, then in some financial trouble. In two years such was his success in relieving the company from embarrassment that he was presented in 1827, by the stockholders, with a service of plate, as a testimonial of

THOMAS P. COPE.

<sup>1</sup> Cope's "View of the United States."

their grateful sense of the manner in which he had managed the affairs of the company. He died Aug. 29, 1832, aged sixty-seven.

Previous to the Revolutionary war the wharfage accommodation of Philadelphia had become much impaired by the accumulation of mud. Arthur Donaldson invented a dredging-machine for cleaning and deepening the docks, a cut and description of which were given in the *Pennsylvania Magazine* for 1775. The committee of the Philosophical Society recommended an award to the builder of £100 for his ingenuity.<sup>1</sup> In 1785, Donaldson was granted by the Assembly the exclusive privilege, for a term of years, of making and using in the Delaware his machine for cleaning docks, called the "Hippopotamus." He also invented a balance-lock. His constructive abilities procured for him an offer from Fulton of a partnership in his steamboat scheme. To this invention he afterward set up an independent claim, based on the construction of a pump-boat on the principle of Bernoville's, and for some time he strongly contested with Fitch, the originator of that and other modes of applying power. The agency of steam was applied to dredging purposes by Oliver Evans, in 1804, in the "Eruktor Amphiholis."

The number and tonnage of vessels built in Pennsylvania in 1847 were 8 ships, 2 brigs, 31 schooners, 121 sloops and canal-boats, 66 steamers; total, 228, with an aggregate tonnage of 24,126.37.

The history of ship-building in 1854 in Philadelphia is condensed in Hunt's *Merchants' Magazine* for September, 1855, as follows:

	Launched.		On Stock.	
	Vessels.	Tonnage.	Vessels.	Tonnage.

The builders of iron ships in 1860 confined themselves to 3 establishments, with a capital of \$400,000, the raw material used being valued at \$245,900. The hands employed numbered 350, and the value of the product was \$448,500. The builders of wooden ships, by the census of that year, numbered 13, with \$1,350,000 capital, employing 608 hands, and using \$297,355 of raw material, the annual product being valued at \$804,500. The ship-joiners and boat-builders were 9 in number, with a capital of \$18,150, using raw

material valued at \$23,790, employing 76 hands, and producing annually a value of \$78,829. The ship-smiths numbered 12, with \$31,400 of capital, \$14,387 of raw material, employing 52 hands, and producing an annual value of \$55,600. These different classes aggregated 37 establishments, whose total capital was \$1,799,550; the raw material annually used was valued at \$579,932, the hands employed numbered 1086, and the value of the product aggregated \$1,387,429.

In 1870, the ship-builders numbered 12, with aggregate capital of \$3,705,700, paying annually in wages \$1,129,590, and using raw material of the value of \$820,912; the annual product being valued at \$3,012,663. By the census of 1880 ship-building was conducted in 52 establishments, with an aggregate capital of \$2,075,132, the raw material used being valued at \$1,438,574, and the annual product at \$2,981,381. In 1882, the enumeration of Philadelphia industries gave for iron ships and ship-building, 4 establishments, whose aggregate annual product was \$5,620,000; ship-repairing (iron), 7 establishments, whose annual product was valued at \$253,400; ship-builders (wood), not boats, 3 establishments, whose annual product was valued at \$415,000; boats and barges (not steam), 12 establishments, with an annual product of \$190,400; blocks, pumps, and ship-fittings, 8 establishments, whose annual product was valued at \$145,300; ship propellers, 1 establishment, with an annual product of \$120,000. These 35 establishments employed 3092 hands and produced annually a value of \$6,743,400.

Of all the ship-yards in the United States, there is no one better known than that of William Cramp & Sons, which among its work has turned out the famous steam yachts "Corsair," for Charles J. Osborne, in 1881; "Stranger," for George A. Osgood, in 1881, and "Atalanta," for Jay Gould, in 1883.

William Cramp, to whom this great industry owes its origin, was born in the district of Kensington, now the Eighteenth Ward of the city of Philadelphia, in September, 1807. His parents were of English descent, but were natives of this country. He was educated in the Philadelphia schools, and in 1823 was apprenticed to Samuel Grice, the most celebrated ship-hilder of that period, whose yard occupied the site of what is now Verree's rolling-mill. After he had completed his term of service with Grice, he worked for several years as a journeyman ship-carpenter. In 1830 he determined to establish an individual business enterprise, and acquiring some property in Kensington and fronting on the Delaware River, he began the building of wooden vessels and steamboats. In 1857 he took into partnership his two sons, Charles H. and William M. Cramp, and in 1863 three other sons, Samuel H., Jacob C., and Theodore Cramp, were also admitted into the firm. In 1860 the changes that had taken place in marine architecture induced the firm to discontinue the construction of wooden craft and devote its attention

<sup>1</sup> In January, 1774, Arthur Donaldson presented a petition to the Assembly declaring that he had invented a machine to cleanse and deepen the docks, but "which might be beneficial in cleansing and deepening the piers, opening the shallow and too-contracted mouths and channels of rivers, and in raising stones and sand for buildings, and for a variety of other works of public utility." The American Philosophical Society, he declared, had seen the machine at work and had approved of it, and he asks that encouragement should be given to him. A committee was accordingly appointed to see the machine perform.

entirely to iron vessels, in which business it has made a reputation with which every maritime country in the world is familiar. It furnished the government with a number of iron-clads and other ships of war during the Rebellion, including the famous armed frigate "New Ironsides," which did such effective service in Charleston harbor. In addition to the vessels built at the Cramps' yards for the navy, many others were there refitted and equipped. After the close of the war, the firm contracted with the American Steamship Company to build four first-class iron steamers for the Philadelphia and Liverpool Line. As more room than was then occupied was needed for this large undertaking, a large tract of land in Kensington, having a river frontage of 700 feet, was purchased, and is now the establishment of the firm. The necessary piling having been put down, the ship-houses, docks, piers, machine-shops, etc., were speedily erected, and a numerous force of hands engaged for building the American Line steamers. Each of these four vessels is 355 feet long, 43 feet breadth of beam, and 34½ feet depth of hold, and 3016 tons burden. The first ship, the "Pennsylvania," was launched in August, 1872; the "Ohio," in October of the same year; the "Indiana," in March, 1873; and the "Illinois" in the succeeding May. About the same time there were built for the Reading Railroad Company six iron steam colliers, each 250 feet long. In 1874, William Cramp & Sons constructed the largest iron steamer ever built for the American coastwise trade. This was the "Columbus," a screw-ship 285 feet long, and measuring 1850 tons.

In 1876 Russian officials, who were visiting the Centennial Exhibition, inspected the Cramp yards, and they were so highly gratified with what they saw that they persuaded the czar's government to send the corvette "Craysser" there to be overhauled and repaired. This transaction led to further contracts with Russia, for which the Cramps built four vessels, the "Europe," "Asia," "Africa," and "Zabiaca." The Russian government also bought the steamship "State of California," which had just been completed for the Pacific Coast Steam Navigation Company. Subsequently the steamships "Saratoga" and "Columbia," which had been built by John Roach & Son to ply between New York and Havana, were purchased by Russia, and they, as well as the "State of California," were altered at Cramps' into war-vessels. The business of the firm is immense in its extent, and is directly the fruits of the sagacity and energy of William Cramp. A practical man himself, each of the five sons, who have conducted the vast interests of the firm since his death, learned the branches of ship-building in the yards. He was a model of integrity, and was noted for the promptness with which he met every obligation. In an unostentatious fashion he was quite charitable. He was a member of the Presbyterian Church at Kensington, where his father had worshiped before him. He died July 6, 1879, at

Atlantic City, and was buried from his home, No. 1503 North Fifteenth Street, Philadelphia. He married a lady from the Kensington district, who died in 1874. Of their ten children, five were the sons above named, who now constitute the firm, which has prospered under their management. Fourteen hundred men are now employed at the yards, where there are three steamships on the stocks for the Southern Improvement Company and one for the Boston and New York Line.

Adolph E. Borie was another representative merchant of Philadelphia. He was born Nov. 25, 1809, in this city, and was educated at the collegiate department of the University of Pennsylvania, in the class of 1825. He was sent to France to continue his studies, and returned home in 1828. His father intended him for the profession of the law, but owing to his health it was deemed best to relinquish a study involving close mental application, and he entered the counting-house of his father, the late John Joseph Borie. In 1848 he was elected president of the Bank of Commerce, which position he retained until 1860. He took a leading part in sustaining the government during the war, and was among the founders of the Union Club, which in 1862 developed into the Union League, of which he became the first vice-president. In March, 1869, he entered the cabinet of President Grant, as Secretary of the Navy, but resigned June 25, 1869, to attend to his private affairs, much against the expressed wishes of the President. He died Feb. 5, 1880, aged seventy years.

The necessity for a navy was felt by the government almost as soon as it was organized. The insults offered to the flag and the injuries done to the commerce of the country by the Algerian pirates prior to 1795 induced Congress to pass the act of March 27, 1794, "to provide for a naval armament." The peace with Algiers, purchased rather than conquered, put an end to the building of the "armament," and left the country without a navy. By act of Feb. 25, 1799, two docks for repairing ships were ordered to be constructed, and to that end \$50,000 was appropriated. In 1798 the Navy Department was created, and upon the Secretary of the Navy devolved the duty of constructing the two docks; but on the same day on which the dock act passed Congress also enacted a law providing for the building or purchasing of six ships of war, each to carry not less than 74 guns, and six sloops of war, each to carry 18 guns. It was through these two acts that the first navy-yard at Philadelphia was provided. The appropriations for the building of the two docks was \$50,000, and for the construction of the 12 ships \$1,000,000. The first sum was too small for its purpose, so the Secretary, arguing that without a navy-yard it was not possible to build ships, determined to supplement the \$50,000 with a portion of the \$1,000,000, and purchase a site for a navy-yard. To this end, in 1800 several lots of ground in Southwark were purchased. The streets

of the district, as it was originally laid out, crossed these lots, and the Legislature was applied to to close the streets and vacate the right of the district to open. Not until the navy-yard had been established for many years was this exemption granted. The Secretary of the Navy did not wait for the favor, but on the 21st of February, 1801, bought from William and John Allen, of Huntington County, N. J., and from Anthony Morris and wife, and from Luke Morris and wife, three parcels of land beginning at the south side of Prince [formerly called Weccacoe] Lane, in Southwark, and extending eastward 546 feet to the Delaware River, for which three lots the sum of \$37,000 was paid. Adjoining land to the south was bought afterward. The lands purchased cost altogether \$199,030.92. The building of proper houses for the business of the yard was also necessary,—store-houses, blacksmith-shops, mould-lofts, and offices for the civil establishment of the yard, together with saw-shed, hlockmakers' shed, etc. In 1807 the harracks for the marines were erected upon the west side of the yard, south of the principal offices. For the accommodation of the commanding officer of the marine corps a substantial brick building was constructed in 1821, south of the barracks, and facing on Front Street. Up to the year 1820 all vessels constructed at the navy-yard were built in the open air, and unprotected from the weather. In 1821, Philip Justice commenced the erection of a ship-house, which was completed the next year, and was known as the "Frigate House." It was 210 feet long, 74 feet wide, and 80 feet high. In 1822 he commenced a much larger building, 270 feet long, 103 feet high, and 84 feet wide. These houses were for a half-century the most conspicuous objects in and around the city. The price paid to Justice for his work was \$23,000. The work of supplying the houses with launching-ways and slips was done years after. The first keel that was laid at the navy-yard was that of the frigate "Franklin."

The dry-dock which Congress designed to be built, but which the Secretary of the Navy converted into a navy-yard, was finally provided for by Congress, and completed in July, 1851, at a cost of \$831,840.34.

The navy-yard was sold by the government by public sale at the Merchants' Exchange, Dec. 2, 1875, for \$1,000,000, to the Pennsylvania Railroad Company. The removal to League Island took place on the 7th of January, 1876.

#### VESSELS BUILT AND LAUNCHED AT THE UNITED STATES NAVY-YARD.

- 1815, Aug. 25.—Sailing frigate "Franklin," 74 guns.
- 1820, Sept. 7.—Ship-of-the-line "North Carolina," 74 guns.
- 1821, June 23.—Schooner "Dolphin," 10 guns.
- 1828, Aug. 26.—Sloop of war "Vandalla," 20 guns.
- 1836, Sept. 14.—Sloop of war "Relief," 4 guns.
- 1837, July 18.—Ship-of-the-line "Pennsylvania," 120 guns.
- 1839, Oct. 8.—Sloop of war "Dale," 3 guns.
- 1841, May 6.—Side-wheel steamer "Mississippi," 10 guns.
- 1843, June 13.—Frigate "Baritan," 44 guns.
- 1843, Sept. 7.—Steam-propeller sloop of war "Princeton," 31 guns.
- 1846, Aug. 21.—Sloop of war "Germantown," 20 guns.

- 1850, April 6.—Side-wheel steam frigate "Susquehanna."
- 1855, May 1.—Steam-propeller "Arctic," built for light-boat, afterward in Kaighn's polar expedition.
- 1855, Oct. 11.—Light-boat "Martin's Industry."
- 1855, Oct. 24.—Steam-propeller sloop of war "Wabash."
- 1857, Aug. 8.—Side-wheel steamer "Shubrick."
- 1858, Jan. 9.—Light-boat "Second Class."
- 1858, Oct. 20.—Steam-propeller sloop of war "Lancaster," 22 guns.
- 1859, Jan. 19.—Steam-propeller sloop of war "Wyoming," 7 guns.
- 1859, Oct. 8.—Steam-propeller sloop of war "Pawnee," 11 guns.
- 1861, Aug. 24.—Steam-propeller sloop of war "Tuscarora," 7 guns.
- 1861, Nov. 16.—Side-wheel steamer "Miami."
- 1862, March 20.—Steam-propeller sloop of war "Juniata," 9 guns.
- 1862, July 10.—Steam-propeller sloop of war "Monongahela," 12 guns.
- 1862, Dec. 8.—Steam-propeller sloop of war "Shenandoah."
- 1863, May 7.—Side-wheel steamer (double end) "Tacony," 10 guns.
- 1863, Sept. 29.—Steam-propeller "Kansas," 8 guns.
- 1864, March 18.—Steam-propeller "Yantic," 3 guns.
- 1864, March 31.—Steam-propeller iron-clad "Tonawanda," now "Amphitrits."
- 1865, May 23.—Steam-propeller sloop of war "Swatara," 10 guns up; new "Swatara" built at New York.
- 1865, Oct. 5.—Steam-propeller sloop of war "Neshaminy," afterward "Arizona," afterward "Nevada," 16 guns.
- 1867, July 17.—Steam-propeller sloop of war "Pushmataha," afterward "Cambridge," afterward "Congress," 13 guns.
- 1869, June 10.—Steam-propeller sloop of war "Astoria," now "Omaha," 12 guns.
- 1875, Sept. 28.—Steam-propeller sloop of war "Quinnebang."
- 1875, Nov. 13.—Steam-propeller sloop of war "Antietam."
- 1882.—Steam gun-boat "Ossipee."

#### UNITED STATES VESSELS NOT BUILT AT NAVY-YARD.

- 1797, March 10.—Sailing frigate "United States," built at Southwark by Joshua Humphreys, naval constructor.
- 1799, Nov. 28.—Sailing frigate "Philadelphia," presented by citizens of Philadelphia, built at Southwark, by Joshua Humphrey.
- 1814, March 23.—Sloop of war, built by Adam & Noah Brown.
- 1814, June 20.—Sailing frigate "Guerriere," built by Joseph Grice, Kensington.
- 1864, Oct. 13.—Steam sloop of war "Chattanooga," built at Kensington, Oct. 13, 1864; sunk at League Island, Dec. 25, 1871.
- 1862, May 10.—Iron-clad "New Ironsides," launched at Kensington, May 10, 1862; partially burned at League Island, Dec. 16, 1866.
- 1869, Oct. 25.—Steamer "Allanhus."
- 1883, March 24.—Monitor "Terror," from ship-yard of William Oramp & Son, Kensington.

## CHAPTER LVIII.

### THE COMMERCIAL EXCHANGES OF PHILADELPHIA.

The Philadelphia Board of Trade is the largest organization of its kind in the country, and in point of influence is second to none. Its general objects are "the promotion of the trade of the city, the giving a proper direction to all commercial movements, the improvement of facilities for transportation, and generally the use of all proper measures for advancing the interests of the business community." In its membership it embraces men engaged in almost every branch of business, and its utterances must therefore be regarded as, in the most representative degree, the sentiments of the business men of Philadelphia. It dates its existence from a meeting held at Wade's Hotel, Oct. 15, 1833, which was called "to consider the propriety of forming an association by

means of which the commercial and trading community in the city might be enabled to act with united efforts on all subjects relating to their interests." A committee on a constitution made a report the same evening, which was adopted, and a committee of twelve was appointed to receive subscriptions for membership. A second meeting was held at the Franklin Institute a week later, at which Thomas P. Cope was chosen president of the new association, Matthew Newkirk vice-president, Thomas C. Rockhill treasurer, and George W. Toland secretary. A board of directors was also elected, consisting of the following gentlemen: Robert Toland, Caleb Cope, John Haseltine, John S. Riddle, Lewis Waln, William H. Hart, William R. Thompson, Mordecai D. Lewis, Evans Rogers, William W. McMain, Thomas P. Hoopes, Hugh F. Hollingshead, John Grigg, Richard D. Wood, Alexander Read, Edward Roberts, Robert Patterson, George Handy, J. G. Stacey, J. C. Oliver, and Charles Schaffer, Jr.

The association at once entered upon the prosecution of its work by recommending to the board of directors the appointment of a committee to confer with a committee already appointed at a meeting of citizens, and select delegates to attend an Internal Improvement Convention to be held at Warren, Ohio, on the 13th of November, 1833. The appointment was made by the directors, and a conference was held by the committee with the committee of citizens, resulting in the selection of Josiah White, Jacob S. Waln, Abraham Miller, Thomas P. Hoopes, J. M. Atwood, Alexander McClurg, and George Handy as delegates to the convention. The prompt and energetic action of the board with regard to this convention is thought to have been the cause of much of the success which subsequently attended the transportation in Western produce through this State, and to Philadelphia markets.

The association's first fixed place of meeting was in a room at the Merchants' Exchange. In October, 1847, a resolution was passed that the meetings of the board of directors should be open to members of the association, and at the same time it was decided in consequence to abolish the quarterly meetings of the association and hold them yearly instead. The system of annual meetings prevailed until 1871, when, the board having increased very much in size and importance, a return was made to the old plan of assembling quarterly.

On April 17, 1845, the Board of Trade resolved to unite with the then existing Chamber of Commerce, which had already signified its willingness for a consolidation, and the union subsequently took place. At the annual meeting in the early part of 1858, a line of policy was explained by the directors to the board which was designed to extend the influence and increase the usefulness of the association, and which did result in its complete reorganization, and the fulfillment of the highest hopes of the projectors of the

movement. In accordance with the policy suggested, a committee was appointed to choose another room for the association, and also to select a permanent secretary for the executive council, which had taken the place of the old board of directors, and at that time consisted of twenty-one members. The committee selected rooms at 505 Chestnut Street, and the association moved thither in June, 1858. Lorin Blodget was made secretary of the executive council, and instead of the rooms being open only once or twice a month, as formerly, they were now kept open every day in the week except Sunday. In order to render the association more democratic in its organization, and to secure a wider participation in its proceedings than had previously been given, the annual subscription of firms for membership was reduced from ten to five dollars. The appreciation felt by merchants of these changes is shown by the fact that within a year one hundred and twenty new members, consisting of men engaged in almost every branch of business, were added to the association. In process of time the number of members reached almost twelve hundred, but from those figures it afterward declined. At the present time there are on the rolls over eight hundred names.

The National Board of Trade was formed at the annual convention of the Boards of Trade held in Philadelphia June 31, 1869, and Frederick Fraley, of this city, was chosen its president, an action that was a decided compliment to the Philadelphia Board.

In the early part of 1872 the location of the board was again changed to its present room in the Mercantile Library building, on Tenth Street, between Chestnut and Market Streets. In March, 1872, George L. Buzby became secretary for both the board and its executive council, and thus the confusion of having a secretary for each, as had been the case previously, was obviated. Since its last removal, the Board of Trade has had a very quiet and uneventful history.

The board has had but four presidents. Thomas P. Cope, the first incumbent in the office, held the position until his death, on the 22d of November, 1854.

Mr. Cope's successor was Thomas P. Hoopes, one of the original members of the association. Mr. Hoopes was a native of Bucks County, Pa., and was of Quaker descent. On coming to Philadelphia, he entered the hardware store of Bird & Earps, at the southwest corner of Fifth and Market Streets. Subsequently he became one of the proprietors of the store, the firm-name being Hoopes, Wolfe & Baker. Toward the latter part of his life he retired from business with what was considered in those days a handsome fortune, and devoted his attention to the Board of Trade, and to matters of public interest.

He succeeded in 1857 by Samuel C. Morton. Mr. Morton was a native of Wilmington, Del., and, on coming to Philadelphia, served an apprenticeship with Bunker & Starr, flour merchants, on the

river front, near Walnut Street. He afterward became one of the proprietors of the store, the firm-name being Samuel C. Morton & Co. From 1847 to 1857, he was president of the American Fire Insurance Company of this city. Mr. Morton resigned the presidency of the Board of Trade in 1865, and in February, 1866, was succeeded by John Welsh, the present incumbent, and at one time United States minister to Great Britain.

The present officers are as follows: President, John Welsh; First Vice-President, James C. Hand; Second Vice-President, Frederick Fraley; Third Vice-President, John Price Wetherill; Fourth Vice-President, T. Morris Perot; Secretary, George L. Buzby; Treasurer, Richard Wood. The executive committee numbers thirty-three members.

Lack of space forbids any extended notice of the questions considered and conclusions reached by the Board of Trade, which, as the clearest expression of the opinions of Philadelphia merchants, have exerted a great influence on legislation. In 1834 a memorial was prepared to Congress against the destruction of the Bank of the United States, and others were drawn up subsequently. In 1834 delegates were sent to Harrisburg to secure a reduction in the State tolls upon merchandise passing over the canals and the Portage road, and to visit Columbus, Ohio, in order to advocate the connection of the public works in Pennsylvania and Ohio. In their first effort the committee were successful, and several subsequent efforts for further reductions met with a like fortunate result. In 1835 a committee was sent to Washington to urge upon Congress the erection of new lights at Brandywine Shoal and Reedy Island, a reduction of rates in postage, and the establishment in Philadelphia of a new custom-house. The committee reported that they had obtained the assent of the proper committees to these measures. In October, 1836, delegates were appointed to attend a convention called to promote the construction of a railroad from Northumberland to Erie Harbor, afterward the Sunbury and Erie Railroad, and now the Philadelphia and Erie Railroad.

In February, 1837, a memorial was transmitted to the Legislature urging the modification of the usury laws of the State, which was the first of quite a number. In August, 1838, a committee was appointed to "consider the expediency of establishing a line of steam packets between this city and certain points in Europe." The promotion of this project in one form or other was always a favorite matter of consideration by the board. In 1848 the efforts made by the board in connection with the citizens generally to obtain the incorporation of the Pennsylvania Railroad were successful. In 1849 the board obtained the passage of a law for the incorporation of manufacturing companies. The improvement of the Delaware River and Bay has always been a matter of the deepest interest to the board. In 1852 they sent a committee to

Washington to urge the construction of works in the Delaware, and succeeded in obtaining an aggregate of appropriations exceeding \$100,000 for the construction of the breakwater, and for an ice-harbor at Reedy Island. In 1853 the board took the initiative, at the first meeting of the directors, in a plan for widening Delaware Avenue and extending the wharf-line, and in the same year a paid fire department was recommended to the city government. A general banking law was advocated as early as 1856, and on the introduction of the National Banking Bill into Congress, in 1862, the board, after careful consideration, gave it their approval. Frequent action has been taken by the board with regard to unsound insurance companies, and in 1859 the annual report refers with satisfaction to the fact that these efforts had already brought the insurance companies on a better basis. Previous to 1876 the board was active in advancing the interests of the Centennial Exhibition, both in urging appropriations from the Legislature and in providing help in other ways. It has always been in favor of a protective tariff, and has expressed itself clearly on the subject a number of times. In 1882 the abrogation of the reciprocity treaty of the United States with the Sandwich Islands was advocated. The United States received large imports from them.

A Congressional committee having been appointed to take evidence on the subject of differential rates by railroads in their charges to seaport cities from the West, the Board of Trade opened its rooms for several days for the fullest discussion of the subject before the committee. The recommendation of the majority of the business men was against the adoption of any measures disturbing the rates of the railroads, on the ground that differential rates recognized the relative advantages of different seaports. The committee reported in accordance with these views. The adoption of the Lowell Bankruptcy Bill was urged on Congress. The passage of a bill introduced into Congress to increase the efficiency of the Signal Service Department was advocated. The bill for an act giving the consent of the United States for the erection of a bridge across the Delaware River, from Philadelphia to Camden, having been made the occasion of a request for the opinion of the Board thereon, it was resolved that the project was not a feasible one, owing to the hindrance it would offer to navigation. A petition was offered to Congress to provide by law for a liberal compensation to American steamships for ocean mail-service, under proper terms and conditions, in order to induce American capitalists to invest the large sums of money required to establish and maintain foreign steamship lines, and thus promote the interests of American shipping. Resolutions were adopted requesting Councils not to grant privileges to telegraph or telephone companies to erect additional poles in the city to carry their wires, the belief being expressed that wires could be laid underground with results satisfactory to the companies and more agreeable to the public.

The association is composed of persons interested in the commerce, finance, manufactures, and mechanic arts of Philadelphia.

Frederick Fraley, the vice-president of the Board of Trade, has been so intimately associated with the prominent institutions and public affairs of this city as to require a sketch of his biography. He is the son of John Urban Fraley and Elizabeth Laskey, and was born in the city of Philadelphia on the 28th of May, 1804. His ancestry on his father's side was Swiss, his grandfather, Frederick Fraley, having come to Philadelphia from Zurich at an early age. His maternal ancestors were English.

His predilection was for the practice of the law, which, as a lad, he had studied for his own gratification; but it was finally determined that he should receive a mercantile training, and he accordingly entered a house in the hardware trade, continuing in that business for a number of years. His first participation in public enterprise was in the year 1824, when, in conjunction with several of the leading mechanics and scientific men of the city, he took a prominent part in founding the Franklin Institute, of which body he has continued through life an active member and manager, and many years its treasurer. In the year 1834 he was elected to the City Council, and was at once placed upon its most important committees. During his service in Councils the suspension of specie payments, in 1837, occurred, which brought great complications in the municipal credit. At the height of this, when the city was on the brink of insolvency, Mr. Fraley, as chairman of the Finance Committee, proposed, as a measure of relief, the issue of certificates of debt in small denominations. This measure was carried through the committee and Councils, and at once relieved the city from embarrassment. The introduction of gas-lighting in face of much public opposition, and the subsequent organization and management of the Philadelphia Gas-Works upon the system still in force, were the result of his report, in 1835, as chairman of a Councils committee. He also prepared the plan for the reorganization of the committees of Councils, and the keeping and auditing of the city's accounts, which continued in force until the period of consolidation.

In October, 1837, Mr. Fraley was elected a member of the Senate of Pennsylvania. During his term of service the amended State Constitution of 1837 went into operation, and he took an active part in framing the laws needed to carry the new Constitution into effect. The difficulty of this duty was aggravated by the serious political complications which resulted in what is known in State history as "the Buckshot war." He was personally present during the disturbances which forced the memorable adjournment of the Senate, and, at the request of his colleagues, prepared an address to the people giving an account thereof. Subsequently he served as chairman of the committee of investigation, conducting its labors to a suc-

cessful issue, with the confidence and respect of both political parties. In politics he was a leading Whig during this period.

In 1847 he was elected to the presidency of the Schuylkill Navigation Company, which office he still holds; and in the same year, upon the completion of the Girard College buildings, Mr. Fraley was elected one of the board of directors of the institution, and prepared the report adopted for the organization and management of the college. During a number of years he continued at the head of the board of directors, and spent his Sunday afternoons in giving to the pupils instruction upon moral and religious duties, voluntarily discharging, also, the duties of president during a vacancy of about six months.

In 1853 he became an active and prominent member of the committee of citizens, organized to prepare a plan for the consolidation of the city with its many separate districts, and most of the provisions of the act of Assembly relating to the financial management of the city were drafted by him.

At the outbreak of the Rebellion he ardently supported the government by his social as well as by his political influence, and was one of the founders of the Union Club and its successor, the Union League of Philadelphia. Since 1863 he has been a trustee of the University of Pennsylvania, and worked devotedly toward the reorganization of the collegiate system and the raising of the endowment fund, which has placed that institution upon its present footing.

Having been from a very early period a member of the Philadelphia Board of Trade, and its president for many years, he was selected as a delegate, in 1868, to the commercial convention which was held in Boston for the establishment of a National Board of Trade, and for the discussion of the grave financial questions then pending. In the midst of a dangerous diversity of opinions upon the question of specie payments and kindred subjects, Mr. Fraley had the tact and genial influence to harmonize the views of his associates, and to win from the convention a nearly unanimous vote upon the adoption of the resolutions submitted by him. The organization of a National Board of Trade followed this convention, and he was at once elected president. By unanimous re-election he has continued in that office until the present time (1884), and has been the chosen and permanent spokesman of the board before the Houses of Congress, and on all occasions when its views have been made public.

When it was determined to hold the Centennial National Exhibition of 1876, Mr. Fraley was called upon to aid in the preliminary arrangements, and assisted the committees of Councils in sketching the system upon which its financial management should be conducted. The important features of the plan submitted by him were adopted in the act of Congress of 1872, and when the Board of Finance was estab-

lished, in 1873, he was unanimously elected treasurer of the Centennial Board of Finance, which raised the millions of money required for that historic exhibition. In association with his life-long friend, Hon. John Welsh, he supervised the immense and complicated financial details, and satisfactorily adjusted the difficult questions of internal organization that continually arose between the commissioners and the Board of Finance.

In 1878, Mr. Fraley was elected president of the Western Saving Fund, and still continues in that office. In addition to active work of a purely public character, his skill in organizing and administering the affairs of various institutions of a philanthropic and semi-public character has been largely employed. The Merchants' Fund, the School of Instruction for the Blind, the Apprentices', Mercantile, and Philadelphia Libraries, and the Pennsylvania Hospital have all shared his attention and reaped the benefit of his experience. He is now, and has been for some years, the president of the American Philosophical Society.

From the foregoing much abbreviated sketch it will be seen that Mr. Fraley's prominent characteristics as a citizen have been those of an organizer; a man to set good and useful works in motion, both public and private; a man whose counsel is always in demand, because his fellow-citizens have confidence in his integrity and wisdom. He is noted for the soundness of his judgment in all matters of finance, political economy, and trade in their broad range, and for all administrative affairs. Still active in his eightieth year, in his many and diverse engagements and duties he is one of Philadelphia's veteran worthies who does not lag superfluous on the stage.

**The Chamber of Commerce.**—Previous to the institution of a Corn Exchange, the flour and grain merchants of this city possessed but little unity of purpose or feeling. It was to bring them together for their general benefit that a meeting of gentlemen connected with the grain business was held at the house of Henry Budd, in the early part of January, 1854. Besides Mr. Budd, there were present Samuel L. Witmer, Samuel L. Ward, James Steel, John Wright, William L. James, James Perot, and Benjamin B. Bunker, who took part in the discussion whether the establishment of a Corn Exchange was practicable. A few days later a general meeting of the trade was called, which convened in a room at the old Merchants' Exchange, corner of Third and Walnut Streets, and adopted measures looking towards a permanent organization. The first board of managers was elected February 4th, and consisted of W. M. Goodwin, James Barrett, Sr., Henry Budd, William B. Thomas, A. McHenry, A. J. Derbysbire, B. M. Bunker, S. C. Witmer, Alexander Nesbit, and T. A. Goodwin. Col. William B. Thomas was chosen the first president, Samuel L. Witmer secretary, and John Derbysbire treasurer.

The first location of the Exchange was in the

rotunda of the Merchants' Exchange, but this room was occupied only a few months before removal to a hall on the southwest corner of Second and Gold Streets, which was occupied until the change was made to the Chamber of Commerce in 1869. The original title was The Flour and Grain Exchange Association of Philadelphia, but this was altered in 1856 to The Corn Exchange Association of Philadelphia. The original number of members was 32, and by the end of the first year it had increased to 83. The treasurer's report for the first year (1854) showed receipts amounting to only \$414, and disbursements to the amount of \$406.62, leaving a balance in the treasury of \$7.38. During 1855 the membership increased to 154, and the treasury receipts to \$1280.

CHAMBER OF COMMERCE.

At the end of the third year the number of members was 230, and the increase thereafter was slower; but almost every year recorded an advance. One of the first measures adopted by the board of managers was the establishment of a fixed and uniform rate of commission for selling flour and produce. The change for the better in the *morale* of the whole trade was marked, and justified the wisdom and fulfilled the highest hopes of the organizers of the association. On the 20th of October, 1863, a revised tariff of charges was adopted, fixing the commission of the merchant for selling flour, grain, feed, and other produce at 2½ per cent. on the gross sales, with various charges for incidentals. At these figures the rates still remain.

At the first meeting of the board of managers, in 1858, an appropriation of \$100 was made toward purchasing books for a library, which now contains many volumes upon commercial topics, and is a valuable one of its kind. During the civil war the membership increased from 283 in 1861 to 404 in 1865.

As a generous contributor to the Union cause and the alleviation of the miseries of war, the Exchange made a record of which it is justly proud. It raised about \$30,000 for the relief of the families of soldiers, while at the Sanitary Fair the Corn Exchange table returned a large revenue. At a special meeting, on July 24, 1862, over \$27,000 was subscribed to raise and equip a regiment for the government service. This command was officially the One Hundred and Eighteenth Regiment of Pennsylvania Volunteers, but was much better known as the Corn Exchange Regiment of Philadelphia, mustered into the service Aug. 30, 1862, and out on June 1, 1865. It was conspicuous for its gallantry and discipline in the Army of the Potomac.

The Exchange was incorporated in 1863, and on May 24, 1867, it decided to apply for a change of name from The Corn Exchange Association of Philadelphia to the Commercial Exchange of Philadelphia, and to make the Exchange a general business mart for merchants of all classes. The order was granted April 8, 1869, and a number of members of other trades joined the Exchange under its more liberal organization, but the movement was not general, and the objects contemplated when the change of title was asked for were not accomplished. At the present day the Commercial Exchange is still a Corn Exchange in fact, the chief commodities bought and sold being grain, flour, and, to a small extent, whiskey. Quite a large number of individuals, firms, and corporations outside of the grain business, however, are members. In 1864 expectations were aroused that a number of wealthy members would erect a building for the use of the association. A committee on a room, appointed in 1865, reported to the board of managers, on September 19th of that year, that it had received assurances from responsible parties, mostly members of the Exchange, that they were willing to form a company to erect a building almost opposite the location then occupied, if the Exchange would agree to take the lease of the hall for ten years, at \$6000 a year. These conditions were agreed to, and the company obtained a charter in 1866, under the title of The Philadelphia Chamber of Commerce, with a capital of \$200,000. Ninety per cent. of the stockholders were members of the Exchange, and the Exchange itself was a subscriber for one hundred shares.

On Oct. 14, 1867, the corner-stone was laid with appropriate ceremonies, and on Dec. 12, 1868, the building was transferred by the contractor to the officers of the company. The dedicatory exercises took place in the new hall March 1, 1869, when the building was tastefully decorated for the occasion, and upon the walls hung the battle-scarred banners carried by the Corn Exchange Regiment through the war. The building dedicated with so much display was destroyed by fire Dec. 7, 1869, and the association took up its quarters in the warehouse of President Michener, 122 and 124 Arch Street, while the Chamber of Commerce set about

rebuilding. On Jan. 25, 1870, the Exchange removed to the large room of the Board of Brokers, at No. 421 Walnut Street, which had been generously tendered to them for their use by the brokers. A plan for a new building was drawn up by James H. Windrim, and the contract for its erection was given to Benjamin Ketchum. On the evening of Dec. 20, 1870, a little more than a year after the destruction of the first edifice, the new building was thrown open for the inspection of members of the Exchange, and on the 27th of December following the association removed from their room at 421 Walnut Street, and took possession of their new hall.

The Exchange has occupied the building ever since. It is a very handsome structure, ninety-two feet front on Second Street, and one hundred and fifty feet deep on Gothic Street, built of fine pressed brick, with brown stone elevation and a granite base. The lot cost \$60,000, and the building \$164,400. The annual revenue from rentals is \$13,000, of which the Exchange pays \$8000. In its new house the Exchange received President Hayes on April 25, 1878, and Gen. Grant on Dec. 19, 1879. In 1877 the open board for the sale of grain was established.

The number of members at the beginning of 1884 was 600. The total receipts into the treasury from all sources during 1883 were \$45,853.72, and the expenditures, excepting for investment purposes, \$18,176.91, making an increase in the assets of \$27,676.81. The total assets at the end of the year were \$92,991.81. The Exchange holds 527 shares of Chamber of Commerce stock out of a total of 1644, or thirty-one per cent. of the entire amount, and is endeavoring to gain possession of it all.

The Commercial Exchange is the largest and most important active commercial organization in the city. While not a deliberative body, like the Board of Trade, it very frequently adopts memorials to Congress or the Legislature, or expresses its opinions on matters affecting the business community, and exercises a wide and pronounced influence in this respect. The admission fee was \$250, until the membership reached 600, when it became \$500, and was advanced Jan. 1, 1884, to \$1000. The annual assessment is \$35. The presidents of the Exchange are elected annually, and since its inception have been as follows:

1854-55. William B. Thomas.  
1856. Henry Budd.  
1857. Alexander G. Cattell.  
1858. George L. Buzly.  
1859. James Barrett.  
1860. James Steel.  
1861. A. J. Derbyshire.  
1862. C. J. Hoffman.  
1863. Archibald Getty.  
1864. Henry Winsor.  
1865. Charles Knecht.  
1866. Charles H. Cummings.  
1867. Howard Hinclman.  
1868. E. Harper Jeffries.  
1869. John H. Michener.  
1870. Nathan Brooke.

1871. Seth I. Comly.  
1872. William Brice.  
1873. Robert Gray.  
1874. Samuel Hartranft.  
1875. William Masscy.  
1876. George W. Meure.  
1877. Seneca E. Malone.  
1878. Francis M. Brooke.  
1879. S. Jenks Smith.  
1879. John T. Bailey.  
1880. William McAleer.  
1881. John T. Bailey.  
1882. Walter G. Wilson.  
1883. Harry K. Cummings.  
1884. E. A. Hancock.

**The Produce Exchange.**—The first meeting for the organization of the Philadelphia Produce Exchange was held on Saturday, April 25, 1874, at 37 South Water Street, in pursuance of a call signed by sixteen of the firms engaged in the produce business. At this meeting William H. Dunlap was elected chairman, and Matthew Semple secretary. It was resolved to form an association of produce commission merchants, and a committee of five was appointed to prepare a constitution and by-laws. The next meeting was held on the Wednesday following, April 29th, when the report of the committee on the constitution and by-laws was adopted, and nineteen firms affixed their signatures. At a meeting held on May 4th, following, J. M. Gilbough was elected president, and Matthew Semple treasurer and secretary.

The first location of the Exchange was in the second story of the building at 37 South Water Street. After some time removal was made to the southwest corner of Arch and Front Streets, and then to a room in the Chamber of Commerce, on Second Street. Upon their withdrawal from this location, the Exchange was without settled quarters, its meetings being held in the offices of members. When its affairs began to assume better shape, rooms were taken at 59 North Water Street, and still later at the corner of Chestnut Street and Delaware Avenue. From this last location, on the 3d of May, 1882, removal was made to the present location, in the second story of the building corner of Arch Street and Delaware Avenue. It was chartered Nov. 11, 1878.

During these frequent changes the vicissitudes of fortune of the Exchange were almost as numerous. While it occupied the rooms in the Chamber of Commerce the number of members rose to one hundred and twenty-five, but later there was a falling off to about thirty. When located at the corner of Arch and Front Streets an attempt was made to institute a call board, but without success, and the rooms were used simply as a place of meeting, where members of the trade might discuss matters pertaining to their business, but very little trading was done. In the early part of 1881 an effort was made by a number of energetic members to infuse the association with more life and vigor, and to increase its usefulness. A call board was established, daily meetings were held, telegraphic reports of the markets of the principal cities were introduced, and the advantages of a central place of assemblage were represented to persons engaged in the produce business. The result was a decided increase in the membership, which rose from thirty-three, at the opening of the year, to about ninety at its close. In the beginning of 1882 the initiation fee was increased, and it was determined to limit the membership. New York produce merchants were brought to see the advantages of being represented in the Exchange, and nearly two hundred of them joined. Their advent was the occasion of a renewal of interest among Philadelphia merchants, and there were many more additions from

among them. The rapid development of this Exchange has been unexampled among Philadelphia trade organizations. From the list of about ninety members at the beginning of 1882, its roll had increased, by the beginning of 1883, to five hundred and fifty individuals and firms, representing the major portion of the produce trade of Philadelphia, and a considerable part of that of New York and other cities. At the beginning of 1884 the number of members was five hundred and fifty-three, and the Exchange was in sound condition, the treasury showing a handsome surplus.

The opening of the new rooms, at the corner of Arch Street and Delaware Avenue, on the 3d of May, 1882, was attended with interesting ceremonies.

During 1883 the attention of the board of managers, in connection with the committee on statistics, was directed toward the gathering of information with regard to the amount of produce received daily in the city, which has supplied a great need to the trade. A sheet prepared by the committee on quotations, with the aid of the secretary, attained a high reputation as a reliable market report, and secured a wide circulation among produce men. On Dec. 3, 1883, the Exchange established a gratuity fund, which, upon the death of a member, pays a thousand dollars to his heirs. In order to secure and maintain the fund, members are assessed \$3 each upon a death, and if the amount collected is in excess of the sum required it goes into a surplus fund. The board of managers were able to congratulate the Exchange, in their report for 1883, that many certificates of membership which had been bought for speculative purposes were being purchased by business men, and thus the strength and dignity of the Exchange were being augmented.

During 1883 the total number of transactions on the floor of the Exchange was 2124. The amounts of the sales of the principal articles were as follows: Eggs, 8830 barrels and 22,426 crates; butter, 833 tubs, 42 barrels, and 140 boxes; poultry, 321 packages; dried fruits, 527 packages; walnuts, 2440 bushels; seeds, 1300 bushels; flour, 37 barrels; and cheese, 340 boxes. The treasurer's report for the same period showed receipts of \$14,430.83, and expenditures amounting to \$3158.60, leaving a balance of \$11,272.23. The total assets were \$12,337.28.

The successive presidents of the Exchange have been as follows: 1874-75, J. M. Gilbough; 1876-77, J. D. Ferguson; 1878-79, W. H. Dunlap; 1880, J. B. Myers; 1881-82, John J. MacDonald; 1883, Henry D'Olier; 1884, J. E. Hendrickson.

The standing committees of the association are: a Committee of Arbitration, a Committee on Transportation, a Committee on Quotations, and a Committee on Trade and Statistics.

**The Maritime Exchange.**—Among the various agencies which have been influential in obtaining improvements for the harbor of Philadelphia, and in

advancing the importance of the city as a port of entry, none is entitled to more credit than the Maritime Exchange. It was organized in March, 1875, its purpose being principally to advance the maritime and commercial interests of Philadelphia, by the collection and dissemination of information, and to bring Delaware breakwater into prominence as a port of call. It further contemplated the establishment of an association of ship-owners, ship-brokers, merchants, and others, by which their mutual interests might be protected and advanced, and their differences adjusted. The following gentlemen were chosen as the first officers: President, William Brockie; Vice-President, George W. Mears; Treasurer, E. W. Adams; Secretary, Frank S. Urie.

The Exchange was opened on the 1st of April, 1875, at the rooms which it still occupies, in the Chamber of Commerce, on Second Street.

Outside of its efforts to accomplish the objects for which it was created, the history of the Exchange has been uneventful, but these efforts have been vigorous, unremitting, and successful. The gathering and furnishing of news of interest to maritime men has claimed the attention from the start, and has been developed to a high degree of perfection. The front room of the Exchange is occupied as a news-room, and is supplied with all the principal daily as well as commercial and maritime newspapers, both foreign and domestic. On its records and bulletins are displayed telegraphic reports on all subjects of interest, including reports of the stock, grain, and general markets at home and abroad, reports of marine disasters, of the sailing and arriving of vessels at United States ports, and of mail steamers at both European and American ports, and of the passing of all vessels observed at Cape Henlopen and New Castle, Del., and also at Fire Island and Sandy Hook. The Exchange has been put into direct connection with the similar organizations at Boston, New York, Baltimore, and other ports.

Observing and reporting stations have been established, the most important of which is the Henlopen Observatory, a substantial building erected in 1880 by the Exchange at Cape Henlopen, from which the earliest observations are made of vessels approaching Delaware Bay, and immediate notice telegraphed to the Exchange. Two reporters and a telegraph operator are employed to man the observatory, and signals can be exchanged at any hour. An observing office, manned by one reporter and one telegraph operator, is maintained at New Castle, Del., which is also connected by wire direct with the Exchange. A reporter is maintained through the ice season at Chester, Pa., and another at Delaware City, Del., and the lazaretto supplies the movements of all vessels at that point during the quarantine season. Arrangements have been made for the immediate transmission from various points along the coast of information concerning disasters to vessels at those points, or

other matters of interest to the shipping trade. The office of the Signal Service in this city is connected with the Exchange, so that news received from the signal-station on the Delaware breakwater is promptly received and displayed in the Exchange rooms. A branch office of the United States Naval Hydrographic Department was established in the news-room in October, 1884, under the charge of Lieut. W. H. H. Southerland, of the United States navy, and has been of great service to mariners and others interested in maritime matters.

In the beginning of 1884 a time-ball was placed in the Exchange, which drops at precisely the hour of twelve o'clock noon on the seventy-fifth meridian, the time being furnished from the Naval Observatory at Washington.

In addition to its work of gathering and disseminating news, the Exchange has been active and energetic in promoting in other ways the interests of the shipping trade, and, to a considerable extent, the commercial interests of the city, especially by deputations and memorials to the State and national governments, to obtain proper legislative measures. In accordance with an ordinance passed by City Councils and signed by the mayor, March 25, 1882, the Exchange, in conjunction with the Board of Trade, the Commercial Exchange, and the Vessel Owners' and Captains' Association, has made nominations for the Board of Port Wardens whenever vacancies have occurred, from which Councils have elected the requisite number of members to that important body. The Exchange has frequently, in conjunction with other commercial organizations and the City Councils, urged upon Congress the necessity of appropriations for continuing and extending works in progress for deepening and otherwise improving Delaware River and Bay, and the Schuylkill River, and with gratifying success. That Delaware Bay is as well lighted as any harbor in the world is due to a great degree to these appeals.

The regulation and improvement of the pilotage service has been a subject to which it has devoted much attention, but thus far its endeavors have met with only a limited amount of success. A bill to improve the service, framed by the Exchange, was passed by the Legislature on the 8th of June, 1881. It provided, among other things, that vessels which had not been spoken outside of a line drawn from Cape May to Cape Henlopen, should not be compelled to employ a pilot, and, in order to encourage the Pennsylvania coal trade, American vessels, carrying their registered tonnage of Pennsylvania coal, were granted the same exemption. The good effects hoped for by the passage of this act were not realized, as a law passed by the Legislature of Delaware in the same year established higher rates than Pennsylvania, and made pilotage compulsory in both the cases mentioned above. Consequently a vessel coming to Philadelphia without a pilot, under the Pennsylvania

rules, was subject to a pilotage tax, notwithstanding, from the State of Delaware. The oppressive law of Delaware was contested a number of times in the courts by Philadelphia merchants, but without avail, the merchants being informed that their only hope of relief lay in Congressional legislation. A bill introduced into Congress by Senator Hale, "to relieve ships and vessels from compulsory pilot fees," was accordingly strongly indorsed by the Exchange in a resolution adopted on the 22d of January, 1884.

During 1883 a protective fund was instituted, by the provisions of which any registered or enrolled vessel making payment of five dollars was entitled to the services of the solicitor of the Exchange for one year, free of charge, in the prosecution of all demurrage claims, or claims for freight, incurred through any fault of the consignee of the cargo, when the cargo was to be delivered from on board at a regular lading or discharging berth within the customs district of Philadelphia; and was also entitled to his services in all cases where the vessel had been made the subject of extortion or frauds while within the Capes of the Delaware, providing the vessel was at the time either lying at or hound to or from a regular lading or discharging berth within the customs district of Philadelphia, and that the payment of the dues to the Exchange had been made previous to the occurrence of the trouble.

The Exchange was incorporated on the 31st of March, 1882. The number of its members at the beginning of 1884 was 250, among whom were quite a number of corporations and companies not directly interested in maritime matters. Annual reports have been issued every year since 1878, with the exception of 1883, which have contained many statistics of interest to those connected with the shipping interests. William Brockie has been president of the Exchange since its organization. Frank S. Urie was secretary in 1875 and 1876, since which time Edward R. Sharwood has held the position.

**The Merchants' Exchange.**—The necessity felt by the Philadelphia merchants from a very early period of the city's history for some common point of meeting where they could talk over matters pertaining to their business and arrange for purchases and sales has resulted in the selection of various places from time to time for that purpose. At first these meetings were at the "coffee-houses," of which there were

several on Front Street at an early period. The London Coffee-House, which was started by William Bradford at the southwest corner of Market and Front Streets in 1754, became the first prominent place of resort for merchants. The City Tavern, finished about the beginning of the Revolution, succeeded to the distinction, which it maintained until about 1800. Its importance was revived in 1806, for a time, by James Kitchen. Subsequently, under the name of the Merchants' Coffee-House, corner of Second and Gold Streets, it served the purposes of an Exchange for a number of years.

As the city grew, the accommodations furnished by the Coffee-House became too limited, and to meet the demand for larger quarters the Philadelphia Merchants' Exchange Company was formed to erect a suitable building. The company was organized at a meeting held at Girard's Bank on the 19th of May,

THE MERCHANTS' EXCHANGE.

1831. Among the prominent stockholders were Joshua Lippincott, Thomas P. Cope, John Siter, Jr., Alexander Ferguson, Samuel Comly, William Yardley, Jr., John Hemphill, William D. Lewis, Laurence Lewis, Thomas C. Rockhill, George Handy, Ashbel G. Ralston, John J. Borie, Matthew L. Bevan, William Platt, John A. Brown, and Samuel Grant. The corner-stone of the structure was laid on the 22d of February, 1832, in the presence of the building committee and a number of spectators, and an address was delivered by Mr. John K. Kane. It was opened for business early in 1834, and has been occupied ever since. The cost of the building was \$184,000, and of the lot on which it was erected \$98,000; 2069 shares of stock were issued, of a par value of \$100 each.

The building is constructed of Pennsylvania marble, and is in the shape of a parallelogram, having a front-

age of 95 feet on Third Street, and a depth of 114 feet on Walnut Street. There is a semicircular attachment in the rear, with a radius of 36 feet, which makes the total length, from front to rear, 150 feet. The semicircular portion is embellished with a portico of eight Corinthian columns and antæ. A circular lantern rises forty feet above the roof, and is pierced with windows and ornamented. The building is of very striking beauty, and is modeled after the choragic monument at Athens, called the Lantern of Demosthenes. William Strickland was the architect of the building, John Struthers the marble-mason, John O'Neill the carpenter, and Joseph S. Walton & Son the bricklayers.

As the population and business interests of the city increased, exchanges for particular branches of business were formed, and the Merchants' Exchange gradually lost its position as the meeting-place of merchants. At present it is simply rented to various firms and associations.

The presidents of the Exchange Company have been as follows: 1831 (May to December), Samuel Comly; 1831-41, Joshua Lippincott; 1841-47, William Yardley; 1847-53, William E. Bowen; 1858-64, Moncure Robinson; 1864-68, Joseph W. Ryers; 1868-69, Edward S. Handy; and since 1869, W. J. P. White.

**The American Iron and Steel Association.**—The first general meeting of the iron trade of the United States, as far as can be ascertained, was called on Dec. 6, 1846, to meet in Philadelphia on the 20th of the same month, "to consider the existing depression of the iron industry, and to appeal to Congress for relief through a revision of the tariff."

No further movement occurred for more than five years, but the necessity for a general organization grew with the growth of the trade, and finally, on March 6, 1855, the American Iron Association was formed in Philadelphia, and existed until 1859. From that time until Oct. 19, 1864, the iron and steel manufacturers appear to have been without any national organization.

On the 19th day of October, 1864, a number of iron manufacturers from Pennsylvania, Ohio, Indiana, Illinois, Michigan, Kentucky, New Jersey, Missouri, and Maryland met in Philadelphia, and determined to invite the iron- and steel-makers of the United States to meet together for the purpose of considering a plan of organization, "whereby the whole American iron interest might be promoted, and each branch known and cared for." A letter of invitation was issued on the 1st day of November, calling a meeting on the 16th day of that month at the Board of Trade rooms in Philadelphia, which assembled accordingly, and organized the American Iron and Steel Association, which has ever since maintained a healthy and active existence. Capt. Eber B. Ward, of Detroit, was chosen president of the meeting; William B. Ogden, of Chicago, vice-president; and E. Y. Town-

send, of Philadelphia, and Thomas S. Blair, of Pittsburgh, secretaries.

The American Iron and Steel Association is now a recognized authority in all matters connected with the trade, and is consulted by Congressmen and government officials at home, and by persons in all countries who desire accurate information concerning our special industries. Its work is properly divisible into five branches, as follows: 1st, statistical, which takes shape annually in a report by the secretary; 2d, the revision and publication every two years of a directory to all the iron- and steel-works in the United States; 3d, the publication of the *Bulletin*, a weekly trade newspaper, at present edited by the secretary, Mr. James M. Swank, and its free distribution to all American iron and steel manufacturers; 4th, educational and special work, such as watching legislation, and looking after decisions of the Treasury Department upon questions affecting the interests of the iron trade; the publication and distribution of tariff pamphlets and other documents, etc.; 5th, the maintenance of a bureau of general information, and a place of general resort for iron and steel manufacturers. The office of the association is centrally located, at 261 South Fourth Street, in Philadelphia, is tastefully but plainly furnished, and is daily open to members and to all engaged in the iron trade. A library of several hundred volumes has been accumulated by purchase and exchange, and all the leading trade and scientific journals of this country and Europe are constantly on file; these are open to all members and others engaged in the business of making or selling iron and steel.

The list of the present officers of the association is as follows: President, Daniel J. Morrell; Vice-Presidents, Joseph Wharton, Samuel M. Felton, Ahram S. Hewitt, William Metcalf, B. F. Jones; Secretary, James M. Swank; Treasurer, Andrew Wheeler; Executive Committee, J. B. Moorhead, Ahram S. Hewitt, William Metcalf, Joseph Wharton, Samuel M. Felton, E. Y. Townsend, A. B. Stone, B. F. Jones, Andrew Wheeler, W. E. C. Coxe, Paris Haldeman, D. J. Morrell; Auditing Committee, David Reeves, Percival Roberts, Powell Stackhouse.

**The Textile Association.**—A very large portion of Philadelphia's wealth and importance is derived from her manufactures, and among these the production of textile fabrics occupies the most prominent place. According to the census of 1880, there were in this city 4484 hand-loom, 17,184 power-loom, 152,818 cotton-spindles, 223,110 wool-spindles, 68,187 worsted-spindles, and 9705 knitting- and stocking-frames. The textile interest employed nearly 60,000 people, and the production annually amounted to nearly \$90,000,000 worth of goods. It was to protect an interest so vast as this that the Textile Association was formed at a meeting held Jan. 27, 1880. Thomas Dolan was chosen president; James Dobson, first vice-president; Conyers Button, second vice-president; William T. Seal,

secretary; and William Arrott, treasurer, who have continued to hold their positions up to the present time. In May, 1881, the rooms at 161 Chestnut Street were occupied. The original number of members was 21. By the end of the year they numbered 176, but later there was a falling off, and at the beginning of 1884 there were about 130 individuals and firms upon the rolls.

The objects of the association, as set forth in the constitution, are "to promote an interchange of information and experience, to encourage schools of design for industrial purposes, and in general to advance the manufacture of textile fabrics in the city of Philadelphia." In the furtherance of these objects the association has issued annual reports since the first year of its existence, has started a library composed of books treating on industrial topics, and displays at its rooms a number of periodicals and trade journals. The establishment of a school for instruction in textile arts has been a matter of deep interest to the association from its beginning, and subscriptions to that end have been collected by a committee appointed for the purpose, until a fund aggregating over \$35,000 has been obtained. It is proposed to organize the school as a corporation separate and distinct from the association, the management of which shall be in the hands of those who have furnished money for its establishment and maintenance. Believing that the sum raised has not yet reached an amount that would warrant the commencement of active operations, the managers of the association have not applied for a charter for the school.

The association has exerted a wide influence in matters pertaining to the textile industry, and has aided materially in shaping legislation affecting that interest. Its protests have been presented to Congress frequently against reductions of the tariff. It sent twenty-seven delegates, eight of whom were workmen employed in mills operated by members, to the National Tariff Convention in New York, on the 29th and 30th of November, 1881. A decision having been given by the Supreme Court in March, 1881, in the case of *Vietor et al. vs. the Government of the United States*, by which a specific duty previously charged on knit goods was declared illegal, thereby producing an injurious effect on that branch of manufacture, the association raised a large amount of money for the rehearing of the case. The Supreme Court, however, reaffirmed its decision on the second trial, and Congressional legislation had to be obtained before the injury could be remedied. The association met and appointed delegates to appear before the Tariff Commission on their visit to this city in 1882. About 75,000 copies of publications giving a view of the tariff question from the manufacturers' standpoint were distributed throughout the country by the board of managers in 1882, at an expense of \$1820.50. While the rates of tariff passed by Congress at the session of 1882-83 were not so favorable to the textile

industry as was hoped for, yet the association was able to congratulate itself upon the fact that its efforts had prevented the duties in some cases from being more inimical than they otherwise would have been. For example, on reaching Washington during that session the representatives of the association found that much of the benefit to be expected from the duty placed on cloths and cassimeres was neutralized by an insufficient tariff on ready-made clothing. They pointed out the defect, and the rates on ready-made clothing were advanced.

In 1881 the manufacturers of knit goods being unwilling to pay the royalty exacted by the owners of certain attachments to sewing-machines for trimming hosiery, met together to consult as to the way in which they might escape this burden. Other matters of common interest developing, it was finally determined to form an association for the advancement of their branch of business. Later in the year this body was merged into the Textile Association, though retaining its organization for the transaction of business belonging particularly to the hosiery or knit goods industry. The suggestion was made at the time of this junction that members be allowed to form sections, according as they were interested in certain departments of manufacturing industry, which might frame for themselves whatever rules and by-laws were desirable, provided the same should not be inconsistent with the constitution and by-laws of the association. A new constitution and by-laws were adopted by the association at a meeting held on the 18th of February, 1884, in which the above suggestion was incorporated as an article. At the same time the name of the association was changed from the Philadelphia Association of Manufacturers of Textile Fabrics, the original title, to the more concise one, the Philadelphia Textile Association.

**The Grocers' and Importers' Exchange** was organized in the spring of 1872, as the Wholesale Grocers' Association, and the first permanent officers were elected on the 5th of April of that year. Edward C. Knight was chosen president; Thomas L. Gillespie, first vice-president; H. H. Lippincott, second vice-president; Charles S. Boyd, treasurer; and Charles J. McClary, secretary. Its growth was gradual, but steady.

The admission fee was placed at first at \$25, but afterward reduced to \$10, with the effect of increasing the number of the members. When the growth seemed to warrant it, the fee was restored to \$25, and in April, 1882, it was advanced to \$100, and at the same time it was resolved to advance it to \$200 as soon as the number of members should reach 200. In 1878 removal was made to a room in the second story of the building at 43 South Front Street, which is still occupied. At the quarterly meeting in December, 1879, the name of the association was altered to the Grocers' and Importers' Exchange of Philadelphia, and it was incorporated on the 15th of December, 1883.

Since its removal to its present quarters, the proceedings of the Exchange have been marked with more life and energy than formerly. A daily call was tried a number of years ago and failed, and a revival of the practice during 1883 for about half an hour each day at noon, was also unsuccessful, and it was finally abandoned. Members, nevertheless, assemble in considerable numbers every day shortly after twelve o'clock, to talk over matters pertaining to their business, and effect purchases and sales with one another. Sugar, molasses, rice, canned goods, coffee, and tea, are the principal articles dealt in.

The Exchange at the beginning of 1884 was in good financial condition, having a permanent fund of \$2000 invested in Philadelphia, Wilmington and Baltimore Railroad trust certificates, and \$500 in four and a half per cent. government bonds, and a balance in the treasury of \$478.27. The number of members at the same time was 197, and included almost every firm in the city whose interests were of the character of those which the Exchange was intended to promote.

The successive presidents since its organization have been as follows: 1872, E. C. Knight; 1873, Thomas L. Gillespie; 1874, S. L. Kirk; 1875, John H. Catherwood; 1876, Francis B. Reeves; 1877, William M. Sinclair; 1878, James Graham; 1879, Solomon Smucker, Jr.; 1880, Marvin E. Clark; 1881, James S. Martin; 1882, John L. Hough; 1883, Henry A. Fry; 1884, Alexander Harding.

**The Tobacco Trade Association.**—The meeting to organize an association of persons interested in the tobacco business in Philadelphia, was held April 26, 1879, and on the 7th of May following officers were elected as follows: President, Arthur Hagen; Vice-President, L. Bamberger; Treasurer, George W. Bremer; and Secretary, Arthur R. Fougerey. The same officers have continued in their positions ever since. The meetings of the association have been held at various places, but chiefly at the office of the president, Mr. Arthur Hagen. The number of firms who are members at present is forty.

During the agitation of the reduction of the tobacco tax by Congress, in 1882 and 1883, the association adopted frequent memorials expressing its views upon the subject. At a meeting of persons interested in tobacco, held at the Board of Trade rooms on the 11th of March, 1882, three delegates were chosen to attend a national convention of tobacco men in Washington, to take place on the fifteenth day of the same month. At a subsequent meeting a resolution was adopted requesting Congress to abolish entirely the internal revenue tax on tobacco, snuff, cigars, and cigarettes, and to grant a rebate to the full extent of the tax to manufacturers and dealers having stamped goods on hand at the time of the law becoming operative. A bill was passed by Congress on the 3d of March, 1883, which reduced the tax about fifty per cent. and provided for a rebate upon all unbroken packages of

tobacco at the time of the law going into effect, but no appropriation was made by which the rebate could be paid to dealers, though the manufacturers, being allowed to receive payment in revenue stamps, were enabled to satisfy their claims. The association joined in calling the attention of Congress to the omission, and early in 1884 an appropriation was made to rectify the error.

The association was organized, according to its constitution, for the purpose of preserving good feeling between members and branches of the trade, advancing their common interests, and paying proper respect to members at their death.

**The Drug Exchange** was organized at a meeting held at the Merchants' Hotel, Jan. 22, 1861, in answer to a call issued by thirteen wholesale firms, when John M. Maris presided, and James Palmer was appointed secretary. A preamble and resolutions, reciting the necessity for the wholesale drug trade to combine, and recommending the formation of an association of wholesale and jobbing druggists, importers of drugs, manufacturing chemists, drug brokers, and manufacturers of articles connected with the trade who were not retailers, were adopted. There were twenty-one firms or representatives of firms present at the meeting, who signed their names to this resolution, and John M. Maris was chosen president of the new organization, and Thomas P. James, vice-president. A constitution adopted by the association on the 2d of February described the objects aimed at as "the facilitating of the purchase and sale of drugs, the common interest of its members by encouraging personal intercourse with each other, and the protection of the individual and united interests of the drug trade." On the 30th of January, 1861, the board of directors selected as the meeting-place rooms in the second story of the building at 37 South Third Street, which have been occupied ever since, except for two short periods while they were undergoing renovation and repairs. The Exchange was incorporated April 5, 1862.

In January, 1866, an arbitration committee was established to settle business disputes among members, but it has had very little labor to perform, owing to a lack of disagreements requiring adjudication. In 1869 a change was made from the plan of allowing the board of directors to elect the president and vice-president, the association itself assuming that duty. In the early part of 1870 an invitation was received from the Commercial Exchange, which was at that time endeavoring to consolidate into one association all the commercial organizations of the city, for the Drug Exchange to join with them, and hold their meetings at the Chamber of Commerce. The offer, however, was refused, as it was feared by the druggists that such a move might result in the dissolution of their association. For several years subsequent to 1875 a *Drug Exchange Monthly Circular* was published, but has since been discontinued. The number of

members fell off later, and at the beginning of 1884 there were only ninety-nine names on the rolls. This number embraced, however, almost all the wholesale drug firms or other firms eligible to membership in the city.

The course of legislation affecting the drug trade has been influenced to a very considerable extent by the action of the Exchange. As illustrative of its procedures in this respect may be mentioned the following instances: In 1861 a committee of the Exchange was sent to Washington to secure some changes on the tariff imposed on drugs in a tariff bill introduced by Senator Morrill, which was then before Congress. This committee were very successful in their mission, and a number of alterations were made at their suggestion. A bill to appoint a drug inspector for the State of Pennsylvania, which was brought before the Legislature in 1869, was defeated through the instrumentality of the Exchange. An act providing for an internal revenue, which contained a section requiring a stamp on proprietary medicines, was interpreted by the commissioner of the internal revenue (1872) as embracing all medicines which contained on the bottles inclosing them directions as to the amount of the dose or the manner of using. This decision was strenuously resisted by the Exchange, and it eventually secured its aim through Congressional legislation. It resisted the repeal of the duty on quinine, and has urged upon Congress the advantages of a stable tariff. It has raised over \$7000 in the cause of charity.

The presidents of the Exchange from the beginning have been as follows: 1861, John M. Maris; 1862-64, Thomas P. James; 1865-66, M. G. Rosengarten; 1867-70, Robert Shoemaker; 1871, William Gulager; 1872, William W. Wilson; 1873, Edward H. Hance; 1874-76, Alexander H. Jones; 1877-78, William Wilson; 1879-80, H. B. Rosengarten; 1881, H. N. Rittenhouse; 1882, William J. Jenks; 1883, John Ferguson; 1884, Mahlon N. Kline.

The Petroleum and Mining Exchange is the result of the consolidations of the Philadelphia Mining and Stock Exchange, the Mining Annex of the Stock Exchange, and the Philadelphia Oil Exchange. The first named was the oldest, having been started in the fall of 1879, mainly through the efforts of Messrs. Samuel W. Powell, Lawrence Emig, and Frederick Schuellermann. The original number of members was 48, each of whom paid into a common fund to meet the expenses of the new organization the sum of \$50. The first quarters of the Exchange were at No. 310 Chestnut Street, and were occupied on Dec. 4, 1879. Its officers during the first year of its existence were: President, William M. Capp; First Vice-President, Edward H. Green; Second Vice-President, Frederick Schuellermann; Treasurer, Samuel W. Powell; Secretary, George A. Q. Miller. It had been in operation but a little over a year, when a split occurred, and in January, 1881, a

number of the members withdrew, and formed the National Mining Exchange of Philadelphia, with headquarters in the rotunda of the Merchants' Exchange. This separation lasted about six months. In the mean time, a Mining Annex had been started to the Stock Exchange, with headquarters in the basement of the building at No. 310 Chestnut Street. There were thus at one time three Mining Exchanges in active operation in the city. Upon the reunion of the two original organizations, as intimated above, they occupied the rotunda of the Merchants' Exchange. Toward the close of the spring of 1882, a further consolidation took place with the Mining Annex of the Stock Exchange, and all the three organizations became united with the one body, as the Mining Annex of the Stock Exchange. In this relation they existed, first occupying quarters at No. 310 Chestnut Street, and afterward in the Merchants' Exchange, until their union with the Oil Exchange, on the 1st of June, 1883. At the time of this last junction, the number of members in the Mining Exchange was 157.

Previous to the institution of the Philadelphia Oil Exchange, transactions in oil in this city were very limited, being carried on chiefly by the firms of Wenzell & Foster, and Hilton & Waugh, which were branches of Oil City houses, and effected their purchases and sales in that city. The Philadelphia Oil Exchange was organized in 1882, the prime movers in its establishment being S. S. Wenzell, John H. Waugh, and Samuel W. Powell, who had also been active in organizing the Mining Exchange, and William N. Viguers, also as mining broker. About the middle of June, 1882, there were sixty-seven names on its roll of membership. The officers chosen to serve for the first year were: President, William Hastie Smith; First Vice-President, William N. Viguers; Second Vice-President, Junius R. Clark; Treasurer, John H. Waugh; Secretary, Alfred Newhouse. After the Exchange had been in operation somewhat less than a year, overtures were received from the Mining Exchange for a consolidation. A committee of three was appointed from each Exchange, who, upon conference, agreed upon terms of union, which were ratified by the Exchanges. On the 1st day of June, 1883, the two Exchanges came together as one body, under the title of the Philadelphia Petroleum and Mining Exchange, and occupied the rotunda of the Merchants' Exchange. The number of members at the beginning of 1884 was 232. The daily operations in oil amounted to about 300,000 barrels on the average, and in mining and miscellaneous stocks to from 25,000 to 35,000 shares. The original intention of the organizers of the Oil Exchange was to have dealers in the different varieties of oil represented in its membership, and make their purchases and sales upon its floor. This design has not been realized, however, and most of the transactions are in pipe-line certificates. The officers of the Exchange at present (1884)

are as follows: President, John S. Davis; First Vice-President, William N. Viguers; Second Vice-President, Junius R. Clark; Secretary and Treasurer, A. Douglas.

**The Butchers' Hide and Tallow Association** dates its origin from the year 1849, when a number of butchers conceived the idea of associating together for mutual benefit in the matter of salting the hides which came from the cattle that they had slaughtered. At that time the tanners of the city were paying them but three cents per pound for green hides, and in the beginning of that year they refused to enter into contracts to take them, even at that low rate. This determined the butchers to form an association or partnership for salting them on their own account; and the experiment proved so beneficial and was so successful that in the following year the building on Noble Street, above Eleventh, afterward known as the "Hide House," was purchased, and the partnership was put upon a permanent basis. The experiment in hides having been so successful, it was determined to handle the fat in the same manner, and in 1851 the property at 1519, 1521, and 1523 Pennsylvania Avenue was purchased and fitted up for rendering the fat into tallow. This building is commonly known as the "melting-house." The property on Noble Street was eventually given up as a hide-house, and the whole work was consolidated in the melting-house, where it is still performed.

The melting-house and lot are the property of a stock company, who derive the interest on their investment from the rental paid by the association. Members bringing hides and fat to the melting-house receive an advance of money upon them, according to their quality. The hides being salted and the fat rendered, the products are disposed of, and the amount received is placed to the credit of the association. At the end of the year any surplus remaining, after all claims are paid, is divided among the members in proportion to the amount of hides and fat they have furnished. The profits of the association have all along been very satisfactory. The association is under the management of fifteen trustees, including the president, secretary, and treasurer. The officials for 1884 were John H. Hight, president; George E. Mancill, treasurer; and John F. Strickland, secretary. The number of members is one hundred and twenty.

**Beef-Butchers' Hide and Tallow Association** was a split from the Philadelphia Butchers' Hide and Tallow Association, and was organized on the 1st of April, 1883, its object being the same as that of the other association, namely, to enable butchers to salt the hides and render the fat of animals slaughtered by them so as to procure the largest possible returns. A board of nine directors was chosen, who selected from their own number John J. Stark as president, L. S. Boraef as vice-president, Edward Willig as treasurer, and John Young as secretary. A temporary location was secured at 436 North Eleventh

Street, which is still occupied. The association consists of thirty members. It salts hides brought to it by members, but sells its oleomargarine fat to parties making oleomargarine butter, and has an arrangement with other parties by which its tallow fat is rendered on very advantageous terms.

**The Vessel-Owners' and Captains' Association** was organized March 1, 1868, for the protection of the rights and interests of vessel-owners of all classes, the dissemination of information of interest to them, and the promotion of their welfare by urging the enactment of beneficial laws and the repeal of injudicious ones. The particular cause which led to its formation was the fact that consignees found it inconvenient or undesirable to receive their cargoes at once, frequently detaining vessels laden with coal for weeks at a time without affording the owners any compensation for the losses occasioned thereby.

Another object of the association, which it has constantly carried out, has been the prosecution of suits coming from a disagreement over freights, in which a member has been concerned, such as, for instance, the rejection of the part of a cargo by the consignee as unmerchantable. It has also defended members in suits brought against them for shortages of cargoes, when the master, officers, and crew of the vessel have first made oath that all the cargo which was received on board has been discharged.

The usefulness of the association to its members and to the shipping interest has been very great, and may be instanced by fact that out of 184 cases brought to the attention of the solicitor in Philadelphia during 1883 all but two were settled by the end of the year. The estimate has been made that not one-fifth of the amount of demurrage which has been collected, and paid over to owners of vessels without charge, could have been obtained without the existence of the association. Oftentimes demurrage-fees, which have been refused to certain captains, have been paid promptly and without contest to members of the association, although the circumstances have been the same in each case.

In pursuit of its object of obtaining beneficial laws, and the repeal of injudicious ones, the association has frequently adopted resolutions setting forth its views on matters of legislation. It has devoted a great deal of attention to the pilotage question, and in 1884 forwarded to Congress a resolution indorsing a bill to abolish compulsory pilotage, claiming that, as almost all of the captains of coastwise vessels are thorough pilots, compulsory pilotage was unnecessary.

Since its organization the association has had enrolled upon its books 1030 vessels, aggregating a registered tonnage of over 260,000 tons, and a valuation of upward of \$15,525,000. The value of the vessels enrolled at the beginning of 1884 was about \$1,250,000. The treasurer's report for the year, extending from March 1, 1883, to March 1, 1884, showed receipts from dues of vessels, captains, and indi-

viduals, and from other sources of \$4062.94. The assets of the association amounted to \$9581.06, most of which were invested in Philadelphia City 6's of a par value of \$7300 and a market value of \$9563. The chief items of expense were the salaries of officers and solicitors. The association has occupied room No. 5, in the second story of 205½ Walnut Street, for a number of years.

The officers for 1884 are as follows: President, Charles Lawrence; Vice-President, Capt. Jonathan May; Treasurer, Jeremiah Smith; Corresponding and Recording Secretary, James F. Wallace; Agent, James Nelson.

**The Tow-Boat Owners' Association** was organized April 1, 1874, at the advice of a number of captains of vessels, for the purpose of establishing uniform rates of towage, and at the same time of advancing in a general way the interests of tow-boat owners. Stephen Flanagan was its first president. He was succeeded in April, 1881, by F. A. Churchman, who has held the position ever since. The association has met from the beginning at 119 Walnut Street. It has been very successful in carrying out its objects, and at present the rates of towage in the harbor of Philadelphia are, it is claimed, from twenty-five to fifty per cent. less than in any other port upon the Atlantic coast. The number of members at present is 70, and consists exclusively of the managing owners of tugs.

The government of the association is vested in a board of twelve managers, including the president, secretary, and treasurer, and they have full power to make rules and regulations with regard to towage, and fix the rates of the same. The annual dues of the members vary according to the expenses incurred. Difficulties among members are settled by an arbitration committee. The annual meeting is held in April.

The officers during 1883 were as follows: President, F. A. Churchman; Secretary, Thomas Winsmore; Treasurer, J. A. McCauley; Assistant Secretary, John Sholdice; Collector, Richard Banks.

**The Shoe and Leather Trade Association** was organized at a meeting held at the room of the Board of Trade, on Feb. 22, 1883. A committee appointed then on a constitution and by-laws made a report on February 28th following, which was adopted. Paul Graff was elected president; Thomas C. Else, Thomas Y. England, John J. Ziegler, and William Clark, vice-presidents; Thomas C. Babb, recording secretary; John T. Monroe, corresponding secretary; and David J. Horr, treasurer. In October, 1883, a credit bureau, for the investigation of the characters of customers asking members of the association, for credit, was established, Mr. Howard Van Court being appointed actuary. The bureau is conducted in the manner usual with institutions of that character.

**The Clothing Exchange** was organized at a meeting held in Mercantile Hall, Nov. 6, 1882, at which every clothing-manufacturing firm in the city was represented. The establishment of a credit bureau,

the consideration of the transportation of agents, samples, and merchandise, the regulation of the time of labor, the establishment of a board of arbitration, the obtaining of the recognition of Philadelphia as a trade centre, and the consideration of matters in general relating to the clothing trade were the objects. Within the six months previous to the last annual meeting on Dec. 12, 1883, 1438 names had passed through the bureau, and 4197 reports had been furnished by the actuary. Interchange of information has been established with New York, Baltimore, and Rochester, and Cincinnati and Chicago were visited by a committee from Philadelphia and New York, with the result of securing a favorable prospect of intercommunication with the former city. The Exchange was chartered June 12, 1883, and the number of members at the beginning of 1884 was 33.

The officers of the association for 1884 are as follows: President, Herman L. Freedman; Vice-President, Leo Loeb; Treasurer and Secretary, S. L. Haas; Board of Managers, Benjamin F. Greenwald, Simon Fleisher, Joseph Goldsmith, Emanuel Schwerin, Joseph Loucheim, and Joseph Stern.

**The Merchant Tailors' Exchange** was formed in the year 1870, and a room taken at 911 Chestnut Street, where a "hook of delinquents" was kept, which was free for consultation to members, and in which they were expected to inscribe the names of their delinquent customers.

On the 25th of February, 1871, the Merchant Tailors' Exchange was organized, and negotiations were shortly afterward entered into for consolidation with an already-existing Merchant Tailors' Exchange, consisting of small German firms engaged in business away from the central portion of the city; and on the 21st day of July, 1871, the union took place, the Germans paying the sum of \$500 for the privilege of becoming members of the new organization. The number of members of the Exchange previous to the consolidation was 26, and the number added 46, making a total membership of 72.

The presidents since its organization have been as follows: 1871, George Müller; 1872, E. O. Thompson; 1873-76, William Milligan; 1877, Edward P. Kelly; 1878-81, George Müller; 1882-83, James B. Mageoch; 1884, John A. Carr.

The objects of the Exchange are to elevate the profession, to promote social intercourse among its members, to obtain protection against adventurers who endeavor to clothe themselves elegantly without paying their tailors, and to insist on having a voice in making out "bills of prices," which should be generous to employes and just to employers.

**The Bottlers' Protective Association** was formed some time between 1844 and 1850, for the purpose of mutual benefit and the protection of bottles and other property connected with the transaction of the business. The law requires that bottles containing beer or various other articles of drink shall not be sold,

but the carelessness of many parties to whom bottles were delivered resulted frequently in their never being returned to their owners. There was, besides, a great deal of smuggling of bottles into other States, where the laws in force in Pennsylvania did not prevail, and where they could be sold without risk of punishment.

The association set itself to work to correct these evils by dividing itself into committees, each of which took a separate district of the city, in which it made collections, and which afterward sorted the bottles thus gathered for return to their owners. Prosecutions were also instituted in a number of cases for smuggling, which resulted in the source of loss being checked to a considerable degree. Robert Wagner was president of the association for many years. The workings of the committees, however, were not satisfactory, as during the busy season of the year, when the prompt collection of bottles was most necessary, the membership of the committees were too busy to attend to the performance of their duties, and bottles which had been collected were sometimes retained for months before being sorted and returned to their owners.

To meet the demand for a more systematic method of operating, the association was reorganized early in 1881, and Mr. C. D. O'Farrell succeeded Mr. Wagner to the presidency. A central depot was established, which was put under the control of a superintendent, to which all bottles gathered from various points of the city are brought and sorted for return to their owners.

During 1883 there were altogether 1,230,000 bottles brought to the depot, at a cost of \$17,000, and the payments of some of the larger firms to the depot averaged about \$30 a week. The association has also employed detectives to ferret out cases of smuggling of bottles into other States, where they might be sold with impunity for a considerably larger sum than can be obtained from the association. Quite a number of prosecutions have resulted, which have been the means of bringing offenders to punishment, and have in a great measure destroyed this class of thievery.

The officers elected at the time of reorganization, in 1881, have been continued without change. They are as follows: President, C. D. O'Farrell; Secretary, Robert Lelar; Treasurer, E. Posten; Superintendent, William Arlitz. The number of members at the beginning of 1884 was 54.

## CHAPTER LIX.

### BURYING-GROUNDS AND CEMETERIES.

WHEN the English authority supplanted the Dutch government on the Delaware, there were already within the settlement three churches with burial-grounds attached,—one at New Castle, a sec-

ond at Craine Hoeck, and the third at Tinicum Island. At a special court held at New Castle in 1675, it was ordered that another church be built at Wicacoe for the people of Passyunk. Church-wardens were appointed by this court in 1677. For seventeen years after the arrival of Penn it does not appear that there was any necessity for providing burial-places for the poor and for strangers, and the first movement in that direction was made by Common Council, Sept. 21, 1705. The minutes say,—

"It is ordered that the mayor (Griffith Jones), recorder (David Lloyd), and Alderman Wilcox (taking along with them such persons of the respective religious persuasions of this city as they shall think proper), apply themselves to the Comrs of Property for a publick piece of ground in this city for a burying-place for strangers dying in this city, and report their doing therein to the next meeting."

The commissioners met this request by persuading the corporation to accept the Southeast Square, which had been dedicated to the public use by the original plan of the city in 1682, and a patent was issued Jan. 29, 1706, which recited that an application had been made "by the mayor and commonalty of the city of Philadelphia to the commissioners, that they would grant some convenient piece of ground for a common and public burying-ground, for all strangers or others who might not so conveniently be laid in any of the particular enclosures appropriated by certain religious societies to that purpose." The commissioners therefore stated that they had appropriated "a certain square belonging to those squares which at the original plotting of the said city were intended for public uses." The ground was bounded north by Walnut Street, on the south by a street forty feet wide, and on the east by Sixth Street. The dimensions were five hundred feet in length by five hundred feet in breadth.<sup>1</sup>

The purpose of the grant was declared to be "for a common burying-place for the service of the city of Philadelphia for interring the bodies of all manner of deceased persons whatsoever, whom there shall be occasion to lay therein." For the improvement of the burying-place, full and free liberty was given to the mayor and corporation "to enclose, fence, plant, build on, or by any ways or means whatsoever that will improve the aforesaid piece of ground, . . . to be held as of the manor of Springettsbury in free and common socage, at the rent of one ear of corn, payable on the first day of March in every year." The grant was scarcely made before Joshua Carpenter, a Common Councilman, made application for a lease of the ground. It might be useful as a place of pasture for cattle, and as the burials were not likely to be many for some years ensuing, the grass crop could be available in nearly the whole of the inclosure. Council ordered, March 8, 1706, that a lease should be granted to Carpenter for twenty-one years, "at the rent of — p. Ann., he fencing the same & from time to time enlarging the ground as there

<sup>1</sup> The ground extended on the west to the back end of Eighth Street lots. The street now on the west side of the square was not laid out until long afterward.

shall be occasion for roome to bury in." The rent was subsequently fixed at the nominal rate of one shilling per annum, "if demanded." The expense of the fencing must have been considered nearly equivalent to the value of the premises in rent during the long term named in the lease, which was not signed until the 30th of March, 1708. In 1730 the lease to Carpenter having expired, Jacob Shoemaker proposed "to take the potters' field." Carpenter was dead, and his representatives, it was a matter of complaint, had not complied with the conditions of his lease, and kept the premises in order. A committee was appointed to inquire into the condition of the ground, but there is no minute of the conclusion which was arrived at. Shoemaker was informed at the same time that the corporation was not inclined to lease the premises for more than three years. He entered into possession, and was still tenant of the property in 1762, on a three-years' lease, at ten pounds per annum. Jasper Carpenter succeeded Shoemaker as lessee of the square on a seven-years' lease in 1766. He applied for a renewal in 1773, and a new grant was made by the board for seven years longer. When this term expired, the corporation of the city of Philadelphia had ceased to exist. There could be no renewal, and Carpenter was the last lessee. Indeed, it may be presumed that the value of the ground for the purpose of raising hay or for pasture was very small after the Revolution had set in.

Potter's Field was uneven, and near its southwest corner was entered by a stream which flowed in from beyond Arch Street. A second rivulet, having its source in a pond about where the First Presbyterian Church was afterward built, met the other west of Sixth Street, and the brook took a course nearly eastward to Fifth Street, and half-way to Fourth Street, where it turned north, then east to about Hudson Street, where it emptied into the northwestern branch of Dock Creek. In after-years a culvert carried the water to Fifth Street and through adjoining properties. The Carpenter family inclosed in the centre of the field a plot about forty feet square for a private burial-ground, and it is said that Joshua Carpenter was buried there beneath an apple-tree.

Almost as soon as the property was vested in the corporation, interments were made there of the wretchedly poor, the slaves, and the free blacks. In times of festival it has been said that the slave blacks of both sexes used to go to the square in considerable numbers, and amuse themselves by dancing, singing, and speaking. When the war of Independence began, this was the only place available for the burial of soldiers who died in the service, or as prisoners. In that poor privilege, the regular American and British soldier were served alike. The men who in hospitals yielded their lives to the attacks of camp fever, and the prisoners of war held captive in the adjoining Walnut Street jail, were brought to this Potter's Field. Pits of twenty by thirty feet square were dug along

the line of Walnut Street by Seventh, and filled by coffins piled one upon the other. On the south line of the square long trenches were dug, which were kept open until necessary to be used. Then, commencing at one end, the coffins were piled up and covered with dirt, leaving the space beyond open and ready for future deposits. John Adams, member of Congress, and afterward President of the United States, in a letter dated April 13, 1777, gives a gloomy picture of the condition of the ground:

"I have spent an hour this morning in the congregation of the dead. I took a walk into the 'Potter's Field' (a burying place between the new stone prison and the Hospital), and I never in my whole life was so affected with melancholy. The graves of the soldiers who have been buried in this ground from the Hospital and hettering-house during the course of last summer, fall, and winter dead of the smallpox and camp-diseases, are enough to make the heart of a stone to melt away. The sexton told me that upwards of 2000 soldiers had been buried there; and by the appearance of the grass and trenches, it is most probable to me that he speaks within bounds. To what cause this plague is to be attributed I don't know,—disease has destroyed 10 men for us where the sword of the enemy has killed one! We have at last determined on a plan for the sick, and have called into the service the best abilities in physic, etc., that the continent affords."

In less than four months after this letter was written the British army occupied the city with a hody of men greatly in excess of the number of troops previously in town. The mortality among these soldiers might not have been as great as among the Americans, but there was continual necessity for the services of the grave-digger. Acting in an enemy's country, it was not necessary to respect the rights of religious congregations. Many of the British soldiers who died might have been interred in the burying-grounds belonging to the churches and meeting-houses, yet the Potter's Field had its share.

In the yellow fever epidemic of 1793 there were so many burials in Potter's Field that there was no more room unless made by disturbing the remains of those who had been previously interred. About January, 1794, some attempt was made to improve the square by planting trees upon it, and it was ordered that a portion of the public lot on Lombard Street should be used for burials, after which interments were directed to be made there and not in Potter's Field, and so the latter ceased to be the public burying-ground.

**Lombard Street Burying-Ground.**—By the provisions of an act of Assembly passed April 8, 1786, the Supreme Executive Council was ordered to transfer to the wardens of the city "the lots of ground on the south side of Lombard Street, between Tenth and Twelfth Streets, bounded southward by ground of Barron, Hurst & Co., to be appropriated as a burial-ground for the interment of strangers and others who have not been in communion with a religious society at the time of their decease." The conveyance was not at once made, but soon after the new municipal government was organized it obtained, Dec. 13, 1790, a patent for the two lots between Tenth and Twelfth Streets. It was discovered, however, that the ground

between Eleventh and Twelfth Streets had been previously patented to Christian Ritz and William Adcock, and therefore the city only took clear title to the lot between Tenth and Eleventh Streets. The Council had previously designated a piece of ground on Vine Street, between Front and Second Streets, from the Schuylkill [Twenty-second and Twenty-first Streets] for burial purposes. The lot took up the greater portion of the square. It was three hundred and ninety-six feet on Vine Street from Front Street to Second, and extended southward toward Race Street three hundred and sixteen feet, but it is believed that no burials were ever made there.

In 1794 it was ordered that the Lombard Street ground be fenced in, and in six years it was so crowded with corpses that further interments were prohibited. The commonwealth had not parted with its title to this property under the act of 1790, and for more than fifty years the city made use of it without absolute ownership. On April 26, 1846, an act was passed granting to the city the lot between Eleventh and Twelfth Streets, freed and discharged from the uses mentioned in the act of 1790. Under this authority the city sold out the lot upon ground-rents, which at the time of the consolidation in 1854 were valued at \$11,250 principal.

The third Potter's Field was on Lombard Street, between Ninth and Tenth, extending from street to street, three hundred and eighty-six feet in breadth and seventy-six feet in depth, north and south. It was granted to the city in 1800, but does not appear to have been used for burials in 1812, and four years later it was ordered that no more interments be made therein. In after-time the city made of it a storage ground.

**Potter's Field in Northwest Square.**—When interments first began to be made in the Northwest Square, lying between Race and Vine and Schuylkill Fourth [Nineteenth] and Schuylkill Fifth [Eighteenth] Streets, is not known. In the early part of the century it was far out of town, and quite beyond the very limited police supervision established under the city administration. It might have been used before the Southeast Square was closed for burial purposes, being convenient for the interment of persons residing in the western part of the city. It may have been occasionally used for interment while Washington Square was also a public burying-ground. At all events, the title "Potter's Field" was transferred from the Southeast to the Northwest Square at an early period in the present century. On the 18th of June, 1812, City Councils passed an ordinance "to prevent the interment of deceased persons in the public squares of the city of Philadelphia." The preamble recited that "for a considerable time the public square situated on the north side of Sassafraz and on the east and west sides of Schuylkill Fourth and Fifth Streets had without any authority been used as a place of interment for the bodies of persons

dying at the almshouse, at the State prison, and at the Pennsylvania Hospital, and of strangers not belonging to any religious society." This was declared to be an infringement upon the rights of the citizens of Philadelphia, and it was enacted that after the 10th of July, 1812, no bodies should be buried in any of the public squares of Philadelphia.

**Burials in Northeast Square.**—A portion of the Northeast Square having been occupied since 1741 by the congregation of the German Reformed Church for a burial-ground, it is probable that unauthorized burials were made there outside of the plot used by that congregation. This theory is sustained by the city ordinance of 1815, by which it was ordered that the Northeast Square should be inclosed, and by the ordinance of the succeeding year, for the improvement of the square, which directed that if the lease to the congregation for the ground used by it for burial purposes should be renewed, it was upon condition that the congregation would put up an open wooden fence corresponding with that placed on other parts of the square by city commissioners. By ordinance of March, 1816, establishing the Vineyard burial-ground, it was ordered that, after the latter was opened, "burials in the Northeast Square should cease." The prohibition was not intended to apply to interments made by the German Reformed congregation in the piece of ground held for burial purposes. This appears by a subsequent ordinance, passed in 1818, directing the opening of the Vineyard ground, in which there is a special proviso that the right of the German congregation under its patent shall not be affected.

**Burying-Ground at the Vineyard.**—In 1816, when it was resolved to close the public burying-ground on Lombard Street, between Ninth and Tenth, a committee was appointed by City Councils with instruction to purchase a lot suitable for a burying-ground in some other place. Under that authority a lot of ground was selected adjoining the northwest boundaries of Francisville. It was situated at the northeast corner of George and Charles Streets, and was purchased at a cost of two thousand dollars. The access was by Ridge road to George Street [now called Ginnodo]. The present Twentieth Street goes through this ground, and Parrish Street also intersects it. In May, 1818, Councils ordered that the lot purchased under authority of the ordinance of March, 1816, adjoining the Vineyard, should be inclosed with a fence, and that after the 15th of June it should be used as a public burying-ground. A house for the grave-digger was ordered to be built at an expense not exceeding three hundred dollars. By ordinance of September 14th, in the same year, the lot was appropriated "as a place for interment of the bodies of deceased strangers and persons not members of any religious society at the time of their decease." The second section of the ordinance directed that it should be an offense, punishable with a fine of

twenty dollars, to inter, or cause to be interred, the body of any deceased person in any of the public squares or lots of ground belonging to the city other than the lot thereby appropriated.

**Lower Burying-Ground on West Side of Schuylkill.**—On the west side of the Schuylkill, north of Market Street, on the road to the Upper Ferry and near the river, a burying-ground had been in use from an early period. The true secret of the ownership of the property was known but by few persons, and they took no care to impart their knowledge to others. As a consequence, a belief was general that this was ground dedicated for public uses. As there was no one to interfere, burials were made there by poor persons at a very early period, and were continued for more than one hundred years. In 1806 the members of the Society of Friends took possession of this ground and refused to allow other denominations to use the property for burial purposes. In 1809 application was made to the Legislature by citizens of Philadelphia, in which they set forth that the ground had been used for many years as a free place of interment and was no doubt public property, and that the rights of the people had been interfered with by the Society of Friends. They asked that a law should be passed vesting the property in the county commissioners for the use of the public as a free burying-ground. A committee of the House of Representatives, to which the matter was referred, reported that the Friends had no exclusive right or title to the burying-ground, and that it ought to be vested in the public. The bill which they prepared for the purpose passed the House by the vote of fifty-three yeas to twenty-seven nays. When this vote was known the Society of Friends took means to vindicate its title, and sent a petition to the Legislature remonstrating against the passage of the law, and, after the House committee had heard all the facts in the case, it reported "that the said burial-ground was applied very early after the foundation of the province for the accommodation of Friends, who held their public meetings at stated intervals at Duckett's farm, on the west side of the Schuylkill, adjoining the said ground. It appears by public records that survey had been made of said ground for a burial-ground, and that of course it is not vacant, unappropriated land, and is not liable to legislative interference. Although the title is not complete, there is strong presumptive evidence that it has been held by the Society for one hundred and twenty years, and positive evidence that they have exercised ownership for sixty years. Although persons of various sects have been buried in the ground, there has generally been an application to and permission of the Society of Friends (cases of improper intrusion excepted). This conduct has been misunderstood and an impression created that it belonged to the public." The committee, coming to the conclusion that the Legislature had no authority in the matter, asked to be discharged.

The controversy as to ownership was carried on between the Board of Health and the Friends, until in 1819 the latter made an agreement in accordance with which they relinquished the ground on condition that the title be vested in the board, and without prejudice to the rights of individuals, "to the use of a burial-ground, or a place of interment of the dead forever." More than thirty years afterward, when the Pennsylvania Railroad Company was seeking ground for depots on the west side of the Schuylkill, this trust, as well as that concerning the burial-ground immediately on the north, belonging to the Board of Health, was vacated, and the two plots were sold to that corporation.

**Upper Burying-Ground on West Side of Schuylkill.**—Adjoining the lower ground on the west side of the Schuylkill to the north, on the road from the permanent bridge to the Upper Ferry, was another burying ground which had also been in use for free interments for many years, and which seemed to have no owner. In 1811, when the State Senate passed the act to vest the lower burying-ground in the Board of Health, another act was passed to vest the upper ground in the Guardians of the Poor as a place of interment. This bill, like the other, was lost in the House. March 4, 1813, the right of the commonwealth to the burial ground on the west side of the Schuylkill, near the Upper Ferry, of two acres and twenty-two perches, was vested in the guardians and overseers of the poor, for the use thereof for a burial-ground, with a proviso that "nothing herein shall be construed to impair the right or interest any person or persons may now have in said land." The preamble said that this place had been recognized as a burying-ground from the earliest settlement of Pennsylvania, and that it appeared to be property of the commonwealth. It has been conjectured that this ground was originally the burying-ground of Friends' Meeting, at Centre Square, which was abandoned a few years after the city was founded.

Cherry Hill burying-ground was the name given by the Board of Health to a piece of ground adjoining the City Hospital, on Coates Street, between Schuylkill Third and Fourth Streets.

**Potter's Field, Germantown.**—In Germantown the upper burying-ground was given to the use of the inhabitants by Paul Wolf, shortly after the settlement of the town. The lower ground was also given by John Streepers and Leonard Arets for public use at an early period. These inclosures were for general convenience, but they were not considered Potter's Fields. The Potter's Field of Germantown, situate on Bowman's lane, southwest of Germantown, Main Street, was bought by Baltes Rezer, July 23, 1755, at sheriff's sale, the property having formerly belonged to George Arnold. It contained one hundred and forty perches of land. The deed-poll recited that the ground was bought "for and as a strangers' burying-ground or Potter's field, for all Germantown, to serve

for a burial place for all strangers, negroes, and mulattoes as died in any part of Germantown, forever."

**Potter's Field, Moyamensing.**—The district of Moyamensing was chartered by act of 24th of March, 1812. Under this authority the commissioners some time afterward established their public burying-ground upon a lot on the north side of Tidmarsh Street, between Eleventh and Twelfth.

**Hart's Lane Burying-Ground** was appropriated as a Potter's Field in 1855, and is bounded by Lehigh Avenue, Twentieth Street, and Hart's Lane. Up to 1883 it was still in use for burial purposes.

**The Morgue.**—The first place brought into service for the deposit of unknown or unclaimed bodies, was the Green House at the Potter's Field, on Lombard Street, between Ninth and Tenth, and in 1870 the Morgue was built on the north side of Noble Street, east of Front.

**Cemeteries.**—As distinguished from the burial-places in churchyards, the first cemetery in Philadelphia was that established in 1826 by the Mutual Burying-Ground Association, which bought ground on the south side of Prime Street [Washington Avenue], east of Tenth. It was followed by the Philadelphia, Passyunk road between Twentieth and Twenty-second Streets, and by the Union Burial-Ground Society, which in 1841 was regularly incorporated. A lot was purchased on the east line of Sixth Street, which has been extended from Washington Avenue to Federal Street, and half-way to Fifth Street.

Machpelah Cemetery dates back to about 1827, and is owned by the Machpelah Cemetery Society, which bought ground on the north side of Prime Street, at Tenth Street. The Philanthropic Cemetery, on Passyunk road, was also established about 1827, and was followed in the next year by Lafayette Cemetery, covering the block between Ninth and Tenth, and Federal and Wharton Streets. Philadelphia or Ronaldson's Cemetery was projected by James Ronaldson in 1826, and founded a year or so subsequently on the ground bounded by Tenth, Shippen, Ninth, and Fitzwater Streets. He spent money liberally upon it, and for many years it was the model burying-place of the city.

**Laurel Hill Cemetery**, unsurpassed in its beauties of location and adornment, was planned in 1835 by some gentlemen, principal among whom were Frederick Brown, Benjamin W. Richards, and John Jay Smith. They purchased, in February, 1836, the country-seat of Joseph Sims, on the east bank of the Schuylkill, and called "Laurel," which then became Laurel Hill Cemetery, and in later years North Laurel Hill. The Laurel Hill Cemetery Company was incorporated Feb. 9, 1837, and the first interment was made a few months later. It was that of Mrs. Mary Carlisle, who had visited the grounds a few weeks before her death and selected for her grave

a spot under a group of pines near the centre of the inclosure. Laurel Hill at once became the chief cemetery of the city, because of its rural charms, its picturesque variety of hill and dale, its noble trees, and its splendid architectural adornment. One of the first pieces of decoration selected by the managers was the exceedingly appropriate group executed in red sandstone by James Thom, a Scotch sculptor, representing "Old Mortality" with his pony, and in conversation with Sir Walter Scott, the author of that famous character in fiction. In course of time other art-creations were added, and the owners of many lots erected in them the costly and superb tombs and monuments that now everywhere dot the surface of this beautiful city of the dead. Within a short time after its opening it was found necessary to enlarge Laurel Hill. An extension northward was not possible, as the ground fell off sharply, and the Reading Railroad ran below. Immediately adjoining, on the south, was situate Fairy Hill, the seat of the Pepper family, but it was not to be bought when the cemetery company would have been glad to acquire ownership. As a matter of necessity, the managers were compelled to purchase somewhere else, and a negotiation was entered into for the estate, formerly Harleigh, on the Ridge road, adjoining Fairy Hill on the north and Strawberry Mansion on the south. This was bought some time before 1852, and opened as South Laurel Hill. In course of time the Fairy Hill property came into the market, and was purchased by the Laurel Hill Cemetery Company, and thus the north and south sections were united, while to the newly-acquired property was given the name of Central Laurel Hill.

**Monument Cemetery**, situated on the west side of Broad Street, between Montgomery Avenue and Diamond Street, was laid out in 1836-37, by Dr. John A. Elkinton, who was owner of the property, under the title of *Père La Chaise*. The lot-holders were incorporated March 19, 1838, as the Monument Cemetery Company of Philadelphia.

**Woodlands Cemetery** was previously the country-seat of William Hamilton, lying southeast of the Darby road, or what is now Woodland Avenue. It was purchased by a number of citizens, who, on April 13, 1840, were incorporated as the Woodlands Cemetery Company of Philadelphia. This cemetery occupies an admirable site, commanding views of the course of the Schuylkill and the city, and embraces numerous monuments that are marked by a high standard of artistic design and execution.

**Franklin Cemetery.**—In 1840 Mrs. Catharine R. Livingston, of the township of the Northern Liberties, proposed to convey to Rev. George Boyd and John W. Kester a lot of ground containing about seven acres, situate near the two-mile stone on the Frankford road, for the purposes of a rural cemetery. On the 29th of May, 1840, the association was incorporated as the Franklin Cemetery Company.

The ground lies north of Lehigh Avenue, and stands back from the Frankford road.

**Lebanon Cemetery** is located on the northerly line of Passyunk road, about a quarter of a mile west of Broad Street, and contains eleven acres. The company is composed of colored persons, and was chartered Jan. 24, 1849.

**Olive Cemetery** is situated immediately west of the home for aged colored persons, at Girard Avenue and Belmont Avenue, and is a place of interment for colored people. It was established in February, 1849.

**Odd-Fellows' Cemetery** is on Islington Lane, northwest of Broad Street, and is the property of an association of members of the Order of Odd-Fellows, the charter of which was granted on March 14, 1849.

**Glenwood Cemetery**, corner of Ridge Avenue and Islington Lane, contains the Scott Legion monument. The Glenwood Cemetery Company was incorporated Feb. 19, 1850, and was largely made up of Odd-Fellows.

**The American Mechanics' Cemetery** was projected by members of the Order of United American Mechanics and Daughters of America, who purchased grounds adjoining the Odd-Fellows' Cemetery, on the northeast side of Islington Lane. Their rights were confirmed by an act of the Legislature March 20, 1849.

**The Cathedral Cemetery**, West Philadelphia, at Forty-eighth Street and Lancaster Avenue, consists of forty-three acres purchased in 1849. It was consecrated on September 16th of that year, by Rt. Rev. J. M. Odín, D.D., Bishop of Galveston, Texas, assisted by Very Rev. F. X. Gartland, Rev. William O'Hara, and Rev. J. J. Deane, of Pittsburgh. Bishop Kenrick delivered the sermon. In January, 1850, Bishop Kenrick appointed a committee to assist him in conducting its affairs. They were Very Rev. F. X. Gartland, Rev. Q. S. Waldron, and Messrs. Robert Ewing, Charles A. Repplier, and M. A. Frenaye. It is now managed by Episcopal authority.

**The New Cathedral Cemetery** is at Second and Butler Streets, in the northeastern part of the city. It consists of the forty-one acres bought in 1868 by Bishop Wood, and on August 30th of that year consecrated by Rt. Rev. William O'Hara, Bishop of Scranton. An addition has since been made to the original purchase.

**Mount Moriah Cemetery**, north of the road to Darby, near the Blue Bell Tavern, was established about 1855, and opened about the beginning of July. The company was incorporated March 27th of that year. This ground, far removed from the heart of the city, is in a situation where improvements and the opening of streets will be less likely to interfere with it than any other cemetery in the city.

**Mount Vernon Cemetery** is on the east side of Ridge Avenue, immediately opposite Laurel Hill. By the charter of Mount Vernon Cemetery Company,

Feb. 28, 1856, authority was given to purchase a lot of ground, not exceeding thirty acres, bounded north by Cambria Street, east by Thirty-second Street, south by Lehigh Avenue, and west by Ridge Avenue.

**Mount Peace Cemetery**, managed in connection with the Odd-Fellows' Cemetery on Islington Lane, is principally under the control of members of that order. It adjoins Mount Vernon Cemetery, and was originally the country-seat of the Ralston family, and known as the Mount Peace estate. In this inclosure is a fine monument to the memory of William Curtis, who was for many years Grand Secretary of the Grand Lodge of Odd-Fellows of Pennsylvania.

**Cedar Hill Cemetery**, Main Street, above Paul, Frankford, is a small inclosure. North Cedar Hill, some distance beyond, on the Bristol and Smithfield turnpike, is much larger, and is finely situated. Old Cedar Hill was established by a company incorporated March 25, 1850.

**Mount Sinai**, a Jewish cemetery, adjoins North Cedar Hill on the east, and has a fine entrance, occupying a space of one hundred and forty-six feet.

**Leverington Cemetery**, Ridge road, Roxborough, at the corner of Rittenhouse Lane, is well situated and handsomely laid out. The company was incorporated May 13, 1857.

**Fair Hill Cemetery**, Germantown road, above Cambria Street, is upon the ancient ground granted by William Penn for the use of Fair Hill Meeting. It is under the control of members of the Society of Friends belonging to the branch commonly called Hicksites. It was a peculiarity of the Society of Friends, for more than a century and a half in Pennsylvania, not to allow any tombstone or memorial to be set up to mark the resting-place of the dead, but at some time after the opening of Fair Hill Cemetery, low headstones bearing merely the name and date of death of the deceased were permitted.<sup>1</sup>

**Old Oaks Cemetery** was projected in 1868, and laid out upon the estate of John Tucker, upon Wis-

<sup>1</sup> Concord Monthly Meeting in 1729 bore the following testimony: "Whereas, It hath been upon the minds of some Friends to suppress all superfluous practices of putting names and dates upon coffins, and it is the mind of this meeting that for the future Friends desist from all such idolatrous practices." In 1759 the following minute was also adopted:

"Though it was the early care of Friends to advise and caution against the vanity and superstition of erecting monuments and entombing the dead with singular notes or marks of distinction, which is but worldly pomp and grandeur, for no encomium nor pompous interment can add worth to the deceased,—yet some professing with us have set up tombs or grave-stones in some burying-grounds which, coming under our notice, brought a concern on this meeting to advise and caution against them. And the Monthly Meetings whereunto such burying-grounds belong are desired to take care to put a stop thereto according to the directions of this meeting given by a minute on this occasion, viz.: 'The Friends or overseers of each meeting, where tombs are begun to be placed, are to admonish against any usage of that kind, and where they already are to caution and request the relatives or those concerned to remove such tombstones away, and to deal with such as refuse or after a reasonable term neglect to do so.'"

In the burying-ground at Third and Arch Streets were interred many of the best citizens of Philadelphia in colonial time without a headstone to distinguish their graves.

sahickon Avenue, extending from the Reading Railroad, at Erie Avenue, to Abbotsford Street. The company was incorporated in July, 1869, but the cemetery has since been abandoned.

**Hood Cemetery**, Germantown, goes back in its history to 1690. The ground, originally half an acre, was granted by Leonard Arets, by deed dated Feb. 12, 1692, to Paul Wolff, his heirs and assigns, for no other use than a burying-place forever. The grant was a half-acre of a square form, and lying on the eastern side of Germantown, on the Main Street. A stone wall was placed round it, and the inclosure was known as the lower burying-ground. Wolff is understood to have held upon the implied trust that the burying-ground should be for the use of the inhabitants of Germantown, and it was managed by trustees, residents of that village. By subsequent purchases the premises were enlarged to five acres. In March, 1847, William Hood, of Germantown, made a proposition that, in consideration of allowing him to build a vault in the footway near the front gate, he would erect a marble gateway and entrance. This was carried out, and Mr. Hood put up a beautiful entrance-gate of Pennsylvania marble, arched, and the canopy supported by Corinthian columns, and a marble wall and handsome railing along the whole front. In 1866 the trustees obtained a charter, under the title of the Hood Cemetery Company.

**Palmer Street Burying-Ground** owes its origin to Anthony Palmer, a native of England, who came to Philadelphia at an early period, and was a member of the Provincial Council in 1708, and president of the board, and acting Governor in 1747-48. He purchased in 1730 a tract of ground in Northern Liberties, bounded by Gunner's Run, the Delaware, Frankford road, and by what is now known as Hanover Street. There were one hundred and ninety-one and a half acres, and here Mr. Palmer laid out a town, which he called Kensington. It was his intention to dedicate there a piece of ground for the purposes of a burying-ground for the use of the inhabitants of that village. He died without making any formal deed of dedication, and in 1749 his daughter, Mrs. Thomasine Kieth,

by her will, bequeathed the ground to trustees, for the use of a burying-ground and a school, the lot having a front of two hundred and ten feet on Cherry Street. In 1704 the trustees of the Palmer Ground purchased additional space adjoining, and enlarged the inclosure accordingly.

**Ivy Hill Cemetery**, on the Germantown and Willow Grove turnpike, about a mile east of Germantown Avenue, contains about eighty acres. The stockholders were chartered Dec. 5, 1867, as the Germantown and Chestnut Hill Cemetery Company, but in June, 1871, the title was changed to Ivy Hill. The Second Baptist Church has removed to this ground about three hundred bodies from the old burying-ground on New Market Street.

**Beth El Emeth Cemetery**, corner of Fisher's Avenue and Market Street, West Philadelphia, is under the care of the Jewish Congregation. There is also a Hebrew cemetery at Market and Fifty-fifth Streets, extending to Fifty-fourth Street on the east, and northward to Arch Street, and another on Federal Street between Ninth and Tenth Streets. The ancient Jewish Cemetery at Spruce and Ninth Streets is but rarely used.

**Greenwood Cemetery**, Adams Street, Frankford, was established by the benevolent order of the Knights of Pythias, for the interment of their members and others. The company was chartered Dec. 9, 1869, and bought the property, which was formerly Mount Airy, the residence of Commodore Stephen Decatur, Sr.

**West Laurel Hill Cemetery** is on the west bank of the Schuylkill, at Pencoyd Station, in Lower Merion township, Montgomery Co., and immediately opposite Manayunk. The ground is high,—one hundred and fifty feet above the Schuylkill,—and commands a fine view from every portion of it. In the inclosure are about one hundred and ten acres and some fine monuments and tombs. This cemetery is separate and distinct from Laurel Hill on the east side of the Schuylkill, and is under different control, although some of the managers of the old cemetery are interested in this. The charter was obtained Nov. 8, 1869.
