# HISTORY OF PHILADELPHIA.

## CHAPTER XLII.<sup>1</sup>

### THE MUNICIPAL GOVERNMENT OF PHILADELPHIA.

City Departments—Duties of Municipal Officers—Condition of the City Government—Civil Lists—Statistical Information, etc.

BEFORE the 2d day of February, 1854, the territory of the county of Philadelphia was under the control of various municipal corporations, *to wit*: the mayor, aldermen, and citizens of Philadelphia, the commissioners and inhabitants of the district of Southwark, the commissioners and inhabitants of the incorporated district of the Northern Liberties, the commissioners and inhabitants of the Kensington District, the commissioners and inhabitants of the district of Spring Garden, the commissioners and inhabitants of the district of Moyamensing, the commissioners and inhabitants of the district of Penn, the commissioners and inhabitants of the district of Richmond, the districts of West Philadelphia and Belmont, of the boroughs of Manayunk, Germantown, Frankford, White Hall, Bridesburg, and Aramingo, and of the townships of Passyunk, Kingsessing, Blockley, Roxborough, Germantown, Bristol, Oxford, Lower Dublin, Moreland, Byberry, Northern Liberties, and Delaware, and Penn. On that day the Governor of Pennsylvania approved an act consolidating the aforesaid corporations, and changing the corporate name of the mayor, aldermen, and citizens of Philadelphia to "The City of Philadelphia," the boundaries of its territory being those of the county of Philadelphia. This act is known as the "Consolidation Act," and divides the city into wards, but continues the county of Philadelphia as one of the counties of the commonwealth, the same territory thus having a dual name, the county of Philadelphia and the city of Philadelphia.

**The Legislative Power, and Councils.**—The legislative powers of the city are vested in two bodies, called the Select and the Common Council; the Select Council consists of one member from each ward, who must have attained the age of twenty-five years, and have been a citizen and inhabitant of the State four years next before his election, and the last year there-

of an inhabitant of the district for which he shall be chosen, unless he shall have been absent on the public business of the United States or of the State of Pennsylvania; and no person shall hold said office after he shall have removed from such ward. Their term of office is three years. Each ward has a member of Common Council for each two thousand of *taxable inhabitants*<sup>2</sup> that it shall contain according to the list of taxables for the preceding year, who shall serve for two years from the 1st day of January succeeding their election, and it is the duty of the sheriff of the County of Philadelphia, in his proclamation for every

<sup>2</sup> **QUALIFICATIONS OF ELECTORS.**—*Voting on Age.*—Every male citizen between the ages of twenty-one and twenty-two years may vote without being assessed. He must previously have resided in the State one year, and in the election district (or division) where he offers to vote for at least two months, before the election. If his name is not on the registry of voters, he must make affidavit, if a native citizen, as to his birth-place and residence in the district for two months, and in the State for one year, except in case he had been a resident and removed therefrom and again returned, when six months' residence will be sufficient. If he is not native born, but the son of a citizen naturalized during the son's minority, he must also produce proof of his father's naturalization, of which the naturalization certificate will be the best evidence.

A natural-born citizen over twenty-two years of age must have paid within two years a State or county tax, which shall have been assessed at least two months and paid one month before the election. He must have resided in the State one year, or if, having previously been a qualified elector or native-born citizen of the State, he shall have removed therefrom and returned, then six months, immediately preceding the election. He must have resided in the election district where he offers to vote at least two months immediately preceding the election. If his name is not upon the registry list, he must produce at least one qualified voter of the district or division to prove his residence by affidavit, and himself make affidavit to the facts upon which he claims a right to vote, also that he has not moved into the district for the purpose of voting therein. Proof of payment of taxes must be made by producing the tax receipt, or by affidavit that it has been lost, destroyed, or was never received.

A naturalized citizen must have the same qualifications as to residence in the State and district, assessment and payment of taxes, as a native-born citizen. He must have been naturalized one month before the election. If his name is not on the registry list he must prove his residence by the testimony of a citizen of the district or division, and himself state by affidavit when and where and by what court he was naturalized, and produce his naturalization certificate for examination. On challenge, he may also be required, even when his name is upon the registry list, to produce a naturalization certificate, unless he has been for five years consecutively a voter in the district.

#### QUALIFICATIONS OF ELECTION OFFICERS.

No person can be an election officer who holds, or *within two months* has held, any office or appointment under the Federal or State government, or under any city or county or any municipal board, commission, or trust, in any city, except justices of the peace, aldermen, notaries public, and persons in the military service of the State.

<sup>1</sup> This chapter, with the exception of the civil lists and statistical tables, was prepared for this work by Isaac H. Shields, attorney-at-law, of this city.

municipal election, to state the number of members of the Common Council which the voters of each ward shall be entitled to elect. But no member of the State Legislature, nor any one holding office or employment from, or under the State, at the time of said election, shall be eligible as a member of said Councils; nor shall any member thereof, during the term for which he shall be elected, hold any office or employment of a municipal character,<sup>1</sup> nor shall any member, whether as a committee or otherwise, make any disbursement of corporate moneys, nor audit the accounts thereof, nor perform any other executive duty whatever. A member of Common Council shall have attained the age of twenty-one years, and have been a citizen and inhabitant of the State three years next preceding his election, and the last year thereof an inhabitant of the ward in and for which he shall be chosen, unless he shall have been absent on the public business of the United States or the State of Pennsylvania. Councils in joint meeting, by *viva voce* vote, appoint all heads of departments not elective, and provide by ordinance for the appointment of clerks and officers, except the mayor's clerk, who is appointed by the mayor, all of whom serve for such periods as may be fixed by ordinance, subject to dismissal by the appointing power or superior officer, as such ordinance may provide.

The head of each department shall nominate, and by and with the advice and consent of the Select Council, appoint the clerks and officers in his department. The mayor nominates, and by and with the advice and consent of the Select Council, appoints the policemen and watchmen.

It is the duty of City Councils to provide by ordinance for the establishment and regulation of all the departments indicated by the said Consolidation Act and other laws in force in said city, under the proper heads, and with the necessary clerks, officers, and assistants, to wit: For law, police, finance, surveys, highways, health, water, gas, fire, the poor, city property, and the public grounds, and such others as may from time to time be needful; and through the mayor and proper committees the Councils shall maintain a supervision of each department, whether corporate or otherwise, and over the inspectors of the county prison, for the exposure and correction of all evils and abuses, and for that purpose may require the production of and inspect all books and papers, and the attendance of witnesses by subpoena, and examine them under oath or affirmation.

Councils fix the compensation and prescribe the duties of all officers of said city, and whenever any elective officer dies, or becomes incapable of fulfilling the duties of his office, his place, except where other provision is made for filling the vacancy, is filled by a joint vote of Councils, until the next city election

and the qualification of a successor in the office: *Provided*, That such vacancy shall exist at least thirty days before the next city election, otherwise such vacancy is filled at the next election thereafter.

The salary of any officer elected by the qualified voters of the city cannot be increased or reduced by an act or ordinance to take effect during the term for which he was elected; and in all cases where the salary of any officer is not fixed by law, it is by Councils, but it is not lawful for them, at any time, to pass an ordinance, or by other means provide for the payment of any money in the shape of *per diem* pay or compensation of any kind for services rendered by them in their capacity as councilmen, or members of committees emanating from Councils.

Officers elected by the qualified voters are subject to removal from office under impeachment for misdemeanor in office, or other sufficient cause, on charges preferred by the Common Council, and tried by the Select Council in the manner prescribed by the constitution and laws of the commonwealth of Pennsylvania, as to the impeachment by the House of Representatives and trial thereof by the Senate. And all officers are subject to removal for sufficient cause, in the manner provided by Councils.

Councils may prescribe by ordinance that paving of streets, except at the intersections thereof, and of footways, and laying of water-pipes within the limits of the city, shall be done at the expense of the owners of the ground in front whereof such work shall be done, and liens may be filed by the said city for the same.

They have authority by ordinance to direct owners of docks and wharf property to clean their docks after certain notification by the proper officer of the city government, with power, in case of refusal or neglect on the part of any parties thus notified, to cleanse such docks, and to enter liens against the surrounding property for its respective proportions of the expense attending such work; and Councils may also provide for the cleaning of the docks on the Delaware and Schuylkill fronts of said city, and require the owners of wharves and piers, which surround such docks, to cleanse the same; and after thirty days' default from the service of notice on them to perform said duty, it shall be lawful for the city to do said work, and to apportion the expenses thereof among the owners of the wharves and piers adjoining, in proportion to the extent of their wharves, having the privilege or use of such docks, and to collect the same by filing liens therefor and process thereupon, as in case of claims for paving: *Provided*, That no dock shall be cleansed to a greater depth than the natural bed of the river.

The city may construct any bridges that may be necessary to carry any street or highway at the proper grade across any ravine or stream therein, and whenever it shall become necessary in the progress of the building improvements of said city, to grade, curb, bridge, culvert, or pave any of the highways used as

<sup>1</sup> But this does not apply to deputies and employes not holding commissions.

turnpikes or plank-roads, it is lawful for Councils to agree for the relinquishment of such parts thereof as may be required from time to time, and if the parties cannot agree to obtain a jury-view upon such parts to assess the damage the company owning the franchise may sustain by the city using the same for said purposes; such jury appointed, three by the Court of Quarter Sessions of Philadelphia County, and three by such courts in the next adjoining county to which such leads; and such viewers shall take into consideration whether such turnpike or plank-road company shall have occupied a previous public highway or ground purchased by the company. Councils may enact an ordinance providing for the inspection of leaf tobacco of domestic growth received at the port of Philadelphia, to be sold by sample, for establishing the fee for charges for inspection and sampling and storage, and imposing penalties for any violation of the same.

Whenever Councils shall deem the public exigency to demand it, they may order, by ordinance, any streets, laid upon any of the public plans of the city, to be opened, giving three months' notice thereof to the owner, whereupon any of the owners whose ground will be taken by such street may forthwith petition the Court of Quarter Sessions for viewers to assess the damages which such owners may sustain by the opening of such street, and if the same be not paid within one year, may sue the city for the recovery thereof: *Provided*, That security shall be given the city to the owner for the payment of such damages before his ground shall be actually taken, and the city may indemnify the persons entering such security, and no proceedings to assess the damages on any street on such plan shall lapse by the delay of a year in paying such damages. It shall be lawful for Councils to institute an inquiry as to persons benefited by the opening of any new street, and to withhold appropriation for the opening of the same until the persons found to be benefited shall have contributed according to the benefit to be derived therefrom toward the damages awarded to the owners whose ground will be taken therefor, but in no instance shall the contributions exceed the damages awarded for the ground taken.

Whenever Councils shall order any street upon the plan of said city to be opened or widened, no damages therefor shall be paid unless first assessed by a jury and approved by the Court of Quarter Sessions, in accordance with the general road laws of the commonwealth: *Provided*, That Councils may in all cases, whether the proceedings to open any street shall have been commenced in Council, or in the ordinary course before the court, refuse to appropriate for the opening of any street until the owners or citizens to be benefited shall have contributed the whole or any part thereof, as Councils may have determined to be just, and in such case such street shall not be actually opened, nor any security which may have been taken for the damages be responsible therefor.

It is the duty of juries selected to assess damages for the opening, widening, or vacating roads or streets within the said city, to ascertain and report to the court, first, what damages the parties claiming the same are entitled to, and second, to assess and apportion the same among and against such owners of land as shall be benefited by such opening, widening, or vacating any such road or street, and when such report shall be affirmed by the court upon notice to all such parties, and the damages paid or secured by the parties among and against whom it shall be so assessed and apportioned, the chief commissioner of highways shall proceed to open, widen, or vacate such road or street accordingly: *Provided, however*, That it shall be lawful for Councils, when in their judgment the public interest shall require it, to provide for the payment of such damages out of the city treasury: *And further provided*, That two-thirds of the members of Councils present at the passage of such ordinance consent thereto, and the yeas and nays on the passage thereof shall be entered on the journals.

It is the duty of Councils in all cases, when making appropriations, to state the items of expenditure under separate and distinct heads for which such appropriations are intended. They are authorized annually to appropriate toward the support and maintenance of the House of Refuge such sum as they may deem expedient, not exceeding thirty thousand dollars in any one fiscal year, payable in equal payments on the first Mondays of February, May, August, and November in each and every year.

They have power and authority to make, ordain, constitute, and establish such and so many laws, ordinances, regulations, and constitutions as shall be necessary and convenient for the purposes of fixing, ascertaining, and regulating, from time to time, the rates and prices which shall be demanded and received by wagoners, carters, draymen, porters, wood-sawyers, and chimney-sweepers, for each and every labor and service which they shall respectively do and perform within the city; and also for the doing, performing, and executing all and every other power, authority, act, matter, and thing whatsoever, which the wardens and street commissioners separately of themselves, or they or either of them, in conjunction with one or more justice or justices of the peace, or with any person or persons whatever, were authorized and empowered, or might or could lawfully do or perform by or under any laws in force at the time of the approval of the aforesaid act of consolidation.

Councils may by ordinance prohibit any interments within such parts of the city wherein they shall judge such prohibition necessary, and to impose such fines for any breach of such ordinance as they may deem necessary.

It is lawful for the Select and Common Councils, from time to time, by ordinances, at the expense of the owner or owners of the property adjoining, to regulate, grade, pave, and repair, curb, and recurb the

footways or sidewalks, and the said ordinances, rules, and regulations to execute, under the direction or superintendence of such person or persons as they may authorize or appoint, and the same to enforce by suitable penalties, which penalties and expenses of paving and repaving, curbing and recurbing, as aforesaid, are recoverable before any magistrate of said city, or before any court having jurisdiction, in the same manner that debts of like amount are by law recoverable.

Councils fix the rate and levy all taxes now authorized by law within the limits of said city and county, except the State tax, and direct the amount to be applied and paid by the city treasurer to health, school, poor, city, and other purposes, according to law. The said taxes are voted so as to show how much is raised for said objects respectively, and they are collected and accounted for to the treasurer as one city and county tax. The said tax, and all State taxes accruing within said city limits, are paid to the receiver of taxes, and all allowance made by law for the collection and prompt payment of the State tax accrues to the city treasury for the use of the city.

It is the duty of Councils to designate the place of holding the elections in the several election divisions of the wards, and to notify the sheriff thereof, at least thirty days prior to the election, and shall have full power and authority to remove or change the place of holding the elections in any of the said election divisions, whenever by reason of inability to hold said election at the place so designated, a change shall be necessary. And in sudden emergency, as in case the polling place is destroyed by fire on the eve of the election, the court designates one.

The Select and Common Councils have the power to levy a tax for municipal purposes on all subjects of taxation specified by the thirty-second section of the act of April 29, 1844, and to provide, by ordinance, a system for the assessment thereof, and for the collection of taxes thereon.

The following is a schedule of taxable articles under the thirty-second section of the act of 29th April, 1844 :

"Houses, lands, lots of ground, and ground-rents, mills and manufactories of all kinds, furnaces, forges, bloomeries, distilleries, sugar-houses, malt-houses, breweries, tan-yards, fisheries and ferries, wharves, and all other real estate not exempt by law from taxation; also all personal estate, to wit: horses, mares, geldings, mules, and neat cattle over the age of four years; also all mortgages, money owing by solvent debtors, whether by promissory note, penal or single bill, bond or judgment; also all articles of agreement and accounts bearing interest, owned or possessed by any person or persons whatsoever, except notes or bills for work and labor done, and bank notes; also all shares or stock in any bank, institution, or company now or hereafter incorporated by or in pursuance of any law of the commonwealth, or of any other State or government; and on all shares of stock or weekly deposits in any unincorporated saving-fund institution, and all public loans or stocks whatsoever, except those issued by this commonwealth, and all money loaned or invested on interest in any other State; also all household furniture, including gold and silver plate, owned by any person or persons, corporation or corporations, when the value thereof shall exceed the sum of three hundred dollars; also all pleasure carriages, both of two and four wheels; salaries and emoluments of office, all offices and posts of profit,

professions, trades, and occupations, except the occupation of farmers, together with all other things now taxable by the laws of the commonwealth."

Councils fix the salaries of all municipal officers elected by the people. They have the power to order and direct the construction of branch sewers, whenever the same shall be approved by the Board of Surveys, and in the opinion of Councils shall be required for the health, comfort, or convenience of the inhabitants of the city.

Councils are also vested with full power and authority to modify the powers and duties of any officer or department, and for that purpose to enact that after the expiration of the term of any existing officer or officers-elect, such office shall cease, and the duties thereof be imposed on other officers or departments now existing, or by ordinance to be established: *Provided*, That this authority shall not be construed to confer any additional powers upon Councils, to abolish, modify, or limit the powers of any boards, commissioners, or officers regulating public parks which have been dedicated to the uses and enjoyment of the people of the commonwealth, or are charged with the collection of taxes or the revision and regulation of assessments of property for general taxable purposes, or created for the purpose of erecting public buildings for the use of the city.

The City Councils cause to be published, once in every year, in the month of January, or as soon as possible thereafter, not later than sixty days, a statement of receipts and expenditures of the city, and a statement of the financial condition of the city, showing all of its liabilities, permanent and temporary, and a schedule of its assets, which are published in two or more newspapers of different political complexion, published in Philadelphia, for three consecutive issues.

Councils are empowered to provide for the inspection of milk, under such rules and regulations as will protect the people from adulteration and dilution of the same.

They are also authorized to alter and regulate the curb-lines and heights, and determine and make uniform the widths of the footways of the streets within the limits of the city.

The municipal authorities and courts having jurisdiction in Philadelphia have exclusive control and direction of the opening, widening, narrowing, vacating, and changing grades of all streets, alleys, and highways within the limits of said city, and may open or widen streets of such width as may be deemed necessary by such city authorities and courts.

The Councils of the city fix by ordinance the salary to be paid out of the city treasury to the mayor.

"The proper authorities of any county, city, town, or township of Pennsylvania are authorized and empowered to enter into contracts with any of the railroad companies, whose roads enter their limits, respectively, whereby the said railroad companies may

relocate, change, or elevate their railroads within said limits or either of them, in such manner as in the judgment of such authorities, respectively, may be best adapted to secure the safety of lives and property, and promote the interest of said county, city, town, or township; and for that purpose the said authorities shall have power to do all such acts as may be necessary and proper to effectually carry out such contracts. And any such contracts made by any railroad company or companies as aforesaid with said authorities, or either of them, are hereby fully ratified and confirmed: *Provided*, That nothing in this proviso contained shall affect any contract made or hereafter to be made with any railroad company, from (for) apportioning the expenses of altering and adjusting the grades of existing railroads and intersecting streets in any city or borough, so as to dispense with grade crossings."<sup>1</sup>

"The Councils of every city shall prescribe by ordinance the number, duties, and compensation of the officers and employés of each branch, and no payment shall be made from the city treasury, or be in any way authorized, to any person, except to an officer or employé elected or appointed in pursuance of law; and no ordinance shall be passed except by a two-third vote of both Councils, and approved by the mayor, giving any extra compensation to any public officer, servant, employé, agent, or contractor after services shall have been rendered or contract made, nor providing for the payment of any claim against the city without previous authority of law; and any officer drawing any warrant, or passing any voucher for the same, or paying the same, shall be guilty of a misdemeanor, and on conviction thereof be punished by a fine not exceeding five thousand dollars and imprisonment not exceeding one year."<sup>2</sup>

Upon the resignation of any member of Select or Common Council, the president of the chamber, wherein such resignation shall be tendered, is authorized to direct the clerk to notify the sheriff of the county of Philadelphia of such resignation within one week after the same.

The City Councils shall, from time to time, exempt from the operation of any statute law, conferring on the Board of Health jurisdiction of the subject of nuisances, such portions of the territory under their jurisdiction, being a rural district or sparse in population, as in their opinion they can do with safety to the health and comfort of the inhabitants thereof, which exemption shall at all times be revocable by the like authority.

Any person who shall, directly or indirectly, offer, give, or promise any money or thing of value, testimonial, privilege, or personal advantage to any member of Councils to influence him in the performance of any of his public or official duties, shall be

guilty of bribery, and be punished in such manner as that offense is by law punishable.

A member who has a personal or private interest in any measure or bill proposed or pending before Councils, shall disclose the fact to the branch of which he is a member, and shall not vote thereon. If such interested member shall vote without disclosing his interest in such measure or bill, and the same be carried by his vote, such member shall forfeit his office.

A member of Councils who shall solicit, demand, or receive, or consent to receive, directly or indirectly, for himself or for another, from any company, corporation, or person, any money, office, appointment, employment, testimonial, reward, thing of value or enjoyment, or of personal advantage, or promise thereof, for his vote or official influence, or for withholding the same, or with an understanding, expressed or implied, that his vote or official action shall be in any way influenced thereby, or who shall solicit or demand any such money or other advantage, matter, or thing aforesaid for another, as the consideration of his vote or official influence, or for withholding the same, or shall give or withhold his vote or influence, in consideration of the payment or promise of such money, advantage, matter, or thing to another, shall be held guilty of bribery, and shall, upon conviction thereof, be punished by fine not exceeding ten thousand dollars, and by separate and solitary confinement at labor for a period not exceeding five years, and shall be forever incapable of holding any place of profit or trust in the commonwealth of Pennsylvania.

LIST OF THE COMMON COUNCILMEN OF THE CITY OF PHILADELPHIA FROM 1701 TO 1777.<sup>3</sup>

The body corporate to consist of the mayor, recorder, eight aldermen, and twelve councilmen; the latter afterward increased.

1701.—*By City Charter*.—John Parsons, William Hudson, William Lee, Nehemiah Allen, Thomas Paschall, John Budd, Jr., Edward Smont, Samuel Buckley, James Atkinson, Pentecost Teague, Francis Cook, and Heury Badcocke.

1704.—Robert Yeildhall, Joseph Yard, Thomas Griffith, and John Redman, Sr.

1705.—Joshua Carpenter, Abraham Bickley, Thomas Bradford, and John Webb.

1707.—Samuel Hall and John McComh.

1708.—Henry Flower, Peter Stretch, David Griffine (or Giffing), and George Claypoole.

1711.—Owen Roberts.

1712.—Clement Plumsted, Gilbert Falconer, John Jones (Bolter), and Nathaniel Edgcomb.

1713.—Joseph Redman, John Warder, John Vanleer, George Claypoole, William Fishbourne, Thomas Wharton, and Benjamin Vining.

1715.—Anthony Morris, Jr., Daniel Radley, and Thomas Redman.

1716.—James Parrock, Samuel Carpenter, Richard Moore, and Charles Read.

1717.—Samuel Powel, Edwards Roberts, George Fitzwater, and Evan Owen.

1718.—Israel Pembertou, John Carpenter, John Cadwalader, Joseph Buckley, Thomas Griffiths, and Thomas Tresse.

1723.—Robert Ellis, George Calvert, and Edward Owen.

1724.—Ralph Assheton.

1727.—William Allen, Thomas Masters, Alexander Woodroppe, Andrew Bradford, Isaac Norris, Jr., and Henry Hodge.

<sup>1</sup> Act June 9, 1874, Sec. 1, P. L., 282.

<sup>2</sup> Act May 23, 1874, Sec. 6, P. L., 230.

<sup>3</sup> From John Hill Martin's "Bench and Bar of Philadelphia."

- 1728.—Samuel Hasell and Thomas Chase.  
 1729.—Peter Lloyd, Samuel Powel, William Atwood, and Joseph Turner.  
 1730.—James Steel, George Emlen, Abram Taylor, George Mifflin, Samuel Powel, Jr., and John White.  
 1732.—Samuel Mickle, Edward Shippen, George Hoose, John Dillwyn, Benjamin Shoemaker, Joseph England, James Bingham, and Joseph Paschal. Samuel Powel and Samuel Powel, Jr., re-elected.  
 1739.—William Till, Joshua Maddox, William Coleman, James Hamilton, William Plumsted, and Nathaniel Allen.  
 1741.—Robert Strettell, William Parson, Andrew Hamilton, Samuel Rhoads, and Thomas Hopkinson.  
 1742.—Joseph Morris, Joseph Shippen, Joshua Emlen, Richard Nixon, Samuel Austin, and Isaac Jones.  
 1743.—William Logan, Charles Willing, Attwood Shute, and Septimus Robinson.  
 1745.—Alexander Graydon, John Inglie, Richard Stanley, William Shippen, Thomas Bond, and William Biddle.  
 1747.—John Mifflin, John Stamper, John Soher, Tench Francis, John Wilcocke, Samuel McCall, Jr., Phineas Bond, and John Sims.  
 1748.—Benjamin Franklin and Thomas Lawrence, Jr.  
 1751.—*Council increased by nine.*—Thomas Cadwalader, William Coxe, Lloyd Zachary, Charles Norris, John Redman, William Humphreys, Samuel Smith, Amos Strettell, and William Bingham.  
 1755.—Edward Shippen, Jr., Samuel Mifflin, Alexander Huston, John Wallace, Alexander Stedman, Andrew Elliot, Samuel Morris, Jacob Duché, Samuel Shoemaker, and Thomas Willing.  
 1757.—*Council increased eight more.*—Henry Harrison, Daniel Benezet, Charles Stedman, William Rush, John Swift, Towneend White, William Vanderspiegel, and Joseph Wood.  
 1762.—John Allen, John Lawrence, Evan Morgan, John Gibson, and Redmond Conyngham.  
 1764.—James Tilghman and Archibald McCall.  
 1767.—Andrew Allen, Joshua Howell, James Allen, William Fisher, William Parr, Joseph Swift, John Wilcocks, and George Clymer.  
 1770.—Joseph Shippen, Jr., John Cadwalader, Samuel Powel, Alexander Wilcocks, Stephen Carmick, and Peter Chevalier.  
 1774.—John Potts, Samuel Meredith, James Biddle, Samuel Howell, Isaac Cox, and Thomas Barclay.

 1855. Joseph Wood, Jr.  
 1856. Henry C. Leisenring.  
 1859. J. Barclay Harding.  
 1862. Emanuel Rey.  
 1863. Henry C. Corfield.  
 1864. Benjamin H. Hainee.  
 1873. Joseph H. Paist.

**Ordinances.**—No law shall be construed to impair the validity of an ordinance of the city of Philadelphia if the same is not recorded, and all ordinances heretofore passed, or which may hereafter be enacted, shall be valid and effectual, although the same may not have been, or may not be, recorded in the office of the recorder of deeds.

The Select and Common Councils have the power, by a two-thirds vote of each Council, to pass any bill, whatever its nature, which may have been returned by the mayor, without his signature.

Councils have full power and authority to make, ordain, constitute, and establish such and so many laws, ordinances, regulations, and constitutions as shall be necessary or convenient for the government and welfare of the said city, and the same to enforce, put in use and execution, by the proper officers, and

<sup>1</sup> "To take effect November 30, when he comes of age." In office till 1745.

<sup>2</sup> He held the office until the Revolution.

<sup>3</sup> All the other officers of both branches of the City Councils were re-elected on April 4, 1881, by acclamation.

<sup>4</sup> All the family now spell their name Keemle.

at their pleasure to revoke, alter, and make anew, as occasion may require, provided the same shall not be repugnant to the laws and constitution of the commonwealth of Pennsylvania.

For all breaches of the ordinances of the city of Philadelphia, where the penalty demanded is fifty dollars and upwards, actions of debt shall be brought in the corporate name of the city of Philadelphia.

No ordinance can be passed through Councils except by bill, and no bill shall be so altered or amended, on its passage through either branch of Councils, as to change its original purpose. No bill can be considered unless referred to a committee, returned therefrom, and printed for the use of the members, and no bill can be passed containing more than one subject, which shall be clearly expressed in its title. Every bill must be read at length in each branch, all amendments made thereto must be printed for the use of the members before the final vote is taken on the bill, and no bill can become a law upon the same day on which it was introduced or reported. On its final passage the vote is taken by yeas and nays, and the names of the persons voting for and against the same are entered in the journal, and a majority of the members elected to each branch are recorded thereon as voting in its favor. No amendment to bills by one branch must be concurred in by the other except by the vote of a majority of the members elected thereto, taken by yeas and nays, and the names of those voting for and against recorded upon the journal thereof, and reports of committees of conference must be adopted in either branch only by the vote of a majority of the members elected thereto, taken by yeas and nays, and the names of those voting recorded upon the journals.

Every legislative act of the Councils must be by resolution or ordinance; and every ordinance or resolution, except as hereinafter provided, shall, before it takes effect, be presented, duly engrossed and certified, to the mayor for his approval; and all ordinances, within five days after their passage, must be advertised in five daily and two Sunday newspapers, by the mayor.

**Committees of Councils.**—For the purpose of supervising the operations of the different departments, and of assisting Councils in the consideration of subjects brought before them, relating to the interests of the corporation, the following joint standing committees are appointed by the respective presidents annually on the organization of Councils:

- I. Committee on Finance.
- II. Committee on Department of Water-Works.
- III. Committee on Department of Gas-Works.
- IV. Committee on Department of Highways, Bridges, Sewers, and Culverts.
- V. Committee on Department of City Property and Public Grounds.
- VI. Committee on Department of Police.
- VII. Committee on Department of Fire.
- VIII. Committee on Department of Prisons.
- IX. Committee on Department of Schools.
- X. Committee on Surveys and Regulations.

XI. Committee on Railroads.

XII. Committee of three members from each chamber are appointed to compare bills and transmit the same to the mayor when found correct.

XIII. Committee on Department of Law.

The chairmen of the Committees on Finance, Gas-Works, Highways, Bridges, Sewers, and Culverts, Police, Fire, Schools—and to compare bills—must be members of Common Council, and the chairmen of the remaining committees must be members of the Select Council; but no member of either branch shall be chairman of more than one standing committee. They hold stated meetings for the transaction of business at such times as a majority of the committee may determine, and special meetings whenever the chairman or three members thereof may require.

The Committee on Finance has supervision over the departments of the city treasurer, the receiver of taxes, and the city controller. The Committees on the Department of the Water-Works, on the Department of the Gas-Works, and on the Department of Highways, Bridges, and Sewers, on the Department of City Property, on the Department of Police, on the Department of the County Prison, on the Department of Schools, on Surveys and Regulations, Railroads, to compare bills, and Department of Law, exercise a general supervision over said departments for the exposure and correction of evils and abuses. The Committee on the Department of City Property fix the sums for which the real estate in charge of that department shall be rented.

Matters relating to the markets are under the supervision of the Committee on Markets, and those relating to the wharves and landings under the supervision of the Committee on Wharves and Landings.

There is appointed by the respective presidents annually, on the organization of Councils, a standing committee on the cash account of the city treasurer. It is the duty of this committee to examine and compare his statements, and to report to both branches of Councils, at their first stated meeting after the second Monday in each month, a complete statement of moneys received during the preceding month by the city treasurer; stating the total amount received from each and every officer and department of the city of Philadelphia, and whether such statement from the city treasurer agrees with the statements received from the said officers and departments.

There is appointed a committee to supervise all the disbursements of the department of clerks of Councils, and all requisitions for stationery first receive the sanction of said committee; all bills for stationery and printing receive the indorsement of the committee before countersigned by the controller, and the chairman of said committee is appointed by Select Council.

The presidents of the Select and Common Councils appoint a joint committee, styled the committee on election divisions, to whom is referred the changing

of all election divisions; also a committee on hoiler inspection, and one on House of Correction.

The number of all standing committees consists of twelve from each chamber, and nine members thereof constitute a quorum.

Select and Common Councils each elect a clerk and an assistant, and the presidents each appoint a page, and there is also a transcribing clerk, whose duty is to engross the ordinances when passed by both branches.

**Taxes and Taxation.**—The system of assessment and collection of taxes in Philadelphia is executed by a Board of Revision, forty-two assessors, a receiver of taxes, and a collector of delinquent taxes.

The Court of Common Pleas of Philadelphia County, once in every three years, before the time of the revision of the taxes for the succeeding year, and as often as vacancies occur, appoint three persons deemed the most competent, who compose the Board of Revision of Taxes of the county, a majority of whom are a quorum, who have the power to revise and equalize the assessments, by raising or lowering the valuations, either in individual cases or by wards, to rectify all errors, to make valuations where they have been omitted, and to require the attendance of the assessors or other citizens before them for examination, on oath or affirmation, either singly or together, with power to forfeit the pay of assessors, ratable to their annual compensation, for each day's absence when their attendance is required; and the Board of Revision hear all the appeals and applications of the taxpayers, subject to an appeal from their decision to the Court of Common Pleas of the county, whose decision is final; and, if the appeal to the court be groundless, the appellants pay their costs of court. The Board of Revision hear the taxpayers of their respective wards in succession, of which notice is given; and the Board of Revision alone, or a majority of them, exercise all the powers vested in the County Board of Revision, but shall not, in any instance, lower the aggregate valuation of the county. They meet as often, but not oftener, than is necessary to dispatch the business which their duties require of them, and hold stated meetings on the first Saturday of each month.

The salary of each member of the Board of Revision of Taxes is four thousand dollars per annum.

The Board of Revision have and exercise all the powers heretofore by law conferred upon the commissioners of the city of Philadelphia, and the county commissioners of the different counties of the State, in relation to the assessors, and the assessment and collection of taxes within the city and county of Philadelphia, and the correction of all valuation and return therefor; and they issue the precepts to, and receive the returns of, the assessors, procure the assessment-hooks, and cause the duplicates to be made out and issued to the receiver of taxes, make the returns required by law to the State Revenue Board, and have the exclusive custody and control of all

books relating to the assessment of taxes, and keep them arranged according to wards and dates; and also have the custody and control of the duplicates of surveys, when the same have been made by the department of surveys; they may issue certificates to show how property has been assessed, to be used with the same effect as the original books of assessment, as evidence in relation to the title of property; they report to Councils, through the mayor, the aggregate of the assessments, on or before the first day of November in each year.

The Board of Revision are authorized and empowered to issue their precept to the several assessors of the city and county of Philadelphia, in the year of the triennial assessment, and to the assessors of any ward or wards of said city in which they shall deem a new assessment necessary in any subsequent year other than the triennial year, requiring them to return the names of all taxable persons residing in their respective wards, and all property taxable by law, together with the just valuation of the same, and the said board have power to revise and equalize the assessments.

It is the duty of the Board of Revision, immediately after the annual assessment in each year, to classify the real estate so assessed in such a manner and upon testimony adduced before them as to discriminate between the rural and built-up portions of said city, and they are required to certify to the Councils of said city on or before the first day of November, in each year, the valuations of the built-up portions, the valuation of the rural or suburban property, and the valuation of lands exclusively used for agricultural and farming purposes respectively, and it is the duty of Councils, in determining the rate of taxation for each year, to assess a tax upon said agricultural and farmland equal to one-half of the highest rate of tax required to be assessed for said year, and upon the rural and suburban portion of said city, a tax not exceeding two-thirds of the highest rate of tax required to be assessed, as aforesaid, so that upon the real estate assessed there are three rates of taxation, and it is the duty of the assessors of said city to make assessments of property in conformity to the foregoing, and to designate the class in which such property should be rated.

The Board of Revision have power to affix the seal of the city of Philadelphia to all official certificates they may be authorized by law to issue, and they have authority, from time to time, as the public interests may require, to create additional assessors' districts and appoint additional assessors therein.

A copy of the tax duplicate for each year is filed in the office of the city controller, said copy of the duplicate is made out in form the same as for the department of the receiver of taxes; and it is the duty of said controller to post against each item on said duplicate the amount of taxes returned to him as received by the receiver of taxes; and it is also the duty of the receiver of taxes, whenever allowances are made from

the assessed value of any property, to certify to the city controller the owner's name and locality of such property, and the amount of allowance, and by whom made, and no credit is given to the receiver of taxes for such allowances, unless such certificates be returned to the office of the said city controller.

It is the duty of the Board of Revision of Taxes, in preparing the duplicates and triplicates of the assessors' transcripts for the receiver of taxes and city controller, to give a definite description of all assessments, either by street numbers, as fixed by the proper department, or where such numbers do not exist, by measurement from a given point upon the city plan, and also indicate by feet and inches the frontage and depth thereof, and in rural districts the superficial area thereof.

The Board of Revision of Taxes prepare triplicate copies of the assessment of taxes in each ward, and deliver the same to the city controller at the same time that the duplicates are given to the receiver of taxes, and they also deliver monthly, on the first Monday in each month, to the city controller a certified schedule of the allowances made to each person, separately stated, with his or her name, location of property, and page of the duplicate; also, a correct account of all the divisions of properties made during each month.

It is the duty of the Board of Revision of Taxes, through the assessors of real estate, to rearrange and revise the numbers of houses whenever necessary, to furnish each owner or occupant of any house or property situate upon any street, lane, or alley of the city, a written copy of the correct number to which such house is entitled, and after such notices served, the said property is designated and known by such number in the hooks and accounts of the several departments; and each owner shall, within thirty days after such notice, cause a painted, carved, or cast number with the proper figures to be placed in a conspicuous place upon such house or property in a permanent and durable manner, and such owner shall, for every neglect in having said house or property numbered in the manner and within the time specified, forfeit and pay the sum of five dollars, recoverable as debts of like amount are recoverable by law, to be appropriated to the use of the city.

Upon the failure or neglect of any owner to comply with these requirements, it is the duty of the said assessors of real estate to notify any magistrate of such failure or neglect, and it is the duty of such magistrate to collect the said sum of five dollars for each and every offense, and pay the same over to the city treasurer, and make report to the city controller, under oath or affirmation.

The Board of Revision of Taxes, in making out the proper number of houses, is governed by the present system, that is, the initial or starting point is at Market Street and the river Delaware, respectively, allowing one hundred numbers to each square of three

hundred and fifty or more feet in length, and commencing with an even hundred at the commencement of each square, and in all respects adhering to the decimal system of numeration; also, in all streets running in opposite directions, but not extending to the initial points, the same order of enumeration is observed as though such street did actually extend to such point. And in such parts of the city as it may be impracticable to accurately follow this system, the Board of Revision of Taxes arrange the numbering as nearly in accordance therewith as possible.

The Board of Revision, immediately after the election in each year, issue their precept to the assessors of the respective wards, requiring them to make out and return, within such time as the said Board of Revision shall designate, not later than the 1st day of September, following, a just and perfect list, in such form as the said board shall direct, of all taxable persons residing within their wards respectively, and all property taxable and exempt by law, with a just valuation of the same; and whenever the assessors of any ward cannot agree upon the valuation of any property, the member of the board senior in office acts as umpire and decides.

The hooks for assessment are furnished to the assessors by the 15th day of May in each year by the Board of Revision, and any assessor who shall not have completed and returned his assessment by the 15th day of August following, forfeits his compensation and surrenders his hooks, to be finished by the Board of Revision. It is the duty of the assessors to mark opposite all property used for agricultural purposes the word "rural," and on all property so returned there is assessed or collected but two-thirds the rate for city tax that is assessed on other real estate in the city: *Provided*, That any error in such return in this respect shall be corrected by the Board of Revision on appeal.

The assessors, at the time they make the assessments required by law, ascertain the dimensions or quantity of each lot or piece of ground assessed, and return the same with their assessment to the Board of Revision, and whenever the return shall not be sufficiently certain to enable the receiver of taxes properly to describe any lot or piece of ground against which he is about to proceed for the recovery of registered taxes, it is the duty of the surveyor of the district in which said lot or piece of ground is situated to furnish the said receiver with an accurate measurement thereof, together with a precise description of its locality.

It is the duty of the several assessors of the city to ascertain, by strict inquiry, the proper orthography of the name of each taxable person within his ward, the exact number of his place of residence, together with his present occupation, profession or business, and to state, plainly written, all such particulars in his assessment-list.

The assessors make a second return of the values

of all new buildings which have been erected and not included in their previous return, on or before the first day of November in each year; and the assessors, or either of them, are authorized and empowered to administer an oath or affirmation to any person or persons required to make a statement of property taxable under the general or special laws of this commonwealth: *Provided*, That no fee be charged for the administration of such oath or affirmation.

The assessors in estimating real estate subject to ground-rent, where there is no provision made in ground-rent deeds that the lessee shall pay the taxes on the said ground-rents, estimate and assess for taxes, the said ground-rents to the owners thereof.

The pay of assessors is at the rate of two thousand dollars per annum, and their appointments are made so that there is a majority and minority representation of the political parties in each district, and no appointment or removal of assessor or assessors is made without the concurrence of all the members of the Board of Revision.

All taxes, rates, and levies, which are imposed or assessed, either in the city or county of Philadelphia, on real estate situate in said county and city is a lien on the same, together, also, with all additions to and charges on the said taxes, rates, and levies; and the lien has priority to, and must be fully paid and satisfied before, any recognizance, mortgage, judgment, debt, obligation, or responsibility which the said real estate may become charged with or liable to.

All churches, meeting-houses, or other regular places of stated worship, with the grounds thereto annexed necessary for the occupancy and enjoyment of the same; all burial-grounds not used or held for private or corporate profit; all hospitals, universities, colleges, seminaries, academies, associations, and institutions of learning, benevolence, or charity, with the grounds thereto annexed and necessary for the occupancy and the enjoyment of the same, founded, endowed, and maintained by public or private charity; and all school-houses belonging to any county, borough, or school district, with the grounds thereto annexed and necessary for the occupancy and enjoyment of the same; and all court-houses and jails, with the grounds thereto annexed, are exempted from all and every county, city, borough, bounty, road, school, and poor tax: *Provided*, That all property, real or personal, other than that which is in actual use and occupation for the purposes aforesaid, and from which any income or revenue is derived, is subject to taxation, except where exempted by law for State purposes.

No portion of the real estate of any religious, charitable, or benevolent association or institution in the city of Philadelphia, which is used for business purposes, shall be exempt from municipal or State tax by reason of any act of Assembly exempting the real estate or property of said religious, charitable, or benevolent association or institution.

All lands inclosed as burial-grounds and cemeteries, and used for the interment of the dead, and for no other purpose, together with the buildings and improvements thereon, owned by churches, corporations, or associations, are exempt from all taxation for municipal or county purposes.

Councils cannot impose taxes upon rural portions of the city for police and watchmen, for lighting and paving and cleaning streets, but shall make an allowance of at least one-third of the whole city tax in favor of such section.

The City Councils fix the rate and levy all the taxes authorized by law within the limits of the city and county, except the State tax, and direct the amount to be applied and paid by the city treasurer to health, school, poor, city, and other purposes, according to law. The taxes are voted so as to show how much is raised for said objects respectively; they are collected and accounted for to the treasurer as one city and county tax. The said tax and all State taxes accruing within the city limits, are paid to the receiver of taxes, and all allowance made by law for the collection and prompt payment of the State tax accrue to the city treasury for the use of the city: *Provided*, That the City Councils discriminate in laying the city taxes as not to impose upon the rural portions those expenses which belong exclusively to the built-up portions of the city; for which purpose the assessors distinguish in their returns what properties are within agricultural or rural sections, not having the benefit of lighting, watching, and other expenditures for purposes exclusively belonging to built-up portions of the city; and all land within said agricultural or rural districts, used for the purpose of cultivation or farming, is assessed as farm land.

All meadow, or marsh, or meadow land situate in the Twenty-fourth Ward, and assessed as marsh or meadow land, and paying besides the usual city taxes, a further tax for keeping up and in repair the banks on said lands, is only liable to pay one-half the rate of tax levied on real estate in said city for city purposes.<sup>1</sup>

The offices, depots, car-houses, and other real property of railroad corporations situated in the city, the superstructure of the road and water-stations only excepted, are subject to taxation, by ordinances, for city purposes.

If Councils, before or on the second stated meeting in December in each and every year, fail to levy and fix the rate of taxes for the ensuing year, the tax-rate of the preceding year is continued as the rate for the ensuing year.

Upon all taxes paid on or before the 31st of August a discount at the rate of one per cent. per annum is allowed. If paid after the 31st day of August, and on or before the 15th day of September, an addition

<sup>1</sup> This act was extended to the First Ward by act of April 8, 1859, P. L., 410.

or penalty of one-half of one per cent. is added. If paid after the 15th day of September, and on or before the 1st day of October, there is an addition or penalty of one per cent. If paid after the 1st day of October, and on or before the 15th day of October, there is an addition or penalty of one and one-half per cent. If paid after the 15th day of October, and on or before the 1st day of November, there is an addition or penalty of two per cent. If paid after the 1st day of November, and on or before the 15th day of November, there is an addition or penalty of two and one-half per cent. If paid after the 15th day of November, and on or before the 1st day of December, there is an addition or penalty of three per cent. If paid after the 1st day of December, and on or before the 15th day of December, there is an addition or penalty of three and one-half per cent. If paid after the 15th day of December, and on or before the 1st day of January, there is an addition or penalty of four per cent. If paid after the 1st day of January, and on or before the 15th day of January, there is an addition or penalty of four and one-half per cent.; and upon all taxes remaining unpaid after the 15th day of January, there is an addition or penalty of five per cent. added to and made payable upon the same. And it is the duty of the receiver of taxes to display from day to day, in large figures, and in a conspicuous place in the tax-office, the amount of discount or penalty fixed by ordinance.

No receipt for taxes is valid or binding upon the city unless the payment be made to the cashier, during business hours, at the office of the receiver of taxes, in conformity with the regulations of the department for the safe collection of taxes.

Every person or persons owning and possessing one dog shall pay a tax of twenty-five cents for it, and for every second dog kept about the same house one dollar, and for every additional dog two dollars.

All taxes unpaid on the 1st day of January, after the year for which they were assessed, bear interest until paid, besides the commissions thereon for collection.

The charge for advertising delinquent taxpayers of the city of Philadelphia shall not exceed fifteen cents for all advertising of each name in any one ward, which is payable by the person or persons liable for the tax, nor shall the same be inserted in more than two newspapers; and if the name of any person shall be so advertised after having paid their tax the receiver shall pay the expenses thereof.

Sales for taxes may be made at any of the regular sales by the sheriff of the county and of the city and county of Philadelphia.

For the purpose of creating a sinking fund for the gradual extinguishment of the bonds and funded debt of the city, the Councils annually (until payment of the bonds and funded debt be fully provided for) levy and collect, in addition to the other taxes of said corporation, a tax of not less than one-fourth of one

mill, and not exceeding three mills, upon the assessed value of the taxable property of said city, called the sinking fund tax, which is paid into the city treasury, and applied toward the extinguishment of said bonds and funded debt in the order of the date of issue thereof, and to no other purpose whatever; and said bonds, when purchased, are conspicuously stamped to show that they were purchased for the sinking fund of said city, and the interest on said bonds is collected and used in like manner with the taxes collected for said sinking fund.

The qualified voters of the city elect one person, who is denominated receiver of taxes, to serve for three years. He gives bonds, and is sworn or affirmed to perform his duty. He collects and receives all taxes and public assessments payable and receivable within the limits of the city. It is the duty of the Board of Revision to place the duplicate lists of taxes in the possession of the receiver of taxes as early as practicable in the year for which the taxes are assessed, and when he receives them he causes his clerks to make out bills against the taxpayers.

The receiver of taxes, on the first Mondays of October, November, and December, gives general notice to all taxpayers, three times in three newspapers, to pay the taxes then due; and if not paid before the 1st day of the following January, interest will be charged thereon, and the names of all delinquent taxpayers will then be published according to law, and the names of the delinquent taxpayers, when published, are alphabetically arranged for the several wards.

The receiver of taxes of the city collects and daily pays into the city treasury all State taxes by him collected. The city pays over all State taxes collected and paid into the city treasury before the 25th day of July in each year, and receives therefor the five per cent. allowed by law, and one per cent. for the commission of collection, but no allowance for the then uncollected State tax, unless the city advance the same by the said date, in which case the city may borrow the amount of such residue of the current year's State tax: *Provided*, That the loans therefor be all payable within the year, and the whole of the State taxes for the year for which they accrued shall be paid into the State treasury by the 25th of January next thereafter. The city allows the taxpayers for the State tax five per cent. on all sums paid before the 25th of July of the year when due, and nothing if paid thereafter.

The receiver of taxes of the city is charged by the city controller with the amount of the duplicates for each ward placed in his hands by the Board of Revision for State and city taxes, and in the month of January, annually, the receiver, in books to be called "the register of unpaid taxes on real estate," registers all unpaid taxes (except occupation taxes) of the preceding year, and the said taxes are a lien on all real estate. The city controller, immediately

after the expiration of the term of office of the receiver of taxes, audits his accounts and makes allowance for uncollected taxes, and all real estate sold by order of the Orphans' Court, if returned to and confirmed by the said court, is certified to the receiver of taxes by the prothonotary of said court, and all real estate sold by order of the Court of Common Pleas, or any other court (except sold by the sheriff), if returned to said court or courts, and confirmed by said court or courts, is certified to the receiver of taxes by the prothonotary of said court.

The receiver of taxes is authorized to refund all State and city taxes that may have been paid to and collected by him on duplicate and erroneous assessments to the person or persons who may have so erroneously paid the same; all amounts to be refunded out of the taxes collected in the respective wards and in the respective years in which said errors occurred: *Provided, however*, That proper vouchers of allowance of such errors by the Board of Revision be furnished to the said receiver of taxes: *And provided further*, That the lien of the taxes on the real estate wrongfully paid has not been discharged by a judicial sale or otherwise.

The receiver of taxes gives bond to the city of Philadelphia, with sureties which shall be approved by the Select and Common Councils in the sum of forty thousand dollars, conditioned for the faithful performance of the duties of his office. He is sworn or affirmed by the mayor that he will honestly keep and account for all public moneys and property intrusted to his care, and to faithfully perform the duties of his office. He collects and receives all taxes and public assessments payable and receivable within the limits of the city. He renders each day to the city controller an account, under oath or affirmation, administered by the controller, of each item of his receipts, and all fees, and daily pays the same into the city treasury.

On the first day of each month the receiver of taxes certifies under oath to the city controller the amount received by him from the sheriff of the county for all taxes and costs due, or claimed as due, upon any property sold by the sheriff, the name of each case, the amount received in each case during the preceding month; and the receiver of taxes, in making payment to the city treasurer, specifies separately the amounts paid to the treasurer on account of the sums received from the sheriff by him.

It is the duty of the city controller to examine the said list or lists so furnished by the receiver of taxes, and also the dockets of the sheriff and the books of the receiver of taxes, and the city controller sends to the second stated meeting in each month of Councils a copy of the list or lists so furnished by the receiver of taxes (he retaining the original list or lists, and filing the same in his office), and he certifies at the foot of the list that he has personally examined the docket of the sheriff and the books of the receiver

aforesaid, and that he has compared the same with the list or lists, and that he has found them correct, or otherwise, as he finds the same to be.

The city treasurer keeps a book in which he enters the amounts received by him from the receiver of taxes on account of the sums collected from the sheriff of the county.

The receiver of taxes appoints one deputy receiver of taxes, at a salary of \$2000 per annum; one cashier, at a salary of \$2500 per annum; one chief clerk, at a salary of \$2000 per annum; one discount clerk, at a salary of \$1500 per annum; eight bill clerks, at a salary of \$1000 per annum; four registering clerks, at a salary of \$1000 per annum; one judicial sales clerk, at a salary of \$1000 per annum; one chief search clerk, at a salary of \$1200 per annum; four assistant search clerks, at a salary of \$1000 per annum; one messenger, at a salary of \$1000 per annum; one watchman, at a salary of \$600 per annum; and one janitor, at a salary of \$600 per annum.

The judicial sales clerk makes daily returns to the receiver of taxes of all taxes collected through sheriff's sales, or other judicial sales, and the receiver of taxes makes daily reports in duplicate of all such collections, which he files with the controller and city treasurer, and he also keeps at the office of the sheriff a detailed account of such receipts, subject to public inspection.

The receiver of taxes keeps a detailed daily account, by wards, of all receipts for State or municipal taxes, subject to public inspection.

It is the further duty of said receiver to prepare blank poll-tax receipts in books containing two hundred thereof, which are impressed with the seal of the city of Philadelphia, by the mayor, which said books are issued to the collectors of poll-tax from time to time, as required, and the stub of each receipt is, on the 29th day before every election, returned to the receiver of taxes, and safely kept by him as part of the records of his office. And on or before the 20th day preceding such election the said receiver transmits to the city controller a statement showing the amount of poll-tax collected, together with the full names of the persons paying the same by divisions and wards, also the names of all defaulting collectors of poll-tax, if any, with the amount of such default, and the last-mentioned statement he also furnishes to the city solicitor for collection and for prosecution of the offender.

Poll-tax collectors for each ward, in numbers not exceeding the representation in Common Council, are appointed by the receiver of taxes, and they receive as compensation twenty per cent. of the gross receipts, provided they make return of all moneys collected.

The receiver of taxes is authorized to receive on account of taxes due, one-half the amount of the same at one time, and the other half at another.

The said receiver of taxes shall, on or before the

15th day of January in each and every year, have prepared a registry of all outstanding or delinquent taxes of the previous year due and owing, and shall immediately proceed upon all such delinquent taxes, rates, and levies for the collection thereof, and to collect the same, by distraint or otherwise, either out of the personal property on the premises, or the personal or real estate of the delinquent owner wherever the same may be found, whether in his own possession, or in that of any trustee or other person for him, or in the possession of his executors, administrators, or legal representatives.

The receiver of taxes is authorized to levy upon and sell any goods, chattels, or personal property found on any premises on which taxes are delinquent, or upon the goods, chattels, or personal property of the owner of said premises, wherever the same may be found, whether in his own possession or in that of any trustee or other person for him, or in the possession of his executors, administrators, or legal representatives: *Provided*, That there shall have been served on such owner or tenant, or other person in whose hands or possession such goods, chattels, or personal property may be, a printed or written notice demanding payment of the taxes, costs, and charges thereon, within thirty days of the date thereof, stating that if said payment be not made within said time the same would be enforced by levy and sale of such goods, chattels, and personal property: *Provided, further*, That any executor, administrator, trustee, or legal representative of any estate, or other person who shall pay any such taxes, costs, and charges due upon any such estate, may defalk the amount paid by him or them out of any moneys in his or their hands, or from any revenue received thereafter from or belonging to said estate: *And provided, further*, That when goods, chattels, or personal property of any tenant shall have been levied upon, the collector is authorized and empowered to collect from said tenant, and when the amount of tax exceeds the amount of rent due, then only the amount of rent then due, but the lien of the levy shall remain upon said goods during the occupancy of said premises by said tenant, and all rents after accruing shall be applied to the extinguishment of said taxes, until the tax, charges, and costs shall have been fully paid. The amount collected by said receiver is a lawful deduction from the rent due or may thereafter become due; and in the event of the refusal of any landlord to allow of said deduction to said tenant on account of rent, and shall refuse to accept the receipt of said receiver in lieu thereof, then it shall be the duty of the city solicitor to defend the said tenant in any action brought by the said landlord or his agent for the recovery of said rent from said tenant, the costs and expenses thereof to be paid by the collector of delinquent taxes: *Provided, further*, That in no case shall any tenant or tenants be compelled to pay the said tax, costs, and

charges, or any portion thereof, until the said rent shall have become due and payable; neither shall said receiver follow said tenant's goods, chattels, or personal property to any other premises upon a previous levy, upon a change of residence of said tenants, or a *bona fide* removal of said goods, in the ordinary course of business.

In all cases where the receiver shall deem it advisable to proceed against the real estate of such delinquent owner, whether by action or by lien, and the said premises shall be exposed to sheriff's sale, if an amount shall not be bid sufficient to cover the amount of all taxes due, with all the costs, charges, and expenses due thereon, together with all costs and expenses incident to said sale and the judgment under which the same is made, the receiver of taxes has full power and authority, in his discretion, either to stay the said sale, or to purchase the property in the name and behalf of the city, and take title thereto.

All sales made in suits instituted by such receiver or under his direction, on a judgment regularly obtained invests in the purchaser a good and sufficient title to the premises sold, subject to the right of the delinquent owner to redeem the same, which is limited to two years from the date of the acknowledgment of the sheriff's deed therefor, upon his payment to the purchaser of the amount bidden at such sale, with ten per cent. thereon, and all costs, charges, and expenses.

The said receiver of taxes appoints such number of clerks and deputies as may be fixed by the Councils, removable at his pleasure; and the deputies have all the powers to collect and proceed for such delinquent taxes as the receiver has, and they make weekly returns, and pay over to the receiver weekly all sums of money for delinquent taxes, interest, penalties, and costs collected by them.

The said receiver of taxes is allowed a commission of one per cent. on all moneys collected by him or his deputies as delinquent tax.

John Hunter,<sup>1</sup> the present receiver of taxes, was born on the 15th of April, 1825, in Belfast, Ireland. When but two years of age he was brought to America by his parents, who settled in that portion of Philadelphia County, now known as West Philadelphia. The father engaged in the business of printing calico and other cotton goods. When quite a lad, John Hunter entered the establishment of his father, and, beginning at the foundation, familiarized himself with the various details of the business. The father having died while the son was but a young man, the latter, in conjunction with his brother James, assumed full charge of the mill, and succeeded in placing the business upon a substantial foundation. And ever since the house of James and John Hunter has enjoyed a national reputation for upright dealing.

<sup>1</sup> This sketch of Mr. Hunter was contributed by F. W. Leach.

Although a practical and industrious business man, he is, withal, of modest demeanor, and possessed of but slight inclination for public life, and his entrance into the field of politics, early in 1877, was rather from the force of circumstances than from choice. In January, of that year, he was asked by a number of prominent residents of the Twenty-fourth Ward to permit the use of his name as a Republican candidate for common councilman. So reluctant was he to accede to their request that he suggested a neighbor as a more suitable candidate, going so far as to offer to pay the latter's campaign expenses. Despite his protestations, the convention nominated him for the office. Before the body adjourned, however, a certain element in the convention, being animated by outside influences antagonistic to Mr. Hunter's known ideas of honest and efficient municipal government, caused his nomination to be reconsidered, on the plea that he had declined to subscribe to a pledge that he would abide by the decision of the delegates, no matter what it might be. In this emergency the man's determination of character asserted itself, and he immediately began a vigorous warfare against his opponents. Having announced himself as an independent candidate, he was subsequently indorsed by the Democratic party. At the election which ensued on the 20th of the February following, Mr. Hunter received 3014 votes, 2788 ballots having been cast for his opponent.

Mr. Hunter's course in the Common Council during his term of service was of such an aggressive character as to keep alive the antagonism of those who had fought so bitterly to prevent his success in 1877, and these same opponents, in 1880, decreed his defeat for re-election. New tactics, however, were resorted to. Again had Mr. Hunter declined to comply with the rule requiring a written pledge to the nominating convention that he would not become an independent candidate, but this refusal was overlooked, and a forged document supplied its place. On the night before election Mr. Hunter's enemies pretended to have suddenly discovered this fraud, and omitting his name from the regular ward ticket, supplanted it with that of a new candidate named by the Ward Committee. But the friends of Mr. Hunter had anticipated all this, and, to the chagrin of his opponents, his tickets were found next morning at every polling place in the ward, and he was again elected, receiving this time 2848 votes to 1715 cast for his opponent.

During his second term in the Common Council, Mr. Hunter was even more aggressive in the cause of good government than in his previous service, turning his attention especially to the exposing of certain defects and evidences of wrong-doing in the water and gas departments. For a portion of this second term, also, he served as chairman of the Finance Committee, the most important of the Councilmanic Committees.

In December, 1880, Mr. Hunter was placed in the field for the office of receiver of taxes by the Citizens' Committee of One Hundred, which organization had just inaugurated its career of reform effort and investigation. He was subsequently nominated by the Democratic Convention. His opponent before the people was George G. Pierie, who was the nominee of the Republican party. The campaign was a vigorous one, and much enthusiasm was awakened. The result was the polling, in February, 1881, of a very heavy vote for a municipal contest, the figures being,—Hunter, 88,934; Pierie, 62,348.

Mr. Hunter's conduct of the tax-office during his three years' term of service was characterized by a general stopping of official and clerical leaks in the administration of the affairs of the department. Taxes were collected with greater promptness, and at less expense to the tax-payer, and efficiency and honesty took the place of carelessness and malfeasance.

When the Republican Convention to nominate a candidate for receiver of taxes for the term beginning in April, 1884, met in January of that year, Mr. Hunter's name was placed before it for a renomination. Three ballots were taken before a final result was reached, the outcome being the selection of George G. Pierie, Mr. Hunter's opponent of three years previous. Mr. Hunter's defeat in the convention awakened a storm of condemnation throughout the city, on the part of the press as well as among the people. Finally, on the 22d of January, Mr. Pierie withdrew from the field, and on the 23d the Republican Convention was reconvened, and Mr. Hunter was placed upon the ticket, with, practically, no dissenting voice. On the following day the Democratic Convention met, and Mr. Hunter was nominated by it also, so that, virtually, he had no opposition when the election was held. On the 19th of February, 1884, he was re-elected, and is now serving his second term as receiver of taxes.

In his report for the year ending Dec. 31, 1882, Mr. Hunter gives the following statement of the collection of taxes for that year:

The total amount of the city tax assessment for the year was.....	\$10,118,338.05	
Additions during the year.....	3,650.04	
	<u>\$10,082,455.36</u>	
Allowances by Board of Revision.....	39,532.73	\$10,082,455.36
Amount of city tax collected.....	\$9,406,362.13	
Discount allowed.....	\$43,644.96	
Penalty added.....	42,429.43	
Net discount.....	<u>1,215.53</u>	
Net amount city tax collected.....		9,405,146.60
Cash paid city treasurer. Proceeds from sale of poll-tax receipts, February election.....	1,422.00	
Ditto, November election.....	<u>38,645.20</u>	
		40,067.20
Cash paid city treasurer. Amount of search fee from Oct. 1, 1881, to Oct. 1, 1882.....	3,850.55	
Amount of State tax collected during the year.....		208,512.68
Total amount paid to city treasurer.....		<u>9,657,577.03</u>
Amount of city tax delinquent (on which penalties are to be added).....		676,093.23

John Hunter

STATEMENT OF THE REAL AND PERSONAL PROPERTY IN THE CITY OF PHILADELPHIA FOR THE YEAR 1883.

Thomas J. Smith, elected.....	Oct. 13, 1874
Albert C. Roberts, elected.....	Oct. 10, 1876
John Hunter, elected.....	Feb. 15, 1881

COLLECTORS OF DELINQUENT TAXES FOR PHILADELPHIA.

Office established by act of March 24, 1870.

John L. Hill, appointed.....	1870 to 1873
Henry Bunn, appointed.....	1873 to 1876
William J. Donohugh, appointed.....	1875 to 1882
Henry B. Tener, <sup>2</sup> appointed.....	July 20, 1881

BOARD OF REVISION OF TAXES.<sup>3</sup>

Established by the act of March 14, 1885, term three years. The board to consist of two persons and the senior city commissioner; the senior in 1865 was John Given; the second year, 1886, Philip Hamilton, and the third, Thomas Dixey, whose term expired by act of Feb. 2, 1867, and was succeeded by Samuel Haworth. By act of Feb. 2, 1867, an additional person, instead of the senior city commissioner, all three to be appointed by the judges of the Court of Common Pleas. The members of the board are as follows:

John Given, by the act.....	March 14, 1865
William Loughlin, appointed.....	May 6, 1865
Andrew Doz Cash, appointed.....	May 6, 1885
Thomas Oochran, vice Cash.....	Oct. 30, 1865
Philip Hamilton, commissioned.....	— 1868
Thomas Dixey, commissioned.....	— 1858-57
Samuel Haworth, under act of.....	Feb. 2, 1867

solicitor; Richard Peltz, receiver of taxes; Alexander McCuen, city commissioner; Charles Gibbons, district attorney; and Richard Donegan, prothonotary of the Common Pleas. And on certiorari to the Supreme Court, the decision of the lower court was affirmed on Feb. 14, 1870.

<sup>2</sup> The act of Feb. 14, 1881, consolidated the offices of receiver of taxes and collector of delinquent taxes. Mr. Hunter appointed Tener on July 20, 1881, and the appointment was approved by the mayor and Council on Jan. 3, 1882, but Donohugh said his appointment dated from April 7, 1879, for three years, and he refused to vacate until April 7, 1882.

<sup>3</sup> From John Hill Martin's "Bench and Bar of Philadelphia."

James Howard Castle,<sup>1</sup> appointed.....Jan. 1, 1877  
 George Walter Fairman,<sup>2</sup> appointed.....March 30, 1878  
 Chief Clerk, James Wesley Sayre, appointed.....Nov. 1, 1886

**City Treasurer.**—The qualified voters of the city elect a city treasurer to serve for three years, from the first day of January next succeeding such election. He shall give bond to the city, conditioned for the faithful performance of his duty, in such amount as the City Councils shall direct, and shall, before he enters upon his office, take and subscribe an oath or affirmation, honestly to keep an account of all public moneys and property intrusted to his care; and if such treasurer shall knowingly violate such oath he shall be deemed guilty of perjury, and on conviction thereof in the proper court he sentenced to undergo solitary imprisonment at hard labor in the Eastern Penitentiary for the term of not less than one nor more than ten years. Any vacancy in said office shall be filled by the City Councils by *viva voce* vote in joint meeting. No money shall be drawn from the treasury of the city, except the same shall have been previously appropriated by Councils to the purpose for which it is drawn. The accounts to be kept by the said city treasurer shall exhibit all the receipts and all the expenditures of the city in an intelligible manner, in the form of accounts current, in which the particulars of each item of charge and discharge shall fully and precisely appear. Any citizen may, on the payment of a fee of twelve and a half cents, to be paid to the city treasurer for the use of the city, inspect the said accounts; and for a further fee of fifty cents and one cent per line of ten words, to be paid for the use of the city, the treasurer shall, on request of any citizen, furnish a transcript of any part thereof. It shall be the duty of the Councils of the city to provide, and said treasurer to pay into the treasury of the State, the amount of the State tax assessed within the limits of the city, deducting all allowances made by law; and said treasurer elected as aforesaid shall, before he enters upon the office, give bond with sureties to be approved by the judges of the Court of Common Pleas of Philadelphia County, in such sum as they shall direct, conditioned for the safe keeping of and accounting for all moneys received by him for the use of the State. The said treasurer shall keep the public moneys in such place and manner as the City Councils shall direct, and shall verify his cash account at least once every week to the satisfaction of a standing committee of Council; and upon the affidavit of a majority of such committee of any default therein, the said treasurer shall be suspended from office until the further action of Councils; and the Court of Common Pleas of Philadelphia County shall, upon said affidavit and cause shown, forthwith issue a writ of sequestration to the sheriff of the county against such defaulter for the amount of such

<sup>1</sup> Castle was appointed in place of Cochran, who resigned. He died March 18, 1878, aged sixty years, and Fairman was appointed to fill the vacancy.

default, to be levied on all his property, estate, and effects in favor of said city, which writ shall be a lien thereon from the issuing thereof, with a clause of attachment contained therein, directing the sheriff to arrest the body of such defaulter to answer the said charge on a day certain, on which day the said court shall inquire of the premises and enter judgment thereon as may be just, or in their discretion award an issue to try the disputed facts; and if the said court upon such hearing shall be satisfied that there is probable cause to believe that such treasurer has committed the crime of perjury, it shall be their duty to commit him for trial at the next Court of Quarter Sessions of said county.

The treasurer of the city of Philadelphia shall, on the first Monday of July, and quarterly thereafter, or oftener, if required by the State treasurer, pay into the treasury, or such place of deposit as said State treasurer shall designate, to the credit of the commonwealth, the whole amount of money received during the period preceding said payments; and shall furnish to the State treasurer statements under proper heads, designating the source from which the money was received; and said officer shall file and settle quarterly accounts in the office of the auditor-general, as now required by law. Upon the settlement of said quarterly accounts, if it appear that the receipts shall not have been paid as directed by this section, any officer so offending shall forfeit his fees and commissions on the whole amount of money collected during the quarter; in every case where a balance due the commonwealth shall remain unpaid for a period of ten days after such quarterly settlement, suit shall be commenced against such delinquent and his sureties, as is provided in case of defaulting officers.

No money shall be paid out of the city treasury except upon appropriations made by law, and on warrant drawn by the proper officer in pursuance thereof.

The treasurer of the city is required to render to the auditor-general and State treasurer quarterly returns of all moneys received by him for use of the commonwealth, designating under proper heads the source from which the money was received, and all such moneys so collected shall be paid into the State treasury quarterly, or oftener, if required by the State treasurer.

Said treasurer gives bond to the corporation, with two or more sureties, to be approved by the Select and Common Councils, in the sum of one hundred thousand dollars conditioned for the faithful performance of the duties of his office, and he takes and subscribes an oath or affirmation before the mayor, honestly to keep and account for all public moneys and property intrusted to his care. He deposits and keeps, in such places and manner as Councils may direct, all public moneys intrusted to his care as city treasurer, including such as shall come to the corporation as trustee, and the accounts of such deposit of

trust moneys shall be kept separate, and not blended with any other account. He shall pay all warrants that are drawn on him by the proper officer, and countersigned by the city controller, and none other.

Upon the presentation of city warrants at the office of the city treasurer, it is the duty of the treasurer to pay the same on demand, and in the order of presentation. In the event of the inability of the treasurer to so pay the same on their first presentation, he shall cause such unpaid warrants to be stamped with date of presentation and numbers, and thereafter no new or unstamped warrants shall be cashed until all those stamped have been first paid, and those stamped shall be entitled to be first paid, and in the order of their numbers: *Provided*, That the treasurer shall not refuse to cash unstamped warrants when the funds in the treasury are sufficient to meet the stamped warrants, as well as those presented and not stamped; *And provided further*, That the treasurer shall not refuse to cash any stamped warrant in its regular order, and that the money for those previously stamped and not presented shall remain in the treasury, subject at all times to payment, and the interest on all such un-presented warrants shall cease when notice is posted in the treasurer's office that the same will be paid on presentation.

The said treasurer daily makes return in writing to the controller, verified by oath or affirmation administered by that officer, of all moneys received on the day previous, stating the sources, and at the same time he shall give to the controller the certificate of deposit of the same.

The treasurer shall not deposit in any one of the banks, designated as city depositories, at any one time, the city money, in excess of three hundred thousand dollars; and in addition to the daily returns made to the city controller of certificates of money deposited in banks, makes a statement, verified under oath, of the drafts made on each depository, and the balance remaining to the credit of the city at the close of business.

The accounts of the city treasurer on Jan. 1, 1883, stood thus:

Total cash receipts, as per statement.....	\$13,425,404.97
Cash balance Jan. 1, 1882.....	2,250,693.44
	<hr/>
Total payments.....	\$16,876,098.41
	13,256,684.53
	<hr/>
General cash balance Jan. 1, 1883.....	\$2,420,413.88
Sinking fund " " " ".....	705,271.39
	<hr/>
Total cash balance in hands of treasurer, Jan. 1, 1883.	\$3,125,886.27

**Board of Health.**—This board consists of nine citizens and electors of the city of Philadelphia, who are selected in the following manner, to wit: the judges of the Court of Common Pleas of the city and county appoint three, in such manner that one retires each year, their terms being three years each. The judges of the Supreme Court likewise appoint three in the same manner, and the Select and Common Councils appoint the other three.

In event of a vacancy in said board from death, resignation, or otherwise, it is supplied and filled for the unexpired term of such member by the power which appointed him.

They enter upon their duties by meeting on the first Monday of July in each year and organize into a board, and elect a president and such other officers as may be necessary for the proper transaction of the business of the board. All sums of money due, payable to, or received by the Board of Health, are paid into the city treasury, and all sums expended by or for the purposes of the Board of Health are paid by the city treasurer upon orders drawn upon appropriations regularly made by Councils. The board act

<sup>2</sup> Appointed in the place of Benjamin Shoemaker, and still in office Oct. 3, 1775.

<sup>3</sup> See "Accounts of Pennsylvania," p. 47.

<sup>4</sup> Died Oct. 18, 1882, aged seventy-three.

<sup>6</sup> By the consolidation act the County Treasurer continued from 1854 to 1858 as the Receiver of Taxes. Lindsay was continued as City Treasurer until the expiration of his term, May, 1855.

upon their own adjournment as they find necessary, but must meet between the 1st day of June and the 1st day of October.

Whenever it shall come to the knowledge of the Board of Health that any person within the city is afflicted with any contagious disease dangerous to the community, it is the duty of the board to take measures to prevent the spread of the contagion, by forbidding and preventing all communication with the infected house or family, except by means of physicians, nurses, or messengers, and they exercise all such other powers as the circumstances of the case shall require, and as shall in their judgment be most conducive to the public good with the least private injury.

All persons other than persons on board of any ship or vessel, and liable to be sent to the lazaretto, residing within the city of Philadelphia, who are afflicted with any pestilential or contagious disease (measles excepted), may, upon the advice and order of the port physician, or any other physician or person authorized by the Board of Health to grant such order, be removed by the health officer, and such assistance as he shall for that purpose employ, to the municipal hospital, or to such other place as the physician or Board of Health shall approve, if the person afflicted with any contagious or pestilential disease cannot be properly and sufficiently attended at home, there to be lodged, nursed, and maintained, and kept until duly discharged by a permit in writing, signed by a physician of the said public hospital: *Provided always, nevertheless,* That each and every patient, and his or her estate, real and personal, shall be liable to pay and reimburse all the charges and expenses on his or her account incurred in the said hospital, unless the Board of Health award that he or she shall be exonerated and exempted therefrom.

Every person practicing physic in the city who shall have a patient laboring under a pestilential or contagious disease (measles excepted), forthwith makes a report, in writing, to the health officer, and for neglecting so to do he is considered guilty of a misdemeanor, and subject to a fine not exceeding fifty dollars.

Whenever any person shall die in the city, the physician or surgeon who has attended such person, as a physician or surgeon, during his or her last sickness, shall leave a note in writing, signed with his name, with some one of the family in the house where such person shall have died, specifying the name and apparent age of the deceased, and the disease of which he or she shall have died. And every physician or surgeon refusing or neglecting to make and deliver such note shall forfeit the sum of five dollars. And no sexton of any church, or other person having charge of any cemetery, vault, or burying-ground in the city, shall permit any dead body to be interred therein until he has received such note in writing so signed as aforesaid; or in case no physician or sur-

geon shall have attended such deceased person, or the physician or surgeon who did attend shall have neglected or refused to leave such note, then a like note signed by some of the family in which such person shall have died. The contents of which note, in writing, shall be entered by such sexton on a blank schedule to be furnished by the clerk of the health office, or such other person as the Board of Health shall direct, and delivered, together with the said schedule, on the Saturday of every week, to the health officer for publication in such form as may be designated by the Board of Health. And every sexton, or other person having charge of any place of interment, neglecting or refusing to perform the aforesaid requirements forfeits the sum of twenty-five dollars.

No practicing physician, or other person or persons, are allowed to communicate the infection of smallpox by inoculation or otherwise within the jurisdiction of the Board of Health, unless by special permission of said board, and any practicing physician, or other person or persons, so transgressing is liable to a penalty not exceeding one hundred dollars, nor less than seventy, for each person so inoculated or infected.

It is the duty of all persons who may pursue or practice midwifery in the city of Philadelphia between the 1st day of March and the 1st day of April, annually, to leave their names in writing, and the places of their residence, at the office of the Board of Health. And when so left it is the duty of the clerk to enter the same alphabetically in a book kept for that purpose, which is open at all times during office hours to persons desirous to inspect the same. And all persons pursuing or practicing midwifery are required to keep a true and exact register of the births that take place under their care and superintendence, and from time to time, as they may happen, enter the same, with the sex of the child so born, on a blank schedule furnished to them by the clerk of the health office, which schedule is signed with the name of such person, and delivered on the last Saturday of each month to the clerk of the health office, or other person calling for the same. And every person pursuing or practicing midwifery neglecting or refusing to leave their names and places of residence at the health office, or to perform any of the duties required, forfeit and pay for each offense the sum of twenty-five dollars.

Any person willfully and knowingly obstructing or resisting the Board of Health, or any of the members thereof, or any person by them appointed, in the execution of the powers to them given, or in performance of duties enjoined by law and the rules and regulations of the board, forfeits and pays a sum not exceeding five hundred dollars. And if, after the expiration of the quarantine, any mariner or other person who shall have complied with the regulations established, shall commit any violence on the person

of a member of the Board of Health, or any of the officers attached to the same, for anything done in the execution of his duty, such person is subject, on conviction, to a fine of two hundred dollars and imprisonment at hard labor for any term not exceeding three years.

The president, secretary, and chief clerk of the Board of Health, and the health officer, have power to administer oaths and affirmations in conducting the business of their respective offices, in connection with said board, and any false oath so taken is deemed perjury.

The Board of Health are vested with full power to make general rules, orders, and regulations for the government and management of the lazaretto, and the vessels, cargoes, and persons there detained, or under quarantine, and of the health office and public hospitals, and for the mode of visiting and examining vessels, persons, goods, and houses. They have power to appoint such officers and servants as may be necessary to attend the health office, the lazaretto, and the City Hospital, and convey communications and supplies to the lazaretto and hospital, and such other officers and servants as may be necessary for the preservation of the health of the district; together with all temporary officers and servants that may be rendered necessary by the existence of any dangerous contagious disease in the city, or in any other place within the United States: *Provided*, That such officers and servants shall not hold any offices of profit or trust under the United States; and to remove any of the officers and servants by them appointed, and to allow and pay the said officers and servants such compensation for their respective services as the board deem just and proper. The Governor appoints one physician, who resides at the lazaretto, and is denominated the lazaretto physician, and one physician who resides in the city of Philadelphia, who is denominated the port physician, also one health officer, one quarantine-master, all of whom are under the direction and control of the Board of Health.

The lazaretto physician is furnished with a house to live in, also a garden, within the bounds of the lazaretto, and the quarantine-master is provided with similar accommodations.

The health officer is entitled to receive from the captain or master of any ship or vessel the following sums, and no more, and to pay the same over from time to time as the board may direct, to wit: all American vessels sailing under coasting documents, arriving at the port of Philadelphia, from any port or place in the United States, between the river St. Croix and the river St. Mary (except ports or places between Sandy Hook and Cape Charles), pay two dollars and fifty cents for each arrival during quarantine months, and the vessel during that time shall (if having goods capable of containing contagion, persons, haggage, or clothing, from any foreign port or place or any diseased person) stop at the lazaretto, and there

be examined by the lazaretto physician and quarantine-master, under the rules and regulations. And all American vessels from any port in the United States where they may have touched or traded from a foreign port or place, pay the same sum as if they had arrived direct from such port or place. And all American vessels with coasting documents, arriving from any port or place between Sandy Hook and Cape Charles, including the bay and river Delaware, during quarantine months, having on board merchandise of foreign growth or manufacture, or persons, baggage, or clothing from any foreign port or place, or from any place to the northward or eastward of Sandy Hook, or westward of Cape Charles, stop at the lazaretto for examination under the rules and regulations, and pay for each arrival during quarantine months two dollars and fifty cents. All American vessels arriving from any port or place in New Brunswick, Nova Scotia, Canada, or the islands or ports adjacent the river St. Mary, the coast of Florida, hay of Mexico, including New Orleans and parts adjacent, and from thence along the bay of Honduras and coast of Terra Firma, as far as the river Amazon, including all the islands generally denominated West India, Bahamas, or Bermudas, pay on arrival five dollars. All American vessels arriving from any place in Europe, in the Western, Medeira, Canary, or Cape Verd islands, the coast of Africa as far as latitude thirty-four degrees south, and from any place in the Mediterranean or straits thereof, or from any place from the river Amazon inclusive, and round the coast of Brazil as far as latitude thirty-four degrees south, pay ten dollars each. And all American vessels arriving from any place beyond latitude thirty-four degrees south, or round Cape Horn, or the Cape of Good Hope, pay twenty dollars each. And all foreign vessels arriving as aforesaid (except prizes to American vessels) pay twenty-five per cent. each additional, unless otherwise regulated by any treaty. And prize vessels, taken by foreign armed vessels, pay twenty-five per cent. each more than is paid by American vessels. And prize vessels taken by American vessels pay on arrival ten dollars each. And public armed vessels and privateers pay six dollars each. And any vessel of the burden of one hundred and fifty tons and upwards, arriving at the lazaretto, from any foreign port or coastwise, may come to in the outer chaunel, as near to the west end of the island of Little Tincum, opposite the lazaretto, as her draught of water, wind, and weather will permit, for the purpose of receiving the visit from the lazaretto physician and quarantine-master. And if the said vessel does not receive her visit in the inner channel, she shall pay an additional sum of five dollars, of which two dollars shall be paid to the lazaretto physician, and one dollar to the quarantine-master as a compensation for their services, and two dollars into the treasury of the board.

Every ship or vessel coming from any foreign port or place, bound to the port of Philadelphia, between

the 1st day of June and the 1st day of October in every year, must come to anchor in the river Delaware as near the lazaretto as the draught of water and the weather will allow, before any part of the cargo or baggage be landed, or any person who come in such ship or vessel shall leave her, or any person be permitted to go on board, and shall submit to an examination. And if any master, commander, or pilot shall leave his station before the said lazaretto, or if any master or commander permit or suffer any part of the cargo or baggage, or any person or persons arriving in such ship or vessel from any port beyond the limits of the United States, to be landed on either shore of the Delaware Bay or river, or suffer any person, except the pilot, to come on board before such examination be duly had, and a certificate obtained, the person or persons so permitting, and the person or persons so landed or going on board (unless imminent danger of the loss of the vessel or lives of the crew shall render assistance necessary) being thereof convicted, upon indictment or prosecution, by verdict, confession, or standing mute in any court having jurisdiction of the offense, shall pay a fine not exceeding five hundred dollars.

It is the duty of the lazaretto physician and quarantine-master, so soon as any ship or vessel is anchored near the lazaretto, between sunrise and sunset, immediately, wind and weather permitting, to go on board the same, and there thoroughly examine, in form and manner as is prescribed by the Board of Health, the said ship or vessel, the crew, passengers, cargo, and baggage on board the same, and to demand answers under oath or affirmation, administered by either the said physician or quarantine-master, who are severally empowered to administer the same, to all such questions as shall be put to any person on board such ship or vessel touching the health of the crew and passengers during the voyage, and the nature and state of the cargo, as the Board of Health, by their rules, from time to time direct to be asked; and it is the duty of the person so examining on oath or affirmation, before he shall proceed therein, to make known to the person interrogated, the penalty imposed upon the person who shall give false answers, under oath or affirmation, to the questions proposed in such examination, to the said physician or quarantine-master, that the said ship or vessel came from a port or place at which no malignant or contagious disease prevailed at the time of her departure, that the persons on board such ship or vessel are free from every pestilential or contagious disease, measles excepted, and that the said vessel has had no malignant disease on board, either during the homeward-bound voyage or during her continuance in a foreign port; and if they shall see no cause to suspect that the cargo or any part thereof is infected, they shall forthwith deliver to the master or captain of such ship or vessel a certificate of the facts in such form as shall be directed by the Board of Health. And the said captain

or master may thereupon proceed according to his destination, and shall present such certificate at the health office in Philadelphia, within twenty-four hours after his arrival and safely mooring there. But if it shall appear, upon such examination, that the ship or vessel came from a port or place at which a malignant or contagious disease prevailed, such vessel shall be detained at the lazaretto for such time as the Board of Health shall deem necessary, not exceeding twenty days.

The lazaretto physician, quarantine-master, nor other officer or servant of the lazaretto shall not absent himself from the place of his duty between the 1st day of June and the 1st day of October on any pretence whatever, for any time, without leave first obtained in writing from the Board of Health, under the hand of the president or chairman for the time, attested by the secretary and entered on the minutes, under the penalty of forfeiting his office, and a fine of any sum not exceeding five hundred dollars.

It is the duty of the lazaretto physician, immediately on the arrival of any ship or vessel liable to be detained at the lazaretto in order to be cleansed and purified, to cause the sick, if any are on board, to be removed to the building which shall be appointed by the Board of Health for their reception, and diligently and impartially to attend upon them, and cause to be executed such orders and regulations as the said board shall from time to time ordain for the government and management of the lazaretto, and of the vessels, cargoes, and persons under quarantine.

The health officer attends the health office at the meetings of the Board of Health, and at such other times as shall be required for discharging the duties of his appointment, and generally enforces and executes the regulations and instructions of the Board of Health. It is his further duty to collect, recover, and receive all forfeitures and penalties imposed and sums of money directed to be paid by law. He shall give bond, with sureties, to the satisfaction of the Board of Health, conditioned for the faithful performance, and account for all moneys coming into his hands as such officer. The bond is a lien on the estate of the health officer and his sureties.

No vessel is permitted to leave the lazaretto, without first giving security, approved by the Board of Health, for the payment of all expenses of said vessel, and of passengers and other persons imported in them, which said vessels, their captains, owners, or consignees are by law made liable.

The health officer, for services rendered in issuing permits or certificates of health to vessels, to the collector of the port and for other purposes, receives the sum of two dollars for each permit or certificate issued by him, and he is authorized to employ a clerk at a salary of twelve hundred dollars a year. The port physician receives the sum of eighteen hundred dollars per annum.

The salary of the lazaretto physician is twenty-five

hundred dollars per annum, and that of the quarantine-master two thousand dollars, and the health officer receives twenty-one hundred dollars.

The Board of Health receives for treatment in the Municipal Hospital all persons afflicted with any contagious or infectious disease, who would otherwise be a charge upon the Guardians of the Poor, and paupers so afflicted in the almshouse, and such as are sent by the inspectors from the county prison.

No pilot bringing a ship or vessel to the lazaretto in an apparent state of good health shall be obliged to perform quarantine, but the lazaretto physician shall grant such pilot a certificate, permitting him to proceed to the capes of the Delaware, in order that he may prosecute his profession; but such pilot shall not on any pretence come into the city of Philadelphia for twenty days from the date of such certificate, under the penalty of one hundred dollars or one year's imprisonment. And any pilot bringing to the said lazaretto a ship or vessel infected or supposed to be infected with any pestilential or contagious disease, may be permitted to go and remain on shore within the bounds of the lazaretto during the time the ship or vessel brought thither shall be detained under quarantine: *Provided always*, That if the said vessel shall be infected with any such disease as aforesaid, he shall be detained and treated in the like manner as seamen or passengers so infected are detained and treated: *And provided further*, That if he shall go without the bounds of the lazaretto he shall be liable to the same penalties as are imposed on seamen or passengers escaping therefrom.

Whenever the Board of Health shall receive information that any malignant or contagious disease (the measles excepted) prevails in any port or place within the United States or on the continent of America, they shall make diligent inquiry concerning the same, and if it shall appear that the disease prevails as aforesaid, all communication with such infected port or place shall be subject to such control and regulations as the Board of Health may from time to time think proper to direct and publish in one or more newspapers published in the city of Philadelphia. And all vessels from such port or place, and bound to the port of Philadelphia, shall stop at the lazaretto and be proceeded with in the same manner and under the same penalties as are provided in cases of vessels coming from foreign ports. And every person or persons having entered or been brought into the city or county of Philadelphia from such infected port or place shall also be conveyed, by any person authorized by the board, to such place for purification as the said board may appoint or direct for that purpose, and be there detained at the pleasure of the board any time not exceeding twenty days, and at the expense of such person or persons.

Every person keeping a boarding- or lodging-house in the city of Philadelphia between the 1st day of June and the 15th day of October, in any year, shall,

within twelve hours after any seafaring man or sojourner shall become sick in such boarding- or lodging-house report in writing the name of such diseased person to the health officer. And no master of a vessel or other person whatsoever shall remove any sick person from any vessel lying in the river Delaware, before the city of Philadelphia, before such sick person has been visited by the port physician, and a written permit granted by him for the purpose of such removal. And any person neglecting or refusing to comply with the provisions of this section shall, on legal conviction thereof, be subject to a fine not exceeding fifty dollars, or to imprisonment for any term not exceeding three months.

The Board of Health, or a committee of them, have power, having first obtained a warrant from a justice of the peace, in due form of law, founded on a complaint of two householders, under oath or affirmation, directed to the sheriff of the county of Philadelphia, or his deputy, to enter and search all houses, stores, cellars, and other inclosures, between sunrise and sunset, where they may have just cause to suspect any nuisance to exist: *Provided, however*, That no sheriff or deputy sheriff shall execute any civil process, either by arresting the body, or attaching the goods and chattels, of any person or persons, under color of any entry made for the purposes aforesaid, unless such service could by law have been made without such entry; and all services so made under color of such entry are utterly void, and the officer making such service is considered a trespasser. And it is the duty of the board to cause all offensive or putrid substances, and all nuisances which may have a tendency in their opinion to endanger the health of the citizens, to be removed from the streets, lanes, alleys, highways, wharves, docks, or any other part or parts of the city of Philadelphia, and to cause such of the privies within the limits aforesaid to be emptied or corrected with lime or otherwise, at the expense of the individuals who are the owners of the houses to which the said privies are appurtenant, as the board shall from time to time deem necessary for the health of the inhabitants. And if the owners or occupiers of the premises on which any nuisance may be found, and the owners of the houses to which the said privies are appurtenant, shall, on due notice thereof, refuse or neglect to have the same immediately removed, emptied, or corrected, as aforesaid, he, she, or they so refusing or neglecting, forfeit and pay for every such offense any sum not less than twenty, nor more than two hundred, dollars. And the expense attending the removal of such nuisance shall be recovered by the board in any court having lawful jurisdiction, from all corporate bodies and individuals, in case due notice has been given to remove the same, and a refusal or neglect to do so within the time prescribed by the board.

It is the duty of the Board of Health in all cases where the owner or owners of unoccupied property

upon which a nuisance, in the opinion of the said board, exists, reside out of the city, or cannot be found by the messenger of the said board, after diligent search made, to cause the said nuisance to be at once removed, and the expense attending the removal of the same is recovered by the said board in any court, or before any justice of the peace, having jurisdiction. The expense attending the removal of any nuisance is a lien on the premises from which it was removed.

Whenever any nuisance is found anywhere within the jurisdiction of the Board of Health, by reason of keeping of hogs or other animals, the said board, in addition to their power of destroying the pens or other inclosures containing such animals, or of otherwise abating such nuisance, are authorized to seize such animals and deliver them over, as forfeited, to "the guardians for the relief and employment of the poor of the city of Philadelphia," for the use of said poor.

The Board of Health have full power to remove the cause of all nuisances.

No bone-boiling establishment or depository of dead animals shall be kept or erected within the city limits without permission of the Board of Health.

No person shall collect or remove kitchen garbage and offal from any dwelling, hotel, restaurant, or other buildings, or convey the same through any of the streets, lanes, courts, or alleys of the built-up portions of the city, except the same be collected or removed in water-tight carts, wagons, or other vehicles, and securely covered, so that none of the contents shall fall, leak, or spill therefrom, or be exposed to public view, and the same regulation exists as to the removal of ashes.

The Board of Health grant licenses to proper persons, upon their application, to clean privy-wells and sinks, under such stipulations as place them under the control of the board, which regulates the price they may charge and the time and mode of their work.

Annually on the fourth Tuesday of January the Board of Health elect twenty-four persons who have had conferred upon them the degree of Doctor of Medicine, to serve as vaccine physicians in the city.

It is the duty of each of the said physicians to vaccinate gratuitously in their respective wards all persons who may make application or be reported to him by the collector of vaccine cases in his ward, either at his own office or at their respective places of abode, according to the option of the applicant; and he shall continue to visit every such patient as often as may be necessary to enable him to ascertain whether the person or persons so vaccinated have passed through the genuine disease. Each of said physicians must keep in a convenient part of his district an office, with a sign in front, having on the words "Vaccine Physician," where application may be made at all reasonable hours in relation to the duties of his appointment; and each of said physicians preserve and keep on hand a sufficient quantity of genuine vaccine

matter for distribution without fee or charge to all practicing physicians residing within the city of Philadelphia who make personal application therefor.

The said vaccine physicians each furnish the Board of Health quarterly with a list alphabetically arranged of the names, ages, birthplaces, residences, and occupations (and, when children, of the occupation of their parents) of the persons whom he may have successfully vaccinated.

Upon the fourth Tuesday of January in each year the Board of Health elect thirteen persons to serve as collectors of vaccine cases. Each collector is required to live in the district assigned him, and is paid ten cents for every unvaccinated person he procures to be vaccinated by the vaccine physician. It is the duty of the collectors to call on each and every family residing in the ward or wards for which he may be elected, and inquire whether any and, if any, what members thereof may be liable to smallpox disease; and if he find any person or persons so liable, he shall offer the gratuitous services of the vaccine physician of the ward to vaccinate such person or persons; and if the offer is accepted, the collector reports immediately to the physician the names of the individuals, with their residences; and at the expiration of each quarter he shall leave a copy of all the cases collected by him and returned to the physician at the health office with the health officer.

It is the duty of the health officer to register the returns made to him of the marriages which are contracted, and of the births and deaths which may occur within the city. He also prepares an abstract of them annually, in the month of February, and this he sends to Councils through the Board of Health, which abstract contains a statement of the marriages solemnized, and of the number of births, and of deaths, with the reported causes thereof, which have occurred in the city during the year next preceding the 1st day of January, with such other information and suggestions in relation thereto as he may deem of practical utility for the promotion of public health, and of general interest to the city.

It is the duty of clergymen of all denominations, of clerks or keepers of the records of all churches and religious societies, as also of every magistrate, and of other persons by or before whom any marriage may be solemnized or contracted, and of every practicing physician, and of every practitioner of midwifery, and of every undertaker and superintendent or sexton of any cemetery or burying-ground in the said city of Philadelphia, to report his, her, or their names and places of residence to the health officer, at the office of the Board of Health; and it shall be the duty of the health officer to have the same properly registered in index form in suitable books. In the event of any of the persons above specified removing to any other place of residence, it shall be their duty to notify the health officer of the fact within thirty days after such removal, except where the persons removing shall

cease to act in such official capacity as makes them subject to the provisions of the law.

It is the duty of every clergyman, and every magistrate, and of the clerk or keeper of the records of all religious and other societies, and of every other person, by or before whom any marriage may be solemnized or contracted, to make a faithful return of the same at the expiration of every three months to the health officer, in the form of a certificate, which shall set forth, as far as the same can be ascertained, the full name of the husband, his occupation, the place of his birth, his residence and age, the date of marriage, the full name of the wife previous to the said marriage, and her age, the color of the parties, and the place where, and the name of the clergyman or other person by whom, the marriage ceremony was performed.

Every clergyman, and every magistrate, and every clerk or keeper of the records of all religious societies, and every practicing physician, and every person practicing midwifery in the city, and every undertaker and superintendent or sexton of any cemetery or burying-ground in the city, who shall neglect or refuse to leave his or her name and place of residence at the health office, and shall refuse or neglect to perform any other of the duties aforesaid, forfeits for each offense the sum of ten dollars.

HARBOR-MASTERS FOR THE PORT OF PHILADELPHIA.

The Law Department.—The qualified voters of the city, at the February election, every third year, elect one person learned in the law, to act as solicitor of the city, whose duties are prescribed by ordinance, and who employs such number of assistants as Councils may prescribe. He holds his office for a term of three years. In his office, provided by Councils, are deposited and preserved all patents, deeds, wills, leases, mortgages, and other assurances of title, together with all contracts, bonds, notes, official bonds, books, and other evidences of debt belonging to the city of Philadelphia.

The law-office of the city is under the superintendence, direction, and control of the city solicitor; he gives bond to the corporation, with two or more sureties, to be approved by the Select Council, in the sum of ten thousand dollars, conditioned for the faithful performance of the duties of his office, as the same are or shall be defined by any act of Assembly or ordinance of the city.

It is the duty of the city solicitor to prepare all

bonds, obligations, contracts, leases, conveyances, and assurances, which may be required of him by any ordinance of the corporation of the city of Philadelphia; to commence and prosecute all and every suit and suits, action and actions, brought and to be brought by the corporation for or on account of any of the estates, rights, trusts, privileges, claims, or demands of the same, as well as to defend all actions or suits brought or to be brought against the said corporation or any officer thereof, wherein or whereby any of the estates, rights, privileges, trusts, ordinances, or acts of the corporation, or any branch thereof, may be brought in question before any court in the commonwealth; and shall do all and every professional act incident to the office which may be required of him by the mayor of the city, or by any committee of the Select or Common Councils, or by any ordinance or resolution of the said Councils or either of them; and shall, when required, furnish the Councils or committees thereof, and the mayor, with his written opinion on any subject which may be submitted by them. He shall perform all the duties enjoined by law or ordinance upon him, including the Board of Health, Guardians of the Poor, prison inspectors, and controllers of the public schools.

The city solicitor shall, at least once in every week, make a return to the city controller, under oath or affirmation, of each item of moneys received by or through him or his assistants by virtue of his office, or for any matter connected therewith, and immediately upon making such return, pay the amount in his hands to the city treasurer.

There is kept in this department a lien docket, in which, in appropriate places, are entered all claims for curbing, paving, piping, and all other matters that may be the subject of claim on the part of the city, and may be returned to the solicitor by the various departments as remaining due and unpaid after the period prescribed by law or ordinance for the payment of such claims to the said departments; and it is the duty of the head of each department wherein any such claims shall originate to furnish to the solicitor, within the period prescribed by law or ordinance, a statement of all claims for curbing, paving, piping, etc., which remain due or unpaid, a certified copy of which the said heads of departments shall at the same time furnish to the controller, which docket shall at all times be open to the inspection of the public.

No claim or suit against the city shall in any way or manner be compromised by the city solicitor or any other officer of the city, unless the same is authorized by ordinance.

The solicitor keeps in his office a general lien docket for all the departments, in which is entered all claims of whatsoever nature which may be due the city. It is his duty to furnish the city controller, under oath, weekly returns of the amount received on each claim, together with the amount of interest

and costs received on each, separately stated, and the date, page, term, and number of the court docket on which satisfaction was entered. He also makes return to the city controller, on the first Monday of each month, of all mandamuses directed to be paid, or of road damages or other claims allowed, with the name of the plaintiff, the amount and purpose on which the judgment was obtained, also specific returns of the amounts collected for any department or purpose, and certify to the city controller the schedules of all claims and securities placed in his charge. He also makes a return of all bills presented by the sheriff, coroner, district attorney, and clerk of the sessions for fees or other charges, with an oath or affirmation that he has examined the records of the several offices, and found by comparison that the claims presented by those officers are correct.

His salary is fifteen thousand dollars per annum. All fees received by him are turned into the city treasury.

**Contracts.**—No debt or contract incurred or made is binding upon the city of Philadelphia unless authorized by law or ordinance, and an appropriation sufficient to pay the same be previously made by Councils: *Provided*, That persons claiming unauthorized debts or contracts may recover against the person or persons illegally making the same.

No contract for the construction of any new building, school-house, bridge, culvert, new paving of streets, redemption of the tolls of any turnpike or plank-road, to be paid for by the city, shall become binding thereon without an ordinance therefor duly enacted. No contract shall be made by the head of any department for work or materials for the city, unless for objects authorized by Councils, and if for new work, the contract and sureties be approved by the city solicitor and Councils, and the supervision of Councils shall extend to adjudge the character of all work and materials done and furnished for the city, and to the scrutiny of the accounts and vouchers therefor; but such supervision and scrutiny shall in no wise relieve the controller from the performance of the like duty in respect to such accounts and vouchers.

All goods, merchandise, and other articles of any kind, and labor and service required for the city in any department thereof, shall be purchased or contracted for only in such manner as shall be prescribed by ordinance, and for that purpose the Councils are required to direct by ordinance the manner and time of making the yearly estimates by the several departments, and of receiving sealed proposals for such supplies as aforesaid, which proposals shall be preceded by advertisement, and no contract shall be awarded to any but the lowest bidder, who shall give the requisite security therefor.

All stationery, printing, paper, and fuel used in the Councils and in other departments of the city government, and all work and materials required by the city, shall be furnished, and the printing and all other

kinds of work to be done for the city shall be performed under contract, to be given to the lowest responsible bidder, under such regulations as shall be prescribed by ordinance. No member or officer of Councils, or any department of the city government, shall be in any way interested in such contracts directly or indirectly, either at its inception or during the progress of its fulfillment, or furnish any materials or supplies or labor for such contracts.

It must be one of the conditions of every contract entered into by any department for the purchase of stone coal that each and every ton of said coal shall be weighed at the place of delivery, in the presence of a proper person deputed for that purpose by the head of the department, who shall keep an accurate account of each load of coal delivered, and its exact weight; and the city controller shall countersign no warrant drawn upon the city treasurer for the payment of stone coal furnished the city, unless accompanied by an affidavit of the person who superintended the weighing of said coal, setting forth by what contractor delivered, the time of delivery, the number of tons, and the number of pounds to each ton.

All contracts for grading, paving, or curbing, entered into by the city, shall specify that the accurate measurement thereof shall be certified to by the surveyor and regulator of the district in which it may be performed, and no curbing shall be set, highways graded, nor gutters laid, unless in accordance with regulations furnished by the surveyor and regulator of the district, under a penalty of twenty dollars, to be paid by the contractor.

Whenever any contract for work, labor, or materials and repairs for the city of Philadelphia shall be authorized by Councils, it shall be made a condition of the same that the parties shall be skilled and regularly engaged as to their proper occupation, trade, and business in work, labor, and materials and repairs required, and to be furnished and by the contractor performed; and that the contractor in person shall superintend his own work, labor, and repairs, and delivering all necessary materials to the city.

Every advertisement for proposals for public work to be done, or materials to be furnished, for or on behalf of the city, shall state that the person or persons who shall bid for the same, shall, in the first place, be required to enter security at the law department in the sum of five hundred dollars, conditioned that if his or their bid is the lowest, and he or they shall decline to do the said work, or furnish said materials, he or they shall pay to the city the difference between the amount of his or their bid and the bid of them or him who shall actually perform said work or furnish said material, and no bid shall be considered unless there be a certificate that this has been complied with.

All contracts entered into by a contractor or contractors for furnishing supplies, erection of buildings, as well as all other work, labor, materials of any kind and description for the city must be accom-

panied with a sufficient joint bond and warrant of attorney, with one or more sureties conditioned in half the amount of the contract for the faithful performance of the contract, agreement, or work and labor done. And the city solicitor is required to enter up the bond in court, and cause judgment to be entered thereon, and said judgment remains a lien against said contractor or contractors, and his sureties until the terms of said contract have been fully and faithfully complied with. But the city solicitor shall enter satisfaction of record upon said bond and the judgment thereon, whenever he shall be so requested in writing by resolution of the committee, and the head of the department having the supervision and control of the contract or work, for the performance of which the bond was given, which request shall also certify that the terms of said contract have been fully complied with. The costs and charges for preparing said contract, bond and warrant, searches, entering satisfaction, and all other expenses incident thereto are paid by the contractor or contractors.

No contract for paving, curbing, water-pipe laying, culvert grading, or any other municipal work or improvement on any street, avenue, lane, court, or alley in the city, is given out or entered into, until a certificate is first obtained from the survey department that such street, avenue, lane, court, or alley has been dedicated or opened to the use of the public.

All proposals for contracts to do work, labor, or to furnish materials and supplies, advertised for, are opened in the presence of a committee of Councils, and such proposals or bids must be filed with the committee before or at the time of the meeting thereof, otherwise they will not be considered.

When such contracts are awarded, a schedule of bids offered, a copy of the advertisement therefor, and a statement of the award, indorsed by the committee, is sent to the city controller, and that officer is inhibited from countersigning any warrant for any stationery, printing, paper, fuel, advertising, or for work and materials, unless he shall have been furnished with the statement, schedule, and copy of advertisement aforesaid.

All contracts requiring the signature of the mayor that may be entered into in behalf of any of the departments of the city, for materials to be furnished or work to be done, shall not be altered in any material matter, either in quantity of materials to be furnished, work to be done, or prices to be paid for said work and materials, without the chief of the department for which said contract has been entered into shall have previously laid before Councils a plan and estimated cost of the proposed changes, and obtaining the consent of Councils to the proposed changes and alterations.

The ordinance authorizing the work to be done shall contain in full a copy of the proposed contract, and specifications of the work intended to be done,

the prices for which the accepted contractor shall offer to do the proposed work, and the copy of the estimated quantities of the different kinds of work to be done under the proposed contract, and the total estimated cost of the whole work.

All bids and proposals for stationery, printing, paper, advertising, fuel, work, material, and supplies furnished to the departments of Board of Revision of Taxes, city commissioners, city controller, city treasurer, park commissioners, public buildings, city ice-boats, sinking-fund, and receiver of taxes shall be opened and contracts awarded in the presence of said departments and the committee on finance; department of clerks of Councils, committee on printing and supplies; fire commissioners, committee on fire department; guardians of the poor, Board of Health, and county prison, committee on prisons; highways, committee on highways; house of correction, committee on house of correction; law, committee on law; markets and city property and port wardens, committee on city property; police, committee on police; police and fire-alarm telegraph, committee on police and fire-alarm telegraph; Board of Public Education, committee on schools; steam-engines and boilers, committee on boiler inspection; surveys, committee on surveys; and water, committee on water-works.

It is the duty of the heads of departments, immediately after making any contract for work or materials for the city, to furnish the city controller with a memorandum thereof, together with a probable amount that will be required to pay for said work or materials when completed or furnished, and thereupon the controller shall enter up said amount against the item from which the money will be taken to pay for said work and materials, and the heads of departments shall make similar entry in the books of their office.

It is the duty of every head of a department, when entering into a contract for or ordering work or materials, to indorse upon the back of the contract or order the amount at that time standing to the credit of the item out of which said work or materials are to be paid for.

In no case shall a chief of a department allow any work to be commenced under any proposed contract until Councils shall have passed an ordinance authorizing the work to be done, and the mayor has signed the contract.

No contractor for work or materials for the city shall have any claim for compensation under his contract, unless it shall appear by certificate thereon of the city controller that at the date of execution thereof it appeared by the books in the controller's office that sufficient amount stood to the credit of the appropriation from which payment should be made to pay said contractor, and to pay for all other contracts theretofore awarded to be done under said appropriation.

No contract or lease for the renting of any property by any of the departments of the city is binding upon the city, unless the contract or lease has been confirmed by the Select and Common Councils.

The heads of the several departments are forbid to award any contract for work or materials to any party or parties who have previously defaulted in any contract with the city.

**Departments.**—No portion of the property of the city shall be used for purposes of private gain by any official, councilman, agent, or employé of the city, or of any department thereof, nor shall the same be willfully used or injured, or sold or disposed of in any manner, without the consent of Councils, by any such official, councilman, agent, or employé. Nor shall any official, councilman, agent, or employé of said city, or any department thereof, be interested, either directly or indirectly, either personally or as a member or officer of any firm, company, or corporation contracting with the said city, or any department thereof, for the use, lease, occupation, or enjoyment of any of the works, material, or property of said city. Any breach of these provisions is a misdemeanor, and upon conviction shall be punished by fine not exceeding one thousand dollars, and imprisonment not exceeding one year, or either, at the discretion of the court trying the same; and upon such conviction, the party offending shall be forthwith removed from his office or employment, and shall not be eligible to appointment to any place of profit or trust under said city or any department thereof.

It is not lawful for any department, or committee, or officer, or the prison inspectors to draw any moneys out of the city treasury, or to use any savings or the proceeds of the sales of any work or materials for or in any office, department, or prison, or any revenues whatsoever thereof for any entertainment, eating, drinking, or smoking furnished to any members or officers of said city, corporation, departments, or officers thereof, or of said prison, but shall pay the whole of said moneys into the city treasury; and every warrant drawn for the expenses of every department of the public service and prison shall contain the declaration that no part thereof has been used for said purposes; and it shall be lawful for the city controller, and his duty, whenever required by any citizen, to administer an oath or affirmation to any person presenting a bill against the city as to its accuracy, the prices actually paid or contracted to be paid therefor, whether others and who are interested therein, and as to whatsoever matter he may deem needful to protect the interests of said city.

Every head of department, officer, or agent of the city, who shall have made default in the rendering of any account or report, or the payment over of any moneys or bills collected for the city, shall be guilty of a misdemeanor, and be by Councils dismissed from his office.

It is the duty of the controller to furnish to the

Councils, on or before the 1st day of September in each and every year, a detailed statement of the estimated receipts, expenditures, and liabilities of every kind for the next fiscal year, and it shall be the duty of the said Councils to levy and fix a tax-rate, on or before the 1st day of October in each and every year, for the year next ensuing; the amount of tax-moneys collectable during the year for which such tax shall have been levied shall be ascertained by deducting from the gross amount yielded by said tax-rate, the average of such proportion of the annual tax levy for each of the five years immediately preceding as shall have remained uncollected at the end of each of the said years, and the tax-moneys collectable during the current year shall, with the average income from sources other than from current tax-moneys, exclusive of sinking-fund receipts (such average of income to be determined by ascertaining the average income during the five years immediately preceding), be set apart for the extinguishment of the floating indebtedness, which the city controller may estimate to be outstanding upon the 1st of January following, for the payment of all lawful obligations due by the city during the fiscal year commencing January 1st next ensuing, and for such expenses of the municipal government as may be authorized by the Councils; and the city controller shall not countersign any warrants (except for payments of interest and for sinking-fund) pertaining to any of the appropriations until the said Councils shall have first passed all appropriations necessary for the expenses for the current year of each department, board, commission, or trust connected with the city; nor shall said officer countersign any warrants, except as aforesaid, until the total of all appropriations, all estimates, and other lawful obligations shall have been brought within the sum yielded by the tax-levy and average income from other sources ascertained as aforesaid; and any appropriation or expenditure in excess of this total shall be void, and shall have no hindering force upon the municipality. In default of said Councils fixing the tax-rate on or before the 1st day of October in each and every year, then and in that case the rate of the preceding year shall be the rate for the current year, and all appropriations shall be made in conformity therewith, as if Councils had themselves established such rate.

No department, board, or officer, which or who is or may be authorized to issue warrants for the payment of claims against such department, board, or officer for services rendered or supplies furnished to or in the same, shall issue any warrant until the bill containing such claim shall be presented by such department, board, or officer to the controller to be audited.

Whenever any such bill is presented to any said department, board, or officer, it shall be delivered, with a notification from such department, board, or officer of the item of the appropriation out of which

it is proposed to pay the same; and the controller shall audit the bill with the view to ascertain whether the supplies have been furnished or the services performed and the sum charged therefor is proper, and he shall inquire and ascertain if any member of Councils, member or officer of such board, officer of any department, or officer or agent of the city corporation is interested in the sum due therefor, or is to receive any portion thereof, or has received any commission, consideration, or gratuity relating thereto; and if any such party is so interested he shall refuse to approve of such bill, and report the same to Councils.

Whenever the controller has audited and approved any bill, he shall return it to the proper department, board, or officer in order that a warrant may be drawn therefor.

No head of any department, and no commission, board, or trust, or any other agent, officer, or employé of either or any thereof, exercising any powers of government therein, either in the making of contracts, the approval thereof, or in the authorization of the expenditure of the money of the city in any manner whatever, shall make any contract without a previous appropriation has first been made by Councils; draw, issue, or approve any warrant for any expenditure by such department, commission, board, or trust, or any other agent, officer, or employé, unless an appropriation has been previously made; and no warrant shall be drawn against any item in said appropriations in excess of said item; and any contract made or warrant issued in violation of these requirements is absolutely void as against the city; and any head of department, board, commission, or trust, agent, officer, or employé issuing such warrant shall be deemed guilty of a misdemeanor, and upon the conviction thereof fined a sum not exceeding five thousand dollars, and imprisoned for a term not exceeding three years, and be forever disqualified from holding any office or position of trust under the State, or any county or municipality thereof; and the countersigning of any warrant or warrants by the city controller, contrary to these provisions, shall likewise constitute in such officer a misdemeanor, and shall subject him to like penalties.

Justices of the peace, the receiver of taxes, the collector of delinquent taxes, the register of the water department, commissioners of markets and city property, Board of Health, prison inspectors, guardians of the poor, the chief commissioner of highways, city solicitor, chief inspector of boilers, chief engineer and surveyor, port wardens, commissioners of Fairmount Park, and all other municipal officers and departments receiving money on behalf of the city, shall furnish, under oath, on the second Monday of each month, to the committee on the cash account of the city treasurer, a statement, giving the date and amount of payments to the city treasurer, on account of their respective departments, for the preceding month. And the several departments are required

to make a daily statement in writing to said treasurer, showing the number and amount of each warrant, and the name of the person or persons in whose favor drawn, and the treasurer shall keep a record of such reports.

In each department which shall have liens to be entered for claims for paving, curbing, piping, removing nuisances, and all other matters that may be the subject of a claim upon the part of the city, the said claims are numerically arranged on the books of each department, and a schedule, certified by the chief of each department, setting forth the number, name of the party chargeable, the purpose and amount of each claim, is furnished to the controller on the first Monday in each month, and the amount paid on each account within the month, or disposed of in any way, is noted on the schedule returned to the controller. And all claims which remain unpaid after the period prescribed by law for the payment of such claims to said departments, two schedules thereof are made out by each department specifying the name of the party, number, purpose, and amount of each claim, and deliver the same to the city solicitor; the duplicate is signed by the city solicitor, attesting that he has received the same for collection, and returned the same to the city controller to be charged to the city solicitor; and on the books of each department the dates of the credits are stated, or, if handed to the city solicitor for collection, the fact shall be entered on said books with the date thereof; and all claims returned to the city solicitor are paid to and settled only with him; and in each department of the city wherein moneys are received, receipts therefor, attested by the person paying it, shall be taken.

**Mayor.**—The qualified voters of the city elect to serve as mayor, by a plurality of votes, and in case of a tie the Councils order a new election. He serves for *three* years, and until his successor is elected and qualified. He must be at least thirty years old, a citizen of the United States, and have resided seven years next preceding his election within the commonwealth of Pennsylvania, and the last two years thereof in the city. He shall take the usual oath of office, in the presence of the Councils, administered by one of the judges of the courts in the city, at twelve o'clock, noon, on the first Monday in April next succeeding his election. Besides the powers otherwise conferred by law, he has the like powers and authority as the sheriff of the county of Philadelphia has for the suppression of any riot, disturbance, and violation of law, and may exercise the authority of making requisition for the commanding officer of the military, and of dismissing all police officers for failure in discharge of duty. And it is his duty to communicate to Councils, at least once a year, and oftener, if deemed expedient, a general statement of the condition of the city in relation to its government, finances, and improvements; to recommend the adoption of all such measures as he may deem expedient for the security,

health, cleanliness, improvement, and welfare of the city; to be vigilant and active in causing the laws and ordinances of the city to be duly executed; for which purpose . . . all policemen and watchmen shall obey his orders, and make a report to him when acting under his orders; and he shall exercise a constant supervision and control over the conduct of all subordinate officers, receive and examine all complaints preferred against them, and generally perform all such duties as may be prescribed by the laws and ordinances of said city and of the commonwealth; and he may call special meetings of the Councils whenever any public emergency may require. The mayor may approve ordinances in vacations of Councils, and may call special meetings of Councils to reconsider ordinances which he does not approve, on three days' notice to each member. In case of his temporary absence or inability to act, the Councils shall appoint a mayor to serve until he shall resume the duties of his office; and whenever a vacancy shall occur in the office of mayor, by death or otherwise, it shall be the duty of the Select and Common Councils, in joint meeting forthwith to elect, *viva voce*, a person qualified as aforesaid to serve as mayor, who shall continue in office until the Tuesday succeeding the next city election, and until his successor shall have been duly elected and qualified. The mayor shall receive a salary, to be fixed by Councils, which shall not be increased nor diminished during the term for which he shall have been elected. The police officers, policemen, and watchmen, shall receive the compensations to be fixed by ordinance of said Councils.

The mayor nominates, and by and with the advice and consent of the Select Council, appoints the policemen and watchmen. All fees and costs pertaining to the office of mayor are paid into the city treasury. All the police station-houses are under the charge of the mayor of the city, who has exclusive care and custody of them. He has the jurisdiction and power of a justice of the peace. And he may appoint any one of the justices of the peace of said city to sit as a committing magistrate at the police station adjoining his office.

It is the duty of the mayor to keep a register of the amount and objects of all appropriations, and to withhold his signature for all new constructions until all the interest accruing on the loans of the city, and the principal of those becoming due, and the ordinary and necessary expenses of the city and the administration of justice in the county shall be adequately provided for. His salary is five thousand dollars per annum.

The mayor shall sign a resolution or ordinance, if he approve it, or return the same to the branch of Councils wherein such resolution or ordinance originated, within ten days, or at the next meeting of Councils after ten days have expired, if he does not approve it, with the reasons therefor; and if, thereupon, each branch of Councils pass the same, within

five days of such veto, by a vote of three-fifths of all the members elected to each branch, it shall become as effective as though the mayor had signed the same; and it shall become equally effective, if he should neglect to return the same within such ten days.

The mayor has power to take proof of all deeds, conveyances, mortgages, or other instruments of writing, touching or concerning any lands, tenements, or hereditaments situate, lying, and being in any part of the commonwealth of Pennsylvania, which probate shall have the like force and effect as if the same were proved before a judge of the Supreme Court, or any judge of the Court of Common Pleas within said commonwealth.

He also may appoint such persons to act as police officers, as he may be requested to do, by any duly organized or incorporated humane society, having for one of its objects the protection of children from cruelty, hut the city is not liable for their salary or wages.

It is not lawful to exhibit to the public in any building, garden, grounds, concert-room, saloon, or other place or room within the city, any interlude, tragedy, comedy, opera, ballet, play, farce, negro minstrelsy, negro or other dancing, or any other entertainment of the stage, or any part thereof, or any representation in which a drop-curtain and scenery or theatrical costumes are used, or any equestrian circus or dramatic performance, or any performance of jugglers, rope-dancing, or acrobats, or any menagerie, until a license for such exhibition, performance, or entertainment shall have been first had and obtained from the mayor by the proprietor thereof; which license shall be granted by him for each and every place or building in which such exhibitions, performances, or entertainments are held, upon the payment by said proprietor of the sum of twenty-five dollars for the whole or for any portion of each calendar year: *Provided*, That before such license shall be granted, the said mayor shall be satisfied by affidavit or otherwise that the exhibition, performance, or entertainment for which the license shall be applied shall not be immoral in its nature or tendencies, or otherwise unlawful or hurtful to the community; and every manager, proprietor, or director of any such exhibition, performance, or entertainment, who shall neglect to take out such license, or who shall allow or cause any such exhibition, performance, or entertainment without such license, and every owner or lessee of any building, room, garden, grounds, concert-room, or other place, who shall lease or let the same for the purpose of any such exhibition, performance, or entertainment, or shall assent to the use thereof for any such purpose, except as permitted by such license, and without such license having been previously obtained and then in force, shall be guilty of a misdemeanor, and upon conviction thereof shall be sentenced to pay a fine not exceeding one hundred dollars, or undergo an imprisonment not exceeding

three months, or both or either, at the discretion of the court.

The mayor, upon proof satisfactory to him, by affidavit under oath or affirmation, of the violation of the provisions of any act of Assembly or ordinance regulating places of amusement, or that the exhibition, performances, entertainments, or any of them, given under color of said license, are or have been immoral or unlawful, may vacate, annul, and render void and of no effect any license which shall have been obtained as aforesaid by any manager, proprietor, owner, or lessee, for the holding such exhibition, performance, or entertainment, or allowing or letting any part of a building or other premises for the purpose thereof; and it is lawful for the mayor to prevent any such exhibition, performance, or entertainment from being held, exhibited, or performed, until the license hereinbefore provided for shall be paid, or if the same shall have been annulled or vacated for violation of any act of Assembly or ordinance, and to that end to direct the police to close the building, room, or other place in which the said exhibition, performance, or entertainment is intended to be held, and prevent the entrance of auditors or spectators.

If any person or persons applying to the mayor for a license shall be aggrieved by the action of the mayor in refusing to grant such license, or in revoking any license, such person or persons have the right of appealing to the Court of Quarter Sessions.

It is not lawful for any female to attend among or wait upon the audience or spectators at any of the exhibitions, performances, or entertainments mentioned, or at any other place of public amusement, to procure, offer, furnish, or distribute any description of commodities or refreshments whatsoever; nor is it lawful for any manager or proprietor of any such exhibition, performance, entertainment, or place of public amusement to employ or permit the employment of any female to attend among or wait upon the audience or spectators thereat, to procure, offer, or distribute any description of commodities or refreshments whatsoever; and any person violating this provision is guilty of a misdemeanor, and upon conviction thereof sentenced to pay a fine not exceeding five hundred dollars or undergo an imprisonment not exceeding one year, or both or either, at the discretion of the court.

The mayor upon proof satisfactory to him of the violation of any law or ordinance regulating places of amusement that are or have been immoral, may vacate their license, and he may prevent any performance or exhibition, and to that end may direct the police to close the place wherein such exhibition, performance or exhibition is intended to be held, and prevent the entrance of auditors or spectators; but the refusal of the mayor to grant, or his exercise of the authority to vacate a license is subject to appeal to the Court of Quarter Sessions.

If twelve or more persons be assembled unlawfully, riotously, and tumultuously, so as to endanger the public peace, it is the duty of the mayor in person, or, in case of his absence or inability to command, of the officer in charge of the police, to go among the rioters, or as near to them as he can safely go, and then and there, with a loud voice make proclamation in the name of the commonwealth, commanding all persons so unlawfully assembled immediately to disperse themselves and peaceably to depart, and if such persons remain together to the number of twelve or more, they shall be guilty of a misdemeanor, and upon conviction be sentenced to undergo solitary confinement at labor in the county prison for a period of not less than one month nor more than two years; and any person arrested, upon whose person or in whose possession is found firearms, or any other deadly weapon, shall be deemed guilty of an intention to riot, whether said firearms or deadly weapon be used or not, unless the contrary be satisfactorily established, and punished accordingly.

If, after proclamation made, or if the mayor or other officer of police authorized attempt to make such proclamation, and be prevented by force from making the same, then after such attempt made, if such persons so unlawfully, riotously, or tumultuously assembled continue together and not disperse forthwith, then it shall be lawful for the said mayor and police and such other person or persons as shall be commanded to assist under him, who is authorized to command all ward constables, and citizens of age and ability, to assist him therein to disperse, seize, or apprehend such persons so unlawfully, riotously, or tumultuously continuing together, after proclamation made or attempted to be made as aforesaid, and they are required so to do and to use all necessary force and means whatsoever for said purpose.

Every person not belonging to the police force or to the military force, who may be summoned, and aid and assist the said mayor in the suppression of any riot shall be paid by the commissioners of the county of Philadelphia the sum of one dollar for each day or part of a day that he shall be so employed upon presenting the certificate of said mayor that he was so summoned, and that he did so aid the officer as aforesaid.

If in any case the mayor or other officer of police authorized shall certify in writing to the major-general or other commanding officer of the military division composed of said city and county, that there is an existing riot, tumult, or unlawful assemblage within said county, which the said police force under his command is not, in his opinion, competent to suppress without further aid, and require the said major-general or commanding officer to assist him with the military force under his command, the said major-general or commanding officer shall give the necessary orders to the effect that such military force, or such part thereof as he shall deem necessary,

be mustered immediately into the service of the commonwealth, and be subject to the laws applicable to such service, and shall proceed to any part of said city or county to restore the public peace, by suppressing such riot, tumult, or unlawful assemblage, and by seizing and securing the offenders therein for trial and punishment according to law; and it shall be lawful for said military force to proceed in suppression of such riot, tumult, or unlawful assemblage as aforesaid by such military force, and in like manner as in case of war or public insurrection, and the said military force shall continue and remain in service and upon duty under military command and subordination until the said mayor shall certify in writing to the said major-general or commanding officer that said riot, tumult, or unlawful assemblage is entirely suppressed; and the military body so called into service is entitled to be paid while on actual duty as follows, to wit: two dollars a day to the privates, non-commissioned officers, and musicians, and four dollars a day to the commissioned officers, and two dollars a day for each horse employed, which sum shall include all expenses of subsistence; the amount thereof, together with the expense of their ammunition and artillery used on such duty, is paid out of the treasury of said county; but such military body shall not be required to march to the place of any such riot, tumult, or unlawful assemblage, until after the said mayor or other person authorized to make proclamation as aforesaid, in an audible voice, and as near to the rioters or persons unlawfully assembled as he can safely and with convenience go, shall have commanded such rioters or persons unlawfully assembled, and all other persons not being then and there on duty as police or a part of his posse, civil or military, to return to their lawful homes and business.

After proclamation made or attempted to be made, and the continuance of said unlawful, riotous, or tumultuous assemblage, notwithstanding the same, the said mayor and police, and all and every person or persons so aiding and assisting them, and the said military force shall be wholly discharged, held harmless, and indemnified, as well against the commonwealth as against all and every other person or persons for or concerning the killing, maiming, or hurting of any such person or persons so unlawfully, riotously, or tumultuously continuing together as aforesaid, that shall happen to be killed, maimed, or hurt.

The requisition of the mayor made as aforesaid, or other officer of police authorized as aforesaid, upon the commanding officer of any division, brigade, regiment, battalion, or company, shall be conclusive evidence that the services of the military were necessary for the suppression of such riot, tumult, or unlawful assemblage.

The mayor appoints one person to act as chief of police, by and with the advice and consent of the

Select Council, subject to dismissal by him, who performs such duties as are provided by law and ordinance.

In all cases of arrest made by any police officer or constable upon any of the streets or highways, he shall take the person arrested for a hearing to the office of the justice of the peace nearest to the place where said arrest was made, except when the person is arrested for intoxication, in which case such person shall be taken to the station-house for a hearing before the committing magistrate of the district.

Any patrol or watchman selected and employed by and at the private expense of the residents or of persons doing business in any block or blocks, square or squares, or parts thereof, for the purpose of protection to their property therein against loss by fire, theft, or robbery, upon filing with the mayor of the city a certificate of such employment, the time for which he may have been so employed, and the bounds of the locality which he is required to watch, signed by the person so employing him, and the mayor is satisfied that such person is qualified, by his integrity and vigilance, to perform such duty, he has authority to appoint and commission him as patrol or watchman for such locality, with all the powers of policemen in respect to the arrest of all vagrants and persons found offending against the law within the bounds of said locality, and all vagrants and offenders arrested by such patrol or watchman shall be received and held in custody at any police-station in like manner as if the arrest had been made by any policeman; such patrol or watchman, when on duty, shall have authority to carry and use, when necessary, the usual implements of policemen for alarm, arrest, and defense, and shall respond to the signals of policemen within the limits of his said locality in making arrests and performing needful duty, but shall not be required to leave his said locality; and policemen shall in like manner respond to the signals of such patrol or watchman and give him all needful aid in making arrests and protecting property within the limits of said locality.

Any police officer or constable, upon view of the breach of any ordinance, is authorized to forthwith arrest the person or persons so offending without any process, and to take said person or persons forthwith before any police magistrate or alderman, who shall require bail for the appearance of said person at a time to be fixed for the hearing of said charge, and in default of bail, to commit for a hearing; and at said hearing the case shall be proceeded with as if the parties were appearing before said magistrate or alderman upon a summons duly issued and returned served, or if both parties desire it, the case may be entered and determined by the magistrate or alderman in like manner without requiring bail or further continuance.

There is one station-house in each police district, located by the mayor by and with the consent of the Councils, for the use of the police, and for the tem-

porary detention of persons arrested or charged with offenses against the laws.

A docket of cases heard is kept by the magistrates at the district station-houses, and it is their duty to make return of all cases in which any person or persons may be there held to answer, at the commencement of the term of Quarter Sessions, to the district attorney. And it is the duty of the lieutenant, or one of the two sergeants, to attend at such hearings at the station-houses and to deliver to the district attorney the said returns.

The mayor has power to prescribe the duties of the various officers appointed, and to make all police rules and regulations, subject to the approval of Councils.

No policeman is permitted to engage in any other business or profession whatsoever, and he or they so offending, upon due proof thereof, are at once discharged from the service, and are not eligible for re-appointment for one year thereafter.

All policemen are allowed, with the permission of the mayor, to receive any rewards or gratuities which may be offered them by persons or institutions who may consider themselves benefited by their extra services: *Provided*, The same shall not have been asked for or promised before the service was rendered, and it is a misdemeanor in office for any of them to receive any other compensation, fee, or reward, to be followed by dismissal from service.

The police vans and other vehicles used for the carrying of prisoners to and from the several prisons are so arranged that the males and females are separated therein.

It is not lawful for any proprietor, driver, or any other person, to carry prisoners in such vans or vehicles in any manner whereby males and females shall be secured together in any apartment thereof.

It is not lawful for the drivers of prison vans, or any other persons, to furnish any spirituous, vinous, or malt liquors to any prisoner or prisoners while under charge in such vehicle.

The mayor nominates, and by and with the advice and consent of Select Council appoints four captains of police, who receive an annual salary of fifteen hundred dollars, and are each assigned to duty in one of four divisions into which the city is divided for that purpose. They are superior in rank to the police lieutenants, and it is their duty to see the laws enforced, the station-houses and other property of the police department kept in order, and that discipline is maintained among and duty performed by the police force.

There is also, as part of the police force, what is called the Reserve Corps, consisting of not less than fifty men, with one lieutenant and one sergeant, who commands them, all taken from the regular force, and performing such duty as the mayor may assign them. At present they are on duty on Chestnut Street, and being specially selected for size, are like unto the historic guard of Peter the Great.

Policemen when on duty are required to wear the prescribed uniform, and their salary is two dollars and twenty-five cents per day. The mayor appoints a clerk to the chief of police, also the telegraph operators at the several police station-houses, together with four pilots, four engineers, and four firemen, for service upon the Delaware River and Schuylkill River police tug-boats.

The city, for purposes of police, is divided into twenty-six police districts, including therein the Delaware harbor police and the Schuylkill harbor police, which is divided into boat-crews to man the police tug-boats. The force of harbor police receive the same pay as other police officers. The mayor appoints for each of the police districts, one lieutenant and two sergeants.

The mayor also appoints a number of persons as a *substitute* police force, who only act when called on to take the place of a temporary absentee of the regular force by reason of sickness or otherwise.

The detective force consists of eight men appointed by the mayor.

There is elected by Select and Common Councils a superintendent of police and fire-alarm telegraph, whose term of office is three years, at a salary of two thousand dollars per annum. He appoints by and with the advice of Select Council an assistant with a salary of fifteen hundred dollars per year, and the said superintendent appoints, also, two operators for each police district, four operators for the central office, one repair-man, and two battery-men, all with the advice and consent of the Select Council, and at an annual salary of eleven hundred dollars, payable monthly.

The said superintendent, with the Councils committee on police, are authorized to connect any bank, banking-house, insurance company, or other institution, with the central office by telegraph, for the purpose of giving an instantaneous alarm, provided the city be at no expense, and the party having such privilege pay to the city treasurer twenty-five dollars annually.

If any person be charged, on oath or affirmation before the mayor or any magistrate, with being a professional thief, burglar, pickpocket, counterfeiter, or forger, and who shall have been arrested by the police authorities at any steamboat landing, railroad depot, church, banking institution, broker's office, place of public amusement, auction-room, store, or crowded thoroughfare, and it shall be proven by sufficient testimony that he or she was frequenting or attending such place or places for an unlawful purpose, he or she shall be committed to jail for a term not exceeding ninety days, there to be kept at hard labor, or, in the discretion of the mayor or magistrate, required to enter security for good behavior for a period not exceeding one year. Any one feeling aggrieved by any such judgment may appeal to the Court of Quarter Sessions.

During the Revolution, <sup>3</sup> office vacant.....	1776	to 1789

<sup>1</sup> From John Hill Martin's "Bench and Bar of Philadelphia."

<sup>2</sup> Died April, 1754.

<sup>3</sup> During the occupation of Philadelphia by the British, Samuel Shoemaker was continued the first magistrate of police by the king's authority. He died Oct. 10, 1800, aged seventy-six years. (See *Foulson's Advertiser*, Oct. 11, 1800.) Mr. Westcott, in reply to a query, "How was the city governed during the Revolution, from 1776 to 1789?" in the *Sunday Dispatch* of Oct. 15, 1882, says, "The last election for mayor under the proprietary charter was on the 3d day of October, 1775, and there had been no meeting for six months previously. There was no meeting afterward until the 17th of February, 1776, and that was the last upon the minutes. Why the city charter was considered to be superseded by the events of the Revolution is a political rather than a legal question. By the events of the Revolution the people claimed to have succeeded to every right which the proprietaries had under the royal charter, and which the Assembly and every local government had. It was an accepted fact, after the 4th of July, 1776, that the old government was overthrown. The Convention of the State of Pennsylvania, in 1776, appointed a large number of justices of the peace for the city and county, among whom were Benjamin Franklin, John Dickinson, and George Bryan. They were required, before assuming their duties, to take an oath of allegiance to the State of Pennsylvania and renunciation of the authority of George III. Under the Constitution of 1776 justices were elected, two for each ward, etc., and they were commissioned March 28, 1777, for the city, and for the city and county June 6th of the same year. After that justices were appointed and elected for the city up to the time of the second city charter. No aldermen were appointed within that period. During the interval the municipal government was suspended. The affairs of the city seemed to have been carried on

**High Sheriffs of Philadelphia.**—By the frame of government, of April 25, 1682 (1 C. R., 27), the freemen of the counties were to elect annually, on April 23d, "a double number of persons to serve for sheriffs, justices of the peace, and coroners, for the year next ensuing, out of which respective elections and presentments the Governor, or his deputy, shall nominate and commissionate the proper number for each office the third day after the said presentments; or else the first-named in such presentment for each office shall stand and serve for that office the year ensuing." No sheriff could continue in office more than three successive years, or be capable of being again elected during four years afterward. By the Constitution, Sept. 4, 1790, article 6, section 1, the people were to elect two persons, the Governor to appoint one of them. (See also act of Sept. 29, 1789.) No person to be chosen twice in any six years. The same law applies to coroners, and should the sheriff die, the coroner of the proper county shall execute

by Councils of Safety, wardens, and street commissioners, officers having authority under old acts of Assembly. The wardens had control of lighting the streets, and the commissioners of paving them and keeping the highways in repair. We presume that there were no watchmen during the Revolution, except the military guards. In regard to offenses triable in the City Court, as there was no such tribunal during the Revolution, all cases of crime had to be tried in the Quarter Sessions for the county of Philadelphia, because in law, or, at least, by general consent, there was no city of Philadelphia in existence."

<sup>1</sup> By the act of April 4, 1798, the Councils were to elect the mayor on the third Tuesday in October. The act of April 10, 1826, repealed the fifth section of the act of April 4, 1798, requiring the mayor to be elected from among the eldersmen, and authorized Councils to elect any citizen, and the act of June 21, 1839, gave the people the right to elect the mayor, Councils to elect where no candidate received a majority. In 1839, Swift was elected by Councils.

<sup>2</sup> Elected under the Constitution of 1873, on the third Tuesday in February, the term of office to commence the first Monday in April next ensuing.

his office. They shall hold their offices for three years, and until a successor shall be duly qualified. The amended Constitution of 1838 says, in regard to sheriffs and coroners: One person shall be chosen for each office, who shall be commissioned by the Governor. Vacancies to be filled by an appointment, to be made by the Governor, until the next general election, and until a successor shall be duly qualified. The coroner to execute the duties of the office until another sheriff shall be duly commissioned. No person shall be chosen or appointed twice in any term of six years.

Jedah Fouike, commissioned.....	Oct.	4, 1770
William Dewees, commissioned.....	Oct.	4, 1773
William Masters, <sup>19</sup> elected.....	Oct.	—, 1776

<sup>3</sup> Mentioned as sheriff; late a merchant of London, and sheriff of Chester County. (See Smith's "History of Delaware County," 529.)

<sup>4</sup> Commission extended one year, and commission recorded; 1 C. R., 121.

<sup>5</sup> Held office until 4th 11 mo., 1689-90; 1 C. R., 280.

<sup>6</sup> He was deposed as clerk and sheriff Feb. 12, 1697-98; 1 C. R., 498.

<sup>7</sup> Chirurgeon (1 C. R., 478), mentioned as a former sheriff; 2 C. R., 15.

<sup>8</sup> He is mentioned as sheriff, June 20, 1700, in the State Paper Office, London. As former sheriff, July 14, 1701; 2 C. R., 20. He resigned his office "to transport himself to England," 10th 6th mo., 1703; 2 C. R., 98.

<sup>9</sup> John Budd was elected in October, 1704, but the Lieutenant-Governor refused to commission him, and continued Finney; 2 Logan Papers, 185.

<sup>10</sup> Ousted for an official failure Feb. 6, 1706; 2 C. R., 241, 369.

<sup>11</sup> In office until October, 1706; 2 Logan Papers, 185.

<sup>12</sup> Called "present sheriff." John Budd and Henry Flower were elected sheriffs Oct. 1, 1706; but the Lieutenant-Governor refused to notice their election, and Captain John Finney is called "present sheriff" (2 C. R., 308). Finney resigned Feb. 1, 1706-7.

<sup>13</sup> Mentioned as sheriff of the previous year, and re-elected. No sheriff mentioned by name in 1722, 1723, 1724, and 1725.

<sup>14</sup> Died Aug. 5, 1741.

<sup>15</sup> Died Jan. 7, 1767.

<sup>16</sup> In Colonial Records, Richard Sewell. (See 5 C. R., 120.) In Minutes of Common Council, 546, it is Shewell. His signature is Sewell; but these are but two spellings of the same family name.

<sup>17</sup> See 5 C. R., 561; March 6, 1752. Dismissed from office.

<sup>18</sup> See 3 Pa. Archives (1st series), 635. Sheriff for 1761 not named, no doubt Redman, as it appears to have been the rule to elect the same person for three years successively.

<sup>19</sup> He declined to act or qualify, and the office appears to have been vacant until June 13, 1777; 11 C. R., 217, 222.

George de Benneville Keim, elected.....	Nov. 7, 1883

### Masters of Rolls and the Recorder of Deeds.—

The office of master of rolls was created by the twentieth section of the laws agreed on in England, on the 5th day of the Third month (May 7), 1682, viz.: "And to prevent frauds and vexatious suits within said province, that all charters, gifts, grants, and conveyances of land (except leases for a year or under), and all bills, bonds, and specialties above five pounds, and not under three months, made in said province, shall be enrolled or registered in the public enrollment-office of the said province within the space of two months next after the making thereof, else to be void in law. And all deeds, grants, and conveyances of land (except as aforesaid) within the said province and made out of the said province shall be enrolled or registered as aforesaid, within six months after making thereof, and settling and constituting an enrollment-office or registry within said province, else to be void in law against all persons whatsoever." (See "Frame of Laws," 1 C. R., pp. 27, 28, secs. 17 and 18.)

The master of rolls was the keeper of the "Public Records for the County of Philadelphia and for

Entering of all Judgments of County, publique Proceedings of Justice, Legal Cases, and all other Instruments w<sup>th</sup> are by Law to be inrolled and Recorded" (1 C. R., 214). The office of recorder of deeds of Philadelphia was created by act of May 28, 1715, and was separated from that of the master of rolls by act of Assembly of March 14, 1777. Read's "Digest," 341; Dallas' "Laws," vol. i., 731. The second section names the recorder of deeds for each county. The Council appointed the master of rolls, the Assembly the recorder of deeds. The act of March 29, 1809, abolished the office of master of rolls. A portion of the roll-books are in the office of the Secretary of the Commonwealth, the rest in the office of the Secretary of Internal Affairs of this State. In *McCraher vs. The Commonwealth* (5 W. & S., p. 26), it is said by Judge Sergeant, in delivering the opinion of the Supreme Court, that the office of recorder of deeds, "although unknown to the common law, has been coeval with our province and State, being part of the laws agreed upon in England between William Penn and the first purchasers, in 1682, and reduced after various efforts to a regular system by the act of 1715, which continues to be the foundation of our code on the subject, and this office may be said to form the pivot on which all our titles to real estate turn. The design of it has been to furnish a permanent record of all titles and muniments of real estate, and many of personal, to which parties may have recourse for exemplifications that have the same force and efficacy as the originals. But there is another equally if not more important design, which is to enable all persons to obtain knowledge of the state of titles to real estate by deeds and conveyances, and also of charges and encumbrances existing on them by way of mortgage."

### THE MASTERS OF ROLLS.

Timothy Matlack, <sup>15</sup> commissioned.....	April 14, 1800

The list of masters of rolls, printed in 9 Pa. Archives, 628 (2d series), is very imperfect and incorrect, for it is a matter of history that Charles Brockden was made recorder of deeds of the county

<sup>12</sup> Resumed the office 5th Seventh month, which he claimed was his for life.

<sup>13</sup> 1 Archives, 125. Perhaps a deputy only

<sup>14</sup> A clerk and deputy (in 1712) under Mr. Story, and on his retirement was appointed and commissioned master of the rolls, and was in office over fifty-two years. Resigned 1787, and died Oct. 20, 1789, aged ninety-five years and six months.

<sup>15</sup> Timothy Matlack died April 15, 1829, aged ninety-nine years.

<sup>1</sup> See in 8 Archives, 321, his letter of June 14, 1780, in reference to his services.

<sup>2</sup> See 15 C. R., 567, 579.

<sup>3</sup> At the election in 1806, there was "no choice," and Barker remained in office until 1807.

<sup>4</sup> Commodore Thomas Truxton was a distinguished officer of the United States navy, from which he had resigned. He died in Philadelphia in 1822, aged seventy-seven years.

<sup>5</sup> Died in 1823.

<sup>6</sup> Afterward regularly elected and commissioned.

<sup>7</sup> Died suddenly Dec. 1, 1842.

<sup>8</sup> Appointed by the Governor.

<sup>9</sup> Died Jan. 18, 1882, aged seventy.

<sup>10</sup> His election was contested successfully by Alderman John Thompson.

<sup>11</sup> See Constitution of 1873, article xiv. section 1.

<sup>12</sup> See Constitution of 1873, article xiv. section 1.

of Philadelphia by the act of May 28, 1715, and at the same time appointed master of rolls, and that he held those offices for over fifty-two years, and until his retirement in 1767, so that Andrew Hamilton, Thomas Hopkinson, William Allen, Tench Francis, and Benjamin Chew never were the masters of rolls, nor did Andrew Allen ever hold such a position. On page 629 of the same work Arthur Cook is given as the first chief justice of the province from 1681 to 1684. As the Supreme Provincial Court was created by order of Council of "y<sup>e</sup> 1st of y<sup>e</sup> 2d mo.," 1684, and as the charter to William Penn was not signed until March 4, 1681, the statement is unaccountable, and a serious error in an official publication. The first chief justice was Dr. Nicholas More (not Moore), and C. J. Robeson's name was not Robson, as given. The register-general of wills in 1712 is called Hayne; it should be Mayne, the name of a distinguished Irish family. There are many other errors in the lists given, but they are not as important as those here corrected.

**Guardians of the Poor.**—The Board of Guardians of the Poor is composed of twelve members. The Select and Common Councils meet in joint convention in June of each year, and elect four persons as members of the board to serve for three years in place of four whose terms are about to expire, one of whom so elected shall represent the political minority.

The board annually elects a president and such other officers as are necessary for the proper transaction of business.

Each member of the board takes an oath or affirmation that he will discharge the duties of the office of guardian of the poor truly and impartially to the best of his ability.

All indentures of apprenticeship by the guardians shall be executed in the name of the city of Philadelphia.

The said board appoint suitable persons as visitors of the poor; the said visitors are continued in office at the discretion of the board, and give such security for the faithful performance of their duty as may be required. It is the duty of the visitors to act as agents under the direction of the Board of Guardians, and when called upon by an applicant for relief, or by a citizen in behalf of any poor person, to visit such party without delay and, after full examination, to report, in writing, the particulars of the case to the next meeting of the board, stating the residence, name, age, sex, color, birthplace, number of children, if any, on receipt of which report, the board, if satisfied of the necessity of the case, directs the mode and determines the amount of relief to be furnished to such applicant, and causes the name, residence, and amount of relief directed to be furnished, to be entered in a book kept for that purpose: *Provided*, That in all cases of sudden emergencies, when the party cannot be removed to the hospital or almshouse, it is the duty of the visitor, with the consent of one of the guardians, to administer such relief as the case may require; the particulars of the case and the amount of relief are reported to the next meeting of the guardians. All relief granted to out-door poor is temporary.

The Board of Guardians are authorized to put out as apprentices to some trade or calling all poor children who become chargeable, that is, the children of such poor persons as are dead without leaving any property, or any kindred bound by law to maintain them, or who, if living, have deserted them; males to the age of twenty-one, and females to the age of eighteen years. And the said guardians are authorized to bind out, as aforesaid, all children that have received public support, either in the almshouse or

<sup>9</sup> Given died Oct. 11, 1880, aged forty-six years.

<sup>10</sup> Appointed under the act of April 18, 1878; resigned Jan. 28, 1879.

<sup>11</sup> Onsted 1883.

children's asylum, although their parents demand their discharge from said institutions, unless the expenses incurred in their support be refunded.

The said board, annually, at the first stated meeting of Councils in the month of January, report to them a statement, in detail, of the receipts and disbursements made by them during the past fiscal year, and they, annually, not later than the 1st day of January, are required to report to Councils an estimate of the amount necessary for the expenses of their department during the then fiscal year, and the items of such expenses, with an estimate of their receipts for the same time.

The said board is required to keep an account with all the poor districts of Pennsylvania of all the outdoor relief furnished in behalf of paupers having a legal settlement therein according to the several acts of Assembly of Pennsylvania.

Warrants for the payment of appropriations made to the department are drawn by the president of the board, and at the time of the issue of any warrant the secretary takes a receipt for the same, which specifies its number, date, amount, and the service or supplies for payment of which is issued, and each warrant is accompanied by a bill containing the items which comprise the sum for which it is drawn. The bill is signed by the person claiming its amount, and to be delivered to the controller, and filed by him.

All moneys due to jurors, witnesses, and arbitrators, which shall remain in the hands of the sheriff of the city and county of Philadelphia, or any of the clerks, prothonotaries, or officers of any of the courts, or in the hands of the county commissioners, or their clerks, within the said city and county, and shall not be demanded by or paid over to the person or persons lawfully entitled to receive the same, and which shall not have been paid over or demanded within twelve months from the receipt thereof, shall belong to the said guardians of the poor, and shall be paid over to them; and the said sheriff, clerks, prothonotaries, officers, and county commissioners shall keep separate accounts of the said moneys, and furnish copies thereof to the said guardians of the poor on the first Tuesday in the month of January, in each and every year, and pay over the same forthwith to the said guardians for the use of the poor.

If any husband or father, being within the limits of this commonwealth, shall separate himself from his wife, or from his children, or from wife and children, without reasonable cause, or shall neglect to maintain his wife or children, it is lawful for any alderman, justice of the peace, or magistrate of this commonwealth, upon information made before him under oath or affirmation, by his wife or children, or either of them, or by any other person or persons, to issue his warrant to the sheriff or to any constable for the arrest of the person against whom the information shall be made as aforesaid, and bind him over, with one sufficient surety, to appear at the next

Court of Quarter Sessions, there to answer the charge of desertion.

The information, proceedings thereon, and warrant shall be returned to the next Court of Quarter Sessions, when it shall be lawful for said court, after hearing, to order the person against whom complaint has been made, being of sufficient ability, to pay such sum as said court shall think reasonable and proper for the comfortable support and maintenance of the said wife or children, or both, not exceeding one hundred dollars per month, and to commit such person to the county prison, there to remain until he comply with such order, or give security by one or more sureties to the commonwealth, and to such sum as the court shall direct for the compliance therewith.

The father and grandfather, and the mother and grandmother, and the children and grandchildren of every poor, old, blind, lame, and impotent person, or other poor person within said city, not able to work, being of sufficient ability, shall, at their own charges, relieve and maintain every such poor person as the Court of Quarter Sessions shall order and direct.

The husband of every wife, whose father or grandfather, mother or grandmother, children or grandchildren, shall be poor, blind, lame, impotent, or otherwise unable to maintain himself or herself, and being within the said city, not able to work, shall, if of sufficient ability, at his or their own charges, relieve and maintain every such poor person as the Court of Quarter Sessions shall order and direct, on pain of forfeiting seven dollars for every month he shall fail therein: *Provided*, That such relief so furnished by such husband shall be demanded only where such husband shall have obtained possession of personal property, or be entitled to the rents and profits of real estate belonging to his said wife, and then only to the extent of the value of such property so acquired by his marriage.

It sometimes happens that men separate themselves without reasonable cause from their wives, and desert their children, and women also desert their children, leaving them a charge on the city, although such persons may have estates, rights, and credits which should contribute to the maintenance of such wives or children: Therefore, it shall and may be lawful for the guardians of the poor, in the city, having first obtained a warrant or order from one of the justices of the peace where such wife or children shall be so left or neglected, to take and seize so much of the goods and chattels, rights and credits, and receive so much of the annual rents and profits of the lands and tenements of such husband, father, or mother as such justice shall order and direct for providing for such wife, and for maintaining and bringing up such child or children; which warrant or order, being confirmed at the Court of Quarter Sessions, it shall and may be lawful for the said court there to make an order for the guardians of the poor to dispose of such goods and chattels, rights and credits, by sale or otherwise,

or so much of them for the purpose aforesaid as the court shall think fit; to receive the rents and profits, or so much of them as shall be ordered by the said court, of his or her lands or tenements for the purposes aforesaid; and if no real or personal estate, rights and credits of such husband, father, or mother can be found, wherewith provision may be made as aforesaid, it shall and may be lawful to and for the said court to order the payment of such sums as they shall think reasonable for the maintenance of any wife or children so neglected, and commit such husband, father, or mother to the common jail, there to remain until he or she comply with the said order, give security for the performance thereof, or be otherwise discharged by the said court; and on complaint made to any justice of the peace of any wife or children there being so neglected, such justice shall take security from the husband, father, or mother, neglecting as aforesaid, for his or her appearance at the next Court of Quarter Sessions, there to abide the determination of such court, and for want of security to commit such persons.

Every master or commander of any ship, or other vessel arriving at the port of Philadelphia from any country out of the United States, or from any other of the United States than this State, shall, within twenty-four hours after the arrival of such ship or vessel in the said port, make a report in writing, on oath or affirmation, to the mayor of the city of Philadelphia, or, in case of his sickness or absence, to the recorder of said city, or to any alderman or justice of the peace, of the name, place of birth, and last legal settlement (if known), age, and occupation of every person who shall have been brought as a passenger in such ship or vessel on her last voyage from any country out of the United States into the port of Philadelphia, and of all the passengers who shall have been landed, or suffered or permitted to land from such ship or vessel, at any place during such her last voyage, or have been put on board, or suffered and permitted to go on board of any other ship or vessel with the intention of proceeding to said port, and of the name or names of the owner or owners and consignee or consignees of such ship or vessel, under the penalty on such master or commander, and the owner or owners, consignee or consignees of such ship or vessel, severally and respectively, of seventy-five dollars for every person neglected to be reported as aforesaid, and for every person whose name, place of birth, and last legal settlement, age, and occupation, or either or any of such particulars, or the name or names of the owners or consignees as aforesaid, shall be falsely reported as aforesaid.

It shall be lawful for the said mayor, recorder, alderman, or justice to require, by a short indorsement on the aforesaid report, every such master or commander of any such ship or vessel to be bound with two sufficient sureties (to be approved of by the said Board of Guardians), to the said (guardians of

the poor of the city of Philadelphia), in such sum as the mayor, recorder, alderman, or justice may think proper, not exceeding one hundred and fifty dollars for each passenger not being a citizen of the United States, to indemnify and save harmless the said guardians and their successors, and the inhabitants of the city, from all and every expense or charge which shall or may be incurred by them for the maintenance and support of any such person, or for the support of the child or children of any such persons which may be born after such importation, in case such person, or any such child or children, shall at any time within two years from the date of said bond become chargeable to the said guardians of the poor, and the costs of the proceedings before the mayor and recorder shall be paid by the said master or commander, and a sum not exceeding two dollars for preparing said bond; and if any such master or commander shall neglect or refuse to give such bond within five days after such vessel shall have so arrived at the said port of Philadelphia, every such master or commander, and the owner or owners, consignee or consignees of such ship or vessel, severally and respectively, shall be subject to a penalty of five hundred dollars for each and every person not being a citizen of the United States, for whom the mayor or recorder shall have determined that bond should be given as aforesaid, to be sued for and recovered as hereinafter provided.

Every ship or vessel on board of which any such person, not being a citizen of the United States, may have been a passenger shall be liable for the said penalties.

Upon information given to the mayor or recorder of the city, or any two justices of the peace of the county of Philadelphia, that any old persons, infants, maimed, lunatics, or any vagabond or vagrant persons, are imported, come, or are brought within the said city, the mayor or recorder, or any two justices of the peace for the county of Philadelphia, shall cause such aged persons, infants, or impotent or vagrant persons to be brought before him, and if upon examination they shall judge that such person or persons are likely to become chargeable to the said city, it shall be lawful for the said mayor or recorder, or two justices of the peace, as aforesaid, by warrant or otherwise, to send for the master or merchant, or other person who imported any such infant, lunatic, aged, maimed, impotent, or vagrant person or persons, as are likely to become chargeable as aforesaid, and upon proof made of their being the importers or owners of such ship or vessel in which said infant, lunatic, aged, maimed, impotent, or vagrant person, who shall be judged likely to become chargeable, as aforesaid, were imported, then the said mayor or recorder, or any two of the justices, as aforesaid, shall and may compel the said master, merchant, or importer of such infant, lunatic, maimed, aged, impotent, or vagrant person or persons to give sufficient security to carry and transport such infant, lunatic,

mained, aged, impotent, or vagrant person or persons to the place or places whence such person or persons were imported or brought from, or otherwise to indemnify the inhabitants of the city from any charge that may come or be brought upon them by such infant, lunatic, maimed, aged, impotent, or vagrant person or persons: *Provided*, That any one feeling aggrieved may appeal to the Court of Quarter Sessions.

If any housekeeper or inhabitant of the said city shall take into, receive, or entertain in his or her house or houses any person or persons whomsoever (all mariners coming into this State, and every other healthy person coming from any foreign port immediately into the said State, only excepted), being persons who have not gained a legal settlement in some other township, borough, or place within this State, and shall not give notice in writing, which they are required to do within three days next after the taking into or entertaining any person or persons in his or her house, within the said city, to the guardians of the poor, or some of them, of the said city, such inhabitant or housekeeper, being thereof legally convicted by testimony of one credible witness, on oath or affirmation before any one justice of the peace residing in the said district or township, shall forfeit and pay the sum of four dollars for every offense, the one moiety for the use of the poor of said city, and the other moiety to the informer, to be levied on the goods and chattels of the delinquent, and for want of sufficient distress, the offender to be committed to the jail of the city and county of Philadelphia, there to remain without bail or mainprise for the space of ten days. In case the person or persons so entertained or concealed shall become poor and unable to maintain him or herself, and cannot be removed to the place of his or her last legal settlement in this or any other State, if any such he or she hath, or shall die, and not have wherewithal to defray the charges of his or her funeral, then in such case the housekeeper or person convicted of entertaining or concealing such poor person shall be obliged to provide for and maintain such poor and indigent person or persons; and in case of such poor person's death shall pay the guardians of the poor so much money as shall be expended on the burying of such poor and indigent person or persons; and upon refusing so to do, it shall be lawful for the guardians of the poor in the city, and they are required to assess a sum of money on the person or persons so convicted, from time to time, by a weekly assessment, for maintaining such poor and indigent person or persons, or assess a sum of money for defraying the charges of such poor person's funeral, as the case may be; and in case the party convicted shall refuse to pay the sum of money so assessed or charged to the guardians of the poor, for the uses aforesaid, the same shall be levied on the goods and chattels of the offender, but if such person have no goods to satisfy the money so assessed for him or her to pay, then said justices may commit the offender to

prison, there to remain until discharged in the manner provided by law.

Where any person not having legal settlement within the city shall be relieved and provided for temporarily by the guardians of the poor, it is lawful for the guardians to transmit with the poor and indigent person or persons so as aforesaid relieved, to his last place of legal settlement, a bill containing the amount of money expended in the relief of such poor or indigent person or persons, certified under the seal of the corporation, and attested by the oath or affirmation of the guardian furnishing or expending the same, which bill shall be received by the overseers or justices of the township or place where the said poor or indigent person or persons were last legally settled, and the overseers of the place or township to which such poor and indigent person or persons shall be so as aforesaid removed, shall be liable to pay the amount adjudged to be due, whether notice has been given to them or not, of the pauper's being within the city of Philadelphia.

If any poor person or persons shall remove out of the city of Philadelphia into any other township, borough, or place within this State, or shall remove out of any borough, township, or place into the said city, and shall fall sick or die before he or she hath gained a legal settlement in the said city, district, or township, or other township or borough to which he or she shall come, so that such person or persons cannot be removed, the guardians of the said city or overseers of the said other township or borough into which such person or persons is or are to come, or one of them, shall, as soon as conveniently may be, respectively give notice to the overseers of such township or borough, or to the guardians of the said city (as it may happen to be necessary), where such person or persons had last gained a legal settlement, or to one of the said overseers or guardians, of the name, circumstances, and conditions of such person or persons. And if such overseers of a township or borough, or guardians of the said city to whom such notice shall be so given, shall neglect or refuse to pay the money expended, as well before as after the said notice, for the use of such poor person or persons, and to take order for relieving and maintaining such poor person or persons, or in case of his, her, or their death, before notice can be given as aforesaid, shall, on request being made, neglect or refuse to pay the money expended in maintaining and burying such poor person or persons, then and in every such case it shall be lawful for any two justices of the county where such poor person or persons were last legally settled, and they are hereby authorized and required, upon complaint made to them, to cause all such sums of money as were necessarily expended for the maintenance of such poor person or persons during the whole time of his, her, or their sickness; and in case he, she, or they die, for his, her, or their burial by warrant under

their hands and seals, to be directed to some constable of the said city, township, or borough, to be levied by distress and sale of the goods and chattels of the said guardian or guardians, overseer or overseers of the poor so neglecting or refusing to be paid to the guardians or overseers aforesaid, where such poor person or persons happened to be sick or to die as aforesaid.

The Board of Guardians are authorized whenever any person or persons shall be received into the almshouse, to inquire into the situation and circumstances of such persons, and into the causes which have produced his or her application for relief; and if in the opinion of said guardians the case shall be such as to make it expedient, they shall cause to be opened in the books of the almshouse an account with the person or persons so received, and shall charge him, her, or them, a fair and moderate price for the maintenance and other articles furnished for their relief; and shall credit such persons with a just and liberal allowance for any work they may perform or services they may have rendered; and persons who may be sent to the hospital and cured of any disease brought on by vicious habits shall be removed to the house of employment; and also, any idle, disorderly, and vagrant person who may be sent to the said almshouse by any of the said guardians, may be detained in the said house by the Board of Guardians, and compelled to perform such work and services as the said board may order and direct, until they have compensated by their labor for the expenses incurred on their account, unless discharged by special permission of the Board of Guardians; and it shall be the duty of said Board of Guardians to furnish such person or persons as aforesaid with sufficient work and employment, according to their physical abilities, so that the opportunity of reimbursement may be fully afforded; and the said Board of Guardians are authorized and empowered to exercise such power as may be necessary to compel all persons within the said almshouse and house of employment to do and perform all such work, labor, and services as may be assigned to them by the said Board of Guardians: *Provided*, The same be not inconsistent with the condition or ability of such person.

The several constituted authorities having care and charge of the poor in the respective counties, districts, and townships of this commonwealth have authority to send to the asylum such insane paupers under their charge as they may deem proper subjects; and they shall be severally chargeable with the expenses of the care and maintenance and removal to and from the asylum of such paupers.

If the guardians, directors, or overseers of the poor, to whom any patient who shall be in the asylum is chargeable, shall neglect or refuse, upon demand made, to pay to the trustees the expenses of the care, maintenance, and removal of such patient, and also, in the event of death, of the funeral expenses of such

patient, the said trustees are authorized and empowered to collect the same as debts of a like nature are collected.

The appropriations of the guardians of the poor for 1882 were:

Hospital department.....	\$29,615
Insane department.....	13,598
Children's asylum.....	1,467
House generally.....	316,069
Manufacturing department.....	20,730
Farm and Blockley estates.....	11,527
Out-door expenses.....	26,410
Deficiency bill, 1876-77.....	1,150
Cost of Marston Street sewer.....	652
	\$422,118

PRESIDENTS OF THE BOARD OF THE GUARDIANS OF THE POOR.

**Water Department.**<sup>1</sup>—Councils elect every three years a chief engineer of this department. He has charge of the water-works, including mill-houses, steam-engine houses and their machinery, the reservoirs, pipes, mains, dams, fire-plugs, property and fixtures connected with the same, and he exercises control over all the officers connected therewith, assigns and directs their duties. He makes an annual report to Councils, prepares all plans of construction, makes all necessary estimates connected with the works whether for construction or repairs, certifies all accounts, bills, and contracts for materials purchased or labor performed under his direction, notifies Councils of all breaches of contract, supervises and contracts for laying down mains, pipes, and fixtures.

The chief engineer appoints three assistants, who shall be civil engineers, one general superintendent of works, one engineer's clerk, to be chief clerk of the department, one assistant clerk, one superintendent of city repair-shops, one draughtsman, ten engineers at works, one register, one chief clerk of register's department, one receiving clerk, two permit clerks, six general clerks, six purveyors, who give security in the sum of five thousand dollars, fourteen inspectors, one messenger, one pipe clerk, one muster clerk, and one telegraph operator.

The chief engineer gives bond in the sum of ten thousand dollars.

The water purveyors have charge of all the mains, pipes, stop-cocks, fireplugs, and other fixtures appertaining to the distribution of the water through the city, and personally attend to the laying of new pipes as well as the repairs of the pipes, fireplugs, and other fixtures that require it, to shut off the pipes

<sup>1</sup> The history of the water-works of Philadelphia is given in the narrative of volume I. of this work.

for repairs on account of leaks, to shut off water, to cut off such pipes on premises on which the water-rent has not been paid, to keep an account of all new pipes laid or repairs made.

The register makes assessments of water-rents in manufacturing and other establishments where large quantities are used, receives all water-rents, and makes return of them to the controller, and turns the money over to the treasurer.

The permit clerks attend to their respective sub-offices, issue all permits under the supervision of the register, and make weekly returns to the register of all permits issued and moneys received, and perform such other duties as directed by the chief engineer.

The inspectors examine all premises where water is introduced, and return to the register an account of all connections and openings on the premises and their uses, such as the number of hydrants, baths, water-closets, fountains, etc., and other rate of charge as fixed by Councils, distribute the water-rent bills and notices, and examine and report cases of fraudulent use of water and abuse of permits, etc.

Whenever the chief engineer shall issue a warrant, he shall at the same time take a receipt which shall specify its number, date, and amount, and the services or materials for payment of which it is issued; and every warrant shall be accompanied by a bill which shall contain the items which compose the sum for which it is issued, signed by the person in whose favor the warrant is drawn, and the said bill is delivered to the controller and filed by him.

Whenever the pipes for conveyance of water shall have been laid in any square of street or highway, the chief engineer of the water-works shall, within five days thereafter, inform the surveyor of the district within which the said street is situated, and the said surveyor shall, within ten days thereafter, assess the expense of laying such pipes at the sum hereinbefore mentioned, against the several owners of ground fronting said street, in proportion to their respective fronts thereon, and make out duplicate bills therefor, which he shall deliver to the chief engineer of the water-works; and the said engineer shall cause one of said bills to be delivered by one of the inspectors in the department for supplying the city with water, to the owner or owners of ground aforesaid; or, if the owner be unknown or cannot be found, placed upon the premises, and the other thereof he shall deliver to the register in said department. The said bills shall contain a printed notice that the amount thereof is payable to the register, and that if the same be paid within thirty days from the day of such delivery, a deduction of five per centum will be made thereon, and that if not paid within four months therefrom, a claim for the same will be filed. Every bill so delivered to the register shall have noted thereon, by the proper inspector, the date of the delivery of its duplicate to the person charged therein, or of its being left on

the premises as aforesaid. And at the end of four months from such date of delivery, or being left as aforesaid, and within five days thereafter, the register shall return to the said surveyor the bills in his hands unpaid, whereupon the said surveyor shall, within five days, prepare a full description by metes and bounds of each property whose owners shall not have paid the amount charged against him, and deliver the same, with said bill, to the city solicitor, who shall forthwith file claims for, and proceed to collect the same as it is now practiced and allowed by law, and when the amount of any such claim is collected and received by him and paid to the city treasurer, he shall inform the register thereof.

Whenever any pipes for the conveyance of water shall be laid in any of the streets or highways, the owners of the ground in front whereof the same shall be laid shall pay for the expense thereof the sum of one dollar for each foot of their ground upon such street: *Provided*, That on all corner lots an allowance shall be made of one-third the length of their fronts, but such allowance shall be always and only on the street or highway running at an angle to the street or highway in which pipe shall have been previously laid and paid for, but in no case shall the allowance exceed fifty feet on any corner lot.

It is obligatory on the chief engineer of the survey department to furnish the city controller with a statement of all bills for the laying of water-pipes, at the same time that they are sent to the register of the water department. At the expiration of four months from the time the register of the water department receives the bills for water-pipe, he shall then furnish the city controller with a statement of all unsettled bills sent to the city solicitor for collection.

All water-rents shall be payable to the register of water-rents at his office, annually, in advance, on the second Monday of January; and upon all water-rents unpaid upon the 1st day of May in any year, there is charged the sum of five per centum, and upon all rents unpaid on the 1st day of July in any year there shall be charged an additional sum of ten per centum; and if such rent, with the said additional charges, shall remain unpaid on the 1st day of September in any year, the said register shall notify the chief engineer of the water-works of the names of such delinquents, who shall cause the ferrules of all such delinquent water-tenants to be detached from the pipe of conduit, and suit be instituted for the recovery of such rent; and after such ferrules shall have been detached the water shall not again be supplied or furnished to the said premises, except upon payment of all arrears of water-rent, and the sum of two dollars for expenses incurred; and a printed notice shall be left upon the premises.

The following are the rates charged :

*Dwellings*.—One-half dwellings (one room on a floor), without hydrant or sink on premises, \$2.50; three-quarter dwellings (one room on a floor and kitchen), without hydrant or sink on premises, \$3.75; other

dwellings, without hydrant or sink on premises, \$5; all dwellings with hydrant or sink, or hydrant in yard and sink in kitchen, with hot or cold water, \$5.

**Wash-Pipes.**—Screw nozzles on hydrants or elsewhere, \$3; for watering horses, \$10.

**Wash-Basins or Sinks.**—In private dwellings (kitchen excepted), each \$1; in hotels or boarding-houses, each \$3; in drug-stores, attached to dwellings, each \$2.50; in stores, attached to dwellings, each \$2; in stores, attachment from main pipes, each \$5; in public buildings and halls, each \$3; in barber-shops, one basin or outlet, each \$3; in barber-shops, each additional outlet, \$1.

**Slop-Sinks.**—In boarding-houses, hotels, etc., each \$4.

**Wash-Tubs.**—(Stationary) each partition, \$1.

**Baths** (hot and cold, or either).—In private dwellings, each \$3; attached to main pipe, each \$5; in hotels and public bath-houses, each \$6; shower-baths in private dwellings, each \$1; shower-baths in hotels and public bath-houses, each \$2.

**Water-Closets, Urinals, Bidets, and Foot-Tubs.**—In private dwellings, each \$1; in stores, factories, etc., self-acting, each \$2; in stores, factories, etc., all others, each \$3; in hotels, boarding-houses, self-acting, each \$3; in hotels, boarding-houses, all others, each \$5.

**Stables.**—Without water on premises, each stall and each carriage, \$1; with water on premises, not exceeding five stalls or carriages, \$5; accommodating farmers, each stall, 50 cents.

**Bars.**—With or without water, each \$10.

**Hotels and Boarding-Houses** (in addition to opening charges).—For boarders to the number of ten, \$5; for boarders to the number of twenty-five, \$10; each additional twenty-five, \$5.

**Boarding and Private Schools.**—Each pupil, 3 cents.

**Family Bakeries.**—In addition to dwelling charges, \$3.

**Ice-Cream Saloons.**—In addition to dwelling charges, \$3.

**Eating and Oyster-Saloons.**—In addition to dwelling charges, \$5.

**Market-Houses.**—Each stall, 25 cents.

**Fish-Stalls.**—Each, \$5.

**Photographers.**—One operator, \$10; each additional operator, \$5.

**Hatters' Planks.**—Fours per set, \$8; sixes per set, \$10; eights per set, \$12.

**Brickyards.**—Per gang of men, \$5.

**Steam-Engines.**—Each horse-power, \$3.

**Steam-Boilers.**—Each horse-power, \$3.

**Dye-Works.**—Each hand on tubs used, \$10.

**Vinegar Establishments.**—According to capacity, from \$10 to \$20.

**Dye- or Wool-Washers.**—Each 100 gallons, 2 cents.

**Skin-Dressers.**—Each 100 gallons, 2 cents.

**Malt-Houses.**—Each 100 gallons, 2 cents.

**Packet Steamers and Vessels.**—Each 100 gallons, 5 cents.

**Breweries.**—Each 100 barrels, \$2.

**Other Establishments.**—Each 100 gallons, 2 cents.

**Fountains.**—Counter in stores,  $\frac{1}{8}$ -inch jet, \$5; garden, etc.,  $\frac{1}{8}$ -inch jet, 10 hours per day, 6 months, \$6; garden, each additional jet, 10 hours per day, 6 months, \$1.50; garden,  $\frac{1}{4}$ -inch jet, 10 hours per day, 6 months, \$7.50; garden, each additional jet, 10 hours per day, 6 months, \$2.50; garden,  $\frac{1}{2}$ -inch jet, 10 hours per day, 6 months, \$14; garden, each additional jet, 10 hours per day, 6 months, \$9; garden,  $\frac{3}{4}$ -inch jet, 10 hours per day, 6 months, \$32. (No ferrule larger than  $\frac{1}{2}$  inch granted for fountains exclusively.)

**Green- or Hot-Houses.**—With or without water, each \$5.

**Building Purposes.**—Bricks, per thousand, 5 cents; stone, per perch, 2 cents.

**Water-Meter Rate.**—Each thousand cubic feet, \$1.25.

**For a Flow of Water Twelve Hours Per Day.**—From  $\frac{1}{2}$ -inch ferrule, per annum, \$200; from  $\frac{3}{4}$ -inch ferrule, per annum, \$315; from  $\frac{1}{2}$ -inch ferrule, per annum, \$450; from 1-inch ferrule, per annum, \$800. The water-rent for meters used for church organs shall be assessed at the rate of from \$10 to \$25 per annum, according to capacity, and subject to water-rates at the discretion of the chief engineer.

The water-rents for all charitable institutions at fifteen per cent. of the regular schedule rates charged for the use of water.

The city water department has 772 miles of pipe under ground, and supplies with water 151,096 dwellings, 67,011 bath-rooms, 6119 fire-plugs, and has an average daily pumpage of 67,647,782 gallons of water.

The chief engineer of the department for supplying

the city with water reports, for the year 1882, that the receipts amounted to \$1,495,483.59, and the expenditures were \$660,958.45.

The itemized table of revenue and expenditures from annual and special appropriations and loans, shows—

Total revenue in twenty-eight years, 1855-82, was \$25,343,252.08; expenditures, \$17,190,896.

The average percentage expenditures on the basis of receipts in twenty-eight years, 1855-82, sixty-eight per cent.

In twenty-eight years, 1855-82, the quantity of water pumped by steam-power, one hundred feet high, was 287,910,247,143.

In twenty-eight years, 1855-82, the quantity of water pumped by water-power, one hundred feet high, was 182,393,609,671.

In twenty-eight years, 1855-82, cost to maintain the steam pumpage, \$4,408,398.08.

In twenty-eight years, 1855-82, cost to maintain the water pumpage, \$1,541,371.04.

In twenty-eight years, 1855-82, expense to maintain the works, \$5,949,769.12.

In twenty-eight years, 1855-82, expenditures of all kinds, except interest, \$17,190,896.

In twenty-eight years, 1855-82, cost of distribution, \$6,702,866.31.

In twenty-eight years, 1855-82, cost of machinery (construction) plant, \$1,520,315.15.

In twenty-eight years, 1855-82, cost of buildings, grounds, and reservoirs, \$2,984,800.06.

In twenty-eight years, 1855-82, cost of incidentals, \$3,145.37.

The following analysis of the water taken from the forebay of the Fairmount Water-Works, Feb. 9, 1872, is by Dr. Charles M. Cresson. The figures show the total amount of solid matter of all kinds contained in one United States standard gallon of water, containing two hundred and thirty-one cubic inches.

Water collected at the forebay of the Fairmount Water-Works, Feb. 9, 1872; no water had flowed over the dam for sixteen days:

	Grains in one gallon.
Condition of the sample.....	Clouded.
Amount of sediment in one gallon.....	1.9200.
Acid or alkaline.....	Alkaline.
Scum on boiling.....	None.
Total solid matter.....	6.2937.
Total after ignition.....	4.7250.
Total organic matter, carbonic acid, etc.....	1.6687.
Ammonia, free.....	0.0006985.
Ammonia, albuminoid.....	0.004656.
Nitrogen, from nitrates and nitrites.....	0.071900.
Sewage.....	0.046500.
Sulphuric acid, free.....	None.
Sulphuric acid, in combination.....	1.186700.
Chlorine, free.....	None.
Chlorine, in combination.....	0.260300.
Magnesia.....	0.149700.
Alumina and oxides of iron and silica.....	0.548100.
Lime.....	0.604800.

Total solid matter in one United States gallon of water:

	Analyzed by	Total grains.
Schnylkill.....	Prof. Boyer.....(in 1842).....	4421
Schuykill.....	Booth & Garrett (1854).....	6314
Schuykill.....	Booth & Garrett (1862).....	5693
Schuykill.....	F. C. Phillips.....(1870).....	4493

Boston, Mass.....	Horsford.....	3110
London, England.....	Letterly.....	16,380
Paris, France.....	.....	8830

**Surveys and Surveyors.**—The city is divided into twelve survey districts, and one surveyor for each district is elected by Councils. The twelve surveyors constitute the Board of Surveyors. Councils elect a chief surveyor and engineer, who serves five years, at a salary of three thousand dollars per annum. The district surveyors each receive five hundred dollars per year. All the public plans of town lots are deposited in the office of the Board of Surveys, subject to public inspection.

The said Board of Surveyors, under the direction of Councils, have authority to alter the lines and regulate the grades of any street or streets which may have been laid out upon any of the public plans, but not opened, subject to the approval of the Court of Quarter Sessions.

The chief engineer and surveyor shall, by and with the advice and consent of the Select Council, appoint the following officers, viz.: A recording clerk, whose duty it shall be, under his directions, to assist in the charge of the office, in recording documents, and in such business as may be required by said chief engineer and surveyor. He shall act as secretary of the Board of Surveyors, and keep regular minutes of their proceedings. A draughtsman, who shall make and copy such drafts and plans pertaining to the business of the department as the chief engineer and surveyor may require; and a rodman, who shall act as messenger, whose duties shall be prescribed by the said chief engineer and surveyor.

The chief engineer shall have the superintendence and direction of all surveys and regulations as authorized by acts of Assembly and ordinances of the several districts of the city of Philadelphia. He shall preside as president of the Board of Surveyors at all stated and special meetings of the said board, and be entitled to vote upon all questions. He shall, as chief engineer and surveyor, sign all plans and profiles of surveys, regulations, bridges, and culverts, when acted on by the said Board of Surveyors. He shall furnish the department of highways with all plans and specifications for laying out, grading, and regulating streets and public ways, and for bridges, culverts, location of inlets, or other improvements to be done under the superintendence of said department, and under the direction of the said chief engineer and surveyor.

The district surveyors shall, in their respective districts, lay out and survey the same, as may be requisite from time to time, and designate the proper lines, levels, and grades, as established by the confirmed plan of such district as he may have in charge. All general plans for sewers, bridges, or other improvements, to be constructed under the direction of the chief engineer and surveyor, shall be approved by the Board of Surveyors, to be decided thereby, and no contracts for such improvements, whether of culverts or bridges, shall be executed or work commenced until the chief engineer and surveyor shall certify that the plans thereof have been approved by said board; and

when built or constructed by contract, no estimate shall be paid without his certificate as to its correctness.

Each district surveyor shall keep an accurate record, in a book provided by the city for that purpose, of all surveys and adjustments of party lines, and also furnish duplicates thereof to the chief engineer and surveyor within one month after the same is made, and also such plans of such parts of said district, and in such form, and with such details as said chief engineer shall from time to time require for official purposes; and such plans, surveys, records, minutes, notes, memoranda, and regulations, whether in the principal office or in the respective offices of the district surveyors, are the property of the city of Philadelphia, and shall be delivered up to their successors in office on the termination of their official service.

The district surveyors and regulators shall be required to attend to all surveys to be made with a view to the erection of new buildings, or other work, in their respective districts, within four working days after notice so to do.

No person shall begin the foundation or erect any building or buildings adjoining to or upon any street, road, lane, court, or alley, or on the line of his, her, or their neighbors' ground, without first applying to and having the line or lines thereof regulated and marked by the surveyor and regulator of the district; or shall deviate therefrom by extending his, her, or their building or buildings beyond any or either of the lines or boundaries marked as aforesaid (unless determined otherwise by appeal).

The district surveyors shall be allowed to charge and demand, in advance, the following from the owners of property ordering the work to be performed, or against whom the same is properly chargeable, namely: For surveying and regulating each lot of not more than twenty feet in width, three dollars. Each lot of more than twenty and not over forty feet in width, four dollars. Each lot of more than forty and not over sixty feet in width, five dollars. Each lot of more than sixty and not over one hundred feet in width, six dollars; and for each additional foot in width, two cents. For measuring and making returns of paving and curbing, two cents per linear foot of property on each side, payable by contractor. For furnishing heights and stakes for resetting curb, seventy-five feet continuously or under, one dollar and fifty cents; for each additional foot, two cents. For measuring and making returns of repaving and paving new intersections, two cents per square yard, to be paid by contractor. And they shall be entitled to demand and receive from the city corporation the following, viz.: For measuring, making drawings, and returns for water-pipes, two cents per linear foot of property on each side, inclusive of description for liens for pipe laid. For gutter or grading stakes, one cent per linear foot. For furnishing heights and stakes one hundred feet or less of new curbing, two

dollars and fifty cents; and two cents per foot for each additional foot. For preparing liens for municipal claims, each (exclusive of water-pipe liens), one dollar. For surveys and duplicate sectional plans for line regulations, per acre, two dollars. For surveys and duplicate sectional plans for grade regulations, per acre, one dollar and fifty cents. For duplicate sectional plans, comprising both line and grade regulations, per acre, three dollars. For superintendence of branch culverts with lines and levels, property plans and assessment bills, with certificate that specifications have been complied with, per linear foot, six cents, payable by contractor.

The chief engineer and surveyor shall cause to be made books of plans of the city, divided into sections so far as the streets of the said city are laid out, which shall show the situation and dimensions of each property therein, with the city numbers thereof, and who are the owners, with such succession of blank columns as will permit the names of future owners to be entered therein, with the dates of transfer, and with index for recording such names alphabetically.

To enable the chief engineer and surveyor of the city to keep up the said books of plans, it shall be the duty of every seller and buyer of ground upon the planned plot of the city of Philadelphia to make report to him of every conveyance made, with the precise dimensions and locality of the premises, and, so doing, the same shall be received without charge, and noted on the deed of conveyance, by the assistant of the said chief engineer and surveyor; but if said seller and buyer shall both omit said duty, the recorder of deeds of the said county of Philadelphia shall not admit the deed of conveyance to record in his office without charging fifteen cents for each lot described therein; and it shall then be his duty to furnish the proper description of such lot or lots, with the date of conveyance, and names of grantor or grantee, within one month, into the office of the department of surveys, under the penalty of one dollar for each omission, to be recovered as penalties for taking unlawful fees are recovered, for the use of the said city; and it shall be the duty of every purchaser of houses and lands at judicial sales, and of every one to whom an allotment in partition shall have been made, and of every devisee by will, to make return to the chief engineer and surveyor of the purchase he has made, or allotment he has received, and of all devises made to him by will, with descriptions as aforesaid, which the said chief engineer and surveyor shall receive without charge; but if he shall not have done so simultaneously with the completion of his purchase, or on partition effected, or if on probate of any will the devisee shall not have done so as to any houses or lands in the said city, purchased, allotted, or devised, it shall be the duty of the clerk or prothonotary of the proper court, under whose authority such judgment or partition shall have been made, and for the register of wills to furnish such descriptions as are

above required of the recorder of deeds, so far as the wills to be proved in his office shall enable him to do so, for the like charge, and under the same penalty; and the clerk or prothonotary and register may make such charge against such purchaser or party taking in partition, or devisee, on delivery of the deed, certifying proceedings in partition, or granting probate of the will, and that whether the same be in trust, or for any estate for life only, or otherwise, unless the party interested shall produce to him or them the certificate of the chief engineer and surveyor that such duty has been performed.

If neither the seller or buyer, devisee or heir, or other party, who has acquired title to houses and lands in the said city, shall have furnished the description of the property sold, as aforesaid, both he who may have parted with and he who acquired title shall be liable for the taxes thereafter assessed thereon, without right of reclamation or contribution therefor, either against the other, and if the lands or houses sold be afterward sold for taxes thereafter accruing as a lien by record, before said duty shall have been performed, the purchaser shall acquire title as now he may by law within the county of Philadelphia; but if the said duty of making the return, as required by this act, shall have been discharged by the party who shall have acquired title before the tax accrued, as a lien of record, for which the same shall have been sold, the purchaser at the tax sale shall not acquire the title of such person who shall have performed such duty, or of his heirs or assigns, unless the same shall have been made in the name of such owner after the service of process upon him.

The greater part of Philadelphia is laid out in parallelograms, with the streets at right angles to each other, making the system of numbering houses a simple one. The houses on streets running east and west are numbered by hundreds, beginning at Front Street, near the Delaware River. The houses on the south side bear even numbers, those on the north side uneven numbers. Thus, on the north side of Chestnut Street, beginning at Sixth and going west, the numbers are 601, 603, 605, etc.; on the south side the numbers are 600, 602, 604, etc. At Seventh Street the numbers in 700 begin, and so each successive street begins a hundred of its own number.

Market Street is taken as a dividing-line between north and south for numbering houses on streets running north and south. The even numbers are on the west side of these streets, the uneven numbers on the east side. No. 1 "north" and No. 1 "south" begin at Market Street. No. 100 north begins at Arch Street, the first principal street north of Market; No. 100 south begins at Chestnut, the first principal street south of Market. The following are the names of the streets running parallel to Market Street, north and south thereof. The numbers signify the number which is given to the houses north or south, as the case may be, of the street to which it is attached.

Those streets having no numbers are narrow or short streets between the principal avenues:

No.	North.	No.	South.
1	Market.	1	Market.
	Filbert.		Jayne.
	Commerce.		Merchant.
	Church.		Minor.
100	Arch.	100	Chestnut.
	Cherry.		Saneom.
200	Race.		Library.
	Branch.		Dock.
	New.	200	Walnut.
300	Vine.		Locust.
	Wood.	300	Spruce.
400	Callowhill.		Union.
	Willow.	400	Pine.
	Noble.	500	Lombard.
	Margaretta.		Caskill.
500	Buttonwood.	600	South.
	Spring Garden.	700	Bainbridge.
600	Green.		Monroe.
	Mount Vernon.		Fitzwater.
	Wallace.		German.
	Melon.	800	Catharine.
700	Fairmount Avenue.		Queen.
	Olive.	900	Christian.
800	Brown.		Marriott.
	Parrish.	1000	Carpenter.
	Ogen.	1100	Washington Avenue.
900	Poplar.		Ellsworth.
	Laurel.	1200	Federal.
	Beaver.		Marion.
	George.	1300	Whartou.
1200	Girard Avenue.	1400	Reed.
	Stiles.	1500	Dickinson.
1300	Thompeon.		Greenwich.
	Seybert.	1600	Tasker.
1400	Master.	1700	Morrie.
1500	Jefferson.		Pierce.
1600	Oxford.	1800	Moore.
1700	Columbia Avenue.		Sigel.
1800	Moutgomery.	1900	Miffin.
1900	Berks.	2000	McKean.
2000	Norris.	2100	Snyder.
	Otis.	2200	Jackeon.
2100	Diamond.	2300	Wolf.
2200	Susquehanna Avenue.	2400	Ritner.
2300	Dauphin.	2500	Porter.
2400	York.	2600	Shunk.
2500	Cumberland.	2700	Oregon Avenue.
2600	Huntingdon.	2800	Johnson.
2700	Leligh Avenue.	2900	Bigler.
2800	Somerset.	3000	Pollock.
2900	Cambria.	3100	Packer.
3000	Indiana.	3200	Curtin.
3100	Clearfield.		
3200	Alleghany Avenue.		

The following lists give the names of the principal city surveyors and regulators and assistants to date:

PRINCIPAL CITY SURVEYORS.<sup>1</sup>

Thomas Holme, surveyor-general.....	18 2 mo., 1682
Edward Penington, surveyor-general.....	Feb. 20, 1698
Thomas Fairman, surveyor-general.....	—, 1702
Jacob Taylor, surveyor-general.....	Nov. 26, 1706
Thomas Redman, from.....	1712 to 1725
Jacob Taylor, <sup>2</sup> appointed.....	Aug. 30, 1725
Benjamin Eastburn, surveyor-general.....	Aug. 8, 1737
William Parsons, surveyor-general.....	Aug. 27, 1741
Nicholas Scull, surveyor-general.....	Jan. 14, 1748
Joseph Fox, regulator.....	Jan. 14, 1748
John Lukens, surveyor-general.....	April 10, 1761
David Rittenhouse, appointed.....	Jan. 25, 1774
Edward Bonsall, appointed.....	Jan. 25, 1774

<sup>1</sup> From John Hill Martin's "Bench and Bar of Philadelphia."

<sup>2</sup> Vice Redman.

Josiah Matlack, appointed.....	April 15, 1782
James Pearson, appointed.....	April 15, 1782
Reading Howell, appointed.....	—, 1804
James Peareon, appointed.....	—, 1808
William Stevenson, appointed.....	—, 1809
William Garrigue, appointed.....	—, 1811
Samuel Haines, appointed.....	Aug. —, 1814
Alphonse C. Ireland, appointed.....	Aug. —, 1814
Enoch Lewis, <sup>3</sup> appointed.....	1827 to 1834
Edward H. Gill, appointed.....	1834 to 1840
Samuel Haines, appointed.....	Jan. 16, 1840
Samuel Honeyman Kneass, appointed.....	April 26, 1849
Spencer Bonsall, appointed.....	May 9, 1853
Strickland Kneass, <sup>4</sup> appointed.....	May 29, 1855
Samuel Lightfoot Smedley, appointed.....	March 14, 1872

ASSISTANT CITY SURVEYORS.<sup>5</sup>

Ordinance of Dec. 5, 1839.

Marine T. W. Chandler, appointed.....	Jan. 16, 1840
Spencer Bonsall, appointed.....	July 11, 1850
David Hudson Shedaker, appointed.....	Sept. 1, 1853

PRINCIPAL ASSISTANT CITY ENGINEERS.

Office created by Ordinance of July 7, 1870.

James R. McClure, appointed.....	July 7, 1870
J. Milton Titlow, appointed.....	March 1, 1874

ASSISTANT CITY ENGINEERS.

Office established by Ordinance of Feb. 6, 1874.

Rudolph Hering, <sup>6</sup> appointed.....	Feb. 6, 1874
John D. Estabrook, appointed.....	Aug. 15, 1882

The department of surveys of the city of Philadelphia was organized by ordinance of Councils, under the provisions of the 27th and 50th sections of the act (of consolidation) of Feb. 2, 1854. The ordinance was sent to the mayor on Oct. 14, 1854, and not having been returned to Councils within fifteen days thereafter, became a law.

On March 27, 1855, Councils in joint session elected Strickland Kneass chief engineer and surveyor, together with twelve district surveyors and regulators, viz.:

- |                           |                       |
|---------------------------|-----------------------|
| 1. Charles S. Cloes.      | 7. James P. Davis.    |
| 2. David Hudson Shedaker. | 8. William Reed.      |
| 3. Francis Lightfoot.     | 9. Henry A. Frink.    |
| 4. Joseph King, Jr.       | 10. Henry Haines.     |
| 5. Jesse Lightfoot.       | 11. John H. Levering. |
| 6. Spencer Bonsall.       | 12. Amos Stiles, Jr.  |

These to constitute a Board of Surveyors, with the chief engineer as president. These gentlemen met once, and organized as a board by electing Strickland Kneass chief engineer and surveyor and president of the Board of Surveyors; but they never performed any other duty, as they were superseded by a supplement to the act (of consolidation) of April 21, 1855, directing that the members of the Board of Surveys should be elected by the votes of the twelve survey districts into which the city was divided by the supplement, one person to be elected in each district, to serve for five years, "who shall have had five years' experience and skill in his profession." The supplement also directed that the board should be organized by the election of the chief engineer as president.

The said district surveyors were duly elected on May

<sup>3</sup> Vice Howell.

<sup>4</sup> Chief engineer and surveyor.

<sup>5</sup> The act of Feb. 2, 1854, abolished this position.

<sup>6</sup> Resigned Dec. 31, 1881.

*Strickland & Brass*

1, 1855, and the board organized by electing Strickland Kneass chief engineer and surveyor. (Journal of Select Councils, May 7, 1855.)

Strickland Kneass,<sup>1</sup> late assistant to the president of the Pennsylvania Railroad Company, was born in Philadelphia, July 29, 1821, his father being William Kneass, who for many years was engraver for the United States Mint. His school education was obtained chiefly at the classical academy of James P. Espy, and at an early age he adopted civil engineering as a profession. Mr. Kneass derived most of his practical training from his services upon the Delaware and Schuylkill Canal and Philadelphia and Wilmington Railroad, which were constructed under the supervision of his eldest brother, Samuel H. Kneass, as chief engineer. On the completion of the latter road he became a student in the Rensselaer Polytechnic Institute at Troy, N. Y., whence he graduated in 1839 as civil engineer, taking the highest honor. He was soon after made assistant engineer and topographer on the State survey for a railway between Harrisburg and Pittsburgh, which enterprise was rather ahead of the times and failed of accomplishment. He then became draughtsman in the Naval Bureau of Engineering, at Washington, and was afterward employed by the British Commission in preparing the maps of the northeast boundary between the United States and the provinces; and, subsequently, by the Federal government, on the general map of the boundary survey. In 1847 he was selected, by J. Edgar Thomson, chief engineer, as one of his assistants in the explorations which resulted in the construction of the Pennsylvania Railroad, and afterward he was promoted to the position of principal assistant engineer, and designed the first shops and engine-house erected by the company at Altoona. In this part of his career the powers of Mr. Kneass were severely tasked, as the construction of the road from Altoona to the summit of the Alleghenies was one of the most difficult engineering feats of the day. In 1853 he resigned to accept the position of associate engineer on the North Pennsylvania Railroad, where he remained two years, leaving, in 1855, to accept the office of chief engineer and surveyor of the newly-consolidated city of Philadelphia. To that position he was re-elected three times, each for a term of five years. He here organized the Department of Surveys and Registry Bureau, and their development under his direction may be regarded as one of the most valuable results attained in the city. Under his surveys the entire drainage system of the city was provided for, resulting in the construction of the great sewers to carry off the waters of Cohock-sink Creek, on the northeastern, and of Mill Creek, in the western part of the city. Of the various bridges that span the Schuylkill, those at Callowhill Street and Chestnut Street are from his designs. He

was one of the first to encourage the project of city passenger railways, and was chief engineer of many of these companies. In 1862, during Lee's invasion, he was dispatched into the interior, and during his absence made an extended survey of the Susquehanna River from Duncan's Island to Havre de Grace. He also assisted Professor Bache in preparing topographical maps of the surroundings of Philadelphia, with a view to the location of forts and other devices for protecting the city from invasion. Mr. Kneass resigned the office of chief engineer and surveyor on March 6, 1872, to accept the position of assistant to J. Edgar Thomson, president of the Pennsylvania Railroad Company, at the earnest solicitation of that gentleman, and Councils passed a series of resolutions, as did also the Board of Surveys and South Street Bridge and Park Commissions, referring in complimentary terms to the character of his service while in public office. As an officer of the main line he soon became identified with the management of some of the branches of the Pennsylvania Railroad Company, and in February, 1880, became president of the Pennsylvania and Delaware Railroad Company, of the Trenton Railroad Company, of the Columbia and Port Deposit and Western Railroad Company, and a director of the Pittsburgh, Cincinnati, and St. Louis line; also was made president of the Eastern Railroad Association in 1878, and was largely instrumental in bringing it up to its present state of usefulness. He was a member of the American Philosophical Society, of the Franklin Institute, and of the American Society of Civil Engineers, and was past president of the Engineers' Club of Philadelphia. He filled the position of assistant to the president of the Pennsylvania Railroad at the time of his death, which occurred at twenty minutes after five o'clock, on the morning of Jan. 14, 1884, from heart-disease, after an illness of four months.

In 1853, Mr. Kneass was married to Margaretta Sybilla, granddaughter of Judge George Bryan, of the Supreme Court of Pennsylvania, who survives her husband. Mr. Kneass also left five children, two sons and three daughters.

#### DISTRICT SURVEYORS AND REGULATORS.<sup>2</sup>

1. Thomas Daly, elected.....	May	1, 1855
2. Charles S. Close,* elected.....	May	1, 1855
3. Spencer Bonsall, elected.....	May	1, 1855
4. Amos Stiles, Jr., elected.....	May	1, 1855

11. George W. Hancock, <sup>5</sup> appointed.....	March 14,	1872
5. Andrew French, <sup>6</sup> appointed.....	March 18,	1874
1. William C. Cramer, <sup>7</sup> elected.....	Nov.	18, 1878
11. Joseph Johnson, <sup>8</sup> elected.....	Jan.	1, 1878
6. Joseph Mercur, <sup>7</sup> elected.....	Dec.	3, 1879
9. Henry A. Stallman, <sup>8</sup> elected.....	Feh.	17, 1880
10. George S. Wehster, <sup>9</sup> appointed.....	April	19, 1880

RECORDING CLERK AND SECRETARY OF THE BOARD OF SURVEYS.  
George Sturgis, appointed.....March 31, 1856.

**Table of Distances in Philadelphia.**—Strickland Kneass, chief engineer and surveyor of the city, prepared the following useful table showing the length of the squares, the width of the streets, the distances to and from various parts of the city, and the order in which the house numbers run. The distances east and west are measured along the south side of Market Street, and the distances north and south are measured along the west side of Broad Street. The first column shows at what street the numbers begin for each 100; thus, No. 520, south of Market, will be found between Lombard and South Streets; No. 1329 between Wharton and Reed Streets; No. 723, north of Market, between Fairmount Avenue and Brown Street, and No. 1520 between Jefferson and Oxford Streets. On the streets running east and west the names themselves indicate where the numbers begin. The third column shows the width of the streets, the fourth the length of the squares or blocks, and the fifth the aggregate distance. As 5280 feet make one statute mile, this last column will enable any one to compute the distance from point to point along Market Street and Broad Street, and these distances will approximate to the actual distances on most of the parallel streets. Thus, going south from Market Street, the distance from the south side of Market to the south side of Washington Avenue is one mile and 71 feet 11 inches over; from the south side of Market, going north, it is one mile to the south side of Fairmount Avenue, and 109 feet 10 inches over. Going west from the Delaware, it is one mile to the east line of Twelfth Street, and 18 feet 5 inches over; it is two miles and 362 feet 5 inches to the Schuylkill River, nearly three miles to Thirty-sixth Street, nearly four miles to Forty-seventh Street, and a little over five miles to Fifty-seventh Street. These are illustrations only; other distances can be computed in the same way.

<sup>1</sup> Vice Kelly, deceased.  
<sup>2</sup> By the board, in place of his deceased father.  
<sup>3</sup> The act of Assembly of April 13, 1868, creating the Twenty-fourth Ward, made it a survey district, which necessitated the appointment of a district surveyor. Mr. Hibbard was appointed by the board, and continued, by election, since.  
<sup>4</sup> In place of his father.  
<sup>5</sup> Vice Smedley.  
<sup>6</sup> Vice Wolf, resigned.  
<sup>7</sup> Vice Davis, deceased.  
<sup>8</sup> In place of Lightfoot, who declined.  
<sup>9</sup> In place of Isaac E. Shallcross, resigned.

<sup>10</sup> The omission of Thirty-fifth Street is not accidental. In consequence of peculiar territorial conditions in West Philadelphia south of Market Street, no street runs through between Thirty-fourth and Thirty-sixth.

1 By this arrangement Numbers 1000 and upwards, and 1100 and upwards, seem to be excluded. This is the case on Broad Street, which Poplar Street strikes after running from the Delaware considerably to the northwest, instead of directly west. At the Delaware Poplar Street is, comparatively speaking, but a short distance above Brown Street. But at Broad Street Poplar is but a little distance south of Girard Avenue. In other words, the distance from Poplar Street to Girard Avenue on Front Street is much greater than upon Broad Street. On Front Street the numbers run over 1100, but on Broad Street, the distance being so short, they cannot do so.

Distances to Various Points in the Park.—The distances measured below are understood to be along the main drive. There are numerous by-paths and short cuts by which pedestrians may shorten the distance, except along the Wissahickon.

From the Green Street gate—

	Miles.
To the east end of Girard Avenue bridge.....	1
“ Lansdowne entrance.....	1½
“ Belmont Avenue.....	3
“ George’s Hill (direct).....	3½
“ George’s Hill (via Belmont).....	4½
“ Belmont (direct).....	3½
“ Belmont (via George’s Hill).....	4½
“ Falls Bridge (via West Park).....	6½
“ Wissahickon Pike (via West Park).....	7½

The distances along the Wissahickon are as follows:

From the mouth of the Wissahickon—

	Miles.
To Livezey’s Mills.....	3
“ Valley Green.....	4
“ Indian Rock.....	4
“ Thorp’s Mill Lane.....	6

The total distance along the drive from the Green Street gate, through the Western Park and over the

Falls Bridge to the terminus of the Wissahickon drive, is twelve and a quarter miles, five miles of which are on the direct road through the beautiful valley of the Wissahickon.

**City Commissioners.**—The city commissioners are elected at the general election held on the Tuesday next following the first Monday of November. Three are then elected, each voter voting for two. They are county officers.

The city commissioners shall have the respective places appointed for holding elections put in convenient and proper order for holding and conducting the same, shall furnish the election officers of each division with the necessary blanks, stationery, etc., and a list of the taxable inhabitants of such division.

The city commissioners shall disburse no money, nor make any contracts for public works or highways, nor take any part in the opening of streets, or the assessment of the damage therefor.

The city commissioners shall draw no warrants upon the city treasury for the payment of the fees of jurors, viewers, witnesses, or officers of the courts, without a certificate of the prothonotary or clerk of the court, countersigned by one of the judges of the court in which the duty or service was performed, that the same is correct to the best of his belief; nor shall any warrant be drawn for jury or witness fees in favor of any person but the juror or witness entitled to such fees.

The city commissioners of the city shall, before entering on the duties of their office, give bond in such amount, and with such sureties as shall be approved by Councils, for the faithful performance of the duties of the said office, and that no debt shall be contracted or warrant drawn against the city by said commissioners except for the purposes legally authorized, and not to exceed the appropriation therefor made by Councils.

In Philadelphia, all applicants for license to sell intoxicating liquors, by any measure less than one quart, shall appear before the commissioners of said city between the first Monday in March and the first Monday in April in each and every year, and make and sign an oath or affirmation of the amount of their respective sales of liquors and other refreshments at their respective bars, to the best of their knowledge and belief; and said commissioners are hereby authorized to administer said oath or affirmation, and required to file the same in their office, and rate and classify each applicant in accordance therewith: *Provided*, That any applicant for a license, for a place not previously licensed, shall be rated and classified by them for the first year as they may deem just, after considering the locality of the premises for which license is asked; and they shall make out a

correct list of all such applicants, with their names, places of business, and the class in which they are respectively placed, and furnish the same to the city treasurer, who shall advertise the same once a week, for three weeks, in two daily papers.

The commissioners shall perform such other duties as Councils may from time to time prescribe.

The receipts of this department for 1882 amounted to \$130,760.51, received from the following sources:

From market-houses.....	\$48,002.00
“ wharves and landings.....	46,041.00
“ city property.....	7,127.89
“ sale of city property, etc.....	13,299.62
“ vendors' license.....	16,291.00
Total.....	\$130,760.51

**Coroner.**—The coroner holds an inquest on the body of any deceased person who shall have died of violent death, or whose death shall be sudden: *Provided*, That such sudden death be after an illness of less than twenty-four hours, and that no regular practicing physician shall have been in attendance within said time, or that suspicious circumstances shall render the same necessary. He appoints a deputy at a salary of fifteen hundred dollars per annum, and himself receives six thousand dollars per annum. Coroner's jurors receive \$1.50 per day.

<sup>3</sup> Appointed Oct. 21, 1839, elected 1840. <sup>4</sup> Died Nov. 5, 1848.

<sup>5</sup> Elected Dec. 20, 1851; died Feb. 17, 1880.

<sup>6</sup> Appointed in place of Taylor, who died in office in 1870, and Brown was afterward elected in 1871, and died May 12, 1878, aged fifty-three.

<sup>7</sup> Died June 28, 1880, aged fifty. By Constitution of 1873 the term of Coroner Goddard was extended to Jan. 1, 1878.

**City Controller.**—The qualified voters of the city elect a city controller every three years. He acts as a check on all heads of departments in matters of finance.

He shall countersign all warrants on the city treasurer, and shall not suffer any appropriation made by the City Councils to be overdrawn.

He shall superintend the fiscal concerns of the city in such manner and make reports thereon at such times as shall be prescribed by ordinance.

It shall be a misdemeanor in office for the controller of the city to pass, or the treasurer of the city to pay, any bill or order for any object not authorized by law.

The city controller shall he and he is hereby required to keep separate accounts for each specific or separate item of appropriation made by City Councils to each and every department of the city, and shall require all warrants to state particularly against which of said items the said warrant is drawn; and he shall at no time permit any one of the items of appropriation to be overdrawn, or the appropriation for one item of expenses to be drawn upon for any other purpose by any one of the departments than that for which the appropriation was specifically made; he shall upon receiving a bill or warrant from any one of the departments proceed immediately to examine the same, and if the said bill or warrant contain an item for which no appropriation has been made, or the appropriation for which is exhausted, or to which, from any other cause, he cannot give his approval, it shall be his duty immediately to inform such department, and the warrant therefor shall not be issued unless by special authority from the City Councils.

The controller shall communicate at all times to the mayor and the committees of Councils such information upon the condition of the finances and the accounts of all officers expending or receiving the moneys of the city as his department can afford.

It shall be the duty of the prothonotaries of the several courts of the said city, on the expiration of each term of their respective courts, to furnish to the controller a statement, under oath or affirmation, of the fines and penalties imposed, recognizances recovered, judgment and jury fees received, and arbitrators' and witnesses' unclaimed by the parties entitled to the same, with the name of the case in which the same were imposed, recovered, or received; and it shall be the duty of the sheriff of the county of Philadelphia to submit his account with the city to the controller for settlement on the 1st day of January, and quarterly thereafter, and upon such settlement the sheriff shall be charged with all sums received and recovered as aforesaid, and he shall forthwith pay over the balance, if any, to the city treasurer; and any officer neglecting or refusing to comply with the provisions of this section shall be deemed guilty of a misdemeanor in office, and be proceeded against in like manner as for other misdemeanors.

It shall be the duty of the controller of said city

upon the death, resignation, removal, or expiration of the term of office of officers and persons who, by law or ordinance, may be authorized to receive or pay city moneys, make contracts, or draw warrants on the treasury, to audit and examine the accounts and official acts of said officer, and if such officer shall be found to be indebted or liable to said city, a copy of the report of said controller shall be filed in the office of the court of Common Pleas of said city, and a writ of *scire facias* may be issued thereon, and the City Councils shall have full power and authority to prescribe by ordinance the mode and means by which the said controller shall exercise the duty hereby enjoined, and the officers and persons whose accounts and official acts shall be so audited and examined. And whenever the writ of *scire facias* herein authorized shall issue, it shall be lawful to file with the præcipe therefor a copy of the official bonds of such defendant, and the writ of *scire facias* shall contain a clause warning the surety or sureties, or the executors or administrators of such surety or sureties, to appear and make defense, and the judgment in such proceeding may be entered against all the parties named in said writ.

Every department, board, or officer shall furnish to the controller weekly a list of the warrants which shall have been issued by such department, board, or officer during the preceding week, which list shall contain the number and amount of such warrants, the names of the party in whose favor the same were drawn, and the items of appropriation against which they were charged.

All departments and officers of the city government who are or may hereafter be authorized by ordinance to draw warrants upon the city treasurer for the payment of salaries in their respective departments, are hereby expressly prohibited from exceeding, in or for any one month, one-twelfth of the aggregate appropriation made by Councils for the payment of such salaries for the fiscal year, and the city controller is hereby required to withhold his signature from all warrants drawn in violation of the provisions of ordinances.

He shall keep a regular set of books, in which shall be opened and kept as many accounts, under appropriate titles, as may be necessary to show distinctly and separately all the estate and property whatsoever, real and personal, vested in the city by law or otherwise, all trusts in the care of the same, all debts due to and owing by the city, all the receipts and expenditures in the various departments, and all appropriations made by Councils, and the sum expended under the same.

He shall make a report, verified by oath or affirmation, to the City Councils, at their first stated meeting in January in each year, of the public accounts of the city and of the trusts in their care, exhibiting all the receipts and expenditures of the city, the sources from which the revenue and funds are derived, and in what manner the same have been disbursed, each

account to be accompanied by a statement in detail, in separate columns, of the several appropriations made by Councils, the amount drawn on each appropriation, and the balance standing to the debit or credit of such appropriation; and he shall publish said report in two daily papers, twice in each paper.

In Philadelphia, the duty of county auditors was transferred by the act of Feb. 2, 1854, to a city controller, to be elected every second year. By the Constitution of 1873, the term was increased to three years. The revenues of the controller's department from all sources for the year 1882, were,—

**Highway Department.**—The department of highways, bridges, and sewers of the city is constituted as follows: One chief commissioner, at a salary of four thousand dollars; six assistant commissioners, at a salary of two thousand dollars each; one superintendent of city railroads, one chief clerk, one assistant clerk, one license clerk, one assistant license clerk, one miscellaneous clerk, one messenger, and twelve street superintendents.

The building and repairing of all bridges, culverts, sewers, and inlets, the opening, grading, curbing, paving, repaving, and repairing of all streets, roads, lanes, alleys, and other highways of the city of Philadelphia, is under the control, supervision, and management of the chief commissioner of highways.

Councils elect, in joint convention, by *viva voce* vote, one chief commissioner of highways, to serve three years. The said chief commissioner appoints six assistant commissioners, whose term is two years (three of whom are elected for one year, and three for two years), and until their successors be duly qualified. It is the duty of said chief commissioner to assign the assistant commissioners to their respective districts, and the said assistant commissioners have charge of the respective districts to which they have been assigned, and have the general supervision of all work done therein by order of the chief commissioner (who may, at his discretion, at any time assign any of the said assistants to any other district he may deem for the advantage of the department). The said assistant commissioners enforce all laws and ordinances relative to the department of highways, and have charge of and direct (subject to the chief commissioner) the street superintendents and workmen that may be employed within the limits of their respective districts.

The chief commissioner shall annually report to Councils, in detail, the receipts and disbursements of his department during the past fiscal year.

The joint standing committee of Councils have supervision over all matters appertaining to this department, and it is the duty of the chief commissioner of highways to submit all contracts, plans, etc., together with all accounts, bills, etc., for work or labor

done, which may appertain to this department, to the said committee for their inspection, before any action shall be had thereon.

The appropriation for this department for the year 1882 was \$639,397.60, and the disbursements were \$506,089.75, and the revenue for the year amounted to \$51,175.18.

The office of the chief commissioner of highways was created by the act of consolidation, *i.e.*, Feb. 2, 1854, P. L., for the supervision of the streets and roads of this city and county. By the act of April 21, 1855, and ordinance of Councils, the chief and his two assistant commissioners were constituted a board for the transaction of all business relating to the highways. The term of office at first was for one year, but since the new constitution for three years.

This department in 1882 expended \$251,885 for street cleaning and removing ashes, garbage, and dead animals. Prior to 1882 this work had come under the supervision of the Board of Health, and their annual expenditures for this purpose were as follows:

	Cleaning Streets and Removing Ashes.	Removing Garbage.	Total.
1877.....	\$282,027.10	\$49,123.27	\$331,130.27
1878.....	168,899.44	22,747.25	191,646.69
1879.....	171,552.36	23,188.46	194,740.81
1880.....	169,040.16	23,102.96	192,233.12
1881.....	133,630.73	19,311.00	152,941.75
Average for five years under Board of Health.....			212,542.50
1882 Under Department of Highways.....			251,995.00

**CHIEF COMMISSIONERS.**

Thomas Birch, elected.....	Oct.	5, 1854
John McCarthy, elected.....	July	16, 1867
Conrad B. Andress, elected.....	July	8, 1858
Joseph Shantz, elected.....	July	7, 1869
James Landy, elected.....	Feb.	6, 1860
George W. Schofield, elected.....	Feb.	26, 1863
William W. Smedley, elected.....	Feb.	11, 1864
Mahlon H. Dickinson, elected.....	Feb.	12, 1867
John Liberton Hill, elected.....	Feb.	18, 1875
William Baldwin, <sup>1</sup> elected.....	March	2, 1876
John D. Estabrook, elected.....	Jan.	6, 1883

**Markets and City Property.**—This department is conducted by a commissioner of markets and city

<sup>1</sup> Mr. Baldwin was elected for the unexpired term of John L. Hill, who resigned and was re-elected for three years, Jan. 1, 1877, and again on Dec. 30, 1879, for three years from Jan. 1, 1880. He died suddenly of heart-disease on Jan. 1, 1883, aged forty-five years, on his way to attend a joint meeting of Councils, who were to fill his expired term of office.

property. He is elected by Councils for a term of three years. He is charged with the renting and collecting of the rents of all market-stalls and stands, and with the care of all the market-houses belonging to the city, and wharves and landings.

**Steam-Engines and Boilers.**—The mayor of the city of Philadelphia nominates, in the month of June, annually, and by and with the advice of the Select Council of the said city, appoints a person skillful and competent, for the discharge of the duties performed by him, to be the inspector of stationary engines in and for the city of Philadelphia. Before entering upon the duties of his office he gives bond in the sum of ten thousand dollars, with security, approved by the mayor.

It is the duty of the inspector carefully to examine and inspect all stationary steam-engines and steam-boilers erected or in use; and no stationary steam-engine or steam-boilers shall be erected and put into use and operation in the city of Philadelphia without being first inspected and certified to be competent and safe under the hand and seal of the inspector; and he shall furnish to the owner, proprietor, or other person using such engine or steam-boiler a certificate under his hand and the seal of his office that it has been so inspected and found to be competent and safe; he shall from time to time, and as often as he may deem expedient, examine all or any such engines or steam-boilers in use or operation, and for such purpose he, together with his assistants, may enter upon any premises and require the removal of any part of the building, fixtures, or machinery, and he shall note in a book to be kept for that purpose the result of every such examination; and he shall, at least once in every year, make such examination and give certificate of the result whenever required.

**Gas and Gas-Works.**—The city manufactures gas under and by twelve trustees, six elected by Common and six by Select Council. They select a president out of their own number. They serve three years. They conduct the business of manufacturing and distributing gas.

It is the duty of the trustees to manufacture carburetted hydrogen gas from bituminous coal for the purpose of public and private illumination, and to lay pipes for its distribution through the city. The trustees keep accurate accounts of their receipts and disbursements, and report the same, together with a statement of their proceedings, to Councils annually in the month of January, and give such other information as may from time to time be required by the Select or Common Council.

The trustees are vested with power to construct works, to purchase materials, make contracts, and employ such agents as they deem necessary in and about the furnishing of light for public and private use.

According to the engineer's report of the gas-works for 1882, the total amount of gas made during the year was 2,319,898,000 cubic feet, making the total

product of the works since their erection 37,342,521,-000 cubic feet.

The amount manufactured at the different stations was as follows:

	Cubic feet.
Gas made at the Twenty-sixth Ward works.....	713,212,000
Gas made at the Ninth Ward works.....	1,079,907,000
Gas made at the Fifteenth Ward works.....	23,155,000
Gas made at the Twenty-first Ward works.....	41,627,000
Gas made at the Twenty-fifth Ward works.....	461,997,000
	2,319,898,000

The maximum consumption of gas in twenty-four hours was 10,667,000 cubic feet, which occurred on the night of the 22d of December, 1882. The maximum production of gas in twenty-four hours was 10,049,000 cubic feet.

The Philadelphia Gas Department has 742 miles of gas mains, 13,100 street lamps, about 102,000 consumers of gas, with an annual consumption of about 2,054,857,000 cubic feet. The price for cubic feet is \$1.90 for gas, with an average illuminating power of 16.39 candles. By resolution of the trustees, gas has been supplied the city lamps without cost since Oct. 1, 1882.

The net profits of the gas-works during the year 1882 were \$510,586.57, making the accumulated profits to the end of the year, \$4,538,957.23.

The board of trustees of the Philadelphia Gas-Works for 1884 are as follows:

President, William D. Gardner; Trustees, John S. Rittenhouse, William R. Leede, Samuel S. Kelly, M. Hall Stanton, James Work, Alfred Moore, William W. Alcorn, Thomas H. Gill, William H. Smith, Esq., Ham B. Morrie, James E. Salter, William D. Gardner; Engineer, William K. Park (elected Feb. 28, 1873); Cashier, Samuel M. White (elected June 28, 1870); Registrar, Thomas Nolle (elected Dec. 9, 1870); Controller, Alexander J. McCleary.

**Police Magistrates.**—In accordance with the requirements of the twelfth section of Article v. of the Constitution of 1873, the Assembly, by act of Feb. 5, 1875, authorized the election of a police magistrate (to serve for five years from the first Monday in April) for every thirty thousand inhabitants of the city of Philadelphia. The courts therefor to be located by Councils, and indicated by numbers, the magis-

<sup>1</sup> Supplied directly from City Works.

<sup>2</sup> Supplied directly from Northern Liberties Gas-Works.

trates to choose their courts by lot; and in the election for magistrates, no voter to vote for more than two-thirds of the number to be elected. By the Constitution, the office of alderman in Philadelphia was abolished.

The police magistrates have jurisdiction not exceeding one hundred dollars, and exercise such authority, civil and criminal, as is given them by law. Their jurisdiction extends throughout the city and county, and they are *ex officio* justices of the peace.

MAGISTRATES.

1. Jesse S. Bonsall, elected.....	Feb.	16, 1875

23. Thomas H. Clark, elected.....	Feb.	17, 1880
24. Thomas Rundall, elected.....	Feb.	17, 1880
3. James L. Brown, appointed.....	May	26, 1881

The following statistical information for reference was furnished by the various city departments at the request of John E. Addicks, health officer in 1882:

Philadelphia is situated in latitude 39° 57' N. and 75° 09' W. The total area is one hundred and twenty-nine thousand four hundred and fifty square miles, or eighty-two thousand eight hundred and forty-eight acres.

The greatest elevation in each ward above high water is, viz.:

<sup>1</sup> Develin died May 11, 1877, and John T. Thompson was appointed by the Governor to fill the vacancy, and elected Feb. 19, 1878, for five years.

<sup>2</sup> Appointed by the Governor *vice* Sutphin, deceased. By the act the Governor fills the vacancy until the first Monday in the next succeeding April. The vacancy to be supplied at next municipal election, for the full term of five years, as in case of Thompson, of Court No. 14.

<sup>3</sup> Henry H. Everly, of Court No. 3, died May 23, 1881, aged forty-five, and on May 26th Lieut. James L. Brown was appointed to fill the vacancy, and elected on the third Tuesday in February, 1882, to serve five years from the first Monday in April.

The census of 1777 was taken by order of Sir William Howe when the British army was in possession of the city. At that time many Whigs and patriots were absent, and it is estimated that the population in the same year before the entry of the British was about thirty thousand.

In 1854 the boundaries of the city were by the Consolidation Act extended over the whole of the country, so that the distinction between the city with the suburbs or adjoining incorporated districts and the county was abolished.

Thomas and Richard Penn, Proprietaries.....	1746 to 1771
Anthony Palmer, President of Council.....	June 6, 1747
James Hamilton, Lieutenant-Governor.....	Nov. 23, 1748
Robert Hunter Morris, Lieutenant-Governor Oct.	15, 1754
William Denny, Lieutenant-Governor.....	Aug. 27, 1756
James Hamilton, Lieutenant-Governor.....	Nov. 18, 1759
John Penn, Lieutenant-Governor.....	Nov. 1, 1763
James Hamilton, President of Council.....	May 6, 1771
Thomas and John Penn, Proprietaries.....	1771 to 1775
Richard Penn, Lieutenant-Governor.....	Oct. 16, 1771
John Penn, Governor.....	Aug. 30, 1773

UNDER THE COMMONWEALTH.

Thomas Wharton, Jr., <sup>8</sup> President Supreme Executive Council.....	March 5, 1777
George Bryan, Vice-President.....	May 23, 1778

<sup>1</sup> Governor until June 26, 1681, when the colonial government ceased by virtue of the charter to William Penn of March 4, 1681, who then became the proprietor. Penn's Council first met at Upland, i.e. Chester, on Aug. 3, 1681.

<sup>2</sup> The members of Council were authorized by the Governor to choose one of themselves President in the absence of Thomas Lloyd (1 C. R., 124), and they were Governors for the time being, and as such signed commissions and performed all the duties of that office. Thomas Holme died 10th 7 mo., 1694, aged forty-five years.

<sup>3</sup> Commissioners, any three to act as Deputy Governor; 1 C. R., 165.

<sup>4</sup> Deputy Governors, or assistants to Markham; 1 C. R., 427.

<sup>5</sup> His commission bears date Nov. 29, 1716, but the dates given by me are those when the Lieutenant-Governors were inducted into office.

<sup>6</sup> Called Lieutenant-General, Governor, and Commander-in-Chief, etc.; 3 C. R., p. 55. Not Sir William until 1721, when he succeeded to the baronetcy.

<sup>7</sup> Lieutenant-Governor, with the assent of Hannah Penn; 3 C. R., 265.

<sup>8</sup> President of the Committee of Safety, Aug. 6, 1776. President of the Supreme Executive Council, March 5, 1777.

Joseph Reed, President Supreme Executive Council.....	Dec. 1, 1778
William Moore, President Supreme Executive Council.....	Nov. 14, 1781
John Dickinson, President Supreme Executive Council.....	Nov. 7, 1782
Benjamin Franklin, <sup>9</sup> President Supreme Executive Council.....	Oct. 18, 1785
David Redick, Vice-President.....	Oct. 15, 1788
Thomas Mifflin, President Supreme Executive Council.....	Nov. 5, 1788
Thomas Mifflin, Governor.....	Dec. 21, 1790
Thomas McKean, Governor.....	Dec. 17, 1799
Simon Snyder, Governor.....	Dec. 20, 1808
William Findlay, Governor.....	Dec. 18, 1817
Joseph Hiester, Governor.....	Dec. 19, 1820
John Andrew Shulze, Governor.....	Dec. 16, 1823
George Wolf, Governor.....	Dec. 15, 1829
Joseph Ritner, Governor.....	Dec. 15, 1835
David Rittenhouse Porter, Governor.....	Jan. 15, 1839
Francis Rahu Shunk, Governor.....	Jan. 21, 1845
William Freame Johnston, Governor.....	July 9, 1848
William Bigler, Governor.....	Jan. 20, 1852
James Pollock, Governor.....	Jan. 16, 1855
William Fisher Packer, Governor.....	Jan. 19, 1858
Andrew Gregg Curtin, Governor.....	Jan. 15, 1861
John White Geary, Governor.....	Jan. 15, 1857
John Frederic Hartranft, Governor.....	Jan. 21, 1873
Henry Martin Hoyt, Governor.....	Jan. 21, 1879
Robert Emory Pattison, <sup>10</sup> Governor.....	Jan. 16, 1883

MEMBERS OF THE PROVINCIAL COUNCIL OF PENNSYLVANIA FROM 1682 TO 1775.

1682. William Markham.	1682. William Biles.
Christopher Taylor.	James Harrison.
Thomas Holme.	John Richardson.
Lawrence Cock.	1683. Edward Southern.
William Clark.	John Roads.
John Hilliard.	1684. William Welch.
William Haigne.	William Wood.
John Moll.	Thomas Lloyd.
Ralph Withers.	Thomas Janney.
John Simcock.	Luke Watson.
Francis Whitwell.	John Cann.
Edmund Cantwell.	William Southebe.
William Clayton.	William Darvall.

<sup>9</sup> Franklin's term expired Oct. 14, 1788. "Armor's Governors," 251; xv. C. R., 564.

<sup>10</sup> The first Constitution for the government of Pennsylvania as a State, went into effect on Sept. 2, 1790. An election was held under it the following month, and Thomas Mifflin, of Philadelphia, who had been President of the Supreme Executive Council since Nov. 5, 1788, was elected, and on Dec. 21, 1790, inaugurated as Governor in Philadelphia, "with much ceremony." He was Governor until Dec. 17, 1799, a period of nine years, having been twice re-elected. Joseph Ritner, of Washington County, was Governor from Dec. 15, 1835, until the third Tuesday of January, 1839, the beginning of the gubernatorial term having been changed by the amended Constitution of 1838 from the third Tuesday of December to the third Tuesday of January. Governor Shunk resigned on the 9th day of July, 1848, when William Freame Johnston, of Armstrong, who was Speaker of the Senate, by virtue of his office, became Governor until the third Tuesday of January, 1849. In the mean time Governor Johnston had been elected at the October election in 1848, and on the third Tuesday of January, 1849, was inaugurated, and served a full term. Andrew Gregg Curtin, of Centre County, was Governor for two terms, covering the entire period of the Rebellion. Robert Emory Pattison was elected on Nov. 7, 1882, to serve as Governor for four years from the third Tuesday in January (the 16th), 1883; he is but thirty-two years of age, being our youngest Governor. Mifflin, at his inauguration, was forty-six; McKean, sixty-five; Snyder, forty-nine; Findlay, forty-nine; Hiester, sixty-eight; Shulze, forty-eight; Wolf, fifty-two; Ritner, fifty-five; Porter, fifty-one; Shunk, fifty-seven; Johnston, forty; Bigler, thirty-eight; Pollock, forty-five; Packer, fifty-one; Curtin, forty-four; Geary, forty-eight; Hartranft, forty-three, and Hoyt, forty-nine years of age. The Constitution of 1790 provided that a Governor could be elected for three terms successively. The amended Constitution of 1838 limited the time to two terms, and that of 1873 to one term of four years. Philadelphia was the capital of the commonwealth until 1799, when the seat of government was removed to Lancaster, where it continued until 1812, when Harrisburg was made the capital. Of these eighteen former Governors of the State, only four are now living, namely: Pollock, Curtin, Hartranft, and Hoyt.

1684. Peter Alrichs.	1701. John Guest.
1685. John Barnes.	Samuel Finney.
Nicholas Newlin.	John Blunston.
Phineas Psmherton.	1702. James Logan.
William Frampton.	John Finney.
Edward Green.	1703. Roger Mompesson.
Robert Turner.	William Trent.
1686. Francis Harrison.	1704. William Penn, Jr.
Arthur Cooke.	Richard Hill.
1687. Maj. William Dyer.	Georgs Roche.
Griffith Jones.	Joseph Pidgeon.
James Claypoole.	1708. Isaac Norris.
John Bristow.	Anthony Palmer.
Joseph Growden.	1712. Jonathan Dickinson.
Samuel Carpenter.	Robert Assheton.
John Eckley.	1721. Col. John French.
1688. Bartholomew Coppock.	Thomas Masters.
William Yardley.	Andrew Hamilton.
Samuel Richardson.	Henry Brooke.
John d'Haas.	1722. William Assheton.
1689. John Hill.	1723. William Fishbourn. <sup>1</sup>
William Stockdale.	Jusiah Rolfe.
John Curtia.	1724. Francis Rawle.
1690. Griffith Owen.	1725. Dr. Thomas Graeme.
Thomas Clifton.	1726. Evan Owen.
Thomas Duckett.	1727. Clemeut Plumsted.
John Brinckloe. <sup>1</sup>	1728. Samuel Hasell.
1693. Andrew Robeson.	Thomas Lawrence.
Patrick Robinson.	Ralph Assheton.
1693. Lawrence Cook.	1733. Thomas Griffiths.
William Salway.	Charles Read.
George Forman.	1741. Ahram Taylor.
1694. Charles Sanders.	Robert Strettell.
John Donaldson.	William Till.
1895. Anthony Morris.	1745. Benjamin Shoemaker.
David Lloyd. <sup>2</sup>	James Hamilton.
Caleb Pusey.	1747. Lawrence Growden.
George Maris.	William Logan.
John Williams.	Joseph Turner.
Richard Halliwell.	Thomas Hopkinson.
Robert Clifton.	1749. Rev. Richard Peters.
Richard Wilson.	1753. John Penn.
1696. Edward Shippen.	1755. Lyn-Ford Lardner. <sup>3</sup>
1698. William Rodney. <sup>1</sup>	Dr. Thomas Cadwalader.
1700. Richard Hough.	1756. Benjamin Chew.
Jasper Yentes.	John Mifflin.
Samuel Preston.	1759. John Moland.
Thomas Fenwick.	1764. Richard Penn.
Robert French.	1767. James Tilghman.
Thomas Story.	1770. Edward Shippen, Jr.
Humphrey Murry.	Andrew Allen.

#### LIEUTENANT-GOVERNORS.

*Elected under the Constitution of 1873, to preside in the Senate.*

John Lattn, elected.....	Nov.	3, 1874
Charles W. Stone, elected.....	Nov.	5, 1878
Chunucey F. Black, elected.....	Nov.	7, 1882

<sup>1</sup> Brinckloe, Clark, Fishbourn, Murry, William and Cæsar, and Rodney is the spelling in their signatures. Despite the utmost care, these names have been misspelt heretofore.

<sup>2</sup> "SIR.—Having had some experience of Your Loyalty to Our most gracious Sovereign KING WILLIAM and fidelity to Our Proprietor I have thought fitt to Nominate You One of the Proprietors Council for this Governm<sup>t</sup>. And In Order of Settling affairs of great Imporertycy I doe require you to Attend me at Pbiladelphia the fifteenth day Instance. So I hid You heartily farswell

"Your affectionate friend

"Philadelphia this 7th (the rest defaced) "WM MARKHAM.

"To David Lloyd. Thess"

David Lloyd first sat at the Council held April 23, 1695. I am indebted to Furman Sheppard, Esq., for this interesting paper.

<sup>3</sup> His signature was Lyn-Ford; he died Oct. 6, 1774, aged fifty-eight.

Job Roberts Tyson.....	1855	to	1857

<sup>4</sup> The Assembly of Pennsylvania elected the members of the Continental Congress during the Confederacy on general ticket. The names here given are such of the members as are known to have been residents of the city and county of Philadelphia. There were others chosen from other parts of the State who are not named here. There is also some difficulty in assigning some of them to their proper residences, as they had estates and seats in Philadelphia and in other counties. For instance Joseph Galloway, in Congress 1774-75, was in the Assembly a delegate from Bucks County, although most of the year he lived in Philadelphia. The same conditions apply to Charles Humphreys, member of Congress 1774-75.

<sup>5</sup> Vice Hemphill, resigned.

<sup>6</sup> Died April 27, 1880, aged seventy-two years.

William Millward.....	1855 to 1857 and 1859 to	1861
Jacob Broom.....	1855 to	1857
John Cadwalader.....	1855 to	1857
Jamee Landy.....	1857 to	1859
Henry Myer Phillips.....	1857 to	1859
Owen Jones.....	1857 to	1859
John P. Verree.....	1859 to	1863
John Wood.....	1859 to	1861
William Eckhardt Lehman.....	1861 to	1863
William Darrah Kelley.....	1861 to	1863
William Morris Davis.....	1861 to	1863
Charles John Biddle.....	1861 to	1863
Samuel J. Randall.....	1863 to	1873
Charles O'Neill.....	1863 to 1871 and 1873 to	1875
Leonard Myers.....	1863 to	1875
Martin Russell Thayer.....	1863 to	1867

## CHAPTER XLIII.

## MUNICIPAL, STATE, AND GOVERNMENT BUILDINGS.

City and District Halls—Watch-Houses—Watchmen and Police Stations—State-House or Independence Hall—Custom-House—Post-Office—United States Mint.

**City Halls and District Halls.**—Although there is reason to believe that Philadelphia might have been created a borough by William Penn in 1684, it is not probable that there were any buildings belonging to the public that were in use before the city was chartered, in 1701. In the charter there is a provision that the mayor, recorder, Common Council, and aldermen shall hold sessions at stated times, and "on the 1st 3d day of the week, in the 8th month (Oct.), yearly for ever hereafter, publicly to meet at a convenient room or place within the said city, to be by them appointed for that purpose and there chose one of the aldermen to be mayor for that ensuing year." The minutes of the City Council, which have been preserved, commence with the entry: "Att a Meeting of the Mayor, Aldermen, and Comon Council at the House of Barbert Carry, of this City, Innholder, the Third day of October, 1704," showing that there was no public hall or place for municipal use. The succeeding minutes are dated at the "Coffy House," and a subsequent meeting was held at the same place. After that time, during the whole provincial period, the general custom was to head the minutes "at Philadelphia," the place of meeting not being stated. It is probable that after the court-house at High and Second Streets was finished the Common Council meetings were held there up to the time of the Revolution. The City Court, presided over by the recorder, met there to hear all matters connected with the provincial or county government.

The first movement toward the collection of a fund for the erection of a city hall took place in October, 1746, which is thus recorded upon the minutes of the Common Council:

"James Hamilton, Esqr., Mayor, represented to the Board that es it had been cstmotary for the mayors of this City at the going out of their Office to give an Entertainment to the Gentlemen of the Corporation; he intends in Lieu thereof to give a Sum of Money, equal at least to the Sums usually expended on such Occasions, to be laid out in something permanently Useful to the City, And proposes the Sum of One Hundred and Fifty Pounds toward erecting an Exchange or some other Publick Building. The Board taking the said Proposal into Consideration unaniously approved of the same. And the said James Hamilton accordingly presented to the Mayor and Committee of the City of Philadelphia the said sum of One Hundred and Fifty Pounds, to be applied towards the Building of an Exchange in this City, for the like uses with that of the Royal Exchange, in London, or of the erecting of such other publick Edifice in this City as the Mayor and Commonalty shall see fit to order and direct. The Money aforesaid to be placed out and Continued at Interest until the same shall be wanted for the Purposes aforesaid."

This money was paid to the treasurer, who was ordered to place it out at interest, on security which should be approved by the mayor, recorder, and treasurer for the time being, and two Common Councilmen.

The example of Mayor Hamilton was not followed by all of his successors; several of them, it is probable, preferred to "give the customary entertainment." The minutes contain only the following notes of gifts to this fund:

1746. Alexander Hamilton.....	£150
1784. William Attwood.....	60
1749. William Attwood.....	60
Charles Willing.....	100
1753. William Plumsted.....	75
1753. Robert Stretzell.....	75
Total.....	£520

The necessity of having some building appropriated entirely to municipal use was considered so urgent that the following proceedings in relation thereto took place in Common Council on the 8th of February, 1775:

"It was proposed that the Board take into Consideration the great necessity there is of erecting a City Hall and Court-House, for the use of this Corporation, and the Mayor's Court, a lot of ground having been long since appropriated for that purpose in the State-House Square. The sense of the Board appeared generally in favor of the Proposal; and a Committee was agreed to be appointed to draw a plan and make an estimate of a proper building; likewise to inspect the state of the funds of this Corporation, and to Consider whether this Board can apply the Moneys formerly given by several of the Mayors of this City in lieu of the accustomed Entertainments on going out of their Office for the Purpose of a City Hall and Court-House, or whether they are restricted by the terms of those donations to apply that money, with the accumulated Interest thereon, solely for the Purpose of building an Exchange."

At the next meeting of Common Council, in April, 1775, the committee presented a plan of a city hall, but without an estimate of the cost. At the same time that body expressed the opinion that the former donations by several of the mayors of the city "were to be applied to the building of an *Exchange*, or such other *public edifice* in this City, as the Mayor and Commonalty should see fit to order and direct, consequently, that this board had an undoubted Right to apply the same toward building a City Hall." At the same meeting the managers of the House of Employment, who owed the city seven hundred and fifty pounds for money lent, offered to settle by the transfer of some ground-rents. The proposition was refused, because "probably the money would soon be wanted in order to build a City Hall," and notice was given that the bond must be discharged within two mouths, "Otherwise let it be then Peremptorily put in suit."

The Revolutionary war suspended all active operations for the erection of a city hall. In 1785 the Assembly passed an act appropriating six thousand pounds, which had been realized from the sale of the old High Street prison, toward the erection of municipal buildings. Nothing was done, however, until 1789, when another act was passed authorizing a lottery to raise eight thousand dollars, four-fifths of the proceeds of which was to be paid to the corporation toward the erection of a city hall, and the other fifth to be given to Dickinson College at Carlisle.

The city hall was begun in 1790, and the building finished in the summer of 1791. It was of plain brick, two stories high, with a small cupola. The style was solid and respectable. There was a little

display of ornamentation by the use of marble as a band between the first and second stories, with marble keystones and springers to the arches of the windows and doors. The building was originally intended to be used in the first story by the Mayor's Court and by the mayor in hearing cases which were brought before him as a committing magistrate. But as the Federal government had come to Philadelphia before the building was finished, it was requisite to find some suitable place for the accommodation of the Supreme Court. The Federal Senate and House of Representatives were of necessity granted the use of the building at the southeast corner of Sixth and Chestnut Streets, which had been erected for the County Court-House. The Assembly of the State, with the Supreme Court, and County Court of Common Pleas and Quarter Sessions, were crowded into the State-House. The Federal courts, Supreme, Circuit, and District, could not be accommodated anywhere else than at the building at Fifth and Chestnut Streets.

While the Supreme Court was there the bench was occupied by the first chief justice, John Jay, who had been appointed by Washington in 1789, but resigned in 1794, with some reluctance, to accept the mission to England, against the actions of which this country at that time had many causes of complaint. Oliver Ellsworth, of Connecticut, succeeded him as chief justice in 1796, and remained in that office until 1800. The associate justices were John Rutledge, of South Carolina; William Cushing, of Massachusetts; James Wilson, of Pennsylvania; Samuel Chase, of Rhode Island; John Blair, of Virginia; James Iredell, of North Carolina; Thomas Johnson, of Maryland; William Patterson, of New Jersey; Bushrod Washington, of Virginia; Alfred Moore, of North Carolina; and John Jay, who was reappointed in 1800, but declined to act. Some of these justices replaced others who had died or resigned in the meanwhile.

The United States Circuit and District Courts were also held in the second story of the City Hall, they being under the administration of Justice William Lewis, of the Supreme Court, and Judges Francis Hopkinson and Richard Peters. After the seat of the Federal government was removed to Washington City, the Councils of the city took charge of the City Hall. The Mayor's Court met there until after the old State-House was purchased from Pennsylvania by the city of Philadelphia, in 1816. After that time the Mayor's Court was removed to the centre State-House building. The lower back room of the City Hall was occupied by the mayor. The City Council began to meet in the second story of the building as soon as it was finished, and continued there until the consolidation of the city, in 1854.

The Common Council was in the back room, and the Select Council in the northeast front room, second story, on the west side; north were the committee rooms. The rooms on the first floor were occupied

by departments of city government. The water department, city commissioners, city clerk, city treasurer, and other officers, were in the back room. The Mayor's Court was afterward removed to the State-House building.

After the consolidation of the city and districts, in 1854, Councils resolved that the State-House should be the City Hall. To accommodate Select and Common Councils extensive alterations were necessary. They were completed about 1854, and since that time meetings of the Municipal Legislature have been continuous in that building.

**City Courts.**—One of the incidents of the charter of the city of Philadelphia, granted by William Penn in 1701, was the conferring of authority to exercise judicial functions within the city upon the officers of the corporation. In order to facilitate this design there was to be a city sheriff and a town clerk, who was to be clerk of the peace and clerk of the court and courts. The functions of the recorder, who in after-years acted as one of the presiding judges of the City Court and Mayor's Court, were not so well defined. He was "to do and execute all things which unto the office of Recorder of the said city doth or may belong." It is worthy of notice that in the original charter the recorder was not mentioned as being necessary to the corporate title. "Mayor and commonalty of Phila. in the province of Pennsylvania" was the title of the old city corporation, although in some parts of the charter "the mayor and commonalty of the city of Phila.," omitting the words in the province of Pennsylvania, are spoken of as the official title. A court, whereof any four or more of the aldermen (whereof the mayor and recorder for the time being shall be two) has no name assigned to it in the charter further than a "Court of Record." Under the charter Thomas Story was named as the first recorder, Thomas Farmer to be the city sheriff, and Robert Assheton to be the town clerk and clerk of the court and courts. Farmer was the county sheriff at the time. There does not appear to have been at any period afterward an attempt to constitute a separate city sheriff. The sheriff for the county was always considered to be the sheriff of the city. The case was different with the coroner. The charter does not command that the county sheriff shall be the city sheriff. But the county coroner was always to be the city coroner, whether he resided in the city or in the county. There is a curious provision in the charter in reference to this matter:

"And I will that the coroners to be chosen by the county of Phila. for the time being shall be the coroners of *the said city and liberties* thereof; but that the freemen and inhabitants of the said city shall from time to time as often as occasion be have equal liberty with the inhabitants of the said county to recommend or choose persons to serve in the respective capacities of coroners and sheriff for the county of Phila. who shall reside in the said city."

From this it would seem that the coroners and sheriff of the county were obliged to reside in the city. The court established under the charter without a

name was generally known as the City Court. Under the authority of the charter the city corporation, shortly after 1701, set up under ordinance a court for determining small debts, and to be held by the mayor or recorder with one or more of the aldermen. This was called "the forty shillings court" "or the two weeks court." The management of this tribunal was not satisfactory. According to the recital in the act of May 28, 1715, "the several Laws of this Province for determining small Debts without formality of trial were designed for the Ease and Conveniency of the Subject; but Complaint is made by many of the Inhabitants of the City & County of Philadelphia that the manner of putting the same in Execution by some of the said City Magistrates and Officers, proves very chargeable and inconvenient." For remedy of this it was declared that the city ordinance under which the Forty Shillings or Two Weeks' Court exercised its functions was null and void, that no court in the province should have cognizance of debts and demands under forty shillings, and that the same should be recoverable by ordinary process before any justice of the peace.

The Revolution was considered to have put an end to the corporation of the city under Penn.

During the interval when there was no city corporation, under certain acts of Assembly the justices of the peace for the city of Philadelphia were authorized to hold "a city court." Under the act of March 11, 1789, creating the new city charter, this authority was annulled, and all the records and proceedings of the City Court were ordered to be transferred to the Mayor's Court on the 15th of April of the same year. Under the charter of 1789 the corporate title was "the mayor, aldermen, and citizens of Phila." The recorder elected by the mayor and aldermen was to hold his office for seven years, and to have all the powers and jurisdictions of a justice of the peace within the said city. A court with a large jurisdiction in cases of crimes and misdemeanors, to consist of the mayor, recorder, and aldermen, or any four or more of them, of whom the mayor or recorder for the time being shall be one, were given authority to hold a court of records to be entitled "the Mayor's Court for the city of Phila."

Authority was granted at the same time to establish a city court to be called "the Alderman's Court," to consist of three of the aldermen of the city, any two of whom might be a quorum. The aldermen who were to constitute this court were to be appointed by the mayor and recorder four times in each year, or oftener, if they thought proper. The aldermen were to have a civil jurisdiction in "causes and matters cognizable before any one justice of the peace within the State, where the debt or demand amounts to forty shillings, and does not exceed ten pounds." In cases of debts under forty shillings, right was given to the mayor and any alderman within the city to "have cognizance of and a sole

and exclusive right to hear and determine in a summary way all such matters and things." An appeal from the judgment from the mayor and alderman was allowed to the Aldermen's Court. The latter tribunal proved to be no more popular than the Forty Shillings Court of the early municipal period. The act of 1789, so far as related to the establishment and power of the Aldermen's Court, was repealed after fifteen years' experience, in 1804.

The Mayor's Court came to an end under the act of 19th March, 1838, which created the Court of Criminal Sessions in the city and county of Philadelphia, and abolished the Mayor's Court.

**Aldermen and Justices of the City Court and Mayor's Court, 1701-1838.**—Under the charter of the city granted by William Penn in 1701, the mayor, recorder, and aldermen were created justices of the peace, and justices of Oyer and Terminer in the city and liberties thereof; also "that they, or any four or more of them (whereof the mayor and recorder of the said city shall be two) shall and may forever hereafter have power and authority . . . to hear and inquire into all manner of treasons, murders, man-slaughters, and all manner of offences, capital and criminal," etc.; also "to hold and keep a Court of Record quarterly or oftener, if they see occasion," etc. This was the establishment of the court which was known before the Revolution as the City Court. They were also justices of the quorum of the county courts.

#### ALDERMEN HAVING RIGHT TO SIT IN THE CITY COURT.<sup>1</sup>

Last minutes of meeting of Aldermen and Common Council under the charter of 1701, dated Feb. 17, 1776.

There must have been a stoppage of justice for some time. The City Court was held to be abrogated by the supposed annulment of the charter of the city. The Convention of Pennsylvania in July, 1776, appointed thirty-six justices for the city and county of Philadelphia. Offenses triable before the City Court must have been tried in the County Court (See "Court-Houses.")

In 1777 a better order was established. There were justices of the peace appointed for the city wards. Presumably they held the City Court.

#### JUSTICES OF THE PEACE.

**New City Hall.**—During several years after consolidation propositions relating to the erection of a new city hall for the use of the corporation was discussed. As early as 1838 an act was passed authorizing the mayor, aldermen, and citizens of Philadelphia to erect a city hall on any part of the lots of ground in said city now known by the name of Penn Square. The expenses of erecting the hall were to be paid out of the treasury of the city. There was a proviso that the consent of the commissioners of the county of Philadelphia should first be had.

The grant of the Centre Square to the city by Penn was not clearly expressed as to the direct intention further than the same might be used for public buildings. In "a short advertisement" upon the situation and extent of the city of Philadelphia, explanatory of Holme's "Portraiture of the Plan of the City," issued about 1685, is this language: "In the center of the City is a square of 10 A. At each angle are to be

<sup>2</sup> These do not seem to have been commissioned.

houses for Publick affairs as a Meeting-house House, Assembly, or State-House, Market-House, School-House, and several other buildings for publick Concerns." Although there was considerable discussion upon the subject of a new city hall in 1838, the project failed. On the 16th of March, 1847, an act was passed authorizing the commissioners of the county of Philadelphia, by the consent of Select and Common Councils of the city, to erect a new court upon a part of the said State-House Square. Councils were also authorized by the same act to "cause a new city hall to be erected on any other part of said square; the location and erection of said buildings to be first approved by the County Board of said Philadelphia County." There was much discussion in the newspapers about this proposition, and plans of buildings were prepared. But eventually the subject seemed to have been abandoned. On the 31st of September, 1868, City Councils passed an ordinance providing for the erection of municipal buildings on Independence Square, and designating commissioners to carry the same into effect. These gentlemen met shortly afterward, and organized and advertised for architectural plans for the buildings. On the 17th of September following plans and drawings were received from various architects, and at a meeting of the commissioners shortly afterward the plan of John McArthur, Jr., was selected, and he was appointed architect of the work. Contracts were solicited and awarded in January, 1870, but work was not begun. As soon as it appeared that the commissioners were determined to erect the new city buildings, there sprung up a very decided opposition to the use of Independence Square for such a purpose. It was argued that the erection of buildings for the accommodation of the municipality and courts would be a desecration of ground sacred to patriotic veneration by reason of Revolutionary memories connected with the old State-House. This opposition was something more than sentimental. The Legislature was in session, and the controversy was transferred to that forum. The opponents of the use of Independence Square succeeded, and on the 5th of August, 1870, an act of Assembly was passed by which Theodore Cuyler, John Rice, Samuel C. Perkins, John Price Wetherill, Lewis C. Cassidy, Henry M. Phillips, William L. Stokes, William Devine, and the mayor of the city of Philadelphia, and the presidents of Select and Common Councils for the time being were constituted commissioners "for the erection of the public buildings required to accommodate the courts and for all municipal purposes in the city of Philadelphia." This board was in nature permanent until the public buildings were finished. The commissioners had authority to fill vacancies in their own number, and also to increase their number to thirteen.<sup>1</sup>

<sup>1</sup> In 1882 only one of them remained, the others having died or resigned. The president, Samuel C. Perkins, was at that time the only original member of the commission.

The commissioners were given authority to procure plans for the buildings, and adopt them, make contracts, and superintend the carrying on of the work. They were entitled to make requisitions on the City Councils for the amount required annually toward the expense of construction. The commissioners were authorized and directed to locate the buildings on either Washington or Penn Square, as might be determined by vote of the citizens at the election in October, 1870. Within thirty days afterward the question was determined, and the commissioners were authorized to commence the work.

If Washington Square was selected by a majority of votes, Councils were directed to execute to the commissioners the proper deed or deeds. As to the four Penn Squares, at the intersection of Broad and Market Streets, if the decision of the people was in favor of Washington Square, Councils were directed to convey one of said squares to each of the following institutions: Academy of Fine Arts, Academy of Natural Sciences, Franklin Institute, and Philadelphia Library, "for the purpose of allowing them to erect thereon ornamental and suitable buildings for their respective institutions." If Penn Square was chosen as the site of the public buildings, the commissioners were authorized to vacate so much of Market or of Broad Street as they might deem needful, and lay out streets passing around said buildings of width not less than one hundred feet." During a portion of the year succeeding the appointment of the commissioners there was a lively controversy as to the site of the new buildings. A large number of property-holders and business men were anxious to retain the public buildings at the old site at Sixth and Chestnut Streets, while other persons who were interested in property farther west preferred the Penn Square location. "A series of litigations ensued; application was made to the Legislature; resistance was attempted in the City Councils, and the elements of the most vehement partisan prejudice were used to frustrate the law and to procure its repeal."<sup>2</sup> After a bitter contention, mostly waged through the newspapers, the vote was taken in October, and the return was as follows: For Washington Square, 32,825 votes; for Penn Square, 51,623. This was decisive, and the commissioners entered upon their duties as well as they could. Subsequent adverse efforts delayed the actual commencement of work for a year.

The decisions, popular, legal, and legislative, being in favor of the Penn Square site, the commissioners commenced work on Jan. 7, 1871, by removing the iron railings which inclosed the four squares. After the passage of the act of 1828, which declared that the Centre Square (then one inclosure) should be cut by running Market and Broad Streets through it,

<sup>2</sup> B. H. Brewster's address at laying the corner-stone of the public buildings, 1874.

the four plots made by this bisection were first inclosed with a wooden fence, or paling, and afterward by iron railings. On the 10th of August, 1871, the ground was broken by John Rice, then president of the Board of Commissioners, and on the 12th of August, 1872, at two o'clock P.M., the first stone of the foundation was laid. One of the most important questions presented to the commission was whether they should allow Broad and Market Streets to be continued through the square, and erect four buildings on the corner lots, or take the whole square as originally laid out, including the ground occupied by streets, and erect thereon one building. The commissioners resolved upon the latter plan, and whether their decision was right or wrong was of little moment after the work had so far progressed that it could not be undone. The excavations for the cellars and foundations required the removal of one hundred and forty-one thousand five hundred cubic yards of earth. The building occupies four hundred and seventy feet from east to west, and four hundred and eighty-six and a half feet from north to south, and covers an area, exclusive of the court-yards, of nearly six and a half acres. It is larger than any single building in America. The main building is ninety-four feet high, and consists of a basement story eighteen feet in height, a principal story of thirty-six feet, an upper story of thirty-one feet, surmounted by another of fifteen feet. The small rooms opening into the court-yards are each divided into two stories for the purpose of making useful all space. The several stories are to be approached by four large elevators at the intersection of the leading corridors, together with eight grand staircases, one in each of the four corners of the building, and one in each of the centre pavilions at the north, south, east, and west fronts. The entire structure contains five hundred and twenty rooms, all fire-proof in material, and provided with every possible convenience for heat, light, and ventilation. The architecture presents a rich example of the style of the Renaissance, modified and adapted to the varied and extensive requirements of a great American municipality. It is designed in the spirit of French art, while at the same time its adaptation of that florid and tasteful manner of building is free from servile imitation either in ornamentation or in the ordonnance of its details. The whole exterior is bold and effective in outline and rich in its parts, elaborated with highly ornate columns, pediments, pilasters, cornices, enriched windows, and other appropriate adornments, wrought in artistic forms, expressing American ideas and developing American genius. The interior is richly decorated with carvings in relief, full-length figures upon the spandrels of the arches, carved keystones, caryatides, and other ornaments.

The entrance pavilions are eighty-six feet wide, and rise to the height of two hundred and one feet. The corner pavilions are forty-eight feet square and

one hundred and sixty-one feet high. The pavilions are crowned with massive dormer-windows, in marble, forty-two feet high, flanked by marble caryatides twenty feet nine inches high. The corner pavilions are fitted with marble dormer-windows, with caryatides. The central court-yard is one hundred and eighty-six feet north and south by two hundred and twenty feet east and west. From the north side of the central court-yard rises a grand tower of ninety feet square at the base, gracefully falling off at each story until it becomes, at the spring of the dome (which is three hundred and fifteen feet above the level of the court-yard), an octagon of fifty-six feet in diameter, tapering to the height of eighty-four feet, where it is to be crowned with a statue of the founder of Pennsylvania, thirty-six feet in height, thus completing the extraordinary altitude of four hundred and thirty-five feet, making it the highest artificial construction in the world.

**Town-House of the Northern Liberties.**—That part of the township of Northern Liberties which had become populous, so as to be, in fact, a suburb of the city, had arrived at such a condition of importance in 1795 that it was necessary to place it under some sort of municipal regulation. A division was made in the thickly-settled portions of the district for election purposes. In that year an act of Assembly was passed to authorize the building of a town-house and market-place in the Northern Liberties. Twenty feet of ground on each side of Second Street, between Coates and Poplar Streets, had been previously dedicated by the owners of lots to encourage the improvement of that part of the county. They undertook to build the market-house by subscription, without cost to the public. The town-house was directed to be commenced in the middle of Second Street, forty feet north of Coates Street, and was to be twenty-six feet front by thirty feet in depth along Second Street, where it joined the market-house, eighteen feet wide, which originally extended to Brown Street. This building was probably finished in a year or two. It was constructed in the style of the old court-house at Second and Market Streets. Arches rising from the ground to the height of one story gave passage to the market-house beyond. The main room of the town hall was in the second story. The building was of brick, with a small cupola on top, and was in general appearance similar to the market-hall standing at the intersection of Second and Pine Streets. When the Northern Liberties were incorporated as a district, on March 29, 1803, the town house of the Northern Liberties became the Commissioners' Hall. The commissioners were elected May 7th, and met for the first time May 11th at the town house. The building was occupied for several years, but was entirely too small for the intended purpose. In the early part of 1814 the commissioners of the Northern Liberties purchased a building on the east side of Third Street, between Tammany [or Buttonwood]

Street and Green Street, which was formerly known as the officers' house of the military barracks.

The commissioners first occupied that building on the 17th of February, 1815. Previously the old house was used as a tavern. After the commissioners of the Northern Liberties bought the barracks building, an act of Assembly was passed declaring that thereafter that building should be the Commissioners' Hall of the Northern Liberties. The building was of plain brick, which in later times was rough-cast. During the period that the Northern Liberties had a mayor, his office was in the basement of the building, and there were rooms for the lock-up and accommodation of the watch. The Recorder's Court of the Northern Liberties, with criminal jurisdiction, was held in the first story from 1836 to 1838, Robert T. Conrad being the recorder or judge.

PRESIDENTS OF THE BOARD OF COMMISSIONERS OF THE DISTRICT OF NORTHERN LIBERTIES.

*Incorporated March 29, 1803.*

- May 13, 1803—May, 1805.—Dr. Peter Peres.
- May 14, 1805—August, 1809.—John Kessler.
- Aug. 29, 1806—May, 1812.—John Goodman.
- May 6, 1812—May, 1814.—Daniel Groves.
- May 11, 1814—May, 1815.—Cornelius Trimnel.
- May 10, 1815—May, 1818.—Dr. Michael Letb.
- May 6, 1818—October, 1829.—Daniel Groves.
- Oct. 20, 1829—Jan. 11, 1831.—J. W. Norris.
- Jan. 11, 1831—Oct. 1, 1831.—J. Edmund Shotwell.
- Oct. 18, 1831—October, 1832.—William Binder.
- Oct. 18, 1832—October, 1834.—William Wagner.
- Oct. 21, 1834—October, 1835.—William Binder.
- Oct. 20, 1835—October, 1837.—John G. Wolf.
- Oct. 17, 1837—October, 1838.—Charles J. Sutter.
- Oct. 16, 1838—October, 1839.—Joseph Pancoast.
- October, 1839—October, 1840.—William Bruner.
- October, 1840—October, 1843.—John T. Smith.
- October, 1843—October, 1846.—James Landy.
- October, 1846—October, 1849.—John T. Smith.
- October, 1849—October, 1850.—James S. Watson.
- October, 1850—October, 1852.—Edward T. Mott.
- October, 1852—October, 1854.—Stephen D. Anderson.

**Southwark Commissioners' Hall.**—The southern suburbs were erected into a municipality denominated the district of Southwark by act of Assembly passed May 14, 1762. It was a qualified organization, composed of three surveyors and regulators, three assessors, and three supervisors, also an overseer of the poor and an inspector, having the same power as similar officers in townships. In 1794 the district of Southwark was incorporated with fifteen commissioners, having general municipal powers, among which were the erection of buildings.

The Board of Commissioners first met on the 26th of May of that year, at the house of Catharine Fritz, which was an inn, and situated in Front Street, below Catharine. This place was not agreeable, and it was determined at once to take the lease for public purposes of Jonathan Penrose's house, at a rent of thirty dollars per annum, he to furnish one window for election, "to put a cloth on the floor, if the board considers it necessary, to keep the place clean, take care of the wood, etc." This building stood north of

Christian Street, and east of Second, on the back part of the lot afterward occupied by the commissioners' hall. In the succeeding year the meeting-place of the commissioners was at James Little's school-house. In 1797, during the yellow fever, the board met at Crosby's house, near Moyamensing road, afterward at Sampson Goff's house, Fifth and Christian Streets, but they went back to Little's school-house after the epidemic had ceased. In 1798 the yellow fever again drove them to the house of Sampson Crosby. It was there resolved to meet regularly in a new brick building at John McLeod's rope-walk, in Front Street, at a rent of six dollars per month. In 1799 a stone building in the rear of the Third Baptist Church, which stood about the head of the present Scott's Court, was rented. About 1810 the commissioners purchased from Paul Beck a lot of ground on the east side of Second Street, above Christian, where they erected a plain and substantial two-story brick building, forty feet deep by sixty-nine feet in width. This hall was first occupied by the commissioners April 11, 1811. There was a large hall for public meetings in the first story. The commissioners usually met in the second story. The front of the hall stood back from Second Street, but the building extended to a street in the rear, running from Catharine to Christian, which was at one time called Sutherland Street. There was a vacant space north and south of the building. At Second Street, at each side of the lot, were erected, some time after the hall was built, two fire-engine houses, which were occupied for some years by the Southwark and Weccacoe Fire Companies. The new Southwark Hall was first occupied by the commissioners April 11, 1811. After consolidation this building was used as a police station. It was ordered to be torn down in 1882, and replaced by a new station-house.

PRESIDENTS OF THE BOARD OF COMMISSIONERS OF THE DISTRICT OF SOUTHWARK.

*Incorporated April 18, 1794.*

- May, 1794—May, 1795.—Joseph Marsh.
- May, 1795—May, 1798.—Richard Tittermary.
- May, 1798—May, 1801.—William Linnard.
- May, 1801—May, —.—William Penrose.
- May, —.—May, 1813.—Robert McMullin.
- May, 1813—May, 1816.—John Thompson.
- May, 1816—May, 1817.—Phineas Eldredge.
- May, 1817—May, 1821.—Robert McMullin.
- May, 1821—May, 1822.—Charles Penrose.
- May, 1822—May, 1829.—Joel B. Sutherland.
- May, 1829—May, 1846.—Thomas D. Grover.
- May, 1846—May, 1850.—Lemuel Paynter.
- May, 1850—May, 1852.—George O. Rickard.
- May, 1852—May, 1853.—Charles C. Wilson.
- May, 1853—May, 1854.—Thomas A. Barlow.

**Spring Garden Hall.**—When the District of Spring Garden was incorporated, March 22, 1813, it was directed that the citizens of the district should meet together at the school-house belonging to the Spring Garden Association, which was situate at the northeast corner of Eighth and Buttonwood Streets, and is still standing (1884). They were to choose twelve commissioners at the election to be held there.

The school-house was a two-story brick building with a cupola, which had originally been erected by subscription of citizens in 1809. It was intended to be a place for religious worship and education, and to be used for township elections and other purposes. In 1823 the Legislature passed a law authorizing the commissioners of the district to build in the centre of Callowhill Street, between Sixth and Seventh Street, a market-house and town hall, the same to be of the width of thirty-four feet. This privilege was not accepted so far as regarded the erection of a town hall in the centre of the street. The commissioners purchased a lot and building on the north side of Vine Street, east of Ninth, where they remained for some years. On the 19th of July, 1847, an ordinance was passed authorizing the issuing of certificates of loan to be applied toward the erection of a new hall for the District of Spring Garden. The lot chosen was at the northwest corner of Thirteenth and Spring Garden Streets. The building was constructed with rapidity, and was finished in 1848. It was the largest and most elegant commissioners' hall in the county, and extended parallel from Spring Garden Street near the line of Thirteenth, northward to Brandywine Street. The first story was for offices. The commissioners' room was in the second story. In front the first story from the ground was a hasement, and a fine Grecian portico rose above it. The building was surmounted by a steeple built by Jacob Berger, in which there was a clock made by T. Tyson. At the consolidation of the city and districts this building was appropriated for some time for the purposes of a station-house. At a later period it was occupied as the office of the Spring Garden Gas-Works and by the water department of the city.

PRESIDENTS OF THE BOARD OF COMMISSIONERS OF THE DISTRICT OF SPRING GARDEN.

*Incorporated March 22, 1813.*

May 7, 1813—May 5, 1815.—Joseph R. Zebley.  
 May 5, 1815—May 7, 1824.—David Woelpper.  
 May 7, 1824—Oct. 13, 1831.—Lawrence Shuster.  
 Oct. 13, 1831—Oct. 13, 1832.—Joseph R. Bolton.  
 Oct. 13, 1832—Oct. 12, 1833.—John M. Ogden.  
 Oct. 12, 1833—Oct. 18, 1834.—George W. Riter.  
 Oct. 18, 1834—Oct. 16, 1836.—Joseph Johns.  
 Oct. 16, 1836—Oct. 13, 1838.—John M. Ogden.  
 Oct. 13, 1838—Oct. 12, 1839.—William W. Walker.  
 Oct. 12, 1839—Oct. 17, 1840.—Thomas Matlack.  
 Oct. 17, 1840—Oct. 4, 1841.—Daniel Smith.  
 Oct. 4, 1841—Oct. 15, 1842.—George W. Ash.  
 Oct. 15, 1842—Oct. 18, 1845.—John H. Dohnert.  
 Oct. 18, 1845—Oct. 16, 1847.—Robert T. Fry.  
 Oct. 16, 1847—Oct. 14, 1848.—Hiram Ayres.  
 Oct. 14, 1848—Oct. 13, 1849.—William Neal.  
 Oct. 13, 1849—Oct. 12, 1850.—Joseph W. Martin.  
 Oct. 12, 1850—Oct. 12, 1852.—George W. Donohue.

**Kensington Hall.**—After the incorporation of the Kensington District of the Northern Liberties, March 6, 1820, the commissioners met in rooms hired for their accommodation. In 1833 a large lot of ground was purchased by the commissioners upon Frankford road, bounded by that avenue, Master and Front

Streets. In the centre of this plot was erected a fine hall building of brick, two stories in height, surmounted with a steeple. This building was ready for use in 1834. The commissioners met in the second story. The first story was occupied by offices, and in the basement were fitted up cells for the reception and safe-keeping of offenders. This hall was torn down in 1883, and the ground is now occupied by dwellings.

PRESIDENTS OF BOARD OF COMMISSIONERS OF THE KENSINGTON DISTRICT OF THE NORTHERN LIBERTIES.

*Incorporated March 6, 1820.*

May, 1820—Aug. 10, 1832.—John C. Brown.  
 October, 1832—October, 1834.—Henry Remmey, Jr.  
 October, 1834—October, 1835.—Mahlon Dungan.  
 October, 1835—June, 1836.—Henry Remmey, Jr.  
 June, 1836—May, 1840.—Abraham R. Eyre.  
 May, 1840—May, 1841.—Peter Rambo.  
 May, 1841—June, 1842.—Thomas H. Brittain.  
 June, 1842—October, 1845.—John Robbins, Jr.  
 October, 1845—1847.—Samuel T. Bodine.  
 1852—54.—John P. Verree.

**Moyamensing Hall.**—The commissioners of Moyamensing met in 1812 at the inn or tavern of William Daly, South Sixth Street. Afterward they occupied various rented rooms for some years. About 1833 a movement was made to provide a proper hall for the use of the district officers. A lot of ground was purchased on the south side of Christian Street, between Ninth and Tenth. A fine hall, with a marble front portico, was commenced in August, 1833. It was finished in November, 1834, and for twenty years was the principal voting-place in the district. During the cholera of 1866, the building not being in actual use, was selected to serve as a hospital for cholera patients in case the epidemic should be severe. The designation of the hall for such a purpose aroused apprehension and fear in the neighborhood. Protests were made against the proposed service. As no attention was paid to these remonstrances, some evil-disposed persons took an opportunity to settle the matter in a summary way. The hall was set on fire by incendiaries, and the interior destroyed, Aug. 4, 1866. The walls were in good condition. The property was afterward sold and rebuilt, and was occupied by a Roman Catholic institution.

**Richmond Hall.**—The commissioners' hall for the district of Richmond was situate at the corner of Clearfield and West Streets, and finished in 1829.

**District of Penn Hall.**—By act of April 19, 1843, James Markoe, Andrew D. Cash, William Esher, Jacob Heyberger, and Edward T. Tyson were appointed commissioners to appoint surveyors and lay out with streets, sewers, etc., that portion of Penn township "lying between the north boundary-line of Spring Garden and a line parallel with and at the distance of one hundred feet north of Susquehanna Avenue, and between the middle of Delaware Sixth Street and the river Schuylkill," etc. They met for the first time May 2, 1843, at Woodvale Cottage, the residence of James Markoe, and organized. They

were superseded in authority by act of March 14, 1844, which created a municipal corporation styled "The Commissioners and Inhabitants of the District of Penn." The first meeting of the commissioners was held March 25, 1844, at the house of Michael Deiner. On the 30th of March, 1846, the commissioners met for the first time at the new hall, northeast corner of Tenth and Thompson Streets. They were in the occupancy of that building at the time of consolidation (1864).

PRESIDENTS OF THE BOARD OF COMMISSIONERS, DISTRICT OF PENN.

*Incorporated March 14, 1844.*

March, 1844-March, 1846.—James Markoe.  
 March, 1846-March, 1847.—Athanasius Ford.  
 March, 1847-March, 1849.—Anthony Olwine.  
 March, 1849-March, 1850.—William Esher.  
 March, 1850-May 13, 1850.—Samuel Ogden.  
 May 13, 1850-May 13, 1851.—William Esher.  
 March, 1851-June 15, 1852.—Samuel Ogden.  
 June 15, 1852-June 15, 1854.—Jacob D. Sheble.

**West Philadelphia Hall.**—The commissioners for West Philadelphia occupied a lofty brick building for district uses at the corner of Washington [Market] and Park [Thirty-seventh] Streets.

**Germantown Hall.**—The town hall of Germantown, built upon a lot fifty-five feet front by one hundred feet in depth, stood back from the main street, or Germantown Avenue. It was authorized to be built before the act of consolidation was passed, and was finished July 1, 1855.

**Frankford Hall.**—The town hall of Frankford was occupied January, 1849.

**Watch-Houses, Watchmen, and Police Stations.**—At the consolidation of the city and districts all the commissioners and town halls of the various districts and townships ceased to be of local importance. As nearly all of them had been used for police headquarters, and were provided with facilities for the temporary detention of prisoners, they were continued in use as police stations.

In Philadelphia the earliest conservators of the peace were the constables. The first watchman was appointed in July, 1700, by the Provincial Council, and had the whole care of the city within his charge. He was appointed and empowered "to go round ye town with a small Bell in the night time to give notice of ye time of night & the weather, and if any disorders or dangers happen by fire or otherwise in the night time to acquaint ye constables eyrof."

In a curious document of instructions, purported to have been addressed to Thomas Todd (constable of Mulberry Ward) in 1722, probably by Mayor Fishbourne, there are directions as to his duty in daytime, particularly to suppress disorder on the first day of the week in the public streets, the arrest of persons tippling in public-houses, and the maintenance of peace at other times. The following is in relation to the watch:

"What I have said chiefly concerns thy conduct

in the day, but what follows is relative to the Night Watches.

"I. Take care to warn the watch duly, and that thou attend accordingly at the time and place already appointed.

"II. If any person duly warned does not come or send one in time, or when come does not attend his duty therein, return the names of every such to some magistrate next day.

"III. If thou meet any disorderly persons in the streets, endeavor to suppress them, and commit them to Gaol until next morning; but if, with the assistance of the watch, thou cannot then learn their names make return thereof accordingly next day to some magistrate.

"IV. If thou knows or hears of any suspected lew'd houses as entertaining debauched persons or servants, &c., search there accordingly and apprehend all suspected persons thou finds therein, and commit them to Gaol in order to be brought before some magistrate next morning.

"V. If any publick housekeepers keep unseasonable hours or rude disorderly company in their houses thou art to require them to disperse the company and return the name of such publick housekeeper to some magistrate the next day."

From these instructions it appears that the constable was the principal officer of the watch. There was another matter connected with it, viz., that the watch was not a permanent paid body of men, but was composed of citizens who were designated or chosen for that service. Practically every able-bodied housekeeper had to take his turn upon the watch or send a substitute, which privilege is alluded to in Clause II. of the above instructions. This system had, in course of time, become onerous upon some citizens, and was not satisfactory for other reasons. In 1743 a grand jury made a presentment on this subject, in which it was stated, "The Watch for some time past has been a great expense to the Citizens and the charge thereof unequal and grievous to the poorer part of the Citizens and that a less sum than what was yearly collected on that account raised by an equal assessment and properly managed might in a short time be sufficient to build a watchhouse and support a stated watch, who would be more diligent and careful and go their hourly rounds during the whole night." Common Council voted that a stated watch, to be paid for by the city, would be most effectual, and application was made for authority to establish it. It was not until 1751 that the necessary authority was given by the Assembly. The nightly watch was established, and at the same time public lamps were set up. This was a temporary law, and expired in 1756. In the latter year another act was passed, by which Henry Harrison, Samuel Rhodes, George Okill, Joseph Morris, Daniel Roberdeau, and James Fisher were appointed wardens to maintain and take care of the lamps already erected, and to put up others, and pro-

vide for lighting and watching, and to hire and appoint the watchmen. They had power to direct, in writing, "at what stands it is fit for the said watchmen to be placed, how often they shall go the rounds and also to appoint the rounds each watchman is to go and to order what number of the constables of the City shall watch each night."

The hours of watching between the 10th of March and the 10th of September were from 10 P.M. to 4 A.M., and between the 10th of September and the 10th of March from 9 P.M. to 6 A.M. There were seventeen rounds or beats at that time. The largest one was on Market and Chestnut Streets, from Front Street to Seventh. The other beats were not farther west than Fifth Street.

It was also directed, "and the Constables shall in their several Turns and Courses of Watching use their best Endeavors to prevent Fires, Murders, Burglaries, Robberies, and other Outrages and Disorders within the said City, and to that End shall and they are hereby impowered and required to arrest and apprehend all nightwalkers, malefactors, and suspected persons, persons who shall be found wandering and misbehaving themselves, and shall take the person or persons who shall be so apprehended, as soon as conveniently they may, before one of the Justices of the Peace of and for the said city, to be examined and dealt with according to law, and shall once or oftener, at convenient times in every night, go about the several wards of the said city and take notice whether the watchmen perform their duties in their several stations." The pay of the constables was three shillings per night. The section of the law defining the duties of watchmen followed, substantially in the language that regulates the power of the constables. The watchmen were authorized "to apprehend all Nightwalkers, Malefactors, Rogues, Vagabonds, and disorderly persons whom they shall find disturbing the public peace, or shall have just cause to suspect of any evil design. . . . And in case of any Fire breaking out or other great Necessity shall immediately alarm each other and the inhabitants in their respective Rounds, which when done they shall repair to their respective Stands, The better to discover any other Fire that may happen as well as to prevent any Burglaries, Robberies, Outrages, and Disorders and to apprehend any suspected Persons who in such Times of Confusion may be feloniously carrying off the Goods and the Effects of others."

The watch-box was an early necessity of the watch system. They were small wooden constructions, square or hexagonal, and at a late period of their employment some of them were perfectly round. They were in width or diameter from four to five feet, and surmounted by lamps. Within them was space for a narrow bench, fixed to one of the sides of the building. Sometimes there was space for a small stove, the pipe from which rose near the top of the box and opened out upon the street. Around the inside walls

were hooks upon which to hang coats, capes, torches, etc., and underneath the bench was a place in which to store cans of oil, with wicks, lamp-dishes, and other appliances. Probably about 1830 small round holes were placed in the doors of the watch-houses, behind which were fixed revolving disks of iron or tin, upon which were cut in Roman numerals figures running from IX. to XII., then commencing at I. down to VI., the latest morning hour. The watchman set this dial on each return from traversing his beat, and the wayfarer by consulting the dial could learn the hour of the night. It was not essentially necessary in the earlier period of the watch that such precaution should be taken. The watch-box was doomed to removal by ordinance of March 16, 1848, which declared that thereafter no watch-boxes should be provided or permitted in the public streets. It was the duty of the watchman, as he went his rounds, to announce the hour in a loud voice. The watchman's cry was peculiar and musical, and was usually listened for by those awake with some interest, because he not only told the time of the night, but the condition of the weather. If he should cry out, "Oh past tw—elve o—clock—and a starlight morning!" the information was more pleasant than if it might be at another hour, "Oh pa—a—st three o—clock—and a stormy morning!" It is a matter of historic legend, probably true, that on the night that the news of the British surrender at Yorktown, in 1781, was brought to the city, the intelligence having come in at a late hour, a German watchman, who went his rounds, startled the wakeful population by crying the hour, and adding, "Unt Cornwallist ish daken!" Before the Revolution the watchman carried a stave and a flambeau, which was made of tin or iron, with usually a square fountain for oil at the end, which he held in his hand, and a stout wick running through the tube, which burned with a great flare, and was rarely blown out, even in the most windy weather. A badge buckled round his hat was a certificate of his official authority, and a rattle conveniently carried in the side-pocket of his coat, or great-coat in winter, was ready for use in case of alarm or the attempted escape of an offender. In 1806 city watchmen were provided with tin trumpets.

**Watch-Houses.**—The watch-house became a necessity for the watchman and his prisoners from the first establishment of municipal police guardianship. Where the earliest one was located is not known, but in 1704 a watch-house was ordered to be built in the market-place. There is no evidence as to how long its use was continued or how it was superseded. The records show that it was twenty-six feet long and fourteen feet wide. Perhaps it was replaced by the use of the county prison for the same purposes. The headquarters of the watch were fixed at the county court-house as soon as the courts were removed to the State-House. During the Revolutionary period there was a watch-house in the State-House yard, and under the second city charter of 1789 the old court-

house at Market and Second Streets became the city watch-house, and was occupied as such for some years.

A superintendent of the nightly watch was appointed under ordinance of 1797. It was his duty to take care of the oil, wick, and utensils belonging to the city, to see that the watchmen performed their duties, and to aid them in "preventing murders, burglaries, robberies, and other outrages." In course of time the principal watch-house was established in the basement of the City Hall, at Fifth and Chestnut Streets.

In 1833, under the stimulus of the will of Stephen Girard, by which money was devised for the improvement of a police force in the city, four equal divisions of the territory were made for public purposes. There was a captain of the watch and a lieutenant of the city police for each division. Each division was apportioned into three sections, and for each of the latter there was an inspector of police to superintend the policemen and watchmen, subject to the orders of the lieutenant of the division. There were twenty-four day policemen and one hundred and twenty watchmen for night duty. It was provided that there should be a suitable watch-house for each section. Therefore there were twelve watch-houses. But this arrangement was so unsatisfactory and expensive that in 1835 a new ordinance was passed, reducing the number of the day police and the number of watch-houses.

Of the several watch-houses, that for the northern section of the city proper stood upon the north side of Cherry Street, east of Fifth. Another was on the south side of Union Street, between Third and Fourth. The western watch-house occupied a site on Broad Street, near Arch, which is now partly covered by the Masonic Temple. The district corporators had watch-houses that were established at the commissioners' halls. On Nov. 12, 1810, the Northern Liberties organized by ordinance a nightly watch, and provided for lamps. The force was increased in 1811, and a captain appointed.

A radical departure from the old system or lack of system was taken by the act of Assembly of 1850, which brought into existence the Philadelphia police district, and created a force which was clothed with authority not only in the city proper, but also in the districts of Northern Liberties, Spring Garden, Kensington, Richmond, Penn township, Southwark, and Moyamensing. This organization was independent of the old watch and police of the city and districts. By the act a police board was created, to be composed of the marshal and his four lieutenants, who were obliged to keep an office in the city, which should be called the chief police station. It was also made the duty of the Councils of the city and the commissioners of the districts to erect suitable and convenient station-houses for the police in proper localities. The office of the chief marshal was opened

on Fifth Street, below Walnut, and the new station-houses required were gradually provided in different sections of the city.

The marshal's police officers established the following signals for calling the force together, the intention being that the officers should repair to, and concentrate at, the station-house indicated by the signal:

To the marshal's office.....	5	strokes of the alarm-bell.
S. E. Section of the city.....	5-1	" " "
S. W. " " ".....	5-4	" " "
N. W. " " ".....	5-3	" " "
N. E. " " ".....	5-2	" " "
Southwark.....	12	" " "
Moyamensing.....	11	" " "
Spring Garden.....	10	" " "
Northern Liberties.....	9	" " "
Kensington.....	8	" " "
Penn.....	7	" " "
Richmond.....	6	" " "
West Philadelphia.....	13	" " "

"When such concentration may be required at any station the signal shall be given by the alarm-bell within the limits of the said station. The adjoining stations will promptly answer the alarm by giving the same number of strokes as that given by the first alarm-bell, thereby conveying the intelligence to the next station, and so on; so that all policemen will proceed at once to the station whose alarm corresponds with the above statement or regulation."

When the Consolidation Act was passed, in 1854, there was a reorganization of the police department, and by ordinance of July 28th, of the same year, it was declared that for police purposes each ward should be a separate police district, and that in each district there should be "a station-house for the use of the police, and for the temporary detention of persons arrested or charged with offences against the laws."<sup>1</sup> The central station was established in the City Hall, at Fifth and Chestnut Streets. Stations in some of the wards were provided by the appropriation of the former commissioners' halls, and in the other wards buildings were rented and fitted up. It was soon discovered that there was no economy in the renting method, and the city then began to build its own police stations. The first were solid but plain structures, but in course of time architectural effect was attempted, and the buildings provided with ornamental material.

In 1884 there were twenty-six station-houses, located as follows:

First District, Fitzwater Street, below Twentieth.

Second District, at old Southwark Commissioners' Hall, Second Street, above Christian.

Third District, north side of Union Street, below Fourth.

Fourth District, east side of Fifth Street, above Race.

Fifth District, east side of Fifteenth Street, above Locust.

<sup>1</sup> This ordinance has not been rigidly complied with, as in 1884, although there were thirty-one wards, the number of police districts was only twenty-four, corresponding with the original number of wards. The only extra stations were for the Delaware and Schuylkill Harbor Police, whose duties are mainly executed upon the water.

Sixth District, east side of Eleventh Street, above Race.

Seventh District, St. John Street, above Buttonwood.

Eighth District, south side of Buttonwood Street, above Tenth.

Ninth District, northwest corner Twenty-third and Brown Streets.

Tenth District, east side of Front Street, above Master.

Eleventh District, Girard Avenue, near Otis Street.

Twelfth District, northeast corner Tenth and Thompson Streets, old Penn District Commissioners' Hall.

Thirteenth District, old Manayunk Borough Hall, Main Street, Manayunk.

Fourteenth District, old Germantown Borough Hall, Main Street, Germantown.

Fifteenth District, old Frankford Borough Hall, Main Street, Frankford.

Sixteenth District, corner Thirty-ninth Street and Lancaster Avenue.

Seventeenth District, Taylor Street, below Passyunk Avenue.

Eighteenth District, Trenton Avenue, below Dauphin Street.

Nineteenth District, Lombard Street, below Eighth.

Twentieth District, north side of Filbert Street, above Fifteenth.

Twenty-first District, corner of Darby Road and Thirty-eighth Street.

Twenty-second District, northwest corner of Lehigh and Park Avenues.

Twenty-third District, south side Jefferson Street, above Twentieth.

Twenty-fourth District, corner of Belgrade and Clearfield Streets.

Delaware Harbor, northeast corner Front and Noble Streets.

Schuylkill Harbor, Fairmount Water-Works.

#### MARSHALS OF POLICE.

To be elected for three years, under the act of May 8, 1850; act repealed May 13, 1856.

John S. Keyser, elected.....	Oct.	8, 1850
Col. John K. Murphy, <sup>1</sup> elected.....	Oct.	11, 1853

#### CHIEFS OF POLICE.

This office was created by act of May 13, 1856, to take effect at the end of the term of the marshal of police. The chiefs to be appointed by the mayor, to hold office during his pleasure.

Samuel G. Ruggles, appointed.....	May	—, 1857
Gen St. Clair A. Mulholland, appointed.....	—	—, 1868
Kennard H. Jones, <sup>2</sup> appointed.....	—	—, 1871
Samuel Irvin Givin, appointed.....	July	—, 1879
Jamee Stewart, Jr., appointed.....	April	—, 1884

**The State-House, or Independence Hall.**—As soon as William Penn arrived in his province of Pennsylvania, it became requisite to convene the representatives of the inhabitants, to agree upon proper laws for the government of the settlement. It

was not necessary to employ for these primitive legislative sessions a building of large proportions, for, although, by the form of government, the General Assembly for the province was to consist of all the freemen of and in the said province, it is not likely that all attended. The first Assembly met at Chester, Dec. 4, 1682.<sup>3</sup>

The first session of the Assembly at Philadelphia was held on the 12th of First month (March), 1683. There were fifty-four members, nine for each of the counties of Philadelphia, Bucks, Chester, Kent, New Castle, and Sussex. Where this body met is not known. Mr. Etting thinks ("History of Independence Hall") that the place might have been at Guest's Blue Anchor Tavern, because there was no public building in the city at that time, yet it is probable that there was a structure which was looked upon as a public building. Richard Townsend, who was with Penn in the "Welcome," says, in his testimony, "Our first concern was to keep up and maintain our religious worship, and in order thereto we had several meetings in the houses of the inhabitants, and a boarded meeting-house was set up where the city was to be, near the Delaware, and as we had nothing but love and good will in our hearts to one another we had very comfortable meetings from time to time, and after our meeting was over we assisted one another in building little houses for our shelter." From this it seems that the meeting-house was completed before many of the original inhabitants had got out of the caves under the banks of the Delaware, which were their earliest dwelling-places. There is a minute of a meeting held at Philadelphia on the 9th of Eleventh month (January), 1683 (Jan. 9, 1684, new style), at which it was agreed that Monthly

<sup>3</sup> The names of the persons who attended this body are not given in the vote of the Assembly at the head of the proceedings of the session. We can only obtain a portion of the names from the minutes that note members appointed on committees, etc. From this source it is ascertained that the following delegates among others were present: Christopher Taylor, of Bucks; Nicholas More, of Philadelphia; John Simcock, of Chester; William Clark, of Deal; Francis Whitewell; Griffith Jones, of Philadelphia; Luke Watson, of Sussex; William Yardley, of Bucks; William Sample; Thomas Brassy, of Chester; John Briggs, of Kent; Ralph Withers, of Chester; Thomas Holme, of Philadelphia; Thomas Winn, of Philadelphia; John Moll, of New Castle; and Edward Southam.

In the Assembly arose on the first day of its session the first election contest in Pennsylvania. The return for New Castle was contested for illegality. John Moll was admitted and Abraham Man was not admitted to the seat.

In what house or place the Assembly met at Chester has been a matter of controversy. One opinion extensively believed was that the meetings were in an old building, which, until about 1860, stood on the west side of Filbert Street, near the margin of Chester Creek, and was commonly known as the old Assembly-house. But Dr. George Smith, in the "History of Delaware County," with whom John Hill Martin (the "History of Chester") agrees, declares that the Assembly-house, so called, was not built until 1693, and that it was not used then for the Assembly, but was the first Friends' meeting-house. Both these writers coincide in the opinion that the Assembly sat in the court-house, which was then the "house of defense," a log structure, the site of which is not known, and which is believed to have been torn down about the time of the Revolution. Dr. Smith says it was the only public building erected in Upland (Chester) at that time of which we have any knowledge.

<sup>1</sup> He died Feb. 10, 1876, aged seventy-nine.

<sup>2</sup> Died July 6, 1879.

Meetings should be held on the first third-day of each month for men and women, and that every third meeting should be Quarterly Meeting. At this meeting Thomas Holme, John Songhurst, Thomas Wynne, and Griffith Owen were designated to make the arrangements for the choice of a fit place for the meeting-house. Some time in 1684 the brick meeting-house in Centre Square and the bank meeting-house, which was probably of frame, were constructed. The brick meeting-house was not, therefore, the boarded meeting-house, and the bank meeting-house, a more pretentious structure, is believed to have replaced the latter. We may hence presume that the meeting of the Assembly in March, 1683, took place in the boarded meeting-house. The bank meeting-house, on Front Street, above Arch, was completed in 1684 or 1685, and there is strong probability that the Assembly then, and for some years afterward, was convened in that building.

In 1695 it met in the principal room of a large house that had been erected by Richard Whitpain on the east side of Front Street, between Walnut and Spruce. It was considered quite a grand structure for its day, and Penn, writing from England in 1687, said it was too big for a "private man," wherefore he recommended its use by his own commissioners as a State-House for the use of the officers of the province. When the Assembly, eight years afterward, occupied this building for the legislative branch of the government they must have been in some strait for a proper place in which to do business. A committee was appointed to negotiate with Sarah Whitpain. They reported next day that they had agreed with her as to the compensation, or rent, which must have been an unusual thing, because one member for each county stood forth and "obliged themselves to defray the charge of this house, each for their respective county." In 1696 the Assembly met at the house of Samuel Carpenter, which was at that time on the west side of King [or Water] Street, above Walnut. In 1698 the Assembly ordered the rent of the house in which the meetings were held to be paid, and in February, 1699, in consequence of the extreme cold weather they adjourned to Isaac Norris' house, probably to warm themselves. In 1701 the Assembly again met at Whitpain's house, then owned by Joseph Shippen, and occupied the great front room. Subsequently they occupied the school-room of Thomas Makin, who had been elected clerk of the Assembly in 1699. In February, 1705, Thomas petitioned the House and made complaint that he had lost several scholars "by reason of the Assembly's using the school-house so long, the weather being cold." Makin had been allowed twenty shillings for the use of his room during the session, but now the Assembly, being in a generous mood, voted him three pounds in addition. The new Friends' meeting-house, built at the southwest corner of Second and Market Streets in the year 1695, is believed to have been occasionally used by the Assembly for a place

of meeting, intermittingly with Makin's school-room.

At the convening of the Assembly, Dec. 16, 1728, there was again a question as to where it could find a proper place for meeting. It appears that at the preceding session it had passed a resolution requesting the Governor and Council to make an order for a meeting place that should be most convenient for the dispatch of business, because of "indecencies used toward members of the Assembly" where it had been sitting. Lieutenant-Governor Gordon was obliged to apologize for not executing this resolution. He said that he would have appointed some other place than Philadelphia, had it not been that the Council was of opinion that for the convenient dispatch of business the members ought to meet in the city. But he said that if the house would not agree with him, an adjournment to Chester—"which next to Philadelphia seems to be the most convenient place for your meeting"—would be proper. As the Governor did not help the Assembly out of its dilemma, it appointed a committee which selected for its temporary abode the house of Capt. Anthony Morris, on Second Street below Walnut.

In April, 1729, the citizens of Philadelphia presented a petition to the Assembly that it would by law empower the city and county to build a State-House in High Street near the prison. At this time the legislative branch was in one of the frequent controversies it had with the executive whenever it proposed to issue paper money, part of which was for the renewal of former emissions whose legal time had expired. The bill then pending had originally proposed the issue of fifty thousand pounds, but the objections of Lieutenant-Governor Gordon reduced the amount to thirty thousand pounds before it was passed, May 10, 1729. In this act was inserted a section in which it was declared that "a House for the Representatives of the Freemen of this Province to meet in and sit in General Assembly in the City of Philadelphia, is very much wanted." Therefore it was enacted "that the sum of two thousand pounds of bills of credit made current by this act be delivered by the trustees of the loan office to Thomas Lawrence, Andrew Hamilton, and John Kearsley, who are hereby appointed for building and carrying on the same, who shall give their receipt to the trustees for the said bills," etc.

Andrew Hamilton and William Allen were named as trustees by the Assembly for the use of the province. On Feb. 20, 1736, in an act "for vesting the state house and other public buildings with the lots of land whereon the same are erected in trust for the use of the province," it was recited that Hamilton and Allen had purchased divers lots of land situate on the south side of Chestnut Street, and extending from Fifth to Sixth Streets, 396 feet; and on Fifth Street south 337 feet; thence west 148½ feet; then north 82 feet to a lot of ground reputed to be vacant;

thence west 99 feet; thence south 82 feet; thence west 148½ feet to the east side of Sixth Street; thence north 337 feet. Thus it appears that the whole of the ground between Chestnut and Walnut was not taken up at that time, and that the sides on Fifth and Sixth Streets extended south farther than the lot extended in the centre portion. It was as if a piece oblong in shape had been cut out neatly from the southern portion of the ground. As Hamilton and Allen made their purchases individually, the act of 1735 was intended to settle the title. It was there directed that Hamilton and Allen should make good and sufficient deed of conveyance of the property to John Kinsey, of Philadelphia, Joseph Kirkbride, Jr., of Bucks, Caleb Cowpland, of Chester, and Thomas Edwards, of Lancaster, "to and for the use of the representatives of the freemen aforesaid which now are and from time to time hereafter shall be duly elected by the freemen aforesaid and to and for such other uses intents and purposes as they the said representatives at any time or times hereafter when in general assembly met shall direct and appoint, *Provided always* and it is hereby declared to be the true intent and meaning of these presents that no part of the said ground lying to the Southard of the State house as it is now built be converted into or made use of for erecting any sort of buildings thereupon *but that the said ground shall be enclosed and remain a public green and walk for ever.*" In an act passed Feb. 7, 1762, it was stated that Allen purchased of Anthony Morris one other lot of ground, adjoining to the original ground, bounded on the south by Walnut Street, eastward by the lot formerly of John Bird, northward with the State-House ground, and west by the lot reputed to be vacant. This lot was 49½ feet on Walnut Street, and 255 feet deep, so that it ran out on the eastern boundary of the west side of the extension down to Walnut Street, but did not extend to Sixth.

Neither Hamilton nor Allen had made the conveyance to Kinsey and the other trustees as ordered in 1735.

An effort was made to discharge this duty on the 16th of September, 1761, by James Hamilton, heir and representative of Andrew Hamilton, and by William Allen, by which they conveyed the property to Norris, Leach, and Fox, who were named to be trustees in the previous act. The Assembly does not appear to have been satisfied with this arrangement. By an act passed Feb. 17, 1762, it was recited that Hamilton, Kinsey, Cowpland, and Kirkbride were dead. The legality of the conveyance might be called into question, and consequently the Assembly, acting as *cestui que trust* and as the sovereign authority as well, enacted that all the estate and interest of Hamilton in his lifetime, and of his heirs after his death, and also of William Allen in the premises, should be settled upon and vested in Isaac Norris, Thomas Lecah, Samuel Rhoads, Joseph Galloway, John Bayn-

ton, and Edward Penington, and the survivors and survivor of them, and the heirs and assigns of such survivor freed and acquitted from the former uses, but to be held by Norris and his associates for the same uses and purposes as were directed in the act of 1735. The Assembly excepted out of the grant two lots at the corners of Fifth and Sixth Streets and Chestnut, on which the county court-house and city hall were afterward erected. It was stated that Hamilton had bought these grounds for the use of the city and county, and by the act the municipal and county title was affirmed. The declaration was again made that the ground south of the State-House within the wall of the inclosure should not be used for erecting any sort of buildings thereon, but should *remain a public green and walk forever*. Three months after the passage of the act already noticed, another act was passed "to enable the trustees of the State house to purchase certain lots of ground, the remainder of the square whereon the said house now stands."

An appropriation of five thousand pounds was made for the purchase, and the deeds were ordered to be taken in the names of the trustees, the new acquisition to be added to the State-House grounds. After the seat of the State government was removed from Philadelphia the title to the property remained vested in the commonwealth of Pennsylvania; but the members of the Assembly seem to have so lost pride in the old house that, in 1813, a bill was introduced to sell the property, as a means of doing which with the best pecuniary results the opening of a street through it was projected. Voicing the indignation of the people at such a desecration, the Philadelphia Councils sent a protest to the State Legislature; yet, on March 11, 1816, it did pass an act for the sale of the whole property; but it embraced a proviso that if the corporation of the city of Philadelphia should, within ten days before the 1st of June, the day named for the sale, make a contract with the Governor for the purchase of the State-House buildings, with the clock and grounds, for the sum of seventy thousand dollars, and pay one-third within five days thereafter, the sale should not take place, but that the lot and buildings should be conveyed to the city, excepting the County Court buildings, at Sixth Street, the City Hall, at Fifth Street, the American Philosophical Society's hall, south of it, and the office buildings east and west of the main State-House building, which had been erected in 1812, and they were to be vested in the city and county of Philadelphia. The money realized was to be used by the State for the building of a capitol at Harrisburg. The act again repeated the declaration in former acts that the grounds south of the buildings should *be and remain a public green and walk forever*. Councils raised the funds by loan. A portion of the money was paid immediately, and the balance after some delay. And thus this valuable property became vested in the city. William Allen bought the lots on the south side of Chestnut Street,

between Fifth and Sixth, Oct. 15, 1730. There was at least one building upon the ground, as it appears that the Assembly occupied such a building before the State-House was ready for use. It is not likely that the latter was begun before the succeeding year. The building committee was composed of Speaker Hamilton, Dr. John Kearsley, and Thomas Lawrence. Kearsley, although not a professional architect, had gained much local reputation by reason of his plan for the construction of Christ Church, on Second Street. It may have been this achievement which gained him a place upon the building committee. Hamilton was a lawyer, and not expected to be an architect, and Lawrence was a merchant. However, when the committee met to agree upon the plan of the building, Hamilton came with his design, and so did Dr. Kearsley with his. Lawrence seems to have had the casting vote, and he decided in favor of Hamilton's plan. Kearsley was not only disappointed by the rejection of his design, but he was opposed to the building of the State-House on Chestnut Street. In 1732, August 8th, Speaker Hamilton reported to the House that he had provided materials to "carry on the building in the manner as the House now sees it. But for as much as the said John Kearsley had opposed the work, both on account of the place where it is begun to be built and of the manner and form of the building, and had frequently insisted that the House of Representatives had never agreed that it should be erected in that place, Mr. Speaker desired to know the sentiments of the House thereupon; and the said John Kearsley being present as a member, stood up in his place, and having offered to the House his reasons and allegations, which were fully heard, Mr. Speaker moved the House would resolve itself into a Committee of the Whole House, that he might have an opportunity of answering the said John Kearsley." This was done, and the matter was debated between the two architects. On a subsequent day the Assembly ordered that William Allen should be paid for the ground which he had bought for the State-House lot. At that time it was recorded: "Mr. Speaker (Hamilton) then produced a draught of the State House, containing the plan and elevation of that building, which, being viewed and examined by several members, was approved of by the House."<sup>1</sup>

Hamilton, having been vindicated by the action of the House, was now anxious to withdraw from subsequent supervision of the work. He asked to be excused from service, saying, "that the care of conducting the said building had almost entirely rested on

himself; that by experience he found the affair was attended with great difficulties and much inconvenience to his own private concerns; that it was necessary that the House should appoint some skillful person to superintend the work, who ought to have an eye constantly upon the management of the whole and have authority sufficient to consider what is proper to be done." The members of the Assembly gave no heed to this request. They knew that they had the proper man in control, and they voted "that Mr. Speaker be the person appointed by this House with the advice of the two gentlemen before nominated to superintend and govern the building of the State House, and that for his trouble therein the House will give him compensation." This vote of confidence was satisfactory, and Mr. Hamilton was encouraged to make a statement to the Assembly in relation to some of his troubles as contractor for the erection of the building. The carpenters were on a sort of strike, and alleged that the "work expected from them was heavy and to be carried on in an extraordinary manner," and they demanded as compensation "thirty shillings per square." The House resolved that it should be given to them. At a later day, Dr. Kearsley, having fortified himself, it may be supposed, with stronger objections than he was able to interpose on the 8th of August, when the matter was unexpectedly broached by Speaker Hamilton, addressed himself again to the subject, his text being "that the form of the building was liable to great exceptions." The House heard him patiently, and then resolved that in the selection of the place "and the manner of conducting the said building" the Speaker had "behaved himself agreeably to the mind and intention of this House." Speaker Hamilton stated, on Jan. 18, 1734, that he was blamed, without cause, for delay in finishing the building; that his own plan, with "one or more" produced by one of gentlemen joined in the said undertaking (Dr. Kearsley), with several other plans and elevations, were produced; that his plan was "agreed upon as the least expensive and the most neat and commodious and had been approved by the then House of Representatives." Notwithstanding his care, attention, and loss of time, "many Persons imagining it might recommend them to the People have made it their Business unjustly to charge the said Andrew Hamilton with being the sole projector of the building and house for the Purposes aforesaid, and of his own Head running the Country to a much greater Charge than was necessary." In disgust at this treatment, Mr. Hamilton asked the Assembly "to discharge him from having any further Concern in carrying on or taking care of the said Building, he being unwilling to bear the unjust Reproaches of malicious Persons for doing what he conceived and is well satisfied is not only necessary, but when finished will be a credit to the whole province." The House postponed consideration of the matter. In fact, no action was taken

<sup>1</sup> John F. Watson, in his "Annals of Philadelphia," vol. 1, page 398, shows that he was led astray as to the name of the architect of the State-House. Supposing, no doubt, that the architect of Christ Church was the only man on the committee competent to make a design for the building, he came to the conclusion that Kearsley must have been the architect, and seems to have been ignorant of the plain and decisive entries concerning the matter which appear in the votes of the Assembly.

in regard to Mr. Hamilton's complaints, and the Assembly adjourned the next day.

The building which was projected by Mr. Hamilton was the centre edifice since known in later years as Independence Hall. It was one hundred feet in width on Chestnut Street by forty-four feet in depth, and the tower was not a part of the plan. The master-carpenters and builders were Edmund Wooley and Ebenezer Tomlinson. John Harrison was the joiner and carver; Thomas Shoemaker, Robert Hind, Thomas Peglar, Joseph Hitchcock, and Thomas Boude were the bricklayers. The brick were made and furnished by Daniel Jones, James Stoops, and Benjamin Fairman. The stone-masons and cellar-diggers were Jonathan Palmer and Thomas Redman; the marble-mason was William Holland; the wood-carver who executed the fine decorative carvings in the hall and apartments was Bryan Wilkinson. Thomas Ellis and Thomas Godfrey, the inventor of the quadrant, were the glaziers, and Gustavus Hesselius, one of the best known and talented artists of his time, who is yet renowned for his portraits in the style of Godfrey Kneller, gave up for a period the finer practice of his art, and condescended with pot and brush to do the painting of the wood-work. The construction went on slowly. As originally designed, it was intended that the State-House building should accommodate the Assembly, the Supreme Court, and the Governor and Provincial Councils. On the 24th of March, 1733, the Assembly ordered, "for the greater security of the public papers of this Province (agreeable to a plan now produced before the House) two offices to be built adjoining the State-House." These were square buildings two stories in height, capped by a hip-roof. They were some distance east and west of the main State-House. There appears to have been no provision for reaching the upper stories of them by a stairway in the interior. The somewhat curious plan was adopted of constructing a covered piazza of three open arches in front, which contained the stairway and also led to the State-House. A front elevation of the latter, engraved in 1798, shows this arrangement.

In January, 1735, it was ordered "that the west end of the State-House be wainscoted of a convenient height on three sides, and that the east end be neatly wainscoted and finished the whole height for the use of the Assembly." This room on the first floor east was afterward known as Independence Room or Hall. The wainscoting at the east end was to be considered as complete, while on the sides it was but partial. It is probable that the Assembly first occupied the State-House at the session commencing October, 1735. The square buildings adjoining and the main State-House were sometimes called Province Hall. The additional buildings were nearly completed in January, 1736. On the 15th of that month John Kinsey made a motion, in which he recited that "the Province hath been at considerable Ex-

pense in building the several Offices adjoining to the State-House, which are now almost completed, and were intended as Repositories for such Records and Papers as more immediately concern the Publick, and particularly those of the Trustees of the General Loan Office, the Rolls Office for recording Deeds; and the Register-General's Office." The House took into consideration a proposition that such officers should be compelled to deposit their records and papers in those offices, and give their own attendance there. The committee brought in their draught under the title, "An act to enjoin sundry officers in the county of Philadelphia to give their attendance in the offices adjoining the Province Hall." This proposition was not well received by the officers in question. The register-general, Peter Evans, protested that the papers and records of his office were "as well-secured against Fire, and more effectually guarded against any Embezzlement that may be made by ill-disposed Persons in the place where they now are." The wills and papers of the office were lodged in the various counties, and application to the register-general was seldom made and the profits of the office small. It would be a great inconvenience to him to make him attend on the office on Chestnut Street daily. He therefore proposed, at his own expense, to build "a strong Brick Room near the Market-Place, apart from any other Buildings, arched with Brick, and covered with tile or slate, with such a Door and Window as shall render it secure from Fire and other accidents, and that the Property of said Building shall be vested in the Register-General for the time being forever." Charles Brockden, recorder of deeds, was as unwilling as Evans to remove to the offices. In his protest he said that the site of the proposed office was remote from his habitation and establishment in business, and inconvenient for his daily attendance at certain hours, and if, by the act, the care of the records was taken from him, he presumed that he would not be responsible in case of fire or other accidents. Mr. Brockden also represented that he was suffering upon account of "the Smallness of his Fees, which, as he is informed, are much less than in any other Government in America." The House resolved "that the Security given by the Recorder of Deeds for the due Execution of his Office cannot by Law be extended to Fire or other accidents which may happen without any Default in him or against his Will." The bill was passed by the Assembly on the 31st of January, 1736, but it met with opposition from the Governor, who refused to sign it unless considerable modifications were made for the benefit of the office-holders. The Assembly would not agree, and so the bill fell.

The Philadelphia Library Company in 1739 was granted permission to use the second story of the western office or wing building, "to deposit their books in." The company remained there thirty-four years, and went to Carpenters' Hall in 1773. This

room, and one in the eastern wing, was occupied during the Revolution for committee-rooms, either by the Assembly or Congress. The lower story was occupied by the secretary of the province from 1739 down to the Revolution. In the attic of the western wing the doorkeeper of the Assembly in colonial times was lodged.

In February, 1736, Edmund Wooley and Ebenezer Tomlinson sent a petition to the Assembly stating that they had almost finished that part of the State-House that they undertook to construct, and, therefore, "praying that the house will direct in what manner the house will complete the same," and claiming payment for some extra work. Upon this it was resolved "that for as much as it will be too great a Change at present to wainscoat the inside of the State House and that wainscoating any Part of it may be totally lost when the Whole come to be completely finished the House is therefore of Opinion, and doth order, that the Inside of the said building he finished with good Plastering, a proper Cornish round the Room next the Ceiling and a Surbase below."

At the session commencing in October, 1738, Andrew Hamilton brought in his accounts for the building, which were audited by a committee of the Assembly. It was shown that he had paid out on account of the State-House £4043 16s. 11d. Thomas Lawrence had received £666 13s. 4d., and paid out £399 19s. 3d. John Kearsley had received £666 13s. 4d., and paid out £550. To Hamilton there was allowed £402 3s. 9d. for commissions and services during five years; to Lawrence, £32; and to Kearsley, £32 10s. 4d. In June, 1741, a committee, composed of Edward Warner, Mark Watson, and William Hughes, appointed to inquire into the cause of the delay in the completion of the structure, reported that "they had discoursed with the manager of such building, who informed that he had met with several Disappointments by Workmen; that the Carpenters' Work, however, was now finished; that the Sashes were made and the Glass ready to put in, but that the enclosing Wall, not being yet completed, he had thought it better to defer putting them up until that was done lest they should suffer much damage by breaking; that as to the Plastering, notwithstanding the Pains he had taken for that Purpose, he had not been able to procure a Workman capable of doing it as in his Opinion it ought to be done, tho' he had no Hopes of getting such a One by next Spring; but if the House would be content with such Work as is commonly done here he would have it speedily performed, and like wise would have the lower Rooms immediately glazed, if the House think fit to direct it; in which Case he will cause the Enclosure to be finished in such a Manner as may for the present tend to preserve the Glass; and that he would cause that Part of the Wall that is ill done to be amended." Some members were dissatisfied with the manner in which the work had been going on. A motion was put "that the building

he no longer continued under the present direction, but that some other person or persons be appointed to manage and carry on the same." This was lost. But on the same day the committee brought in their report in writing, as follows:

"We think it necessary, that the Assembly-room of the State house should be plastered, glazied, and finished, all hut the Ceiling and npper Work, by the next Meeting of the Assembly. And the Ceiling and upper Work to be finished as soon as a Workman can be got.

"A boarded Fence, from each Office to each Wall, as high as the Wall, and Doors fitted in the Wall adjoining the Offices, to inclose the whole.

"Part of the Brick Wall ought to be taken down, and new built, the North End of each Wall turned round, or carried upright, to prevent Children getting over.

"The Earth being high, and the Wall low on the South Side of the Back Wall, the Earth should be taken away, to prevent getting over.

"Considering Stone is so hard to be come at in covering the Wall, Brick will have many Joints where the Water will get in, and perish the Wall, we are of Opinion, that to put a Cornish on each side of the Wall to carry the Water a small Distance off, and cover it with Shingle, will be sufficient for many Years, and not very Chargeable.

"That the Manager of the Building lay the Accounts relating to it before the Committee of Accounts.

"That the Whole Building, with all its Parts, should be finished without Delay, that it may be ready for the Use intended.

"EDWARD WARNER

"MARK WATSON

"WILLIAM HUGHES."

This was agreed to, and a copy of the report ordered to be sent to Mr. Hamilton for his observance. But fate ordained that he should be unable to pay much attention. He died in less than two months, Aug. 4, 1741. He must have left his papers in excellent condition, as in two weeks after his death his executors exhibited to the Assembly his accounts as superintendent of the building.

At this time there was a proposal in relation to carved work, and shortly after John Harrison, carpenter, who had done the inside work, sent a petition requesting that it might be inspected, and an allowance in compensation he made. Shortly afterward Thomas Leach, Isaac Norris, and Edward Warner were appointed superintendents to finish the building, with recommendation that they expedite such portions as had already been recommended to Superintendent Hamilton.

A plan for finishing the court-room, the west room, first story, and the piazzas between the offices and the court-room was laid before the House, and approved of in 1743. It is probable that the State-House building was finished in 1744, as toward the close of that year Edmund Wooley's bill was presented to the House.

It was then without tower or steeple. It was oblong, and it has been somewhat of a puzzle how ascent was made to the upper story. It might have been by galleries accessible from the piazzas, the steps of which led to the office buildings east and west, or it might have been by stairways running right in from the main hall of entrance. The front of the building presented much the same appearance as it does in 1884, except that the doorway, which was perfectly plain in its frame-work and in the same style with the windows, has been replaced by the pres-

ent doorway, which was substituted after the beginning of the present century by certain officers, who made some alterations. The brick basement course, in which the cellar-windows opened, was crowned by a coping of soapstone, which ran horizontally to the edge of the sham windows on each side nearest the door. Then the ridge dropped to the parallel of the upper step, which it joined, running east and west for that purpose. An example of this ridge can be seen in the rear of the State-House now, but it does not appear in the front, having been changed, probably, when the doorway was altered. A heavy balustrade rose upon the central portion of the roof, and connecting the three stacks of flues or chimneys.

When finished, the State-House was occupied in the lower east room by the Assembly, and in the lower west room by the Supreme Court of the province. The accommodation of the Governor and his council was also intended when it was projected, but it was not until 1747 that the Council-chamber, the western room on the second floor, was finished.

It is not possible to trace entirely the location of the offices of the provincial government previous to that year. While Penn, on his first arrival, was living in Fairman's house, at Sbackamaxon, the public business connected with the executive branch of the government must have been transacted there. When he took possession of the cottage (afterward known as Letitia's) on the lot running from Front to Second, south of High Street, there can be little doubt that the public concerns were also attended to by himself and his council in that house. On his return to England, in 1683, he directed his steward, James Harrison, to allow his cousin, William Markham, to live in the Letitia house, and that Thomas Lloyd, the Deputy Governor, should have the use of his periwigs, "and any wines and beers that may be there for the use of strangers." This seems to refer to the visits of strangers to the Deputy Governor on public business, and justifies the belief that the seat of the proprietary government was at the Letitia house.

After Penn's return to the province he conducted its affairs at his successive residences in the Shippen mansion and the "slate-roof house," where his secretary, James Logan, also lived. Logan was given permission to live in the "slate-roof house" until the year was up, in January, 1702. The building was then the State-House of the province, at least as far as regarded the executive officers. In May, 1702, Logan wrote to Penn, "I am forced to keep this house still, there being no accommodation to be had elsewhere for public business. Jacob Taylor (the office must pay for him) likewise tables here and holds it in thy closet that was, the books, etc. being removed to the next room just above it." Logan left the "slate-roof house" when Governor John Evans came to Pennsylvania in February, 1704, and then Evans, James Logan, and Judge Mompesson, and

William Penn, Jr., went to Clark's Hall, southwest corner of Third and Chestnut Streets. The offices of State were probably established in that building during the term of Evans. The early minutes of the Council generally state that they were held at Philadelphia or in "ye Council room." On the 11th of the Fourth month (June), 1685, the Council is stated in the beginning of the minutes to be held in the Council-room at Philadelphia, Thomas Holmes being the president, and William Markham secretary. Subsequent minutes are generally particular in noting the same fact up to the commencement of the term of Governor Fletcher, in 1693. In May, 1689, the Council was held "in ye council room," Governor Gen. John Blackwell being present, but in January, 1689, it was held "at the Governors lodging at Phila." and there are several subsequent entries of that kind. During the succeeding, in January, 1690, the Council was again held "in ye Council room," and in after-years the general entry was that they were held at Philadelphia.

The Council took possession of the Council-chamber in the State-House when Anthony Palmer was president, some time in the summer of 1747. This room and the upper story were occupied by the Governor and Council up to the Revolution, and no doubt by the Council of Safety and the Supreme Executive Council, and the Governors of the State afterward, and until the seat of government was removed to Lancaster. The whole of the second story was occupied most probably before the Revolution by the officers of the provincial government. A division ran through the centre east and west. The Governor's room was in the southwest corner, and the officers of the Council and the proprietaries seem to have been located in the southeast. The long apartment on the Chestnut Street front was often appropriated to social purposes, and on such occasions was called the "banqueting hall."

On the 30th of September, 1736, William Allen, mayor of the city, made a feast for the citizens at the State-House, to which all the strangers in town of note were also invited. Franklin's *Pennsylvania Gazette* contains an enthusiastic notice of "the delicacies of the viands, the variety and excellency of the wines, the great number of guests, and yet the easiness and order with which the whole was conducted," so that it was "the most grand and the most elegant entertainment that has been made in these parts of America." This must have been given in a down-stairs room, and not in the up-stairs apartment, afterward called the "long room" or the "banqueting room," because it is apparent that at this time the upper stories were unfinished. On the 9th of November, 1752, Lieutenant-Governor James Hamilton celebrated the anniversary of the birthday of King George II. by an entertainment at Busb Hill, where the royal healths were drunk, in honor of which there was a discharge of cannon from the Association

Battery and from the ships in the Delaware. In the evening there was a grand ball at the State-House, with a hundred ladies present, and a larger number of gentlemen. The dancing must have either taken place in the Assembly-room, or the room occupied by the Supreme Court. The supper was given in the long gallery, and "everything conducted with the greatest decorum." Governor Robert Hunter Morris gave a supper and hall there in 1754. Governor William Denny was honored by a dinner in the same apartment in 1756. The Earl of Loudon, commander of the British forces in America, was feasted in the long room by the city corporation in the ensuing year. John Penn was dined there by the city in 1763, and Richard Penn in 1771 and 1773. In the rejoicings which followed the news of the repeal of the Stamp Act, on the 21st of May, 1766, the "principal inhabitants" gave an entertainment at the State-House, to which were invited the Governor and officers of the government, the military, and Capt. Hawker, of his Majesty's ship "Sardoine," which had convoyed the stamp ship into port a few months previously. Three hundred plates were laid, and a contemporary chronicler says that "the whole was conducted with the greatest elegance and decorum, so that detraction itself must be silent on the occasion." In September, 1774, when the Continental Congress met at Carpenters' Hall, its members were the guests of the gentlemen of Philadelphia at a dinner in the State-House, and this is helieved to have been the last occasion on which public social festivities took place there, although there were private occasions afterward when the building was used for banquets.

The General Assembly of the province met in the east room on the lower floor, and it was there that the constant controversies between the members and the Governors were fought out. The sturdy Quaker majority held their own against the proprietary demands, and important political questions were settled there. This apartment was occupied from October, 1736, to May 13, 1775, upon all occasions of regular or called sessions. During the three latter days of this period it is probable that the chamber was occupied during a portion of the time by the Assembly and at other times by the Continental Congress. The Congress sat there until driven out by the British, on Sept. 18, 1777. It came hack July 2, 1778, and in the east room received on August 6th of that year, M. Conrad Alexander Gerard, minister of France. On the 9th of July, 1778, "the Articles of Confederation and Perpetual Union between the Independent States of America" were signed in that chamber by the delegates of eight States, but upon conditions not to be binding until ratified by the thirteen States.<sup>1</sup>

<sup>1</sup> The eight States were New Hampshire, Massachusetts, Rhode Island, Connecticut, New York, Pennsylvania, Vermont, and South Carolina. The delegates from Pennsylvania who entered into this treaty were Robert Morris, Daniel Roberdeau, Jonathan Bayard Smith, William Clingan, and Joseph Reed. During the course of the year the articles

Congress continued in the east chamber until June 21, 1783, when, because some soldiers of the Pennsylvania line were a little uproarious in front of the State-House in demanding that the Supreme Executive Council of the State (not Congress) should requite their claims, the Confederate delegates took upon themselves an unnecessary panic, and adjourned in great haste to Princeton, where they met on the 30th of June. It was impossible to coax them back for some years, and when they did come they did not sit in the Assembly-room.

#### PRESIDENTS OF CONGRESS IN PHILADELPHIA.

##### SESSION AT CARPENTERS' HALL.

Sept. 3, 1774.—Peyton Randolph, of Virginia.

##### SESSIONS AT THE STATE-HOUSE.

May 24, 1775.—John Hancock, of Massachusetts, session at the State-House until Congress adjourned, Sept. 18, 1777, to Lancaster.

##### SESSION AT LANCASTER.

Nov. 1, 1777.—Henry Laurens, of South Carolina.

##### SESSIONS AT STATE-HOUSE, PHILADELPHIA.

Dec. 10, 1778.—John Jay, of New York.

Sept. 28, 1779.—Samuel Huntington, of Connecticut.

July 10, 1781.—Thomas McKean, of Delaware.

Nov. 5, 1781.—John Hanson, of Maryland.

Nov. 4, 1782.—Elias Boudinot, of New Jersey.

Congress adjourned to Princeton June, 1783.

To what use the east room was put for a few years is not now known, but there, May 14, 1787, assembled the members of the convention appointed by the various States to frame and agree upon a Constitution for the United States. Of that august body George Washington was president, and Maj. William Jackson was secretary. This convention was in session until September 17th, when, having perfected their work, the members adjourned. They were succeeded shortly after, in the month of October, by a conference of delegates from the congregations and churches in the United States which before the Revolution had been in connection with the Church of England. This convention consulted upon the means best adapted to secure independence of Great Britain, while at the same time the religious service and creed of the Church of England should be disturbed as little as possible. The result was that after a session of eight days the labors of the delegates resulted in the foundation of the Protestant Episcopal Church of the United States of North America. In the same year, November 24th, the convention of the State of Pennsylvania to frame a new constitution met in the east chamber, perfected its work, and occupied the room, with the exception of vacation, until Sept. 2, 1790. During this time this convention passed a resolution to ratify the new Federal Constitution of the United States. Under the State Constitution of 1790 there was a very material change in the legis-

wers ratified by North Carolina, July 21st; Georgia, July 24th; New Jersey, November 26th; Delaware, May 5, 1779; Maryland, March 1, 1781.

lative system. The General Assembly of Pennsylvania had up to that time been a single body. There was now constituted an additional department, and the two were denominated the Senate and the House of Representatives of the State of Pennsylvania, the term General Assembly being enlarged so as to include both. This change led to new arrangements. The Senate was to be accommodated as well as the House. They took possession of the first floor, and occupied the east and west chambers. The Senate occupied the eastern room, and the House remained in the old quarters of the Assembly on the west. A writer who had visited the Assembly at this period relates his recollections in later years :

"The Senate of Pennsylvania held their deliberations in an upper chamber of the State-House, Anthony Morris, Speaker, in the chair, facing the north. His personal appearance from the chair was that of an amiable, contemplative, placid-looking gentleman, dressed fashionably plain, in a suit of mixed or drab cloth; fair complexion and light flaxen hair, slightly powdered, his imperturbable serenity of countenance seemingly illuminated by a brilliant pair of silver-mounted spectacles.

"The Representatives' chamber was in the east wing down-stairs, designated since the arrival of Lafayette as 'Independence Hall,' George Latimer in the chair, facing the west. When seated in the chair, and the table before him, he seemed admirably adapted to the station he so honorably filled, and which he had the honor to fill, by his well-formed manly person, from his bust upward, and being of the proper height and bulk, his neck supporting a head and physiognomy of the first order, even such a one as is given by Milton to our first parent in these words,—

"His fair large front, an eye sublime, declared  
Absolute rule."

"Nevertheless, being judged by his political opponents, all spoke of him as being possessed in a high degree of that admirable quality of 'softness in the manner but firmness in the purpose,' which he exhibited one day with great effect. A new member, fresh from his constituents, and highly charged with the political fluid of the day, attempted to introduce personality into the debate. He was on the instant stopped by Mr. Speaker, and cautioned by him very gently to beware, as it would in no case be permitted. The member, notwithstanding, in a short time afterwards intimated something like a repetition of his purpose, on which Mr. Speaker raised himself upon his feet, and addressed to him certain words of powerful import in a low but firm tone of voice, which caused the offending member to shrink within himself, as a touched terrapin within the shell, Mr. Speaker the mean while deliberately preparing with finger and thumb to regale himself from his open snuff-box with a cool pinch of snuff.

"On the floor of the House and from the lobby the first object which arrested the attention of the spectator was the venerable appearance of old Mr. Hiltzheimer, from South Seventh Street, he being always among the first in his place, and looking towards the door with the most profound gravity through a pair of full-moon spectacle-glasses, or else reading and sifting away the daily printed journal which had been just handed him, damp from the press.

"The largest man in the House, and probably in the State at the time, was the member from Berks County, Mr. Coolbough, a gentleman of high respectability, and very popular among his constituents, though sometimes designated in the city as the 'Dutch giant.' But among them all, as the leading master-spirit or 'Prospero' of the Assembly, and the most memorable State politician of the day, was the far-famed (within the boundaries of the State) Dr. Michael Leib. He was always remarkable in the House for his erect position of crest, his fashionable, gentlemanly dress and address; his handsome face and ruddy complexion, and his piercing, brilliant black eyes, sparkling with intelligence and quickness of thought. He used to be seen continually in mottoo somewhere, either conversing with animated gestures among other members surrounding the fireplace, addressing himself to the chair in most energetic speech, exhibiting therein thoughts which glowed and words which burned in the cause of 'the People,' as he at all times constantly averred in those days."

By this time the inhabitants of the interior of the State had become dissatisfied with the continuance of the capital at Philadelphia. Persons who were interested in the public business with the legislative or executive departments were compelled to travel great distances from the western boundary to the eastern, at Philadelphia. Therefore, in March, 1787, it was resolved that a State-House should be erected for the accommodation of the executive and General Assembly, at Harrisburg, in Dauphin County. No active measures were taken to effect the removal immediately, but to expedite the measure the Legislature resolved, by an act passed in April, 1799, that temporary removal of the seat of government should be made to Lancaster, and that after the first Tuesday in November of the same year the functions of the State government should be exercised there. The Assembly adjourned on the 11th of April of that year, and thus, after a hundred and seventeen years, during which the State capital was at Philadelphia, that connection with the city and its people ceased.

In the latter part of 1799 the Grand Lodge of Masons of Pennsylvania presented a petition to Governor Thomas Mifflin for permission to hold its meetings in one of the rooms of the State-House. The Governor granted the use the room formerly occupied by the secretary of the Senate of Pennsylvania, in the second story of the western part of the building, probably in that which was formerly known as the Council-room. The lodge removed from the State-House in 1802, when Peale's Museum was established.

This departure of the legislative and executive offices of the government of the commonwealth from Philadelphia left the State-House building vacant for a time, and there was much inquiry as to what should be done with it. Charles Wilson Peale, whose museum had grown too large for the quarters it occupied, offered to become the tenant.

The American Philosophical Society by memorial, and the Select and Common Councils of the city by resolution, recommended the plan of Peale to the attention of the Assembly. A committee to which the subject had been referred reported in favor of selling the State-House, with a lot of sufficient size adjoining, for the use of the building, and that the balance of the State-House yard should be divided into convenient lots. But there was a better spirit among the members. They rejected the proposition to sell the property, and, instead of that sacrifice, passed the act of March 17, 1802, granting to Peale the use of the lower story of the eastern end and the whole of the upper floor, with the proviso that the citizens, as usual, should hold their elections there (presumably at the windows of the east room), and that Peale would take care of the State-House yard, and "open the doors in the hall and permit citizens to walk in the yard for recreation, and to pass and repass at reasonable hours as heretofore." The second story was divided into four rooms. The "long room"

was upon the north, fronting Chestnut Street, and extended from the east to the west end of the main building, and half-way toward the south end. It took up, in fact, the front half of the building. The southern half was divided into three apartments. The "mammoth-room" extended from the east wall to a parallel with the east wall of the tower. The "lecture-room" was small, and occupied a space about the width of the tower. The stairway leading to the upper tower of the steeple was on the east side. The "quadruped-room" extended from the lecture-room to the west wall. The stairway to the tower also led to the "marine-room," which was in the attic. In the long room were over a thousand specimens of birds and four thousand insects, with minerals and portraits. The mammoth-room contained the skeleton of the remarkable antediluvian monster, the bones of which were first discovered in a marl-pit in Ulster County, N. Y., by Mr. Peale in 1801. The lecture-room was used for lectures, when delivered, but also contained curiosities. In the quadruped-room were stuffed specimens of some two hundred animals, large and small. In the marine-room were bodies of large fish, alligators, serpents, and reptiles. In the yard were placed in cages a few living animals which could stand existence in the open air in summer and winter. A splendid eagle was in a cage, on the front of which was inscribed, "Feed me well; I live one hundred years."

This very small zoological garden was of unflinching interest to the hoys of the city and to the country people, when they came as visitors. Besides the rooms in the State-House proper, Mr. Peale threw a floor over the stairway in the main hall or tower, in which he prepared subjects, deposited duplicates, and kept his library of natural history. After the city of Philadelphia became owners of the State-House, Mr. Peale was notified to remove this floor, as it was a disfigurement of the fine proportions of the stairway and tower, but he made objection, and succeeded in baffling the opposition. The museum remained in the State-House until the Arcade building, Chestnut Street, north side, between Sixth and Seventh, was finished, in 1828-29.<sup>1</sup>

Up to the time when the State sold the State-House property to the city Mr. Peale had paid no rent. In 1811, before that transfer was made, he proposed that he should be allowed, for the accommodation of the museum, the use of the second stories in the wings about to be constructed. As soon as the city bought the property, in 1816, it was resolved that Mr. Peale should pay rent. He began at a rate of four hundred dollars per annum. In 1818 Councils resolved that

<sup>1</sup> When Mr. Peale first opened the museum he kept the collection open on Sunday, and placed at the front door a placard, upon which was the following inscription: "Here the wonderful works of the Divinity may be contemplated with pleasure and advantage. Let no one enter to-day with any other view." This attempt at an exhibition on Sunday brought forth opposition and articles in the newspapers in regard to Sabbath desecration, which were replied to by Mr. Peale defending his course. How long the museum was open on Sundays is not known.

he should pay twelve hundred dollars rent, and leave the two lower rooms vacant. The latter were rented to the county commissioners for the use of the County Courts for twenty-four hundred dollars. In 1821, Peale's rent was reduced to six hundred dollars, and in the same year the Legislature incorporated the Philadelphia Museum Company, composed of Raphael, Rembrandt, and Rubens Peale, sons of C. W. Peale, Coleman Sellers, a son-in-law, and Pierce Butler. They purchased the interest of the elder Peale, and the capital of the company was fixed at five hundred shares at two hundred dollars each, the stockholders to be personally responsible.

After the evacuation by Peale of the lower stories, the east room became occasionally an exhibition-room. The first employment of the apartment for that purpose was in November, 1824, when Trumhull's picture of "Washington Resigning to Congress his Commission" was exhibited there. The reason for its admission was that this being a representation of a great historical event, the hall dedicated to patriotic memories was the proper place for the display. Subsequently other pictures were exhibited, in favor of which no patriotic pretence could be presented.

Probably the last occasion on which Independence Hall was used for show purposes was when a picture called "The American Flag Unveiled in Mexico for the Protection of Joel R. Poinsett" (formerly minister to Mexico) was exhibited. Councils resolved that after that making a show-room out of the Independence chamber was not beneficial to the character of a great city.

In "the picture of Philadelphia in 1824" is a plan of the State-House and adjoining buildings, including the court-house. Proceeding westward from the passage-way leading to the yard adjoining the City Hall, the offices and rooms upon the first floor of the east wing were occupied by the clerk of the Mayor's Court and recorder of deeds. Then the hall or passage-way leading through to the yard and to the stairway to the second story. On the west side of the passage-way were the register of wills and rooms of the Supreme Court. Next was the east room, second story, denominated on the plan "Court-Room," but without regular tenants.

The centre hallway leading to the tower was denominated "entrance to the museum," etc. The west room was occupied by the Mayor's Court; the adjoining office in the west wing was held by the prothonotary of the Court of Common Pleas; next was the sheriff's office; then the west hallway to the yard and stairs to the second story; then clerk of Orphans' Court and clerk of Quarter Sessions.

The second story of the east office wing was divided east of the hallway by a partition running parallel with Chestnut Street. The front room was occupied by the guardians of the poor, and the back room, looking out upon the yard, by the grand jury. West of the hallway the space was cut by a partition run-

ning north and south, with an entry leading to the stairway. A small room front of this entry, looking upon Chestnut, was the "black witness-room," and immediately opposite was the "white witness-room." The westernmost room of this second story, reached by the short entry, was occupied by the prothonotary of the District Court. The second story of the western side was planned in the same manner as the east wing. The clerk of the United States Court occupied the eastern apartment. The United States marshal held the two offices front and back, corresponding to the witness-rooms in the east wing. The western half of the second story was divided by east and west partitions. The county commissioners occupied the southern room, and the auditors that at the north.

After the Legislature and Governor had removed to Lancaster and Harrisburg, the Supreme Court for the Eastern District, which had been held up-stairs, sought more comfortable quarters. The judges descended to the east room, and remained there, it is supposed, until after the State-House building was sold to the city, and probably until 1818. After that time there was no public use of the east room until about the time when the second visit of Lafayette to America was expected, in 1824. In that year, Councils having resolved to honor Lafayette as the guest of the city, it was determined to receive him in the east chamber, a design considered the more appropriate because of the Revolutionary history of the apartment.

Previously certain officers having charge over the State-House had changed very materially the appearance of the apartment. The old wainscot and panel-work had been torn out, the curious chandelier of glass with its pendants had been taken down and conveyed to an upper story, and the interior had been modernized. The walls were painted in stone-color, and the windows hung with curtains of red and blue studded with stars. A statue of Washington, carved in wood by Rush, stood near the east centre, and on either side of it were hung portraits of Washington and of Penn, Franklin, Morris, Hopkinson, Green, Wayne, Montgomery, Hamilton, Gates, Rochambeau, Carroll, and McKean. Lafayette was received at the Chestnut Street entrance, passing under an archway designed by William Strickland and decorated with paintings, mottoes, and two carved figures emblematic of justice and wisdom, that were executed by Rush. The City Councils met Lafayette at this entrance, and accompanied him to the east room, where Mayor Watson delivered the address of welcome, to which he made an appropriate reply. In 1833 an effort was made to restore this room to its original appearance. Much of the panel-work was found and restored, and missing pieces were replaced by substitutions in the same style. The old chandelier having been restored, the room was very much as it was in 1776, the principal lacking feature being the gallery that had partially filled the eastern end. Por-

traits of eminent Philadelphians were hung up, and in 1854 a portion of the Peale collection was added. The City Councils having devoted the room to public purposes, a large number of the guests of the municipality were received there, among them Presidents Jackson, Van Buren, Harrison, Polk, Taylor, Pierce, Lincoln, and Grant, the Prince de Joinville, and Louis Kossuth. The remains of John Quincy Adams, Henry Clay, and Abraham Lincoln, and those of many officers killed during the civil war lay in state in the east room.

The west chamber of the first floor was ordered to be finished in 1743, but might have been in use before that year by the Supreme Court of the province. It may be assumed, without positive knowledge, that the Courts of Admiralty under the crown held their sessions at the court-house at Market and Second Streets, after that building was finished, and at the State-House after the Supreme Court of Pennsylvania was assigned the use of the west room. This would be likely from the known interests of the colonial Governors and Assembly to keep on good terms with the crown and officers of the English government. Yet it must be stated that there are no means of proving anything upon the subject. Knowledge is meagre in relation to the manner in which the admiralty jurisdiction under the crown was exercised. Casual references in letters, or allusions in the colonial records, to persons as officers of the admiralty are about all that can be found in relation to this subject. The titles to the jurisdiction of the officers were changing. William Penn and the Council exercised admiralty jurisdiction in Pennsylvania and the lower counties on the Delaware for ten years after the settlement, and until 1693. Several cases are found upon the Council minutes, as for instance, the petition of the mariners belonging to the "Friends' Adventure," March, 1693; the "Levee," of Liverpool, September, 1683; the "Mary," of Southampton, November, 1683; the "Harp," of London, and others. Governor Benjamin Fletcher, of New York, upon his assuming authority in Pennsylvania in 1692, announced himself as vice-admiral, and appointed in the succeeding year William Markham to be his surrogate, with the power of vice-admiral. In 1697, Col. Robert Quarry was in Philadelphia, and claimed to be judge of the admiralty for Pennsylvania and West Jersey. Some of the judges are called commissaries. Col. Seymour, Governor of Maryland, is said to have been vice-admiral of Maryland, Pennsylvania, and West Jersey in 1704, and John Moore was deputy judge at Philadelphia in the same year. Jared Ingersoll, in 1771, was described to be judge of admiralty in appeal for Pennsylvania, New Jersey, Maryland, and Virginia. Ingersoll seems to have been a superior officer. There are references to show that Edward Shippen, Jr., who was appointed commissary or deputy judge in 1751, was acting in Philadelphia in 1773, although Ingersoll was still in commission.

As soon as resistance to the claims of Great Britain became a settled policy in Pennsylvania, the authority of the admiralty under the laws of Great Britain was superseded. The Continental Congress recommended the Assemblies of the various colonies to create Courts of Admiralty. An act of Assembly for this purpose was passed in the early part of 1776, and George Ross, of Lancaster, was commissioned judge on the 6th of April by the Assembly. This court was in existence until superseded by the District Court of the United States, holding admiralty power in 1790.

July 15, 1776, the convention to form a constitution for the State of Pennsylvania assembled in this room, and remained there until September 28th, when the frame of the constitution was finished. What became of the Assembly after the members were driven out of the east chamber is not exactly known. In 1778 it was sitting in the eastern room of the second story, possibly in the banqueting-room. About 1780 the Legislature came down-stairs and occupied the west room of the first story. In 1811, the District Court for the City and County of Philadelphia occupied this chamber. In 1821 the Mayor's Court became tenant of the apartment. When that tribunal was superseded by the Court of Criminal Sessions, established March 19, 1838, Judges Bouvier, Conrad, and Todd established themselves in the Mayor's court-room. They were driven out by the act of Feb. 25, 1840, which abolished the Court of Criminal Sessions and established the Court of General Sessions. In less than two years Judges Barton, Conrad, and Doran were themselves *functus officio* by act of Feb. 3, 1843. The west room was vacant for a short time, but the necessities of justice requiring more court-rooms than had previously been in use, the General Sessions room was fitted up to accommodate the Court of Common Pleas, while the old Common Pleas court-room, in Sixth Street below Chestnut, was given up entirely to the Quarter Sessions. In 1875, principally through the exertions of Francis M. Etting, Councils resolved to appropriate the west room as a national museum and place of deposit for relics connected with the history of the Province and State of Pennsylvania, and of the United States. Eventually the whole building may come to some such use as a proper sequence of its evacuation and the use of the City Hall at Broad and Market Streets by Councils.

After Peale's Museum was removed from the State-House the United States government rented the second story for judicial purposes. The long room was obliterated, and the western portion of the second floor was thrown into one room for the use of the United States Circuit and District Court. The judge's bench was placed in front of an alcove, upon the wall of which was erected an elegant marble tablet, prepared by the bar of Philadelphia, in memory of Justice Bushrod Washington. A canopy, supported by Corinthian pillars, arose from the bench and projected out into the room. The United States district attor-

ney and clerk occupied a railed-off space in front of the bench. The wood-work was handsomely painted, the bench and its portico in pure white, and at the time this was the handsomest court-room in the city. East of the United States court-room the second story was divided by a partition, leading east and west, into two rooms. The northern apartment, with the remaining portion of the old long room, was used as a jury-room for the United States Court. The southern apartment was given up to the use of the clerk of the District and Circuit Court. Francis Hopkinson held both of these offices for some years. In November, 1846, George Plitt was appointed clerk of the Circuit Court, Mr. Hopkinson remaining as clerk of the District Court, but being superseded therein, March 9, 1847, by Thomas L. Kane. During this period the clerk of the District Court occupied the southern office, and the clerk of the Circuit Court that on the north. In 1854, upon the consolidation of the city and districts, it was decided by Councils that increased accommodation for the legislative branch of the municipal government was required. The United States courts were given notice to remove from the second story of the State-House building, and the court-room required but little alteration to make it suitable for the use of Common Council. On the east the partition between the rooms of the court clerks was demolished and a single chamber was fitted up for Select Council. Access from one chamber to the other is by a passage-way railed off on the northern side. A small room between them has been sometimes used for committee purposes.

The State-House has been singularly fortunate in escaping injury by fire. It was especially threatened on the occasions when the City Hall and the courthouse were partially destroyed. There have also been serious fires in the neighborhood on the north side of Chestnut Street between Fifth and Sixth, but good fortune preserved that old building. Its narrowest escape was March 24, 1824, when the Mayor's court-room was entered by three incendiaries, Dennis McCarthy, Thomas Cole, and John Carr. They piled chairs, books, and combustibles in the southeast corner, set fire to them, and escaped through the window. The flames were soon discovered, and were extinguished before they had gained much headway. One of the intentions of the incendiaries was the murder of Mayor Wharton, in whose court they had been previously convicted on a criminal charge. For the second crime they were arrested, and the prosecuting attorney, Thomas M. Pettit, presented an indictment against them for conspiracy to burn the State-House and to burn the dwelling of Charles Wilson Peale, and also for conspiracy to kill the mayor. They were convicted on all the counts, and were sentenced to twelve years' imprisonment each.

In 1749 measures were taken to erect the tower on the south side of the main hall. The superintendents were ordered to proceed as soon as they conven-

iently might, and the tower was to contain "the staircase with a suitable place therein for hanging a bell." At the sessions of 1750-51, the House passed a resolution directing "that the superintendents provide a bell of such weight and dimensions as they shall think suitable." Isaac Norris, Thomas Leech, and Edward Warner accordingly, a few months afterward, prepared the following letter, which is interesting in showing the commencement of proceedings which resulted in the casting of what was afterward known as "the liberty bell:"

"To Robert Charles, of London, Nov. 1, 1751.

"RESPECTED FRIEND,—The Assembly having ordered us (the superintendents of the State-House) to procure a bell from England, to be purchased for their use, we take the liberty to apply ourselves to thee to get us a good bell of about two thousand pounds weight, the cost of which we presume may amount to about one hundred pounds sterling, or perhaps with the charges, etc.

"We hope and rely on thy care and assistance in this affair, and that thou wilt procure and forward it by the first opportunity, as our workmen inform us it will be less trouble to bang the bell before their scaffolds are struck from the building where we intend to place it, which will not be done until the end of next summer or beginning of the fall. Let the bell be cast by the best workmen, and examine carefully before it is shipped with the following words, well shaped, in large letters around it, viz.:

"By order of the Assembly of the Province of Pennay, for the State-House in the city of Phila., 1752."

"And underneath,—

"Proclaim Liberty through all the land unto all the inhabitants thereof."—Levit. xxv. 10.

"As we have experienced thy readiness to serve this Province on all occasions, we desire it may be our excuse for this additional trouble from thy assured friends.

"ISAAC NORRIS,  
"THOMAS LEECH,  
"EDWARD WARNER."

The bell was brought by Capt. Budden, and was put on shore about the end of August. It was supposed to be of the best quality, but when hung up and being tried for the sound "it was cracked by a stroke of the clapper, without any other violence." Very much disappointed, the superintendents determined to ship the bell back to England to be recast. But Capt. Budden had a large cargo, and had no room for the bell. In this emergency, — Pass, a native of the Isle of Malta, and Stow, a son of Charles Stow, undertook to recast the bell from the old material. The mould was opened March 10, 1753, and one of the trustees, writing to Europe, said, "The mould was finished in a very masterly manner, and the letters, I am told, are better than the old ones. When we broke up the old metal our judges here generally agreed that it was too high and brittle, and cast several little bells out of it to try the sound and strength, and fixed upon a mixture of an ounce and a half of copper to one pound of the old bell, and in this proportion we now have it." But it turned out that the sound was not satisfactory. There was too much copper in the bell, and Pass and Stow made another trial. The third bell was considered satisfactory, but Isaac Norris did not like it, as he confessed in a letter some months afterward, and even then

made some mention of a determination to have another bell cast in England.

The following notice shows that the third bell was put in place:

"June 7th, 1753.—Last week was raised and fixed in the State-House steeple the new great bell cast here by Pass and Stow, weighing 2080 pounds, with this motto: 'Proclaim Liberty to all the land and all the inhabitants thereof.'"¹

The original bell was cast at Whitechapel, probably by Lister. It cost one hundred and ninety-eight pounds. Pass and Stow, for recasting it, received, in September, 1753, £60 13s. 5d. They had the benefit of the old material, and added but little. On the 8th of July, 1776, it is probable that this bell was rung, as the public reading of the Declaration of Independence took place in the State-House yard on that day, and there were general rejoicings. This has been generally assumed as an event that ought to have happened to make the inscription on the bell prophetic. John Adams, in writing to Samuel Chase on July 9th, said, "The bells rang all day and almost all night." On the 15th of September, 1778, by order of the Executive Council, the bells of Christ Church and St. Peter's, as well as the State-House, were ordered to be taken down and removed to a place of safety. This action was taken, it is said, because at that time the bells in a captured town belonged to the conquering troops, and were available as spoil of war for the casting of cannon. These bells, eleven in all, were removed to Allentown, Pa., by the way of Bethlehem, in the streets of which the wagon bearing the State-House bell broke down, and had to be unloaded. After the evacuation of the city by the British army they were brought back, and the State-House bell was placed in its old position in the latter part of 1778.

The dimensions of the tower of the State-House were thirty-four by thirty-two feet. The stairways to the upper stories found spacious accommodation there. The trustees for building the State-House were not instructed further than to erect a tower, but they took the responsibility of adding to it a steeple. This was rendered the more easy by a direction that a

¹ The following bill, curious in its particulars, gives an account of the cost of "raising" the first bell. Whether there was another festival when the second bell was put up is not known:

"PHILA., April 17, 1753.

"THE PROVINCE.

"To EDMUND WOOLEY, debtor, for sundries advanced for raising the bell-frame and putting up the bell:

a peck potatoes.....	£	s.	d.

½ of a hundred of flour.....	0	3	6
Two former hookings at getting on two floors, and now for raising the tower, fir-wood, etc.....	3	0	0
	14	12	8¼

As early as 1774 the wood-work of the steeple was found to be decaying, and the superintendents were instructed to take it down, and to have the brick-work of the tower covered, in order to save it from damage by the weather; but all this was not effected until 1781, when a low hip-roof was made to cover the tower, and carried in its centre a slim-pointed spire. The bell was lowered into the tower, and, although occasionally heard, it may be said to have been retired emeritus, as it ceased to do active duty. A new bell, which sounded the hours by the clock, and rang for fires, was placed upon the roof under an open wooden belfry. It was not until 1828 that any attention was given to the restoration of the steeple. A committee was appointed by City Councils to have "the turret in the rear of the State-House surveyed, and, if found adapted to the purpose, to procure a plan and estimate of the cost of carrying it up to a height sufficient to place a clock and bell therein, to be called the city clock, from which the time of the whole city can be regulated." William Strickland, Daniel Groves, John O'Neill, and John Struthers, architects and builders, presented their plans and estimates on the 14th of February, 1828. They found that the foundation-walls of the tower were very strong, being three feet thick at the base, and eighteen thick at the top, sixty-nine feet above the ground. They were in such good condition that two stories more in brick might be added with perfect safety. Strickland drew the plan, and endeavored to make the steeple as much like the old one as possible. The great difference was that it was a story higher. The old steeple was one hundred and fifty feet high to the top of the spire, and the new steeple was one hundred and sixty feet high. In March, 1828, after considerable debate in Councils, during which it was

alleged by some members that the new steeple would be entirely unlike the old, an appropriation of twelve thousand one hundred dollars was made for a new steeple, bell, and clock, but not without a very sharp debate. Councilman Troth reminded his fellow-members that their character was at stake as men of taste and admirers of antiquity, and he hoped that they would not proceed hastily. Mr. Lowber said that "so far from being an ornament to the city, the steeple would be a deformity; so far from recalling to mind the venerable pile that stood on that spot, it would efface the remembrance of it altogether. It is not the ancient design. I would rejoice to see that building restored to its ancient state,—to the precise state in which it was when the glorious event to which it owes its celebrity was consummated. But no man will be able to look at that building with its new steeple and be able to persuade himself that it represents the ancient State-House. . . . If the original features of the building cannot be preserved, I would much rather the whole were demolished, that we might by some handsome monument point out the spot where the glorious declaration of our national independence was agreed upon."

The result was that Strickland was compelled to modify his plan, and he did so by simply substituting wood for brick. The two upper stories were constructed of wood. The first above the brick of the tower, was what might be called a dumb-story, and attracted no attention by any inward or outward ornament. The next story was the clock-room, and above that was the turret, the open arches of which were set upon a base sufficiently high to give access to a small gallery with balustrades on all sides. A sight of the city from this gallery of the State-House steeple was one of the town wonders for nearly half a century after the steeple was finished, not only to citizens but to strangers. The latter, after they had seen the Fairmount Water-Works and climbed the State-House steeple, inspected the method of coinage in the Mint and visited the navy-yard, might be allowed to go home and boast that they had thoroughly seen Philadelphia. Strickland's plan, thus modified by wood instead of brick, was so nearly a reproduction of the old steeple, the tower-windows being omitted, that it may be substantially declared to be a renewal of the original design.

John Wilbank was awarded the contract for furnishing the new bell, the weight to be forty-two hundred pounds. The calculations for the casting were made as scientifically as possible, and were very close, the bell exceeding the expected weight only seventy-five pounds. The contract was at the rate of forty-five cents per pound, and at the weight which was ascertained when cast, four thousand two hundred and seventy-five pounds, the cost was \$1923.75.<sup>1</sup>

<sup>1</sup> The following were the dimensions of the first new State-House bell cast by Mr. Wilbank in 1828: Height, including crown, five feet nine inches; diameter at bottom, five feet one and a half inches; thickest

There seemed to be a fatality about the State-House bells. It took three castings in 1752-53 to get a perfect bell, and it required just as many in 1828. Mr. Wilbank's first casting was unsatisfactory in tone; it was broken up and recast in different proportions. That bell was cracked almost as soon as put in use. A third bell was cast, the fine, deep tones of which were perfectly familiar to every citizen for over half a century. In 1876, Henry Seybert, a citizen of Philadelphia, anxious to do honor to the Centennial year, offered to present to the city a new bell and clock for the State-House steeple, much more grand in proportions. The new bell weighed thirteen thousand pounds, and when placed in the steeple the tone was so low and could be heard such a short distance that it was altogether unsatisfactory. Meneely & Kimberly, of Troy, N. Y., were the bell-founders. It was sent back to them to be recast. Like its predecessors in the State-House steeple, it also required three trials to produce a perfect bell. The second casting was so unsatisfactory it was broken up, and the third bell was cast and brought to the city and put in place. It has never been as resonant as the bell of 1828, but after the third trial the bell of 1876 was accepted, and has since done duty in the tower.<sup>1</sup>

The history of the "Liberty Bell" requires further mention. After the alterations made in 1828, it remained in the upper story of the brick tower upon the heavy frame-work which had sustained it. It became a venerated object, and it was tacitly determined that it should only be rung on special occasions of rejoicing, or to commemorate some event of public importance. It was tolled in 1828 upon the reception of the news of the emancipation of the Catholics by act of the British Parliament. Its sharp tones were heard Feb. 22, 1832, when the centennial anniversary of the birthday of Washington was celebrated. It might have been used on other occasions, but an end was put to its usefulness for sound early in the morning of July 8, 1835. While being tolled in memory of Chief Justice Marshall, who had died in the city two days before, and whose remains were then being conveyed to the wharf to be sent to Virginia, a large crack was developed in the bell, starting from the centre of the rim and inclining in a right-hand direction toward the crown. This break was at first only

part, four and a half inches; thinnest part, one and a half inches. There was a clapper to the bell, which was not used. For sounding the hour it was struck by a hammer by the action of machinery. For the purposes of alarm in time of fire there was another hammer, on the opposite side of the bell. A rope from the end of this hammer led to the story surrounded by the open gallery, which was immediately below the open cupola, and here the watchman or janitor of the State-House and of the steeple struck the bell for fire-alarm. For many years this duty was executed by a man well known in his time to every fireman and almost to every citizen, young or old, by name, if not by sight. Tommy Downing was a town character.

<sup>1</sup> The old State-House bell of 1828 was removed to Germantown, and placed in the town hall, together with the old clock. Occasionally the citizen of the central part of the city who happens to be in Germantown is startled by its sound, once so well known to every inhabitant.

eight or ten inches in length, but when the bell was rung on Feb. 22, 1843, it was so much increased that never again could the sound of the famous old instrument be heard at a distance of more than a few feet. Thenceforth it became a silent memento of the historic past.

After the original steeple and bell had been decided upon, a clock was ordered by resolution of March 11, 1752. It was intended that it should "strike on the bell in the tower," and that there should be "a suitable dial-plate to show the hours and minutes." Peter Stretch, of Philadelphia, a watch- and clock-maker, was employed to make this machine. Isaac Norris, in a letter written a year afterward (March 10, 1753), said, "They expect it will prove better than any they would send us from England, where, when once they had it put out of their hands, they have done with it; but here the workman would be made very uneasy if he did not exercise his utmost skill, and we do not stint him in the price of his labor." Six years afterward Peter Stretch was paid for making the clock and taking charge of it for six years, £494 5s. 5½d. The dials of this clock were fixed in round windows in the east and west gables of the State-House building. The clock movements were immediately under the roof near the centre. Motion was communicated to the hands by rods connected with the machinery. The pendulum extended through the floor to a lower story, and the weights were concealed in wooden boxes in the tower. In deference to the custom of the time, when tall clocks were found in the best houses, the dials were cased in a stone imitation of an eight-day clock. Stretch took care of the clock until 1762, and was succeeded by Edward Duffield, who was a watch- and clock-maker. In March, 1775, David Rittenhouse, the astronomer, succeeded, upon his own petition to the Assembly, in which he stated that Duffield no longer desired the position, and that as he (Rittenhouse) "has charge of the time-piece belonging to the Philosophical Society, which is kept in the observatory in the State-House Square, with the astronomical instruments for adjusting it, he conceives it would not be too inconvenient for him to take charge also of the said public clock."

The construction of the new steeple, in 1828, led to the acquisition of a new clock. In the course of time the instrument which Peter Stretch had constructed had become unreliable. In the debate on the subject, in 1828, the testimonials as to the character of the State-House clock were not flattering. Mr. Lukens was at that time the clock-keeper. Tilghman said of him, "He is a very good keeper, but has had the care of a very bad clock. . . If there is anything proverbial, it is the badness of the clock at the State-House. It is an *excusing*, not a regulating, clock. It is a clock which affords no rule to go by, but a rule *not* to go by, for everybody knows it can never go right." Mr. Lukens made the new clock, at a cost of two thousand dollars. This proved to be a clock to

go by, and for many years it was the standard for city time. Four clock-faces were fitted in the steeple, and these were made of ground glass, which was then considered a great novelty. What was yet more surprising was the fact, demonstrated as soon as gas came to be burned, that by strong lights in the clock-room, the dial-plates could be illuminated at night, and seen from a great distance. Nothing of the kind could be possible with the old clock, and the new arrangement was so unusual that travelers frequently spoke of it with admiration. The pendulum of this clock extended down into the tower, where it was properly encased to prevent its being meddled with. The clock-weights ran down wooden troughs, which were placed against the east wall of the tower to the first floor. The old clock and bell were, by resolution of Councils, sold to the Roman Catholic Church of St. Augustine, the clock for two hundred and fifty dollars, and the bell for four hundred dollars. Both were destroyed by the burning of the building, in May, 1844, during the riots in which the Roman Catholic Churches suffered so severely.

In 1830 the committee on State-House steeple made report of the cost, as follows :

For rebuilding the steeple.....	\$12,376
Paid for the bell.....	2,157
Paid for the clock.....	2,075
	<hr/>
	\$16,608
Credit received from Rev. Michael Hurley, of St. Augustine Church.....	\$650

In 1875, when Henry Seybert offered to supply the city with a new bell, he also expressed a desire to furnish a better clock than that which was in use. There was not much complaint about the old clock, but the offer being generous, it could not very well be separated by accepting the bell and refusing the clock. Mr. Seybert's proposition was therefore accepted, and the new clock was constructed by the Seth Thomas Clock Company of Thomaston, Conn.

The ground on Chestnut Street east and west of the square offices or buildings remained vacant for some years. Before the Revolution, it is supposed, although even as to that there is no positive clue, two barn-like frame structures were erected at Fifth and Sixth Streets, and joined the east and west walls of the square office buildings by a right-angled attachment, so that each shed was in the shape of an L. It is said that these structures were originally put up for the accommodation of Indian delegations when they came to the city. During the Revolution the sheds were used for storage purposes, and it has even been claimed that munitions of war were put there for safety. However this may be, it is a fact that when the new court-house and City Hall at Fifth and Sixth Streets were erected, the wooden buildings were torn down.

In 1741 the Assembly ordered that the grounds apportioned to the State-House be inclosed with a wooden fence. The brick wall was in an unfinished condition, and some protection was needed before win-

dows could safely be placed in the structure. There was no attempt at decoration of the grounds until 1785, when George Morgan, a Pennsylvanian, presented to the Supreme Executive Council one hundred elm-trees, to be planted in the State-House Square. This gift was obtained through the influence of Samuel Vaughan, of Philadelphia, and about the same time a brick wall, seven or eight feet in height, was built around the inclosure. There was a grand entrance by a central gate on Walnut Street, due south of the State-House tower. This portal rose fifteen or eighteen feet, and far above the coping of the wall. It was decorated with a pediment, cornice, eutablature, and pilasters, beneath which an arched semicircle in wood, and paneled, permitted the narrow, paneled, wooden gates to open. After this improvement and the growth of the trees, more attention was paid to the decoration of the grounds. Walks were laid out, grass was cultivated, and seats for rest in the shade were placed in various portions of the ground. The State-House yard was really the first approach to a little park or square which the city possessed, for although squares in four parts of the city were dedicated to public use by Penn in laying it out, they were under no improvement. The place became a famous resort, and the town poets wrote verses in praise of its rural beauties, which were duly published in the newspapers. In 1811, when the improvements were made by demolishing the square offices, houses, and building the office wings of the State-House adjoining the main edifice, the removal of the great brick walls was authorized. In their place was erected a low brick wall, about three feet high, which was coped with marble, and a railing of plain iron palisades, between standards, which resembled three oblong rings on top of each other and finished off with a spear-point, was placed around the square, which thus appeared open and more attractive than ever from the surrounding streets. A gate of somewhat imposing proportions was fixed on the south, and there were small gates on Fifth and Sixth Streets, about half-way between Walnut and Chestnut. The length of the railing on Sixth Street, exclusive of the gate-ways, was three hundred and ninety-seven feet; on Fifth Street it was shorter, by reason of the Philosophical Hall building taking up ground not occupied on the west side. Here the length, exclusive of the gate-way, was three hundred and thirty-seven feet nine inches; and on the south side, exclusive of the gate-way, it was three hundred and ninety-one feet four inches. The cost of removing the walls and replacing the improvements was six thousand five hundred and six dollars and eighteen cents. The southern gate-way was in time enhanced by a design which made the jambs of heavy marble, upon which were fastened the Roman fasces and spear.

About 1876 another improvement was made in the yard by removing the wall and rails. The surface of the ground being some two or three feet above the adjoining streets, there was no difficulty in throwing

it open, and yet practically securing it from thoughtless trespass. A low wall of granite, with an ornamental coping of marble, was placed around the sides, and broad and easy steps were constructed in the centre of the Walnut Street front, and at the corners on Fifth and Sixth Streets. Wide flag walks were cut through the grounds in almost every direction from street to street, which would facilitate the enjoyment of the proverbial American pleasure,—“the short cut.” The trees were thinned out in order to admit the sunlight, as they had previously been so thick as to make the square seem dark and gloomy.

In 1768 the American Philosophical Society petitioned the Assembly of Pennsylvania for assistance to enable the members to observe the transit of Venus across the sun, which was expected to take place June 3, 1769. The proposition was treated with liberality. One hundred pounds were granted to enable the society to procure a reflecting telescope of two and a half or three feet focus and a micrometer of Dolland's make, which had to be procured from England. They were purchased there by Dr. Franklin. The society erected a wooden building as an observatory in the State-House yard, the exact site of which is not known. It was generally supposed to have been constructed near the centre parallel of the ground, and west of the main walk which runs southward. It might have been on a line with Little George Street [now called Sansom], and about half way between Sixth Street and the main walk. John Adams alluded to it in his writings as “an awful platform.” Mr. Etting says, “The foundations were discovered when recently perfecting the sewerage of the square. It appears to have been of circular shape, and was erected about forty feet due west from the rear door of the present Philosophical Hall and about the same distance south of the present eastern wing.” Watson's “Annals,” however, states that it “was about twenty feet high, twelve to fifteen feet square, and was from fifty to sixty feet south of the State-House, and fifteen to twenty feet west of the main walk.”

The transit was observed in this building by Dr. John Ewing, Joseph Shippen, Dr. Hugh Williamson, Thomas Prior, Charles Thomson, and James Pearson. While they were thus engaged, David Rittenhouse, Dr. William Smith, John Sellers, and John Lukens noticed the phenomena at Norriton, and Owen Biddle at Henlopen light-house. How long that building remained is not known. It was there on the 8th of July, 1776, when the Declaration of Independence was first read to the people by the recommendation of Congress and by order of the Council of Safety of Pennsylvania. It was resolved that the sheriff (William Dewees) should do this, but for some reasons he did not. John Nixon, member of the Council of Safety, read the instrument. Then, by order of the Committee of Inspection, the king's arms were taken down from the court-room in the State-House, and publicly burned by nine associators appointed for that

purpose. According to a tradition little known, the place of the burning was at Front and High Streets, immediately opposite the London Coffee-House.

The only invasion upon the State-House yard that was not of a public character was by a grant made in 1785 by the Legislature of Pennsylvania to the American Philosophical Society, which was done in a season of liberality among the members. The lot granted, as described in the act of Assembly, was on the west side of Fifth Street, beginning ninety-six feet south from Chestnut Street, extending along Fifth Street seventy feet, and westward fifty feet. The society took possession of this building about 1787-88.

The State-House yard was for a long time the favorite place of assembling of town-meetings, and for great public demonstrations which could be made in the open air. Here, on Oct. 5, 1765, was held a meeting of citizens to express their indignation because of the passage of the stamp act, and the use of “the detested stamps,” just brought into the port in the ship “Royal Charlotte,” under convoy of the sloop-of-war “Sardoine.” Here, also, in August, 1768, there was a meeting to protest against the act of Parliament to levy duties on paper, glass, painters' colors, lead, and tea imported into America. A meeting on the 18th of October, 1773, spiritedly protested against the unloading of tea sent out by the East India Company, and on the 27th of December, a public meeting in the State-House yard resolved that the tea-ship “Polly,” Capt. Ayres, which had been sent to Philadelphia, should return immediately with her whole cargo, and that none of it should be landed. There was an impromptu town-meeting in the State-House yard on the 25th of April, 1775, the day after the news was received of the battles of Lexington and Concord on the 19th. A single resolution, “to defend with arms their property, liberty, and lives against all attempts to deprive them of them,” was the short and decisive act of the eight thousand citizens who had assembled without preconcert. In after-years the square was the chosen scene of great political meetings which were held by Democrats, Whigs, Native Americans, Republicans, and other political parties and divisions of parties. During the war of 1812, young volunteer soldiers enrolled for the defense of the country were taught the march and the drill in the yard. The most notable military use of the inclosure occurred at the outbreak of the war of the Rebellion, when the recruiting officers of various Pennsylvania regiments pitched their tents upon the ground, showing a stretch of canvas from Walnut Street to the rear door of the State-House, while under the old elms the inclosure took on the character of a camp, with groups of soldiers, and above all arose the shrill notes of the fife and the interminable rattle and boom of the drums.

Not many years before the outbreak of the Southern Rebellion a proposition was made that a monument should be erected in Independence Square to commem-

orate the Declaration of Independence. The plan was that only the original thirteen States of the Union should participate, and that they should combine in the erection of the monument. The commonwealth of Pennsylvania approved of that plan, and invitations were issued to the Governors of "the old thirteen" to send commissioners, with authority to agree upon the plan of a monument, and to take measures for its construction. Albert G. Waterman, a member of Common Council for the Eighth Ward, was the originator of this project, and labored faithfully for its success. The first meeting of the commissioners was appointed to take place in Independence Hall in June, 1860. In anticipation of that event, City Councils, on June 4th, passed an ordinance declaring

their approbation. The times were critical, the country was rapidly drifting toward civil war, and when the first gun was fired at Fort Sumter, in April, 1861, the scheme was dropped.

The front of the State-House, on Chestnut Street, must have presented the appearance of great neglect before the Revolution. In one of Birch's views, published in 1800 and afterward, the square from Sixth to Fifth Streets appears in an unattractive character. A brick pavement, apparently not more than six or eight feet in width, had been laid next the curb. Inside of that, up to the walls, the original earth remained, covered, no doubt, with grass and weeds in the summer, but barren, trodden down, and unpleasant in its looks in the late autumn, winter, and early spring. A soli-

INDEPENDENCE HALL IN 1884.

that the commissioners should be the guests of the city, and that the trustees nominated by the Governors of the States "should have authority to enter upon Independence Square and to mark out the spot where the monument should be erected, at such time as they may deem fit to lay the corner-stone of the same." Accordingly, commissioners appointed by ten States met at Independence Hall and chose, in the centre of the square, a spacious circular plot for the purpose. Several plans for the structure were submitted to them, but they wisely concluded to defer laying the corner-stone until the States by which they were appointed should ratify their proceedings and make the necessary appropriations. Some progress was made in that direction, and appropriations were made by some of the Northern States, but the Southern States generally withheld

tary pump stood some twenty or twenty-five feet from the curbstone, on the western portion of the ground, and about opposite the western piazza, which was connected with the square office building. East of the centre doorway, in front of the east room, about fifteen or twenty feet from the front wall of the building, stood a wooden hexagonal watch-box, above the roof of which was placed an oil-lamp. There was another watch-box at the east end of the pavement, placed at a very short distance from the window in the City Hall building, which is now (1884) the doorway leading to the office of the police and fire-alarm telegraph. That which is now considered a window, south of the present door, was then the door of entrance on the west side of the City Hall building. It may be as well to notice that at this time there were clear passages from

Chestnut Street to the yard, which were controlled by gates. One was between the City Hall at Fifth Street, and the square county office building on the east of the State-House. The same arrangement was made on the west, between the court-house building and the offices. When the office buildings were erected these passages to the State-House yard were closed with gates of wood, in the upper part of the frame-work of which iron palisade railings were arranged. After the construction of the wing office buildings the space in front of the State-House up to the curbstone was paved with brick. The pump, which stood south of the brick path, was removed to a situation near the curbstone, due north of the old site. At a corresponding distance on the east side of the State-House another well was dug and a pump established. The State-House pumps were very near, if not exactly, upon the spot where fountains, surmounted by vases and intended to be decorated by flowers or shrubbery, were afterward placed by the Philadelphia Fountain Society. Long after the hydrant-water from the Schuylkill was in common use in the city, these State-House pumps maintained their reputation for their supply of water, which was considered pure and delightful, and much preferable to Fairmount water. More than that, the temperature of the water was always cool, and in the summer-time, ere ice-water became so common that it might be had everywhere, there was a great run of hot and perspiring citizens upon the State-House pumps. Large iron ladles, which never rusted because they were in constant use, were fixed by chains near the nozzle. On warm summer days hundreds, if not thousands, of persons stopped to drink at those pumps, and they did not fail to read the placard posted upon the head of the pump by the Humane Society, which kindly cautioned all persons against the danger of drinking cold water in immoderate quantity when the body was heated.

The State-House pavement was a wide and unpleasant place in warm weather when the sun was shining. Fully exposed, and reflecting back the heat, it was, in consequence of the buildings being far back from the line of the street, less attractive than sidewalks across which neighboring houses threw a shade in some periods of the day. No attempt was made to introduce any improvement until the fall of 1821, when trees were planted in front of the State-House, extending from Fifth to Sixth Street. Poulson said in reference to this improvement, "It will be a salubrious exchange for the arid bricks that have been broiling our brains there for fifty years." The trees chosen were ailanthus, noted for quick growth and thick foliage. In ten or fifteen years the front of the State-House in summer-time was as umbrageous as a forest. Afterward these trees were attacked by worms, and were ordered to be cut down. The axe was applied at some little distance above their roots, and in a few hours the grove, once the glory of the city, the favorite place in which the town politicians assembled to talk about

nominating and elections, to discuss political affairs—where they were commonly called "tree-toads"—presented the dismal appearance of a forest in which the wood-choppers had been entirely too busy. The public could not stand that. In a short time new trees (silver maples) replaced the ailanthus, the idea being from experience that they would not be disturbed by the worms. They grew finely, and in a few years the grove in front of the State-House was restored to its original beauty. But just about that time the worms gave proof that they would change their diet upon necessity rather than starve. The ailanthus and paper mulberry having been almost exterminated as a sidewalk tree in the streets of the city, the worms accommodated themselves to circumstances, and condescended to devour the leaves of the maples.

In time the English sparrow was imported, and he justified the expectations founded upon his change of country by attacking the worm vigorously. In the meanwhile many years had gone by, and a considerable number of the trees had yielded to natural decay. When about 1876 it was determined to replace the brick footways by a pavement of slate, there were very few of the old trees left. It was not difficult to dispose of them. By covering the surface with the stone and making no provision for watering the roots, the remaining trees gradually died off, so that in 1884 there is probably no survivor of this most beautiful grove which for many years was the most attractive place on Chestnut Street.

About 1860, in consequence of the existence of no public memorial to the memory of Washington, the Society of the Cincinnati being slow in its collections, and the fund in the hands of that association being considered as its own property, a movement was started for the erection of a Washington monument by the children of the public schools of the city and county of Philadelphia.

A "Washington Monument Fund Society" was established and incorporated. The collections at first were small, but they were carefully invested and the income applied, together with new contributions, so that in the course of a few years the fund was sufficient for the erection of a handsome statue and its base. City Councils gave the use of a piece of ground in the centre of the Independence Hall pavement, opposite the main door. Here on the 5th of July, 1869, was unveiled the statue of Washington by J. A. Bailly, sculptor, which has since been familiar to every citizen.<sup>1</sup>

<sup>1</sup> This figure is eight feet six inches high, and carved out of a single block of Italian marble, remarkably free from spot or blemish of any kind. Washington is represented in citizen's dress, the beautiful dress of the period. The position is full of grace and dignity, and the face is almost as full of expression as the renowned picture by Stuart. The right hand rests upon a book, supported upon a pedestal, and the left grasps lightly the hilt of the dress sword at the side of the figure. The base was modeled and cut at the yard of William Struthers, and is composed of Richmond granite. There are three blocks to the base, the lower one being six feet six inches square, and the entire height ten feet.

On the pedestal is the inscription :

Erected  
by the  
Washington  
Monument Association  
of the  
First School District  
of  
Pennsylvania,  
July 4, 1869.

Sculptor,  
Philadelphia, 1860.

**Custom-Houses.**—Upon no subject of general interest connected with the early history of Pennsylvania is there less information to be had than concerning matters connected with the collection of customs duties upon goods and merchandise and the methods of levying and recovering them. Occasional and incidental mention furnish a few hints, and that is about all. The names of some of the persons who exercised the functions of collectors of customs in the colonial period are known. But even here great confusion exists to distinguish the principal, who was entitled to the emoluments of the office, and the deputy who did the actual work. The latter was the man who came in communication with the people. The former in some cases might have been an absentee, holding a sinecure. For these reasons a complete and satisfactory account of the histories of the custom-houses in Pennsylvania cannot be given. The earliest regulation concerning commerce is to be found in the Duke of York's laws concerning the appointment of viewers of pipe-staves. "That the Constable and Overseers in all Townes within this Government where Pipe Staves shall bee shipt do, from time to time as need shall require, Nominate Two men of each Town Skilfull in the Commodity. And such as can attend the Service to be viewers of Pipe Staves, who, so chosen, shall be by the Constable Convented before some Justice of the Peace to be sworn diligently and faithfully to view & search all such Pipe Staves as are to be Transported, and to be used for making of right Caske, who shall cast by all such as they shall Judge not Merchantable, both in respect of Worme holes and do Assize (viz.), That are not in Length Four Foot and a halfe, in breadth Three Inches and a half, without sap; in thickness three-quarters of an Inch, and not more or less than an Eighth part of an Inch; Then three-quarters of an Inch, well and even hewed, and sufficient for use," etc. Masters of vessels were subject to fine of five pounds for receiving on board every thousand of pipe-staves not properly viewed and examined, and the persons putting the staves on board of the vessel were subject to forfeiture of the whole consignment. By another clause in the same act it was directed that all casks used for liquors, fish, beef, pork, or other commodities to be put to sale should be of London assize, and of sound and well-seasoned timber. Gaugers were to be

appointed to gauge such vessels or casks. Coopers were required to have a distinct brand-mark on each cask. The selling of defective casks was liable to punishment. Gaugers were to be appointed yearly, and the following regulations were established for the inspection of merchandise intended to be exported:

"That in every Towne where any such Goods are packed up for Sale, the Gager or Packer of that Towne or of the Towne wherein it is put to sale or Shipped shall see that it be well and orderly performed (viz), Beefe and Porke the whole halfe or Quarter, and so proportionably, That the best be not left out, and for Fish that they be packed all of one kind, and all Caske soe packed be full, Sound, and well seasoned, etc."

In 1666, Governor Nicholls, of New York, issued orders to collectors and receivers of customs, and noticed the necessity of granting some temporary privilege for the encouragement of trade between New York and Delaware, and that the tenths of all sorts of goods, liquors, or peltry, etc., by former practice and order had been collected and paid in or at the aforesaid port or in Delaware River; now he orders that (until further orders) no sort of liquor, goods, or peltry, shall be liable to pay any custom either in New York or Delaware River, provided that due entry and certificate be made and given of all such goods transported to or from those places. This would seem to show that there was a collector of customs on the Delaware River, but no information is given as to the name of the person holding that office. In 1670, Deputy Governor Francis Lovelace issued an order, March 25th, reciting, "Whereas, I am given to understand that all European Goods imported at the Whorekill, in Delaware Bay, did heretofore pay custom at the rate of £10 per cent., and all furs and peltry exported from thence at the same rate, which turned to some advantage towards the support of Government, upon mature advice and consideration had thereof, I have thought fit to renew the former custom, and do therefore hereby order and appoint Captain Martin Krieger, who is a person well versed in the trade of those parts, and very well known there both to the Christians and Indians, to be receiver and collector of the customs at the Whorekill, whereby himself or his Deputy is to receive 10 per cent. of all European Goods Imported there, whether coming from this place (New York), New Castle, in Delaware, or any other part, and 10 per cent. also for all furs or peltry exported from thence according to the former Custom and Usage on that behalf." This custom became a hardship, which was complained of particularly by persons who were coming to the Delaware to settle in West Jersey. They were despoiled of one-tenth of their property, and the duty was oppressive. Accordingly they addressed themselves to the trustees of Billinge to have the duties removed by application to the Duke of York. William Penn was one of those commissioners. A long argument was addressed to commissioners appointed by the Duke of York to consider the question.

After considerable delay the commissioners referred the matter to Sir William Jones, who decided in favor of the colonists. The result was officially made known to the Governor of New York, and the duty removed in 1680.<sup>1</sup>

In the charter of Charles II. to William Penn for the province of Pennsylvania, March 4, 1682, liberty was given to the liege people and the subjects of the king to "transport themselves and families vnto to the said cuntry with such convenient shipping as by the Lawes of this our Kingdome of England they ought to vse with fitting provisions, paying only the customes therefore due." The settlers were also given full license to lade and freight in any ports of the country, and to carry goods, wares, etc., from England, "saving always to vs, our heirs, and successors, the Legall impossicons, customes, and other duties and payments for the said Wares and merchandise by any Law or Statute due, or to be due to vs our heires and successors." License was also given to Penn and the inhabitants of the province to import goods and to export the commodities of the province either by land or by sea, subject, however, to the king's customs and impositions, and the regulation of acts of navigation and other laws in that behalf. Power was also given to Penn to "have and enjoy the Customes and Subsidies in the ports, harbors and other creeks, and places aforesaid, payable and due for merchandises and wares there to be Laded and Unladed, the said customes and subsidies to be reasonably assessed upon any occasion by themselves and the people there as aforesaid to be assembled to whom we give power by these presents for vs, our heires, and successors, vpon iust cause and in a due Pporcn to assesse and impose the same saving vnto vs our Heires and Successors such imposican and customes as by Act of Parliament are or shall be appointed." Under this authority two principles were established. First, that all goods and merchandise imported into, or exported from, Pennsylvania were subject to such customs duties as might be imposed by the crown under act of Parliament, and that vessels and the service of commerce were subject primarily to the British navigation acts. Second, that the Government of Pennsylvania had a right to levy import and export duties secondary to those levied under the king. Under this authority, chapter ninety-seven of the law made March 10, 1683, declared that on "all Rum, Wine, Brandy, and Strong Waters that shall be imported into this province or territories thereof, shall pay to the Proprietary and Governor as a custom, Two-pence by ye Gallon. And all Syder that shall be imported as aforesaid, shall pay One penny by ye Gallon." Other goods imported were to pay at the rate of twenty shillings for every one hundred pounds worth, molasses only excepted. This act was repealed in the year 1690. The ninety-eighth chapter of the act of 1683 laid duties of twelve pence

upon steer-, bull- or cow-hides exported; nine pence on beaver skins, and nine pence on other peltry when amounting to the value of a beaver skin, with one-half penny per pound weight on deer-skins. This was also repealed in 1690. In 1684 the Provincial Council exercised the franchise of a court of admiralty in the case of the ship "Harp," of London, Robert Hutchins master, charged with being "an unfree ship," not being cleared from the custom-house at London. It appeared that the vessel was a French bottom, and not free to trade with the colonies. The councilors therefore condemned the said ship with her tackle, apparel, and ammunition. The vessel was sold "by inch of candle" to Barnaba Wilcox for £59 10s. 6d.<sup>2</sup>

It has already been seen that customs were levied upon the river under the Duke of York laws. When Penn arrived the practice was well established, so that we find that in March, 1683, John Moll, William Hage, William Clarke were appointed a committee to bring in a report "of the fees of officers belonging to ye Custom-House." They were not as prompt as expected. Either that, or they made no report. A year afterward some propositions for laying duties on goods were considered.

The first collector of customs under the king appears to have been Maj. William Dyer, who came before Council on the 28th of August, 1685, and presented his commission and instruction. He was appointed collector of customs in the province of Pennsylvania by the commissioners of his Majesty's customs in England, and collector for New Jersey, and surveyor-general for all his Majesty's colonies in America. Dyer gave notice that he had appointed Christopher Snowden to be "his Deputy Sercher and Wayter of his Majts Customs in Pennsylvania." The latter was attested. He was, in fact, the deputy collector of customs. Dyer did not make a good official record. In 1687 he presented himself to the Provincial Council, asking for admission as a member. At that time the councilors were elected, and Dyer had the return from Sussex County. There was objection to receiving him. Members of Council "expressed their general dissatisfaction, and desired him to desist, declaring that they could not, in duty and respect to the king, nor with security to the province, take into the Council such as had not discharged the office of the king's collector of the customs with a faithfulness and good report." A committee was appointed upon Dyer's persistence, and it made report at a subsequent meeting, with the reasons for their objections to Dyer. The substance of this document is not stated. It was quite sufficient, in the opinion of the other members of the Council, to exclude him, and he was not admitted.

James Walliams was appointed to succeed Dyer, and produced his commission before Council Nov. 18,

<sup>1</sup> Hazard, "Annals of Pennsylvania," p. 479.

<sup>2</sup> Sale by inch of candle was a peculiar kind of auction. The candle was lighted, and as soon as it was burning bide could be made. The highest bid before the candle was burned out was the successful one.

1686, granted by Patrick Mein, Esq., the king's surveyor-general of his Majesty's customs in America. Council was of opinion that Walliams had not presented himself in form and manner as directed in his instruction. Notwithstanding this he seems to have exercised the office, and in May, 1689-90, upon a matter of a seizure made by him, a commission was appointed to take testimony in reference thereto. Finally the board recommended that the dispute should be settled by the parties.

William Clark was appointed collector of customs for the province and territories by Edward Randolph, "surveyor-general of their Majesty's customs in the Main of America," on the 13th of June, 1692. He appointed, Feb. 18, 1695, John Deplove to be searcher of customs for the city and county of Philadelphia. Clark himself lived at New Castle, and Deplove at Philadelphia, called the searcher, was really deputy collector for the port.

John Bewley succeeded Clark and Deplove as collector at Philadelphia, on the 21st of November, 1696. He was appointed by the commissioners of customs in England,—Robert Clayton, Robert Southwell, Walter Yonge, Samuel Clark, and J. Chadmesh. It was recited that this appointment was made by virtue of an act of Parliament of the twenty-fifth year of Charles II., entitled, "An Act for the Encouragement of the east land and green land trades, and for better securing the plantation trade." On the 25th of March, 1698, Edmund Randolph, surveyor-general of customs on the continent of America, being at the time at Philadelphia, commissioned Matthew Birch to be surveyor and searcher of the customs in Pennsylvania. He went into office at the same time that Bewley assumed the duties of collector of customs. The functions of the Court of Admiralty were exercised for some years by the proprietary (Penn) and Council in 1683, and Thomas Lloyd and Council in 1684. When the government was taken from Penn by the crown, Governor Benjamin Fletcher, who was appointed to Pennsylvania, held, as is recited in his commission, Oct. 20, 1692, the office of vice-admiral. He appointed William Markham deputy in his office as vice-admiral, May 17, 1693. After this time the officers of the proprietary government ceased to exercise the office of vice-admiral or judge of admiralty. Col. Robert Quarry appears to have been exercising the power of a judge of admiralty for the province of Pennsylvania before September, 1698. Complaint was made to the Council of his conduct in a matter of seizure of goods on board of the sloop "Jacob," but how long before that time he had been acting is not certainly known. When William Penn the proprietary died, William Penn the second, who succeeded, sent, in his letters to Lieutenant-Governor Sir William Keith, instructions to protect the officers of the customs in the discharge of their duty.

On the 9th of January, 1695-96, the commissioners of customs at London—Robert Southwell, E. Godol-

phin, Samuel Clarke, and Robert Clayton—sent a letter to Lieutenant-Governor Markham on the subject of an act lately passed in Scotland, for erecting a company to trade with India, Africa, and America, and the danger that might happen to English commerce if the Scotch enterprise should be successful. The letter contained strict instructions as to the duties of custom-house officers in Pennsylvania, the care to be taken in making up the records of entries and clearances permits, etc. William Penn had occasion, in 1702, to make complaint to the commissioners of customs in regard to the restrictions and injury borne by the tobacco merchants by heavy duties on exportation, closeness and severity exercised in matters of form, occasioning forfeitures and condemnation of goods and other hardships operating on trade.

Lord Loudoun had cause to complain, in 1757, of the extra strictness of the collector of the port of Philadelphia, who was inclined to compel the king's transport vessels to be cleared at the custom-house, and had given some annoyance thereby. Lord Loudoun requested Governor Denny to interpose his authority as Governor, to give those transports dispatches to leave the port of Philadelphia. If the Governor had no authority over the king's officers, this could scarcely have been done.

The proceedings in the custom-house during the greater part of the provincial period were uninteresting and uneventful. The officers took their fees, and business went on without excitement. Toward the close of the colonial period, when the spirit of the people was gradually increasing and hatred of Great Britain was growing warmer, there were some episodes between the custom-house officers and the people which were interesting. The headquarters of the surveyor-general of customs in North America appears to have been at Boston in the latter part of the century, and they managed to send from that city to Philadelphia some unpopular persons. The Stamp Act stirred up feeling among the people, which was not soothed by any particular efforts on the part of the crown officers. In 1769, John Swift, collector of customs, seized several pipes of Madeira wine upon charge made of an attempt on the part of the owner to evade the customs laws. The wine was placed in a store-house near the Delaware River. In the night boats, in which several persons were, rowed to the store-house, which was broken open and the wine carried off. Collector Swift was present and tried to prevent the outrage. He was threatened and abused, and on the same night the windows of his house were broken. The wines had been restored to the owner. This being perfectly well known, there was a meeting in reference to the subject the next day at the Coffee-House, by the resolutions of which it was suggested to the owner that he had better return the wine to the custom-house, which he did. Suits were subsequently brought against some of the rioters in the Mayor's Court, and they were convicted. In October, 1769, a

person who had informed the collector concerning some pipes of wine which were landed without paying the duties thereon, was seized by the people, ducked, set up in the pillory, and afterward smeared with tar and strewed with feathers. Shortly afterward there was an affray on the Delaware River caused by the brutality of Capt. William Diddington, commander of the royal armed schooner "Gaspee," who, with David Hay, seized Davis Bevan, a citizen of Chester County, who had been fishing in the Delaware, near Chester, and maltreated him. This event added to the discontent.

In the same year the collectors of customs and naval officers were accused of taking illegal fees amounting to over seventeen hundred pounds in one year. It was quite an ordinary thing, as a consequence of the bad feeling against England at this time, that custom-house officers were roughly treated. John Keates, of Southwark, was assaulted by a mob in 1770, on suspicion of being an informer to the customs officers concerning some smuggling of tea and other articles. In 1771, Collector John Swift had in his service a schooner for the purpose of preventing smuggling. In November, 1771, Thomas Muskett was commander of the king's vessel, and seized a pilot-boat upon charge of smuggling. The latter was brought up the river as far as Red Bank, where the king's vessel and the pilot-boat were anchored. On the same night a pilot-boat was observed coming from Philadelphia. She was steered straight for the revenue vessel, and struck the sides of the latter, when about thirty men, with blackened faces, sprung from the stranger craft, boarded the king's vessel, and, with fire-arms, cutlasses, and clubs, overcame the crew, beat and wounded them, threw them in the hold, and confined them there. They then ran the king's schooner upon a bar, cut up the rigging and sails, and seizing the captive pilot-boat, sailed away with her. There was a great stir about this outrage. Chief Justice Allen was informed of the circumstances by affidavit. Governor Penn issued a proclamation for the arrest of the daring perpetrators; but nobody denounced them, nor was the recaptured pilot-boat, with its cargo of smuggled goods, ever reclaimed. In consequence of this bold proceeding another king's vessel, stronger and more heavily armed, was sent to the Delaware in 1772, and was managed by its officers in a high-handed way. They acted with great strictness on the river, stopped vessels of all kinds, subjected them to inquiry and sometimes to search, arrested captains and crews, and made themselves odious by arrests and bringing suits in the admiralty. In 1773, Ebenezer Richardson was sent to Philadelphia by the customs commissioners at Boston. He was accused of being an informer, and that his business was to lurk about the wharves and spy out offenses on the part of the importers and report them to his masters. A description of this man was published in Bradford's *Journal* in October, 1773, and it was suggested "that all lovers of liberty in this provin-

ince will make diligent search after said Richardson, and, having found this bird of darkness, will produce him tarred and feathered at the Coffee-House, there to expiate his sins against his country by a public recantation." Immediately afterward Richardson was pursued by a mob, but managed to escape, and got out of Philadelphia as speedily as possible. In 1774 a number of hogsheads of sugar, seized by the custom-house officers on board the schooner "Felicity," Capt. Allen Moore, for not having paid duty or being entered at the custom-house, was rescued from the king's officers, who were beaten with clubs and staves, and the sugar carried off. The usual proclamation was made by the Governor for the arrest of the offenders, but they were never discovered.

The reception of the news of the battle of Lexington in 1775 practically suspended the power of the king's officers, and they were superseded in a short time entirely by the committees to conduct public affairs, appointed by the patriots. The State of Pennsylvania assumed the power of the King, and during the Revolution the affairs of commerce were transacted under direction of the popular and State authorities, the regulations about imports and exports, duties, etc., varying from time to time with the public exigencies.

A naval officer for the port of Philadelphia seems to have been appointed early in the eighteenth century. But little is known as to when the office commenced, or what its duties were. Appointment to it seems to have been under the provincial government, and it may be conjectured that the naval officer executed the port laws of the province of Pennsylvania, or collected whatever customs and duties might be imposed under the charter, subject to the paramount rights of the crown. The "9th Pennsylvania Archives," page 738, shows that Robert Assheton was naval officer in 1717. Dr. Frederick Phile held the office before the Revolution, in 1770 and 1771, but was superseded before 1773 by Dr. David Finney. Dr. Frederick Phile was reappointed in 1776 by the Supreme Executive Council. The last incumbent before the Revolution was Lieutenant-Governor Richard Penn, who appointed himself to this place, the salary of which was six hundred pounds.

After the authority of the crown was thoroughly overthrown, the Constitution of the 28th of December, 1776, directed that "the President and, in his absence, the Vice-President, with the Council, five of whom shall be a quorum, shall have power to appoint and commissionate judges, *naval officers*, judge of the Admiralty, etc." The powers of those officers were not defined further than what might be inferred from the name of the office. No collector of customs was provided for, and it may be inferred that the duties of the naval officers were those which, before the Revolution, under the crown, were discharged by the collectors of customs. On the 5th of April, 1777, Dr. Frederick Phile was balloted for and chosen naval

officer for the port of Philadelphia. In April, 1785, the naval officer reported to Council that he had made choice of a convenient place for holding his office. The collector of imposts and the wardens of the port also reported having made similar arrangements for their own comfort. In January, 1788, the naval officer made report that he had seized the brig "Catharine," from Halifax, which was entered in ballast, but found to contain a quantity of fish. He represented that he suspected that the crew of the brig intended to evade the law by seizing on the vessel and cargo. The commander of the "Invalids" was ordered to furnish him with as many men as might be necessary to prevent such action. The naval officer was still Frederick Phile, who had been re-elected Nov. 9, 1787.

As soon as the Federal Constitution was adopted, and the Congress of the United States got to work, the first act passed, on June 1, 1789, settled the form of the oaths to be taken by the members and officers of Congress, officers of the various States, and officers of the United States. The second act, passed July 4, 1789, was entitled an act for laying a duty on goods, wares, and merchandise imported into the United States. The duties were to commence on the 1st of August, and specific tariff was provided on particular articles. This was the first of a long series of laws in relation to imports. The system established by the Congress of the Confederation for the collection of duties was not interfered with in Pennsylvania until 1799, when the State of Pennsylvania was divided into two districts,—those of Philadelphia and Presque Isle (Erie). The district of Philadelphia was to include all the shores and water of the river Delaware, and the rivers and waters connected therewith being within the State of Pennsylvania. The city of Philadelphia was to be the sole port of entry and delivery for the same, and a collector and naval officer for the district was to be appointed, who should reside at the city of Philadelphia. These regulations, with some modifications, have remained in force ever since. In 1784 the State of Pennsylvania established a custom-house at Philadelphia, and Sharp Delany was appointed collector by the General Assembly, and gave bond to the satisfaction of the Supreme Executive Council on the 15th of March of that year.

The naval officer, as a member of the custom-house establishment of the United States, was created by an act to regulate the duties on imports and tonnage passed March 2, 1790. He was to receive copies of all manifests and entries, and estimate the duties on goods, and keep a separate record thereof, countersign all permits, clearances, debentures, and other documents to be granted by the collector, and to examine the collectors' abstracts of duties and other accounts of receipts, bonds, and expenditures, and if found right to certify the same.

The office of surveyor of customs was established by act of Congress of 1799, with authority to superintend and direct all inspectors, weighers, measurers, and

gaugers within his port, and report weekly as to their performance of duties or their neglect. Also to report the names of vessels arriving from foreign ports, with particulars in relation to their cargoes, the liability of the property to duty, etc.

The location of the custom-houses at the early periods are not known, except in a few instances. They were probably in the stores or offices of the collectors. In 1784, Col. Delany was authorized to rent a building for the use of the custom-house, and he was located at the corner of Black Horse Alley and Second Street. In 1810 the United States authorized the purchase of a lot of ground and the construction of a building for the use of the custom-house and the various offices connected therewith. There was an attempt to obtain the use of a lot at the Draw-bridge belonging to the city, which failed. A lot of ground was bought on the west side of Second Street, below Dock, at the northwest corner of Elmslie's Alley, running through to Laurel Court, afterward called Levant

FIRST UNITED STATES CUSTOM-HOUSE.

Street. Here, on the 12th of July, 1819, the first Federal building used for a custom-house in the city was opened. It was plain, three stories in height, the front of the first story being of marble. The second story was lighted by long, arched windows. Small, square windows were above them. The roof stood gable-fashion, rising above the third story. A niche near the apex contained a fine statue in wood, representing "Commerce," cut by William Rush. The upper stories were of brick. Large warehouses were built back of the main building for storage purposes. The architect was William Strickland. The building stood back from the street a distance of forty or fifty feet. On Second Street there was a heavy brick archway, with a wide passage in the centre for drays and carts, protected by an iron gate. Smaller arches for pedestrians were on each side, and there was a small show on either side of the archway of a low wall surmounted with iron palings. The entrance in front of the building was by a central doorway, which led to the main business-room in the second story. In this building the business of the Philadelphia custom-house was carried on until about 1845, when the United States Bank having failed, the white marble building on Chestnut Street, between Fourth and Fifth, occupied by that institution, was purchased by the United States government, and has been in use ever since.

The want of sufficient space in the custom-house

for the accommodation of the large business of the office, led to the erection of a heavy, massive, brick building upon the lot running from Second to Dock Street, north of Walnut, which had been for many years occupied by the Bank of Pennsylvania. This structure, known as the appraisers' building, is solidly built of brick and iron, no wood or combustible mate-

1727.—Grosvenor Bedford; 1 Archives, 385. He acted in person from 1730 to 1732. When appointed not known.  
 1727.—John Moore,<sup>2</sup> his deputy, died December, 1732. He is referred to as being the king's collector in the "Charter and Laws of Pennsylvania," p. 307 (1879), on Nov. 24, 1726.  
 1732-33.—Peter Evans,<sup>3</sup> Bedford's deputy, February 6th. Evans was Moore's son-in-law; he resigned in 1743. 1 Pennsylvania Archives, 385.  
 1743.—William Alexander. He died January, 1744-45.

UNITED STATES CUSTOM-HOUSE IN 1884.

rial being used in it. It is five stories in height, and Mr. Mullett, supervising architect of the Treasury of the United States, has declared that this is the only thoroughly fire-proof building in the country. The appraisers' building was completed and put in use in 1871.

#### COLLECTORS OF THE CUSTOMS AT PHILADELPHIA.<sup>1</sup>

##### UNDER THE CROWN.

- 1685.—Maj. William Dyer.  
 1686.—James Walliams, 1 C. R., 147, for bay and river Delaware.  
 1692.—William Clarke, appointed June 13, 1692; 1 Archives, 117.  
 1698.—John Bewley; 1 C. R., 502. Died 1704.  
 1703.—Robert Assheton; 1 Logan Papers, 200.  
 1704.—John Moore, appointed 24th 5th mo. (July), by Col. Query, *vice* Bewley, deceased; 1 Logan Papers, 309.

1745.—Abram Taylor, deputy for Grosvenor Bedford.

1748.—Alexander Barclay, deputy for Grosvenor Bedford.

<sup>2</sup> In *Pennsylvania Gazette*, Nov. 30, 1732, it is stated that "On Saturday last (25th), died John Moore, Collector of his Majesty's Customs for this Port, which place he enjoyed above thirty years. He dyed in the 74th year of his age." His commission as collector, signed by Evelyn, is in possession of one of his descendants. In the *Pennsylvania Archives*, 2d series, the following list of the collectors of customs is given, viz.: "John Bewley, 1698 to 1702; John Moore, 1706 (1703?) to 1728; Ralph Assheton, 1732; Grosvenor Bedford, 1733; Richard Pearne (died), 1762; Enoch Story, 1762; Abraham Taylor (resigned), 1762; John Swift (*vice* Taylor), June 9, 1762; Robert Beyard, Feb. 21, 1772; John Patterson, Oct. 19, 1772." It is said in the "Life of Dr. William Smith," 2 vol., 488, "John Moore, it appears, came with his wife and family to Philadelphia prior to 1700, and became the King's Collector at that Port." This we know from his commission, which is before me, dated 1703, signed by Evelyn.

<sup>3</sup> In an obituary of Peter Evans, *Pennsylvania Gazette*, June 20, 1745, it is stated he was "an eminent counselor, and for many years Collector of the King's Customs."

<sup>1</sup> From John Hill Martin's "Bench and Bar of Philadelphia."

- 1761.—Ahran Taylor, and in office; 8 C. R., 39, 713, which covers the time from May 7, 1767, to May 10, 1762. John Inglis is said to have been collector from 1751 to 1769, but it is an error. He was deputy in the absence of Collector Taylor from 1751 to 1763. William Till was collector at New Castle during the above period.
- 1762.—John Swift, *vice* Taylor, June 9th. Still in office Dec. 5, 1771. Dr. Thomas Graeme is said to have been collector before his death, in 1772. See "Memoirs of the Historical Society of Pennsylvania," 1 vol., 460 (2d edition).
- 1772.—Robert Bayard, February 7th; 4 Pennsylvania Archives, 449 (1st series).
- 1772.—John Patterson, October 19th, in place of Bayard, declined.
- 1773.—Zachariah Hood, acting for the collector; 10 C. R., 90.
- 1774.—Lachlane Maclean. John Patterson,<sup>1</sup> deputy.

**Post-Office.**—The commencement of the post and letter service in Philadelphia will go back to the Duke of York's times, and originated in the necessities of government. By the act of Sept. 26, 1676, it was held as follows:

"**PUBLIQUE AFFAIRS.**—Whereas, this Government may on many occasions be disappointed of speedy and true Information of Publique Affairs out of England as well as out of our Neighbors' Coloneyes, To the remedy of such future Inconveniencies, every Constable to whom any letters may come Directed to the Gouverneur, Attested on the Backe side the letter with the name of one of his Majesties principall Secretaries of State, or with the name of any one of the Gouverneurs of any of his Majesties Coloneyes of New England; or any letter Sent from the Gouverneur to the Sheriff, or any of the Justices of the York shire upon Long Is Land, and so Attested as aforesaid, shall he dispatch by every such Constable within three hours at the furthest after the receipt thereof to the next Constable, and so forwards as the letter directe Upon the penalty of 40 Shillings for every hour's delay, And in such cases all Constables are Impowred to Press a Sufficient horse and man for that purpose, Allowing for the Man and Horse Satisfaction Six pence for each miles travel, which shall be discounted to such Constable in the Publique Rates."

Under this system the constables were the first postmasters, but they were only to carry public letters and communications. By the great law of March 1, 1683, passed by the Assembly under Penn at Chester, this law was substantially re-enacted for the benefit of the Governor and the dispatch of letters concerning public affairs. The constable ceased, however, to be the postmaster in all cases, and became a forwarder of letters. It was directed that every justice of the peace, sheriff, and constable, to whose hands public letters should come in any county directed to the Governor, should dispatch them within three hours at the furthest after receipt or knowledge thereof to the next sheriff or constable, and so forward as the letters direct upon penalty of twenty shillings for every hour's delay. The sheriffs and constables were empowered to press either man or horse for that service, allowing for a horse or man "two pence by ye mile, to be paid for out of the

public stock." This arrangement was not for the benefit of private persons sending letters to each other. It was abrogated by act of William and Mary in 1693.

In the Pemberton papers it is said that the first post-office was set up by William Penn in July, 1683, and that Henry Waldy, of Tacony, was given authority to conduct the service and "to supply passengers with Horses from Phila. to New Castle or to the Falls" (afterward near Trenton). The rates were to be: For letters from the Falls to Philadelphia, threepence; from the Falls to Chester, five pence; from the Falls to New Castle, seven pence; from the Falls to Maryland, nine pence; from Philadelphia to Chester, two pence; to New Castle four pence; and to Maryland sixpence. This post went once a week, and was to be fully published "on the meeting-house door and other public places." There is nothing in the Colonial Records or Archives in reference to this matter.

On the 17th of February, 1691, King William and Queen Mary granted to Thomas Neale, Esq., his executors, administrators, and assignees for twenty-one years full power and authority to erect, settle, and establish within the king's colonies and plantations in America, one or more office or offices for receiving and despatching letters and packets by post, and to receive, send, and deliver the same under such rates and sums of money as should be agreeable to the rates established by act of Parliament in England, or as the planters and others should agree to give on the first settlement. Under this power the king's Postmaster-General of England, at the request of Neale, deputed Andrew Hamilton, of New Jersey, "to Govern and Manage the said General Post-Office for and throughout all the King's plantations and Colonies in the main land or Continent of America and the Islands adjacent thereto. Hamilton applied to the Lieut.-Gov. and Council of Penna., May 19, 1797, for an encouragement to support the Post, and the Council Voted that a Bill be prepared for encouragement to support ye post both by the publick and upon private letters. The Act was prepared and passed in the same year." In the preamble it was stated "that the mantaining of mutual and speedy Correspondencies is very Beneficial to the King and his Subjects, and a great encouragement to trade, and that the same is best carried on and managed by Publick Post. As well as for preventing Inconveniencies which heretofore have hapned for want thereof, as for a certain, safe, and speedy Dispatch, carrying and re-carrying of all Letters and Pacquets of Letters by Post to and from all parts and places within the Continent of America and several parts of Europe, and that the well ordering thereof is matter of General Concernm<sup>t</sup> and of great advantage. The act then went on to declare that there be from henceforth one general letter office erected and established within the town of Phila."<sup>1</sup>

The act established the following rates and regula-

<sup>1</sup> "Bench and Bar of Philadelphia," John Hill Martin.

tions: Every single letter might contain merchants' accounts (none exceeding one sheet of paper), bills of lading, gazettes, invoices, or bills of exchange (if they did not exceed one sheet of paper). A packet was to be accounted three letters, at the least. If any letters or packets should lie or remain in the post-office uncalled for for the space of forty-eight hours, the postmaster might send them forth to the houses of the persons to whom they were directed, and receive therefor one penny more. Letters directed to or going from the Proprietary or Governor were to be free. Persons employed in the several stages within the province and territories might pass or re-pass every ferry without paying either for his own passage or for his horses'. Ferry-masters who refused transportation were liable to five pounds' fine. Ship-letters were also matters of concern, as is shown by the second preamble: "And whereas, upon the arrival of Ships into the Several ports of this province, many Letters directed to Several Merchants and others have been detained long, to the great damage of ye merchants, and want of that Speedy Advice which they might have had if the same had forth with been dispatched. And sometimes such Letters have been delivered by the Masters or Passengers of such Ships to ignorant and Loose hands that understand not the ways and means of speedy Conveyance and Delivery of Letters, whereby great Prejudice hath accrued to the affairs of merchants and others, as well as by the miscarriage of many letters, As many times by opening of the same to the discovery of the Correspondencies and Secrets of Merch<sup>ts</sup>." It was, therefore, directed that all letters and packets brought into the province by any ship should be delivered to the master of the general letter-office for the time being, to be delivered by him according to the directions of the same. A fine of twenty shillings might be recovered against any master who refused to deliver such letters to the post-office, and for the encouragement of the shipmaster it was directed that he should receive from the master of the post-office one penny for every such letter delivered to him. There was an exception in favor of letters passing between consignors by the vessel and the merchants, masters, or owners, and in favor of any special messenger sent on purpose by the writer of a letter to deliver it to some other person. Any attempt to set up a private post (to the injury of the postmaster) for hire, or to "set up or employ any spot, Post-House, Post-Paquet, Boat, or Conveyance whatsoever, for carrying, conveying, or re-carrying any Lett<sup>rs</sup> or Pacquets by Sea or Land," was subject to a forfeiture of forty pounds. The act was to remain in force seven years. The postage-rates were as follows: For every single letter to or from Boston or Rhode Island, eighteen pence, and so in proportion to the greatness and quantity of letters.

Single letters to or from Philadelphia, Piscataway, and other parts to the eastward of Boston, two shillings; to or from the post-road in Connecticut

Colony, one shilling; to or from New York, eight pence; to or from any place within eighty miles of Philadelphia, sixpence; to or from Maryland or Virginia, eighteen pence. These rates were provided the letters went by post. If delivered into the office by any private person, rate four pence.

For letters greater than single, the rates were to be doubled.

Under this, the first establishment of the post in Philadelphia, Postmaster-General Hamilton appointed Henry Flower to be his deputy.

For the encouragement of Hamilton's post-office there was an allowance made by the province of Pennsylvania of twenty pounds per annum for three years. This sum had not been paid in 1701, when Hamilton petitioned the Provincial Council for the remuneration, and it was ordered that the treasurer pay the same out of the public stock as soon as he should have sufficient in his hands for that purpose.

When Gen. Braddock arrived, in 1753, he requested the establishment of a post between Philadelphia and Winchester for the forwarding of his dispatches. This request was laid before the Assembly, and seems to have been complied with, as it was noted in May, 1756, that the western post had not yet come in, owing, it was supposed, to the ravages of Indians near Winchester.

Postmaster-General Hamilton died in Philadelphia in 1709. In the succeeding year the British government took possession of the establishment of the post-office, and thenceforth it was managed in connection with the postal service of the British government, with chief officers at Edinburgh, Dublin, and New York. There was no material change in the management or system by reason of the assumption of the management of the post-office under the royal authority.

The advance of the post-office was slow. In December, 1717, Jonathan Dickinson wrote to a correspondent, "We have a settled post from Virginia and Maryland unto us, and goes through all our northern colonies, whereby advices from Boston unto Williamsburg, in Virginia, is completed in Four Weeks, from March to December, and in double that time in the other months of the year." In 1727 the mail to Annapolis went from Philadelphia once in two weeks in summer, and once a month in winter *via* New Castle to the Western shore and back to the Eastern shore. The mail for New York was carried weekly in 1729, in the summer time, and fortnightly in the winter months. For this reason the *Pennsylvania Gazette*, in 1729, announced that during the fortnightly stage to New York the paper would be continued only once in two weeks. Henry Pratt was riding postmaster for all the stages between Philadelphia and Newport, in Virginia, in 1738. He set out at the beginning of each month, and returned in twenty-four days. In 1748, Kalm, the Swedish traveler, remarked that when the vessel in which he arrived

reached the city, many inhabitants came on board asking for letters. Those not called for were taken to the Coffee-House and not the post-office. The delivery of letters from the post-office to the persons for whom they were intended seems not to have been renewed as a custom, which was required by the act of 1797, when the royal authority took hold of the post-office.

The first penny-post, as it was called (meaning the delivery of letters from the post-office to persons to whom they were addressed), is said to have commenced in 1753. At the same time the advertising of lists of letters uncalled for commenced. In 1754 an immense advance was made by the establishment of a mail to New York three times per week in summer, and once a week in winter. In the next year Franklin, who was Postmaster-General, speeded the mail for New England by sending it out once a week all the year round, instead of once a fortnight, as formerly. By this arrangement a letter could be sent to Boston and a reply received in Philadelphia in three weeks, instead of six weeks, as formerly. Newspapers in 1758 were carried by the post-riders fifty miles for nine pence per year, and one shilling sixpence for one hundred miles. As no paper was published at this time oftener than once a week, these prices comprised fifty-two deliveries. It is supposed, but not known, that this small profit was a personal perquisite of the post-riders.

The stages for carrying travelers soon became more frequent than the mails. The new stage, in November, 1756, left John Butler's sign of "The Death of the Fox," in Strawberry Alley, for New York. The trip was made in three days, and a return in three days more, made one trip weekly between city and city. In 1765 this was improved upon by the establishment of a line of stages to New York twice a week. They also required three days for the trip, but the proprietors must have owned four or five coaches. The fare was two pence per mile. The "Flying Machine" set up by John Barnhill, in Elm Street, went in the summer time to New York in the remarkably short period of two days. Fare through, twenty shillings; for way passengers, threepence per mile. The vehicles used were wagons; the seats set on springs. John Bessonet & Co., in 1773, started stage coaches to New York, through in two days. Fare for inside passengers, four dollars; outside passengers, twenty shillings.

Up to the time of the employment of steamboats, the speed was not much greater. The latter, upon the Delaware River and streams on the coast of New Jersey, were enabled to shorten the time, but the stages across New Jersey were, as usual, slow. To get to New York in one day was a matter that might be accomplished in summer, but frequently occupied a day and a half,—passengers leaving Philadelphia in the morning slept in inns upon the route over night, and were enabled to reach the city of New York on

the morning of the next day. Even as late as July, 1828, the *United States Gazette* of Philadelphia chronicled the fact that the morning papers from New York were received at their office in the evening of the day they were printed, nine hours and forty-three minutes from New York. At the same time it was a matter of congratulation that the time of travel between Philadelphia and Baltimore was shortened so much that passengers were carried through in one day.

William Goddard, in 1774, about the time that the First Continental Congress was in session, encouraged by the spirit which prevailed in the country, endeavored to set up an independent post-office establishment. Goddard, who was the publisher of the *Pennsylvania Chronicle*, had been surveyor of roads and comptroller of the post-office establishment under Franklin. He originated a plan for "the Constitutional Post," and traveled over the country to obtain support. His proposition was that subscriptions should be taken up to maintain the post; that the subscribers in each colony should annually select a committee from among themselves; and that the committee of each colony should appoint the postmaster, regulate the rates of postage, make contracts with the post-riders; to have charge of the mails, the colonial postmasters were to elect the Postmaster-General. Goddard went through the country endeavoring to gain support for his plan. In New England and New York he was encouraged, but he made few friends in Philadelphia. At a meeting of mechanics, about October, 1774, his plan was proposed for their acceptance, and they listened to some of his letters setting forth the merits of his scheme, but they refused to listen to the rest of them, declaring that Americans had their hands full, without setting up a post. He established his route, however, between Philadelphia and New York, and perhaps to other points, and placed his post-office at the London Coffee-House, where it was open for a short time, but soon closed for want of patronage.

As soon as it was perceived by the Continental Congress that it was necessary to supersede the royal authority, the importance of establishing a post-service was recognized. On the meeting of the Second Congress, in May, 1775, a committee was appointed to report the scheme of a post "for conveying letters and intelligence through this Continent." In July an act for that purpose was passed, the general post-office to be at Philadelphia. The Postmaster-General nominated was Benjamin Franklin, at a salary of one thousand dollars per annum. He was succeeded in the next year by Richard Bache. It was directed that there should be formed "a line of posts from Falmouth, New England, to Savannah, in Georgia, with cross-posts where needful." Under this arrangement a new system was established for carrying the mail. The riders ceased to go through from one extremity of the route to another, as Henry Pratt did in 1738. Mail riders were appointed for every twenty-five miles, to

go through by night and day, carrying the mail one way, and receiving the return mail, when possible, to be carried the other way to the end of their station. At the same time advice boats were ordered to be established between North Carolina and Georgia, and the place wherever Congress was sitting. They were armed, and had a right to carry freights.

As soon as the Federal government went into operation, Congress set to work to establish the post-office. By act of Sept. 22, 1789, it was resolved that there should be a Postmaster-General, with assistant or clerk or deputies, the postmaster to be under the direction of the President in performing the duties of his office, which were to be "the same as they last were under the resolutions and ordinances of the late Congress." This was only an act to continue the post-office, and its time was limited to a year. By act of 1790, August 4th, it was again continued until March 4, 1791. And again by act of March 3, 1791, until the end of the next session of Congress. All letters to and from the treasurer, comptroller and auditor of the treasury, and the assistant secretary of the treasury on public service were to go free of postage, and the Postmaster-General was to extend the carrying of the mail from Albany, N. Y., to Bennington, in Vermont.

On the 20th of February, 1792, a long act was passed by which were established a great number of post-roads, extending from Wiscasset, Me., to Savannah, in Georgia, passing through many cities, towns, and villages, with branches, lateral extensions, cross extensions, etc., extending westward in all the States as far out as Lexington and Danville, Ky., to Hagerstown, Chambersburg, and other places. It was directed that a general post-office should be established at the seat of government of the United States, which was then at Philadelphia, and that the Postmaster-General should have authority to appoint deputies at the offices. He was to provide for carrying the mails "by stage-carriages or horses, as he may judge most expedient, and to regulate the manner in which deputy postmasters should discharge their duties. Persons obstructing the passage of the mails, or of any horse or carriage carrying the same, were liable to a fine of one hundred dollars, and ferrymen delaying the mail to a penalty of ten dollars for each half-hour of delay. Mails were to be kept open for the reception of letters until within half an hour of the time for forwarding. The salary of the Postmaster-General was two thousand dollars per year, and of his assistants one thousand dollars, without fees or perquisites. The rates of postage were heavy. The following was the postage to be charged on each single letter :

	Cents.
Not exceeding thirty miles.....	6
Over 30 and not exceeding 60 miles.....	8
"    60    "    "    100    "    .....	10
"    100    "    "    150    "    .....	12½
"    150    "    "    200    "    .....	15
"    200    "    "    250    "    .....	17
"    250    "    "    350    "    .....	20
"    350    "    "    450    "    .....	22
"    450 miles to any distance.....	25

Rates from one port to another in the United States packet-boats or vessels provided by the government :

	Cents.
For each single letter.....	8
"    double    "    .....	16
"    triple    "    or packets.....	24

Ship letters brought into the United States to be carried at the same rate.

In order that ship-letters should be promptly delivered, it was directed that no vessel entering port should be allowed to break bulk till the master or commander had delivered to the postmaster all letters brought with him directed to persons within the United States, except such as were for the owners or consignees. The shipmaster was to receive two cents for each letter so delivered to the post-office. There were penalties for delaying, secreting, opening, embezzling, or destroying letters by persons employed in the post-office department, penalty or such fine not exceeding three hundred dollars, or imprisonment not exceeding six months, or both, according to the circumstances and aggravations of the offense. But if it should happen that the letters so dealt with contained any bank-note, bill of exchange, Treasury warrant, assignments of stock, letter of credit, promissory note, with other valuable papers specially named, the punishment was to be death. The punishment of robbing the mail, or a carrier of the mail, was death. Regulations were made for publishing the address of letters uncalled for every three months, forwarding dead letters to the Postmaster-General for examination, and return of valuable articles therein to the person by whom the letter was written. Very liberal provisions were made for sending letters free by officers of the national government, congressmen, etc; A free exchange of one copy of a newspaper by the printer thereof, and sent to any other printer of newspapers, was established. Newspapers conveyed in the mails under cover open at one end were to be carried, not more than one hundred miles, for one cent, and one and a half cents for any greater distance. One-half of the newspaper postage was allowed to be received by deputy postmasters for their own use. Regarding the compensation of deputy postmasters, this was to be fixed by the Postmaster-General by salaries and commissions on the amount of business done, no compensation to any one postmaster to exceed eighteen hundred dollars per annum. This act was the foundation of all subsequent acts in relation to the post-office, there being modifications at various times in the postage charges, the establishment of delivery of letters to persons to whom they are addressed, methods of transportation, compensation to postmasters and others, and many other modifications made necessary by the immense changes in the population of the country, and the tremendous increase in the volume of correspondence which seems to have followed every reduction in the amount of postage.

LOCATION OF POST-OFFICES IN PHILADELPHIA.

- 1728.—At Andrew Bradford's house, Second Street.
- 1734.—In Second Street.
- 1737.—At Franklin's house, Market Street.
- 1771.—At Foxcroft's house, Market Street, near Fourth.
- 1775.—At Goddard's Constitutional Post-Office, at Coffee-House, southwest corner Front and Market Streets.
- 1782.—At Widow Budden's house, Front Street, below Market, east side.
- 1784.—At corner of Front and Market Streets.
- 1785.—At corner of Front and Chestnut Streets.
- 1790.—At No. 7 South Front Street, below Market.
- 1791.—No. 35 South Front Street, north of Chestnut.
- 1793.—During yellow fever, at old college, Fourth Street, below Arch.
- 1794.—At No. 34 South Front Street.
- 1797.—During yellow fever, at Dunlap's stable, Twelfth Street, below Market.
- 1798.—During yellow fever, at north side of Market Street, first house west of Eleventh Street.
- 1799.—At No. 27 South Third Street, below Elbow Lane, east side.
- 1799.—During yellow fever, at the upper end of Market Street.
- 1802.—During yellow fever, at Dunlap's stable, Twelfth, below Market Street.
- 1805, September.—During yellow fever, at the house of James Traquair, northeast corner Tenth and Market Streets.
- 1814, June.—At southwest corner of Third and Market Streets.
- 1815.—At No. 27 South Third Street, for a short time.
- 1816.—At No. 116 Chestnut Street, south side, corner Carpenters' Court.
- 1828.—At No. 107 Chestnut Street, north side, corner Franklin Place.

- 1854.—At Jayne's building, Dock Street, below Third, north side.
- 1863, February 27th.—Chestnut Street, below Fifth, south side.
- 1884.—Northwest corner of Ninth and Chestnut Streets.

The carrier delivery of the Philadelphia post-office covers the greatest territory of any city in the world, excepting London. The New York post-office serves forty square miles of territory; the Philadelphia central office serves seventy square miles, and it has in addition thirty sub-stations and fifty stamp agencies, covering an aggregate of one hundred and twenty-one square miles, all within the boundaries of the city of Philadelphia. The London postal service covers two hundred and twenty-five square miles.

The official "Post-Office Guide" for the year 1883 shows the relationship of Philadelphia to the other large offices to have been:

	Number of pieces mailed.		Number of pieces mailed.
New York.....	489,741,230	St. Louis.....	80,527,232
Philadelphia.....	181,952,232	Baltimore.....	34,957,920
Chicago.....	170,144,346	Washington.....	28,937,208
Boston.....	140,881,496	Indianapolis.....	13,282,434
Cincinnati.....	85,636,752		

In all post-office documents, however, of late years, Philadelphia leads the list, because the business of its office is conducted with the least number of errors and greatest profit.

The new granite building fronting on Chestnut, Ninth, and Market Streets, erected for the post-office, United States Court, and offices of the Federal government, was occupied and opened for business for the first time in March, 1884. For eleven years this expensive edifice has been spreading and rearing its gray granite proportions, until now (March 20, 1884), with a frontage of four hundred and twenty-five feet, a depth of one hundred and seventy-five, and one hundred and sixty-four feet in height, it is the largest-looking and most substantial edifice, with the exception of the new City Hall, in Philadelphia. The work of

digging for the foundations of this magnificent structure began Oct. 11, 1873. The site is the most expensive that has ever been selected for a post-office. Its cost alone was \$1,491,200.99. The entire cost of site, building, furniture, machinery, and interior fixtures, when completed, it is estimated will amount to about \$3,000,000. The actual cost of the building itself has only been about \$4,500,000.

From the first the actual work has been under the direction of A. M. Smedley, with John McArthur, Jr., as nominal superintendent. In turn H. H. Bingham, George W. Fairman, A. Loudon Snowden, and Gen. Hartranft, as postmasters, have been custodians of the work and disbursing agents of the funds. The latest and most important share of the work has fallen upon Gen. Huidekoper, the present postmaster.

As a comparison, we give the square feet of area covered by the six largest post-office buildings in the United States:

Baltimore.....	29,500	Cincinnati.....	59,100
St. Louis.....	49,028	Philadelphia.....	57,121
New York.....	49,323	Chicago.....	70,448

While the Philadelphia post-office does not cover the largest space, it is, however, the finest, most complete, and costly, and more thoroughly equipped than any other post-office building in the country.

Scanning the splendid front of this expensive structure, which is on Ninth Street, the eye has to take in at a glance the whole five stories, extending from Chestnut to Market Street, a long stretch of nearly five hundred feet of massive masonry, with one hundred and eighteen windows, flanked by one hundred and eighty Ionic fluted shafts and ten immense doorways, each porticoed with a dozen immense granite columns, standing in groups of two at each side. The central part of the front rises the five stories, the upper story forming a part of the dome, which is heavy, but not high. This central part is five windows wide down to the great central portico, inclosing the three central doors, which have also a window at each side. It projects out farther than any other part of the building, and shows a little more elaboration and carefulness of construction than the rest. Extending from this centre toward Chestnut Street are three sections, each varying in projection, and three similar ones extend to Market Street. The sections nearest the centre on each side are set back flat, and are each seven windows wide above, with four doors and six windows below. This section, like the two sections, each three windows wide, adjoining it and extending to the corners, is but four stories high. The windows of the first story, reaching almost from floor to ceiling, are over four times as high as a full-grown man, and the windows above, although they diminish in size, are proportionately large. The actual heights are:

	Height, feet, in.		Height, feet, in.
First story.....	27 3	Fifth story.....	15 6
Second story.....	22 3	Dome.....	59 8
Third story.....	20 9		
Fourth story.....	15 6	Total height.....	163 11

The whole surface of the front and sides is granite, with nothing else in sight to break the grandeur and harmony of the pile. Even the plate-glass in the walnut frames of the windows is set back so far that in an oblique view the heavy sills and jutting sides produce an almost fortress-like effect. The only points at which full round granite columns are introduced are in the three porticoes ornamenting the principal groups of doorways, three in the central section, and the two nearest the Market and Chestnut Streets corners. There they stand out boldly on stalwart pedestals, and support the usual frieze and fillet with round marble teeth or colonettes, forming a little railing on top. The building line is set very far back from

stories. The Market Street side is an exact fac-simile. In all probability the building is the best designed for its purpose of any erected in America. Without going into the details of the arrangement of the upper floors, there are one hundred and forty actual rooms in the building, ranging in size from the work-room, in which several regiments could drill, to the smallest, which would hold at least a full-sized company. There are on the first floor seventeen rooms; on the second, forty rooms; on the third, forty rooms; on the fourth, thirty-two rooms; and on the fifth floor, eleven rooms, a total of one hundred and forty rooms. The doors, window-frames, etc., all through the building are dark-red mahogany. The furniture is the same, even

NEW POST-OFFICE IN 1884.

the curb line, probably fifty feet, and from the line of each of the projecting porticoes to the other a low railing extends, inclosing a space of twenty or twenty-five feet, which helps to set off the building. The character of the architecture generally preserved within as well as without is Romanesque.

There are no doors on either the Market or Chestnut Street sides. On Chestnut Street a plain granite elevation, with forty-four windows in it, the central section five windows wide for four stories, with three windows on each side, and three windows on top in the fifth story, or attic, is all that is to be seen. The only ornamental feature is the repetition of the mezzoportico over the central windows of the first and second

the tables in the post-office work-room. In the finer private offices there is leather upholstery. Some of the carpets are old gold and very aesthetic. Every door and window in the building has a solid iron screen slid into the wall, and when these are in place, it is asserted, the building is absolutely fire-proof. These iron doors alone cost one hundred thousand dollars. The building is lighted by six hundred incandescent electric lights. A few of the striking and interesting facts concerning this superb building, said to be the finest government structure outside of Washington, are as follows:

Front on Ninth Street.....	425 feet
Front on Chestnut Street.....	175 "
Height from pavement to dome.....	164 "

Length of front corridor.....	254 feet.
Width of front corridor.....	18 "
Height of first story.....	27 "
Length of work-room.....	254 "
Depth of work-room.....	124 "
Number of rooms.....	146
Number of windows.....	235
Exterior stone columns.....	28
Exterior fluted shafts.....	324
Columns in work-room.....	70
Letter-drops.....	17
Lock-boxes.....	1,614
Total square feet of area <sup>1</sup> .....	67,121
Electric lights.....	600
Cost of site.....	\$1,491,200
Cost of building.....	4,508,800
Furniture and machinery.....	2,000,000
Estimated total cost.....	\$8,000,000

The statistics of the office are as follows :

Employees, total.....	} 1291	833
Carriers and sub-carriers.....		458
Wagons.....		34
Sub-stations.....		30
Stamps, annual sales.....		\$1,500,000
Mail matter hauled, pieces daily.....		500,000

#### POSTMASTERS AT THE CITY OF PHILADELPHIA.

- 1696.—Andrew Hamilton, Postmaster-General; 1 C. B., 463.  
 1698.—Henry Flower,<sup>2</sup> Sept. 2, 1698.  
 1707.—Capt. John Hamilton; 2 Logan Papers, 228.  
 1722.—Henry Flower, *Potter's American Monthly*, 1875, p. 891.  
 1725.—Andrew Bradford.  
 1737.—William Spotswood, Postmaster-General.  
 1737.—Benjamin Franklin, *Harper's Magazine*, October, 1871.  
 1753.—Benjamin Franklin and Peter Hunter, Postmasters-General.  
 1753.—William Franklin.  
 1757.—Peter Franklin, brother of Benjamin; 4 Pennsylvania Archives, 257.  
 1759.—Josiah F. Davenport (about this time).  
 1767.—John Foxcroft,<sup>3</sup> a relative of Franklin's wife.  
 1774.—William Bradford.  
 1775.—William Franklin,<sup>4</sup> called comptroller of the general post-office at Philadelphia.  
 1775.—William Goddard<sup>5</sup> (Constitutional Post).  
 1775.—Richard Bache, deputy to Franklin.  
 1776.—Richard Bache, Postmaster-General. He was appointed by Congress on Nov. 7, 1776.  
 1776.—Peter Baynton.  
 1782-89.—Ebenezer Hazard, postmaster to the United Colonies.

**United States Mint.**—Some of the American colonies either issued or allowed to be issued, under their authority, various coins of copper and silver, but in Pennsylvania no attempt was made in that direction. The record is extant of the case of Charles Pickering, a lawyer, and a man in some authority under Penn, who attempted to engage in a coinage speculation in 1683. He was charged before Penn himself in Council, on the 28th of October of that year, with being concerned, together with Samuel Buckley, in coining pieces of silver, being Spanish bits and Boston money. This they confessed, and acknowledged that they had put out some of those new bits, "but they say that all their money was as good silver as any Spanish money." The trouble seems to have been that, although the silver was pure, there was too much of an alloy of copper or brass. Pickering and Buckley alleged that John Rush was concerned with them in the making of the bits, which Rush denied. It was resolved that there should be a proclamation against these new bits and New England shillings, and that they should be cried down. The trial was a peculiar one. The Council ordered a special grand inquest to be summoned and examined, and appointed a special attorney, John White. A special petit jury was also summoned. Pickering said that nobody should lose anything by him; but he was found guilty, together with Buckley and Robert Fenton, who had made the seals or dies for the money. Pickering was sentenced to pay to every person who should bring in within the space of one month "this false, Base, and Counterfeit Coyne." The pieces so redeemed were to be his property, but they were to be melted in gross before the metal was returned to him. He was also sentenced to pay a fine of forty pounds "toward ye building of a Court House in this Towne." Buckley was fined ten pounds "toward a public Court House here," while Robert Fenton, being a servant, and having confessed the truth, was only sentenced "to sitt an hour in the Stocks tomorrow morning." Pickering suffered very little by this transaction, and afterward held public situations of trust. His coin must have been nearly up to standard value, and doubtless was redeemed according to the sentence of the court.

In New England there was difficulty after the first settlements for the want of a currency. In Massachusetts they tried to make out with Indian wampum and seawant. At one time "country pay," including corn, all kinds of grain, peas, and live-stock, were received at the colonial treasury for taxes. The General Court of Massachusetts passed a law at an early day that

<sup>7</sup> Appointed by Hartranft's sureties according to act of Congress.

musket-balls of full bore should pass currently for a farthing each, but this sort of legal tender was not allowed to be carried to an inconvenient extent. No man could be compelled to take more than twelve pence worth, or forty-eight of them at one time. This sort of money could not have been of plentiful issue, as afterward the General Court of Massachusetts was compelled to pass a law to the effect that upon executions on judgments for old debts the officers of the law might take lands, houses, corn, cattle, fish, and other commodities, which, after being valued, were to be turned over to the creditor in satisfaction of his debt. The only hard money in circulation was such as had been brought from England, with Holland and other foreign coins. These colonists were continually in debt to the people abroad, from whom they obtained supplies. The merchants in the English and Dutch West Indies drained them all the time of their gold coin.

In 1652 Massachusetts resolved to establish a mint, a dangerous invasion of the royal prerogative; but as there was no king in England at the time, the commonwealth under Cromwell being in power, it was considered expedient to take the risk. The Mint-House was established at Boston, and John Hull was appointed master of the Mint, with authority to coin twelvence, sixpence, and threepence pieces. They were to be of the just alloy of new sterling English money, but in order to prevent their being exported, they were ordered to be of less value by two pence in the shilling than the English coins, and lesser pieces proportionally. The earliest pieces, bearing the date 1650, which were issued by this authority, had on one side in the centre, in a ring of dots, a rude representation of a pine-tree, with the inscription, "Massachusetts. N. E." On the other side, in the centre, "1650;" "xii." under it, and upon the outer circle "New. England. and." There seems to be some doubt as to whether these coins were struck in Massachusetts at all. One numismatist believed that they were made in New Castle, England, while another says that they were made in Newark, England. It is not necessary to follow up here this interesting subject of the Massachusetts currency. Commenced in an invasion of the supreme authority, there were occasional contests with the English Mint officers, which were terminated in 1686 by prohibiting the issue by the Massachusetts Mint of sixpences, groats, and pennies. In Maryland a shilling was issued bearing a bust of Lord Baltimore, 1659. Various pieces of copper and silver were issued between the time of the settlement of the colonies and the Revolution, which were ascribed to various North American colonies, as, for instance, the Carolina half-penny, 1694; the New England half-penny, 1694. These were really struck in Great Britain, with others which were brought over to America and circulated, among them the Rosa Americana, 1722, and afterward the Granby and Connecticut coppers, Virginia silver and copper half-pennies, French pieces for Louisiana,

and Spanish pieces for Florida. As soon as the Revolution had fairly set in, coining became quite common. Private speculators struck off numerous pieces of small value in copper or silver. The States, which were not now under awe of the royal prerogative, authorized coinage. Even England came to our assistance by striking pieces at nominal values beyond their worth, and sending them over to this country.

Various curious pieces were brought out, among which may be mentioned several varieties and with different designs, in copper principally, called Washington pennies and Washington pieces; Continental currency, 1776; Janus, 1776, copper; Massachusetts pine-tree coppers, 1776; U. S. A. coppers, supposed to have been issued in 1776; Non Depen—dens. status, 1778; Nova Constellatio, copper and silver, 1783 and 1785, and gold in 1785; Annapolis shilling, sixpence and threepence, 1783; Washington cent, 1783; Washington tokens, 1783; Confederatio, copper, 1785. Several pieces in copper were issued under authority of the State of Vermont, and a large number under authority of Connecticut, and many under the law of New Jersey between 1776 and 1788. New York, in 1786-87, authorized the coining of copper and gold coins.

In 1786, October 16th, the Congress of the Confederation passed an ordinance for establishing a Mint of the United States and for regulating the value and the alloy of the coin thereof. A contract was made, and on the 6th of July, 1787, the government ordered that its copper coin should bear the following inscriptions and devices:

*Device.*—A dial, with the hours expressed upon the face, with "fugio" on the left and "1787" on the right. A meridian sun above the dial, and below it the

*Legend.*—"Mind your Business."

*Reverse.*—Thirteen circles, linked together, forming a large circle. In the centre of the same a small circle, with "United States." Around it and in the centre, "We are one."

This piece was coined by contract, and was the only legal coinage of the United States copper coins until the year 1793, except the experimental pieces of three varieties, coined in 1791, and called the Washington cent.

On the 3d of March, 1791, the Congress of the United States, established under the Federal Constitution, passed the following resolution:

"That a Mint shall be established under such regulations as shall be directed by law.

*Resolved,* That the President of the United States be, and he is hereby authorized to cause to be engaged such principal artists as shall be necessary to carry the preceding resolution into effect, and to stipulate the terms and conditions of their service, and also to cause to be procured such apparatus as shall be requisite for the same purpose."

On the 2d of April, 1792, Congress passed "an act

establishing a Mint and regulating the coins of the United States.

"That a Mint for the national coinage be and the same is established, to be situate and carried on at the seat of the government of the United States for the time being; and that for the well-conducting of the business of the said mint there shall be the following officers and persons, namely: a director, an assayer, a chief coiner, an engraver, a treasurer."

The act then went on to describe the duties of the officers. The director "shall employ as many clerks, workmen, and servants as he shall from time to time find necessary, subject to the approbation of the President of the United States. . . . He shall have the chief management of the business thereof, and shall superintend all other officers and persons who shall be employed therein. The assayer was to "receive and give receipts for all metals which may lawfully be brought to the mint to be coined, . . . assay all such of them as may require it, and . . . and deliver them to the chief coiner to be coined." The chief coiner was to "cause to be coined all metals which shall be received by him for that purpose." The engraver was to "sink and prepare the necessary dies for such coinage, with the proper devices and inscriptions," but it shall be lawful for the functions and duties of the chief coiner and engraver to be performed by one person. The treasurer was to "receive from the chief coiner all the coins that shall have been struck, and shall pay or deliver them to the persons respectively to whom the same ought to be paid or delivered. He shall, moreover, receive and safely keep all monies which shall be for the use, maintenance, and support of the Mint, and shall disburse the same upon warrants signed by the director." Each of these officers was to give a bond, with one or more sureties, to the satisfaction of the Secretary of the Treasury, in the sum of \$10,000, conditioned for the faithful and diligent performance of the duties of his office. The yearly salaries of these officers were as follows: Director, \$2000; assayer, \$1500; chief coiner, \$1500; engraver, \$1200; treasurer, \$1200; to each clerk, not exceeding \$500; and to subordinate workmen and servants, such wages and allowances as are customary and reasonable. The President of the United States was authorized to cause to be provided and put in proper condition such buildings and in such manner as shall appear to him requisite for the purpose of carrying on the business of the same Mint. The coins were to be of gold, silver, and copper. The gold coins were to be eagles, value of \$10 or units, and to contain 247 grains, and  $\frac{1}{8}$  of a grain of pure gold, or 270 grains of standard gold; half-eagles, each of the value of \$5, and quarter-eagles, each of the value of \$2.50, were to be of relative proportions of pure and standard gold. The dollar was to be of "the value of a Spanish Mill Dollar, as the same is now current, and to contain 371 Grains, and  $\frac{4}{16}$  parts of a Grain of pure, or 416 Grains of Standard Silver. The Half Dollar and the Quarter

Dollar were to be of proportion in the amount of pure and standard metal. The Disme was to be the value of  $\frac{1}{10}$  of a dollar, in the same proportions of pure and standard metal, and the Half Disme was to be the value of  $\frac{1}{20}$ th of a dollar. The Cent to be the value of 100th part of a dollar, and to contain 11 penny weights of copper. The half-cent to be half the value of the other in the weight of the metal. Section 10th said,—

"That upon the said coins, respectively, there shall be the following devices and legends, namely: Upon one side of each of the said coins there shall be an impression emblematic of liberty, with an inscription of the word Liberty, and the year of the coinage; and upon the reverse of each of the Gold and Silver Coins there shall be the figure or representation of an Eagle with this Inscription: 'United States of America;' and upon the reverse of each of the Copper coins there shall be an inscription which shall express the denomination of the piece, namely: cent, or half cent, as the case may require."

The proportional value of gold to silver was fixed as 15 to 1, according to the quantity in weight of pure gold or pure silver. Every 15 pounds weight of pure silver was to be of equal value, in all payments, with 1 pound weight of pure gold. The standard for gold coins was 11 parts fine to 1 part alloy. The alloy to be composed of silver and copper in such proportions, not exceeding one-half silver, as should be found convenient. The standard for silver coins was to be 1485 parts fine to 179 parts alloy, or 1485 parts in 1664 parts of the entire weight of pure silver. Gold and silver coins struck at the Mint were declared to be legal tender. There were directions for an annual assay and other necessary matters. By the act of March 3, 1795, an additional officer was directed to be appointed in the Mint by the name of "The Melter and Refiner." He was to take charge of all copper, silver, and gold bullion delivered out by the treasurer of the Mint, after it had been assayed, and to reduce the same into bars or ingots fit for the rolling-mills, and then to deliver them to the coiner or treasurer, as the director shall deem expedient. He was to give bond in the sum of \$6000 for the performance of his duties, and was allowed a salary of \$1500 per year. It will be observed that according to the terms of the act of 1792, the Mint was to be located at the seat of government for the time being. After Congress went to Washington City, the act of March 3, 1801, declared that the Mint should remain in Philadelphia until the 4th of March, 1803. This act for continuing the Mint was revived time after time for terms of five years. In 1828, May 19th, it was enacted that the act of 3d of March, 1801, concerning the Mint, should be revived and continued in force and operation "until otherwise provided by law." Practically this made the position of the Mint more permanent. Fifty-six years have rolled on, and the location in Philadelphia has not been disturbed, although there have been oc-

casional efforts to remove the institution to other cities.

Under the act of 1791 the President was authorized to employ artists, etc., for the purposes of establishing a Mint. During the time that succeeded the passage of that act and the full Mint Act of 1792, it is believed that experiments were made in coinage in Philadelphia. John Harper, a manufacturer of saws at the corner of Sixth and Cherry Streets, is credited with the coinage of one of the Washington pennies of 1791, which was struck in his cellar upon an old press probably imported from England, and afterwards used in the Mint. The piece ascribed to Harper's press was of copper. It bears a clumsy likeness of Washington attired in military costume, his hair dressed with a cue in the old-fashioned style, date 1791; legend, "Washington President." On the reverse appears the upright eagle with wings outspread, his claws grasping respectively the olive-branch and thirteen arrows. The national escutcheon is on his breast, and the motto "Unum E Pluribus," inscribed upon the ribbon which is held in the beak. There are no stars on this coin. In 1792 a copper coin much resembling the above, designed by Adam Getz, engraver, of Lancaster, together with some silver half-crowns from the same die, are said to have been struck under the superintendence of Adam Eckfeldt, who was for many years chief coiner of the Mint, upon a press manufactured by Mr. Harper in a cellar on Sixth Street, nearly opposite Carpenter. In 1792 a half-dime was prepared, with the female head wearing ear-rings, and the hair brushed back in the fashion of the time. It is said that the features of the face resemble those of Mrs. Washington. On the other side an eagle shaped something like a hawk was represented flying beneath the words "half disme" above a star. On the face was the legend "Lib. par. of Science and Industry" (Liberty parent of Science and Industry), and on the reverse "Uni. States of America." These pieces were struck at Harper's cellar, Sixth and Cherry Streets, from a deposit of one hundred dollars' worth of silver bullion made by Washington himself. The pieces were distributed by him to particular friends in the United States and Europe, and were never intended to be currency. The act of 1792 put an end to the idea of placing the head of Washington upon the national coin, and it is represented that he discouraged such devices, and selected the female head of Liberty instead.

Under the act of 1792, the first thing necessary to put the Mint in working order was the appointment of the officers who should have charge of the establishment. Washington selected for director David Rittenhouse, the astronomer, on the 1st of July, 1792. Henry Voight, watch-maker, assistant of John Fitch in the manufacture of machinery of the first steam-boat, was made chief coiner, and Tristram Dalton treasurer. In the succeeding year Albion Cox was appointed chief assayer, and Robert Scot engraver. The first matter of importance was to obtain the proper

buildings for the accommodation of the machinery and the officers of the establishment. For this purpose a lot of ground on the east side of Seventh Street, north of Farmer's Alley [afterward Sugar Alley, afterward Farmer's-Street, and now Filbert Street], was purchased. There was an old still-house and other buildings upon it. On the 19th of July six men were employed in removing the buildings. On the 31st of July the foundation-stone was laid by David Rittenhouse, and work was commenced at once. The foundation was ready for the superstructure on the 25th of August. The frame-work was raised in the afternoon of that day. Preparations were made in the "shop" for setting up bellows, etc., on the 7th of September. Six pounds of old copper were bought for the Mint, at one shilling threepence per pound, three days afterward, being the first metal for coinage. Three coining-presses, imported from England, arrived September 25th, and were put in operation about the 1st of October. Washington, in his message to Congress, Nov. 6, 1792, said, "There has also been a small beginning in the coinage of half-dimes, the want of small coins in circulation calling the first attention to them." There were coined in 1792 the dime and half-dime and the cent. The silver dollar and half-dollar were coined in 1794, and gold eagles and half-eagles in 1795. The Mint building, still standing on the east side of Seventh Street, and finished in 1792, was the first piece of property owned by the United States of America. It was very plain, of brick, three stories in height, with a central doorway leading to a hall, which ran through to back buildings. Space on each side of the hall was used for offices. In the rear, in old wooden buildings, was the coining-room and melting apartment. There was access to these buildings by a gateway upon Farmer's Alley, which opened to a passage running between the front and back buildings. Up to 1816 the work of coinage at the Mint was done by hand- or horse-power. In the latter year the use of steam was introduced for operating the presses. During the yellow fever years, 1797-99 and 1802-3, the work of the Mint was suspended.

Humble as it really was, this establishment was conducted with great care, under the management of eminent men, for many years. The increase in the size of the country, the growth of the population and wealth, rendered it necessary that better quarters should be obtained. The Secretary of the Treasury and the President considered this matter.

On the 2d of March, 1829, a resolution was passed by Congress making a liberal provision for the erection of a suitable building for the purposes of a mint. A lot of ground was purchased at the northwest corner of Chestnut and Juniper Streets, extending northward to Olive Street, one hundred and fifty feet front by two hundred and four feet deep. The architect was William Strickland. He furnished the design for a building of the Ionic order, taken from the celebrated Grecian temple on the Ilyssus, near Athens, having

porticoes, sixty feet front, with six pillars of the Ionic order upon the north and south fronts. The buildings consist of a basement, principal and attic stories. The front is one hundred and twenty-three feet, and the building carried of that width from street to street one hundred and ninety-three feet, including therein two porticoes, each of twenty-seven feet in depth, making the building space one hundred and twenty-three feet wide by one hundred and thirty-nine feet deep, leaving small open spaces on the east and west sides. The corner-stone was laid July 4, 1829, by Samuel Moore, then director of the Mint, but the edifice was not finished and occupied until May, 1833. The form of the building was a quadrangle, with an open court in the centre, fifty-five by eighty-four feet in space. It was overlooked from piazzas in each story connected with all parts of the

UNITED STATES MINT.

building, and to give additional light to the various departments. The officers' rooms, vaults, etc., were on the Chestnut Street front, and part of the western flank was arched in a complete fire-proof manner. The entrance was from the south portico into a circular vestibule, communicating immediately with the apartments of the director and treasurer, and arched passages with those of the chief coiner, melter, and refiner, and with the rooms for receiving bullion and delivering coins. The east flank and north section of the edifice contained the rooms appropriated to the operations of the chief coiner. There were two rooms for laminating ingots of fifty-five feet by forty, opening to the north portico. The propelling steam-power was placed in the basement story. A range of apartments extending one hundred and thirty feet by thirty-two, was appropriated to the more immediate operations of coinage and the machinery connected therewith. The principal coinage-room, thirty-seven feet by thirty-two, was sufficiently capacious to contain ten coining-presses. The west flank was occupied by the melter and refiner, and accommodated in a range of apartments extending ninety-five feet by thirty-two. The principal melting-room was an apartment of thirty-seven feet by thirty-two, and the process of

gold and silver parting, for which a contracted space would be peculiarly unfit, was provided for in an apartment of fifty-three feet by thirty-two. The marble staircase in each wing of the southern front communicated with the attic story, in which, on the west, were the apartments of the assayers and engravers, the former upon the west and the latter upon the east.

Upon the south front, in the second story, is placed the cabinet, which contains not only specimens of all the coins struck by the Mint, but many curious and rare foreign pieces. Among them is the "widow's mite," the smallest in value of all ancient coins which are mentioned in the New Testament. There are coins of the Greek Republic in large variety; coins of Ægina, claimed to have been struck seven hundred years before Christ; coins of Athens and of the

Greek colony of Massilia, settled about six hundred years before Christ, upon the coast of Gaul, on the spot now known as Marseilles, in France; coins of the Greek monarchies, dating back to five hundred and fifty years before Christ, including several of Alexander the Great, of Macedon; coins of Darius, of Persia; Egyptian pieces; Syrian and Hebrew coins; Roman coins, over one thousand in number, of the earlier periods; Imperial coins, from Julius Cæsar down to the time of the Eastern Empire, covering eight centuries; Oriental coins, from Burmah, Siam, and China; African ring money; Japanese, and other pieces of money of Eastern nations. Modern Europe is represented by French coins, covering

one thousand years; German, Swiss, Danish, Norwegian, Swedish, and Russian coins in great variety; and English coins from an early period, dating from the reign of the Saxon kings, and coming down from William the Conqueror to Queen Victoria. Portuguese and Spanish coins are numerous; Mexican, Brazilian, and South American coins in great variety; coins of the Sandwich Islands, from the time when they began to be civilized; the American colonial coins of Massachusetts and the various provinces; the Summer Islands or Bermudas pieces; and coins of English, Spanish, and Portuguese colonies; the various coins struck for use in the United States after the Revolution, including the rare New York doubloon of 1787, value sixteen dollars; the Washington cent, so called, in variety, and various tokens; also a full collection of medals struck by order of Congress and for private purposes to commemorate great events, as well as foreign medals of rarity and historical value. When the Mint was finished the roof was covered with copper. The intention was to furnish commodious quarters, but the growth of the United States has been so rapid, and the necessities of the Mint so great, that every available inch of space has been taken up. The court-yard has been filled with buildings, and from

them, out of necessity, ascends a tall brick chimney, towering far above the roofs, and being in strange contrast with the classic character of the marble building which surrounds this structure on all sides.

The interests of the country—such was the argument—required in the course of years that branch Mints should be established in various parts of the United States. Really the only necessity was for the placing of national establishments and buildings in the sections favored, and the distribution of offices and salaries among their residents. Under the greed for office, frequent assaults have been made upon the Mint at Philadelphia with effort to remove it elsewhere. Failing in the full endeavor, partial satisfaction has been given to local feeling by the establishment of branches. The latter have really been of little necessity or assistance, and have only divided work which the parent Mint could have done entirely. The places at which branch Mints or assay-offices have been set up are as follows :

March 3, 1835.—Branch at the city of New Orleans for the coinage of gold and silver.

March 3, 1835.—Branch at Charlotte, Mecklenburg Co., N. C., for the coinage of gold only.

March 3, 1835.—Branch at Dahlonega, Lumpkin Co., Georgia, for the coinage of gold only.

1852.—Branch Mint at San Francisco, Cal.

1863.—Branch Mint at Carson, Nev.

1884.—Branch Mint at Dallas City, Oregon.

1873.—Branch Mint at Denver, Col.

Feb. 12, 1873.—Assay-office at New York City.

June 16, 1874.—Assay-office at Boise City, Idaho.

Feb. 12, 1873.—Assay-office at Charlotte, N. C., established instead of the branch Mint there.

The discovery of gold in California added very materially to the business of the Mint. The first delivery of gold from that State was described as follows in a letter from the director of the Mint to the Secretary of the Treasury, Dec. 11, 1848 :

“On the 8th instant we received the first deposit of gold from California. It was deposited by Mr. Daniel Carter, who brought it from San Francisco by the Isthmus route. It weighed 1804.59 ounces troy. . . . On the 9th another deposit was sent by the Secretary of War which weighed 228 ounces. . . . The average value per ounce of the bullion before melting is \$18.05½.”

The experience of the Mint authorities in relation to American gold is that the purest deposits are found in the State of Georgia. The largest nugget ever brought to the Mint came from California in 1852, and yielded nearly six thousand dollars in pure gold. Attempts have been made to deposit spurious or manufactured nuggets at the Mint. But as these are only accounted for according to the amount of pure metal found in them, such frauds have not been profitable to the persons concerned. Gold-dust occurs in fine grains, from the size of a pin's head to that of a pea, and in lumps varying in size from a pea to the size of a man's hand. It is occasionally found in a crystalline form. The changes in the methods of Western mining by the erection of melting and refining

establishments in the gold and silver regions of the Pacific States has materially changed the character of the deposits of metals. They do not frequently come now in the native condition as found by the miner, but in the shape of ingots and bars. But they are not pure, and require remelting and separating to obtain the gold and silver.

In 1857 the coining of nickel pieces was commenced, with copper alloy. The three-cent pieces were of 32 grains; the five-cent pieces,  $72\frac{1}{100}$  grains. One-fourth was nickel, and the balance copper. The bronze pieces (one- and two-cent) are of copper, zinc, and tin, about 95 per cent. of copper, and  $2\frac{1}{2}$  per cent. of zinc, and  $2\frac{1}{2}$  per cent. of tin. The one-cent pieces in 1870 weighed 48 grains, and the two-cent pieces 96 grains. The coining-presses are capable of making from 70 to 120 coins per minute, and, if run at the highest capacity, double-eagles to the surprising value of \$34,000 could be struck in one minute. The presses are generally run at the speed of 80 pieces to the minute. These machines are exceedingly delicate in the adjustment. The deviation of a hair's breadth would spoil a coin.

#### DIRECTORS.

1792, April 14.—David Rittenhouse.

1795, July 8.—Henry William De Sausanre.

1795, Oct. 28.—Elias Boudinot.

1806, Jan. 17.—Robert Patterson.

1824, July 15.—Samuel Moore.

1835, May 28.—Robert M. Patterson.

1851, June 30.—George N. Eckert.

1853, April 4.—Thomas M. Pettit.

1853, June 3.—James Ross Snowden.

1861, April 4.—Ex-Governor James Pollock.

1866, Oct. 1.—William Millward (not confirmed).

1867, April 1.—Henry R. Linderman.

1869, May 1.—James Pollock (second term).

By act of Congress, May 12, 1873, the Bureau of the Mint was established at Washington, D. C. The Mint at Philadelphia was to be under the direction of a superintendent.

#### SUPERINTENDENTS.

1873.—James Pollock.

1879, March.—A. Loudon Snowden.

#### TREASURERS OF THE UNITED STATES MINT.

1792, April 14. Tristram Dalton.	1841. Isaac Roach.
1793. Dr. Nicholas Way.	1847. James Ross Snowden.
1797. Dr. Benjamin Rush.	1852. Edward C. Dale.
1813. Dr. James Rush.	1853. Daniel Sturgeon.
—, Ex-Governor William Findlay.	1858. James H. Walton.
1841, April 13. Ex-Governor Joseph Ritner.	—, Archibald McIntyre.
	1866. Chambers McKiñhen.

By act of Congress, April 7, 1868, an assistant treasurer of the United States was established at Philadelphia. The said treasurer became thereby in effect the treasurer of the Mint, and the office of treasurer of the mint was virtually abolished.

#### ASSISTANT TREASURERS OF THE UNITED STATES.

1868. Chambers McKiñhen. | 1869. George Eyster.

#### CHIEF COINERS OF THE UNITED STATES MINT.

1792, April. Henry Voight.	1861. Louis R. Broomal.
1814. Adam Eckfeldt.	1863. John G. Butler.
1839. Franklin Peale.	1866. A. Loudon Snowden.
1855. George K. Childs.	1877. Oliver C. Boeshyshell.

## CHIEF ASSAYERS, UNITED STATES MINT.

1793. Albion Cox.	1872. William E. Du Bois.
— Joseph Richardson.	1881, December. Jacob B. Eckfeldt.
— Jacob R. Eckfeldt.	

## CHIEF ENGRAVERS, UNITED STATES MINT.

1793. Robert Scot.	1845, Jan. 9. James B. Longacre.
1824. William Kneass.	1868. William Barber.
1840. Christian F. Gobrecht.	1880. Charles E. Barber.

## REFINERS AND MELTERS, UNITED STATES MINT.

*Office established by act of Congress, March 3, 1795.*

1795. Joseph Cloud.	1846. Richard J. McCollough.
1838. Franklin Peale.	1850. James C. Booth.
1839. Dr. J. R. McClintock.	

Archibald Loudon Snowden, the present superintendent of the Mint, was born in Cumberland County, Pa., and descends from one of the oldest families in Pennsylvania. His great ancestor in Philadelphia, William Fairfax Snowden, came from Virginia, and was the owner of large tracts of land in what was subsequently known as the "Old City Proper," as early as 1669. His son, John Snowden, was born in Philadelphia, August, 1685, and was for many years one of the most prominent merchants of the city, as were also his son and grandson. The grandfather of Col. Snowden, the Rev. Nathaniel Randolph Snowden, was born in Philadelphia in 1770, and his father, Dr. Isaac Wayne Snowden, in 1794. Dr. Snowden graduated at an early age in medicine, and entered the military service under Gen. Jackson, as surgeon. He was with him at the battle of New Orleans and in the Seminole war. At the close of the Florida campaign—in which he was severely wounded—Dr. Snowden resigned from the army, and settled in the rich valley of the Cumberland, nine miles below Carlisle, Pa., where he practiced his profession with great success until his death, in 1850. The mother of Dr. Snowden was a daughter of Dr. Lemuel Gustine, and was the last survivor of the massacre of Wyoming. Her father subsequently removed from the Wyoming Valley to Carlisle, Pa., where he practiced medicine for many years.

Shortly after Dr. Snowden's removal to Cumberland County, he married the daughter of Archibald Loudon, Esq., a large land-owner in that section of the State, and from this union the subject of our sketch was born.

At a very early age Col. Snowden was sent to an academy, and subsequently entered Jefferson (now Washington and Jefferson) College, in Washington, Pa. Here he received a thorough education, and was particularly distinguished during his collegiate course as a brilliant and effective orator. He was twice selected by the literary society of which he was a member as class orator. On the completion of his collegiate course he studied law, but on May 7, 1857, before being admitted to the bar, accepted the position of register tendered him by his uncle, the late

Hon. James Ross Snowden, then director of the United States Mint. While discharging the duties of register he familiarized himself with all subjects relating to coinage.

In 1866, a vacancy having occurred in the office of chief coiner of the Mint, he was appointed by the President, and unanimously confirmed by the Senate. He entered upon the duties of this office Oct. 1, 1866.

As chief coiner of the Mint, he was enabled to put into practical use the valuable information which he had been diligently acquiring for many years, and also had an opportunity for the exercise of his remarkable power of thorough organization, for which he is so justly distinguished. The coining department soon felt the impulse of his active and earnest spirit, and the most gratifying results followed. While thus prosecuting with great ardor and enthusiasm the delicate and important work intrusted to his care, he was suddenly and unexpectedly called upon to lay aside his agreeable and congenial duties to accept, at the request of President Grant, the postmastership of Philadelphia, to which he had been nominated, and was unanimously confirmed by the Senate.

He assumed the duties of the office Jan. 1, 1877, with much reluctance, but soon manifested as postmaster the same capacity for thorough discipline and organization which had distinguished him in the Mint. In his administration of the postal service of the city he gained credit for himself and rendered a most acceptable service to the public. Col. Snowden's recognized administrative ability, integrity of character, and thorough knowledge on all matters relating to coinage being fully understood and appreciated in the Treasury Department at Washington, as well as by the public at large, general satisfaction was manifested when President Hayes, in December, 1878, voluntarily tendered him the position of director of all the Mints of the United States, made vacant by the expiration of the commission of Dr. Linderman. After the death of Dr. Linderman, the President again sent for him, and urged his acceptance of the place, which he was believed to have declined previous to Dr. Linderman's death from motives of delicacy, having long been the friend of the late director. This tempting and very complimentary offer he again declined, giving as his reason that the acceptance would necessitate his removal from Philadelphia to Washington.

In the following February the President again made him a voluntary tender of office. This time it was the superintendency of the Philadelphia Mint; and as its acceptance restored him to a service agreeable in every particular, and permitted him to remain among his friends in Philadelphia, he promptly accepted, was again unanimously confirmed by the Senate, and assumed control of the Mint on the 1st of March, 1879.

On the outbreak of the Rebellion, Col. Snowden promptly offered his services, and, under authority from the Governor, assisted in enlisting and organizing a regiment, which he offered to the State. Declining the

*A. Loudon Gordon*

colonelcy in favor of Col. Gabriel de Korpornay, who had had much experience and long service abroad, he was elected and commissioned lieutenant-colonel. The most solemn promises to muster the regiment into the service were overlooked or disregarded, until, from the long delay and expense of maintaining the command intact, four of the companies tendered their services to New York, and were incorporated into the Excelsior Brigade, commanded by Gen. Sickles. The other six companies were ultimately sent into Camp Washington, at Easton, Pa., but by an ingenious system of gerrymandering were so divided among the other companies from different parts of the State that, although voting for their old field-officers, their votes in each of the regiments to which they were assigned did not constitute a majority. Thus, after months of labor and expense in enlisting, subsisting, and clothing the men, the field-officers were deprived of the places to which they were justly entitled.

On his return from Camp Washington he was invited, and consented, to resume his old place as register at the Mint.

For fifteen years he was an active member of the First City Troop, and participated with it in the services it rendered during the late war, and ultimately became its captain.

For many years he has taken an intelligent and active interest in railroad and insurance matters. In January, 1873, he was elected vice-president of the Fire Association, one of the oldest and largest fire insurance companies in the United States, and in 1878 was elected president. In October, 1880, he was elected president of the United Fire Underwriters of America, an organization embracing the officers of more than one hundred and fifty of the leading American and foreign companies doing business in the United States, representing a capital and assets of over one hundred and eighteen million dollars.

In the midst of the large demands made upon him by business and social interests, he finds time to cultivate his fine literary taste, and within the past few years has delivered several notable addresses on scientific and other subjects. As a public speaker he is brilliant, entertaining, and instructive, and is always welcomed as one who can be relied upon, with or without notice, to meet the highest expectation. In the discharge of the important trusts committed to him he has at all times manifested the highest intelligence, united with energy and thorough integrity. In his public and private life he commands the confidence of the government he has long and faithfully served, and the respect and esteem of the public at large.

## CHAPTER XLIV.

## COURT-HOUSES AND REFORMATORY INSTITUTIONS.

Prisons—House of Correction—House of Refuge, etc.

**Court-Houses.**—In 1706 the inconvenience of the Assembly having no proper place for its sessions led to an address being presented to the Governor, asking permission that the House should sit in Chester or Bucks Counties "until the county of Philadelphia shall have a State-House or other convenient place for the Assembly to sit in." This action seems to have stimulated the justices of the county to undertake the building of a court-house. At the same time they proposed the building of two county bridges, and levied a tax of one penny on the pound. The Common Council of the city objected strongly to the tax being laid for the building of the bridges. The members were willing to pay their share of a court-house for the city and county, but they were uncertain where the court-house was to be built, and this was a matter of great importance. The municipality therefore asked that a law should be passed for the erection of a court-house, and that the collection of the taxes should be stopped. In a conference before the Governor and Council in reference to this dispute, in April, 1708, Justices Growden and Pidgeon, of the county, said, "Here, in the capital town of the government, the magistrates are obliged to hold courts in an ale-house." Finally the dispute was compromised by a stipulation that if the county would build its own bridges, the city would build the court-house, and it was agreed that the building should be as free "for all the services of the county magistrates, for their courts, etc., as those of the city." This structure is known to have been finished in 1710, and is spoken of in the minutes of Common Council of November 16th of that year, in which persons who keep their stalls "at the east end of the court-house are ordered to remove themselves to the other shambles." The latter stalls were authorized to be built by resolution of May 22, 1710, and they were constructed immediately west of and adjoining the court-house. The building which was thus authorized was of two stories, and the first story had an arched entrance on Second Street, beneath the outside stairway. There was an arched entrance in the centre of the north and south sides of the building, and on each side of this doorway were arched windows, as appears in an engraving published in 1764. After the lower story ceased to be used as a watch-house, the windows on the north and south sides were taken out, and the opening continued down to the pavement, so that it might seem, in later times, to persons not knowing of the change, that the building on those sides was sustained on three brick arches.

The court-room was in the second story, and was approached by steps on the outside of the building, commencing in Market Street, on the north and south

sides, extending eastward until the east front of the building was reached, when they turned and ascended to a platform on a level with the floorway of the second story. A portico, supported by plain pillars, rose from the balustrade of the platform to a pediment which jutted out from the wall above the doorway. The style of this entrance was probably copied from the conventional doorway of the ordinary Quaker meeting-house. On the second story front, toward Second Street, a window was placed on each side of the door, and two windows on the north and south sides gave plenty of light to the court-room. Above this story rose a steep-pitched roof inclosing an attic, in which there were two plain windows looking east and west and three dormer-windows with a northern and southern aspect. In a little cupola, rising regularly from the middle of the roof, the original town bell was suspended. It had previously hung in a crotch on or near the site of this court-house. From the balcony the orators addressed the people on public occasions, and there the official proclamations were also read. On it newly-appointed Governors stood to deliver their inaugural addresses. Rev. George Whitefield preached from it during one of his visits to America, and his voice was so loud and clear that Franklin, who made a practical test by walking away from Second Street, said that he could hear it distinctly until he very nearly reached Front Street.

Before the State-House was built the elections for the city and county of Philadelphia were held at the court-house, and the voters ascended the steps on one side, passed up to the central door, where they gave in their ballots, and went down on the other side. Sometimes, when political excitement was very high, the stairways were held by rough fellows, who attempted to prevent any citizens from ascending the stairs except such as belonged to their own party. This was particularly the case during "the bloody election" of 1742. At some time before the Revolution the outside stairway was removed. All that remained of that convenience was the platform at the second story, which was railed and took the shape of a balcony, the porch and pediment of the main door being removed. About the same time it is probable that a change was made in the arches beneath. The cost of this building, John F. Watson says, was six hundred and sixteen pounds. The lower story seems to have been divided into four spans or corners, which were rented at good rates. The millers occupied a portion of the space, and in 1714 were ordered to "Expose their meal under the court-house by Opening their Sacks' Mouths that the Inhabitants may see what they Buy." In 1718 it was ordered that no public sale of goods be made under the court-house unless consideration be paid to the corporation for the same. Then, or about then, the floor was raised, the pavement bricked, and posts put up to keep out carts and horses. The vendue-master had one portion of the space within the arches, and John Leech, in 1718, for the

privilege paid a rent of ten pounds per annum. The space was rather limited, and some of the tenants complained that the premises were not "tenantable." John Leech, vendue-master in 1729, represented that he had not quiet possession, being often interrupted by the clerks of the market. A compromise was made with him.

Besides its use as a court-house, being occupied by the City or Mayor's Court, County Court, or Common Pleas, Orphans' Court, and Quarter Sessions, this building was also tenanted by the Supreme Court twice a year. It is believed to have been the place of meeting of the Common Council of the city. When the State-House was finished the Supreme Court went to that building, occupying the west room, first floor, where it is supposed the County Courts also were held. Whether the City Court was held there is not now known. That tribunal might have found it more comfortable to remain at the old court-house, which it was privileged to use under the agreement of 1709.

After the County Court-house was built at Sixth and Chestnut Streets, the building at Second and Market remained a monument of the past. As a curious relic of the early times it was valued, but business cared nothing for it, and so, in April, 1837, upon the demand of trade that it should have more facilities than it possessed upon Market Street, the old court-house was torn down. Not, however, much to the advantage of the highway. The structure and the old stalls were replaced by a new market-house, the principal feature of which was that instead of supporting the roof upon stout brick piers, as in the provincial building, light and graceful pillars of iron were substituted. There was little space gained on the sides. If the market-houses had been entirely displaced there might have been an argument against allowing the old court-house to remain. The only gain by demolishing it was that one obstruction was replaced by another not quite so large, but, unfortunately, less interesting.

**County Court-House.**—The ground upon the State-House Square at the southeast corner of Sixth and Chestnut Streets, dedicated for the use of a county court-house by the Assembly in 1763, was fifty feet on Chestnut by seventy-three feet on Sixth Street, and afterward was enlarged on the latter by fifteen feet, making the entire depth eighty-eight feet. In the spring of 1787, the county commissioners commenced the building of the new court-house. Convicts, who about that time were put to hard labor by virtue of an act of Assembly, were recommended by Chief Justice McKean as proper to be employed in paving streets and other public work. A gang of these convicts dug the cellars for the new court-house building. The earth taken from the excavations was carried down Sixth Street, below Walnut, where it was deposited upon the street, in the neighborhood of the run which passed through the square and beneath the Walnut Street prison toward Fifth Street

and Dock Creek, about the intersection of Hudson's Alley and Harmony Court. The construction of the new court-house was authorized on March 18, 1787, by the Supreme Executive Council, after the inspection of the plans and approval of that which was afterward carried out by the county commissioners. This building was finished in March, 1789, and cost sixteen thousand dollars. The fitting up of the interior may have taken up the greater portion of that year. It is not known whether any court had occupied it before it was placed at the disposition of Congress. The Assembly of Pennsylvania on March 4, 1789, tendered for the accommodation of Congress the use of any or all the public buildings in Philadelphia, the property of the State, "and of the building lately erected on the State-House Square belonging to the City and County of Philadelphia, in case Congress should at any time incline to make choice of that city for the temporary residence of the Federal government."

It was not until more than a year afterward, on the 2d of July, 1790, that the United States Senate passed the bill fixing the temporary seat of Congress at Philadelphia for ten years, the next session to commence on the 1st of December, 1790, in Philadelphia. The bill was passed finally, and signed by the President on the 16th of July. It will be observed that the Assembly tendered to Congress the use of a building which was not the property of the State. Probably the commissioners of the county of Philadelphia were understood in some way to have authorized the offer. On the 6th of December, the day when Congress met, the commissioners confirmed the use of the court-house, which had already been offered, by communication sent to Congress. This courtesy was acknowledged by Vice-President John Adams, on the 8th of December. The two houses of Congress occupied what might be called the southern portion of the building. There was no archway and opening upon Sixth Street, as there is now (1884), and entrance was obtained by the centre doorway on Chestnut Street. The entry ran southward to the door of the chamber of the House of Representatives, which was just where the central doorway to the room sometimes occupied by the Court of Quarter Sessions is now. The stairway to the second story led from a line parallel north and south with the east frame-work of the doorway to the upper story, reaching a landing about half distance from the second story, with a turn in which the steps were reversed, and ascended to the westward. Whether there was a door on the first floor beneath the stairway leading into the passage by the gateway from Chestnut Street is uncertain. The front entry in the centre divided the spaces on each side, and they were again divided into rooms for committees or offices. Passing the doorways to these rooms the members of the House of Representatives are supposed to have entered their chamber by the first door in the State-House yard, on the east side of

the edifice. The space assigned to spectators of the proceedings was on the east side, and they were admitted by a door on that side, which is still visible, but has been closed up to the height of the lower sill of a window. When inside, they found themselves immediately in front of the Speaker, who was seated on the west side, near the windows on Sixth Street.

An interesting writer, who published his reminiscences of this period many years afterward, thus describes the appearance of the Representative chamber: "The House of Representatives in session occupied the ground floor. There was a platform elevated, three steps plainly carpeted, and covering nearly the whole of the area, with a limited promenade for the members and privileged persons, and four narrow desks between the Sixth Street windows for the stenographers,—Lloyd, Gales, Callender, and Duane. The Speaker's chair, without canopy, was of plain leather with brass nails, facing the east at or near the centre of the western wall. . . . Speaker Muhlenberg was succeeded by Jonathan Dayton, of New Jersey, a tall, raw-boned figure of a gentleman, with terrific aspect, and, when excited, a voice of thunder. His slender, bony figure filled only the centre of the chair, rising on the arms of it with his hands and not his elbows. From the silence which prevailed, of course, on coming to order, after prayers by Bishop White, an occasional whisper increasing to a buzz, after the manner of boys in school, in the seats in the lobby and around the fires, swelled at last to loud conversation inimical to debate. Very frequently at this stage of confusion among the babbling politicians, Mr. Speaker Dayton would start suddenly upon his feet, look fiercely around the hall, and utter the words 'order! order without the har!' in such an appalling tone of voice, that as though a cannon had been fired under the windows upon the street, the deepest silence prevailed, but for a very short time." A colossal bust of Minerva, now in possession of the Philadelphia Library Company, is said to have been placed above and behind the Speaker's chair. It would have required a stout and strong bracket to hold it up.

The Senate of the United States assembled in the second story south room. The bay-window space at the south was occupied by the Vice-President of the United States, or the president *pro tem.* of the Senate. The writer, already quoted, speaking of the appearance of this chamber, said, "In a very plain chair, without canopy, and a small mahogany table before him, festooned at the sides and front with green silk, Mr. Adams, the vice-president, presided as president of the Senate, facing the north. . . . Among the thirty senators of that day there was observed constantly during debate the most beautiful order, gravity, and personal dignity of manners. They all appeared every morning full powdered and dressed, as age or fancy might suggest, in the richest material.

"The very atmosphere of the place seemed to inspire wisdom, mildness, and condescension. Should

any of them so far forget for a moment as to be the cause of a protracted whisper while another was addressing the Vice-President, three gentle taps with his silver pencil-case upon the table by Mr. Adams immediately restored everything to repose and the most respectful attention, presenting in their courtesy a most striking contrast to the independent loquacity of the Representatives down-stairs, some few of whom persisted in wearing, while in their seats, and during the debate, their ample cocked-hats, placed fore and aft upon their heads, with here and there a leg thrown across the little desks before them, and facing Mr. Jupiter Dayton, as he was sometimes called by writers in the *Aurora* of Benjamin Franklin Bache."<sup>1</sup>

<sup>1</sup> During the period that Congress occupied the court-house building the following were the members of the United States Senate:

*New Hampshire.*—1790 to March 3, 1793, Paine Wingate; March 4, 1793, to June 17, 1801, Samuel Livermore.

March 4, 1789, to March 3, 1801, John Langdon.

*Massachusetts.*—March 4, 1789, to March 3, 1791, Tristram Dalton; March 4, 1791, to July 7, 1796, George Cabot; July 7, 1796, to Nov. 14, 1800, Benjamin Goodhue.

March 4, 1789, to June 11, 1796, Caleb Strong; June 11, 1796, to March 3, 1799, Theodore Sedgwick; March 4, 1799, Samuel Dexter.

*Rhode Island.*—June 7, 1790, to March 3, 1803, Theodore Foster.

June 7, 1790, to March 3, 1793, Joseph Stanton; March 4, 1793, to October, 1797, William Bradford; October, 1797, to May, 1801, Ray Green.

*Connecticut.*—March 4, 1789, to May, 1796, Oliver Ellsworth; May, 1796, to March 3, 1803, James Hillhouse.

March 4, 1789, to June 13, 1791, William Samuel Johnson; June 13, 1791, to March 3, 1793, Roger Sherman; March 4, 1793, to March 3, 1795, Stephen M. Mitchell; March 4, 1795, to October, 1795, Jonathan Trumbull; October, 1795, to March 3, 1801, Uriah Tracy.

*Vermont.*—October, 1791, to Oct. 13, 1796, Moses Robinson; October, 1796, to Oct. 17, 1797, Isaac Tichenor; Oct. 17, 1797, to March 3, 1803, Nathaniel Chipman.

Oct. 17, 1791, to March 3, 1795, Stephen B. Bradley; March 4, 1795, to March 3, 1801, Elijah Paine.

*New York.*—July 15, 1789, to March 3, 1791, Philip Schuyler; March 4, 1791, to March 3, 1797, Aaron Burr; Jan. 11, 1798, to May 5, 1798, John Sloss Hobart; May 5, 1798, to Aug. 17, 1798, William North; Aug. 17, 1798, to April 3, 1800, James Watson.

July 16, 1798, to Nov. 9, 1796, Rufus King; Nov. 9, 1796, to Nov. 6, 1800, John Laurance.

*New Jersey.*—March 4, 1789, to March 3, 1791, Jonathan Elmer; March 4, 1791, to Dec. 5, 1798, John Rutherford; Dec. 5, 1798, to Feb. 14, 1799, Franklin Davenport; Feb. 14, 1799, to Feb. 26, 1801, James Schureman.

March 4, 1789, to Nov. 23, 1790, William Paterson; Nov. 23, 1793, to March 3, 1793, Philemon Dickerson; March 4, 1793, to Nov. 12, 1796, Frederick Frellinghuysen; Nov. 12, 1796, to March 3, 1799, Richard Stockton; March 4, 1799, to March 3, 1805, Jonathan Dayton.

*Pennsylvania.*—March 4, 1789, to March 3, 1791, William Maclay; Feb. 28, 1793, to Feb. 28, 1794, Albert Gallatin; April 1, 1794, to March 3, 1803, James Ross.

March 4, 1789, to March 3, 1795, Robert Morris; March 4, 1795, to March 3, 1801, William Bingham.

*Delaware.*—March 4, 1789, to March 19, 1794, George Read; March 19, 1794, to Feb. 7, 1795, Kinsey Johns; Feb. 7, 1795, to Feb. 28, 1801, Henry Latimer.

March 4, 1789, to March 3, 1793, Richard Bassett; March 4, 1793, to Jan. 19, 1798, John Vining; Jan. 19, 1798, to Jan. 17, 1799, Joshua Clayton.

*Maryland.*—Jan. 17, 1799, to Nov. 13, 1804, William Hill Wells; March 4, 1789, to Jan. 10, 1793, Charles Carroll of Carrollton; Jan. 10, 1793, to Nov. 30, 1796, Richard Potts; Nov. 30, 1796, to March 3, 1803, John Eager Howard.

March 4, 1789, to Dec. 11, 1797, John Henry; Dec. 11, 1797, to Dec. 12, 1800, James Lloyd.

*Virginia.*—March 4, 1789, to March 31, 1790, William Grayson; March 31, 1790, to Nov. 9, 1790, John Walker; Nov. 9, 1790, to Nov. 18, 1794, James Monroe; Nov. 18, 1794, to June 4, 1813, Stevens Thomson Mason.

The first session of Congress in the court-house building commenced March 4, 1790; the last session ended May 14, 1800.

After Congress left the city the county court-house building was taken possession of by the tribunals for the accommodation of which the edifice had been constructed. The Courts of Common Pleas, Quarter Sessions, and the Orphans' Court occupied the south room, first floor, which had been the chamber of the Federal House of Representatives. The bench was placed within the bay recess on an elevated platform. The clerks and district attorney, when present on business, sat within a railed inclosure, the floor of which was lower than the bench, and probably ten feet in width. In front of this a U-shaped table, covered with baize or cloth, joined the railings of the privileged inclosure, extending some twenty or thirty feet. Within this division was the place for the members of the bar. The jurors were seated on a railed platform east or west of the table, as occasion

March 4, 1789, to Oct. 18, 1792, Richard Henry Lee; Oct. 18, 1792, to Nov. 18, 1794, John Taylor; Nov. 18, 1794, to Dec. 5, 1799, Henry Tazewell; Dec. 5, 1799, to August, 1804, Wilson Cary Nicholas.

*North Carolina.*—Nov. 27, 1789, to March 3, 1793, Samuel Johnston; March 4, 1793, to March 3, 1799, Alexander Martin; March 4, 1799, to March 3, 1805, Jesse Franklin.

Nov. 27, 1789, to March 3, 1795, Benjamin Hawkins; March 4, 1795, to March 3, 1801, Timothy Bloodworth.

*South Carolina.*—March 4, 1789, to March 3, 1795, Ralph Izard; March 4, 1795, to March 8, 1801, Jacob Read.

*Georgia.*—March 4, 1789, to March 3, 1793, William Few; March 4, 1793, to Nov. 16, 1795, James Jackson; Nov. 16, 1795, to Feb. 20, 1796, George Walton; Feb. 20, 1796, to March 3, 1799, Josiah Tatnall; March 4, 1799, to Aug. 27, 1807, Abraham Baldwin.

March 4, 1789, to March 3, 1801, James Gunn.

*Kentucky.*—June, 1792, to March 3, 1805, John Brown.

June 18, 1792, to March 3, 1795, John Edwards; March 4, 1796, to March 3, 1807, Humphrey Marshall.

*Tennessee.*—Aug. 2, 1796, to March 3, 1797, William Cocke; Sept. 26, 1797, to Oct. 6, 1798, Andrew Jackson; Oct. 6, 1798, to Dec. 12, 1798, Daniel Smith; Dec. 12, 1798, to March 3, 1803, Joseph Anderson; Aug. 2, 1796, to June 8, 1797, William Blount; Sept. 26, 1797, to Dec. 12, 1798, Joseph Anderson; March 4, 1799, to March 3, 1805, William Cocke.

During the same period the Senate was presided over by Vice-President John Adams, March 4, 1789, to March 3, 1797, and Thomas Jefferson, from March 4, 1797, to March 3, 1801.

*Presidents pro tempore of the Senate:*

John Langdon, March 4, 1789, to April 17, 1792.

Richard Henry Lee, April 18 to May 8, 1792.

John Langdon, Nov. 5, 1792, to May 30, 1794.

Ralph Izard, May 31, 1794, to Feb. 19, 1795.

Henry Tazewell, Feb. 20, 1795, to May 5, 1796.

Samuel Livermore, May 6, 1796, to Feb. 15, 1797.

William Bingham, Feb. 16, 1797, to July 5, 1797.

William Bradford, July 5 to July 10, 1797.

Jacob Read, Nov. 22, 1797, to June 26, 1798.

Theodore Sedgwick, June 27 to July 17, 1798.

John Lawrence, Dec. 6, 1798, to Feb. 28, 1799.

James Rose, March 1 to March 3, 1799.

Samuel Livermore, Dec. 2, 1799, to May 13, 1800.

*Speakers of the House of Representatives.*

Frederick A. Muhlenberg, of Pennsylvania, April 1, 1789, to March 3, 1791.

Jonathan Trumbull, of Connecticut, Oct. 24, 1791, to March 2, 1793.

Frederick A. Muhlenberg, of Pennsylvania, Dec. 2, 1793, to March 3, 1795.

Jonathan Dayton, of New Jersey, Dec. 5, 1795, to March 3, 1799.

Theodore Sedgwick, Dec. 2, 1799, to March 3, 1801.

might serve. The entrances for the bar, juries, and witnesses were at doors on the south side of the building near the east and west corners. Ordinary spectators were admitted from the centre passage-way by the hall, and rising seats on each side accommodated them.

After the Supreme Court of the United States went to Washington, the room occupied by that tribunal, which was at the southern end of the second floor, was handed over to occupancy of the United States District and Circuit Courts. A small gallery above the doorway accommodated fifteen or twenty persons, and was entered by a stairway leading to another gallery in a little room which adjoined the stairway, and which, in later times, was fitted up as a conversation-room, but is now a sort of passage-way eastward to the wing. This arrangement is believed to have been built in 1795. It remained for many years, but was not in use for spectators. It was probably removed during some alterations made about or before 1850. The ceiling over the gallery was decorated with the painting of an eagle during the Federal occupation of the room. This emblem of national sovereignty kept its place long after the State tribunals had taken possession of the chamber, and it was frequently a matter of curiosity among speculating lawyers why a national emblem was there instead of the arms of Pennsylvania. The general belief was that the eagle had been painted while the Senate occupied the room.

About 1818 or 1819 the front passage-way and entry from Chestnut Street on the first floor was closed. The partitions of the office-rooms on each side were torn down and the whole thrown into one chamber. The District Court of the city and county of Philadelphia came from the State-House about 1820 and took possession of the new court-room. The bench was constructed on an elevated platform on the north, or Chestnut Street side. The centre door was closed up, but the fan-light was left in its place. At the same time it is likely that the arched opening was made on Sixth Street, with inside steps ascending to the floor and communicating with the stairways. Entrance to the Supreme Court was by a middle door in the hall, and a smaller one on the eastern side.

The second story front during the occupation of Congress is understood to have had an entry, with offices on each side. These were also torn out and a court-room constructed. It was most pleasantly situated, and in 1824 the Supreme Court of Pennsylvania removed from the State-House and occupied the new apartment. On the 26th of December, 1821, fire broke out in the county court-house, which was occasioned by the bursting of a flue leading through the attic. A portion of the roof was destroyed and some injury was done to the cupola. The Supreme Court was allowed temporary quarters at the City Hall in the Common Council chamber during the session

of 1821-22, and the District Court was probably accommodated at the State-House. A plan in the "picture of Philadelphia," published in 1824, places the District Court in the north room, first story; Common Pleas, south room, first story; Supreme Court, north room, second story; and the United States Circuit Court, south room, second story. Between the last two courts were two small rooms. The law library was on the west (Sixth Street) front, while the controller of public schools was on the east side, adjoining the stairs. About 1825 the United States Court was removed from the second story, south room, and the chamber was granted to the use of the District Court of Philadelphia, the extension of the business of which required larger accommodations. Jury trials were held usually in the lower court-room, which was also on most occasions the place of assemblage of public meetings held, according to notice, "at the county court-house." Jury trials were also held in the second story, south room, but the court in banc preferred the latter on all occasions when not engaged in trials. After some years the increasing necessities of the District Court required that the Supreme Court should be given notice to remove from the second story front room. It was proposed, as means of accommodation, that the east room, first floor, of the State-House, then known as the Hall of Independence, should be used for the purpose, but there was a great outcry against the "desecration," as it was called, and the superior tribunal was sent to the old Masonic Hall on Chestnut Street, between Seventh and Eighth, where it occupied the Grand Chapter-room, on the second story front. Some time afterward the space occupied by offices in the second story of the office wing buildings, on the east of the State-House, was fitted up for the accommodation of the Supreme Court, and was in use until the building of the new City Hall at Broad and Market Streets was so far advanced that accommodations could be had there.

As soon as consolidation was an established fact, in 1854, it was found that enlarged accommodations would be necessary for that highly-important city officer, the receiver of taxes. The front room of the court-house, first story, was believed to be the most proper apartment that could be provided. The receiver was established in it until his office was removed to the new public buildings, when the next tenant was the clerk of the Court of Common Pleas, who also occupied all the offices on the first story of the west wing and the extension across the alley-way leading from Chestnut Street.

**The New Court-House.**—The growing population of the city, the increase in the number of persons charged with offenses, and the constant pressure to compel the trial of criminals under the two-term law, whether the district attorney was prepared or not, required for public use more court-rooms than could be conveniently had in the limited space available at

the State-House. Often it was a necessity that there should be two Courts of Quarter Sessions holding trials at the same time, and it was frequently troublesome to find a public court-room that could be put in use by other than the regular tenants. This led to consideration of the necessity of additional court-house accommodations. On the 30th of December, 1865, an ordinance was passed authorizing the commissioners of city property, under the supervision of the committee of Councils, to advertise for proposals for the erection of a suitable court-house, in accordance with plans relating to the necessity of immediately providing better accommodations for the Court of Quarter Sessions, the cost not to exceed thirty-four thousand five hundred dollars, and the building to be finished within five months from its commencement. It was begun Nov. 2, 1866, and completed early in 1867. The location was on Sixth Street, just south of the old county court-house, and the structure mainly of brick, with a granite facing up to the level of the first floor, where, on the north side of the central hall, is the office of the clerk of the Quarter Sessions and the waiting-rooms for witnesses. On the south side are the ante-room and grand jury-room and the offices of the district attorney. The second floor is taken up with the court-room, and the loft under the roof is very inadequately fitted up as a jury-room, where unfortunate jurors shiver in winter and roast in summer. As regards acoustics, the court-room is a marked failure, and none of the many experiments that have been tested have remedied its defects. The best that can be done is to huddle together closely the judges, the jury, the counsel, and the witnesses.

**Prisons.**—The want of a prison in which offenders against the laws might be confined was one of the questions which earliest engaged the attention of the settlers. They were almost without exception men of deep religious feelings and stern purity of life, but it was inevitable that to a new country there should flock some adventurers who were always ready to throw off moral restraint. As early as February, 1683, the Council ordered one of their members, William Clayton, to build a cage, seven feet long by five feet broad, for the detention of miscreants, and the grand jury made a presentment in which it specified the necessity of establishing a prison. An agreement seems to have been made with Lacy Cock, in 1685, for the building of a log house, on Second Street, intended for a county jail. He complied with his contract, but in September of that year, it being considered that the log house was insufficient for the purpose of a prison, it was agreed by the grand jury that Cock might have the house and the lot upon which it was built and some ground adjoining, if he would release the county from the payment of sixty pounds, the cost of building the structure. Instead of using Cock's house, the high sheriff hired one that belonged to Patrick Robinson, and when he had fur-

nished it with fetters and chains he declared in court that "with his own attendance and that of his deputies he had a sufficient gaol, and if any escapes occurred he would not blame the county for want of a gaol, nor for the insufficiency of the said house."

The location of this prison is believed to have been on the west side of Second Street, north of the corner Market Street lot, at the distance of one hundred and two feet from the High Street. It was situated between Market Street and Christ Church ground. The sheriff of the county was the person to whom the owner of the prison looked for his rent, and he was not always recompensed promptly, as was shown in 1694 by Mary White, the widow of Sheriff John White, whose estate was bound for the rent of the prison. She made application to the Provincial Council for recompense, and it was ordered that the justices of the county should pay the amount due. In 1685 the Court of Quarter Sessions received the report of Samuel Carpenter, Humphrey Murry, and Nathaniel Allen, and others who had made inquiry as to the cost of building a new prison, and made return that an edifice twenty feet long and fourteen feet wide, two stories high, with convenient light doors, casement constructed of stone, and brick floors, with a cock-loft, and having four chimneys, capable of being divided into four rooms inside, could be built for one hundred and forty pounds. That it was constructed shortly afterward is a matter of inference, and it was situated in the middle of High [or Market] Street, between Front and Second.<sup>1</sup>

This primitive jail was standing in 1702, when the grand jury presented "the prison-house and the prison-yard, as it now stands in High Street, as a common nuisance." In the ensuing year the court appointed a commission to ascertain what the cost of a new prison and court-house would be. In 1705 the Common Council ordered that the old cage built by Clayton should be repaired and put in use as a city watch-house, and a new cage was ordered to be built in the market-place in the latter part of the same year. It was to be sixteen feet long, fourteen feet wide, and to be used as a watch-house.

In 1706 a pair of stocks, a whipping-post, and pillory were ordered to be set up in the same place, but they had not been completed two years afterward. In 1707 the grand jury reported that the middle and upper windows of the jail were insufficient, and that body presented the whole jail on a similar complaint in 1716 and 1717. In the latter year a general act was passed "for erecting Houses of Correction and Work-Houses in the respective Counties of this Province." The preamble set forth "that the pro-

<sup>1</sup>In a plat of Letitia Penn's lot drawn in 1698, the prison stands in the middle of High Street, twenty-four feet square. The prison-yard was twenty-four by eighty feet, and was east of the prison. A plat twenty-four by forty-six feet adjoining, is marked "designed for a court-house." The same plan shows that the cage was on the open space at the intersection of Second and High Streets, and the hell under a belfry, supported by posts, a little eastward, but still in the street.

proprietary and first adventurers, in their principal modelment of the government, proposed that for crimes inferior to murder the punishment might be by way of restitution, fine, imprisonment, and such like; where the offender proved not of ability to make such satisfaction, it was intended that he should be kept in prison or house of correction at hard labor. But no effectual care has been yet taken to erect such houses, by reason whereof many evil-doers escape unpunished, and servants who, for their neglect and abuse, could be kept to work in such houses are become incorrigible." This act gave to justices of the peace of the city of Philadelphia, in conjunction with the justices of the county and to justices of other counties of the province, power to cause to be built houses of correction and work-houses, and it was directed that such buildings should be constructed, in Philadelphia, inside of three years, counting from March 25, 1718. From this we may presume that the work was done before the end of 1721. Common Council, in April, 1722, ordered that "the old prison be sold to the highest bidder." This was done, and the amount realized for the materials was seventy-five pounds.

The new prison was at the southeast corner of Third and Market [or High] Streets. It was two stories high, and was made up of two stout buildings, that fronting on High Street being the debtors' prison, and the one south of it the criminals' prison. The attics under the high-pitched roof were also utilized as cells. Between the two buildings was a high wall which inclosed a yard.

In a poem describing High Street, published in the *Bradford Mercury* in 1729, the writer describes the court-house and prison in the following strain :

"An yew-bow distance from the key-huilt strand,  
Our Court-Houee fronts Cesarea's Pine-tree land;  
Through the arch dome and on each side the Street  
Divided runs, remote again to meet;  
Here Eastward stands the tracks to obloquy  
And pretty crimes, stocks, posts, and pillory.<sup>1</sup>

\* \* \* \* \*  
Thence half a furlong west declining pace  
And see the rock-huilt prison's dreadful face."

The inmates of the prison were of different character. Their offenses might be civil or criminal, accordingly as they were defaulters in their debts, or had broken the laws against felonies and misdemeanors. The practice of imprisonment for even the smallest amount of debt was imported from England.

In 1715 an act was passed for better determining debts and demands under forty shillings. It provided for summary arrest by *capias*, summary hearing, judgment without appeal, and execution against the body or goods, thus justifying imprisonment of the debtor.

<sup>1</sup> From this it would seem that the stocks and pillory were east of the court-house and between Front and Second Streets. They were subsequently placed west of the market, which extended from the court-house at Second Street and to very near Third Street, and within sight of the prison.

In 1745 a new act was passed, which declared that "a great number of the law-suits which are commenced in this province are brought against the poorer sort of people for small sums of money, who are unable to pay the expenses arising by the common method of prosecution." The intention of the act was to make the method of recovery against these poor persons less costly, and easier than it had been, but there was no change in the liability of the debtor to imprisonment, even for the smallest sum. Hence a debtor once committed to prison was in a worse condition than a criminal. The latter had a time fixed when his sentence would expire, but the debtor had no hope of release except by payment of the debt. Prisoners for debt were expected to support themselves; and if they were not able to do so, and failed in procuring relief from the charitable, they were liable to starvation. In 1705 the Assembly enacted a law directing that jailors should not oppress their prisoners; that all prisoners should be free as to room, and should have liberty to provide themselves with bedding, food, and other necessaries during their imprisonment, and that the public allowance should be two pence per day and no more. The dimensions of the prison were soon found to be insufficient to hold the crowd of debtors liable to confinement together with the criminals, and measures of relief became necessary. In 1700 there was passed the law relative to arrest and forcing debtors to pay by servitude. In 1705 it was enacted that no person should be kept in prison for debt or fines longer than the second day of the next sessions after his or her commitment, unless the plaintiff should make it appear that the person in prison had some estate, which he would not produce. If there was no estate, the court might order the prisoners to make satisfaction by servitude. The time of the service was to be fixed by the judges. If the debtor was a single person, and under the age of fifty-three years, the term could not exceed seven years; and if a single person, under forty-three years, the term of service could not be more than five years. It was at the option of the plaintiff to require this service or to refuse it. If he chose the latter, the debtor might be discharged in open court.

In 1729 an act was passed for the relief of insolvent debtors, which recited that by experience it was found that the service of the debtor, in accordance with the previous law, had "in no wise answered the end proposed." For remedy it was provided that any person against whom any prosecution had been made, whose debt did not amount to more than one hundred pounds might, upon petition to the court, on exhibition of his property and an assignment for the benefit of his creditors, be discharged from imprisonment, the property to be divided among the creditors. This privilege depended in part upon the willingness of the creditors to allow the discharge, as they might prevent it by agreeing in writing to pay for the support of the prisoner such amount as the court should assess, not

to exceed three shillings weekly on each creditor, payable on the second day of the week. Some sick prisoners languished for want of medicine, and in 1770 one died of starvation. Public indignation made itself manifest, and a committee of the Assembly, visiting the prison about that time, reported that it contained forty inmates, men and women. Many of the men were naked, and their usual covering at night was one blanket to two persons. Even the blankets were of recent introduction into the jail, having been furnished by charitable subscriptions raised by sermons for the benefit of the poor, and by donations. One man had been detained in prison for four years for non-payment of the jail fees, and another three years for want of surety for his good behavior. The Assembly passed an act increasing the allowance for prisoners to threepence per day, payable out of the county stock, and made some new arrangements in regard to confinement. Notwithstanding the assistance supposed to have been secured by this act, the prisoners were still in a wretched condition. In 1772 three persons died at the Market Street prison of starvation, a fact which created great excitement. Contributions were raised. The Rev. Mr. Stringer, of St. Paul's, preached a sermon which yielded thirty pounds, the Society of the Friendly Sons of St. Patrick contributed between twenty and thirty pounds, and other donations were made. The best result was the formation, in the early part of 1776, of "The Society for the Relief of Distressed Prisoners." Procuring wheelbarrows, on the tops of which were painted the words "victuals for prisoners," the members of the society passed from door to door, gathering food for the unfortunates. It continued in existence until the British troops took possession of the city; was revived later, and is now "The Society for Alleviation of the Miseries of Public Prisons."

The laws for the punishment of crime which prevailed in England as to felonies were by the Royal Charter intended to be continued in Pennsylvania. But it was presently agreed that acts of Parliament did not extend to the Plantations in America, unless they were particularly mentioned in the acts. In 1717, it was recited in an act of Assembly that "some persons have been encouraged to transgress certain statutes against capital crimes and other enormities because those statutes have not been hitherto fully extended to this province." To remedy this defect it was enacted that trials for high treason should be according to the order and course of the common law, observing the direction of the statute laws of Great Britain relating to trials and proceedings and judgments in such cases. Trials for petty treason, misprision of treason, murder, manslaughter, and other crimes were to be according to the method directed by the act. Women convicted of concealing the death of their illegitimate children, and persons who advised the killing of such children, were liable to the death

punishment. The English statutes against stabbing, which deprived persons guilty of that offense of the benefit of clergy, was extended to Pennsylvania, and the offense was classed with murder, while those who were present were to be considered as accessories. Punishment of death without benefit of clergy was denounced against persons convicted of burglary in the night-time; also, against persons who burned the dwelling-house, barn, stable, or out-house of another having corn or hay therein. Benefit of clergy was extended to women convicted of felony, but they were liable to be branded and burnt in the hands. Benefit of clergy was denied to such women for a second offense. The commissioners and assessors of the city in 1749 made application to the Assembly for use of the court-house and the labor of the prisoners in the work-house for the benefit of the county, with the intention of hiring out the prisoners. James Whitehead, who was keeper of the jail at that time, petitioned for an extra allowance for the support of lunatics. He had paid nine pounds out of his own pocket to save these sufferers from freezing, but there is nothing to show that he was ever reimbursed. In this same year two highwaymen, under Whitehead's charge, concocted a plot to seize him, obtain his keys, and make their escape. They made a desperate fight, but were overpowered, and were hanged on the common by sentence of the court. This is the first known occasion in Pennsylvania where the place of execution was mentioned in the newspapers.

After the Walnut Street prison was finished, in 1774, the prison property at Third and Market Streets was in condition to be sold; but when the Revolutionary war broke out it became useful as the headquarters of a military guard, and for the incarceration of political prisoners as well as military prisoners. Samuel R. Fisher, who was arrested, in 1779, on the charge of having sent information to the enemy, at New York, was confined in this prison for nearly two years, a consequence of his refusal to give bail to answer in the regular way for his offense. The town-major, Louis Nicola, had the headquarters of his guard there, and afterward the regiment of invalids, under command of Col. Nicola, had quarters and privilege of confinement of prisoners at the same place. These bodies were, after the suspension of the city charter by the events of the Revolution, the only effective organizations for the preservation of the peace which the city possessed.

During the period that this prison was occupied, the gallows were somewhat active. The following executions took place between 1721 and 1775, the persons having first been prisoners and carried to the place of execution according to the sentence of the law:

- 1721.—Edward Hunt, for counterfeiting Spanish silver coin.
- 1721, July 12.—A negro, for house-breaking.
- 1729, Oct.—James Smith, burglary.
- 1730.—Thomas Soames *alias* Wathell, burglary.
- 1736, April.—John Watson and Michael McDermitt, burglary.
- 1736, August.—James, a negro, rape.

- 1737, April.—Henry Wildman and Catherine Conner, burglary.  
 1739, April.—A negro, for murder.  
 1741, April.—Lawrence Kalahan, murder of William Bentine.  
 1741, November.—John Bullach, murder of his wife.  
 1744, October.—Mushamelin, an Indian, for the murder of Armstrong, a trader, and two others.  
 1747.—Patrick Burns and Michael Burns, burglary.  
 1748.—Alexander Ulrie, murder.  
 1748.—Arthur Maginnis and Thomas White, sodomy.  
 1749, Oct. 26.—James Johnson and Thomas Fielding, highway robbery.  
 1750, August.—Hane Ulick Seiler, murder of Mrs. Shultz.  
 1751, January.—John Morris, Francis McCoy, and Elizabeth Robins, burglary.  
 1752, May.—John Webster, burglary.  
 1752, Nov. 29.—Daniel Hurley, murder of James Clark.  
 1723, Oct. 25.—Thomas Ruth, murder of Charles Quig.  
 1759.—James Jones and James Powell, burglary.  
 1759.—Durel, soldier of the Royal American regiment, murder.  
 1759.—John Jones, burglary.  
 1760, October.—John Brulaman, murder of Robert Scull.  
 1762, November.—Caepar and Joe, negroes, burglary.  
 1764, May 5.—William Frederick Handinreid, felony and burglary.  
 1764, May.—John Williams *alias* John Heins, felony and burglary.  
 1765.—Henry Halbert, murder of Jacob Woolman.  
 1766, Oct. 18.—Dennis Scanlan, highway robbery.  
 1766, Oct. 18.—Abraham Ryall, burglary.  
 1767, Oct. 24.—David Smith, burglary.  
 1768, August.—Robinson, soldier of the Thirty-fourth Regiment, shot for desertion.  
 1769, June 12.———, soldier of the Thirty-fourth Regiment, shot for desertion.  
 1770, April 24.—David and Thomas Jones, burglary.  
 1770, April 24.—Herman Rosikrans, counterfeiting provincial bills of credit.  
 1771, May 22.—John Thompson, burglary.  
 1771, July 4.—John Thomas, burglary.  
 1774, April 30.—Thomas Stephens, Joseph Price, and Richard Burch, burglary.  
 1774, April 30.—James Swain and mulatto, Elizabeth, murder.  
 1774, April 30.—Burnard Reptin, counterfeiting provincial bills of credit.  
 1775.—Andrew Stewart, counterfeiting provincial bills of credit.

**Walnut Street Prison.**—In consequence of complaint of the insufficiency of the old jail at Third and Market Streets the Assembly passed a law, Feb. 26, 1773, which authorized the commissioners of the county of Philadelphia to borrow as much money as they might think sufficient for purchasing a lot of ground "in some convenient part of the said city, and erecting thereon a commodious, strong, and sufficient gaol, work-house, and house of correction, with a good yard to each of them, inclosed by a wall of proper height and strength." After this prison was built, the commissioners had authority to sell the old jail at Third and Market Streets, and to appropriate the money received toward the cost of constructing the new prison. The property at Third and Market had been vested in trustees, for the use and benefit of the city and county of Philadelphia, and Joshua Carpenter, the survivor, in 1721, made a declaration of trust, reciting the title of the city and county.

The county commissioners purchased from John and Thomas Penn and others, for three thousand two hundred and fifty-two pounds in Pennsylvania currency, a lot at the corner of Walnut and Sixth Streets, extending nearly half way down to Fifth Street and southward about four hundred feet to Prune [Locust] Street. Upon this ground they erected a stone prison

building of one hundred and eighty-four feet front on Walnut Street, thirty-two feet deep, and with wings on the east and west extending ninety feet southward. On the southern portion of the lot fronting on Prune Street, a stone building was erected for a work-house, but it soon came to be used for the confinement of debtors. In time buildings were erected in the prison yard, some of them adjacent to the Sixth Street wall, for work-rooms. There was a stone wall twenty feet high which ran from the western wing of the prison down Sixth Street, and along Prune to a line with the debtors' department, which was set a little back from the street. Another wall began west of the building, ran along Prune to the eastern line of the property, and then northward until it met the east wing of the main building. The prison was two stories in height, with a basement rising some feet above the ground. The central building stood out from the wings a short distance, and was crowned with a pediment in which was a semicircular arched fan-window. A one-story cupola rose above all, and the vane was in the shape of a gilded key. The main entrance was in the centre by a passage-way eight feet broad, through two iron-grated doors to a cross hall running from east to west on the southern side of the building, with stairs and windows at each end. There were eight large rooms on each floor, all arched, and having two windows to each room. The wing building had arched windows upon the court-yard, one for each room. Beneath the wings were the dungeons, in the basement, and partially under ground. The jail occupied the whole width of the lot, and southward to a depth of three hundred feet, where there was a semicircular row of work-houses, two stories high, and beyond them the southern wall. The stone front on Walnut Street was rough-cast, and the impression created by the prison was that of solidity and fitness. In the yard a brick building, three stories in height and raised on arches, contained the sixteen solitary cells, each six feet by eight, and nine feet high. They were very dark, as the only light admitted came from above, through a peculiar form of blind. They succeeded the basement dungeons, which were abandoned in 1795.<sup>1</sup>

The architect of the new prison was Robert Smith, but it is not exactly certain at what date it was occu-

<sup>1</sup> In an account of the Walnut Street prison, published in the *United States Gazette*, before its demolition, in October, 1835, it was said, "Beneath the eastern wing, projecting into the yard of the prison, is a long-arched passage, dimly lighted with one or two lamps fastened to the masonry of the wall. Doorways at the side of this long subterranean chamber opened into dark, arched cells, where no rays of light but by the door could find entrance, and where all that is imagined of the solitary and subterranean dungeon holes of feudal castles might be fully realized. Strong, massive chains were fastened to the floor and the grating, and the thick, iron-studded doors, now thrown down, show that an attempt at escape must have been futile. No prisoner has occupied these horrible abodes for nearly forty years. The last prisoner had been thrust in for some crime out of the usual course. His situation was not made known to the keeper, and he perished miserably, without being able to make his voice heard."

pied. In August, 1775, the buildings were used as store-houses for powder, and in the following December the Committee of Safety was notified that a portion was ready for the reception of prisoners. It was, therefore, resolved to remove to that building as prisoners the soldiers, sailors, and others confined under authority of Congress. Thomas Apty was appointed temporary keeper for this purpose, and the sum of one dollar per week was allowed for the support of each prisoner, under authority of an act of Congress. In January, 1776, one hundred and five felons, Tories, debtors, and prisoners-of-war, were taken from the old jail to the new one. Six of them made their escape the same night by breaking the lock of a back gate and getting over the wall, and only one was retaken. The British general, Richard Prescott, captured in Canada in 1775, was prisoner on parole, and permitted to reside at the City Tavern for a time, but, it being alleged that he had acted cruelly toward Col. Ethan Allen and the Continental prisoners in Canada, he was ordered into close confinement in the new prison, and remained there until September, when he was exchanged for Gen. Sullivan. He again became a prisoner July 10, 1777, when he was seized and captured by Lieut.-Col. Barton, of Rhode Island, at Overing's house, near Newport. Col. Moses Kirkland, a South Carolina Tory, who had been captured upon a tender sent by Lord Dunmore, of Virginia, to Gen. Howe, at Boston, was also sent to the Walnut Street prison, from which he escaped in May.<sup>1</sup>

In May, 1776, twenty-three North Carolina Tory officers, among whom were Gen. McDonnald, Col. R. Allen McDonnald, Maj. Alexander McDonnald, Col. Thomas Rutherford, and others, were sent to the new prison, and Col. John Shee was ordered to furnish an officer's guard for the protection of the jail. In September, 1777, during the excitement caused by the movements of the British army toward Philadelphia, and the probability of an early flight from the city being necessary, the Supreme Executive Council of Pennsylvania thought proper to remind the Continental Board of War "of the great number of prisoners-of-war now in the new jail." It is to be presumed that they were released, if not by the Whigs before they left the city, by Howe after the entry of the British army.

After the British marched into Philadelphia, the Walnut Street jail became the British provost prison. This establishment was under the principal control of the inhuman William Cunningham, provost-marshal, and Joshua Loring, commissioner of prisons. When they received the prisoners belonging to the frigate "Delaware" of the Pennsylvania armed fleet, which was compelled to strike its flag in front of the

city during the naval operations which succeeded Donop's attack upon Red Bank, Cunningham and Loring were particularly offensive. The American prisoners were assaulted and abused with foul language. For three days they were kept without food of any kind, as if there was an intention to starve them to death. After that they were furnished with stale and mouldy bread at the rate of four pounds for nine days' subsistence, and one and a half pounds of meat during the same time. The people of the city who had remained, Tories although they might be, did as much as they were allowed to do in furnishing victuals to the American prisoners in the provost. Cunningham took pleasure in upsetting the vessels in which their meals were brought, and was amused in witnessing their scrambles for the scraps which were spread out on the dirty floor. Jacob Ritter, an American prisoner, told John F. Watson that after he had been captured at the battle of Brandywine and brought to the city, he was given no food for three days and nights, and he saw a starved soldier, who had been allowed no food for five days, and who then, upon being given a piece of rye bread, fell over dead while attempting to eat it. The prisoners who were allowed the liberty of the yard ate grass and roots and chewed scraps of leather and chips. Some, by watching at the rat-holes, were enabled to catch some of the rodents, which they skinned and cooked in the best manner they could. Many of these died.<sup>2</sup>

In the winter the condition of the prisoners was terrible. The glass in the windows had been broken by the concussion caused by the blowing-up of the British frigates "Augusta" and "Merlin," and the piercing blasts, the rain, sleet, and snow penetrated the cells. There were no fires, and the sufferers were almost without blankets or other covering. The Board of War, writing to President Wharton, said of the cruel treatment of the prisoners by the British, that "so far from observing even the common line of humanity, their conduct to our prisoners through the several stages of the war has been marked with more than savage cruelty, and has rendered it necessary for Congress to send in provisions for their support, lest a greater number should fall a sacrifice to their inhumanity." Elias Boudinot was appointed commissary of prisoners for that purpose. Day after day the bodies of American soldiers who had died in the Walnut Street prison, either from wounds, sickness, or starvation, were carried over to Potter's Field,

<sup>1</sup> In the advertisement offering a reward for his arrest his costume was described to be a green coat faced with blue, a velvet waistcoat, and brown velvet breeches. It was a matter of sufficient oddity to note the fact that, instead of a wig, he "wore his own grey hair tied behind."

<sup>2</sup> In "the life, confession, and last dying words of Capt. Cunningham, formerly British provost-marshal in the City of New York, who was executed in London on the 10th of August, 1791," is the following language: "When the war commenced I was appointed provost-marshal to the Royal Army, which placed me in a position to wreak my vengeance on the Americans. I shudder to think of the murders I have been accessory to, both with and without the orders of government." The authority of this "confession" has been much disputed by historical students, but many of the circumstances related are so nearly what must have occurred in the life of Cunningham that if fabricated it must have been composed by some one exceedingly familiar with the incidents of his dark career.

immediately adjoining, where they were thrown into trenches and covered up.

In 1787, under the influence of Chief Justice McKean, the street commissioners of the city were induced to agree to the employment of criminals condemned to hard labor as a part of their sentence, and to put them to use in cleaning the public streets. For this purpose about thirty convicts were employed, and the city paid for their labor to the county one shilling sixpence per head at the beginning, and afterward one shilling ninepence per day. The experiment was expected to effect something in the way of economy. It turned out disastrously, and ended in 1789, after the conviction and execution of five of "the wheelbarrow men," as they were called, for murder, which they had planned while upon the streets. There were two classes of these felons: those who were most dangerous and least to be trusted were the chain-and-ball men. They were each manacled with a chain ten or twelve feet long, which was attached to a heavy ball. These convicts were the sweepers, and were considered the most desperate characters. They could move about by carrying the ball with them; but as this was heavy, the journey was not very much extended. When they put the ball down they swept in a circle bounded by the length of the chains. They were dressed in a particular prison uniform.

When, in 1781, the Society for the Alleviation of the Miseries of Public Prisons was organized, it undertook to reform the shocking condition of the Walnut Street jail, which the jailer managed with an eye to his own profit. Dr. Mease says, in regard to the reformation undertaken by the society, "the task was truly arduous. An Augean stable of filth and iniquity was not only to be cleansed, but industry and morality to be introduced and under difficulties that seemed almost insurmountable. The man whose duty required him to assist in the experiment constituted one of them, for he had grown wealthy by the abuses which had been for a long time tolerated, and feared the introduction of a system which would cause his conduct to be closely watched, and the garnish jail fees, sale of liquor, and other perquisites to cease; his opposition was therefore decided, and the number of his friends enabled him to retain his place." The influence of the society was shown in the passage of an act of Assembly, in 1790, creating a board of inspectors of the prison. They were Daniel Thomas, Charles Shoemaker, Thomas Paul, James Bayland, James Sharswood, John Connelly, Alexander Henry, Robert Wharton, Joseph Snowden, Caleb Lownes, James Cooper, and Richard Wister. The very first matter to which they addressed themselves was to the separation of the sexes, men and women before that time having been confined in the same room. They banished spirituous liquors from the rooms, encouraged the convicts to labor, for which they received compensation, separated the convicts from untried

prisoners, secured for all the inmates of the jail better clothing and food than they had ever had before, and introduced a regular system of religious instruction. Against these great reforms, says Dr. Mease, "the opposition of the keeper of the prison was decided."

The inspectors also had to contend against the opposition of many of the inmates of the prison, who had become accustomed to their old surroundings of squalor, indolence, and drunkenness. With them the proposed reform was most unpopular, and, by concert, a desperate attempt was made by all the inmates to escape on the evening of the first day of the introduction of the new system; fifteen of them succeeded in obtaining their liberty. In 1798 yellow fever broke out in the prison during the time that epidemic was raging in the city. This institution, although tenanted by the most abject and dissipated classes, had escaped attack during the fevers of 1793 and 1797. There were three hundred persons in the prison in 1798, the convicts, the untried and debtors, and the mortality was very considerable. The inspectors did the best that they could do under the circumstances. The women, the vagrants, and persons accused of small crimes were transferred to Robert Morris' unfinished mansion house on Chestnut Street, between Seventh and Eighth. The remaining prisoners became desperate, and made an effort to escape by securing the key from Dr. Duffield, who was in the prison professionally. The keepers fought them as well as they could, and Alderman Robert Wharton, who was in another part of the building, ran to the assistance of the guard. He found Miller, the ringleader, with an axe raised to kill Evans, a constable and deputy keeper. Upon this Mr. Wharton and Gass, an assistant keeper, who were both armed with muskets, fired. Miller was mortally wounded, and Vaughan, who had struck Evans with a bar of iron, was shot through the lungs by Evans, who pursued him. Subsequently some of the prisoners escaped by undermining the walls. The grand jury investigated the facts, and in 1799 made a special presentment, in which they declared that the convicts, Miller and Vaughn, came to their death during the attempt to escape from confinement, and that Wharton, Evans, and Gass were "doing an act which was of imperative necessity, and their duty as men and citizens, and were not only fully justified, but which we further present as highly meritorious, and deserving the thanks of their fellow-citizens."

By 1810 the administration of the prison had been so greatly changed for the better that it was stated each inmate slept on the floor, on a blanket, and there were no more than thirty of them in a room. The encouragement of the convicts to labor by offering them payment had resulted admirably, and it was remarked that "on several occasions the balance paid to a convict has amounted to \$100 (in one instance it was \$150), and from \$10 to \$40 are commonly paid." In addition to this, the poorer prisoners, when dis-

charged, were furnished with money to take them to their own homes, if they did not live at a great distance. Cleanliness was enforced by strict rules, and a rigid discipline was generally maintained. At meals the race distinctions were preserved, the whites and blacks eating at different tables. Good conduct was rewarded with an extra allowance, but the fractious convict was placed in a dark cell, on short rations of bread and water, corporal punishment not being permitted.<sup>1</sup>

About 1819 the treadmill was introduced into the prison system of Philadelphia. It was an appliance by which the prisoners' weight gave a revolving motion to a cylinder, which was sometimes attached to useful machinery. It was used but a short time in the alms-house.

THE TREADMILL.

On July 23, 1800, twelve prisoners made their escape by descending the wells which led into the common sewer, through which they crawled into the light of day. Their desperate and daring attempt, under the most repulsive circumstances, secured them but a few weeks of liberty, as they were all soon recaptured. In 1817, William McIlhenny, Henry Kelly, Jock Smith, and some eight or ten others tried a bold dash for freedom. McIlhenny concealed himself in the prison-yard, and hid away some poles, with which he hoped to mount the walls. Kelly managed to force the lock of a door inside the vestibule leading to the Sixth Street gate. They and three others got into the cellar of the western wing, and, burrowing through the wall, they made an excavation under the pavement of Sixth Street. All

<sup>1</sup> It was probably in the early part of the term of authority of the inspectors that they were presented with the large oil-painting that for many years hung in the office of the prison. It depicted a woman weeping at the door of a cell, and bore the following inscription :

"At the door of the Prison see Friendship in tears.  
 May her object some pity inspire;  
 May the hand of Humanity banish her fears,  
 And relieve while she stoops to admire.

"'Tis an emblem which mortals may view with delight.  
 Nay! Divinity brightens the scene!  
 'Twas to save, when from heaven our Lord took his flight,  
 To pardon, and cleanse the unclean."

This painting and a rusty iron gibbet (that has come down from pre-Revolutionary times) are about the only relics of the Walnut Street prison that have been preserved in the jail on Passyunk road.

five escaped, and were caught within a brief time. In 1819 a far more serious affair occurred. Two of these men, McIlhenny and Jock Smith, sawed away the bar which held the door of their cell, and, rushing down-stairs, attempted to batter down the iron doors which opened on Walnut Street. Baffled there by a keeper, who fired upon them, they rushed out into the prison-yard to the dungeons to obtain props and poles. Here they met with some resistance from a convict named Scott, whom they stabbed. The next attempt was to get over the wall. This failing, an effort was made to tear up the entrance to the common sewer. All this happened while the yard was full of prisoners, the greater portion of whom took no part in the proceedings. At the critical moment the bell of the prison sounded for the prisoners to return to their rooms. The majority obeyed, and the human tide was so strong that McIlhenny, Kelly, and the rest were swept along with it, and their attempt was abandoned. Among others confined in the jail at this time was a negro named Harry Powell, who, in order to shorten the term of his own imprisonment, and to secure the favor of the inspectors to be used for his benefit in obtaining a pardon, had become a spy of the keeper upon the doings of his fellow-convicts. Powell had taken a prominent part in defending Armstrong, a keeper, during the attempt to escape in 1819. He was yet a prisoner, and when McIlhenny's party were admitted to the yard, after punishment, was himself engaged in a quarrel with a convict named Hedgman, in which the latter was badly stabbed. This circumstance occasioned considerable excitement among the prisoners, and was the signal of a concerted attack upon the informer. Some forty desperate men rushed toward Powell, but he was nimble and powerful, and defended himself so well that he was able to retreat to the blacksmith-shop, where he caught up a bar of iron. Here, although stones, bars of iron, tools, and other missiles were hurled at him, he kept his foes at bay for some time; but McIlhenny and others, by breaking through a rear window, got behind him, and drove him from his shelter. Then, with one blow from an iron bar, he was laid prostrate, his skull broken through. Death must have happened immediately, although McIlhenny stooped over the prostrate body and plunged into it a long-bladed knife up to the haft. All this was sudden and unexpected to the officers, and when the inspectors were called together they resolved that the ringleaders should be put in dark cells.

The next morning the keepers and inspectors, with Peter Meircken, their president, at their head, surrounded the door of the room in which McIlhenny and others were confined. This man was called out, and he came with an iron bar, and, assisted by those who swarmed out with him, made an attack upon the opposing force. There were forty of the prisoners, full of resolution and passion. The result was a retreat of

the officials. Down the stairs, in the greatest confusion, tumbled inspectors, keepers, and convicts, black and white, while the upper passages and rooms resounded with shrieks, yells, and groans, and clanging of chains and bars, as the fastenings were torn to pieces with wild fury. In a few moments every door was thrown open, and throughout the whole range the prisoners were released. The force of the rioters was increased by two hundred men, who hastened to the lower hall, and then the entire body of convicts had unlimited sway within the prison. They hurried into the yard to make their escape, the alarm spreading fast throughout the city. Some persons who were armed climbed to the top of the eastern wall, and fired into the mob of convicts, killing one of them, John Runner, and wounding others who were endeavoring to break down the Sixth Street gate. The fire of the citizens cowed the insurgents, and while they shrank back into the yard the gates suddenly opened, and the whole space swarmed with the bayonets of the United States marines and the militia.

Sheriff Caleb North placed the force under the command of Col. Clement Biddle, a man of invincible determination. Col. Biddle mounted a marble block in front of the convicts, and, drawing out his watch, said, in a loud voice, "I give you just three minutes to march to your rooms; any hesitation will bring upon you a volley from these muskets." It was enough; authority had asserted itself. The crowd slunk away, and when the time had expired they were all in full march to their rooms. Forty-eight of the worst characters were arrested by means of the military, and put in cells. For three or four days and nights the prison was guarded by a force of marines and volunteers. Thirteen or fourteen of the ringleaders were arraigned for the murder of Howell, but as every witness was a convict, infamous by law, and unable to give legal testimony, it was impossible to convict any one.

Three or four years afterward there was a riot in the prison incited by two convicts named Malony and Helmbold. For two hours these desperate men had range of the yard, and with their spades and shovels threatened every keeper who came near them. Providentially just at this time a company of volunteer soldiers were parading the streets, and the captain being notified of the trouble at the prison, marched his men there, and quiet was soon restored. On the 26th of February, 1839, on a gusty night, Jock Smith, with some twenty or thirty others, managed to escape from a room on the second story east of the main door by sawing through the window-bars. Jock Smith was not heard of again for six years, when he was brought to the Eastern Penitentiary from the interior of the State, to be confined for horse-stealing.

In the course of time the Walnut Street prison, which was commonly called the penitentiary up to the time when the Eastern Penitentiary was built on Coates Street, became densely crowded. In 1817 the

grand jury called attention to the subject. There were then in the prison four hundred and fifty-one convicts, and ten hundred and fifty-eight prisoners awaiting trial. It was no unusual thing for thirty or forty to be lodged in a room eighteen feet square. On March 30, 1831, the Legislature passed the act for the construction of Moyamensing prison, and on Oct. 29, 1835, it was finished, and the inmates of the Walnut Street jail were transferred to it. The commissioners had authority to sell the Walnut Street property, and in 1836 they disposed of it to John Moss for \$299,000.99, having first demolished the prison structure. As the original cost of the ground to the city was but eight thousand six hundred and seventy-two dollars, it made a highly profitable bargain. Mr. Moss proposed to erect upon it a splendid hotel, to be called the Penn Hotel, but the scheme fell through, and the lot was cut up into building sites.

#### EXECUTIONS OF PERSONS CONFINED IN WALNUT STREET PRISON.

- 1776, May 4.—John Woodward, for the murder of his wife.  
 1777, March 4.—Brinton Debadec, shot for desertion.  
 1777, March 31.—James Molesworth, hanged as a spy.  
 1778, August.—George Spangler, hanged as a spy.  
 1778, Sept. 2.—Lieuts. Samuel Jones and Ford, shot for desertion.  
 1778, Sept. 4.—Patrick McMullin, shot for desertion.  
 1778, Nov. 4.—Abraham Carlisle and John Roberts, high treason.  
 1778, Dec. 1.—Wright, burglary.  
 1778, Dec. 22.—James Beard, highway robbery.  
 1779.—Abijah Wright, high treason, acting as a guide to the British army.  
 1780, April.—John Wilson, high treason, enlisting with the British.  
 1780, May 8.—Dennis Carragan, burglary.  
 1780, May 6.—John Hill, highway robbery.  
 1780, May 6.—Marmaduke Grant, burglary.  
 1780, November.—David Dawson, high treason.  
 1780.—Richard Chamberlain, counterfeiting Continental bills.  
 1780, Dec. 30.—James Sutton, running away with the American privateer "Luzerne," and taking her to the British, hung on the lower end of Windmill Island.  
 1780, Dec. 30.—John Hill, burglary.  
 1781, May 23.—Thomas Wilkinson, piracy, hung on Windmill Island and gibbeted at Mud Island.  
 1781, May 26.—Henry McKeever, John Dobbins, John Flannagan, James Byrnes, Thomas McCollough, burglary.  
 1781, May 26.—Thomas McGee, robbery.  
 1781, Nov. 24.—Mary Hall, burglary.  
 1781, Nov. 24.—James Cannon and James Green, robbery.  
 1781, Nov. 13.—John Moody, hanged as a spy.  
 1781, Nov. 13.—Burns, *alias* Murphy, burglary.  
 1782, October.—Peter, a negro, for the murder of James, a negro.  
 1783, Feb. 15.—Kemble Stackhouse, Lot Salsey, Samuel John Freeman, *alias* Murlick, burglary.  
 1783, Oct. 25.—Petro Glacobe, *alias* Simons, and Francisco Mesca, for the murder of Capt. Pickels.  
 1783, Nov. 1.—James McGraw and James Jones, burglary.  
 1784, July 17.—John Downey and John Martin, highway robbery.  
 1784, Oct. 18.—James Burk, murder of Timothy McAuliffe.  
 1784, Oct. 18.—James Crowder, burglary.  
 1784, Oct. 18.—Peter Brown, attempt to murder Capt. Tolbert.  
 1784, Oct. 16.—George Williams, *alias* One-Armed Tom Robinson, murder and highway robbery.  
 1784, Oct. 18.—James Brown, burglary.  
 1784, Oct. 16.—James Doene, robbery of the treasurer of Bucks County.  
 1785, May 7.—Andrew D. Bleck and Samuel Preston, robbery.  
 1785, July.—Francis Courtney, rape.  
 1787, May 12.—Robert Elliott, burglary.  
 1788, Sept. 24.—Abram Doane and Levi Doane, outlawry and treason.  
 1789, July 29.—William Coll, burglary and highway robbery.

1789, Oct. 12.—Daniel Cronan, Francis Burns, John Bennett, John Logan, and John Fergueon (the wheelbarrow men), for murder of James McFarland. Hanged on a lot on Market Street, west of Thirtieth, near where the murder was perpetrated.

1788.—Charles Reed, for the murder of a boatman.

Here the bloody list comes down to a milder record. In 1786 the Legislature of Pennsylvania changed the punishment for burglary, highway robbery, and other crimes less than murder in the first degree to imprisonment. By the act of 22d of April, 1794, it was declared "no crime whatsoever hereafter committed (except murder in the first degree) shall be punished with death in the State of Penna." Under the same act the benefit of clergy in felonies of death was abolished.<sup>1</sup>

After that there were no executions under the State laws, except for murder, and even they were fewer in number than they had been in the early part of the century. The first execution after the passage of the act took place under the administration of the Federal law. On the 9th of May, 1800, Baker, —, Brous, and, Peterson, *alias* Labruse, convicted of piracy and the murder of the mate and supercargo and one of the crew of the schooner "Amelia," and tried by a United States District Court, were hung at Windmill Island. This site seems to have been the place of execution for admiralty prisoners and persons charged with offenses under the law of nations before the Revolution, and convicted under the crown. There were no more executions there after 1800. Where the gallows was erected and executions took place before that time for prisoners convicted under the laws of the province and State is not exactly known. Whenever the newspapers published before the Revolution alluded to the place of an execution under State laws, it was frequently mentioned to have been "on the Commons," which, in the early part of the eighteenth century, might have been west of Eighth or Ninth Streets. But in fact most of these executions took place in Centre Square. After the law was passed restricting the cases in which capital punishment might be imposed, the following inmates of the Walnut Street prison were executed:

1800, May 9.—Baker, Broue, and Peterson, for piracy, at Windmill Island.

1807.—John Joyce and Peter Mathias (colored), for the murder of Mrs. Cross, hanged in Bush Hill.

1816, Aug. 10.—Lieut. Richard Smith, for the murder of Capt. John Carson, hanged at Potter's Field, now Logan Square.

1823, Feb. 7.—William Gross, for the murder of Keziah Stow, hanged at Potter's Field, now Logan Square.

**Arch Street Prison.**—As early as the year 1803 the necessity of erecting a new prison to relieve the Walnut Street prison of the pressure upon it was acknowledged by the Legislature. On the 1st of April,

in that year, was passed "an act for the sale of certain vacant lots in the city belonging to the State." The preamble recited that the Walnut Street prison was too small to accommodate the convicts sent from all parts of the commonwealth. It was therefore directed that the money received from the sale of all vacant, unimproved lots in the city should be devoted to the construction of a new building for the confinement of prisoners awaiting trial, vagrants, and such other persons except convicts as had been committed to the county prison. The work was to be done in such a way as the inspectors of the prison, the Court of Quarter Sessions, the grand jury, and the county commissioners should agree upon. This was a measure of honesty on the part of the State of Pennsylvania, which, by reason of a gift of five hundred pounds for the purpose of erecting cells in the Walnut Street prison-yard, had obtained a right to use the Philadelphia prison for State purposes, under which it was made a place of confinement for convicted criminals from all parts of the State. The officers, to whom control in this matter was accorded, selected for the new prison a lot on the south side of Arch Street, between Broad Street and Schuylkill Eighth [Fifteenth], and extending to a small street running east and west, north of Filbert Street. Some of the vacant lots of the commonwealth were sold and the building was commenced. The work went on slowly. In 1809 a portion of it was occupied, and in the succeeding year the prison inspectors reported to the General Assembly of Pennsylvania that \$85,821.12 had been received for the sale of city lots, and that they had expended in building the new prison \$85,600.84. They wanted \$25,000 more to complete the jail, and put up the wall. Their request was not complied with until two years afterward, when \$25,000 were appropriated; but, even in this, much injustice was done by the conditions under which the money was to be spent. The act declared that the prison should be the exclusive property of the commonwealth. If the intention had been to relieve the county prison of Philadelphia at Sixth and Walnut Streets from the use the State had made of it for twenty-two years, as a penitentiary for the confinement of prisoners from other counties, there could have been no objection, and the measure would have been considered beneficial to Philadelphia. But while the law making the appropriation declared that the Arch Street prison should be entirely a State prison, the right of sending prisoners to the Walnut Street prison was not relinquished. There was no justice in this, but the inspectors took the money and proceeded to finish the Arch Street prison as well as they could. When completed, its ground plan was in the shape of the letter T.

The main entrance, offices, keeper's residence, kitchens, and wash-rooms were in the centre front, a building of brick, with basement, and high steps ascending to the principal story. There was a second

<sup>1</sup> Crimes which were punishable by death before Sept. 15, 1786, the date fixed in the act last mentioned, were murder, robbery, burglary, rape, sodomy, malicious maiming, manslaughter by stabbing, witchcraft, conjuration, arson, concealment of the death of bastard children, counterfeiting any gold or silver coin, and every felony (except larceny) on a second conviction.

story, crowned with a pediment, above which rose a small cupola, in which was placed a bell. Back of the central building, the prison rooms extended east and west nearly to Broad and Schuylkill Eighth Streets. They were two stories high, with a basement, and ran out to the small street extending east and west, and there at times the friends of prisoners could hold communication with them. The yards for the use of the prisoners were at the northeast and northwest angles of the lot. The main central building stood a little back from Arch Street. High walls of rough stone extended from each side to the building-line on Arch Street, and were thence continued along that street to Broad and Schuylkill Eighth [Fifteenth], and along the latter to the prison buildings, inclosing them on every side. This structure was never competent for the object for which it had been erected, as it was weak and insecure. Eventually the debtors were sent there to be imprisoned, as punishment for their misfortunes.

During the war of 1812 the Arch Street prison was partially appropriated for the use of the troops coming to Philadelphia, and it was also used for the confinement of prisoners of war. In December of 1814 it was occupied by a militia brigade from the interior of the State, under command of Brig.-Gen. Spearing. He was aided by the Committee of Defense, by a liberal appropriation, to enable him to purchase shoes, stockings, and clothing for his men, who were about to march for their homes in a distant part of the State in the most inclement part of the winter season.

In January, 1814, the Legislature of Pennsylvania approved of the policy, on the part of the national government, of securing hostages for the safety of such American soldiers as were threatened with execution by the British troops. In pursuance of this policy, in March of this year, Maj. De Vilette and twenty-two other British officers were brought to the city and confined in the Arch Street prison as hostages. In the succeeding month eighteen escaped by the simple method of sawing the iron bars of the windows of the rooms in which they were confined. Some of these were retaken, but the larger number got off beyond the possibility of arrest.

In 1822 the eastern end of the prison, which had been occupied by the debtors, was altered for the purpose of placing there prisoners awaiting trial, and the debtors were removed to the western side. The wall on all sides was raised six or eight feet, and changes were made in the character of the rooms and cells. In the succeeding year, by an act of Assembly, all the debtors in the Prune Street department of the Walnut Street prison were directed to be removed to the Arch Street prison, and the space they had formerly occupied was used as a part of the penitentiary.

In 1832 the Arch Street prison suffered severely from the cholera, the first death occurring on July 30.

There were then confined in that institution two hundred and ten persons on the criminal side and

twenty-one in the debtors' apartment. The former class was made up most entirely of vagrants, disorderly persons, petty thieves, and drunkards. In two days after the outbreak of the disease in the prison there were a very considerable number of cases. Dr. Jesse R. Burden was at the time a visiting inspector, and being apprised of the threatening condition of affairs, not only applied his own professional skill and attention to the persons taken sick, but obtained the services of Dr. A. M. Allen as resident physician, and Edward Peace, at that time a student of medicine, to attend at the prison. Dr. Allen was prostrated shortly after he went to the prison, and Dr. Peace also became ill before the end of the first week. The latter before he was himself attacked was in consequence of the sickness of Dr. Allen the only person in medical charge, and was in great personal danger. The inmates of the prison were intensely excited and chafed under a restraint which they would have borne with comparative good humor under ordinary circumstances, but which at that time seemed to be cruel. When Dr. Peace was taken with the disease, on Sunday, August 5th, there were eighty sick persons among the inmates and four of the officers were down. There was great danger of an outbreak on the part of those prisoners who remained. What was more important was the fact that they were without medical assistance in case of attack. News of the unfortunate state of affairs soon spread throughout the city, and Dr. Burden obtained the assistance of a number of fearless physicians. They were Drs. George Fox, R. Harlan, C. W. Morris, C. Lukens, J. Peace, A. M. Allen (who had partially recovered from his sickness), George Norris, Benjamin H. Coates, T. Ash, Wilson Jewell, Robert Bridges, and J. Tognio. They promptly repaired to the jail and did the best they could, but the pestilence was extremely virulent. "The scenes of that memorable day were of unparalleled fearfulness and loathsomeness in the history of Philadelphia. Before night not less than seventy persons who were living in the building when the morning dawned were consigned to the grave," said the citizens' sanitary committee of North Ward in the formal report which they made of the circumstances connected with this visitation. "In the midst of this awful riot of disease and mortality the medical gentlemen nobly and faithfully maintained their ground, and were instrumental in rescuing many who would otherwise have swelled the frightful number of the dead."<sup>1</sup>

<sup>1</sup> The committee of North Ward named as principals among the citizens, John Swift, Thomas Roney, Peter Fritz, Robert O'Neill, Thomas Wallace, George Tees, Michael Wartman, George Nagle, and Peter A. Grojjan. Thomas Louellen, a keeper, was the only officer of the prison who remained on duty throughout the existence of the disease in that building, and although exposed more than any one else (except the physicians) by contact with the sick and the dead, was at no time seriously indisposed. Joseph S. Kite, a citizen, was invested with the office of keeper by the inspectors when all the officers but Louellen had encumbered. Kite acted but a single day, and was himself attacked by the disease the next morning. John Swift was taken sick the day after. He was conspicuous at the prison, and narrowly escaped death. In the

At the succeeding session of the Legislature a committee was appointed in the House of Representatives to investigate the circumstances connected with the appearance of cholera at the Arch Street prison. They stated that the entire period during which the disease raged in the institution was from the 5th of July until some time in September. It first appeared in the women's apartment, and the sufferer was a female vagrant who had been only a day or two in the house. In relating the circumstances the committee said, "The rooms used as hospitals became crowded and the sick were brought into the great hall. There was an interval of several days before the epidemic occurred on the men's side; when it did, it seemed, according to the description of a keeper, like a shock of electricity. The cries, shrieks, and groans of the sick and dying, the frantic desperation and agony of those who were eager to escape, and the difficulty at the moment of deciding upon all the points of most interest to the welfare of the prisoners and that of the public, are described as in the highest degree distressing and embarrassing to those who had them in charge."

On the night of the 4th of August the diseased were so numerous upon the floors of the extensive halls that the keepers had difficulty to avoid treading upon them as they performed their duty. "About eighty persons were lying dead, dying, or suffering with this epidemic in the building. The dead were necessarily kept all night in the jail, because the keepers feared to open the doors, lest the prisoners for whose security they were responsible should attempt to escape." The chief keeper, on the "fatal Sunday," August 5th, "bewildered with fatigue, and almost in a state of derangement," called upon the recorder of the city, reported upon the condition of the prison, and begged that the prisoners might be released. Upon consultation with the inspectors, the determination was taken by the latter to discharge many of the prisoners upon their own recognizance. The recorder did this with a formal sort of protest "that he had no legal right to do so, but that in his opinion the necessity of the case amply justified the act." Some of the sick were sent to the cholera hospitals of the city, and thirteen of the most desperate characters were taken under convoy of a strong guard of citizens to a neighboring watchhouse. As for the debtors, they were in worse condition than the criminals. The public, represented by the officers of the commonwealth, might be satisfied with overlooking the strict demands of law and duty in a case like this, where the necessity was great; but the remorseless creditor, who had put his unfortunate debtor in prison, might not be willing to forgive any citizen who should make himself legally responsible by aid-

ing in the discharge or escape of his victim. In some instances money was advanced by private citizens to release them from the judgments against them. In others bonds were filed and surety entered by persons who were unacquainted with the debtors, on condition that they would apply for the benefit of the insolvent laws. Many of the prisoners in health assisted those who were sick, and some of them who were discharged on Sunday remained until the succeeding day as nurses. In fact the prison was entirely cleared out on the 6th of August, and it was cleaned and fumigated before it was again put to use. During the interval the thirteen prisoners who had been strongly guarded at the neighboring watchhouse, at Broad and Filbert Streets, were returned to their old quarters. Not one of them had died.

It may be permissible to mention here that during this season there was no case of death by cholera at the penitentiary. There was only one case at the Walnut Street prison which resulted in death. Diarrhœa and diseases of the bowels were noticed to be more prevalent there than elsewhere.<sup>1</sup>

After the Philadelphia County prison, at Moyamensing, had been finished, in 1836, the Arch Street prison was abandoned and the property sold. The only execution in the latter building was that of James Porter, found guilty of robbing the United States mail at Ridge road and Turner's Lane. He was hanged on July 2, 1831, on the line of Seventeenth Street, near the intersection of Wallace.

**Eastern Penitentiary.**—On March 21, 1821, the Legislature passed an act to provide for the erection of a State penitentiary within the limits of the city and county of Philadelphia. Commissioners were appointed to select the site and superintend the erection of the building. They were Thomas Wistar, Dr. Samuel P. Griffith, Peter Miercken, George N. Baker, Thomas Bradford, John Bacon, Caleb Carmalt, Samuel R. Wood, Thomas Sparks, James Thackera, and Daniel H. Miller. They were directed to build a penitentiary on the general plan of the Western Penitentiary, at Pittsburgh. They were also authorized to sell the Arch Street prison to the commissioners of the city and county of Philadelphia, if the latter would pay fifty thousand dollars for the buildings. They selected a tract of land of eleven acres, with a dwelling-house and country-seat, known as Cherry Hill, and situated upon Francis Lane, afterward called Coates Street [Fairmount Avenue], between

<sup>1</sup> The Board of Health record states the number of cases of cholera in the Arch Street prison between July 11th and September 18th to have been eighty-six; deaths, forty-six. But the committee of the House of Representatives, at the session of 1832-33, said that there was difference of opinion as to the degree of mortality. A member of the Society for Alleviating the Miseries of Public Prisons was of the opinion that the entire mortality of the prison inmates was fifty-two persons, and this included those who died in the prison and the cholera hospitals, and two who were discharged from prison, but were found lying dead on the roads a few miles from the city. Ten persons died after that time, making a total of sixty-two. Another estimate placed the entire mortality as high as eighty.

succeeding year a service of plate was presented by the citizens of Philadelphia in appreciation of his courageous conduct and the valuable assistance which he gave at the prison. This presentation was made in March, 1833.

Schuylkill Third [Twentieth] Street and Schuylkill Front [Twenty-second] Street. John Haviland was chosen to be the architect, and produced a plan differing from any previously used in prison buildings. There is a central structure for the officers, and as a guard over all the establishment, it was crowned by a tower. This observatory, for such it is, overlooks the blocks of cells, which radiate from the central building like spokes from the hub of a wheel. Each corridor of cells opens upon a small yard for the use of the inmates. Long passage-ways extend through each corridor, and separate the cells. Beside the overlook in the watch-tower, there are galleries on the outside, by which every yard space in a block of cells can be seen, so that if any prisoner should attempt to escape his design can, by the exercise of ordinary vigilance, be detected and prevented. There are thirty-six cells in blocks, each twelve feet long, eight feet wide, and ten feet high, with an exercising-yard to each. The prison proper is in the centre of the grounds, which occupy more than a solid square of the ordinary size upon the city plan. The front is in the castellated style of architecture, having heavy square towers sixty-five feet high, and a splendid arched gateway, with porticulis and central tower. The gate is twenty-seven feet high and fifteen feet broad, and the main front tower ninety-seven feet high. The

front on Fairmount Avenue is six hundred and seventy feet depth, and on the sides about the same. One of the objects expected to be secured by the erection of this building was the establishment of the Pennsylvania system of separate confinement. The plan was administered with earnestness by the inspectors for several years, but it was found that it did not accomplish near as much as was expected. The greatest objection to it was that it sometimes caused insanity, and the system has consequently been much modified.

The corner-stone of the Eastern Penitentiary was laid on the 22d of May, 1823, and an address was delivered by Roberts Vaux. The buildings were finished in 1829, with two hundred and sixty-six cells, according to the original plan. In 1831 the inspectors were authorized to increase the number of cells to four hun-

dred. Additions have been made from time to time, so that the buildings are much larger now than they were fifty years ago. Between 1824 and 1839 there were appropriated for the grounds and building of the Eastern Penitentiary six hundred and eighty-eight thousand one hundred and twenty-four dollars.

On May 19, 1837, William Moran, who had been confined in the Cherry Hill prison, was hanged on the line of Seventeenth Street, near the intersection of Spring Garden Street, for the murder of Capt. Smith and Mate Ward of the schooner "William West."

**The Philadelphia County Prison (Moyamensing).**—On the 30th of March, 1831, the Legislature passed an act directing that a prison for the city and county of Philadelphia, capable of holding at least three hundred prisoners on the principle of separate confinement, should be erected at such a place within

THE MOYAMENSING PRISON.

the city and county as the commissioners appointed by the Court of Common Pleas of the county and the Mayor's Court should direct. This building was to be called the Philadelphia County prison. The commissioners were authorized to purchase a site and make contracts for the erection of the building, and to borrow \$150,000, if necessary for the purpose, at an interest not exceeding five per cent. per annum, for the security of which the Walnut Street prison property was pledged. By the act of Feb. 27, 1833, power was given them to borrow \$70,000 additional, and the sale of the Arch Street prison was provided for. In the succeeding year another loan of \$70,000 was authorized. The Moyamensing prison cost \$360,000; and as the receipts from the Walnut Street and Arch Street sales netted \$330,012.18, the county had to pay no greater sum than \$29,517.82. Under these acts

the Court of Common Pleas appointed as commissioners for building the new prison Jesse R. Burden, Jacob Frick, and William G. Alexander, and the Mayor's Court appointed William E. Lehman, Joseph Price, and Samuel Palmer. On the 13th of April, 1832, these commissioners purchased of John Savage fifteen and three-quarter acres of ground in Moyamensing township for \$8000, and in the succeeding May they bought one hundred perches adjoining for \$975. The ground was on the west side of Passyunk road, near Tenth Street, and just below Reed Street. It extended back, crossing Eleventh, Twelfth, and reaching to Thirteenth Street, and was much larger than the necessities of such a building at the time of purchase. When the prison came to be built, it was laid out in lines parallel to Passyunk road, and its depth was sufficient to cut into Eleventh Street and block up that highway entirely.

The ground west of the prison inclosure remained vacant for some years. The greater portion of it was assigned, in 1838, for use by the military as a parade-ground, and was known by that name for many years. It was rarely used by the volunteers, and was unpopular among them because it was never properly laid out for their use. Afterward a portion of it, bounded by Wharton, Reed, Twelfth, and Thirteenth Streets, was laid out for a public square, and known as Passyunk Square. On a portion of the lot on the east side of Twelfth Street was built, in 1882, an armory for the Third Regiment National Guards.

The corner-stone of the new prison was laid on the 2d of April, 1832. The plans for the building were prepared by Thomas U. Walter, architect. He chose for it the castellated Gothic style, and was successful in the design of a bold and exceedingly striking front, the effect of which was much increased by the heavy, dark color of the syenite granite which was selected for the building material. The façade was set back from the road, at the distance of fifty feet from the line of the sidewalk. The centre building, fifty feet in height, is of three stories, with a front of fifty-two feet at the base and a height of fifty feet. Circular warders' towers, supported on large corbels, are at the corners, and rise above the roof, being crowned with projecting embattled parapets. The centre building also is surmounted by parapets pierced with embrasures. The whole front is ornamented with architraves, corbels, labels, etc., peculiar to the style. On each side of the centre building are wings receding ten feet, and fifty feet wide, surmounted by a parapet pierced with embrasures. Entrance gates, ten feet wide and seventeen feet high, secured at the top by wrought-iron portcullis, give means of access to the interior of the prison. Octagonal towers terminating in embattled parapets, and ornamented with narrow, pointed windows, are joined by a yard wall receding fifteen feet, and then extending northeastward and southwestward to bastions fifteen feet wide at the base, thirteen feet at the top, and twenty feet high.

The centre building contains the office of the inspectors and rooms for the keeper. There were offices and lobbies in each of the wings on the lower story, from which the cells extend.

There are four hundred and eight cells, each nine feet wide, thirteen feet long, and nine feet high. The entire front of the prison is three hundred and ten feet, and its depth between the yard walls five hundred and twenty-five feet. Inside of the prison-yard, in a building forty-three feet wide by seventy-two feet long, erected between the blocks of cells, is the kitchen, bake-house, laundry, and bath-houses; and in two other buildings are rooms for turning, tinsmithing, blacksmithing, carpentering, and dyeing.

On the north side of the prison the debtor's apartment was erected as a separate building, having its front on the Moyamensing road on a line with the prison. The architect Walter designed it in the Egyptian style. The material is red sandstone, from quarries on the Connecticut River. The front is about ninety feet, and the depth one hundred and twenty feet. The entrance is by a recess portico ornamented by two columns three feet in diameter, twelve feet high.

By section eighth of the act of 1831, it was directed that every person who should be convicted after the completion of the new prison for any crime, the punishment for which should be imprisonment for a term under one year, should be sent to the new prison. This was altered in 1835 to a term of two years or under.

By act of 14th of April, 1835, it was directed that there should be a board of inspectors of the county prison, twelve in number, four of them to be appointed by the mayor, recorder, and aldermen of the city of Philadelphia, four by the judges of the Quarter Sessions, and four by the judges of the District Court. The board was directed to divide itself into four classes to serve one, two, three, and four years, and afterward new appointments were to be made for four years. In 1838, by the act constituting the Court of Criminal Sessions, the number of inspectors was increased to fifteen, three of whom were to be appointed by the judges of that court.<sup>1</sup>

By act of March 22, 1836, the commissioners for building a prison were authorized to purchase a suitable site and erect a building thereon to be called "the vagrant department of the city and county of Philadelphia." To this building all persons convicted by magistrates as vagrants or disorderly for one month's imprisonment were to be sent. The commissioners performed the duty by erecting a vagrant building upon the premises of the county prison. After the abolition of imprisonment for debt in 1841,

<sup>1</sup> In 1838-39 the inspectors were Jesse R. Burden, Edward C. Dale, John L. Woolf, Robert O'Neill, appointed by the District Court; William G. Alexander, Augustine Stevenson, William King, John R. Walker, appointed by Quarter Sessions; Joseph Price, William Bethel, William E. Lehman, Joel B. Sutherland, appointed by mayor, recorder and aldermen; Joseph E. Smith, Michael Day, William F. Hughes, appointed by Criminal Sessions.

the debtors' apartment, adjoining the county prison, became unnecessary for that service, except in the case of prisoners confined upon proceedings and actions in tort, and the debtors' apartment was utilized for the confinement of witnesses and other purposes.

On the 10th of April, 1834, the Legislature passed an act abolishing public executions, and directing that the sentence of the law where prisoners should be condemned to death by hanging should be inflicted within the walls or yard of the county jail, and it should be the duty of the sheriff or coroner to be present, and the presence of a physician, the attorney-general, or deputy of the county, and twelve reputable citizens, to be selected by the sheriff, should be invited, with one or two ministers of the gospel, if desired by the criminal, and any immediate relatives, together with officers of the prison, and such of the sheriff's deputies as might be selected. After the execution, oath by the sheriff or coroner, together with the death-warrant, is ordered to be filed in the office of the Court of Oyer and Terminer of the county. Under these provisions the executions in the county prison have since taken place within the prison walls. The following gives the dates and names of persons hanged up to March 4, 1884:

#### EXECUTIONS IN THE COUNTY PRISON.

1839.—Samuel Zeppon (colored), for the murder of Cuffy Todd (colored).

1839, Aug. 9.—James Williams, for the murder of Francis Kearney.

1846.—Charles Mosler, for the murder of his wife.

1848, Oct. 29.—Charles Langfeldt, for the murder of Mrs. Rademacher.

1852, Aug. 6.—Matthias Skupinski, for the murder of Jacob Lehman.

1852.—Blaise Skupinski, for the murder of Jacob Lehman.

1853, June 10.—Arthur Sprig, for the murder of Ellen Lynch and Honora Shaw.

1856, May 23.—Peter Mattocks (colored), for the murder of Elizabeth Gilbert (colored).

1861, Aug. 9.—Thomas J. Armstrong, for the murder of Robert Crawford.

1866, June 8.—Anton Probst, for the murder of Christopher Deering, of which he was convicted. He also murdered at the same time, and confessed to the crime, the other members of the Deering family, viz.: Mrs. Julia Deering, John Deering, Thomas Deering, Emily Deering, Elizabeth Dolan, and Cornelius Carey.

1867, June 4.—Gottlieb Williams, for the murder of Mrs. Elizabeth H. Miller.

1867, Aug. 29.—George W. Winnemore, for the murder of Mrs. Dorcas Magilton.

1869, April 8.—Gerald Eaton, for the murder of Timothy Heenan.

George S. Twitchell, convicted of the murder of Mrs. Mary E. Hill, his mother-in-law, was sentenced to be hanged April 8, 1869, but took poison on the morning of that day, and died before the time of execution.

1871, Feb. 1.—John Hanlon, for the murder of Mary Mohrman.

1875, Jan. 20.—Frederick Heidenblut, for the murder of Godfrey Knehle.

1877, May 17.—Patrick Quigley, for the murder of Mrs. Catharine Quigley, his wife.

1881, Jan. 6.—Daniel F. Sullivan, for the murder of Josephine S. Irvin.

1881, Jan. 6.—Patrick Hayes, for the murder of his wife, Bridget Hayes.

1884, March 4.—John McGinnis, for the murder of his mother-in-law, Mrs. Mary Reed.

**The House of Correction.**—The growing demand of prison management for available space was hampered to a considerable degree by the increasing number of prisoners committed for trivial offenses. The

necessity of an intermediate establishment between an almshouse and a prison was frequently enforced by the public journals, and occasionally the plan was presented by grand juries. At length the Legislature was induced to take some action. By act of April 14, 1868, City Councils were authorized to provide for a house of correction and employment, and to erect the proper buildings for the organization and management thereof. Under this authority Councils passed an ordinance, Dec. 29, 1870, creating a body to be managers of the House of Correction. In the succeeding year, June 2d, the Legislature passed an act making those managers a body politic and corporate, under the title of "The House of Correction, Employment, and Reformatian for Adults and Miors in the City of Philadelphia." Under this act the managers were empowered to receive all persons who were willing to be committed for not less than three months, nor more than twelve; any persons liable to be committed to a place of confinement, who might apply for the purpose; and also all persons convicted of being vagrants, drunkards, or disorderly street-walkers; also minors not under sixteen years of age "absenting themselves from school, or who shall disobey their parents' command, or be found idle in the streets," if arrested on complaint of parents, or any citizen; provided no boy shall be kept in the House of Correction beyond twenty-one years of age, or a girl beyond the age of eighteen. Provision was made that every person in the custody of the managers, unless disqualified by sickness or casualty, "shall be employed by the superintendent in quarrying stone, cultivating the ground, manufacturing such articles as may be needed for the prison, almshouse, other public institutions of the State or city, or for other persons, and at such other labor as shall upon trial be found to be profitable to the institution and suitable to its proper discipline and to the health and capacity of the inmates." Permission was given to employ inmates under direction of the superintendent outside of the grounds of the institution "for any of the departments or institutions of the city, or for such other persons as may be approved by the Board of Managers."

The first board of managers was elected by Councils in December, 1870, and consisted of A. H. Francisus (president), Thomas A. Barlow, William F. Smith, Samuel Leonard, Samuel Kilpatrick, Samuel C. Willets, John Fry, William M. Wilson, John Robbins, Jr., William A. Duff (secretary). A tract of ground was selected for the erection of the House of Correction on the west bank of the Delaware River and the south bank of Pennypack Creek, embracing a tract of from two hundred to three hundred acres. It was situate between the river and the State road, and not far from the Trenton Railroad, so that there was access by railroad, and, by the building of a wharf upon the Delaware, there was a convenient landing from the water. It was expected that a portion of this ground

could be employed for farming and other accommodation for industries. On this plot there was commenced, in 1871, an extensive range of buildings, the ground plan of which was something like a letter Y, with three cross-pieces below the crotch. The plans were drawn by James H. Windrim, architect, who superintended the construction until the buildings were well advanced, after which he was superseded by Frank Furness. The builder was Richard J. Dobbins. The buildings are of stone. They comprise a large main edifice, with keeper's residence and offices, and a central building for correction purposes, with eight extensive wings. In the centre, high above all, rises a steep roof-construction, which is visible for a long distance. It is the Anchor of Hope chapel. Its floor is on a level with the third-story floors of the adjacent buildings, and its ceiling is some thirty or forty feet above. This chapel is conveniently situated for access from all parts of the building, and it will hold two thousand five hundred persons. The hospital-rooms are upon the third story, also a school-room for boys. Connected with the house are very extensive kitchens, bakery, store-rooms, and shops. The institution has held more than two thousand inmates at a time. The men are put to labor in stone-quarries near by, or to work about the grounds filling up the low places, cultivating the garden, and gathering ice in the winter. Some of them were occupied for several months, about 1879-80, in building the great levee and embankment upon the Schuylkill, intended to keep the water from overflowing the low grounds at the Neck during great freshets in the river. They were also engaged in the repairing of South Broad Street, and in 1882 an arrangement was made by which the labor of the inmates was to be utilized for finishing the great reservoir for the water-works in East Fairmount Park. In the shops of the House of Correction are made clothing for the inmates, hats, shoes, etc. The women prisoners work at sewing and washing. The latter necessity is very extensive, and sometimes involves the cleansing of seven thousand pieces a week.

**House of Refuge.**—The establishment of the House of Refuge is to be ascribed to the efforts of the Society for the Alleviation of the Miseries of Public Prisons. In the course of their experience, closely connected with the character and weakness of the criminals and destitute, the members of this society were frequently and painfully impressed with the danger to which youths were exposed when their early associations were not restrained, and their impulses properly directed. The society considered the matter, and originated a plan for the establishment of a place of reformation for juvenile delinquents. The plan of such a society had already been demonstrated as a necessity in the city of New York. Under this example the Philadelphia society formulated a plan, and a meeting of citizens was called at the county courthouse on the 7th of February, 1826, for the purpose

of instituting a society to build and manage a house of refuge. Chief Justice William Tilghman was president, and Col. Robert Patterson secretary. Roberts Vaux read an address in which the part taken in the movement by the Society for Alleviating the Miseries of Public Prisons was explained. John Sergeant offered a set of resolutions, in which it was stated that at that time there were sixty persons in the Walnut Street prison under the age of twenty-one years. It was resolved that an association should be formed, to be called "The House of Refuge for Juvenile Offenders," and that the Legislature should be appealed to for a charter. To carry out the measure a committee was appointed, composed of Joseph R. Ingersoll, Alderman Abraham Shoemaker, Thomas Bradford, James C. Biddle, John Swift, Roberts Vaux, Dr. James Mease, George M. Dallas, and Robert Wharton. Application was immediately made to the Legislature for a charter, and on the 23d of March, 1826, an act of Assembly was passed, the preamble of which stated that an association of citizens had been formed in the city and county of Philadelphia for the humane and laudable purpose of reforming juvenile delinquents, and separating them from the society and intercourse of old and experienced offenders, with whom, within the prisons of the said city, they have heretofore associated, and were thereby exposed to the contamination of every species of vice and crime. The members of this society were incorporated and made a body politic in law by the name, style, and title of the House of Refuge. Membership in the corporation was assured to any person who should pay the sum of two dollars annually during the time he made such contributions. Any one who paid ten dollars annually for six years, or fifty dollars in one sum, would become a member for life. The directors were twenty-one in number, elected at the annual meetings. Afterward, in 1832, an act was passed giving the appointment of two managers to the mayor of the city, and three to the Court of Quarter Sessions. The managers were to provide a suitable building and establish regulations for the religious and moral education, training, employment, discipline, and safe-keeping of the inhabitants of the house. They were entitled to receive at their discretion children taken up or committed as vagrants or upon any criminal charge, or duly convicted of any criminal offense upon commission of Court of Oyer and Terminer, or Court of Quarter Sessions, to which the Mayor's Court was afterward added, or of aldermen or justices of the peace, or managers of the almshouse. There were some changes in these regulations in after-years, the most important of which gave the managers a right to receive males under twenty-one years of age, and females under eighteen, committed by an alderman or justice on complaint of a parent, guardian, or next friend of children, on proof of vagrancy, or incorrigible or vicious conduct. On the 2d of March, 1827, the Legislature granted

five thousand dollars immediately and two thousand five hundred dollars on the 1st of January, 1828, and a like sum on the 1st of January, 1829, and the county commissioners were ordered to set aside ten thousand dollars, to be paid in two installments, toward the purchase of the site and building of the house. After that was paid the commissioners were to pay out of the county funds five thousand dollars a year for keeping of the house, and repairs for five years. Subsequent appropriations were made in different ways. In 1835 the act in regard to the commission and confinement of infants was amended and changed in some particulars, and it was directed that the judges of Common Pleas and the District Court and the recorder of the city should alternately visit the house at least once in two weeks to examine into the commitments and causes, and, if satisfied with them, to indorse on the commitment of the magistrate that the infant should continue there or be discharged. The managers of the society obtained subscriptions during the year 1826 to the amount of eight thousand one hundred and four dollars and forty-one cents. Encouraged by this success and the legislative assistance, they entered into the work. For the purposes of the institution they purchased, for five thousand five hundred dollars, the piece of ground which had been held for the purposes of the botanic garden. It was situated at the northwest corner of Ridge road and Francis' Lane [afterward Coates Street, and now Fairmount Avenue]. Upon this ground the managers, with excellent discretion to avoid subsequent trouble in regard to the opening of streets, laid out an inclosure west of the Ridge road, and on the line of Schuylkill Eighth [Fifteenth] Street, and extending to the line of Schuylkill Seventh [Sixteenth]. None of these streets were at that time opened above Vine or Callowhill Street. The plot taken for the purpose was four hundred feet in length from east to west, and two hundred and thirty-one feet in breadth from north to south. It was inclosed on all sides with a stone wall two feet thick and twenty feet high. The back part of the building was upon Coates Street, but the unpleasant uniformity in the shape of the wall was avoided by a rise in the central portion in the shape of a pediment, which gave to the wall somewhat the appearance of a front of a large building. There were tower-like projections at each corner. The wall was entirely of rough stone. The principal front was upon the north, and fronted upon a street then called Howard Street. It was in appearance much like the wall on Coates Street, except that the central building rose higher and was of two stories and an attic, and a large central door. The low towers at each end rose a few feet above the wall, and were capped with high roofs. Long narrow windows were opened at distances along the whole front. The architecture was simple but substantial. In the main building were the superintendent's residence, rooms for the managers, libraries, etc. The dormitories and shops were in

the inclosure. There were wings on each side of the main building, three stories in height, which contained one hundred and seventy-two cells, four feet by seven each, for separate lodging-rooms, which were well lighted and ventilated. The main building was ninety-two feet front and thirty feet deep. The workshops were low buildings, running parallel with the east and west walls. The corner-stone of the House of Refuge was laid on the 21st of June, 1827, and the building was carried on with so much energy that before the end of the year it was under roof.

The whole cost of the lot and buildings was \$38,025.16. The house was exhibited to the public and formally opened Nov. 29, 1828, by an address by John Sergeant, the president of the institution. The first subject committed to the discipline of the house was received on the 8th of December of the same year. He was a boy fourteen years of age, and committed by the mayor. A library of several hundred volumes was contributed at an early period, mostly by the booksellers of the city. The regulations of the house were exact. At a quarter before five o'clock in the morning the bell rang, as a notification to the inmates that it was time to rise for the day. By five o'clock the dormitory doors were opened and the inmates sent to their ablutions, afterward to morning worship, and then to school. Seven o'clock was the breakfast hour, and in half an hour they were sent to work. There they continued until noon, which was the dining hour. After dinner they heard lessons or lectures until one o'clock, when they returned to the shops. At five o'clock they went to supper, after which half an hour was allowed for recreation or play. School from half-past five o'clock to a quarter before eight, followed. Then there were evening prayers. The boys and girls were sent to bed before eight o'clock, and the doors locked, and they were left to their slumbers. On Sundays there was a Sunday-school and religious services, morning and afternoon. Clergymen of different denominations preached by turns in the chapels, and the services of the superintendents of the schools were gratuitously given. The boys were employed at book-binding, shoemaking, winding bobbins, making brass nails, umbrellas, furniture, cane chair-seats, and bonnet-reeds. The girls were employed at sewing, knitting, cooking, and other domestic duties about the establishment.

Some time after the original building was finished additional cell buildings were erected for girls, and there were then accommodations for seventy females. The House of Refuge was in considerable favor for some years. It was a fact that the expenses of the almshouse and penitentiary had been reduced after its establishment. It was asserted that vagrant children had become less numerous in the streets, not merely wanderers, but children who professed to beg and were ready to steal. The judges of the courts, in their charges to the grand juries, dwelt upon the

advantages of the institution, and the grand juries made favorable mention. Four thousand six hundred dollars were contributed to the support of the house by the executors of William Mackenzie, in 1829. Frederick Kohne also made a large bequest in favor of the institution.

JAMES J. BARCLAY.

In the course of years the institution became crowded. There was a difficulty also in regard to the commitments of colored children. The prejudices of the white children were very strong against such associates, and their feelings at times were unpleasantly manifested. These circumstances induced the managers at as early a time as they could arrange to obtain the funds to make preparations for the construction of a building for colored children. A lot of ground was purchased upon William [Twenty-fourth] and Parrish Streets, extending to Twenty-second and to Poplar Streets. Here, upon a lot four hundred feet by two hundred and ten in width, the colored department of the House of Refuge was opened on the 1st of January, 1850. The premises were surrounded by a high wall, and the interior fitted up with work-shops and other buildings. This was the commencement of a movement to take the institution from Fifteenth and Coates Streets, which was fully accomplished in after-years. The managers built on the eastern portion of the lot, extending from about the line of Twenty-third to Twenty-second Streets, the House of Refuge for white boys. At a later period there was built on the west side of Twenty-second Street and north side of Poplar Street, and extending to South College Avenue, a

House of Refuge for girls, in a brick building separated from the department for white boys by the width of Poplar Street. This building is, however, connected by a bridge to the building south of it, an arrangement of convenience to the officers of the institution. This building was dedicated on the 20th of January, 1872. The property at Fifteenth and Coates Streets had been disposed of before that time.

James J. Barclay, president of the institution, has held that position for forty-eight years, and was one of its founders. On his ninetieth birthday, Jan. 15, 1884, a public reception was given him at the House of Refuge, a ceremony which was a just tribute to his arduous and honorable services to that as well as to other charitable and reformatory institutions. Among those who on that occasion congratulated him upon his ripe age, his useful life, and the general esteem in which he is held by the community, were many of the leaders of commerce, law, and society in this great city.

## CHAPTER XLV.

### PUBLIC SQUARES, PARKS, AND MONUMENTS.

#### PUBLIC SQUARES AND PARKS.

THE title of the city of Philadelphia to the five public squares within the boundaries of the city, as originally laid out between Vine and Cedar Streets and the Delaware and Schuylkill Rivers, depends, with the exception of a direct grant by patent of the Southeast Square for a public burying-ground, upon a statement issued as the explanation of a map. The earliest known plan is "a portraiture of the City of Phila. in the Province of Penna. By Thos. Holme, surveyor General. Sold by Andrew Sowle in Shore ditch, London." At what time this map was published is not known. It might have been in 1682, but was more probably in 1683. It shows some things which are evidence that the exact position of the streams was not clearly understood. For instance, Dock Creek is represented as discharging itself into the Delaware between Spruce and Pine Streets. The Cohoquenoque, or Pegg's Run, is laid down as commencing near the intersection of Arch and Broad, and flowing northeasterly, crossing Vine Street about the present intersection of Franklin Street, between Seventh and Eighth, and so bending northeasterly to the Delaware, which it enters at about the right position. While a portion of this course was correct, that which gave it rise at Broad and Arch Streets was wrong. Broad Street on this map is the twelfth street from the Delaware, there being eleven parallel streets on each side of it between the Delaware and the Schuylkill. The Centre Square is laid down at the intersection of Twelfth Street and Market Street. Four

smaller squares, with trees upon them to show their uses, are also marked. One, afterward called Southeast and then Washington Square, commenced at the southwest corner of the sixth street from the Delaware and the street afterwards known as Walnut Street. It was a perfect square. It extended on Walnut Street beyond Seventh Street, and about half the way to Eighth Street. Southward it ran toward Spruce Street, which it did not touch, but extended about three-fourths of the distance to the latter. It was, therefore, only bounded by two streets, and it closed up the passage on Seventh Street entirely. The distance from Walnut to Spruce is greater than between any other two streets running east and west in the old city. The actual reason of the width is that Dock Creek (although this plan does not show it) entered the Delaware north of Spruce Street, and just where any street laid immediately adjacent to the southern boundary of the Southeast Square would have come out. To avoid this, Spruce Street was placed far enough south of the square to secure a clear passage.<sup>1</sup>

The Northeast Square was situate upon Sixth Street, between Race and Vine Streets, and along the two latter, crossing Seventh and about half-way to Eighth Street. The Southwest Square upon this plan is laid down between the sixth [Seventeenth] and eighth [Fifteenth] streets from the Schuylkill. It extended eastward from Schuylkill Sixth, and crossed and blocked up Schuylkill Seventh [Sixteenth] Street. It was bounded by the accessible streets Schuylkill Sixth and Walnut, and occupied relatively the same position as the Southeast Square.

The Northwest Square was bounded on the west by Schuylkill Sixth [Seventeenth] Street, and on the north and south by Vine and Sassafras Streets. It extended across Schuylkill Seventh, and half-way to Schuylkill Eighth Streets. These squares upon the plan appear to be of the same size, but by survey some difference is now shown. The Southeast Square is 540 feet north and south by 540 feet 4 inches east and west, and contains six acres and two roods. The Northeast Square is 632 feet north and south by 543 feet 6 inches east and west, and contains seven acres and three roods. The Southwest Square is 540 feet 4 inches north and south by 540 feet 4 inches east and west. The Northwest Square is 632 feet north and south by 540 feet east and west, and contains seven acres and three roods.

It will be observed from this statement that the two western squares were not intended to be situate where they are now. They were at some time after the "portraiture" was published moved westward, so that their eastern boundaries were upon Schuylkill Fifth [Eighteenth] Street, and they extended westwardly, crossing Schuylkill Fourth [Nineteenth]

Street, nearly to Schuylkill Third [Twentieth] Street. When this alteration was made is not exactly known. It must have been within a year or two after the "portraiture" was published. Within about two or three years afterward it is supposed that Holme issued "a map of the improved parts of Pennsylvania, in America, begun by Wil. Penn, proprietary and Governor thereof in 1681." It contains plans of the three counties of Philadelphia, Chester, and Bucks, as far as then surveyed and laid out. Unfortunately, there is nothing upon it to show the date of its publication. There is a letter from Philip Ford, in London, dated 21st of the 1st month, 1684-85 (probably March 21, 1685), in which he says, "As for the map of the city it was needful that it should be printed. It will do us a kindness, as we were to loss for something to show the people." Mr. Reed assumes that the map thus referred to was the "portraiture," which he says was published by Mr. Penn's printer, of the Shoreditch (Andrew Sowle). If this supposition is correct, the "portraiture" could not have been published until some time in 1685.

Mr. Reed says that the plan of the city, Broad Street being the twelfth street from each river, etc., was altered by Benjamin Eastburn when he was appointed surveyor-general; but this must be a mistake, as Eastburn was appointed Oct. 29, 1733. There is on record a certificate of warrant and survey to Anthony Burgess from Thomas Holme, surveyor-general, dated 25th of the Eighth month (October), 1684, for a lot of ground "situate between the eighth street from Schuylkill and the Broad Street on the eastward," showing that Broad Street was the next street east of Schuylkill Eighth (now Fifteenth) Street at that early time. There is a record of survey made Oct. 9, 1684, and recorded April 11, 1687, for a lot to Josiah Elfreth, "bounded eastward by the Market Square, and westward by the eighth street from Schuylkill," and of a warrant and survey for lot adjoining, between the same streets, to William Dilwyn, surveyed Nov. 29, 1684, and recorded 29th of June, 1686. Market Square seems to have been the original name given to the ground at the intersection of Market and Broad Streets, afterward called Centre and Penn Square.

If there was a dedication of the ground of the public squares to the use of the city, it was never made by formal warrant or patent. Holme's portraiture was accompanied with "a short advertisement upon the scituation and extent of the city of Phila." It was in illustration and explanation of the small map, or portraiture, and is written in the third person, and not in the name of William Penn. Thus it is said, "the Governor, as farther manifestation of his kindness to the purchasers, hath freely given them their respective lots in the city without defalcation of any of their quantities of purchased lands, etc. . . . The city is so ordered now by ye Governor's care and prudence, that it hath a front to each river. . . . The city, as the modell shews,

<sup>1</sup> The distance from Walnut to Spruce Street is seven hundred and seventy feet. The distance from Chestnut to Walnut Street is four hundred and seventy feet. The square from Race to Vine Street is six hundred and thirty-two feet.

consists of a large front street to each river, and a High Street near the midel from front or River front, of 100 foot broad, and a Broad Street in the middle of ye city, from side to side, of the like bredth. In the center of the city is a square of 10 acres. At each angle are to he houses for publick affairs, as a Meeting-House, Assembly or State House, Market House, School House, and severall buildings for public concerns. There are also in each quarter of ye city a square of 8 acres, to he for the like uses as the moorfields, in London." These statements, made apparently by Holme, are all that there is to show that the Centre Square, and the Northeast, Northwest, Southeast, and Southwest Squares were dedicated to public use by William Penn. Legally there is no doubt of the title of the city, which has been confirmed by decision of the Supreme Court.

**Centre or Penn Square.**—The square in the centre of the city was designed, it will be observed, to be occupied at each angle with houses for public affairs. In the large map of Pennsylvania, by Holme, this proposed disposition of the inclosure is made very apparent in the plan of the city drawn on the margin. There is a rectangular house with a steeple and weather-cock planted in the middle of the square at the intersection, and near the corners are four smaller buildings. In August, 1684, the Quarterly Meeting of Philadelphia agreed that a meeting-house should he huilt in the Centre Square, to he of brick, sixty feet long and forty hroad. In 1686 there was a disposition to change the dimensions to fifty feet long and forty-six feet wide, but Rohert Turner, in a letter to William Penn, Aug. 30, 1685, published in the second account of Pennsylvania, says,—

"We are now laying the foundation of a new hrick meeting-house in the Centre (sixty feet long and about forty feet broad) and hope soon to have it up, there being many hearts and hands at work that will do it." It is not known how long this meeting-house was in use.

The yearly fairs established shortly after the settlement were held most prohably in the eastern part of the city. As they were occasions of great gatherings of people to the benefit of husiness, it was natural that there should he some competition for the henefit of having them near certain places. In April, 1688, the Provincial Council received "The Petition of the inhabitants at ye Center of Philadelphia, Requesting ye fayr to be kept there;" answered, "The next fayr will be granted to be kept at ye center." The proposition did not meet with the approval of the pcrsons who had been benefited by the previous holding of fairs in the eastern neighborhoods. They went so far as to print something in the shape of a handbill, perhaps in reference to the presumption of the Centre Square people in asking that a fair should be held away from the town. The attention of the Council was drawn to this matter on the 16th of May, in the same year. "A summons was sent, Directed to Thos.

Clyfford, messenger, for the summoning ye Subscribers of a Contemptuous Printing Paper, touching ye keeping of ye fair at ye Centre, where it was ordered by ye Govr. and Council to be kept." The messenger made return the next day that he had summoned "the subscribers of ye contemptuous printed advertismt. . . . Several of ye subscribers Excusing themselves. The Depty Govr. and Council, after Re-proveing them, did pardon all those who subscribed to what was endorsed on ye back of one of ye printed papers." Two days afterward it was ordered that inasmuch as the practice was to hold the fairs on the latter days of the sitting of the General Assembly, it was found that the public husiness of the government was impeded. For this reason it was ordered that the fair should be kept hereafter on the 20th of May; "and it is further Ordered yt an Additional fayr he kept at Phila. at ye Centre to he held the 30th day of ye ncxt Sixth Month" (August). In May, 1698, the Assembly voted "that the Fair at the Centre of *Philadelphia* is of little Service, but rather of ill Tendency. It was put to the vote that the same may be recommended to the Governor and Council, to "put the said Fair down." The reply of Lieutenant-Governor William Markham to the request of the Assembly is thus stated in the Council minutes: "To ye sd, that the Centre Fair was a nuisance, hee told ym yt he wold Leave yt to the care of ye justices of ye peace." It is likely that the "Fair at the Centre" was suppressed about that time, since no subsequent reference to it has been observed.

Centre Square remained without any inclosure for more than one hundred years. The short-cut from Market Street east to Market Street west went through it, and if there was any necessity of passing by the line of Broad Street the way ran straight from north to south. In 1799 it was determined to construct the city water-works for the supply of the inhabitants from the Schuylkill River. The pumping works were at Chestnut Street Wharf, Schuylkill, and the Centre Square was chosen as the situation for another pumping house and reservoir. The works went into operation in January, 1801. The Centre House, with its pillared portico and dome, was long a conspicuous object, and could be seen upon Market Street anywhere between Broad Street and the Delaware. Gradually the grounds were laid out in circular shape, fenced in with wooden pickets, which were neatly painted white. The streets were continued around the inclosure as far north as the line of Filbert Street, and southward to Olive Street. The ground was planted in grass and with trees, and in 1809 the great attraction of the fountain with the figures of a nymph and a swan were added. They were placed upon a mound of stone in front of the main entrance to the central building, and were exceedingly attractive for a long time.

After the square had ceased to be used by Friends for their meetings, it was for many years a mere com-

mon, and the owners of fast horses gradually put it to the uses of a race-course. The earliest notice of this disposition of the ground appeared in 1760, when it was advertised that by subscription a "piece of plate (about £50 value) would be run for at the Centre House, near Philadelphia." The races were nominally two-mile heats, best three in five, but as twice around the track was considered a mile the distance was actually short. A gallery for spectators was erected by a man named Wilson, who charged seven shillings sixpence for admission. In 1761 two days, and in 1764 four days, were devoted to the races. A jockey club was formed in 1767, and the four days of racing were given under its auspices.

Among the events was a gentleman's subscription-

owner of "Creeping Kate" and "Northumberland." "Angelica" contested in fleetness with "Regulus" and "Billy." Very properly the ladies' purse of fifty pounds was won by "Lady Legs." The races were continued at the Centre Square probably up to the Revolution. The Jockey Club, in 1773, offered the Whim plate and the Ladies' plate to winning horses, and the result of the races was duly reported for the information of the public. For many years Centre Square was the common hanging-ground of the city and county. Convictions, with capital punishment, were, before the Revolution, frequent; and the gallows was probably a permanent fixture for many years. This use may have continued up to the time when the Centre House was erected for the use of the

CENTRE OR PENN SQUARE.  
[Site of the new City Hall, 1834.]

purse of one hundred guineas, four-mile heats, a sweepstake for all horses owned twelve months by the persons entering them, a fox-hunt, and a brilliant assembly, for a purse of fifty pounds given by ladies, and a watch for a vintners' and innholders' purse of fifty pounds. "Jockeys," the directions stated, were "to appear with neat waistcoat, cap, and top-boots. There will be ordanaries every day, and it seems to be the intention of Gentlemen to dine together, as is the custom in England, rather than be divided by private engagements." In 1770 the Jockey Club purse of three hundred pounds was won by James De Lancey's horse "Lath." The names of the horses were very much like those chosen by sportsmen of the present day. The Hon. Horatio Sharp was the

water-works. During the period of the Revolutionary war Centre Square and the common in the neighborhood were the ordinary grounds for company and regimental drill and exercise. Reviews were held there in the early part of the Revolution by various high military officers. In 1783 the French army, under Count Rochambeau, six thousand strong, on their way out Market Street to Yorktown, encamped at Centre Square and on the common. They pitched their tents, kindled their camp-fires, and attracted as visitors thousands of the people of the city, who wondered at the brilliancy of the white and pink uniforms and the strange appearance of the foreign soldiers, whose language few could understand.

Gen. Wayne also encamped there on his return

from the Western expedition against the Indians. It was the parade-ground of McPherson's Blues and Shee's Legion. Dunlap's company (the First City Troop), Capt. John Morrell's Volunteer Green Cavalry, the Second Troop, under Capt. Thomas Cadwalader, and many other organizations—Fencibles, Rangers, Fusileers, Guards, Blues, Grays, Greens, artilleryists, cadets, horse infantry, and pikemen—exercised in the neighborhood.

After the Revolution the Centre Square was the place of interest when the volunteer and militia paraded. On the 4th of July, for many years, tents, booths, and stands were set up there, for the sale of eatables, such as pickled oysters, cakes, gingerbread, spruce beer, porter, ale, strong beer, and in some places the fiery liquors, gin, rum, Scotch or Irish whiskey. The American whiskey distilled from wheat or rye was scarcely known in those days. In time these assemblages became a great nuisance, and Zachariah Poulson, in the *Daily Advertiser* of July 4, 1821, printed the following expressions of righteous indignation:

"Centre Square has too often on this day been disreputably distinguished. Petty gambling establishments abound there in the open day, to which apprentice-boys and others are enticed. They there become initiated in the wretched school of gambling, and may possibly, at a future period, trace their ruin to the deviations at Centre Square. Some of the harpies well known in the city were on the ground with their tables yesterday afternoon, pursuing their abominable vocation; should they return to-day let an example be made of them."

This remonstrance may have produced some immediate effects, but in the succeeding years the evil was renewed. Mayor Robert Wharton determined, in 1823, to put an end to the disgraceful scenes which had occurred for so long at Centre Square on Independence day. Shortly before the 4th of July he issued a proclamation, in which he said,—

"The scenes of debauchery, gambling, and drunkenness, with many other acts of excess and riots which annually take place on the 4th of July, in and about the booths, tents, and other unlawful restaurants on the public streets and grounds of the city, have for years past been to the mayor, and has, no doubt, been to many other citizens, a source of deep regret; and as his military brethren, who assemble under arms to celebrate the anniversary of our independence, remain but for a short period on the parade, and can obtain refreshments from sources less impure, he confidently hopes that the prohibition about to be enforced will not be inconvenient to them, but that they will see the propriety of banishing from our city limits causes of such ruinous effect to the morals and future usefulness of the rising generation."

The mayor therefore forbade the erection of the booths and tents on Centre Square, but the liquor-sellers and gamblers removed to Bush Hill, where they soon became more objectionable than ever.

The engine-house in Centre Square ceased to be useful for the purpose originally designed when the water-works at Fairmount were fully established. After 1823 the Centre House, as it was usually called, served no other purpose than a place of storage for oil, necessary to be used in the public lamps. There was at one time a movement to grant the use of the building to the American Philosophical Society as an astronomical observatory, but for some reason, prob-

ably lack of funds for suitable instruments, the matter fell through.

About the year 1828 an agitation commenced, principally under the influence of flour, grain, and liquor-dealers, on Market Street west of Broad, to have the Centre House removed, on the plea that it was an obstruction to business, and this was done. By resolution of the Councils, on May 19, 1829, the name of the inclosure was changed to Penn Square, and on Aug. 28, 1828, Mr. Toland, chairman of the Council committee, reported that they had directed the city commissioner to take down the fence and remove the rubbish from the square. In accordance with resolutions of Councils, numerous of the tall trees were cut down, and Broad Street and Market Street were carried through the inclosure, which thus was divided into four small parks, bounded on the exterior by Juniper, Oak, Filbert, and Olive Streets, surrounded by picket-fences, and having two rows of trees on the sidewalks. When the Boston City Guards visited Philadelphia about 1833, they camped on the Southwest Penn Square, and many years afterward the Pennsylvania Horticultural Society held an exhibition on the southeast square, in tents. In 1852 Councils passed an ordinance that an iron railing or fence be erected around Penn Square, of a suitable height from the pavement, and secured in and resting upon a stone basement.

The ground originally embraced in Centre Square was not bounded by any street, and the "square" was in reality a circle. When it was inclosed as a portion of the water-works, thoroughfares were opened around it. It is not easy to fix the date of the establishment of Juniper Street and Filbert Street.<sup>1</sup>

Regarding the streets on the south and west of the Penn Squares, it appears that on May 11, 1846, Councils authorized the mayor "to cause to be laid off, and marked out with stakes or otherwise, two passages or strips of ground, each of fifty feet in width, one of them over and along the western edge or boundary of Penn Square, the whole length of the square from north to south; the other over and along the south edge or boundary thereof the whole length from east to west, and also to cause so much of the whole eastern edge or boundary of said square to be marked off agreeably to the aforesaid plan, as will make the width of Juniper Street along the said eastern boundary to be fifty feet." From this it appears that Juniper Street was narrower than the described width, probably of the same width as is now occupied by that street above and below the square, forty feet. The southern street, which was called Olive Street,

<sup>1</sup> The enlarged plan of the city on Clarkeon & Biddle's map (1762) extends from the Delaware no farther west than Eighth Street. On its margin is a small plat of the city, which presents Centre Square as a rectangular inclosure at Market and Broad Streets, but with no designated street around it. On Varlo's map, published subsequent to 1790 and before 1800, the public square is bounded on the east by a small street (Juniper), and on the north by Filbert, but no streets are indicated on the southern and western faces.

and the western street, called Oak Street [afterward Merrick Street], were taken entirely from the ground of Penn Square, thus reducing considerably the size of that inclosure.

**Southeast or Washington Square.**—After the Southeast Square was abandoned as a burial-ground, about 1794–95, years elapsed before any attempt was made for its improvement. In 1802 a petition was presented to City Councils asking that thirty feet of Potter's Field, on the south side of Walnut Street, should be taken out of the inclosure, and that two rows of trees be planted in addition to the row already there. The committee to which the subject was referred, made report that they had viewed the ground, that in their opinion "public walks in a city" were very desirable, and that the prayer of the petitioners ought to be granted. They recommended that a fence should be set on the west side of Sixth Street, five feet within the row of trees, and that another row of trees should be planted there; also that the wooden buildings at Sixth and Walnut Streets, used by the city commissioners, be removed to the corner of Seventh Street (probably the southwest corner), and that the corners should be rounded, commencing at the distance of one hundred feet from the corner on each side. Three years afterward a proposition was made that a public market-house be built on the Southeast Square, but it was never carried into effect, although a general permission for the erection of market-houses was given the municipality by the act of the Legislature, March 19, 1804.

In November, 1805, it was directed by Councils that in order to complete the improvements of the square the city commissioner should erect side-walls to it, and cover the little stream crossing it diagonally from Walnut to Sixth Street to the distance of thirty-five feet south from Walnut Street, and lay the bottom with condemned logs, or cover or arch the same, so that the flow of water be not impeded. Another effort to obtain possession of the ground was made about the same time by the University of Pennsylvania, which solicited permission to erect a building in the square for the accommodation of their medical school. This request was not granted.

In 1813, under the authority of City Councils, an advertisement appeared in the *Aurora*, requesting proposals for the renting of the southeast square and the lots on Lombard Street between Ninth and Eleventh, south side, as pasture grounds during the pleasure of Councils. In 1816 it was ordered that the city carpenter-shop on Locust Street should be removed to Lombard Street, and the rubbish used to fill up the square. In the previous year Councils adopted a resolution that as soon as the owners and occupiers of property in the vicinity of the Southeast Public Square would pay fifteen hundred dollars into the city treasury a culvert should be built in the square, and the paving-stones, lumber, and dirt should be removed from the line of Seventh Street.

An open fence was to be put upon the Seventh Street front, and the other fences around the square were to be repaired. Before that time and for some years the ground on the line of Seventh Street and west of it had been used as a cattle-market. The occupants of the fine houses on Sansom Row found this to be a great nuisance. Councils ordered, in May, 1815, that the cattle-market should cease at that place, and it was transferred to the hay-market, in Sixth Street, above Callowhill. In the succeeding year (1816) it was resolved that the square should be fenced in according to the boundaries in the patent. A space for a street was left on the west side, extending from Walnut Street southward, which was named by Councils Columbia Avenue. In the same year Mr. Leaming, of Select Council, proposed that the four squares should be named for Washington, Franklin, Columbus, and Penn, but he did not designate the squares to which each title should be given. It was part of his plan that in each square there should be erected a statue in bronze of the distinguished character after whom the inclosure was to be named. Common Council agreed to this plan, but Select Council did not concur. Nine years afterward the proposition to give new names to the squares was more favorably received, and by ordinance of May 9, 1825, the Southeast Square received the name of Washington Square. Within a year or two afterward the improvements were sufficiently advanced to permit the opening of this square for public use. George Bridport, artist and engineer, was intrusted with the task of laying out the square for public use about the year 1817 or 1818, and Andrew Gillespie, gardener, superintended the planting of the trees. For several years the ground was inclosed with a white paling fence. In 1831 a committee of the Horticultural Society of Pennsylvania, in its report of the gardens in the neighborhood of Philadelphia, described Washington Square as follows:

"It is situated south of Walnut, and above Sixth Street, in the southeastern part of the city, and contains eight acres, all scientifically intersected with very handsome and spacious walks. The figure of the whole is as follows: Four diagonal walks, thirty feet wide, leading to a circular plot in the centre of one hundred and twenty feet diameter. Around this is a walk forty feet wide, and another circular walk twenty feet wide extends to within twenty-five feet of the side of the square. Where this walk intersects the diagonal are circular plots thirty-five feet in diameter, thus forming a handsome recreative and interesting promenade amongst fifty varieties of trees, seven of which are European and forty-three native, a large proportion of which are from distant parts of the Union. Many of the *Acers* are very handsome trees, as also several varieties of *Prunus*; two of the latter were introduced by Lewis and Clark from the Rocky Mountains. The one is conspicuous for its foliage and fruit; the other, called *sweet-scented cherry*, has very large racemose spikes of fragrant flowers, and is much admired for its beauty; the majestic *Atlantus*, with several varieties of *Pines* and *Cypress*, all of the first and second class of trees, and admired for their foliage, flowers, and shade. Hence instruction with respect to our own productions is placed before the public, and at the same time it is ascertained what trees are best adapted to our immediate climate, salubrity is diffused throughout the neighborhood and to the city generally, and recreation afforded to the assiduous citizen, where he may view four hundred trees in the midst of a populous and busy city. These trees are in a very healthy and thriving condition, and well trained by Mr. Andrew Gilles-

pie, who is a judicious arborist. . . . The whole is beautifully kept, and well illuminated at night with reflecting lamps till ten o'clock, all showing the correct and liberal spirit of our city."

After the centennial celebration of Washington's birthday, in 1832, the feeling that there should be erected a monument to his memory was greatly increased, subscriptions were taken up, and the gentlemen who had charge of the business were so much encouraged that it was believed that, if the corner-stone of a monument was laid with public ceremonies, the people would feel assured that the structure would be built, and that there would be no trouble afterward in obtaining subscriptions. The most suitable place for the erection of such a monument was considered to be Washington Square, and on Feb. 19, 1833, Councils passed an ordinance authorizing the erection of the monument in that square, the plan to be submitted to and approved by Councils. The desire was that the corner-stone should be laid on the 22d of February, but the ordinance was passed at such a short time previously that there was not time to arrange the details of the procession and to make it as large and imposing as it should have been. The military portion, under Maj.-Gen. Patterson, was the most interesting part of the parade. There were three troops of cavalry, five companies of artillery, and ten companies of infantry. The tradesmen turned out slimly. The marble masons had prepared the corner-stone in the procession of 1832. They marched after the wagon on which the gift was drawn by four white horses. The hatters, agriculturists, and gardeners, tin-plate workers, tobacconists, journeymen cabinet-makers, silver-plate workers, cordwainers, saddlers, and the Youths' Library and Literary Association took part in the civic procession. The place fixed for the reception of the corner-stone was in the middle of the centre plot. In making the excavation for the purpose, some of the mouldering relics of the old Potter's Field were disturbed. The mayor of the city was chief marshal of the procession. A prayer was offered by the Rt. Rev. Bishop White. Dr. W. C. Draper, on behalf of the Washington Monument Association, delivered the introductory address, and the oration was pronounced by David Paul Brown. The corner-stone was then, with due ceremonies, placed upon the foundation and covered up, and there has since remained, the monument never having been built.<sup>1</sup>

<sup>1</sup> The following articles were deposited in the stone at that time:

1. A neat copy containing the Constitution of the United States, and of the State of Pennsylvania, with the names of the executive officers, members of Congress, the executive officers of the State, and of the corporation of the city of Philadelphia, and an almanac for 1833. Presented by Isaac Elliot, Esq.
2. A copy of the oration on the death of Charles Carroll of Carrollton, by John Sergeant, Esq. Presented by Isaac Elliot, Esq.
3. A description of the centennial procession as it occurred in 1832.
4. An emblematical sketch of the centennial celebration. By William J. Mullen, Esq.
5. Washington's Farewell Address on satin. Presented by the committee of arrangements.

An ordinance to authorize the lighting of Washington Square by gas was passed in August, 1837, and it was subsequently inclosed by an iron palisade. Within the past two years this railing has been taken down, a large number of the trees have been removed, and flag-stone walks have superseded the gravel paths.

**Northeast or Franklin Square.**—This square remained an open ground for many years after it had been dedicated to the city by the proprietary. If Councils believed it to be of any value, no measure was taken to exercise authority over it. A minute of Council, dated April 21, 1721, indicates that it was leased to Ralph Assheton "for 21 years, at the rate of 40 shillings per annum, to be paid to the corporation, to commence March 25, 1724, which is agreed to by this board, he leaving the same at the expiration of said time well and sufficiently fenced in with good rails and cedar posts." It is not clear under this minute whether Assheton's lease was to run from 1721 or 1724, but possibly the fencing of the square was considered equivalent to three years' rent, after which the money compensation might be fairly asked. Assheton must have abandoned the lease, as on June 1, 1741, Thomas Penn issued a warrant to Benjamin Eastburn, Surveyor-General, which recited, "Whereas, Philip Boehm and Jacob Seigel have requested that we would be pleased to grant them to take up in trust, to and for the use of the German Congregation in the city of Philadelphia, a vacant lot or piece of ground within our said city, situate between the Sixth and Seventh Streets, bounded northward by Vine Street, eastward and westward by vacancies, and southward by the ends of Sassafras Street lots, containing in length north and south 306 feet and in breadth east and west 150 feet, for which they agree to pay for our use the sum of £50, together with the yearly quit-rent of 5 shillings sterling or the value of the said quit-rent, the coin current," etc. The German congregation spoken of was that of the German Reformed Church, of which the pastor was John Philip Boehm, who preached alternately in Philadelphia, Germantown, and Whitpain.

The Penn family had no moral or legal right to grant the property, but the congregation nevertheless went into possession of the square, which they at once began to use as a burying-ground.

In 1745 thirteen pounds was paid to the receiver-general for four years' interest and four years' quit-

6. A beautiful specimen of an Anthracite case, inclosing a portrait of Gen. Washington in 1797. Presented by the Messrs. Kerks.

7. A silver medal, struck off during the centennial procession, and presented by the gold and silver artificers for the corner-stone.

8. Several specimens of composition coin. Presented by Mr. William Robinson.

9. Several specimens of copper coin. By several citizens, of the years 1771-72, 1771, 1791, 1797, etc.

10. A print representing the Surrender at Yorktown, and a full statue of Gen. Washington.

11. Several newspapers of the day.

12. The programme of the procession for laying the corner-stone. By the committee of arrangements.

rent. In December, 1763, John Penn was paid £189 7*d.*, in full, for the lot, and a patent was issued on the 14th of December. The ground chosen by the congregation was one hundred and fifty feet in width on Vine Street. It was taken out of the middle of the square, leaving vacancies on each side, so that the eastern and western boundaries were about at equal distance from Sixth Street and from the western boundary of the lot, no street then being open on that side. The depth (three hundred and six feet) extended less than half a square toward Race Street, where it was bounded by what the Penns called the back end of Race Street lot, meaning the back ends of the ground which they would have been willing to sell as building lots. During the Revolution the military authorities erected on this square the public magazine or powder-house. In November, 1782, the German Reformed congregation presented a petition to the Assembly, stating that for fifty years it had been using a lot on the south side of Vine Street, between Sixth and Seventh, for the purposes of a burial-ground; that, owing to the increase of the congregation, it had often happened that encroachments were made on other lots in the said ground for the purpose of burying the dead, and they asked leave to bring in a bill to vest a portion of the square in the congregation as a place of interment. The Assembly did not grant this request, and in 1797 City Councils, acting on the opinion that the deed to the German congregation by Thomas Penn was illegal, passed a resolution that suit be instituted for the recovery and possession of the ground. This order was not complied with, and two years later another of the same purport was adopted. It might have been because of the representations made to the Assembly that the burying-ground on the Northeast Square was filled, that a grant was made on Feb. 19, 1800, to the Germau Reformed congregation of a lot, bounded on the south by Mulberry [Arch] Street, on the east by Schuylkill Sixth [Seventeenth] Street, on the north by Cherry, and on the west by Schuylkill Fifth [Eighteenth] Street. This lot was much larger than was needed by the congregation, so that more profit was made by the sale of a portion of it. The burial-ground was laid out on the east side of the ground, extending from Arch to Cherry Street on the west side of Schuylkill Sixth Street, and was about one hundred feet in width.

The city closely pressed its suit in relation to Franklin Square, and in February, 1801, it was agreed, on the part of Councils, to discontinue it upon the following conditions:

"1st. That the congregation yield possession of all of the square in which interments had not been made.

"2d. If they will accept a lease from the corporation of that part of the lot in which interments are made, but for which they hold no patent.

"3d. That they do not erect buildings on the lot for which they have a patent, and length of possession is to be no bar to the city's rights."

In August it was reported that this agreement had been signed.

At this time John M. Irwin, auctioneer, was in possession of the western side of the square for the use of a horse and cattle market, and was at the same time carrying on the business at the Southeast Square. He generally held one sale during the week at each location.

During the war with Great Britain, especially in the year 1814, the City Councils, finding that there was not room sufficient for the drilling of volunteer companies, passed a resolution in September, "That all the uninclosed part of Northeast Public Square, east of Seventh Street and south of the oil-house, be cleared off as far as the same is not inclosed, and that the militia, or any company thereof, or any military association shall be permitted to drill or parade on said open ground when cleared."

In September, 1815, Councils passed a resolution that the Northeast Public Square should be inclosed. It was recommended shortly afterward that the high parts of the ground should be plowed down, that earth should be laid over the lower portions, that grass-seed be sown, and the square planted with forest-trees, and that there should be other improvements under the direction of the city commissioner.

Under the compromise made between the city and the German Reformed congregation, in 1801, a lease was executed for fifteen years, and when it expired the congregation was anxious for renewal. In the memorial sent to Council it was asked that the lease should be renewed for ninety-nine years, but the committee to which the subject was referred was not willing to allow the disfigurement of the ground for nearly three generations. The answer to the request for a very long lease was the brief recommendation that a lease be executed for two years and four months from the 20th of September, with a proviso that the congregation must first agree to put up an open painted fence, corresponding with that on the other portion of the square, and inclosing the ground which they claim, within eight months. The congregation would not accede to those conditions, and held out strongly in favor of a ninety-nine years' lease. In 1819 a culvert was ordered to be built in the Northeast Square, to commence on Race Street, about sixty-five feet west of Delaware Seventh Street, and to run diagonally across the square to Sixth Street. Whether this culvert went through the burying-ground is a matter of conjecture. In the same year Councils ordered the city commissioners to open a street, fifty feet in width, on the western boundary of the Northeast Public Square, to connect Race and Vine Streets. After it was opened sufficiently for carriages to pass, it was ordered that Seventh Street should be closed in such a way as to make the square entire. Before that time there had been an ordinary passage direct on the line of Seventh Street. The proposition excited considerable indignation among citizens, and some of them commenced proceedings in the Court of Quarter Sessions to procure the opening of Seventh

Street again. This attempt having failed, a bill was introduced into the Legislature, in 1823, directing that Seventh Street should be carried through the square, but it was not adopted. The Reformed congregation having refused to take a short lease of the ground held by them in the square, a peremptory order was issued by Councils, in 1821, that the congregation should vacate the square altogether.

In 1835 a strong effort was made to induce City Councils to purchase the right of the German Reformed congregation in the burying-ground. There was a disposition to pay the congregation for the relinquishment of its right, but the negotiation was not successful. In Common Council motions to pay the congregation fifty thousand dollars, with amendments naming lesser sums, were defeated. It was held by some members that the price was entirely too high. Common Council finally agreed to offer the congregation thirty-five thousand dollars, but Select Council would not agree. The suit was then proceeded with, and the result was a decision by the Supreme Court that the congregation had no right; that the original dedication by William Penn to the city was a complete act, and that the grant in 1741 by Governor Thomas Penn, and subsequent proceedings, were illegal, the Penn family having no title. The congregation sadly relinquished the property. The fence was torn down, and the gravestones were partially removed, but many of them were laid a few feet below the surface of the earth on the tops of the graves. Some of the bodies were removed, but the greater portion of the remains were undisturbed. The grassy mounds were leveled down, the surface was in some places raised, and in others where the ground was inclined to be hilly they were leveled, and the appearance of the burial-ground plot was made to conform with that of the remainder of the square. The walks were extended, trees were planted, and in a few years all traces of the old graveyard were lost.<sup>1</sup>

The unfortunate dispute was finally settled by the decision of the court; but after the city took possession of the ground a feeling of regret over the controversy had something to do with promoting a spirit of liberality in favor of the congregation. Two years after the final judgment the Councils passed a resolution remitting a claim for costs. An additional resolution was passed, offering the congregation five thousand dollars, on condition that they would relinquish all claims to the lot. This offer was accepted and the controversy was ended.

Northeast Square became Franklin Square by reso-

<sup>1</sup> In Harbaugh's "Life of Schlatter," page 357, is the following reference to some of the mouldering tenants of the square: "Directly east of the sparkling jets, a few feet from the edge of the circular gravel walk, under the green sod, lie the Revs. Stelner and Winkhaus, and Drs. Weyberg and Hendei, the aged. Directly north of this spot, about midway between it and Vine Street, lies Rev. Michael Schlatter; around these leaders of the Lord's host, far and near,—a silent congregation now!—sleep thousands of those to whom they once ministered the holy ordinances of the church, and the precious instructions and consolations of the Gospel."

lution of Councils, passed in 1825. Preparations for opening the square at night and lighting it by gas were made in 1837. By this time the inclosure had become in appearance worthy of its use. The trees had grown finely and there was a pleasant shade. To render it more attractive, a large fountain was ordered to be constructed by ordinance of Nov. 2, 1837. It was of grand dimensions, having forty jets of water that fell into a marble basin, which was guarded from intrusion by an iron railing round the top. The centre of the square was chosen for this purpose, and when the fountain was finished, a complete circle of wooden benches, on the opposite edge of the circular walk, was provided for the use of citizens. In 1883 the iron railings were taken down, and were replaced by a low stone coping. The walks were laid out with flagging, and the electric light was introduced.

**Northwest or Logan Square.**—After the Northwest Square ceased to be used for a burying-ground, it remained for some time in a condition of neglect. The post and rail fence which inclosed it was but little attended to, the rails were broken, and in some places the posts were rotting away. The first evidence of its increasing value was given in 1821. The Orphans' Society, the buildings of which were at the northeast corner of Schuylkill Fifth [Eighteenth] and Cherry Streets, made application in that year to City Councils for the use of the square as a pasture-ground, and the lease was executed at a rent of sixty dollars per year. It was ordered that the ground should be fenced in to prevent carts from driving through. William Gross was hanged in the Northwest Square on the 7th of February, 1823, an occurrence which drew a great crowd, and contributed toward breaking down trees and injuring the fences. It was the last public execution held on that ground. The value of this square began to be appreciated in 1825, when an ordinance was passed changing its name from Northwest to Logan Square, in honor of James Logan, secretary to William Penn. By ordinance of Feb. 13, 1834, the city commissioners were authorized "to lay out and mark off a passage or strip of ground fifty feet in width along the western edge or boundary of Logan Square, the whole length thereof from north to South, and that the said street shall be called Logan Street." Freedom of ingress and egress to the owners or occupants of buildings upon the said street or passage-way was pledged by the ordinance, the owners being under the same obligation as to curbing and paving along the fronts of their buildings, as owners of other houses and lots fronting upon other streets in the city. By ordinance of Sept. 15, 1842, which referred to Logan, Rittenhouse, and Penn Squares, it was declared to be an offense punishable by fine for any person to drive or take into either of those squares any horse, cow, cart, wagon, carriage, or wheelbarrow, except by permission, or place any wood, coal, rubbish, carrion, or offensive matter

within either of the squares, or to climb upon the trees, or to injure trees, fences, or gates in the said squares, or to dig up the soil or injure the grass, or to "run or walk over or lie upon the same." By this time Logan Square was under regulation. There was an open paling fence, walks had been laid out, trees planted, and the ground had been leveled. The mounds and hillocks above the graves were obliterated, the square began to assume the feature of a park, and was for some years jealously guarded from intrusion. The continual care of the public squares had been vested in the Commissioners of City Property, under the direction of Councils Committee on City Property. Among other things they were required to "personally superintend the preservation, repairing, and improvement of . . . the public squares." Small annual appropriations to those officers enabled them to make gradual improvements from year to year, and the western squares seemed to grow up without attracting much public attention until the time had come for opening them for public use. By ordinance passed March 6, 1852, the Committee on City Property was authorized to cause an iron railing or fence to be constructed around Logan Square "of a suitable height from the pavement, and secured in and resting on a stone basement." The great Sanitary Fair of 1864 was held in Logan Square, but so much care was taken that no considerable injury was done to the trees or herbage.

**Southwest or Rittenhouse Square.**—This public pleasure-ground escaped the fate of those that were used as cemeteries. In response to petitions that some improvement should be made upon it, in 1816 Councils passed resolutions that if the owners and occupants of property in the neighborhood would raise eight hundred dollars among themselves, and loan it to the city for three years without interest, Councils would inclose the square with a substantial fence of rough boards; money was raised, and the inclosure followed. In the same year a committee of Councils reported in April that the Southwest Square, "in those parts not used for particular purposes, should be tilled to destroy the weeds with which it was overgrown, and laid down with grass as soon as possible."

In 1825 the grounds were named Rittenhouse Square, in memory of David Rittenhouse, the philosopher. In 1840 the American Philosophical Society, which had for years been desirous of the privilege of constructing an astronomical observatory in the city, applied to Councils for authority to erect such a building in Rittenhouse Square. The committee on city property, to which the memorial had been referred, made report as follows:

"The subject is one to which the committee has given much attention, and which they believe has received the approval of former Councils. The importance of an observatory is universally admitted. The

difficulty usually has been to obtain suitable instruments and to erect a proper building. The controllers of the public schools have imported from Germany the several instruments required, of suitable size and of great excellence. The Philosophical Society is provided with funds to erect an edifice such as is required to use with advantage the instruments. All that is now required is a site, which will allow of a sufficient horizon, and be at such a distance from the crowded streets as to be beyond the agitation consequent on the passage of carriages on the pavement. No place presents itself in the city excepting the public squares, and none of them have the advantage possessed by Rittenhouse Square.

FOUNTAIN IN RITTENHOUSE SQUARE.

Believing that the great objects of the public squares will not be interfered with by the erection of an observatory upon one of them, and that such building might be regarded as a proper monument to the distinguished American whose name has been given to the Southwestern Square, and that great public good will be promoted by the measure without pecuniary contribution on the part of the city, the committee feel authorized to report favorably to the memorial referred to their consideration."

The bill authorized the society to erect the observatory at its own expense, under the supervision of the

Committee on City Property, subject to removal from the square whenever the mayor and Councils should determine. It was passed on the 12th of November, 1840, but the society for some reason declined to enter upon the work, and in September, 1842, the ordinance permitting the observatory to be erected was repealed.

On Feb. 13, 1834, the commissioners were ordered to lay out a street fifty feet wide along the west edge or boundary of Rittenhouse Square, the whole length of the square from north to south, and another street along the south edge or boundary, the whole length from east to west, the western street to be called Rittenhouse Street and the southern street Locust Street. An iron paling was erected around this inclosure about 1852-53, but, except in the trees, grass, and walks, no other improvements were made for many years. The first improvement was an iron fountain, tall, grotesque, and fanciful, which, by the permission of Councils, was put up by a lady near the entrance-gate at Walnut and Rittenhouse Streets. It was followed by the construction of a similar fountain near the gate at Eighteenth and Walnut Streets, the gift of a gentleman, and another of similar style was put up near the gate at Eighteenth and Locust Streets. As they dampened the ground, these fountains became unpopular, and were removed by orders of Councils. The dimensions of Rittenhouse Square are five hundred and forty feet on each of its four sides.

**Independence Square.**—This name was given to the State-House yard by the ordinance of 1825. It occupies four squares and two roods, and its history has been fully told in the article upon the State-House in a previous chapter.

**Passyunk Square.**—When the commissioners for building a county prison purchased ground for that purpose, in 1832, on the west side of the Passyunk road, in the district of Moyamensing, they bought a much larger tract than was absolutely necessary for the purpose. The prison building was on the east side of the lot, south of Reed Street. When built it extended northwestward to about Eleventh Street. Beyond that several acres appurtenant stretched westward as far as Thirteenth Street. There being no use for this ground, it lay vacant until about 1838, when a proposition was made that the space might be utilized as a parade-ground for the use of the volunteers and militia of the city and county. The inspectors of the prison were directed to devote the ground to that use, and the major-general and brigadier-generals of the First Division were authorized to ordain the necessary regulations for the government of the ground. Evidently appropriations were necessary to put the parade in good order, level it, and preserve it from injury; but assistance was not cheerfully given, and whatever was done by the volunteers was at their own expense. On the occasion of the few military parades and reviews which took place there, the ground was found to be dusty, rough, and uneven, the sun scorching, and the

inclosure without trees or shade. The parade-ground was a failure. Upon the consolidation of the city and districts this property was vested in the city of Philadelphia. It lay for some years vacant, and was used as a commons. At length, Councils by ordinance resolved that the portion of the ground lying between Wharton and Reed Streets and Twelfth and Thirteenth should be inclosed as a public square. No name was given to it originally, but gradually the title Passyunk Square was attached to it. Appropriations were made for leveling the ground, laying out walks, and planting grass and trees, and within a few years this inclosure has become an ornament and a pleasure to that portion of the city.

**Jefferson Square.**—Under an act of Assembly passed April 13, 1835, the commissioners and inhabitants of the district of Southwark were authorized to purchase, whenever they might consider it expedient, "a lot of ground in said district, to be kept open for a public square forever in the same manner that the public squares in the city of Philadelphia are kept open." The authority thus given was not exercised immediately. The question of a large purchase and of increased taxation on the people of the district operated to prevent the commissioners from adding to the public burden. About 1850 there was some movement to excite sufficient interest and spirit among the inhabitants of Southwark to justify the commissioners in purchasing a piece of vacant ground which was considered suitable for the purpose, situate between Third and Fourth Streets, and extending from Washington Street to Federal Street. The dimensions were three hundred and ninety-two feet east and west, three hundred and seven feet on Fourth Street, and two hundred and ninety-two feet on Third Street. The area included two acres and two roods. The property was known as the Miller lot, and belonged to the heirs of a family of that name. There were some negotiations for the purchase of the Miller lot, but the commissioners had not reached the point of offering decidedly to buy. Whilst they were hesitating the bill to consolidate the city of Philadelphia and adjoining districts was introduced into the Legislature, and made such headway that it was apparent some time before the bill was finally passed that it could not fail in going through both houses and receiving the approbation of the Governor. Under this stimulus the commissioners of Southwark, arguing that the district wanted a public square, and that the people of the whole city and county would have to pay for it, bought the Miller lot on credit. They named it Jefferson Square. In the City Digest of 1856, compiled by William Duane, William B. Hood, and Leonard Myers, it is said of the proceedings of the Southwark commissioners that "It is understood that no ordinance was passed, and that the resolution upon the subject still remains in manuscript." Nevertheless the city of Philadelphia paid for Jefferson Square, which has been converted into one of the finest of the local pleasure-grounds.

**Hunting Park.**—Forty-five acres of ground at the intersection of Nicetown Lane and the Old York road were for many years the "Hunting Park Race-Course," but under the laws prohibiting horse-racing they were gradually abandoned, and remained vacant for several years. The property was unoccupied until in 1854, under the stimulus of the consolidation act, a number of gentlemen, some of whom were interested in real estate in the vicinity of the old race-course, joined together to purchase the ground, with the intention of presenting it to the city, to be used as a public park. In their communication sent to Councils, Nov. 9, 1854, they stated the fact, and requested Councils to take measures and receive the property.<sup>1</sup>

This generous offer was accepted with little delay. On the 29th of January, 1855, a resolution was adopted accepting of the ground formerly embraced in the Hunting Park Course, in trust, for the use of the public as a park. Councils also agreed that they would "cause a wooden fence to be erected around the said premises; and that they will enact ordinances to forbid, and will otherwise prevent, the sale of liquor, or merchandise of whatever kind, within the said park; and that they will, within twelve months from the date of said conveyance, cause avenues and walks to be laid out and properly graded, the plan of which shall be approved by a committee to be appointed by the said owners; and that they will also plant a suitable number and variety of trees, and keep the same, with the grounds, in good order." Upon survey, it was found that the inclosure contained about forty-three acres two-tenths square perches of land. By ordinance of July 10, 1856, the ground was dedicated "free of access for all the inhabitants of the city, and for the health and enjoyment of the people forever, under the name of Hunting Park." By act of April 4, 1872, the commissioners of Fairmount Park were authorized to open a street between Fairmount Park and Hunting Park, and to keep it in repair as a park road, under their police control and supervision. They were also authorized to negotiate with the owners of property adjoining Hunting Park on the east and south for exchange of ground within the park limit for ground outside of it, so as to square the park, and to make it more suitable and attractive in shape for the purposes intended.

**Fairhill Square.**—The heirs and trustees of the

<sup>1</sup> The parties who participated in this purchase and gift were Charles Henry Fisher, Thomas T. Lea, John Tucker, Isaac R. Davis, Francis N. Buck, John Rice, Joseph Swift, Jacob Steinmetz, Charles P. Fox, Frederick Fraley, Pierce Butler, Joseph S. Lovering, Harry Ingersoll, John A. Brown, George Cadwalader, George Roberts Smith, Alfred Cope, S. Morris Waln, Samuel Welsh, James Dundas, Philip M. Price, J. Dickinson Logan, Morris L. Hallowell, Henry Pratt McKean, David S. Brown, John Grigg, Joseph D. Brown, George G. Presbury, Jr., John Farnum, Richard Ashhurst, E. M. Davis, James D. Whetham, C. W. Chnrchman and friends, Joseph R. Ingersoll, Isaac Norris, William Welsh, Gustavus G. Logan, John B. Myers, J. Francis Fisher, William Goodrich, Isaac F. Baker, Caleb Cops and friends, Charles H. Rogers and friend, George B. Wood and friends.

estate of Joseph Parker Norris held for many years after his death a large tract of land, embraced in what was called the Fairhill and Sepviva estates, in the district of Kensington. The Fairhill estate was on the east side of Germantown road, and extended over almost to the Delaware, crossing the Frankford road. The eastern portion of the ground, which lay to the east of Frankford road, was called Sepviva. The western portion was known as Fairhill. The original Sepviva plantation in the last century was one hundred and fifty-five acres, and the Fairhill estate five hundred and thirty acres. This large body of land, six hundred and eighty-five acres in all, was derived from Isaac Norris, of Fairhill, who had obtained title to some of it as early as 1713. It remained substantially in the ownership of his descendants in the present century. After the death of Joseph Parker Norris, June 22, 1841, the members of the family made arrangements to bring the body of land into the market in the shape of building lots. In doing so they generously determined, for the benefit of the persons who would buy land of them, as well as for the improvement generally of the district of Kensington, to devote two considerable pieces for public uses. By act of Assembly, passed April 6, 1848, the trustees and parties in interest were authorized to convey to the commissioners of Kensington district in fee-simple for such consideration as they might think proper, "and to be held for public use as a public green and walk forever, and to be used for no other use or purpose whatever, the plot or square of ground now called Fairhill Square, part of the said Fairhill estate, bounded by Lehigh Avenue on the north, by Huntingdon on the south, Fourth Street on the east, and Apple Street on the west." The commissioners were required to keep the ground properly inclosed, and planted with trees, for a public square and walk for light, air, and recreation forever. The consideration was merely nominal, and in 1851 the title was accepted by the solicitor of the district of Kensington. The ground was put under cultivation, and Fairhill Square is now one of the best features of Kensington.

**Norris Square.**—By the act of Assembly of 1848, which authorized the conveyance to the district of Kensington of Fairhill Square, the commissioners were also authorized to accept Norris Square, part of the Fairhill estate, bounded by Susquehanna Avenue on the north, Diamond Street on the south, Howard Street on the east, and Hancock Street on the west. Upon the county plan a passage called Clinton Street was laid down, running through this inclosure from north to south. It was vacated by act of Assembly. The same directions to the Kensington commissioners in regard to keeping the square open for general use and benefit as a public green and walk forever were given, with injunction as to inclosing of the ground and planting of trees, which were directed to be in force in relation to Fairhill Square. Norris Square

was held under a lease from the Norris family in 1851, but at the time when the lease expired, in the same year, the commissioners of the district took possession of the property. By ordinance of Nov. 21, 1859, the plan of Franklin Square was adopted as the plan for the improvement of Norris Square, excepting that the fountains were omitted. There is, however, a handsome fountain in the square, surrounded by flower-beds.

**Shackamaxon Square.**—When the Point Pleasant Market, at the intersection of Frankford road and Maiden Street, was built, in 1819, under the authority of the commissioners of the district of Northern Liberties, there was left on its western side an open space, which it was proposed to convert into a public square. Upon the incorporation of the district of Kensington in 1820, authority over the market was vested in the Kensington commissioners, and the same jurisdiction was extended over the square. As the market was deserted by dealers, it was torn down, and the grounds were neglected until, in 1845, the commissioners resolved that two dozen seats should be placed in the square, and that it should be kept open, under the supervision of the police, from six o'clock in the morning to eight o'clock in the evening, daily, from the 1st of May to the 31st of August. At a later period in the same year an ordinance was passed for the regulation of the public square, prohibiting injury to the trees or benches, making it an offense for any one to lie down in the square, or to use insulting language to any person passing through the grounds. The commissioners gave no name to the place. In 1850 an act of Assembly was passed which declared that the public square in the district of Kensington, bounded on the northwest by the Frankford road, on the southeast by Beach Street, on the southwest by Maiden Street, and on the northeast by Manderson Street, should be thereafter called Shackamaxon Square. The commissioners were authorized to keep the inclosure in good order, for the purposes intended, and to tear down and remove the market-house fronting on Beach Street whenever they should deem it expedient to do so. This privilege was soon exercised, as the market-house had become useless, except as a resort for the disreputable classes of the vicinity.

**Germantown Square.**—The Germantown public square is upon Main Street and in front of the town hall. The ground was purchased by the borough authorities in 1854, just previous to consolidation, and the cost was charged upon the city. The square is decorated with the monument to the soldiers of Germantown who fell during the civil war, which was dedicated on July 4, 1883. It is a lofty cenotaph, surmounted by a granite statue of an American soldier.

**Union Square.**—Union Square, a triangular piece of ground, bounded on the south by Buttonwood Street, on the west by Fifth Street, and on the east

by Old York road, is not of great extent, but being neatly inclosed with an iron fence, and the trees and grass kept in order, it is a pleasant and open place for the benefit of the neighborhood and for the public who pass along the street. This space of ground was once occupied by some old buildings. A better class of houses having been erected on Fifth Street and York Avenue, the parties interested in those properties united in subscriptions to purchase the property. The ground was cleared, dedicated to public use, and accepted by ordinance of Councils dated July 11, 1864.

**Thouron Square.**—Thouron Square, a small triangular piece of ground at the intersection of Sixth Street and Germantown road, was dedicated for public use about the time of the Centennial Exhibition.

**Fairmount Park.**—The vast and magnificent pleasure-ground to which the name of Fairmount Park has been given was not the outgrowth of any suggestion or expectation that it would ever be possible to obtain two thousand acres on the banks of the Schuylkill for public use. It is quite well known that the first purchases of ground at Fairmount were for the enlargement of the city water-works, and it was not until forty years later that the idea of a public park was mooted. But when the project was once mentioned it caught the fancy of the community, and Fairmount Park was created by successive gifts and purchases. The earliest intimation that it might be judicious for the city to acquire Morris Hill, as the lower portion of Fairmount was then styled, was made by Frederick Graff, engineer of the water-works, and John Davis, who, in 1810 or 1811, were directed by the water committee of Councils to make examination of the best means of increasing the water supply. On Dec. 18, 1811, Mr. Graff made a report suggesting the erection of pumping-machines and reservoirs on Morris Hill. On Aug. 13, 1812, an ordinance was passed empowering the mayor to raise money for the construction of works at Fairmount for supplying the city with water. The reports of the department state that the first purchase of ground at Fairmount was made on June 28, 1812, when five acres were obtained for sixteen thousand six hundred and sixty-six dollars, and that the steam-works were begun in August of the same year. It has proved to have been exceedingly fortunate that the members of the Councils committee directing the construction of the works were men of taste and prevision. Morris Hill rose so steep from the edge of the river that there was barely space between its verge and the water for the construction of the engine-house, and when it was determined to substitute water-power for steam as a pumping energy, a great deal of blasting had to be done on this rocky frontage to make an entrance to the grounds and to give space for the forebay. This accomplished and the wheel-houses built, the Councils saw that there was an opportunity for laying out and cultivating a garden which would always be a favorite place

of public resort. William Rush, the sculptor, who was a member of the water committee, was appealed to, and his figures of the "Nymph and the Swan" were brought from Centre Square and placed on the rocks above the west side of the forebay, and, with addition of several jets, which were constantly in play in fine weather, were of themselves a constant wonder and delight. Crowning the pediments of the doorways of the wheel-houses were two reclining figures, by Rush, of full life size, with accessories, and they were so prominent as always to attract admiration and attention. When they were finished and set in place they were thus described:

"The male figure represents the Schuylkill in its present improved state, no longer running uncontrolled, but flowing gently from dam to dam, and passing through artificial canals by locks and gates.

ing main. Water gushes out of the top, falling into the vase, and, to make it more picturesque, but not appropriate, overflowing the vase and falling down its sides."

There was a pretty garden with grass-plats and trees planted on the south side of the inclosure, extending from the entrance north of the Upper Ferry bridge as far as the forebay, from which steps extended to a paved way lower than the adjoining ground, and extending from along the front of the forebay to the head of the race bridge, from which a raised walk ran out into the Schuylkill to the edge of the dam, where, in 1835, was constructed a pavilion sustained by pillars, and arranged with seats for the comfort of visitors. At the same time the large building nearest Callowhill Street, which had been the engine-house, was altered into a public saloon, and

CALLOWHILL STREET BRIDGE, FAIRMOUNT.

"The female personifies the water,—a work unequalled in its kind throughout the world.

"The male figure is recumbent on a bed of rocks, the water flowing in several directions from him. It represents Old Age, the head covered with flags, a long flowing beard, the body covered with water-grass, etc., and a chain attached to the wrist, intended to emblemize the neutralized state of the Schuylkill by locks and dams. A bald eagle at his feet with wings opening is about to abandon the banks of the Schuylkill in consequence of the busy scene which art is introducing.

"The female figure is represented as seated near the pump which pours water into the reservoir. On the left side is represented a water-wheel; her left arm gently waved over it is indicative of the water-power; her right arm or elbow rests on the edge of a large vase, representing the reservoir at Fairmount. On the side of the vase a pipe represents the ascend-

ing main. Water gushes out of the top, falling into the vase, and, to make it more picturesque, but not appropriate, overflowing the vase and falling down its sides."

in it were placed the full-length statues of Justice and Wisdom that had been carved by Rush in 1824 for the ornamentation of the triumphal arch erected in front of the State-House upon the occasion of the reception of Lafayette.

The summit of the sharp acclivity west of the wheel-houses was gained by steps and platforms, upon which there were resting-places in the shape of arbors, from which the most delightful views of surrounding scenery were to be had. The reservoirs at the top of the hill were guarded with an open fence, outside of which a hard-rolled gravel path was carried around the circumference of the mount, which broke away in three terraces, upon which shade-trees were planted. The Fairmount gardens, opened in 1825, were the show-place of the city. No stranger was allowed to think that he had seen anything of Philadelphia unless he was taken to Fairmount Water-Works, and this small plot at the southwest limit of the present

noble inclosure was the inception of Fairmount Park. The ground did not at first extend out to the line of the street. A portion of the space between the bridge and Fairmount proper was occupied by the bridge company, and upon it was built a dwelling-house for the accommodation of their toll-gatherer. In 1835 the company built a toll-house opposite the entrance of the bridge, and an arrangement was then made by which a lot belonging to the city at Callowhill Street and Schuylkill Second was sold, and from the proceeds, with other money, the bridge property adjoining Fairmount garden was bought, and the line of the inclosure brought out to the street.

The original dimensions of Fairmount being only five acres, additions were made from time to time, until in 1828 the reservation comprised twenty-four acres, the aggregate cost of which was one hundred and sixteen thousand eight hundred and thirty-four dollars. It then included the ground from Biddle Street up to Fairmount Avenue, and from the Schuylkill over to what is now known as Twenty-fifth Street. The northern side was for many years a barren and unsightly waste, but finally it was fenced in along Fairmount Avenue from the Schuylkill landing to the Philadelphia and Columbia Railroad, and thence to the rise of the hill below Green Street, and trees were planted.

The extent of this improvement is yet visible in the appearance of the ground between the line of Fairmount Avenue and Green Street, which is deeply shaded. North of Fairmount, on the north side of Fairmount Avenue from the Columbia Railroad nearly to the river Schuylkill, were hotels and houses for many years after the water-works had become a place of great resort. An old-fashioned country house, which, about 1832 and afterward, was occupied as a tavern, called the "Four Nations Hotel," was near the railroad. From that point extended westward dwelling-houses and shops, until at the extreme point of the square near to the Schuylkill, and at the corner of a street running northwest which stretched out toward Lemon Hill, was a conspicuous four-story establishment, visible from nearly all parts of Fairmount, which was called the Robert Morris Hotel. Farther up on the northeast side of Landing Avenue were dwelling-houses, some of which were torn down in later years to make place for the Rialto House, a tavern and place of resort for the crews of the amateur boating clubs on the Schuylkill. Farther on beyond the Rialto, and on the southwestern bank of a creek which flowed out from the Dark Woods, was for many years a rolling-mill. The creek was crossed by a bridge, and Landing Avenue was continued up until it met another creek, which came down on the east side of the high ground of Lemon Hill. On the side of this creek was once partially erected a stone building, which it was said was originally intended to be occupied as a mill for making beet-sugar. It was afterward utilized as an ice-house. The place where that creek crossed

and fell into the Schuylkill was a little south of the spot where the Lincoln monument now stands, and the main driving road east of the Schuylkill goes over the line of the creek. On the southwest side of Landing Avenue there was a narrow strip of ground from Fairmount Avenue upward, upon which were built store-houses with wharves. Between the mouths of the Dark Woods and Lemon Hill Creeks was a place for the mooring of rafts and boats, which were kept there to be hired out for use on the Schuylkill. This was the condition of the neighborhood of Fairmount Water-Works up to the year 1867 or 1868.

In the mean while the city had become the owner of the Lemon Hill estate, once the seat of Henry Pratt, which, having been bought from him by Isaac S. Lloyd, was lost when that daring real-estate speculator got into difficulties. The United States Bank, either to prevent loss or for speculative purposes, took the property after it passed from the control of Lloyd. When that institution failed, efforts were made to induce the city of Philadelphia to buy it. Interested persons suggested that its possession would be a matter of absolute necessity to the city, in order to prevent it from being built upon, and the waters of the Schuylkill polluted by discharges from buildings. Over two thousand four hundred citizens petitioned Councils to make the purchase, and the College of Physicians presented a memorial in which the advantage of the acquisition to the public health was gravely represented. At the time affairs were gloomy, the failure of the bank having brought many persons of affluence face to face with poverty. Real estate was worse than a drug in the market, and it required a good deal of tact to get rid of so large a piece of property as this. The bank had paid two hundred and twenty-five thousand dollars for it, and was holding it for a sale at two hundred and fifty thousand dollars; but its own failure broke the spirit of speculation. The trustees wanted one hundred and thirty thousand dollars for the estate, but the city bought it for seventy-five thousand dollars, payable in a five per cent. loan. The conveyance was made on the 24th of July, 1844. The ground was leased for several years to a tenant, who used the old Pratt mansion and ground for a beer-house and garden. It became famous with German citizens, and a favorite spot for picnics, Easter Sunday and Easter Monday celebrations, and for entertainments at other times. It was not until the 15th of September, 1855, that Councils passed the ordinance dedicating Lemon Hill for the purposes of a public park, to be known as Fairmount Park. The ground was about forty-two acres in extent. As soon as this dedication was made, measures were adopted to improve the ground. Some of the outbuildings of Lemon Hill were removed, the mansion was altered in certain respects for the better accommodation of the public, the old walks, parterres, and garden-beds remained, and, in addition to Fairmount Water-Works, the visitor was

VIEW OF FAIRMOUNT WATER-WORKS ON THE SCHUYLKILL.

directed to Fairmount Park, crossing Fairmount Avenue, and walking along the especially hot and unshaded line of Landing Avenue.

Some wealthy citizens took an interest in the extension of the grounds, and subscribed a fund toward the purchase of the Sedgely estate, immediately north of Lemon Hill on the Schuylkill, bounded on the northeast by the Reading Railroad and extending to Girard Avenue. This property, formerly belonging to the Mifflin and Fisher families, had been bought in 1836 by Isaac S. Lloyd for speculative purposes. He paid seventy thousand dollars, and on being sold by the sheriff it passed into the hands of an individual, who in turn disposed of it to Ferdinand J. Dreer. Mr. Dreer then sold it to Henry Cope, Alfred Cope, Joseph Harrison, Thomas Ridgeway, Nathaniel B. Browne, and George W. Biddle, the trustees for the subscribers to the fund to procure Sedgely for the enlargement of the park. A deficit occurred in the purchase-money because of all the subscriptions not being paid up, and the city acquired the property by paying the balance of forty-five thousand dollars due on the mortgage and assuming all responsibilities. The transaction was completed in 1857, and thus Sedgely was added to Fairmount Park.

The tract extended from the Lemon Hill Creek or Run up the Schuylkill, crossing Girard Avenue, to the little creek or ruu which came down on the south side of the Spring Garden Water-Works. The latter being at the time, by reason of the act of consolidation, city property, increased the possession of the park, and ran it up as far as the great rock upon which in after-years the eastern abutment of the connecting bridge was built.

For ten years Fairmount Park was the ground north and west of Landing Avenue, separated by the latter from the property and grounds of Fairmount Water-Works. After the acquisition of Sedgely, Councils determined to obtain possession of the neck of land between the water-works and Lemon Hill, which included all the property on Fairmount Avenue and Landing Avenue, which was done under a jury award for fifty-five thousand dollars. Memorials to City Councils and the Legislature sought some small purchases of ground on the west side of the Schuylkill, and while these measures were pressed, but not acted upon definitely, four citizens learned that the Lansdowne tract on the west side of the Schuylkill, belonging to the family of Barings in England, was about to be sold, and that the owners were disposed to accept a price much below the actual value of the ground. They understood that if the Lansdowne property was brought into the market it would become an object of speculation, and that the construction of buildings would follow, with necessary risk of drainage into the Schuylkill and pollution of the water. They had the opportunity and they bought the ground, their intention being to offer it to the city of Philadelphia at cost price if used for public purposes. The offer

was promptly accepted, and one hundred and forty acres were bought for eighty-four thousand nine hundred and fifty-three dollars.

The acquisition of this large tract naturally led to a demand that there should be some better system of management of the park than had yet been provided. Jurisdiction over the works and adjacent ground was shared between the chief engineer of the water-works and the commissioner of city property. The latter had done something toward the decoration of the grounds near Fairmount, but was restricted by small appropriations from devising or executing any enlarged plan. It was necessary that there should be some better jurisdiction, and in accordance with public sentiment an act was passed "appropriating ground for public purposes in the city of Philadelphia" on the 26th of March, 1867. It declared that the title and ownership to certain ground on the west side of the river Schuylkill should be vested in the city of Philadelphia, "to be laid out and maintained forever as an open public place or park, for the health and enjoyment of the people of the said city, and the preservation of the purity of the water supply." To describe the ground thus appropriated by metes and bounds would be tedious. Generally, it may be said that it took in the area on the west side of the Schuylkill, the lines of which can be easily traced in the present park, extending from the west side of the Fairmount or Callowhill Street bridge northwardly by Bridgewater Street, Haverford Street, and the Pennsylvania Railroad, up to the Junction Railroad, and along the latter to Girard Avenue; crossing that highway to the north side of the park, it ran due west to Forty-first Street, and northward along the latter to Lansdowne Avenue, and then westwardly to Belmont Avenue, up Belmont northward to Montgomery Avenue; thence eastward along the same to the river Schuylkill, and down that stream by the banks to the west side of the Fairmount bridge, the place of beginning. In this area were included the West Philadelphia Water-Works, which were opposite Lemon Hill, and the noted country-seats of Solitude, Eggesfield, Sweet Brier, and Lansdowne, with a gore of ground north of the latter, between the regular line of Lansdowne and Montgomery Avenue. The grounds were to be managed by a board of commissioners, composed of the mayor, presidents of Select and Common Councils, the commissioner of city property, the chief engineer and surveyor, and the chief engineer of the water-works of the city, together with five citizens appointed for five years by the District Court, and five citizens appointed for the same period of time by the Court of Common Pleas. They were to receive no compensation for their services. The commissioners were authorized to negotiate and agree with the owners of the ground within the space specified for the purchase thereof, and if no agreement could be made, to introduce proceedings to condemn the ground and award damages, the whole being

subject to the approval of the Court of Quarter Sessions. They were to have the whole management and care of Fairmount Park on both banks of the river Schuylkill. In due time afterward the Fairmount Park Commission was organized. It was composed of Morton McMichael, mayor of the city; Joshua Spring, president of Select Council; Joseph F. Marcer, president of Common Council; Charles Dixey, commissioner of city property; Strickland Kneass, chief engineer and surveyor; Frederick Graff (the second), chief engineer of the water-works; and the following citizens: Eli K. Price, John Welsh, William Sellers, Joseph Harrison, Jr., and John C. Cresson, appointed by the District Court; and Nathaniel B. Browne, Theodore Cuyler, Henry M. Phillips, Gustavus Remak, and Maj.-Gen. George G. Meade, appointed by the Court of Common Pleas. Mr. McMichael was elected president, and at his death in 1879 was succeeded by William S. Stokley, who in 1881 was succeeded by Henry M. Phillips.

N. B. Browne was elected treasurer, Joseph F. Marcer secretary, and David F. Foley (not a member of the commission) assistant secretary. Standing committees were appointed on land purchases and damages, on plans and improvements, on superintendence and police, on finance and of audit; also an executive committee, composed of the officers of the board and the chairmen of the five standing committees, and a special committee upon the subject of "the preservation of the purity of the water supply." During the year after the commissioners were appointed they did but little. They came to the opinion at an early period that the ground acquired was not sufficient, as on the east side of the Schuylkill there was no park property north of the Spring Garden Water-Works. An act of Assembly of 1866 authorized the purchase of the small strip of ground between the Reading Railroad and the river as far north as the Columbia bridge, but beyond this there was no protection, and on the west side of the Schuylkill the extreme western boundary was below the bridge. If the water supply was to be preserved from pollution park extension was unavoidable, and in their report for 1867 the committee on plans and improvements said, "Now, if ever, while it is yet possible to be done at a cost which is moderate when compared with its advantages, we must possess the ground which surrounds our water supply so closely that the impurities which are drained from its surface must necessarily be drawn into the reservoirs, and, by preventing the erection of dwellings and manufactories on the shores of the basin and of the waters closely adjacent, provide against the pollution of the water which is the sole supply for domestic uses of the present and of the future population of this vast and rapidly-growing city. If we fail to do so, and our population continues to increase in the ratio of our past progress, twenty years will not pass before the shores of the Schuylkill will be crowded with dwellings and man-

ufactories pouring their impurities into the basin, and compelling the city, at an enormous cost, either to build fresh water-works at some other point, where pure water for domestic uses may be had, or else to acquire the very ground—the purchase of which we now recommend while its cost is moderate—when its price will have been so enhanced as to make its acquisition almost impracticable." The committee proposed that the boundaries of the park should be increased, commencing on the west side of the river Schuylkill, near the city bridge at the Falls; thence southwardly and westward down to the Lansdowne property (already belonging to the park), and out the Ford road to George's Run, not far from the Pennsylvania Railroad. On the east side of the river the ground was to be extended above the Spring Garden Water-Works so as to take in the space between Thirty-third Street and the Schuylkill River as far as Laurel Hill Cemetery, west of which it was to be carried by a driving-road (one hundred feet wide, and above that point one hundred and fifty feet wide) along the Schuylkill up to the intersection of the Ridge turnpike and School Lane; thence between the Ridge turnpike and the Schuylkill up to the southeasterly side of Wissahickon Creek, then crossing the Schuylkill to the Reading Railroad property at the city boundary line and the place of beginning. They also recommended that the control of the Wissahickon and of both the shores of that creek within narrow limits, yet sufficient to protect the water from impurities, should be acquired by the city, to be used in connection with the park. The whole extent of the ground thus recommended to be taken and comprised within the limits of the park, including the water area of the river, was computed to be sixteen hundred and eighteen and one-fifth acres. The extra ground recommended to be taken in addition to that previously embraced in the park was one hundred and fifty-one acres on the eastern side and six hundred acres on the western side of the river. This did not include the property along the Wissahickon, which it was suggested should be put under control of the city, but which was not asked to be included within the park grounds.

The draft of the bill to enlarge the boundaries of the park was presented to the attention of Councils, which acted in a very liberal spirit, and with the intention to secure ground that might be needed at some future time for basins and reservoirs by adding to the proposed territory on the east side of the river and south of South Laurel Hill three hundred and ten acres additional. The Assembly assented to the demands made by the passage of the act of April 14, 1868, which not only made a grant of the ground within the enlarged area, but directed that the park commissioners should appropriate "the shores of the Wissahickon Creek, on both sides of the same from its mouth to the Paul's Mill road, and of such width as may embrace the road now passing along the same, and may

also protect the purity of the water of said creek, and by passing along the crest of the heights which are on either side of the said creek may preserve the beauty of its scenery." The act provided for the laying out of a road of easy and practicable grades, "extending from the intersection of the northerly line of the park by Belmont Avenue, on the westerly side of the Schuylkill, to the head of Roberts Hollow, and thence along said hollow and the river Schuylkill to the foot of City

estimated that the amount, excluding the Wissahickon ground and the road through Roberts Hollow, was two thousand two hundred and forty acres. This, it was calculated, left about sixteen hundred acres to be acquired; but the area was reduced somewhat by river surface, so that the actual purchases necessary were a fraction over nine hundred and sixty-nine acres. While the commissioners were busily employed in carrying out the work, they experienced an

BRIDGE AND TUNNEL IN FAIRMOUNT PARK.

Avenue, laid out, with the ground contiguous thereto for ornamentation, of such width and so constructed as the commissioners . . . may determine. And such road and its contiguous ground are hereby declared to be a part of the aforesaid park." The act also contained a code of rules and regulations for the government of the park, and ordered that the commissioners should employ, equip, and pay a park force adequate to maintain good order therein. When the commissioners got to work in negotiating for the land they

unexpected generosity in the presentation to them and to the city by Jesse George and his sister, Rebecca George, of the lofty piece of ground west of the assigned park boundaries, which was known as George's Hill. At that time Jesse George was over eighty-three years of age, and his sister was of advanced years. In his communication to the park commissioners, Mr. George stated that the ground had been the uninterrupted home of his ancestors for many generations, and from the original settlement of the country. He

had been frequently applied to sell portions of it on account of its lofty situation, but had declined. He said, "I had expected to retain possession during my lifetime, and had thought of devising some of this ground to some public use thereafter. Considering the benefits which a public park will secure for the health, recreation, and enjoyment of the citizens of Philadelphia, I have determined that this disposition would be as useful to the people as any other. . . . My sister Rebecca George is joint owner with me in that portion which belongs to the estate of my brother Edwin George, now deceased, and she joins with me in making the same offer." The ground was eighty-three acres situate at such a lofty attitude as to overlook the city of Philadelphia in the distance. The conditions were that annuities of four thousand dollars per year should be paid to Jesse George and Rebecca George during their respective lifetimes.

These payments were not many. Rebecca George died on the 10th of November, 1869, aged seventy-eight years, and Jesse George died Feb. 14, 1873, and the whole property came into the possession of the city. By resolution it was determined that this portion of the park should be forever known as George's Hill. Upon the passage of the act of 1868 the commissioners concluded a piece of work that ought to have been done long before. This was the acquisition of the ground between the old water-works and Lemon Hill, situate upon Fairmount Avenue and Landing Avenue. This ground had been authorized to be taken by ordinance passed in 1864, but legal proceedings delayed action for four years.

The commissioners in their first report set forth their understanding of the object for which a park should be supported and the benefits to be acquired. They said,—

"The primary requisite of the park for popular recreation is an expanse of green sward partly sheltered and adorned by trees and shrubbery.

"These simple rural elements will of themselves give pleasure and healthful exhilaration to people of all ages and conditions, but a large community need something more.

"There should be breadth enough of open lawns to give room for play-grounds and parades; shaded and secluded spots in sufficient number to present ample opportunity for the enjoyment of the quiet, doubly grateful to those who temporarily escape from the din of crowded city streets. There should be ornamental fountains and abundant supplies of running water accessible for the refreshment of visitors of all degrees and of the animals admitted for their convenience or amusement.

"There should also be arbors and other structures for shelters and rest, as well as suitable arrangements to facilitate the enjoyment of fine views of the park and the surrounding scenery."

Easy access to these works of art and beauties of nature must be provided, requiring road and walks skillfully designed for securing to all visitors, both pedestrians and riders, freedom from danger or any reason to apprehend dangerous interference with their common recreation.

As to laying out the grounds, the general system necessary was concluded to be such as would give easy access to all interesting objects by judiciously adapting the roads for pleasant transit, without in-

jury to the natural scenery among which they were to be located. The diversified character of the ground, and the abundance of noble trees and groves, gave to the commissioners at many points a park made to their hands, replete with the objects which form nature's share of its adornment.

Seven engineering parties were sent out the first season, led by Samuel L. Smedley, surveyor and regulator of the city. One of these, under the lead of John D. Estabrook, made a special survey of a line for a sewer designed to convey the drainage of the factories at Manayunk to tide-water below Fairmount dam.

An enumeration of the trees standing in the park, in 1869, excepting those on the borders of the Wissahickon, showed that there were thirty-four thousand seven hundred trees of large size, between eighteen feet and twenty-seven feet in girth, and that they embraced thirty-nine genera and sixty species. The trees of less size were nearly seventy thousand, and the hard-wood shrubs and vines were estimated to be nearly two thousand in number. There were one hundred and fifteen springs of water and wells. The highest level in the West Park was a short distance north of Belmont mansion, at an elevation of two hundred and forty-three feet above tide. In the East Park the highest spot was on the Strawberry mansion tract, one hundred and thirty feet above tide. An estimate made at the same time of the length of fence or impervious hedges for outside inclosure was that nearly eight miles would be required; and that the length for single screens for railways outside of the boundary, and double screens for railways inside, would exceed ten miles.

In the second annual report of the commissioners of the park, laying aside the formal expressions usual in such documents, they became enthusiastic in setting forth the beauties of the ground over which they had control. Thus they observed,—

"Lying in what in a few years will be the very heart of the city; exhibiting singly and in combination every variety of picturesque aspect; presenting contours, both smooth and broken, adapted to all forms of embellishment, and soil suited to all kinds of cultivation; bountifully endowed with stately and umbrageous trees; irrigated by numerous brooks, which, as they meander from the higher to the lower levels, babble over pebbly bottoms, or leap in flashing cascades, or spread into shining pools; and partly composed of two romantic streams, flowing for miles between banks of verdurous lawn or sloping woodland, or rock-girt precipice; Fairmount Park, considered in reference to the uses for which it is intended and the situation it occupies, may justly claim to be without a rival. Superb and elegant as are many of the parks belonging to European capitals, except in the architectural and sculptural adornments which the lavish application of wealth has bestowed, or the grand and graceful arboreous avenues which the care-

DEVIL'S POOL, MOUTH OF CRESHEIM CREEK.

ful nurture of centuries has secured, there is no one among them to which it is inferior, while in natural capacities it far exceeds them all. And if the people of Philadelphia have been fortunate in the site selected for their park, because of these natural capabilities, they are still more fortunate in the economic results which that selection involves. For many years the gravest topic submitted for municipal deliberation had been one connected with the water supply of the city. Whether that supply could continue to be drawn in sufficient abundance and of the desired purity from the Schuylkill, or whether it would have to be sought in more distant regions, were questions which deeply exercised not only the public functionaries, but all thoughtful citizens. In the discussion of these questions it became manifest that, if the latter alternative were adopted, it would compel an outlay of many millions of dollars. The formation of huge artificial lakes, and the construction of long lines of aqueducts through a rugged country, as experience elsewhere had shown, could only be accomplished at an enormous expense, and, when completed, the cost of maintenance and repair would be proportionately heavy. To avert this but one course was feasible, and that was the dedication of the park as its boundaries are now defined." The commissioners went on to argue that without a park the water of the Schuylkill River would have soon been unfit for use. "Singular and paradoxical as the statement may seem, it is nevertheless true that by this purchase Philadelphia will actually save money, and practically get a park for nothing. In other words, without the acquisition and disposition of this land it would not be possible to protect the Schuylkill from such contamination as would speedily make its waters unfit for general use, and in that contingency a resort to remoter sources of supply would be inevitable. Such a resort could not be successfully had without the expenditure of at least twice the amount expended in procuring the ground in Fairmount Park."

There was a good deal of work to be done in obtaining possession of lands, the payment of damages, and the laying out of roads to make the new park accessible. In the West Park the Lansdowne drive was the principal carriage-way, and it required much labor to put it in order for use. This grand road was opened on the 21st of June, 1869, from Girard Avenue at the head of the bridge to George's Hill, with some ceremony, in which the Park Guard, a section of the Keystone Battery which fired a salute, and members of Councils, judges of the courts, and city officials took part. The flag-staff at George's Hill was first put in use by the raising of a large Burgee flag, inscribed with the title "George's Hill," by Maj.-Gen. George G. Meade and Mayor Fox, a ceremony which was accompanied by instrumental and vocal music. Eli K. Price delivered an engrossed testimonial of thanks, for the gift of George's Hill, to Jesse George, for himself and his sister. On the 13th of September,

1869, the corner-stone of a monument to the memory of Alexander von Humboldt was laid, on the centennial anniversary of his birth, by the German society, on the knoll where the *tete du pont* battery had been built during the war of the Rebellion, which was on the hill adjoining the entrance to Girard Avenue bridge.

In 1871, Councils adopted a resolution requesting the commissioners to construct within the Park suitable fire-proof buildings for a public art-gallery and museum for free exhibition at all times. Joseph Harrison, Jr., a park commissioner, proposed the erection of an edifice on the crest of Lemon Hill. In this structure he thought might be permanently preserved Rothermel's great picture of the battle of Gettysburg, painted by order of the State of Pennsylvania, and he offered as the nucleus of an art collection his numerous Indian portraits, taken from life scenes, portraying Indian manners and customs, landscapes, etc., and also a large picture painted by Benjamin West.

In 1872, in accordance with this suggestion, the museum building was erected near the Green Street entrance. It was of brick, stone, glass, and iron, ninety feet long, thirty-eight feet wide, and twenty-two feet high. Rothermel's picture was placed in it, with some statues and pictures belonging to the Fairmount Park Art Association, and others which were loaned. The gallery was opened to the public daily, but in 1876 most of the contents were removed to Memorial Hall, and the building was afterward assigned to the use of the Pompeian Gallery.

In 1870-71 a new walk, twelve feet in width, was opened through a highly picturesque ravine, to which was given the name of Belmont Glen. It extended from the Belmont Mansion to the Belmont Station of the Reading Railroad, near the bank of the Schuylkill. The length of the walk was two thousand six hundred and forty feet, passing in its course over the old inclined plane of the Columbia Railroad, on a rustic bridge, and following for some distance the meanderings of a hill-side brook bordered by several springs, two of which were utilized by being inclosed in stone basins to form drinking-fountains.

Michaux Grove was planted in 1870-71, near the northwestern limit of the Lansdowne drive. It comprised sixteen species of oaks, selected for their adaptability to the soil and the climate.

On Sept. 22, 1871, a bronze statue and monument in memory of Abraham Lincoln, erected by the Lincoln Monument Association of Philadelphia, was unveiled and dedicated on the plateau near the southeast boundary of Lemon Hill. The artist was Randolph Gross, an American residing in Rome, and the casting was done at Munich. The cost of the statue was nineteen thousand three hundred dollars, and of the granite base nine thousand four hundred dollars. The figure is colossal in size, and measures, in the sitting posture, nine feet six inches in height, the statue and base together being thirty-two feet high. In the dedication ceremonies was included a parade of military, which

embraced the First Division of Pennsylvania Volunteers, under Maj.-Gen. Provost and four brigades under Brig.-Gens. John P. Bankson, J. William Hoffman, William B. Thomas, and Louis Wagner.

The pavilion at Belmont, a building erected for public purposes, including meetings and banquets, was opened on the evening of the day that the Lincoln monument was dedicated, with a public banquet. It stood a little west of, but conveniently near to, Belmont Mansion and Restaurant. It was forty-five feet wide by eighty feet long, well adapted for the uses for which it was intended. This building was frequently the place at which public entertainments

LINCOLN MONUMENT.

were given previous to the opening of the Centennial Exhibition of 1876. The place which it occupied was taken up by considerable two-story additions built for restaurant purposes in 1875-76, at the south and west of the old Belmont Mansion.

One of the most memorable incidents connected with the history of the park was the use to which it was put for the great Centennial Exhibition of 1876. Attention was at first officially called to the propriety of holding the exhibition there as early as 1869, when the Franklin Institute and Academy of Fine Arts of Philadelphia memorialized Congress in favor of holding an International Exhibition to commemorate the one hundredth anniversary of the Declaration of Independence, and to signalize the immense progress in population and prosperity which had been made by

the country in the mean time. The Councils of the city sent a memorial and appointed a committee on the celebration, and an association of citizens was formed to execute the project. Congress took no immediate action, but eventually the Committees on Manufactures and on Foreign Relations of the House of Representatives visited Philadelphia on invitation and were shown the grounds in the park, which, in the opinion of the commissioners, would be most suitable for exhibition purposes.

In consequence of the recommendations of these committees, Congress passed an act, March 3, 1871, "to provide for celebrating the one hundredth anniversary of American Independence by holding an International exhibition of arts, manufactures, and products of the soil and mine, in the city of Philadelphia, and State of Pennsylvania, in the year 1876." The act authorized the appointment of a commission composed of one delegate from each State and Territory, to be nominated by the Governors of the States, and confirmed by the President of the United States. This was the Centennial Commission, a body for the maintenance of which, or the discharge of its duties, no means were provided. There were no appropriations or pledge of moneys on behalf of the United States, and the commission was actually a body appointed "to work for nothing and find itself." There was no power given in the bill to the commissioners to raise a penny by subscription, and Congress seemed to have reluctantly sanctioned the project of hold-

ing the exhibition, with particular care that it should be at no expense to the national treasury. Under these circumstances it was found that the exhibition, under a set of managers who had no power to raise money, could not have been other than a failure.

For more than a year the project languished. It was not until 1872—in which year an association was formed in Philadelphia to raise the funds necessary for the construction of buildings, etc., and for carrying on the exhibition, to which was given the title "The Centennial Board of Finance"—that there was any probability that the exhibition would be provided for and held. Congress was induced, by act of June 1, 1872, to incorporate the Centennial Board of Finance, with authority to receive subscriptions to a capital stock not exceeding \$10,000,000, to be divided

into shares of not more than \$10 each, with authority to construct the buildings and to carry on the exhibition. Under the control of this commission, subscriptions were made, and the stock allotted to be distributed in the various States. There were in addition some large gifts. The State of Pennsylvania gave \$1,000,000 to the commission, for the purpose of erecting the Permanent Building, since known as Memorial Hall, and the city of Philadelphia gave \$1,500,000, with which were constructed Horticultural Hall and Machinery Hall. On the 26th of June, 1873, Governor Hartranft, in compliance with a provision in the act of Congress, notified President Grant that provision had been made for the erection of the exhibition buildings. The latter made proclamation on the 3d of July, of the same year, that the exhibition would be held in 1876, and two days afterward Mr. Fish, Secretary of State, sent notification to all foreign governments. On the 4th of July, 1873, the commissioners of Fairmount Park formally transferred to the Centennial Commission and Centennial Board of Finance, for the use of the exhibition, two hundred and thirty-six acres of ground, extending from the River road, or continuation of Forty-first Street, northwest to the Lansdowne drive and concourse not far south of Belmont, and around the same, south by west, by the Belmont drive to the edge of George's Hill, and south to Elm Avenue, and along the same to the place of beginning, opposite Forty-first Street. The first plan for the exhibition was to have but one structure, to cover forty-four acres. Afterward this idea was abandoned, and it was determined to erect several buildings. Congress, on the 3d of March, 1875, appropriated \$505,000 for the arrangement of an official government display, of which \$150,000 was to be devoted for the erection of a special building for the government exhibition. Ground was first broken for the construction of buildings July 4, 1874. Up to the beginning of 1876 the funds realized by the board of finance from gifts, subscriptions, and concessions, were \$5,187,750. It was calculated that \$1,537,000 would be necessary to finish the buildings and open them free of debt. Congress passed an act authorizing a grant of \$1,500,000 on the 14th of February, 1876, which was supposed to be a gift, but which, after the exhibition had closed, was claimed to be only an advancement or loan, and, under the effect of a judicial decision by the Supreme Court of the United States, was returned to the national Treasury, so that, except as to the money paid for the purpose of the government display, the Centennial Exhibition did not cost the United States a dollar. The stockholders of the Board of Finance received a small percentage of their investments. The receipts of the exhibition were only sufficient to pay expenses and something over, and the stockholders pocketed their losses and charged them off on their account-books "to patriotism."

The buildings constructed for the use of the exhibi-

tion were one hundred and ninety-four in number, and some of them of immense size. The Centennial Commission divided the buildings into five groups. The first were composed of the largest structures on the ground, and included the Industrial Hall or the Main Building, and Memorial, Machinery, and Agricultural Halls with their respective annexes, several of the latter being buildings of large size. The second group was composed of buildings belonging to the United States and the individual States. They included the United States Government Building, Hospital, Signal-Office, and smaller structures, and also the buildings erected by the various States of the Union for the accommodation of their own commissioners, and as places for the assembling of their citizens who were visitors at the exhibition. There were twenty-seven of these State buildings, and one which was erected by the city of Philadelphia. Many of them were picturesque and elegant in style, and were constantly admired by all visitors. The third group were buildings erected by foreign nations,—Great Britain, Germany, Spain, Brazil, Portugal, Sweden, Japan, France, and the Dominion of Canada. The fourth group was composed of restaurants and houses of entertainment, of which there were twelve or fifteen with accessories. The fifth group was declared to be composed of miscellaneous buildings, among which were the Women's Exhibition Building, the Bankers', Brewers', and Dairymen's Buildings, besides various structures put up by persons in particular business bazaars, railroad offices, etc. Within the inclosure were sufficient structures to make a large town, and some of them of greater proportions than any town or city ever saw. The following were the dimensions of some of the principal buildings: Industrial Hall, Main Exhibition Building, built of iron, glass, stone, and brick, covered 21.27 acres, with two annexes; shape, a parallelogram; running from east to west eighteen hundred and seventy-six feet, and from north to south four hundred and sixty-four feet. The east and west centres of the fronts were relieved by central projections, galleries, and towers. In the centre was a transept running from side to side, from which arose four great towers, each forty-eight feet square and one hundred and twenty feet high. The building was commenced May 8, 1875, completed, set up, and transferred to the commission Feb. 14, 1876. Architects, Joseph Pettit and Joseph M. Wilson; builder, Richard J. Dobbins; cost, one million six hundred thousand dollars.

Machinery Hall resembled the Main Exhibition Building in general details, but was materially different in many respects. It was principally built of iron and glass, and covered nearly thirteen acres; shape, a parallelogram; length, fourteen hundred and two feet east and west; width, three hundred and sixty feet; annex in the centre, two hundred and eight feet wide and two hundred and ten feet deep to Elm Avenue; and some smaller annexes. Architects, Henry

Pettit and Joseph M. Wilson; builder, Philip Quigley; cost, seven hundred and ninety-two thousand dollars.

Horticultural Hall, built of brick, stone, iron, and glass; style, Moresque; situate at the head of Fountain Avenue, on the north side of Lansdowne Valley and northeast of Memorial Hall, intended to be fire-proof. Length, east and west, three hundred and eighty-three feet; width, one hundred and ninety-three feet; height to top of lantern, seventy-two feet; covers 1.05 acres; architect, H. J. Schwarzman; builder, John Rice; cost, two hundred and fifty-one thousand nine hundred and thirty-seven dollars.

Memorial Hall, intended to be an art gallery. A permanent building of granite, brick, glass, and iron, situate immediately north of the Main Building and south of Lansdowne Glen. Building, east and west, three hundred and sixty-five feet; width, north and south, two hundred and ten feet; height of walls, fifty-nine feet. The dome over the rotunda rises one hundred and fifty feet above the ground. It was capped by a colossal bell, upon which stood an emblematic figure of Columbia, cast in zinc. This figure was taken down some time after the centennial year, as it was found to be sinking, and there were fears that it would break through the dome. The plan consisted of a centre building, open arcades east and west of the main entrance, and closed pavilions at the corners. The exterior was decorated with statuary and many ornaments. Architect, H. J. Schwarzman; builder, R. J. Dobbins; cost, one million five hundred thousand dollars.

Agricultural Hall stood north of Horticultural Hall and beyond Belmont Valley. Material, wood and glass; ground-plan, a long nave, crossed by three transepts; nave, eight hundred and twenty feet long, from north to south, and one hundred feet wide; grand central transept, four hundred and sixty-five feet long and one hundred feet wide; height of the nave, seventy-five feet. Areas and courts were between the naves and the transepts, which were built upon to the height of one story, so that really the building was almost square. There was a central tower and steeple, and towers at the end of each transept. The hall, although cheaply put up, presented an attractive appearance. Space covered, seven and one-fourth acres; architect, James H. Windrim; builder, Philip Quigley; cost, one hundred and ninety-seven thousand dollars.

The United States Government Building, the largest of the second group, was on the west side of Belmont Avenue, at Fountain Avenue. Built of wood, in the shape of a cross. Long nave, running east and west, four hundred feet long, one hundred feet wide: cross transepts, three hundred feet in depth, one hundred feet wide; height of building, sixty feet, surmounted by a lantern. This building was occupied by the War, Navy, Interior, and Post-Office Departments, with the Agricultural Bureau and Smithsonian Insti-

tution. Architect, James H. Windrim; builder, Aaron Doane & Co.; cost, sixty-two thousand dollars.

Women's Pavilion, built by the Women's Centennial Committee, for the exhibition of women's work in art and manufacture. Situate on the east side of Belmont Avenue, opposite the United States Government Building. Formed by two intersecting naves, each sixty-four by one hundred and ninety-two feet, with a porch at the end of each eight by thirty-two feet, and four pavilions, each forty-eight feet square, in the corners formed by the naves. Architect, H. J. Schwarzman; builders, Jacob G. Peters and John D. Burger, of Lancaster, Pa.; cost, forty thousand dollars.

There were several special buildings for the exhibition of particular industries, which were erected by persons interested in their trade displays. Among these were the Shoe and Leather Building, in which all sorts of shoes and boots, from those that would fit the tiny feet of the infant up to the enormous stogies worn by the giant, were on exhibition. Also leather of all kinds, in every stage of manufacture, and articles made of leather, from the pocket-hook up to the Saratoga trunk. This building was three hundred and fourteen feet long, from east to west, and one hundred and sixty feet in width. Architect, Alexander B. Bary; builder, J. H. Coffrode & Co.; cost, thirty-one thousand dollars.

The Carriage Exhibition Building was three hundred and ninety-two feet long by two hundred and seventy-seven feet wide, a single story, constructed of wood, sheathed with corrugated iron. It was used for the exhibition of carriages, coaches, fancy wagons, pleasure carriages, sleighs, omnibuses, and railway cars from all parts of the world. Architect, H. J. Schwarzman.

The Photographic Exhibition Building was specially prepared to receive actinic pictures. It was an annex of the Art Gallery; style, of the French Renaissance; length, two hundred and fifty-eight feet; width, one hundred and seven feet.

The Pomological Building, east of Agricultural Hall, was considered an annex of the latter, and was of the dimensions of one hundred and eighty by two hundred feet. It was used particularly for the exhibition of fruits and flowers, when they were in season.

The Brewers' Building was an annex to Agricultural Hall, designed to show the processes and business of brewing. Length, two hundred and seventy-two feet east and west; breadth, ninety-six feet; two stories in height. Builder, James B. Doyle; cost, twenty thousand dollars.

The buildings erected by foreign governments for the accommodation of their commissioners were not very elaborate. The most striking was St. George House, in the picturesque style of the old English timber houses of two centuries ago, some examples of which yet remain near Chester and other parts of

England. It was a combination of gables, bay and oriel windows, verandas, balustrades, balconies, with a very liberal distribution of chimneys, which might defy accurate description. Its oddity rendered it very attractive.

The French Government Building was very plain, built of brick, and not particularly attractive in style. It was used for displays of models, plans, and drawings of the public works maintained by the French nation.

The German Government Building was of brick, rough-cast, in the Italian Renaissance style, eighty-two feet long and forty-two feet broad, and particularly noticeable on account of its capacious and handsome portico.

Brazil had a pavilion which was noticeable. It was octagonal in form, but so decorated with porches and bay-windows that the ground-plan was not observable, and the effect was pleasant.

The Spanish government prepared an octagonal building, surmounted by a lantern, and in the details of doors and windows Moresque in style. Spain was the only country, except the United States, which sent regular soldiers to the exhibition. The building spoken of was first intended for their quarters. It was fifty feet in diameter. Subsequently an annex building, eighty by one hundred feet, was constructed, in which there were exhibited Spanish products.

Japan presented for the occupancy of its commissioners a curious building, put up by Japanese workmen, with odd tools and strange manual processes. It was entirely of wood, finely planed and finished, and was joined with as much neatness as a fine piece of furniture. The wood-carvings, birds, flowers, and other objects over the porch of entrance were executed with great skill. This was one of the most attractive buildings on the ground.

Sweden was represented architecturally by a school-house, and Canada by a timber house, made of planks and boards piled upon each other on the interior, with an outside portico formed of trunks of trees with the bark on; it was a curious-looking structure.

Among the State buildings none was more showy and peculiar than the one that was erected by New Jersey. The style inclined to the Norwegian pattern in architecture, but with its peaks, gables, lofty tower, porches, gallery, and pavilions, it was not to be assigned exactly to the architecture of any country.

The Ohio State Building was composed in front of stone of different colors and qualities produced in different parts of the State. Unfortunately it was not of sufficient size, and a wooden annex was added, which detracted from the general appearance.

Kansas and Colorado united in the construction of a building in Gothic style, built in the form of a Greek cross, the arms of which were each one hundred and thirty-two feet long, and they used the space for a special exhibition of their products of agriculture and minerals and manufactures.

Many of the State buildings were small, and not particularly handsome, their styles being apparently modeled from those of the most conspicuous and elegant private houses in some of their villages.

The Centennial Exhibition opened on the 10th of May, 1876, and closed Nov. 10, 1876. The total admissions were 9,910,966 persons, of which 1,906,692 were free, the latter representing in a large degree exhibitors, officers, and employés, who passed in and out of the enclosure daily, and some of them several times a day.

After the close of the Centennial Exhibition, which had been remarkably successful as an object of interest and a means of instruction, there were expressions of regret that such a magnificent collection of interesting objects should be dissipated, and that the exhibition and its results would become only a memory. It was believed that if the Main Exhibition Building could be retained there might be created a permanent exhibition, in the style of the Kensington Museum, at London, which would be continually useful as a school of instruction, and of unceasing interest. Under these hopes there was organized an association entitled the Permanent International Exhibition Company, the object of which was to continue the display. Some of the depositors in the Centennial Exhibition left their goods in the charge of the new enterprise, and new deposits were obtained. The Main Exhibition Building was purchased, and the managers entered upon the experiment. The Permanent Exhibition was opened with parade and ceremony on the 10th of May, 1877. Misfortunes and errors of management followed. After four years of experiment, the early portions of which were flattering and seemed to promise prosperity, the attempt was relinquished. The stockholders voted four to one, on the 14th of February, 1881, that it was inexpedient further to maintain the exhibition, and that the directors be authorized to dispose of the building and other property as soon as in their judgment such action would be best. The Bi-Centennial Association of Philadelphia had a celebration at the building on the 4th of July succeeding, nearly thirty thousand persons being present. It was the last public occasion on which the building was put to use. The materials were sold at auction on the 9th of August, 1881, for ninety-seven thousand dollars. The work of tearing down the building commenced shortly afterward, but was not thoroughly completed for several months.

Agricultural Hall was torn down shortly after the close of the Centennial Exhibition. Machinery Hall stood longer, but was finally disposed of by auction, and the material taken away in 1883. Of all the grand buildings which stood upon the plot in 1876 there only remained in 1884 Memorial Hall and Horticultural Hall, St. George's House, the pavilion of the German Empire, and the Ohio State Building.

In 1878 the Park Commissioners reported that all

the lands purchased by them, or valued for purchase, were worth \$6,105,069. At the same time they stated the area to be two thousand six hundred and forty-eight acres. Immediately before or during the centennial year there were erected in the park three elevators and observatories for the purpose of affording views of the landscape scenery. One of these was Sawyer's observatory at Belmont, another was put up on the bold promontory rising above Turtle Rock, on the Lemon Hill property, and the third was at George's Hill. Sawyer's structure was taken down after standing some years. The George's Hill observatory was removed to Coney Island, N. Y. In 1884 Lemon Hill observatory yet remained.

The ornamentation of the park to any considerable degree by the acquisition of works of art was an object from the beginning of the jurisdiction of the Park Commissioners, but they could scarcely hope to accomplish it through the ordinary appropriations made to them. The amount required for the purchase of land, the heavy expenditures for the laying out of walks and drives, the building of bridges, and putting the park in a condition for public use were so great that only the development and exhibition of the natural beauties of the ground could be attended to. Knowledge of this fact, and a desire to add to the appearance of the grounds by works of art and beauty, led to the formation, in 1871, of a society, the object of which was to add to the decorations of the park. Several gentlemen met and organized in June of that year. Subscriptions were opened on the 22d of the same month, and on the 2d of February, 1872, the Fairmount Park Art Association was incorporated. The object, as set forth in the charter, was "the accumulation of a fund, by means of annual contributions of small fixed sums of money, by the members thereof, and by legacies, donations, etc., which fund, or the interest thereon, shall be devoted to and expended in adorning Fairmount Park, in the city of Philadelphia, with statues, busts, and other works of art, either of a memorial nature or otherwise." With good judgment, it was determined that membership should not be expensive. The entrance fee of one dollar went to the expense fund, and five dollars per year annually into the general fund, for the art purposes of the society. In the first report made, October, 1872, it was stated that the association had seven hundred and thirty-three members, and that the amounts received for subscriptions and entrance fees was seven hundred and seventy-five dollars. At the meeting of Dec. 18, 1882, it was reported that the membership of all grades was nine hundred and fifty-seven. Up to that time the association had obtained thirteen principal objects of decoration, statues, fountains, etc., and held in the general and permanent fund \$24,388.51, of which \$9249.91 were in trust for the memorial statue of Gen. George G. Meade, and \$13,090.89 for memorial monument of President James A. Garfield.

OBJECTS OF HISTORIC INTEREST AND WORKS OF ART AND DECORATION IN FAIRMOUNT PARK JULY 4, 1883.

**Historic Houses and Mansions.**—The cottage of William Penn (sometimes called the Letitia House), built in Letitia Court, below Market Street, and between Front and Second, about the year 1683, being the first brick house in Philadelphia. Removed to Fairmount Park on the knoll southwest of Lansdowne drive, near Girard Avenue, in 1883, and rebuilt by citizens.

Wooden cottage and building occupied by Gen. U. S. Grant as his headquarters at City Point during the campaign in Virginia of 1864-65. Presented by citizens in 1865, and removed to the East Park, southwest Sedgely guard-house.

Lemon Hill Mansion, northwest of Fairmount Water-Works, built by Henry Pratt after 1800, changed in the interior decoration, and added to by Park Commissioners.

Sedgely guard-house was once the stable and offices of the Sedgely Mansion, which stood east of it. It was originally the northern portion of the Hills estate belonging to Robert Morris, and was separated from the latter in the sheriff's sale 25th of March, 1799, and was bought by William Crammond, who built a country-house in the Gothic style there after the plan of Latrobe the elder about the year 1800. Sedgely became the property of Samuel Mifflin, merchant, in 1806, and of James Cowles Fisher, merchant, in 1812.

The Cliffs, a small house northwest of the drive, on part of Mifflin's Lane, formerly in the East Park. It is near the Philadelphia and Reading Railroad.

Fountain Green, the seat next beyond the Cliffs, originally belonged to Samuel Mifflin. The grounds run over to what was called Mifflin's Lane. Mr. Mifflin died in 1781, and Samuel Meeker became the owner and lived there many years during the present century; Casper W. Morris succeeded him. After the old mansions on the Schuylkill were deserted Fountain Green was known as "Engel & Wolf's farm," and was occupied near the railroad by that firm for brewing purposes. The old Mifflin-Meeker Mansion was used as a restaurant and for the accommodation of picnic-parties and social gatherings.

Mount Pleasant, in the East Park, near the bridge of the Reading Railroad Company, formerly called the Columbia Bridge, and nearly opposite the former site of Lansdowne, on the west side of the Schuylkill, was built by Capt. John McPherson, about 1762; bought by Benedict Arnold as a marriage-gift for his wife, Peggy Shippen, in the spring of 1779; escheated after his treason; confiscated in 1781; bought by Col. Richard Hampton during Arnold's life; purchased by Blair McClenachan in 1783; sold in 1784 to Chief Justice Edward Shippen, the father of Margaret, wife of Benedict Arnold; sold by him in 1792 to Gen. Jonathan Williams, member of Congress, the first superintendent of West Point Military Academy; held by him and his family, the last owner in that

SCENES ON THE WISSAHICKON.

line being his son, Henry J. Williams, an eminent lawyer. It was for some years a place of resort chiefly by Germans, and called Washington Retreat. In 1868 it was bought by the Park Commission. Among the tenants of this mansion might have been Maj.-Gen. Baron Frederick William Augustus Von Steuben, who was given lease of the premises Oct. 25, 1780, by the Supreme Executive Council, but in regard to whom it is doubtful whether he had ever occupied it. The Marquis Casa d'Yrujo, minister plenipotentiary of Spain, who married a daughter of Governor Thomas McKean, lived here in 1802.

West of Mount Pleasant was Rockland. The estate belonged from 1756 to 1765 to John Lawrence, and afterward to Capt. John McPherson. The mansion was built by George Thomson, merchant, about 1810. He sold it in 1816 to Isaac C. Jones, who, with his family, occupied it, until the estate was taken for park purposes.

Belleville, north of Rockland, a small house, was occupied by Daniel W. Coxe, who was a brother-in-law of Edward Shippen Burd.

Next to Belleville is Ormiston. The property belonged to Joseph Galloway before the Revolution. It was forfeited to the State in consequence of his treason, bought by the trustees of the University of Pennsylvania, and sold to Gen. Joseph Reed, once president of the Supreme Executive Council. He sold it to Edward Burd, son-in-law of Chief Justice Shippen, who named it Ormiston, after the estate of his father in Scotland. Edward Shippen Burd, his son, occupied this property for many years.

Next to Ormiston was Laurel Hill, which was occupied for many years by Samuel Shoemaker, and afterward, from 1828 to 1836, by Dr. Philip Syng Physick. After the name of the Laurels, the seat formerly of Joseph Sims, farther up and near the Falls of Schuylkill, was changed to Laurel Hill, the old Laurel Hill (Shoemaker's place) was known as Edgeley.

Woodside, lately occupied by the Park Commissioners, is an old house which, according to tradition, was built by William Coleman, the friend of Franklin, who was associate justice of the Supreme Court of Pennsylvania, and died in 1769. It was afterward the residence of David Franks, who, unfortunately, during the Revolution was not on the right side.

William Lewis, lawyer, lived for some years at Summerville, which was the property immediately south of the present Laurel Hill. It was afterward occupied by Judge Hemphill, and after it was abandoned as a place of summer residence it was called Strawberry Mansion. It was from 1835 for some years a favorite place for picnics, and when the park was opened it was established as a restaurant.

The Park River road, which runs below Laurel Hill Cemetery, passes over the property once occupied by three famous country-seats. They were Harleigh, William Rawle's place, now South Laurel Hill; Fairy Hill, George Pepper's place, Central Laurel Hill; and

The Laurels, Joseph Sims' seat, the name of which was afterward changed to Laurel Hill, which now constitutes North Laurel Hill.

In the West Park the following old country-houses are still existing: Solitude, in the West Park, south of Girard Avenue, was the villa of John Penn, the son of Thomas Penn and of Lady Julianna Farmer, daughter of the Earl of Pomfret. Penn came to Pennsylvania to look after his family interests in 1784, and bought ground opposite The Hills, fifteen acres, for six hundred pounds sterling. Here he built the little two-story box, still standing, and occupied by the offices of the Zoological Society. The house was finished in 1785.

Sweet Briar, northwest of the Lansdowne entrance, near the Girard Avenue bridge, was built by Samuel Breck about 1798. He occupied this mansion for many years.

Belmont, the property north of Lansdowne, was purchased by William Peters, brother of the Rev. Richard Peters, from the widow of Daniel Jones, by deed of July 4, 1742. The tract contained two hundred and twenty acres. Mr. Peters erected a small stone house, with a hay at the southern end, in a fine situation, with a grand view of the Schuylkill. It was probably finished in 1743. Mr. Peters called the place Belmont, and resided there until about the Revolution, when the use of the property was assigned to his son Richard, afterward judge of the United States District Court. It is not known when the large mansion on the north of the original Peters house was built. It might have been by William Peters before the Revolution, or by his son afterward. As long as Judge Peters resided there the house was the resort of the most eminent men, famous in American history and politics, and of distinguished foreigners. The attractiveness of the place was somewhat injured in 1832 and afterward by the laying out of the State railroad from Philadelphia to Columbia. The tracks were brought across the Schuylkill on the Columbia Railroad bridge, and up the hill by an inclined plane, the bed of which comes out about two hundred feet distant from the Belmont mansion, and is now used as a bridle-road. There was machinery to operate the cable on the plane, work-shops, and depots almost next door to Belmont mansion, so that, with the travel connected with the railroad, it could not have been for some years a favorite place of residence. When the Pennsylvania Railroad was chartered, and the route was laid out to the Market Street bridge, the inclined plane was abandoned, and Belmont returned to a quietude greater even than was usual to the mansion and grounds before railroads had invaded them. Judge Peters was dead, and the house, so long the genial rendezvous of bright and fashionable people, was scarcely disturbed by a wandering visitor. The Park Commissioners bought this property in 1867, and established it as a restaurant. The popularity of the place was such that it was soon found that there

was not room enough for the accommodation of company, especially for banquets and occasions of ceremony; a pavilion was erected west of the mansion-house. In 1876 there was another alteration, during which the old Peters building of 1743-44 was demolished, and a two-story addition, fronting south, was erected for the purposes of a restaurant, being furnished with dining- and supper-rooms.

Mount Prospect was the seat of the Johnsons as early as 1806. It was subsequently sold to Jacob S. Waln, who changed the name to Ridgeland, and lived there many years.<sup>1</sup>

1802, was afterward occupied by Benjamin Johnson. It was north of Prospect Lodge, immediately opposite the Laurels, Sims' place, afterwards called Laurel Hill. The Park Commissioners gave to the place the name Chamounix. In the area of the East Park, besides these buildings yet standing, there have been others of historic importance.

The Hills was the name of Robert Morris' estate, which included the whole of Lemon Hill and Sedgely. The Hills House was built by Mr. Morris after 1770, when he made the first purchase of the ground there. It was probably finished in 1771-72. The house was torn down by Henry Pratt after he bought the estate.

North of Lemon Hill, before Sedgely was reached, was Mount Sidney, which was occupied by Thomas Passmore, and some time after the year 1800 by Peter De Barbier Du Plessis and by Maj.-Gen. John Barker.

The early country-seats in West Park not now existing were as follows: On the west side of the river Schuylkill, immediately north of Haverford Street, was Spring Hill, the property of Ellis Yarnall. It was in a due line west of Turtle Rock and Lemon Hill. The West Philadelphia Water-Works were built on a portion of this property.

Eaglesfield or Eggesfield, on the west side of the Schuylkill, a little above the entrance to Girard Avenue bridge and south of Sweet

Briar, was built about 1798 for James Greenleaf, after designs by George I. Parkins. It was in after-years the property of Robert E. Griffith.

Lansdowne Mansion stood about where the Horticultural Hall is now erected. The first purchase of ground there was made by Governor and Proprietary John Penn in 1773, and comprised, when all outlying parcels were added, about two hundred acres. Lansdowne House was built of stone in the Italian style, and probably finished when the Revolution broke out. It is marked distinctly on Faden's map of 1777. He lived there until about the time of his death, Feb. 9, 1795. The estate was devised absolutely to his wife, Ann, daughter of Chief Justice Allen. She sold it in 1795 to James Greenleaf. The sheriff of Philadelphia seized it in 1797 as property of Greenleaf, who was in pecuniary difficulties, and sold it to William Bingham. He kept the mansion in grand style until

SUPPOSED "TOM MOORE'S COTTAGE."

Farther up, south of the Fort road, was Prospect Lodge. Montpelier, built by George Plumsted about

<sup>1</sup> There is on the west side of the Schuylkill, above the Reading Columbia Railroad bridge, in front of Ridgeland, a small one-story house, which has been called "Tom Moore's Cottage." The story is that it was occupied by Thomas Moore, the poet, at the time when he was in Philadelphia, in 1804. There is no good foundation for the legend. The journal of Mr. Moore shows that the whole time which he spent in Philadelphia during his visit to America was ten or eleven days. He was received in the best society, flattered, dined, and his company much sought by literary people. He had no time to become a tenant of this insignificant house if he had desired to. There is no plausible foundation, in fact, for the Tom Moore's story as connected with this little house. Edward Waln, who was a boy at Ridgeland in 1815 and for many years afterward, wrote to Russell Thayer, superintendent of Fairmount Park in 1883, that he had never heard of the place being called Tom Moore's Cottage while he resided there. The house in his early days was known in the neighborhood as "Aunt Cornelia's," and this was the name of an old colored woman who lived there and made her livelihood as a washerwoman, to which she added occasionally a few pennies by the sale of ginger-cakes and spruce-beer.

after the death of his wife, in 1801. At the death of Mr. Bingham, three years afterward, the property was vested in his family, two of his sons-in-law being Barings. The Barings held the property until the ground was bought by gentlemen through whose interests it was secured for Fairmount Park. Joseph Bonaparte, ex-king of Spain, Count De Survilliers, lived in the

downe, and once occupied by Mr. Baring, who had married Miss Bingham.

A great attraction of these grounds is the Zoological Garden. The Zoological Society was incorporated in 1859 by the General Assembly, and a site assigned to it in Fairmount Park under the act of incorporation. The place provided was north

ZOOLOGICAL GARDEN.

Lansdowne Mansion 1816-17. The house was entirely burned out on the 4th of July, 1854, but the walls were standing in good condition. The mansion might have been rebuilt if the Park Commissioners had so elected. But they did not appear to know the historic character of the ruins, and the easiest way to get rid of them was to prostrate them entirely. The Hut was a small house on the River road near Lans-

downe of the Spring Garden (Schuylkill) Water-Works, on the hill extending over to the Reading Railroad, and eastward to the river drive. The opening of the Connecting Railroad on the south side of the lot placed the grounds in a wedge between two railroads, with the river on the other side, and with no easy means of access except by crossing the railroads at that time. For this reason it may be supposed the mem-

bers of the society were deterred from attempting to establish the gardens and procure a collection of beasts and birds, etc. In June, 1873, the commissioners of Fairmount Park assigned to the use of the society the Solitude portion of its grounds south of Girard Avenue and between the River road and the Pennsylvania and Connecting Railroads. The society entered upon the property, constructed large and attractive buildings for the exhibition of various kinds of animals, and the grounds were opened July 1, 1874. The inclosure embraces Solitude and a portion of Spring Hill, the Yarnall estate.

The house in which David Rittenhouse, the astronomer, was born, stands near the junction of Paper-Mill Run with the Wissahickon Creek, and is about half a mile above the site of the Log Cabin.

The Monastery is situate on the east side of the Wissahickon. This building succeeded one which was erected by Alexander Mack, John Reissman, and Henry Hoecker, Dunkers, who had belonged to the church at Beberstown, commonly called Beggartown, established in the northern part of Germantown in 1732. The establishment was modeled upon the monastery of the Dunkers, or Seventh-Day Baptists, at Ephrata, which had been founded in 1732-33 by Conrad Beissel. The Wissahickon house was inhabited for about a year by Alexander Mack, Henry Hoecker, John Reissman, and another brother, who, in the "Chronicon Ephratense," published in 1786, records these facts, but does not give his own name. It ceased to be used by the brethren almost entirely in March, 1739. Thirteen years afterward Joseph Gorgas bought ground on the Wissahickon, where he erected a three-story stone house, which is now called the Monastery. He lived there until 1761. It is a matter of tradition, but by no means of proof, that Gorgas and others of the Seventh-Day Baptists resided at this house for purposes of seclusion and religious meditation. Legend says that the attire of the monks was like that of the Catholic Capuchins, or White Friars,—a short trousers and vest, with a long white gown and cowl of woolen webbing in winter and of linen in summer. The same traditions say that there was a place near the Monastery, below the county bridge, where the monks administered the rite of baptism. Gorgas sold the house and lot to Edward Milner in 1761, and although since called the Monastery, it has not been used for monkish purposes.

**Works of Art and Decorations in Fairmount Park.**—The Nymph and the Swan, called also Leda and the Swan, wooden statue, with fountain cut by William Rush, sculptor, and originally erected in the Centre Square in front of the reservoir; removed to Fairmount and placed on the rocks of the forebay after the Centre Square reservoir-house was abandoned by the Water Department, about 1828.

The same figures in bronze were moulded from the wooden statue, and placed in the centre of the large

fountain near Callowhill Street. The casting was made and placed in position while Frederick Graff, the second, was chief engineer of the water-works.

Figure of a boy riding a dolphin, an ornamental *jet d'eau* at fountain north side of park entrance, at Green and Twenty-fifth Streets. These figures were originally placed in the fountain near the Callowhill Street entrance, but were removed when the bronze statue fountain of Leda and the Swan was placed there.

Diana, a marble statue, placed over the drinking fountain near the eastern part of the forebay by the watering committee about 1830-31.

Reclining figures, "The Schuylkill in an improved state," male; and "the Schuylkill in chains," female, in wood, over the entrances to the wheel-houses, by William Rush, sculptor.

Justice and Wisdom, mask, full-length statues in wood, by Rush; carved for the decoration of triumphal arch in front of the State-House on the occasion of the reception of Gen. Lafayette, in 1824; transferred to the Assembly room, which replaced the old engine room of the water-works some years afterward.

Memorial bust of Frederick Graff, first engineer of the works, and canopy; erected in the garden south of the forebay by City Councils about 1847-48.

The first fountain, so called, stands upon the side of the road on the west side of the Wissahickon, half a mile below the Indian Rock Hotel. It is claimed that this is the first drinking fountain erected in the county of Philadelphia outside of the Fairmount Water-Works. A clear, cold, mountain spring is carried by a spout, covered with a lion's head, from a niche in a granite front, with pilasters and pediment into a marble basin. The construction bears the date 1854, and it was the gift of John Cook, a gentleman residing near the Wissahickon. Upon a slab above the niche are cut the words "Pro bono publico;" beneath the basin these, "Esto perpetua."

Tedyuscung is fancifully said to be represented by the wooden figure of an Indian, which is placed on the top of a lofty precipice called Indian Rock, situate on the east bank of the Wissahickon, a short distance beyond the Indian Rock Hotel.

William Penn, statue of Indiana marble, made by Ezekiel, sculptor of the group "Religious Liberty;" placed on "Mom Rinkle's Rock," Wissahickon; presented by Hon. John Welsh, park commissioner.

Monument statue in bronze to the memory of Alexander von Humboldt, presented by the German Society of Philadelphia and citizens; situate on the knoll overlooking the bridge at the southeast corner of Girard Avenue and the upper drive from Lemon Hill; corner-stone laid Sept. 13, 1869; dedicated in 1871.

Fountain, marble, copy of the fountain in the Villa Borghesi; presented by Robert H. Gratz in 1871; placed in the Park Art Gallery, and now at Memorial Hall.

Pegasus led by Calliope, and Pegasus and Clio, two

groups in bronze, heroic size; purchased by Robert H. Gratz and others, and presented to the park in 1872; originally set up near the park offices north of the Reading Railroad bridge, near Belmont; in 1876 removed and set upon pedestals at the approaches to Memorial Hall. These statues were formerly part of the decorations of the Grand Academy of Vienna.

Iron fountain and canopy at mineral spring, Lemon Hill; placed in position in 1871.

Marble drinking fountain on the walk leading northward from the Lincoln Monument, at the southeast corner of Lemon Hill.

Fountain *jets d'eau* and fish-pond, formerly belonging to Lemon Hill, in front of the ascent to the terraces nearly opposite Brown Street, and on the east side of Lemon Hill Mansion.

Iron drinking-fountain, main pedestrian walk, north of fountain and fish-pond, East Park.

Iron drinking-fountain at Sedgely, placed in 1871.

Iron drinking-fountain, Elm Tree, near the Humbolt Monument; placed in 1871; cast in Philadelphia.

"Night," bronze statue, presented to Fairmount Park Art Association by Edwin N. Benson; set up at George's Hill, 1872.

Group in bronze, two Hudson Bay gray wolves quarreling over the carcass of a deer; by Edwin Kemeys; cast in Philadelphia; presented by Fairmount Park Art Association; set up in 1872 at Ferndale Pool, West

FOUNTAIN AND STAND-PIPE.

Park; in 1876 removed to the east side of the Lansdowne drive, West Park, north of connecting railroad bridge.<sup>1</sup>

Marble Statue, "Il Pensive," by Mosier; presented by Fairmount Park Art Association in 1874; placed in the Temporary Art Gallery at Horticultural Hall.

"The Ambuscade," oil painting; figures by Baronet Wappers.

"Landscape," by Koekkoek; presented by N. A. Jennings to Fairmount Park Art Association in 1874; placed in Temporary Art Gallery.

"Chalk and his friends," oil painting of dogs, by Newbold H. Trotter; presented by artist to Fairmount Park Art Association in 1874; placed in Temporary Art Gallery.

Bronze group, "The Dying Lioness," by Professor Wilhelm Wolf, of Berlin; cast by Müller, in Munich, Germany; syenite pedestal furnished by Müller; presented by Fairmount Park Art Association, 1876; cost, \$4424.72; exhibited near Memorial Hall during Centennial Exposition; set up afterward in the Girard Avenue concourse, in the north front of Zoological Gardens.

Grand Fountain, platforms, and sub-fountains, marble; erected by Catholic Total Abstinence Societies of Philadelphia, 1876; central statue, "Moses," secondary statues, Bishop John Carroll, of Baltimore; Commodore John Barry, of the Revolutionary navy; Father Theobald Mathew, Irish Apostle of Temperance; and Charles Carroll of Carrollton; figures of colossal size; erected in 1876.<sup>1</sup>

Christopher Columbus, statue, marble, heroic size, erected in 1875 by the Columbus Monument Association of Philadelphia.<sup>1</sup>

Statue, in bronze, of the Rev. Dr. John Witherspoon, member of the Continental Congress; modeled by J. A. Bailly, of Philadelphia; cast by Robert Wood & Co.; presented by the Presbytery of Philadelphia, and erected northeast of Memorial Hall.<sup>1</sup>

"Religious Liberty," statue group, in marble, artist Ezekiel; presented by the Hebrew Society B'nai B'rith; originally set up in 1876 at the head of the Sunken Garden extending from Horticultural Hall to the Belmont road; afterward removed to the circle east side of Horticultural Hall.<sup>1</sup>

Pompeian Museum, in the old Art Gallery in the park, near the Green Street entrance; representations by Signor Giacomo Luzzati, of Naples, showing the remains of the fora, temples, theatres, houses, and streets of Pompeii as they now appear, including thirteen views, ten restorations of noted edifices, and ten scenes illustrative of Pompeian life and manners, including festivals, sacrifices, law trials, gladiatorial combats, funerals, etc.; purchased by John Welsh, park commissioner, and presented to the park in 1878.

Two spray fountains, after those in the Champs Elysée; cast in Paris, at the foundry of Val D'Osne; southeast corner of plot of ground near Lincoln monument.

Three of the same fountains in a trefoil-cluster, northeast of the Lincoln monument; presented by the Fairmount Park Art Association, 1877.

Colossal statue of Diana Borghesi, terra-cotta; exhibited at the Centennial Exhibition by H. Doulton & Co., of London; presented to Fairmount Park Art Association, 1876; now placed in Horticultural Hall.

Tam O'Shanter, Sutor Johnny, the landlord, and landlady, four figures in red sandstone, cut by the Scotch artist, James Thom, before the year 1837; transferred to Fairmount Park Art Association, and set up under a rustic shelter on the River drive, southeast of Turtle Rock, in 1877.

Drinking fountain, granite, presented to Fairmount Park Art Association by Mrs. R. D. Wood; set up in 1878 on the Wissahickon.

Trophy of buff, terra cotta and faience, with ornaments; presented by H. Doulton & Co., of London, to Fairmount Park Art Association; set up in Memorial Hall.

Horse-trough, of Italian marble, presented by Clarence S. Kates to Fairmount Park Art Association, and set up, in 1879, on the Wissahickon drive, near the Old Log Cabin.

Grand fountain, twenty-five feet high, bronze, with full-size life figures; purchased in France by Fairmount Park Art Association; cost, \$8650.11; and set up in East Park, near the Dauphin Street entrance, in 1880.

Fountain, bronze; set up under will of A. F. Ott Montrose in West Park.

Bronze statue of Morton McMichael, the president of the Park Commission; presented by citizens; set up on the east side of drive from Lemon Hill to Girard Avenue bridge; set up in 1882.<sup>1</sup>

The boat clubs on the Schuylkill are supplied with a considerable number of barges, shells, sculls, and other craft. In fine weather, especially in the afternoons, the boats can be seen anywhere between Fairmount and the Falls of Schuylkill, and the efforts of the rowers give animation to the scene. The earliest rowing clubs that came upon the river were the Blue Devil and Imp Barge Clubs, which were organized about 1833. The Imp had a long black boat, with a broad red stripe. The rowers were dressed in dark trousers, with a red shirt and cap. The "Blue Devil" was a black boat, with a broad gold stripe. The crew was dressed in dark trousers, sky-blue shirt and cap, faced with white. These clubs were soon joined by others, so that in the course of two years there were a sufficient number of boats on the river to justify an attempt to get up a regatta. This took place on the 12th of November, 1835. The second-class boats were four oars,—the "Ariel," the "Nymph," the "Dol-

<sup>1</sup> See "Monuments," etc., p. 1872 *et seq.*

phin," and the "Neptune." They rowed the first race for a silver cup, which was won by the "Ariel." The first-class boats were seven,—"Imp," "Blue Devil," "Cleopatra," "Falcon," "Sylph," "Metamora," and "Aurora." These were eight-oared boats. The distance which was rowed is not given in the very full report of the first regatta, which was published at the time. The "Cleopatra" won the race in twenty minutes. The "Blue Devil" was fourth, and the "Imp" was seventh and last. These two had previously had a race on their own account, in order to prove which was best, on the 14th of September, which may be memorable as the first boat-race on the Schuylkill. Their course was straight to a point opposite Belmont, and was computed to be from Fairmount nearly three miles. The race was won by the "Imp" in eleven minutes. After 1835 there were various clubs which came upon the river, which flourished and which faded. The boat-houses were at the beginning simple, plain buildings, of brick, along the shore of the Schuylkill, at Landing Avenue, and above as far as the foot of Lemon Hill. After the latter was purchased by the city the boat-houses were extended along the bank. The Park Commissioners wisely considered that these clubs should be encouraged. Long experience upon the Schuylkill showed that their members were bright, active, young men, whose conduct had always been decorous and unobjectionable. Permission was given to them to erect larger and better houses than they had yet possessed, and conveniences were granted. The only thing required was that the buildings should be architecturally neat and attractive, and under that arrangement some handsome structures have been erected by the clubs, which add to the attraction of the park and the neighborhood. The following are the boat-houses, in 1883, extending along the east bank of the Schuylkill from Fairmount up to Turtle Rock:

The Public Boat-House is a large building erected by the Park Commissioners in 1881, as a place where boats could be kept on hire. It is not a club-house, but is managed by a person to whom the lease is given by the commissioners.

The first boat-house going west is occupied by the Fairmount Rowing Association, a comparatively new club of 1883, and the Quaker City Barge Club, organized Oct. 20, 1858. The house is of stone, fifty-six feet long, thirty-five feet wide, and divided into two compartments, for the separate accommodation of each club. It was built in 1860.

The second house is of stone, fifty by forty feet, two stories high, with a mansard roof, and is occupied by the Pennsylvania Barge Club, which was organized June 4, 1861, as the Atlantic Barge Club, and afterward changed its name, and the Crescent Boat Club, instituted Sept. 1, 1867.

Bachelors' Barge Club, the third house, brown stone, Gothic, two stories in height, is in possession of the Bachelors' Barge Club, organized July 4, 1853.

The fourth house is occupied by the University Barge Club, organized by classmen of the University of Pennsylvania April 25, 1854, and by the Philadelphia Barge Club, instituted Dec. 8, 1862. Dimensions, forty-two by fifty-seven feet; material, West Chester green stone. The house has a mansard roof.

The fifth building is occupied by the Malta Boat Club, organized February, 1860, and the Vesper Boat Club, organized Feb. 22, 1865. It is of stone and ornamental.

The sixth boat-house is in tenancy of the College Boat Club of the University of Pennsylvania and the West Philadelphia Boat Club.

The Undine Barge Club, organized May 9, 1856, occupied the seventh, which is the largest and most costly boat-house in the Park. It was finished in 1883. It is of brown stone. This club occupied for many years the lower portion of the house of the Skating Club. The Skating Club house is the last in the row. The club was instituted Jan. 4, 1850, and incorporated Feb. 28, 1861. It is forty feet front by sixty feet deep, two stories in height, built of gray stone, and in the Italian style of architecture.

The Schuylkill navy was organized in 1858, and numbered eleven clubs,—Bachelors', University, Keystone, Camilla, Independent, Undine, Neptune, Chebucto, Quaker City, Dauntless, and Excelsior,—some of which no longer exist. Annual regattas are given by this combination. The majority of clubs on the Schuylkill River belong to the navy, but there are two or three that do not. The ten clubs of the Schuylkill navy in 1875 owned sixty-seven boats, and the three clubs which were not attached to it owned seventeen boats.

The Undine Club has an up-river house for receptions and calls, which they have named Ringstetten, after the castle on the Rhine of Sir Rupert, whose fascination by Undine is related in the story of La Motte Fouque.

The Bachelors' Club also has a house of reception on the west side of the Schuylkill, near the Falls.

The old Fishing Company, established in the year 1732, and called the Colony [afterwards the State] in Schuylkill, had its "castle" for many years on the west side of the Schuylkill, near Eggesfield, and within the present park bounds. When the dam was built across the river at Fairmount it was necessary, so it was thought, to remove the Fish-House from its ancient domain. The materials of the building were floated down the Schuylkill upon scows, as far as Rambo's Rock, below Gray's Ferry, and re-erected, and there the society has since remained. The inroads on the banks of the river by the opening of streets, the erection of dwelling-houses and factories, the manufacture of gas above and below the Fish-House, and the petroleum trade which is concentrated in the immediate neighborhood, rendered fishing an impossibility in the neighborhood of the castle of the State in Schuylkill long ago. It became evident some

years since that the company would be driven out of their old domain. Having been ancient denizens of the park, the citizens of the State were anxious to come back again. Application was made to the commissioners of Fairmount Park. They granted to the company the use of a piece of ground near the mouth of the Wissahickon, not far from the Germantown and Norristown Railroad bridge. They have built here a small house, which they occupy as a sort of a sub-station. When they are at length forced out of their ancient territory they will come here and enlarge their mansion, and use it in the way to which they have been accustomed, during the fishing seasons, for more than one hundred and fifty years. For this, be it understood, is the oldest social club in Philadelphia, and for the matter of that the oldest social club in the world.

In 1878 the Park Commissioners reported the following statistics: "The greatest length of the park, measured from Green Street entrance to Thorp's Lane (on the Wissahickon at Chestnut Hill), is 10.89 miles. The greatest breadth of the park is from Ridge Avenue to George's Run, a distance of two miles."

The following areas have been calculated by the engineer of construction:

	Acres.
Area of the Old Park.....	117
"    "    East Park.....	510
"    "    West Park.....	1242
"    "    Wissahickon.....	416
Extent of water-surface of the Schuylkill River within the limits of the park.....	373
Area of the park proper.....	2648
"    outlying lots paid for out of park loan.....	143 <sup>3</sup> / <sub>8</sub>
Total area.....	2791 <sup>7</sup> / <sub>8</sub>

Girard Avenue bridge, connecting the East with the West Park, is 1000 feet in length, 100 feet in width, and 55 feet above low-water mark.

Total length of the footwalks in Fairmount Park in 1878, 34.27 miles; total length of carriage-drives, 30.46 miles; total length of bridle-paths, 7.82 miles; length of park boundary, 22.59 miles.

PUBLIC MONUMENTS.

The first proposition for the erection of a public monument in Philadelphia was made by the Society of the Cincinnati of Pennsylvania in 1811. On the 4th of July of that year the following was unanimously adopted:

"Resolved, That a committee of this society be appointed to prepare a plan for raising by subscription such a sum of money as they shall deem sufficient for the purpose of erecting a monument to the memory of the late father of his country, Gen. George Washington; that the plan, when prepared, shall be submitted to the standing committee, and, when approved by them, should be carried into effect; that Major [David] Lenox, Judge [Richard] Peters, Major [William] Jackson, Mr. [Charles] Biddle, and Mr. [Horace] Binney be a committee for the above purpose."

An address was issued soon afterward to the people of Pennsylvania requesting subscriptions, by which it was hoped enough money would be obtained before the 4th of July, 1812, to authorize the commencement of the monument. This expectation was not realized. Subscriptions were small, but they were faithfully invested, and accumulations added. On the visit of Lafayette in 1824 the popular enthusiasm caused by the presence of the hero, and a revived interest in the events of the Revolutionary period, produced a popular movement in favor of the erection of a monument to the memory of Washington. Public meetings were held, and such was the confidence of success that it was proposed and agreed that the corner-stone should be laid by Lafayette before he left the country. The response by contributions was by no means equal to the hopes of citizens who promoted the plan. The fund collected was not sufficient to justify action, and it was held by the officers in trust for the purposes intended. In 1832 the centennial celebration of the birth of George Washington again stimulated the monumental feeling. Other meetings were held and subscriptions made, and on February 22d the corner-stone of the intended monument was laid in Washington Square. But the contributions turned out to be insufficient. In 1832 the Society of the Cincinnati was granted, by decree of the Court of Common Pleas, the citizens' monument funds of 1824 and 1832, amounting by accumulation to about fifty thousand dollars. This, added to the Cincinnati fund, which had been carefully increased to one hundred and thirty thousand dollars, gave to the society the command of one hundred and eighty thousand dollars, and upon this capital it was resolved to obtain plans and authorize the construction of a monument. The design of Soemmering, a Belgian artist, was adopted, and work upon the statues and decorations commenced

in Brussels, the supposition being that the monument will be placed in Fairmount Park.<sup>1</sup>

**Penn Treaty Monument.**—The first public monument erected in Philadelphia was prepared and dedicated by the Penn Society, an association of citizens embodied for the commemoration of historical subjects connected with the history of Pennsylvania. In 1827 this association obtained the right of placing a small marble monument on an inclosure of ground on Beach Street, Kensington, near where the great elm, supposed to have sheltered William Penn in a treaty with the Indians, had stood. The monument is a simple block of marble, placed upon a marble base. It is about three feet high, in the shape of a truncated pyramid, sloping from the base. The expectation of the society was that a much larger monument would be erected in time, but it was never able to do this, and the little memorial still remains, strangely out of place, it might seem, among the hurry and bustle of the neighborhood. The inscriptions on the stone are as follows :

*On the North.*  
 "Treaty Ground  
 of  
 William Penn  
 and the  
 Indian natives  
 1822.  
 Unbroken Faith."  
*On the South.*  
 "William Penn,  
 born 1644,  
 died 1718."  
*On the East.*  
 "Pennsylvania,  
 founded 1681,  
 by  
 Deeds of Peace."  
*On the West.*  
 "Placed by the  
 Penn Society  
 A. N. 1827  
 to mark the site  
 of the great elm-tree."

**Washington and Lafayette.**—Monument Cemetery, on Broad Street, north of Montgomery Avenue, was originally laid out under the name of "Père La Chaise," after the name of the celebrated cemetery near Paris. Shortly afterward the managers determined to erect a conspicuous monument to the memory of Washington and Lafayette, and in allusion to that fact changed the name of the ground to Monument Cemetery. Many years rolled by before the plan was carried out. The monument to Washington and Lafayette was dedicated May 29, 1869.

An ambitious effort to make this monument symbolic has been manifested. The pedestal contains seventy-seven and a half square yards, and is intended to indicate the seventy-seven years and five months of Lafayette's life. From the top of the pedestal to the apex of the monument is sixty-seven feet ten

inches, corresponding with the years and months of Washington's life. Immediately above the pedestal are thirteen steps or stages, representing the original number of States in the Union; thirty-two vertical grooves in the sub-shaft (eight on each side) represent the number of States in the Union when the monument was erected. The inscriptions on the north and south faces are upon bronze tablets, beneath profile medallion likenesses of the two heroes. They are as follows :

"Washington,  
 First in war, First in peace,  
 and  
 First in the Hearts of his Countrymen.  
 As a Warrior,  
 He served refusing pay, and led in the achievement of our  
 Independence.  
 As a statesman and Law Giver,  
 His guiding wisdom assisted in framing the Constitutional  
 Law.  
 As first president of the U.S.,  
 He Governed with firmness and moderation.  
 As a patriot, he bequeathed his bright example and  
 Earnest counsel and immortal legacy to his country.  
 As a man, his character stood superior in its grand  
 Equipoise of noblest Qualities.  
 Modest as great, prudent as wise,  
 He gave the best years of his life to the public weal, and  
 Died in Voluntary Retirement,  
 The Brightest Star in the constellation of the great men  
 Of all times."

The other inscription is as follows :

"Gibert Motier De Lafayette,  
 Benefactor of two Hemispheres;  
 Born a Noble of France;  
 He served as a citizen soldier of American  
 Liberty;  
 A cherished Friend of Washington,  
 By whose side he fought and Bled  
 In defence of the great principle  
 That the only legitimate Government  
 Is that which derives its authority from the  
 Governed.  
 A patriot fearless and firm in days of Terror;  
 A man of unchanging Integrity under  
 Changing Dynasties;  
 The Constant supporter of Constitutional  
 Freedom;  
 Like Washington,  
 He died in voluntary Retirement,  
 Leaving a name that belongs to History,  
 The lesson of his life to future generations,  
 His most revered memory  
 To every American."

**George Washington.**—Statue monument, in marble, in front of Independence Hall, Chestnut Street, between Fifth and Sixth. This was erected by contributions of the children of the public schools of Philadelphia. The design is simple: a plain granite pedestal surmounted by the statue, which was cut by J. A. Bailly, sculptor. It was dedicated July 5, 1865. This is the finest statue of Washington in Philadelphia, and next to it in point of merit is the statue in wood in Independence Hall, by William Rush.

**Gen. Hugh Mercer, of the Revolutionary Army.**—The remains of this patriot, who was killed at the battle of Princeton, were originally interred in the ground of Christ Church, south of the building on

<sup>1</sup> See vol. i. p. 636.

Second Street and immediately adjoining Church Alley. In 1840 the widening of Church Street rendered it necessary to cut away the graves near the wall. Among them were those of Maj.-Gen. Charles Lee and of Gen. Hugh Mercer. Gen. Lee's remains were reinterred near the original spot, between the first and second windows, east of the southwest door of the church. The St. Andrew's Society of Philadelphia determined that the remains of Gen. Hugh Mercer should be removed to Laurel Hill, where a monument was to be erected to his memory by the society. The ceremonies took place on the 26th of November, 1840, there being a military parade, and a fine oration at the First Presbyterian Church, Seventh and Locust Streets, delivered by William B. Reed. The reinterment took place at Laurel Hill, where there was erected a marble monument in the Roman style. It is surmounted by a funeral urn, and on the entablature a sword and scabbard are beautifully cut. Upon this monument are the following inscriptions:

*On the East Front.*

"Dedicated to the memory of General Hugh Mercer, who fell for the sacred cause of human liberty and American Independence in the battle of Princeton.

"He poured out his blood for a generous principle."

*On the West Front.*

"General Hugh Mercer, a physician of Fredericksburg, Va., was distinguished for his skill and learning, his gentleness and decision, his refinement and humanity, his elevated honor, and his devotion to the great cause of civil and religious liberty."

*On the North Front.*

"General Mercer, a native of Scotland, was an assistant surgeon in the battle of Culloden, and companion of Washington in the Indian wars of 1755 and 1756. He received a medal from the corporation of Philadelphia for his conduct and courage, in the expedition against the Indian settlement of Kittanning."

*On the South Front.*

"The St. Andrew's Society, of Philadelphia, offer this humble tribute to the memory of an illustrious Brother."

**Charles Thomson, Secretary of the Continental Congress.**—John Thomson, of Delaware, after the opening of Laurel Hill Cemetery, erected there a monument of a public character in memory of his uncle, the secretary of Congress. The remains of Charles Thomson were removed to the place selected near the bank of the river in 1838. The monument is a granite obelisk, and upon it was placed this inscription upon the principal tablet:

"This monument covers the remains of the Honorable Charles Thomson, the first, and long the confidential Secretary of the Continental Congress, and the Enlightened Benefactor of his Country in its day of peril and need.

"Born November, 1729. Died Aug. 16, 1824. Full of honors and of years.

"As a patriot his memorial and just honors are inscribed on the pages of his Country's History.

"As a Christian his piety was sincere and enduring.

"His Biblical learning was profound, as is shown in his translation of the Septuagint.

"As a man he was honored, loved and wept."

*On the Opposite Side.*

"Erected in memory of an honored uncle and benefactor, by his nephew, John Thomson, of Delaware.

"*Hic Jacet Homo, Veritatis et Gratiae.*"

The remains of Hannah, wife of Charles Thomson, who died in 1807, and of Charles Thomson, born Jan. 17, 1793, died March 26, 1820, are also interred at the same place, as appears by the inscription.

**John Witherspoon, D.D., LL.D.**—West Fairmount Park; monument statue in bronze; sculptor, J. A. Bailly. This memorial, in honor of a patriot of the Revolution and a signer of the Declaration of Independence, was erected principally by the aid of subscriptions among members of the Presbyterian denomination. The cost was twenty-five thousand dollars. The figure is in the dress of the colonial times, over which is thrown a clergyman's gown or cloak adopted at Geneva. It is mounted on a pedestal of Quincy granite, and stands twenty-five feet high.

**Roman Catholic Centennial Fountain.**—This great combination of statuary groups has already been described<sup>1</sup> in another part of this work. We merely refer to it here as a proper place to state that it is a beautiful and costly monument. The statues are those of Moses, of colossal size; Commodore John Barry, of the Revolution; Archbishop John Carroll, of Baltimore; Charles Carroll of Carrollton, signer of the Declaration of Independence; and Father Theobald Mathew, the apostle of temperance. The fountain was erected by the Catholic Total Abstinence Societies, and cost fifty-two thousand dollars. The sculptor was Herman Kern.

**Commodore Stephen Decatur, the elder, and Commodore Stephen Decatur, Jr.**—In the yard of St. Peter's church are tombs of Commodore Stephen Decatur, the elder, of the Revolutionary navy, who died on the 14th of November, 1808, in the fifty-seventh year of his age. His son, Commodore Stephen Decatur, Jr., of the United States navy in the war of 1812, is commemorated by a splendid monument; a pure Ionic column, set upon a base, upon which is perched an American eagle, which was erected by private subscription long after his death. It bears the following inscription:

*On the North Side.*

"STEPHEN DECATUR.

born Jan'y 5th, 1779.

Entered the navy of the U.S.

As midshipman

April 30th, 1798,

Became Lieutenant

June 3d, 1799.

Made Captain

For Distinguished Merit,

Passing over the rank of Commander,

Feb. 16th, 1804.

Died

March 22nd, 1820."

*On the East Side.*

"Devoted to his Country

by a

patriot father,

he cherished in his heart,

And sustained by his

Intrepid actions the

Inspiring Sentiment,

<sup>1</sup> See vol. II. p. 1485.

'Our Country! right or wrong!  
A nation  
Gave him in return  
Its Applause and Gratitude.'

*On the South Side.*

"The Gallant Officer  
Whose prompt and Active Valor,  
Always on the Watch,  
Was guided by a Wisdom  
And supported by a Firmness,  
Which never tired:  
Whose Exploits in Arms  
Reflected  
The daring fictions of  
Romance and Chivalry."

*On the West Side.*

"A name  
Brilliant from a Series of  
Heroic Deeds  
On the coast of Barbary,  
And Illustrious  
By Achievements Against  
More disciplined Enemies:  
The Pride of the Navy,  
The Glory of the  
Republic."

**Maj. Levi Twiggs**, of the United States army, who fell at the storming of Chapultepec, in Mexico, Sept. 13, 1847, and **George Decatur Twiggs**, his son, killed at the National Bridge, near Vera Cruz, in the same war. This monument, in North Laurel Hill Cemetery, was erected to the memory of father and son. It is a conspicuous ornament by its size and sculptured decorations. Above the pedestal rises a Roman battle-axe surrounded by a bundle of spears. The flag of the United States, in graceful folds, is thrown over these trophies. Beneath is the national shield and an anchor. The whole resting upon a cornice of tied fasces.

**Christopher Columbus**.—In 1876 the Italian citizens of Philadelphia erected a statue monument, in marble, representing the great Genoese navigator. It was of heroic size, a standing figure, the right hand resting on a globe and the left holding a chart. An anchor and rope at the foot of the figure is emblematic of the career of the great sailor. On the pedestal is the name of Columbus, with bas-reliefs representing the landing of Columbus on his discovery of the coast of America and the coats of arms of the United States and Italy. This handsome work stands on the west side of Belmont Avenue, facing the sunken gardens and Horticultural Hall.

**Religious Liberty**.—This is an allegorical group, representing Liberty protecting Religion. It was erected by the Jewish Society of B'Nai B'rith, and is a tribute by the people of the Jewish faith to the toleration which has always been extended to them in this country. A female figure in armor represents the Genius of Liberty. A mantle, fastened at the neck, falls from the left shoulder to the left foot. The right breast and arm are uncovered. On the armor is a breastplate, on which is wrought the shield of the United States. The Phrygian cap of liberty, bor-

dered with thirteen stars, is on the head of the figure. In her left hand she holds the Constitution, supported by fasces. The other figure, at the right side, represents a youth, slightly draped, with upraised face. One hand is stretched to heaven, holding an urn, in which burns the sacred flame. At the base of the group an eagle is represented, its talons buried in a serpent, signifying the destruction of slavery. This beautiful monument stands upon a central plat opposite the east front of Horticultural Hall. The pedestal and statue stand twenty feet in height. The group in marble was executed in Rome by Ezekiel, an American sculptor.

**Benjamin Franklin**.—A statue in marble, life-size, of the patriot and philosopher, stands in Odd-Fellows' Cemetery, Islington Lane, in the centre of a lot belonging to the Franklin Lodge of Odd-Fellows. The sculptor was Battin.

**Soldiers' Monument**, in memory of American troopers, names unknown, massacred during the Revolutionary war by British soldiers, at Wood's barn, Roxborough, is placed in Leverington Cemetery, Ridge Avenue. This monument was erected by subscription, and dedicated by public ceremonies.

**Soldiers' Monument, Scott Legion**.—After the Mexican war the survivors of the regiments of Pennsylvania formed themselves into a body under the name of the Scott Legion. For the purpose of the interment of deceased members, they secured a large piece of ground in Glenwood Cemetery, on Ridge Avenue, at Islington Lane. Here they erected a fine memorial monument of marble, with proper inscriptions, upon which are recorded the names of the large numbers of the soldiers who lie in the grounds adjacent.

**Soldiers' Monument**.—Erected by the Light Artillery Corps, Washington Grays, to the memory of members of the company killed during the war of the Rebellion. It is situate on Broad Street, at its junction with Girard Avenue. This is a unique memorial of granite, which attracts attention by its peculiarity. Upon the base, which is of a triangular shape, is set a cannon, breech upward, which is surmounted by a bursting bomb. Other details are in the same military taste. The inscriptions are as follows:

*At the Top.*

"Artillery Corps,  
Washington  
Grays.  
W. G."

*On the West Side.*

"Lieutenant-Colonels,  
Thomas C. Martin,  
Henry C. Whelan,  
George W. Hawkins,  
Thomas M. Hall.  
Majors,  
Joseph S. Chandler,  
Andrew Cal Suplee."

*At the Bottom.*

"Our Fallen Companions,  
1861 — 1865."

*On the Northeast Side.*

"W. G.  
Major George W. Wood.  
Captains,  
Charles P. Warner,  
Charles L. Kneass,  
Albert C. Walker,  
Washington Airey."

*At Bottom.*

"19 April, 1872."

*On the Southeast Side.*

"W. G.  
Lieutenants,  
William J. Sill,  
Godfrey M. Brinley,  
Archibald H. Engle,  
William K. Pollock,  
Walter Scott,  
William Bown."

*At the Bottom.*

"Semi-Cent' Anniversary."

This monument has but three sides, the front facing west and the sides northeast and southeast.

**Soldiers' Monument**, mural tablet, University of Pennsylvania. This memorial of nineteen graduates of the University, who died in the service of their country during the war of the Rebellion, was placed in the chapel in 1879. The monument consists of tablets of black and red Tennessee marble, incased in a highly-decorated frame in the Gothic style. In the panels are military trophies in bronze, and the badges of different army corps are carved on the frame. The whole is surmounted by a beautiful carving of the American eagle, very well executed. The monument was designed by Professor Richards, architect of the University building, and was procured mainly through the efforts of Professor Jackson. In the upper portion there is a cross, and the Latin motto, "*Literæ sine, moribus, vana,*" of the University arms; in the lower a Greek verse, in praise of love of country; and in the middle the following inscription:

"ERECTED BY THEIR BRETHREN,  
To the memory of

John Richter Jones, Class of '21.  
Henry Jonathan Biddle, Class of '34.  
Francis Engle Patterson, Class of '41.  
Thomas S. Martin, Class of '42.  
William Platt, Jr., Class of '46.  
James St. Clair Morton, Class of '47.  
Albert Owen Stills, Class of '48.  
Charles Frederick Taggart, Class of '52.  
Charles Izard Maclean, Class of '53.  
Henry Courtland Whelan, Class of '53.  
Daniel Penrose Backley, Class of '55.  
James Hamilton Kuhn, Class of '57.  
Charles Baker Riehls, Class of '58.  
John Haseltine Haddock, Class of '59.  
George McClelland Bredin, Class of '60.  
Francellus Gordon Dalton, Class of '60.  
Archibald Hill Engle, Class of '60.  
Robert Patterson Engles, Class of '60.  
George William Powell, Class of '60.

SONS OF THE UNIVERSITY

who died to uphold the laws of their Country in the  
WAR OF THE GREAT REBELLION."

**Soldiers' Monument** in Cedar Hill Cemetery, Frankford, tasteful and appropriate in appearance. It was erected by citizens of Frankford in memory of residents of that part of the city who entered the service of the Union and fell upon the field of battle or died in hospitals or elsewhere from wounds received.

**Soldiers' Monument** at Germantown. This handsome memorial was dedicated on the 4th of July, 1883, and stands in the Market Square, opposite the house of Elliston Perot, which was occupied by the British Gen. Howe during the Revolution, and by President Washington in 1793, and also opposite the building occupied by the United States Treasury Department in 1793. The monument was erected through the exertions of Ellis Post, No. 6, G. A. R., in pursuance of the determination entered upon as early as April, 1881. The material is mainly of granite, and the height of the structure is thirty-five feet. The cost was eleven thousand six hundred dollars. There are four granite pillars at the corners, with panels of polished granite, and borderings of rough, unfinished stone bear the bronzes. The decorations and inscriptions are as follows:

*On the North Side.*

Arms of the United States in bronze, above which is the inscription "The United States of America," and beneath, "Liberty and Union, now and forever, one and inseparable."

*On the East Side.*

The arms of the city of Philadelphia in bronze. Above them, "Philadelphia the City of Brotherly Love." Beneath, "On earth peace and good will to men."

*On the South Side.*

The arms of Pennsylvania in bronze. "The Keystone State." Below, "Liberty without obedience is confusing, and obedience without liberty is slavery."

*On the West Side.*

A bronze plate in the shape of a Grand Army badge. Above, "Fraternity, Charity, Loyalty." Beneath, "Ellis Post, No. 6. They never fall who die in a good cause."

The summit of the pedestal is a capstone from the battle-field of Gettysburg, in which is set a box containing the names of one hundred and ninety-seven soldiers and sailors of Germantown who lost their lives during the civil war. Above is a granite figure, nine feet six inches high, of an infantry soldier at parade rest. The monument is surrounded by a railing made of musket-barrels captured during the civil war. The corners are four cannons taken from the British in the war of 1812. At each corner of the base of the monument is a mortar. Within the inclosure are broken cannon from the wreck of the British frigate "Augusta," which was burned and blown up on the Delaware, opposite Red Bank, in the Revolutionary war. Opposite is a pyramid of twenty-two cannon-balls from the same source, also a shell captured at Charleston in 1865.

**John Fulton Reynolds.**—An equestrian statue of this officer, who was killed at the battle of Gettysburg, in July, 1863, has been cast in bronze, and is to be

erected on the north esplanade of the new City Hall, Broad and Filbert Streets.

**Stephen Girard.**—Sarcophagus and statue in vestibule at the entrance of the principal building of Girard College. Erected by the city of Philadelphia to the memory of Stephen Girard, and dedicated upon the removal of the remains of Mr. Girard from the Holy Trinity Roman Catholic Church, July 30, 1850, by a procession, and ceremonies by members of the Masonic Order. The statue is of fine Italian marble, by Gevelot, a French artist, and is a wonderfully faithful likeness of the man.

**Frederick Graff,** superintendent and chief engineer of the Philadelphia Water-Works from 1800 until his death, April 13, 1847, had been so faithful and efficient in his duty, that after his decease the Councils of the city resolved to erect a memorial in commemoration of his services near the scene of his faithful labors. The monument was placed in Fairmount, near the wheel-houses, and is in shape of a Gothic canopy, richly decorated, within which is a bust of Mr. Graff. The inscriptions are as follows:

*On the West (Front).*

"To the memory of  
Frederick Graff,  
who designed and erected the  
Fairmount Water-Works."

*On the East (Back).*

"Erected by the  
City Councils of  
Philadelphia,  
June 1, 1848."

**William B. Schnider.**—This gentleman was for many years Grand Tyler of the Grand Lodge of Pennsylvania, Free and Accepted Masons. After his death, some years ago, the Grand Lodge and Keystone Chapter, Royal Arch Masons, erected a monument to his memory in Mount Moriah Cemetery. It is peculiar in appearance, is of a triangular form, has upon it a fine alto-relief bust portrait of Mr. Schnider, and is appropriately embellished with sculptures of Masonic insignia.

**Thomas Godfrey** (inventor of the mariners' quadrant: Laurel Hill Cemetery).—The distinguished inventor of the mariners' quadrant, a citizen of Philadelphia, is remembered by the monument erected by the Mercantile Library Company of Philadelphia and several citizens in 1843. It is a plain cenotaph of marble in the obelisk form, about ten feet high. Near the top, on one side, is the figure of a ship in full sail. The inscription is appropriate, with the name, date, and particulars of Mr. Godfrey's wonderful invention and discovery.

**Soldiers' Monument, Girard College.**—This testimonial stands west of the main building, and was constructed by the alumni of the college to commemorate those graduates of the institution who fell in the civil war. Base of granite. A canopy of sandstone, sustained by four pillars at the corners, shelters a statue of a soldier at rest, in white marble. Inscriptions on marble tablets are as follows:

SOLDIERS' MONUMENT, GIRARD COLLEGE.

*On the South Side.*

"Erected A.D. 1869,  
to perpetuate the memory and record the  
Services  
of the pupils of this College  
who, in the then recent contest for the  
preservation of the American Union,  
Died  
that their country might live.  
Fortunati Omnes  
Nulla dies Unonana memori vos eximet alvo."

*On the North Side.*

" Especially I desire  
that by every proper means a pure attachment  
to our Republican Institutions  
shall be formed  
and fostered  
in the minds of the Scholars.'  
*Extract from the will of*  
STEPHEN GIRARD."

*On the East Side.*

" Robert Cornwall, Petersburg.  
Joseph Riddle, Richmond.  
Adam R. Patton, Newberrn.  
Edwin Merkle, Fort Darling.  
Joseph T. Newell, Millen Prison.  
James F. Miller, Lobby Prison.  
Philip A. W. Banks, George Tanner,  
Hospital.  
William H. Callan, Camp Brandywine."

*On the West Side.*

" Joseph W. Oswald, James D. Smith,  
Charles Logan, George Ritter,  
Robert Ruddock, John S. Tyler,  
Antietam.  
John B. Scheetz, Gettysburg.  
John Bussinger, W. W. Bayne,  
Chancellorsville.  
James Neeson, Fredericksburg.  
Andrew J. McIlravey, Fair Oaks.  
James McNamee, Mechanicsburg.  
Augustus D. Goodwin, Carnes Mills.  
Samuel Lilley, Williamsburg."

**Abraham Lincoln.**—This statue, which stands in the East Park, near Lemon Hill, was erected by means of contributions made by the citizens of Philadelphia, a movement which began immediately after the assassination of the President. The figure is of bronze, in a sitting position, and is of colossal size, being nine feet six inches in height, and raised upon a granite pedestal, upon the upper part of which are emblems in bronze. Four eagles in bronze are at the corners beneath. The statue was modeled in Rome by Randolph Rogers, and was cast at Munich. The cost was thirty-three thousand dollars, and it was unveiled Sept. 22, 1870, the anniversary of the proclamation of emancipation.

*On the South Side.*

" To  
ABRAHAM LINCOLN  
from a grateful people."

*On the North Side.*

" Let us here highly resolve  
That the government of the people  
By the people  
And for the people  
Shall not perish from the Earth."

*On the East Side.*

" I do order and declare that all persons held as slaves within the States in Rebellion are and henceforth shall be free."

*On the West Side.*

" With malice toward none,  
With charity toward all,  
With firmness in the right as God gives us to see the right,  
Let us finish the work we are in."

**David M. Lyle**, chief engineer of the fire department for some years, was very popular among the firemen of the city. After his death they erected to his memory, by subscription, a fine full-length statue of himself in fireman's costume. It was publicly dedicated by a procession and appropriate ceremonies, and placed in Old Oaks Cemetery, whence it was subsequently removed.

**Frederick Von Humboldt.**—Statue monument in bronze stands upon a bluff in the East Fairmount Park, facing the entrance to Girard Avenue bridge. It was erected by German citizens of Philadelphia in memory of the great German scientist and philosopher.

**John Fitch** (inventor of the steamboat).—John F. Watson, the annalist, took great interest in the story of the unfortunate John Fitch, the inventor of the steamboat. His original intention was to procure the removal of the remains of the unlucky genius from Bardstown, Ky., where they had been interred, to Laurel Hill Cemetery; but being disappointed in this expectation, he was instrumental in procuring the erection of a plain marble monument to his memory at Laurel Hill. It is in the eastern part of the ground, and not far from the Godfrey monument.

**Yellow Fever Monument** (North Laurel Hill).—A fine marble monument, with proper inscriptions, erected by citizens of Philadelphia, in 1859, in memory of men and women citizens who volunteered to nurse the sick during the yellow fever at Norfolk, Va., and died by the infection taken during the course of the performance of their service. It is inscribed, "In memory of the Doctors, Druggists, and Nurses who volunteered to aid the sufferers by the yellow fever at Norfolk and Portsmouth, Va., and died in the discharge of their duties."

**William Young Burch and Julius R. Friedlander.**—Mr. Burch was a bookseller and a man of wealth, who was active and generous in the establishment of the Pennsylvania Institution for the Care of the Blind. Mr. Friedlander was the founder of the institution, and the first teacher of sightless unfortunates. Their associates of the institution erected these monuments to their memory in Laurel Hill.

**Philadelphia Fireman.**—Life-size statue in marble, figure in the fireman's costume, cut by Battin, is in Odd-Fellows' Cemetery, and a decoration of a burial-lot belonging to a volunteer fire company.

**Morton McMichael.**—This public-spirited citizen was identified with every public movement that could be of advantage to his native city during a space of fifty years; an eloquent orator, a chaste and elegant writer, and a steadfast friend. He was well known for his genial sentiment, wit, and amiability of disposition. After his death his friends erected to his memory a statue in bronze in East Fairmount Park, representing him in the sitting posture. It is an excellent likeness and an easy and graceful figure. Upon the pedestal are the following inscriptions:

*On the East (Front).*

"MORTON McMICHAEL."

*On the West.*

"High Sheriff of the  
County of Philadelphia

From the year 1843 until the year 1845.

"Mayor of the  
City of Philadelphia

From the year 1866 until the year 1869.

"President of the  
Fairmount Park Commission  
From its organization June 3, 1867,  
Until the day of his death."

*On the North.*

"An

Honored and beloved  
Citizen

of

Philadelphia."

*On the South.*

"In commemoration of the  
Civic services and private  
Virtues of

Morton McMichael

This monument is erected

By his fellow citizens

A. D. MDCCCLXXII."

**Benjamin Franklin.**—The remains of the illustrious patriot were interred in Christ Church burying-ground, near the northwest corner of the inclosure. The vestry of Christ Church some years ago took down a section of the wall immediately adjoining the grave, and the tombstone can be seen from the street. It is of the plainest and most simple character. A flat stone covers the grave, and it was fashioned according to his own request in his will, in which he said,—

"I wish to be buried by the side of my wife, if it may be, and that a marble stone, to be made by Chambers, 6 feet long, 4 feet wide, plain, with only a small moulding around the upper edge, and this inscription:

BENJAMIN  
AND  
DEBORAH } FRANKLIN.  
178—"

This was copied upon the slab, the date being made 1790.

It appears from the records of Christ Church that Deborah Franklin was buried there Dec. 22, 1774, and Benjamin Franklin on the 17th of April, 1790. At the head of the Franklin tomb stand two dilapidated tombstones, one with the name "Francis F., son of Benjamin and Deborah Franklin, deceased Nov. 21st, 1736, aged 4 years, 1 month, and 4 days;" also one "in memory of John Read," the father of Mrs. Franklin, who died Sept. 2, 1724, aged forty-seven years. Some years ago, in digging up some of the graves in the churchyard, a tombstone was discovered which contained the name of Dennis Franklin, a child who died at an early age. Near the

tomb of Dr. Franklin, immediately adjoining, is that of his daughter, with this inscription:

"RICHARD  
AND  
SARAH } BACHE.  
1811."

The lady was the daughter of Benjamin and Deborah Franklin.

**Monuments in Christ Church Burying-Ground.**—In Christ Church Burying-Ground will also be found monuments and tombs in memory of distinguished men, erected usually by their families, which may be worthy of notice. Among them are the following:

"John Andrews, D.D., late Provost of the University of Penna., born April 21st, 1746; died March 29th, 1813.

"Commodore William Bainbridge, of the U. S. Navy, born in Princeton, New Jersey, May 7th, 1774; died in Phila. 28th of July, 1833. *Patria victisque Laudatis.*"

"Benjamin Smith Barton, M.D., Prof. in the Univ. of Penna., died Dec. 19th, 1815, in the 49th year of his age."

"Philip Benezet, merchant, died Oct. 13th, 1791, aged 69 years."

"Charles Biddle, Vice-President of Penna., died —, 1721."

"Dr. Phineas Bond, one of the founders of the Penna. Hospital, died June 11th, 1773, aged 56 years."

"Dr. Thomas Bond, also a founder of the Hospital, who practiced Physic and Surgery with signal reputation and success nearly half a century. Lamented and beloved by many. Respected and esteemed by all, and adorned by literary honors sustained by him with dignity. He departed this life March 26th, 1784, aged 72 years."

"Samuel F. Bradford, Printer and publisher, died April 8th, 1837, aged 61 years."

"Edward Burd, Prothonotary of the Supreme Court, died July 24th, 1833, in the 84th year of his age."

"Matthew Clarkson, Alderman and Mayor, died Oct. 5th, 1800, in the 67th year of his age."

"Commodore Richard Dale, of the Revolutionary Navy, born Nov. 6th, 1756; died Feb. 24, 1826. An honest man, an incorruptible patriot, in all his relations a Christian without guile. He departed this life in the triumph and hope well founded, and of that blessedness which await all who like him die in the Lord."

"John Dunlap, Printer and Publisher, died Nov. 27th, 1812, aged 66 years."

"Michael Hillegas, Treasurer of the U. S. during the Revolution, died Sept. 29th, 1804, in the 76th year of his age."

"Major Wm. Jackson, Secretary of Presd. Washington, born March 9th, 1759, died Dec. 17th, 1828."

"Elizabeth Willing Jackson, his wife, born March 27th, 1768, died Aug. 5th, 1858."

"Dr. John Kearsley, Architect of Christ Church, and founder of Christ Church Hospital, died Jan. 11th, 1772, aged 88 years."

"Thomas Lawrence, An eminent Merchant, A faithful Counsellor, An active Magistrate of Penna., whose private virtues endeared him to his friends; whose publick conduct gained him respect and esteem. Expecting everlasting life he ended this, during his 9th Mayoralty of this City, the 25th day of April, MDCCCLIII, Aged 64 years."

"John Patterson, A native of Ireland, Formerly an Officer in the British Army, and at the period of the Revolution Collector of Customs in the port of Phila., died Feby —, 1798, aged — years."

"Chandler Price, Merchant, died Dec. 27th, 1827, aged 62 years."

"Dr. Benjamin Rush, signer of the Declaration of Independence, died Apl 9th, 1813, aged 68 years. 'Well done good and faithful servant, enter thou into the joys of thy lord,' Matt. 25 c. 23 v."

"William Tilghman, LL.D., who departed this life 30th of April A. D. 1827. Invested with the office of Chief Justice of Penna., in which for upwards of 20 years he imparted a lustre rarely equaled, never surpassed, *ÆT. 71.*"

"Commodore Thomas Truxtun, of the Revolutionary Navy, died May 5, 1822, aged 67 years."

"Rev. Bird Wilson, LL.D., D.D., born at Carlisle, Penna., Jan. 8th, 1777, died New York, Apl 14, 1859. Appointed Presd Judge to the Courts of Common Pleas in the 7th Diet. of Penna, A. D. 1802. Re-

<sup>1</sup> Morton McMichael died Jan. 6, 1879.

signed after 17 years faithful service to enter into Holy Orders, Ordained Presbyter A. D. 1820, Rector of St. John's Church, Norristown, Elected Professor of Systematic Divinity in the Genl Theological Seminary Prot Episcopal Church, A. D. 1822, Resigned A. D. 1750."

In the yard attached to Christ Church building are many interesting tombs. Among them that of Dr. Thomas Graeme, died Sept. 4, 1772, aged eighty-four years,—

"This soul that lived within this crumbling dust  
In every act was Eminently just,  
Peaceful through Life. As peaceful, too, in Death.  
Without one pang he rendered back his breath."

Near him lies his daughter, Lady Ann Keith, wife of Sir William Keith, who died July 31, A.D. 1740, aged sixty-five years; also near him Dr. Graeme's daughter, the celebrated Mrs. Elizabeth Ferguson, wife of Hugh Henry Ferguson, died 1801,—

"Eliza — caused this stone to be laid  
Waits with resignation and humble hope  
For reunion with her friend  
In a more perfect state of existence."

Rev. Dr. Alexander Murray, "Born in North Britain, educated in King's College, Aberdeen, departed this life Sept. 14, 1793, aged sixty-six.

"A truly honest man.  
Reader who ee' thon art,  
Strive to attain this character.

"A wit's a feather and a chief's a rod;  
An honest man's the noblest work of God."

"Rev. John Waller James, rector of this church,—

"I know that my redeemer liveth."

The following inscription is upon a family vault:

"The Family Vault of William White  
And Robert Morris; The latter of whom  
Was financier of the United States  
During the Revolution—died the 8th  
May, 1806. Aged 73 years: The  
former Rector of this Church & Bishop  
Of the Diocese, died on the 17th of July, 1836,  
Aged 88 years, 3 months, and 13 days."

Within the church are the following tombs:

Dr. Robert Jenney, rector, died Jan. 5, 1752, aged sixty-five years, and his wife, Joanna Elizabeth, who died six days after his burial, aged sixty-four years.

Rev. Richard Peters, D.D., rector of Christ Church and St. Peter's, died July 10, 1776.

The Hon. Richard Warsom, Esq., "One of His Majesty's Council of the Island of Barbadoes. Nature had been hountful to him. His education was liberal. His principles in regard to Church and State Orthodox and Constitutional. In the relations of husband and father he was kind, tender, and truly affectionate. His mournful widow, in respectful testimony of his Conjugal, Paternal, and other Excellencies, dedicates this stone. Born in Barbadoes, A.D. 1701, died in Philadelphia, A.D. 1768, aged 65 years."

**St. Peter's Churchyard.**—On the outer eastern wall of St. Peter's Church, at Third and Pine Streets, are several tablets bearing inscriptions; among them are the following:

To the memory of the Rev. Robert Blackwell, D.D., one of the ministers of the United Churches from 1781 to 1811, born May 6, 1748; died February, 1831, aged 83 years.

Rev. Jacob Duché, formerly rector, died Jan. 3, 1798, aged 59 years, 11 months, and 3 days.

George Mifflin Dallas, Vice-President of the United States, born July 10, 1792; died Dec. 1, 1861.

Rev. James Abercrombie, D.D., long assistant minister of Christ Church and St. Peter's, died June 26, 1841, aged 83 years and 5 months. Nicholas Biddle, scholar and financier, born Jan. 8, 1786; died Feb. 27, 1844.

Charles J. Biddle, his son, captain in the Mexican war, colonel of the Bucktail Regiment of Pennsylvania during the Civil war, died Oct. 1, 1873, aged 55 years.

Benjamin Chew, chief justice of Pennsylvania before the Revolution, died Jan. 20, 1810, aged 87 years and 10 days.

Alexander James Dallas, Secretary of State of the Treasury and of War under the United States Government, Attorney-General of Pennsylvania, died Jan. 16, 1817.

Joseph R. Ingersoll, lawyer and member of Congress, born June 14, 1786; died Feb. 20, 1868.

Dr. James Woodhouse, professor of Chemistry in University of Pennsylvania, died June 4, 1809, aged 39 years and 6 months.

**Monuments in Laurel Hill Cemetery.**—Beside the public monuments already noted, there are many memorials of eminent citizens erected by their families or friends which are worthy of mention. Jacob Ridgway, who, next to Stephen Girard, was, in his time, considered the richest citizen of Philadelphia, sleeps beneath an altar-tomb. A monument in memory of William Henry Drayton, member of the Continental Congress from South Carolina, who died Sept. 3, 1779, will attract attention. It is a single shaft of marble, having upon it the sculptured laurel wreath and the arms of South Carolina. Commodore Alexander Murray, of the United States navy, who died Oct. 26, 1821, aged sixty-six years. Commodore Isaac Hull, of the United States navy, of the war of 1812, hero in the fight between the frigates "Constitution" and "Guerriere," a splendid altar-tomb in the Roman style, with an effigy of an American eagle defending the American colors perched upon the centre. Commodore Hull died Feb. 13, 1843. Altar-tomb of Governor and Chief Justice Thomas McKean, of Pennsylvania, and president of the Continental Congress, died June 24, 1817. William Short, the United States minister to France, to Holland, and to Spain, the first officer appointed by President Washington. A pyramid of marble. Mr. Short died Dec. 14, 1849. Oscar Douglass, a Philadelphia fireman, who was killed by the falling of a wall while discharging his duty as a fireman in Market Street, above Third, Jan. 14, 1841. This monument was erected by the Philadelphia Fire Company and the Light Artillery Company, Washington Grays.

The number of clergymen buried in Laurel Hill is very great, and their graves are marked by tombs and monuments. Among them may be named the following: Rev. Albert Barnes, Rev. Henry A. Boardman, Rev. George Chandler, Rev. Joseph H. Jones, Presbyterians; Rev. J. B. Clemson, Rev. G. A. Durbin, Rev. James H. Fowles, Rev. Kingston Goddard, Rev. Joseph H. Jones, Rev. James Wiltbank, Rev. John Gordon Maxwell, and Rt. Rev. Alonzo Potter, Episcopalians; Rev. John P. Durbin and Rev. Solomon Higgins, Methodists; Rev. Charles R. Demme, Lutheran; Rev. A. De Gillette, Baptist.

Frederick Graff, the originator and designer of the

Fairmount Water-Works, who is commemorated by a Gothic canopy monument and bust at Fairmount, lies buried near the centre of Old Laurel Hill, and has an appropriate monument. Near the Schuylkill a winding path down the hill leads to a tomb cut in the solid rock, the entrance to which is by a massive Egyptian granite floorway. Above it trees rise from the surface soil. This rock-tomb is the burying-place of the Kane family. Within are the remains of Judge John K. Kane, of the United States District Court, died Feb. 21, 1858, aged sixty-three years, and his sons, Elisha Kent Kane, the Arctic explorer, died at Havana, Feb. 16, 1857, and Gen. Thomas Leiper Kane, of the Union army, died Dec. 26, 1883.

There are also many splendid memorials of eminent citizens. Among them may be mentioned the following: Commodore Stephen Decatur Lavalette, monument enriched with naval emblems; Joseph S. Lewis, altar-tomb, which is a fine bas-relief view of the Fairmount Water-Works, in the establishment of which Mr. Lewis, as a member of the watering committee of Councils, was largely instrumental. The Diston mausoleum is a large and very handsome marble building, conspicuous in appearance, and placed in a commanding situation.

Ferdinand Rudolph Hassler, a man of science, director of the United States coast survey from 1816 to 1832, is commemorated by a massive rock of rough marble, surmounted by a pedestal and urn, and situate near the banks of the Schuylkill. Near to it is a piece of work somewhat similar,—a rough block of marble, surmounted by a lyre and urn and tablet, to the memory of Joseph C. Neal, humorist and journalist and author.

A beautiful statue monument in white marble represents a woman clasping two babes in her arms. It is a portrait group executed by Henry Demchowski Saunders, a Polish sculptor, in memory of his wife and children.

**The Swedes' Church** burying-ground, on Delaware Avenue, is the oldest in the city, and dates from 1698. One of the most interesting memorials in this ground is the tombstone of Alexander Wilson, the ornithologist, which has an appropriate inscription.

**West Laurel Hill.**—This, the latest cemetery established in Philadelphia, has not yet attained the amount of monumental ornament to be met with in older grounds. The remains of Charles Brockden Brown, the first American novelist, lie under a plain stone, which marked the original place of his burial. Upon the highest circle in the inclosure lies the body of Col. Ulric Dahlgren, a gallant officer of the Union army, who was killed near Richmond, Va., March, 1864. It is intended to erect to his memory at this point a statue in bronze. The remains of Justice Grier, of the United States Supreme Court, lie upon the hill-side, with a costly monument. Thomas W. Evans, a merchant, is commemorated by a splendid shaft of Aberdeen granite.

**Hood Cemetery (formerly the Lower Burying-Grounds, Germantown).**—In this ground lie the bodies of Gen. James Agew and Col. Bird, of the British army, who were killed at the battle of Germantown. A plain stone was placed over their remains some years ago by John F. Watson. In this cemetery lie the remains of William Hood and his wife, in a vault prepared by himself, over which is the following inscription:

"Wm. Hood,  
Born Philadelphia,  
September 2nd, 1786,  
Died, Paris,  
January 18th, 1850."

"Eliza A. Hood,  
Born August 18th, 1783,  
Died August 15th, 1856."

Some of the stones in this ground are very old. The dates run back to 1700. In one of the vaults repose the remains of the Rev. Christian F. Post. The slab contains this inscription:

"In Memory of  
Christian Frederick Post,  
Missionary for Propagating the Gospel  
Among the Indians  
In the Western Country,  
On the Ohio, at Labrador,  
On the Muesqueto Shore,  
In North America.  
In the Gospel 45 years with  
Distinguished zeal, prudence,  
And ability,  
He departed this life on the  
First day of May, 1785,  
Aged 75."

The modern gravestones are handsome. One of the finest covers the remains of Capt. John S. Jones, once of the merchant service, who died Aug. 10, 1855. It is an altar-tomb.

**Mount Moriah.**—In this ground, principally by removal from other burying-grounds, are the tombs of men of considerable distinction in their time. The Baptists have a portion of the cemetery for their own dead, and the following are some of the inscriptions:

"*First Baptist Church.*—In memory of Mr. Abel Morgan, Baptist minister, who departed this life Decr 16th, 1722, in ye 49th year of his age."

"The Rev. Mr. Jenkin Jones, late minister of the Baptist Church in this city, in which station he served 35 years. Died July 6, 1759."

"Rev. Henry Holcomb, D.D., ordained Sept. 11, 1785. He was an officer of the Army of the Revolution, and a member of the South Carolina Convention which approved the Federal Constitution. Died May 22nd, 1824."

"In memory of Rev. Morgan Edwards, A.M., pastor of the first Baptist Church of Phila. for 11 years. Died June 28th, 1795, aged 73 years."

"Rev. Thomas Ustick, A.M., who was upwards of 20 years minister of the first Baptist Church of Phila. Died April 18, 1803."

"Rev. Wm. Rogers, D.D., pastor of the first Baptist Church, ordained 1772. Died April 7, 1824. In memory of their affectionate remembrance of a faithful pastor and of his services the first Baptist Church have erected this monument to his eudearing memory."

Other ministers lie in this cemetery, among them Rev. Thomas H. Stockton, Methodist Protestant, and Rev. Newton Heston, Methodist Episcopal divine.

Commodore Jesse D. Elliott, of the United States navy, who died Dec. 10, 1845, is commemorated by a simple slab. Commodore Peter Turner lies near him. The lot of the National Guards contains a monument surmounted by the bronze figure of a soldier. When the cemetery attached to the United States Naval Asylum was abandoned, the remains of the seamen and officers were removed to Mount Moriah. There were four hundred and forty bodies, and each is marked by a separate gravestone. One of them is "to the memory of Thomas Johnson, who died July 12, 1851, aged one hundred years." Some of the family monuments are very handsome. That of John J. Jones, of West Philadelphia, has a colossal marble statue of "Time" upon a base of granite about twelve feet in height. Robert P. King, printer and publisher, who was the first president of the Cemetery Company, lies near a massive base of white marble surmounted by a marble cross. He died Sept. 27, 1868. Among the tombs of soldiers is that of Joseph C. Reynolds, private in Company D, Ninety-first Regiment Pennsylvania Volunteers; he has an altar tombstone, on the face of which are carved in relief a musket, knapsack, cartouch-box, and baversack. He died from wounds received at the battle of Spottsylvania Court-House, Va. Upon the tomb is the sentence:

"Mother, one of us ought to go,  
Why not me?"

Other memorials are of Col. John W. Moore, of the Ninety-ninth and Two Hundred and Third Pennsylvania Volunteers, killed at the attack on Fort Fisher; Lieut.-Col. George W. Hawkins, Ninety-seventh Regiment Pennsylvania Volunteers, killed at Hatcher's Run, Oct. 28, 1864; Col. George C. Spear, killed May 3, 1863. A striking memorial is that erected by William Wheatley, the actor, in memory of the Gale sisters, who were burned to death by an accident at the Continental Theatre in 1861:

"In memory of the Gale sisters,  
Ruth,  
died Sept. 17th, 1861, aged 15 years.  
Zelia,  
died Sept. 25th, 1861, aged 17 years.  
Adeons,  
died Sept. 15, 1861, aged 19 years.  
Hannah,  
died Sept. 15, 1861, aged 22 years.

Strangers who through this city of the dead,  
With thoughtful soul and feeling heart may tread,  
Pause here a moment: those who sleep below  
With careless ears ne'er heard a tale of woe.  
Four sisters, fair and young, together rest  
In saddest slumber on earth's kind breast,  
Torn out of life in one disastrous hour,  
The rose unfolded to the budding flower,  
Lifs did not part them,—Death might not divide.  
They lived, they loved, they perished side by side.  
O'er doom like this let kindly feelings shed  
The softest tears that mourn the early fled,  
For whom, lost children of another land,  
This marble raised by weeping friendship's hand.  
To us—to future times remains to tell  
How even in death they loved each other well.

With a mother's tearful blessing  
They sleep beneath the sod;  
Her dearest earthly treasures  
Restored again to God."

**Mount Vernon.**—The remains of Gen. William Knox were removed from Christ Church ground to this cemetery. Commodore Robert Ritchie and Col. Van Leer are also interred here.

One of the most elegant monuments is to the memory of the Gardel family, a pyramidal structure of brown stone, decorated at the base with several life-like statues of marble. As a work of art it is one of the finest in the country.

In the burial-ground of the **Third (Old Pine Street) Presbyterian Church**, part of which belongs to the First Church, is a tablet erected to the memory of David Rittenhouse, the celebrated astronomer, who died June 26, 1796, and was originally interred in a mausoleum adjoining the garden of his dwelling, northwest corner Seventh and Arch Streets; and a fine monument in memory of Capt. Charles Ross, of the City Troop, erected by that organization. It is particularly distinguishable by reason of the bronze helmet and military trophies on the top, those being the first monumental devices of that metal put up in Philadelphia.

In **St. Stephen's Church (Protestant Episcopal)**, on Tenth Street, below Market, is a very elegant monument, surmounted by a group of four figures, cut by the celebrated sculptor Steinhauser, and erected by Edward Shippen Burd, in memory of members of his family. It is a splendid work of art, and is executed in pure white marble.

In the churchyard of **St. Mary's (Roman Catholic) Church**, Fourth Street, below Prune, are tombs to the memory of Capt. John Barry, of the Revolutionary navy, and Thomas Fitzsimons, once member of Congress.

**Woodlands Cemetery** is adorned with many fine monuments, and many of them elaborate and costly. Conspicuous among them is the Drexel mausoleum, erected to the members of the family of Francis M. Drexel. It is a magnificent building, in the Grecian style, and one of the largest tomb structures in the country. In this cemetery is the tomb of Lieut. John T. Greble, the first officer of the United States army killed in the civil war. It is designed in exquisite taste. Among other conspicuous memorials in this ground are the monuments and tombs of Admiral Charles Stewart, "Old Ironsides," of the United States navy; Commodore David Porter, United States navy; Maj.-Gen. David B. Birney, United States army, during the civil war; and a fine memorial to the memory of Dr. David Jayne, a well-known business man.

**Monument Cemetery.**—One of the finest memorials in Monument Cemetery was erected, shortly after the ground was opened, to the memory of William Delamater Caldwell. It was erected in pursuance of directions left in his will, and is an expensive piece

of work. It towers conspicuously among the memorials in the ground.

The tomb of the Sartain family is of brown stone, and in the Egyptian style. On the front is a white marble die with the figure of "Grief" in relief. On the panel in the rear is the following striking inscription:

"LIFE.  
Monstrous and false in form,  
But true and Beautiful in promise,  
Wisdom, and love, with savage force allied.  
The plan, the purpose, and the means.  
The thought and will of God achieved,  
Through discipline of Pain!  
Vigilant, Relentless, Yet Beneficent law,  
Not angry, cruel, or capricious.  
Pain is not punishment, and there is  
No death.  
The world's hope but waits the Great  
Atonement.  
Each serving to his brother's use and  
Suffering for his sin and the divine for all,  
And the sacrifice shall not cease,  
Nor Justice reign  
Until  
Faith stands rendered into Knowledge  
And worship Incorporates with work;  
Till the world's life obeys its Science  
And man is organized into Unity  
With man, with Nature, and with God.  
Universe is one;  
Reconciliation is Redemption.  
Harmony is Heaven,  
The Mystery Hidden from the Ages.  
Rendered by this Key.  
The Sphinx shall perish,  
The Curse cease, and death and Hell  
Be swallowed up  
In  
Victory."

The Association for the Relief of Sick and Disabled Firemen has a conspicuous monument above a vault. A white marble panel-case has at the corners representations of fire-plugs. The shaft rising above bears upon the face in relief the horn, spanner, and torch. The names of the persons who sleep below and the dates of their deaths are on the sides. The Diligent Fire-Engine Company has a neat monument to the memory of Marcus Rink, a member killed at the same time with Oscar Douglas (who lies in Laurel Hill) by the falling of a wall at the fire in Market Street, near Third, Jan. 23, 1841.

A fine monument to the memory of Capt. Daniel S. Stellwagon, master in the United States navy, born Nov. 6, 1774, died Nov. 16, 1828, has elaborate inscriptions setting forth his services to his country. The base is in panels. Above these is a rough rock upon which is represented sea-weeds, etc., and upon which the shaft resembles a light-house with lookout lantern, etc. A figure of "Hope" crowns this unique memorial. Lieut.-Col. Thomas S. Martin, of the Eleventh Regiment Pennsylvania Volunteers, killed at Bull Run, Aug. 30, 1862, is commemorated by a white marble shaft. The remains of Frederick J. Roberts, who died Oct. 13, 1844, are marked by a monument erected by the Washington Grays.

## CHAPTER XLVI.

## FIREMEN, FIRE COMPANIES, AND LARGE FIRES.

BEFORE 1695 no public measures were taken in Philadelphia for the extinguishment of fires. On the 25th of May, in that year, the inhabitants of the town petitioned Governor Markham and the Council to pass a law providing them with ladders and leather buckets. The Provincial Legislature, regarding the petition a reasonable one, passed a bill in 1696 for preventing accidents at fires in the towns of Philadelphia and New Castle, and for preventing and extinguishing fires. By this act the inhabitants were prohibited from cleaning their chimneys by burning them out, and foul chimneys were forbidden under a penalty of forty shillings. Each householder was directed to keep at his dwelling "a swab, twelve or fourteen feet long," and a bucket or pail, to be ready in case of accidents by fire, under a penalty of ten shillings, and no one was allowed to smoke tobacco in the streets, day or night, under a penalty of twelve pence. The fines to be appropriated for the purchase of leather buckets and other instruments or engines for the public use in the extinguishment of fires. A similar law was passed in 1700, which provided for "two leathern buckets," and re-enacted in 1701, with an additional clause directing the magistrates to procure "six or eight good hooks for tearing down houses on fire."

With this primitive fire department the good citizens of the town were content to rest until 1718, when Abraham Bickley, a public-spirited citizen, and afterward a prominent city official, offered a fire-engine to the city, which he probably imported from England. The city purchased this engine for the sum of fifty pounds, and it continued to be its greatest defense against fire until 1831.

George Claypoole, in July, 1729, was employed to keep the city fire-engine in good repair and make monthly trials of it at an annual salary of three pounds, but becoming dissatisfied with his bargain after an experience of only one month, Richard Armit was given the contract. In 1730 the citizens, with the aid of Bickley's engine, attempted to subdue a large fire on Fishbourn's wharf, below Walnut Street. The fire gained great headway, and at one time threatened to destroy the city. It crossed Water Street, burned the buildings of Jonathan Dickinson, and destroyed property altogether valued at five thousand pounds. This destructive conflagration warned the authorities of the necessity of procuring more adequate fire apparatus, and accordingly, in April, 1730, the city authorized the purchase of three more engines, four hundred buckets, and twenty-five hooks. One of the new engines was made in Philadelphia by Anthony Nicholls, and the other two were procured in England. In January, 1731, the latter arrived, with two hundred and fifty buckets, the remainder

being made in the city from a sample furnished by Thomas Oldman at nine shillings each. A trial of the engine built in the city was made in January, 1733, and a local chronicler says that it "played water higher than the highest in this city had from London." The leather fire-buckets were ordered to be hung up in the court-house, and the engines were stationed as follows: One at the great meeting-house yard, southwest corner of High and Second Streets; one at Francis Jones' lot, corner of Front and Walnut Streets; and the old engine in a corner of the Baptist Meeting yard, in Second Street near Arch.

In December, 1733, Franklin's *Pennsylvania Gazette* contained an article on fires and the mode of extinguishing them. On Feb. 4, 1735, the same paper contained a communication signed "A. A." (probably Anthony Atwood, a well-known citizen) in reference to the subject of fires and their extinguishment. The writer sets out by stating that in consequence of lameness of his hand he is not capable of giving that kind of assistance which at fires is so cheerfully accorded by the citizens generally, but he thinks it his duty to extend what aid he can in the way of useful suggestions. He said the city had engines enough, but in some parts of the town there was not water sufficient "to keep the pumps going for a half-hour together." At the same time he advised the formation of fire companies. Shortly after these suggestions were made the houses of "Budd's long row," on Front Street above the Drawbridge, took fire, and threatened the destruction of a large amount of property. Attention was again called to the necessity of adopting some method for the extinguishment of fires, and fire companies were again suggested. Accordingly, on the 7th of December, 1736, the Union Fire Company was established, mainly through the active efforts of Benjamin Franklin.

The Union Fire Company was an association for mutual assistance. Each member agreed to furnish, at his own expense, six leather buckets and two stout linen bags, each marked with his name and the name of the company, which he was to bring to every fire. The buckets were for carrying water to extinguish the flames, and the bags were to receive and hold property which was in danger, to save it from risk of theft. The members pledged themselves to repair to any place in danger upon an alarm of fire with their apparatus. Some were to superintend the use of the water, others were to stand at the doors of houses in danger, and to protect the property from theft. On an alarm of fire at night it was agreed that lights should be placed in the windows of houses of members near the fire "in order to prevent confusion, and to enable their friends to give them more speedy and effectual assistance." The number of members was limited to thirty. Eight meetings were held annually. At each meeting there was a supper costing three shillings. Members who came late were fined one shilling. Members who did not come at all were

fined four shillings. There was a treasurer, but no president, of the company. Each member served in turn during a month as clerk, in which time he notified his associates of the meeting, inspected their buckets and bags, and when they were not in good order reported the fact to the company. Upon this plan, with slight variations, all the fire companies of Philadelphia were conducted until long after the Revolutionary war.

At this time engines and buckets were the only available apparatus, as pumps were few, and the supply of water scant. The engine of the Union Company, it is believed, was imported from England, as were also those of the other companies formed down to 1768.<sup>1</sup>

The engine of the Union Company was probably kept in a house in Grindstone Alley, which runs north from Market Street to Church Alley, west of Second Street. Among its early members were Isaac Paschal, Samuel Powell, William Rawle, and Samuel Syme.

The membership of the Union being limited to thirty persons, before the end of the year another company was formed, under the name of the Fellowship Fire Company, with thirty-five members. Its constitution was dated Jan. 1, 1738, and its house was situated on a lot belonging to the Friends' Meeting, on Second Street, near Market. The fire-ladder was kept under the eaves of the butchers' shambles, on the south side of the market-house, near the meal-market; there were also seven ladders in various other places.

In 1742 the members of the Fellowship Fire Company were Isaac Williams, Ohadiah Eldridge, Jacob Shoemaker, Jonathan Zane, William Moode, Thomas Hine, Edward Cathall, George Sharswood, — Hewes, John Jones, Jr., John Langdale, Jr., Thomas Say, Barnaby Barnes, John Biddle, Jacob Shoemaker, Jr., John Howell, Benjamin Betterton, Andrew Bradford, William Callender, Joseph Noble, Joseph Fussell, John Pole, Abraham Mitchell, Isaac Powell,

<sup>1</sup> In the *Pennsylvania Gazette* for October 28, 1768, appeared the following advertisement:

"Richard Mason, living at the upper end of Second Street, undertakes to make and sell fire engines of the newest construction. Warranted good, from fifth rate down to the smallest size. The advantages these engines have above others are that they have twice the room to pour in water than those whose levers work at the sides of the cistern, — they work as easy, and play with a constant stream and prodigious force, and collect a large body of water closely together, and will sooner extinguish fire in buildings than any other engine heretofore contrived. The cisterns are made of good seasoned white oak or red cedar if required, — the joints of the cistern are lined with copper and nailed with brass nails, and the wheels are shod with iron. As I am the first inhabitant and native of this province who has attempted so useful a branch, I call on the fire companies of this city who may want new engines.

"I have just completed a fourth class engine for the Northern Liberty Fire Company. Any gentleman wanting an engine may see the same played. I will undertake to keep all the city engines in repair.

"RICHARD MASON."

Mr. Mason was not aware of the engine made by Anthony Nicholls, or he would not have announced himself as being the first to attempt to build fire-engines in Philadelphia. He was undoubtedly the first successful manufacturer.

The Northern Liberty Fire Company, founded May 1, 1756, was probably the first to encourage domestic manufacture. Its engine-house was situated at the northeast corner of Cable Lane and Callowhill Street.

Joseph King, William Corry, Caspar Wistar, John Wister, David Deshler, Alexander Crukshank, Joseph Stiles, George Hitner, Jonathan Carmalt.

On the 1st of March, 1742, the third fire company was formed. This company was called the Hand-in-Hand. The fourth voluntary company, established Feb. 22, 1743, was called the Heart-in-Hand. The fifth company, named the Friendship Fire Company, was founded July 30, 1747.

The fire companies established after the Union slightly increased the number of their members. The Fellowship had thirty-five members; the Hand-in-Hand, the Heart-in-Hand, and the Friendship each had forty members. The Britannia Fire Company was probably established in 1750 or 1751. The only trace that we have of its existence is in an advertisement which gives a list of some articles lost belonging to that company; this advertisement appeared in April, 1752. All of these companies, with the exception of the Britannia, were in service until the Revolution, when the latter, possibly in consequence of the unpopularity of its name, was discontinued. In the year 1791 the Union, Fellowship, Hand-in-Hand, and Heart-in-Hand were in full service, and made return of the condition of their apparatus, including engines, huckets, ladders, hags, haskets, and "hauses" (hose). Of the latter, the Union had one of eighty feet, and the Friendship one of one hundred and twenty feet. Each of these companies had an engine, except the Friendship, which had two. The same company also had two hundred and forty buckets, in number only equalled by those in possession of the Union. During the years which succeeded the establishment of the Union Fire Company there were but few fires, the city being spared from many destructive ones during the period of which we are now speaking. The most serious conflagration occurring about this time was that of Hamilton's buildings at the Drawbridge, which consumed several stores, with all their contents, consisting of produce, etc. This was probably the largest and most destructive fire which had happened in the city up to that time.

The six fire companies which were in existence in the city in 1750 were reinforced by several new associations established between the latter year and the time of the Revolution. They were as follows:

NAME.	FOUNDER.	LOCATION.
Hibernia.....	Feb. 20, 1752.....	Corner 2d and Walnut.
Northern Liberty.....	May 1, 1756.....	N. E. corner Cable Lane and Callowhill.
Vigilant.....	Jan. 2, 1760.....	Sup. east side Second, below Vine.
King George III., after-ward Delaware.....	March 21, 1761.....	Sup. in Water St., below Arch.
Queen Charlotte, after-ward Fame.....	March 29, 1764.....	North side Cherry, east of Fourth.
American.....	Before Dec. 1764.	
Sun.....	Before Feb. 28, 1765.	
Crown and Beaver.....	Before March, 1765.	
Cordwainer.....	Before Feb. 1769.	
New Market.....	March 1, 1769.....	N. end Market 2d & Pine.
Amicable.....	Aug. 7, 1769.....	Fifth, above Market.
Neptune.....	Jan. 17, 1774.....	Race, below Third.

The Hibernia Fire Company was founded, at a meeting held at Evans' Tavern, by Hugh Donaldson, Randle Mitchell, Walter Shee, Samuel Wallace, Abram Usher, William Henry, Plunket Fleeson, William West, John Johnson, John Fullerton, Robert Taggart, Benjamin Fuller, George Bryan, James Fullerton, James Mease, James Haldane, James Hunter, Blair McClenachan, John Mitchell, George Fullerton, George Campbell, Samuel Duffield, Sharp Delany, Edward Batchelor, William Alison, William Burrall, and William Miller. To these members were added, before 1776, James Caldwell, John White, Henry Hill, John Mease, John Boyle, Francis Nicholas, John M. Nesbit, James Crawford, David H. Conyngham, George Hughes, Michael Morgan O'Brien, Robert Morris, John Brown, and John Nixon. Nearly all of these gentlemen were merchants or tradesmen, and several of them afterward became conspicuous in public affairs, especially during the Revolutionary war.

At a meeting called to form the Northern Liberty Fire Company Levi Budd was president, and William Coats was secretary. The other original members were Charles West, John Stellwagen, Henry Woodrow, Adam Stricker, Martin Nolle, Joseph Cannon, Joseph Rush, James Worrell, Reinard Cammer, Richard Mason, Seymour Hart, Thomas Gilbert, Henry Stonematz, Thomas Felton, William Biddle, Samuel Pryor, John Scattergood, George Leib, Elias Lewis Triechel, James Nevell, John Williams, David Rose, Thomas Britton, Jacob Weaver, Isaac Jones, John Britton, Joseph Cowperthwait, and Thomas Scattergood. These gentlemen were inhabitants of the Northern Liberties. William Coats was a large land-owner in the district. Levi Budd was a man of means. Seymour Hart was a lumber merchant at Callowhill Street wharf. William Biddle lived in Front Street, above Callowhill. George Leib was the father of Michael Leib, once a very influential politician. Richard Mason afterward became a manufacturer of fire-engines. Martin Nolle, Adam Stricker, and Elias Lewis Triechel were innkeepers. The company met for some time at Triechel's Tavern, sign of Noah's Ark, Front and Noble Streets.

The original members of the Vigilant Fire Company were Edward Drinker, W. Moulder, Charles Lyon, Joseph Connell, John Elton, John Gill, Jeremiah Smith, John Biles, Isaac Cathrall, Peter Thompson, William Davis, John Cameron, Martin Ashburn, Nathaniel Brown, Henry Shute, William Gua, William Barnes, Joseph Warner, Henry Rigby, Israel Cassell, Nicholas Hicks, Samuel Robbins, William Williams, Samuel Hastings, Bradford Roberts, James Cassell, William Wayne, Bowyer Brooke, James Wood, John Cassell, and Jeremiah Smith. Edward Drinker, who leads off among the members, was noted among Philadelphians as having been born upon the site of the city upon Dock Creek in 1680, two years before the landing of Penn. He was at

this time eighty years old, and lived at the Drinker House, corner of Front Street and Drinker's Alley. William Moulder was at one time a schoolmaster at Callowhill Street and Cable Lane, and was afterward a justice of the peace. Bowyer Brooke was a surveyor, related to the Coats and Brown families of the Northern Liberties. Peter Thompson, in the year 1760, kept store at the sign of the Haud and Pen, in Race Street. Nathaniel Brown was a whip-maker, afterward a surveyor, and also, during the Revolution, a wagon-master, and a wagon-major in the quartermaster's department. After the Revolution he kept the Leopard Inn, on Market Street, and, subsequently, the Hunting of the Fox, on Arch Street, above Sixth. Jeremiah Smith kept the famous tavern on Front Street, above Arch, known as the Queen of Hungary. Charles Lyon was a merchant. Martin Ashburn kept the upper ferry at Arch Street wharf. Abram Carlisle became a member before the Revolution, and suffered during that contest the fate of a traitor.

The King George the Third Fire Company originally consisted of the following members: William Faries, Isaac Coats, Charles Lawrence, Conrad Beech, Richard Wood, Joseph Hill, Jacob Bright, Andrew Shaffer, Robert Elton, Matthias Abel, James Cooper, Thomas Brookes, Francis Forster, William Bywater, Christopher Ludwick, George Button, Rudolph Bonner, John West, Jonathan Biles, Griffith Vaughan, Benjamin Worthington, Robert Tatnall, Henry Casdorp, John Whiteall, William Wells, William Palmer, Henry Bunner, Lane Naylor, David Cawthorn, John M. Nill, John Browne, and William Salsbury. These were all respectable business men. Christopher Ludwick, a baker, during the Revolution obtained the sobriquet of baker-general, from his services in supplying the army with bread.

The Queen Charlotte Fire Company was originated at a meeting held at William Clampfer's, at which Jacob Maag was president, and John William Hoffman was clerk. The original members were Thomas Meyer, George Adam Gaal, Philip Ulrich, Casper Graff, Louis Weiss, Matthew Labolt, David Shaffer, Jacob Graff, Jacob Chrystler, Barnard Lawerswyle, Martin Fisher, Philip Will, Dietrich Rees. The original number of members was thirty. The company obtained ladders previous to the year 1769, when a new fire-engine was built by Richard Mason. It was placed in a house on the north side of Cherry Street, "between the Lutheran school-house and Thomas Tuston's," which was east of Fourth Street. The names of the members of this company are all German, and, from the fact that they obtained ground adjoining the Lutheran school-house, it is probable that most of them were members of Zion or of St. Michael's Lutheran congregation.

The Neptune Fire Company was formed at the house of Mrs. Krider, in Third Street. The first meeting noticed was held on Monday, Jan. 17, 1774.

All the members were present on that occasion, to wit: Andrew Geyer, Jacob Kehmlee, George Forepaugh, Charles Bitters, George Wert, Andrew Bachman, Charles Miller, William Sheaff, Lawrence Sickle, Andrew Eppele, George Honey, Jr., Hilary Baker, Jr. At the time of the breaking out of the Revolutionary war the company had no engine, the members being supplied with buckets.

In January, 1764, citizens of Germantown held a meeting at the town hall, in order to consult together in regard to the means of protecting themselves from the ravages of fire. They were situated at a considerable distance from the fire apparatus of Philadelphia, and the roads at that time were frequently so bad that no assistance could have been derived from the city fire companies. It was therefore resolved to form three separate fire divisions in Germantown and its neighborhood, and the fire companies which were formed were called the Fellowship, of the Upper Ward; Fellowship, of the Middle Ward; and Fellowship, of the Lower Ward. Subscriptions were taken up to purchase apparatus, and money enough was collected to send to England for three hand fire-engines, but by some misfortune the order was not fully completed. When the engines arrived, one was sent to Germantown; but of two others, one went to Bethlehem, and the other to Frankford. The companies afterward received their apparatus, however. In subsequent years the names of the three companies were changed, as follows: That of the Upper Ward, instituted March 1, 1764, was named the Franklin Fire Company; that of the Middle Ward, instituted March 5, 1764, was named the Washington Fire Company; and that of the Lower Ward, instituted Feb. 20, 1764, was named the Columbia Fire Company.

The number of fire companies which were in service in the city at the beginning of the Revolution were added to in the next quarter of a century by several more new institutions, as follows:

Sun Fire Company, founded Sept. 24, 1778; located at east end of Jersey Market, at Front Street.

Harmony Fire Company, founded Aug. 24, 1784; located in Harmony Court, near Third Street.

Endeavor Fire Company, founded Feb. 17, 1785; located in Keys Alley, between Front and Second Streets.

Reliance Fire Company, founded March 10, 1786.

Alarm Fire Company, founded May 1, 1787.

Assistance Fire Company, founded Dec. 28, 1789; located on the east side of Fifth Street, below Race.

Federal (afterward America) Fire Company, founded April 10, 1790; located at the Commissioners' Hall, Third Street, Northern Liberties.

Relief Fire Company, founded December, 1791; located in Relief Alley, near Second Street.

Diligent Fire Company, founded July 4, 1791; located on the south side of Market Street, near Eighth.

Kensington Fire Company, founded August, 1791.

Franklin Fire Company, founded Jan. 17, 1792; located in Powell Street, between Fifth and Sixth.

Washington Fire Company, founded Jan. 1, 1793; located in Frankford.

Humane Fire Company, founded March 1, 1794; located on the north side of Vine Street, between Second and Third.

Washington Fire Company, founded Jan. 3, 1796; located on the west side of Eleventh Street, below Walnut.

Friendship Fire Company, Northern Liberties, founded Aug. 18, 1796; located at the Commissioners' Hall, Second and Coates Streets, Northern Liberties.

Columbia Fire Company, founded Sept. 16, 1796; located at the corner of Eighth and Cherry Streets.

Hope Fire Company, founded Nov. 22, 1796; located on the south side of Pine Street, between Fourth and Fifth.

Resolution Fire Company, founded Jan. 1, 1797.

Whale Fire Company, founded Jan. 10, 1798.

Philadelphia Fire Company, founded Jan. 15, 1799; located at the northwest corner of Third and Spruce Streets.

Weccacoe Fire Company, founded May 1, 1800; located at the corner of Front and Christian Streets.

The Sun Fire Company, established in 1778, was a reorganization by members of the old company, which was founded some time before 1765.

The Harmony Fire Company was established by members of the Society of Friends, and the first meetings for the purpose of forming the company were held at the Quaker meeting-house, on part of the burying-ground at Fourth and Arch Streets, which was torn down when the large meeting-house was erected. The names of the Quakers who founded this company were Daniel Drinker, Richard Price, Abraham Liddon, Thomas Harrison, Arthur Howell, Jesse Williams, John Townsend, Isaac Paxson, Robert Wood, Thomas Parker, Samuel Pancoast, Jr., Jonathan Evans, Jr., Thomas Savery, James Truman, James Starr, Robert Coe, David Evans, Ellis Yarnall, John Poultney, Joseph Richardson, Jr., John Letchworth, John Elliott, Jr., John Oldden, Thomas Lawrence, Jr., Solomon White, Zachariah Jess, Evan Truman, Jacob Shoemaker, Jr., Joseph Budd, Samuel Jones, Solomon Dawson, Samuel Carver. Jonathan Evans, Jr., was the first secretary, and Daniel Drinker treasurer. Up to June, 1785, the company had no engine, the apparatus being three ladders, two fire-hooks, and the bags and buckets of each member. In 1785 the company procured the engine of the Britannia Fire Company.

The Reliance Fire Company was originated by Quakers, and was mainly composed of members of the Northern Monthly Meeting in Keys Alley. The original members were Ebenezer Robinson, Samuel Briggs, Samuel Parker, Benjamin Myers, Joseph

Moore, William Lane, Joshua R. Smith, Evan Owen, Thomas Rodgers, Jr., Isaac Stroud, Daniel Dawson, George Justice, John Warner, Daniel Evans, Stephen Phipps, John Care, John Teas, James Gorham, Amos Foulke, John Ives, William Smith, Jonathan Worrell, John Grandom, James Worstall, Thomas Sherman, Hugh Ogden, Stephen Smith, James S. West, Joseph Rakestraw, Jr., Seymour Hart, Thomas Norton, Clement Remington, William Dawson, Leonard Snowden, Richard Hopkins, Joseph Yerkes, John Thomas, Joseph Bacon, James Oldden, Benjamin Oldden, William Trotter, Thomas Wimer, Joseph Shoemaker, Benjamin Taylor, Samuel Shoemaker, George S. Moore, George Bullock, Isaac Buckbee, Thomas Paul, Joseph Ogelby, Samuel Noble, Samuel Compton, William Compton. The meetings were held in the school-room at Keys Alley meeting-house until 1798, when the company met at Peter Widdowes' school-room in Race Street, between Front and Second. This was while the Quaker school-house in Keys Alley, which had been torn down, was being built. After its completion the company returned and built a house on part of the lot.

The Assistance Fire Company was formed principally by persons living in the neighborhood of Fourth and Race Streets, among whom were members of the Lutheran Church, a fact which will account for the choice of the German motto, "Bereit" (*Ready*), originally inscribed under the badge of the company. The members were Isaac Pennington, Henry Smith, Zachariah Lesh, Philip Odenheimer, Henry Harberger, Jacob Hansell, Philip Hall, John Long, Henry L. Stroop, Henry Peiffer, Godfrey Zeppernick, Valentine Hoffman, John Henchman, Samuel Mechlin, Conrad Sherer, Henry Nagel, John Isenbrise, Andrew Cressman, Martin Borhiff (or Boraeff), Peter Walter, John Muller, George Keeley, John Etris, Henry Ries, Daniel Frismuth. Isaac Pennington was the first president; Samuel Mechlin, vice-president; Philip Hall, treasurer; George Keeley, secretary. The original meetings were held at Smith's Tavern, and a few months afterward at Henry Meyer's Tavern, sign of the Old White Bear, corner of Fifth and Race Streets, where the members met for many years.

The Federal Fire Company was not named in compliment to the political party of that name, but in honor of the Federal government. The members were residents of the Northern Liberties. Among the founders were William Giles, Dr. John Weaver, Frederick Hoeckley, Jacob Ziegler, Charles Yetter, John Bender, Sr., Joseph Fricker, Dr. Joshua Strouse, Christian Hackman, John Adolph, Sr., Samuel Weisman, Sr., Michael Miller, Daniel Groves, Jesse Groves, Robert McKoy, Sr., and Daniel Rambo. This company got an engine in 1791, made by Samuel Briggs, fire-engine builder of this city.

The Kensington Fire Company was originated by

citizens of that district. The names of the founders cannot be separated from those of members who joined afterward. Among the early members were Matthew Vandusen, George Hoffman, Thomas Vaughn, Sr., Conrad W. Knot, Henry Kell, Thomas Vaughn, Jr., Henry Bald, John Wilson, William Clark, Michael App, Jacob Beideman, Martin Cramp, Jacob Deal, Isaac White, Samuel Brusstar, Christian Sheetz, James Tuttle, Philip Gosser, John Rice, Jacob Hill, Daniel Sheetz, George Binder, Peter Baker, Deobald Emrick, Adam Upperman, Martin Geyer, W. Geyer, James Brusstar, Thomas Elston, Daniel Deal, Peter Stoy, Michael Collar, M. Day, John Brown, Manuel Eyre, John Buckius, Clement Keen, Samuel Tees, Nicholas Vandusen, and others.

The Diligent Fire Company was instituted at the Spread Eagle Tavern, on Market Street, near Eighth, kept by Frederick Hubley. The original members were Abram Markoe, Daniel Rundle, Joseph Ogden, David Kennedy, Dr. Benjamin Vau Leer, Peter Lex, George Hunter, William Attmore, Benjamin Shoemaker, Frederick Hubley, Baltis Emerick, G. W. Davis, William Hunter, Henry Herbert, John West, John Henderson, William Lucas, Owen Foulke, Martin Thomas, Predy Kimber, Caleb Foulke, Richard North, David Seckel, and Edward Shoemaker. Richard Mason built the engine for this company in 1792, and it is recorded that this was the one hundred and seventeenth machine of that kind which he had constructed. His engines were sent to all parts of the United States and the West Indies.

The Humane Fire Company was originated by the following persons: John Goodman, Jr., J. Nicholas, W. Seidel, Adam Hains, John Du Montet, Frederick Boller, George Rehm, Martin Gillman, John Storr, Jacob Shreiner, Jacob Edenborn, Frederick Hyneman, Samuel Rockenberg, Garret Bross, George Abel, Jacob Wise, Jacob Wiltberger, Jacob Rees, Isaac Thomas, John Butler, Jacob Wyman, Samuel Neidlinger, Adam Eckfeld, George Brown, John Jordan, Frederick Burkhard, Jesse Oates, John Smith, Andrew Merker, Frederick Forehaugh, Thos. Lancaster, Jacob Shuler, John Hyneman, James Anderson, Andrew Meyer, John Grant, John Keffer, John Barris, John Halman, Samuel Sower, John Goodman, Sr., Philip Limeburner, George Smith, Christian Donnaker. A new engine was hought of Philip Mason in 1795, fitted for the purpose of working with a suction and venting hose.

The Washington Fire Company was established by residents of what was then the southwestern part of the city, in the neighborhood of Walnut, Spruce, Eleventh, and Twelfth Streets. The original members were Benjamin Lyndall, Francis Higgins, Barnabas Weaver, Thomas Mills, Samuel Mills, James Skerrett, John Chapman, Samuel Bonsall, Michael Waltman, John Martin, Francis Noblet, John Paterson, Henry Harherger, Peter Bob, John Nicholson, William McLaw, George Morton, and John Sisty.

The Friendship Fire Company, of the Northern Liberties, was founded by John Bender, John Abel, Adam Trips, Anthony Rennard, Daniel Linker, Henry Moser, Peter Abel, John Snyder, George Hopple, Jr., John Weaver, John Sefferheldt, John Browne, John Miles, Michael Baker, Peter House, Henry Sell, Henry Plain, John Rickert, John Bisbing, John Jones, Andrew Young, William Paul, Adam Logan, Henry Shall, Charles Yetter, Henry Senn, Peter Gabel, John Fisher, Jacob Lentz, Jacob Masoner, Joseph Fitch, Peter Wister, Peter Shrank, Frederick Mangole, Jacob Belsterling, Peter Groves, Andrew Frazer, William Snyder, and Melchior Deter.

The Columbia Fire Company was originated among citizens residing in the neighborhood of Eighth and Cherry Streets. The first officers elected were: President, Joseph Morris; Vice-President, John Moore; Secretary, Jacob Zebley; Treasurer, William Powell. The members were John Rujan, William Rudolph, Henry Hoffner, Anthony Wright, Joseph Warner, George Flake, Jacob Colladay, John H. Simmons, Joseph Thomas, Alexander Jarden, Nicholas Quest, Matthew Conroy, Samuel White, Samuel Jarden, John Buzby, Jacob Miller, Jacob Kinsel, George Lower, Heronimus Warner, Jacob Lyhrand, Henry De Forrest, Daniel Knight, Matthew Weaver, Jacob Perkins, William Perkins, John Lawrence, Wolfgang Hoffman, Jonas Holtz, and Joseph Deamer. This company, in 1797, purchased a fire-engine from Philip Mason for two hundred and twenty pounds.

The Hope Fire Company was originated among persons living in the neighborhood of Fourth and Pine and Lombard Streets. They were William Preston, Cadwalader Griffith, Anthony Fannin, Samuel Jones, Philip Mason, John Finister, William Jobson, A. Mnsgrave, Jr., Joseph Worrell, Benjamin Lyndall, Elisha Gordon, Joseph Allen, William Miller, William Stewart, Daniel Abell, Adam Promit, Samuel Powell Perkins, Joseph Price, George Morton, Benjamin Thurston, Pennel Beale, Gregory Strahan, William Franklin, Nathan Atherton, Adam Burk, Peter Field, Martin Bernard, Thomas Dixey, Daniel Shoemaker, Curtis Clayton, John Conner, William Sheed, Thomas Cave, J. Steward, Martin Erhard, Lawrence Sink, Saul Carver, Robert Harrison, Jacob Herman, Thomas Amies, George Kemble, John Henderson, Ebenezer Hillyard, Thomas Kurysten, Jacob Earnest, William Jones, John Smith, T. Ross, Ewing Wiley, John Geger, William Patten, Francis Jack, John Murray, William French, James Cornish, William Kern, Jr., Jacob Mitchell, and William Buck. Philip Mason, the engine-builder, was a member, and it is supposed he furnished to the company the first engine, which was obtained in 1797.

The Philadelphia Fire Company was formed by members of the Society of Friends, namely: Robert Coe, Jr., Joseph Parrish, Charles Townsend, Owen Biddle, Jr., George Vaux, John Bacon, James Conley, William Paxson, Charles Allen, Joseph Cowgill,

Charles Teas, Philip Garrett, Samuel Lippincott, William Abbott, and Joshua Longstreth. The engine was purchased in the year 1800, and is supposed to have been made by Philip Mason.

The Weccacoe Fire Company was originated in Southwark by residents of that district. The first officers were Joseph Ash, president; Joseph Marsh, Jr., treasurer; Robert Ralstou, secretary; John Turner, Sr., Joseph Johson, Lewis Dewees, David Ware, Robert Ralston, William W. Ross, Joshua Humphreys, George Ord, Charles Whitehead, John Hoover, Adam Vance, and Benjamin Phillips, engineers. Thomas Shortall, John McCloud, Henry Mitchell, Enoch Wheeler, Lawrence Myers, Frederick Godshall, S. Croshy, Isaac Hozey, David Ware, Peter D. Murphy, Benjamin Phillips, John Janvier, William Strembeck, Jacob Reinhard, Stephen Flannigan, Samuel Hargesheimer, and Joseph Ogelhy were members. Money was raised promptly to procure an engine, and one was got from Philip Mason for two hundred and ten pounds, and was housed for service on July 4th of that year. For years this company was not allowed to go to fires out of the district of Southwark.

The Union Fire Company was in active service until probably about 1820. The Fellowship Fire Company was also in existence in 1817-19, and probably went out of active service before 1825. This company had an engine-house at the east end of the Jersey market. The Hand-in-Hand Fire Company in 1800 kept its apparatus in a house at the north west corner of Front and Spruce Streets. Before the Revolution and up to 1800 this company was composed of the most eminent men in Philadelphia, embracing merchants, physicians, lawyers, clergymen, and citizens of wealth and refuement, many of whom held important positions in the State and city, and were eminent in the church. About the year 1800 the active members had, by reason of age and its attendant infirmities, become careless as to their duties. The loss of the minutes between December, 1796, and May 15, 1823, renders the history of the Hand-in-Hand a blank during nearly all the period between 1800 to 1825. It is known that Mr. McIlvain joined the company in 1804, Peter Hay in 1808, and Dr. Hahn before 1815. Charles Kammerer was president in 1811, Charles Schneider in 1812, Isaac W. Chadwick in 1813, John Martin in 1814, John Rohbins in 1814-15, John W. Chadwick in 1816, and Peter Flanagan at some date not now known. The secretaries, as far as known, were J. W. Chadwick, William Bullfinch, and Samuel Bard. The treasurers were John Rohbins, Michael Bourne, and E. S. Boys. Among the members were C. Snyder,—who attended a meeting of fire companies held at Elliott's Hotel, on Third Street, in 1813, as a delegate from the Hand-in-Hand,—James Mitchell, William Schreiner, John Deagle, W. Shawdonick, and Edwin Hedderly. The secretary of the prison inspectors, in 1814, gave permission to the Hand-in-Hand to stand in the house

northeast corner of Sixth and Walnut Streets. After 1816 the company ceased to be active, although it did not dissolve, and the engine was used by the Neptune Fire Company.

In 1822, the Neptune Fire Company being also reduced in numbers, but having possession of the Hand-in-Hand engine, obtained permission of the Fame Fire Company to store their machine in the latter's house, which circumstance led to the suggestion that a union between the Fame and the Neptune would be desirable. When it was learned that the engine used by the Neptune was owned by the Hand-in-Hand Company, it was decided to dissolve the Fame and Neptune Companies and unite with the Hand-in-Hand. The result was that the Fame and Neptune ceased to exist,—that the members of those organizations went into the Hand-in-Hand, which company was continued. At a meeting held in May, 1823, which appears in the minutes as a meeting of the Hand-in-Hand Fire Company, Richard W. Brown was chairman, and Isaac Dunton was secretary. There were fifteen other members. A committee was appointed to have the engine retouched and the name "Hand-in-Hand" restored, and to fit up the engine-house as conveniently as possible. The constitution, which was substantially that of the Neptune Fire Company, was adopted at the next meeting.

Among the members of the Hand-in-Hand, after the union in 1823, were Daniel K. Deas, Joshua M. Butler, George P. Little, Charles Woodward, Jesse K. Knight, Nicholas Le Huray, Jr., Charles J. Jack, John H. Camphell, Joseph Ogden, and William Spohn. In 1823, William Spohn was president. In the same year a committee was appointed to put the date of the institution of the Hand-in-Hand Fire Company in the oval over the door. The old Fame engine was sold in 1824 for forty dollars, and the tin torches belonging to that company were sold to the Northern Liberty Hose Company.

The Fame Fire Company kept its engine, in the year 1800, on the south side of Cherry Street, east of Fourth, adjoining Zion Lutheran Church. The spirit of the members began to relax in activity about this time. In 1808 the engine had become so dilapidated, and the efforts to obtain funds for a new machine were so unsuccessful, that a dissatisfied member offered a resolution proposing to dissolve the company, which was not passed. There were no meetings from March, 1810, to January, 1812, in consequence of the inactivity of the members; but in the latter year some vitality was infused into the company by the election of fifteen young gentlemen, among whom were John H. Gartley, Christian Denckla, George Geisse, Samuel Wayne, and Samuel Thompson. The engine-house was removed to Shiveley's [now Mulberry] Alley, in 1809, but in 1812 the machine was restored to its old site on Cherry Street. Yet the affairs of the company were not flourishing, and in 1815 a committee was appointed to consider the utility of uniting with the

Relief or the Assistance. Nothing was actually done, but for two years there were no meetings. A proposition to dissolve was again made in 1817. The company in 1810 sold its engine, which was built in 1765, to an association of young men and boys who called themselves the Junior Fame Fire Company. The price was one hundred and twenty dollars, to be paid in installments. The Juniors ran the machine for about nineteen months, when they returned it to the members of the Fame Fire Company, who put it up at auction; but so old and dilapidated was it that no higher bid than five dollars could be procured, and it was withdrawn from sale. In 1821 the directors resolved to unite the company with the Hand-in-Hand; but that measure was not accomplished until 1823, when the Fame Fire Company ceased to have an existence. Among the members of the Fame during the period of which we are treating were Daniel Sharp, John Boller, John Musser, Caspar Rehn, Andrew Leinau, Frederick A. Huber, Charles F. Gebler, and Richard Renshaw.

The Neptune Fire Company was in active service as late as 1815, and stood at that time in Coates' Alley, between Front and Second Streets. Among its members were Dr. George Glentworth, George A. Baker, John Geyer, Frederick A. Muhlenberg, John Phile, Capt. John Earl, Gen. Peter Muhlenberg, Dr. George Lehman, Jacob Lauerweiler, Leonard Jacoby, B. F. Glentworth, and George Kitts.

The Heart-in-Hand Fire Company is supposed to have been in active service in 1800, but it must have ceased from its labors shortly afterward.

The Hibernia Fire Company kept its apparatus, in the year 1800, in a house on Walnut Street, near Second. Afterward the company acquired a right to build a house on Dock Street, between Second Street and the entrance of Pear Street, upon a narrow lot, on which a two-story brick house was erected.

The Northern Liberties Fire Company, in 1800, stored its apparatus in a house on the north side of the Hay Scales wharf, at Front and Noble Streets. In 1802, according to an inventory of the company, its property consisted of an engine-house, an engine, eleven fire-buckets, a ladder-house in Front Street, above Green, in which were stored two ladders, one twenty and the other forty feet, a life-ladder, kept in John Keen's ship-yard, forty-five feet long, and two ladders which were fixed upon the walls of the market, at the intersection of Callowhill and New Market Streets. The fire-engine built by Briggs becoming unserviceable in 1808, a new one was procured of Patrick Lyon. The company removed, in 1812, from the Hay Scales lot to Pool's bridge, which crossed Pegg's Run at Front Street. Piles were driven into the bed of the creek, and upon these the superstructure was built, the front wall being upon the bridge. A large bell, costing eighty-five dollars, was placed upon this engine-house in 1817. A bucket-basket was procured in 1819, and some torches were pur-

chased the same year. The succeeding year two hundred feet of riveted hose was bought and placed upon a reel. Joseph Cowperthwaite was president of this company 1802-3; George Budd, 1803-5; Joseph Grice, 1805-13; Dr. Peres, 1813-20; Samuel Lehman, 1821-23; John M. Brown, 1823-27. The company met at the house of Silas Wilson from 1802 to 1816, from 1817 to 1820 at William Rice's, and afterward at the Norwich school-room, Callowhill and New Market Streets.

The Vigilant Fire Company in 1800 stood on the east side of Second Street, below Vine, on a lot adjoining an old inn formerly known as the Amsterdam Tavern, and in later years as the Barley Sheaf. In the early part of 1813 this company purchased a lot at No. 33 Race Street, between Front and Second, of Mrs. Jane Woglom. The price was sixteen hundred dollars, of which twelve hundred dollars were paid in cash and four hundred dollars remained on mortgage. The company did not take possession of this property until 1815. A cupola was built upon the front portion of the building, in which was placed a bell weighing two hundred and six pounds. A cupola for drying hose was afterward erected on the rear of the lot, and a new bell was procured for the steeple. The meetings of the company in 1800 were held at the sign of the Camel, on Second Street, above Race; but they were changed the same year to the school-room of the Young Ladies' Seminary, back of No. 9 Cherry Street, at a rent of six dollars per annum. In the same year the place of meeting was changed to the Widow Hill's, sign of the Buck, in Second Street, above Race, and subsequently to Parry's school-room, until the new house on Race Street was built. Richard Mason built an engine for the Vigilant Company in 1801 for five hundred and sixty dollars. In 1802 a white hat, with the word "Vigilant," was adopted. In 1817 a light-green hat, with a white label bearing the name "Vigilant," was adopted. In 1825 a hat was adopted painted green, and with a vermilion label on which the word "Vigilant" was painted in gold letters, shaded in black. In 1818 three hundred feet of hose were bought, and the old regulation requiring each member to furnish two buckets was abolished. In 1821 a hydraulion, like that used by the Pennsylvania Fire Company, was bought.

The Delaware Fire Company in 1800 stored its apparatus on a lot belonging to John Fromberger, in Fromberger's Court, which ran from Hartung's Alley to the alley afterward known as Lagrange Place, which ran westward from Second Street, south of Arch. In 1800 a committee composed of Henry Pratt and John Lyle, Jr., was appointed to get a new place, and reported in favor of Front Street and Drinker's Alley. But this was not approved of; and in 1801 a lease was made of ground on the opposite side of Hartung's Alley for eleven years, and a new brick engine-house was erected. In 1807, this lot being needed, the company went back to the old site. In 1811 there was

another removal to a lot on the south side of Har-tung's Alley which belonged to William Rawle. In 1813 the company petitioned Councils for the space under the old court-house, but it did not succeed. Some time afterward Councils granted permission to the Delaware Company to use the house of the Fellowship Company, at the front side of the Jersey Market, but it was too small. A new engine was purchased in 1801 of Richard Mason, to whom direction was given that a ship should be painted on each side of the gallery, as an ornament. This company was well supplied with ladders, having no less than seven from twenty to fifty feet long. These useful implements were stored in various parts of the city. According to a report in 1810, the ladders were placed as follows: No. 1, on the State-House wall, Fifth Street; No. 2, in an alley between Nos. 229 and 231 Arch Street, above Sixth; No. 3, in an alley between Nos. 109 and 111 Race Street, opposite the Golden Swan; No. 4, in an alley between Nos. 194 and 196 Front Street, above Vine; No. 5, in an alley between Nos. 79 and 81 North Third Street; No. 6, under the eaves of the market, nearly opposite the Presbyterian meeting-house; No. 7, in Goforth's Lane, between Second and Third Streets. Among the members of the Delaware Company during this period were Dr. Benjamin Say, Paul Beck, Jr., Henry Pratt (the eminent merchant), James Sharswood (father of Justice Sharswood, of the Supreme Court), Samuel Wetherill, Sr., Samuel Wetherill, Jr., Samuel C. Claypoole, Sr. (at one time publisher of the *Daily Advertiser*), David Paul Brown, and Townsend Sharpless (merchant). Stephen Girard was a member of the Delaware Company as early as 1783, and was active for some years. Isaac Hallowell, father of Judge Hallowell, and Dr. Benjamin Say were presidents of the company before 1800. Amos Wickersham was president for a year or two. Henry Pratt was president for many years. Benjamin Thaw, watch-maker, succeeded Pratt in 1803, and held the office for twenty years. He was succeeded by Townsend Sharpless.

The Sun Fire Company stood at the east end of the Jersey Market in 1800, and had a device of a rising sun emblazoned over its door. In the previous year it owned one engine, one hundred and sixty buckets, forty bags, and forty baskets, managed by forty members. This ancient company was dissolved probably about 1810.

The New Market Fire Company, the apparatus of which stood in the market-house at Second and Pine Streets, had, in 1799, forty members, an engine, and other essentials for the extinguishment of fires. It was dissolved probably before 1810.

The Amicable Fire Company stood on the east side of Fifth Street, below Arch, at the south end of Christ Church burying-ground, and relinquished the stand to the Resolution Hose Company about 1823-24.

The Harmony Fire Company, in the year 1800, occupied, by permission of Hon. William Bingham, a

house which was placed on the corner of his mansion-house grounds, and situate either upon Spruce Street or at the corner of Third and Spruce Streets. A new engine-house was erected on that site in 1802, at an expense of one hundred and fifteen dollars. In 1810 the necessity of removal was apparent, and permission was obtained to build the engine-house on a lot on the east side of Fifth Street, nearly opposite Minor, on the Sparks burying-ground, this place having been devised, in 1715, by Richard Sparks as a burial-place for the Seventh-Day Baptists. In 1811 a new brick engine-house was finished there, to which the company removed. The Harmony had in use, in 1811, an old engine which belonged to the Britannia Company before the Revolution, and which was conveyed to them, in 1797, by trustees of the Britannia,—Richard Willing, John M. Nisbet, Isaac Hazlehurst, Chief Justice Shippen, Hon. Robert Morris, Richard Footman, and John Nixon. In 1800, Philip Mason built an engine with a six-inch chamber. In January, 1816, Joseph M. Truman, a member, made a draft of an engine, which was built by Perkins & Jones at an expense of nine hundred dollars. The faults of this machine were its height and heaviness. It was cut down three hundred pounds. A new engine, with a seven-inch chamber, was ordered in 1822, but it was not finished until 1828. The meetings were held for many years in Willing's Alley. In 1812 the place was changed to the commissioners' hall, in the old court-house, at Second and Market Streets; in 1814 at Joseph Albertson's school-room, Church Alley, afterward occupied by Joseph Verdris; subsequently at the Athenæum, Chestnut and Fourth Streets, in the room of the Society of Public Economy. A second story being added to the engine-house, the meetings were afterward held there. Badges were first procured in 1816, when forty-three were painted, and in 1821 it was declared that every member at fires must wear a hat or a badge. In 1825 a badge was adopted, having upon it a device of the Fairmount Water-Works.

The Reliance Fire Company was mainly under the control of Quakers. In 1800 its engine was placed in a house on the lot adjoining the Quaker school on Keys' Alley [New Street], between Front and Second Streets. There was a brick engine-house built there in 1799, on a fifteen-years' lease, which was occupied until the early part of 1823, when the company rented a house on the south side of New Street, above Second, originally for twenty-four dollars a year. The meetings were held at Henry Atherton's school-room; Peter Widdowes' school-room, on Race Street, between Front and Second; and at the Keys' Alley school-house, kept by Joseph Yerkes, and afterward by Elihu Pickering. A new engine was ordered of Patrick Lyon in 1821, but so slow was that famous workman at the time, that the company did not obtain the machine until three years afterward, and only then by the assiduous importunities of a com-

mittee which for a month waited upon him daily at his house, his shop, or at whatever place he might be. About 1818 the Quakers relinquished to some degree the control of this company to more active young men, among whom were Joseph G. Auner, Henry Schell, Joseph Eckstein, Jacob E. Hagert, Josiah Kisterhock, George S. Geyer, Ebenezer Mustin, and Samuel R. Deacon.

The Endeavor Fire Company, which was in existence in 1800, with forty members and an engine, was dissolved in the year 1816, and the members divided their funds among some of the active companies of the day.

The Alarm Fire Company, which had in 1799 forty members and an engine, must also have gone out of existence before 1810.

The Assistance Fire Company was of German origin, composed chiefly of members of Zion and St. Michael's Lutheran Churches. The meetings were held at the house of Henry Meyers, sign of the White Bear, Fifth and Race Streets. The engine stood on the east side of Fifth Street, below Race, in 1800. In 1808 the trustees of St. John's English Evangelical Lutheran Church granted to the company the use of a lot on the southwestern portion of their property on Race Street, on a lease of twenty-one years, the house to be built of brick. In 1800 the engineers of this company procured a box to carry the hose in, for which thanks were returned by the company for their "ingenious invention," this seeming to be the first employment of a box for that purpose. A bell was presented to the company by Thomas M. Levering, in 1819, which was placed upon the engine-house in 1826.

The Federal Fire Company of the Northern Liberties occupied, in 1800, a brick house in front of commissioners' hall, on Third Street, above Tammany [Buttonwood]. In front of it was a bell elevated upon a post. The company had sixty members in 1800, one engine, one hundred and twenty buckets, one ladder, sixty bags, forty baskets, one hook, and one hundred and three feet of hose. A new engine was built in 1812. The first appropriation by the corporation of the Northern Liberties was made in 1817, and amounted to seventy dollars.

The Relief Fire Company in 1800 had fifty members and two hundred buckets. Its house was in front of the Quaker meeting-house, on Front Street, as early as 1816, and although not active in 1825, the company was still recognized among the fire associations of the city.

The Kensington Fire Company, No. 1, had an engine, and a house with a cupola upon it, and a hose-carriage in 1807, and authorized a fire-hook and pole to be purchased in 1809. The engine-house was removed in 1823 to a lot "adjoining Jacob Moser's." This company embraced originally in its membership representatives of the most conspicuous Kensington families.

The Diligent Fire Company in 1800 had its apparatus in the house on Filbert Street, between Eighth and Ninth, in front of Mrs. Myers' lot. In 1807 a removal was made, and a grant of a lot of ground for twenty-one years on Ninth Street, below Market, was procured from the trustees of the University of Pennsylvania. A brick house was built there in 1811. The original fire-engine, built for the company by Richard Mason, was replaced by another in January, 1822, built by Patrick Lyon, the chambers of which were not less than nine and a half inches in diameter. This engine was the most powerful in America, and was known as "Pat Lyon's masterpiece." It could discharge two hundred and forty gallons of water a minute, out of a nozzle larger than any previously used in America. Lyon was elected a member of the company, and said, in his speech on signing the constitution, that he would endeavor to do justice to the organization. The meetings of the company were held in 1800 at the house of Mrs. Myers; afterward at the house of John Cordner, in Filbert Street, above Eighth. In 1804 they were held at Amos Holahan's Golden Lion, Eighth and Filbert Streets; afterward at the Robin Hood, in Filbert Street; and afterward at Keyser's school-room. Among the members after 1800 were James Traquair (marble-mason), John Dunlap (printer), Dr. Thomas Ruston, Henry Sailor, Timothy Banger, Charlee Keyser, Samuel Fox, Samuel Porter, Michael Lybrandt.

The Franklin Fire Company of Southwark in 1800 had its engine stationed on Catharine Street, above Third, and was in active operation during the quarter of a century succeeding 1800.

The Humane Fire Company had its house in 1800 on the north side of Vine Street, between Second and Third. The company was compelled to remove in 1817, together with the Humane Hose Company. A lot was procured at the corner of St. John and Wood Streets. In 1821 it was resolved that the badge should be a succession of diamonds around the hat, painted on a white ground; a gilt band at the top, and extending around the hat; and in front a blue scroll, with the word "Humane" in gilt letters. In 1825, in consequence of a furnace for drying sugar having been erected on the back end of the lot at Wood and St. John Streets, it was thought dangerous, and a new location was sought. It resulted in the purchase of the lot at Ann and Callowhill Streets, thirty-nine feet seven inches in front by thirty-four feet three inches deep, for nineteen hundred dollars. The old building was altered for the use of the engine, and the alarm-bell, which had been erected on a pole at Third and Callowhill Streets, was placed on the engine-house. The wisdom of the inteded movement was soon made apparent, for before the removal was effected the old house caught on fire from the sugar-furnace. The members of this company were leading men in the Northern Liberties.

The Washington Fire Company procured an engine

of Philip Mason in 1800, the color of which, it was directed, should be blue. It was completed in a few months, and cost four hundred dollars. The site was on Walnut Street, between Eleventh and Twelfth. In 1813 notice was given to the company to remove. It obtained from the managers of the Pennsylvania Hospital permission to place their engine on the lot on Spruce Street, between Ninth and Tenth, leased at the nominal rent of four cents a year. The company erected a neat brick house, with a parapet-wall, capped with marble. It was ordered that a bust of Washington, in stucco or marble, should be placed in front of the house, which probably was not done. In December, 1821, the company ordered Patrick Lyon to build them a second-class engine. It was housed by the company on the 7th of January, 1822. It threw a stream of one hundred and fifty feet, and cost nine hundred dollars.

The Friendship Fire Company of the Northern Liberties in 1800 had its engine-house in the middle of Second Street, at the end of the new market at Coates Street. It was then removed to the lot of the German school-house at St. John and Brown Streets.

The Columbia Fire Company had its engine-house in 1800 at the corner of Eighth and Cherry Streets. In 1801 notice was given to remove, and the company located its house on the private burial-ground of the Church family, on Arch Street, between Seventh and Eighth. It was again removed in August, 1804, in consequence of the determination of the Church heirs to sell the ground for building-lots. The company then removed to a lot belonging to George Flowers, on Eighth Street, below Race. In 1811, Mr. Flowers notified them to remove, and they leased a lot of Henry D. Forrest, on the east side of Eighth Street, above Race, below the Lutheran burying-ground. In 1818 the congregation gave the company permission to occupy a lot at the southwest corner of its ground on Eighth Street. Here a building was erected, costing \$629.92. This company adopted the anchor as a device in 1796, and it was retained, although the eagle was perched upon it.

The Resolution Fire Company, after the erection of the Shakespeare building at Sixth and Chestnut Streets, kept its apparatus in that portion of the building which was afterward the entrance to the pit of the theatre, and now is the site of the wing of McDowell's tobacco-store. The Resolution Company remained there until 1827.

The Whale Fire Company, which, in 1800, had sixty members, one engine, and one hundred and twenty buckets, ceased in a few years to be active. The engine was a powerful one, and afterward came into the possession of the Fairmount Fire Company.

The Hope Fire Company in 1800 had its house on the west side of the lot of the Presbyterian Church, on Pine Street, below Fifth.

The engine of the Philadelphia Fire Company, which was finished April 7, 1800, was placed tempo-

rarily in the house on the Bingham estate, at the northwest corner of Spruce and Third Streets, which had been occupied by the Harmony Company. A committee was appointed to obtain a site for a new engine house, and in the course of the year the company got permission from Caspar Wister Haines to build on a lot on Fourth Street, north of Market. The house which was constructed was of brick, and cost one hundred and sixteen dollars. In 1801 this company directed that every member should "wear a hat of the color of the company" (chocolate), with a label similar to that of the buckets, with the word "Philadelphia" on it. The new engine was not satisfactory in its performance, and it was sold in 1802 for three hundred and fifty dollars, and a new one was ordered of Patrick Lyon for five hundred and seventy-five dollars. In December, 1803, it was agreed with the members of the Philadelphia Hose Company that on the site of the house occupied by the engine company a new building should be erected to accommodate the apparatus of both companies. This was afterward done. The house was about eighteen feet front, and cost two hundred and fifty dollars. The companies remained in this situation until 1811, when the corporations of Zion and St. Michael's Lutheran Churches granted to the use of the engine company a lot of ground on the east side of Fourth Street, below Cherry, twenty feet in front by twenty feet in depth. Here a house was erected with a double-pitched roof, the gable on the street, with a dormer-window. There was a cupola or a steeple, which surmounted a wooden tower, the object of which was to furnish a place in which the hose might be hung up for drying. The structure cost \$870.19. Up to 1817 the meetings of the company had been held in the old court-house at Market and Second Streets. In April of that year they were changed to the hall of the Academy of Natural Sciences, No. 35 Arch Street, and, at a later period, to No. 32 Church Alley. Subsequently they were held at No. 118 Chestnut Street, corner of Carpenters' Court. This company was the first in the city which introduced a tender to accompany a hose-carriage. "A two-wheeled carriage was adopted, with capacity to carry seven hundred and twenty-eight feet of hose, and in the minutes for March, 1820, it was for the first time styled a 'tender.'" To accommodate the new apparatus some alterations were necessary in the hose-house. The steeple was removed to the east end, and so enlarged as to accommodate the engine company and the Philadelphia Hose Company. A lamp was ordered to be placed on the hose-carriage, so as to distinguish it; but this seemed to be a difficulty, in the opinion of the committee. As a substitute, that body recommended the purchase of a machine invented by Coleman Sellers, which made a noise "similar to that of a cry of 'Fire!'" Mr. Sellers agreed to allow the company to use this invention free of expense, reserving his own right to a patent. It is supposed to

have been a wind instrument, which was put in operation by the revolutions of the carriage-wheels. George Catlin made the machine, and, after some dispute as to what it was worth, he was paid fifty dollars. It is presumed that the apparatus was attached to the carriage and "hollered 'Fire!'" whenever it was carried through the streets. It was soon found that the tender was a troublesome affair, and the plan was suggested of placing the hose on the engine. This idea led to the invention, by Sellers and Pennock, of what was first called a combined apparatus, afterward designated a hydraulion. To meet this change the company resolved to sell the engine and tender, which were sold to the Globe Fire Company, the engine bringing five hundred dollars. The hydraulion was finished and placed in the engine-house in February, 1821, and a suction supply-pump was bought for forty dollars, which was generally managed at fires by boys. The hydraulion was a heavy machine, but was ornamental, and was distinguished by figures of dolphins at the corners of the gallery. They were gilt, and to the motto "Prodesse civibus" was given due prominence. This company was very active, and enjoyed the advantage of a large membership for a number of years, the majority of whom belonged to the Society of Friends.

The Weccacoe Fire Company, which was formed May 1, 1800, secured about five hundred dollars by subscription, and procured an engine built by Philip Mason for two hundred and ten dollars, which was housed on the 4th of July, 1800, in a house built for the company by Jacob Reinhard, at the corner of Front and Christian Streets. A bell was placed in front of the house, to be rung in time of fire. Some time afterward the company removed its house to the corner of Union Alley and Front Street, where it remained for two years. The house was then removed to Prime Street landing, and the bell was sent to New Orleans. In 1817 the commissioners of Southwark granted to the company permission to use the lot in front of its hall on South Second Street.

The strength of the fire department of the city and county was much increased between 1800 and 1825 by the establishment of a considerable number of new companies. Up to 1800 the only apparatus used for the extinguishment of fires were fire-engines, with buckets, and a few pieces of hose, which were in possession of the Humane, the Delaware, and the Reliance Fire Companies: The hooks, ladders, and fire-escapes which were in service belonged to the engine companies. The introduction of the Schuylkill water, and the setting up of hydrants and fire-plugs in the streets, encouraged the introduction—in truth, it may be said, the invention—of a new kind of apparatus for the special hose service. The system commenced with the establishment of the Philadelphia Hose Company in the latter end of 1803. After the hose became generally in use, the fire companies gradually abandoned the fire-buckets, and, as there were great num-

bers of these useful vessels, the result was the setting up of separate organizations known as bucket companies.

The companies which were established during this period were as follows:

- Good Will Fire Company, founded March 27, 1802.
  - Philadelphia Hose Company, Dec. 15, 1803.
  - Decatur Fire Company, of Frankford, established Feb. 15, 1803.
  - Good Intent Hose Company, March, 1804.
  - Resolution Hose Company, April 11, 1804.
  - Humane Hose Company, April 10, 1805.
  - Perseverance Hose Company, April 10, 1805.
  - Neptune Hose Company, Aug. 6, 1805.
  - Hope Hose Company, Aug. 17, 1805.
  - Southwark Fire Company, established before January, 1806.
  - Columbia Hose Company, May 1, 1806.
  - Southwark Hose Company, May 6, 1806.
  - Pennsylvania Fire Company, instituted May 16, 1806.
  - United States Hose Company, September, 1807.
  - Phoenix Fire Company, formed before December, 1808.
  - Star Fire Company, formed before June, 1808.
  - Protectors of Property, before December, 1810.
  - Washington Hose Company, Feb. 22, 1811.
  - United States Fire Company, established Oct. 29, 1811.
  - Niagara Fire Company, instituted before June, 1817.
  - Charitable Fire Company, instituted before June, 1817.
  - Venerable Fire Company, instituted before June, 1817.
  - Defiance Fire Company, instituted before June, 1817.
  - Phoenix Hose Company, Aug. 25, 1817.
  - Fame Hose Company, Jan. 1, 1818.
  - Junior Fire Company, established before July, 1818.
  - Pennsylvania Hose Company, before July, 1818.
  - Independent Fire Company, established before Jan. 14, 1819.
  - Union Fire Company, of Rising Sun Village, March 10, 1819.
  - Good Intent Fire Company, of Kensington, founded April 26, 1819.
  - Humane Fire Company, No. 2, before July, 1819.
  - Franklin Hose Company, July, 1819.
  - Schuylkill Hose Company, before January, 1820.
  - Penn Township Hose Company, before January, 1820.
  - Spring Garden Fire Company, before May, 1820.
  - Globe Fire Company, May 22, 1820.
  - Diligent Hose Company, June 30, 1820.
  - Point Pleasant Fire Company, July, 1820, at Point Pleasant, Kensington.
  - Fairmount Fire Company, established Feb. 22, 1823.
  - Hibernia Hose Company, March, 1823.
- The following bucket companies were established in the latter part of 1818: Free Will, Liberty, Union; in 1819, Humane, Columbia, Amicable; in 1820, Good Will, Diligent, Washington, United States, Fame; in 1821, Globe, Independent, and Northern Liberties.

The original associators of the Good Will Fire Company were, Adam Eckfeldt, who was the first president, and who held that office during nearly the whole of his life; John Stotzenberg, the first treasurer; James Flanagan, the first secretary; George Armitage, George Walters, John Faunsler, Israel Davis, Henry Rigler, William Walters, and Joseph Saulnier. Henry Hoffner resigned from the Columbia Fire Company on the 29th of March, 1802, in order to join the Good Will. Patrick Lyon furnished an engine for this company in February, 1803, which cost six hundred and fifty dollars. As the streets in the western part of the city were unpaved when the company was established, and many of them remained so for a long while afterward, it was necessary at times to use horses. A tongue was fixed to the apparatus, and this was the first engine in Philadelphia that was drawn to fires by the aid of horses. In 1818 an alarm-bell was purchased by subscription and

placed in the engine-house. After the fire at the Orphans' Asylum, in 1822, it was determined to fix the bell outside the house; and it was placed upon a pole in the rear. The apparatus of the company at this time consisted of an engine, hose, buckets, and hook-and-ladder.

The Philadelphia Hose Company was the first association for the management of hose at fires established in Philadelphia, and, it may also be said, the first in the world, the small quantity of hose previously in use being the property of engine companies. A severe fire which took place in Sansom Street on the 13th of December, 1803, was rendered more than ordinarily destructive by the want of water, the supplies of hose in use by fire companies being small and not sufficient to carry much water to the engines. The necessity of an organization for the special management of hose seems to have attracted the attention of some young men at the fire on Sansom Street, and two days later they met at the house of Reuben Haines, No. 4 Bank Street. The persons present were Reuben Haines, chairman; Roberts Vaux, secretary; Joseph Parker, Samuel N. Lewis, Abraham L. Pennock, William Morrison, Joseph Warner, and William Morris. They were between seventeen and twenty-one years of age. Charles E. Smith joined them at the next meeting. They made an estimate of how much it would cost for four hundred feet of hose and screws for the same, with a machine for conveying the hose, also for the erection of a frame house. The hose, it was estimated, could be obtained at fifty cents a foot, and the carriage for fifty dollars. According to the estimate, three hundred and fifty dollars were sufficient to place the company in active service. They were successful in raising over seven hundred dollars. Six hundred feet of leather hose, two and a quarter inches in diameter, were contracted for with Frederick Schultz, at the price of forty-three cents a foot. There were eleven sections each fifty feet long, and two of twenty feet.

The first hose-carriage was made after a plan designed by Patrick Lyon. It was in shape something like an oblong box on wheels, and the hose was carried loosely in it. A roller was provided at the end for the hose to pass over, and lanterns were fixed on each side of the carriage, prepared to hold candles. In front was painted the company's motto, "Non Sibi Sed Omnibus," and "Original Institution." The entire cost of this apparatus was ninety-eight dollars. The company went into service for the first time on the 3d of March, 1804, at a fire in Whalebone [now Hudson] Alley, which consumed the stables of Israel Israel. The weather was cold, but the hose answered well, and the members behaved to so much advantage that the Contributionship Insurance Company made a donation to the organization of seventy dollars. A bell was added to the carriage in 1804, to distinguish this apparatus from that of the Good Intent Hose Company, which had lately been instituted. James

P. Park, a member, perfected a plan by which the bell was made to move by means of a spring, which was the prime mover, and regulated the ringing, so that, while effectual, it was not continuous. Various improvements were made to the apparatus, among which were delivering-pipes, and bridges to prevent hose from being cut. A hose-carriage upon a new plan was built by Philip Mason in 1806. In that

FIRST HOSE-CARRIAGE.

year a uniform costume for the members was agreed upon, which was the first equipment dress adopted by any fire company in the city. The original by-laws, in 1803, ordered that each member should wear a hat with the words "Philadelphia Hose Company" painted on it, and it was recommended that each member should wear a roundabout jacket. The new uniform consisted of a dark frock-coat reaching within two inches of the knee, and a cape falling over the shoulders, a badge being tied around the ordinary citizen's hat in time of fire.

James Sellers, in 1806, invented a machine for greasing and brushing hose.

In 1807, the Neptune Hose Company having placed an alarm-bell on their carriage, the Philadelphia Hose Company passed a resolution, stating that "we cannot but view with peculiar indignation the flagrant violation and contempt of our acknowledged rights." The Neptune paid no attention to this expression of anger, and James P. Park, who originally applied the apparatus to the Philadelphia hose-carriage, took out a patent, described "for the attachment of an alarm-bell to a hose-carriage or other vehicle for the conveyance of fire apparatus." This patent was not received until November, 1809, when the company placed upon the bell-apparatus a brass plate bearing the inscription, "Park's patent alarm." Mr. Park placed the price of using it at fifty dollars, and suit was instituted against the Neptune Hose Company, which then yielded, took down its bell, and allowed the Philadelphia to monopolize the privilege of making a noise in the streets. Three years afterward the Good Intent Hose Company, notwithstanding

ing the terrors of a suit for the infraction of Park's patent alarm, determined to use two bells on their carriage. They were suspended upon a gallows, and fixed upon springs similar to those of common house-bells, an arrangement entirely different from that of Park's plan.

The Philadelphia complained to the Fire-Hose Association, which decided that the use of bells by the Good Intent should be discontinued; that the attempt of the Good Intent to use bells was an interference with the peculiar badge of the Philadelphia; and directed that they should be removed from the carriage. The company, refusing to obey this, was expelled from the Fire-Hose Association. Suit was brought in the United States Circuit Court by Mr. Park against the committee of the Good Intent which ordered the bells to be placed on the carriage. The case was heard before Judges Washington and Peters, Joseph R. Ingersoll and Peter A. Browne being among the counsel. The defense contended that the principle of attaching bells was not novel, and that the Perseverance had bells before Park's alarm was used by the Philadelphia, but being accidentally broken were not renewed. The Neptune had removed its bell because too expensive. The jury found for the defendants, and the Philadelphia resolved to abandon the right to use bells altogether, and by resolution informed the Fire-Hose Association of that determination. The Good Intent was readmitted to the Association, and as a token of triumph resolved to adopt two bells as the badge of the company. The Philadelphia still clung to the idea of a distinguishing badge in the form of a bell, and a new contrivance was adopted by which the motion of the wheels of the carriage raised a lever at regular intervals, which struck the bell as the carriage was dragged along the streets. The sound was different from that of the ordinary bells, and when the improvement was finished the members of the Philadelphia felicitated themselves that at length they had a badge of distinction.

In 1807 the hose-carriage seems to have had a cylinder on which the hose was wound. The introduction of two rollers on the end of the carriage, in order to thoroughly expel the water from the hose, was another improvement. In 1809 the committee reported that by dispensing altogether with the box-body of the carriage, and retaining only the wheel of the hose, the axles of that wheel passing through the larger wheels would make the latter a direct support for the hose. The result was the abandonment of the box, and the adoption of a plan by which the hose-wheel was supported on an open arch sprung from standards or supports resting upon a body fixed to the axle of the carriage. In 1814, James Sellers built for the company what was called "a combined apparatus,"—an engine and hose-carriage after the plan of Rowntree, of London, which he called a hose-engine, but which in later times was called a hydraulion. The machine of Sellers was different from that of Rown-

tree, and was worked by hydraulic and hydrostatic pressure. This machine was finished and housed in September, 1814, and cost over fourteen hundred dollars. The carriage had two reels for hose. The sections were carried from the back wheel by a roller fixed on the engine. The hose upon the front of the carriage was carried from a wheel over the roller, passed over the carriage, and then under the body of the engine.

In July, 1811, an experimental committee on the subject of hose, which had been appointed on account of the frequent bursting of sewed hose, reported in favor of the utility of rivet hose. The members of this committee were Abraham L. Pennock, James Sellers, and Isaac Wainwright, the two former being really the inventors of that kind of hose, afterward obtaining a patent for it. A trial of one section of the hose, under the pressure of the hydrants and the full force of the Resolution engine, was found to be satisfactory, and before the end of the year 1811 the company had eight hundred feet of hose on the new plan. At first it was riveted with two seams, but it was soon found that one seam was sufficient. It was manufactured by Jenkin S. Jenkins & Sons, and was fastened with turned iron rivets and burrs. One of the difficulties attending the use of the rivets was that they were liable to rust; but in a short time rivets were used which did not tarnish. In 1812, Sellers and Pennock invented a furnace for drying hose. It was in the shape of a tower, built of brick, and was filled from the top with charcoal, which was fastened down. Fire was applied from below. The tower-furnace was carried up through a wooden steeple, in which the wet hose was hung, and was dried by the gradual heat. The original house built for the use of the company was at No. 17 North Fourth Street, on a lot belonging to Reuben Haines.

In August, 1811, Zion Lutheran Church granted to the Philadelphia Hose Company and the Philadelphia Fire Company the use of a lot on the east side of Fourth Street, below Cherry, and adjoining the church. Here a spacious double house was erected, which was occupied by the two companies for many years. There was a strong experimental spirit among the members of this association, which revealed itself at times in odd ways. Thus, in 1817, an alligator skin having been presented to the company, a committee was appointed to ascertain whether it would not be useful for hose; but they reported against it, on the ground that its "tessellated and rough surface would increase the friction and force necessary for the water to pass over it." The hose-engine was a ponderous machine, without springs, and difficult to manage. It became unpopular among the members, and was disposed of in April, 1817, to James Sellers, the builder, who took it in part payment for another one which he built for the company. The old one was disposed of to the Friends' Asylum, at Frankford. A committee composed of A. L. Pennock,

Thomas M. Pettit, and William A. Griffiths, was appointed to deliberate upon a name for the machine. They reported in favor of the word "hydraulion,"—from the Greek *hudor* (Latin *hydra*), water, and *aulos*, a pipe,—which they thought would express the nature of an engine for propelling water through pipes. As a "badge of distinction," it was resolved to fix to the hydraulion a machine which produced, by the action of wind upon vibrating plates and tubes of metal, a trumpet-sound. The contrivance was obtained and fixed upon the hydraulion. But the hopes of the members were disappointed on hearing it, as it squeaked more like a penny trumpet than the blattant instrument used in war to sound the charge or retreat. In 1819 a gong was fixed to the hydraulion, and in order to accomplish the necessary noise a person was employed to accompany the machine and beat the gong. This individual was an enthusiast in his profession, and he soon accomplished the destruction of the gong by belaboring it so severely that it cracked. Another gong was obtained, and fixed in its place, but the sound was not sufficiently sharp and annoying, and the company resolved to take it down and put up the old bell.

In March, 1820, John K. Kane and Dr. Benjamin Say invented a contrivance for conducting water from a pump into the hose. They called it a "conductor," and presented it to the company. After four years' trial of the hydraulion the members became dissatisfied with it, and determined to procure a new machine. This was made by Samuel V. Merrick, and was finished in 1823. It was thought to be a superior engine. It included a forcing and suction apparatus. The cylinder was eight and a half inches in diameter. The reels held eleven hundred feet of hose. The flambeaux were of novel construction, and so fixed that one of them could be elevated fifteen feet above the ground. The suction drew water from the river Delaware, and forced it through eighty feet of hose one hundred and thirty feet from the branch-pipe. At several fires the suction drew water four hundred feet, and discharged it a distance of eighty feet from the vent.

On the 24th of July, 1805, a general meeting was held of the directors of the Philadelphia, the Good Intent, and the Humane Hose Companies, at which certain rules were adopted in regard to their intercourse at times of fire. This was the beginning of what was afterward called the "Fire Hose Association." This body continued in existence until July, 1817, when it dissolved itself, the reason being that it could not enforce its resolutions. Immediately afterward the Fire Association—composed of fire companies and hose companies—was established, and the Philadelphia entered the union. In 1818 it was proposed to make the association an insurance company, which the members of the Philadelphia opposed, and then withdrew. In 1825 the Philadelphia rejoined the association.

There was considerable difficulty at the period when what is now called "hose" came into operation as to the proper method of spelling that word. In the minutes of the old engines it is called, according to the fancy of the secretaries and writers of the minutes, "hoose," "hooze," "hoase." The founders of the Philadelphia called it "hose," but the founders of the second company formed for hose service rejected that spelling, and in veneration for the past, we may suppose, adopted something more ancient. Thus it happened that on the 8th of March, 1804, the Good Intent "Hoase" Company was formed; and, despite all usage to the contrary, it remained a "hoase" company until August, 1824, when, by special resolution, the secretary was ordered to spell the word according to modern form. In 1806, and at the time of its institution, the following were members: Jesse Thomas, Samuel Newbold, Moses Lancaster, Joshua Andrews, Thomas Newbold, David Cox, Andrew Fisher, George W. Jones, Isaac Tyson, Jr., Joseph Lippincott, Humphrey Atherton, David McKenny, James Howell, Joseph Lownes, Caleb Lownes, Mahlon Jackson, Samuel Harper, Charles Leeds, Benajah Farquhar, Richard Jackson, Lindsay Nicholson, Joshua Bolton, William Chandler, William McCollom, Thomas Owen, Nathan Dunn, Thomas Ellison, Joel Atkinson, John Justice, Richard Nisbet, John Ware, Thomas Shields, Andrew Ashton, William C. Wright, Joseph Tatem, Thomas Dilworth, Elisha Brown, Harvey Lewis, Joseph Ridgway, Thomas Owen, Thomas S. Field, Thomas Bowman, Samuel English, Samuel Stokes, Joseph Hunter, Joseph Rakestraw, Richard Pryor, and Powell Stackhouse. The great majority of these persons were Quakers, and the minutes were kept in the Quaker style. Furthermore, the original house of the company was built upon the property of the Quaker school, on the east side of Fourth Street, below Chestnut. The first "hoase"-carriage was finished in February, 1808, and was of the box shape. On the front was a perpendicular pole, capable of sliding up and down, upon which a lamp was fixed for a badge; but that plan was soon given up in consequence of not producing the desired effect. The contest between this company and the Philadelphia in regard to the use of hells is referred to on a preceding page.

In August, 1814, it was resolved to place the hose upon a reel, which, being elevated higher than the top of the old carriage, it was found necessary to enlarge the hose-house. At the same time, in order that any member might easily obtain access to the carriage, a latch was placed on the door from which a string might be pulled. In 1816 the first "coffin" was procured, and it was called "a labor-saving machine to brush hose." Three lamps were placed on the carriage,—one in front and one on each side. In 1820 the carriage was painted with white, picked in with another color.

On the 11th of April, 1804, in the spirit of the motto, "Esse utilis conabimur" ("To be useful is our wish"), the following young men associated themselves as the Resolution Hose Company: Henry Fries, John S. Willett, John K. Drummond, William Milner, John Nisbet Blathwaite, T. Shober, William Delaney, Jr., Richard Standley, Mark Richards, James W. Delaney, Adam Traquair, Henry Beckman, Moses Thomas, Cecil G. Stevens, Peter Muhlenburg, Jr., Samuel Hughes, John Hughes, John Duffield, James Traquair, Jr., George Woolfley, John Towers, Luke King, John McDonald, John B. Smyth, Cornelius H. Faulkner, Gerard Strong, Thomas Coates, Jr., James McKarher, John W. Blanchard, Samuel Benezet, Jr., and Thomas Reeves, Jr.

They procured a hose-carriage on the box plan. They adopted as their badge of distinction a red signal-lamp. The hose-carriage was placed on a lot on the south side of Market Street, nearly opposite Elbow Lane, and was housed in a shed. In 1810, William Warren, manager of the new theatre on Chestnut Street, granted to the company the right to house its carriage on Carpenter Street, near Sixth, where the old gallery entrance was afterward opened. The Resolution Fire Company, established in 1797, was at the same time housed in a portion of the theatre, on Sixth Street, which was afterward used as a pit entrance. The badge adopted by the Resolution was an eagle with expanded wings, which was painted on the hat, and when the Columbia applied for admission to the Hose Association the Resolution objected to its using the national bird as a badge. The protest was not sanctioned, whereupon the Resolution withdrew from the association. Rivet hose was obtained in May, 1812. A bell was placed on the hose carriage in 1817, and in the latter part of that year, or the beginning of 1818, a new carriage was obtained with a cylinder four feet in diameter. An arch was thrown across the carriage in front, from side to side, upon which was placed a lamp with a red light and a fine-toned bell. By the destruction of the Chestnut Street Theatre, on April 2, 1820, the Resolution Hose Company was hurned out. The carriage and hose were saved, but the books and papers were lost. The Philadelphia Hose Company gave the Resolution permission to put its carriage in its house until accommodation for it could be found. Before the theatre was rebuilt, Mr. Warren allowed the company to build a house on the old site, which was two stories in height, and had an upper room for meetings. In July, 1821, a new carriage was ordered that was built upon springs, about which there was great investigation and a learned report. Thomas Ogle finished this carriage in December, 1821. In the next year, on account of the plan of rebuilding the theatre, the company was obliged to relinquish its quarters on Carpenter Street. It obtained the house of the Amicable Fire Company, on the east side of Fifth Street, above Market. An ar-

rangement was entered into by which the Amicable went out of active service and yielded up its apparatus, etc., the Resolution assuming the debts of the Amicable, which were fifty dollars. Christ Church gave the company a twenty-years' lease, provided they would have a vault under the hose-house. John Haviland designed the plan, and the building was finished in 1823.

When this company was instituted, the members were generally Americans; but John W. Blanchard, an original member, was a native of France, and soon introduced so many of his countrymen that the company became known as "the French company." The following were those who were admitted in this way: John Bosquet, E. G. Dutilh, F. Thibault, J. B. Andraulle, Edward Chaudron, J. M. Besson, J. E. Destouet, E. Bourckle, Peter Bizat, L. Borie, A. F. Brasier, P. Lehman, Charles Durang, Ferdinand Durang, J. Bouchard, A. Blenon, H. Paillet, D. Gardere, J. De Laport, L. Perdriaux, G. Cure, J. Castagnet, F. Tete, T. H. Tuyes, Eugene Baudray, Gus. Gaschet, John Ducoring, W. Frederick, John Shelmerdine, P. Destouet, Edward Laraque, L. A. Besson, A. J. Levy.

The three hose companies first instituted belonged to the city of Philadelphia. Their success led to the institution of a new company, to be located in the Northern Liberties. This association, which was called "the Humane Hose Company," was instituted at a meeting held on the 10th of April, 1805, at John Smith's tavern, sign of Gen. Washington, on Vine Street. Conrad Hester was chairman and Charles Sellers was secretary. There were present on that occasion Frederick Buck, John Rink, Adam Stricker, and Andrew C. Barclay. Measures were taken for the formation of a company. The articles were signed by the gentlemen above named, together with Richard Heimberger, Louis Evans, John Kessler, Henry Fidler, James P. Bewley, Ezra Comby, Jr., Hugh White, Daniel Fling, Matthew Heimberger, Ahraham Comby, Charles Hill, William Hankinson, Philip Heyle. The permanent officers elected were Philip Heyle, president; Conrad Hester, vice-president; Louis Evans, treasurer; and Andrew C. Barclay, secretary. The subscriptions for the assistance of the company were liberal. A hose-carriage was contracted for with Patrick Lyon, which cost one hundred and two dollars. It was of box shape, with an oval front. The color of the body was yellow, tipped with red, and the wheels were red. The name of the company was painted on the front by John A. Woodside. Five hundred feet of hose were also contracted for. By some arrangement with the Humane Fire Company, it was understood from the beginning that a house could be obtained adjoining that of the latter, upon the north side of Vine Street, between Second and Third. The hose-house was nine feet front and fifteen feet deep, and cost twenty-four dollars. The front was painted yellow, the blinds were green, and the

doors were of mahogany color. The hose, which was of leather, was manufactured by Warren. The company met for some years at Moulder's school-room, in one of the Norwich markets, at the intersection of St. John and Callowhill Streets.

In 1817 the old box hose-carriage was altered, and a hose-wheel and bells were added. In the same year the Humane Hose Company and the Humane Fire Company, being obliged to remove from the house on Vine Street, built a wooden house at St. John and Wood Streets. The lot occupied by the two companies was sixteen feet front by twenty feet deep. The fire company removed from that location in 1825, and went to the corner of Ann and Callowhill Streets. The hose company remained there until 1829.

The Perseverance Hose Company was established on the 27th of May, 1805, by a number of boys and young men, nearly all of whom were house-carpenters, either apprentices or journeymen, and who resided in the neighborhood of Fifth and Wood Streets. Several of them were apprentices of Philip Justus, Nathan Smith, and Frederick Forepaugh. The minutes of the company gave the ages of these, on the 5th of July, 1806 (a year after the institution of the association), as follows: Hudson Burr, nineteen years; O. Robbins, twenty-five; W. C. Hancock, nineteen; Joseph Smith, nineteen; John Ellick, nineteen; H. L. Melcher, twenty-two; C. S. Ellick, seventeen; P. Culman, nineteen; John Bender, Jr., twenty-one; I. Burr, twenty; William W. Way, nineteen; John B. Prentiss, nineteen; J. Sovers, nineteen; Peter Weynant, nineteen; Peter Deal, nineteen; C. Taylor, twenty-one; George Bower, twenty-five; Joseph Robbins, nineteen; C. Price, —; Frederick Frailey, twenty-three; J. Steinmetz, nineteen; J. Wilkins, twenty-two; George Hitner, twenty-two; J. Erzenhert, twenty-four; John A. Woodside, twenty-four; N. Roberts, twenty-three; B. Taylor, twenty; G. Fry, twenty-two; Thomas Gaskill, twenty-one; T. E. Warner, nineteen; J. Ritter, eighteen; J. Jackson, twenty; Frederick Vogel, twenty-four. In addition to the above, there were at the first meeting Henry Magee, Ralph Smith, Joseph Servoss, George Wilson, and Jacob Levan. They adopted for their motto, "Perseverentia Omnia Vincit." They were without means or influence, and their progress was slow. At the time of the fire in Pennington's sugar-house, Vine Street, below Third (21st of September, 1805), the company had neither house nor hose-carriage. They began the acquirement of suitable implements by the purchase of four or five sections of hose, which they carried on their backs to fires, and succeeded in supplying the Philadelphia Fire Company. The members being generally carpenters, it was not necessary that they should go to Patrick Lyon for a hose-carriage. They resolved to build one themselves, the material being contributed by friends. It was constructed at the house of Philip Justus. They afterward obtained the use of a lot of ground

owned by Catharine Lowery, situated back of Vine Street, between Fifth and Sixth, and accessible by Branner's Court. Here, with their own hands, they built a hose-house. But in 1809 the trustees of St. John's Lutheran Church granted them a site on Race Street, west of Fifth, for the term of twenty-one years, and there they erected a brick building, to which their apparatus was removed. In 1812, after seven years' service of the original carriage, a contract was made for another, which was the first one built on springs, and the second one built with a cylinder-wheel.

The Neptune Hose Company was formed at a meeting of young men at Dunn's Hotel, Aug. 6, 1805, at which Michael Nesbit was chairman, and Jacob Chrystler was secretary. There were present, beside the officers, Moses Thomas, William Carr, William M. Becharms, Emanuel Spangler, John Hutton, John Neckervis, Isaac Pennington, Joseph Redman, John Scheetz, Edward A. Evans, John Chrystler, George Sickle, James Stokes, and John M. Funk. The company adopted a hat, the ground color of which was black, and on the front was a painting of "Neptune" holding a trident, and drawn in a car by two sea-horses. It was the most elegant hat worn by any company at that period. The motto was "Pulcher um est beneficere res publica," which was thus interpreted, "It is a glorious thing to be serviceable to the public." Moses Thomas was elected president, Emanuel Spangler, secretary, and George Sickle, treasurer. The carriage was made by Patrick Lyon for one hundred and thirty-five dollars, and four hundred and fifty feet of hose were furnished by Frederick Schultz for two hundred and eighteen dollars. The carriage and hose were finished, and were in the hands of the company in December, 1805, being temporarily deposited in a chair-house in Watkins' Alley, which led from Third to Bread Street, nearly opposite Cherry, and was afterward called Fetter Lane. In August, 1806, the county commissioners gave the company the privilege of depositing its carriage in a house for the accommodation of a fire company, which had been built in front of the Walnut Street prison, at the southeast corner of Sixth and Walnut Streets. The company remained here only three months, and at the end of that time resolved to return to the old house in Watkins' Alley. In 1807, the apparatus was removed to the house formerly occupied by the Neptune Fire Company in Coats' Alley, running from New Market to Second, above Vine Street. Subsequently it was removed to a house on the south side of Race Street, east of Fourth, upon a portion of the lot belonging to the German Reformed Church. In the latter part of 1818, notice having been given to the company to remove from the church lot, a coach-house and stable situate in Cherry Street, between Fifth and Sixth, was rented, and the apparatus was removed to that place.

The Hope Hose Company was organized on the

5th of August, 1805, by a number of young men resident in the vicinity of Second and Pine Streets. They were Thomas F. Gordon, Robert Gordon, William Henderson, William J. Faulkner, Benjamin Griffith, G. Lyndall, Thomas Nixon, James Roddy, Adam Cook, Alexander Wilson, Thomas H. Dawson, William Colton, Jenkins P. Tutton, D. McCaraheer, D. Dawson, J. Robinson, D. Freil, and William Stevenson. Philip Mason made the hose-box, which was ready in December, and hose was procured in the fall of the same year. The company obtained permission from City Councils to occupy a hose-house in the hall erected at the northern end of the new market at Second and Pine Streets. This was the easternmost house for fire apparatus, and had been occupied by the New Market Fire Company, which was dissolved about the year 1800. Permission was given to the Hope Hose Company to ring the bell in the cupola in time of fire. In June, 1806, the company adopted the following motto: "Omnis actus specificatur ab objectu" ("Every act is specified from its object"). A new hose-carriage, obtained in 1816, cost \$317.55. John A. Woodside painted a handsome frontispiece, representing "Hope" with her anchor. The old carriage was repaired, and was also kept in use. In September, 1819, another hose-carriage, built by Jeffries & Nuttall for the Franklin Hose Company, which latter association was dissolved about that time, was bought for three hundred and forty dollars.

The Southwark Hose Company probably had its origin in the Southwark Fire Company, an association which was established some time after the early part of the year 1799, and before the spring of 1806. It is not certain whether the hose company succeeded to the rights of the fire company, or whether the name and objects of the latter were changed. The members of the hose company claim the date of its institution to be May 6, 1806. The earliest minutes in possession of the company some years ago commenced in 1807, at which time it possessed a hose-carriage built by Patrick Lyon and a quantity of hose. The location of the hose-house was on the north side of Almond Street, east of Front. The stated meetings were held for many years in James Crowell's school-room, in Shippen Street below Second. The original members were Richard Barrington, John Dolhy, Isaac Roach, Jr., James M. Linard, Emanuel Lewis, Jacob Copeland, William Myers, John Durney, Lewis Carson, Robert McMullen, Jr., Archibald Maxwell, James Crowell, Thomas Wright, John B. Austin, James White, Isaiah Jones, R. G. Martin, Andrew Donaldson, Samuel Workman, H. Hewlings, George Patton, William Holmes, Joseph P. McCorkle, Caleb Milburn, Thomas Sparks, John H. Curtis, William H. Stewart, Benjamin Thomas, Jr., Alexander Frankford, and William Hunter. The company was in possession of the engine of the Southwark Fire Company, and measures

were taken to sell it, in 1808, together with the house. A new carriage was presented to the company by Conrad Gurn in 1811. During the war of 1812 a volunteer company was formed from the Southwark Hose Company, which was called the "First Independent Company of Artillerists." James M. Linard was captain. They served at Camp Bloomfield, Kennett Square, Chester Co., in the campaign of 1814. Isaac Roach, one of the founders, subsequently mayor of this city, went into the regular army of the United States as lieutenant, and afterward obtained the rank of captain. The hose-carriage became worn out in 1815, and one was borrowed for a time from the Fire-Hose Association, which was composed only of companies located in the city of Philadelphia. The Southwark, belonging to an adjoining district, was not allowed to belong to that association, an exclusion which operated to the injury of the Southwark, as appropriations from City Councils and donations from insurance companies were frequently allowed to the Fire-Hose Association, or to companies located in the city of Philadelphia. The corporation of Southwark would give no assistance, and, as the only means of sustaining the institution, it was recommended by a committee that the company should remove into the city of Philadelphia. This was carried, and the city commissioners gave the company the use of the house in the hall-building at the southeast corner of the Second Street market, at Second and South Streets; but the members subsequently obtained the house at the other corner. The removal took place May 22, 1815. In the mean while the commissioners of Southwark had been brought up to such a point of generosity that they made an appropriation of one hundred dollars for the use of the company; but finding that it had removed before the money was paid, a disposition was manifested to withhold it. Eventually the company received it, and it might be considered in satisfaction of all past services.

Another appropriation of one hundred and fifty dollars, however, was made in 1819, which came very acceptable in helping to defray the cost of a new hose-carriage, built by Jeffries & Nuttall for three hundred and ninety-seven dollars. The old bell which had belonged to the Southwark Fire Company, and which had been in use at the hose-house on Almond Street, was placed in the steeple of the building at Second and South Streets, in the latter part of 1820. It was afterward used as an alarm-bell. A torch, instead of a lamp, was placed in front of the hose-carriage in June, 1822. In March, 1823, John Neagle, artist, volunteered to paint a frontispiece, and the apparatus was repainted at the same time, the ground shade being blue. Bells were added to the carriage at this time, the first used upon it. Among the persons who became members between the institution of the company and the year 1825 were James J. Barclay, who is still living, and has been for many

years active in the affairs of the House of Refuge and of the Deaf and Dumb Asylum; Archibald Randall, afterward judge of the United States District Court; Thomas S. Bell, associate justice of the Supreme Court of Pennsylvania; John Neagle, artist; and Wilson Jewell, afterward a prominent physician.

The Columbia Hose Company was established May 1, 1806, by persons resident in the neighborhood of Seventh and Cherry Streets, who were friends and adherents of the Columbia Fire Company. The latter gave to the hose company, as soon as it was instituted, eighty feet of hose. The hose-house was established on the south side of Cherry Street, above Seventh. In 1810 a new carriage was procured by the company. It had upon it the device of an eagle with outstretched wings, the use of which was considered by the Resolution Hose Company as an infringement, it having previously used that emblem.

The Pennsylvania Fire Company was formed at a meeting of young men at Parker's Inn, and at subsequent meetings at commissioners' hall, which was in the old court-house, at the centre of Market and Second Streets, and at Parsey's school-room. The original members were Edward Simmons, Jr., president; Jesse W. Roberts, secretary; Richard G. Paxson, treasurer; Evan Davis, B. W. Flower, Joseph Field, Samuel R. Fisher, Jr., William Charleton, John Elfreth, Benjamin Walton, Otis B. Merrill, George McGlassin, Joseph F. Ridgway, William Armer, Isaac Pennington, T. S. Roberts, Richard F. Allen, John Parry, Israel Howell, Thomas Barnes, J. P. Hutchinson, Richard Wistar, Jr., and Joseph Donaldson. The members determined to wear sky-blue hats, with the Pennsylvania coat of arms painted thereon by John Justice; special exemption, however, being given to one member who was allowed to have his hat painted by John A. Woodside. A new engine was built by Patrick Lyon. It was painted yellow, was decorated with the Pennsylvania coat of arms, and cost seven hundred and fifty dollars. It played fifty-six and two-thirds yards without the spray, and was asserted by the company to be equal to any engine in Philadelphia. In February, 1808, the directors of the Philadelphia Library Company granted to the Pennsylvania Fire Company the right to put up a house on the northwestern portion of a lot adjoining the library. It was one story in height, and was taken possession of in August of that year. In 1819 this company procured a suction-pump, made by Bacon, which was placed on wheels, and hose carried with it. The pump was stationed in a gutter, and sucked up the waste water from the engines. In December, 1820, a new engine was procured of the first class from Perkins & Bacon. It cost nine hundred dollars, and played two hundred and six feet without the spray. Shortly afterward a hydraulion, which carried three hundred feet of hose, was purchased. For this apparatus the company gave the suction-pump and one hundred and forty dollars cash. A

suction was attached to the hydraulion in January, 1823.

The United States Hose Company was formed in September, 1807, at a meeting of young men, among whom were Daniel C. Ellis, president of the meeting; Joseph Askew, secretary; Randolph Hutchinson and William L. Nortou. There were twenty-one members in all, between the ages of seventeen and nineteen years. They procured sufficient money by subscription to buy one hundred and twenty-five feet of hose. The Philadelphia Hose Company loaned them their old carriage. The new association went into active service, and received from the county commissioners the right to place their apparatus in the old hose-house on the southeast corner of Sixth and Walnut Streets, on the prison lot. They continued in active service about a year, after which the affairs of the company were neglected, and the association was finally dissolved.

The Phoenix Fire Company was represented in the latter part of 1808, in a communication to the Southwark Fire Company, by Paul C. Stewart, Joshua Harlan, and John A. Aeckel. Samuel Kennedy was president of this company in May, 1818. Shortly afterward the house of the company was removed to Bread Street, near Arch, and the company was dissolved about 1821.

The Star Fire Company was instituted probably after the year 1800. It was in existence in June, 1808, but it was not in service ten years afterward.

An association called the Protectors of Property from Fire was formed before the month of December, 1810, to guard property in case of fire. Their implements consisted of hags, buckets, and apparatus to take furniture, goods, etc., to a place of safety. The house of the company was established in Hartung's Alley, south of Arch Street, and east of Third.

The Washington Hose Company was instituted Feb. 22, 1811. The first hose-house of the company was situated on a lot granted by the University of Pennsylvania, on the west side of Ninth Street, below Market. Afterward it was removed to the west side of Tenth Street, at Filbert.

The United States Fire Company was formed at a meeting held at Kennedy's Hotel, Letitia Court, composed of Powell Stackhouse, president; Giles Love, secretary; George Widdifield, Hastings Stackhouse, George Wilson, John T. Ware, Benjamin B. Forepaugh, Enoch Nicholls, Samuel Jones, Thomas Zell, Abraham Mitchell, Jr., Christian Sulger, Chester Chattin, Thomas W. Carson, James Stackhouse, and Enoch Middleton. To these were added, at the first meeting after the formation of the company, John Scott, Francis Lasher, Thomas Palmer, and James Chapin. The object of the establishment of the company was for the security of the northeastern quarter of the city and liberties. The meetings of the company were removed in November to Simpson's school-room, Second, below Margaretta Street. The com-

missioners of the Northern Liberties granted the company the right to occupy the house at the bridge on Second Street, above Callowhill. At the same time the Northern Liberty Company had its house on Poole's bridge, on Front Street. An engine built by Patrick Lyon was procured in the latter part of 1812. The company bought a lot of ground in 1819 on the west side of Fourth Street, north of the intersection of Old York road. The lot had fronts upon the two streets, and upon it was erected a substantial two-story brick building, with a cupola and bell. This house was occupied by the company on the 11th of September, 1819. The funds for the cupola and for the bell were presented by residents of the neighborhood. The building committee consisted of John M. Ogden, George Widdifield, Thomas Zell, Enoch Middleton, Jesse Ogden, Jonathan P. Smith, and Isaac Parry.

The Niagara Fire Company was instituted after the close of the war with Great Britain, and is believed to have been composed in majority of members of the the second company of Washington Guards, of which John Swift was captain. Mr. Swift resigned from the Philadelphia Hose Company in January, 1818, to join the Niagara Company. Isaac G. Elliott was secretary of the company in 1818, and Thomas Lewis in 1819. In the latter year John M. Scott was president. The house occupied by the company on Zane Street, above Seventh, was built on speculation by a carpenter. There was room enough in it for two fire companies, and the Phoenix Hose Company was co-tenant with the Niagara. The property was sold, and was bought by the Phoenix. The Niagara removed from the premises in 1822, sold the apparatus, and the company was dissolved.

The Charitable, Venerable, Defiance, and Junior Fire Companies were in service in 1817. They were probably new companies. They did not last long. The Junior was in service in 1818, the Humane Fire Company, No. 2, and the Independence Fire Company in 1819, and the Spring Garden Engine Company in 1820.

The Phoenix Hose Company was established on the 25th of August, 1817, by ten young men,—Thomas McEuen, M.D., Charles Macalester, Jr., Edward Yorke, Ashbel G. Jaudon, Benjamin Carman, Dods-worth Peacock, Henry D. Carrell, John McPhail, Henry B. Reese, and Robert Aertsen. To these were added, during the same year, J. C. Homann, Jr., John B. Dobbins, Alexander L. Hodgdon, Hudson Carman, William E. Whelan, N. W. Robinson, H. Stoddart, Thomas O. Duncan, and F. A. Muhlenberg. They obtained a location for their apparatus in the house of the Niagara Fire Company, on the north side of Zane [Filbert] Street, above Seventh. A hose-carriage was procured, and a badge was painted on the front by Woodside, which was directed to be "a phoenix rising from the flames, on a blue relief, surmounted by a gilt or white scroll, with the name of

the company inserted, and a gilt star." In March, 1820, a committee appointed for the purpose reported in favor of obtaining a combined apparatus, uniting the properties of a hose-carriage and an engine. It was built by Sellers. The carriage part of the machine was painted in cream-color, picked in with black, and the body of green. Upon trial, in 1820, the engine played one hundred and fifty-three feet through the branch-pipe attached to a ten-foot section of double-rivet hose. In December, 1820, the company bought the house which it had occupied on Zane Street, above Seventh, from the Niagara Fire Company. The latter removed from the premises before May, 1822, at which time the Phoenix resolved to construct a new house, three stories in height, which it was estimated could be done for one thousand dollars. Actually it cost, with the furniture, two thousand three hundred and forty-nine dollars and eighty-eight cents, and the company was greatly embarrassed by this debt for some years.

The Fame Hose Company was instituted Jan. 1, 1818. Among the original members were Edward Irving, Samuel P. Griffiths, Jr., and H. M. Tucker, who were appointed a committee, on the 9th of March of that year, to procure a hose-house. They obtained from the county commissioners the use of the house at the southeast corner of Walnut and Sixth Streets, at the Walnut Street prison, but did not remain there long, having been successful in obtaining from the Philadelphia Library Company the use of a lot of ground on Fifth Street, adjoining the house of the Pennsylvania Fire Company. A house was built there for the use of the Fame, and a plan was fixed upon by which the fronts of the two houses were made uniform in appearance.

The Pennsylvania Hose Company was established in July, 1818,—Dennis P. Whelan, president; and William Kennedy, secretary. At that time an application was made to the Pennsylvania Fire Company for a donation of old torches, which was complied with.

A company called the Independent Fire Company was in existence before Jan. 14, 1819.

The Good Intent was the second fire company established in the district of Kensington. It was formed April 26, 1819, at a meeting held at Isaac Boileau's school-room,—John Wood, chairman; and Isaac Boileau, secretary. The following-named gentlemen were associated with them: Howe Keith, Samuel P. Courtney, Isaac J. Kipp, Thomas Reading, William Vandyke, George App, Adam Miller, Samuel Weyant, John Seddinger, Joshua Bowers, David Jones, William Jones, James B. Wood, Peter Steinmetz, Joseph Wood, Nathan Barnaba. A wooden house was erected on the lot at Prince Street and Frankford road, which belonged to Mr. Camac, and an engine costing one thousand dollars was bought of Patrick Lyon, July 13, 1820. The company also had a bucket-carriage.

The Franklin Hose Company was established before 1819, and stood on the east side of Eighth Street, between Cherry and Race. It was nicknamed at one time "the Bootmakers' Company," and it was asserted that the hose was made of boot-legs. Jeffries & Nuttall built a carriage for the company in 1819, which the members of that firm would not deliver until paid for. The Hope Hose Company bought it, and the Franklin may be considered by that circumstance to have gone out of service.

The Schuylkill Hose Company was in operation before 1820. In the latter year some of the members united with former members of the Franklin in a demand upon the Philadelphia Fire Company for hose, which the latter had bought of Seybert. The Philadelphia resisted, on the ground that the Schuylkill, as well as the Franklin, had been dissolved.

The Penn Township Hose Company rented the hall of the Columbia Fire Company in 1820, and continued to meet there until August, 1824. It was in active service during all that time.

The Spring Garden Fire Company was in service before May, 1820.

The Globe Fire Company was organized at B. Hutchinson's tavern, in Kensington, May 22, 1820. William Fidler was elected president, Samuel Salter secretary, and John Sanderson treasurer. In addition to them, the members were John Holmes, Branch Green, James Altemus, James Phillips, John Pfeiffer, Robert Wallace, Gabriel Cox, Henry Benner, Robert Arthur, Archibald Wright, and Joseph Barton. The company received its name in compliment to the Globe Mills. John Holmes, a member, belonged to the firm of Craig, Holmes & Co., proprietors of the mills, and there is reason to believe that many of the members were employes in that factory. The engine-house was of wood, two stories high, and was occupied in the second story for the purposes of a school by Rev. William Metcalfe, of the Bible Christian Church. It cost four hundred and fifty dollars. The engine cost five hundred dollars. The Globe Bucket Company was given permission, in July, 1821, to keep its bucket-carriage in the engine-house.

The Diligent Hose Company was established June 3, 1820, and the apparatus was located in the neighborhood of Eleventh and Vine Streets. It is probable that the organization sprang from the Diligent Bucket Company, a portion of the members of which united in the establishment of the hose company. Shortly after it was founded the bucket company made a donation of ten dollars to the hose company, showing at least a sympathy between the two organizations. The following were members in 1822: B. H. Bannen, Robert Lyons, Jacob Patterson, Pascal B. Smith, John Develine, E. S. Erickson, G. Ray, Jacob Weaver, William Corson, Thomas Carvell, Stogdon Pennell, William Henderson, John Bozler, William Lypherheldt, Joseph Garlick, Henry Leadbeater, Laspol Gramshaw, Thomas Everett, A. Mar-

tin, W. Brooke, J. Santine, W. B. Dexter, J. Martin, George Smith, B. Connodell, G. Bursfield, John F. Janneaus, Charles Knodle, William Connor, — Jester, and — Bloom. This company was in active service in January, 1822, when it was resolved that the body of the hose-carriage should be painted green, the wheels yellow, picked in with black, and the badges picked in with red. Torches were affixed to the carriage. They were taken off in 1823, and lamps substituted. The latter were not popular at that time, and after a short trial the torches were restored. A committee was appointed in February, 1824, to obtain ground for an engine-house, and it was ordered not to go below Eighth Street nor below Arch, but in 1825 the order was modified, and directions were given to the committee to seek a lot from the owners of the Farmers' Brewery, corner of Tenth and Zane Streets.

The Point Pleasant Fire Company was in existence before July, 1820, and its place of service was at Point Pleasant, Kensington, on the Delaware River, near the mouth of Cohocksink Creek.

The Fairmount Fire Company was established in the district of Spring Garden, Feb. 22, 1823. On the dissolution of the Whale Fire Company of the city, the engine of that association—a large and powerful machine—was purchased by the commissioners of Spring Garden for the protection of the citizens of that section. The possession of this apparatus led to the formation of a fire company to manage it, and in that way the Fairmount originated. The original members were young men, a large proportion of them butchers, and their peculiarities furnished much amusement to the members of other companies, and were the subjects of jests which were long remembered and renewed by fresh recitals. The original house of the Fairmount was on the Ridge road, north of Wood Street, east side.

An association called the Hibernia Hose Company was in operation in March, 1823, and had its stand in Walnut Street, between Front and Second. It was not long in existence.

On the 7th of September, 1815, water flowed for the first time from the pipes connected with the Fairmount Water-Works. Previously, the water supplied by the works at Chestnut Street, on the Schuylkill, had but small head or force,—which fact, although hose had come into general operation, seemed to render the use of fire-buckets a necessity as a means of assisting the working of the hose,—but with the establishment of the Fairmount works the pressure was so much increased that it was found that the use of fire-buckets was unnecessary, and the companies generally neglected them. This led to the project for the institution of bucket companies. They were formed of young men or boys who were not allowed to become members of the regular fire companies and hose companies. The majority of them adopted names which were the same as those of the latter or-

ganizations. Most frequently these names were painted on the buckets; so that the bucket companies, by adopting those names, found that their property was already appropriately marked and painted. The buckets were carried to the fire either in the old hose-carriages, which had not yet been broken up, or in wagons. These companies began to be formed about 1818, and they ceased to be useful in 1821. The names of such of those associations as have been preserved were as follows:

Liberty, of which John Sendos was president in November, 1818; Ernest F. Crozet in December, 1818; and John H. Dohnert, secretary in 1819. This company obtained from the Philadelphia Hose Company permission to use the house at Twelfth and Clover Streets, which at that time was in the tenure of the Philadelphia. The Liberty was in service at the burning of Masonic Hall, March 9, 1819.

The Free Will Fire Bucket Company in November, 1818, petitioned the Columbia Fire Company for the donation of some buckets.

The Union Fire Bucket Company in 1818 bought an old bucket-carriage of the Hope Hose Company, and went into active service.

The Humane Fire Bucket Company in 1819 asked the Humane Fire Company for the privilege of being located near the latter.

The Columbia Fire Bucket Company petitioned the Columbia Fire Company in September, 1819, for aid; and in May, 1820, exchanged a bucket-basket and sixty-four buckets with the Good Will Fire Company for five sections of hose. It probably became a hose company.

The Amicable Fire Bucket Company was in service in October, 1819. John Phile was secretary, and William Hartley was one of the members.

The Good Will Fire Bucket Company was organized in May, 1820, and was furnished by the Good Will Fire Company with a bucket-carriage and apparatus. It was first placed in "Mr. Sanford's yard," and afterward in a house built for its use adjoining the Good Will engine-house, at the northwest corner of Juniper and Race Streets.

The Washington Fire Bucket Company was in active service in 1820.

The Diligent Bucket Company made a donation of ten dollars to the Diligent Fire Company in 1820, to aid in building the engine afterward made by Pat. Lyon.

The United States Fire Bucket Company, William B. Dexter, president, and William Kline, secretary, applied for advice and assistance to the United States Fire Company on the 10th of October, 1820. A committee was appointed to comply with their request.

The Fame Fire Bucket Company was in existence in 1820.

The Independent Fire Bucket Company was in service about the same time.

The Globe Fire Bucket Company bought thirty old

buckets of the United States Fire Company in May, 1821, for five dollars, and went into active service.

The Northern Liberties Fire Bucket Company was established in 1821. Joseph Wood was one of the founders, and the company was reorganized as the Northern Liberties Hose Company on the 7th of May, 1828.

Outside of the city and districts the needs of the more rural portions of the county led to the institution of fire companies in villages and neighborhoods as opportunity served. In Germantown, as early as the month of January, 1764, a public meeting was held at the town hall to consider the necessity of obtaining fire apparatus, and taking measures to carry out that design. Germantown was then divided into three divisions or wards. As the effort was a united one, it was resolved that the companies should bear the same name,—Fellowship. Subscriptions were taken up, and a short time afterward the companies were formed. The Fellowship Fire Company of the Upper Ward was established March 1, 1765; the Fellowship Fire Company of the Middle Ward, March 4, 1764; the Fellowship Engine Company of the Lower Ward was not established until Feb. 20, 1765. There was a difficulty in getting engines. The subscriptions were sufficient to pay for three hand-engines, and orders were sent to England for their purchase. The three machines did come to this country, but only one of the Germantown companies was served, the other coming into capacity for service at a later period. In course of time the usefulness of the Germantown companies was occasionally interfered with by the resemblance of the names of the three organizations, and it was resolved to give them distinct titles. The Fellowship of the Upper Ward became the Franklin Fire Company of Germantown, the Fellowship of the Middle Ward became the Washington, and the Fellowship of the Lower Ward became the Columbia. These alterations were effected about 1809. In the upper part of Germantown township the Mount Airy Fire Company was established Feb. 9, 1804.

At Chestnut Hill the Congress Fire Company was instituted May 11, 1815. The Fellowship Fire Company, taking the name which had been given up by the Germantown companies, was established Sept. 3, 1819.

At the Rising Sun the Union Engine Company was established March 19, 1819.

At Frankford a company was established Feb. 11, 1803, the name of which seems now to be unknown. It was some years after its institution that it was decided to give to the company the name of the Decatur Fire Company, after Commodore Stephen Decatur, who, by the residence of his father in that neighborhood, was considered in some degree a Frankford boy. It is probable that his name was not given to the company until after his naval victories had become famous. This might have been after his destruction of the frigate "Philadelphia," in 1804, but more probably

after the capture of the "Macedonian" by the frigate "United States," in 1812.

In Frankford the Washington Fire Company was established Jan. 1, 1793.

In Roxborough the Good Intent Fire Company was established May 8, 1819.

In the western portion of Blockley, near Haddington, the Monroe Engine Company was established March 8, 1823.

The water-supply for the engines originally was poured into cisterns from buckets, which were passed along lines of persons extending from the place of the fire to the nearest pumps or other available places. The empty buckets were usually returned by lines composed of women, children, and aged persons.

The first hose used in the city was introduced, in the year 1794, by the Humane Fire Company. Philip Mason, Jan. 31, 1795, proposed to make an engine "fitted completely for the purpose of working a suction and venting hose." It was finished in July, 1795, and was first used at a fire in Coombs' Alley, a short time after. The company had about one hundred and sixty feet of it, made of woven web, or canvas. Solicitous measures were taken to prevent it from rotting, as it was supposed, by steeping it in salt pickle. Under this treatment the hose was soon disposed of. The Delaware Fire Company, in 1796, appointed a committee to ascertain what materials were best for making hose. They reported in favor of patent hemp, wove hose, "such as that used by the Humane Fire Company," and eighty feet of it were procured. The Humane did not incline to further use of this kind of hose, and in 1798 leather hose was procured by that company. The Reliance Company before this time had got one hundred and seventy feet of leather hose, and after this period that material was common. It was made by Samuel Briggs and Philip Mason. The screws used with this hose were immovable, and, by twisting the hose in attaching it to the engines, frequently burst it. This difficulty was remedied by a suggestion of John Butler, of the Humane, and the making of screws revolving in a socket, by John Cooke and Jesse Oat, coppersmiths, members of the Humane Fire Company. Philip Mason made leather hose for the Philadelphia Fire Company in 1801. The Philadelphia Hose Company at the beginning employed leather hose made by Frederick Schultz. It was sewed, and on account of its frequently bursting, a committee was appointed to devise a plan for improving the hose. This led to the invention of riveted hose, for which Sellers & Pennock, two of the members, took out a patent, and went into the business, of which they had a monopoly until about 1823, when Adam Dialogue, then a young man, undertook the manufacture. Suit was brought against him on the charge of infringing the patent of Sellers & Pennock. The Phoenix Hose Company sustained Dialogue, and called a convention of companies to back him up in the suit. Contributions

were made for the employment of lawyers, etc., and on the trial of the case Dialogue obtained a verdict. There was no doubt that Sellers & Pennock invented riveted hose while on the committee of the Philadelphia Hose Company, but at that time they had no idea of making a business of it, and they allowed Jenkin S. Jenkins to manufacture the hose before taking out a patent. It was held that this conduct was an abandonment of the invention, and that it was thereby relinquished to the public. The case went to the Supreme Court of the United States, which sustained the decision of the court below, and after that time the manufacture was open to all. Dialogue made it his regular business, and was engaged in it until his death.

Hooks, ladders, and fire-escapes engaged attention at this time. An escape was procured by the Fame Fire Company in 1783. It was a three-story ladder, with a tackle and basket affixed. In 1791 a pole was used in place of the ladder. It was used at many fires. The company lost it when burned out at the destruction of Zion Church, in 1794. The Harmony Fire Company, in 1790, obtained a fire-escape, and had a carriage to carry the apparatus. Its use was abandoned in four years. Edward Robinson, of the Reliance, in 1797, invented an escape which, upon consideration, was refused because of its heavy character. The Northern Liberty Company had a basket apparatus during part of the time to which we refer.

Firemen, while in service, had no distinguishing badge or equipment until 1788. In that year a fireman's convention was held for consultation. The means of distinguishing firemen by some uniform equipment was considered. They recommended the use of a painted hat for all the companies, to wit: round hats, with black-painted rims and white crown, with the member's name and company in large characters. The Harmony Fire company refused this uniform, but gave to members a right to wear a yellow badge, with the name of the company upon it, which was to be buckled around their hats when in service. The first coats and capes were used in 1704 by the Assistance Fire Company, which obtained two coats and oil-cloth capes for the use of the engineers. The directors of the Humane Fire Company in 1796 purchased ten oil-cloth suits for their own use. The company in the same year authorized to be worn "a hat covered with oyl-cloth, and the word Humane painted on the front." This was the first equipment worn by all the companies in the city.

The Philadelphia Fire Company in 1801 adopted a hat of a chocolate color. The Vigilant Fire Company in 1802 adopted a red badge, to be buckled on the ordinary hat, with the name "Vigilant" thereon. In 1803 the Philadelphia Hose Company directed that each member should wear a painted hat and a round-jacket. In 1804 the Resolution Hose Company adopted a hat with an eagle painted in front; and in 1805 the Neptune ordered that a figure of the

sea-god, with his horses, should be painted on the hats of the members.

The Philadelphia Hose Company in 1806 agreed upon the adoption of a frock-coat, with a cape, belt, and hat, but there was no general wearing of a dress equipment until many years afterward. The fire-hat, which was painted, and on which the name of the owner's company was inscribed, was the only distinguishing uniform of the fireman during the period now under discussion.

Most of the companies had their engineers and directors equipped with coats and capes, but for many years the members were only distinguished by hats and badges.

The Hope Hose Company adopted coats and capes in 1827, and this is the first mention we have been able to find of company equipments of that nature. In 1828 capes and coats were adopted by the Delaware Fire Company. About 1845 or 1846 one or two companies adopted the New York fire-hat. This example was followed by others until the head-gear of the entire department was of that fashion. Capes were also laid aside. The fire-coat was made like a long surtout, and in moderate weather the fire-hat, a red shirt, dark pantaloons, and boots, with a fire-belt around the waist, was the usual costume of a fireman.

In 1796, upon the proposition of the Resolution Fire Company, there was established a Fire Association to regulate the proceedings at fires. Each company elected two trustees, to devote themselves to the preservation of goods and furniture at fires; two regulators, to find out pumps and to form lines to convey the buckets of water to the engines; and two engineers, to select places for engines to operate at fires. This association gradually fell into disuse, and was probably abandoned by 1806-7.

When hose companies came into operation a marked distinction was made between their members and those of the old fire companies. The latter were called "firemen," and the others "hosemen." The hosemen formed an association of their own for the regulation of their affairs at fires, called the Fire-Hose Association, and remained in operation until 1817, when it was dissolved by a vote of all the hose companies belonging to it.

In January, 1816, a meeting of firemen was called at the county court-house to form a Firemen's Benevolent Institution. The project failed, but from the discussions which resulted came a proposition to establish a Fire Association, which was partly a controlling body for the regulation of the interests of fire companies, and partly an insurance company.

In December, 1816, the Diligent Fire Company appointed delegates to co-operate in any movement toward forming a general association of fire companies. A convention was held in which several companies were represented, and a constitution was adopted. A charter was applied for to the Legisla-

ture, but owing to the opposition of some of the old insurance companies it was defeated. Great indignation ensued, and the question was carried into the elections. In 1819 a ticket for members of the Assembly was resolved upon at a public meeting to be supported as a firemen's ticket. It was made up of nominees from both the Democratic and Federal tickets. Some of the companies opposed this movement; others were strongly in its favor. The political parties at that time were nearly matched. The leading Federal candidate received 2277 votes; the leading Federalist, 2315; while the Firemen's ticket was carried by votes ranging from 2519 up to 3000. Only one of the firemen's candidates was defeated,—a person who was not popular. Four out of the five delegates to the Legislature from the city were carried by the firemen, and at the next meeting of the Legislature the Fire Association was chartered.

In 1818 there was great excitement among the members of the fire and hose companies in consequence of an attempt to form a company composed of persons of color. Some of the latter had formed a company called the African Fire Association. Derrick Johnson was president, and Joseph Allen was secretary. A committee was appointed to solicit subscriptions. When knowledge of this attempt came to the members of the companies then in existence (their attention was called to it by circulars), the appointment of committees of conference was solicited. A meeting was held July 9th, at Stell's Tavern. Joseph P. McCorkle was called to the chair, and Robert P. Aertsen was appointed secretary. The following companies were represented: Delaware, Neptune, Union, Phoenix, Friendship, Niagara, United States, Hibernia, Weccacoe, Junior, Fame, Fellowship, and Franklin Fire Companies; Good Intent, Perseverance, Fame, Resolution, Phoenix, Neptune, Columbia, Franklin, Hope, Humane, Washington, and Southwark Hose Companies. This meeting passed a resolution that—

"The formation of fire-engine and hose companies by persons of color will be productive of serious injury to the peace and safety of citizens in time of fire, and it is earnestly recommended to the citizens of Philadelphia to give them no support, aid, or encouragement in the formation of their companies, as there are as many, if not more, companies already existing than are necessary at fires or are properly supported."

A committee was appointed by this meeting to wait on the proper authorities, and to request them to prevent the African company from opening the fire-plugs. At a subsequent meeting, held July 13th, additional representatives were present from the Pennsylvania, Diligent, Amicable, Columbia, Vigilant, Resolution, and Hope Engines, and from the Philadelphia Hose Company.<sup>1</sup> The committee appointed at the former

<sup>1</sup> In connection with this curious affair it may be noted that the following companies were not represented: Fire companies, Northern Liberties, Harmony, Reliance, Assistance, Federal, Relief, Kensington, Humane, Washington, Philadelphia, Good Will, Southwark, Star, Charitable, Venerable, and Defiance; hose companies, Fame, United States. Several of these companies were what might be called "Quaker com-

meeting reported that the chairman of the watering committee of Councils had said that that body had no discretion on the subject, the ordinance directing them to grant a license to any fire association applying for the use of the plugs in time of fire. A petition to Councils was therefore recommended. Meanwhile some persons of color, who foresaw, in the agitation which this matter had created, that trouble would be likely to ensue to themselves and their race, met at the house of George Jones. James Forten was chairman, and Russell Parrott was secretary. A resolution was adopted expressing the regret of the meeting that—

"a few young men of color had contemplated the establishment of a fire or hose association, and, although the same may have emanated from a pure and laudable desire to be of effective service in assisting to arrest the progress of the destructive element, we cannot but thus publicly enter our protest against the proposed measure, which we conceive would be hostile to the happiness of people of color, and which, as soon as known to us, we made every effort to repress. Should it be carried into effect, we cannot but consider that it will be accompanied with unhappy consequences to us. Therefore we sincerely hope that supporters of the contemplated institution, and such as might wish to be concerned, will relinquish all ideas of the same."

This remonstrance, together with the opposition of the fire companies, produced its effect. The members of the African Fire Association met on the 19th of July, and, after passing a resolution of regret at the "erroneous construction put upon their undertaking," and desiring to vindicate themselves from unjust imputations, and to "assert the rectitude of their intentions, as they were influenced solely by a wish to make themselves useful," declared that they "did not expect dissatisfaction, or they would not have progressed so far." It was, therefore, resolved to dissolve the company, and to return the subscriptions to the citizens who made them.

All of the engines used by the various fire companies before 1752, with the exception of the Vigilant, founded on Jan. 2, 1760, used engines imported from England. After this date they were very generally manufactured in Philadelphia. Between 1768 and 1801, Richard Mason, a native of Pennsylvania, made engines for the Northern Liberty, Queen Charlotte, Vigilant, Hibernia, Hand-in-Hand, Delaware, Assistance, and Diligent Fire Companies, and probably many others. Richard Mason introduced the form of engines working at the ends, which were different from the side-lever engines usually made. Philip Mason, a son of Richard, was also an extensive manufacturer. Between 1775 and 1801 he built engines for the Washington, Columbia, Hope, Harmony, Philadelphia, and Weccacoe Fire Companies. Samuel Briggs built engines for the Federal and Northern Liberty Fire Companies, but they were not a success. These engine-builders were soon superseded by the famous locksmith, Patrick Lyon,

panies," and even at that early day, in a matter calculated to arouse bad feeling, they seem to have maintained the integrity of their principles, which undoubtedly were more liberal to the colored race than those held by other sects at that time.

who, about 1794, invented a new and improved fire-engine, which he announced would throw more water than any other, and with a greater force. As an engine-builder he did not gather any reputation until 1803. In 1799 the Washington Fire Company decided on Philip Mason as a builder in preference to Lyon, by a vote of 2 to 1. In 1803, Lyon made machines for the Philadelphia and Good Will Fire Companies. After that time he built engines for the

*Philip Mason*

Pennsylvania, United States, Philadelphia, Good Will, Hand-in-Hand, Good Intent, Diligent, and Washington Fire Companies, and for others belonging to Philadelphia and in various cities and towns in the United States. The last of which we have any account was built for the Reliance Fire Company, and was finished about July, 1854. His engine built for the Diligent Fire Company in 1820 was accounted his masterpiece.<sup>1</sup>

James Sellers invented a new machine, after the plan of Rowntree, of London, for the Pennsylvania Fire Company, which was afterward called a hydraulion. Subsequently this variety of fire-engine was built for the Pennsylvania, Philadelphia, and Vigilant Fire Companies, and the Philadelphia and Phoenix Hose Companies. They were built by Merrick & Agnew, by Perkins & Bacon, and by John Agnew.

Sellers & Pennock built a few engines,—one for the Harmony Fire Company, in 1820. Perkins & Jones built one for the Harmony in 1816, on the plan of Joseph M. Truman.

The first hose-carriages—square boxes on wheels—were made by Patrick Lyon, who built many of them during the twenty years which succeeded their introduction in Philadelphia. Philip Mason and Joshua

<sup>1</sup> Patrick Lyon was born in England, of Scotch parents, and while he resided in Philadelphia was a member of the St. Andrew's Society. He died at his house on Library Street, below Fifth, on the 15th of April, 1829, and was buried in St. Peter's graveyard, at the southwest corner of Third and Pine Streets. His remains lie, unmarked by a single stone, within eight or ten feet of the grave of John R. Scott, the actor.

Bickham also made hose-carriages while the box shape was retained. The reel on which to wind the hose was first adopted by the Pennsylvania Fire Company, and by the Resolution and Humane Hose Companies. The arched carriage on which the hose-reel was sustained is believed to have been introduced by the Phoenix Hose Company about 1818. It was a great improvement. Thomas Ogle built a carriage for the Resolution Hose Company on this plan, and others were constructed by Jeffries & Nuttle. The Neptune Hose Company in 1818 had a carriage built with three wheels, one before and two behind. The hind wheels had cogs, which could be attached to the hose-cylinder. This carriage frequently upset in turning corners.

A carriage built in 1821 for the Resolution Hose Company, by Thomas Ogle, was probably an open-arched carriage, as it was undoubtedly the first spring hose-carriage made in this city. A committee had been appointed by the company to inquire whether springs could not be advantageously used. They examined the "Cyclopedia" on the subject, and reported favorably. Their plan was adopted, with instructions "to lower the front wheels and raise the cylinder, so as to permit the front wheels to turn under the carriage," a direction which makes it very reasonable to suppose that there was no box to interfere with the concussion of the running wheels and hose-reel. It is noted of the carriage built for the Good Intent, in 1826, by Jeffries & Nuttle, that it had semicircular arches. After that time no other general form was adopted, though various improvements have been made in hose-carriages by the builders, Sneider, C. Haight, Robert E. Nuttle, George Ruhl, W. Mason, George W. Watson, and others.

The Resolution Hose Company appears to have paid particular attention to the subject of springs, having, in 1821, first introduced spring carriages. The same company, in 1847, adopted the plan of W. Mason, a member, by which semi-elliptic springs are placed under the lockers, and semi-elliptic springs at the sides extend from axle to axle. The combined action of these springs makes the carriage easy and exceedingly light in its movements. The America Hose Company, in 1837, adopted a carriage draughted by Greer, with springs working in the lockers. This carriage was built by R. E. Nuttle, and was in use until 1845, when another, entirely of iron, working with similar springs, was built for the same company by Simpson, of Baltimore.

The Philadelphia Hose Company, in 1829, had a machine called "The Twins," being a double hose-carriage. When occasion required, the fore and hind parts could be detached, and each used as a separate carriage. The Southwark Hose Company, in 1828, procured one carriage with two cylinders, which were found upon trial to be very inconvenient and troublesome. In 1840 the Resolution tried the plan of a

stationary carriage, with the cylinder on springs, which was not found to work as satisfactorily as had been imagined.

Lamps have seen some change. Lanterns, in which tallow candles emitted feeble radiance, were at first adopted. Torches took the place of these, and were permanently fixed on the carriages. Lamps of various patterns succeeded.

The history of hose-carriages between 1845 and 1860 is a history of luxury. Every decoration which painters, sculptors, and lapidaries could put upon them was used. They were resplendent with gold and silver work, handsome paintings, mirrored sides and carvings. They were inlaid with pearl, and one carriage bore on its front a blazing glory formed of imitation brilliants of the first water. The very handsome machines thus decorated seemed only designed for show, while the work was mostly done by uncouth, badly-shaped, clumsy carriages called "crabs," which bore as much resemblance to the dandy hose-carriages as orang-outangs do to Venus.

Hook-and-ladder apparatus were of extremely modern introduction in this city. Seventy years ago every fire company possessed these useful adjuncts, but they were suffered to lie neglected until they ceased to be a part of the property of Philadelphia fire companies. The formation of the Empire Hook-and-Ladder Company, in 1851, again introduced hooks and ladders to notice, and they had been so useful on various occasions as to lead to the formation of other companies upon a similar plan.

The steam fire-engine, which has in most all of the large cities of the Union driven out the hand fire-engine, is a very late introduction. The first of these machines which was built in the world was made by Mr. Braithwaite, of London, in 1830. In 1832 he built an engine for the king of Prussia. In 1841 Mr. Hodges, of New York, built a steam fire-engine under a contract with the associated insurance companies of that city. The difficulty with all these machines was that they were too heavy. A. B. Latta, of Cincinnati, in 1853, built what is generally considered to be the first practical steam fire-engine which could be used on ordinary occasions.

In February, 1855, there was brought to Philadelphia for exhibition a large steam fire-engine called the "Miles Greenwood." This machine was tried in February of that year at Dock Street wharf, the hose used being loaned for the occasion by the Philadelphia Hose Company. The trial was witnessed by a large number of people, including a number of firemen, and the general feeling was that the fire-engine was a failure, which she certainly was as far as regarded her power to throw water to a distance, her performances in that line not being equal to those of many of the hand-engines then in use. In May of the same year, A. Shawk, of Cincinnati, brought on here a fire-engine called "The Young America," which he was very anxious to sell to City Councils. There was

a trial of the machine in the yard of the county prison on the 23d of May, and, afterward, on the 1st of June, in front of the Presbyterian Church, Arch Street, above Tenth. There was also a trial on the 4th of June at the foot of Dock Street. Shawk asked nine thousand five hundred dollars for the machine, and the city not being willing to pay it, the amount was subscribed by certain citizens, who insisted that they proved their public spirit by the act. The engine was presented to the city of Philadelphia, which found itself, in consequence, in the position of the man who won the elephant at a raffle. A house was built for the machine, on a lot belonging to the city, at the corner of Front and Noble Streets. An engineer and assistants were engaged at a salary, and everything was ready to make "The Young America" a success. But there was a want of horses to drag it to fires, and also a want of good workmanship to keep its parts together. It was continually getting out of order or breaking down. Its weight was twenty thousand pounds, and in the three years during which the city attempted to keep it in service it cost the treasury a dollar a pound, or twenty thousand dollars, for repairs and maintenance. During that period "The Young America" was attempted to be taken to a fire (June 30, 1856), at the corner of Fifteenth and Hamilton Streets, but broke an axle before she reached the ground. She was at the fire at the corner of Third and Race Streets in July of that year, and she also did the best service in her history at the fire at Magargee's board-yard in October, 1856. Beyond these services "The Young America" had no history but that of expense.

The first steam fire-engine employed by a regular fire company of Philadelphia was the "Fire-Fly," which was built in New York, and which was the property of the firm of Arthur, Burnham & Gilroy, manufacturers of this city. They offered to place it in the charge of the Philadelphia Hose Company for use, free of expense. This was in January, 1857. The "Fire-Fly" was tried on the 2d of February of that year at the tobacco-house, in Dock Street. In April the Philadelphia Hose Company resolved to have an engine of their own, and they invited the mechanics of the city to make plans of such a machine. Mr. Joseph L. Parry responded, and he proposed to build an engine weighing fifty-five hundred pounds, which would throw water through a one-and-one-eighth-inch nozzle one hundred and ninety-four feet horizontally, and through a seven-eighths-inch nozzle one hundred and seventy-five feet. The price was to be thirty-five hundred dollars. This machine was built by Rainey & Co., of Kensington. A short time afterward the Diligent Fire Company, undeterred by previous experience, sought to become the custodians of the "Big Squirt," *alias* "The Young America." They succeeded; but she continually wanted repairs, and she was tinkered at by Shawk & McCausland, of this city. Finally she was cut down and rebuilt by

McCausland and made much lighter, and she was afterward put in service. The Hope Hose Company procured a steam fire-engine from Rainey & Co., in June, 1858. The Hibernia was the next steam fire-engine, which was obtained in January, 1859. The mania for these machines now began to rage with great power, and during that year twenty steam fire-engines were built for fire companies in the city. And so the passion extended from company to company until the old hand-engine was so thoroughly superseded in the built-up parts of the city that its appearance is unknown to a large portion of the present generation, and it is almost forgotten by their seniors.

Up to 1855 the fire department was without any supervision beyond that which was given by the companies to the board of directors, and this was advisory rather than absolute. Until the consolidation of the city and districts it was impossible to control the fire companies except by the district corporations, and any general system which should govern all could not be established. As soon as consolidation was effected the politicians began to take measures which would make the department useful to their own purposes. On Jan. 30, 1855, the City Councils passed an ordinance directing that the fire department should consist of such regularly-organized engine, hose, and hook-and-ladder companies within the limits of the city of Philadelphia as should, within sixty days after the passage of the ordinance, "express by resolution, duly attested by the officers thereof, their willingness to comply with its provisions." The officers of the department were to be a chief engineer, seven assistants, and a director for each company, who was to represent his company in the board of directors of the fire department. This board of directors were to ballot for three persons from each fire district for chief engineer, from which persons Councils were to elect. The assistant engineers were to be chosen in the like manner. The city was divided into seven districts, and the area within which the fire companies were to serve was regulated. There were also provisions limiting the members of each company, and a promise of an annual appropriation to each company not exceeding four hundred dollars. This ordinance created great dissatisfaction in the department, and many companies refused to accept it. These were called "the non-accepting companies," and some of them remained out of service for several months. Finally the ordinance was modified in several important particulars, and the companies came back into service. Under this ordinance the first election for chief engineer took place in March, 1855, by the board of directors, and resulted in that body as follows: Benjamin A. Shoemaker, of the United States Engine Company, forty votes; Samuel P. Fearon, of the Schuylkill Hose Company, forty votes; T. H. Blake, of the Philadelphia Hose, thirty-nine votes. The result was referred to Councils, which elected B. A.

Shoemaker to serve until December, 1856. The companies voted directly for that officer. The chief engineers have been as follows :

- 1855, Benjamin A. Shoemaker, of the United States Engine Company.  
 1856, Samuel P. Fearon, of the Schuylkill Hose Company.  
 1858, Samuel P. Fearon, of the Schuylkill Hose Company.  
 1860, David M. Lyle, of the Fairmount Fire Company.  
 1863, David M. Lyle, of the Fairmount Fire Company.  
 1865, David M. Lyle,<sup>1</sup> of the Fairmount Fire Company.  
 1867, Terence McCueker, of the Moyamensing Hose Company, in place of David M. Lyle, deceased.<sup>2</sup>  
 1867, George W. Downey, of the Western Engine Company.

In 1870 a board of fire commissioners was organized by ordinance, which went into operation Jan. 3, 1871. This ordinance changed the mode of electing the chief engineer.

Under the ordinance of April 20, 1864, the office of fire-marshal was created, and since that time the following have been appointed :

Dr. Alexander W. Blackburn, <sup>3</sup> appointed.....	—	—	1864
James S. Thompson, appointed.....	—	—	1871
Harrison G. Clark, appointed.....	Jan.	—	1872
William B. Heine, <sup>4</sup> appointed.....	Sept.	27,	1882
Charles W. Wood, appointed.....	Oct.	19,	1882

The police- and fire-alarm telegraph, which was established in the year 1856, changed very materially the mode of giving alarms. The old system of district and fire company bells, and of the alarm from the State-House, was modified by alarms given to the central telegraph-office from the station-box nearest a fire, which was immediately sent to all the station-boxes in the city, and as in a short time these boxes were placed in the hose- and engine-houses, their members had the earliest information of the breaking out of a fire.

On the 1st day of June, 1857, Mayor Vaux established a separate department of the police, which was specially charged with the duty of ascertaining, by a rigid investigation, the origin of fires and of discovering incendiaries. This was called "The Fire Detective Police," and Alexander W. Blackburn was appointed the chief of that department. He afterward received the title of "Marshal of Police."

For ninety-six years the firemen never appeared in the city in any parade or celebration. They were first induced to make a public demonstration by feelings of patriotism at the centennial celebration of the birthday of General Washington (Feb. 22, 1832), and their appearance on that occasion attracted so much attention, that they resolved to make a parade independently in the succeeding year. After 1834 they resolved to have triennial parades, which custom they kept up until the year 1852.

Below we give a list of the general parades of the fire department, observing that during the last thirty-eight years the services of the firemen in strengthening public processions, whatever the object might be,

were so well understood that the different companies have appeared in all such parades in greater or smaller numbers :

- 1832, February 22.—Alexander Henry, Hope Hose Company, chief marshal.  
 1833, March 27.—Jacob B. Lancaster, Southwark Hose Company, chief marshal.  
 1834, March 27.—George K. Childe, Good Intent Hose Company, chief marshal.  
 1837, March 27.—John Price Wetherill, Philadelphia Hose Company, chief marshal.  
 1838, December 31.—Benjamin Matthias, Philadelphia Fire Company, chief marshal.  
 1840, March 27.—Peter Fritz, Perseverance Hose Company, chief marshal.  
 1843, March 27.—John T. Donnelly, Pennsylvania Hose Company, chief marshal.  
 1846, March 27.—Thomas Graham, Southwark Engine Company, chief marshal.  
 1849, March 27.—Edward Weeter, Globe Engine Company, chief marshal.  
 1849, May 1.—Edward Weeter, Globe Engine Company, chief marshal.  
 1852, May 3.—Edward Matthews, Franklin Hose Company, chief marshal.  
 1857, October 5.—J. F. Gibson, Northern Liberty Hose Company, chief marshal.  
 1865, October 16.—Henry P. Bobb, Washington Engine Company, chief marshal.

The membership of the old fire companies varied according to the neighborhood in which they were situated. They were generally composed of neighbors, and their social standing varied according to the portion of the city in which they were located. All the members of the fire companies were honest men and good citizens, but some of them were more wealthy and more famous in city history than were others. Thus, for instance, we will take the roll of the Hand-in-Hand Fire Company, established March 1, 1741, and which was for many years located in Dock Ward, at the Fish Market, at the Drawbridge. Between the years 1770 and 1796 the following eminent citizens were active members of this company: Francis Hopkinson, James Wilson, Dr. Benjamin Rush, and George Clymer, signers of the Declaration of Independence; Dr. William Smith, provost of the College of Philadelphia; Dr. Shippen, Dr. John Morgan, Dr. Thomas Bond, and Paul Fooks, professors in the college; Rt. Rev. Bishop White, Rev. Richard Peters, Rev. Jacob Duché, of St. Peter's Church; Rev. Dr. Blackwell, Rev. Dr. John Andrews, Rev. Samuel Magaw, Rev. James Abercrombie, Rev. William Pilmore; Rev. Ashbel Green, of the Presbyterian Church; J. B. Bond, John Patterson; Andrew Hamilton, Lieutenant-Governor under the Penns; Thomas Mifflin, Governor of the State of Pennsylvania; William Tilghman, chief justice of the commonwealth; Edward Shippen, chief justice; Benjamin Chew, Sr., attorney-general under the crown; William Bradford, attorney-general of the State; Thomas Willing, member of the Continental Congress; Joseph Hopkinson, judge of the United States District Court; Jared Ingersoll, Dr. Phineas Bond, Drs. John and Joseph Redman, Dr. Way, Dr. Adam

<sup>1</sup> Born Jan. 26, 1818, died Nov. 23, 1867.

<sup>2</sup> Terence McCueker died March 1, 1877, aged forty years.

<sup>3</sup> Died Nov. 30, 1871, aged fifty-six years.

<sup>4</sup> Died Oct. 18, 1882, aged fifty-five years.

Kuhn, Dr. John Foulke, Maj. William Jackson, Col. Lambert Cadwalader, and the following eminent merchants and business men: Joseph Sims, Samuel Rhoads, Alexander Stedman, Alexander Willcocks, John Lawrence, James Humphreys, John Swift, Joseph Stamper, John Cadwalader, Samuel Powell, Robert Hare, James Humphreys, William Bingham, George Mead, Samuel Meredith, John Swanwick, James Biddle, Tench Coxe, James Cramond, and William Cramond.

In old times the companies generally adopted mottoes, which were frequently in Latin. One company (the Assistance Fire Company) put its motto in German. We have not been able to obtain all of the mottoes of the companies. The following will give an idea of their character:

- Pennsylvania Hose Company. "With willing hearts we hasten to assist."
- Cobocskink Hose Company. "The danger of our citizens prompts us to action."
- Western Fire Company. "Our energies, like our name, unlimited."
- Good Will Fire Company. "Our name is our motto."
- Spring Garden Hose Company. "Prompt to save, with spirit to subdue."
- Ringgold Hose Company. "We honor him whose name we bear."
- Fairmount Fire Company. "Prompt to action."
- Philadelphie Hose Company. "Non sibi sed omnibus." ("Not for itself, but for all.")
- Resolution Hose Company. "Esse utiles correbim ur." ("To be useful is our wish.") 1804.
- Head-in-Head Fire Company. "Proximus erdet Ucaligon." ("Ucaligon's house burns next.") 1787.
- Perseverance Hose Company. "Perseverantie omnia vincit." ("Perseverance conquers all things.")
- Neptune Hose Company. "Pulchrum est beneficere Republica." 1805. ("To save our fellow-citizens we hazard ourselves.") 1830.
- Hope Hose Company. "Omulis actus specificatur eb objectu." 1806. ("Every act is specified from its object.") 1834.
- Assistance Fire Company. "Beret." ("Ready.")
- Washington Hose Company. "All private duties are subordinate to those which we owe to the public."
- Fame Hose Company. "Fama extenditur factis." ("Fame spreads our deeds.")
- America Hose Company. "Union and Independence."
- Humene Fire Company. "Ou gnoesis alla prexis—Spectamur agendo." ("Not knowledge but action; we are seen by what we do.") ("Humanity dictates to us to do to others as we would be done by.") 1794.
- Diligent Hose Company. "The impulse to action is the denger of our citizens."
- Friendship Fire Company. "Friendship."
- Niagara Hose Company. "Paretus et fidelis." ("Ready and feithful.")
- Northern Liberty Hose Company. "When duty calls 'tis ours to obey."
- William Penn Hose Company. "Like Penn, we will be useful to our country."
- Independence Hose Company. "Our country is our glory."
- Pennsylvania Hose Company. "Auxilium dare ultro festinam." ("With willing hearts we hasten to assist.")
- Lafayette Hose Company. "Like Lafayette, we will assist in time of need."
- Southwark Fire Company. "Always ready."
- Phoenix Hose Company. "Surgu lucidius." ("I rise more shiving.")
- Philadelphia Fire Company. "Prodesse civibus." ("To assist the citizens.") 1826.
- Queen Charlotte (afterward Fame) Fire Company. "United we stand, divided we fall." 1782.
- Good Intent Fire Company. "We strive to save—To do good is our intent."
- Empire Hook-and-Ladder Company. "For the public good."
- Excelsior Hose Company. "To excel with honor is our utmost aim."
- Delaware Fire Company. "Don't give up the ship." 1816.

In conclusion we give a list of the volunteer fire companies instituted in the city from the earliest times. It will be noticed that several companies have had the same name. This has resulted from the dissolution of old companies and the formation of new ones, which, in ignorance, took names that had been previously in use; and also from the fact that under the system in vogue before consolidation, it was not considered improper in the city to adopt the name of a fire company existing in an incorporated district, or *vice versa*.

Name.	When Founded.	Original Location.
Union Fire.....	Dec. 7, 1736.....	Grindstone Alley, near Market Street.
Fellowship Fire.....	Jan. 1, 1738.....	.....
Head-in-Hand Fire.....	Merch 1, 1742.....	.....
Heart-in-Head Fire.....	Feb. 22, 1743.....	.....
Friendship Fire.....	July 30, 1747.....	.....
Ster Fire.....	Jan. 4, 1749.....	.....
Britannic Fire.....	Prior to 1751.....	.....
Hiberois Fire.....	Jan. 20, 1752.....	Cor. 2d and Walnut Sts.
Northero Liberty Fire.....	May 1, 1756.....	N. E. cor. Cable Lane and Callowhill Street.
Vigilant Fire.....	Jan. 2, 1780.....	East side 2d, below Vine.
King George III., afterward Delaware.....	Merch 21, 1761.....	Water, below Arch.
Fellowship Fire, of Lower Ward, afterward Columbie Fire.....	Feb. 20, 1764.....	Germentown.
Fellowship Fire, of Upper Werd, afterward Freuklin Fire.....	Merch 1, 1784.....	Germentown.
Fellowship Fire, of Middle Werd, afterward Westington Fire.....	March 5, 1764.....	Germentown.
Queen Charlotte, afterward Fame Fire.....	March 28, 1784.....	N. side Cherry, E. of 4th.
American Fire.....	Before Dec. 1764.....	.....
Sun Fire.....	Def. Feb. 28, 1765.....	.....
Crown and Beaver Fire.....	Def. Merch, 1765.....	.....
Cordwainer Fire.....	Before Feb. 1769.....	.....
New Market Fire.....	March 1, 1769.....	N. end market, 2d & Pine.
Amicable Fire.....	Aug. 7, 1769.....	Fifth, above Market.
Neptune Fire.....	Jan. 17, 1774.....	Race, below Third.
Sun Fire.....	Sept. 24, 1778.....	East end Jersey market.
Hermoy Fire.....	Aug. 24, 1784.....	Harmoy Court, near 3d.
Endeavor Fire.....	Feb. 17, 1785.....	.....
Reliance Fire.....	March 10, 1788.....	Key's Alley, b. Front & 2d.
Alarm Fire.....	May 1, 1787.....	.....
Assisteoce Fire.....	Dec. 28, 1789.....	E. side Fifth, below Race.
Federal, afterward American Fire.....	{ April 10, 1790 }	In front Commis's Hall, 3d below Tammerly.
Relief Fire.....	December, 1791.....	Relief Alley, near Second.
Diligent Fire.....	July 4, 1791.....	S. side Market, near 8th.
Kensington Fire.....	August, 1791.....	.....
Franklin Fire.....	Jan. 17, 1792.....	Powell St., bet. 5th & 6th.
Washington Fire.....	Jan. 1, 1793.....	Frankford.
Humane Fire.....	March 1, 1794.....	N. side Vine, bet. 2d & 3d.
Washington Fire.....	Jan. 3, 1796.....	W. side 11th, bel. Walnut.
Friendship, N. Liberties.....	Aug. 18, 1796.....	End market, 2d & Coates.
Columbia Fire.....	Sept. 16, 1796.....	Cor. 8th and Cherry.
Hope Fire.....	Nov. 22, 1796.....	S. side Pine, bet. 4th & 5th.
Resolution Fire.....	Jan. 1, 1797.....	.....
Whale Fire.....	Jan. 10, 1798.....	.....
Philadelphia Fire.....	Jan. 15, 1798.....	N. W. cor. 3d & Spruce.
Wecocoe Fire.....	May 1, 1800.....	Cor. Front & Christian.
Good Will Fire.....	March 27, 1802.....	N. W. cor. Juniper & Race.
— afterward Decatur Fire.....	Feb. 15, 1803.....	Frankford.
Philadelphian Fire.....	Dec. 15, 1803.....	No. 17 N. Fourth Street.
Good Intent Hose.....	Merch 8, 1804.....	E. side 4th, bel. Chestnut.
Resolution Hose.....	April 11, 1804.....	W. side 3d, below Market.
Mount Airy Fire.....	Feb. 9, 1804.....	Mount Airy.
Humene Hose.....	April 10, 1805.....	N. side Vine, bet. 2d & 3d.
Perseverance Hose.....	May 27, 1805.....	S. side Vine, bet. 5th & 6th.
Neptune Hose.....	Aug. 6, 1805.....	Fetter Lane, above 3d St.
Hope Hose.....	Aug. 17, 1805.....	N. end market, 2d & Pine.
Columbia Hose.....	May 1, 1806.....	S. side Cherry, above 7th.
Southwark Fire.....	Before Jan. 1808.....	Almond, near Front.
Southwark Hose.....	May 6, 1806.....	N. side Almond, E. Front.
Pennsylvania Fire.....	May 16, 1806.....	Fromberger's Court, bet. 2d and 3d Streets.
United States Hose.....	September, 1807.....	S. E. cor. 6th & Walnut.
Phoenix Fire.....	Before Dec., 1808.....	St. James Street, East 7th.
Star Fire.....	Def. June, 1808.....	.....
Columbia Fire.....	March 6, 1809.....	Germentown.
Protectors of Property.....	Before Dec., 1810.....	Hartung's Alley, East 3d.
Washington Hose.....	Feb. 22, 1811.....	W. side 9th, below Market.
United States Fire.....	Oct. 28, 1811.....	Bridge crossing, Pegg's Run, 2d and Willow.

In 1860 there were in the city twenty-one steam fire-engines, at an average cost of three thousand two hundred and fifty dollars, which, with the hose, the hose-carriages, and other equipments, involved an interest amounting to two hundred and ten thousand five hundred and fifty dollars.

For many years the subject of abolishing the old volunteer fire department, and establishing a paid system, largely occupied the public mind. The volunteer department was a power. It was no child's play to destroy an organization which the habits and needs of years had made a living thing, and which was endeared to the people by acts of the noblest heroism. For many years it had served the community faithfully without reward, and rendered valuable and important service. It had numbered many brave and generous men in its organization, and could boast of many deeds of gallantry, self-sacrifice, and heroism. The old system, however, not only trained hold and expert firemen, but eventually gave rise to evils of the greatest magnitude. The spirit of rivalry not only produced competition in battling with the flames, but led to constant disorders and breaches of the peace.

The advocates of the paid system saw plainly the impossibility of separating the good from the bad men who had attached themselves to the volunteer department. Nothing but the destruction of the good and commendable part would eradicate the evils which all deplored. They conceded the historical facts, of which all were so proud, but at the same time pointed to the disgrace which was inseparably connected with the department. They asserted that a volunteer department and acts of lawlessness were concomitants. It became evident that nothing but the complete destruction of the volunteer system would secure the results desired. The ordinance creating the paid system was passed in 1870. The board of commissioners of the new paid fire department met and organized on Jan. 3, 1871, and the department went into operation March 15th of the same year. The results which have followed the institution of the paid fire department are the best encumbrances which can be paid it. The startling alarm-bell, instead of being heard at almost any hour of the

night, sending forth notes of horror from its brazen throat, is now silent. The institution of the fire-alarm telegraph, which is the great auxiliary of the department, is another great blessing. The alarm comes noiselessly over the wires, telling its tale with unerring accuracy. At the first stroke of the signal-box in the engine-house, the firemen, springing from their places, rush to the horses, and in another moment the harness is on, and the intelligent animals, apparently eager to reach the scene of the fire, stalk unbidden to the apparatus. The match is applied to the engine, and in another instant they are on their way. Nothing is heard but the rumbling of the wheels of the engine and hose-carriages, the quick steps of the horses, and the occasional sharp whistle or the sounding of the gong which are given *en route* to show that in five minutes and a half from the time the signal was received the engine was ready for work. There are no loud words spoken, no hooting or howling, and no street-fights. The same daring, the same heroism which characterized the volunteer firemen, is displayed by their successors. Tremendous streams of water are poured incessantly on the burning building, and as the angry flames burst out, the *fiat* of the firemen goes forth, "Thus far shalt thou go, but no farther." Sinew and muscle will fail, the strength of men will grow to weakness, but the iron muscles and steel arms of the engine are tireless,—no exertion can exhaust them, no labor affect them. As soon as the fire is extinguished the horses, apparatus, and men are returned to their places. Such is the practical working of the Philadelphia Fire Department,—a model in every particular, a source of pride to the city, and a credit and honor to those who compose it.

This department consists of seven fire commissioners, one chief engineer, five assistants, and as many foremen, euginemen, hosemen, hook-and-ladder men, and other persons, divided into companies, as the number of engines and other fire apparatus of the city shall from time to time require.

The fire commissioners must be citizens of Philadelphia, of good character, who shall serve without compensation, and be elected as follows: Three by Select Council and four by Common Council, on the last stated meeting in December. The said commissioners, when elected, shall draw for their respective terms of office, three for the term of two years and four for the term of four years; and every second year thereafter, at their first stated meeting in the month of February, there shall be elected in the same manner three or four persons, as the case may be, by the Select or Common Councils, in which the vacancy may occur, to serve for the term of four years. The minority in each chamber shall at all times be represented by one member in said Board of Fire Commissioners. The said commissioners to hold their offices until their successors are duly elected and qualified.

The salaries of the officers and employés of the fire

department are as follows: Chief engineer, two thousand five hundred dollars per annum; secretary of the fire commissioners and clerk of the chief engineer, twelve hundred dollars per annum; messengers of the fire commissioners, eight hundred dollars per annum; assistant engineers, each, one thousand two hundred dollars per annum; enginemen, each, one thousand dollars per annum; firemen, each, eight hundred dollars per annum; tillermen and drivers, each, seven hundred and fifty dollars per annum; foremen, each, one thousand dollars per annum; and the hose and hook-and-ladder men, each, seven hundred and fifty dollars per annum, payable monthly.

The chief engineer has the sole command at fires over the assistant engineers, officers, and members of the fire department, and all other persons who may be present at fires. He directs all proper measures for the extinguishment of fires, protection of property, and preservation of order. It is his duty to examine into the condition of all the fire apparatus, and houses connected therewith, as often as the fire commissioners or Councils may require; and whenever the engines or other apparatus shall need alterations or repairs, he reports the same to the fire commissioners, who shall cause the same to be made. He transmits to the fire commissioners all returns of officers, members, and companies; keeps fair and exact rolls of the respective companies, specifying the time of admission and discharge, and name, age, occupation, and residence of each member. He, annually, in the month of January, and oftener, if required by the fire commissioners or Councils, reports to them the condition of the houses, fire apparatus, and other property of the department, together with the names of the officers and members of the various companies; the number of fires since last report, the causes thereof, and extent of damage, as near as can be ascertained.

The fire commissioners, chief and assistant engineers, and the foremen of companies are authorized to exercise the powers of police officers in going to, while at, and returning from any fire may occur or alarm be given.

To this department was appropriated, for the year 1882, the sum of \$462,855, and it disbursed \$457,536.49. There was then in use in the department 46,680 feet of gum hose, and 11,950 feet of rubber-lined cotton hose, and 28 steam-engines and 5 truck companies, located as follows:

*Engine Companies.*—No. 1, at Nos. 1837 and 1839 South Street; No. 2, Tenth Street, above Montgomery; No. 3, at No. 117 Queen Street; No. 4, at 116 South Seventeenth Street; No. 5, at the southeast corner of Thirty-seventh and Ludlow Streets; No. 6, Montgomery Street, below Girard Avenue; No. 7, at No. 22 Church Street, Frankford; No. 8, at No. 143 Race Street; No. 9, at Main and Carpenter Streets, Germantown; No. 10, at Nos. 808 and 810 Morris Street; No. 11, at 1035 Lombard Street; No. 12, at Main and Centre Streets, Man-

ayunk; No. 13, at No. 1431 Brown Street; No. 14, at 4612 Frankford Avenue, Frankford; No. 15, at Howard Street and Columbia Avenue; No. 16, at Fifty-first Street and Lancaster Avenue; No. 17, on Race Street, below Broad; No. 18, at 1903 Callowhill Street; No. 19, at No. 20 East Chelton Avenue, Germantown; No. 20, at No. 911 Filbert Street; No. 21, at Nos. 826 and 828 New Market Street; No. 22, on Evelina Street, below Third; No. 23, at No. 1936 Germantown Avenue; No. 24, at northeast corner Twenty-first and Ellsworth Streets; No. 25, at No. 215 Adams Street; No. 26, at Nos. 1011 and 1013 Hamilton Street; No. 27, at No. 2202 Columbia Avenue; No. 28, at Belgrade and Clearfield Streets; No. 29, Lawrence Street below Girard Avenue.

*Hook-and-Ladder Companies.*—A, at No. 2132 Fairmount Avenue; B, at No. 331 North Fourth Street; C, at No. 2003 North Second Street; D, at No. 319 Union Street; E, at southwest corner of Twentieth and Hand Street; F, at Haverford Street and Wyoming Avenue.

On Jan. 1, 1883, the department consisted of 1 chief engineer, 5 assistant engineers, 28 foremen of engine companies, 5 foremen of hook-and-ladder companies, 28 engineers of companies, 28 firemen of companies, 33 drivers of companies, 5 tillermen of hook-and-ladder companies, 216 permanent hosemen, 50 permanent hook-and-ladder men, 8 temporary hosemen in rural districts. These were divided into 33 companies, as follows: 28 steam-engine companies, 5 hook-and-ladder companies, with the addition of hose and hose-carriage at each station, and 6 fuel wagons at various locations. The losses by fire in the city in 1882 were estimated at \$8,235,963.

#### ENGINEERS OF THE PAID FIRE DEPARTMENT.

1871, February 3, William H. Johnson.

1879, February 11, John R. Cantlin.

#### LARGE FIRES.

1799, December 17.—Rickett's Circus and Amphitheatre, southwest corner Sixth and Chestnut Streets.

1813, December 2.—A chocolate manufactory, owned by Charles Miller, and eight houses on Kunkel Street and Brewers' Alley were destroyed and a child burnt to death.

1819, September 8.—Vauxhall Garden, northeast corner Walnut and Broad Streets, set on fire by a mob.

1820, April 2.—Chestnut Street Theatre, north side of Chestnut Street, above Sixth.

1821, May 9.—Old Southwark Theatre, south side of South Street, between Fourth and Fifth.

1822, January 24.—Philadelphia Orphan Asylum, northeast corner of Schuylkill Fifth (Eighteenth) and Cherry Streets. Twenty-three children perished in the flames.

1823, July 16.—The Farmers' Tavern, Third Street, near Callowhill, which extended through to Kunkel Street, with seven houses on Third Street and six on Callowhill.

1824, January 20.—A fire occurred in the Walnut Street prison.

1828, February 11.—The weaver's shop attached to the Prune Street prison.

1831, November 1.—A fire occurred at Arch Street prison.

1835, July 12.—"Red Row," in the neighborhood of Shippen and Eighth Streets, was burned by a mob.

1838, April 1.—Upper Ferry bridge.

May 17.—Pennsylvania Hall, corner of Sixth and Haines Streets.

May 18.—Shelter for Colored Orphans, Thirteenth Street, above Callowhill, burned by a mob.

1839, October 4.—A great fire took place on Chestnut Street wharf. The fire commenced at No. 19 South Wharves, occupied by William G. Stroup and David W. Prescott. It burned eight stores between that number and Chestnut Street, and destroyed on the east side of Water Street Myers' Fulton Hotel, on the corner of Chestnut Street, and the store next door. Eleven stores on the east side of Front Street, extending through to Water Street, from Chestnut Street north, were partially burned. One occupied by Cheyney, Hickman & Co., and Wain & Leaming, which was fireproof, was uninjured. Three houses on the east side of Front Street, below Chestnut, were burned and others were injured. The houses on the south side of Chestnut Street, below Water, including the Steamboat House, Napoleon House, and Baltimore steamboat office, were destroyed, and one or two houses on Water Street, near the corner. Altogether, twenty-three houses were totally destroyed and fifteen or twenty others badly injured. The loss was estimated at \$350,000. William P. Moreland and Thomas Barber, firemen, were killed by falling walls, and four or eight others were injured.

1842, August 1.—Abolition riots; African Presbyterian Church, St. Mary Street, and Smith's Hall, Lombard Street, burned.

August 26.—Reading Railroad bridge and the old bridge at the Falls of Schuylkill.

1844, May 8.—Know-Nothing riots; St. Michael's and St. Augustine's Catholic Churches, and Female Seminary, and many houses.

1845, June 11.—Fire at the Academy of Fine Arts, which destroyed many valuable paintings and statues.

1849, March 27.—The "City Carpenter-Shop," located on the south side of Lombard Street, standing back from the line of the street, about midway between Tenth and Eleventh Streets.

1850, July 9.—A great fire commenced on Delaware Avenue, near Vine Street, and extended south toward Race Street and west toward Second Street, and destroyed three hundred and sixty-seven houses. The firemen were so prostrated by the heat and exertion that Mayor Jones telegraphed to New York for several hundred of their firemen to come on to relieve the firemen of this city.

December 30.—Fire at the *Ledger* building, corner of Third and Chestnut Streets.

1851, March 18.—Assembly building, corner of Tenth and Chestnut Streets.

November 12.—Fire at Bruner's cotton-factory, corner of Nixon and Hamilton Streets. Three persons killed and several severely injured.

December 26.—Hart's building and the Shakespeare building, at Sixth and Chestnut Streets.

December 30.—Barnum's Museum, corner of Seventh and Chestnut Streets.

1853, Dec. 9.—Sanford's Opera-House, west side of Twelfth Street, below Chestnut.

1854, July 5.—The National Theatre and Chinese Museum and other buildings, between Chestnut and George [now Sansom] and Ninth Streets. That portion of the block which was entirely swept by the fire was that on which the museum and the National Theatre stood, the store at the corner of Ninth and Chestnut Streets, and the brick buildings immediately east of the theatre and museum on Chestnut and Sansom Streets, the sites of which are now occupied by John Wanamaker & Co.'s clothing store. The houses now standing on the north side of Sansom Street, between Eighth Street and the Continental Hotel building, were damaged by fire, and also the upper part of a store on Eighth Street, between Chestnut and Sansom Streets, and some of the houses on Chestnut Street, between Eighth and Ninth, on the south side, in the roofs.

1856, April 30.—A great fire took place at the corner of Sixth and Market Streets.

1859, Jan. 4.—Factory, Lawrence, above Brown, was burned; loss, about \$35,000. The steam fire-engines which were introduced Jan. 20, 1858, did effective service in saving surrounding property.

March 3.—Great fire on Second, below Dock; seventeen families burned out.

August 20.—Great fire at Sloat's planing-mill and sewing-machine factory, Eighteenth Ward.

September 8.—Good Intent mills, in Twenty-fourth Ward, destroyed.

1860, Jan. 17.—Fire at fancy store of T. H. Peters & Co., No. 716 Chestnut Street; loss, \$60,000.

February 11.—Destructive fire at Shackamaxon Street wharf.

April 15.—Fire on Delaware Avenue, below Arch.

May 7.—Tattersall's stables, Filbert, below Thirteenth Street, burned, with twenty-eight horses.

May 24.—Richmond and Schuylkill River Railway depot, Girard Avenue and Twenty-fifth Street.

June 23.—Holy Trinity Catholic Church, Sixth and Spruce Streets.  
 July 13.—Kimball & Gorton's car-factory, in Fifteenth Ward.  
 July 22.—Yard, Gilmore & Co.'s store, Nos. 40 and 42 North Third Street; loss, \$50,000.

October 19.—Franklin building, Sixth, below Arch Street.  
 1861, January 7.—Maule & Brothers' lumber-yard, South and Twenty-third Streets.

February 16.—Eastern Penitentiary injured by fire.

September 14.—Fire in dressing-room of Continental Theatre, Walnut, above Eighth Street. Fourteen ballet-girls burned, nine of whom died.

October 30.—Cotton- and woolen-mills, Washington and Twelfth Streets; loss, \$100,000.

November 26.—St. Paul's Catholic Cathedral, Christian Street, below Tenth, destroyed by fire accidentally.

1862, February 18.—Work-shops at Frankford arsenal.

October 18.—Destructive fire at Ninth and Market Streets.

October 25.—Destructive fire at Eleventh and Walnut Streets.

December 9.—Destructive fire, Ninth above Poplar.

1863, May 2.—Car-factory at Nineteenth and Market Streets; loss, \$100,000.

September 13.—Destructive fire at the navy-yard.

December 18.—Petroleum store-house, Delaware Avenue, below Almond Street.

December 23.—West end of Gray's Ferry bridge.

1864, February 15.—Destructive fire, Second above Chestnut Street.

February 18.—Destructive fire Front and Lombard Streets.

March 27.—Destructive fire Ninth and Wallace Streets.

April 20.—Grant's candle-factory, in Fifteenth Ward; loss, \$75,000.

May 19.—Coal-oil refinery, Twenty-third and Arch Streets.

May 24.—Destructive fire Twelfth and Willow Streets.

July 20.—Nixon's paper-mill, Manayunk; loss, \$200,000.

July 22.—Simons' wagon-works, at Second and Huntingdon Streets.

November 20.—Destructive fire, Sixth above Market Street.

1865, February 8.—Disastrous conflagration at Ninth Street and Washington Avenue. Originated in coal-oil establishment. Fifty dwellings were burned, and several persons perished in the flames. The streets were filled with snow, and banked up the burning coal-oil, forming a sea of fire.

June 27.—Joseph B. Bussler & Co., fire-works store, Nos. 108, 110 South Delaware Avenue; loss, \$100,000.

June 28.—C. J. Fell & Co., spice establishment, No. 120 South Front Street; loss, \$70,000.

August 12.—St. George's Methodist Episcopal Church, Fourth, below New Street, partially destroyed by fire.

October 3.—French, Richards & Co., drug establishment, Tenth and Market Streets; loss, near \$300,000.

October 8.—Coal-oil sheds, A. R. McHenry & Co., Dickinson Street wharf; loss, \$100,000.

December 2.—Landreth Public School partially destroyed by fire.

1866, January 2.—Building 607 Chestnut Street; loss, \$150,000.

January 4.—Coal-sheds, Point Breeze gas-works burned; loss, \$50,000.

January 23.—E. & W. C. Biddle's hardware-store, No. 131 Market Street; loss, \$150,000.

January 30.—Delaware Avenue below Vine Street; loss, \$100,000.

February 26.—Great fire, extending from George H. Roberts' hardware-store, Nos. 235 and 237 North Third Street; James, Kent & Santee, wholesale dry-goods house, 237 and 239; Smith & Shoemaker's wholesale drug-house, and others; loss, \$800,000. One man killed and nine wounded by the fall of wall of house No. 235 upon house No. 233.

April 20.—Flax- and bemp-factory of Peter Watson, Tenth, above Columbia Avenue; loss, \$100,000.

June 9.—Dearie's mill, Callowhill Street, opposite Twenty-fifth; loss, \$200,000.

July 5.—Baker & McFadden's planing-mill, on Hillsdale Street, in Sixth Ward, and roofs of five dwellings; loss, \$100,000.

July 7.—Fidler, Weaver & Co.'s rope-factory, Germantown road, near Tenth Street; loss, \$30,000.

July 12.—Tacony Print-Works, at Frankford, belonging to A. S. Lippincott; loss, \$1,000,000.

July 27.—Biddle & Co.'s hardware-store, No. 509 Commerce Street; loss, \$150,000.

August 4.—Moyamensing Hall, Christian Street, above Ninth; set on fire by persons opposed to the use of the hall as a cholera hospital, and totally destroyed.

September 7.—Upper story of Union League House burned; loss, \$30,000.

December 14.—James Armstrong's mill, at Germantown; loss, \$120,000.

December 16.—The "New Ironsides," partially destroyed by fire at League Island.

December 23.—Gustav Bergner's malt-house, Thompson and Thirty-first Streets; loss, \$100,000.

1867, June 6.—Explosion at steam saw-mill of Geary & Ward, Sansom Street, between Tenth and Eleventh. Twenty-two persons killed, some being burned alive, and seven injured. A relief fund of \$15,000 was raised for the families of the sufferers.

June 19.—American (formerly Continental) Theatre, north side of Walnut, between Eighth and Ninth, destroyed by fire. Ten persons were killed by the falling of the front wall.

1868, August 4.—Cotton- and woolen-mill of John Brown & Sons, Moyamensing Avenue and Moore Street, burned; loss, \$105,000.

August 11.—Fire at Front and New Streets; building occupied by Collins & Bobb, provision and commission merchants; Bartlett & Co., blacking manufacturers; Benjamin Bullock & Sons, storage; loss, \$70,000.

November 25.—Atlantic Garden (formerly called City Museum), Callowhill Street, between Fourth and Fifth Streets.

December 3.—Nos. 619-623 Market Street, T. Morris Perot & Co., Sellers Brothers, W. W. Paul & Co, Graeff & Jordan, and Kilburn, Gates & Co.; loss, \$150,000.

December 4.—Ferry-boat "Brooklyn," belonging to Gloucester Ferry Company, destroyed by fire; loss, \$30,000.

December 30.—Depot of Second and Third Streets Railroad destroyed by fire; twenty cars burned.

1869, January 12.—Store at north west corner of Chestnut and Hudson Streets damaged by fire to the extent of \$25,000.

January 14.—Jewelry establishment of J. E. Caldwell & Co., Chestnut above Ninth Street; also Howell's paper store, adjoining; Orne's carpet store badly damaged. Two clerks in Caldwell's store were burned to death.

April 28.—Old depot of the Germantown and Norristown Railroad Company, Ninth and Green Streets, burned.

April 29.—Skating rink at Twenty-first and Race Streets burned.

May 17.—John Dobson's blanket factory, Falls of Schuylkill.

May 17.—Pennypacker & Sibley's panel factory, Willow Street, above Eleventh.

June 23.—The cloth store of Messrs. Leonard Baker & Co., No. 210 Chestnut Street, damaged by fire; loss, about \$50,000.

June 25.—Destructive fire at Sixth and Columbia Avenue; loss, \$250,000.

August 4.—Destruction of Col. W. C. Patterson's bonded warehouse, Front and Lombard Streets, with several thousand barrels of whiskey; loss, over \$2,000,000.

August 15.—Boston Fish Company's building at Columbia Avenue and Fifth Street; loss, over \$50,000.

August 19.—Commission house of J. H. & W. Creighton, No. 217 Chestnut Street; loss, over \$50,000.

August 24.—Large factory at Ninth and Wallace; loss, nearly \$100,000.

August 31.—Store of James S. Earle & Sons, Chestnut Street, below Ninth; loss, over \$100,000.

September 12.—Spice-mills, No. 137 North Front Street; loss, \$40,000.

September 16.—The barrel manufactory of W. B. Thomas, at Twelfth and Buttonwood Streets; loss, about \$50,000.

December 7.—Partial destruction by fire of new Commercial Exchange building, at Second Street, above Walnut; damage, about \$100,000.

1870, January 4.—John Maxson & Son's cotton-mill, at Manayunk; loss, \$50,000.

February 17.—Cotton-mill of J. P. Bruner & Sons, Twenty-fourth and Hamilton Streets, partially destroyed by fire; loss, about \$200,000.

March 5.—Building, No. 439 Chestnut Street, partially burned.

March 8.—Harmonia Hall (German theatre), No. 717 Coates Street, near Franklin.

June 4.—Nos. 15 and 17 South Third Street; loss, \$80,000.

June 14.—Gaul's brewery, New Market and Callowhill Streets.

June 24.—Sash- and door-factory of Kimby & Madeira burned down and adjoining property damaged.

June 25.—Bussler & Co.'s store, No. 107 South Water Street, during which fireworks exploded, killing Charles Ross, a fireman, and wounding a number of others.

July 10.—Flour-mill of Rowland & Irvein, on Broad, below Vine.

July 26.—Sugar refinery of Newhall, Borie & Co.; loss, \$1,000,000. A number of firemen were injured, one of whom, Matthias Furey, died July 27th.

July 26.—John Dearie's cotton-mill, Linn Street; loss, \$60,000.  
 August 8.—Large mill of Theodore Vetterlein, Twenty-second and Wood Streets.  
 August 14, Bergdoll and Psotta's brewery.  
 August 27.—The planing-mill of Jesse C. & C. E. Coulson, Twenty-fourth and Brown Streets.  
 September 6.—Smith & Harrie's saw-mill, Coates and Beach Streets, and a large quantity of lumber.  
 September 8.—Large building at No. 235 Race Street.  
 September 10.—The carpet manufactory of Bromley & Brothers, Jasper and York Streets; loss, \$75,000.  
 September 17.—The planing-mill of N. F. Wood, at Spruce Street wharf, Schuylkill.  
 September 27.—Store at No. 219 North Third Street.  
 October 12.—The planing-mill of D. Maguire, Ridge road.  
 October 18.—Cotton and woolen-mill, Twenty-first Street and Pennsylvania Avenue, partially destroyed by fire.  
 October 20.—The chair-factory of George Fenner, No. 1730 North Fifth Street.  
 November 22.—Steamboat "City of Bridgeton" burned while lying above Pier 7, North Wharves, on the Delaware; loss, about \$70,000.  
 1871, February 10.—Charles Shaw's woolen-mill, on Duy's Lane, Germantown.  
 April 19.—S. J. Mintz's fur-store, No. 408 Arch Street; loss, \$10,000.  
 May 27.—Keystone Marble-Works of Jacoby & Prince, Market Street, near Twentieth.  
 May 28.—Woolen-mill, No. 3021 Chestnut Street, damaged by fire.  
 May 28.—Warehouse of Malone & Co., 1126 and 1128 Washington Avenue.  
 June 5.—Planing- and saw-mill of Stanley & Neber, Marshall Street, below Girard Avenue, and about forty other buildings were destroyed or damaged by fire; loss, about \$150,000.  
 June 6.—Stores Nos. 527 and 529 Commerce Street.  
 June 6.—Shoddy-mill, foundry, etc., at Thirtieth and Chestnut Streets, damaged by fire; loss, about \$20,000.  
 June 23.—Gillingham & Garrison's saw-mill, Richmond and Norris Streets; loss, \$40,000.  
 July 11.—Pattern-shop at I. P. Morris & Co.'s Port Richmond iron-works struck by lightning and destroyed by fire; loss, \$55,000.  
 August 10.—The restor-house at J. S. Lovering & Co.'s sugar-refinery, Lagrange Place; loss, \$25,000.  
 August 29.—Building No. 3029 Chestnut Street partially destroyed; loss, \$25,000.  
 September 23.—Planing-mill of W. P. Henderson, Coates and Twenty-first Streets; loss, \$15,000.  
 September 29.—Jessup & Moore's paper warehouse, Nos. 524 and 526 North Street and 27 North Sixth Street; loss, \$200,000.  
 September 29.—Jacob Schonning's morocco-manufactory, No. 1545 Randolph Street; loss, \$90,000.  
 October 4.—Victoria Oil-Works, on Moyamensing Avenue; loss, \$50,000.  
 October 11.—Meeting of citizens at the mayor's office to raise funds for the relief of the sufferers by the fire at Chicago; \$104,000 subscribed, which was afterward increased to nearly half a million dollars. Among the principal contributions were the following:

Adams, Kelly & Wilhere, Lord & Connor, and John Wilde & Bro., cotton and woolen yarn-spinners; one girl injured by jumping from the upper windows; one died from burns; sixteen persons injured; loss, \$65,000.
- December 12.—Goldsmith's Hall, Library Street, east of Fifth, totally destroyed by fire. Occupants, E. G. Haehnlen & Co., dealers in chamouis skins; E. C. Markley & Sons, printers; A. C. Farley & Co., manufacturing stationers; Lehman & Bolton, lithographers; custom-house and note-brokers, lawyers, etc.; loss, \$350,000.
- December 28.—Buildings and works of Schnykill Paraffine Oil Company, corner Maiden and Gray's Ferry roads, operated by Samuel Bryan; loss, \$30,000.
- 1883, January 3.—Dry-goods store of Hood, Bonbright & Co., on the Filbert Street front, west of Eighth Street; loss, \$72,000.
- January 12.—Canton Cotton- and Woolen-Mills of Fitzpatrick & Holt, Leverington Avenue, Manayunk; loss, \$20,000.
- January 30.—Fire at 250-256 North Broad Street, occupied by Levi Knowles & Co., J. Allen & Co., E. H. Graham & Co., flour and grain merchants; Edmund Hill & Co., machinists; and E. W. Siegman & Co., dealers in agricultural implements. Loss, \$100,000.
- February 5.—Furniture manufactory of Julian Kraan, No. 942 North Ninth Street; loss, \$20,000.
- March 8.—Loiseau Fuel Company's works, corner Linden and Bath Streets, Twenty-fifth Ward; loss, \$50,000.
- March 19.—Cotton- and woolen-mill of C. J. Milne; loss, \$50,000.
- April 14.—C. A. Blessing's plumbers' metal-works, Montgomery, below Sixth Street; loss, \$70,000.
- April 22.—Woolen-mill of Daniel Jones & Son, Fifty-fifth Street and Hunter's Lane; loss, \$30,000.
- April 26.—Fire at the Arch Street Opera-House, by which the interior was burned out; loss, \$18,000.
- May 3.—Fire at southeast corner Germantown Avenue and Master Street, occupied by D. F. Rawle, flour-dealer; John Richardson, furniture manufacturer; Montague & White, hosiery; John Patterson, hosiery; Walton Ritter, cotton goods. Loss, \$23,000.
- May 13.—Fire at 1512-1516 Spring Garden Street, occupied by North American Smelting-Works, Pennsylvania Brass-Works, D. W. Bing, foundry and machine-shops; D. B. Birch, miller; — Fayer, cigar-moulder; and James Kerr, manufacturer; loss, \$35,000.
- May 22.—Saw- and planing-mill and steam packing-box factory, Marshall Street, above Girard Avenue, occupied by W. H. Howard, Willware & Yiest, and William Stone; loss, \$115,000.
- June 5.—Furniture manufacturing establishment of John Ehert, Edward Street, west of Hancock; also occupied by D. R. Dover, bobbin-turner; and William W. Altemus & Son, manufacturers of knitting-machines; adjoining properties damaged; loss, \$85,000.
- August 7.—Stable and ice-houses of Knickerbocker Ice Company, Willow Street wharf; thirty horses and four mules burned to death; loss, \$35,000; Reading freight depot, adjoining, damaged.
- August 11.—Picker-room of woolen-mill of Robert Wilde & Son, Leverington Avenue, near Hamilton Street, Manayunk; loss, \$15,000.
- August 29.—Woolen-mill, northwest corner Cumberland and Third Streets, occupied by Gilmour & Morris, finishers; Lee & Bowers, woolens; Robert Laycock, woolens; Garner & Co., worsted; Joseph P. Murphy, shawls, etc.; loss, \$50,000.
- September 7.—Stables of Chestnut and Walnut Streets Passenger Railway Company, extending on Sansom Street from Forty-first to Forty-second; loss, \$50,000.
- September 7.—Ice-house and stable and plaster-mill of T. B. Wright, Sutherland Avenue, between Catharine and Christian Streets; loss, \$50,000.
- September 19.—Saw- and planing-mill, Norris and Richmond Streets, occupied by Jesse W. Taylor & Sons and Henry Bradshaw, hardwood goods, burned, and adjoining property injured; loss, \$30,000.
- September 19.—Fire broke out in the lumber-yard of James Gill, 1168 North Third Street, which spread and destroyed nearly the whole block of buildings bounded by Third Street, Canal Street, Charlotte Street, and Girard Avenue, occupied by Gill's lumber-yard, Eagle Iron-Works of Hoff & Fontaine, and from fifteen to twenty dwelling-houses, shops, and other buildings; loss, estimated at \$75,000.
- September 29.—Saw- and planing-mill, Willow, between Eleventh and Twelfth Streets, property of the assignees of William B. Thomas, and occupied by J. J. Crout & Son, sash, blind, and door manufacturers, and Henry A. Hunsicker, planing-mill, burned; loss, \$20,000.
- October 28.—Mausion of E. N. Benson, Chestnut Hill; loss, \$80,000.
- November 17.—Sheds of the American Line Steamship Company, at Christian Street wharf. Cotton and other merchandise intended for shipment burned; also the tugboat "Pallas," some hoisting-floats, lighters, and other vessels; loss, estimated at \$112,000.
- November 17.—Handle-factory of Henry Distou & Sons' saw-works, Tacony; loss, \$50,000.
- November 17.—F. G. Luersson's dwelling and cigar-store, 2501 Germantown Avenue; Charles Mallon, an inmate, burned to death.
- November 19.—Stables of Christopher Hare, Washington Avenue, below Seventh Street; twenty-six horses and two mules burned to death.
- 1884, January 26.—Perseverance wood-works of Mahlon Fulton, Ninth Street, above Oxford; loss, \$75,000.
- February 16.—Flour warehouse and depot of E. Lathbury & Co., Vine Street, above Broad; loss, \$60,000. The western wall fell February 17th, crushing in adjacent buildings on Vine Street and Leeds Avenue. One citizen and one fireman killed.

February 28.—Powers & Waightman, manufacturers of chemicals and drugs; nineteen out of twenty-six buildings, bounded by Knox, Brown, Kessler, and Parrish Streets, were destroyed; loss, \$1,500,000.

March 6.—Oil-cloth works of George W. Blaybon & Co., Nicestown (coating, grinding, and printing buildings); loss, \$150,000.

March 15.—Spices manufactory of A. Colburn & Co., Broad Street, above Arch; loss, \$75,000.

## CHAPTER XLVII.

### EDUCATION.

**The Public Schools of Philadelphia.**—The same earnest solicitude for public education which made itself manifest in the settlement of the New England colonies to an unusual degree does not run through the early history of Pennsylvania; yet, outside of the Puritan settlements, there was no other colony which paid so much attention as Pennsylvania to the mental training of its youth. During the seventeenth century, the general character of the colony, as regards the intelligence of its people, stood deservedly high. The school-house, with its inevitable concomitant, the printing-press, never at any time ceased to exert its wholesome influence in training up a population which, as regards sobriety, thrift, and all the substantial qualities that flow from instruction, has never been surpassed by any other great community.

William Penn, who was one of the most accomplished scholars of his time, never wearied in pointing out to the colony the advantages of public education. The constitution which he proposed for the infant commonwealth contains the direction that virtue and wisdom must be propagated by educating the youth, and that after-ages would have the benefit of the care and prudence of the founders in this respect. It was one of the provisions of the "great law of April 25, 1683, that "schools should be established for the education of the young," and the authorities of the new government did not delay in carrying it into practical effect. On the 26th of December, 1683, at a meeting of the Provincial Council, held in this city, the subject of providing for the education of the children of the colony came up for discussion, and it was agreed that there existed a great necessity for a schoolmaster. Accordingly an agreement was entered into with Enoch Flower, who promised that, in conducting such an establishment as was needed, he would charge only four shillings for teaching English each quarter, six shillings for reading and writing, and eight shillings for reading, writing, and casting accounts. A scholar who boarded with him would receive his tuition, as well as lodging, meals, and washing, for ten pounds a year. These charges seem to have been fixed by Flower and the Council with the idea of making education as cheap and as popular as possible. This was the first regular English school in

Pennsylvania. There had been schools during the ascendancy of the Swedes and the Dutch. The Swedes are known to have maintained schools at Chester and Tinicum as early as 1642, and the Dutch records show that in 1657 Evert Pieterson came over from Holland, and in the capacity of "schoolmaster, comforter of the sick, and setter of Psalms," taught twenty-five pupils. These schools were of the most primitive character, but they served the purpose of the simple-minded little communities of herdsmen and farmers, who thought more of the wagon than they did of books.

In the year 1689 Penn's ideas about a public school, as he had communicated them to Thomas Lloyd, were put into practice by engaging George Keith at a salary of fifty pounds a year, the use of a house, and the profits of the school for one year, to open a grammar school. Keith accepted the offer, and the institution which he founded was known for many years afterward as a well-managed school. Here the children of the poor were instructed free of charge, the school-house being located on Fourth Street, below Chestnut, and being conducted under a charter which had been procured by Edward Shippen, David Lloyd, John Jones, Samuel Carpenter, Anthony Morris, James Fox, William Southby, and others. Keith was the Scotch Quaker who afterward embroiled the province in controversy by his refusal to subscribe to the doctrines of the Friends in all their original orthodoxy, and who subsequently became a minister of the Church of England. He was assisted by Thomas Makin, a Latin scholar, who is known to antiquarians by a poem in that language, descriptive of Pennsylvania in 1729. After the new school had been in existence for about a year, Makin became its principal, and remained such for many years afterward. The Friends held this school in high estimation, and the character of some of the men who officiated in it as instructors—Robert Proud, D. J. Dove, William Wanney, Charles Thomson, and Jeremiah Todd—shows that it was managed with no mean order of ability. It is curious to note that this institution was not at first regarded with entire favor by some of the leading men of the colony, and that Deputy Governor Thomas Lloyd, wishing his daughters to "finish their education," sent them to Lewiston, Delaware.

During the sixty years following the establishment of Keith's school there was no attempt made to start schools that would be free to all and not marked by the distinction between rich and poor children. This democratic principle was not clearly formulated and advanced until it was taken up by Benjamin Franklin in 1749, when he distributed gratis a pamphlet which he had written on the question, and which soon became productive of important results in the establishment of the future University of Pennsylvania. Prior to that time most of the schools in the province were conducted either under strictly private auspices or under the patronage of religious denom-

inations. Thus a very distinguished seminary of learning in its time, humble though it was, was the "Log College," which the Rev. William Tennent, an Irish clergyman of the Presbyterian Church, had established about the year 1726 in Bucks County, near the forks of the Neshaminy Creek, and in which such eminent Presbyterians of the colony in the eighteenth century as Beatty, Robinson, Rowland, Campbell, Lawrence, and Blair obtained their education. Mr. Tennent's school was much encouraged by Thomas Lyon, who not only granted it land, but on some occasions would send its founder provisions in his lonely retreat. A little later on some notable Philadelphians, such as George Read, Charles Thomson, and Thomas McKean, received their first instruction from Rev. Francis Allison, who, in 1741, opened a school at New London, in Chester County, where he taught the languages, and who subsequently removed to Thunder Hill, in Maryland. During the early part of the seventeenth century the Swedes had schools of their own, in which they attempted to resist the educational usages of the English, and to keep up the study of the Swedish language. The Lutherans also paid much attention to the education of their youth, and established German schools before the year 1750.

The agitation of the subject of starting the Philadelphia Academy and charity schools in 1749-50 (see University of Pennsylvania) had a beneficial effect upon the community, not alone as regards the founding of this particular institution, but in the general interest which was stimulated in educational matters. The number of private schools began to increase, and in 1751 a night school was opened by William Milne, who taught reading, writing, arithmetic, spelling, navigation, mensuration, and geometry. In 1756, the Baptist Association, which was composed of ministers of that denomination, took measures toward raising money for a Latin grammar school, which soon afterward was placed under the charge of Isaac Eaton, and which was supported by the churches. Three years later there was a meeting held at Germantown, at which it was resolved to erect a commodious building for an "English and High Dutch or German school." In 1761 it was opened under the name of the Germantown Union School-House, with sixty-one English and seventy German pupils, who studied such branches as Greek, Latin, and mathematics. It was erected on Bensell's Lane, which afterward came to be known as School-House Lane. Under the title of the Germantown Academy it had a long and honorable career. About the same time there also existed a Moravian school, and in 1763 Episcopalian scholars were instructed under the auspices of the authorities of Christ Church. The progress of the population in the gentler and refined arts of life is attested by the existence of a "ladies' boarding-school" in 1767. That stenography was practiced to some degree is evident from an announcement of "a report in short hand of the dis-

course of a female Friend and a prayer," by William Darrach, a schoolmaster.

The Revolutionary war left the people but little opportunity or inclination to consider educational interests. Some of the pedagogues went into the American army, and many of the schools were closed up, particularly during the British occupation of the city. The Germantown Academy, for instance, remained unopened during the greater part of the six years after 1778. When peace was declared there was a revival of interest in school affairs. One of the first acts of the Legislature was to make grants of land to the Germantown Academy, and teachers soon began to be numerous. At this time there were at least one hundred persons, the majority of whom were women, that gained their living in the various schools of the city, and fifteen years later the number had doubled. The books that were commonly used during this period were Bennet's Primer, Dilworth's Speller, Rose's Assistant (arithmetic), Fuller's Catechism, and Æsop's Fables. It was not difficult, however, for persons of moderate means to obtain an education for their children in the classics and the higher branches of learning. The Friends' Academy, as well as the Academy which was united with the College of Philadelphia, gave the city a large reputation among the colonies as a seat of learning, and supplied an excellent order of instruction. Just before the Revolution there had been an attempt made to found an institution designed more particularly for Germans who wished to obtain some knowledge of the higher sciences, English law, medicine, and theology. It was under the control of the Society for the Promotion of Christianity and all Useful Knowledge among the Germans in America, which was composed of twenty-four members, who had each contributed ten pounds. The Rev. H. M. Muhlenberg was the chief director of the enterprise, but, like many other undertakings of a similar character, it was abandoned during the Revolutionary struggle. When a school languished, or was in need of funds, it was not then uncommon to raise money by a lottery. Thus, in 1769, the projectors of the Germantown Academy never thought of entertaining scruples about starting a lottery by which they could secure twelve hundred pounds.

Nor was the education of the very humblest classes of the city's population entirely neglected during the last century. The Society of Friends, whose philanthropy was always practiced so quietly, and yet so effectively, opened, in 1770, a free school for the blacks, and a bequest of the Rev. Thomas Bray, an Episcopalian clergyman, who had come over to the colony before the close of the seventeenth century, and who, in his will, had made provisions for missionary work, was diverted in 1774 to the purpose of educating colored youths. Before the year 1790 the Pennsylvania Abolition Society had started a similar school. It was about this time that Sunday-schools

began to be popular. They were not exactly what we of the present day understand by that term. Their essential object was not, as it now is, religious instruction. The members of the society for the support of the schools opened them on Sunday, because on that day many young persons had better opportunities than at any other time to learn how to read, write, and cipher. Three of these schools were kept in operation, and it is estimated that they had an average attendance of about two hundred and fifty pupils.

One of the most fashionable institutions of these days was Poor's Academy for Young Ladies, which was started on Cherry Street, about 1787, by John Poor. It was incorporated in 1792, and for some time, under the presidency of the Rev. Samuel Magaw, its reputation stood deservedly high. Its curriculum included reading, writing, arithmetic, grammar, geography, with the use of the maps and globes, and vocal music. As many as one hundred and fifty pupils a year attended the academy, and for a young lady to be a graduate from it was considered as an evidence that she possessed much more than the ordinary accomplishments. The annual commencement days in the churches, and the street parades, were occasions of much interest in the town. The vocal studies of the fair pupils were in particular noteworthy. Pianos were then beginning to be introduced, and were superseding the spinet, the harpsichord, and the guitar. The study of the modern languages seems to have been almost entirely a matter of individual engagement with private tutors. Just after the Revolution teachers of French, Spanish, and Italian, who were not then in the habit of dubbing themselves "professors," were frequently to be met with, and owing to the intimate relation which existed between this country and France particular stress was laid upon the value of a knowledge of the French tongue.

The schools were generally conducted with simplicity and severity. The closest application was required of the pupils. Very little that was only ornamental was permitted in their management. Until 1795 such titles as "seminaries," "institutes," and "lyceums" were hardly known. The rod and the strap were applied regularly to offenders and delinquents of both sexes, and often in the presence of both. Indeed, with the exception of the young ladies at the academy and one or two other schools of that kind, the boys and girls were mostly taught together in the same classes. The schoolmasters administered the punishment of flogging with the greatest apparent delight in the exercise. This was accounted for by reference to the fact that many of them were Englishmen or Irishmen, who had contracted these rigorous notions of discipline in their home-training. "They conceived, and conceived truly," says Watson, in his "Annals," "that their business was to make their scholars good writers, good readers, good arithmeticians, and intelli-

gent grammarians;" and then they justly inferred that they were qualified by their own separate exertions to improve themselves at home, if they would, "in all manner of intellectual attainments, such as history, philosophy, belles-lettres," etc. If these pedagogues, who were generally quiet, unassuming men, managed (by teaching their scholars at ten shillings a quarter) to acquire a home in the course of their lifetime they were content. They were slow to welcome innovations, but applied themselves to their duties with a zeal which was as unostentatious as it was intense in its single-minded devotion. Nor were the school-houses in which they held forth elaborate edifices. Little of that busy ingenuity with which the educators of to-day endeavor to make school life comfortable and attractive was then bestowed on the class-room. In 1770 there was a private academy at the upper end of the city, near the river front, and not far above what is now Vine Street. It was a long stone building, three stories high on Water Street and two stories on Front Street, and was thought to be very attractive on account of its beautiful situation.

A fair picture of the school life of the time is given by Watson in his description of the old "Friends' Academy," on Fourth Street, below Chestnut. "The principal was of middle size, round, and strongly built, habited as a clergyman, in parson's gray suit, cocked hat, and full-bottomed powdered wig." There were four different masters. "The west room down-stairs was occupied by Robert Proud, Latin master; the one above him by William Waring, teacher of astronomy and mathematics; the east room, up-stairs, by Jeremiah Paul; and the one below, last, but not least in our remembrance, by J. Todd, severe as he was. The State-House clock being at the time visible from the school pavement, gave to the eye full notice when to break off marble and plug-top hastily, collect the 'stakes' and huddle in pell-mell to the school-room, where, until the arrival of the 'master of scholars,' John, they were busily employed every one in finding his place under the control of a short Irishman usher, named Jimmy McCue." Forty years ago this writer looked back upon those as halcyon times, and his own as somewhat degenerate. Education seemed to him then to be more perplexing, wearisome, and annoying than it was in the time of his early recollection, and the teachers, too, much affected in their imitations of colleges, and in their desire to teach the ornamental branches of learning. And now in turn we have the same complaints of our schools, in 1884, with many an endearing allusion to the simplicity of the schools of forty years ago.

It was not until the beginning of the present century that the idea of educating children generally at the expense of the State or the taxpayers began to find a lodgment in the public mind. In January, 1792, the society which had carried on the three Sunday-schools had asked the Legislature to make effective that part of the Constitution of 1790 which

enjoined the Legislature to provide for schools throughout the State in such a manner that the poor might be taught gratis. Plans for setting up a school in each county that had three representatives were formulated by a legislative committee, but nothing came of them for three years, when Governor Mifflin impressed the Houses with the importance of the subject. Finally, in 1796, the Assembly took up a bill which had for its object the gratuitous tuition of the poor, one-fifth of the expense to be borne by the State, and four-fifths by county taxes. It was met with remonstrances from many quarters, principally from the Friends and the Lutherans, who argued that they supported their own schools, that they never received any assistance from the State, and that a general school tax would not be consistent with equal justice. The bill managed to pass the House, but its progress was stopped in the more conservative Senate. Governor Mifflin repeatedly called the attention of the Assembly to the need of such a law, and at nearly every session up to the year 1802 the feasibility of public schools was discussed by the representatives of the people. In that year, however, was planted the first germ of our public-school system in an act which applied only to the city and county of Philadelphia, and by the terms of which the children of persons who were too poor to pay for their education were provided for and distributed among the private schools, and the cost of their tuition was paid out of the county treasury. This was not done without much opposition from the conservative element of the city, which could not relish an innovation, and especially one which, as they considered it, made a deep and unjust inroad upon their pockets for the sake of people in whom they felt no interest.

Far from being animated by this spirit was a little gathering of young men, who in the winter of 1799 were in the habit of talking over the need of popular education, and who, although they were only apprentices, clerks, and newly-started business men, were enterprising enough to form an association, called "The Philadelphia Society for the Free Instruction of Indigent Boys." They opened a night-school, did much good, and soon became of sufficient importance to ask for an act of incorporation. Just at this time a wealthy German citizen, Christopher Ludwick, who had meditated the establishment of a charity school, died, leaving eight thousand dollars to the association which should be first incorporated for the purpose of teaching gratis poor children in Philadelphia, without any regard to the nativity or religion of their parents or their friends. The trustees of the University of Pennsylvania were also anxious to obtain this handsome fund, and they and the young men of the new society struggled earnestly for priority in securing a charter. Governor McKean, in order that no favors might be shown, delivered to the agents of the rivals at the same moment their articles of incorporation. Before these documents became legal it

was necessary to have them recorded in the rolls office at Lancaster. The bearers of the papers sat out from this city in a hot race to reach that town first. The messenger for the University, who was on horseback, and Temple Bennett Eves, for the society, who was drawn in a sulky, drove their animals furiously; but Eves soon distanced his competitor, and arrived in Lancaster, sixty-six miles distant, in seven hours. He succeeded in completing the incorporation of the society before the University trustees could do so for themselves, and thus ultimately established its claim to Ludwick's legacy, a fund which proved to be of much benefit to the poor children of the city. The Ludwick School, conducted by this society, was first opened in a room of the Third Presbyterian Church, at Third and Arch Streets, and afterward in a building on the north side of Walnut Street, above Sixth. The names of Paul Beck and John Keble are also honorably identified with the schools which were founded by this society, through their philanthropy.

The colored people of the city did not depend entirely upon the charity of white citizens for the education of poor children. In the year 1804 was formed a Society of Free People of Color for promoting the instruction and school education of children of African descent. Among the projectors of this enterprise were Richard Allen, William Brown, and Joseph Albert. No religious distinctions were permitted, and it was agreed that the Pennsylvania Abolition Society should have the privilege of inspecting the schools, inquiring into the accounts and funds, and suggesting regulations of government. In the same year a school was opened by the society in Carter's Alley, under the charge of John Trumbull as teacher. The congregation of St. Thomas' African Church also adopted measures at the same time for establishing a school which should be more directly under the influence of their religious teachings. At this period there were three or four other schools for the free instruction of colored boys and girls, and there were as many more in which tuition was furnished at fifteen shillings a quarter.

In the early part of this century, and probably before the close of the last, there was a school near Darby, taught by Alexander Wilson, afterward celebrated as an ornithologist. He was a Scotchman, who came over to this country about the year 1794, and while living near Darby was on intimate terms with the famous botanist, William Bartram. The building in which he kept school was situated on the Darby road, a short distance west of its intersection with Gray's Ferry road. Wilson, who was of a roving disposition and who had not yet written the book which gave him renown, abandoned the school in 1804, about which time he contributed to the *Literary Magazine* a long poem of upwards of two hundred lines, recounting the experience of "The Solitary Tutor." Its opening verse was,—

"Who'er across the Schuylkill's winding tide,  
 Beyond Gray's Ferry half a mile, has been  
 Down in a bridge built hollow must have spy'd  
 A neat stone school-house on a sloping green.  
 There, tufted cedars scattered round are seen,  
 And stripling poplars planted in a row;  
 Some old gray white-oaks overhang this scene,  
 Pleased to look down upon the youth below,  
 Whose noisy noontids sports no care nor sorrow know.

\* \* \* \* \*

Hers many a tour the lously tutor takes,—  
 Long known to solitude, his partner dear,—  
 For smiling woods his empty school forsakes  
 At morn, still noon, and silent evening clear."

ALEXANDER WILSON'S SCHOOL-HOUSE.

The reputation of the city for its private institutions of education stood high throughout the United States during the early years of this century. The Clermont Seminary, on the road leading from Frankford to Germantown, was established, in 1806, by John Thomas Carre and Charles Carre; pupils were charged three hundred dollars a year each. John Sanderson was for some time prominent as its principal. The Mount Airy Seminary, on the Germantown road, about eight miles distant from the city, was opened in the following year by the Rev. F. X. Brosius, under the auspices of Roman Catholic divines. An academy was in existence near Frankford, under the management of the Rev. John W. Doake, of the Presbyterian Church. There were not a few other institutions of a like character in and about the city. Nor was military training altogether neglected. Some time after the war of 1812 a classical and military lyceum was established near Germantown, under the management of B. Constant and Col. A. L. Roumfort. It was modeled on the plan of the United States government school at West Point, and was designed to prepare pupils for admission to that institution. The students, who were known as cadets, were charged two hundred and fifty dollars a year, and were clad in gray uniforms, with a black leather cap seven inches high, and a pompon nearly as long. During the first twenty or twenty-five years of the present century private schools of various degrees of merit were carried on by Joseph Longhead, Mrs. Rivardi, John Jones, Francis

Varion, D. Hewitt, Mrs. Tuckett, Ignace Fraiser, Daniel Mageniz, James Hamer, David Simon, T. Loomis, Benjamin Tucker, J. Hobson, William P. Smith, Gray and Wylie, I. Stenson, Rev. William Mann and William J. Bedlock, and Ballantyne and Corson. It will thus be seen that parents who could afford to keep their children out of what it was then common to stigmatize as "pauper schools" had many educational facilities presented to them at a cost which was, in the main, comparatively moderate. The free schools supported by private charity were also numerous, but few of them were efficiently or conscientiously managed, and the distinction between rich and poor, which was raised by accepting their privileges, served to prevent them from becoming popular as they should have been.

The principles of the kindergarten, which we are commonly disposed to accept as a modern plan of education, were not entirely unknown to the tutors of our grandfathers. William Maclure, of this city, had witnessed in Europe the practical workings of what was known as the Pestalozzian system. So much impressed was he with its wisdom that he engaged a German, Joseph Neef, who was an associate of Pestalozzi, to introduce it into Pennsylvania. About the year 1807 Neef made his appearance in Philadelphia. Not long afterward he wrote a book entitled "Sketch of a Plan and a Method of Education founded on an Analysis of the Human Faculties and Natural Reason: suitable for the offspring of a Free People, and for all Rational Beings." This work attracted some attention, and was commented upon with much enthusiasm by Col. William Duane, who assisted Neef in opening a school on the Smith property, near the Falls of Schuylkill. Here the rod was unknown and the formality of the pedagogue discarded. The teacher was to be guide, play-fellow, and messmate. Neef himself was described as a perfect child of nature. He never touched money and never wanted money. His wife attended to all his pecuniary dealings while he was absorbed in his school. No book was allowed to his boys, but slates, blackboards, and other contrivances for assisting mental operations were not tabooed. The course of study occupied six years. Much of it was conducted in the open air. The children were first taught to draw before they were able to spell, read, or write, and mental arithmetic was taught with a proficiency which surprised spectators in the cleverness of its results. It is related that Zerah Colburn, "the lightning calculator," who was then exhibited about the country as a prodigy, was more than matched by some of Neef's boys on one occasion, and that the arithmetical genius, in his exasperation, came to fist-cuffs with one of the class. This German schoolmaster was also in the habit of roaming around the country with his pupils, examining plants, flowers, and minerals, and delivering to them lectures on the curiosities they would discover. After some years

Mr. Neef abandoned his school and took up his abode in one of the Western States.

Another attempt to embody in practice some of the ideas which Von Fellenburg, a follower of Pestalozzi, had derived from his philosophy, was made in the year 1822. Coming to this city as an exile, he found some sympathizing admirers who assisted him to found a school, in which the leading principle was the union of labor with education. It was known as the Fellenburg School, and when it was located in a building on Bank Street had as many as one hundred and thirty pupils. They were noted for skill in the plaiting of straw for hats and bonnets, and at one of the exhibitions of the Franklin Institute, a medal was granted the school for its excellence in this department of industry.

The discussion which was carried on in Philadelphia during 1817-18 over the attempts to introduce the system of teaching that had been formulated by Joseph Lancaster had an important effect, not so much as the intrinsic value of his methods was concerned, as in the additional interest which was excited in the welfare of children, and in the movement to open schools at the expense of the taxpayers. The Lancasterian system<sup>1</sup> was regarded with much favor. Its popularity enabled the advocates of public schools to appease much of the opposition against them by a promise on their part that it would be adopted in the schools which the law might authorize. On the 16th of March, 1818, was passed by the Legislature the act which erected the First School District of Pennsylvania, and which, unlike the more famous common-school law of eighteen years later, applied only to this county.

The directors of the first four sections who were elected by Councils and by the district commissioners were as follows:

*First Section.*—Robert Wharton, Joseph Reed, Roberts Vaux, Thomas Stewardson, William Fry, Jonah Thompson, John Sergeant, Clement C. Biddle, Joseph M. Paul, Daniel B. Smith, Thomas F. Leaming, Rev. Philip H. Mayer, Jonathan Fell, Daniel H. Miller, William Ashbridge, Richard C. Wood, William J. Duane, Robert M. Lewis, Joseph Cloud, Thomas Latimer, Reuben Haines, William Smith, Rev. Dr. Neil, John Claxton, and William J. Duane.

*Second Section.*—George Boyd, Peter Keyser, John C. Brown, John Kessler, William Binder, Jacob G. Tryon, Jesse Cleaver, George F. Goodman, George Knorr, John Harrison, Jacob Johnson, and James S. Stuber.

*Third Section.*—Benjamin Martin, Robert McMullin, Jr., Ebenezer Ferguson, John Turner, George McLeod, George C. Snyder, James Ronaldson, Daniel Guisy, Thomas Dixey, James McCann, Joshua Raybold, and John Leshner.

*Fourth Section.*—David Woelpper, William Warner,

George Esher, George Laudenslager, Martin Ludie, and Joseph B. Norbury.

A large proportion of these men were citizens of excellent standing, and it may be doubted whether the average character of our school boards has since always stood as high as it did when it was a somewhat novel distinction for a citizen to serve the community in that capacity. The Board of Control was elected by the directors, and when it was organized, on the 6th of April, 1818, it was made up of Roberts Vaux (president), Thomas Stewardson, Joseph Reed, William Fry, George Boyd, Peter Keyser, Ebenezer Ferguson, James Ronaldson, and David Woelpper. One of their first acts which was much commended at the time was to secure the services of Joseph Lancaster as superintendent of the schools. The branches of study were simply reading, writing, and arithmetic, with instruction in sewing to girls. In the model school on Chester Street, which was under charge of Lancaster himself, and the design of which was to train up young teachers for service in the interior of the State, the course of training was more extensive. During the first year of the new schools they were attended by two thousand eight hundred and forty-five pupils of both sexes, who were apportioned as follows:

Section.	Schools.	Teachers.
First (the city proper)		Not yet provided for.
Second.....	Adelphi.....	{ John Ely.
		{ Eliza Allison.
	Kensington.....	{ Joseph Ketter.
		{ Jane Prondfit.
Third.....	Moyamensing....	{ Peter McGowan.
		{ Morrie Wileon.
	Southwark.....	{ Samuel F. Watson.
		{ Elizabeth Willard.
Fourth.....	Spring Garden.	Moses Taylor.

The school buildings used were in some instances those which had formerly been occupied by the charity schools, such as the Adelphi, on Pegg Street, between Front and Second, and the Paul Beck school in Moyamensing. The total expense of operating these schools in 1818 was \$23,049, of which \$15,000 had been expended on the construction of the new building of the Model school; \$3808 for furniture; and \$5082 for the salaries of the ten teachers, for rent, and for incidentals. The friends of public education pointed with much pride to the fact that while, under the system which had just been supplanted, the average cost for each child was \$11, it had now fallen to \$3.57. Nor was this wide discrepancy altogether a subject of wonder. It appeared that inefficiency, fraud, and corruption had characterized the county commissioners' distribution of the public bounty among the charity schools. Thus, in one instance, where they had represented that three hundred children had been paid for, only thirty of them could be discovered.

President Roberts Vaux, in drawing up the first report of the controllers, said, "They entered upon the discharge of their official duties at a period and under circumstances by no means propitious to the

<sup>1</sup> For abstract of this system, see vol. i. p. 594, note.

experiment contemplated to be made in the new system of free education. For nearly ten years previous to the enactment of the law under which they are organized, several well-intended but inadequate and unsuccessful legislative provisions had been applied to this district for the free instruction of indigent children. It was natural, that in so far as the public mind had become familiar with the inefficiency and experiences of the plans formerly adopted, that doubts of the success and want of confidence in any untried scheme should be manifest, whilst unworthy jealousies and illiberal prejudices did not fail to cast their influence into the scale against the efforts to produce reform. With these combined objections and difficulties to encounter, the controllers began their labors without the animating expectation that in so short a space of time they would have been enabled to overcome them. . . . From the year 1810 to the month of June, in the year 1818, the county commissioners issued orders upon the county treasurer for the payment to the teachers, to whom the children of indigent persons were intrusted for education, of sums amounting to \$114,114.97. In the years 1815-17 the number of children returned by the assessors averaged two thousand six hundred annually."

It was with some difficulty that the prejudices against the new schools could be made to disappear. Even the poor and ignorant people, whose children they were intended to benefit, could not easily be persuaded to avail themselves of the advantages which were thus offered to their offspring. The pupils were not all in the habit of attending the schools regularly, and there was little of that effective yet mild discipline which prevail in the system of to-day. An idea of how the schools at this time were managed and what studies were pursued may be obtained from a description by Dr. Joseph C. Martindale of the school at Byberry. "In the lower room," he says,—

"a single row of desks was formally placed around next to the walls, so that all the pupils sat facing the stones and mortar, and mostly had their backs to the teacher. The benches consisted of a number of stools, without backs, fastened to a plank ten or twelve feet long, and so arranged as to snit the desks. On these the pupils sat from morning till night, leaning over their desks in front, without any support whatever for their backs. The deske had lids which could be lifted up w heo it was desired to examine the contents within; and the boys and girls might often be seen with the lids resting on their heads, much to their detriment in the way of study. In the centre of the room stood the old wood-stove, in which many a cord of hickory and oak had been consumed. It was then the duty of the larger boys to split up enough wood to keep the room warm, and when an armload was wanted ooe of them was detached for that duty and soon returned with the required amount. At noontime the boys and girls took turns in sweeping out the school-room, but neither this nor the splitting of wood was then considered a hardship, although it might occasion a little grumblng if enforced at the present day. Then, too, we had the good old quill pen, which were regularly mended by the teacher after each lesson in writing, which was generally given morning and afternoon. The copies, too, had to be ruled by him, a task never imposed upon the teacher now. The books then in use were Pike's and Rose's Arithmetics, the New Testament, the Introduction, English Reader, Sequel, Cowper's 'Task,' the Expositor, Comly's Speller, and Olney's Geography. But little explanation was then given by the teacher, and the only wonder now is that the pupils learned anything at all."

How necessary it was to be scrupulous in the disbursement of the school funds at this time—a consequence, no doubt, of the exposures of the frauds that had been practiced by the county commissioners—is shown in the rejection of certain bills that were presented to the Board of Control. The county auditors reported that "they had examined the objections of the controllers to Benjamin Morton's account, as rendered Feb. 4, 1821, in which he charges \$100.49 for a "raising dinner," which exceeded the amount allowed by the controllers \$50.49; and Sylvester Roherts' account for printing 1000 copies of an address delivered at Ebenezer Church on the 4th of July last, \$3 for printing a hymn on the same occasion; John Graham's account of \$4 for a suit of clothes given to a boy for reading the Declaration of Independence at the same time; and John Allen's, of \$1.50, for preparing the said church on the said occasion; and they perfectly coincide with the controllers that the said charges are improper and cannot be admitted."

Down to about the year 1833 the public schools made comparatively slow progress. Although in 1819 there were three thousand two hundred and sixty-eight names of children on the Lancasterian rolls, that number fourteen years later had not increased much above five thousand. During the years 1821-23 there was a gradual falling off, which was ascribed to the demands of the manufacturing system for the lahor of children. Roberts Vaux continued to be president of the board up to the year 1831, and his labors were characterized by much zeal and intelligence. He made way for Thomas Dunlap, a man of considerable energy, with a leaning toward innovation, and his influence was soon brought to bear toward the aholition of the Lancasterian idea. In furtherance of the new plans which he suggested he was much aided by a bequest of ten thousand dollars contained in the will of Stephen Girard. New school-houses were built, reforms were encouraged, and the experiment of infant schools, which soon after ripened into primary schools, was tried in 1832 at the model school with satisfactory results. It may not be uninteresting to tahulate here a list of the public schools and the teachers of fifty years ago. They were as follows:

- MOOEL SCHOOL (Chester Street).—John L. Rhees and Aona Bird.
- Infant School, A. M. Williams.
- LOCUST STREET (corner Locust and Twelfth).—William S. Cleavenger and Eliza Eastburn.
- NORTHWESTERN (Schuylkill, Seventh [Fifteenth] and Race).—Hiram Ayres and Martha C. Hallowell.
- SOUTHWESTERN (Spruce Street, near Rittenhouse Square).—Samuel T. — and Eliza Bateman.
- NORTHERN LIBERTIES (Third, near Brown).—John R. Coleman and Frances R. Eastburn.
- FRANKLIN STREET (east of Fourth Street).—Louisa Beuford.
- SOUTHWARK (Catharine, between Third and Fourth).—Samuel F. Watson and Eliza McLeod.
- MOYAMENING (west of Passyunk road).—Peter McGowen and Ann Dolby.
- PENN TOWNEHIP (Buttonwood, near Eleventh).—B. E. Chamberlain and Julia A. Byrns.

KENSINGTON (Marlborough Street).—Henry W. Chadwick and Elizabeth W. Beechy.

LOMBARD (colored, Lombard, near Sixth).—James M. Bird and Maria C. Hutton.

APPLE STREET (colored, Northern Liberties).—William Sherman.

The agitation for a passage of a general common-school law for the entire State—being in effect an extension of the act of 1818, that hitherto had applied only to Philadelphia—was watched with great interest by the friends of education in this city, and was much facilitated by them through a society for the promotion of education that had been organized in 1827. In June, 1834, the Legislature passed an act providing that townships, boroughs, and wards should constitute school districts, and authorizing a tax to be levied, in order that schools might be maintained at the public expense. An intense opposition, which it is now difficult to look upon without surprise, prevailed in many portions of the State, and in 1835 would have overthrown the new law had it not been for the steadfast advocacy which was given it by such men as Thaddeus Stevens, George Wolf, and Joseph Ritner.

They soon succeeded in creating a powerful public opinion in its favor, so that, in 1836, it was amended and much improved, the system being confided to the superintendency of Thomas H. Burrowes, who was then secretary of the commonwealth. One of the provisions of the law of 1836, as applying to Philadelphia, directed that all children over four years of age should be educated, annulled the obligation to use the Lancasterian system, and authorized the establishment of a Central High School. It seems to have had a stimulating effect upon the board of control, and was certainly in accordance with the wishes of President Dunlap and most of its members. In the same year a committee was sent to make an inspection of the schools in New York and Boston, and they were much impressed with the system which prevailed in the latter city. The infant schools, which had turned out to be successful experiments, were now superseded by primary schools, thirty of which were opened in 1836, under the charge of lady teachers. The salaries paid them were two hundred and fifty dollars a year, which, in proportion to the higher value of money in 1836, was not lower than is now given young ladies who teach the youngest classes in the public schools. The children were kept in these classes until they had acquired a rudimental knowledge of reading and spelling, the first principles of writing, and some of the rules of arithmetic. This reform, which was introduced under the supervision of a committee consisting of Morton McMichael, Samuel H. Turner, and George M. Justice, assisted by Mr. Dunlap, was the beginning of the end of Joseph Lancaster's system. The controllers had reached the conclusion that, although it was intended to make education as cheap as possible, it was in the long run dear, and not productive of the best results.

Under his plan of picking out monitors, it was calculated that one teacher could take charge of three hundred children, but in the reaction against it which now set in, it was declared that the great need was more teachers, and much fewer pupils to each teacher.

President Dunlap, in his report written in the year 1837, said, "Scarcely nineteen years have elapsed since a few public-spirited and philanthropic individuals, disgusted with the miserable provisions and fraudulent execution of the existing laws for the gratuitous education, determined to attain a melioration of the system. The act of March, 1818, was the prize of their conflict. This has ever since been the school charter of the First District, and, modified by subsequent amendments, now affords, by the splendid improvements of last session, all that can be desired to carry out a complete system of universal public instruction from the primary school to the proudest institute of human learning. But eighteen years have rolled away since the original board opened the first school with a few pupils in a hired room; now they point their fellow-citizens to eleven magnificent edifices for the accommodation of our children, of whom they can proudly point to twelve thousand actually enrolled in more than fifty schools. All this, too, has been effected by the noiseless, unobtrusive, hut unceasing constancy of men content to gain a great good for themselves by foregoing notoriety or emolument,—even the common approbation of their fellow-citizens, many of whom are scarcely apprised that such a system exists, or, if so, barely extend to it the coldest toleration."

Mr. Dunlap had in mind the project of the new High School when he referred to the "proudest institute of human learning." A lot of ground on Juniper Street, east of Penn Square, and near the United States Mint, was bought by the board in 1837, and on September 19th of the same year the corner-stone of a substantial edifice of brick was laid. The school was opened on the 21st of October, 1838, and during its first year eighty-nine boys were admitted to it. The instructors were John Frost, in the English department; E. C. Wines, in the classical department; E. Otis Kendall, in the department of mathematics, astronomy, natural philosophy, and chemistry; and Henry McMurtrie, teacher of special physics. The germ of the school was still imperfectly developed when, in 1839, Alexander Dallas Bache, who had been chosen president of Girard College, volunteered to give his services to the Board of Education while he was waiting for the time when the completion of the college would enable him to enter upon his duties in that institution. The offer was gladly accepted, and Professor Bache, while assuming something of a supervisory or rather advisory control of the schools, was detailed more particularly to organize the High School. He was made acting principal of the school, and the impress of his well-equipped mind was soon

felt upon it. He submitted a report in the summer of 1840 to the effect that the number of students had increased to one hundred and forty-seven, of whom the parents of ninety-four had chosen the business course, twenty-six the classical course, and twenty-one the English course. To the corps of instructors were added J. A. Delorette, professor of the French Language; Rembrandt Peale, professor of Drawing and Writing; William Vogdes, professor of Mathematics; and John Sanderson, in the classical department. It was estimated that the average cost of training each scholar was fifty-five dollars a year, the studies being Latin, Greek, French, belles-lettres, moral and mental science, mathematics, natural philosophy, natural history, drawing, and writing. At the same time the average cost of each of the twenty-three thousand pupils in the lower grade of schools was a little more than five dollars a year. Not less than eighty per cent. of the boys in the High School were children of a class of people who could not otherwise have bestowed upon them the benefits of such an education.

The fame of the High School was soon spread abroad, even reaching England. The erection of its observatory, supplied as it was with superior apparatus, was accounted the beginning of a new era in astronomical science in this country. It was from its tower that the return of Enke's comet was detected, and such was the interest in celestial observations awakened by it that a journal devoted to astronomy was issued from the school. The observatory was a square brick tower, about forty-eight feet high, and it contained Fraunhofer's equatorial, a sidereal clock, fine telescopes, a comet-searcher, sextant, and other valuable instruments. Even Harvard University was not so well equipped, and the Naval Observatory at Washington not infrequently borrowed the telescopes. Professor E. Otis Kendall had charge of the observatory, and did much to give it a reputation among men of science.

After three years of service in the High School, Professor Bache retired, but not until after he had formed for the school the substantial frame-work of the course of discipline and organization by which it is still characterized. His genius, energy, and forecast were held in much value by the board, which took occasion to say of him, "By his great talents, joined to the most indefatigable exertions, during the three years that he was in the service of the board, he not only carried out almost to its complete development his plan for the reorganization of the High School, but rendered at a most critical time essential service to the directors of the various sections in the examination of teachers and the remodeling and perfecting of the Primary, Secondary, and Grammar Schools."

The strong recommendations which John S. Hart, who had been adjunct professor of Languages in Princeton College, received from the faculty of that

institution induced the controllers to appoint him to the vacancy made by resignation of Dr. Bache. Professor Hart proved to be exactly the man for the place. His salary was fixed at sixteen hundred dollars a year, which was about three hundred dollars in excess of the sum paid each of the other professors. With that quiet energy and keen sagacity which in no long time raised him to a high place among American educators, and which would have distinguished him in almost any sphere of action, he did much to make the school still more popular and useful. His name will always be gratefully remembered in this city, where he lived so many years a blameless life. Dr. Bache's plan of a four years' course to be pursued by eight classes, the first class graduating every six months, was adopted by Professor Hart, and the first noteworthy commencement under it was in 1842, when the following youths, many of whom are now or have since been leading citizens, were graduated in the order named, each one having prepared an essay:

1. John V. Merrick, "Intellectual Improvement."
2. George Harding, "Age of Leo."
3. William Hunter, "The Student's Reward."
4. Lewis L. Hout, "Study of Living Language."
5. Isaac L. Ortlip, "Retrospection."
6. Alexander Kirkpatrick, "Influence of Literature."
7. Lewis J. Evens, "Influence of Music."
8. Henry S. Hagert, "Decline of Taste."
9. Benjamin H. Rand, "Classical Studies."
10. William H. Hawkin, "Ancient and Modern Arts."
11. Charles S. Rand, "Greek Literature."
12. John L. Beker, "Works of Aristophanes."
13. Stephen N. Winelow, "Encouragement of National Industry."
14. David L. Ketter, "North America."
15. Henry Gerbert, "Country Customs."
16. Jervis Mason, "Agriculture."
17. Samuel Flood, "Genius of Byron."
18. Edward W. Clerk, "Female Education."
19. Joseph S. Carele, "Orators of America."
20. George W. Mears, "The Infatuation of the Age."
21. William V. McGrath, "The Aristophian and the Platonic Philosophy."
22. Adolphus H. Ashton, "Distribution of Happinesses."
23. Jesse Pearson, "Progress of Temperance."
24. Robert Young, "Influence of Mind."
25. Charles E. Young, "Solon and Lycurgus."
26. John W. Berks, "Francis Merion."
27. Christopher H. Bunn, "Description of a Shipwreck."
28. Simeon Stover, "Legislation of Solon."
29. William H. Swimley, "The Sultan's Son-in-Law."
30. Charles Zeitler, "The Plague of Naples in 1650."
31. James Bradley, "Study of Philosophy."
32. B. Frederick Forepugh, "Mountain Scenery."
33. Isaac J. Potter, "The Cruaders."
34. Francis McBride, "Poetry."
35. Lafayette L. Webeter, "Retributive Justice."
36. William Gervin, "Commerce."
37. William C. Tripler, "Human Greatness."
38. Edwin A. Hemble, "Improvement of Time."
39. Isaac Sege, "State of Europe."

At this time there were three hundred and eighty-three pupils in the school, and an alumni association was already in existence. It continued in after-years to embrace the names of many men who to-day hold honorable places in the community. For instance, Henry S. Hagert (who filled the post of valedictorian of the above class, became district attorney), William

V. McGrath (entered politics, was influential as a Democrat, and held the place of State treasurer), Stephen N. Winslow (became one of the best known of Philadelphia editors), George Harding (reached distinction as one of the most successful patent lawyers in the United States), B. H. Rand and Zephaniah Hopper afterward came back to the school as professors, and William Hunter's name has since been honorably identified with our public schools, J. Vaughan Merrick (prominent for his scientific knowledge of machinery), and George W. Mears (one of the presidents of the Commercial Exchange) came out of this first noteworthy class. A list of all the High School boys who have done credit to their Alma Mater would be very long. Prominent among them, however, may be named Lewis C. Cassidy (the attorney-general of Pennsylvania), Dr. Charles M. Cresson (the chemist), William M. Cramp (the ship-builder), George Alfred Townsend (the famous "Gath" of the newspaper press), John J. McElhone, and the Murphy brothers (who became almost indispensable at Washington as Congressional stenographers), James Gay Gordon (of the State Senate), Governor Robert E. Pattison, Judge James T. Mitchell, George Inman Riché (now the head of the institution), Charles E. Warburton (of the *Philadelphia Evening Telegraph*), John Russell Young (one of the most accomplished of American journalists) and his brother, James Rankin Young (the executive clerk of the United States Senate), Dennis F. Dealy (for many years a publisher of newspapers), Joel Cook (editor of the *Public Ledger*), Adam Everly (the conveyancer), Col. William McMichael, Col. Robert P. Dechert, Judge Michael Arnold, Joseph L. Caven, David H. Lane, William D. Gardner, John D. Stockton (once one of the most brilliant of newspaper writers), Charles T. School (publisher of the *Evening Star*), Peter A. B. Widener, William Nelson West (ex-city solicitor), Alexander J. McCleary (long an influential writer for the press), George H. Boker, David W. Sellers, Dr. Burchard W. James, Malcom Hay (the Pittsburgh lawyer), Rev. Joseph S. Kennard, William M. Singerly (the publisher of the *Public Record*), Lewis L. Houpt (engineer of the Pennsylvania Railroad), Alexander P. Colesbury, James W. Latta, James Morgau Hart (son of Professor Hart), John G. Johnson, Rev. Ignatius F. Horstmann, Mayer Sulzberger, and almost as many more, who have reached honorable distinction in the public life of the city or the State.

Mr. Townsend, in a fugitive newspaper sketch some years ago, narrated his experience in the school. "The first impression," he said, "I had of the High School was when it was seriously proposed to send me to it, was of an immensely aristocratic place, where all the well-bred, patent-leather-shod, silver-watch boys were collected from the select streets. . . . The principal was thought to be the most dreadful, most learned, and the most aristocratic individual in this country, not excepting the President of the United States. John

S. Hart, LL.D! The title made us shiver with respect. He had published real books and got them into the schools, too. Grammars, class books of poetry, and some said a treatise on the Anglo-Saxon roots. This last stumped us; a man entrenched in Anglo-Saxon, who could understand what Geoffrey Chaucer wrote, was certainly beyond sympathy for us. The State of Pennsylvania possessed in Professor Hart one of its ablest men for any branch of executive labor. He would have made a good Governor, and, I have no doubt, a good judge. As a disciplinarian, ruling by what he did not do or say rather than by speech or action, he was equal to a regular army general. We felt him because he felt himself. That pale, pure face, with skin like a woman's in softness and spiritual light, those meditative, scholarly eyes, in which was the heroism of firmness, and the clean, plain dress and linen; we did not know what it was, but it was that perfection of things we saw,—a Christian gentleman. He had started in youth with the great and sacrificial ambition of becoming an instructor, and was, therefore, perfectly contented with his growth and rank. . . . So long as he was at the head of that school he refined it, although it was full of coarse and mongrel material. It was impossible that he should have intimacy or even intercourse with many out of its five hundred to six hundred boys, but those few who got to know him in subsequent years had a change of experience; he was then felt to be soft and almost humorous, and in some respects quite a child. But while we were in the school he exercised over us all the nameless control of a thorough teacher and educational magistrate."

Professor Hart was never wrong in making reforms and improvements. The Board of Education was indebted to him for hundreds of valuable suggestions. For several years, beginning about 1842, he conducted at the High School what were known as "Saturday Classes." In these were assembled, once a week, about three hundred young women, who were either teachers or advanced pupils in the grammar schools. He also caused a committee of twenty leading citizens, with Provost John Ludlow as chairman, to make a thorough examination of the boys in the High School, in order that the public might be convinced of the usefulness of the institution. In 1847 he, together with Professors Heyer, Kirkpatrick, and Rhoads, gave lectures in the school on such subjects as English Literature, the Public Schools, and the History of Pennsylvania. About 1849 a class in phonography was started, and in a few years it had trained up some of the most expert short-hand writers in the United States. In many other ways the period of his occupancy of the president's chair of the High School was fruitful of lasting benefits to the cause of education in Philadelphia. He soon succeeded in removing the reproaches and prejudices that had previously existed toward the common school system by raising the High School to a standard which all the lower

grades of schools were likewise educated to in some degree, so that by the year 1846 a pupil in the second or third departments of the grammar school was remarked to know as much as a High School lad did in 1838.

In the year 1853 the High School building, on Juniper Street, was sold for forty-five thousand dollars to the Pennsylvania Railroad, which wished to erect a freight depot on its site, and on the 31st of May, in the same year, the corner-stone of the present edifice at Broad and Green Streets was laid. On this occasion Bishop Potter made a prayer, and addresses were delivered by Nathan Nathans, chairman of the High School committee, Professor Hart, George M. Wharton, Judge William D. Kelley, Harlan Ingram, Thomas B. Florence, and Dr. R. T. Breckenridge, of Kentucky. The lot extended one hundred and fifty feet along Broad Street and ninety-five feet on Green and Brandywine Streets. An examination was made of the corner-stone of the old building, and it was found that the documents and newspapers which had been deposited therein were reduced to pulp, and that through the action of the elements everything else was in more or less decay. For a short time, while awaiting the completion of the new building, the school was obliged to occupy the old model school in Chester Street. The dedication of the present edifice took place on the 28th of June, 1854, the Rev. Dr. Boardman and Morton McMichael delivering addresses, and Rev. Philip F. Mayer making a prayer. The entire cost of its construction and fitting up was seventy-five thousand dollars, of which seventeen thousand dollars were paid for the lot. Built chiefly of brick, with little ornamentation, it was a simple and yet not unimposing specimen of architecture, such as was not altogether inconsistent with the character of a free college for the people. Doubtless, if it had been erected ten or twenty years later, at a time when school-houses were regarded as fair exercise for an architect's fancy, it would not have been marked by so much simplicity. But in 1854 it was justly regarded as a great advance in public opinion when seventy-five thousand dollars could be obtained for such a purpose, and there was no disposition to go to an extreme, and cause a reaction by indulging in extravagance in minuteness of details. When the school was reopened in the fall of 1854 it contained six hundred pupils.

Professor Hart severed his connection with the school in December, 1858, and henceforth the public school system in this city was deprived of the services of perhaps the most valuable instructor who has adorned it. His successor was Nicholas Maguire, whose methods were widely different, and who, while possessing much force of character, was not inclined to be severe in the discipline of his administration. The friends of Professor Maguire in the Board of Education admired him highly on account of his "insight into individual character," which quality they

pointed out as a "peculiar trait." About the year 1865, under the rigorous administration of Edward Shippen as president of the Board of Education, there was a reorganization of the High School. A committee of investigation, after overhauling the various departments, requested the entire faculty to resign. Mr. Maguire was succeeded by George Inman Riché, and two-thirds of the old professors were reinstated. This was the beginning of a new era of prosperity for the school. Mr. Riché was warmly devoted to its welfare. At the time of his accession to the principal's chair he was a young man, who had not many years before graduated from the school, and who was early recognized as one of the rising men of the community. Turning aside from the field of politics, in which his fine abilities as a speaker would have won for him success, he became ambitious of living a life of more usefulness, even if of less prominence, as an instructor. In the twenty years which he has passed as the head of the High School he has won the earnest respect of the thousands of young men with whom he has come into contact, and whom he has sent out into the world. As soon as he took charge of affairs, in 1866, he set about making improvements in every direction. It was with pride that he secured the services of professors who had themselves gone through the school as boys. He seems to have made it a point to encourage practical studies, and to provide a good business training for the lads who did not stay to graduate. When Professor Bache had organized the school, a quarter of a century previous, he divided the courses into three,—principal, classical, and elementary. The studies in the first two differed only in regard to languages, the modern being the feature of the principal, and the ancient that of the classical. The latter, however, allowed French, so far as it was not inconsistent with due progress in classical studies. The elementary course was an English one entirely, including geography, American history, arithmetic, and algebra, and was about equivalent to the studies pursued at the present time in the half-way classes of the grammar schools. In Professor Bache's time no preparatory course was needed at all for admission, and pupils not older than nine and ten years were registered. That the High School students were representative of the whole community, and, therefore, were made up for the most part of boys whose parents were either poor or in humble circumstances, may be seen from the list of occupations of their fathers as they were taken down during Professor Hart's terms. It was not unwisely, in view of this fact, that the study of Greek, Spanish, and Anglo-Saxon was, in 1854, entirely abandoned. In 1856 the elementary course was discarded, and the principal and classical courses were united. At the same time the study of the German language, which had been introduced in 1852, under Professor Frederick A. Roese, was discontinued, but was revived in 1860, under Lewis<sup>1</sup> Angelè, one of the most picturesque and

best-remembered figures in the memory of High School lads. Under Principal Riché's administration particular attention was paid to this language, and one of his first reforms was to abolish the chair of French altogether, and to substitute for it a department of physical geography and civil engineering. He also, about the same time, abolished the department of commercial calculations and business forms. Under his wise management the school has become, more than ever it was, a model of its kind.

The following is a list of the gentlemen who have been either instructors or assistant instructors in the institution since its foundation: E. Otis Kendall, John Frost, Henry McMurtrie, J. A. Deloutte, F. A. Brégy, John F. Frazier, James C. Booth, John Sanderson, Rembrandt Peale, William Vogdes, George J. Becker, Henry Haverstick, J. Kirkpatrick, E. K. Smith, James Rhoads, Martin H. Boyé, Frederick G. Heyer. These professors were appointed during the period preceding 1850, after which time the faculty was recruited in the following order: Daniel W. Howard, 1850; Samuel S. Fisher, 1851; Frederick A. Roese, 1852; Alexander J. McNeill, 1853; George H. Stuart, 1853; Zephaniah Hopper, 1854; Edward W. Vogdes, 1854; James McClune, 1855; George Gerard, 1859; William H. Williams, 1859; Romaine Lujeane, 1859; Jacob G. H. Ring, 1859; A. D. Bache, 1859; B. Howard Rand, 1859; Lewis Angelè, 1860; Francis A. Brégy, 1862; Joseph B. Beale, 1862; Henry Hartshorne, 1862; Joseph Wilson, 1862; Lemuel Stephens, 1865; Isaac Norris, John Kern, 1866; D. W. Bartine, 1866; John Kern, 1866; George Stuart, 1866; Edwin J. Houston, 1867; J. F. Holt, 1867; George Corliss, 1869; John S. Newton, 1869; Elihu Thompson, 1870; William H. Wahl (temporarily); George W. Schock, 1875; Max Straube, 1875; Henry Leffman, 1876; Samuel Mecutchen, 1878; Franklin Taylor, 1878; M. B. Snyder, 1878; W. N. Meeks, 1878 (killed in same year); Frederick F. Christine, 1880; William H. Greene, 1880; Oscar C. S. Carter, 1880; and A. J. Morrison.

At the present time the studies in the High School include the following subjects: geometry, belles-lettres and elocution, history, Latin, German, drawing, algebra, physical geography and natural philosophy, anatomy and physiology, higher mathematics and astronomy, English literature, mental and moral science, chemistry, and commercial arithmetic. To secure instruction on all these subjects a four years' course is necessary, the completion of which entitles the graduate to the degree of Bachelor of Arts. The degree of Master of Arts is also conferred upon graduates of not less than five years' standing. The average attendance of pupils during the year 1883 was less than six hundred. The prejudices which have been raised against the High School have lost much of their power by reason of the excellent results which it has produced. It has trained up a great number of the most useful citizens in Philadelphia, who, in the

great majority of instances, could not have, in their boyhood, secured such advantages, and who look back upon the school with a grateful remembrance of the spirit of public beneficence which allowed them the opportunity to broaden and equip their minds; nor has it had the effect, which might naturally be supposed, of spoiling its youth for the practical and commonplace affairs of life. At one time, when Professor Hart, who was exceedingly anxious to discover whether this effect would be produced, made a list of the occupations which one of his graduating classes intended to follow, it was found that those who wished to be architects were 2; blacksmiths, 3; bookbinders, 3; bricklayer, 1; cadet, 1; carpenters, 16; clerks, 20; conveyancers, 6; cordwainers, 6; curriers, 2; dentist, 1; druggists, 4; engineers, 3; engravers, 4; farmers, 8; machinists, 14; manufacturers, 2; mariners, 3; painters, 2; physician, 1; printers, 7; saddler, 1; shipwrights, 5; stores, 38; teachers, 9; turner, 1; tinsman, 1; watch-maker, 1; and wheelwright, 1. Many of these purposes were, perhaps, transient impulses, that could not always be carried out, but they are sufficient to indicate that a liberal degree of education at the public expense did not then destroy, as it probably has not since entirely destroyed, the democratic simplicity of our youth.

The necessity of an institution of a similar character which would provide an advanced education for the girls in the grammar schools, as well as prepare teachers for the lower grades of schools, had been frequently spoken of as early as 1838. Thomas Dunlap, in particular, did much to forward such a project in the Board of Education, but the controllers were slow to come to any definite action on the subject, believing that the experiment of the Boys' High School should first be thoroughly tested. Nor was the importance of female education rated very high in the general opinion forty-five years ago. For ten years the idea of a higher school for girls was talked over before any decisive measures were adopted looking to that end. On the 1st of February, 1848, a normal school was opened in the model school building, on Chester Street, under the charge of Dr. A. T. W. Wright as principal. One hundred and six girls were enrolled, and were taught in grammar, history, mathematics, reading, drawing, and writing, and music. It was estimated that the cost of instruction to each pupil was seventeen dollars per annum. The school was not long in becoming popular, and in the year 1853 a new building was constructed for it on Sergeant Street, between Ninth and Tenth Streets. It remained under Dr. Wright's efficient supervision until the year 1857, when he resigned, and was succeeded by Philip A. Cregar. For seven years this gentleman administered the affairs of the institution. In January, 1864, George W. Fetter, who has ever since occupied the principal's chair, and who has shown a superior order of executive ability, came to the school, and under his direction it has made a

constant advance in usefulness. The building on Sergeant Street, soon after Professor Fetter's advent, became cramped, as the numbers of pupils clamoring at every examination for admission became greater from year to year; but it was some time before City Councils could be induced to make an appropriation for a new structure. Indeed, there were not a few people in the community who did not manifest the most friendly spirit toward the institution, on account of what they regarded as its tendency to provide merely ornamental education.

In the year 1875, however, the objections against making further provisions for the school were overcome, and during the centennial year a handsome

ing, botany, elocution, composition, rhetoric, logic, algebra, physical geography, arithmetic, geometry, mathematics, mythology, general history, drawing, physiology, music, and theory and practice of teaching. Graduates who wish to become teachers are required to remain in the school for an additional year as post-graduates, and show by their work in the schools for practice, which are attached to the institution, that they are able to train and control children, and not until they thus demonstrate their fitness do they receive certificates to teach in the public schools of Philadelphia.

The establishment of these two institutions—the Boys' High School and the Girls' Normal School—

GIRLS' NORMAL SCHOOL, PHILADELPHIA.

building was erected on the northeast corner of Seventeenth and Spring Garden Streets. It was dedicated on the 30th of October, 1876, with appropriate exercises, consisting of a prayer by Bishop William Bacon Stevens, and addresses by M. Hall Stanton, Simon Gratz, Judge William S. Peirce, and Judge Joseph T. Pratt. The building is large, handsome, and imposing, accommodates upwards of eleven hundred pupils, and cost, including the lot and the furniture, about two hundred thousand dollars. At the present time upwards of one thousand girls and young ladies attend the Normal School. The course of study is divided into a period of four years, and embraces etymology, Constitution of the United States, sew-

ing, botany, elocution, composition, rhetoric, logic, algebra, physical geography, arithmetic, geometry, mathematics, mythology, general history, drawing, physiology, music, and theory and practice of teaching. Graduates who wish to become teachers are required to remain in the school for an additional year as post-graduates, and show by their work in the schools for practice, which are attached to the institution, that they are able to train and control children, and not until they thus demonstrate their fitness do they receive certificates to teach in the public schools of Philadelphia. The establishment of these two institutions—the Boys' High School and the Girls' Normal School—

was most effective in dispelling the feeling of distrust with which the public school system was so long regarded up to about 1845-50. As soon as it became apparent that an excellent education could be obtained for boys at the public expense under the care of such instructors as Bache and Hart and Kendall, parents who hitherto had been sending their children to "pay schools" or to academies, began to perceive the growing advantages of the public school, and thousands of other people, who, with false ideas about "respectability," had been paying for tuition for their children sums which they could ill afford, were not slow in imitating those who were wealthier. Thus the number of children attending the schools was, in

1840, twenty-three thousand one hundred and ninety-two, and ten years later it had reached forty-eight thousand and fifty-six, or much more than doubled itself.

The efficient administration of Mr. Dunlap as president of the Board of Education, which had lasted for ten years, closed on the 1st of January, 1840, and his name deserves to be honored along with those of Joseph R. Chandler, Peter Hay, John Wurtz, John Sergeant, George W. Smith, Ellis H. Yarnall, George M. Stroud, Jacob Lex, and other earnest workers in the cause of popular education in Philadelphia. George M. Wharton was president of the board from 1841 to 1844; John Miller, from 1844 to 1847; George M. Wharton, from 1847 to 1850; Daniel S. Beideman, from 1850 to 1853; George M. Wharton, from 1853 to 1854; Thomas G. Hollingsworth, from 1854 to 1857; William J. Reed, from 1857 to 1859; Henry Bumm, from 1859 to 1861; Benjamin M. Dusenberry, from 1861 to 1862; and Leonard R. Fletcher, from 1862 to 1864. With one or two exceptions these men were useful in their positions. No other events of striking interest beyond these which we have narrated occurred under their administration. Slowly, gradually, and at times almost imperceptibly the system under their charge continued from year to year to extend itself and to become more efficient. New York, Boston, and other cities had before 1860 copied our system of dividing the schools into primary, secondary, grammar, and high schools. In President Beideman's time began an era of operation in the building of school-houses which, though for short times checked, has never since entirely ceased, and which has dotted the city with hundreds of edifices that are worth millions of dollars. The accession of Edward Shippen to the presidency of the board in 1864, an office which he held for five years subsequently, marked the beginning of a period of much activity and original thought in the Board of Education. Mr. Shippen's reports are perhaps the best written by any of the presidents after Vaux and Dunlap. He was an enthusiastic believer in popular education. He studied the subject in all its bearings.

The teachers never had a warmer advocate. He was never wrong in besieging City Councils for more liberal appropriations. He inveighed against the "cramming process," which after the civil war first began to attract attention, and through his influence the experiment of dispensing with the use of textbooks at home, and not allowing them to be taken out of the schools, was tried about 1867. During the same year, in co-operation with Mayor McMichael, he caused a census of the children in this city to be taken by the police, and the community was somewhat startled to discover that twenty thousand boys and girls between the ages of six and eighteen did not attend school nor engage in any kind of employment. This discovery had the effect of starting a cry for compulsory education. In 1867 "senior classes"—in which an advanced course of study is

pursued, approaching to some degree that of the High School in its lower classes—were established, with the object of preventing the "fearful competition to get into the High School," a competition which was said to be as injurious to the scholar as to educational interests in general. In the same year the "Teachers' Institute" was started with nine hundred out of the fourteen hundred teachers in Philadelphia, and a course of lectures, as well as the establishment of a library, was made its chief attraction. Mr. Shippen was earnest in insisting upon the necessity of a superintendent, who should assume direction over all the schools in Philadelphia. The building of some of the first of the many large and neat brownstone school-houses that adorn the city was also a conspicuous feature of Mr. Shippen's administration.

The class of men who assisted him in the board was also superior to those who had at times controlled its affairs, not so much by means of their knowledge and their standing as citizens as of their influence in ward politics and their ability to manipulate the sectional school boards which chose them as representatives in the general board. This improvement was brought about in 1867, by an act of Assembly which vested the power of appointment in the board of judges of the Court of Common Pleas, and which has not been abused by the judiciary to any serious extent, although a subject of criticism by those who believe that the board should be chosen by the people or through some other agency than the judicial bench. It must be said, however, that during the sixty-six years of its existence the board has, considering the large outlays of money it has made, preserved a far better character than has been the case with such bodies in some other cities. Notwithstanding the expenditure of a million and a half dollars annually, there has hardly been for many years past even a whisper raised against the integrity of the board at a time when probably no other municipal department has not been to some degree an object of suspicion. That the city is generally willing to sustain education and make these outlays is not disconnected with the faith which they are inclined to place in most of the controllers.

A full list of the citizens who, since 1818, have served in this capacity is contained in the following names of members of the board between the years 1818 and 1850:

John C. Brown, Josl B. Sutherland, William W. Fisher, Daniel B. Smith, Jacob Justice, Gurney Smith, John C. Brown, Joseph B. Norbury, Benjamin W. Richards, Isaac W. Norris, Rev. George Boyd, Charles Norris, John Steel, Joseph Warner, Andrew M. Prevost, John L. Wolf, James Gowen, Jonathan Thomas, Joseph Bockius, Evan W. Thomas, Jr., John Oakford, Morton McMichael, Alex. Parker, J. G. Hollingsworth, Henry Zollicoffer, Edward B. Garrigues, Charles E. Cathral, George M. Wharton, George M. Justice, Jonathan Thomas, Jacob T. Snyder, John R. Walker, Andrew Horton, Dr. Thomas Oliver Goldsmith, George Thomas, Samuel H. Traner, Richard R. Spain, Samuel English, William G. Flanagan, Alexander Wentz, John Foulkrod, Charles V. Hagner, Henry Lesch, George Emlen, Jr., Mordcael L. Dawson, Isaac Barton, Clifford Smith, Richard G. Laning, William F. Ireland, John C. Smith, James Campbell, James R. Nagley, Thomas H.

Forsyth, Stephen B. Kingston, William Wieter, Francis Lyons, Peter Rambo, Abraham Helffenstein, Richard Vaux, William Biddle, Thomas S. Hollingsworth, George H. Burgin, M.D., Clifford Smith, John Miller, Joseph Yerger, Francis Lyons, John Robbins, Jr., Hugh Clark, Jacob Heyberger, William S. Perot, Alexander Browne, William J. Crane, Hugh O'Donnell, Joseph Yerger, John J. McCohen, James J. Barclay, Samuel D. Patterson, Lewis Crunssillat, Samuel Grice, Theodore Cuyler, Alexander M. Macpherson, Daniel S. Beideman, John P. Colcord, Joseph E. Maull, Michael D. Waterman, George F. McCallmont, Jacob Shearer, Benjamin Matthias, William English, Charles Thomson Jones, Frederick Sorber, William J. Reed, Philip N. Hayner, George W. Vaughan, William Martin, William Watson, M.D., James Peters, Robert Ash, Paul K. Huhbs, Joseph T. Mears, John S. Painter, Charles C. Aitkin, Jesse H. Flitcraft, Charles M. Sandgram, James Peters, Henry Boureau, Perry W. Levering, John Clouds, Nathan Nathans, William H. Drayton, Benjamin Morton, Isaac Ashmead, William Larzelere, Isaac Pearson, Samuel C. Ford, John M. Pugh, M.D., John H. Bringhurst, Arthur G. Coffin, Joseph Cowperthwait, Benjamin Baker, Alexander Greaves, Thomas J. Herring, John Stellman, Thomas J. Malony, and John J. Meany.

Between 1850 and 1860, the following citizens served in the board :

John Clayton, David H. Kollock, T. K. Collins, Thomas Lewellen, Harlan Ingram, William Clothier, John McAvoy, M.D., C. Campbell Cooper, M.D., William B. R. Selby, Nathan L. Jones, Isaac Leech, Jr., Joseph Eneut, Jacob C. Slemmer, Benjamin Gskill, Edwin Booth, D. M. Foot, M.D., Henry Herbert, Andrew Miller, William F. Smell, William H. Sickle, Joseph W. T. McAllister, George P. Mercer, Joseph J. Thomas, Samuel Ashmead, William Curran, M.D., Benjamin M. Dusenberry, Samuel Taylor, Charles T. Sutter, George P. Henzey, Andrew H. Manderson, Charles Cline, George W. Burr, Edward W. Gorgas, Samuel S. Worthman, Spencer Roberts, Benjamin F. Warren, Richard R. Montgomery, Philip B. Mingle, Thomas G. Hollingsworth, Thomas W. Marchmont, E. Harper Jeffries, William Matthews, William R. Bald, Francis McManus, Alfred W. Green, M.D., Edward R. Badger, Marcus A. Davis, Washington J. Jackson, Joseph Reakirt, John J. Kersey, Thomas Banes, William Conn, Charles M. Lukens, Robert F. Bower, Cornelius L. DeGroot, Edward G. Lee, Benjamin H. Barton, Aaron H. Burtis, James H. Watson, Charles Frishmuth, Leonard R. Fletcher, Joseph M. Hancock, Cornelius Baker, William H. Trinick, John Conroy, M.D., Charles J. Wieter, Jr., Thomas W. Duffield, John R. Angney, M.D., C. S. Himmelwright, Stephen Farrand, John Fry, Aaron B. Ivins, John Huneworth, Henry Bumm, John Houston, Adam Shetzline, Paul B. Carter, Edwin McCalla, R. Q. Shelmertine, Thomas Haig, Adam Martin, Michael Blynn, John Rittenhouse, William H. Flitcraft.

The following citizens have been members of the board at various times since 1860, as well as some of those above named who were appointed before that year :

Isaac B. Smith, William N. Tisdall, Charles Welsh, Thomas Fitzgerald, Charles A. Yeager, George Inman Riché, Joseph B. Smith, James S. Chambers, Edwin McCalla, Lewis Bitting, Thomas Wood, William H. Gominger, William Adamson, George W. Stull, David Wallace, Charles W. Zimmerman, John Holland, James Freshorn, L. R. Fletcher, Daniel Witham, John Moffet, Frederick Vandegrift, James S. Stewart, Robert W. Ritchie, Joseph Cooper, John F. Belsterling, John B. Green, Thomas Potter, David Murtha, William C. Haines, James Lees, Natban Hilles, William F. Cooper, Jonathan Roberts, George W. Nebinger, M.D., P. A. Fagen, Robert Palethorpe, John Noble, Edward Shippen, Robert W. Cushman, William M. Levick, William O. Kline, Andrew Broffy, Edward Holt, M. McGeoy, James W. Fletcher, Patrick Duffy, Charles Abel, De Witt C. Moore, G. A. Hoffman, Joseph H. Hookey, Louis F. Linde, Joseph Crount, James N. Marks, William F. Boucher, Abraham Taylor, James H. Gaw, Lewis Elkin, Samuel Scheide, John W. Clark, Henry McIntyre, James McManes, James Milligan, Jr., Joseph Mullineaux, Norris J. Hoffman, Francis W. Getz, Samuel S. Money, James J. Reville, Jacob Reed, M. Hall Stanton, William S. Elder, Henry Einweclter, Charles W. Carrigan, Washington L. Bladen, W. Elwood Rowan, A. S. Jenks, Lewis C. Cassidy, M. R. Harris, John Samuel, John Price Wetherill, James S. Hinkel, Albert C. Roberts, Henry C. Hickok, Stephen Taylor, Stephen H. Smith, Edward Armstrong, John G. Brenner, James H. MacBride, Charles Harmer, Daniel Steinmetz, Charles F. Ahott, P. A. B. Widener, William B. Stephens, William Ridings, D. Weatherly, R. W. Downing,

Samuel Wakeling, John J. Hartman, James Long, Thomas R. Davis, R. J. Lehman, William J. Gillingham, Thomas A. Fahy, James S. Whitney, Louis Wagner, Richardson L. Wright, M. P. Hutchinson, John Sheiden, James Nichol, Leander M. Jones, Alexander Adaire, John L. Stewart, John M. Campbell, Simon Gratz, Charles S. Austin, George W. Cox, William J. Pollock, William J. Colladay, Edward T. Steel, Thomas Kennedy, William F. Miller, Edward Lewis, John Fitzpatrick, James J. Cooper, George F. Barker, William Gulager, James Pollock, Henry S. Godshall, Isaac A. Sheppard, William M. Smith, Samuel T. Child, James V. Watson, James Hughes, Joseph C. Ferguson, Andrew M. Spangler.

A most valuable assistant to these men for thirty-six years has been Henry W. Halliwell, who entered their service in 1848, who, in 1865, was made chief secretary, and who is closely identified with the cause of educational progress in this community.

M. Hall Stanton was president of the board from 1870 down to the end of the year 1876, and his administration, although not so fertile in original ideas as was that of his predecessors, was in the main progressive and beneficial. He was succeeded by James Long, who remained in the office for two years, and who was replaced in January, 1879, by Edward T. Steel, who has thus far performed his duties with a rigor and intelligence which promise to be productive of much good. During these three administrations a generous reception has been given to every new idea that has been advanced with a view of enlarging the usefulness of the public schools. In 1875 the University of Pennsylvania offered to furnish the city with forty free scholarships in its scientific departments, and pupils of our free schools now found an opportunity to complete their education in that fine institution of learning. The Philadelphia School of Design also receives ten female pupils each, and the Pennsylvania Museum and School of Art has likewise established five free scholarships for the city. The Night School for Artisans, which was opened by Professor Riché, in the High School building, in November, 1879, has afforded many young men an excellent medium of instruction in the industrial arts.

For many years, dating from Mr. Shippen's administration, the necessity of a superintendent of the Philadelphia schools has been frequently urged upon the board; but it was not until 1882 that the Councils of the city were willing to make an appropriation for that purpose. They then agreed to lay aside fifteen thousand dollars, with which the board could begin the organization of such a department of superintendence. It was contended that the schools were without systematic organization, that they were not managed according to a fixed standard of regulations, and that the teachers in particular needed supervision by an instructor of the largest experience as well as thorough technical knowledge. After much scrutiny of the qualifications of a number of candidates for the position, Professor James McAlister, then engaged at Milwaukee in a similar capacity, was called upon to accept the place, which he did in the spring of 1883. It is expected that he will gradually establish a reformation of the system of education, which will bring

it up to all the improvements that have been made in the modern training of youth.

The city's appropriations for its schools have for some years past averaged a million and a half of dollars each year—a figure which, in the time of Roberts Vaux or Thomas Dunlap, would perhaps have caused the most enthusiastic advocate of common schools to stand aghast. Indeed, this is three times as much money as was appropriated for this object a period so comparatively recent as the opening of the civil war. While during the last fifty years the number of pupils has increased twenty-fold, the amount of expenses has increased nearly fifty-fold. The following table shows the number of pupils, the amount of appropriations, and the general population of the city at various periods during the past sixty-four years:

Year.	Pupils.	Appropriations.	Population.
1820.....	5,359	\$22,058	137,097
1830.....	5,371	32,100	182,961
1840.....	23,192	125,740	258,037
1850.....	48,056	366,361	406,762
1860.....	63,530	512,014	568,034
1870.....	82,891	1,197,901	678,000
1875.....	95,552	1,634,663	800,400
1882.....	103,702	1,529,157	900,000

The scholars are divided among the schools in the following order: Normal and High Schools, 1539; grammar schools, 16,124; secondary schools, 28,433; and primary schools, 57,606. The total number of schools is about 470, and the total number of teachers about 2200. The warrants drawn for teachers' salaries amount to about eleven hundred thousand dollars annually. This does not indicate a very high average salary for each teacher, and it was only recently that President Steel remarked "that a woman who is, in fact, capable of directing the work of a primary school should receive a maximum salary of five hundred and thirty dollars, is a satire." It is estimated that the total average cost of the tuition of each pupil, including the High and Normal Schools, is less than fifteen dollars a year. Nevertheless, there are many children in Philadelphia who do not receive the benefit of the public schools. It has been calculated that there are upwards of sixty thousand boys and girls between the ages of six and fifteen who are not enrolled upon the list of pupils, and that but comparatively few of this large number are attendants at private schools. How to get at this ignorant mass of the population is still a problem to be solved. "When we can begin training in the kindergarten," said President Steel, in a recent report, "continue it in excellent primary schools, through grammar schools, embracing thorough manual instruction, and complete it with a course in a high school combining a school of technology, we may feel that proper provision is made for the education of the children of the city."

The city and county of Philadelphia is known as the First School Division of the State of Pennsylvania, and each ward in the city is a school district. The voters of each ward elect three citizens each year as

directors of public schools. They must have the same qualifications as State senators, and reside in the ward to which they are accredited.

In addition to the directors aforesaid, there is a Board of Public Education, composed of one person from each ward, known as controller of public schools, and appointed by the Court of Common Pleas, and each controller is a member of the ward Board of School Directors from which he is appointed, and he must have the qualification of a member of the Senate.

The controllers of the public schools determine upon the number of school-houses which shall be erected or established in every section, and limit the expense of erecting and establishing every such school-house. They have the power to establish a model school, in order to qualify teachers for the sectional schools, or for schools in other parts of the State. They also have power to provide such suitable books as they shall deem necessary for the use of the pupils belonging to the different schools within the First District. They have the general superintendence over all the schools established in the said district, and make such rules and regulations for their own government, and for the general regulations of the district, as may be deemed necessary. They also appoint a secretary.

It is the duty of the said controllers to examine all accounts of moneys disbursed in erecting, establishing, and maintaining the several schools established within the district.

The said controllers meet at least quarterly, and call special meetings whenever the same may be deemed expedient. They keep regular minutes of their proceedings, and publish a statement, in the month of February in every year, of the amount of expenditure, and of the number of children educated in the public schools.

The said controllers are authorized, whenever they shall think proper, to establish schools for the instruction of children under five years of age, and the money expended in the establishment and support of these schools is provided for and paid in the same manner directed by law with respect to the other public schools in said district.

Five members of the controllers of public schools for the city and county of Philadelphia constitute a quorum for the making of orders for the payment of money and the transaction of business generally, with this exception: that no order for the payment of money shall be made at any special meeting of the board unless a majority of the whole number be present.

The controllers, from time to time, when required by the superintendent of common schools, furnish such reports touching the condition and management of the schools under their charge, and of the methods of instruction practiced therein, as he may deem useful for the advancement of the system of general education in the State.

They are authorized and directed to cause such of

the public schools in the said district as they may deem necessary to be opened at night, during the months of January, February, March, October, November, and December of each and every year, for the instruction of male adults.

They also have and possess power to confer academical degrees in the arts upon graduates of the Central High School, in the city of Philadelphia, and the same and like power to confer degrees, honorary and otherwise, which is now possessed by the University of Pennsylvania.

And the controllers of the public schools of the First School District of Pennsylvania establish a system for the examination of the qualifications of all persons who may desire to become teachers in the public schools of said district, the said examinations to be held at such times and places, and under such system, rules, and regulations as the said controllers shall adopt.

The Board of Public Education appoints a superintendent of public schools, who has general supervision of the schools.

The said directors, for every section respectively, have power to erect and establish so many schools in their respective sections as may be determined upon by the said controllers, and appoint teachers, and provide all things necessary for maintaining and conducting the schools in their respective sections, and superintend and direct the said schools respectively. And the directors of every section respectively meet at least monthly, and keep regular minutes of their proceedings, and the said directors of every section respectively divide themselves into as many committees as there may be schools established as aforesaid in the particular section, so that every committee may have the management of one school only; and the said committees also keep regular minutes of their proceedings, and report or exhibit their minutes to the directors of the section whenever required by the said directors so to do. And the directors of every section report the state of all the schools within the section every six months to the controllers aforesaid.

And all the directors of the public schools within the said district perform their duties without any pecuniary compensation, and during their term of service are exempted from serving as jurors, arbitrators, overseers of the poor, or managers of the almshouse, and, except in time of war, from militia duty.

School properties belonging to the city of Philadelphia on the 31st of December, 1882:

	Buildings.	Lots.	Furnitures.	Totale.
Boys' High School.....	\$50,000	\$100,000	\$10,000	\$160,000
Girls' Normal School.....	175,000	70,000	30,000	275,000

1835. William Piersol.	

The University of Pennsylvania.<sup>1</sup>—The history of the University of Pennsylvania begins with the foundation of an academy and charity school, out of which the present organization has grown. As early as 1743, Benjamin Franklin saw the need and proposed the establishment of such an academy, and also recognized in the Rev. Richard Peters one whom he believed especially fitted for its head. Finding himself unable to secure the desired co-operation, and his attention being absorbed in the disturbed condition

THE "NEW BUILDING," AFTERWARD KNOWN AS  
"THE ACADEMY."

of public affairs during the war between Great Britain and France, the matter was dropped until 1749. He then wrote and published a pamphlet entitled "Proposals Relative to the Education of Youth in Pennsylvania," which attracted much attention, and resulted in the formation of a board of trustees, who charged themselves with the execution of the plan. It consisted of the following persons :

Benjamin Franklin, president; William Coleman, treasurer; James Logan, Thomas Lawrence, William Allen, John Inglis, Tench Francis, William Masters, Lloyd Zackary, Samuel McCall, Jr., Joseph Turner, Thomas Leech, Phineas Bond, Abraham Taylor, Thomas Hopkinson, Joshua Maddox, William Shippen, Robert Strettell, Philip Syng, Charles Willing, Richard Peters, Thomas Bond, William Plumsted, Thomas White.

<sup>1</sup> The authors are greatly indebted to Rev. Jesse Y. Burk, secretary of the Pennsylvania University, for this sketch of that historic institution. Good taste and accurate information have enabled Mr. Burk to treat his subject in a way which none can fail to appreciate.

These gentlemen signed articles of association in November, 1749, and subscribed among themselves over two thousand pounds for the proposed school. There was at that time "the new building" in Philadelphia peculiarly adapted to their needs on Fourth Street, below Mulberry Street (now Arch Street). It had been built primarily as a place of worship for the especial use of the celebrated Whitefield whenever he might visit the city, but also to serve as a charity school, and was held by trustees for that purpose under the original subscription. These trustees found themselves embarrassed by a heavy debt upon the property with no prospect of being able to pay it, and very readily consented to transfer it to the academy on condition of a charity school being made part of the scheme, and of Mr. Whitefield and others being permitted its occasional use for preaching. In 1751 the academy formally entered upon the property, the Rev. Richard Peters preaching a dedicatory sermon. There were three schools, the English, the Mathematical, and the Latin, each under a master, with a sufficient number of ushers and tutors, the head master having the title of rector. A charity school, elementary in its character, was also maintained.<sup>2</sup>

The prosperity of the enterprise soon induced the trustees to apply for a charter, which was granted them by Thomas and Richard Penn, under the date July 13, 1753, as "The Trustees of the Academy and Charitable Schools in the Province of Pennsylvania." The Rev. William Smith, afterward so prominent in the affairs of the college and of the province, was added to the staff of instructors, and so enlarged the curriculum by the resources of his learning and energy that the academy became practically equivalent to a college. An additional charter was therefore granted by the proprietors June 16, 1755, changing the title into that of "The Trustees of the College, Academy, and Charitable School of Philadelphia," and conferring upon them all the powers which are usually attached to such a title. The college and the academy were closely related. The same professors taught in each, and they were in fact but higher and lower departments of one school. In the college there were but three classes, freshman, junior, and senior, and the course was one of three years. There were five professors, one of whom was provost and rector of the academy, another vice-provost. The first commencement was held May 17, 1757, when Paul Jackson, Jacob Duché, Francis Hopkinson, Samuel Magaw, Hugh Williamson, James Latta, and John Morgan received the degree of Bachelor of Arts. The eminence afterward attained by these young men was a good augury of the influence and fame of the incipient college.

In 1762 an additional building was erected, nearer to Arch Street, and devoted partly to dormitories for the use of students, who now began to come in from

<sup>2</sup> See vol. II., pp. 1471-72-73.

even the remotest colonies. In 1763 there were nearly four hundred students in attendance upon the college and its subordinate schools, an evidence in those days of an unusual prosperity and success. The first provost, Dr. William Smith, was a man of rare abilities and unbounded activity. Not hesitating to take part in the political contests of the time, he was imprisoned by the Legislature, and for a time taught his classes in the common jail, to which they obtained permission to resort, until he was released on his claim for an appeal in person to the king. Proceeding to England for this purpose, he was received with distinguished honors by the bishops and others in authority, and had conferred upon him the degree of Doctor of Divinity by the University of Oxford. Such an interest was created by him in England that when, in 1761, the trustees found themselves seriously embarrassed in prosecuting the extended work of the college, it was determined to send him again to England to solicit contributions for an endowment. At the same time a similar effort was resolved on by King's (now Columbia) College, New York. The two commissioners reached England at the same time, and wisely concluded to unite their efforts and to share the proceeds. Procuring from the king, through the influence of the Archbishop of Canterbury, a circular letter to all churches in the kingdoms, "they divided the land between them," and making numerous collections, succeeded in procuring a very considerable endowment for each college. At the time of the transmission of this fund a most kind and friendly letter was sent by the archbishop, in which he expressed the earnest hope that the liberal and unsectarian principles on which the institution had formerly been conducted would be adhered to for all time. In their gratitude at the reception of the endowment the trustees adopted as a standing resolution a declaration of these principles in the strongest possible language. By a most singular and perverse misconception this action was seized upon by a Legislature politically hostile to the provost and faculty as a "narrowing of the foundation," and made in 1779 the pretext for an unjust confiscation of all the rights and properties of the college, which were transferred to a new organization, called in its charter the trustees of the University of the State of Pennsylvania. The trustees of the college made a good fight for their rights, but, unfortunately, Benjamin Franklin was then absent as minister to France, and they were obliged to surrender their property, while still maintaining their organization and carrying on, to the best of their now straitened ability, the several schools. The new University organized its faculties, both in arts and medicine, and for a few years the rival and hostile institutions struggled on side by side with necessarily indifferent success. In 1789 an act was passed declaring the former to be altogether unjust, and restoring the trustees of the college then surviving to all their former rights and

properties, only exempting the University from accountability for income rightly expended in lawful purposes. This was after Franklin's return, and doubtless largely owing to his influence. In 1791 the wretched struggle for existence of the two separate schools was ended by an amicable union, each contributing twelve members of its board to form a new one, which was then incorporated and vested with the rights and properties of each, under the name "The Trustees of the University of Pennsylvania." The Governor of the State was *ex officio* the president of the board. The faculties of arts and medicine were, as far as possible, taken equally from the former faculties, but enough of the old spirit of opposition to Dr. Smith prevailed to prevent his being, as he had the right to be, made professor and elected provost. He was quietly disposed of by the grant for one year of the provost's house, the settlement of debts due him, and the grant of one hundred pounds per annum for life. Dr. John Ewing was elected provost, and Dr. John Andrews vice-provost. It would be impossible in this brief sketch to give in detail the succession of able professors and provosts whose labors sustained and increased the reputation of the University, and the reader is referred for the succession of the latter to the list appended to this article. For a few years the old premises on Fourth Street, several times enlarged and improved, continued to suffice for the needs of the college, but it soon became evident that, with the increased ability of the community to maintain liberal education, larger accommodations would be needed.

In 1791 the Legislature of Pennsylvania purchased the property extending from Chestnut to Market Streets, and from Ninth Street west one hundred and fifty-two feet, and proceeded to erect thereon a house for the President of the United States, Philadelphia being then the seat of government, and Washington in the Presidential chair. By the time the spacious and substantial edifice was completed, at a cost of nearly one hundred thousand dollars, Mr. Adams had become President. When the building was finished it was tendered by Governor Mifflin, by direction of the Legislature, to President Adams at a fair rental. Mr. Adams declined the offer, and the State was left with the property on its hands. In 1800 the property was offered at public sale on the steps of the old London Coffee-House, at Front and Market Streets (taken down in 1883), and was purchased by the University for the sum of forty-one thousand six hundred and fifty dollars, less than half its original cost. As an illustration of the advance made in the value of real estate in three-quarters of a century, it may be here stated that in 1874 the property was sold to the United States government for five hundred thousand dollars, as a site for the erection of the new post-office building. A part of the Fourth Street property was sold to enable the trustees to purchase the new property, and after extensive alterations the schools were removed to their new

quarters in 1802. In 1829 the President's house was taken down altogether, and two plain but symmetrical buildings erected on the somewhat extensive lot of ground, leaving a broad middle space between them,—one for the collegiate and one for the medical department,—and in these they prospered and flourished until the present property in West Philadelphia was acquired, and buildings suited to the greatly-enlarged needs of the several departments were there erected. During all these years there was a slow but steady progress in the direction of enlarged facilities and a wider range of instruction. Until 1810 the course of study in the department of arts covered three years, and the classes were styled senior, junior, and freshman. In that year the course was extended to four years, and the additional class thus created was called the sophomore. From time to time experiments were made in the establishment of new chairs or new departments, some of which failed to meet the expectation of their projectors, and were finally abandoned; but every experiment was suggestive of and leading to the wise classification of studies and establishment of definite courses which has at last been reached, with a certainty of the correctness of the general scheme and ample provision for the enlargement of each as necessity shall arise. The steps by which permanent results have been attained may be indicated by the following account of the establishment of the various departments now existing.

The department of arts begins, of course, with the charter erecting the academy into a college, and its history is coeval throughout with that of college and university.

The department of medicine was suggested by Dr. William Shippen, who had privately been instructing pupils in anatomy as early as 1762, but it was not until the return to this country of Dr. John Morgan, one of the first graduates of the college, who had pursued an extensive course of medical studies in Europe, that the project was carried into effect. In 1765 the department was formally organized, with Dr. Morgan as its efficient head, and the first medical commencement was held June 21, 1768, when the degree of Bachelor of Medicine was conferred upon ten gentlemen, the first medical graduates in America. Under the succession of distinguished men who, for more than a century, have made Philadelphia illustrious as a centre of medical learning, this department has ever maintained the foremost place among the institutions for medical education in this country. Rival schools have grown up around it, and in some years even exceeded it in the number of graduates sent forth, but have never obtained the reputation and standing of the University. In recent years radical changes in the system of teaching, the introduction of many subordinate subjects of instruction under skillful specialists, vastly enlarged facilities for laboratory work, and a marked increase both in the requirements for entrance on the course, as well

as in the length of the course, were found necessary, and all these made to coincide with the acquisition of the ample and well-equipped buildings erected on the new grounds in West Philadelphia. Not only has the department kept pace with the developments of medical science in its own growth, it has been the efficient cause of the creation of the auxiliary dental, hospital, and veterinary departments, each of which will be mentioned in due order.

The department of law originated in 1790, when James Wilson was elected professor of Law, an office in which he was confirmed on the establishment of the University, but met with so little encouragement that for many years it was completely dormant. In 1817 it had a brief revival under Professor Charles W. Hare, and then again ceased to have active existence until 1850, when it was revived by the late Chief Justice Sharswood, under whom it grew rapidly into importance.

As now organized, it is a most efficient and useful school of law, and its graduates are recognized by the courts of Philadelphia as competent for admission to the bar.

The auxiliary department of medicine was founded in 1865 through the liberality of Dr. George B. Wood, who provided for its maintenance during his lifetime and its endowment after his death. It gives instruction in branches collateral to the study of medicine, not included in any regular medical course, and yet believed to be of the highest importance to the thorough education of the physician. Its teaching is so distributed as to supplement and harmonize with both the curriculum in medicine and several of the courses in the Towne Scientific School.

The department of science is the outgrowth of various experiments made for the purpose of engrafting modern science upon the old curriculum of arts. For many years it sufficed that chairs of mathematics, physics, and chemistry should exist in the department of arts. But the vast growth of the physical sciences, and the demands of the age for special teaching in them, led to the establishment of first a school of natural science, then of a school of mines, and finally to a more comprehensive scheme, under the name of the department of science. A large endowment having been provided for this department by the will of the late John Henry Towne, in 1872 the name "Towne Scientific School" was conferred upon it. Its course was extended to the period of five years, and at the expiration of the second the student is required to elect one out of six parallel courses in the various subdivisions of science, to which his attention will be given for the remaining three. These courses are: I. Analytical and Applied Chemistry and Mineralogy; II. Geology and Mining; III. Civil Engineering; IV. Mechanical Engineering; V. Drawing and Architecture; VI. Studies preparatory to the Study of Medicine. It will be seen that this system may be indefinitely increased as the fields of science

are further explored, and their thorough culture may demand exclusive attention.

The department of music was established in 1877, and is a school for advanced students who desire to add to the mere ability to read and perform music a scientific acquaintance with harmony and counterpoint. The preparation of an original musical composition, as well as a rigid examination on the principles of music, are essential to graduation as Bachelor of Music. The school has never been large, but its graduates have given proof of its efficiency in teaching the profounder branches of musical study.

The department of dentistry, established in 1878, was a necessary outgrowth of the development of oral science as collateral with that of medicine. Closely connected with the medical school, it derives immense advantages from the association, and stands

UNIVERSITY OF PENNSYLVANIA.

relatively as high in the estimation of the profession. Its facilities both for theoretical and practical training are probably unequalled, and its spacious lecture- and laboratory-rooms are occupied by a large and flourishing school.

The department of finance and economy, founded by Joseph Wharton in 1881, bears his name. Its purpose is to give a thorough general and professional training to young men who intend to engage in business, to manage property, to prepare for the profession of law or journalism, or to engage in public service. Its aim is to treat as a science the great principles which underlie practical business and politics, and to fit young men by a definite training for these most important careers. Its staff of professors are men of national reputation, and it bids fair to largely advance

the fame of the University through the influence of its graduates in their chosen sphere. It may here be remarked that the University library possesses the most complete collection of works on finance and political economy that is known to exist.

The department of philosophy, organized in 1882, is intended to embrace post-graduate instruction in literature and science. Its faculty is composed of the principal professors of the other departments, and its studies properly begin about where they end. Its students may or may not be in attendance at the University; its requirements are necessarily very high, and its degree is conferred only after rigid examination in the more advanced studies.

The department of veterinary medicine, the last established, is another outgrowth of the original medical school. Long ago Dr. Rush predicted and hoped for its establishment, and when this was accomplished, after the lapse of nearly a century, one of his descendants was appointed as its head. Its aim is to give a

thorough and scientific education in veterinary medicine. Like the dental school, its close connection with the medical department gives it unusual advantages, while its own buildings and grounds, of admirable construction and ample equipment, give every facility for thorough work in veterinary surgery, forging, and the care of domestic animals.

In 1883 the four departments of arts, science, music, and finance were consolidated under the name of "The College Department," the united faculties forming one governing body, while each school retains its distinctive formation. A large part of the early work in each is identical with that of the others, and at the end of the second year the studies diverge into the special lines which fit for the degrees conferred by the particular school.

From its very beginning the University has provided for the free tuition of a certain number of deserving students, and such scholarships, with the exception of two which belonged originally to the Penn family, and were by them vested in the Governor, were awarded as occasion demanded and the ability of the trustees warranted. In 1870, when it was resolved to transfer the University to West Philadelphia, a tract of ten and a half acres was granted by the city, on which were erected the present college buildings, except that of the veterinary department. In 1872 the city granted additional ground, amounting to five and a half acres, for the erection of the hospital, to be hereafter described. In 1882 application was made for more ground, in view of the future growth of the institution, and the City Councils granted thirteen acres more for the consideration of the payment of ten thousand dollars, and the maintenance forever of fifty free scholarships, of the annual value of seven thousand five hundred dollars, for the use of graduates of the public schools of Philadelphia. By this wise arrangement the common school system of the commonwealth is not only brought into direct relation to the University, but the ablest and most deserving students of these schools can win and hold as a right, and not as a charity, a full opportunity for the higher education. The whole amount of property thus held by the University in West Philadelphia amounts to twenty-seven acres, enough to suffice for its probable growth for many years. When we add that it adjoins on one side the beautiful Woodland Cemetery, and on another the spacious grounds which the city has determined to reserve for its Municipal Hospital on the removal of the almshouse to another site, it will be seen that a most important breathing area, almost equivalent to a public park, is added to the advantages of that part of the city.

An integral part of the University, although not classed as a department, is a magnificent hospital. As soon as it was decided to remove the medical department to the new site, it was felt that the University should have a hospital of its own. A committee was appointed to carry the design into effect, and for several years its members worked with a diligence beyond all praise to secure the success of their mission. As before stated, the city granted the necessary ground. The Legislature voted the sum of two hundred thousand dollars on condition that two hundred and fifty thousand dollars additional should be subscribed and that fifty free beds should be forever maintained.

On June 4, 1874, the main building and west pavilion were formally opened, and since that date the hospital has been in active operation. The plan adopted is such that as the means are available a series of pavilions, connected by corridors, will be erected along the whole of the Spruce Street front, a length of seven hundred feet, giving ample room for an exceedingly large hospital. In 1883 an additional

pavilion was built to the westward through the liberality of Mr. Henry C. Gibson, known as the ward for chronic diseases, and devoted to those incurable cases which cannot be received in general hospitals. What is now seen is, therefore, only the centre, and two extensions on one side, of what is intended to be ultimately a noble pile of buildings. The interior plans are of the latest and most approved construction, and every essential to health, safety, and cleanliness has been provided in these model buildings. The architect, Professor T. W. Richards, who also designed the Arts and Science and Medical Halls, was aided in his labors by the advice of the most experienced physicians and hospital managers, and his plans have met with the highest approval. The hospital is always taxed to the utmost of its accommodation, and both it and the adjacent Municipal Hospital afford most valuable fields for clinical instruction to the students of the University.

It is impossible within the necessary limits of an article like this to make mention of the able and eminent men through whose devotion as trustees and professors the University has done the work and maintained its reputation for one hundred and thirty years. The appended lists of officers mention some of their names, which will be recognized as among Philadelphia's most illustrious sons. The same appendices will give some idea of the condition of the University in 1884, and will show that the present management of this venerable institution is not unworthy of its trust, and that the city and the State have just reason for pride in the University of Pennsylvania :

OFFICERS FOR 1884.

Provost of the University, William Pepper, M.D., LL.D., president *pro tempore* of the board of trustees; Trustees, the Governor of Pennsylvania (*ex officio* president of the board), Rev. Henry J. Morton, D.D., Frederick Fraley, LL.D., Rev. Charles W. Schaeffer, D.D., John Welsh, LL.D., Rt. Rev. William Bacon Stevens, D.D., LL.D., John Ashhurst, William Sellers, Rev. Richard Newton, D.D., Eli K. Price, LL.D., J. Vaughan Merrick, Fairman Rogers, Richard Wood, S. Weir Mitchell, M.D., George Whitney, Joshua B. Lippincott, Charles C. Harrison, James H. Hutchinson, M.D., Rev. George Dana Boardman, D.D., William Hunt, M.D., Horace Howard Furness, LL.D., Wharton Barker, Samuel Dickson; Rev. Jesse Y. Burk, secretary; Wharton Barker, treasurer.

*Officers of Instruction and Government.*—William Pepper, M.D., LL.D., provost of the University; E. Otis Kendall, LL.D., vice-provost; Joseph Leidy, M.D., LL.D., professor of Anatomy; Henry H. Smith, M.D., emeritus professor of Surgery; Francis A. Jackson, A.M., professor of the Latin Language and Literature; E. Otis Kendall, LL.D., Thomas A. Scott, professor of Mathematics; J. Peter Lesley, LL.D., professor of Geology and Mining; P. Pemberton Morris, A.M., professor of Practica, Pleading, and Evidence at Law and in Equity; Richard A. F. Penrose, M.D., LL.D., professor of Obstetrics and of the Diseases of Women and Children; Alfred Stillé, M.D., LL.D., professor of the Theory and Practice of Medicine, and of Clinical Medicine; Harrison Allen, M.D., professor of Physiology; Horatio C. Wood, M.D., LL.D., professor of Materia Medica, Pharmacy, and General Therapeutics, and clinical professor of Nervous Diseases; John J. Reese, M.D., professor of Medical Jurisprudence, including Toxicology; Charles J. Stillé, LL.D., emeritus John Welsh Centennial professor of History and English Literature; Oswald

Seidensticker, Ph.D. (Göttingen), professor of the German Language and Literature; John G. R. McElroy, A.M., professor of Rhetoric and the English Language; J. I. Clark Hare, LL.D., professor of the Institutes of Law, including, *inter alia*, International, Constitutional, Commercial, and Civil Law; D. Hayes Agnew, M.D., LL.D., John Rhea Barton professor of Surgery, and professor of Clinical Surgery; Rev. Robert E. Thompson, A.M., John Welsh Centennial professor of History and English Literature, professor of Social Science, and librarian; Frederick A. Genth, Ph.D. (Marburg), professor of Chemistry and Mineralogy; Samuel B. Howell, M.D., professor of Mineralogy and Geology; George F. Barker, M.D., Ph.B., professor of Physics; E. Coppée Mitchell, LL.D., professor of the Law of Real Estate and Conveyancing and of Equity Jurisprudence; Lewis M. Haupt, A.M., C.E., professor of Civil Engineering; William Pepper, M.D., LL.D., professor of Clinical Medicine; William Goodell, M.D., professor of Clinical Gynecology; William F. Norris, M.D., clinical professor of Diseases of the Eye; George Strawbridge, M.D., clinical professor of Diseases of the Ear; James Parsons, A.M., professor of Personal Relations and Personal Property; Thomas W. Richards, A.M., professor of Drawing and Architecture; George A. Koehn, Ph.D. (Heidelberg), assistant professor of Chemistry; Samuel P. Sadtler, Ph.D. (Göttingen), assistant professor of Chemistry; James Tyson, M.D., professor of General Pathology and Morbid Anatomy; Louis A. Duhring, M.D., clinical professor of Skin Diseases; Hugh A. Clarke, professor of the Science of Music; Rev. Frederick A. Muhlenberg, D.D., professor of the Greek Language and Literature; Jos. T. Rothrock, M.D., B.S., professor of Botany; Wm. D. Marks, Ph.B.; C. E. Whitney, professor of Dynamical Engineering; Theodore G. Wormley, M.D., LL.D., professor of Chemistry and Toxicology; John Ashhurst, Jr., M.D., professor of Clinical Surgery; Otis H. Kendall, A.M., assistant professor of Mathematics; Joseph G. Richardson, M.D., professor of Hygiene; Charles J. Essig, M.D., D.D.S., professor of Mechanical Dentistry and Metallurgy; Edwin T. Darby, M.D., D.D.S., professor of Operative Dentistry and Dental Histology; Andrew J. Parker, M.D., Ph.D., professor of Comparative Anatomy and Zoology; Henry W. Spangler, assistant engineer U.S.N., assistant professor of Dynamical Engineering; Morton W. Easton, Ph.D., professor of Comparative Philology; James Truman, D.D.S., professor of Dental Pathology, Therapeutics, and Materia Medica; Frederick A. Genth, Jr., M.S., assistant professor of Chemistry; Albert S. Bolles, Ph.D., professor of Mercantile Law and Practice; Rush Shippen Hudekoper, M.D., V.S. (Alford), professor of Veterinary Anatomy and Pathology; Edmund J. James, Ph.D. (Halle), professor of Finance and Administration; John Bach McMaster, A.M., professor of American History; George Tucker Bispham, A.M., professor-elect of Practice, Pleading, and Evidence at Law and in Equity; Robert Meade Smith, M.D., professor of Comparative Physiology; Charles T. Hunter, M.D., demonstrator of Anatomy and assistant surgeon in University Hospital; Roland G. Curtin, M.D., lecturer on Physical Diagnosis, and assistant physician in University Hospital; Charles K. Mills, M.D., lecturer on Mental Diseases; Samuel D. Bissley, M.D., instructor in Ophthalmology and Ophthalmological Surgery in University Hospital; De Forrest Willard, M.D., lecturer on Orthopaedic Surgery; J. William White, M.D., demonstrator of Surgery and lecturer on Venereal Diseases, and assistant surgeon in University Hospital; Benjamin F. Baer, M.D., demonstrator of Clinical Gynecology; Elliott Richardson, M.D., lecturer on Clinical and Operative Obstetrics and demonstrator of Operative Obstetrics; Adolph W. Miller, M.D., lecturer on Materia Medica and Pharmacy and demonstrator of Practical Pharmacy; John Marshall, M.D., Nat.Sc.D. (Tübingen), demonstrator of Practical Chemistry; William Barton Hopkins, M.D., assistant demonstrator of Surgery; George A. Pieroul, M.D., demonstrator of Normal Histology; Henry F. Formad, M.D., demonstrator of Pathological Histology and of Morbid Anatomy, lecturer on Experimental Pathology, and librarian of the Stillé Medical Library; Walter M. L. Ziegler, M.D., instructor in Otolary and Aural Surgery in University Hospital; Carl Seiler, M.D., instructor in Laryngology; Edward T. Bruen, M.D., demonstrator of Clinical Medicine and assistant physician in University Hospital; Albert L. A. Toboldt, M.D., assistant demonstrator of Practical Pharmacy; Harry R. Wharton, M.D., demonstrator of Clinical Surgery and assistant demonstrator of Surgery; Richard H. Harte, M.D., assistant demonstrator of Surgery and Anatomy and assistant surgeon in University Hospital; Robert Hney, D.D.S., lecturer on Operative Dentistry; William Diehl, D.D.S., demonstrator of Operative Dentistry; Louis Starr, M.D., instructor in Diseases of Children, assistant physician in University Hospital; John B. Deaver, M.D., demonstrator of Osteology and Syndesmology and assistant demonstrator of Anatomy; Francis X. Dercum, M.D., instructor in Nervous Diseases; Thomas R. Neilson, M.D., assistant demonstrator of Anatomy; Edmund W. Holmes, M.D., assistant demonstrator of Anatomy; Wil-

liam M. Gray, M.D., assistant demonstrator of Normal Histology; Edward T. Reichert, M.D., demonstrator of Experimental Therapeutics; William A. Edwards, M.D., assistant demonstrator of Clinical Medicine; Judson Daland, M.D., assistant demonstrator of Clinical Medicine; N. Archer Randolph, M.D., assistant demonstrator of Physiology and instructor in Physiology; Edwin S. Crawley, B.S., instructor in Civil Engineering; William L. Cave, D.D.S., demonstrator of Mechanical Dentistry; Stephen L. Wiggins, D.D.S., assistant demonstrator of Operative Dentistry; J. Judson Edwards, D.D.S., assistant demonstrator of Mechanical Dentistry; Rev. George S. Fullerton, A.M., B.D., instructor in Intellectual and Moral Philosophy; Henry F. Keller, B.S., assistant in Chemistry; Lieut. Joseph B. Murdock, U.S.N., assistant in Physics; Chester N. Farr, instructor in the Theory and Practice of Accounting; Frederick C. Sheppard, M.D., assistant gynecologist; Henry A. Was-muth, E.M., assistant in Geology and Mining; George E. Shoemaker, M.D., assistant demonstrator of Physiology; J. Hendrie Lloyd, M.D., instructor in Electro-Therapeutics; A. Sydney Roberts, M.D., instructor in Orthopaedic Surgery; J. P. Crozer Griffith, M.D., assistant demonstrator of Normal Histology; George E. De Schweinitz, M.D., prosector to the professor of Anatomy; Horace F. Jayne, M.D., assistant instructor in Biology; Henry W. Stelwagon, M.D., instructor in Dermatology; John B. Webster, clerk to the college faculty; William H. Salvador, clerk to the faculty of medicine.

Girard College.—The founder of this institution was Stephen Girard, mariner, merchant, and banker, who left by his will two million dollars for its erection and endowment. Mr. Girard died on the 26th of December, 1831. As soon as Timothy Paxson, Thomas P. Cope, Joseph Roberts, William J. Duane, and John A. Barclay, his executors, had advanced sufficiently far in the settlement of his large estate to authorize the undertaking, the Councils of Philadelphia, who were selected by Mr. Girard as his trustees, took the necessary steps to carry out his intentions. Accordingly, on the 11th of February, 1833, they elected a board of directors to superintend the organization and management of the college in conformity with his will. This board, which consisted of the most prominent citizens of the city, organized on the 18th of the same month by the election of Nicholas Biddle as chairman, and immediately entered upon the discharge of their duties. As the ordinance creating a board of directors conferred no power with regard to the construction of an edifice for the college, the Councils, on the 21st of March, appointed a sub-committee of their body, to be called the building committee, who, with eight members of the board of directors

and the architect, were instructed to prepare a plan for the college building.

The joint committee met on the 18th of April, 1833, and, after due examination, determined that the designs which had previously been received from all parts of the United States in competition for the premium offered should be set aside, and Thomas U. Walter, who had been elected the architect, was instructed to prepare a plan of the main building, with a portico extending around the entire structure, and conforming in the dimensions and form of the cella or body of the building, to the directions laid down in the will of Mr. Girard. The design prepared by this gentleman, substantially the present edifice, was approved by Councils on the 29th of April, and excavations for the foundations having been commenced on the 6th of May following, the corner-stone of the college was

six inches high and nine feet four inches wide on the face of the abacus. The corner columns have one and one-half inches more diameter than the intermediate ones, for the purpose of overcoming the apparent reduction in their size arising from their insulated position. Each frustum composing the shafts, as well as the bases, consists of a single piece without vertical joints.

The exterior of the cella or body of the building measures one hundred and eleven feet wide, one hundred and sixty-nine feet long, and fifty-nine feet eight inches high, including the architrave, which corresponds with that of the peristyle.

The building is three stories in height, the first and second stories being twenty-five feet from the floor, and the third story being thirty feet in the clear to the eye of the dome. Each story is divided, as di-

GIRARD COLLEGE.

laid with fitting ceremonies on the 4th of July, 1833. The main edifice and out-buildings were completed and transferred to the directors on the 13th of November, 1847, making fourteen years and six months as the entire period occupied in the execution of the work.

The total amount expended for this construction, not including the western out-buildings, which have since been erected, was \$1,933,821.78.

The general design of the main building is that of a Greek temple, having eight columns on each end and eleven on each side, counting the corner columns both ways, making in all thirty-four columns. The order of architecture in which the exterior is composed is the Grecian Corinthian. The columns are six feet in diameter and fifty-five feet in height, the bases are nine feet three inches in diameter and three feet two inches high, and the capitals are eight feet

rected by the will, into four rooms, each fifty feet square in the clear. All the outside foundation walls of the cella, and the walls separating the cellars under the rooms from those under the vestibules, are six feet four inches thick, and the rest of the interior foundation walls are three feet four inches thick. The thickness of the wall for supporting the columns is nine feet nine inches, and the intercolumniations, as well as all other openings, are counter-arched with bricks. The outside walls of the superstructure and the interior vestibule walls are four feet in thickness, and the rest of the interior walls three feet. All the rooms and vestibules in the building are vaulted with bricks, those of the basement, first and second stories with groin-arches, and those of the third story with pendentive domes springing from the floors.

The superstructure rests on a stylobate or basement, consisting of eleven steps, which extend around the

entire edifice, thus imparting a pyramidal appearance to the substructure, which conveys an idea of great solidity, and at the same time affords an approach to the peristyle from all sides.

The roof is composed of marble tiles, and the ceiling of the peristyle entirely of cast iron. The flooring of the interior of the building amounts in the aggregate to thirty-eight thousand one hundred and thirty superficial feet, all of which is done with marble tiles. The area on which the building stands, exclusive of the steps, measures thirty-four thousand three hundred and forty-four superficial feet, of which twelve thousand eight hundred and sixty-two feet are occupied by the walls.

The following materials were used in the construction of the main building:

	Tons.
177,168 cubic feet of marble, weighing .....	13,537
21,366 cubic feet of granite, weighing .....	1,717
25,139 flooring tiles, weighing .....	409
12,134,980 bricks, weighing .....	27,087
12,495 perches of building stone, weighing .....	19,635
Wrought iron for bands, cramps, etc., weighing .....	134
Cast iron in ceiling of portico, weighing .....	142½
Cast iron in water-pipes, weighing .....	18
Cast iron in sky-lights and inner rims, weighing .....	18½
Milled lead for gutters and setting marble, and lead for cramping, weighing .....	48½
53,720 bushels of lime, weighing .....	1,431
50,224 bushels of river-sand, weighing .....	3,232
133,646 bushels of pit-sand, weighing .....	8,759
4,200 bushels of hydraulic cement, weighing .....	250
Locks, fastenings, glass, lumber in doors and windows, etc., weighing about .....	118
Making the aggregate weight of the building .....	76,594½

Mr. Girard directed that at least four out-buildings, detached from the main edifice and from each other, should be erected, which buildings he ordered should be sufficiently spacious for the residence and accommodation of at least three hundred scholars, and the requisite teachers and other persons necessary in such an institution.

In compliance with this provision of the will, before the year 1861, five out-buildings had been constructed. In 1877-78, the primary school building and the chapel were erected, at an expenditure of \$348,030. In 1880-82, a dining-room for 800 boys and sleeping apartments for 230 were provided, at a cost of \$201,804. Mechanical hall, which is in course of completion at a cost of \$45,000, will be ready for occupancy May 1, 1884.

It had been the original intention of Mr. Girard that the college buildings should occupy his square of ground comprehended within the limits of Market and Chestnut and Eleventh and Twelfth Streets in the city proper. But becoming afterward by purchase the possessor of the farm of Peel Hall, on the Ridge road, he chose the latter as the more desirable site, and it is here that the college has finally been established.

During the progress of the main building an unsuccessful effort was made by the next of kin to Mr. Girard, to defeat the intentions of the testator, by alleging that the institution was illegal and immoral, and by laying claim to the fund appropriated for its

establishment. Although not specifically set forth in the bill of complaint, yet the following portion of Mr. Girard's will was relied upon as a most important portion of the argument to invalidate the intentions of the testator:

"I enjoin and require that no Ecclesiastic, Missionary, or minister of any sect whatsoever, shall ever hold or exercise any station or duty whatever in the said College; nor shall any such person ever be admitted for any purpose, or as a visitor, within the premises appropriated to the purposes of the said college. In making this restriction, I do not mean to cast any reflection upon any sect or person whatsoever; but as there is such a multitude of sects, and such a diversity of opinion amongst them, I desire to keep the tender minds of the orphans, who are to derive advantage from this bequest, free from the excitement which clashing doctrines and sectarian controversy are so apt to produce; my desire is, that all the instructors and teachers in the College, shall take pains to instil into the minds of the scholars, the purest principles of morality, so that, on their entrance into active life they may from inclination and habit, evince benevolence toward their fellow creatures, and a love of truth, sobriety, and industry, adopting at the same time such religious tenets as their matured reason may enable them to prefer."

It was objected that the foundation of the college upon these principles and exclusions was derogatory and hostile to the Christian religion, and was void, as being against the common law and public policy; first, because of the exclusion of all ecclesiastics, missionaries, and ministers of any sect, and, secondly, because it limits the instruction to be given to the scholars to pure morality and general benevolence, and to a love of truth, sobriety, and industry, thereby excluding by implication all instruction in the Christian religion. The cause was first argued before the Supreme Court at January term 1843 by Mr. Stump and Mr. Jones of Washington on behalf of the Girard heirs, and by Mr. Sergeant for the city; but the judges thinking that it was proper to rehear the cause before a fuller court, a reargument was ordered, and took place at January term, 1844, where Gen. Walter Jones and Daniel Webster appeared for the complainants, and Horace Binney and John Sergeant for the city and executors.

The unanimous decision of the court was delivered by Justice Story, establishing in an elaborate opinion that the trust and charity were valid and legal, and that there was nothing in the devise creating the college, or in the regulations and restrictions contained therein, which is inconsistent with the Christian religion or opposed to any known policy of the State.

During the progress of the building, the board of directors deemed it advisable to select a presiding officer of the institution in advance of its organization, who would prepare a system of discipline and instruction for the college in anticipation of its speedy completion. Having obtained the necessary authority from Councils, they accordingly, on the 19th of July, 1836, elected Alexander Dallas Bache, of the city of Philadelphia, the first president of the college, with instructions to visit similar institutions in Europe, and to procure such books and apparatus as should be needed in its organization. Upon the return of President Bache, in 1838, efforts were made by the board to establish schools preparatory to the completion of

the college, which it was now found would require several years to finish; but in consequence of the opinion of competent legal authority that the organization of the institution before the completion of the buildings would be in violation of the will, the requisite permission was not granted.

Soon after this period, difficulties arose between Councils and the directors, which resulted ultimately in the repeal both of the ordinance creating the board, and that authorizing the election of a president.

From this period until its completion the building committee continued to have charge of the erection of the college, and in June, 1847, the edifice being then nearly finished, a new board of directors was again appointed to organize and manage the institution.

The buildings were formally transferred to the directors on the 13th of November, 1847; on the 15th of December following, the necessary officers and agents were elected, the Hon. Joel Jones, then president judge of the District Court for the city and county of Philadelphia, being selected as the president, and on the 1st of January, 1848, the college was opened with fitting ceremonies, with a class of one hundred orphans who had been previously admitted. On the 1st of October of the same year, one hundred additional boys were introduced, and on the 1st of April of the following year, a third class of one hundred pupils was admitted. Since then, from time to time as vacancies have occurred, other orphans have been admitted to supply their places.

On the 1st of June, 1849, Judge Jones resigned the office of president of the college, and on the 23d of November of the same year William H. Allen, M.D., LL.D., then professor of Mental Philosophy and English Literature in Dickinson College, Pennsylvania, was duly elected to fill the vacancy. This gentleman having accepted the appointment, was duly installed on the 1st of January, 1850, and continued until the close of 1862, when he resigned. He was succeeded by Richard Somers Smith June 24, 1863, who resigned in September, 1867. William H. Allen was re-elected president and served until his death, Aug. 29, 1882. Dr. Allen was born near Augusta, Me., March 27, 1808, and received his preparatory education at the

Maine Wesleyan Seminary. At the age of twenty-one he entered Bowdoin College, from which he graduated after a four-years' course. After leaving college he taught Greek and Latin for two and a half years in the Oneida Conference Seminary at Cazenovia, N. Y., and then returned to Augusta, Me., where he took charge of the high school. In a few months he accepted the chair of professorship of Chemistry and Natural Philosophy at Dickinson College, which he occupied for ten years, and then filled that of English Literature for three years. He was a regular con-

WILLIAM H. ALLEN, M.D., LL.D.

tributor to the *Methodist Quarterly Review*, and delivered lectures in Boston, Philadelphia, Baltimore, and Indianapolis. In 1850 the degree of Doctor of Laws was conferred upon him by the Union College, New York, and also by Emory and Henry College, Virginia. In March, 1872, he was elected president of the American Bible Society. He was succeeded as president of Girard College on Jan. 1, 1883, by Adam H. Fetterolf, Ph.D., who is still holding the dignified and arduous position.

Some years ago it was found that the institution was

so large that the president needed assistance. Henry W. Arly was elected vice-president, and discharged that duty for several years. He had been secretary of the board of directors from the opening of the institution. A. H. Fetterolf succeeded Mr. Arly as vice-president after the resignation of the latter, and upon the election of Mr. Fetterolf to be president, Henry D. Gregory was elected vice-president.

While the Councils of the city, as the trustees of Mr. Girard's will, still retain the general supervision of the institution, the immediate government of the college is vested in the Board of City Trusts. This board is subdivided into various standing committees, who have respectively charge of the various departments of the institution. The will of Mr. Girard provides that the college shall be for the benefit of "poor white male orphan children." If at any time there are more applicants than vacancies, a preference is given by the will, first, to orphans born in the city of Philadelphia; secondly, to those born in any other part of Pennsylvania; thirdly, to those born in the city of New York; and, lastly, to those born in the city of New Orleans. To be qualified for admission, orphans must be between the ages of six and ten years, and no application is received for admission of a child before he attains the first-named age, nor can he be admitted into the college after becoming ten years of age, although the application has been made previously. At present (1884) the institution contains the following number of scholars in the various schools: Fourth School, 223; Third School, 302; Second School, 240; First School, 339; making a total of 1104.

The administration of the Girard College, and the collection and management of the revenues which maintain it, constitute the most important part of the trusts committed to the charge of the Board of City Trusts, of which Alexander Biddle is president, William H. Drayton vice-president, and Joseph L. Caven, William B. Mann, James Campbell, John H. Michener, James L. Claghorn, Henry M. Phillips, Charles H. T. Collis, George H. Stuart, Benjamin B. Comegys, and Louis Wagner members of the board.

The officers of the Girard estate are James A. Kirkpatrick, superintendent; Charles S. Smith, consulting superintendent; F. Carroll Brewster, solicitor.

The officers of Girard College for 1883-84 are as follows:

President, A. H. Fetterolf, Ph.D.; Vice-President, Henry D. Gregory, Ph.D. Faculty and Teachers: George J. Becker, professor of Drawing, Writing, and Book-keeping; Lemuel Stephens, A. M., professor of Physics and Industrial Science; Warren Holden, A. M., professor of Mathematics; Elmore C. Hine, M.D., professor of Natural History; Miss Mary Lynch, teacher of English Studies, and librarian; Miss Keturah Cole, teacher in Fourth School; Miss Charlotte E. Overn, teacher in Third School; Miss Elizabeth McDuffie, teacher in Third School; Miss Heaste R. Miller, teacher in Third School; Miss Mary D. Wars, teacher in Third School; Miss Margaret Wylie, teacher in Third School; Miss Virginia B. Tucker, teacher in Third School; Miss Mary L. Nevillo, teacher in Third School; Miss Kate V. Linderman, teacher in Third School; Miss

Emily P. Town, teacher in Second School; Miss Minnie M. Jones, teacher in Second School; Miss Mary E. Clime, teacher in Second School; Miss Amelia C. Wight, teacher in Second School; Miss Mary I. Campbell, teacher in Second School; Miss Martha E. Bentley, teacher in Second School; Miss Florentine A. Merino, instructor in Spanish; Mme. S. Anna Simon, instructor in French; Miss Fanny West, teacher of Drawing; Miss Ida C. Craddock, teacher of Phonography; Miss M. B. Heritage, teacher of Elocution; Thomas A'Becket, professor of Vocal Music; George Bastert, instructor of brass band; Maj. John W. Ryan, commandant of cadets; T. Mason Mitchell, mechanical instructor. First or Primary Department, Miss Hallie Braddock, Miss Inez E. Walsh, Miss Kato E. Thompson, Miss Harriet N. Breadin, Miss Kats V. Campbell, Miss Mary Wise, Mrs. Eleanor L. Gilbert, Miss Christiana Breiding, Miss Emily Bushong, Miss Emma D. Harron.

Household.—Matron, Miss Anna M. Shreve; Assistant Matron, Mrs. Elizabeth B. Thompson; Prefects, William H. Kilpatrick, George W. Oram, A. M., Robert S. Brier, Frank Danenhour, Louis T. Reed, Henry H. Hay, Frank L. Scribner, George W. Pollock, A. D. Dudbridge, George W. Price; Governesses, Miss Mary White, Miss Mary Govers, Miss E. J. Hare, Miss Mary Madstra. Primary Department: Prefects, Willard B. Rivell, Joseph L. Springer; Governesses, Mrs. Mary J. Woodland, Miss Anna B. Grove, Miss Sallie M. Chew, Miss Caroline M. Whitecar, Miss Ann Jane Cross, Mrs. Fanny T. Boas, Mrs. Emma Noble, Miss Virginia Miller; Superintendent of Manual Labor, I. E. Shimer; Steward, Thomas Perrins; Physicians, James Markoe, Jr., M.D., John J. Reese, M.D.; Dentist, Wilbur F. Litch, M.D.

The property of the Girard estate is carefully guarded. The receipts from Jan. 1, 1882, to Dec. 30, 1883, both inclusive, were as follows:

Rent from real estate in the city.....	\$324,477.98
Rent from collieries.....	467,809.82
Water-rent, Schuylkill County.....	5,474.44
Rent from real estate, and sale of surface right of lots in Schuylkill and Columbia Counties.....	16,508.24
Interest on city loans.....	84,786.60
Other sources.....	67,761.32

Gross revenue.....\$931,295.76

The Girard estate, comprising the residuary fund, on Dec. 31, 1882, consisted of the following:

Girard College, ground, and buildings (cost).....	\$2,888,974.88
Banking-houses, dwellings, stores, wharves, and farms in the city of Philadelphia (assessed valuation for 1882).....	3,734,900.00
Real estate in Schuylkill and Columbia Counties, Pa., about twenty thousand acres (assessed valuation for 1882).....	1,511,917.00
Stocks and loans (par value).....	1,466,165.22
Cash in the city treasury.....	27,247.82
	\$9,829,204.92

Alexander Biddle, the president of the Board of Directors of City Trusts, which has the management of the Girard estate and many other important trusts, was born in Philadelphia on the 19th of April, 1819. He was one of five sons, the father being Thomas Biddle, a well-known financier, and the head of the old banking firm of Thomas Biddle & Co., who married Christina Williams, daughter of Brig.-Gen. Jonathan Williams, a relative of Benjamin Franklin, who was the organizer and first superintendent of the West Point Military Academy, and member of Congress-elect from Philadelphia at the time of his death.

The Biddle family in America originated from William Biddle, who, about 1681, emigrated from England, and settled in West Jersey, where he became a member of the Provincial Council, a member of the Council of Proprietors, and a member of the General Assembly. Among the descendants of the original emigrant have been many men of distinction, who have brought credit upon themselves, their family name, and the nation at large. Among these,

Engraved by James T. Smith, Phila.

A. Biddle

in this branch of the descent, have been the following: Owen Biddle (born 1738, died 1799), member of the Committee of Safety, member of the Council of Safety, member of the Constitutional Convention, member of the Board of War, etc.; Clement Biddle (born 1740, died 1814), colonel and quartermaster-general in the Continental army, etc.; Col. Clement C. Biddle (born 1784, died 1855), commandant of the Pennsylvania Regiment Light Infantry (volunteers) during the war of 1812, first president of the Philadelphia Savings-Fund Society, and a writer on political economy; John Cadwalader (born 1805, died 1879), member of Congress from Pennsylvania, and judge of the United States District Court at Philadelphia; George Cadwalader (born 1806, died 1879), brigadier-general United States army; Henry Jonathan Biddle (born 1817, died 1862), adjutant-general Pennsylvania Reserves, United States army; Col. Chapman Biddle (born 1822, died 1880), commandant of the One Hundred and Twenty-first Pennsylvania Regiment in the war of 1861-65; and Thomas Biddle (born 1827, died 1875), United States minister to Ecuador.

Alexander Biddle is of the sixth generation from the founder of the family in America, being a grandson of Col. Clement Biddle, quartermaster-general under Gen. Washington, whose continued services the great patriot requested in an autograph letter, still preserved, after the colonel had served long and honorably, and had determined to retire to private life. Alexander Biddle was educated at the University of Pennsylvania, from which institution he graduated. After leaving college he entered the counting-house of Bevan & Humphreys, the largest shipping firm in Philadelphia at that time. At the end of four years he went to Australia, China, and Manila as supercargo. After devoting two years to this service he returned home, and, at the end of another four years, during which time he was engaged in various pursuits, he entered his father's firm, Thomas Biddle & Co., where he remained until the breaking out of the civil war.

Upon the organization of the One Hundred and Twenty-first Regiment, Pennsylvania Volunteers, of which his cousin, Chapman Biddle, was the colonel, he was chosen its major. This regiment was originally assigned to the Pennsylvania Reserves, under Gen. Meade, and subsequently to the First Corps, under Gen. Reynolds, and participated in the following notable engagements, among others: Fredericksburg, Chancellorsville, and Gettysburg. In the battle last mentioned he was in command of the regiment, thus ranking as lieutenant-colonel, and was subsequently commissioned as colonel. After eighteen months of duty he left the service and returned home.

He did not, however, engage in private business pursuits, but directed his attention toward enterprises of a more public character. He was chosen a di-

rector of the Pennsylvania Railroad Company, a position which he still holds. Among other corporate business enterprises with which he became connected as a director may be enumerated the following: The Pennsylvania Company for Insurance on Lives, the Philadelphia Savings-Fund Society, the Lehigh Navigation Company, the Contributionship Insurance Company, the latter established by Benjamin Franklin, and other institutions of a kindred character. He has been a member of the Board of Directors of City Trusts since its organization, in September, 1869, and, in January, 1882, was chosen its third president. He is also a director of the Pennsylvania Hospital. By the will of the late Dr. James Rush, Mr. Biddle was named as executor to succeed Henry J. Williams, his uncle, in the erection of the Ridgway Library, Broad Street, between Christian and Carpenter, a monument creditable to the taste and character of its founder.

On the 11th of October, 1855, Mr. Biddle was married to Julia Williams Rush, daughter of Samuel Rush, late recorder of the city of Philadelphia, and granddaughter of Dr. Benjamin Rush, a signer of the Declaration of Independence, and of Revolutionary fame. He has six children living,—four sons and two daughters.

#### Catholic Educational Institutions and Convents.

—Thirty-five parochial schools, twenty-five academies and select schools, and two colleges of the Brothers of the Christian Schools within the limits of Philadelphia is strong evidence that the Catholics are promoters of education. From a sense of religious duty, these schools are supported at the expense or by the volunteer contribution of Catholics, who, equally with other citizens, bear the burden of the public school system, which, on account of conscientious scruples, they refuse to allow their children to attend.

More than one hundred years ago the Catholics of this city maintained a school. As early as 1781 subscriptions for "paying for the old school-house and lot purchased for £400" were taken up by the Catholics of Philadelphia. A new school-house was built that year, and the accounts preserved show that £440 15s. 6½d. were paid for its erection. This school-house was situate in the rear of the lot now known as No. 324 Walnut Street, near the end of the narrow alley leading to old St. Joseph's Church.

From this small beginning the Catholic educational institutions have grown to the largest proportions of any religious denomination in the city. They are scattered in every section of the city, and their pupils in attendance number among the thousands.

The following are among the Catholic educational institutions of the city:

**Theological Seminary of St. Charles Borromeo** (Overbrook Post-Office, Pa.).—In June, 1832, Rt. Rev. F. P. Kenrick, in order to prepare candidates for the priesthood, began the nucleus of a seminary in the pastoral residence of St. Mary's Church. It

was afterward removed to a house where the bishop went to reside, on Fifth Street, below Spruce, west side, thence to the northwest corner of Fifth and Prune [now Locust] Streets. In 1837, Bishop Kenrick determined to erect a seminary. The northeast corner of Eighteenth and Race Streets was secured, and at the session of the Legislature in 1838 an act of incorporation was passed constituting John Keating, John Diamond, Joseph Dugan, Michael Magrath, and M. A. Frenaye the lay trustees to act with Bishop Kenrick, the president of the seminary, the professor of Theology, and the professor of Sacred Scriptures, making nine trustees. On Sept. 21, 1838, Bishop Kenrick issued a pastoral letter calling for contributions. Heretofore the institution had been his individual concern. On Jan. 22, 1839, the seminary was occupied by students. In 1850 it was enlarged, and a preparatory seminary was opened at Glen Riddle. In April, 1864, the present grand seminary at Overbrook, Delaware Co., was begun, and in 1871 occupied by students from the seminary at Eighteenth and Race Streets, which was closed, as also that at Glen Riddle. On Nov. 7, 1882, the fifteenth anniversary of the institution was celebrated.

*Faculty.*—Very Rev. William Kieran, S.T.D., rector, professor of Dogmatic Theology, English, Rhetoric, Mathematics, and Christian Doctrine; Rt. Rev. Mgr. James A. Corcoran, S.T.D., professor of Sacred Scripture, Moral Theology, Hebrew, Syriac, and Homiletics; Rev. Valentino Valentini, professor of Dogmatic Theology, Ecclesiastical History, Latin, and Greek; Rev. James F. McLoughlin, S.T.D., professor of Canon Law, Natural Sciences, English, and Chant; Rev. Hermann Heuser, professor of Liturgy, Latin, Greek, and German; Rev. Francis P. Siegfried, professor of Philosophy; Rev. Bernard Ruxton, professor of Latin; Rev. William M. Daly, S.T.D., professor of English Literature, Profane History, Latin, and Greek; Rev. John J. McCort, professor of Mathematics and English. Number of seminaries, 95. Number of books in library, 15,600.

**St. Vincent's, Germantown.**—Central house, scholasticate, and novitiate of the priests of the congregation of the mission. Very Rev. Thomas J. Smith, V.C.M., superior and visitor of the congregation of the mission in the United States; vice-superior and master of novices, Rev. James Rolando, C.M.; Rev. Joseph Alizeri, C.M., Rev. William Ryan, C.M., Rev. Thomas Shaw, C.M., Rev. Thomas O'Donoghue, C.M., Rev. A. J. Meyer, C.M., Rev. Peter V. Byrne, C.M., Rev. Thomas J. Abbott, C.M., Rev. James Lefevre, C.M., Rev. Sylvester Haire, C.M., Rev. Aloysius Krabler, C.M., Rev. Martin Dyer, C.M., Rev. Patrick McHale, C.M., Rev. John P. Neck, C.M., Rev. James Devine, C.M., Rev. James Hennelly, C.M., Rev. James Sullivan, C.M., Rev. Thomas Weldon, C.M. Total number of the community in the diocese, 46.

A band of priests is here set apart to be actively engaged in giving missions. All applications for missions are addressed to Very Rev. Thomas J. Smith, V.C.M., St. Vincent's Seminary, Germantown, Philadelphia, Pa. Band of missionaries: Rev. Thomas M. O'Donoghue, C.M., Rev. Thomas A. Shaw, C.M., Rev. A. J. Meyer, C.M., and others.

**St. Joseph's College,** Seventeenth and Stiles Streets, incorporated Jan. 29, 1852.—Faculty, board of trustees, and other officers: Rev. B. Villiger, S.J., president; Rev. James McHugh, S.J., secretary; Rev. J. M. Ardia, S.J., Rev. P. Blenkinsop, S.J., Rev. P. Duddy, S.J., Rev. P. A. Jordan, S.J., Rev. F. O'Neill, S.J., Rev. Charles Cicatorri, S.J., Rev. A. Coppens, S.J., Rev. L. Vigilante, S.J., Rev. P. Claven, S.J., Rev. A. Romano, S.J., Mr. J. Dowling, S.J., Mr. W. A. Gormley, S.J. Number of pupils, 150.

The reverend Fathers are building a new college at Seventeenth and Stiles Streets for the preparatory classes.

**La Salle College** (incorporated under the Brothers of the Christian Schools), No. 1321 Filbert Street.—Honorary President, the Most Rev. Archbishop; President, Brother Clementian; Vice-President, Brother Paphylinus; Treasurer, Brother Isidore; Secretary, Brother Blandin. Professed Brothers, 24. Total number of Christian Brothers in the diocese, 51. Number of students in college, 217; in the diocese, 3587.

**Convents and Religious Communities.**—Convent of our Lady of the Good Shepherd, Thirty-fifth Street and Silverton Avenue, West Philadelphia. Number of choir Sisters, 20; lay Sisters, 16; novices, 25; out-door Sisters, 5; postulants, 5; total number of Sisters in the convent, 71; total number of Sisters of the Good Shepherd in the diocese, 91. The Magdalen Convent contains 54 professed Sisters, 14 novices. Number of penitents, 245. Number in preservation class, 94. Mother Mary of St. Ignatius Murray, provincial and superioress.

Convent of Our Lady of the Good Shepherd, Thirty-ninth and Pine Streets, Philadelphia. Number of choir Sisters, 11; out-door Sisters, 4; lay Sisters, 5; total number in the convent, 20. Mother Mary Philomena, superior.

Mt. St. Joseph's Convent (Sisters of St. Joseph), Chestnut Hill, Philadelphia. Professed Sisters, 35; novices, 18; postulants, 6. Number of religious in the convent, 59. Total number of Sisters of St. Joseph in the diocese, 275. Mother Mary John, superior.

Convent of the Sister-Servants of the Immaculate Heart of Mary (P.O. address Villa Maria), West Chester, Pa. Professed Sisters, 20; novices, 17; postulants, 7. Number of religious in the convent, 44. Total number of Sisters of the Immaculate Heart of Mary in the diocese, 127. Mother Mary Gonzaga, superior.

Convent of the Sacred Heart, Eden Hall (Torresdale P.O.), Philadelphia. Professed Sisters, 57. Total number in this community, 57. Total number of the religious of the Sacred Heart in the diocese, 74. Madam C. McNally, superior; Rev. Lawrence Wall, chaplain.

Convent of the Sacred Heart, No. 1334 Walnut Street, Philadelphia. Professed Sisters, 17. Total

number in the convent, 17. Madam M. Shortill, superior.

Convent of the Sisters of Notre Dame, West Rittenhouse Square, Philadelphia. Professed Sisters, 36. Number in the diocese, 36. Sister Julia, superior.

Convent of Sisters of Mercy, Broad and Columbia Avenue, Philadelphia. Professed Sisters, 26; novices, 9; postulant, 1. Total number of the community in the diocese, 36. Mother M. Patricia Waldron, superior. The Sisters visit and instruct the sick and dying poor. They also visit the State and county prisons for the purpose of giving religious instruction.

Convent of the Holy Child Jesus, Sharon (Sharon Hill P.O.), Delaware Co., Pa. Professed Sisters, 27; novices, 13; postulants, 2. Total number in convent, 42. Total number of the community in the diocese, 70. Mother Mary Walburga, superior; Rev. Thomas O'Neil, chaplain.

Convent of the School Sisters of Notre Dame, No. 1056 Lawrence Street, Philadelphia. Professed Sisters, 12; novices, 2; postulants, 3. Total number in the convent, 17. Total number in the diocese, 35. Sister Mary Cassiana, superior.

Convent of the Sisters of the Third Order of St. Francis Assisium, No. 505 Reed Street, Philadelphia. Professed Sisters, 25; postulants, 3. Total number of Sisters of St. Francis in the community, 28. Mother Mary Agnes, superior.

Convent of Our Lady of Angels, Glen Riddle, Delaware Co., Pa. Professed Sisters, 20; novices, 48; postulants, 6. Total number in community, 74. Total number in the diocese, 170. Sister Mary Juliana, superior; Rev. B. Scheler, chaplain.

Sisters of Charity of St. Joseph's Sisterhood, Emmittsburg, Md. Total number of the community in the archdiocese, 43.

Convent of the Little Sisters of the Poor, North Eighteenth, above Jefferson Street, Philadelphia. Professed Sisters, 16; postulants, 5; total, 21. Total number in the diocese, 34. Mother Gatienne, superior.

St. John Baptist's, Manayunk. Boys 300, girls 345, taught by the Sisters of the Immaculate Heart of Mary.

Assumption, Manayunk. Boys 134, girls 156, taught by Sisters of the Third Order of St. Francis.

All Saints, Bridesburg. Boys 80, girls 78, taught by the Franciscan Sisters.

Tacony. Boys 93, girls 95, taught by School Sisters of Notre Dame.

Chestnut Hill. Boys 60, girls 68, taught by the Sisters of St. Joseph.

Nativity of Blessed Virgin Mary. Boys 152, girls 131, taught by Sisters of Christian Charity.

**The Brothers of the Christian Schools.**—This educational order came to Philadelphia in 1853, and on August 15th opened St. Peter's School. St. Michael's and St. Ann's were the next parishes to secure the services of the Brothers; St. Paul's also, in September, 1864; St. Patrick's, March 20, 1865. The La Salle College, Juniper and Filbert Streets, opened Aug. 28, 1867, with Brother Oliver as president. Cathedral School opened by Brothers September, 1868. St. Augustine's and the Assumption Schools are also in charge of the order, which, on the first Monday of September, 1883, opened a preparatory department at 1240 North Broad Street. There are fifty-one Brothers in the archdiocese. The number of boys taught by them is about three thousand.

**The Congregation of the Sisters of St. Joseph,** established at Puy, in 1650, claims as its founders Father John Peter Medaille, S.J., the famous Apostle of Velay, and Henry de Maupas du Tour, Bishop of Puy and Count of Velay, the friend of St. Vincent de Paul,<sup>1</sup> the originator of many and great designs for the promotion of religion in France. "Yet among all his works," to quote the words of his biographer, "the most remarkable, the most fruitful was, undoubtedly, the foundation of the admirable Congregation of the Sisters of St. Joseph, at once contemplative, educational, and devoted to the care of the poor and the suffering."

Protected by Louis XIV., the institutes spread rapidly through France. But the revolution of 1793, overturning alike throne and altar, did not spare the humbler foundation of the Sisters of St. Joseph. Some establishments, however, were preserved among the mountain fastnesses of Forez and Velay.

Some of the surviving members were, in 1807, reunited into a community under Rev. Mother St. John Fontbonne, who had been saved from the guillotine only by the fall of Robespierre. The congregation in 1884 numbers upwards of four hundred houses in France; numerous establishments, not only in Rome, Savoy, Corsica, and England, but also on the far-distant shores of China and India, are tangible proofs of a fecundity little less than miraculous. But by far the most vigorous offshoot of the parent stem has been the foundation in North America. Under the auspices of Rt. Rev. Bishop Rosati, six Sisters came from Lyons, in 1836, to open a house at St. Louis. The following year brought two additional Sisters, one of whom, Mother St. John Fournier, afterwards introduced the order into Philadelphia.

The semi-centennial of their arrival has not been celebrated, yet the order here numbers nearly two thousand; its houses are numerous not only in Canada, but in nearly every State in the Union.

Equally at home among the Indians of the North and West, and the negroes of the South, as in more congenial fields of labor, "the Sisters of St. Joseph,"

says a late historian,<sup>2</sup> "are to be found in the hospitals of the poor, the asylums of the fallen, the cell of the prisoner, and the halls of the academy, brightening by their presence the pathway of the afflicted, and diffusing on every side the blessings of peace, consolation, and instruction."

In 1847, Bishop Kendrick, of Philadelphia, afterward Archbishop of Baltimore, anxious to place St. John's Orphan Asylum (then on Chestnut Street, below Thirteenth) under the care of the Sisters of St. Joseph, applied to Bishop Rosati, of St. Louis, for some members of that order. In compliance with this request, several Sisters were in May, 1847, sent to the new foundation, of which Mother St. John Fournier was appointed superior.

If, as said the celebrated Mme. de Genlis, "the interests of a nation are best promoted by the education of its daughters," gratitude demands a more than passing mention of this good lady, who, for more than a quarter of a century, labored indefatigably to promote the cause of education, charity, and religion in Philadelphia. Born in Arbois, France, in 1814, of a respectable Catholic family, Julia Alexia Fournier conceived early in life an ardent desire to devote herself to God in some religious order engaged in foreign missions. The accounts given of and by the early French missionaries in the "Annals of the Propagation of the Faith," the biographies of Mme. de la Peleterie, Ven. Mary of the Incarnation, and others of the weaker sex, who had labored among the Indians, were no doubt largely instrumental in determining her choice. North America seemed to her, indeed, a land of promise, a home by predilection; and, hearing that the Sisters of St. Joseph were about to send a colony thither, she, in 1836, entered the congregation at the Chartreuse in Lyons; the following year her superiors called her to the United States.

After ten years of active and efficient labor in the West, she came to Philadelphia in 1847. In 1851, however, having established several branches in this city and State, she was recalled to found an Indian school at St. Paul, Minn., under the pioneer Bishop Cretin.

In response to urgent and reiterated entreaties, Mother St. John was restored to Philadelphia in 1853. The record of the succeeding year is one of ceaseless labor, self-sacrifice, and devotedness, for each was signalized by some new foundation of education or charity, beset with trials and difficulties, often such as would have seemed insuperable to a soul less animated by faith and trust in Providence.

In 1858 she, as it were, set the seal on her work by the establishment of Mount St. Joseph's Convent at Chestnut Hill, the mother-house and novitiate for this diocese.

Here the young religious, whose novitiate lasts four years, are to be trained not only in the art of teaching

<sup>1</sup> He belonged to the family De Gondi.

<sup>2</sup> John Kane O'Murray.

and guiding others, but still more in the spirit of the order which should animate and sanctify their work.

Here, too, return those Sisters, who, enfeebled by age or sickness, are no longer fit for active duty. To each and all of the community it is a home in the best and fullest sense of the word. At the same time she opened Mount St. Joseph's Academy for young ladies.

When, in 1862, the scourge of war was sweeping over the land, at the request of Surgeon-General Smith, she sent Sisters to take charge of the hospitals at Camp Curtin, outside of the city of Harrisburg.

Again we find the Sisters from Philadelphia in charge of the floating hospitals which received the wounded from the battle-fields of Virginia.

It may seem incredible that, amid such multiplied works, Mother St. John should have found time for literary labor; yet, in the latter years of her life she found relief during hours of weary suffering by translating from the French such works as "Meditations on the Litany of the Blessed Virgin," Martinet's "Ark of the People," "Life of St. Benedict the Moor," "Sign of the Cross," by Gaume, "Daily Life of the Sick," "Madame de Laval's Bequest," several other books for the young, and, finally, "Thalia; or, the Council of Nice," which, at her death, she left unfinished.

On her extraordinary gifts of mind and body, her remarkable talent for government, noble character, and consummate virtue we shall not here enlarge.

Deeds speak louder than words, and the simple record of works founded, planned, actuated, or directed by her reveals her worth.

In 1847, Mother St. John, with one companion, entered on her work in Philadelphia. When, Oct. 15, 1875, she was called to her reward, novitiates had been established in McSherrystown, Pa., Toronto, Ontario, and Brooklyn, N. Y., by Sisters sent from Philadelphia.

The community here numbered about two hundred, having in charge eleven parochial schools, twelve academies, and four other institutions, as enumerated below.

There were, moreover, houses in Baltimore, West-ernport, and Hagerstown, Md., and in Camden and Newark, N. J., subject to the mother-house at Chestnut Hill.

Since then the number of Sisters has increased to about three hundred, and five additional schools have been opened.

The following is a list of these schools and the dates of their opening:

St. Joseph's, Pottsville, 1848; St. Joseph's, Philadelphia, 1851; St. Philip's, 1852; St. Anne's, Port Richmond, 1856; St. Patrick's, 1857; St. Michael's, 1859; Cathedral Academy, 1861; St. Mary's,<sup>1</sup> 1862; St. Augustine's, 1865; St. Vincent's, Germantown, 1867; Cathedral Parochial School, 1868; St. John's, Newark, 1872; St. Joseph's, Hagerstown, Md., and Immaculate Conception, Camden, N. J., 1874; St. Peter's, Western-

port, and Star of the Sea, Baltimore, 1875; Our Mother of Sorrows, West Philadelphia, 1878; Star of the Sea, Bergen Point, N. J., 1879; Immaculate Conception, Philadelphia, 1880; Our Lady of Consolation, Chestnut Hill, 1881; and Our Lady of the Valley, Orange Valley, N. J., 1882.

In the parochial schools above enumerated the Sisters teach the girls, and, in some cases, the smaller boys of the parish. The course of instruction includes all the ordinary branches of an English education, to which, as called for by circumstances, are superadded drawing (mechanical and free-hand), vocal music, book-keeping, algebra, etc.

The schools are under the supervision of the pastor, or priest appointed by him, and are supported by the voluntary contributions of the parishioners, who, generally speaking, are deserving of all praise for the way in which they meet this double obligation imposed on them by their conscientious objections to the public schools.

The Sisters of St. Joseph also have under their charge a Sunday-school for deaf-mutes, which numbers about twenty-five, and assembles every Sunday at St. Joseph's, Locust Street, above Fourth. It was opened Oct. 17, 1881.

The Sisters have under their care twelve schools in Philadelphia, containing more than five thousand children.

**Academy of the Sacred Heart.**—The Institute of the Sacred Heart was founded at Amiens, in France, in 1800, by Madame Sophia Barat. Its aim is principally the education of young ladies in boarding-schools, and, when practicable, in parochial and free schools.

The society spread rapidly throughout France, and now has academies in every part of the civilized world. In 1847 the mansion of Mr. F. Cowperthwait and the adjoining farm of ninety acres were purchased at Torresdale, near Philadelphia, by the Religious of the Sacred Heart, and an academy was opened under the direction of Madame Aloisia Hardey. A handsome chapel (Gothic in detail) and wings for class-rooms and dormitories were added by her successor, Madame Tucker, who governed the institution for a series of consecutive years.

In 1849 the academy was incorporated. The average number of pupils is ninety. Young ladies who do not profess the Catholic faith are admitted into the institute, but while they are at liberty to adhere to their own belief, for the sake of order they are required to assist at the public exercises of religion. There is a supplementary free school for the children of the environs. The number of children in attendance averages thirty.

Another object of this institute is to preserve the good begun in the academy by a sodality for ladies in society. Hence, in 1867 a house was purchased in the city of Philadelphia, at 1334 Walnut Street, at which place the sodality, having for its object pious and charitable works, holds its monthly meeting. A day-school for young ladies was opened at the same epoch.

<sup>1</sup> Previously under the care of the Sisters of Charity.

The number of pupils attending averages sixty-five.

**Mount St. Joseph Academy.**—Noteworthy among the educational institutions under the charge of the Sisters of St. Joseph is Mount St. Joseph Academy, Chestnut Hill. This academy, established first at McSherrystown, Adams Co., Pa., was, in 1858, transferred to its present eligible site, in a district proverbial for scenic beauty,—the picturesque valley of the Wissahickon.

Chartered in 1869, its growth has kept pace steadily with succeeding years. To meet the requirements of teachers and pupils, extensive additions have several times been made to the original buildings. The

The institution comprises, moreover, a training-school, or novitiate, wherein young ladies who desire to become members of the order may, during a course of four years, be educated for their future work.

**Private and other Religious Schools.**—At the beginning of the year 1884 there were, in addition to the institutions already described, about thirty-five other educational establishments in the city, most of which are strictly private in their character. Some of these are under the management of religious societies, but the greater number are intended for the accommodation of pupils whose parents are willing to pay for the benefits of private tuition.

Among the religious institutions of learning one of

MOUNT ST. JOSEPH ACADEMY, CHESTNUT HILL.

academy proper, finished in 1875, at a cost of one hundred thousand dollars, is so complete in its internal and external arrangements as to be counted one of the best adapted in the country for its purpose.

The course of study is thoroughly systematic. While it aims especially at imparting a solid English education, its curriculum is adapted to every requirement, and embraces all that tends to higher culture and true Christian refinement. The junior and senior departments each comprise a course of four years; the post-graduate department affords exceptional advantages to those who enter on it. Libraries containing over five thousand volumes are accessible to the pupils.

the most prominent is that of the Protestant Episcopal Church, known as the Divinity School. It is located in West Philadelphia, at Woodland Avenue and Fiftieth Street. Every person producing to the faculty satisfactory evidence of his having been admitted a candidate for priest's orders may be received as a student in this school, as well as any other person who can produce evidence of habits, character, and attainments as may render him apt and meet to exercise the ministry. The instruction is free, and is supported by the friends of theological education in the Episcopal Church. The school occupies a fine building which has accommodations for about forty students, and which contains a fine theological library

of eight thousand volumes. It is managed by a board of trustees, of whom Bishop William Bacon Stevens is president, and a board of overseers, of whom Bishop Alfred Lee is president. The faculty comprises Rev. Daniel R. Goodwin, D.D., dean; Rev. G. Emlen Hare, Rev. Clement M. Butler, Rev. Watson M. Smith, and Rev. George Z. Dubois. Another useful institution of this denomination which has long maintained a high character is the Academy of the Protestant Episcopal Church. This institution was founded in the year 1785, under the auspices of Bishop William White, Rev. Samuel Magaw, Rev. Robert Blackwell, Robert Morris, Thomas Willing, Edward Shippen, Richard Peters, and other gentlemen of prominence in the Episcopal Church of Philadelphia. The first master of the school was Rev. Dr. John Andrews.

In 1787 a charter was granted to the institution by the Legislature of Pennsylvania, and the academy continued its work under various forms until the year 1846, when it was determined to effect a reorganization on a broader basis. Bishop Potter, Horace Binney, and John Welsh were particularly active in introducing improvements. Chief among these was the erection of a building at Juniper and Locust Streets in the year 1849, and the procuring of the services of Rev. George Emlen Hare as head master, who remained with the school until 1857, when he resigned. The building, which was enlarged in 1861 and 1868, is admirably fitted up for its purposes, containing a chapel, laboratory, lecture-room, gymnasium, etc. A considerable portion of the revenue of the academy is applied to the education, free of charge, of such youths as give promise of merit. About one hundred and seventy-five pupils are in attendance. The management of its affairs is in the hands of a board, presided over by Bishop Stevens, and of which George W. Hunter is secretary and treasurer. The head master of the school is the Rev. James W. Robbins, D.D.

The Theological Seminary of the Evangelical Lutheran Church occupies a plain brick building on Franklin Street, above Race, and has been noted for the high character of its instruction to the young men who are preparing for the ministry of that church. The president of the board of trustees is the Rev. J. A. Seiss, D.D.; Vice-President, Rev. J. H. Baden; Secretaries, Rev. B. M. Schmucker, D.D., and Rev. Th. Pfattheicher. The most prominent members of the faculty are the Rev. Drs. C. W. Schaeffer, W. J. Mann, A. Spaeth, and H. E. Jacobs.

The Hebrews of Philadelphia maintain an Education Society which devotes itself chiefly to the instruction of the poor members of that sect. The officers of the society are I. Rossham, president, and D. Sulzberger, secretary. Three free schools, one located at Seventh and Wood Streets, another at Fourth and Pine, and another in the Richmond district, are kept up by this society.

The Institute for Colored Youth was founded in the

year 1837, upon a bequest made by Richard Humphreys for the "education of colored youth in school learning, in order to prepare and fit and qualify them to act as teachers," and has done much excellent work under the management of a corporation composed exclusively of members of the society. Of this society Joel Cadbury is the president, Thomas Scattergood treasurer, and Thomas P. Coe secretary. Many of the most useful and intelligent members of the colored race in Philadelphia have been graduated from this school. The commodious building which it occupies on the north side of Bainbridge Street, west of Ninth, was erected in 1866 at a cost of forty thousand dollars, and will accommodate three hundred pupils.

The members of the Society of Friends also conduct schools at the present time for white children, the principal of which are at Fifteenth and Race Streets, Fourth and Green Streets, and Seventeenth Street and Girard Avenue, and all of which are held in high esteem for the excellence of their methods. The Aimwell School Association, on Cherry Street above Ninth, of which Rebecca B. Boem is the principal, has a long history of quiet usefulness. The Philadelphia Friends also manage two colleges outside of the city which are widely known,—the Swarthmore College and the Haverford College, both in Delaware County.

The Polytechnic College of the State of Pennsylvania was founded about the year 1853, and provides a training for young men in the practical arts, such as civil engineering, mining, chemistry, applied geology, etc. Its faculty, which is presided over by Dr. Alfred L. Kennedy, comprises Furman Sheppard, L. G. Shrackee, W. D. Young, William T. Witte, William B. Walker, J. J. Osmond, and J. P. Wetherell.

**Ogontz Seminary for Young Ladies** is under the management of Miss Mary L. Bonney and Harriette A. Dillaye, with Miss Frances E. Bennett and Sylvia J. Eastman as assistants. It is an English, French, and German boarding and day-school for young ladies, and is one of the best in the country. This school was formerly known as the Chestnut Street Seminary of Philadelphia, and was founded in 1850 by Miss Bonney and Miss Dillaye.

During his first great prosperity, Jay Cooke built at Chelton Hills, eight miles from the heart of Philadelphia, on the North Pennsylvania Railroad, one of the finest private residences in the world, extending upon the house and grounds more than a million of dollars. Here he entertained, in princely style, distinguished visitors from his own and from foreign lands, and his magnificent home and hospitality became widely known. The place was named Ogontz, after an Indian chief who was a friend of Mr. Cooke's in his childhood and youth at Sandusky, Ohio. This chief, it is said, often visited his father's house, and, while there, amused the children by performing Indian feats, carrying them on his back, and telling

them stories. His name is still preserved in various ways in the city of Sandusky, where Jay Cooke was born. When building this magnificent house, he determined to preserve the name of his friend in childhood, and hence called it Ogontz.

The mansion was first occupied in December, 1865. The panic of 1873 temporarily swept away Mr. Cooke's fortune, and for a time the Ogontz property passed from his control, but in 1881 he recovered his fortune, including the Chelton Hill estate of one hundred and forty acres, on which the Ogontz mansion stands. In the mean time, the uses for which the house was built having passed away, Mr. Cooke, in 1888, leased it at a nominal rent for a long term of years to the ladies named for a young ladies' school.

gress in all directions. The principal hall is seventeen feet wide and eighty feet long, extending back into a conservatory forty feet square. This is stocked with plants of finest growth, surrounding an ornamented fountain. Farther on is another fountain, and still beyond, the natatorium.

The main hall presents on the one side a spacious drawing-room, seventy feet in length; on the other, library and reception-rooms. All the windows are of the finest plate-glass, and the frescoing is in the latest and highest style of art. The principal staircase, of solid walnut, is majestic, and presents at the head of the first flight the bronze face of Ogontz, the Indian chief, and the friend of Mr. Cooke in his boyhood. The conservatories and greenhouses on the grounds

OGONTZ SEMINARY.

Ogontz stands on a knoll, commanding a view of forty acres of landscape-gardening, which are connected with the house. This spot Mr. Cooke selected from his farm of one hundred and forty acres, as being the most desirable for a residence. The building is a five-story mica granite, of the Norman Gothic order of architecture. Its air of substantiality and refinement strikes a beholder at the first glance, and reminds one of the aristocratic country-seats of England. It is a building of the most ample dimensions, having in the neighborhood of one hundred rooms of comfortable size. Seventy-five guests have been entertained there at one time.

The building is fire-proof, being constructed of granite and iron, numerous stairways furnishing

were at the time they were constructed the largest in the country. There is also a gas-house, constructed of granite, six hot-houses and graperies, a mushroom-house, potting-house, and a lodge-house at each gate on the main entrances. There are a number of other buildings, such as a farm-house, barn, ice-house, and a frame school-house. A beautiful stream of water courses through the entire place. The lawns are lighted by gas supplied on the grounds. The drives are all macadamized, both in the grounds and leading to Chelton Hill Station.

Among the other educational establishments in Philadelphia which bear a high reputation are the Broad Street Academy, of which Edward Roth has long been the principal; Courtland Saunders' College,

in West Philadelphia; the Bryant & Stratton Business College; Crittenden's Commercial College; the National School of Elocution and Oratory, founded by the late Professor John W. Shoemaker, and now presided over by Dr. Edward Brooks; Pierce's College of Business; the Rugby Academy for Boys; the Rittenhouse Academy; the Lauderbach Academy; the Chegaray Institute; and Few Smith's Classical and Mathematical School.

## CHAPTER XLVIII.

### THE PRESS OF PHILADELPHIA.

THE history of the newspaper press of Philadelphia begins with the first issue of the *American Weekly Mercury*, on Dec. 22, 1719, the third journal published in the colonies; and during all the one hundred and sixty-five years that bridge the interval of time between that date and our own epoch the journalists of this city have bravely and intelligently engaged in the interpretation and solution of all the leading questions that have affected either the national or the local welfare. In the building of the nation, the commonwealth and city, in the formation and application of political policies, in the inception and execution of public enterprises, in the culture of art and literature, in strangling mischievous tendencies, and in nurturing popular morals, there has been no movement in which the newspapers have not been vigorous, aggressive, and determining factors. Glancing back over the long list of dead and gone Philadelphia editors, we are confronted by the names of men of the most brilliant mental gifts, the highest professional equipment, and the most positive convictions upon contemporary issues in government or society. Moreover, as journalism broadened its scope and elevated its aims they were never laggards in the march of progress. Technical improvements found ready adoption with them, and no matter what year may be selected for comparison, we shall find the Philadelphia papers abreast of, and in some respects taking precedence of, the press of any other American city. These general truths of history apply to the present perhaps even in a larger degree than to the past. To-day the journals of Philadelphia are surpassed nowhere in any of the qualities that conduce to the influence, the dignity, and the value of the newspaper press. Whether in the departments of enterprise and liberality in gathering news, in luminous and fearless editorial criticism, or in typographic excellence they are the equals of any kindred publications in the world. It is strictly correct to say that to them Philadelphia is a debtor for much of its past advancement and present greatness.

The forerunner of all the illustrious journalists of

Philadelphia was Andrew Bradford, who, as noticed, issued in this city, on Dec. 22, 1719, the initial number of the *American Weekly Mercury*. The first paper to be published in the colonies was the *Boston News Letter*, the earliest number of which bore date of April 24, 1704. Next came the *Boston Gazette*, of Dec. 21, 1719, so that it will be seen that if Bradford had not been delayed two days, Philadelphia would have had the honor of issuing the second newspaper in America. The claim, however, that it issued the third is not disputable, and carries with it the other facts that it was the second city on the continent and the first in the middle colonies to publish a new periodical. It is also entitled to the broader and more emphatic distinction of having furnished the first daily newspaper on the Western hemisphere. This was the *American Daily Advertiser*, established Dec. 21, 1784, by Dunlap & Claypoole, as an offshoot of the *Pennsylvania Packet*, founded in November, 1771, by John Dunlap. This journal was subsequently published by Zachariah Poulson as *Poulson's Advertiser*, and in December, 1839, it was merged into the *North American*. In Philadelphia, also, was established the pioneer commercial or trade journal.<sup>1</sup>

The first religious weekly newspaper in America was likewise an outgrowth of Philadelphia enterprise. The original publication of this character was the *Religious Remembrancer*, first issued Sept. 4, 1813, and published by John Welwood Scott, at No. 81 South Second Street.<sup>2</sup>

Philadelphia also led the way in the sphere of cheap journalism. Hudson, in his "Journalism in the United States," vouchsafes the following statement: "The penny press of America dates from 1833. . . . The *Morning Post* (of New York) was the first penny paper of any pretensions in the United States. It was started on New Year's day, 1833." The author is frank enough to admit, however, that "there were small

<sup>1</sup> Through palpable oversight, Hudson's "Journalism in the United States" makes the following erroneous statement: "The *Boston Prices Current and Marine Intelligencer, Commercial and Mercantile*, the publication of which was begun on the 5th of September, 1795, was the first regular and legitimate commercial paper issued in this country." As a matter of fact, a journal of a similar character was established in Philadelphia twelve years prior to this date. In June, 1783, John Macpherson issued the first number of the *Price-Current*, published every fifteen days, in which were "contained the prices of merchandise, duties on importations and exportations, regulated by John Macpherson, broker, with the assistance of twenty eminent merchants, factors, and others; likewise the course of exchange, the premiums of insurance to and from the most considerable places of trade," etc.

<sup>2</sup> Hudson also practically ignores Philadelphia in this phase of journalism, maintaining that the *Recorder*, founded in 1814, at Chillicothe, Ohio, was the first religious newspaper published in America. If, as has been asserted, a periodical to be a newspaper must be a folio, surely many of the leading ecclesiastical journals of the present day are not, as they are claimed to be, religious newspapers. Such a proposition is, however, simply an absurdity, and the *Religious Remembrancer* was none the less a religious newspaper from the fact that it was a quarto in form. That its scope was a broad one is observed from the fact that its publisher announced in its columns that its contents comprised "biographical sketches, theological essays, accounts of revivals of religion, missionary information, together with a great variety of other articles of an evangelical and ecclesiastical nature."

and cheap papers published in Boston and Philadelphia before and about that time. The *Bostonian* was one, the *Cent*, in Philadelphia, was another. The latter was issued by Christopher C. Cornwell in 1830. These and all similar adventures were not permanent." It is true that the *Cent* was not a permanent institution. Nor, for that matter, was the *New York Morning Post*, for Hudson himself candidly admits that "after the expiration of twenty-one days from the issue of the first number the *Morning Post* ceased to exist." While both publications were comparatively ephemeral, yet, as, according to Hudson's own admission, the *Cent* was issued in 1830, and the *Morning Post* was published in 1833, the latter surely was not "the first penny paper of any pretensions in the United States." The credit of furnishing the first daily newspaper published for one cent undoubtedly belongs to Philadelphia. The *Cent* had its inception in 1830, the publisher being Dr. Christopher Columbus Conwell,—not *Cornwell*, as the author of "Journalism in the United States" has it,—and the office of publication was in Second Street, below Dock. Dr. Conwell died in the summer of 1832.

In other phases of periodical literature besides news journalism Philadelphia has set the example. In January, 1741, Benjamin Franklin began here the publication of the first magazine established in America. It was entitled the *General Magazine and Historical Chronicle* "for all the British Plantations in America." In the same year another magazine had its inception in Philadelphia, entitled the *American Magazine, or a Monthly View of the British Colonies*, the publisher being John Webbe. Five years later, or in February, 1746, Christopher Saur, of Germantown, began the publication of the first religious magazine issued in America, namely, *Ein Schall und Gegenschall der Wahrheit, und des Gesunden Verstandes Christliebender Seelen in Diesem Americanischer land theil*.

It would be an impracticable task to attempt to catalogue all the numerous instances in which Philadelphia ingenuity and capital have opened up original enterprises and inaugurated new departures in the realm of journalism.

"The details of history, in truth," as Sainte Beuve has said, "can only be gathered from a study of the immense and varied surface which the literature of newspapers presents." Therefore, it is but natural that as the "clever town, built by Quakers," bounded by Vine and South Streets and by the Delaware and Schuylkill Rivers, has become a vast city of one hundred and twenty-nine square miles, and as the handful of villagers of 1719 has grown to a population of nine hundred thousand, so the newspaper press of 1719, represented by the *American Weekly Mercury*, printed on a half-sheet of pot-size, has expanded to its existing proportions, there being at the present time two hundred and fifty periodical publications, from the daily to the quarterly, issued in Philadelphia.

The colonial press, so far as the province of Penn-

sylvania is concerned, began with Bradford's paper, the *American Weekly Mercury*. Five years later, on Dec. 24, 1728, was established the second newspaper in the colony, the *Universal Instructor in all Arts and Sciences and Pennsylvania Gazette*, by Samuel Keimer, that eccentric individual, the pedantry of whose character is indicated by the pedantry embodied in the title of his ambitious journal. Fortunately, however, within a year the *Universal Instructor* passed into the hands of Franklin & Meredith, its title became the *Pennsylvania Gazette* simply, and a career of great usefulness and prosperity was inaugurated. The impress of Franklin's individuality upon contemporary thought and action permits of no skepticism as to his pre-eminence in the possession of the genuine journalistic instinct. The third Philadelphia newspaper in the English language was *The Pennsylvania Journal and Weekly Advertiser*, established in 1742 by William Bradford, nephew of Andrew Bradford, of the *Mercury*. No other weekly newspaper in this language was published until 1767, when *The Pennsylvania Chronicle and Universal Advertiser* was first issued by William Goddard. The era was one prolific of German periodicals, those being the days of Christopher Saur, of Joseph Crellius, and of Henry Miller,—names which should be held in great respect by every one interested in the development of journalism and typography in this city. This was an epoch which was also especially rich, speaking comparatively, in magazine literature, no less than four such periodicals, besides three or more in German, having been established, namely: *The General Magazine and Historical Chronicle* (1741), by Benjamin Franklin; the *American Magazine, or a Monthly View of the British Colonies* (1741), by John Webb; *The American Magazine and Monthly Chronicle* (1757), by William Bradford; and *The American Magazine* (1769), by Lewis Nicola. The colonial press was quite conservative, but with the dawning of the Revolution it was obliged to assume a decisive tone in dealing with the pressing questions of national independence.

Two of the colonial newspapers, the *Pennsylvania Gazette* and the *Pennsylvania Journal*, were carried into and beyond the Revolutionary epoch. One of the two remaining, the *Mercury*, suspended publication in 1746, while the other, the *Pennsylvania Chronicle*, was discontinued in 1773. During the thirty years which may be said to comprise the Revolutionary era the *Pennsylvania Gazette* and the *Pennsylvania Journal* were important factors in the mirroring and the unfolding of passing events. *The Pennsylvania Packet or General Advertiser*, which had its inception in 1771, was the first newspaper established in the Revolutionary epoch. Its publisher, John Dunlap, was a man of varied abilities and broad enterprise, as was also his subsequent partner, David C. Claypoole. As already stated, this journal in 1784 developed in a daily paper, the first in America. The influence of the *Packet* during this time was incalculable. It was

during this era, also, that were born, among others, *The Freeman's Journal*, or *The North American Intelligencer*, the *Independent Gazetteer*, *The Pennsylvania Mercury and Universal Advertiser*, the *Pennsylvania Evening Herald*, the *Philadelphia Gazette*, the *Gazette of the United States*, and *The Aurora*. It was in this period, also, that the following journalists of individuality and power, whether in the line of good or of evil, in addition to those already mentioned, made their appearance in the broadening newspaper arena: Robert Aitken, William Goddard, Francis Bailey, Hugh Henry Brackenridge, Eleazer Oswald, Daniel Humphreys, Mathew Carey, Andrew Brown (father and son), Thomas Paine, Samuel Relf, John Fenno, John Ward Fenno, Benjamin Franklin Bache, William Duane, Philip Freneau, James Carey, and William Cobbett.

Most of the journals established about the beginning of the present century were strong party organs, deeply interested in political discussion and action. Within the era continuing up to the close of the civil war three great wars were fought, and within the time also occurred those radical controversies over Native Americanism, Anti-Masonry, nullification, emancipation, secession, reconstruction, greenbackism, and kindred questions. Newspapers were founded with the especial object of defending some one of these issues. Indeed, the newspapers of America have made as well as unmade parties, have made and unmade administrations, have made and unmade policies, have made and unmade public officials, and in this work of construction and destruction the press of Philadelphia has played no minor rôle. Among the influential journals established during this period, the following may be enumerated: the *Portfolio* (1801), *Freeman's Journal* (1804), afterward the *Palladium, Commercial and Political Register* (1804), *Democratic Press* (1807) *American Sentinel* (1811), *Franklin Gazette* (1818), *National Gazette* (1820), *Columbian Observer* (1822), *Commercial Herald* (1827), *Pennsylvania Gazette* (1827), *Daily Chronicle* (1828), afterwards *Daily Courier, Pennsylvania Inquirer* (1829), *Pennsylvanian* (1832), *Public Ledger* (1836), *Spirit of the Times* (1837), *Pennsylvania Democrat* (1838), *North American* (1839), *Daily Sun* (1843), *Evening Bulletin* (1847), *Daily News* (1848), *The Press* (1857), *The Age* (1863), and *Evening Telegraph* (1864). Among the editors of this era we may name Joseph Dennie, Charles Brockden Brown, William Jackson, John Binns, John W. Scott, Richard Folwell, Robert Walsh, Robert Morris, William McCorkle, Adam Waldie, Richard Bache, Eliakim Littell, Charles Alexander, Samuel C. Atkinson, John R. Walker, Jesper Harding, Robert T. Conrad, James Gordon Bennett, John S. Du Solle, Louis A. Godey, Joseph C. Neal, Morton McMichael, George R. Graham, Joseph R. Chandler, Dr. Robert M. Bird, John Jay Smith, Charles J. Peterson, Joseph R. Flanigan, Edgar Allen Poe, William F. Small, William M. Swain, A. S.

Abell, Azariah Simmons, Edmund Morris, Russell Jarvis, Alexander Cummings, Joseph M. Church, Philip R. Freas, Charles G. Leland, Gibson Peacock, John W. Forney, George W. Childs, Charles J. Bidle, John Russell Young, James R. Young, Charles E. Warburton, W. W. Harding, Washington L. Lane, Joseph Sailer, L. Clarke Davis, William V. McKean, James Elverson, Robert S. Davis, and a host of other names equally suggestive of brilliant journalistic achievement.

After the close of the war the class of special journals devoted to the interests of particular trades or professions was greatly multiplied. The following list of such publications established since the war is illustrative: *The Agents' Herald*, the *American Journal of Photography*, the *American Silk and Fruit Culturist*, the *Band Journal*, the *Banjo and Guitar Journal*, the *Barbers' National Journal*, the *Brewers' and Dealers' Journal*, the *Bullion Miner and Coal Record*, the *Carpenter*, the *Carpet Journal*, the *Carriage Monthly*, the *Caterer*, the *Clerk*, the *Coin Collectors' Herald*, the *Confectioners' Journal*, the *Hammer*, the *Hosiery and Knit Goods Manufacturer*, the *Ice Trade Journal*, the *Iron*, the *Printers' Circular*, the *Real Estate Reporter*, the *Sugar Beet*, the *Textile Colorist*, the *Thoroughbred Stock Journal*, and the *Tobaccoonist*.

While the press of Philadelphia, during its one hundred and sixty-five years' history, has made emphatic progress, not only in numbers and in scope, but in material influence and prosperity, yet it has, perhaps, made even greater advancement in tone and morale. It is true that modern journalism is not devoid of a personal tendency; but something of astonishment would surely be engendered were such an article as the following duplicated in any newspaper at the present day. Mathew Carey, in 1800, thus pays his respects to William Cobbett:

"Wrstch as you ars, accusred by God, and hated by man, the most tremendous scourge that bell sver vomited forth to curse a people by sowing discord among them, I desires not the honor or credit of being abused or vilified by you. I have not leisurs to attend to a controversy, unless I am driven to recomence this trade of nswspapsr printing, and make a profession of scribbling. This, if I cannot scape your coarse, low-lived abuse, I shall certainly aud infallibly do; and then I will hold you up to the xsccration of mankind.

"But no! I will never disgrace my paper with your detested name. Callous and case-hardensd, you draw subsistances from your infamy and notoriety. 'Hisssed and hooted by the pointing crowd,' you cars not, provided you can amass money snough to secure you a competsncs at the close of your dishonorable career. But your wrtings I shall so cut up and strip of thsir sophistry as to make sven 'Folly's self to stare,' and wonder how she could possibly have been so long duped by you. . . . To send a challenge to a hlaisted, posted, loathsome coward . . . would sink ms almost to a level with youresslf."

The extreme violence and virulence of this tirade is measurably mitigated, when one considers how richly the object of it deserved the severest denunciation. Cobbett was an acrimonious and vituperative writer, great in invective and abuse, and was wont to attribute the basest motives to his opponents. He quarreled with every newspaper proprietor and almost every prominent man in the city, and was prosecuted

for libel by Dr. Rush, who recovered five thousand dollars damages against him. He then quitted the country in disgust, and occupied the rest of his life in abusing America and Americans. In his "Farewell to America," published in 1800, he says,—

"When people care not two straws for each other, ceremony at parting is mere grimace; and as I have long felt the most perfect indifference with regard to a vast majority of those whom I now address, I shall spare myself the trouble of a ceremonious farewell. . . . With this I depart for my native land, where neither the moth of Democracy nor the rust of Federalism doth corrupt, and where thieves do not with impunity break through and steal five thousand dollars at a time."

A quarter of a century afterward there had been but a meagre improvement in the tone of editorial discussion prevailing among Philadelphia journalists. The *Columbian Observer* of April 1, 1825, contains the following comment: "Speaking of the newspapers of Pennsylvania, a lunatic editor in Ohio solemnly affirms that 'to procure fit editors for them, every *sink of infamy has been raked to the bottom*' This fellow is a *Clayite*, and their minds all incline to think of *dirt, filth, and infamy*, a very *natural* propensity in them. It seems he does not even except Walsh from the mad denunciation. The editors of Ohio are all manufactured by a *steam-engine*, and come out *finished gentlemen* at the first turn of the wheel!"

Eight years later, or on July 12, 1833, the *Pennsylvanian* quotes from a morning contemporary as follows: "A paper of this city denounces a contemporary as a hack, vilifier, a gladiatorial calumniator, who stabs reputations for pay and destroys character at the turning of his employers' thumbs." But the days of *Porcupine's Gazette* and of "Peter Porcupine" are over. The era of *The Tickler* and of "Toby Scratch'em" is an obsolete one. *The Tangram; or, Fashionable Trifler*, and "Christopher Crag, Esq., his Grandmother and Uncle," have passed from the journalistic arena. *The Luncheon*, "boiled for people about six feet high, by Simon Pure," is no longer served. *The Independent Balance*, and "Democritus, the younger, a lineal descendant of the Laughing Philosopher," and "Simon Spunkey, Esq., duly commissioned and sworn Regulator, Weighmaster, and Inspector-General," are not now encountered. *The Spy in Philadelphia* has ceased its avocation. The journalism of the present is none the less vigorous and pungent than was the journalism of a half-century or a century ago, but it is characterized by a business-like seriousness, stability, and impersonality which were comparatively unknown two or three generations since.

Not only have the tone and morals of the press visibly improved within the last half-century, but the liberty of the press has also been palpably broadened. Perhaps the one is the natural concomitant of the other,—that is to say, as journalism has narrowed itself, or has been narrowed, so far as its license to criticize and denounce has been concerned, perhaps its liberty of legitimate action has, in consequence, been sensibly extended. It was well enough for "Democritus, the younger, a lineal descendant of the

Laughing Philosopher," in his conduct of the *Independent Balance*, to announce as his motto this language of Junius, "Let it be impressed upon your minds, let it be instilled into your children, that the liberty of the press is the palladium of all the civil, political, and religious rights of freemen." But his "liberty of the press" had simply in view the same purpose which actuated his more candid successor in the conduct of the *Balance*, "Simon Spunkey, Esq., duly commissioned and sworn Regulator, Weighmaster, and Inspector-General," who substituted this Shakespearean motto for that of his predecessor, "I claim as large a charter as the wind, to blow on whom I please."

At the inception of journalism in Philadelphia the provincial authorities looked with a jealous eye upon the startling innovation. On the 2d of January, 1721, the following paragraph appeared in the *American Weekly Mercury*: "Our General Assembly are now sitting, and we have great expectations from them, at this juncture, that they will find some effectual remedy to revive the dying credit of this province, and restore us to our former happy circumstances." Surely no statement could be more innocent or placid in its phraseological construction! But the commotion created by it was astonishing. The following excerpts from the proceedings of the Provincial Council are self-explanatory:

"January 19, 1721.—Upon a motion made that Andrew Bredford, printer, be examined before this board concerning the publishing of a late pamphlet, entitled 'Some Remedies proposed for Restoring the sunk Credit of the Province of Pennsylvania,' as also of the *Weekly Mercury* of the second of January instant, the last paragraph whereof seems to have been intended as a reflection upon the credit of this province: It is ordered that he, the said printer, have notice to attend this board at the next meeting of Council.

"February 1, 1721.—The board being informed that Andrew Bradford, the printer, attended according to order, he was called in and examined concerning a late pamphlet entitled, 'Some Remedies proposed for Restoring the sunk Credit of the Province of Pennsylvania,' whereupon he declared that he knew nothing of the printing or publishing the said pamphlet: and being reprimanded by the Governor for publishing a certain paragraph in his newspaper called the *American Weekly Mercury*, of the second of January last, he said it was inserted by his journeyman, who composed the said paper, without his knowledge, and that he was very sorry for it, and for which he humbly submitted himself, and asked pardon of the Governor and the board; whereupon the Governor told him that he must not, for the future, presume to publish anything relating to or concerning the affairs of this Government, or the Government of any other of his Majesty's colonies, without the permission of the Governor or Secretary of this province for the time being; and then he was dismissed and the Council adjourned."

Subsequently there appeared in the *Mercury* the following paragraph in one of a series of essays, over the signature of "Busybody," a *nom de plume* of Benjamin Franklin, *apropos* of an approaching annual election:

"To the friends of liberty firmness of mind and public spirit are absolutely requisite; and this quality, so essential and necessary to a noble mind, proceeds from a just way of thinking that we are not born for ourselves alone, nor our own private advantages alone, but likewise and principally for the good of others and service of civil society. This raised the genius of the Romans, improved their virtue, and made them protectors of mankind. This principle, according to the motto of these papers, animated the Romans, Cato and his followers, and it was impos-

sible to be thought great or good without being a patriot; and none could pretend to courage, gallantry, and greatness of mind without being first of all possessed with a public spirit and love of their country."

The effect of the publication of this simple abstraction was of so emphatic a character that the Governor and Council ordered Bradford, the publisher, to be arrested and committed to prison. Upon this occasion Bradford displayed less of obsequiousness than he had previously exhibited, and, having shown a disposition not to acquiesce in the mandates of the authorities, he escaped further molestation. Since that remote period the history of Philadelphia journalism has undergone a diversity and multiplicity of experiences. Contests between the press and public officials have been numerous. Libel suits, some of vast magnitude and some of petty import, are found in our court reports in every decade. Through all these years the press has battled for a larger liberty. As a result of all this, and as a striking contrast from the action of the Provincial Council of 1721, the sovereign people of Pennsylvania have engrafted into the constitution of the commonwealth the following fundamental principle:

"The printing-press shall be free to every person who may undertake to examine the proceedings of the Legislature or any branch of government, and no law shall ever be made to restrain the right thereof. The free communication of thoughts and opinions is one of the invaluable rights of man; and every citizen may freely speak, write, and print on any subject, being responsible for the abuse of that liberty. No conviction shall be had in any prosecution for the publication of papers relating to the official conduct of officers or men in public capacity, or to any other matter proper for public investigation or information, where the fact that such publication was not maliciously or negligently made shall be established to the satisfaction of the jury."

As in every other large city, the number of newspapers that have died out in Philadelphia is incredible to those who have not made an examination of the subject. In its issue of Sept. 26, 1837, the *Public Ledger* thus refers to a number of rivals which had collapsed shortly before that date: "*The Times* had no time to breathe, for it died almost as soon as born; the *Morning Post*, that posted to its grave as rapidly as if it were an express post; the *Transcript*, that did nothing but transcribe, for it could not reach originality, and transcribed nothing worth reading; the *Eagle*, that seemed more like a screech owl, and never got fledged enough to fly; the *Commercial Pilot*, that actually ran upon the rocks and got shipwrecked in putting to sea; the *Plain Truth*, that told nothing but lies."

Of the newspapers established in the last century, not one is now in existence, although *The North American*, founded in 1839, afterward absorbed or was consolidated with two journals which had their inception prior to 1800. Moreover, of the nineteen daily papers now published in Philadelphia, not one was established in the first quarter of the present century. Indeed, the oldest of the daily papers now published in this city, estimating their origin from the year of their foundation under their present commonly-accepted titles, is *The Inquirer*, which was first

issued on June 1, 1829. But the history of Philadelphia journalism can be intelligently understood only when considered in detail.

**The American Weekly Mercury.**—The first newspaper printed in Philadelphia, or in the province, was issued Dec. 22, 1719. It appeared on a half sheet, of pot size, and bore the imprint, "Philadelphia: Printed by Andrew Bradford, and sold by him and John Copson." In 1721 Copson's name was omitted, and the imprint altered to "Philadelphia: Printed and sold by Andrew Bradford at the Bible in Second Street, and also by William Bradford in New York, where advertisements are taken in." This paper probably served for both cities, no newspaper having been printed in New York until October, 1725; the *New York Gazette* was established by William Bradford, and his name as vender of the *Mercury* in that city was omitted in the following December.

The *Mercury* sometimes appeared on a whole sheet of pot, in type of various sizes, as small pica, pica, and English. It appeared weekly, generally on Tuesday; but the day of publication was varied. Price, ten shillings per annum. Editorial matter seldom appeared, and so little notice was taken of passing events in the city, with which at that time everybody was supposed to be acquainted, that little information with regard to local affairs is to be found in the paper. It was principally made up of extracts from foreign journals, several months old, with a few badly-printed advertisements. Two cuts, coarsely engraved and intended as ornaments, were placed at the head, one on each side of the title. That on the left was a small figure of Mercury, represented on foot, with extended wings, and bearing his caduceus. The other was the representation of a postman, riding at full speed. These cuts were sometimes shifted, and for the sake of variety Mercury and the postman exchanged places.

Andrew Bradford died in the year 1742. His widow, Cornelia Bradford, assumed the publication of the *Pennsylvania Mercury*, but shortly afterward entered into partnership with Isaiah Warner. The latter withdrew from the concern in 1744. Mrs. Bradford published the paper until the end of 1746, about which time it was discontinued.

**The Universal Instructor in all the Arts and Sciences and Pennsylvania Gazette** was the second newspaper established in the province. It was issued December 24, 1728, by Samuel Keimer, who had come to Philadelphia in 1722, and either brought type with him or succeeded to that which was already here in use by Jacob Taylor or others.

Benjamin Franklin, who came to Philadelphia some time in 1723, applied to Andrew Bradford for work. The latter having nothing for him to do, William Bradford, of New York, the father of Andrew, who happened to be in Philadelphia, took him to Keimer.

That Franklin's unfavorable opinion of his early

employer, as shown in his autobiography, was well grounded is shown by the following incident: In 1725, Keimer published Taylor's Almanac, into which he seems to have interpolated some of his own impertinences. Aaron Goforth, Sr., immediately afterward published in the *Mercury* an advertisement, in which he called it "a lying Almanac, set out to reproach, ridicule, and rob an honest man of his reputation, and strengthening his adversaries; and not only so, but he hath notoriously branded a gospel minister of the Church of England with ignominious names for maintaining gospel truths. . . . This man's religion consisteth only in the beard and his sham keeping of the seventh-day Sabbath, following Christ only for loaves and fishes." Goforth wound up by an intimation that if Keimer did not "condemn what he had done, and satisfy the abused, he may expect to be prosecuted." Joseph Taylor, the author of the Almanac, also considered himself very much injured, and in January, 1726, he printed a very severe attack upon his publishers, in which he sneered at Keimer's abilities, particularly his school for the blacks, his beard, and his seventh-day profession. This was partly in verse, and in a portion of the composition was very coarse.

Taylor's reference to Keimer's beard and sabbatic notions is thus explained by Franklin (in his previously-quoted autobiography): "Keimer wore his beard at full length because somewhere in the Mosaic law it is said, 'Thou shalt not mar the corners of thy beard.' He likewise kept the seventh-day Sabbath; and these two points were essentials with him."

Soon after 1725, Andrew Bradford, who continued the publication of the *American Weekly Mercury*, and had at his command nearly all the printing business of the province, began to meet with more steady opposition. Keimer still kept up his printing-office, and managed to do a little business, although he eked out his profits by some means not strictly professional.

After a publication of *The Universal Instructor* for nine months, during which time it had only ninety subscribers, Keimer was involved in debt, and, being unable to continue the paper, he made arrangements to sell it to David Harry, another printer; but the latter, having first assented to the transfer, afterward declined, whereupon Franklin and Hugh Meredith, by subscribing a small sum, obtained possession, and the *Universal Instructor* was resigned to them. It was now published by Franklin and Meredith, who expunged the first part of the title, and called it the *Pennsylvania Gazette*, "containing the freshest advices, foreign and domestic." It appeared twice a week, at ten shillings per annum, on a whole or a half sheet of "pot," as occasion required. The energy and industry of Franklin, and the improvement in the character of the paper, excited public interest, and soon brought the new establishment into notice. They were appointed printers to the General Assembly. They likewise printed a number of books,

among which was a folio edition of the "History of the Quakers," principally intended for the use of members of that society. Of this work Franklin set up the type for a sheet daily, while Meredith did the press-work.

Franklin continued the *Pennsylvania Gazette* with Hugh Meredith until some time in 1732, when the partnership was dissolved, and the former continued the business on his own account. He opened a shop for the sale of stationery, did something at book-binding and bookselling, and, by means of his industry and economy, soon paid his debts, and began to accumulate property. Until his appointment as postmaster the circulation of his paper was not equal to that of Bradford's *Mercury*; but soon after he obtained that office the number of his subscribers greatly increased, and the *Gazette* became very profitable. He continued in business without a partner for fifteen years; but in the beginning of 1748, being much engaged in public affairs, he formed a connection with David Hall, under the firm of B. Franklin & D. Hall. Their establishment was well conducted and lucrative, the paper having a large circulation, and the business of the printing-house being extensive and profitable.

In 1765, Franklin sold his interest in the office to Hall, and the next year the paper was printed by Hall and William Sellers, who continued the business as Hall & Sellers. The *Pennsylvania Gazette* continued its issues regularly under these proprietors until a short time before the occupation of Philadelphia by the British. The last number of this paper published before the capture of the city was dated Sept. 10, 1777, and was numbered 2533. During the occupancy, and for some months afterward, the publication of the paper was suspended. No. 2534 was published at Philadelphia on Jan. 5, 1779, and from that time the publication went forward regularly.

It was still published by Hall & Sellers in 1800, at No. 51 Market Street. This firm was dissolved about 1805. Hall continued the publication alone until about 1810, when the firm of Hall & Pierie (George W. Pierie) was established. About the year 1815 or 1816 the firm of Hall & Pierie was dissolved, and Hall & Atkinson became the publishers of the *Pennsylvania Gazette*. Samuel C. Atkinson, who became a member of this firm, continued with it until after the death of David Hall, which occurred May 27, 1821. The business of the paper survived to Mr. Atkinson, who took into partnership with him Charles Alexander. Atkinson & Alexander at once determined upon a revolution in the character of the paper, and the partners proceeded to build up a new business on the venerable foundation of the *Pennsylvania Gazette*. They at once issued proposals for the publication of a new weekly paper, to which they gave the name of the *Saturday Evening Post*. The first number was issued Aug. 4, 1821. It was published at the price of two dollars a year, payable half-yearly

in advance, or three dollars at the end of the year. The proprietors were young men, and were ambitious. They endeavored to make their paper of interest to all classes, encouraged rising genius, which hurried to see itself in print in the "Poet's Corner" or in the story columns, gave some attention to news, foreign as well as domestic, and eschewed all politics. It was a paper for the family, and although some particular attention was paid to local matters, there was sufficient variety of general intelligence to interest persons not resident in Philadelphia. Thus by judicious attention to business the paper became popular, and gained a large circulation, so that there was in time no portion of the United States into which the *Post* did not penetrate. The editor of the *Post* was Thomas Cottrell Clarke.<sup>1</sup>

**Der Hoch Deutsch Pennsylvanische Geschicht Schreiber, oder Sammlung Wichtiger Nachrichten aus dem Natur und Kirchen Reich**, which is, translated literally, *The High Dutch Pennsylvania Historiographer, or Collection of Important Intelligence from the Kingdom of Nature and the Church*, was issued on the

CHRISTOPHER SAUR'S HOUSE, GERMANTOWN.  
[From a picture in the Philadelphia Library.]

20th of August, 1739, by Christopher Saur,—modernized Sower,—of Germantown, as a quarterly journal. According to the statement in this paper, its object was to collect foreign and domestic news; and it also promised to furnish questions addressed to serious minds, with proper answers thereto. It is said that the type for this journal was cast by Saur, who also made his own ink. In that case, the type was the first cast in America. This paper was after a time changed to a monthly publication. In 1744 it was issued weekly, and was called *Der Germantauer Zeitung*. It became a paper of much influence, and was printed and published up to the time of the Revolutionary war;

but it was discontinued before the close of that contest.

The **General Magazine and Historical Chronicle** "for all the British Plantations in America," the first magazine established in America, was commenced by Franklin in January, 1741. The title-page contained the Prince of Wales' feathers and the motto "Ich dien." This publication was continued for about six months, but not meeting with sufficient patronage, it was discontinued.

The **American Magazine, or a Monthly View of the British Colonies**, also appeared in 1741, being published by John Webbe, who had engaged Bradford to print the work. The prospectus of this magazine, which appeared in Bradford's *Mercury* Nov. 6, 1740, gave offense to Franklin, who alleged that it had been previously engaged to him, which Webbe denied, but acknowledged that some conversation had taken place between him and Franklin on the subject, and that Franklin had given him, in writing, a statement of the terms on which he would print and publish the work. A spirited paper controversy ensued, in which

Franklin, Webbe, and Bradford took part. In consequence of this dispute, Franklin established the magazine above mentioned, and had the first number out about a month before Webbe could issue his. The latter was a foolscap octavo of forty-eight pages, at twelve shillings per annum. Only two or three numbers were published.

The **Pennsylvania Journal and Weekly Advertiser**, the third Philadelphia newspaper in the English language, was established in 1742. William Bradford, a grandson of the first William, and nephew of Andrew Bradford, of the *American Weekly Mercury*, was a partner with the latter for a short time; but he went to England in 1739, returned in 1742, and set up the paper above named. The first number was published December 2d. In 1766 he took his son Thomas as a partner, and the publication of the *Pennsylvania Journal* was continued

by William and Thomas Bradford. After the establishment by Bradford, in 1754, of the London Coffee-House, at the southwest corner of Front and Market Streets, the publication-office of the *Journal* was removed to that building. The London Coffee-House being the great commercial centre until the establishment of the City Tavern, the office of the *Journal* was in an excellent situation for news and business, and the paper seems to have flourished. William Bradford also opened, in the same house, in 1762, a marine insurance office, in company with Mr. Kidd, where much business was done. The *Pennsylvania Journal* was continued until some time in September, 1777. No attempt was made to publish it during the British occupation of the city, nor until after the evacuation. The paper was revived at the

<sup>1</sup> For a further sketch of this offspring of the *Pennsylvania Gazette*, see notice of the *Saturday Evening Post*, in succeeding pages.

beginning of December, 1778, and from that time it was published regularly by William and Thomas Bradford until the death of Col. William Bradford, which occurred Sept. 25, 1791. After that event Thomas Bradford, son of William, continued the paper.

The title of the *Pennsylvania Journal* was changed to the *True American* in 1797, and in the early part of 1800 it was published by Thomas Bradford, son of William, at No. 8 South Front Street. It was soon afterward issued daily by Samuel F. Bradford. On July 1, 1800, notice was given that the paper would thereafter be published by Thomas Bradford, the father of Samuel F. Bradford. In November, 1813, James Elliott and Thomas T. Stiles bought the *True American and Commercial Advertiser* from Thomas Bradford. On the 9th of March, 1818, the *True American* was united with the *United States Gazette*. The two papers were called *The Union and United States Gazette, or True American*. Enos Bronson and Thomas Smith became proprietors. Smith and Ebenezer Cummins had purchased the *True American* before that time of Bradford, and published it at No. 92 South Front Street.

The *German Pennsylvania Journal* is believed to have been the title of a newspaper in the German language which was printed in Philadelphia as early as 1742. It was published by Joseph Crellius, who, as appears from an advertisement, also kept a winter evening German school.

*Ein Schall und Gegenschall der Wahrheit, und des Gesunden Verstandes Christliebender Seelen in Diesam Americanischer Land theil*, the first religious magazine established in this country, was commenced in February, 1746, by Christopher Saur, of Germantown. This magazine soon took the monthly form, but after a time was discontinued.

Subsequently Christopher Saur, Jr., commenced a new serial of the same kind in German, which was entitled, *Das Geistliche Magazin oder das den schatzten der schriftgelehrten zum himmelreich gelehrt das gereichtes altes und Neues*. This magazine was continued for a number of years, and was published strictly in

accordance with the promised plan. Saur's press was very active in producing almanacs, newspapers, and other publications in English and German. He employed two or three mills in manufacturing paper, cast his own type, made his own printers' ink, engraved his own wood-cuts, and bound his own publications.

The *High Dutch Gazette* (so called in English newspapers) was published in Philadelphia during the quarter of a century beginning with 1750. But very little is known in relation to it.

The *German and English Gazette* was established in 1751. In the *Pennsylvania Gazette* of September, 1751, there is a notice of a "*German and English Gazette*, containing the freshest advices, foreign and domestic, with other entertaining and useful matters in both languages, adapted to the convenience of such as incline to learn either. Printed at the *German Printing-Office*, in Arch Street. Price, five shillings per annum." This printing-office was then kept by Gotthardt Armbruster.

A society having been formed in London for the purpose of "promoting religious knowledge among the German emigrants in Pennsylvania," they established a German printing-office in Philadelphia for the publication of school-books and religious tracts in that language as early as the year 1755, or perhaps before that time. A newspaper was also published at this establishment in order to communicate political and general information to the German inhabitants.

W<sup>m</sup> Bradford

The *American Magazine and Monthly Chronicle*, for the British colonies, was issued by William Bradford, at the corner house at Front and Market Streets, October, 1757. It purported to be issued "by a society of gentlemen," and the motto was "*Veritatis cultores, fraudis inimici*." The vignette represented an Indian leaning upon his gun. Upon one side of the Indian was a gentleman proffering him a roll of goods and the Holy Bible. On the other side another gentleman held in one hand a hatchet. The motto was "*Prævalebit æquior*." This periodical was principally devoted to political matters, literary discussions, and poetry. It was discontinued Nov. 14, 1758.

**Der Wochentliche Philadelphische Staatsbote** was first published by Henry Miller in January, 1762. It appeared weekly, printed on a whole or a half-sheet of foolscap, as occasion required; but it was afterwards enlarged to a crown sheet, and next to a demy. After being published about six years the title was changed to *Der Pennsylvanischer Staatsbote*, and the paper was continued until the British army took possession of Philadelphia, in 1777. On the retiring of the British troops from the city the publication was resumed, and was continued until 1779, when the publisher retired from business.

**The Pennsylvania Chronicle and Universal Advertiser**, "containing the freshest advices," appeared on Jan. 6, 1767. It was published by William Goddard at ten shillings per annum. It had four columns to a page, instead of three, as had hitherto been the practice. For two out of three years it was printed in quarto form, and the fourth year it returned to folio, which was the original form in which it had been printed. Joseph Galloway and Thomas Wharton were said to be secret partners of Goddard in this enterprise. But this partnership did not continue for a very long time. The partners quarreled and separated, and Goddard turned his batteries in the *Chronicle* upon Galloway, who was abused through the columns of the paper which he had helped to establish, in a manner that must have been very unpleasant. This paper was discontinued in February, 1773, and Goddard removed to Baltimore, where he established the *Maryland Journal*, the first newspaper published in that town.

**The American Magazine**, an octavo of forty-eight pages, was established by Lewis Nicola, in the beginning of 1769, and was published monthly throughout the year, expiring with the December number. Nicola was a native of France, educated in Ireland, and had quitted the British army, in which he held some appointment. He became warmly attached to the American cause, wrote some treatises on military subjects about the commencement of the Revolution, and became an officer in the army. He was town-major of Philadelphia during the Revolutionary war, and was appointed by Congress to the command of the corps of invalids. He was a member of the American Philosophical Society, and published their transactions in his magazine during its continuance.

**The Penny Post**, containing fresh advertisements and useful hints, etc., was first issued on Jan. 9, 1769, and was printed and sold by Benjamin Mecom, opposite the Presbyterian meeting-house on Arch Street. It was published on Monday, Wednesday, and Friday. The number for January 20th had between the letters of its beading a crown, with the motto beneath it, "*E Pluribus Unum.*" The next number, which was issued on January 27th, had the plain head without the crown and motto. This was the last number of the journal which has been preserved, and was most probably the last number issued.

**The Pennsylvania Packet, or General Advertiser**, was first issued on Monday, Oct. 28, 1771, by John Dunlap. It was a small folio sheet, the printed page measuring nine by fifteen inches, and having three columns. The motto—then considered almost indispensable to a newspaper—was from Juvenal, "*Quicquid agunt Homines, nostri est Farrago Libelli,*" which may be freely translated, "Whatever men do, is the burden of our speech." The imprint was as follows: "Printed by John Dunlap, at the Newest Printing Office, in Market Street, where subscriptions, at ten shillings per annum, advertisements, etc., are thankfully received for this paper."

This "newest printing office" was located on Market Street, third house east of Second, opposite what was then, and for many years afterward, known as the Jersey Market, which occupied the middle of the street. The paper was to be published weekly.

In his announcement the publisher stated that the liberal encouragement he had received enabled him to issue the *Packet* much sooner than he had anticipated, and that this number, *accompanied by a supplement of two pages*, was ample evidence that his undertaking received hearty support from the business men of Philadelphia.

The reading matter in the first number of the *Packet and Advertiser* consisted of the prospectus, communications, extracts from foreign papers, and news from London of the date of September 2d. Not a line of local news or of editorial matter appeared in the paper, nor, indeed, in any of the papers of that time. The ship-news consisted of a list of thirty-four vessels entered, eleven outward, and ten cleared.

At the beginning of its third year the *Packet* was enlarged, so that the printed page measured eleven by eighteen inches. During the Revolution it was reduced to its original size, but again enlarged to the above dimensions in 1783.

This journal warmly supported the cause of the colonies against Great Britain, and in 1775-76, when it was published semi-weekly, postscripts—answering to the extras of to-day—were issued whenever important news was received from abroad or from the other colonies. Though this showed considerable enterprise, the slowness with which important matters were laid before the public in those days is illustrated by the fact that "A Declaration by the Representatives of the United Colonies of North America, now met in General Congress at Philadelphia, setting forth the Causes and Necessity of their taking up Arms," which was adopted July 6, 1775, did not appear in the *Packet* until the 10th of that month.

While the British army occupied Philadelphia, in 1777-78, Dunlap published the *Packet and Advertiser* at Lancaster, but returned to Philadelphia on the 17th of June of the latter year. On the 4th of July he published an editorial—very rare in those days—on the evacuation of the city by the British troops. It marks a feature of the newspaper press of that time,

that the publisher never alluded in the *Packet* to his enterprise in removing his office and publishing his paper while the city was occupied by the enemy, nor to his return at the earliest day possible.

About this time Mr. Dunlap associated with himself David C. Claypoole, who had been his apprentice, and the firm became Dunlap & Claypoole. Subsequently the paper was published by Claypoole alone, though it is likely that Dunlap still retained his interest, since the old firm-name of Dunlap & Claypoole reappeared on the 21st of September, 1784, when the *Packet*, which had before been issued tri-weekly, was converted into a daily, *being the first daily newspaper printed on this continent*. Here again the provoking reticence of the publishers on personal matters is to be noted. *The first daily newspaper had not a word to say for itself!* The title was shortly afterward changed to *American Daily Advertiser*.

From 1791 to 1794 the paper was published by Dunlap alone, when Claypoole again became his partner. In December, 1795, he finally withdrew.

John Dunlap, whose name is thus prominently and honorably associated with the press of Philadelphia, was born at Strabane, County Tyrone, Ireland. When about eight years old he came to America to live with his uncle, William Dunlap, who had emigrated from Ireland, learned the art of printing under William Bradford, and was at that time in business at Lancaster. William Dunlap subsequently removed to Philadelphia, and opened a printing-office and book-store. Turning his attention to divinity, he was ordained in the Church of England, and became an Episcopal clergyman in Virginia. When this took place, in 1768, he sold his printing-office to his nephew—then about twenty years old—to be paid for in installments. John Dunlap prosecuted the business vigorously, and was a prominent printer and publisher before he began the *Packet and Advertiser*, in 1771. He was made printer to Congress, and in that capacity was the first publisher of the Declaration of Independence, to the principles of which he subscribed with pen, purse, and service. In 1780 he contributed four thousand pounds to supply provisions for the American army. He was a member of the First Troop of Philadelphia Cavalry, and served with distinction first as cornet and afterward as lieutenant. Toward the close of the war he became captain of his troop. He rendered efficient service in the suppression of the Whiskey Insurrection in 1799, during which he held the rank of major, and commanded a considerable body of cavalry. By his talents, industry, and business tact, Mr. Dunlap acquired a large fortune. He purchased an estate in Virginia, and, through the friendship of Governor Randolph, obtained a patent for ninety-eight thousand acres of land in Kentucky. He also owned much property in Philadelphia, including the square of ground between Chestnut and Market and Eleventh and Twelfth Streets, which he sold to Stephen Girard.

Mr. Dunlap was an honored citizen, an upright, honest, and liberal man. In one of his houses Robert Morris found a free home in his adversity, and there closed his days. In politics he was a staunch Federalist, a name which is often regarded as a term of reproach, but which in his time was proudly assumed by many of the wisest and best in the land; representing, as they claimed, the principles upon which Washington had placed the welfare of the country. Capt. Dunlap died on the 27th of November, 1812, in the sixty-sixth year of his age, and was buried with the honors of war, in Christ Church graveyard, Fifth and Arch Streets.

After Mr. Dunlap withdrew from the *Advertiser*, at the close of 1795, it was published by David C. and Septimus Claypoole, under the title of *Claypoole's American Daily Advertiser*. Septimus died Dec. 31, 1798, and the paper was continued by David C. Claypoole until Sept. 30, 1800, when he sold it to Zachariah Poulson, Jr., for ten thousand dollars.

Mr. Claypoole was said to be a descendant of Oliver Cromwell, whose daughter married Lord General Claypoole. He was a gentleman of the old school, copying closely the manners of his master, and afterward partner, John Dunlap. He was much respected for his sterling worth by the community in which he lived to attain the age of ninety-two. He died in 1849. Mr. Claypoole, as the publisher of the official paper of the government, printed Washington's Farewell Address from the original manuscript, which was subsequently presented to him by its author. This he reverently cherished, and after his decease it was purchased by James Lenox, of New York, as a most desirable addition to his extensive collection of rare and valuable books and manuscripts, which is unequalled in this country.

On purchasing the *Advertiser*, Mr. Poulson removed the office to his residence, No. 106 Chestnut Street, opposite the Bank of North America, at which place he continued the publication for more than thirty-nine years. It appears that he had intended to establish a distinct paper, for in his introductory he trusts that "to those gentlemen who have subscribed to the *Observer*, the relinquishment of the title, and the alteration of the time of publication, will be no serious objection."

Under Poulson's management the *Advertiser* was prosperous and profitable. Never attaining a very large circulation—indeed, large circulations were for the greater part of his time unknown—it was essentially an *advertiser*; averaging about twenty-two columns of advertisements to six columns of reading matter. This proportion was kept up until the last number. It was several times enlarged; finally to a seven-column paper, the printed page measuring sixteen and three-quarters by twenty-one and a half inches.

Never brilliant, the *Advertiser* was always respectable. The esteem with which it was regarded by the

public is fairly set forth in the following extract from Watson's "Annals of Philadelphia.":

"It is more properly municipal and domestic than any other [newspaper] which we know. It seems composed to suit the family-hearth and fireside comforts of good and sober citizens, never flaunting in the gaudy glare of party allurements; never stained with the ribaldry and virulence of party recrimination. It is patriarchal—looking alike to the wants and benefits of all our citizens as common children of the same city family. It is, in short, a paper like the good old times from which it has descended, and like the people of the former days—its recent most numerous readers—it carries with it something grave, discriminating, useful, and considerate."

The *Advertiser* was a Whig journal, and the last number flew the flag of Harrison and Tyler for President and Vice-President. Mr. Poulson was seventy-eight years old, and for some time had been in feeble health, when, on the 28th of December, 1839, he bade farewell to journalism in these simple yet touching words:

"To the Friends of the American Daily Advertiser:

"The want of health and other causes have, of late, frequently admonished the subscriber to relinquish the labors and responsibilities attending the publication of a daily paper; and as John Poulson, his eldest son—who has spent the greater portion of his days in cheerfully aiding as an assistant, and, during the long affliction of his father as sole editor—declines retaining the establishment, the respect and gratitude which the subscriber feels for the present subscribers to the *American Daily Advertiser*, many of whom have for a number of years honored his subscription-list with their names, has induced him to select successors who have not only an ardent inclination but the ability and means of continuing the publication of the paper to their entire satisfaction.

"With this object in view, he has transferred the said establishment (the first newspaper which appeared daily on the American continent) to Messrs. S. C. Brace and T. R. Newbold, who now publish a highly respectable daily paper, and conducted on the same plan, denominated the *North American*, in connection with which the said *American Daily Advertiser* will from this day be published. . . .

"ZACHARIAH POULSON,

"Who for more than thirty-nine years has been its proprietor."

Mr. Poulson was born in Philadelphia, in 1761, and died July 31, 1844, at his residence on Chestnut Street, where for so many years he had conducted his newspaper. He was a practical printer, having learned the art of Joseph Cruikshank, celebrated in his day for the excellence of his productions. His father, Zachariah Poulson the elder, was a Dane, who came to Pennsylvania with his father, when twelve years of age, and became an apprentice to Christopher Saur, the second, at Germantown, who, like his father, was a printer of celebrity.

Zachariah Poulson, Jr, engaged in business on his own account at an early age, and was for many years printer to the Senate of Pennsylvania. He published many works prior to purchasing the *Advertiser*, some of them—as Proud's "History of Pennsylvania"—of considerable importance. He was an active citizen in all matters calculated to improve or benefit the community in which he lived, and prominent in many benevolent institutions. For nearly fifty-nine years Mr. Poulson was an officer of the Library Company of Philadelphia; twenty-one years as librarian, thirty-two years as a director, and six years as treasurer. His portrait, painted by Sully for the company, now adorns the walls of the library.

The *Gazette of the United States* was established by John Fenno, in New York, April 11, 1789, and when Philadelphia became the seat of government it was removed here, its first Philadelphia issue bearing date of April 14, 1790. The office was located at No. 69 High [now Market Street], between Second and Third, where the paper was published every Wednesday and Saturday, at three dollars a year. It was then a three-column folio, printed on a sheet seven-teen by twenty-one inches, and contained Congressional news, public documents, foreign intelligence three months old, and one or more poems in each number. Scarcely any local news was given, and editorials were exceedingly rare.

On Dec. 13, 1793, an evening edition of the *Gazette of the United States* was commenced, and the title was made the *Gazette of the United States and Evening Advertiser*. In 1795 the latter part of the title was dropped, the paper being published by the name first adopted; but in 1796 the title was made the *Gazette of the United States and Philadelphia Evening Advertiser*. The price for the morning and evening editions in 1793 was six dollars per year. In 1799 it was increased to eight dollars per year; mailed copies, nine dollars. This paper became a strong advocate of the national government.

When he first issued the daily edition, Fenno announced that he was "determined to keep detached from the influence of parties," but the *Gazette* soon became intensely Federal, and bitterly opposed the "French and American Jacobins." This opposition was generally exhibited in articles copied from other journals, and in satirical poems full of personal allusions to prominent Republicans. In a note to one of these poems it is said, "I have heard a respectable old gentleman, contemporary with Dr. F—, observe that he never saw him in a *minority*." Rather an ungracious reflection on the memory of the printer philosopher. Fenno strenuously supported Adams' administration, and when a war with France was imminent, he daily hurled his thunderbolts at the "French faction" in the United States. His son inherited his principles, and when, on the 19th of November, 1798, the news of Nelson's victory over the French fleet in the bay of Aboukir (August 8d) was received, he issued a "Gazette Extraordinary," announcing and giving particulars of the "interesting, important, and truly glorious news," which, he says, "we cannot delay for a moment to communicate to our readers." The next day appeared a "Postscript," rejoicing in the "certainty of that glorious event, the destruction of the French fleet in the Mediterranean by Admiral Nelson."

John Fenno was a native of Boston, Mass., and was born Aug. 12, 1751 (old style). He received a liberal education, and was teacher for several years of the Old South Writing-School, Boston. He died in Philadelphia on Sept. 14, 1798, of the yellow fever, four days after the death of his contemporary and political

antagonist, Benjamin F. Bache, of the *Aurora*. Fenno was a man highly esteemed, and the press, upon the occasion of his death, commended his career.

John Ward Fenno, son of John Fenno, who was only nineteen years old at his father's death, took up the publication, and continued it until May, 1800. The following notice then appeared :

"The *Gazette of the United States*, which has for some time past been the property of Mr. Caleb P. Wayne, and by him been conducted, will in future be published in his name."

Wayne adopted the following motto :

"I, from the orient to the drooping west,  
Making the wind my post-horse, still unfold  
The deeds commenced on this ball of earth."

SHAKESPEARE'S *Henry IV.*, Part II.

Mr. Wayne was a merchant, and did not remain in charge of this paper quite a year and a half.

Enos Bronson, a native of Waterbury, Conn., was born March 31, 1774. He graduated at Yale College, and afterward began the study of law, which, however, he did not long continue. Removing to Philadelphia, he became a teacher in the Episcopal Academy, and shortly afterward purchased the *Gazette of the United States*. The probability is that he was the owner of the paper for some time before his name appeared in connection with it, and that the "seven prosecutions" referred to by Wayne were of his begetting.

On taking control of the *Gazette*, Bronson omitted *Daily Advertiser* from the title, and in May, 1802, entered into a partnership with Elihu Chauncey, which continued but three years. Under this firm, on the 20th of February, 1804, the title was changed from *Gazette of the United States* to *United States Gazette*. After Chauncey retired Bronson improved the paper, increasing the quantity of local news, and gaining largely in advertisements. He also turned his attention to commercial matters, and devoted an entire page to prices current.

A semi-weekly edition "for the country" was started in 1809, at four dollars a year. This, many years later, proved to be the most profitable issue of the paper. About this time the following notice to subscribers appeared regularly: "It is expressly stipulated that any subscriber to this *Gazette* shall be at liberty to discontinue his subscription at pleasure, upon giving notice to the editor, and paying any arrearages which may be due at the time, and not otherwise." A wide liberty, truly! The office of the paper had been several times removed, and was now located in "Zachary's Court, on the south side of Walnut Street, between Second and Front Streets."

On the 9th of March, 1818, the *Gazette* was consolidated with the *True American*, which was the successor of the *Pennsylvania Journal*, established in 1742 by William Bradford, grandson of the first printer in Pennsylvania. It was then published as a morning paper by Bronson & Smith, under the title of *The Union*, the old titles of both papers being retained as

suh-heads. Smith died early in 1819, and there appears to have been some difficulty in settling up the business. For a time the paper was printed "for the proprietors," but in November the name of William Henry Sandford appeared as publisher.

In 1820 James G. Watts and George H. Hart issued proposals for a new paper, to be called the *Commercial Chronicle*. Sanford, being in ill health, and fearing the rivalry, sold them *The Union*, which was furnished, in lieu of the newspaper, to the subscribers they had obtained. The location of the paper was changed twice during this year, once to Market Street, between Seventh and Eighth, and again to the northeast corner of Second and Walnut. Here it remained until June, 1828, when the office was removed to No. 68 (now No. 230) Dock Street, where the paper continued to be published until it was united with the *North American*.

The fortunes of *The Union* were at a low ebb, when, in 1822, Joseph R. Chandler offered a story for publication in its columns. The acceptance of this story proved to be the starting-point of the subsequent great success of the paper. Being fresh and vigorous, it attracted the attention of the public, and Mr. Candler was solicited to continue his contributions. It soon became necessary for him to visit the office to read the proofs of his articles, and almost insensibly he became the editor of the paper. At his suggestion the old title of *United States Gazette* (which for several years had been kept subordinate to *The Union*) was resumed as the sole heading on the 1st of April, 1823.

In November, 1826, Mr. Chandler purchased Mr. Watts' share in the paper, and the firm became Hart & Chandler. At this time the *Gazette* was far from being in a prosperous condition. The circulation of the daily did not reach four hundred, and the establishment was supported mainly by the tri-weekly edition for the country. The press-work was done on a double-pull Ramage press, and some time elapsed before a hand-press was obtained large enough to print two pages at one impression. Under the new management the daily edition soon reached eight hundred, and the partners were jubilant over their success. "When we reach twelve hundred," said Hart, "all will be right."

On the 22d of June, 1829, the establishment passed into the hands of Mr. Chandler. Mr. Hart engaged in other enterprises, but was subsequently employed in the business department of the *Gazette*, and continued his connection with it until 1847.

The paper had now attained a considerable circulation, and was steadily gaining public favor, especially in mercantile circles. The local reports were fuller; enterprises were set on foot to obtain early foreign news; letters from several European capitals appeared on the arrival of each packet; special correspondence from New York, Boston, and other cities was published; political questions were ably dis-

cussed; and occasional stories and poetry enlivened its columns. All the editorial labor was performed by Mr. Chandler, including the letters from "Our Special Correspondent" at London, Paris, New York, Constantinople, Boston, or Peking.

Twenty-five years' incessant editorial labor, joined with his active participation in public affairs, had severely strained Mr. Chandler's constitution when, in 1847, the proposition to purchase the *Gazette* was made by the proprietors of the *North American*. He laid this proposition before his son, Mr. Hart, and his clerks, and they unanimously advised its acceptance. The opinion given by these gentlemen was substantially as follows: "It is evident that if you continue the publication of the paper, working as you do, you cannot live more than five years. If you retire you may live ten years. We shall certainly lose our positions if you sell; but you will probably gain five years of life. We are satisfied to take our chance, and hope that you will take yours." No similar event could have been more honorable to both parties. Mr. Chandler accepted the offer of Messrs. Graham, McMichael & Bird, and the *United States Gazette* ceased to exist as a distinct paper. In his valedictory the editor stated that not one of the papers which had been contemporary with the *Gazette* in 1822 was then in existence.

Joseph R. Chandler, who was sole editor of the *United States Gazette* during twenty-five years, was a native of Kingston, Plymouth Co., Mass. He came to Philadelphia in September, 1815, when about twenty-three years old, and established a school, which he continued for several years, even after he became a partner in the *Gazette*. He was the author of a "Grammar of the English Language," which passed through several editions; and his speeches on various occasions, many of which have been published, give evidence of ripe scholarship, clear judgment, and a remarkable power of felicitous expression.

Mr. Chandler was a gentleman of irreproachable character, and filled many positions of trust with honor to himself and advantage to the public. He represented the Second District of Pennsylvania in Congress from 1847 to 1855, being thrice elected by the Whig party, of which he was an earnest member and a trusted leader. As he had no affiliation with the "Know-Nothing" element, which exerted a controlling influence over the disorganized Whig ranks in 1854, Mr. Chandler failed to receive a renomination. He was subsequently minister to Naples, a position which he filled with honor. For many years he was a member of the Board of Prison Inspectors, and zealously discharged the onerous and perplexing duties of his position. No man who ever filled the editorial chair reflected more credit on the press of Philadelphia than Joseph R. Chandler.

The *North American* and *United States Gazette*, "the oldest daily in America," is the outgrowth of a

number of other journals of various degrees of importance. The *North American* was first issued under that name March 26, 1839, at No. 63 (now No. 233) Dock Street. Originally published by S. C. Brace and T. R. Newbold, it was established by a number of wealthy gentlemen who, observing that the press of the city then paid little or no attention to religious matters or to the proceedings of charitable associations, determined to establish a daily commercial newspaper that should be high-toned, independent, and semi-religious in character. A fund was subscribed for the purpose, which, however, was soon exhausted, and William Welsh, one of the originators, became sole proprietor. Before the expiration of the first year it absorbed Zachariah Poulson's *Daily Advertiser*, and it is on its lineal descent from this paper that the *North American* very properly bases its claim to be the oldest daily in America. In 1840 the *Commercial Herald*, which had been published by Col. Cephas G. Childs, was merged into the new paper, and Mr. Welsh also purchased the *Philadelphia Gazette*, which had been published as an afternoon paper in connection with the *North American*, but under another editor and manager.

On the 1st of October, 1845, Mr. Welsh sold the *North American* to George R. Graham and Alexander Cummings. Robert T. Conrad, alike distinguished as jurist, poet, dramatist, and orator, was engaged as editor, the columns were thrown open to amusement and other advertisements, which had before been excluded, and the pecuniary prosperity of the paper was increased. It joined with the *New York Tribune* in efforts to obtain early news, and at their expense the pilot-boat "Romer," in 1846, was run as an express across the Atlantic, beating the regular packet several days,—a feat which has not been surpassed even in the later enterprises of journalism.

Differences soon arose between the partners. Mr. Cummings objected to the political views of the editor, while Mr. Graham indorsed his course. As a result the firm dissolved, and Mr. Graham remained sole proprietor until Jan. 1, 1847, when Morton McMichael became associated with him, under the firm of Graham & McMichael. The paper was then an eight-column folio, with a head similar to that now used, and had for a motto, "Devoted to Truth." It was published at the northeast corner of Chestnut and Fourth Streets, from whence it was removed, in July, 1848, to No. 132 South Third Street. In 1878 it was removed to its present location, northwest corner of Seventh and Chestnut Streets.

At the beginning of 1847 the *North American* and the *United States Gazette* were separate papers of like character and standing. Both were devoted to the interests of the Whig party; both advocated the policy of protection; both gave great attention to the commercial and manufacturing interests of the city and State; and they were much alike in the tone of their articles. Both were successful,—the

*Gazette* being probably the most prosperous,—but neither could hope for any material increase in its prosperity while the other existed. Under these circumstances Mr. McMichael conceived the idea of consolidating the two friendly rivals, and overtures were made to Joseph R. Chandler for the purchase of the *Gazette*, of which he was proprietor. The proposition was accepted, and on the 1st of July, 1847, the two papers became one of nearly the present size. Dr. Robert M. Bird, who some time before had retired from the literary field, and was residing at New Castle, Del., furnished the requisite extra capital, and became a partner, though the firm remained unchanged until Mr. Graham withdrew, in August, 1848, when it became McMichael & Bird.

This instance in which two journals so nearly equal in business, and both prosperous, were consolidated is almost without parallel in American journalism. In announcing the union, the publishers (apparently fearing that some old subscriber of the *Gazette* might take offense at seeing his favorite title occupy the second place) thought proper to give this curious reason for placing *North American* before *United States Gazette*. "No preference was designed to be given to one (title) over the other; the collocation was determined by the geographical feature which connected the one with the continent and the other with the country, the first with the greater, the second with the less."

When the union was effected the editorial corps of the *North American and United States Gazette* was as follows: Robert T. Conrad, political editor; Dr. Robert M. Bird, miscellaneous; James S. Wallace, associate editor; and G. G. Foster, city editor. Mr. Graham and Mr. McMichael also contributed to enrich its columns. The subscribers of the old *Gazette* were nearly all retained, and the paper entered on a new tide of prosperity.

As before stated, Mr. Graham withdrew in 1848. Dr. Bird died on the 23d of January, 1854, but his interest remained until July following, when Mr. McMichael became sole proprietor.

Robert T. Conrad, for many years the efficient editor of the *North American*, was a polished writer, an eminent citizen, and a cultured gentleman. That he was held in high esteem by his fellow-citizens is evidenced by the fact that he was in 1854 chosen the first mayor of Philadelphia after the consolidation.

Some years prior to Mr. McMichael's death he withdrew from active editorial duty, being succeeded by his son, Clayton McMichael, while another son, Walter McMichael, became general business manager. Clayton McMichael speedily proved himself a journalist of recognized ability, and remained personally in editorial charge until his appointment, by President Arthur, in 1882, as United States marshal for the District of Columbia. John M. Perry is the present managing editor, representing Mr. McMichael during his absence in Washington.

The character of the *North American and United States Gazette* has been maintained during the several decades of its varied history with remarkable uniformity. As a commercial journal, it is highly valued by business men, among whom the daily edition is chiefly circulated. It is Republican in politics, but it has not hesitated upon occasion to dissent from certain so-called "party measures" when these were deemed prejudicial to the interests of the community. It is considered the especial exponent of the views of the manufacturers of Pennsylvania on the protection of American industries. The general conduct of the *North American*, particularly in the expression of its editorial views, is eminently remarkable for its dignity and solidity.

There is a tri-weekly as well as a weekly edition of the *North American*, the circulation of which mainly extends to the country.

Morton McMichael, who did so much to elevate the press of this city, was born in Burlington County, N. J., on the 2d of October, 1807, and his earlier education was acquired in the school of his native village. His family moved to Philadelphia when he was quite young, and he completed his course of studies at the University of Pennsylvania. Subsequently he read law with David Paul Brown, and was admitted to the bar in the year 1827. Prior to the latter date, however, his inclinations led him into literary pursuits, and at a very early age he began that journalistic career which lasted until his death, in January, 1879, and which, in its scope and achievement, has never been excelled by any Philadelphian. In 1826 he succeeded T. Cottrell Clarke as editor of the *Saturday Evening Post*, a journal established in 1821 as an outgrowth of Benjamin Franklin's *Pennsylvania Gazette*, which was originally published in 1728. In 1831, Mr. McMichael became editor-in-chief of the *Saturday Courier*, a new enterprise, and in 1836, together with Louis A. Godey and Joseph C. Neal, began the publication of the *Saturday News*. In 1844 the *Saturday Gazette*, long known as *Neal's Saturday Gazette*, was published, Morton McMichael and Joseph C. Neal being associated as editors. All these papers, as their titles imply, were weekly journals, and all, except the *Saturday Evening Post*, have long ceased to exist.

For over fifty years actively employed in journalism, there was no movement set on foot for the public good or for the honor and welfare of the city which had not the powerful aid of Mr. McMichael's advocacy and support. No one contributed more than he to carrying forward the great measures of instituting the public school system, consolidating the city, creating the park, and a score of other municipal measures of great, though less vital, importance.

In the larger area of national affairs he had long a potential voice. Of a clear vision, broad, though conservative views, and high courage to urge right before expediency, his counsel was ever sought by the statesmen of the Whig and Republican parties.

Webster, Clay, Clayton, Seward, Chase, Blaine were his friends and correspondents, justly valuing his advice and the intimate knowledge he possessed of the views and needs of the great protectional party of the country, of which he was one of the most eminent leaders and apostles.

In a memorial address delivered before the Historical Society of Pennsylvania on the 17th of April, 1879, Col. John W. Forney (himself now deceased) thus speaks of Mr. McMichael's journalistic career:

"His newspaper was characteristically clean, pure, elevated, and impersonal. He never wrote or talked about himself; never spoke of an adversary by name, unless he had cause to praise him; and never stained his pages by printing scandal.

\* \* \* \* \*

"I know there are those who sneer at what they call the ultra-decorum of such an example: men who think that our fast age requires fierce, fast writing, and that modern progress means modern pruriency. So much do I differ from them that I feel I may refer them to themselves to disprove their own argument, in a word, to the extraordinary improvement of the newspapers of all countries within the last twenty-five years. Take the Philadelphia papers of to-day, and place them side by side with the Philadelphia papers forty years ago, even with the journals when Morton McMichael first began to write for Atkinson & Alexander's daily *Chronicle*, and the difference is even more marked than it is between the old Conestoga wagon and the modern steam-engine. For this unspeakable change in journalism, so productive of sweeter manners and purer laws, we are more indebted to Morton McMichael than any other contemporary character. But because he was a gentleman, proud of his great profession, he was not therefore a carpet knight. No one could strike deeper, quicker, or surer, and if he did not use the battle-axe or the broadsword, he wielded lighter weapons with fatal effect. A conservative by blood and breeding, he kindled instantly at wrong or injustice. All his impulses were chivalric."

It was not only as a journalist that Mr. McMichael impressed himself upon the community. Never a seeker after place, he was several times elected to offices of public trust. While a young man he served for some years as an alderman of the city; from 1843 to 1846 was high sheriff of the county, displaying eminent courage in combating and finally suppressing the terrible anti-Catholic riots of 1844; from 1866 to 1869 was mayor of the city; and in 1867, upon the organization of the Park Commission, was chosen president of that body, a position he held up to the time of his death. In 1873 he was appointed a delegate-at-large to the Fourth Constitutional Convention of Pennsylvania, to fill the vacancy caused by the death of William M. Meredith.

A politician of the highest type, of a rare purity as well as strength of character, Mr. McMichael's influence throughout the length and breadth of the State was felt and acknowledged, and, as time softened the asperities of earlier conflicts, perhaps no man commanded so universally the regard of his fellow-citizens of all parties. Holding positive opinions himself on matters of public policy, he enforced them with eloquent voice and powerful pen, but with a courtesy which never interfered with his personal relations with political opponents.

Prominent as a journalist and distinguished as a public servant, as an orator he was certainly unsurpassed. Mr. McMichael's speeches on all subjects

were characteristically chaste and fresh. Prepared or unprepared, they were always finished models. Whether spoken from the hustings, or the public hall, or the private saloon, or in a religious temple, they were fascinating and delightful productions, and not infrequently as impassioned and contagious as they were scholarlike and correct. He was always original, classic, and magnetic. His speech at the Chinese Museum during the Irish famine was a marvel of electric eloquence. The great audience were literally carried away by the fervor, the force, and the beauty of his appeal. Not less memorable was his splendid defiance of the mob, in 1838, when they attempted to set fire to the Shelter for Colored Orphans, in charge of the Society of Friends, on Thirteenth Street, above Callowhill, the day after the destruction of Pennsylvania Hall, on Sixth Street. His display of courage brought to his assistance the strong men whose efforts prevented the second sacrifice. In an agricultural address at Boston, Mass., on the 26th of October, 1855, his oratory was so irresistible that Robert Winthrop and Edward Everett, and other statesmen of the period, who were present, spoke of him in terms of spontaneous amazement and delight.

During the trying times preceding and pending the civil war his voice was ever heard in inspiring appeal for the Union and the law. In the darkest hours of defeat and depression his orations breathed an impassioned courage and faith, as in the final triumph they urged clemency to the defeated.

Mr. McMichael's speech on July 4, 1873, as president of the Park Commission, making a formal transfer of ground to the United States Centennial Commission, and his polished oration on the presentation of the John Welsh endowment to his Alma Mater, the University of Pennsylvania, are literary productions of the highest order,—thoughtful, classic, original, and brilliant,—worthy of Edmund Burke or Daniel Webster.

Of firm though courteous temper, capable of controlling any assemblage, and prompt to give each man opportunity to show his talents, Mr. McMichael was constantly called upon to preside at public gatherings, which he did with unerring tact. His trenchant wit was ever tempered by charity for human frailties, and it was the rule of his life to speak only of the better attributes of men, and always to defend the absent.

A recognized leader in the social life of the city, his charm of manner, voice, and conversation remain a vivid remembrance with his contemporaries. Morton McMichael's pride in and affection for Philadelphia were proverbial, and in part account for the universal expression of sorrow at his death, which was voiced by the press of the State and the action of a score of public organizations.

The estimate in which he was held is epitomized in the inscription upon his monument, erected by his fellow-citizens in Fairmount Park, "An honored and

Martin W. Michener

beloved citizen of Philadelphia." At a meeting, presided over by the mayor of the city, held to express the sense of the public loss (on Jan. 8, 1879), one of the many eminent speakers thus described Mr. McMichael's last hours:

"Not only the great citizen is dead, Mr. President, but the happy philosopher. When I saw him last it was the first day of the new year. Death was on his face, but life was in his heart. He suffered, but he smiled. He even told me a story, and welcomed others, and shook me by the hand. I could almost hear him say, with the illustrious French orator, 'To-day I shall die. Envelop me in perfumes; crown me with flowers; surround me with music, so that I may deliver myself peacefully to sleep.' He lived less than a week after this, and he passed to his final compt in the midst of the sighs of a people that he loved wisely and not too well. I dwell upon his fate, sir, with a certain satisfaction. He is the only human being I ever envied. I envied him his genial nature, his contagious wit, his electric eloquence, the fervor of his poetry, and charm of his conversation, the delicious sympathy of his society, the admiration he excited in others, and his superb composure under disaster."

The **Royal Spiritual Magazine** was started in 1771 by John McGibbon. Not meeting with gratifying success, the periodical was suspended after the issuing of a few numbers.

The **Pennsylvania Magazine, or American Monthly Museum**, was commenced in January, 1775, by Robert Aitken. The celebrated Thomas Paine was one of the principal writers for this work, and had agreed to furnish monthly a certain quantity of original matter for its pages, with which condition it was often very difficult to persuade him to comply. Aitken relates that on one of these occasions, when Paine had neglected to furnish his quota of material for the magazine until near the day of publication, he went to him and complained of the neglect. Paine heard him patiently, and coolly answered, "You shall have them in time." Aitken, however, was not thus to be put off, and he insisted that Paine should accompany him home, and there write the articles, as the workmen were waiting for the copy. Paine accordingly went with him, and, being seated at a table with writing materials,—which, in his case, always included a glass and a decanter of brandy,—he proceeded to his task. "The first glass," says Aitken, "put him in a train for thinking; the second I feared would disqualify or render him intractable, but it only illuminated his intellectual system; and when he had swallowed the third glass, he wrote with great rapidity, intelligence, and precision, and his ideas appeared to flow faster than he could commit them to paper. What he penned from the inspiration of the brandy was perfectly fit for the press without any alteration or correction."

The enterprise of Robert Aitken in the publication of the *Pennsylvania Magazine, or American Monthly Museum*, became more hopeless after the breaking out of the war, and by the events arising during the struggle. The last number was published in July, 1776.

Aitken was an avowed friend of American independence, and being in the city when the British army entered, he was thrown into prison and treated with

great severity. When the enemy were about to evacuate Philadelphia, he and a number of others were taken to the river in order to be conveyed to the prison-ships at New York. He managed, however, to escape from their hands, and after the war resumed his business as a printer.

The frontispiece of the magazine was drawn by "P. E. D." [Pierre E. Du Simitiere], and was engraved by Aitken. The vignette was the Goddess of Liberty, with a pole and a liberty cap, holding a shield with the Pennsylvania arms. On the right side of the figure was a mortar inscribed "The Congress." A plan of a fortification, with cannon-balls, was in the foreground. Cannon were in the background, with battle-axe and pike. A gorget, with the word "Liberty" upon it, was hanging on a tree. Beneath was the motto, "*Juvat in sylvis habitare.*" This magazine was the first published in Philadelphia which gave illustrations. In the first volume there was a portrait of Dr. Goldsmith, plans of a threshing machine, an electrical machine, the "hippopotamus," a dredging-machine invented by Arthur Donaldson, a map of Boston harbor, a plan of the town of Boston and the provincial camp, an engraving of the battle of Charlestown, June, 1775, and a representation of a machine for delivering persons from houses on fire, etc.

The **Pennsylvania Ledger; or, the Virginia, Maryland, Pennsylvania, and New Jersey Weekly Advertiser**, was started in January, 1775, by James Humphreys, Jr., on Front Street, at the corner of Black Horse Alley. It was professedly to be conducted upon principles of strict impartiality; but it was not able to fulfill that undertaking. Humphreys had been clerk of one of the courts, as a qualification for which office he had taken an oath of allegiance to the king of Great Britain; and, on the breaking out of the Revolution, he pleaded the obligations of his oath and declined taking up arms against the government which he had sworn to support. He was, therefore, considered a Tory, and his paper was, of course, denounced as being unfavorable to the cause of liberty. The paper was under suspicion as being inclined to the Tory cause before the British took possession of the city. Its publication was continued under this embarrassment until Nov. 30, 1776, on which day No. 97 was published. It remained suspended for nearly a year.

As soon as the British troops were comfortably stationed it again made its appearance. On Friday, Oct. 10, 1777, No. 98 was published, with the royal arms at the head; and its columns were conspicuous in its display of loyalty. As long as the British troops remained in the city the *Ledger* was prosperous; but as soon as the fact was apparent that the city must be evacuated, the proprietors made preparations to leave a neighborhood where it would have been dangerous to remain much longer. The last number of the *Ledger* was issued May 23, 1778, without intimation that the paper was to be discontinued. Humphreys

went with the British to New York, where he endeavored to establish himself in business. He subsequently went to England, and thence to Nova Scotia; but he returned to Philadelphia in 1797, opened a printing-house, and remained in business until the time of his death.

The *Pennsylvania Evening Post* was first published in January, 1775, by Benjamin Town. It appeared tri-weekly, and was the first evening paper established in Philadelphia. Although Town had been the agent of Galloway & Wharton in the Tory interest of Goddard's *Chronicle*, yet, supposing that Humphreys' *Ledger*, which was just then commenced, would incline to the royal party, he resolved to take opposite ground, with a view of injuring the character of the *Ledger*, and preventing its success.

The *Evening Post*, having taken the side of the Americans from the time of its publication until Howe's advance into Pennsylvania, was under no suspicion when the royal troops advanced. While other journals were making ready to leave the city, Town seems to have made no preparations. He remained during the exciting scenes which followed the battle of the Brandywine and the crossing of the Schuylkill. On Sept. 23, 1777, a number of this paper was issued. The publication was then suspended until October 11th, upon which occasion a full account was given of the military operations and the success of the British arms. There seemed to be no difficulty or intention to interfere with Town's business, and he went on with the publication in the usual way. The British troops evacuated the city on the 18th of June, and on the 20th Town's *Evening Post* appeared as usual, with a cool account of the evacuation by the British on the preceding Thursday. Gen. Arnold, who came immediately as military governor, made no movement against the press or the printer, and the *Evening Post* continued to be published without actual molestation, although the Whigs who returned were exceedingly hostile to the printer. Town was attainted, and was ordered to surrender himself for trial, but he does not seem to have been tried. As soon as the troops had withdrawn he professed Whig principles. The effect of this unpopularity must have been considerable in a pecuniary point of view. Town endeavored to recover his popularity with his old Whig friends. Among others, he applied to Dr. John Witherspoon, of the College of New Jersey, who had been a former contributor. Witherspoon declared that he would not forgive him unless Town apologized to his countrymen for his conduct during the Revolution. The latter promised to do so, and Witherspoon undertook to write the form of an apology. He drew up a paper which was entitled "The humble confession, recantation, and apology of Benjamin Town, printer." This was written in a highly sarcastic manner, at the expense of Town. The latter refused to agree to some passages, and he therefore never signed the re-

cantation. By some means it got into print, and was published all over the country. In this recantation Town is represented as giving a full account of his life thus,—

"I was originally an understrapper to the famous Galloway in his infamous squabble with Goddard, and did, in that service, contract such a habit of meanness in thinking and scurrility in writing that nothing excelled. . . . Could much ever be expected of me? Such changing of sides is not any way surprising in a person answering the above description."

The recantation was long, and abounded with passages of a similar character. In conclusion, it was said,—

"I do hereby recant, draw back, eat in, and swallow down every word that I have ever spoken, written, or printed to the prejudice of the United States of America, hoping it will not only satisfy the good people in general, but also those scatter-brained fellows who would call me and others out to shoot pistols in the air, while they tremble so much they cannot hit the mark."

The *Post* could not continue on account of its unpopularity, and it quietly went out of existence in 1789. Town died July 8, 1793, at his house on Sixth Street, near Arch.

In April, 1775, The *Pennsylvania Mercury and Universal Advertiser*, a new weekly paper, was issued by Story & Humphreys, on Norris' Alley, near Front Street, at the usual price of ten shillings per annum. The title-page was decorated by a large cut, in which two figures, representing Great Britain and America, were displayed in the act of shaking hands, with the motto underneath, "Affection and Interest Dictate the Union." The existence of this paper was short, the office and printing materials being destroyed by fire in the following December, in consequence of which the publication was destroyed.

The *Royal Pennsylvania Gazette* appeared March 1, 1778, being issued by James Robertson, in Front Street. Humphreys and Town, respectively of the *Ledger* and *Post*, had divided the royal patronage between them during the greater part of 1777-78, and Robertson's paper was started to compete with them in appeals to British favor. This paper had a short history. Three days after the last number of the *Pennsylvania Ledger* was issued, on May 26, 1778, it was announced in the *Royal Pennsylvania Gazette* that the latter paper would be "suspended for some time." It was never heard of again. Robertson left the country before the end of the war, and went to Shelburne, Nova Scotia, where, with his brother, Alexander Robertson, he engaged in the publication of a newspaper. He afterward removed to Scotland, where he was engaged in business as a printer and bookseller as late as 1810.

The *United States Magazine* appeared Jan. 1, 1779, Francis Bailey being the publisher. Bailey was the first printer who ventured upon the experiment of publishing a magazine after Aitken's failure with the *Pennsylvania Magazine or American Monthly Museum*. The terms were as follows:

## "PRICES FOR THE FIRST MONTH."

"I. To the adventitious purchaser of a single copy, three dollars.

"II. By the quantity of twelve copies, two dollars and a half.

"III. To the subscriber for a single copy on advancing twenty-four dollars, two dollars.

"The publisher will rise in the price and fall of magazines, to the subscribers and to others, with the prices of articles and commodities in general."

This magazine was to be published monthly. The frontispiece was adorned with a vignette of an arched hall, supported by columns,—probably intended to be thirteen in number, although there were really nine on one side and six on the other. From the capitals of the pillars sprang a regular arch, which was decorated with thirteen stars,—the keystone in proper position. Under the arch was a figure of "Fame" flying, with trumpet, liberty-staff, and cap. On either side of this arch were the names of the States,—probably intended to be represented by the stars on the front of the arch. They commenced with New Hampshire and ran to Georgia. And it is worthy of being noticed that, according to this arrangement, Pennsylvania occupies the keystone of the arch,—this being probably the first example of the emblematic assignment of Pennsylvania to the position of the keystone in the Federal arch. The first piece in the magazine is "A Copy of Verses Illustrative of the Design of the Frontispiece." The following is an extract:

"The arch, high bending, doth convey,  
In a hieroglyphic way,  
What, in noble style like this,  
Our united empire is!  
The pillars, which support the weight,  
Are each of them a mighty State;  
Thirteen and more the vista shows  
As to vaster length it grows—  
For new States shall added be  
To the great confederacy.  
And the mighty arch shall rise  
From the cold Canadian skies,  
And shall bend through heaven's broad way  
To the noble Mexican bay!  
In the lofty arch are seen  
Stars of lucid ray—thirteen!  
When other States shall rise,  
Other stars shall deck these skies;  
There, in wakeful light, to burn  
O'er the hemisphere of morn."

The contents of this magazine were literary, political, poetical, and discursive. Foreign and domestic affairs received attention; and the articles were of a character suitable to the tastes of the times. In the number for December it was announced that the magazine would be discontinued; and, in apology for the experiment, it was said that the publication was "undertaken at a time when it was hoped the war would be of short continuance, and the money, which had continued to depreciate, would become of proper value. But these evils having continued to exist through the whole year, it has been greatly difficult to carry on the publication; and we shall now be under the necessity of suspending it for some time,—until an estab-

lished peace and a fixed value of the money shall render it convenient or possible to take it up again."

The editor of the *United States Magazine* was Hugh Henry Brackenridge, the wit, historian, and jurist, who, in later life, was one of the judges of the Supreme Court of Pennsylvania. Brackenridge was the author of that amusing book, "Modern Chivalry; or, The Adventures of Captain Farrago and Tague O'Regan," published in 1792,—the first comic and satirical novel written in the country. He also wrote "A History of the Insurrection in Pennsylvania of 1794, commonly called the Whiskey War." On going to Philadelphia, in 1776, Brackenridge supported himself by editing the *United States Magazine*.

The following anecdote relative to his editorship of this journal is given by his son: "At one time the magazine contained some severe strictures on the celebrated Gen. Lee, and censured him for his conduct to Washington. Lee, in a rage, called at the office, in company with one or two of his aids, with the intention of assaulting the editor. He knocked at the door. Mr. Brackenridge, looking out of the upper-story window, inquired what was wanting. 'Come down,' said Lee, 'and I'll give you as good a horse-whipping as any rascal ever received!' 'Excuse me, General,' said the editor, 'I would not go down for two such favors!'" Brackenridge was licensed as a Presbyterian preacher. On the 4th of July, 1778, he delivered an oration in honor of the patriots who had fallen in the war, in the German Reformed Church, Race Street, below Fourth.

The *Freeman's Journal*, or *The North American Intelligencer*, was first issued by Francis Bailey on April 25, 1781. It was printed in Market Street, between Third and Fourth, and issued every Wednesday. Under the head was the intimation or motto, "Open to all parties, but influenced by none." This sentiment describes the character of the paper. The journal, at the time of its issue, justified its motto. It was a paper to which all parties resorted, and it met with success. Bailey relinquished the publication on May 7, 1782, and Joseph Scott became publisher. The last number was published May 16, 1792.

The *Independent Gazetteer*, or the *Chronicle of Freedom*, a weekly paper, was established by Eleazer Oswald in April, 1782. It was published on Saturdays. Oswald rendered this journal one of the most lively and attractive published in the city. After he left the service he commenced printing the *Gazetteer*. After his death Mrs. Oswald, his widow, continued the publication of the *Gazetteer* about a year. On Aug. 17, 1796, it was announced in that paper that the proprietorship was disposed of to Joseph Gales, that Mrs. Oswald's connection would cease with the number to be issued on September 16th, and that Gales would commence the publication on Friday, September 23d, the paper to be printed on Wednesdays and Fridays, at noon. Gales was an Englishman, who came to the United States

about 1794. He continued the publication of the *Independent Gazetteer* until late in 1790, when the paper was discontinued, and Gales went to Raleigh, N. C., and set up a journal there.

The **Price-Current**, the first mercantile paper published in the United States, was first issued in June, 1783, and was published twice a month by John Macpherson. It was printed for him by Eleazer Oswald.

**Le Courier de L'Amerique**, a French journal, was established in 1784. In June of that year Boinod & Gaillard, booksellers, gave notice that, having been solicited to publish a paper in the French language, they had digested a plan, and were distributing it at their library, corner of Fourth and Arch Streets. The terms were to be one guinea per annum, one-half of which was to be paid upon subscribing. The paper was afterward commenced. It had but a short existence.

The **Pennsylvania Mercury and Universal Advertiser** was issued on the 20th of August, 1784, by Daniel Humphreys. It was a well-conducted weekly paper, and was published until about the close of 1788. This was the title of the paper commenced in 1775, which was brought to a sudden close Jan. 1, 1776, by the burning of the printing-office of Story & Humphreys; and the revival, nearly nine years afterward, may be considered as a second series of the same paper.

The **Pennsylvania Evening Herald and American Monitor** was founded in January, 1785, by Mathew Carey, who had been publisher of the *Freeman's Journal* and of the *Volunteer's Journal* at Duhlin, Ireland, and who was prosecuted and imprisoned upon account of the sentiments avowed in the latter journal. He came to Philadelphia, where he landed on November 15th of that year. He was poor, had escaped shipwreck in coming up the Delaware, and arrived in Philadelphia with a dozen guineas in his pocket, without acquaintance in the city, or friends, except such as he had made during his passage. One of these companions, a Mr. Wallace, had with him letters of recommendation to the Marquis de Lafayette, to whom he presented them, and with whom he had some conversation in relation to Mr. Carey's case, the particulars of which were well known, and excited much interest in the United States. Lafayette sent for Carey, inquired into his prospects, and did him a special service in introducing him to Robert Morris, Thomas Fitzsimons, and other influential gentlemen. The next day Carey received a letter from the marquis with four one-hundred-dollar notes on the Bank of North America,—a gift made without solicitation on the part of Carey, who merely explained to Gen. Lafayette what he intended to do when remittances, expected from Ireland, should arrive. This sum was the foundation of Carey's fortune; and he was enabled afterward to treble repay it, not only by the return of the amount, with interest, to Lafayette, but to Frenchmen in distress. He

determined to commence a newspaper, and counted upon his reputation as printer of the *Volunteer's Journal*, of Duhlin, to benefit him in the enterprise. In January, 1785, he issued proposals to publish Carey's *Pennsylvania Evening Herald and American Monitor*, to be printed on the evenings of Tuesdays and Saturdays, at the price of three dollars per annum. There was difficulty about procuring material for this enterprise. Carey had no presses nor type; but he bought the stock of type of Robert Bell, a book publisher, who had published extensively. The press he expected to purchase as a bargain; but Col. Oswald, of the *Gazetteer*, was not disposed to admit of the establishment of a rival without a struggle. He bid against Carey at the sale of the press until he raised the price to fifty pounds currency, or one hundred and thirty-three dollars, which was nearly the price of a new press. Under these discouragements the *Pennsylvania Herald* was issued for the first time Jan. 25, 1785. After two months' experience Carey discovered that his means were not sufficient, and on March 25th, William Spotswood and C. Talbot were taken in partnership, and the paper was enlarged.

The *Herald* for some time languished, and did not attract much attention until Carey, by accident, found the means of satisfying a public want. At a town-meeting held at the State-House in the summer of 1785, to take into consideration the calamitous state of trade, Mr. Carey attended, and afterward undertook to write out from memory a statement of the heads of a speech made by Jared Ingersoll. Upon trying to write out the report, he found that it ran so smoothly that he put the whole address into the first person, as if spoken by Ingersoll. He then submitted it to the latter, who was so much pleased with it that he made slight alterations, stating that "he could scarcely have done it so well himself, as he spoke without notes." Carey said,—

"I naturally concluded that if I could publish a speech from memory, without having taken a single note, I should certainly be able to take down debates with the advantage of a seat, a table, and pens, ink, and paper. Accordingly, on the 27th of August, 1785, I commenced the publication of the debates of the House of Assembly without the least knowledge of stenography. I abridged and took down the leading words, and was enabled to fill up the chasms by memory and the context; and, as the printers had then more scruples about pirating from each other than some of them have at present, none of them published the debates, of which the *Pennsylvania Herald* had, for that session, the exclusive advantage. John Dunlap, a respectable Revolutionary character, who printed the *Pennsylvania Packet*, offered me a liberal compensation for the privilege of a republication. But I declined, knowing that it would deprive the *Herald* of the great superiority it possessed.

"In the following session Mr. Dunlap hired as stenographer the well-known Thomas Lloyd, who, though an excellent stenographer as far as taking down notes, was a miserable hand at putting them in English dress. I learned his system, which was one invented by the Jesuits of St. Omers, but did not succeed with it better than I had done before."

The publication of the *Herald* seems to have been discontinued in February, 1788.

The **Columbian Magazine, or Monthly Miscellany**, the publishers being Mathew Carey, T. Siddons, C. Talbot, W. Spotswood, and J. Trenchard, appeared

in September, 1786. This magazine was more ambitious than any which had been issued in the United States. It was modeled somewhat upon the plan of the *Gentleman's Magazine* and of the *London Magazine*, and was intended to present engravings with each number. The plates were generally engraved by Trenchard, and many of them were of local views, all interesting and valuable. Carey withdrew after the publication of the third number. He thought that there were too many partners, and that there was no hope of commensurate profit to be divided among so many. The magazine was nevertheless continued, and nine volumes of it were published, the last number being issued in 1792.

The *American Museum, or Repository of Ancient and Modern Fugitive Pieces, Prose and Poetical*, was issued by Mathew Carey in January, 1787, he having withdrawn from the *Columbian Magazine*. Carey's idea was to preserve the valuable essays which at that time appeared in various newspapers. He said,—

"The first number, which contained a mass of most excellent matter, attracted great attention. It was eagerly sought after; and, as I sold it separately, the edition—one thousand copies—was soon exhausted. I had not means to reprint it. This was a very serious injury, many persons, who intended to subscribe, declining, because I could not furnish them the whole of the numbers."

Carey struggled on for six years, and published twelve volumes of the *Museum*, ending it in December, 1792. The causes of failure were that the subscription price was too low, being only two dollars and forty cents per annum for two volumes, containing each from five hundred to five hundred and fifty pages. Many subscribers lived at great distances, their payments were irregular, and, at last, Carey, whose interest in the work was very great, was obliged to give it up.

The *Federal Gazette* was published in 1788 by Andrew Brown. He was a native of the north of Ireland, where he was born about 1744. He was educated at Trinity College, Dublin. He came to the United States in 1773 as an officer in the British service, but he soon resigned, and settled in Massachusetts. He fought on the patriot side at Lexington and Bunker Hill. He was muster-master general in 1777, and served under Greene and Gates as major. After the war he established a young ladies' academy at Lancaster, and subsequently came to Philadelphia. The *Gazette* was the organ of the friends of the Constitution, and many papers in favor of it were published therein. In 1783 he changed the name of the *Gazette* to the *Philadelphia Gazette*. His paper is said to have been the first to report the debates of Congress. On Jan. 27, 1797, the office of the *Philadelphia Gazette* took fire. Brown and his family occupied the upper part of the building. Upon the alarm he endeavored to save the lives of his wife and three children, but without success, and he was so badly burned that he died February 4th. His son, Andrew Brown, Jr., then took charge of the paper. Samuel Relf be-

came an associate with the younger Brown on the 1st of July, 1797.

The *Philadelphia Gazette* was published in the year 1800 by Andrew Brown, Jr., and Samuel Relf, at No. 29 Chestnut Street. In September, 1801, the entire interest of Brown was sold out to Relf, who continued to be publisher and editor of the *Gazette* until his death, which occurred on the 16th of February, 1823, from the result of injuries caused by falling on the ice. Stevenson Smith and William M. Gouge became the proprietors of the *Gazette* shortly after Relf's death, and gave to the paper considerable strength. Gouge was born in Philadelphia, Nov. 10, 1796. His studies were principally directed toward finance. After he left the *Gazette* he published, in 1835, "A History of the American Banking System;" "The Expediency of Dispensing with Bank Agency and Bank Paper," 1837; and "A Fiscal History of Texas," 1852.

The *Aurora and General Advertiser* was established, in 1790, as the *General Advertiser*, by Benjamin Franklin Bache. His father was Richard Bache, a native of Settle, Yorkshire, England, born Sept. 12, 1737, who came to America while young, entered business as a merchant, married Sarah, the only daughter of Benjamin Franklin, in 1767, and succeeded his father-in-law as Postmaster-General of the United States, which office he held from November, 1776, until 1782. His son, Benjamin Franklin Bache, was born at Philadelphia, Aug. 12, 1769. He accompanied his grandfather, Dr. Franklin, to Paris, when the latter was agent of the Continental Congress at the court of France. Benjamin F. Bache was educated in France and at Geneva. He obtained a knowledge of printing in the house of Didot, at Paris. He came back with his grandfather in 1785, finished his studies in the college at Philadelphia, and on the 1st of October, 1790, published the first number of the *General Advertiser*. On the 8th of November, 1794, the title *Aurora* was adopted for this paper, and it was thenceforth published as the *Aurora and General Advertiser*. This journal, as soon as the French Revolution broke out, became a strong partisan of the French cause, and sought to turn the course of American politics in sympathy with the acts and policy of the French republic. Washington looked coldly upon the violence of the revolutionists, and upheld the dignity of the United States government against the insolence of Genet and of Fauchet and their successors. This policy carried the *Aurora* into hostility to the American government, and it became, in course of time, violent in its advocacy of the principles of the anti-Federal party, which in time came to be denominated the Democratic party. Bache died in the yellow fever visitation, Sept. 10, 1798. His widow, whose maiden name was Margaret Hartman Markoe, of a Danish family, and a native of Santa Cruz, West Indies, succeeded to the publication of the *Aurora*. Her proprietorship was successful, mainly because of the fact that at the time of the death of

Benjamin F. Bache he had been assisted in the editorial department of the paper by William Duane, who was a vigorous writer, and who continued in the management of the journal. Duane was a native of the northern part of the province of New York, near Lake Champlain, where he was born in May, 1760. His father, who was a farmer and surveyor, died in 1765. His widow then removed from that neighborhood, and came to Philadelphia, from which, after a short residence, she went to Baltimore, and subsequently to Ireland, where she settled at Clonmel. William was mainly educated in that country. His mother was strongly attached to the Catholic Church. Her son William, before he was nineteen years of age, married Catharine, seventeenth child of William Corcoran and wife. The family of the latter were Protestants, and this marriage so displeased Mrs. Duane that, although William was an only child, she discarded him. Her resentment lasted until her death, and by her will her property—she being in comfortable circumstances—went to others. William Duane, in consequence of this difficulty, having a young wife to support, bravely ventured out into the world to make his own living. He selected the printing business as a means of livelihood, learned the trade, remained at Clonmel for some three or four years, then went to London, where he engaged in business. In 1787 he went to Calcutta to undertake the publication of a newspaper, sending his family, meanwhile, to Clonmel, to await the result of this new experiment. For a time he was successful in India, but an over-bold article in condemnation of the East India Company caused his seizure and transportation to England, his library and most of his property in Calcutta having, meanwhile, been confiscated. In London he became a parliamentary reporter for the *General Advertiser*, now known as the *London Times*. In 1796, Duane came to the United States, and arrived at New York July 4th of that year. Shortly afterward he came to Philadelphia, where he first obtained employment as editor of the *True American*, published by Samuel F. Bradford. Some time afterward he became one of the editors of the *Aurora*. After the death of Bache he continued this paper with vigor, and with great satisfaction to the political organization first known as anti-Administration, and afterward as the Republican, and finally as the Democratic party. His first wife, Catharine Corcoran, died in 1798. In 1801 he married his employer, the widow Bache, and after that time the *Aurora* was for many years known in ordinary conversation as "Duane's paper."

Mr. Duane conducted the *Aurora* until about the year 1822, when it was purchased by Richard Penn Smith, who became its editor. On the 22d of November, 1824, the *Aurora* and the *Franklin Gazette* were united as a morning paper, entitled the *Aurora and Franklin Gazette*, which was published by John Norvell. Mr. Smith continued to act as one of the editors

of the paper until about the year 1827, when he retired, Mr. Norvell also assisting in that work at the time when the *Aurora and Franklin Gazette* was published at No. 6 Bank Alley. The *Aurora* had been a journal of great political influence in the Democratic party, but had gradually lost its power,—a fact to be attributed, perhaps, in considerable degree to the fierceness of tone and the personal virulence with which it was conducted. There was a considerable change in the manner and spirit of the *Aurora* after Mr. Smith took hold of it.

The *National Gazette* was first issued upon Oct. 31, 1791, by Philip Freneau, and was published until Oct. 26, 1793, when the enterprise was relinquished. He wrote essays, poetry, etc., at an early age, and was a contributor to the *United States Magazine* in 1779. In 1791 he edited the *Daily Advertiser* in New York, and removed to Philadelphia in October of that year, to take charge of the *National Gazette*, being also employed by Jefferson as translating clerk in the State Department. Freneau was a zealous opponent of the foreign policy of President Washington. He left the *Gazette* in 1793, and went to New Jersey. Being bitter in his attacks, mainly upon the government, he was much complained of, and Jefferson was censured for retaining him in office. It was averred that he made the maintenance of this editor a charge upon the treasury of the United States.

The *Ladies' Magazine and Repository of Entertaining Knowledge* was commenced in December, 1792, and was printed for the proprietors by W. Gibbons, No. 194 North Third Street. Two volumes were printed. The contents were stories, poems, and light reading, with essays and a summary of the news of each month.

The *New World* was first published by Samuel Harrison Smith, in 1795, at No. 118 Chestnut Street. On Tuesday, Oct. 25, 1796, the paper was issued for the first time as a daily paper. It was a good publication, but it did not succeed. The last number was published Aug. 16, 1797.

The *Pennsylvania Magazine* was commenced in 1795, of which one volume was published.

The *Philadelphia Minerva*, containing a variety of fugitive pieces, original and selected, was commenced in 1795 by William T. Palmer, No. 18 North Third Street. It was published weekly, in a quarto form, until July, 1798. The contents were of a news character, with selected literary matter.

Finlay's *American Naval and Commercial Register* was established in December, 1795, and was continued until December, 1797.

The *American Annual Register, or Historical Memoirs of the United States*, for 1786, was the first and only volume of that publication.

The *American Universal Magazine* was founded Jan. 2, 1797. It was a weekly publication, and in the first number was described as printed by Budd & Bartram for Richard Lea, No. 131 Chestnut Street. In

the number for March 7th, it was announced that the magazine was published by Snowden & McCorkle for Richard Lea. Volume third was printed by Samuel Harrison Smith and Thomas Smith. Four volumes of this magazine were published, which ended in 1798. It was illustrated with copper-plate engravings, none of which were of merit. The contents seemed to be selections entirely.

The **Universal Advertiser** was established by James Carey in February, 1797. In 1796, Carey, who was a brother of Mathew Carey, and had been engaged with the latter in the publication of the *Volunteers' Journal* in Dublin, and who had charge of that paper after Mathew came to the United States, finally failed in that business and came to this country. On the 7th of February, 1797, he commenced the *Universal Advertiser*, which only lasted until September 12th of the same year.

**Porcupine's Gazette and United States Daily Advertiser** came into existence in March, 1797. The restless spirit of William Cobbett was not satisfied with the sensation which was created by the publication of his pamphlets. He was anxious for some more vigorous field of warfare, and journalism presented the best opportunity for the indulgence. On the 14th day of March, 1797, Cobbett issued the first number of *Porcupine's Gazette and United States Daily Advertiser*, his writings being well known by his signature, "Peter Porcupine." The *Gazette* was bold, scurrilous, and not always truthful. Cobbett was a firm believer in the largest liberty of the press. His freedom in speaking of the characters of public men, and, indeed, of private men (because the libels upon Dr. Benjamin Rush were attacks upon the latter in his professional character as a physician), led to the overthrow of the *Gazette* and the flight of Cobbett from the country. The last number of the *Gazette* was published some time in the year 1799.

The **Courier de la France** is noticed in Bache's paper of 1797.

The **Methodist Magazine**, founded by the Rev. John Dickens, of the Methodist Episcopal Church, commenced in 1797, and was printed by Henry Tuckness, and sold by Dickens at No. 50 North Second Street. Two volumes were published, and the contents were sermons, records of religious experience, etc.

The **United States Recorder** was established in January, 1798, by James Carey, who had made a *fasco* with the *Universal Advertiser* in the previous year. It was published at No. 19 Carter's Alley, the days of issue being Tuesday, Thursday, and Saturday. Carey conducted this paper somewhat in the style of Cobbett, in *Porcupine's Gazette*. It was coarse and scurrilous, and the publication did not last long.

The **Weekly Magazine of Original Essays and Fugitive Pieces** was published by James Watters & Co., and was sold at the printing office in Letitia Court. The first number was issued Feb. 3, 1798, and

three volumes were published. Watters died of yellow fever in 1798. This magazine contained many articles of merit. Charles Brockden Brown commenced in this periodical the novel of "Arthur Mervyn," the first chapter of which was published June 16, 1798.

The **Philadelphia Monthly Magazine, or Universal Repository of Knowledge and Entertainment**, was issued in January, 1798, being printed for Thomas Condie, stationer, No. 20 Carter's Alley. It was published during the year 1798 in two volumes, and contained several engravings.

The **Dessert to the True American** was published from July, 1798, to July, 1799.

The **Philadelphia Magazine and Review, or Monthly Repository of Information and Amusement**, had its origin on the 1st of January, 1799. It was printed for Benjamin Davis, at No. 68 High Street. It was not of striking merit, and closed its career at the end of the first volume.

The **Ladies' Museum**, commenced in February, 1800, and published five numbers.

The **Portfolio**, by "Oliver Oldschool," was published Saturday, Jan. 3, 1801. It was intended to be a weekly paper, and was printed by H. Maxwell, and sold by William Fry, No. 25 North Second Street, opposite Christ Church. The publication was quarto in form, and was devoted to essays, criticisms on books, the theatre, and poetry. It was announced to be published "by the editor and Asbury Dickens, sole proprietors." "The editor" was Joseph Dennie, a native of Boston, Mass., where he was born Aug. 10, 1768. He was a graduate of Harvard. His ambition was the law, for which profession he studied, but which he is said to have abandoned after the disagreeable experience of his first case, in which his fine scholastic oratory, engaged in the elaboration of a very simple point of law in relation to debtor and creditor, was somewhat snubbed by a rough, unsympathizing, and inelegant justice of the peace. His tastes were literary, and he wrote essays under the title of the "Farrago." These were copied in the newspapers of the day, and their success induced Dennie to become connected with *The Tablet*, a small weekly in Boston, which lasted three months. The *Farmers' Museum*, published at Walpole, N. H., by Isaiah Thomas and David Carlisle in 1793, gained Dennie for a contributor, and in 1796 he became its editor. He wrote for it many papers, particularly a series under the title of "The Lay Preacher," in which he sought to use "the familiarity of Franklin with the simplicity of Sterne." The *Museum* was a brilliant literary venture, and for some years was successful. It was controlled by elegance and taste, and the editor succeeded in drawing around him a large number of contributors of wit, taste, and versatility. After some four or five years' labor on this magazine the bankruptcy of the proprietor put an end to its publication. Dennie was next a candidate for Congress, and was defeated. He left Walpole in 1799,

and came to Philadelphia, to act as a clerk in the office of Mr. Pickering, Secretary of State. In 1800 he commenced to edit the *United States Gazette*. In the prospectus of the *Portfolio* he said,—

“A young man once known among village readers as the humble historian of the hour, a conductor of a *Farmers' Museum* and a *Lay Preacher's Gazette*, again offers himself to the public as a volunteer editor. Having, as he conceives, a right to vary at pleasure his fictitious name, he now, for higher reasons than any sickle humor might dictate, assumes the appellation of ‘Oldschool.’”

At the beginning Dennie was inclined to the introduction of politics. His predilections were Federal, and opposition to Jefferson was frequently manifested. In one of the numbers for March, 1801, there was a criticism on the Declaration of Independence. This was followed by a counter-criticism; and subsequently a writer declared that the usual ceremony of reading the Declaration on every anniversary of the adoption of that paper was “an improper act,” etc. In December, the fact that Mr. Jefferson had for the first time introduced a message to Congress, instead of delivering a speech, was declared by the *Portfolio* to be an “extraordinary procedure.” In 1804, Dennie was indicted for a seditious publication against the government, but he was acquitted.

One of the most useful assistants of Dennie in the publication of the *Farmers' Museum* was Royal Tyler, of Boston, author of “The Contrast,” which many writers have declared to be the first American play acted by a regular company,—an error not to be permitted in a work devoted to the history of Philadelphia, in which Godfrey's tragedy of “The Prince of Parthia” had been acted at the South Street Theatre twenty years before Tyler's play was produced in New York City. Tyler was a light and entertaining writer, and his contributions “From the Shop of Messrs. Colon & Spondee,” an amusing *melange* of light verse and entertaining social and political squibs, were transferred to the *Portfolio*. In 1801, and afterward, Tyler published a series of papers entitled “An Author's Evenings.” He was a lawyer, and for several years was chief justice of the Superior Court of Vermont.

Dennie called around him a considerable number of brilliant young writers. Among them were Gen. Thomas Cadwalader (who furnished translations from Horace), Samuel Ewing (who was a son of Dr. John Ewing, and whose signature was “Jaques”), Joseph Hopkinson, Horace Binney, Robert Walsh, Rev. John Blair Linn, Charles Brockden Brown, and Charles J. Ingersoll. Paul Allen, who was certainly an exception to Griswold's suggestion that Dennie was the only professional literary man in the country at the period, was a frequent contributor to the *Portfolio*, and was, it is said, assistant editor. He was a resident of Philadelphia during a portion of the time, and was a contributor to the *United States Gazette*. John Quincy Adams and Gouverneur Morris were among the contributors to the *Portfolio*, and various

others in different parts of the country wrote for it. During the time of Dennie, and afterward, it was the best literary periodical published in the country. Mrs. Sarah Hall, mother of Judge James Hall, of Ohio, was a contributor to the *Portfolio* from the commencement and during the entire time it was published. She was a daughter of Dr. John Ewing, provost of the University, and was the mother of John E. Hall, who was one of the editors of the *Portfolio* from 1815 to 1827, in connection with his brother, Harrison Hall, who was the publisher.

In 1806 the form of the *Portfolio* was changed to octavo, and a new series was commenced with January of that year.

A new effort was made at the beginning of 1809 to improve and materially change the character of the *Portfolio*. A prospectus was published, in which the proposed improvements were set forth.

Dennie continued steadily in the editorship of the *Portfolio* until the summer of 1811, when his health seemed to be broken, and he relinquished his position for a time, but resumed it in January of the following year. In the number of that date he says he was compelled to relinquish his duties in consequence of “the furious onset of three potent adversaries,—sorrow, sickness, and adversity. Under the arduous of the summer solstice, and while the dog-star's unpropitious ray was flaming, he was confined to the couch of languor and anguish, and in the decline of autumn he was afflicted by one of the most tremendous domestic calamities which can agonize the sensibility, nourish the melancholy, and overpower the fortitude of man.” Scarcely had this number been issued before Mr. Dennie was called away. He died suddenly on the 11th of January, 1812, aged forty-three years. In the next number of the *Portfolio*, in an obituary notice, his successor in the editorial chair said of Joseph Dennie, “So pure was its texture, so delicate its conceptions, that his mind seemed, if we may speak so, to have been bathed at its birth in the very essence of literature, to be daily fed with celestial dews of learning.”

Dennie was succeeded in the editorship of the *Portfolio* by Nicholas Biddle. Mr. Biddle did not long remain in sole charge of the *Portfolio*. He was succeeded as editor, in the year 1812, by Dr. Charles Caldwell. The latter, in his autobiography, speaks as follows of the circumstances:

“To become the immediate successor of that gentleman [Biddle], whose abilities, in point of mind, attainments as a scholar, and accomplishments as a writer, were of a high order, was an enterprise involving no common share of hazard. To myself, deeply occupied as my mind and pen already were on several other engrossing subjects, the hazard was necessarily, by such considerations, in no ordinary degree augmented.”

Dr. Caldwell, however, was a man of prompt habits, accustomed to work, willing to take great responsibilities, and enjoying in truth the labor which was necessary to overcome them. He says that he “accepted the proposal in less than a minute,

and in less than an hour began to prepare for the performance of the duty which it enjoined." He was under the engagement to furnish for each number ninety-eight pages of matter, the principal portion of it to be original. The writers for periodicals at that time were scarce, and not a single one was engaged by promise, much less by hire, to act as auxiliary. Dr. Caldwell at the time was engaged in the practice of medicine, was writing on medical subjects, and delivering lectures on medical jurisprudence and the philosophy of medicine. But he went into this affair with great earnestness and with success. He obtained the services of correspondents, officers in the army and navy, believing that at that time the most interesting and attractive matter the *Portfolio* could contain would be accounts of events and transactions of the war. He was assisted with the friendship of Gen. Brown, the commander-in-chief, who encouraged his officers to furnish important matter. Similar relations were created with officers of the navy, and the *Portfolio* received the accounts of momentous engagements as soon as they were received by the Secretary of the Navy. The result was a considerable increase to the number of subscribers. Dr. Caldwell, not having sufficient time to devote entirely to the magazine, employed as assistants, at liberal compensations, Dr. (Thomas) Cooper and Judge Workman, who then resided in Philadelphia, and who were distinguished beyond most other men of the place by the strength and fertility of their talents and their literary accomplishments. Dr. Thomas Cooper, the friend of Priestley, a chemist and lawyer, politician and judge, had been removed from the latter office in 1811, and was in Philadelphia at the time waiting for fortune. His engagement on the *Portfolio* was of much advantage, and enabled him to earn something for his support until he was elected professor of Mineralogy and Chemistry in the University of Pennsylvania on the 29th of December, 1816. Dr. Caldwell remained in charge of the *Portfolio* until the end of the year 1815. He was succeeded by John E. Hall, Jr., who continued until 1827.

The *Portfolio* was originally published "by the editor and Asbury Dickens;" afterward, in 1802, "by the editor and Elizabeth Dickens;" next "by William Fry, for the editor and Elizabeth Dickens;" then for the editor by William Fry; and subsequently for the editor by Hugh Maxwell. At the beginning of 1806 the quarto form was given up, and an octavo shape (book-size) was taken. John Watts assumed the publication in 1806. Bradford & Inskip took hold of the magazine in 1812.

The *Philadelphia Repository and Weekly Register*, printed and edited by David Hogan, was commenced in 1801, and published in quarto form. John W. Scott succeeded Hogan as publisher at the beginning of the year 1803. The *Repository* was devoted to literature, and was popular among young

ladies and gentlemen because it was edited with a kind spirit of encouragement toward their experiments in writing, and offered a place for their poetry, tales, and sketches, upon terms of criticism not very strict or severe.

The *Juvenile Olio* was established in 1802. In January proposals were issued to publish the *Olio* by Amyntor, a citizen of Philadelphia. All the pieces under that signature in the *Philadelphia Repertory*, it was announced, would be published by David Hogan, nearly opposite the United States Bank.

The *Independent Whig* came into existence in 1802, being started by Joseph Scott, the author of "Modern Geography." It was a family evening paper, Democratic in politics, published at No. 207 Arch Street.

The *Literary Magazine and American Register* was founded in October, 1803, by Charles Brockden Brown, who for some time previous to 1800 had been a resident of the city of New York. He came back to Philadelphia about 1801. The *Literary Magazine* was continued for about five years. He lived for some years in Eleventh Street, below George. Some of the city directories gave him the title of "merchant." In 1809, Mr. Brown published an address to the United States Congress on the "Utility of Restrictions on Foreign Commerce, with Reflections on Foreign Trade in General, and the Future Prospects of America." Sully, the painter, said of him,—

"I saw him a little before his death. I had never known him, never heard of him, never read any of his works. He was in a deep decline. It was in the month of November,—our Indian summer,—when the air is full of smoke. Passing a window one day I was caught by the sight of a man, with remarkable physiognomy, writing at a table in a dark room. The sun shone directly upon his head. I never shall forget it. The dead leaves were falling then. It was Charles Brockden Brown."

John Neal, to whom Sully told this anecdote, said that Brown lived in Eleventh Street, between Walnut and Chestnut, in a "low, dirty, two-story brick house, standing a little in from the street, with never a tree or a shrub near it." In 1815 William Dunlap published a life of Brown, in two volumes, together with selections from his works.

The *Freeman's Journal* was established in 1804. William McCorkle issued proposals at the end of the year 1803 for the publication of the *Philadelphia Evening Post*, which was to be a Republican (or Democratic) paper. The first number was issued early in 1804. It was published under the title of the *Evening Post* until the 13th of June of that year, when the title was changed to the *Freeman's Journal*. In 1808, William McCorkle and James Elliott, who were then associated as partners, changed the time of publication of the *Freeman's Journal* to the morning, daily; and they also published the *Freeman's Journal and Columbian Chronicle*, for country circulation, weekly. On the 1st of November, 1824, the *Freeman's Journal* was united with a paper called the *City Register*. The *Freeman's Journal* in 1804 was published at No. 31 Walnut Street, and a year or two afterward at No. 120 South

Second Street. About 1815-16 the proprietors of the *Freeman's Journal* were William McCorkle & Son, and the office of the paper was at No. 20 Chestnut Street, which was at the southwest corner of Front Street. In 1823 the firm was William McCorkle & Joseph Hamelin, and the publication-office was at No. 68 Dock Street. McCorkle went out of the proprietorship in 1824, and Joseph P. Hamelin was editor of the paper in 1825, which was then published at No. 36 Walnut Street. On the 8th of January, 1827, the title of the paper was changed to *National Palladium and Freeman's Journal*, which became the property of the "Hickory Club" (Henry Horn, John Pemberton, Henry S. Hughes & Co.). Within the next two or three years the paper was under the editorial direction of three different journalists, namely, James A. Jones, Charles G. Green, and James Athearn. The last number was published April 8, 1828.

**The Commercial and Political Register**, a daily evening paper, was established in 1804 by Maj. William Jackson, and was conducted with success until the year 1815. Jackson was a native of Cumberland, England, and had been brought to Charleston, S. C., when a small child, he being an orphan. He had been liberally educated. He was a lieutenant in a South Carolina company during the Revolution, was afterward on the staff of Gen. Lincoln, went to Europe with Henry Laurens in 1781, and was Assistant Secretary of War in 1782, under Gen. Lincoln. He studied law and practiced in Philadelphia. He was secretary of the Federal Convention to frame a Constitution for the United States, and was private secretary of Washington during his administration as President. He accompanied Washington on his tours through the country in 1790-91. Washington appointed him surveyor of the port of Philadelphia in 1796, but Jefferson removed him in 1801, shortly after which he commenced the *Commercial and Political Register*. Maj. Jackson married Elizabeth Willing, the beautiful daughter of Thomas Willing, and sister to the celebrated Mrs. Bingham.

**The Philadelphia Medical and Physical Journal**, the contents of which were collected and arranged by Benjamin Smith Barton, had its origin on Nov. 1, 1804, and was continued until May, 1807. It was published in parts, with supplements, at irregular periods, by J. Conrad & Co.

**The Evening Fireside, or Weekly Intelligencer**, was commenced in 1805. After the publication of two volumes the work ceased. The Literary Club, which was formed in 1805, established *The Evening Fireside*. Joseph Rakestraw was the publisher.

**The Philadelphia Prices-Current** was started in 1805 by Thomas Hope, ship-broker, whose office was in Carpenters' Court, near the custom-house. It was issued regularly until some time in 1813. In the latter year the *Prices-Current* was published by John W. Scott. It seems to have ceased entirely at the end of December.

**The Christian Sun and True Philanthropist**, a weekly paper, was issued in 1805, by J. L. Hall & Co.

**The Pelican**, a German newspaper, was started, in 1805, by Joseph Forter, at No. 100 North Fourth Street,—weekly. It was chiefly devoted to literature.

**The General Assembly's Missionary Magazine, or Evangelical Intelligencer**, published monthly, was first issued in 1805. It represented the religious views and interests of the Presbyterian Church.

**The Theatrical Censor**, a weekly paper, was first published in 1805, by John Watts, from his polyglot office, at the corner of Eleventh and Walnut Streets. The first part appeared on the 9th of December of that year, and the last number was dated March 3, 1806, with a promise that the publication would be resumed at the beginning of the next theatrical season, and be continued regularly every Saturday until the close of the theatres,—price, two dollars. It is not probable that the publication was resumed. The *Censor* was conducted in a fair spirit of criticism, which was occasionally severe, but apparently justifiable, if the premises upon which they were founded were correctly stated. Beside the criticisms, there were occasional letters from correspondents, and comments upon theatrical matters. This publication created a very considerable sensation. The actors were not accustomed to hear anything but praises, and the boldness of this writer in pointing out their faults was very unpleasant. The *Repository* was the organ of the opposition, the writers for which, according to the *Censor*, were organized into a club.

**The Philadelphia Medical Museum**, conducted by John Redman Coxe, was in existence from 1805 to 1810, beginning in the year first named. It was published by A. Bartram.

**The American Register, or General Repository of History, Politics, and Science**, was commenced by C. & A. Conrad, in 1806.

**The Spirit of the Press** was published by Richard Folwell, sometimes monthly, and sometimes at greater intervals. Folwell was a printer, and was a dwarf and a hunchback. For these personal defects he made up by an active spirit, by boldness, and by puerility. He was a town character. His paper was exceedingly personal, applied nicknames to the persons chosen for censure, sometimes endeavored to overwhelm them with ridicule, and on other occasions followed them with strong invective. The paper was started in 1806, and was continued for some years.

**The Democratic Press** came into existence in 1807. In February, John Binns, who had been editor of the *Republican Argus*, at Northumberland, Pa., issued proposals for publishing in this city, on Tuesdays and Fridays, the *Democratic Press*, with the motto,—“Strike, but hear.” The first issue was on March 27th. A few numbers were issued on the plan of twice a week, but, in June, Mr. Binns announced that after the 29th of that month the *Democratic Press* would be published every evening. In the autobiog-

raphy of John Binns, he notices the help which was given him by Col. William Duane, of the *Aurora*, who was perfectly willing at the time that a new paper of the Republican party should be established in Philadelphia, a piece of liberality which he perhaps subsequently regretted, as the two papers were in afterwards hostile to each other. Mr. Binns says that Duane—

“did not approve of the name which I proposed for the paper, which he thought was impolitic and dangerously in advance of public opinion. Parties, he said, were in all the States known as Republicans and Federalists. The name of Democrat was nowhere in use. He feared the title, the *Democratic Press*, would prejudice the public against the paper. ‘Recollect,’ said he, ‘that Mr. Jefferson, the able leader of the party, in his inaugural speech took occasion, in speaking of the political parties of the United States, to say, ‘We are all Republicans; we are all Federalists.’ The word ‘Democrat,’ or ‘Democratic,’ is not used, indeed, or scarcely known as applied to politics or parties.’”

Binns, however, had determined on that name; and on the 27th of March, 1807, was published the first number of that paper, with the motto,—“The tyrant’s foe; the people’s friend.” It was the first paper published in the Union, or anywhere else, under the title of *Democratic*, and it was some years before the title was adopted by any other newspaper, or by the party. It however, in time, won its way into public favor, and the political parties of the time recognized and adopted it. “The name of ‘Republican’ faded away, and that of ‘Democrat’ was substituted in its place, and continued to gain ground throughout the Union.” The first office of the *Democratic Press* was on the east side of Front Street, below Walnut, which Mr. Binns had rented for four hundred dollars a year. He remained there only one quarter, and then went to Church Alley, next to Christ Church, where his rent was six hundred dollars a year. He lived in a small three-story house on Vine Street, above Fifth, at a rent of five hundred dollars a year. He then removed to a small two-story house on Church Alley, which he obtained at a rent of one hundred and sixty dollars a year. In 1810 the office of the *Democratic Press*, together with the residence of Mr. Binns’ family, was removed to No. 108 Market Street, which had been occupied by Col. Duane. In 1815 the office of the *Press* was removed to No. 70 Chestnut Street, between Second and Third. The paper was a power in the Democratic party, and might have remained so if Mr. Binns had not opposed Andrew Jackson for the Presidency in 1824, and afterward. The *Democratic Press* was issued for the last time on Nov. 14, 1829, it having been absorbed by *The Philadelphia Inquirer*.

The *Tickler*, edited by George Helmbold, was published by him Sept. 16, 1807, under the editorial *nom de plume* of “Toby Scratch’em.” It had for its motto the following quotation from Pope:

“Curet be the verse, how well soe'er it flow,  
That tends to make one worthy man thy foe,  
Give virtue scandal, innocence a fear,  
Or from the soft-ey'd virgin steal a tear!”

It was to be issued every Wednesday morning, at the price of four dollars per annum, from No. 131 South

Front Street. Owing to pecuniary difficulties, the first volume of fifty-two issues was not completed until Feb. 8, 1809. The paper finally attained considerable circulation; but innumerable suits for libel were brought against Helmbold, and to avoid them he enlisted as a private in the regular army in the war of 1812, was soon made a sergeant, distinguished himself for bravery, and was promoted at Lundy’s Lane to a lieutenantancy. Upon the occasion of a great battle, when he saw a part of his command shrinking from the telling fire of the enemy, he is said to have stirred them up with the comforting assurance of safety, that “those who were born to be hung were in no danger from cannon-balls and bullets.” After the war he took the Minerva Tavern, on Sansom Street, above Sixth, but kept it only a short time. He afterward resumed the editorial pen, and became the editor of *The Independent Balance* until his death, which took place in 1821.

The *Eye*, a weekly magazine, by “Obadiah Optic,” had its inception in 1808, being first issued by John W. Scott on the 1st of January of that year. It contained essays and light papers,—moral and pleasing,—with occasional poetry.

*L’Hemisphere*, a paper printed in the French language, was issued in October, 1809, by J. J. Negrin. Two volumes were published.

*Select Reviews and the Spirit of the Magazines*, a journal of elevated tone, was originally issued in 1809. This work was conducted by Enos Bronson and others, and was published until eight volumes were finished. Washington Irving was at one time connected with this periodical, the work upon which, although it was solid, was not greatly to his taste. He was much better pleased when *Select Reviews* went into new hands and assumed another title. It became the *Analectic Magazine*.

The *Mirror of Taste and Dramatic Censor* had its origin in 1810, the first number being issued in January by Bradford & Inskeep. It was published monthly, in small octavo size. Each number contained about one hundred pages, and was illustrated with a fine portrait of some actor or actress, generally engraved by Edwin. The contents were biographical, historical, critical, and miscellaneous. The *Dramatic Censor* took up the performances at the theatre regularly night after night, and criticised the actors, as well as the plays, with perspicuity and some severity, but with much interest and vigor. The editor of this magazine was Stephen Cullen Carpenter, an Englishman, who had reported the trial of Warren Hastings in Parliament, and who came to the United States in 1803. He established at Charleston in 1805 the *Monthly Register, Magazine, and Review of the United States*. He published at New York in 1809 “Memoirs of Jefferson.” The *Mirror of Taste* was published during the year 1810 and until the end of the year 1811 with no apparent loss of spirit or vigor. Edwin and Leney furnished the majority of the en-

gravings, which were generally from portraits by Sully, Wood, and Rembrandt Peale. In the number of the *Mirror* for April, 1811, appeared the first effort of a young Philadelphia artist, Charles R. Leslie, who, much attracted by the genius of Cooke, the English actor, made a sketch of him at full length, which was engraved by Edwin. Engravings were subsequently made from his designs of Cooper as *Leon*, and Jefferson and Blisset in the "Budget of Blunders."

**The Philadelphia Repertory**, a weekly paper devoted to literature and useful intelligence, was issued in 1810 by Dennis Hart.

**The Evening Star** was started in 1810 by White, McLaughlin & Co., at No. 53 South Fifth Street. It was a daily paper, and was published at the price of eight dollars a year.

**The Amerikanischer Beobachter** (in the German language) was published weekly, in 1810, by Conrad Zentler & John Geyer.

**Le Revelateur, Journal Politique Litteraire et de Commerce** was published, in 1810, three times a week, Mondays, Wednesdays, and Saturdays, at eight dollars per annum, by M. Truchet.

**The Trigram, or Fashionable Trifler**, had its origin in 1810. It introduced itself as follows:

"*The Trigram, or Fashionable Trifler.* By Christopher Crag, Esq., his Grandmother and Uncle.

'How now, ye cunning, sharp, and secret wags!

What is't ye do?—

A deed with a double name?"

Philadelphia:

Published by George E. Blake.

T. & G. Palmer, printers."

In the first number it was explained to the reader that "the title was adopted because a 'trigram' was a strange thing,—an odd thing, curiously contrived." This affair, which was in the style of the *Salmagundi*, is believed to have had three authors. One of them was Alexander Coxe, a son of Tench Coxe, afterward a member of the Philadelphia bar. A second writer for this periodical was Mordecai Manassas Noah. The third writer is not known. Three numbers of this magazine are in the library of the Pennsylvania Historical Society. There is considerable humor and good sense in the few numbers which have been preserved.

**The American Sentinel** had its inception in 1811, being issued by Lewis P. Franks, printer, at No. 164 Cherry Street. It was published twice a week, and was devoted to the support of the Democracy of the old school. It was continued with not very remarkable success for five years. In 1816 it was purchased by Jacob Frick & Co., who, on August 25th, turned the affair into a daily morning paper, under the title of the *American Centinel and Mercantile Advertiser*, and published it at No. 24 Walnut Street. With Mr. Frick was associated Peter Hay, who was one of the editors of the *Centinel* from the beginning. Before the year 1824 the name of this paper was changed from *Centinel* to *Sentinel*. It was published with vary-

ing degrees of prosperity until 1847, when it was merged into the *Evening Bulletin*, which was issued for the first time April 12th of that year.

**The Weekly Public Sale Report** and the **Daily Public Sale Notice** were issued in 1811, by Peter A. Grotjan, from his office and dwelling, No. 77 Walnut Street. About 1818 the titles of those publications were changed to the *Philadelphia Prices-Current and Weekly Public Sales Report*. Stephen Blatchford was associated with Grotjan in 1819, the paper then being called the *Philadelphia Letter-Sheet Prices-Current*. This paper after 1825 passed into the control of Cephas G. Childs.

**The Eclectic Repertory and Analytic Review, Medical and Philosophical**, a quarterly journal, was commenced in October, 1811, and was continued until October, 1820, being edited by an association of physicians. The publishers were T. Dobson & Son. In January, 1821, it was continued as *The Journal of Foreign Medical Science and Literature*, being conducted by S. Emlen, Jr., and William Price, and published by Eliakam Littell. It was suspended in October, 1824.

**The Beacon**, a didactic journal, made its appearance in 1811, printed by W. Brown, No. 24 Church Alley. The first number was published on Wednesday, Nov. 27, 1811, and the second number on Dec. 11, 1811. The library of the Historical Society of Pennsylvania possesses these two numbers. It is doubtful whether any more were published. The style was good, but the subjects were treated too soberly to attract attention or to win wide popularity.

**The American Review of History, of Politics, and General Repository of Literature and State Papers**, was a publication of the same character as the *Register*, founded in 1806. It was commenced in 1811, was edited by Robert Walsh, and was published quarterly for two years, in four volumes.

**The Historical Register of the United States from the Declaration of War in 1812** was commenced in the latter year, and was continued during the conflict, its purpose being to preserve records of the important events which were connected with the controversy. It was completed in four volumes.

**The Cynic**, a periodical paper published in 1812, undertook the work of criticism.

**The Whig Chronicle**, with the motto, "*Omnibus civibus patet; sed nullus partium minus, nullus terriculus movetur*," was begun in November, 1812, by George F. Goodman, at No. 87 Callowhill Street. It was published three times a week, and the subscription price was five dollars a year.

**The Analectic Magazine** was started on the 1st of January, 1813, by Moses Thomas, at No. 52 Chestnut Street. This periodical made its appearance just after the commencement of the war with England, and the publisher judiciously engaged the interest which existed in all parts of the country during that struggle by printing a series of biographies of the

military and naval heroes of the war. They were illustrated with portraits, and many of the biographies, which were written by Washington Irving, were prepared with much care, and were given in elegant style. At the close of the year 1816 the proprietor gave notice that he would give three dollars a page for any original articles deemed worthy of insertion in that periodical. The failure of Bradford & Inskeep, about 1815-16, produced a corresponding disaster in the fortunes of Moses Thomas, who, however, was enabled to go on with the publication by a composition with his creditors. Mr. Irving ceased to be the editor about 1816. The magazine was continued until 1821, when it took a new form.

**The Religious Remembrancer** was commenced on the 4th of September, 1813, by John Welwood Scott. It was issued weekly. This was the first religious weekly newspaper published in the United States. It preceded the *Boston Recorder*, which was commenced by Nathaniel Willis in January, 1816, and which is asserted by many to have been the first religious newspaper,—which it was not. It was published at No. 81 South Second Street.

**The Juvenile Portfolio**, a miscellany devoted to the amusement and instruction of youth, was published weekly by Thomas G. Condie, Jr., No. 22 Carter's Alley, at twelve and a half cents per month, payable quarterly. It made its appearance in 1813.

**The Porcupine**, a weekly paper, was issued by Lewis P. Franks & Co., in 1813.

**The Focus and Weekly Messenger** was started in 1813, by Thomas Waterman and Andrew J. Hutchins.

**The American Weekly Messenger, or Register of State Papers**, was issued by John Conrad in 1814. As the *Register* and *Review* had abandoned this field, there seemed to be a prospect for the success of Mr. Conrad's venture, but this did not appear to be the case. After a sufficient trial to prove the feeling of the public toward it, the *Messenger* was abandoned.

**L'Abeille Americaine Journal Historique, Politique et Litteraire** was printed and published in 1815 by A. A. Blocquert, at No. 130 South Fifth Street. It was a weekly publication. Subscriptions were taken by Mathew Carey and E. Chaudron. This periodical was commenced on the 15th of April, 1815, and was continued several years. Six volumes of this magazine were presented to the American Philosophical Society by the late Peter S. Du Ponceau.

**The Luncheon**, a monthly satirical paper, "boiled for people about six feet high, by Simon Pure," appeared in July, 1815. It was a political publication, and it was announced that it would be issued monthly. The second number of this affair contained a bitter and an abusive article purporting to be a biography of William McCorkle. In January, 1816, Lewis P. Franks was compelled to confess that he was the author of the *Luncheon*, that the biography of McCorkle was untrue, and announced that the paper would be discontinued.

**The Evangelical Repository**, at three dollars per annum, was issued in 1816.

**The Journal of the Academy of Natural Sciences of Philadelphia** was commenced in 1817. By means of it the society "determined to communicate to the public such facts and observations as having appeared interesting to them are likely to be interesting to other friends of Natural Science." The publication was begun when the academy was located at No. 35 Arch Street. About a year after the date of the first issue publication was suspended until 1821, when it was resumed under the management of Dr. Isaac Hays, and continued, without interruption, until 1825, the printer being Jesper Harding, afterward one of the proprietors of the *Evening Telegraph*. It was continued afterward up to 1842, when the first series closed. It consists of eight octavo volumes, each divided into two parts, embracing two hundred and thirty-seven papers or articles, contributed by fifty-six authors, many of them bearing distinguished names, describing in a technical manner objects new to naturalists at the date of publication. This series includes an aggregate of two thousand nine hundred and twelve pages and one hundred and sixty-one plates.

The second series was begun December, 1847, and is still continued.

**The Independent Balance**, a weekly paper, "by Democritus the younger, a lineal descendant of the Laughing Philosopher," was established, in 1817, by George Helmbold, "the first editor of the *Tickler*, and late of the United States army." The first number was published March 20th. The motto was, "Let it be impressed upon your minds, let it be instilled into your children, that the liberty of the press is the palladium of all the civil, political, and religious rights of freemen."—*Junius*. The second volume commenced with a vignette, in addition to the heading, of a sportsman shooting a bird, with the motto,—

"Whene'er we court the tuneful Nine,  
Or plainer Prose suits our design,  
Then fools may sneer and critics frown  
At every corner of the town,—  
Condemn our paper or commend;  
One aim is ours, our chiefest end:  
With well-poised gun and surest eyes,  
To shoot at Folly as it flies."

The *Balance* contrived to get a large circulation. It was managed with tact and a degree of talent which, if better directed, would have been productive of satisfactory results. But it was exceedingly free in using the names of citizens as well as of politicians, utterly unscrupulous as to what it said, and careless to examine into the truth of its assertions. It was vindictive, unscrupulous, and scurrilous, and was particularly effective in ridicule, which it applied unsparingly to those persons whom its conductors did not admire. George Helmbold, the editor, died in Philadelphia, on the 28th of December, 1821. After Helmbold's death the *Balance* went through various changes of proprietors and editors, until it passed into the hands

of L. P. Franks, who published it at "No. 1 Paradise Alley, back of No. 171 Market Street, between Fourth and Fifth Streets." It was at this time edited "by Simon Spunkey, Esq., duly commissioned and sworn regulator, weighmaster, and inspector-general." Its motto was, "I claim as large a charter as the wiud, to blow on whom I please."

**The Franklin Gazette** had its origin in 1818. In February public notice was given through the newspapers that the *Franklin Gazette* was to be established in Philadelphia by Richard Bache. It was to be in favor of Governor Findlay, and it was suggested by the *United States Gazette* that, although the *Democratic Press* was on the same side, the *Franklin Gazette* was expected to supersede it. It was to be published as an evening paper. Bache, at this time, was post-master, and he published the *Franklin Gazette* at No. 116 Chestnut Street. It was continued until the 22d of November, 1824, when it was united with the *Aurora*.

**The Quarterly Theological Review**, which was conducted by Rev. Ezra Styles Ely, was commenced in 1818.

**The Philadelphia Register**, a weekly paper, the title of which in 1819 was changed to the *National Recorder*, was founded by Eliakim Littell and S. Norris Henry, in 1818. In 1821 the name was again altered, and it made its appearance in July, 1821, as the *Saturday Magazine*. In that periodical were published De Quincey's "Confessions of an Opium-Eater," and the works of Charles Lamb. In 1822 the title was again changed, and the issue made monthly. The *Saturday Magazine* became the *Museum of Foreign Literature and Science*. During the first year it was edited by Robert Walsh, and afterward by Eliakim and Dr. Squier Littell. This periodical was continued in Philadelphia for many years. The publication-office was removed to New York in 1843, and the title of the magazine was changed to the *Eclectic Museum of Foreign Literature and Science*, Mr. Littell, however, having no connection with it. He then went to Boston, where, in 1844, he established *Littell's Living Age*, which he continued till his death, May 17, 1870.

**The American Medical Recorder**, conducted by a number of physicians, first appeared in 1818. It was a quarterly journal, and published by James Webster. The title subsequently, in 1824, became the *Medical Recorder of Original Papers and Intelligence in Medicine and Surgery*. In 1829 it was merged into the *American Journal of the Medical Sciences*.

**The Ladies' and Gentlemen's Weekly Literary Museum and Musical Magazine**, published weekly by H. C. Lewis, No. 164 South Eleventh Street, made its appearance Jan. 1, 1819. It was a union of two periodicals previously issued separately.

**Salmagundi** (second series), by Launcelot Langstaff, Esq., was published by M. Thomas (Johnson's head), No. 108 Chestnut Street, between Third and Fourth, and J. Haly & C. Thomas, No. 55 Maiden

Lane, New York,—J. Maxwell being the printer,—in 1819. It was Paulding's effort to revive those famous papers, but the times were not propitious. It was published once a fortnight. The first number contained,—“From My Elbow-Chair,” “Codification,” by Will Wizard, “Criticism on Shakespeare's Othello,” etc. The copyright was dated June 22, 1819. This serial was published during ten or twelve months.

**The Columbian Advocate** was established at Germantown in June, 1819.

**The Latter-Day Luminary** was first issued by a committee of the Baptist Board of Foreign Missions for the United States, in 1819. It was published monthly.

**The Episcopal Magazine**, a thirty-two page octavo periodical, issued monthly, was first issued in January, 1820. It was published by S. Potter & Co., J. Maxwell being the printer. The publication was continued for several years, for the greater portion of the time under the editorial direction of Rev. C. H. Wharton, D.D., and Rev. George Boyd. It was devoted to the general interests of the Protestant Episcopal Church. The original office of publication was at No. 55 Chestnut Street. In 1821 it was removed to No. 87 Chestnut Street.

**The Rural Magazine and Literary Evening Fire-Side**, a forty-page octavo, published monthly by Richards & Caleb Johnson, at No. 31 Market Street, made its appearance in January, 1820. It was printed by Griggs & Dickinson. It was chiefly devoted to agricultural and horticultural matters.

**The American Journal of the Medical Sciences** was projected by Professor Nathaniel Chapman. The first number was issued as a quarterly in 1820, under his editorship, by the publishing house of M. Carey & Son, and under the title of the *Philadelphia Journal of the Medical and Physical Sciences*. In 1825, Drs. William P. Dewees and John D. Godman were associated with Dr. Chapman in the editorship, but the editorial work practically devolved upon Dr. Godman. In February, 1827, Dr. Isaac Hays was added to the editorial staff, and in consequence of Dr. Godman's appointment to the professorship of Anatomy in Rutgers Medical College requiring his removal to New York, Dr. Hays virtually became the editor.

With a view to making the *Journal* more broadly representative and national in character, the co-operation of the leading medical minds in all parts of the country was secured, and in November, 1827, the name of the *Philadelphia Journal* was changed to the *American Journal of the Medical Sciences*, and Dr. Isaac Hays became its sole editor. In 1869 his son, Dr. I. Minis Hays, was associated with him, on whom the entire editorial duties devolved in 1879.

The general plan of the *Journal* has been unchanged since its origin in 1820; it has always been regularly issued by the same publishing house, and for half a century it has been under the control of its present senior editor. The increasing progress in the cultiva-

tion of the medical sciences gradually seemed to call for more space and more frequent communication with readers, and in 1843 the *Medical News* was commenced as a monthly in connection with the *Journal*. This sufficed for many years, until the increasing pressure of material led, in 1874, to the issue of another periodical, the *Monthly Abstract of Medical Science*, under the same editorial supervision.

In 1880 these two periodicals were combined as the *Medical News and Abstract*, which, in 1882, became the *Medical News*, issued weekly.

An examination of the series of the *Journal* shows that among its collaborators are found the names of all the eminent physicians of the period who have contributed to the reputation of American medicine. They have made it a representative journal of American medicine, and, as such, its files are found and consulted in the principal medical libraries of the world. The publishers of the *Journal* are Henry C. Lea's Son & Co., at Nos. 706 and 708 Sansom Street.

**The Reformer**, a religious and moral publication, issued monthly, was commenced about 1820.

**The Critic**, a periodical paper, was published, in 1820, as a journal of criticism, science, and the arts. It was not very successful.

**The National Gazette and Literary Register** made its appearance on the 5th of July, 1820, the publisher being William Fry, No. 63 South Fifth Street. It was published on Wednesdays and Fridays, at five dollars per annum. After a time the semi-weekly issues ceased, and the *Gazette* was brought out as a daily evening paper. Robert Walsh was associated with Mr. Fry in the establishment of this paper. This journal, under the management of Mr. Walsh, made an inroad upon the method in which daily newspapers had previously been conducted. Mr. Walsh was not much of a party politician. His tastes were literary. He had commenced his career as a writer in the *Portfolio*, had been one of the contributors to the *American Review*, and had published various books, essays, and papers. The *National Gazette*, while not wholly neglecting the politics of the country, discussed matters of science, literature, fine arts, and philosophy. On the 1st of January, 1842, the *National Gazette* was merged into the *Pennsylvania Inquirer*.

**The Literary Gazette, or Journal of Criticism, Science, and the Arts** (being a third series of the *Analectic Magazine*) made its appearance as a quarto of sixteen pages, published weekly by James Maxwell, corner of Fourth and Walnut Streets, at six dollars per annum, on Feb. 6, 1821. There is one volume of this periodical in the Historical Library which was published in 1821.

**The Bee** was issued in 1821, by Robert S. Coffin, who had attained a local reputation as a writer of verses for various papers, under the *nom de plume* of the "Boston Bard." He had been a compositor in the office of the *Village Record*, at West Chester, Pa., where he wrote some stanzas on "A Blind Girl," which en-

listed popular sympathy from the fact of their having been put in type by a blind compositor, daughter of Mr. Miner, then publisher of the *Record*. Mr. Coffin came to Philadelphia, and issued proposals for a literary paper to be called the *Bee*. It was published but a short time, the meagre subscription-list passing into the hands of the proprietors of the new *Saturday Evening Post*.

**The Saturday Evening Post** was published for the first time in 1821. After Coffin, as stated above, had procured about two hundred subscribers for the *Bee*, the list came into the hands of Charles Alexander, then a recent graduate of Poulson's *Daily Advertiser*. Mr. Alexander associated himself with Samuel C. Atkinson, of the firm of Hall & Atkinson (successors to Hall & Pierie), carrying on the printing business in the office once occupied by Benjamin Franklin, "back of No. 53 Market Street." In this office the firm of Atkinson & Alexander commenced the publication of the Philadelphia *Saturday Evening Post*, the first number appearing on the 4th of August, 1821, the defunct *Bee* forming the nucleus of the new enterprise. The "Boston Bard" died of consumption a few years afterward at his home in Newburyport, Mass., his last hours being passed in revising the proof-sheets of a volume of his poems.

The office back of No. 53 Market Street, four or five doors below Second Street, was a medium-sized two-story brick, the first floor occupied as a press-room, with two of Patrick Lyon's presses, the second story divided into two composing-rooms, and the attic used as the editor's private quarters. The original editor of the *Post* was T. Cottrell Clarke, who withdrew in 1826 and established the *Ladies' Album*, a weekly literary miscellany, which was subsequently, under the management of Robert Morris, merged into the *Pennsylvania Inquirer*. On the appearance of the *Album* the *Post* was enlarged. Mr. Clarke was succeeded as editor by Morton McMichael, who subsequently resigned to become the first editor of the old *Saturday Courier*, and who afterward and for so long a time was the editor and publisher of the *North American and United States Gazette*.

The old office, long since demolished, contained in the second story the identical press at which Franklin had exercised his skill, and which subsequently found a resting-place among the curious relics in the Patent Office at Washington. Over the entrance to the composing-room was this "Warning," for the benefit of meddlesome visitors, probably written by Franklin himself:

"All you who come this curious art to see,  
To handle anything must cautious be;  
Lest by a slight touch, ere you are aware,  
That mischief may be done you can't repair.  
Lo! this advice we give to every stranger:  
Look on and welcome, but to touch there's danger."

This paper, even so late as 1821, was worked off with the laborious manipulation of wrist-dislocating ink-balls, and a clumsy beating of forms that can hardly

be realized by the skillful pressman of the present day, while the crude press of Patrick Lyon, and even the improved Columbian and the Washington, taxed the pressman's strength from Friday noon—sometimes all night and far into the next day—to work off what would now be a very moderate edition.

While the advent of a new paper required a supply of new type, the old stock was not melted up, but what was then looked upon as the "old Franklin type" was carefully preserved. One use, and perhaps the latest to which it was put, was in the hands of a reverend compositor, who set up his own translation of the New Testament, the proofs being taken on the old Franklin press. This was the Rev. Dr. Abner Kneeland, a Universalist theologian, an able and popular preacher in that day.

This old material from the *Pennsylvania Gazette* came into Mr. Atkinson's possession by reason of the fact that his former partner (Hall) was a grandson of David Hall, who purchased the *Gazette* from Franklin in 1766.

In 1828, Mr. Atkinson became sole proprietor of the *Post*, and employed Benjamin Mathias as editor, who subsequently became, with Joshua L. Taylor, the founder of the *Saturday Chronicle*. Leaving types for politics, Mathias was elected to the State Legislature, and for several sessions presided as Speaker of the Senate, and was the author of Mathias's "Legislative Manual." Prominent among the subsequent editors we may name Charles J. Peterson, Rufus W. Griswold, H. Hastings Weld, and Henry Peterson.

In 1827, the office of the *Post* was removed from Market Street to No. 112 Chestnut Street, between Third and Fourth; in 1833, to No. 36 Carter's Alley (the northern end of Dr. Jayne's building now occupies the site); in 1840, to the second floor of the old *Ledger* building, southwest corner of Third and Chestnut Streets; in 1848, to No. 66 South Third Street, over the *North American* office; in 1860, it was removed to No. 319 Walnut Street.

Mr. Atkinson continued the publication until November, 1839, when he sold to John S. Du Solle and George R. Graham. Mr. Du Solle remained connected with the paper but a few months, and was succeeded by Charles J. Peterson, the firm-name being George R. Graham & Co. In 1843, these gentlemen sold to Samuel D. Patterson and Co., who, in March, 1848, disposed of the establishment to Edmund Deacon and Henry Peterson, each of whom had previously owned a portion. In 1857, the folio form was abandoned for the present quarto, and the old familiar head was replaced by a more elaborate one.

During the past decade the *Post* has several times changed hands. Many younger literary journals have been united with it. Among these were the *Saturday News*, published by Louis A. Godey & Co.; the *Saturday Bulletin*, of which Edmund Morris was the publisher; the *Saturday Chronicle*, by Mathias & Taylor; and the *United States*, published, in 1841-42, by

Swain, Abell & Simmons, the founders of the *Public Ledger*.

The *Post* is the oldest of the family newspapers, and for many years had a monopoly of its special field. Nearly all the prominent writers of the country, for the last sixty-three years, have contributed to its columns, and the reputations of many were established through its agency.

Of the English authors, G. P. R. James, Mary Howitt, Mrs. Henry Wood, and others, have contributed to its pages, the last named having written several novels for the *Post* before the review of "East Lynne" by the *London Times* made her famous. It afforded some amusement in the office of the *Post* to see the very novels which had been published in its columns, without attracting much attention, brought out afterward with a great flourish of trumpets in England, and extolled in very high terms, when reprinted in this country, by the critics of the American press.

The *Columbian Observer*, the motto of which was "Equal Rights, Honest Agents, and an Enlightened People," was established by Stephen Simpson and John Conrad, April 1, 1822, as a semi-weekly paper, and, as originally conducted,—according to the *United States Gazette*,—was devoted more to criticism and speculations on literary and political subjects than to news. But this could not long remain as a proper description of the *Observer*. Simpson's great strength was as a controversial writer, and his chief ability was in attack. He was son of George Simpson, cashier of the old Bank of the United States, and afterward of Stephen Girard's bank. Simpson went into the National Bank when a young man as note-clerk. He must have remained in that position for some time. When he left the bank he made his first venture in newspaper-writing as the author of a series of articles in relation to the management of the Bank of the United States, its policy, and its transactions, which were signed "Brutus." "The tone of those articles was extremely vindictive. They were virulent; they were bitter; but they were extremely able. . . . Armed with this immense power, conferred upon him by his knowledge of facts, 'Brutus' added to the force of his articles a nervous, solid and sarcastic style, which either crushed by its vehemence or deeply wounded by its thrusts." Much care was taken to make the secret of the "Brutus" letters a mystery, and the more they were talked about the higher was the opinion of the town in relation to their merits. It is probable that the secret of the authorship of the "Brutus" articles was known to many persons before the establishment of the *Columbian Observer*, which paper, with the resumption of a series of articles signed "Brutus," in the same style as was manifested in the *Aurora*, revealed the real state of the case. The *Columbian Observer* was a Democratic paper, belonging to one of the sections of that party. It was an early advocate of the nomination of Gen. Andrew Jackson for the Presidency, and had the following at its editorial head:

"Freemen, cheer the Hickory tree;  
In storms its boughs have sheltered thee;  
O'er Freedom's land its branches wave;  
'Twas planted on the Lion's grave."

The verse was thus parodied in the *Democratic Press*:

"Slaves, bow down to the Hickory tree,  
Its boughs have oftentimes watted thee;  
O'er Freedom's land its branches wave,  
To cheer the fool and scourge the slave."

The publication of the paper was intrusted by Simpson & Conrad, who were not practical printers, to Jesper Harding. It was printed at No. 55 Chestnut Street.

The *Christian Gazette and Youths' Herald* was first published in May, 1822. It was in form a small folio, and issued every Saturday, from No. 2 Sansom Street.

The *Episcopal Recorder* was established in 1822, through the exertions of Rev. G. T. Bedell, D.D., then rector of St. Andrew's Protestant Episcopal Church. Among its early editors was Rev. B. B. Smith, now (1884) and for many years presiding bishop of the Protestant Episcopal Church in the United States.

Its object was to present those evangelical views which were held by Dr. Bedell, and had been maintained in the Church of England by John Newton, Henry Venn, Richard Cecil, Charles Simeon, and those who at one time were known as the Clapham sect.

With different editors, and under many changes of ownership, those views have always been maintained by the *Episcopal Recorder*, and they are still its guiding principles. It has undergone various modifications in its name and position, but none in its theological or ecclesiastical views.

When the Reformed Episcopal Church, the legitimate outcome of the views upheld by the *Recorder*, was founded under Bishop Cummins, in 1873, that paper became an exponent of the aims and principles of the new organization, and as such it continues.

A leading feature in the *Recorder* is the appearance in its columns of articles by leading men among other evangelical denominations, in which respect it resembles no other Episcopal paper in the United States. Among these names may be mentioned Drs. John Hall, Crooks, Crosby, Cuyler, and Pentecost, of New York; Dr. Joseph Parker, of London; Drs. Withrow and Warren, of Boston; Drs. Breed, Boardman, and Pierson, of Philadelphia; Drs. N. West and Morehead, of Ohio; Cooper, of Pittsburgh; E. T. Burr, of Connecticut, and many others.

The *Recorder* is a sixteen-page quarto, published weekly at No. 931 Arch Street.

The *United Brethren's Missionary Intelligencer* was established by the Moravians in 1822.

The *Erin*, a weekly paper, devoted to Irish news, was established in August, 1822, and was published by

Hart & Co., No. 117 South Fifth Street, one door above Chestnut.

The *Philadelphia Recorder* was first issued on April 5, 1823. It was a religious weekly, folio in form, and was published in behalf of the Protestant Episcopal Church, by Stavely & Bringham, and afterward by William Stavely, at No. 70 South Third Street. It was under the editorial direction of Rev. G. T. Bedell. It was continued for several years.

The *Teachers' Offering, or the Sabbath Scholar's Magazine*, was established by the American Sunday-School Union in November, 1823. It was under the editorial direction of Frederick A. Packard, and was a 16mo of sixteen pages each. Soon after it was enlarged, and the name changed to the *Youths' Friend*. It continued to be a popular illustrated Sunday-school paper for upwards of twenty years, and millions of copies were circulated.

The *Christian Advocate* was commenced in 1823, and was published monthly.

The *City Register*, an evening daily paper, was established in 1823, and was united with the *Freeman's Journal* on the 1st of November, 1824.

The *Arcadian*, a literary periodical, was established in the latter part of the year 1823, by S. Potter & Co.

The *Gazetteer*, devoted to religion, science, morality, and news, and edited by Rev. Abner Kneeland, was started Jan. 7, 1824, the publishers being Atkinson & Alexander, at No. 53 Market Street. It was a quarto publication. It was continued until December, 1824, being issued once a week.

The *Statesman*, a miscellaneous journal, was published in 1824, and issued three times a week.

The *Liberal* was issued in 1824 as a weekly publication.

The *Medical Review and Analectic Journal*, edited by Drs. John Eberle and George McClellan, made its appearance in June, 1824. Publication was suspended in August, 1826. It was a quarterly periodical, and was published by A. Sherman.

The *Æsculapian Register*, edited by several physicians, was first issued June 17, 1824. It was a weekly periodical, and enjoyed but a brief existence, the last number being issued Dec. 9, 1834. The publisher was R. Desilver.

The *American Sunday-School Magazine*, a monthly, large octavo, containing thirty-two pages, was begun in July, 1824, being published at one dollar and fifty cents per year. It was the first Sunday-school teachers' periodical issued in America. In 1831, having previously become a quarterly, it was merged into *The Sunday-school Journal and Advocate of Christian Education*, a large folio, issued weekly, which had come into existence on Nov. 24, 1830. Both journals were established by the American Sunday-School Union.

*Darby's Geographical, Historical, and Statistical Repository*, a monthly journal, was commenced in 1824.

**The Reformer**, whose avowed purpose was to "expose the clerical schemes and pompous undertakings of the present day under the pretense of religion, and to show that they are irreconcilable with the spirit and the principle of the gospel," was published in 1824 by Theophilus R. Gates.

**The Christian**, a weekly paper, was commenced in 1824, by J. Mortimer, South Second Street.

**The Amerikanischer Correspondent**, "für das In- und Ausland," was established in January, 1825. It was published twice a week, on Wednesday and on Saturday, for a portion of the time by John George Ritter, at No. 253 North Second Street, and also by J. C. Gosler, at No. 72 Wood Street, near the southeast corner of Fourth Street. Its existence continued until the last of December, 1829, when it was merged into the *Philadelphischer Correspondent*, which was begun on Jan. 2, 1830.

**The Philadelphian**, a religious journal, was established in May, 1825, by S. B. Ludlow, editor and proprietor. It was a five-column folio, and was issued weekly from No. 59 Locust Street. The issue of Jan. 5, 1827, beginning the third volume, was enlarged by the extension of the columns in length and width. William F. Geddes then became the publisher, Mr. Ludlow remaining as editor and proprietor. In November, 1829, he was succeeded by Rev. Dr. Ezra Styles Ely. In October, 1830, the publication office was removed to No. 9 Library Street.

**The American Journal of Pharmacy** was commenced in 1825, under the title of the *Journal of the Philadelphia College of Pharmacy*. The college had been organized in 1821, and the *Journal* was at first intended to be mainly the repository of investigations made by members of the college and others interested in pharmacy. Four numbers having been published at irregular intervals, the *Journal* was issued as a quarterly in April, 1829. In 1835 its title was changed to the *American Journal of Pharmacy*, thus indicating its enlarged scope of taking cognizance of the advancement of pharmaceutical knowledge throughout North America, as well as in other civilized countries.

In 1853 the *Journal* was published in bi-monthly parts of ninety-six pages, which, during the civil war, for two years, were reduced to eighty pages. In 1871 it became a monthly publication, and the annual volumes gradually increased to six hundred and sixty pages. A general index of the first forty-two volumes was published in 1873, and a similar one for the next ten volumes at the close of 1880.

Many of Philadelphia's prominent apothecaries were contributors to the early volumes, among whom may be mentioned Daniel B. Smith, Elias Durand, William Hodgson, Jr., Aug. Dubamel, Edward Parrish, William Procter, Jr., and others. Original papers were also contributed by able writers, residing in various parts of the United States and in foreign countries.

The college has, from the beginning, placed the

*Journal* in the editorial charge of one of its professors. The four preliminary numbers were edited by Dr. Samuel Jackson; then followed Dr. Benjamin Ellis to 1833, Dr. Robert E. Griffith to 1836, Dr. Joseph Carson to 1850, William Procter, Jr., to 1871, and since then John M. Maisch.

**The Morning Post** entered the journalistic field in the latter part of 1825, being published by William White.

**The Journal of the Franklin Institute** was first issued in 1826, within two years after the organization of the institute. Originally the periodical, which was then known as the *Franklin Journal*, was not published directly by the institution, but was issued in the name of Thomas P. Jones, then professor of Natural Philosophy and Mechanics. In 1828 the institute assumed the responsibility of continuing the publication, under the title of the *Journal of the Franklin Institute*, and it is so published to-day as a monthly periodical.

It stands very high among technical and scientific periodicals, and is the only journal published in the United States devoted to technological subjects, which is not conducted with a view to pecuniary profits.

The editors of the *Journal* have comprised the following: Thomas P. Jones, Alexander Dallas Bache, Charles B. Trego, John F. Frazer, Henry Morton, William H. Wahl, and George F. Barker.

**The North American Medical and Surgical Journal** was a quarterly, begun in January, 1826, and suspended in October, 1831. It was conducted by Drs. H. L. Hodge, F. Bache, C. D. Meigs, B. H. Coates, and R. La Roche. The first four volumes were published by J. Dobson, and the remaining eight volumes by the Kappa Lambda Association of the United States.

**The Album and Ladies' Weekly Gazette** was first issued June 7, 1826, by Thomas C. Clarke, from No. 27 Market Street, "north side, five doors above Front Street." In December the publication office was removed to the southwest corner of Chestnut and Second Streets. It was subsequently consolidated with the *Ladies' Literary Portfolio*, under the name of the *Philadelphia Album and Ladies' Literary Portfolio*, and was published by Jesper Harding, Robert Morris being the editor.

**The Casket, or Flowers of Literature, Wit, and Sentiment**, a monthly publication, was issued for the first time in January, 1827. Beneath the title-head was this couplet:

"A moving picture of the passing day;  
Look at the tint, then turn improved away."

It was published for many years, and was finally merged into *Graham's Magazine*.

**The Ariel**, a literary gazette, was published for the first time May 5, 1827, although a specimen number had been issued April 14th. It was published every other Saturday, by Elwood Walter, at No. 71 Market Street. It was a quarto, with three columns to each

page. It passed into the hands of Edmund Morris, who increased its size by the addition of a column to each page. It was published by Morris at the office of the *Saturday Bulletin*, No. 95 Chestnut Street, and ran through several volumes, when it was discontinued.

The *Commercial List and Price Current* was established May 26, 1827, as the *Philadelphia Price Current*, by Billington & Sanderson, at "the Merchants' Coffee-House." It was published every Saturday morning, at four dollars per annum. An opposition paper was started in 1829, when the then publisher, Henry Billington, resolved to enlarge his sheet, and give more miscellaneous matter, and thus endeavor to surpass his new rival. Accordingly, the first number of a new series of the *Philadelphia Price Current and Commercial Advertiser* was issued on Saturday, Oct. 24, 1829. It was a five-column paper, the sheet being twenty by twenty-six inches, and was published on Wednesday and Saturday afternoons, at six dollars per annum. In less than a month Mr. Billington makes this announcement: "John Binns, having relinquished the publication of his paper, 'we trust forever,' we shall be enabled in future to issue our sheet in the morning, as heretofore,"—i.e., before the new series was started. Early in 1835, Moore's *Philadelphia Price Current* was purchased, and, on the 24th of January, after several previous mutations, the title became *Commercial List and Philadelphia Price Current*. Col. Cephas G. Childs now became the editor; the paper was issued weekly; the price was reduced to four dollars a year, and the publication office was removed to No. 61 (now No. 221) Dock Street. Col. Childs was born in Bucks County in 1794. He served with great credit in the war of 1812. He was a journalist of industry and a citizen of high repute. Under his management the *Commercial List* attained a very high business standing, which it has never lost. In 1843, Stephen N. Winslow entered the office of the paper as an errand-boy. In the year following he became a local and commercial reporter. He displayed such good business capacity that, in 1850, he was able to purchase a one-fourth interest in the journal. Col. Childs retired in 1852, and Mr. Winslow became sole owner of the *Commercial List*. In 1853, H. G. Leisnering purchased an interest in the paper, which, however, he resold to Mr. Winslow two years later. In 1855, William W. Fulton purchased a share, but he retained it only two years. From 1857 to 1867, Mr. Winslow conducted the paper alone. In the latter year his son, Stephen N. Winslow, Jr., was admitted as a partner. Two years later Messrs. McCalla & Stavely also became partners in its publication. The *Commercial List* has been increased in size upon several occasions, until now it is one of the largest folios published in Philadelphia. In 1836 the office was removed from No. 61 to No. 63 Dock Street, and in May, 1863, it was again removed, this time to No. 241 Dock Street. This latter office is within a stone's throw of

the old Merchants' Coffee-House, from which the *Price Current* was first issued, in 1827.

The *Philadelphia Monthly Journal of Medicine and Surgery* had its origin in June, 1827. The last number was issued in February, 1828. The publisher was R. H. Small, and the editor Dr. N. R. Smith.

The *Commercial Herald* was established in July, 1827, and was subsequently consolidated with the *Pennsylvania Sentinel*, established in 1830. J. R. Walker was the proprietor and one of the editors; N. Sargent being the other. The office of publication was at No. 61 (now No. 221) Dock Street. In addition to the daily issue, there were tri-weekly as well as weekly editions. In 1840 the *Commercial Herald*, which at that time was published by Col. Cephas G. Childs, was merged into *The North American*.

The *Pennsylvania Gazette* was first issued on the 1st of October, 1827, as an afternoon newspaper. It was "devoted to internal improvement, education, agriculture, commerce, manufactures, and general intelligence." George Taylor & Co., the publishers and editors, had previously printed a weekly paper at Mount Carbon, called the *The Miners' Journal*, which was discontinued upon the advent of the *Gazette*. The latter was published at No. 95 Chestnut Street, at eight dollars per annum. The plan of the proprietors of the *Gazette* also embodied an edition printed three times a week, as well as a weekly edition. On the 14th of April, 1828, the *Gazette* was absorbed into the *Aurora*, the new journal being known as the *Aurora and Pennsylvania Gazette*. On the last-named date the consolidated journal appeared as a morning instead of an afternoon paper.

The *Friend* is a weekly periodical, now in its fifty-seventh volume, and has been published continuously since Oct. 13, 1827. It was established by an association of Friends, without any reference to pecuniary advantage, in order to furnish the members of the society with an agreeable and instructive miscellany at a time when great unsettlement was prevalent throughout the society in this country, arising from the promulgation by Elias Hicks and others of doctrines at variance with the original principles of the society. It has been conducted throughout with a strict reference to the orthodox belief of Friends, and its comments on events arising in the society, or on subjects of general interest to the community, may be regarded as representing the views and feelings of that large class of those, under the name of Friends, who adhere to the principles and practices of William Penn and his associate founders of this commonwealth.

In the first twenty-four years it was under the editorial management of Robert Smith, who died in 1851. After this period it was edited by a committee, the duties chiefly devolving upon the late Charles Evans, M.D. Since his death, in 1879, Joseph Walton, whose residence is at Moorestown, N. J., has been the editor.

The *Saturday Bulletin*, "devoted to the diffusion of general intelligence,—literary, moral, and com-

mercial," was established in November, 1827. It was published by Edmund Morris, at No. 95½ Chestnut Street, "three doors above Third Street, north side," at two dollars per annum. On the 10th of May, 1830, the proprietor secured a copyright for his journal, and in his issue of May 15th announced that the said "copyright effectually secures to the editor the entire proprietorship of all the original matter which may be contained in this paper for fourteen years to come. Counsel has been taken on the subject, and we are prepared to institute legal process against all who may again avail themselves, for their own advantage, and to the injury of this paper, of that original matter which has been procured by great labor and expense for the *Saturday Bulletin* alone." As the *Bulletin* was a folio newspaper, and not a magazine, such a course as that pursued by its proprietor was unusual. John Jay Smith was editor of the *Bulletin* in 1830-32. In its issue of Jan. 7, 1832, the *Bulletin* was materially increased in size, its columns being lengthened as well as widened. On Jan. 5, 1833, the *Saturday Bulletin* was merged into the *Saturday Evening Post*.

**Hazard's Register of Pennsylvania**, "devoted to the preservation of every kind of useful information respecting the State," was established Jan. 5, 1828, and was continued until Dec. 26, 1835. It was edited by Samuel Hazard. The office of publication was for many years in Franklin Place, "second door back of the post-office." Subsequently it was removed to "No. 61 in the Arcade, West Avenue." The *Register* was printed by William F. Geddes, No. 59 Locust Street, and afterward at No. 9 Library Street. The value of this periodical can hardly be estimated. A vast amount of material of great importance, as well to the historian as to the student of history, was collected. It was a sixteen-page quarto, of small size, compactly printed.

**The Mechanics' Free Press**, a weekly journal "of practical and useful knowledge," edited by a committee of the Mechanics' Library Company of Philadelphia, made its appearance Jan. 12, 1828, having for its motto this clause of the Declaration of Independence: "We hold this truth to be self-evident, that all men are created equal." It was printed by Garden & Thompson, at No. 6 George Street, and afterward at No. 6 Bank Alley. The *Free Press* was originally a four-page five-column quarto. The issue of July 19th, however, appeared as a six-column paper. The Mechanics' and Working Man's Library-rooms, at which an office for the *Free Press* was subsequently opened, were at No. 30 Strawberry Street. It had a fairly prosperous career for a number of years.

**The Daily Chronicle**, an afternoon newspaper, was first issued by Charles Alexander and John Musgrave, on the 7th of April, 1828. It was published at No. 112 Chestnut Street, and subsequently at No. 3 Athenian Buildings, Franklin Place. Mr. Alexander

was the printer and business manager, while Mr. Musgrave, a vigorous and witty writer, was the editor. In 1834, the *Chronicle* was sold to James Gordon Bennett, who had previously been connected with the *Pennsylvanian*. He changed the title of the paper to the *Daily Courier*, and in its first number made a violent attack on the famous "Wistar parties." Mr. Bennett's onslaught, was so offensive to the entire community that in a few weeks the circulation alarmingly decreased. His management of the *Courier* was very brief, as it was incorporated with the *Pennsylvania Inquirer*, on the 2d of June, 1834. Mr. Bennett shook the dust of Philadelphia from his feet and settled in New York, where he established the *Herald*.

**The Ladies' Literary Portfolio**, whose motto was, "Literature is precious and beautiful where its brilliance gives ardor to virtue and confidence to truth," was first issued Dec. 10, 1828. It was in size a small quarto, and was published by Thomas C. Clarke, at No. 67 Arcade, West Avenue.

**The Philadelphia Inquirer** has a history which is contemporaneous with that of the country itself for the last fifty-five years, and is, indeed, the faithful chronicle of that history. When the first number of *The Inquirer* was issued the first railroad had only been constructed, the first locomotive engine was still the latest wonder and admiration of the world, the electric telegraph did not exist in practical form, the ocean steamship was not yet launched, the steam printing-press, the sewing-machine, and the reaper were still to be invented.

The first number of the journal, bearing the name of the *Pennsylvania Inquirer*, was issued on the 29th day of June, 1829, at No. 5 Bank Alley (now Gold Street), "near the Merchants' Coffee-House." The time seemed to be peculiarly auspicious for the advent of a new public journal. The principal Democratic newspaper was in a weakly state. Duane's *Aurora*, which had so vigorously assailed the cause of the Federalists, had sought to sustain itself by absorbing the *Franklin Gazette*, which addition did not greatly strengthen it. One of the editors of *The Aurora and Gazette* was John Norvell. He was dissatisfied with the prospect, and induced John R. Walker, a young printer, who had just embarked in business, to join him in the publication of a new paper, *The Pennsylvania Inquirer*. In its beginning it was small enough and as little like as possible the generously-proportioned or news-filled *Inquirer* of to-day; it was a folio of six-column pages, the entire sheet measuring twenty-one by thirty-one inches. The new journal supported the administration of Andrew Jackson, and its general policy was presented in an address "to the public" in the words following: "The true principles of Democracy which never change, the unison and harmony of the Democratic party which are essential to the perpetuation of those principles, home industries, American manufactories, and internal

improvements, which so materially contribute to the agricultural, commercial, and national prosperity, shall receive our undeviating support." It is worthy of remark that, while the Democracy has changed its policy, *The Inquirer* supports to-day the same principles of protection to American industries as it did on its first day, fifty-five years ago.

Upon that platform the founders continued to conduct the new journal for several months, when, in November of the same year, it passed into the possession of Jesper Harding, and into it was absorbed *The Democratic Press*, the last number of which was published by John Binns on the 14th of that month.

Jesper Harding, who for thirty years published *The Inquirer*, and who was the father of William W. Harding, the present proprietor, was born in Philadelphia on the 5th of November, 1799. In his early youth he was apprenticed to Enos Bronson, the publisher of *The United States Gazette*. Mr. Harding was so apt a learner of the trade that at the age of sixteen years he was enabled "to huy his time," and to engage in the business of printing upon his own account. One of the earliest of Jesper Harding's imprints is that of the year 1818, and may be found in a pamphlet history of the organization of St. Paul's Protestant Episcopal Church. In 1820 Mr. Harding's printing-office was at No. 336 South Second Street, which was probably below South Street; in 1832 he had removed to No. 74 South Second Street. Prior to the earlier date he had added to printing the business of binding. About the time that Mr. Harding purchased *The Pennsylvania Inquirer* he began the publication of Bibles, which subsequently grew to be an enormous business, especially after the control of it was assumed by William W. Harding. The first Bible published by Jesper Harding was a quarto, bound in sheep, and sold for one dollar. This edition was succeeded by others of a costlier character, and it is estimated that the Messrs. Harding published during the time they were engaged in the business several millions of copies of the Bible.

Mr. Harding signalized his assumption of the management of *The Pennsylvania Inquirer* by changing it from a morning to an evening journal, and by the removal of the office of publication to No. 36 Carter's Alley. The northern end of Jayne's granite Dock Street building now covers the foundation of his office. The newspapers of fifty years ago contained little real news, and the strongest features of *The Inquirer* were its editorials, chiefly political, didactic articles, literary reviews, dramatic criticisms, intermixed with poetry and tales. The advertisements were largely displayed, and were suggestions of the public's fervent pictorial taste.

In January, 1830, the publication office was removed to No. 74½ South Second Street, "a few doors above the Merchants' Coffee-House." On the first day of the succeeding July, the *Morning Journal* was amalgamated with the *The Pennsylvania Inquirer*,

which was enlarged by the addition of a column to each of its pages, and again issued in the morning instead of the afternoon. On the 2d of June, 1834, *The Inquirer* absorbed *The Daily Courier*, uniting the two titles.

During the heated contest between President Jackson and the directors of the Bank of the United States, *The Inquirer* attempted the difficult task of defending the latter while supporting the former; but eventually, when the government deposits were removed from the bank by the order of the President, *The Inquirer* arrayed itself with the anti-Jackson faction of the party, and in 1836 raised the standard of Harrison and Granger. In the succeeding campaign of 1840 it still represented the "Harrison Democrats." Finally, however, the natural independence of *The Inquirer* forced it into the Whig party, to the fortunes of which it strenuously adhered until its overthrow in 1852, under the leadership of Gen. Scott.

In 1840 the office was removed to the southeast corner of Third Street and Carter's Alley, where, subsequently, the iron building, which still stands, was erected as a publication office for *The Inquirer*. That was the first iron front built in Pennsylvania on the Bogardus plan, though now there are thousands of them. Shortly after removing into its new quarters, the paper was enlarged to nine columns, and it took its place in the Whig party as the confessed rival of the *United States Gazette*. But while publishing all of the news it aimed for a circulation among families, and general literature was a feature in its pages. Several of Charles Dickens' novels, among them "Master Humphrey's Clock" and "Barnaby Rudge," were published in *The Inquirer* for the first time in this country, the advance sheets having been liberally paid for to the then young author, although the payment was not compelled by any law or custom. On the 1st of January, 1842, *The Inquirer* absorbed another journal, *The National Gazette*, and combined the title with its own. In 1851 the paper was enlarged to ten columns, and became a vast "blanket sheet," measuring thirty-two by fifty inches.

In the memorable struggle of 1856, *The Inquirer* vigorously supported the Presidential candidacy of Fillmore against Buchanan and Fremont, the regular candidates of the Democratic and Free-Soil parties; and again, in 1860, it advocated the election of Abraham Lincoln, upon the ground that his election was demanded. And when, in 1861, the conflict was begun, by the shot fired at Sumter, *The Inquirer* took its place on the side of the government, and remained one of its strongest and most consistent supporters.

In the fall of 1855, William W. Harding, who had been carefully trained in the printing and publishing business, was associated with Jesper Harding in the publication of the *The Inquirer*, and since October, 1859, has been the sole proprietor, Jesper Harding withdrawing from its management at that time. Previous to the control being assumed by William W.

Harding, *The Inquirer* had been conducted upon old-time principles. The readers were chiefly yearly subscribers, the price of the paper being eight dollars, on the old-fashioned "credit system" in full force. The journal was an excellent one of the old-school sort, but lacked vigor and enterprise. The name was changed to *The Philadelphia Inquirer*; the paper became one of eight pages, of six columns width, and was the first newspaper successfully published in Philadelphia in quarto form. The old custom of seeking yearly subscribers was abandoned, the price was reduced to two cents per copy, and a large increase of circulation was obtained through the establishment of the carrier system and the sales by boys upon the street. Greater attention was directed to the collection of news by telegraph and mail, and an efficient corps of reporters was organized who thoroughly collected and chronicled the incidents of city life.

The editorials became livelier, and were devoted more exclusively to passing events. General literature, however, still found a place in the columns until the stirring events of the war required all the space for their presentation to the public. Supplements were frequently printed, and in May, 1860, two of four pages each, profusely illustrated, were issued on the occasion of the visit of the Japanese embassy to this country. Under such energetic management *The Inquirer* rapidly increased in circulation, and was remarkable during the Rebellion for its enterprise in obtaining the news from the armies and from Washington, for which purpose large sums were expended for special correspondence. Maps of the "seat of war" were frequently given.

Liberal provision was made to secure prompt and regular transmission of *The Inquirer* to the army, and it is doubtful whether any other paper in the country enjoyed as wide a circulation among the soldiers. Not infrequently from twenty-five to thirty thousand copies of a single issue were thus distributed. So ample were the arrangements for insuring prompt circulation that when any steps were taken in the conduct of the war, which it was desirable should be widely known in both armies, a special edition would be ordered by the government for gratuitous distribution by *The Inquirer's* agents. The services rendered by this journal to the government during this trying period were remembered several years afterward, and thus gracefully acknowledged by one who never indulged in idle conventional compliments:

"WAR DEPARTMENT,  
WASHINGTON CITY, JAN. 14, 1868.

"MY DEAR SIR,—Please accept my thanks for your friendly telegram just received. I appreciate your kindness highly. From no one have I received in my official labors more disinterested and highly-prized support than from yourself. Its remembrance will always be cherished with pleasure. Wishing you every success in life, I am, and shall ever be,

"Truly yours,

"EDWIN M. STANTON.

"WILLIAM W. HARDING, Esq."

The great increase in the cost of paper compelled a reduction in the size of *The Inquirer* in December,

1862, and for three months it appeared in the awkward form of a six-page paper; but on the 25th of March, 1863, it returned to eight pages, reducing the size of the paper, however, to five columns, which was continued until December, 1869, when the present size of forty-eight columns, double-sheet, was readopted. On the 29th of August, 1864, the price was increased to three cents a copy, or fifteen cents a week, but was reduced to two cents on the 2d of January, 1865, at which price it still continues.

In the latter part of 1861 a six-cylinder Hoe rotary press was procured, and on the 26th of April, 1862, *The Inquirer* was first printed from stereotype plates, being among the earliest newspapers in the United States to adopt the process. Paper-folders were also used at an early day, and shortly after the removal to the present location, No. 304 Chestnut Street (in April, 1863), a Bullock press was introduced, being the first ever put in operation. This was subsequently supplemented by two others (one of double size), but these have all been removed and replaced by the best form of rapid printing-presses.

Some of those who are now engaged upon *The Inquirer*, both in the mechanical and clerical departments, have been connected with it for between forty and fifty years. From its office have been graduated many who were subsequently distinguished in journalism, literature, and business. The strong hold *The Inquirer* has had upon the public for upward of half a century has been its conservatism in all things. It has been generally recognized as a thoroughly pure newspaper, one in which there is no objectionable reading, either in the advertising or news matter.

**The Journal of Health**, conducted by an association of physicians, was issued on Sept. 9, 1829, for the first time. Its motto was, "Health,—the poor man's riches, the rich man's bliss." The proprietor was Henry H. Porter, whose publication office was at No. 108 Chestnut Street. It was issued every two weeks, and was a sixteen-page magazine, octavo in size.

**The Morning Journal** was established in 1829. It was a small commercial paper, published by William Brown, in Carter's Alley, next door to the office of the *Inquirer*. Its career as a distinct journal was brief, as it was merged into the *Inquirer* on the 1st of July, 1830.

**The Banner of the Constitution**, a weekly journal, was established in the city of New York, on the first Wednesday of December, 1829, where its publication was continued until May, 1831. In the issue of April 13th the editor announced his intention to remove his establishment to Philadelphia. In this announcement of a change of base, he stated that, "as Pennsylvania is without a single paper hold enough to speak out the language of truth in the strong terms befitting the actual crisis of affairs, we have resolved to transfer our establishment to Philadelphia, and to resume our old position on the field of battle." It is not difficult to imagine the nature of his reception

from the press of Philadelphia. The first issue of the *Banner of the Constitution* in this city was on May 4, 1831. It opened a vigorous free-trade campaign at the very outset, and did not enjoy a prolonged career.

**The Protestant Episcopalian and Church Register**, "devoted to the interests of religion in the Protestant Episcopal Church," and edited by an association of clergymen, was first issued in January, 1830. Its motto was "*Pro Deo, pro Ecclesia, pro Hominum Salute.*" It was published by Jesper Harding, at first at No. 36 Carter's Alley, then at No. 74½, and afterward at No. 74 South Second Street. In the beginning of 1838, the magazine passed into the hands of John S. Littell, who published it at No. 11 George Street. It was from the beginning a forty-page octavo. The character of the publication was changed at the close of the year, and on Jan. 5, 1839, the first number of volume first of *The Banner of the Cross*, a weekly paper, was issued.

**Die Philadelphischer Correspondent und Allgemeiner Deutscher Anzeiger** was issued for the first time on Jan. 2, 1830, by J. C. Gosler at No. 72 Wood Street, near the southeast corner of Fourth Street. This paper, which was issued twice a week, on Wednesdays and Saturdays, was practically a continuation of the *Amerikanischer Correspondent*, also published by Gosler, which had been suspended a few days previously. The *Philadelphischer Correspondent* was printed by Alexander A. Blumer.

**The Literary Portfolio** was established Jan. 7, 1830, by Eliakim Littell & Brother, who published it at the corner of Seventh and Chestnut Streets. It was issued weekly. From May 27, 1830, it was published by Jesper Harding, at No. 36 Carter's Alley, and No. 74½ South Second Street.

**The Pioneer** was issued for the first time March 6, 1830. It was published every Saturday by W. Weeks & J. Perry, Military Hall, Library Street, at one dollar per annum. A specialty was made of items of particular interest to militiamen. At the beginning of the second volume, March 5, 1831, the paper was increased by the lengthening of the page and the addition of a fifth column to each page. The full title of the journal then became the *American Pioneer and Military Chronicle*. In the issue of Dec. 31, 1831, the sub-title was changed to the *Fireman's Chronicle*. The issue of Dec. 3, 1831, was from No. 134 Locust Street, above Tenth, the publication office having been removed to that place. The paper was not long in existence.

**The Germantown Telegraph** was first issued in Germantown on the 17th of March, 1830, by its late proprietor, Philip R. Freas, and from that time up to the present day it has regularly appeared every week. Mr. Freas served a full five years' apprenticeship to the printing business in the office of the *Norristown Herald*, then published by David Saur, Jr., a grandson of Christopher Saur, who printed in Germantown the first Bible ever issued in America. Mr.

Freas learned the business with a view of starting a newspaper in Germantown, although he had not received the slightest encouragement from any inhabitant of that place. The entire material of the printing office was obtained of Jedediah Howe, a type-founder, located at the corner of Crown and Callowhill Streets, Philadelphia. A prospectus was hung up in most of the stores and taverns of Germantown some weeks before the journal was issued, and was signed by about thirty persons, four of whom are still subscribers. Of the original subscribers, numbering about four hundred, over one-fourth were delinquent in their payments. The paper was named *Telegraph*, after the *United States Telegraph*, a daily published in Washington by Gen. Duff Green. The size of the sheet originally used was fourteen by twenty-two inches, each page containing five columns; and small as these dimensions were, compared with newspapers of the present day, the *Telegraph* was at that time one of the largest journals in Pennsylvania. Six enlargements of the *Telegraph* have taken place at different periods until it reached its present dimensions on the 25th of October, 1865, each increase in size being made on account of its growing advertising patronage. On the 1st day of August, 1883, in the fifty-fourth year of his editorial career, Philip R. Freas sold the *Germantown Telegraph* to Henry W. Raymond, of New York, son of the noted journalist, Henry J. Raymond, proprietor of the *New York Times*. Under the new management the *Telegraph* continues to be conducted in the same successful and acceptable manner which marked its previous prolonged and prosperous career. It was the first newspaper in the United States to regularly devote a portion of its space to agricultural topics, and the valuable information of this kind which it imparts continues to be one of its leading features.

**Godey's Lady's Book**, the oldest monthly publication of its class in America, was established in Philadelphia in the month of July, 1830, by Louis A. Godey. At that time the population of the United States was twelve millions, and the modes of travel were limited to the canal-boat, packet-vessel, and post-roads, thus circumscribing to a very great extent the circulation of the book. Its colored fashion-plates were, however, a novel feature at that time, and soon gained for it a popularity that exceeded any other publication of that date, and its circulation steadily increased until it reached the enormous figures (for that day) of one hundred and fifty thousand a month. It has always been noted as a magazine of a high literary tone, and has been a stepping-stone in the world of letters for some of the most eminent writers of whom our country boasts. In its pages are to be found the early efforts of such well-known writers as Bayard Taylor, Oliver Wendell Holmes, James T. Field, Henry W. Longfellow, Edgar Allen Poe, Emma Willard, Lydia H. Sigourney, Eliza Leslie, Mrs. Washington Potts, Charlotte Cushman, Harriet

Beecher Stowe, Frances Sargent Osgood, Marion Harland, and many others.

In the year 1877, Mr. Godey, in consequence of increasing years and family bereavements, disposed of the *Lady's Book*, retiring with an immense fortune. From 1877 to 1883 the magazine passed through the critical period of its existence, sudden death and personal troubles of a domestic and physical nature seeming to assail the families of those who had become successors of Mr. Godey, and in consequence the *Book* made a general decline. At the commencement of 1883, however, a better fortune seemed to smile upon the old publication, when it again changed hands and began to steadily improve and regain its old-time popularity. The present proprietor, J. H. Haulenbeek, brought to the publication an amount of business energy, capital, and enterprise that has placed it again in the front ranks of magazine literature. Its new letter-press, its profuse steel, lithograph, and process-engravings, are strong evidences of its enterprise. The present publication office is at 1006 Chestnut Street.

**The Pennsylvania Whig**, "devoted to politics, news, literature, political economy, and popular education," made its advent Aug. 13, 1830. Its motto was, "Equal Rights, Honest Agents, and an Enlightened People." It was published by Stephen Simpson, twice a week; its publication office being in Franklin Place, the first house in the rear of the post-office. The *Whig* vigorously supported the Presidential candidacy of Henry Clay. In his prospectus the publisher set forth that "the object of the *Pennsylvania Whig* is the advocacy of what has emphatically been termed the policy of Pennsylvania, or the American system. It shall advocate the protection of home industry by an adequate tariff, the promotion of internal improvements by roads and canals, the diffusion of knowledge by a universal system of popular education, and sustain and defend every wise measure, sound policy, and healthful institution that contributes to add to American wealth, develop American resources, strengthen native talent, or exalt our national character."

**The Sunday-School Journal and Advocate of Christian Education** was started on Nov. 24, 1830. It was a large folio, and was issued weekly. In the

following year it absorbed the *American Sunday-School Magazine*, which was originally issued in July, 1824. In 1834, *The Sunday-School Journal* was reduced in size and price and changed from a weekly to a semi-monthly periodical, and continued for many years at the then "extremely low price" of twenty-five cents per year. These papers, which had been established by the American Sunday-School Union, were edited by Frederick A. Packard. In 1859, *The Sunday-School Journal* was followed by *The Sunday-School Times*, a large folio, of the same size as the *Journal* of 1832-34, issued weekly, at one dollar per year, and edited by John S. Hart. After about two years it was transferred to the editor and others, to be issued as a private enterprise, and the union began *The Sunday-School World*.

LOUIS A. GODEY.

**The Pennsylvania Sentinel** was established in 1830, by John R. Walker, who had founded and disposed of the *Pennsylvania Inquirer* within the previous year. The *Pennsylvania Sentinel* was subsequently united with the *Commercial Herald*, which afterward merged into *The North American*.

**The Cent**, the first American newspaper published for one cent, was first issued in 1830 (or perhaps a year or two earlier), by Dr. Christopher Columbus Conwell. *The Cent* was short-lived, and only a few numbers were issued. In fact, Dr. Conwell died in 1832. The publication office of *The Cent* was in Second Street, below Dock. Dr. Conwell was born in Ireland. His

father, who was a surgeon in the British army, having been ordered to India, and his mother being dead, he was sent to this country in his youth, and committed to the care of his grand-uncle, who was then the Roman Catholic Bishop of Philadelphia. He received his collegiate education at Mount St. Mary's and Georgetown Colleges, and graduated in medicine at the University of Pennsylvania. He was a young man of fine intellectual powers. Many admirable contributions from his pen are to be found in the current magazines of that day. His death in the summer of 1832 was due to cholera, an epidemic of which was then raging.

**The Herald of Truth**, "devoted to liberal Christianity, science, literature, and miscellaneous intelligence," was issued for the first time on Jan. 1, 1831.

It was published every Saturday by M. T. C. Gould, No. 6 North Eighth Street, with a branch office at No. 420 Pearl Street, New York. It was a quarto publication, of a religious character, with decidedly liberal tendencies. It was not in existence a very long while.

The Philadelphia'er Telegraph und Deutsches Wochenblatt, published twice a week, on Wednesday and Saturday, was issued for the first time on Jan. 8, 1831. It was edited and published by Alexander A. Blumer, at the northwest corner of Fourth and Callowhill Streets, who, in the previous year, was interested in the publication of the *Philadelphia'scher Correspondent*, also a German semi-weekly paper.

The *Presbyterian* first appeared Feb. 16, 1831, under the editorial management of the Rev. John Burtt. He was a gentleman of extensive scholarship, and exceedingly laborious in his vocation. At the end of the first year of its existence it was found that there was a balance of \$1286.85 against *The Presbyterian*, which had to be made up by private subscriptions. Like many similar enterprises, it had not paid its way. Mr. Burtt retired from his post Nov. 21, 1832, after filling it less than two years. He was succeeded by the Rev. Dr. James W. Alexander, afterward so favorably known in the church for his eminent scholarship, his pastoral success, and admirable published works. The first number of the paper issued under his management was dated Nov. 28, 1832, and after continuing about one year he retired, Jan. 9, 1834. At that date *The Presbyterian* had embarrassed the publishers with a debt of some thousands of dollars. The firm of Russell & Martien, which had published the paper from the beginning, was dissolved by mutual consent, May 1, 1834, Mr. Martien continuing to carry on the business. Early in 1834, Rev. Dr. William M. Engles became the editor-in-chief of the journal, and from that period it prospered. Indeed, the annual increase of the subscription-list was steady and unflinching until the Southern Rebellion cut off some thousands of subscribers, and then the paper had to depend entirely on Northern support. In a short time, however, this loss was far more than repaired.

In March, 1852, Rev. Dr. John Leyburn became part owner in *The Presbyterian*, as well as an associate editor. Dr. Leyburn being a Virginian by birth, and having cast his fortunes with the South at the outbreak of the civil war, sold his interest in the paper to Alfred Martien, who had succeeded his father as publisher, on the 7th of August, 1861. At this time Rev. M. B. Grier became associated in the editorial management of *The Presbyterian*.

The long and faithful service of Dr. Engles as the editor of *The Presbyterian*, covering a period of thirty years, was terminated, in 1864, by his death. The conduct of the paper then fell to the hand of the present senior editor, who, with some strong helpers,

carried it on during the years when the discussions arising out of the proposed union of the Presbyterian Churches were most earnest. The general position of *The Presbyterian* at that time was that of opposition to the reunion until the "Standards," as the final basis of union, were reached, when opposition was changed to willing consent. After the reunion Rev. Dr. E. E. Adams was for a time an editor of this paper. But his health was precarious then, and in a little more than a year he was forced to desist from the labor of writing, and his death soon followed. Then *The Presbyterian* again returned to the hands of Rev. Dr. M. B. Grier, and continued there until in 1873, when the interest of Alfred Martien in *The Presbyterian* was purchased by Rev. Dr. S. A. Mutchmore, who thus became a proprietor and editor, and so remains unto the present time.

The *Saturday Courier* was commenced in May, 1831. It was published by Woodward & Spragg, back of No. 112 Chestnut Street, opposite the post-office. It was the largest weekly journal in Philadelphia, and contained more news-reading than any of its contemporaries, affording, at the same time, the most comprehensive and varied character in its selections. A copious epitome of domestic affairs was embraced in its contents, including the local concerns of general interest of all the principal cities of the Union. For foreign intelligence and commercial news, the *Courier* had the advantage of an extensive correspondence in London and Liverpool. The domestic and European markets were given down to the latest hour. Morton McMichael was the original editor, and for several years conducted the paper. The price of subscription was two dollars per annum. The *Courier* finally passed into the hands of Messrs. McMakin & Holden. When Holden died, McMakin claimed ownership of the good will of the paper by right of survivorship. This claim involved a lawsuit, which was decided in favor of Mrs. Holden. A receiver was appointed and ordered to sell the paper's good will. It brought a very high sum, McMakin being the purchaser. It resulted in a heavy loss to him, as pretty much all the old subscribers of the *Courier* deserted him, and the paper became worthless, financially. Before the sale he had established the *American Courier*, afterward called *McMakin's Model Courier*.

The *Lutheran Observer* was first issued in 1831. Its origin was as follows: In March, 1826, Rev. D. F. Schaeffer, D.D., issued at Frederick, Md., the first number of *The Lutheran Intelligencer*, which was the first Lutheran periodical published in America. It was a small octavo monthly, and was continued for five years, until March, 1831, when it was suspended, but was soon reissued in the same year as a semi-monthly, under the name of *The Lutheran Observer*. The first few numbers were printed at Gettysburg, Pa., and were edited by Professor S. S. Schmucker, D.D., but it was soon transferred to Rev. J. G. Morris, D.D., of Baltimore, who assumed charge of it as editor

and proprietor. In 1833, Dr. Morris transferred it to Rev. Benjamin Kurtz, D.D., who then became its editor and proprietor, and issued it in the form of a small weekly. In 1840 it was sold to the Lutheran Book Company of Baltimore, and in 1853 it was transferred to the Synod of Maryland, Dr. Kurtz continuing to be its editor. After several changes of proprietors and editors, it was purchased in 1862 by Revs. F. R. Anspach, George Diehl, and F. W. Conrad, who conducted it for several years as joint editors. In 1866 it was transferred to the Lutheran Observer Association, organized for the purpose, and removed from Baltimore to Philadelphia, where it was conducted by Rev. F. W. Conrad, D.D., as editor, and Rev. Theophilus Stork, D.D., and Rev. E. W. Hutter, D.D., as associate editors. In 1870, Drs. Stork and Hutter retired from the paper, and Professor V. L. Conrad, Ph.D., became associate editor, and continues in that position to the present time.

Since its removal to Philadelphia, the *Observer* has been enlarged from a moderate folio to a large eight-page quarto, in which form it now appears.

The *Lutheran Observer* is the organ of the General Synod, and represents the more liberal and progressive portion of the Lutheran Church in America, as distinct from the General Council and other general Lutheran bodies, which are more conservative and strictly confessional, and which endeavor to maintain the exclusive spirit and usages of the Lutheran Church in Germany and other countries of Europe. The *Observer* is the oldest, most widely circulated, and influential English Lutheran paper published in America.

The *Sunday Gazette* was started in 1831,—it may have been a year or two earlier,—by Alexander Turnbull. His venture was not successful, only six or eight numbers having been issued.

The *Philadelphia Liberalist*, the editor and proprietor of which was Rev. Zelotes Fuller, was first issued June 9, 1832. Its prospectus set forth,—“The *Philadelphia Liberalist* will consist of sermons, reviews, brief illustrations of Scripture, moral essays, historical sketches, religious intelligence generally, poetry, and chaste miscellaneous reading.” It was a folio sheet, and was issued weekly. It was printed by J. Richards, at No. 13 Church Alley, the office of the editor being at No. 86 Callowhill Street, and afterward at No. 240 North Fifth Street.

The *Pennsylvanian*, for twenty-five years a Democratic daily newspaper of great force and influence, was established July 9, 1832, by Mifflin & Parry, by whom it was conducted for several years with great success. During its long and varied career *The Pennsylvanian* passed through many changes of proprietors, editors, location, size, price, etc. William H. Hope was the publisher of it for many years, as was J. M. Cooper, he being the editor also for a while; and so was William Magill, William Rice at the same time being the proprietor. Among the early editors of *The*

*Pennsylvanian* was James Gordon Bennett, who subsequently went to New York and founded the *Herald*. After him came Joseph C. Neal, the well-known Quaker City journalist, who afterward, with Morton McMichael, established the *Saturday Gazette*, which paper he owned at the time of his death, July 18, 1847. In 1845, John W. Forney sold the *Lancaster Intelligencer* and removed to Philadelphia, having been appointed deputy surveyor of the port by President Polk. At the same time he purchased a half-interest in *The Pennsylvanian* and became its editor, which position he retained until 1853. After him, as editor, came Edward G. Webb. In its early days *The Pennsylvanian* was published at No. 17 Arcade, west avenue, at the outset; then from No. 99 (old number) South Second Street, “opposite Merchants’ Coffee-House.” Afterward the publication office was at the southwest corner of Dock and Walnut Streets, and later it was at No. 78 (old number) South Third Street. The subscription price of *The Pennsylvanian* varied as greatly as did any feature of that paper, falling from eight dollars per annum to four dollars, and rising again to six dollars. During a period of the history of the paper there was a tri-weekly as well as a weekly issue. The influence exerted by *The Pennsylvanian* in its day, not only in the city and State but in the nation at large, was very extended. It was, indeed, an important factor in all political movements of interest to the Democratic party. Its prosperity was long-continued. In its issue of Nov. 23, 1854, is this editorial announcement: “During the last six months *The Pennsylvanian* has trebled its daily circulation, and its tri-weekly and weekly editions have advanced in the same ratio. Its circulation in Pennsylvania exceeds that of any other city paper but the *Ledger*, and in several of the Southern and Southwestern States it has no competitor.” *The Pennsylvanian* finally went out of existence in 1861, upon the outbreak of the Rebellion.

The *Cholera Gazette*, a weekly octavo publication, was commenced on July 11, 1832, by George W. Dixon, “the great American buffo singer,” and was concluded on Nov. 21, 1832. It was published by Carey, Lea & Blanchard.

The *Daily Express*, a small four-page sheet, was started on Aug. 1, 1832. The publication office was originally at No. 95 Chestnut Street, but was shortly afterward removed to No. 65 Chestnut Street, “nearly opposite the American Coffee-House.” It was published by Edmund Morris. Its main purpose was to give a daily report of cholera cases, as an epidemic of that disease was then raging. It went out of existence after a brief career of a few weeks.

The *Messenger* is the organ of the “Reformed Church in the United States,” commonly known as the German Reformed Church. It was established in 1832, and published at Chambersburg, Pa., until the burning of that place in 1864, when it was removed to Philadelphia, and has since been issued from

the church's publication rooms, No. 907 Arch Street. The editor-in-chief is elected by the joint votes of the different Synods, and his position is official. Rev. P. S. Davis, D.D., has occupied this position since 1876. The *Messenger* is an eight-page sheet, and is published weekly.

The *Daily Intelligencer* made its appearance Dec. 1, 1832. The second and third numbers were issued on the 6th and 7th respectively. The fourth number came out on the 10th. Thereafter the daily publication was regular. The publisher was Robert T. Conrad. In the prospectus issued it was announced that "The political course of the *Intelligencer* will be calm and independent, decided but moderate. It will advocate the principles of Jeffersonian Democracy, sustain the regular nominations of the Democratic party, and support the present administrations of the general and State governments." The *Intelligencer* was a five-column, four-page folio, neat in typographical appearance, and was published at five dollars per annum. The publication office was at No. 51 Chestnut Street, above Second.

**Waldie's Select Circulating Library**, "containing the best popular literature, including memoirs, biography, novels, tales, travels, voyages, etc.," was published by Adam Waldie, at No. 6 North Eighth Street, Jan. 15, 1833. It was issued weekly, and was simply a serial publication of standard literary works. The publication office was subsequently removed to No. 207 Chestnut Street, "below Seventh," and later to No. 46 Carpenter Street. John Jay Smith was the editor.

The *American Lancet*, edited by F. S. Beattie, and published every two weeks, by Turner & Son, had its origin Feb. 23, 1833. It was not in existence a long while.

The *Spy in Philadelphia and Spirit of the Age* had its inception on July 6, 1833. It was a weekly, containing eight quarto pages. It was published at two dollars per annum, by William Hill & Co., at No. 1 Athenian Buildings. Its character can be best understood from the following extract from the publishers' prospectus: "As the direction and discussion of measures of national and State policy are the business of the daily press, . . . the consequence is that vices, shielded by wealth and worldly influence, are abroad among the people, not only unsuspected, but courted and required, and that a publication is necessary which will not only detect but exhibit these wolves in sheep's clothing,—a mark by which others will be warned from their intent, and a service be rendered to society." It had but a brief existence.

The *Aurora*, being a revival of the suspended *Aurora*, which was instituted in 1790, was issued for the first time July 4, 1834. In the second number, issued July 19th, there are these announcements, among others: "The *Aurora* is revived to sustain the principles which obtained for it the confidence of the country, when the public liberties were menaced, in

1798. . . . Numbers will be issued, at convenient times, till the subscription shall be adequate to the expenditure, when the paper will issue daily without any further notice." The motto of the *Aurora* was "Knowledge, Liberty, Utility, Representation, Responsibility." It was a fair-sized quarto, and was published by William Duane, a name indissolubly associated with the career of the earlier *Aurora*.

The *Advocate of Science and Annals of Natural History* was first published in August, 1834. It was conducted by William P. Gibbons, at the southwest corner of Sixth and Cherry Streets.

The *Gentleman's Vade-Mecum, or the Sporting and Dramatic Companion*, a weekly periodical, made its appearance Jan. 1, 1835. It was published by Charles Alexander, at the Athenian Buildings, Franklin Place. The price of subscription was three dollars a year. The *Vade-Mecum* was an eight-page, five-column quarto, and was a miscellaneous sporting journal, but made a specialty of dramatic and turf interests. It published a number of original dramas, as well as many pieces of music. It also contained occasional illustrations, chiefly portraits of celebrated racing horses. It was issued for the last time on June 25, 1836. On that day Mr. Alexander announced its sale to Messrs. Louis A. Godey, Joseph C. Neal, and Morton McMichael, who merged it into the *Saturday News and Literary Gazette*, which was established on the following Saturday, July 2, 1836. Joseph C. Neal was the editor of the *Vade-Mecum* during its career of a year and a half.

The *Radical Reformer and Workingman's Advocate*, a weekly publication, sixteen-page octavo, was started June 13, 1835, being edited and published by Thomas Brothers, at No. 124 South Front Street. In October, and thereafter, the publication was issued every two weeks. It was not in existence very long.

The *Botanic Sentinel and Literary Gazette*, a weekly quarto publication, had its origin on Aug. 12, 1835, and was published until June 15, 1840, J. Coates being the publisher. In 1837 the title became *The Philadelphia Botanic Sentinel and Thomsonian Medical Revolution*; and in 1839, *The Philadelphia Thomsonian Sentinel and Family Journal of Useful Knowledge*. The editor for a portion of this period was M. Mattson. The periodical was issued semi-monthly for the last three years of its career.

The *Daily Transcript* was first issued in September, 1835, by William L. Drane. With the exception of *The Cent*, published about five years before, the *Daily Transcript* was the first one cent daily newspaper ever printed in this city. Mr. Drane only issued a few numbers at this time, "for the purpose," as he said, "of feeling the pulse of the public on the subject of a daily penny paper." The result of the experiment surely could not have been very gratifying. Mr. Drane was not dismayed, however, as in February, 1836, he began the regular edition of the *Transcript*. Before the expiration of this year, 1836,

the journal was merged into the *Public Ledger*, which had been established in March of the year named.

The *Independent Weekly Press*, whose motto was "The Right of Free Discussion, given to us by our God, and guarded by the laws of our country," was issued for the first time Dec. 5, 1835. The second issue was on Jan. 9, 1836, and it was published weekly thereafter. It was intended to be a "literary paper." It was edited by Lewis C. Gunn.

The *Public Ledger* was first issued Friday, March 25, 1836, from Nos. 38 and 39 of the Arcade, by William M. Swain, Arunah S. Abell, and Azariah H. Simmons, associated under the firm-name of Swain, Abell & Simmons. It was a penny sheet, fifteen and a half by twenty-one and a half inches, with four columns to a page. In the then condition of journalism the odds seemed heavily against the success of the enterprise, but its projectors were men of that brave and self-reliant character best fitted to carry such an undertaking to the highest point of achievement. In their "opening address" they announced their object to be—

"to render it a vehicle of general and useful intelligence, adapted to the wants and interests of the community generally. While its cheapness places it within the reach of the poorest artisan or laborer, we shall endeavor to furnish to the merchant and manufacturer the earliest and most useful information relating to their respective interests. . . . We shall give place to no religious discussions, nor to political discussions involving questions of merely partisan character. The *Ledger* will worship no men, and be devoted to no parties. On all political principles and questions involving the common good it will speak freely, yet temperately. The common good is its object, and in seeking this object it will have especial regard to the moral and intellectual improvement of the laboring classes, the great sinew of all civilized communities. While this paper shall worship no man, it shall vituperate none. It will be fearless and independent, applauding virtue and reproving vice whenever found, unawed by station, uninfluenced by wealth."

This was independence rather than neutrality, but, firmly and honestly adhered to, it was a revolution in the journalism of 1835-40.

These bold innovators were all young men without capital, and possessed only of a trade and a character. They knew how to print a paper, and they meant to print an honest one, according to their idea of what a newspaper ought to be. Two of them developed into men of extraordinary character for untiring perseverance, sound business principles, and unyielding tenacity of purpose. Mr. Swain with the *Ledger*, and Mr. Abell with the *Baltimore Sun*, following the same course and governed by the same principles, attained a success in their profession as well as in their business affairs which but few men have reached in this country. These two papers were for many years so closely connected that in tracing the growth of one it is almost impossible to lose sight of the other. In reviewing the extraordinary results which richly rewarded Swain, Abell & Simmons in their newspaper adventures, it must be remembered that when they began their career the financial condition of the country was not one of prosperity, encouraging men to make costly and expensive outlays of money, and in-

ducing the business community to widen and extend trade by advertising. The "flush times" had expended their evil influence, and the consequences were slowly but surely gathering that strength which within less than two years after the first number of the *Ledger*, March 25, 1836, and within one year after the first number of *The Sun*, May 17, 1837, were issued threatened the whole country with bankruptcy. It was, therefore, a venture of great hazard to begin the publication of one newspaper with little or no capital, but it seems rashness itself when two newspapers were launched by the same impecunious individuals, with the bold avowal by each that "the publication of this paper will be continued for one year at least."

During the first year of their publication neither of these newspapers gave much evidence of that enterprise and push which have since been so characteristic of their management. A glance over the first volume of *The Ledger* shows that it gave scarcely anything of local news, except police reports, unless something startling excited the community, calling for special mention; the news columns were meagre, the mails supplying the only medium for collection of passing events,—the telegraph was the invention of subsequent years, nor did the lightning and express trains of the present day enable the news editor of fifty years ago to publish the events of one day in his paper of the next. Local reporting had not commenced to be the science to which it has grown in late years. The art of epitome, the science of condensation, had not then been learned by any of the newspapers. Nor did it spring spontaneous in the new enterprises of the Messrs. Swain, Abell & Simmons. Reporting the proceedings of the Legislature and of Congress had not then been introduced, and Washington City papers by mail brought the proceedings of Congress, which scissors and paste transferred in an unabridged form, except only where the space of the penny sheet compelled their curtailment. But this soon changed; the year 1837-38 inaugurated a new system. The President's message of December, 1838, was printed in Baltimore, at *The Sun* office, on the same day that it was read in Congress, anticipating its sixpenny contemporaries by two days. The same enterprise extended to *The Ledger*, and news was procured, condensed, and printed before the "blanket sheets" were aware of its occurrence. The observing public, learning where the earliest news was to be obtained, gave such patronage to the penny *Ledger* that its first year's results required enlarged accommodation, and a removal to the northwest corner of Second and Dock Streets, with an increase of size to eighteen by twenty-four inches, with five columns on a page. Soon a double-cylinder "pony" press was purchased, and *The Ledger* exhibited those evidences of vitality which soon had the desired effect of making the paper sought after; and to such an extent did its fearless criticism sting the guilty that "some villainous

scoundrel or scoundrels made a cowardly attack on the office, demolishing several panes of glass, and inflicting somewhat more serious injury to the interior."

The paper had become a power within the land, and within less than a year had the courage to criticize the judge, jury, counsel, and witnesses in the trial which grew out of the murder of Helen Jewett, in New York. Its editorials on this subject were marked by their vigor and legal learning, but they were so bold, in the opinion of more conservative publicists, that the latter gave it the name of the "virulent little sheet." But it pursued its chosen path, and soon scored another popular victory. A firm of cabinet-makers was charged with ill treatment of and furnishing insufficient food to its apprentices, who appealed to the recorder of the city, then possessing judicial powers, and had their indentures canceled. *The Ledger* was fortunate enough to incur its first libel suit by suggesting, in reference to this firm, that "nobody surely who is aware of their meanness will do business with them." It became immensely popular by its appeal in this case to "the jury of the people," and no opportunity was left unimproved to make the people understand, that it knew no interest too high for its assault when the public good demanded the attack. Independent rather than neutral, it never avoided the discussion of political questions involving the general welfare. The Abolition riots in 1838, in which Pennsylvania Hall, where the anti-slavery lecture was to have been delivered by Rev. G. Storrs, was wrecked and burned by the mob, called forth the most vigorous protests from the *Ledger*. In an article entitled "Scandalous Outrage against Law, as well as against Decency," it said, "If the right of discussion upon any subject—a right made common to all by our Constitution and laws, both State and Federal—may be invaded with impunity, all freedom among us is abolished, and we are the slaves of the very worst of all tyrants, *the mob*," and apprehending still further danger, it urged the mayor to call out the volunteer companies, "with bayonet and ball cartridges," saying, "Better is it that all the ruffians in our city, even were they a hundred thousand, instead of three thousand, should bite the dust and leave their blood run deep in the streets, than that the great principle of freedom of speech and the press be surrendered." It is impossible now to measure the degree of responsibility which such outspoken, vigorous language involved in the heated times of abolition excitement. *The Ledger* entertained no sympathy with abolition in its earlier days; neither did it share in that strong prejudice against colored people which culminated in the shameful riots of 1838 and other years; but the right of free speech and free press belonged to the public good,—they were the inestimable jewels of the community, and as such, whenever invaded, for any cause, should receive the vigorous defense of *The Ledger*.

The courageous course of the paper received the

warmest congratulations of law-abiding people, which were increased in consequence of the article on "The Rule of the Law, and the Rule of the Mob," published after the disturbance had ceased, the paper holding that "In all cases of apprehended disturbance of order the only safe course is found in the most vigorous measures of prevention, in presenting before the rioters begin an array of force sufficient to convince them that capture and punishment are certain." *The Ledger* early advocated the noble duty of "scratching" from the party ticket the names of unfit candidates, and it may be mentioned in this connection that it fought steadfastly for the present method of numbering the houses and the nomenclature of the streets.

In 1840, "City Gleanings," or local news items, were introduced, their collector and writer being Charles Ritter, who prepared them in the distinctive and clever fashion which gained for him the name of "The Original *Ledger* Man." On July 1st of the same year, Joseph Sailer, who continued so long at the head of the financial columns, wrote its first money article.

"Twenty-seven years ago this day," said Mr. Sailer, in the "Money Market" of the *Ledger*, Monday, July 1, 1867,—

"the first money market appeared in the columns of the *Ledger*. It was penned by the same hand that writes this paragraph, and the department from that day to this has been continuously in charge of the same person; and as evidence of general good health and application, it may be mentioned that no two successive numbers of the *Ledger* in the time mentioned have been published without matter furnished by him to that department. Averaging the department at one column per day, gives three hundred and twelve columns per year, and as each of these columns of close reading is fully equal to five octavo book pages in ordinary book type, we have as the annual product fifteen hundred and sixty pages, in twenty-seven years equal to eighty-four volumes of five hundred pages each, enough to fill a very respectable book-case."

Continuing the retrospect, Mr. Sailer in the same article says,—

"When this department was commenced in the *Ledger* on the 1st day of July, 1840, the edition was about fifteen thousand daily, and allowing five readers to each paper, it was from the beginning addressed to seventy-five thousand persons daily; and at that rate for the three hundred and twelve publishing days of the year, the number was increased to nearly *twenty-three and a half millions*. This was for one year, when the circulation was at the smallest. It has steadily increased from that time to the present, and by the same rule of five readers to each copy of the paper (many of the copies are read by twice that number) there is now a daily audience to the teachings of its columns of three hundred and fifty thousand persons, which number, multiplied by three hundred and twelve publishing days of the year, gives over *one hundred and nine millions* as readers of its contents in one year."

Truly the builders of the *Ledger* "built better than they knew." The readers of the "little virulent sheet" in those twenty-seven years, Mr. Sailer goes on to show, aggregated "two thousand one hundred and six millions. These figures equal the population of the world, and nearly equal the sum of our national debt in dollars; but, unlike the volume of that debt, which is steadily rolling backward, the circulation and the readers of the contents of the *Ledger* are steadily on the increase."

On May 9, 1840, the paper was enlarged to six

columns on a page, and the sheet to twenty by twenty-nine inches, and the office was removed October 12th to the southwest corner of Third and Chestnut Streets.

Though the *Ledger* was fully abreast of the best mechanical appliances of the day, yet in 1840 it was published in a small, low building, unattractive in appearance, and most poorly appointed in all its mechanical departments, though up to the average of that time. The press-room, occupied by one double cylinder-press, driven by a small engine, was on the same floor with the publication office, but immediately at the rear. The editorial and composing-rooms were upon the second and only other floor used of the building. For the editors and reporters, about six feet of the front second story were partitioned off, and this again was divided, the *sanctum sanctorum* being at the extreme corner,—a sort of closet three and a half by about six feet,—at one end of which was placed an old-fashioned office-desk, before which stood a low yellow chair; and in the opposite corner was a rough board box, hottom up, secured against the wall in a slanting position, giving evidence of an ingenious attempt at desk-manufacture. The former was occupied by Russell Jarvis, as editor-in-chief, while the box, extemporized into a desk, afforded accommodations for the senior proprietor, who occasionally wrote what in badinage he was pleased to term “cream” paragraphs, by which was meant articles embodying thought and philosophic truth. At other times the then news editor, Mr. Lane, occupied the place vacant by Mr. Swain’s absence. Outside this inner temple was a room about twice as large, furnished with a pine table three by four feet, on which *Ledgers* were folded and pasted during the night, and which was occupied during the day by the whole reportorial corps of *one*, a gentleman who was thenceforth to divide the honors of the accommodations with the “money-market” man. And hereupon rose a nice question of proprietary rights. There was in this large apartment, redolent of sour paste and liberally littered with waste paper, hut a single chair, dilapidated by the loss of a leg, and a founder’s type-box, over twenty inches long and six inches square, which by rearing on end was forced into service as a seat for him who should make his appearance second at the table. The whole office arrangements were primitive, and its affairs were most economically administered. The chief clerk, who furnished the supplies, had a special horror of extravagance, having early mastered that truism in domestic economy that “great abundance is the parent of waste;” hence paper was doled out by the single sheet, and pens and wafers in the same limited proportion. The *Ledger* at that time had a daily circulation of about fifteen thousand copies, according to Mr. Sailer, and was printed on a double sheet, and was cut by hand before being delivered to the carriers. Such was the great Philadelphia paper in 1840, as described by one

in 1875, “who remained continually with it from that day to this.”

When the Oregon question seemed about to involve the United States and Great Britain in war, all the great papers put forth their utmost efforts to obtain the earliest English news from the Liverpool steamers arriving at Halifax and Boston. The New York newspapers entered into a combination to anticipate the mails, and with them were joined Mr. Swain for the *Ledger*, and Mr. Abell for the *Baltimore Sun*.

The famous “pony expresses,” by which Mr. Abell had anticipated all contemporaries in announcing the death of President Harrison, and the fate of the fiscal bank bill in 1841, were again called into service, and from Halifax to Portland, Me., relays of fleet ponies fairly flew with the news brought by the steamers from Europe. Relays of these ponies, extending from Halifax to Annapolis on the Bay of Fundy (across Nova Scotia), a distance of over one hundred and fifty miles, brought the news to Portland, Me., and thence by locomotive to Boston and to New York, Philadelphia, and Baltimore. Fifty hours was the time in which the thousand miles were passed. The penny sheets of Philadelphia and Baltimore proved themselves to be the peers in enterprise of the New York press, and far beyond their “blanket sheet” contemporaries of their respective cities, in all that push and pluck which the modern newspaper requires. The news brought by the “Camhria” was awaited with that feverish excitement which always attends matter involving the issues of war or peace. By means of the “pony express” this steamer’s news was hurried through to the *Ledger* and *The Sun*, and by the latter paper sent on to Washington, far in advance of mails and the regular mode by which the larger newspapers obtained their news. In the combination by which the pilot-boat “Romer” was chartered for Liverpool and return with foreign news, the proprietors of the *Ledger* and *The Sun* entered, and again anticipated their slower contemporaries of Philadelphia and Baltimore.

In 1846, when the Mexican war turned the attention of the whole country to the South, and the news centre was removed to the camp of the little American army, far off in Mexico, Mr. Abell, for the firm of Swain, Abell & Simmons, and for the benefit of their newspapers in Philadelphia and Baltimore, undertook the management of the transmission of news from the camp and the battle-field, across the continent, to the news-rooms of *The Sun*, in Baltimore, and *The Ledger*, in Philadelphia. An overland express from New Orleans, “comprising about sixty blooded horses,” was established to Baltimore, which, notwithstanding difficulties interposed by the post-office, almost invariably anticipated the great Southern mail from New Orleans by thirty hours. An excited public, in both cities and the surrounding country, looked to *The Sun* and *The Ledger* for the first news from the seat of war, with perfect confidence in their dispatch

and reliability. The time consumed between New Orleans and Baltimore by these expresses was about six days, and the cost was over one thousand dollars a month. By means of this expeditious mode of transmitting intelligence, the firm of Swain, Abell & Simmons laid before the readers of two newspapers an engraved representation of Monterey, its vicinity, and its fortifications, with the advance of the American army, from the pencil of Capt. Eaton; and also a view of the American army before Monterey prior to the battle. By this view their readers could distinguish the principal forts, the main buildings of the city, the position of the American army, and the place assigned to each division, brigade, and regiment.

It was by means of the vigorous enterprise of this firm that the "full surrender and unconditional capitulation of the city of Vera Cruz, and the castle of San Juan D'Ulloa," was first made known. In Washington *The Sun* of April 10, 1847, caused universal rejoicing by announcing the great event to the government as well as to the public. *The Ledger*, in Philadelphia, received the same intelligence from the same source, and the two newspapers anticipated all others with the glad tidings of the great victory.

The possession of such important information, hours before it was elsewhere known in the United States, might have been used with very great success for pecuniary advantages, as the stock market responded to every particular of the news from Mexico. To have anticipated the rise in prices that followed the tidings of American triumphs could have been easy for any member of the firm of Swain, Abell & Simmons, and would have very much more than reimbursed them for the heavy expenses of the pony express; but they spurned all such temptations. Their unvarying practice was to issue bulletins or slip synopses of the markets at the earliest possible moment after the receipt of European or war news, and place them before the whole public, to be followed with "extras" containing all the information received. They kept the government at Washington advised of every important event transpiring at the seat of war, and were thus instrumental in serving the whole country as well as the readers of their newspapers. It was "generally admitted that the news of the capture of Vera Cruz, arriving by our express on the very day appointed for the close of a national loan, was directly favorable to the national interest in the final negotiation." The brilliant victories of Contreras and Churubusco were first announced by these papers, their "ponies" distancing stages, railroads, steamboats, and magnetic telegraphs, and when military operations approached the city of Mexico, those pony teams, as if in anticipation of the great excitement prevailing throughout the country, "came flying up to the stopping-post with the most thrilling and important intelligence yet received from the seat of war full twenty-four hours ahead of steamboats, railroads, and even telegraphs,"

and during the remainder of the time of operations of the army in Mexico these pony expresses continued to keep the newspapers of this enterprising firm fully abreast with all the exciting events of the period and far in advance of all their contemporaries. In the same spirit of enterprise "carrier pigeons" were utilized, to the number of between four and five hundred, to transmit news from foreign steamers, and on more than one occasion a synopsis of the President's message was brought by the "pigeon express" to Baltimore immediately after delivery to the Congress, and published in extras to the delight and surprise of the public. This, we believe, was the first pigeon express organized in this country, and was the design of Mr. Abell for himself and his partners.

The magnetic telegraph found in both Mr. Swain and Mr. Abell zealous, active, and contributing friends. After the line from Washington to Baltimore, the first constructed in the country, was completed, Mr. Abell was one of its constant patrons, and *The Sun* received the first Presidential message ever transmitted by telegraph, on May 11, 1846, which appeared in its issue of the next day. Mr. Swain was also an enthusiastic friend of the new news-transmitter, for in that light he looked at Morse's invention. He took the greater portion of the stock in the original telegraph company which was allotted to Philadelphia; he became a director, and was president of the company for several years, during which he introduced many reforms into the management of the telegraph offices of the country. As a matter of scientific history it should be added here, in this brief history of an enterprising firm, that the telegraphic copy of the President's message first transmitted to one of the newspapers of Swain, Abell & Simmons was reprinted by the Academy of Sciences of Paris side by side with the authenticated transcript of the original. The Paris correspondent of the *National Intelligencer* said,—

"Professor Morse had the goodness to send me an account of the recent achievements of the electrical telegraph, with a copy of the Baltimore *Sun* containing the President's message on the Mexican war, as it was magically transmitted to that paper. I sent the communication to Pouillet, the deputy author of the report heretofore mentioned to you, and he placed them in the hands of Arago, who submitted their very interesting and decisive contents to the Academy of Sciences and the Chamber of Deputies. In the Chamber, on the 18th instant, when the proposed appropriation for an electrical telegraph from this capital to the Belgium frontier came under consideration, Berryer opposed it on the ground that the experiments of the new system were incomplete; that it would be well to wait for the full trial of what was undertaken between Paris and Rouen. Arago answered, 'The experiment was consummated; in the United States the matter is settled irresistibly. I received three days ago *The Sun*, of Baltimore, with a letter from Mr. Morse, one of the most honorable

men of his country, and here is the President's message, printed from the telegraph in two or three hours. The message would fill four columns of the *Moniteur*. It could not have been copied by the most rapid penman in a shorter time than it was transmitted. The galvanic fluid travels seventy thousand leagues per minute.' The appropriation of nearly a half-million of francs passed with only a few dissenting voices."

Thus this enterprising firm of newspaper publishers in Philadelphia and Baltimore contributed their influence to extend the telegraph across France, as well as through their own country. And even the short-lived Atlantic Cable of 1858 was made tributary to the enterprise of this firm by sending a special dispatch exclusively to their newspapers, which was the first news telegram from London over the Atlantic Cable received and made public in Philadelphia and Baltimore.

Mr. Swain was the master mind in conducting the *Ledger*, as Mr. Abell was in *The Sun*. For twenty years Mr. Swain gave unremitting attention to the management of the *Ledger*; carefully scanning all that entered its columns, and more carefully watching for any item of news which appeared in another newspaper without being in the *Ledger*.

He was early in perceiving the utility of the fast type-revolving cylinder printing-press of Hoe, and the first press of this description used by any newspaper in this country was made for the *Ledger*, and found, on trial, to be so excellent that it was speedily duplicated. It is questionable whether Mr. Swain recurred to any event in his life with so much pride as to his connection with the introduction of the rotary press.

The assistance and encouragement given by Mr. Swain to the efforts to manufacture printing-paper from straw were of great importance in bringing that substitute for rags to perfection. It is a matter of positive certainty that the first white printing-paper made from straw was used upon the *Ledger*, and that the Messrs. Nixon owe to the generous assistance given by Mr. Swain their final success in the manufacture of straw printing-paper. His strong, practical mind turned naturally to machinery, mechanics, and

science, and to their practical application to his own particular business he devoted much time, thought, and study, accomplishing results which added greatly to the efficiency of his newspaper machinery.

Such was the man that made the *Ledger* great; but he did not accomplish his end without many difficulties overcome, many obstacles removed. Some of these have already been referred to, a few of the others must be rapidly glanced at. The Native American movement in politics was attended with mob violence, resulting in the destruction of property and the loss of life. The *Ledger* had no sympathy with ostracism in any place, and its enlarged idea of American citizenship forbade its lending its immense

influence to the proscription of men for religious conviction. A careful writer, reviewing the course of the *Ledger* during those exciting times of 1844, says, that while the paper justly condemned "the excesses into which the mob ran, it unfairly ignored the first great provocation which had stirred up so much ill-blood," but that after its subscribers had fallen off by thousands, its proprietors "suddenly became aware of the fact that a great outrage had been committed upon the Americans in Kensington, before they struck a blow in return." A review of the files of the paper at that time does not sustain such a statement. On May 7th it said, "The citizens who composed the meeting were assembled in the exercise of a right guaran-

teed to them by the Constitution, and it has come to a pretty pass, if, availing themselves of their constitutional rights, they are to be assailed by others and their lives sacrificed in the streets."

The destruction of St. Michael's Church and the Female Seminary and St. Augustine's Church by the mob, called out the *Ledger* on the following morning in denunciation of the rioters in the following vigorous language: "Are our liberties to be surrendered to the rash and headlong domination of mobs, or are we to fly from this great evil to the lesser one of a consolidated military police?" And afterward, resuming its old argument, that "prevention is better than cure," it again urged the use of ball-cartridges first, and blank-cartridges afterward, as the only effi-

*W. M. Swain*

cient manner of dealing with and dispersing mobs; that "in subduing a mob the whole secret is to strike first and threaten afterward." This article created intense excitement among the Native Americans, and many thousands stopped the paper, and the advertising patronage also greatly diminished. But the *Ledger* was not to be swerved from its high and honorable course by any loss of patronage. It continued to demand that the supremacy of the law be maintained, and that "church burners" and those "outlaws who broke up the meeting at Kensington" be sought out and punished. Its circulation returned in larger numbers, and its advertisements increased in volume and value far beyond what they had been before.

The *Weekly Ledger* was begun in 1837, and was afterward *The United States* and *The Dollar Newspaper*. After Mr. Childs purchased the *Ledger* establishment he issued the weekly under the name of *The Home Weekly and Household Newspaper*, but sold it out in 1867. When *The Dollar Newspaper* was established, in 1843, Mr. Simmons gave it most of his attention, returning for that purpose to Philadelphia from Baltimore, to which latter city he had accompanied Mr. Ahell. He died Dec. 9, 1855, enjoying the esteem and confidence of his partners, as well as the respect and affection of his employes in both the *Ledger* and *The Sun*, whose tributes of respect for his memory were most touching and affectionate. He was the first member of the great firm to pass away. His interest was purchased by the surviving partners, and the style became, on April 16, 1861, Swain & Abell.

Col. M. Richards Mucklé, now the business manager of the *Ledger*, relates of his own experience in those early days that "on Saturday morning I went to the office and presented myself to that prince of good fellows, Mr. Simmons. He took me by the hand and called me his boy; and he continued to call me his boy until he vanished from this earth to occupy a place in the temple above." The occasion of which Col. Mucklé writes was his installation in the service of the *Ledger*, and he has accompanied the paper from its earliest location to its permanent home at Sixth and Chestnut Streets.

William L. Drane, another of the most efficient chiefs of departments in the *Ledger* establishment, antedated Swain, Ahell & Simmons as a publisher of a penny paper. His paper, the *Daily Transcript*, was sold to the proprietors of the *Ledger* in September, 1836, and its name has ever since been published as a sub-title. In the succeeding May he entered into the service of the *Ledger*, and for many years preceding his death, which occurred in 1881, he was superintendent of the printing department, a position in which it was impossible to have his superior. He was a native of Dranesville, Va., and learned printing in Washington, on the *Telegraph*, when it was owned by Duff Green.

The firm of Swain & Abell, which was formed upon the dissolution of that of Swain, Abell & Sim-

mons, upon the death of A. H. Simmons, continued the publication of the *Ledger*. But the changes effected by the war between the States were not without important influence upon newspapers. The great increase in the cost of white paper and of labor rendered the publication of a penny paper impossible, except at a great loss. This the firm met and accepted to the extent of more than one hundred thousand dollars. "Six and a quarter cents per week" was an antebellum price, which would no longer purchase the white paper. An increase of price was inevitable, or a loss far greater than prudence and sound judgment warranted. This increase in the price of the paper was contrary to all the ideas upon which the *Ledger* had grown into power and influence. The proprietors had seen the realization of their hopes in a penny paper; they now recognized its failure from causes which they could not foresee. To abandon the fundamental idea upon which their two newspapers had become such pre-eminent successes was more than they could encounter. Unable to agree to raise the price of their paper or to increase the charges for advertising, to prevent further loss they determined to dispose of the entire *Ledger* establishment. It is probable that this determination was due more to Mr. Swain than to Mr. Ahell, and that, had it been possible for the latter to have met the responsibilities and duties of supervising the two newspapers, they would both have become the property of Mr. Ahell. However that may be, the establishment was disposed of to George W. Childs, the present owner. The sale was consummated Dec. 3, 1864.

Mr. Swain survived the sale of the *Ledger* only four years, and died Feb. 16, 1868, in the sixtieth year of his age. Though the *Ledger* is his proper monument, as well as biography, yet his interest in *The Sun* remained after the sale of the *Ledger* and until his death. Mr. Ahell is the sole surviving member of the firm which established and created two of the greatest newspapers in this country. In a ripe old age, he enjoys that confidence, respect, and affection which a long and useful life merits. His hand has never been missing from *The Sun*; he did not hesitate to meet the embarrassment of increase of price, which had induced the sale of the *Ledger*, and his judgment has been sustained by the remarkable prosperity which has followed the enlargements of the paper and the increase in the rates of advertisement. He has kept *The Sun* abreast of every change which the publication of a great newspaper demands. Their great success shows that both Mr. Swain and Mr. Abell were men of remarkable minds, fitted and adapted to supplement each other, and brought together just as the revolution in newspapers was beginning. They seized the auspicious moment, and compelled fortune to become tributary to their energy, industry, perseverance, and courage.

The circulation and advertising business were larger

at the date of the sale to Mr. Childs than ever before, and he promptly took the step at which Messrs. Swain & Abell had hesitated. On Dec. 10, 1864, he increased the price of the *Ledger* to twelve cents per week, but after a trial for a month reduced it to ten cents. The advertising rates were also advanced, and made to correspond with the value of the immense circulation of the paper. Such a change from the old schedule of prices, of course, caused a temporary decrease of the number of subscribers, but Mr. Childs' prescience convinced him that he had but to work and wait for a recovery of and gain upon the highest figure of circulation to which the *Ledger* had ever attained. He was swift to introduce new elements of popularity and enterprise into the paper, and in January, 1870, the average daily circulation rose to seventy-two thousand eight hundred and eighteen, which has been maintained and increased until, at the present writing, it is no exaggeration to say that the *Ledger* is daily read by over four hundred thousand persons.

Discarding the commonly accepted idea that a newspaper was in the nature of a "common carrier" of information for the people, bound to print anything as an advertisement which was not libelous or indecent, Mr. Childs adopted other views. While accepting all responsibility for the editorial and news department, he carried the principle into the advertisement columns also, and asserted his right to exclude from those columns all that might appear to him objectionable on the score of public morals. This determination led to the exclusion of a very large class of advertisements which, from their nature, would pay the very highest prices, and caused a loss estimated at not less than fifty thousand dollars per annum. This judgment was sustained by the people, and its advanced position in newspaper publication was recognized as an earnestness of purpose to make the *Ledger* a welcome and unexceptional visitor in every family where the moral sentiment of the young and innocent was the highest consideration. The new rule proved its wisdom in a very short time, for the advertisements increased with the expanding circulation, until in September, 1867, an enlargement to eight columns became necessary and was made. In the same year Mr. Childs introduced the stereotyping process and other mechanical improvements to meet the demand upon his publishing department, so that the larger edition of the *Ledger* could be delivered at a much earlier hour than before.

Washington L. Lane, the managing editor of the *Ledger*, died Nov. 14, 1865. In its tribute to his memory the *Ledger* said,—

"He possessed a fine analytical mind which, matured and strengthened by extensive reading and reflection, and coupled with a retentive memory and unusual equanimity of temper, peculiarly fitted him for the arduous and frequently trying duties of an editor. While a man of very decided opinions, ever frank and open in their expression, his calm and dispassionate manner in discussion gave to his arguments and reasoning a conservative tone and bearing peculiarly appropriate to one teaching through the medium of a popular newspaper, read by people

of all classes, all ages, and every pursuit. He probably had no superior for the position he held so long and filled so well."

William V. McKean has been editor-in-chief and general manager of the *Public Ledger* since Dec. 3, 1864. He was born in Philadelphia Oct. 15, 1820. Taught to read by his mother before he was old enough to go to school, he had short periods of tuition in the private schools of the day until he went to his first employment, in 1833-34, and at private night-schools after that. He was apprenticed, in 1835, for six years to Robb & Ecklin, type-founders, served out his time, and learned the whole business, from the first work done by boys in the days of hand-mould casting to the business of the counting-house. While so employed he was sent out as counting-house boy, in 1836, to ascertain from references given by Swain, Abell & Simmons whether these subsequently famous founders of the *Public Ledger* were responsible for a small order of ornamental type.

Always given to reading and study, he joined the Union Library Company in 1839, and here got his best reading and mental training. He has ever since remained a member, though the society is now retired, and regards such institutions as most valuable auxiliaries to boys and young men. Still of that opinion, he is a member and has been manager of the Franklin Institute and the Moyamensing Literary Institute, member of the Academy of Natural Sciences, the American Philosophical Society, the Philadelphia and Mercantile Libraries, and the Pennsylvania Historical Society.

The Union Library Company was one of the popular literary societies of that day. It was progressive, became aggressive in its discussions, and very prominent. It secured by its own enterprise money enough to purchase a well-chosen collection of standard books by the best modern authors in history, constitutional principles, public law, mental and moral philosophy, natural science, and classic English literature. Throwing aside all the conventional and hackneyed topics so much affected by debating societies, it went boldly into the discussion of controverted matters in American and foreign history, the principles of government, citizenship, naturalization, current public affairs, political economy, physiology, popular rights and duties, hygiene, and kindred topics. It challenged other societies to debates, and drew larger audiences than the hall could accommodate. Generally in such debates and encounters Mr. McKean and Furman Sheppard were regarded as the champions of their society. This threw them both somewhat early into politics during the Native American excitement of 1843-44, and both, with Henry A. Gildea, another Union member, were vigorous opponents of that movement. This society—as what mention we have made of it will suggest—had a strong influence on the whole of Mr. McKean's after-life.

In 1846 he was entered as a law-student under the preceptorship of the late James C. Vandyke. About

HOTEL DE VILLE, PARIS, FRANCE, RESTORED BY THE IMPERIAL GOVERNMENT.

THE HOTEL DE VILLE, PARIS, FRANCE, RESTORED BY THE IMPERIAL GOVERNMENT.

this time he received a government appointment, which he held about four years (contributing meanwhile as volunteer newspaper writer), and then resigned to join Col. John W. Forney, in 1850, as associate editor of the *Pennsylvanian*. This connection continued until April, 1853, when Col. Forney, who was then clerk of the House of Representatives, at Washington, requested Mr. McKean to come to Washington to take the chief clerkship and the charge of the large amount of public money disbursed by the House. This position he held until February, 1856. Upon going out of the chief clerkship, President Pierce (unknown to him) appointed him to the office of examiner in the Patent Office. This position he resigned in a few months, as in that year he was invited to Wheatland by James Buchanan, and went there as Mr. Buchanan's private secretary, pending the Presidential canvass. While there, personal and political complications among Mr. Buchanan's party friends began to show themselves, and these soon caused the position of private secretary to be quite embarrassing. The public side of these differences related to the pro-slavery and free-soil antagonism brought about by the Kansas-Nebraska Bill. The personal difficulties were engendered by the intense hostility shown by some Southern men to Col. Forney's professional desire to be editor of the *Washington Union* and public printer. As Mr. McKean was in a confidential position, these political and personal discussions came necessarily to his notice, and as he was bound to maintain Mr. Buchanan's confidence, he had to become reticent on all such matters to Col. Forney, with whom he had previously occupied a similarly close and confidential position. Between the duty to Mr. Buchanan, on the one side, and the reluctance to have any privity with the proceedings of Col. Forney's enemies, on the other, the position of private secretary became exceedingly awkward. Notwithstanding Mr. McKean's profound respect for Mr. Buchanan, he asked to be relieved, which Mr. Buchanan finally, but very reluctantly, agreed to, protesting that there was no occasion whatever for Mr. McKean to withdraw.

Meanwhile (and again unknown to himself) he had been appointed to a city office. This and another appointment he successively gave up, and in 1860 returned permanently to his preferred vocation as editorial writer. He was leading editor of the *Inquirer* from April, 1860, throughout the war, to Dec. 3, 1864. Until the November election of 1860 he had been voting with the Democrats, but at that time he became convinced that party should be subordinated to higher interests. In December of that year, and while the preparations of the memorable "peace meeting" of Dec. 13, 1860, were going on, he went to Washington to learn for himself what would satisfy the Southern leaders, or whether they were bent upon breaking up the Union at all hazards. During this visit he had free and full conversations with John C.

Breckenridge (then Vice-President), Senators John Slidell, Stephen A. Douglas, Hannibal Hamlin, and William Bigler, all of whom were his personal friends, and, through Governor Bigler, with Senator Chestnut, of South Carolina. He became satisfied by the utterances of Mr. Slidell that the controlling Southern men would surely carry their States into secession, and from what was said to him by Mr. Hamlin (Vice-President elect), that secession would be resisted by force. He came home to Philadelphia in full belief that the "peace meeting" would be of no avail. War seemed to be inevitable, and he so wrote to the then Governor of Pennsylvania, William F. Packer. Upon expressing the same opinion to one of his editorial associates, a gallant young lawyer, the latter promptly replied, "Then I will go into military drill." This he did upon the word, subsequently raised a company, fought through the war, and is now a distinguished officer of the regular army. From that time Mr. McKean has voted independently of party, making up his ballot for the best qualified and most deserving men, just as the *Ledger* advises all others to do.

On the 3d of December, 1864, Mr. McKean, at the invitation of Mr. Childs, for whom he had been previously doing book and editorial work, went with him to the *Public Ledger*. Since then he has been editor-in-chief and general manager. The files of that journal tell what he has been there for the last twenty years. In nearly all the movements in Philadelphia during that time to promote the welfare of the people, to advance their interests, and to improve the efficiency of their city government, Mr. McKean has had large part as adviser and counsel,—much larger part in these capacities than even in his abundant work as editorial writer. He is peculiarly one of the men whom people seek for suggestion and counsel, and whose judgment they have become accustomed to trust as impartial and sound. This is the case with all manner of persons, from the humblest in station to the highest, private persons, and public officers. The influence exercised in this manner has gone out quietly and worked its way for private and public good in scores and hundreds of matters in which but few people ever knew he had any agency at all. Such influence has taken effect in the enactment of wholesome laws, in the choice of better officials, in the adoption of sound policy by public men, in keeping families from breaking up, and in saving men from their own ruinous appetites. He has had many habitual drunkards to deal with, never gave up the belief that they could be got to go right some time, and never failed but with two. It is a cardinal belief of his that there is a good side to be found in almost every man, if you make fair search for it.

Among the many matters that Mr. McKean has been connected with, such as the commission for the relief of soldiers' families during the war, the Sanitary Fair, the early struggles for municipal reform, the Chicago Relief Committee, the incipient move-

ments for the Centennial Exhibition, the work of the Centennial Board of Finance, the consultations that resulted in the choice of the Committee of One Hundred and that influenced its after-action,—although nearly all these led to important results,—none of them, he says, gave him more pleasure than the organization of the children's free excursions in 1872. During the three years while he was chairman of the committee more than sixty thousand persons (infants, very young children, and their mothers or other caretakers) were taken to Rockland, in the park; furnished with all kinds of innocent and healthful out-door amusements, including performances by the lamented Signor Blitz; were supplied with three wholesome meals, on a bill of fare prescribed by a medical staff (with copious pure milk and some luxuries); and free transportation from and to their homes. The plan for these excursions, as Mr. McKean organized it on the first day, was never changed during their six years' continuance. The children and their mothers had every summer many days of healthful holiday, rest, and recreation away from the hot and unwholesome back-streets and alleys. These days were bright spots in their lives. The excursions were managed mainly in Mr. McKean's room in the *Ledger* office for three summers, and subsequently by Andrew M. Spangler with great zeal and executive ability.

We have referred to the influence exerted upon Mr. McKean's career by the Union Library Company. Next to this he reckons the contact he got with public affairs and public men by reason of the various offices he occupied for short periods under the city, State, and nation. These gave him insight into the machinery for conducting public business, and also into the true dimensions of public men, big and little. Some of the least conspicuous of these grow larger upon acquaintance, and some of the prominent shrivel up when you get close to them. There is no such disenchanter as actual personal observation of "statesmen." But along with personal experience in official matters, he has had an extensive contact with the people in all stations of life, and knows them well. He has touched the extremes of the social fabric,—the very poorest and humblest, and the richest and highest. He has left the *midnight* dining-table of the President of the United States to go to dinner the next day, at twelve o'clock *noon*, with a laboring miner in the coal region, who, in his way, was peer of the President.

For the conduct of the *Ledger* Mr. McKean has a carefully-considered system of editorial ethics, about which Mr. Childs and himself are in thorough accord. Some of his maxims are inserted here, not all:

Always deal fairly and frankly with the public.

A newspaper to be trusted and respected must give trustworthy information and counsel. It is a serious thing to mislead the people.

Understate your case rather than overstate it.

Have a sure voucher for every statement, especially for censure.

There is a wide gap between accusation of crime and actual guilt.

Deal gently with weak and helpless offenders.

Before making up judgment take care to understand both sides, and remember there *are* at least two sides. If you attempt to decide, you are bound to know both.

Do not say you *know* when you have only *heard*.

Never proceed on mere hearsay. Rumor is only an index to be followed by inquiry.

Take great care to be right. Better be right than quickest with "the news," which is often false. It is bad to be late, but worse to be wrong.

Go to first hands and original sources for information; if you cannot, then get as near as you can.

It is the reporter's office to chronicle events, to collect facts; comments on the facts are reserved for the editor.

Let the facts and reasoning tell the story rather than rhetorical flourish.

Don't be too positive. Remember always it is *possible* you may err.

All persons have equal rights in the court of conscience, as well as in courts of law.

Never add fuel to the fire of popular excitement.

There is nothing more demoralizing in public affairs than habitual disregard of law.

Uphold the authorities in maintaining public order. Rectify wrongs through the law.

If the law is defective, better mend it than break it.

Nearly always there is law enough. It is the failure to enforce it that makes most mischief.

There is no need, and therefore no excuse, for mob law in American communities.

Numerous as bad men may be, remember they are but few compared with the millions of the people.

The public welfare has higher claims than any party cry.

Grace and purity of style are always desirable; but never allow rhetoric to displace clear, direct, forcible expression.

Plain words are essential for unlearned people, and these are just as plain to the most accomplished.

This sketch has a fitting close in the following extract from a note received when Mr. McKean was first asked for materials on which to write it. He said,—

"I desire no larger biography than this: 'He has been editor-in-chief of the Philadelphia *Public Ledger* for twenty years, striving to do his responsible work for the public with conscience and common sense, honest purpose and clean hands.'"

The care which watches over the smallest and most unimportant news item that appears in the *Ledger*, guards against rash and exaggerated statements, until the paper has acquired that character for reliability and truth which is equaled by but few, and surpassed by no other paper in the country. This vigilance has watched the vague and uncertain early reports of elections, carefully sifting the improbable, and publishing

only those which will be sustained by later and more correct information, until the *Ledger's* returns of elections almost always prove correct. Even during the civil war the *Ledger*, while consistently and positively sustaining and supporting the government, avoided the many temptations to become sensational, and since the conflict ceased, its potent influence has been steadily exerted for the re-establishment of substantial peace and the encouragement of the growth of good feeling between the sections. Amid the wild excitement which followed the horrible assassination of President Lincoln, the *Ledger*, calm and unexcited, strongly and effectively protested against all secrecy in the trial, and for its outspoken respect for the law of the land was loudly assailed by some of its contemporaries for disloyalty.

Every improvement which would tend to the prosperity of the city, or to extend its area, has found in the *Ledger* its strongest and most persistent advocate. The consolidation of the city and districts, the introduction and extending of the lines of street railways, the change from the old hand-engines, and the "b'hoys that run with the machine," to the steam fire-engine, with its greater expedition and security, have all been sustained and promoted by the *Ledger*. The free bridges across the Schuylkill, the large and beautiful park, and the Centennial Exposition, all owe much of their success to unvarying advocacy by this great newspaper.

When the *Ledger* was purchased by Mr. Childs, it was established on the firm basis of popular support and confidence, free from the cares and anxieties that attended its founders for many years. The *Ledger* was a success beyond a peradventure. It was coining money, enjoying the fullest confidence of the public, and reaping the harvest of many years' planting. Mr. Childs kept the *Ledger* true to the course laid out by its founders, and without varying materially from that course, opened new features of attractiveness, introduced improved machinery, and finally transplanted the whole establishment to the most complete, perfect, and beautiful building in the United States for newspaper purposes. The Howell building and several adjoining lots at the southwest corner of Sixth and Chestnut Streets were purchased, and on May 1, 1866, work was commenced, and the building was formally opened June 26, 1867. Ample in proportion, and furnished with elegant completeness, its brown-stone fronts on the two streets are not excelled in stateliness and beauty by any newspaper establishment in Philadelphia.

George W. Childs was born in Baltimore, May 12, 1829, and at the age of thirteen entered the United States navy, but after spending fifteen months in the service he removed to Philadelphia, where his employment in a book-store became the open door to his almost phenomenal success as a publisher and man of letters. The late John W. Forney well said of him that when he came to Philadelphia his only

wealth was "industry, perseverance, and a stout heart, and with these resistless weapons he fought his way through inconceivable obstacles, until he has become the living illustration of that noble characteristic so rare among men of influence—the accumulation of riches, not for himself alone, but to make others happy during and after his life." Shortly after Mr. Childs had reached his majority, he was a member of the publishing-house of Childs & Peterson, and his energy was shown by the manner in which he advanced Mr. Peterson's compilation entitled "Familiar Science," to a sale of two hundred thousand copies. He issued in superb style Dr. Kane's narrative of his Arctic expedition, and paid to the author a profit of seventy thousand dollars; and he published to so much advantage Governor Brownlow's "Debates on Slavery" and "Sketches of Secession" that he was able to pay to the famous Tennessean fifteen thousand dollars in hard cash. The publication of Allibone's "Dictionary of Authors," in which Mr. Childs was chiefly concerned, drew from the author the acknowledgment that "to George William Childs, the original publisher of this volume, who has greatly furthered my labors by his enterprise and zealous and intelligent interest, I dedicate the fruits of many years of anxious research and conscientious toil."

In 1860, upon the retirement of Mr. Peterson from the firm, Mr. Childs formed a partnership with J. B. Lippincott, which endured but a year, when he resumed business for himself. In 1863 he purchased the *Publishers' Circular*, and by remodeling it and changing its name to the *American Literary Gazette and Publishers' Circular*, he made it indispensable to the trade. He also acquired the *American Almanac*, and renaming it the *National Almanac*, conducted it with such marked judgment that in two years it reached an annual sale of thirty thousand copies. After he had bought the *Ledger* he gave his name as security for one hundred thousand dollars to George P. Putnam, the New York publisher, who was then in some difficulty, and in thanking him, Mr. Putnam wrote of his newspaper undertaking that "such an enterprise as would positively frighten most of us timid and slow-moving old fogies, you, in your shrewd energy and wide-awake sagacity, enter upon us as a positive. You wave your magic wand, and lo! palaces rise, and the genii of steam and lightning send forth from their subterranean cells and lofty attics thousands of daily messages over the continent; and fortune follows deservedly, because you regulate all these powers on liberal principles of justice and truth." It is difficult to select the most prominent instances of congratulations that have been showered upon Mr. Childs since he has owned and conducted the *Ledger*, but one occasion that must not be omitted was the dinner given to the employes in the new building on July 4, 1867. The managing editor, W. V. McKean, then said that "the carriers, although they do not make the highest

wages, have among them the thriftiest of the employés, and the aggregate value of their *Ledger* routes would sell at the Merchants' Exchange as readily as government securities for a sum not less than two hundred and fifty thousand dollars, and probably three hundred thousand dollars." It was not a great while subsequently that Mr. Childs made to the Philadelphia Typographical Society the gift of the Printers' Cemetery, and the late Judge Ellis Lewis, formerly chief justice of Pennsylvania, who delivered the dedication address, said that Mr. Childs "has planted himself in the human heart, and he will have his habitation there while man shall live upon the earth."

A writer in the *New York Evangelist* gives us an insight into the domestic life of Mr. Childs, where private hospitality keeps even pace with public benevolence. He says, "Of all the private houses in this country which have acquired a wide reputation for hospitality, none is better known than that of Mr. George W. Childs, of Philadelphia. He has ample wealth, a large and beautiful house, and lives in a great city, which, in addition to its own excellent society, from its position, midway between New York and Washington, is a place of passage for thousands coming and going." It was in this house that he entertained that remarkable gathering of distinguished and notable persons, on the evening of the 10th of May, 1876, when the Centennial Exhibition, in Philadelphia, was formally opened.

On that occasion there were present President Grant, with his wife; all the members of his cabinet, with their wives; the chief justice and associate justices of the Supreme Court of the United States, with their wives; the Emperor and Empress of Brazil; the diplomatic and other representatives of Great Britain, France, Spain, Austria, Prussia, Russia, Italy, Belgium, Turkey, Japan, China, and other powers of Europe and Asia; the Governors of Maine, New Hampshire, Massachusetts, Rhode Island, Kentucky, Pennsylvania, New Jersey, Delaware, and Maryland, with their staff-officers; leading members of the United States Senate and House of Representatives; Gens. Sherman, Sheridan, Hancock, McDowell; Admirals Porter, Rowan, Scott, Lardner, Turner, Jenkins, Alden; Centennial judges and commissioners from foreign countries and the United States; famous military and naval officers, eminent judges, leading lawyers, prominent divines, presidents of colleges, authors, journalists, artists; in fact, men famous in every branch of professional and private life. And this instance, except in the remarkable comprehensiveness of its scope as to the guests, merely illustrates the rule in Mr. Childs' social life. Scarcely a prominent visitor from abroad arrives in this country who is not furnished with letters of introduction to Mr. Childs, and entertained by him. Compare such generous courtesy to the representatives of foreign aristocracy, wealth, and intelligence with the refinement of delicate appreciation which induced Mr.

Childs, during the continuance of the Centennial, to furnish with the means to visit the great fair not only numbers of poor women who would otherwise not have seen it, but also as many as two thousand children, who, through his liberality, were sent happy-hearted to the wonderful exhibition at Fairmount, and furnished with a good dinner while enjoying the show. Children of the Deaf and Dumb Asylum, the Church Home, and those of other public institutions of the city were thus favored, and in the case of the House of Refuge, it illustrates the peculiar quality of his thoughtfulness that he made a special request that its inmates should be permitted to lay off the uniform, which is their badge, while visiting the exposition, and wear new suits, to be supplied and paid for by him.

Mr. Childs has placed in Westminster Abbey, London, a memorial window, in honor of the poets George Herbert and William Cowper, to which Dean Stanley made a most eloquent reference in a sermon preached in St. John's Protestant Episcopal Church, Philadelphia, Sept. 29, 1878. Another testimonial of which Mr. Childs may well be proud is that which is addressed to him as Honorary Commissioner for the United Kingdom, by the Duke of Richmond and Gordon, Lord President of the Council, acknowledging the valuable assistance rendered by him to her Majesty's Commissioners to the Centennial Exhibition. Col. Forney bears witness to the sentiment of esteem and respect in which Mr. Childs is held abroad by saying that, "When I carried letters from him to Europe, in 1867, his name was a talisman, and it was pleasant to see how a nobleman like the Duke of Buckingham honored the indorsement of an American who, thirty years before, was a poor boy."

There is another feature in Mr. Childs' character which illustrates very strikingly both the head and the heart of the man. Having lived all his life among books, and in familiar association with authors, his library is both a curiosity and an illustration. It is not as large as many other private collections, and yet it contains literary and epistolary treasures which all the libraries of the world could not supply. F. W. Robiusion, in his "Private Libraries of Philadelphia," has devoted forty-eight pages to the description of that of Mr. Childs. We can only condense that description, and give some few of the most striking and peculiar features. The original sermon of Rev. Cotton Mather, indorsed as genuine by Rev. William B. Sprague, of Albany, reposes in a beautiful cabinet between the windows, and is a little 18mo of eight pages, bearing date of May 17, 1703. A copy of the poetical works of Leigh Hunt, a Moxon edition of 1844, and which came direct to Mr. Childs from Dickens' library, has the precious indorsement, to "Charles Dickens, from his constant admirer and obliged friend, Leigh Hunt." With this is a copy of Hood's "Comic Annual" for 1842, in which is inscribed, in Hood's own handwriting, the half-jocose,

*George W. Childs*

half-pathetic verses of farewell to Dickens, when the novelist started on his first visit to the United States. "Alnwick Castle and other Poems," in a beautiful octavo edition, are dedicated, in the poet's hand, to "Charles Dickens, Esquire, from his friend and admirer, Fitz-Greene Halleck, New York, North America, 6th June, 1842." Another treasure is the original manuscript of Nathaniel Hawthorne's "Consular Experiences," containing thirty-seven pages in the author's script throughout, with his signature at the end, remarkable for the beauty of its pages, its clear sheets, and freedom from alteration and erasures. With a copy of the first edition of "The Scarlet Letter" is Hawthorne's autograph letter to Mr. Childs, wherein the author states that the novel "is thus far founded on fact; that such a symbol was actually worn by at least one woman in the early times of New England."

Among other relics of Hawthorne is the original letter from Franklin Pierce to James T. Fields, announcing the death of the poet and the impressions it made upon the ex-President. A manuscript of sixteen pages of the translation of the first book of the "Iliad," by William Cullen Bryant, is accompanied by the letter in which Mr. Bryant instructs Mr. Childs in regard to the proofs. There is also the manuscript of James Russell Lowell's June idyl, "Under the Willows," signed "J. R. L." Another original manuscript is that of James Fenimore Cooper's "Life of Captain Richard Somers," twenty-one pages folio, bound with the text, as published in *Graham's Magazine*, October, 1847, presented by Rufus W. Griswold to Dr. Balmanno, with his autograph attestation. This volume contains ten autograph letters from Cooper to his counsel, J. P. D. Ogden, concerning his lawsuit, in 1830-40, against J. Watson Webb and others for libel. Mr. Childs is, moreover, the possessor of the manuscript of Edgar Allen Poe's wierd and thrilling tale of "The Murders in the Rue Morgue," and it was principally through his liberality that the monument to Poe was erected in Baltimore, as he volunteered to pay all the expenses, and did furnish the greater part of the money. Side by side with these rare mementos of dead and gone poets is to be found the original manuscript draft of President Grant's address at the opening of the Centennial Exhibition, on May 10, 1876. But perhaps the most interesting of all these scripts is the original manuscript of "Our Mutual Friend," presented by Mr. Dickens to Mr. Childs, who had it bound in two large quarto volumes. Outside of those in the Kensington Museum, it is the only complete manuscript in existence of any of Mr. Dickens' novels. Bearing date of "Thursday, Fourth January, 1866," it is signed at the head of the sheet, "Charles Dickens," after which comes the skeleton of the story. In the first volume is inserted Mr. Dickens' letter of Nov. 4, 1868, to Mr. Childs, inviting him to visit Gad's Hill. The envelope is itself a treasure which many collectors would esteem most

highly. It is directed "George W. Childs, Esquire, Langham Hotel, Regent Street, London, West," and contains in the corner the autograph of Charles Dickens. In Murray's fine six-volume edition of Byron's works is the inscription from the publisher, "To George W. Childs, of Philadelphia, in testimony of kind remembrance from John Murray, Albemarle Street, London."

The manuscript of "Cloudesley," a novel by William Godwin, written on old parchment paper, upon both sides of the sheet, lies alongside of the manuscript of "Hertha," by Frederika Bremer, translated by Mary Howitt. Harriet Martineau's "Retrospect of Western Travel," four volumes in manuscript, is also among this collection, as well as the original manuscript of the "Habitations of our Kings," by the poet Gray.

The smallest book ever printed, a 128mo, is "La Divina Commedia di Dante, edizione Illustrata da 30 Fotograffe tolte da disegni di Scara muzzza, Milano, Ulrico Hoepli," 1879, containing the whole of Dante's comedy, with clear, excellent illustrations. The manuscript of "The Cow Chase," by Maj. André, is not the least curious among this interesting collection.

A book that has no duplicate, "A Collection of Autographs made by a Scrivener," W. G. Latham, a lawyer of New Orleans, is a very remarkable work. Mr. Latham was by profession a notary public, and had access to many original documents, from which he made copies of signatures, and was thus employed for twenty-five years. Every autograph in the volume was copied by Mr. Latham, of which there are about four thousand, embracing distinguished Americans of all professions, British authors from before Shakespeare until within a few years, a complete list of signers of the Declaration of Independence, Washington and his generals, Napoleon and leading men of his time and nation, royalty, nobility, military and naval celebrities, men renowned in authorship, in medicine, theology, natural history, and science of Europe for the past three centuries. A brief biographical sketch accompanies each signature.

The "Hall Collection" of letters, manuscripts, and sketches of the most celebrated people of the last fifty years, received by Anna Maria Hall and her husband, S. C. Hall, are among Mr. Childs' collection, as well as the album formerly belonging to Mrs. Hall. The Halls conducted the *London Art Journal*, and among these letters are names known throughout the English-speaking world, with many accompanying original verses or bright sayings, as well as sketches by well-known hands, sometimes in water-colors, sometimes in sepia, sometimes in ink. There are letters from Charles Lamb, Nathaniel Hawthorne, Mary Somerville, Miss Mitford, Harriet Martineau, Martin Farquhar Tupper, Robert Chambers, S. T. Coleridge, Frederika Bremer, Samuel Lover, Wilkie Collins,

William Wordsworth, Daniel O'Connell, Amelia Opie, Robert Southey, L. H. Sigourney, Edward Lytton Bulwer, E. B. Browning (from Rome), G. P. R. James, Robert Burns, Grace Aguilar, and many others. William Kennedy has a "Moorish Melody;" T. Crofton Croker has a sketch in sepia; Tom Moore has lines of remembrance, and a sketch of Sloperston Cottage; there is also a page of manuscript from one of his stories, written by Charles Dickens, and signed with that never-to-be-forgotten signature. Under this he has written, "Countersigned, Boz." An interesting sepia sketch of Maria Edgeworth's library appears; and following it is "The Cross," a poem by Jane Porter. Thomas Hood has written a verse of his "Song of the Shirt," and Thomas Hood the younger presents the lines beginning "Work, work, work." There is "A Prayer" by Hannah More; and Barry Cornwall comes soon after with "A Conceit." Leigh Hunt writes nearly a page of "Abou Ben Adhem," and Caroline Norton has "A Blind Man's Bride." Two neat charades must not be overlooked, under which is to be seen the signature of Theodore Hook. The "Tom Moore Bible" came also from Mrs. Hall, accompanied with a presentation letter to Mr. Childs, and some other features of the collection may be thus catalogued:

The "Black Book of Taymouth," presented to Mr. Childs by the Duke of Buckingham, the last of the Plantagenets; "The Need of Two Loves," an original manuscript of N. P. Willis; an original copy of Milton's "Paradise Lost," in Armenian, exhibited at the World's Fair in London; a two-volume quarto edition of Thompson's works, published in London between 1730 and 1736; an autograph manuscript of "The Italian Bible;" an original tragedy, by John Howard Payne, written for Charlotte Cushman; a large folio containing the portrait of every President of the United States, from George Washington to Chester A. Arthur, with an autograph letter with each portrait; Mrs. Mary Cowden Clarke's "Complete Concordance to Shakespeare," containing a selection of fifty closely-written pages of the original manuscript; and the original of Bulwer's "Pilgrims of the Rhine" and "Godolphin," which have been splendidly mounted upon large pages, arranged in a form worthy of their author, and bound in red Levant morocco, richly gilt. The Duke of Buckingham also presented to Mr. Childs the "Cabinet of the Earls of Derby," a rich and handsome privately-published volume of portraits of the Earl of Derby, Lord Chelmsford, Duke of Marlborough, Earl of Malmesbury, D'Israeli, Duke of Buckingham and Chandos, Sir Stafford Northcote, and the other members.

Mr. Robiusion, in his sketch, has only noticed certain special features of this remarkable collection. It is a treasure-house of rare and valuable mementos of men that have passed away, and illustrates the character of Mr. Childs as a preserver of those precious reminders of the great and good which are

liable to be lost. As he rescued the *Ledger* from decay and ruin, and brought it back to greater power and influence, as he built for Philadelphia its handsomest private business house, so in his library he has preserved those valuable souvenirs of another as well as of the present age, and in all has improved their usefulness by the splendid manner in which he has preserved them. It has been truly said of Mr. Childs "that his exalted position in the estimation of his fellow-men is explicable on no other hypothesis save that of the transcendent excellence of his heart. Other men have had his sagacity, his unflagging industry, his business ability, his enterprise, his sleepless vigilance, but in no one else do we observe in the same impressive combination the complementary qualities of which we have spoken. His name evokes spontaneously, in a multitude which no man can number, a degree of gratitude which it requires a personal acquaintance to understand."

The *Salmagundi and News of the Day*, a bi-weekly illustrated journal, devoted to "satire, criticism, humor, and wit," was first issued Jan. 2, 1836, by Charles Alexander, the publisher of the *Vade Mecum*, at the Athenian Buildings, Franklin Place. *The Salmagundi* was published at two dollars per annum. It was a lively, vigorous sheet, but was not long-lived.

*Everybody's Album*, "a monthly magazine of humorous tales, essays, anecdotes, and facetiæ," was issued for the first time on July 1, 1836. It was embellished with numerous grotesque and amusing engravings. Each number comprised seventy-two large octavo pages. It was published at three dollars per annum, by Charles Alexander, at the Athenian Buildings, Franklin Place.

The *Philadelphia Saturday News*, a weekly journal, was first issued on July 2, 1836, Messrs. Louis A. Godey, Joseph C. Neal, and Morton McMichael being its originators.

The *Botanical Sentinel*, of Aug. 5, 1836, thus comments upon the new periodical:

"THE PHILADELPHIA SATURDAY NEWS.—The above is a title of a new paper which has recently appeared in this city, and is under the editorial management of Messrs. Joseph C. Neal and Morton McMichael, two gentlemen well known in this community for their vigorous powers in wielding the pen. For the sketching of character, drawing humorous dialogues, and portraying eccentrics, Mr. Neal has not his superior. Of Mr. McMichael, it may be said he affords a striking exception to the attributes which from time immemorial have distinguished aldermen. He is neither fat nor stupid: on the contrary, he can with ease pass through any door of ordinary dimensions; and, as to his intellect, it is of the first order. In happy retort, sarcastic reply, and caustic exposition, he is not surpassed by any writer within the circle of our acquaintance, and we confidently predict, with two such able individuals at the head of the *News*, that it will rapidly advance in public favor."

*The Saturday News* was published by L. A. Godey & Co., at No. 100 Walnut Street, at two dollars per annum, and printed on a large folio sheet. Managed as it was by three men of such ability and enterprise, it is but natural that *The Saturday News* soon became a successful venture. Before issuing the first number

of *The Saturday News* the proprietors had bought out Alexander's *Vade Mecum*. The *News* eventually became merged in the *Saturday Evening Post*.

The **National Atlas and Sunday Morning Mail** was started in Philadelphia on July 31, 1836, by Samuel C. Atkinson, No. 36 Carter's Alley. Its purpose was set forth in the following language:

"We trust it will not prove the less acceptable for being a *Sunday* visitor,—as Sunday calls, Sunday dinners, and Sunday promenades are now everywhere in vogue. In order, however, to disarm the prejudices which might nevertheless be brought to bear against our enterprise, we desire to state that the *Sunday Atlas* will be the work of *Saturday* night always, leaving us on the following day with nothing more to do than to lay it upon the tables of those who may have no objection to read on the Sabbath. . . . New York is not without its papers on this day, which, at the same time, are calculated to gratify those who read only to be amused, whereas our object in the *Sunday Mail* is to furnish useful intelligence to our men of business, as well as agreeable matter to the general reader. . . . By an arrangement now in progress we expect to be put in possession of the New York evening papers of Saturday in time to avail ourselves of their contents for the *Atlas* of the following day, a desideratum, as we think, all will admit, and one, accordingly, which we propose to supply."

This publication was octavo, three columns on a page, and the same width of the *Saturday Evening Post*, of the same publisher. The leader of September 25th, of the same year, contained the following frank announcement:

"We are free to confess that we mistook the public feeling when we supposed that a desire existed for a Sunday publication that should supply the void that occurs by the suspension of the daily press on the particular day in question. We shall, therefore, in compliance with the general wish, change the day of publication from *Sunday* to *Tuesday* after the first day of October next, satisfied that, while no one will object to the change, it will meet with the approbation of a large majority of our subscribers. The title of the work will also undergo revision."

Three volumes of the paper were published, covering a period of a year and a half.

The **Eclectic Journal of Medicine** was issued monthly in connection with the Select Medical Library, beginning in November, 1836, and continued until October, 1840. It was published by Barrington & Haswell, and edited by John Bell.

The **Saturday Chronicle**, a weekly journal, published at No. 84 South Second Street, was started about 1836, and continued until 1842. The proprietors were Matthias and Taylor.

The **Independent Democrat**, a weekly newspaper, was begun about 1836. In 1837 or 1838 it was consolidated with the *Evening Star*, and was published until 1841 as the *Evening Star and Independent Democrat*. For some time the office of publication was at No. 73 Dock Street, and subsequently in the rear of No. 110 Walnut Street. The paper went out of existence in 1841.

**Die Alte und Neue Welt** ("the Old and New World") had its inception about 1836, and was published at No. 9 Bread Street, and afterward at No. 124 North Third Street. It was discontinued in 1843.

The **Weekly Messenger** was started in 1836, or thereabouts, and was published until 1848. The publication office was in the Athenian Buildings, Franklin Place.

The **Sunday Sun** was first published in 1836, by Putnam & Creamer, but only three numbers were issued.

The **Colonization Herald**, a fortnightly journal, issued on the first and third Saturdays of each month, came into existence about 1836, and was published for many years,—for a time at No. 27 Sansom Street, and afterward at No. 609 Walnut Street.

**Waldie's Literary Omnibus**, devoted to "news, books entire, sketches, reviews, tales, miscellaneous intelligence," was a weekly journal, established Jan. 6, 1837, by Adam Waldie. It did not flourish.

The **Philadelphia Visitor and Parlour Companion**, a twenty-four page octavo, issued every two weeks, came into existence in March, 1837, edited by H. N. Moore, and was published by W. B. Rogers at No. 49 Chestnut Street. It was devoted to popular and miscellaneous literature, fashions, and music.

The **Ladies' Garland**, a sixteen-page magazine, octavo, made its appearance April 15, 1837. The second number was issued May 6th. Thereafter the *Garland* was published weekly, by John Libby, at No. 45 North Sixth Street.

**Graham's Magazine**, or, as it was originally called, *The Gentleman's Magazine*, a monthly publication, edited by William E. Burton, was issued for the first time in July, 1837, by Charles Alexander, at the Athenian Buildings, Franklin Place. The number for January, 1839, which began the fourth volume, bore the title of *The Gentleman's Magazine and Monthly American Review*. From thence Mr. Burton was publisher as well as editor, and the office was removed to Dock Street, opposite the Exchange. In the editorial conduct of the fifth volume, beginning with July, 1839, Edgar Allan Poe became associated with Mr. Burton. In 1840 Poe withdrew, and in November of that year it was issued for the last time as *Burton's Gentleman's Magazine and American Monthly Review*, a title which it had borne for some time. Having passed into the hands of George R. Graham, it was issued in December, 1840, as *Graham's Magazine*, the publication office having meanwhile been removed to the southwest corner of Third and Chestnut Streets. Mr. Graham was the publisher and editor of the periodical for many years. For a portion of this time it was known as *Graham's Lady's and Gentleman's Magazine*, the *Casket* having been merged into it. Mr. Graham was assisted in his editorial duties at various times by Rufus W. Griswold, Robert T. Conrad, Joseph R. Chandler, J. B. Taylor, and others. Charles J. Peterson was associated in the publication for some time, finally withdrawing to establish *Peterson's Magazine*. Samuel D. Patterson & Co. became the publishers in 1848. *Graham's Magazine* enjoyed great success and popularity for many years. As an evidence of its high literary character, it may be said that it numbered among its contributors Henry W. Longfellow, William Cullen Bryant, J. Fenimore Cooper, Richard Henry Dana, N. P. Willis, James

Russell Lowell, Edgar A. Poe, Lydia H. Sigourney, Frances Sargent Osgood, and Ann S. Stephens.

**The Daily Focus**, established in September, 1837, had for its motto, "The Existence of a Republic must Depend upon the Virtue and Intelligence of her Children!" It was published at No. 103 (old number) South Second Street, two doors north of Walnut, up to August, 1838, by Turner, Davis & Vallean. In the issue of August 13th, the firm-name became Davis & Vallean. The editor was Gen. William F. Small, quite a prominent figure in Philadelphia life somewhat less than half a century ago. He read law with David Paul Brown, and was admitted to the bar Aug. 20, 1836. The student had largely imbibed the views of his tutor on the slavery—or, more properly called, abolition—question. After the destruction of Pennsylvania Hall by a mob, differences arose between the proprietors of the *Daily Focus* and its editor, which resulted in the withdrawal of the latter, as announced in the issue of May 24, 1838. The personal relations of each continued friendly. George R. Graham and Charles S. Peterson, of magazine fame, both then law-students, commenced their literary career on the *Daily Focus* after Gen. Small's withdrawal. It was a bright penny paper, but lived only a few years.

**The Spirit of the Times**, in its day a journal of great popularity and influence, was established in November, 1837, and during twelve years of its career was under the editorial direction of John S. Du Solle. For a part of this period he was assisted by Edward A. Penniman, who was also the proprietor of the journal for a while. On Dec. 10, 1849, Du Solle and Penniman disposed of the paper to A. H. Smith and Charles W. Carrigan. For many years the motto of the journal was, "Democratic and Fearless: Devoted to no Clique and Bound to no Master," which was afterward replaced by "God and the People." The following announcement appeared in the paper for some weeks, and for the last time on Jan. 16, 1845: "To the Public.—The proprietors of the *Spirit of the Times* will pay any individual five hundred dollars who can show that this paper has not a circulation greater than that of any other Democratic journal in the United States! Nor a circulation five times greater than that of any other daily Democratic newspaper in Pennsylvania." For years the paper was published at the northwest corner of Third and Chestnut Streets, and subsequently at No. 42 South Third Street, one door above Chestnut.

**The Morning Star**, published by J. Metcalfe & Co., at No. 57 South Third Street, "opposite the Girard Bank," was established Oct. 5, 1837, at eight dollars per annum, with J. Bausman as editor. It died early.

**The Medical Examiner**, a bi-weekly journal, edited by J. B. Biddle, M. Clymer, and W. W. Gerhard, was issued for the first time on Jan. 3, 1838. Vols. ii.-v. were issued weekly, and a new monthly series was commenced in January, 1845. The following sub-title was added to vol. v.: "and Retrospect of

the Medical Sciences." With the beginning of vol. vii. the full title became *The Medical Examiner and Record of Medical Science*. In January, 1857, it was united with *The Louisville Review*, forming *The North American Medico-Chirurgical Review*.

**The American Journal of Homœopathy**, a bi-monthly periodical, edited by an association of homœopathic physicians, was commenced in August, 1838, by W. L. J. Kiderlen & Co., and was soon discontinued.

**The United States Magazine and Democratic Review**, published at No. 67 South Second Street, was founded in or before 1838, and by 1840 had gone out of existence.

**The Lady's Amaranth**, a magazine published at No. 274 Market Street, was issued for the first time in 1838, and was published for two or three years. Many young writers, who have since become somewhat famous, began to see themselves in print in its pages.

**The Mechanics' Register** was published in 1838, at No. 45 North Second Street, and had a short career.

**The American Phrenological Journal and Miscellany**, a monthly periodical, was commenced in November, 1838, Adam Waldie being the publisher. The title subsequently became the *The American Phrenological Journal and Life Illustrated*, and it was finally moved to New York.

**The Philadelphia Demokrat**, a German morning paper, was founded in 1838 by a number of German Democrats, for the purpose of supporting David R. Porter as a candidate for Governor, against Ritner. Its first number was issued on Aug. 27, 1838. Burkhardt and Rothenstein were the publishers, and No. 391 (old number) North Front Street, between Green and Coates Streets [now Fairmount Avenue], was the publication office. After Porter's election the *Demokrat* was, for a short time, issued weekly, but soon became a daily paper again. In the second year of its existence, L. A. Wollenweber became the proprietor, and published it first at the corner of Old York road and Callowhill Street, and afterward in Third Street, below Noble. In 1852, Mr. Wollenweber sold the paper to John S. Hoffman, and in September, 1853, the firm of Hoffman & Morwitz was established, which continued until the 9th day of July, 1873, when Mr. Hoffman withdrew from the firm. Since that time the publication of the *Demokrat* has been continued by Dr. Edward Morwitz, under the firm of Morwitz & Co. In November, 1868, the office was removed to its new printing house, Nos. 612 and 614 Chestnut Street, where it is now published. The *Demokrat* is a four-page paper, containing thirty-six columns. Its newspaper, publishing, and printing business is now the greatest and most extensive German establishment of this kind in the United States.

From the same office are issued the *Vereinigte Staaten Zeitung*, a weekly, established in 1845, as the *Weekly Demokrat*; *Die Neue Welt*, a Sunday paper, founded in 1856; and the *Abendpost*, an afternoon journal, first issued in 1866.

**The Catholic Herald**, a weekly religious journal, was established about 1838, and published at various places, at No. 61 North Second Street, No. 116 Chestnut Street, northwest corner of Third and Walnut Streets, No. 15 Minor Street, No. 10 South Fifth Street, No. 225 South Fourth Street, etc. In 1857 it was consolidated with the *Catholic Visitor*, which had been started some months before.

**The Philadelphia Reporter**, a monthly periodical, came into existence in 1838, at No. 45 North Sixth Street, and was discontinued after an existence of a few months.

**Bicknell's Reporter**, issued weekly by Robert T. Bicknell, had its inception about 1838, and was published at various places on South Third Street, first at No. 76, then at No. 20, then at No. 33, then at No. 45, then at No. 112, and elsewhere. *Bicknell's Counterfeit Detector* was under the same direction, and in 1858, or thereabouts, the two were consolidated, the title becoming *Inlay & Bicknell's Bank Note Reporter*.

**The Christian Observer**, a weekly Presbyterian journal, was started in 1838 as the *Religious Telegraph and Observer*, but assumed the first-named title in 1839. The publication-office was on Chestnut Street for many years, at Nos. 134, 144, and 216. About 1856 it was removed to No. 48 South Fourth Street. Rev. A. Converse, the editor, a bitter Secessionist, was compelled to leave Philadelphia after the attack on Fort Sumter, and publication was suspended.

**The Baptist Record** was started in 1838, or, perhaps, shortly prior to that date, by J. M. Allen, at No. 21 South Fourth Street. Subsequently the publication-office was at No. 118 Mulberry Street, and the paper existed until 1857.

**The Evening News**, a two-cent daily afternoon paper, was commenced in 1838, or thereabouts, by M. H. Andrews, at No. 103 South Second Street. It lived but a few months.

**The American Phrenological Journal** was issued for the first time in 1838, or perhaps a year earlier, from No. 46 Carpenter Street, and went out of existence in 1841.

**The Financial Register**, published at No. 46 Carpenter Street, was started about 1838, and discontinued in 1839.

**The Farmers' Cabinet**, a periodical mainly devoted to agricultural topics, was commenced about 1838, at No. 45 North Sixth Street, and subsequently removed to No. 50 North Fourth Street. It was successfully published until 1850.

**The Lady's Companion** was published in 1838, by Orrin Rodgers, at No. 67 South Second Street, having been commenced in that year, or shortly before. It was not in existence in 1840.

**The Medico-Chirurgical Review** had its origin about 1838, the publisher being Orrin Rodgers, at No. 67 South Second Street. It soon died out.

**The Banner of the Cross**, a weekly journal, established Jan. 5, 1839, succeeded the *Protestant Episco-*

*palian*, and was published in the interest of that denomination. The motto which originally accompanied the title-head was "*Pro Deo, pro ecclesia, pro Hominum Salute.*" This eventually gave place to the familiar phrase "*In hoc Signo.*" Among its editors were Rev. John Coleman, D.D., and Rev. H. Hooker, D.D. It was published for more than twenty years.

**The United States Commercial and Statistical Register** was established Feb. 13, 1839, by Samuel Hazard. The second issue was on July 3d, and thereafter it was published weekly until June 29, 1842.

**The World**, published by Russell Jarvis, editor and proprietor, at No. 83 Dock Street, opposite the Exchange, north side, was a small folio daily newspaper, and made its appearance in the early part of March, 1839. Jarvis had been connected with the *Ledger* previous to his venture with the *World*. It was quite a strong Whig paper, but its life was not long.

**Little Genius**, "published daily, by the proprietor," at No. 103 South Second Street, "second door above Walnut," was first issued in the middle of May, 1839. Under the title-head was this motto, a familiar quotation from Burns: "A chiel's amang ye takin' notes, an' faith he'll prent 'em!" During its short career it was a small folio, gossippy and flippant.

**Peterson's Ladies' National Magazine**, a monthly periodical devoted to fashions and to kindred subjects of interest to ladies, was established in 1840, since which year it has been continuously published. Charles J. Peterson was its originator and is its present publisher. It has always been well illustrated, particularly in the line of colored fashion-plates, and from the outset met with unexampled success. The publication-office is, and has been from the beginning, at No. 306 Chestnut Street.

**The Daily Chronicle**, a penny paper, the second of that name, was established in 1840, at the corner of Chestnut Street and Franklin Place, by Alexander & Scott. It was in existence in 1847.

**The Daily Standard**, an ephemeral sheet, was first issued in 1840, from No. 83 Dock Street, by F. J. Grund, and was in existence but a few months.

**The Botanic Medical Reformer and Home Physician**, the publishers of which were H. Hollembaek & Co. and the editor Dr. Thomas Cooke, was commenced May 7, 1840, and continued a couple of years in monthly issues.

**The Pennsylvania German**, a weekly paper published at No. 83 Dock Street, came into existence in 1840, but publication was suspended within a year.

**The Philadelphia Repository** had its origin in 1840, at No. 67 South Second Street, and removed to Spruce Street, above Second. It enjoyed a successful career of twelve years, finally suspending in 1852.

**The Literalist**, published at No. 67 South Second Street, made its appearance in 1840, and was discontinued in 1842.

**The United States**, established May 1, 1841, by Swain, Abell & Simmons, the publishers of the *Public*

*Ledger*, was a continuation of the *Weekly Ledger*, which had been first printed in the autumn of 1837. In September, 1842, the paper was sold to George R. Graham, who united it with the *Saturday Evening Post*, which he then published.

The **Temperance Advocate**, first issued in 1841, from No. 65 Third Street, near Dock, by Samuel C. Atkinson, one of the founders of the *Saturday Evening Post*, lived four or five years.

The **Dramatic Mirror and Literary Companion**, "devoted to the stage and the fine arts," published by Turner & Fisher, and edited by James Rees, made its appearance Aug. 14, 1841, at No. 15 North Sixth Street.

The **Young People's Book**, a juvenile magazine, was started in 1841, and was continued for a couple of years, the publication-office being at No. 101 Chestnut Street.

The **Peoples' Library**, a literary periodical which originated in 1841, was in existence until 1843, and was issued from No. 101 Chestnut Street, by Godey & McMichael.

The **Evening Journal**, a daily afternoon newspaper, was started in 1842 at No. 48 South Third Street, and failed in a few months.

The **Evening Mercury**, which was first issued in 1842, at No. 85 Dock Street, was continued for a couple of years, but it did not achieve any very flattering success.

The **Forum**, a daily paper, the publication-office of which was at first at No. 82 Chestnut Street, and subsequently in Dock Street, north side, next door from the corner of Third, was started in 1842, by Bela Badger, as a Whig organ, and was edited by James S. Wallace. It existed only two years.

The **Saturday Museum**, a weekly paper, the publication-office of which was at No. 101 Chestnut Street, was started in 1842, or shortly prior thereto, and was continued until 1844.

The **Protestant Banner**, published on the first and third Thursdays of each month, was started in 1842, and suspended two years later. The publication-office was at No. 8 South Third Street.

**Vancourt's Counterfeit Detector** was successfully published for many years, beginning with 1842, and issued from No. 93 (new number 243) Arch Street.

The **Youth's World**, published by the American Sunday-School Union, was established in January, 1843, as the *Youth's Penny Gazette*, an illustrated folio of four pages, for youth and Sunday-school children, issued every other week. The price at first was one cent, which in about a year afterward was reduced to half a cent per copy. It was originally edited by Frederick A. Packard. In 1859 its title was changed to *The Sunday-School Gazette*, issued monthly, while a similar paper called *The Sunday-School Banner* was issued each week, the two papers being edited by John S. Hart. Two years later, in 1861, the *Gazette* and *Banner* were merged in the *Child's World*, which

was issued semi-monthly. Upon Mr. Packard's death, in 1867, Rev. Richard Newton became the editor, serving until 1878. He was followed by the present editor, Rev. Edwin W. Rice. In January, 1881, the title of the *Child's World* was changed to the *Youth's World*, and it became a monthly.

The **Dollar Newspaper** came into existence on the 25th of January, 1843. The publishers were A. H. Simmons & Co., the company being Messrs. Swain & Abell. In other words, *The Dollar Newspaper* was issued from the *Ledger* office, and owned by the *Ledger* management. It proved quite successful and profitable until the increased price of paper rendered the publication at a dollar annually impossible as a paying business. In its columns Edgar A. Poe's famous prose tale, the "Gold-Bug," was originally published in competition for a premium of one hundred dollars offered by the publishers of the *Dollar Newspaper*, and was awarded the premium by a committee of three gentlemen, consisting of Judge Conrad, Dr. H. G. Patterson, and Washington L. Lane. The story was published on the 21st and 28th of June, 1843, and from the first moment of its issue attracted much attention, especially among literary people of acknowledged culture. It is *sui generis*. It is without plot, and has not a female character named in it, and yet, wholly narrative as it is, it is one of the most thrilling productions of its length ever given to the public. Joseph Sailer, the financial editor of the *Ledger* was editor of the *Dollar Newspaper*, and, as an indulgence of his early typographic taste, "made up" the form of the *Newspaper* every week.

After Mr. Childs purchased the *Ledger* establishment, he changed the name of the *Dollar Newspaper* to *The Home Weekly and Household Newspaper*, increased the price to two dollars per annum, expended large sums of money in literary prizes, and endeavored to build up an extensive circulation. Finding, however, that the paper to some extent clashed with the *Ledger's* interests, he sold it, in December, 1867, to Joseph A. Nunes. Its subsequent career was very brief.

The **Occident and American Jewish Advocate**, a monthly periodical devoted to the diffusion of knowledge on Jewish literature and religion, made its appearance in April, 1843, under the editorial supervision of Isaac Leeser, at No. 118 South Fourth Street, and continued three or four years.

**Campbell's Foreign Semi-Monthly**, a bi-weekly magazine, first appeared on Sept. 1, 1843, and ended on the completion of its third volume. It was owned as well as edited by John Sartain, who engraved a steel-plate for the embellishment of every number. In it appeared for the first time in America "The Bridge of Sighs," "The Song of the Shirt," "The Drop of Gin," "The Pauper's Funeral," Hood's "Haunted House," and many other now famous poems; also Agassiz's "Period in the History of our Planet," which was printed Oct. 16, 1843, when his name was

unknown as yet on this side of the Atlantic. This periodical was merged into the *Eclectic*, published in New York, while it was the property and under the editorship of the Rev. Mr. Agnew.

**The Legal Intelligencer**, a weekly law periodical, was established on Dec. 2, 1843, and it is therefore the oldest law journal in the United States. It was founded by the late Henry E. Wallace, of the Philadelphia bar, who remained its editor until his death, Feb. 23, 1879, and with him was associated J. Hubley Ashton from 1860 to 1864. Dallas Sanders and Henry C. Titus became also associated as editors in 1871, and still remain in editorial charge.

Prior to the year 1843 there was no law journal in the United States. The only systematic reports were those of the courts of last resort, and, with the exception of an occasional and fugitive effort to collect and publish the decisions of the lower courts, the other tribunals throughout the country were unreported. The courts of Philadelphia County had always been of wide repute, and many eminent men had occupied its bench. *The Intelligencer* was established for the purpose of gathering and preserving their decisions.

In 1855 a new feature was added to the paper. The bar and the community had long suffered annoyance by the want of system in the matter of legal notices. In those days, as now, the client expected his counsel to keep himself advised of any proceedings affecting his property interests, and by the distribution of these notices it frequently happened that judgments and other liens were lost, claims against decedents and assignors overlooked, and the client injured in many other ways now guarded against. These evils were corrected by the act of April 5, 1855, which directed the courts to select a journal in which legal notices should be concentrated. *The Legal Intelligencer* was selected for this purpose, and has discharged the duty ever since.

**The Medical News** was commenced in 1843 as a monthly adjunct to the *American Journal of the Medical Sciences*, under the editorial management of Dr. Isaac Hays, and was so continued until 1869, when his son, Dr. I. Minis Hays, was associated with him. The latter assumed the sole editorship in 1879, and in his hands it has remained ever since. In 1880 the size of the *News* was increased by the absorption of the *Monthly Abstract*, and the title became *The Medical News and Abstract*. In 1882, the material for publication having largely increased, and a demand arising for a more frequent communication with its readers, it was changed to a weekly publication, under the old title of *The Medical News*, since which its circulation has increased rapidly. Its readers and contributors are found in every State and Territory, and its unrivaled organization enables it each week to lay upon the tables of its readers an accurate epitome of a week's advance of the whole medical world. It is published by Henry C. Lea's Son & Co., Nos. 706 and 708 Sansom Street.

**The Daily Sun**, a Native American penny paper, was first issued in 1843, and continued until 1857, being published first by Barrett & Jones, and subsequently by Wallace & Fletcher. Lewis C. Levin was editor for a number of years, as was also James S. Wallace. The publication-office was for a considerable time at the northeast corner of Dock and Third Streets, and afterward at No. 64 South Third Street, above Walnut, where was also published the *Dollar Weekly Sun*.

**The Sunday Sun** was started in 1843 by John Lawlor, who came from New York for that purpose, and who subsequently was one of the founders of the *Sunday Dispatch*. Only two numbers were issued, and it was even a greater failure than its predecessor of the same name in 1836.

**The Bulletin of Medical Science**, issued monthly, made its appearance in 1843, and suspended in 1846. It was edited by John Bell, and published by Bar- ington & Haswell.

**The Pennsylvania Freeman**, an organ of the Free-Soil party, was irregularly issued for five years prior to 1844, from No. 72 North Seventh Street and No. 7 Carter's Alley. On Jan. 18, 1844, its regular publication as a bi-weekly was begun at No. 31 North Fifth Street, under the auspices of the Eastern Pennsylvania Anti-Slavery Society and the editorial direction of J. M. McKim and C. C. Burleigh. For many years it was conducted with great vigor, and was of essential service in building up the Republican party.

**Friends' Intelligencer** was started March 30, 1844, by Josiah Chapman, a member of the Society of Friends, a printer, and interested in a country newspaper, who conceived the idea of using the type and news items in the publication of a Friends' paper. Its title was *Friends' Weekly Intelligencer*, but the word "weekly" was afterwards dropped, though its weekly issue was not changed. A number of persons volunteered literary assistance, and the second volume was under the care of an "Association of Friends," who selected an editor and managed its business affairs. Abel North and afterwards John J. White were the principal editors, but at the close of the ninth volume the paper passed into the hands of an Association of Women Friends, and it is still continued under their editorship. About that time it was changed to a sixteen-page octavo. Its design is to furnish information of what is transpiring in the Society of Friends, to preserve and disseminate matter connected with its history, to publish original and selected essays on religious and literary subjects, and brief items of contemporary events. The present publisher and agent is John Comly, at Friends' Bookstore, No. 1020 Arch Street.

**The Christian Instructor** had its origin in September, 1844, when the Associate Reformed Synod of New York agreed to establish a monthly magazine for circulation specially among the families within

its bounds. The first number was issued in September of that year, at Newburgh, N. Y., printed by Rev. David S. Proudfit, and edited by Dr. John Forsyth. Rev. John B. Dales, D.D., became owner and editor October, 1846, and issued it in Philadelphia, and changed it to a weekly paper July, 1859. It was removed to Chicago January, 1879, where it was owned and edited by Revs. A. G. McCoy and A. T. McDill. In April, 1882, Mr. McCoy's interest was purchased by Rev. D. W. Collins, D.D., and it was returned to Philadelphia, where it is now edited by Revs. D. W. Collins, D.D., W. N. Bond, D.D., and A. T. McDill, and is published by Collins & McDill, in the interests of the United Presbyterian Church of North America. It is a sixteen-page weekly, and is issued at two dollars per annum.

**Stockton's Dental Intelligencer**, a monthly journal, was commenced in November, 1844, and was in existence three or four years.

**Neal's Saturday Gazette** was established in 1841 by Joseph C. Neal, who had previously been connected with the *Saturday News* and the *Pennsylvanian*. Morton McMichael was associated with him in the new enterprise, whose publication office was first at No. 113 Chestnut street, and afterward at No. 46 South Third Street. Neal died July 18, 1847, and Mr. McMichael having previously withdrawn to the *North American*, Neal's widow continued the *Saturday Gazette* until 1854, when it died out.

**The Native American**, a daily paper, came into existence in 1844, during the Native American campaign, but continued only a few months. The publisher and editor was Samuel R. Kramer.

**The American Advocate** was published daily for several months, beginning some time in 1844, afterward became the *Native Eagle and Advocate*, and was in existence until 1849.

**The Daily Keystone**, published at No. 85 Dock Street, was started in 1844, and continued for three years, when it was merged into the *Spirit of the Times*. Thomas B. Florence was the editor.

**The Native Eagle and Advocate** was commenced in 1845 as a daily penny paper, and issued from No. 83 Dock Street. It was virtually a continuation of the *American Advocate*, which had its origin in the previous year, and was a Native American organ. William D. Baker, Peter Sken Smith, and Henry H. K. Elliott were interested in that publication.

**The American Citizen**, a weekly Native American journal, was started in 1845, at No. 46 North Fifth Street, but continued only a few months.

**Smith's Weekly Volume**, which lived a year and a half, was established in 1845 by John Jay Smith, at that time the librarian of the Library Company of Philadelphia, and for many years connected with various journals of this city.

**The Dental Intelligencer and Record of Theoretical and Practical Dentistry**, a bi-monthly periodical, was started in 1845, by S. W. Stockton & Co.

**The Vereinigte Staaten Zeitung—United States Gazette**—is a weekly edition of the *Philadelphia Demokrat*. It was begun as *The Weekly Demokrat* in 1845, but the title was subsequently changed to that which it now bears.

**Comstock's Phonetic Magazine** was issued for the first time in September, 1846, with a poetical prospectus, which closed as follows:

"Friends of the Anglo-Saxon quill,  
Now start upon your feet;  
Direct (post-paid) A. Comstock, PHIL.,  
100 Mulberry Street."

Its term of life was about two years.

**The Philadelphia Evening Bulletin** was established on Monday, April 12, 1847, with the original title of *Cummings' Evening Telegraphic Bulletin*, its publisher being Alexander Cummings, then also the publisher of *Neal's Saturday Gazette*. A "specimen number" was published on April 10, 1847, and the first issue of the *Bulletin* was called "vol. i.—No. 1," but the next day's issue appeared as "vol. xxxi.—New Series, No. 2." This anomaly was owing to the fact that the latter issue was dated from the foundation of the *American Sentinel*, whose subscription-list had been purchased by Mr. Cummings. Up to 1847 there had been no successful first-class afternoon newspaper, and it was generally deemed impossible to make a paying investment out of such a venture. Mr. Cummings thought otherwise, however, and he immediately inaugurated a vigorous policy. Charles J. Peterson was engaged as "leader writer," and Col. John F. Carter was made assistant editor in charge of the news department. Dr. Alexander W. Blackburn, afterward fire-marshal of Philadelphia, was city editor. The enterprise prospered at the outset, and the paper, which originally was a six-column folio, was enlarged to seven columns, the sheet being twenty-four by thirty-six inches. Within the first year Mr. Cummings disposed of an interest in the *Bulletin* to James Peacock, formerly of Harrisburg, who had published the *Harrisburg Republican*, on which Simon Cameron, afterward United States Senator from Pennsylvania, had served an apprenticeship. Mr. Peacock subsequently resold his interest in the paper to Mr. Cummings. Mr. Peacock's son, Gibson Peacock, became connected with the editorial staff of the *Bulletin* soon after his father's purchase of an interest, and this relationship was still continued after James Peacock's withdrawal. Indeed, it was not long before the editorial department of the paper was mainly under Gibson Peacock's supervision, as it is at this time. He is a native of Harrisburg, a graduate of Dickinson College, and a vigorous and a versatile writer. Mr. Peterson withdrew from the *Bulletin* about 1854, to give fuller attention to his duties in connection with the conduct of his monthly magazine. Charles G. Leland ("Hans Breitman") became assistant editor of the *Bulletin* in 1855, remaining in that position for many years. Casper Souder, Jr.,

who had been a reporter upon the *Bulletin*, was promoted to city editor upon the resignation of Dr. Blackburn. Rev. Benjamin J. Wallace, a distinguished clergyman of the Old School Presbyterian Church, contributed occasional leaders, and his son, Ernest C. Wallace, was also engaged as an assistant editor.

The word "telegraphic," considered so important at the outset, was dropped from the title at the beginning of the fourth volume, and in April, 1856, the name was changed to *Daily Evening Bulletin*, in contradistinction to that of a weekly edition which was issued for a time, but discontinued about 1861.

The weekly edition of the *Bulletin* underwent many mutations in form, style, and name. For a short time it was properly a weekly edition of eight pages, made up out of the daily. Then it became more literary in character, and was called the *Philadelphia Saturday Bulletin*. During its continuance under this title prize stories were published, a flaming head adopted, and, on the 15th of November, 1856, the *American Courier*, published by Andrew McMakin, was consolidated with it. A semi-weekly edition of the *Bulletin* was begun Oct. 30, 1850, and continued for several years, but was finally discontinued.

On April 20, 1870, the present title of the daily paper, *Philadelphia Evening Bulletin*, was adopted. The price of the paper continued at two cents until July 1, 1863, when the ruling "war prices" of white paper, labor, etc., compelled an increase to three cents.

On Wednesday, Nov. 20, 1850, the *Bulletin* created a sensation by appearing as a double sheet, of the present size,—“a feat not before attempted in Philadelphia.” On the following Friday, another double sheet was issued, and these appeared frequently thereafter, generally on Saturdays, and were occasionally illustrated. In the early part of 1860, more than half the issues were in this form, and it was permanently adopted on the 21st of June of that year.

The *Bulletin* office continued at No. 46 (now No. 108) South Third Street until Feb. 28, 1853, when it was removed to the handsome brown stone edifice No. 48 (now No. 112) South Third Street, then just erected by the Girard estate. The increase in circulation now made it necessary to provide for the more rapid printing of the edition. Accordingly, the double-cylinder press which had been used from the beginning was replaced by one of Hoe's "last fast" four-cylinder rotary presses, which was first put in operation May 31, 1853.

On the 1st of January, 1859, Gibson Peacock purchased of Mr. Cummings one-third interest in the *Bulletin* for eleven thousand dollars cash, and the firm became Cummings & Peacock. This partnership continued until February, 1860, when Mr. Cummings removed to New York, and became the publisher of a new daily paper called *The World*. The proprietorship of the *Bulletin* was then put in the shape of a joint stock association of fifty shares, Mr. Cummings

selling the greater part of his interest to others connected with the paper. The ownership was divided between Gibson Peacock, Alexander Cummings, James S. Chambers, Ferdinand L. Fetherston, Thomas J. Williamson, Casper Souder, Jr., and Ernest C. Wallace. The firm-name became Peacock, Chambers & Co., Mr. Cummings desiring that his name should not appear, as New York was thereafter to be his residence. Mr. Peacock was made editor, with the very liberal concession that he should have "the entire and uncontrolled management" of his department.

In 1862, disagreements occurred between the proprietors damaging to the interests of the paper, and leading to protracted and costly litigation. This was finally terminated in May, 1864, by a decision of the Supreme Court *in banc*, which left Mr. Peacock in entire charge of the editorial department, and Mr. Fetherston in that of the publishing department.

Mr. Fetherston entered the business department of the *Bulletin* in 1847, while in his minority, and rose from one position to another, until the whole management of the publication was intrusted to him. Correct and courteous in his dealings, he enjoys a high reputation among business men, and the financial success of the *Bulletin* is largely due to the energy and ability of his management.

The partnership of Peacock, Chambers & Co., expired by limitation on the 1st of February, 1865, and on that day the *Bulletin* was sold at public auction. Mr. Peacock, for himself and his associates, bought the whole establishment for eighty-nine thousand dollars. This sale was a novelty for journalists, and attracted much attention. A new "Bulletin Association" was formed by the purchasers, the property being divided into one hundred shares, distributed between Messrs. Peacock, Fetherston, Souder, Wallace, and Williamson. In the same year the *Bulletin* Association purchased the five-story building No. 607 Chestnut Street, occupying the site of the old Chestnut Street Theatre, which was demolished in 1855, and relinquishing their lease on the Girard estate building in Third Street to Jay Cooke & Co. As the new building was occupied by tenants whose leases had not expired, the *Bulletin* office was temporarily removed (Sept. 9, 1865) to No. 329 Chestnut Street.

Early on the morning of Jan. 2, 1866, the new building was almost entirely destroyed by fire, fortunately before the *Bulletin* had removed into it. As soon as the frost would permit, it was rebuilt, and on the 5th of May, 1866, the new *Bulletin* Building, handsomely and commodiously remodeled, was occupied for the first time. The arrangements throughout are admirable, and it is creditable to the proprietors that as they increased in prosperity they provided superior accommodations for all connected with their journal.

Francis Wells became connected with the *Bulletin* in the capacity of assistant editor in 1865. Mr. Wells began active life in the publishing houses of Godey &

McMichael, and Lindsay & Blakiston, and was subsequently engaged in the paper warehouse of James M. Wilcox & Co. His taste leading him to literature, he became an occasional contributor to the *Bulletin*, and was one of the original editors of its "Chess Column" several years before he became permanently connected with the paper. He is a ready and vigorous writer, conscientious and painstaking in his profession. In 1866 he purchased half the interest of Ernest C. Wallace, whose health had declined, and who died after a long illness, June 3, 1867, at Yonkers, N. Y., in the thirty-fifth year of his age. Mr. Wallace was a native of Pittsburgh, and entered the office of the *Bulletin* at an early age. His love for his profession amounted to enthusiasm, and had he lived longer, he might have become one of its brightest ornaments. In the last letter of any length that he ever wrote to his associates, this devotion to his profession was expressed with almost passionate tenderness. He was then apparently better, and he wrote: "My main feeling is one of *gratitude*. I feel grateful to Providence for, as it may be, even only an apparent relief from the valley of the Shadow of Death, and for the *hope* of soon going to work in the dear old office."

Casper Souder, Jr., who had worked his way from the position of local reporter to that of assistant editor and part owner of the paper, became ill in the summer of 1868, and died on the 21st of October following, at the age of forty-nine.

Mr. Souder began his career as a journalist in December, 1850, as a local reporter on the *Sunday Dispatch*, and continued attached to that paper for fourteen years, becoming assistant editor, and contributing many valuable articles to its columns. His sketches of the public institutions of the city and his "History of Chestnut Street" displayed his power of making the driest subjects interesting by means of clear, terse language, without the aid of garish literary ornament. Industrious and patient, he had no superior as a local reporter, and his sterling qualities and genial manners won him the esteem and affection of his associates.

The "Bulletin Association" expired by limitation Feb. 1, 1870, just prior to which the interest of the widow of Mr. Wallace was purchased by Mr. Wells, and that of Mr. Williamson by Mr. Fetherston. The widow of Mr. Souder retained her interest in the new partnership which was then formed, and by which the business was conducted under the title of Peacock, Fetherston & Co.

The partnership then formed expired by limitation Feb. 1, 1875, when the interest of Mrs. Souder was purchased by Mr. Wells, Charles Heber Clark, and William F. McCully, the business being continued under the same title as before. On Jan. 1, 1882, Mr. Clark's interest was purchased by Mr. McCully. Mr. Clark began his newspaper career as a writer for the *Evening Telegraph*. He was attached to the editorial

staff of the *Bulletin* in January, 1867, and was one of its most industrious and able writers, especially upon topics of social and political economy. Mr. Clark's versatile literary abilities have produced a series of popular humorous works, under the well-known *nom de plume* of "Max Adeler." He is now the sole proprietor and chief editor of the *Textile Record*, one of the leading industrial journals of the country. Mr. McCully had been connected with the business, originally in its printing department, since the year 1860, and had been for some years the cashier of the establishment, a position which he still occupies. He is a man of thorough business capacity, and a valuable member of the firm. He is at present and has been for some years one of the fire commissioners of the city of Philadelphia.

While the *Bulletin* has steadily kept in view its original purpose of being a reliable *news* paper, equaling the morning journals in the extent and variety of its record of passing events, it has nevertheless given much attention to literary matters, and especially to current literature. It has always been closely identified with the local interests of Philadelphia, and is outspoken on all subjects bearing upon its prosperity, being noticeable for the pertinacity with which it clings to any object until its purpose is accomplished or hopelessly defeated. As an example of this may be cited its advocacy of a paid fire department, a project which it persistently urged for twenty years. For some time the *Bulletin* avoided political affiliations, but gave in its adhesion to the Republican party from its organization, and rarely fails to support its measures or candidates. It is steadily and consistently Republican in its principles, maintaining its views with outspoken boldness and sincerity. The editorial department remains under the control of Mr. Peacock, assisted by Mr. Wells and a full corps of sub-editors, to each of whom a special department is assigned. Mr. Fetherston continues in charge of the business department of the paper, assisted by Mr. McCully.

The *Bulletin* has kept at the front of the great advance that has been made in daily journalism since its beginning. It has its regular correspondents in London, Paris, and Rome, and supplements the telegraphic news of the Associated Press with a large service of special dispatches. Its local department is very comprehensive, its efficiency being greatly promoted by an extensive reference library and an admirably-contrived system of classified historical, biographical, and other matter. It has always paid much attention to literary and art criticism, including especially music and the drama, and enjoys a high reputation for the sound judgment and entire independence exhibited in these departments.

The *Dental News-Letter* was established in 1847 in the interest of dental surgery. As a quarterly it was continued for twelve years, when it was succeeded by a monthly journal, *The Dental Cosmos*, which is

still published. The first number of the latter was issued in August, 1859, by Jones & White.

The *Friends' Review* was started in 1847 by a few Orthodox Friends who considered that the society needed a journal representing a somewhat different view of some matters from that set forth in the older paper, *The Friend*. At that time the visit of Joseph John Gurney, an eminent minister from England, had brought out a diversity of sentiment in the society greater than had existed since the separation, in 1827-28.

The purpose of the paper, however, was not controversial, but general, including, as its title indicates, the discussion of "religious, literary, and miscellaneous" topics. Its first editor and publisher was Enoch Lewis, a man of much ability and various information, as well as independence of character. He was one of the early and active Abolitionists of that day. After several years of service he was succeeded by Samuel Rhoads, also a decided as well as early opponent of slavery. The same was true of his successor, William J. Allinson, a personal friend of John G. Whittier, and a poet of considerable talent, as well as a prose writer of great facility and vivacity of style. About 1872 his health failed, and since that time the paper has been conducted by one or both of its present editors.

At the present time the *Friends' Review* represents the "centre" or moderate portion of the Society of Orthodox Friends. It neither adheres to the extreme conservatism which prevails more distinctly in Philadelphia than elsewhere, nor favors the existing tendency, most manifest in the West, toward innovations of various kinds upon the accepted views and practices of the society. Its animus may be expressed in the motto, "In essentials unity, in non-essentials liberty, and in all things charity." Its present editors are Drs. James E. Rhoads and Henry Hartshorne.

The *Medical and Surgical Reporter* is at present the oldest weekly journal devoted to the interests of the regular medical profession in the United States, with the exception of one published in Boston. Its history dates back to 1847, when it was begun as the *New Jersey Medical and Surgical Reporter*, published by the New Jersey State Medical Society, at Burlington, in that State. Its earliest editors were Dr. Parrish and Dr. S. W. Butler. By these gentlemen it was continued as a quarterly until 1858. In that year Dr. S. W. Butler removed to Philadelphia, and, associating Dr. R. J. Levis in the management of the journal, it was transformed to a weekly, and published at No. 111 South Tenth Street. The success of the new venture was moderate and the prospects were fair, when the outbreak of the civil war led to the temporary discontinuance of the regular issues. Before the close of the war, however, the *Reporter* had recovered, and, Dr. Levis having retired, Dr. Butler continued it alone until 1868, when he associated in its management Dr. Daniel G. Brinton. The same year the *Half-Yearly*

*Compendium of Medical Science* was started under their joint editorship. From this date there was a slow but steady growth in the circulation of the two journals, and each took a high position in the ranks of periodical medical literature. In 1873, Dr. Butler's health failed, and his decease occurred the following year. Both journals have since been continued with increasing popularity by Dr. Daniel G. Brinton, with whom there have been associated at various times as assistant editors Dr. George H. Napheys, Dr. C. C. Vanderbeck, Dr. John Sundberg, and Dr. J. F. Edwards. The publication-office is at No. 115 South Seventh Street.

The *Item* was founded in 1847 by Thomas Fitzgerald as a weekly, and out of it have grown the *Sunday Item* and the *Daily Evening Item*, although the three papers are distinct, and all are flourishing. The *Item* management own the building in which it is published, and employ two fine Bullock lightning printing-machines for their press-work. From its birth *The Item* has been one of the most progressive papers in Philadelphia. Among the forward movements it has advocated may be mentioned the following: consolidation of the city and districts, construction of the Pennsylvania Railroad, the new or decimal system of numbering the streets, the paid fire department, the new market-houses, abolishment of the unpleasant third tier and the bar-rooms in the theatres, the defense of the Union against rebellion, uniforming the police, the letter-carriers, and the car conductors, removal of the railings around the squares, and a departure from Quaker uniformity in building.

During his years of hard work on *The Item*, Mr. Fitzgerald has found time to write a number of plays, some of which have been performed with success. "Light at Last" ran a month at the Arch Street Theatre, and "Patrice" held the boards of the Chestnut Street Theatre for an equal length of time when it was under the management of Laura Keene. Mr. Fitzgerald is now assisted in his editorial and managerial labors by his five sons,—Riter, Harrington, Hildebrand, Gilbert, and Robert Leinster Fitzgerald,—all of whom are trained and practical journalists.

The *American Quarterly Register and Magazine* was first published in September, 1847, by James Stryker, at No. 520 Chestnut Street, and printed by William S. Young, Franklin Building, No. 50 North Sixth Street.

The *Daily Register* was established in 1847 by W. H. Sickels, mainly as a record of the arrivals at the leading hotels, for the information of jobbing houses. Originally it was a mere slip, but it was enlarged at various times until, on Sept. 5, 1851, it was increased to a twenty-four-column quarto. At this time it was published by Moran & Sickels, at the northeast corner of Third and Chestnut Streets. Subsequently it was under the direction of William Birney. Its prosperity was not permanent, and it was suspended within a few years thereafter.

The *Manayunk Courier* was first issued Jan. 1, 1848, by Richard Beresford. It was printed in Manayunk, and the first office was at the corner of Green Lane and Main Street. It was then removed to Mulberry Street, in the house now No. 133. After an existence of ten weeks, it was issued for the last time March 18, 1848.

The *Philadelphia Daily News* was established about the 1st of January, 1848, or some time in 1847, at the northeast corner of Third and Chestnut Streets, and removed to No. 70 (now No. 136) South Third Street. As a Whig, and afterward Republican, paper it had wide influence and large circulation. The original proprietors were Paxson (now Justice Paxson of the Supreme Court of Pennsylvania), Sanderson, and Killinger. Subsequently it was published over twenty years by Joseph R. Flanigen as editor and proprietor. For the greater portion of this period a weekly edition, which bore the title of the *Dollar Weekly News*, was also issued.

The *Saturday Gleaner*, published at No. 98 Chestnut Street, entered the field of journalism in 1848, and died within a few months.

The *Sunday Dispatch*, the oldest existing Sunday paper, was founded in 1848 by John Lawlor, Robert Everett, and Elias J. Hincken. Lawlor had, in 1843, ventured upon Sunday journalism with the *Sunday Sun*, which lived only two or three weeks. The first number of the *Dispatch* was printed May 14, 1848, and was published at No. 33 (now No. 209) South Third Street, below Walnut. A small advertisement in a daily paper, together with a brief notice in the *Daily News* of the intention to issue such a paper, was all the heraldry which the new enterprise received. The first number, however, made a good appearance. It contained nearly twenty-four columns of reading matter and two small advertisements. The receipts from the sale of the paper on the first day of its appearance were twenty-eight cents. Scarcely any enterprise of the kind could commence with less prospect of success, and yet the first number proved to have been of sufficient merit to secure a larger circulation for the second number, with a demand that increased from week to week. There were many prejudices to overcome. The religious element of the community was shocked at the idea that a paper printed on Saturday night should be read on Sunday. The immorality of such a journal was dwelt upon, and was even made the subject of denunciation from the pulpit. The *Dispatch* received no welcomes from the fraternity. The daily press as a rule did not even consider it necessary to note the advent of the stranger, and even in the city Directory, which professed to give a list of the newspapers of the city, the *Dispatch* was not mentioned until three years after its establishment. For twenty-one years the proprietorship of the *Dispatch* remained unchanged, and the paper continued to grow in financial standing and in influence. On the 18th of April,

1869, John Lawlor died, thus severing the association so long unbroken. The remaining partners continued to publish the journal until 1882, when, as announced in the issue of December 31st, Mr. Everett withdrew, the sole proprietorship being thereafter vested in Mr. Hincken, who publishes the *Dispatch* at the present time at the northeast corner of Seventh and Walnut Streets. From its commencement Thompson Westcott has been its editor.

The *Freie Presse*, a German morning paper, Republican in politics, was established in 1848, at No. 174 North Fourth Street. It is now published by the Freie Presse Publishing Company, at No. 317 Callowhill Street. The *Sonntags Blatt*, which is practically a Sunday edition of the *Freie Presse*, is issued by the same company.

The *Biblical Repertory and Princeton Review*, a religious publication, issued quarterly, in the interest of the Presbyterian denomination, came into existence in 1848, and was successfully published for many years at No. 25 Sansom Street. In 1853 it was removed to No. 265 (new number, 821) Chestnut Street.

The *Presbyterian Treasury of Education, Religion, and General Intelligence* had its inception in 1848, at No. 25 Sansom Street. It was discontinued until 1851.

The *Lady's Dollar Newspaper*, a semi-monthly publication, started in 1848, was issued until 1851, at No. 113 Chestnut Street.

The *Christian Chronicle* came into existence, in 1848, as a weekly religious journal, and existed over a decade. For a time it was published at No. 83 Dock Street; then at No. 118 Arch Street; afterward at No. 100 Chestnut Street; subsequently at No. 40 North Sixth Street; and finally at No. 23 North Sixth Street. Rev. W. B. Jacobs was the editor for some years, being succeeded by Rev. James S. Dickerson in 1860.

*Sartain's Magazine*, published by John Sartain, was first issued in January, 1849, and it ended in 1852. It was begun by the purchase of the subscription-list of a New York periodical, entitled the *Union Magazine of Literature and Art*, of which Mrs. C. M. Kirkland was editor, and before the close of its fourth year it was merged again into a New York monthly, called the *National Magazine, devoted to Literature, Art, and Religion*.

Mrs. Kirkland and Professor John S. Hart were associated as joint editors of the new enterprise, and so continued for two years and a half, when they were succeeded by Dr. Reynell Coates, who conducted it for about four months, when Mr. Sartain himself became sole editor, and continued so to the end.

Many choice pieces of literature that afterward became as familiar as household words made their first appearance in this magazine. Poe's poem on the "Bells" was one of the more noted of his contributions, and Longfellow's translation from the Provencal

of *Jasmin* of "The Blind Girl of Castèl-Cuillè" was made for this, as well as many others of his enduring writings. Thomas Buchanan Read and George H. Boker were constant contributors, as well as Frederika Bremer, through her interpreter, Mary Howitt. Poe wrote his essay on the "Poetic Principle" for *Sartain's Magazine*, and it appeared in the October number of 1850. It is a curious and interesting study to observe the gradual development of a noble production, whether in literature or any of the other sister arts, from the first sketch to its after elaboration. For example, here is the form in which Edgar A. Poe first submitted his poem of "The Bells," in eighteen lines:

"The bells!—hear the belle!  
The merry wedding-bells!  
The little eliver belle!  
How fairy-like a melody there swells  
From the eliver tinkling celle  
Of the belle, belle, belle!  
Of the belle!

"The bells!—ah, the bells!  
The heavy iron belle!  
Hear the tolling of the belle!  
Hear the knells!  
How horrible a monody there floats  
From their throats—  
From their deep-tone throats!  
How I shudder at the notes  
From the melancholy throats  
Of the bells, bells, belle,—  
Of the belle!"

Before the poem had got into print as originally written, Poe had so expanded his subject that it grew to the ample dimensions of one hundred and thirteen lines, in which complete form it appeared in the number for November, 1849. The whole of Harriet Martineau's "Year at Ambleside" appeared first in *Sartain's Magazine*, for which it was written.

The *Reformed Quarterly Review*, an octavo periodical of one hundred and thirty-two pages, was founded in 1849, and is published by the Reformed Church Publication Board, at No. 907 Arch Street.

The *Presbyterian Monthly Record*, thirty-two pages, octavo, was first published in 1849, under the title of *The Home and Foreign Record*, and was the organ of what was then known as the old school branch of the church. After the reunion of the church, in the year 1870, it was consolidated with the *Presbyterian Monthly*, the organ of the new school branch, and the name changed to that which it now bears. It is published by the Presbyterian Board of Publication, No. 1334 Chestnut Street, and is the property and the organ of the Boards of the Presbyterian Church of the United States, and is the only publication from which a complete view of the benevolent operations of that church can be obtained.

*Scott's Weekly Paper* was established in 1849, by Andrew Scott, who had been associated with Charles Alexander in the publishing business, and was continued until Scott's death, in 1855. The office was at No. 115, afterward No. 111, Chestnut Street, between Franklin Place and Fourth Street.

The *Sunday Globe* was started in 1849, as the *Sunday Paper*, but in a month or two the title was changed to the former. Robert F. Christy & Co. were the publishers, and Dr. Thomas Dunn English the editor, who was succeeded by J. M. Willis Geist, now editor of the *Lancaster New Era*. The *Sunday Globe* was discontinued in 1852, after having been issued from No. 72 Chestnut Street, and subsequently from No. 1 Lodge Street.

The *American Law Journal* was established in 1849, or about that time, at No. 17 Mercantile Library building. It suspended publication in 1852, being succeeded by the *American Law Register*, which is still in existence.

*Nordamerikanischer Monatsbericht für Natur- und Heilkunde*, "redigirt von W. Keller und H. Tiedeman (in Philadelphia) und Herzka (in New York)," a monthly medical journal, was commenced in January, 1850, as an octavo periodical, published by F. W. Christern.

The *European News*, published weekly at No. 72 Dock Street, was started in 1850, and discontinued in 1851.

The *Drawing-Room Journal* was commenced in 1850, by Stephen McHenry, who had been for years chief clerk of Louis A. Godey. The editor was Manuel M. Cooke. It was published at the northeast corner of Second and Dock Streets, and at No. 32 South Third Street, and expired in 1852.

*Arthur's Home Gazette*, a weekly journal, started in 1850 by T. S. Arthur, was published at first in Franklin Place, and subsequently at No. 107 Walnut Street, and discontinued in 1855.

The *German Illustrated Newspaper*, a weekly periodical, published at No. 282 Arch Street, was established in 1850, and continued until 1853.

The *Guardian*, "a monthly magazine for young men and women, Sunday-schools, and families," came into existence in January, 1850, and is published by the Reformed Church Publication Board, at No. 907 Arch Street, under the editorship of Rev. J. H. Dubbs, D.D.

*Dye's Government Counterfeit Detector* is published monthly at No. 1338 Chestnut Street, and has been in existence since 1850. During its career it has supplied much valuable data for the detection of spurious bank-notes.

The *American Vegetarian and Health Journal*, published by the American Vegetarian Society, and edited by W. A. Alcott, T. L. Nicholls, and Rev. William Metcalfe, was first issued in November, 1850, and continued monthly for several years.

The *American Mechanics' Advocate*, a weekly journal, was published for a couple of years, beginning in 1850, at the southwest corner of Seventh and Market Streets.

The *Saturday Emporium* was first issued in 1850, or thereabouts, from No. 1 Franklin Place, and suspended in 1851.

The *Sunday Ledger* was established in 1850, or

possibly in 1848, by George W. Ward, who kept a gentleman's furnishing goods store on the north side of Chestnut Street, above Seventh. The paper was published until 1855 at No. 84 South Third Street.

The **Banner of the Union** had its inception about 1850, at No. 75 Dock Street, and went out of existence in 1843.

The **Sunday Mercury** was first presented to the public Feb. 23, 1851, as an "independent, not neutral," newspaper, by Samuel C. Upham, H. H. Norcross, and Robert D'Unger. It was a folio sheet, size twenty-three by thirty-three, price two cents, and published at No. 57 South Third Street. Mr. Upham became sole owner May 11, 1851, when he raised the price to three cents, and changed the title to *Upham's Philadelphia Sunday Mercury*. On the succeeding 12th of October he sold out to J. M. W. Geist and James G. Gibson, Jr. Mr. Geist withdrew in two months, and Sept. 5, 1852, Mr. Upham and George W. Jones became the proprietors. Mr. Gibson had enlarged the paper to twenty-eight by forty-two inches, and removed the office to Third and Harmony Streets, from whence Upham & Jones transferred it to Third and Dock Streets, and adopted the present title of the paper. In September, 1856, James P. Magill bought the Upham interest, and the firm of Jones & Magill was formed, who, on Sept. 6, 1857, made the paper Democratic, and enlarged it to thirty by forty-six inches. In 1860, Mr. Magill withdrew, and John H. Taggart entered into partnership with Mr. Jones, and the office was again removed to Third and Harmony Streets. Differences of opinion during the Rebellion caused trouble in the management, and the paper was neglected, and thus suffered in circulation and advertising. In 1862 another change in its proprietorship was made, William Meeser, George W. L. Johnson, and Frederick W. Grayson becoming the owners. They removed the office to 152 South Third Street, and raised the price of the paper to five cents. In 1865, Mr. Johnson retired. Many specialties were introduced, and the *Sunday Mercury* became one of the best newspaper properties in the city.

In 1876 the publication-office was removed to the northeast corner of Seventh and Jayne Streets, and a four-cylinder rotary press procured to supply the demand. Prosperity was too much for the management, carelessness took the place of enterprise, and decay of influence and support followed. The *Mercury* became the property of Edward Morwitz, who was the principal creditor. The firm-name of William Meeser & Co. was dropped from the head of the paper July 18, 1880, and on August 8th it was announced as being published by the Mercury Publishing Company. It was always understood, however, to belong to Dr. Morwitz, who was also proprietor of the *German Demokrat* and other German papers. He could not give it the attention required, and on March 26, 1881, he accepted a proposition from Dennis F. Dealy, and sold the *Sunday Mercury* to that gentle-

man, who is its present proprietor. On the day Mr. Dealy purchased the *Mercury* he sold the *Sunday Press* to the proprietor of the daily *Press*, and with the second number of his new purchase he introduced the specialties which had made the *Sunday Press* so popular, and altered the size to thirty-six by forty-eight inches, making it a quarto, eight-page sheet. It has been restored to its old-time prosperity, and is recognized as one of the foremost of Sunday newspapers. On Nov. 1, 1882, the publishing-office was removed to its present quarters, No. 719 Chestnut Street.

The **Tribune** was issued about 1851 under the direction of Morgan J. Thomas, a well-known resident of Uwchlan township, Chester Co., in this State, where he conducted an academy, beside cultivating a large farm and managing a varied mercantile business. He moved to this city, and began the publication of the *Tribune*, and after the failure of the paper became a real estate agent. He was also engaged in the carpet business on Market Street, below Twelfth, in one of the Girard stores. Mr. Thomas was a man of education and some ability, but rather visionary, as he thought he was about to establish a journal which would eclipse the *New York Tribune*. The result of his venture proved that he was mistaken, as the *Tribune* was discontinued for want of patronage after but a few numbers had been issued. Mr. Thomas represented Chester County in the State Legislature with credit, and was also a member of the Constitutional Convention which met in this city in 1838.

The **Pennsylvania Statesman**, a daily penny newspaper, was issued in 1851, from No. 42 South Third Street. A few months covered the entire period of its existence.

**Church's Bizarre**, "for fireside and wayside," conducted by Joseph M. Church, and published by Church & Co., at No. 140 Chestnut Street, made its appearance on April 17, 1852, as a thirty-two-page octavo, illustrated, and issued on alternate Saturdays. Its motto, quoting Farquahr, was "Bizarre, Bizarre, what say you, madcap?" Within a year the publication-office was removed to No. 4 Hart's building, Sixth Street, above Chestnut, and not long afterward to No. 73 South Fourth Street. The title afterward became *Bizarre: an Original Literary Gazette*. It was also changed from a fortnightly to a weekly journal. It was only published for three or four years, Mr. Church having superseded it with *The Fireside Visitor* in March, 1856.

The **Philadelphia Journal of Homœopathy**, edited by William A. Gardiner, and published by Rademacher & Sheek, was commenced in April, 1852, and issued for the last time in March, 1856.

**Arthur's Home Magazine**, a monthly literary and family magazine, was commenced in 1852. The proprietors were Louis A. Godey and T. S. Arthur, and the name of the publishing firm T. S. Arthur & Co.

The editorial conduct and business management were in the hands of Mr. Arthur, and the magazine soon became widely known as exceptionally pure in character. In 1867, Mr. Arthur bought out Mr. Godey's interest, and associated with himself in the business his second son, William Arthur, under the firm-title T. S. Arthur & Son.

Since that time the *Home Magazine* has held a prominent place among periodicals of its class. Established over thirty-two years ago by T. S. Arthur, who still remains its editor, it has during that period been a welcome visitor in thousands of American homes.

The true place of this magazine in the periodical literature of to-day will best be understood by the editor's own statement of his position, which is taken from a late number. He says, "The mission of the *Home Magazine* is to teach the gospel of useful service in all the common duties and social relations of men and women, and to draw closer the bonds of a common brotherhood. And this mission it seeks to accomplish, not by dull didactics and sermonizing, but through a constant leading of the thoughts and feelings of its readers into harmony with things pure and true and noble in nature and humanity.

With the fashionable follies of the day, whether in social life or current literature, it has no sympathy. It believes in the true, the pure, and the good, and in the useful, taking that word in no limited, material, or 'Gradgrind' sense. It will seek to lead through beauty to use as well as through labor and common service, and it will seek to find in any and everything that is innocent in itself, whether in work, recreation, or amusement, a ministry of good to men." The first publication-office was at No. 107 (new number, 327) Walnut Street, from whence it was removed to No. 920 Walnut Street.

The *American Law Register*, now the oldest law journal in the United States, was started in 1852 by D. B. Canfield, to fill the place of the *American Law Journal*, which, after four years of struggle, had been forced to succumb in its turn, as its immediate predecessor, the *Pennsylvania Law Journal*, had done before it. The new *Register* started under the editorial care of Asa I. Fish and Henry Wharton. For nine years it continued to be conducted by the same editors, and to furnish the profession monthly with selected articles from the foreign law journals, reviews of English and American law books, and cases of exceptional interest. It remained, however, substantially a Pennsylvania magazine till 1861, when an entire change was made in its organization, and it assumed a national character. In that year a new series was begun under the editorial management of James T. Mitchell, now one of the judges of the Court of Common Pleas, No. 2, of Philadelphia, with a staff of experienced and distinguished law writers to aid him. A new line of original work was struck out boldly, and the whole scope of the journal widened, so as to make it

the organ of the whole legal profession of the country. Each monthly number from that time onward has contained an original essay upon some legal topic of present interest and practical value, a selection of important cases not previously published from the courts of last resort in the various States or in England, and a carefully prepared digest of syllabi from recent and unpublished reports.

The special feature, however, of the *Law Register*, as compared with other contemporary legal journals, has been the careful selection of cases involving new or important points of law, and their annotation in the manner originated and so ably carried out in Smith's "Leading Cases." Thus it has presented to the profession constantly a fresh grouping of important decisions upon all the current doctrines of the law, and has become, in fact, a series of volumes of leading cases, selected and annotated by some of the first law writers of the country. Of these may be specially mentioned the late Chief Justice Redfield; Professor Theodore W. Dwight, of the Columbia College Law School; John F. Dillon, author of the works on corporations; John A. Jameson, author of the "Constitutional Convention;" and Thomas M. Cooley, author of "Constitutional Limitations," etc.

The high character of the contributions by these eminent writers and others, both in the original essays and in the annotations to important cases, has given the *Law Register* an authority second to no legal journal in the world. It circulates widely in every State in the Union, in the British provinces, and to some extent in England and in Germany. It has continued for twenty-three years under the same efficient editorial head, James T. Mitchell, assisted for the last two years by Frank P. Prichard.

The *Presbyterian Banner*, a religious weekly, was published from 1852 until 1855 at No. 55½ South Fourth Street.

The *Philadelphia Herald*, a weekly, was first issued in 1852, and continued until 1855, at No. 63 Dock Street.

*Cohen's Advertiser* was issued in 1852, from No. 7 Hart's building, and passed out of existence in the following year.

The *New Monthly Home Visitor* was published at No. 57 South Third Street for a couple of years, beginning in 1852.

The *Southern and Western Journal*, published at No. 57 South Third Street, was started in 1852 and discontinued in 1854.

The *Presbyterian Magazine* was begun about 1852, and was in existence a number of years, first at No. 265 Chestnut Street, then at No. 27 South Tenth Street, and afterward at No. 111 South Tenth Street.

The *Evening National Argus*, a Democratic paper published by Severns & McGill, had offices successively at No. 45 South Third Street, northeast corner of Third and Chestnut Streets, and No. 130 South

Third Street. Its weekly edition was known as the *National Argus*, and both were suspended in 1861.

The **Masonic Mirror** was established in 1852, or shortly before, and published weekly for many years. In succession its publication-offices were at No. 163 Dock Street, No. 106 Chestnut Street, No. 21 South Fifth Street, and No. 146 South Fourth Street.

The **Philadelphia Christian Advocate**, published at No. 5 Hart's building, was started in 1852, and was continued until some time in 1854.

The **Home, School, and Church**, published by what was then the old school branch of the Presbyterian Church, existed from 1852 until 1859, at No. 265 (new number, 821) Chestnut Street.

The **Presbyterian Quarterly Review** began, in 1852, a successful and lengthy career. It was published at No. 248, and subsequently at No. 386 (new number, 1334) Chestnut Street, by the Presbyterian Board of Publication.

The **Mothers' Journal**, published by Mrs. M. G. Clark, had its origin about 1852, and was issued from No. 118 Arch Street.

The **Philadelphia Medical and Surgical Journal**, issued semi-monthly, was begun in 1852, edited by James Bryan, and published by L. W. Holland, and lived several years.

The **American Journal of Medicine and Record of Innocent Medication**, edited by Henry F. Johnson, assisted by all the members of the faculty of the American College of Medicine, was a monthly publication commenced in January, 1853, and soon ended.

**La Gazette Francais**, or "Echo des deux mondes,"—a "journal litteraire, scientifique, et politique, paraissant tous les samedis,"—was commenced at No. 68 South Third Street in July, 1853, under the editorial direction of Felix Drouin and general management of A. Balbo.

The **Weekly Register**, published at the northeast corner of Third and Chestnut Streets, had a brief career, beginning in 1853.

The **Sunday Delta** was published for a short time in 1853 by David S. Palmer, at the northeast corner of Third and Chestnut Streets.

The **Sunday Press**, started in 1853, by James Mortimer, at the northeast corner of Third and Chestnut Streets, was discontinued within a year.

The **Weekly Commercial**, published at No. 102 Chestnut Street for some time, and at No. 53 South Third Street subsequently, was in existence from 1853 to 1856.

The **Phrenological Journal**, and also the *Water-Cure Journal*, commenced in 1853, had publication-offices for a time at No. 231 Arch Street, and later at No. 922 Chestnut Street, where they were issued for some years.

The **Little Pilgrim** was founded in 1853, at No. 66 (new number, 132) South Third Street, and discontinued at the outbreak of the civil war, when its office was at No. 319 Walnut Street.

The **Monthly Insurance Journal**, office No. 70 Walnut Street, was established in 1853, and discontinued in the succeeding year.

The **Eclectic Medical Journal of Philadelphia**, edited by William Paine, appeared in 1858 as a monthly, having previously been published at Millville, Pa., as *The Middle States Medical Reformer and Journal of Health*, which had been in existence since 1854. It continued until 1871, meanwhile undergoing various changes in title, form, etc.

The **Homeopathic News** was in existence from September, 1854, to January, 1856, published by Bocricke & Tafel, and edited by Dr. C. Hering and Dr. A. Lippe.

The **Frankford Herald**, established at Frankford in 1854, is published every Saturday. It is mainly devoted to the collection and dissemination of local information.

The **Philadelphia Business Journal**, afterwards *Fuller's Literary and Business Journal*, was established in 1854, by Zelotes Fuller, at the corner of Ridge Avenue and Buttonwood Street, and subsequently removed to No. 106 Chestnut Street. In 1856 it became the *United States Journal and Traveller*, and in 1857 the *United States Business Journal*. This was eventually changed to the *United States Journal*, published over ten years by Fuller & Co., at No. 310 Chestnut Street.

The **United States Magazine**, started in 1854, was continued until 1856 at No. 12 Prune Street.

The **American Banner and National Defender** was published for several months, beginning some time in the year 1855.

The **Woman's Advocate**, founded in 1855, was published for a number of years at the northeast corner of Third and Chestnut Streets, and afterward at No. 311 Walnut Street. This, the first woman's paper, was printed by women and edited by Miss Anne E. McDowell.

The **New Church Herald**, published in the interest of the Swedenborgian (New Church) denomination, and commenced in 1855, had an office at No. 135 Chestnut Street, and afterward at the northwest corner of Sixth and Arch Streets. It had a life of several years.

The **Monthly Rainbow**, a meteorological and astronomical journal, started in 1855, and suspended in the following year. It was published by Campbell & Co., at No. 83 Dock Street, "next to the post-office."

**Life Illustrated** was begun in 1855, and published first at No. 231 Arch Street, and subsequently at No. 922 Chestnut Street.

The **Daily Morning Times**, founded in 1855, by Sickels, Jones & Moran, at No. 54 South Third Street, was subsequently published by J. Barclay Harding, at No. 45 South Third Street. It was discontinued after two or three years.

The **Philadelphia Wochenblatt**, a German weekly

paper, published by William Rosenthal, was commenced in 1855 or thereabouts, and published for several years at No. 127 (new number, 325) Callowhill Street.

**Ned Buntline's Own**, a story paper, was published for a few months in 1855 by E. Z. C. Judson.

**The Philadelphia Merchant**, a weekly commercial sheet, was published at No. 4 *Bulletin* buildings, in 1855, and for two years subsequently.

**The Saturday Mail**, issued from No. 2 *Bulletin* buildings, existed from 1855 to 1857.

**The Practical Farmer** was founded in 1855, as a monthly agricultural journal, by Paschall Morris. It was published by Mr. Morris for a number of years, and afterward by him in partnership with Judge Knight, of Indiana. Later the publishers were Paschall Morris & Son. In 1874 it was sold to M. J. Lawrence, who issued it as a weekly. In 1881 it was purchased by the Farmer Company, by whom it is at present published at No. 1420 Chestnut Street.

**The Moravian**, "a weekly journal of the American Moravian Church," was first issued Jan. 1, 1856, from the Moravian publication-office, No. 241 Arch Street. The original editors were Revs. Edmund De Schweinitz, L. F. Kampman, and F. F. Hager. The last two withdrew in June, 1858, and Dr. De Schweinitz on Dec. 31, 1858. The next issue of *The Moravian*, bearing date Jan. 6, 1859, was from Bethlehem, Pa., where the office of publication had been removed. Rev. Edwin T. Senseman then assumed editorial charge, and on July 4, 1861, he was succeeded by Dr. De Schweinitz.

**The Fireside Visitor** was established in March, 1856, by A. C. Bryson & Co., at No. 441 Chestnut Street. Joseph M. Church and his wife (under the *nom de plume* of "Ella Rodman") were the editors. After a few months, and when the paper looked as though it would be a paying enterprise, the publishers transferred the proprietorship to Mr. Church, who continued its publication a few months longer, when he turned over his subscription-list to Fitzgerald's *City Item*.

Mr. Church, after the suspension of his paper, entered upon the field of politics. He was a successful candidate for the State Legislature, in which he served one term just prior to his death. His politics were American.

**The Philadelphia Evening Journal**, established in May, 1856, was published until 1863 at No. 76 (new number, 144) South Third Street, when it came to an end. During part of its existence the publishers were Pine & Lewis.

**The Railway World** was established on Saturday, May 31, 1856, under the title of *The Pennsylvania Railroad and Mining Register*, by Thomas S. Fernon, who had previously been a member of the Senate of Pennsylvania and president of the North Pennsylvania Railroad Company. He continued as editor and proprietor until May 1, 1868, devoting the publication

to discussions of railway and mining affairs. During that interval the title was changed (on Saturday, Nov. 29, 1856) by the substitution of the words "United States" for "Pennsylvania," and several alterations in the size and form of the publication were made. On May 1, 1868, the journal was purchased by the United States Railroad and Mining Register Company, and during the succeeding six months J. Luther Ringwalt was editor. Mr. Fernon then resumed the editorship temporarily, from which he retired in May, 1869, when J. Peter Lesley was appointed in his place. He continued to fill that position until the close of 1874, when the stock of the company was purchased by Col. S. S. Moon. On Jan. 1, 1875, he changed the title of the journal to *The Railway World*, and the new organization then formed elected Col. S. S. Moon president and J. B. Ecclesine, Jr., manager. J. Luther Ringwalt became the editor at that time, and has since continued to act in that capacity. The form of the paper was changed from a folio to a quarto of sixteen large pages. On Jan. 1, 1877, another change in form was made, consisting in a reduction of the size and increase of the number of the pages to twenty-four, which is the form now used. On Jan. 1, 1878, the name of the company was changed to the Railway World Publishing Company. In April, 1879, upon the death of Col. S. S. Moon, J. B. Ecclesine, Jr., was elected president and Thomas W. Fernon secretary and treasurer, and they have continued to fill the positions up to the present time. The offices of publication from the date of the first issue until recently were at No. 423 Walnut Street. They were removed to No. 19 South Fifth Street, Feb. 1, 1884.

**The Sunday Transcript** was founded in 1856, the initial number having been issued on October 19th, by Johnson, Greene & Co., at No. 48 [now 110] South Third Street. The original proprietors were John S. Jackson, George W. L. Johnson, and E. W. C. Greene. Mr. Jackson was the owner of the then *Daily Morning Times*, and was the principal capitalist of the new concern. Before the *Transcript* was three months old it had acquired a circulation of ten thousand copies, and its progress thenceforward was onward. In May, 1857, the entire ownership of the paper passed into the hands of Mr. Jackson. Mr. Greene was retained as editor. Mr. Jackson died in January, 1861, and in the April following the paper was purchased by E. W. C. Greene and Thomas Hawkesworth, and published under the firm-name of Greene & Co. At the outbreak of the Rebellion Mr. Hawkesworth entered the Union army, and served gallantly and with distinction until Dec. 14, 1862, when he was shot by a rebel sharpshooter at Fredericksburg, and died at Washington City Jan. 4, 1863. His widow retained his interest in the *Transcript* for about a year, when it was purchased by Mr. Greene, who remained sole owner until December, 1877. At this latter date the ownership of the paper was merged into a joint-stock publishing company, and has so continued (with some

individual changes in membership) until the present time.

William M. Bunn, who was then chosen editor, assumed his duties the following April. With the new departure in publication came a new departure in politics. The *Transcript* has, since Mr. Bunn's advent, been Republican in politics, reserving to itself a free lance for criticism, sincere in the impression that a prompt and deep cut is often the most merciful surgery.

**The Anti-Slavery Standard**, the name of which denotes its object, was originally published in 1856, at No. 31 South Fifth Street, and transferred, in 1861, to No. 106 North Tenth Street, where it was issued until it was abandoned, at the close of the civil war.

**The American Presbyterian**, a weekly, was established in 1856, and continued for many years under the direction of the Presbyterian Board of Publication, originally at No. 106 Chestnut Street, and subsequently at No. 1334 Chestnut Street.

**Die Republikanische Flagge**, a German weekly journal, was commenced in 1856, and existed over fifteen years. It was published at No. 172 (new number, 418) North Fourth Street, by F. W. Thomas, who was also the publisher of the *Freie Presse*.

**The Ladies' Paper**, published at No. 50 South Third Street, had an existence of a few months, beginning some time in 1856.

**The Evangelical Repository**, published by William S. Young, at No. 373 (new number, 1023) Race Street, was established about 1856.

**Die Neue Welt—The New World**—was established in 1856 by the proprietors of the *Philadelphia Demokrat*, the original office being at No. 277 North Third Street. It is a twelve-page, eighty-four-column Sunday journal, and is the largest of its class in the world. It is issued from the *Demokrat* office, at Nos. 612 and 614 Chestnut Street.

**The Typographical Advertiser**, a quarto publication, devoted to typography and kindred interests, was established in 1856, and did not go out of existence until 1882.

**The Philadelphia Police Gazette and Sporting Chronicle** was commenced in 1856 at No. 51 South Third Street, and ceased publication within a very short time.

**The Nation**, published by Crofut & Bigelow at No. 83 Dock Street, was a weekly, which originated in 1856, and died soon afterward.

**The Catholic Visitor**, published at No. 57 South Third Street, was commenced in 1856, and in 1857 consolidated with the *Catholic Herald*.

**The Covenanter** was established about 1856 by James S. Willson, at No. 8 West North Street, and subsequently was issued from No. 1015 Morgan Street.

**The North American Medico-Chirurgical Review**, a bi-monthly journal, founded in January, 1857, was merged in 1861 into *The American Journal of the Medical Sciences*. It was published by J. B. Lippin-

cott & Co., under the editorial direction of Drs. Samuel D. Gross and T. G. Richardson, and was originally formed by the consolidation of *The Medical Examiner* and *The Louisville Review*.

**The Philadelphia Lancet**, T. D. English, editor, was begun in January, 1857, as a bi-monthly publication, and had a short career.

**The Young Reaper**, published by the American Baptist Publication Society at No. 1420 Chestnut Street, was first issued in January, 1857, from No. 530 Arch Street, and is the oldest of the periodicals of the society. It is an illustrated folio, edited by Rev. Dr. B. Griffith, and is so prepared that it can be taken as a monthly or a semi-monthly.

**The National Merchant**, a commercial journal, was begun in 1857 at No. 318 Chestnut Street, and went out of existence in 1860 at the southeast corner of Third and Dock Streets.

**The Southern Monitor** was first published in 1857 in Goldsmith's Hall, Library Street. The office was subsequently removed to the northeast corner of Dock and Walnut Streets, where the paper ended its career in 1860.

**The Philadelphia Intelligencer**, an insurance journal founded in 1857, is published by George C. Helmbold at No. 323 Walnut Street.

**The Press** was first issued on Saturday, Aug. 1, 1857, six months after the inauguration of President Buchanan, and when the conflict between the pro-slavery and anti-slavery forces was fast approaching the crisis of war. It was in this troubled period that John W. Forney founded *The Press*, and perhaps no man understood better than he did the public mind at the North. In the history of the paper it is said, "Mr. Buchanan had been elected President in the year previous (1856) on a clear understanding that he would not allow the slaveholders to make Kansas a slave State by violent means, and *The Press* was started to hold him to that pledge." The message of the President of Feb. 2, 1858, recommending the admission of Kansas under the Lecompton Constitution, caused that disruption of the Democratic party, which two years afterward resulted in its defeat and the election of Mr. Lincoln. It was here that *The Press* abandoned Mr. Buchanan, to whose administration the paper had been very friendly, "at least until some time in 1858, when it became evident that he intended to violate his pledge in regard to Kansas. Presto! what a change took place! First the office-holders began to stop *The Press*, and the postmasters sent me (it) back to the office in basketfuls. That was a red-hot fight! But the gap they made was soon filled, for by this time the Republicans began to realize that our (*The Press*) chief was in dead earnest. At first they thought that *The Press* was making a new personal contest, that would not last long, and would soon be compromised by giving our (*The Press*) editor a fat office at home, or by sending him abroad. When they were convinced that he meant business, they

came in by thousands, and took the places of the angry official Democrats." Col. Forney, who had been identified with the publication of the *Lancaster Intelligencer* and the *Pennsylvanian*, influential Democratic organs, and had made those papers a terror to antagonists and a tower of strength to the old-line Democracy, could no longer support the Democratic party in the pro-slavery direction given to it by the administration of Mr. Buchanan. He followed for a while the leadership of Stephen A. Douglas, for whom he entertained very strong feelings of personal and political friendship. But *The Press*, founded to "watch" the Democratic party, was not long in finding more congenial relations with the Republican party. It was bold and positive, firm in its convictions, and possessing the courage of its convictions, its voice was soon heard throughout the Union, and recognized as a fearless champion of the Northern phase of politics. In its early days it had no capital, and its earliest numbers were printed in the office of the *Sunday Dispatch*, as it was without a press of its own and in debt for its type, but the zeal of the founder conquered every obstacle and opened the path to success.

It was at first a four-page folio, of about the size of the present *Public Ledger*, handsome in appearance, and very brilliant in its sparkling columns. In April, 1858, an edition was issued called the *California Press*, and sent by steamer to Aspinwall, across the Isthmus by rail to Panama, and thence again by steamer to San Francisco. This edition was a great favorite on the Pacific coast, and was continued until the completion of the Union Pacific and Central Pacific Railroads. The *Weekly Press* became the *War Press* during the conflict, and in its columns there appeared correspondence from all the military departments. This edition was highly esteemed in the army, and exerted very great influence by the healthy manner in which the government was sustained and the struggle for the Union supported. Oct. 16, 1865, *The Press* was changed into a quarto, and was printed on an eight-cylinder Hoe press, and soon after upon the latest improved Bullock press.

The paper, from its very first number, was recognized as an able and fearless organ of public opinion, and the prompt and decided manner in which it abandoned the Democratic party, as soon as convinced that that party was untrue to the free-labor sentiment of the North, evinced such an honest and earnest sense of duty and political conviction that the change of party relations improved rather than impaired both its political influence and its pecuniary prospects. From the day of that change to the present *The Press* has remained a Republican journal, advocating every measure of that party and following, or rather leading, every course pursued by its leaders.

In 1877, Col. Forney determined to withdraw from the cares and responsibilities of active journalism, and, with this object in view, he sold *The Press* in the

beginning of October of that year. Its history for twelve years previous, or from the close of the Rebellion, had been one of influence and prosperity. Although much of his time had been occupied in the discharge of the duties entailed upon him by the official positions which he occupied outside of journalism, he had never ceased to be an active and hard-working editor.

In his "Farewell" to *The Press* he said, "I have done my best to make a good, honest newspaper. It has lived through many tempests and changes. It has received and returned many blows. But I can say for myself that, in all this long course of time, I have never deliberately wounded or injured a human being, even in the fiercest struggles of political or sectional difference."

With the retirement of Col. Forney from the management of the paper which he had founded, *The Press* entered upon a new era. Under its founder *The Press* had achieved great success as a daily journal of the type of those founded by Horace Greeley and Henry J. Raymond. It was Forney's *Press* that people asked for, as they did for Greeley's *Tribune*. The paper was read extensively, not on account of the matter contained in its news columns, but for the political information contained in its editorial columns, and for the comments on that information by one who was so important a factor in shaping the events which he chronicled in his personal organ. After Col. Forney's retirement, for the next two years *The Press* was in a transition stage. During that time it was under the editorial and business control of the Messrs. W. W. and E. H. Nevin. These gentlemen were from Pittsburgh, where they had successfully engaged in journalism, and they were anxious to try more metropolitan fields. W. W. Nevin was a scholarly and polished writer, who was interested in economics, and who became engaged in a Mexican railroad enterprise not long after he went on *The Press*, and resigned to accept a lucrative position in connection with the railroad. E. H. Nevin, finding the sole business and editorial conduct of a great morning daily too severe a strain, disposed of his interest in *The Press* to Calvin Wells & Co., Pittsburgh, and started the *Evening News*, and subsequently became naval officer of the port of Philadelphia.

Mr. Wells was a wealthy iron-master of Pittsburgh, who already had a considerable interest in *The Press*, which he had taken to accommodate its whilom owners. Finding himself in control of a large property, with whose management he was unacquainted, Mr. Wells sought to obtain some one to develop it, and Edward McPherson was secured as editor-in-chief. He had been long and well known as an editor in Pennsylvania, and as clerk of the House of Representatives for many years. With him was associated as managing editor W. Ralston Balch, formerly a reporter on the *Boston Herald*, on which paper he had distinguished himself by capturing Chastine Cox, a negro murderer, who had escaped the police, and by the

exposure of the Rev. E. D. Winslow, a great forger. Under Messrs. McPherson and Balch *The Press* took a step forward, but the daily routine of a newspaper office was irksome to Mr. McPherson, who resigned in January, 1880, to accept the secretaryship of the Republican Congressional Committee, and about the same time Mr. Balch retired, to take charge of the *Philadelphia American*. Mr. Wells, who began by knowing nothing of the newspaper business, had now devoted himself to a study of its delicate organization and mechanism, and familiarized himself with everything from a leading political editorial article to a folding and mailing machine for the papers. He became interested in his property, and determined that *The Press* should be revived, to become the equal of any paper in the Union.

With this end in view he secured the services of Charles Emory Smith as editor-in-chief, and of Moses Purnell Handy as managing editor; the latter gentleman joined the paper some months after the former. With the faithful, hearty, and enthusiastic support of these experienced journalists, Mr. Wells proceeded to execute his plans. Modest and retiring almost to bashfulness and reticence, Mr. Wells possessed every quality which makes a business man successful. From a beginning with no means he became at fifty one of the wealthiest men in Pittsburgh. He is essentially a man of wide and liberal views, of high moral purpose, steadfastness, dignity, and determination. His knowledge of men is acute and penetrating, and his judgment is sound and discreet. Familiar with the execution of every detail, he has surrounded himself with competent men to whom he has entrusted the carrying out of the plans which he is now seeing realized to their fullest extent. Withal, Mr. Wells is entitled to the credit of having made *The Press* what it now is,—second to no paper in America, though he would be the last man to claim such credit.

Mr. Smith was born in Mansfield, Conn., in 1842, and removed with his parents to Albany, N. Y., in 1849. He was educated in the public schools of the Knickerbocker city and at Union College, where he graduated in 1861. During the next two years he performed valuable service on the staff of Gen. Rathbone, who had charge of the depots where volunteer regiments were organized, and part of the time he acted as assistant adjutant general. From 1863 to 1865 he was a teacher in the Albany Academy, and in that year he became editor of the *Albany Express*. At the age of sixteen he had followed his taste for journalism by writing the daily leading editorial articles for six months in the *Albany Evening Transcript*, and this taste he had cultivated from time to time until he entered permanently on a brilliant journalistic career by accepting the editorship of the *Express*. While editor of this paper he served, in 1868, as the private secretary of Governor Fenton. In 1870 he purchased an interest in the *Albany Evening Journal*,

and became joint editor of that paper with the well-known George Dawson.

In 1874, when Mr. Dawson retired, Mr. Smith took the post of editor-in-chief of the journal. While in this position he was elected a trustee of Union College on the part of the graduates; was nominated and elected by the New York Legislature, in joint session, as regent of the University of New York; and was constantly in demand as speaker before the State Military, Teachers', Press, and other associations; and of the State Press Association he was president in 1877. For many years he was a delegate to the Republican State Conventions, and repeatedly chairman of the Committee on Resolutions. In this position he played a most prominent part in framing the platform of the Republican party in the Empire State; and has shown rare ability in choice of comprehensive, acceptable, and judicious terms to embody the tenets of his party. In 1876, Mr. Smith was a delegate to the Republican National Convention at Cincinnati, and was the representative of New York on the Committee of Resolutions, which adopted almost bodily the ideas and language of the platform of principles which he had laid down for party guidance in his State. At the Republican State Convention of 1880 he was both temporary and permanent president. In March, 1880, he accepted and assumed the position of editor-in-chief of *The Press*, and shortly afterward became a part owner. Throughout the Presidential campaign of 1880 he was active on the stump in Pennsylvania and New Jersey, and by his energy and force restored *The Press* to the place from which it had slipped,—that of the chief Republican paper in Pennsylvania. Mr. Smith is a fine type of the modern political journalist. Affable, genial, and polished in address; a sympathetic, attractive, and ready speaker; an acute, adroit, and accomplished politician who is gifted with a special love and enthusiasm for the art; endowed with exceptional rhetorical powers of pen and tongue; a keen, close, logical reasoner, Mr. Smith combines with these qualities a consummate ability for harmonizing discordant elements which specially fits him for such a position as the one he occupies, where, from his wide knowledge of political men and affairs, he is able to present views which enlighten the most careless readers as to the drift and portent of events.

Moses Purnell Handy was born in Osage County, Mo., in 1848. His father was a noted Presbyterian divine, and member of a family which has been prominent in Pennsylvania and Maryland, and had gone to Missouri as a missionary. He returned East to Delaware when his son was an infant, and the child was brought up in the schools and academies of "the Eastern Shore," and was nearly ready for college when the war broke out. During part of that stormy period he was in Eastern Virginia, whither his father had been called as a pastor, and on going to Richmond with his father he was conscripted into

the Confederate army. Certain friends interested themselves to procure him the position of courier, with rank of lieutenant, on the staff of Gen. Stevens, chief of engineers in Lee's army.

When the war ended he found himself penniless in Richmond, and, after trying his hand at various means of subsistence, he entered the office of the *Christian Examiner*, a monthly religious paper. From here he went to the *Richmond Dispatch*, where he made a decided sensation by giving an accurate and complete report of a political speech by Henry Wilson. He rapidly rose through the various grades of editorship on the *Dispatch*, and at times was in charge of that important sheet. While connected with the *Dispatch* he served as correspondent of several of the great New York papers, and was general manager for the Southern States of the American Press Association. In 1873 he sprang into national fame as the only newspaper correspondent who had witnessed the transfer of the steamer "Virginus" by the Spanish authorities to the United States government. It will be remembered that, owing to the excited state of public feeling on account of the massacre of American citizens, this event was kept a profound secret by the government. Mr. Handy alone was able to fathom the secret, and by his enterprise and energy showed signs of the peculiar ability in which he is excelled by no American writer for the daily press. After his signal triumph in the "Virginus" affair he received a flattering offer from the *New York Tribune* to join its editorial staff. He accepted, and while connected with the *Tribune* practically organized and carried out the woman's temperance crusade in Ohio, and in two important series of letters presented views of affairs in the Southern States, and complete sketches of the various centennial anniversaries of historical events which took place in 1875. Toward the end of that year (1875), Mr. Handy left New York to take the editorship-in-chief of the *Richmond Enquirer*. In this capacity

he took a prominent part in the State political campaigns.

In 1876 he was appointed a commissioner from Virginia to the Centennial Exhibition at Philadelphia. While acting in that capacity he became an associate editor of the *Philadelphia Times*, and in the columns of that paper wrote the best series of articles published on the action of the "visiting statesmen" in

THE PHILADELPHIA PRESS.  
[Corner of Chestnut and Seventh Streets.]

the Louisiana Returning Board investigation. Three years later he created a sensation in the State by his letters on the Riot Bill Bribery matters. Late in 1880, Mr. Handy accepted the managing editorship of *The Press*, and since then has devoted himself to office organization and the development of the news enterprises which have made *The Press* famous. Mr. Handy is a man of rare executive ability, of consum-

mate tact, and of unerring and impartial judgment in matters of news, and has a political prescience which makes him the trusted confidant of men so opposed in politics as James G. Blaine and Samuel J. Randall. Aided by such competent lieutenants as Mr. Smith and Mr. Handy, Mr. Wells has left the filling of the lesser posts of duty to their hands, and the result has been that *The Press* is manned and officered by young, active, intelligent, and enthusiastic workers, the oldest of whom is just forty-one. The organization is now complete. The editorial and news staff of *The Press* now numbers nearly five hundred, who cover the world from St. Petersburg to Durban and Mandalay. In this staff are enrolled most of the leading authors and prominent men of the country. Among those who have contributed to making *The Press* a great newspaper under its new conductors are ex-Chief Justice Agnew (of Pennsylvania), J. E. Barrett, Jeremiah S. Black, James G. Blaine, Arlo Bates, Junius Henri Browne, F. A. Burr, Gen. James S. Brisbin, Professor A. S. Bolles, Rhoda Broughton, Mrs. E. E. Briggs (Olivia), Bill Y. Buttes, Mgr. Capel, C. Carlotta, Ph.D. (Berlin), J. R. Chalmers, Kate Upson Clark, President Cattell (of Lafayette College), Professor S. J. Coffin (of Lafayette College), Thomas Donaldson, Susan E. Dickinson, Rebecca Harding Davis, Mary W. Early, Edwin S. Ellis, Archibald Forbes, Kate Foote, Kate Field, George Manville Fenn, Jeannette L. Gilder, A. W. Gibson, Robert Haydn, Joseph Howard, Jr., Professor I. H. Hall, A. R. Horn, D.D., Ernest Ingersoll, Professor E. J. James (of the University of Pennsylvania), Thomas A. Janvier, T. W. Knox, Edward King, Professor D. B. King (of Lafayette College), Professor J. L. Little (of Dickinson College), Charles Godfrey Leland, George Parsons Lathrop, F. D. Millett, Professor F. A. March (of Lafayette College), Nina Morais, Allen O. Myers (Pickoway), President James McCosh (of Princeton), Professor J. B. McMaster (of the University of Pennsylvania), Brandon Matthews, Joaquin Miller, Alfred Nevin, D.D., J. M. P. Ott, D.D., Samuel Parsons, Jr., Nora Perry, Robert P. Porter, Josephine Pollard, John James Piatt, W. Clark Russell, J. Hall Richardson, H. J. Ramsdell, Elizabeth Robins, the Lord Bishop of Rochester, James Stephens (Fenian head-centre), "Sophie Sparkle," Annie Thomas, George Alfred Townsend, Z. L. White, Louis Wingfield, and Walt Whitman.

These names form only a selection from the number who have contributed to the columns of *The Press* since Messrs. Smith and Handy assumed direction and management. But it is not alone in literary and news features that *The Press* has wonderfully developed. It has constantly been a watchful guardian of the interests of the public, and in that capacity it unearthed and put a stop to the "graveyard insurance business," by which unscrupulous men offered a premium on death; it exposed and put a stop to corruption in the public offices at Harrisburg; it

caught and sent to prison a gang of grave-robbers; it showed Philadelphia that its drugs were weak and adulterated, and forced the honest druggists to form a protective association to guarantee the public in their purchases; and it drove out of office the city detectives in spite of the strongest opposition. Since the new management took charge *The Press* has not only been abreast of the times, but it has been a leader among the local newspapers. Besides being able and alert, it is complete as a newspaper. In 1881 a Sunday edition was established, which became an immediate success and a prime favorite for its manifold literary attractions. Last year the weekly issue was reorganized and put on a novel basis, which has placed it abreast of its competitors. In November, 1883, the price of the daily *Press* was reduced from three to two cents, a step which had been contemplated ever since the revenues of the paper had increased so as to enable the proprietors to decide to let the public gain by their prosperity. The result has been an increased and unexampled tide of prosperity, which has never been surpassed in the history of any paper, and which is now at its flood.

**The American Messenger and Child's Paper**, established in 1858 at No. 929 Chestnut Street, had a number of years of life.

**The Sunday Atlas** started in 1858, and continued until 1861, when it was suspended. George C. Thomas published it at No. 127 South Third Street.

**The Commonwealth**, a weekly periodical, was published for several months, beginning some time in 1858, and issued from No. 18 South Third Street.

**The National Mechanic**, commenced in 1858 at No. 108½ South Third Street, only lived until the succeeding year.

**The Philadelphia Mirror** had its origin in 1858, but succumbed in 1859. It was published at No. 621 Chestnut Street.

**The Evening Reporter** was started in 1858 at No. 331 Harmony Street, and passed out of existence in 1861.

**Peterson's Counterfeit Detector and National Bank-Note List** was established in 1858 by T. B. Peterson, and is issued semi-monthly by T. B. Peterson & Brothers. The publication office is at No. 306 Chestnut Street.

**The Gardeners' Monthly**, a thirty-two page octavo magazine, devoted to horticulture, arboriculture, botany, and rural affairs, was issued January, 1859, with D. Rodney King, C. P. Brinckloe, and Charles K. Marot, successively, as publishers, and Thomas Meehan as editor continuously to the present time. At its establishment the *Magazine of Horticulture*, conducted by C. M. Hovey, in Boston, and the *Horticulturist*, established by A. J. Downing, of Newburg, and Messrs. Luther Tucker & Son, of Albany, N. Y., were the leading magazines of its class. It was established not to compete with them, but as a lower-priced serial, to reach a class those excellent magazines did not

touch. All these, and others since founded, have left the field, the latter having been purchased and combined with it, as the *Gardeners' Monthly and Horticulturist*, in 1876. There are now other serials covering some portions of the ground occupied by this journal, but it is, on the whole, regarded as the leading, if not the only, representative of general horticulture and kindred sciences and pursuits on the American continent, and as such is received all over the world.

The *Insurance Reporter* was established in January, 1859, and published weekly for many years by C. Albert Palmer, who was also its editor, at No. 727 Walnut Street.

The *Manayunk Star* was the second paper published in Manayunk. The first number appeared on Saturday afternoon, Feb. 5, 1859, the publishers being D. B. Potts and James H. Scott. D. B. Potts retired Oct. 6, 1859, and J. Lewis Scott became associated in its subsequent publication until Jan. 12, 1860, when the copartnership was dissolved, and thereafter the paper was published by J. Lewis Scott, who continued to issue it regularly until Aug. 9, 1862, when, owing to the outbreak of the war, its publication was suspended.

The *Philadelphia Daily Record* entered the field of journalism in 1859, but went out of existence in 1861. Its publication office was at No. 112 South Third Street.

The *Sunday-School Times* was first issued in 1859, but as early as 1830 a weekly paper, which was in reality its progenitor, known as the *Sunday-School Journal and Advocate of Christian Education*, was published in Philadelphia by the American Sunday-School Union. Changed afterward to a semi-monthly, with the simpler title of the *Sunday-School Journal*, this periodical was continued to the close of 1858.

At the beginning of 1859, *The Sunday-School Times* took the place of *The Sunday-School Journal*, and was published as a weekly by the American Sunday-School Union, under the editorship of Professor John S. Hart, LL.D. Two years later its ownership was transferred to a private publishing firm, which included W. J. Cheyney, who had been treasurer of the American Sunday-School Union, and Professor Hart, who continued as editor. J. C. Garrigues & Co. published it from 1862 until the close of 1871, when John Wanamaker became its sole owner and publisher, at which time I. Newton Baker, who had for some years been associated in the editorship, succeeded Professor Hart as chief editor.

In 1875, the Rev. H. Clay Trumbull and John D. Wattles purchased an interest in the paper from Mr. Wanamaker, and in September of that year Mr. Trumbull assumed its editorial control, and Mr. Wattles its immediate business management. Two years later, Messrs. Trumbull and Wattles purchased the entire fee of the paper, with its accompanying series of lesson-helps, and they are now its sole owners and managers.

In 1871, *The Sunday-School Workman*, a weekly paper of similar character, published in New York City, was purchased by Mr. Wanamaker, and merged in *The Sunday-School Times*. In 1882 a like purchase and merging of *The National Sunday-School Teacher*, a prominent and long-established monthly magazine published in Chicago, was made by Messrs. Trumbull and Wattles.

The immediate sphere of *The Sunday-School Times* has been, from the beginning, the instruction and stimulus of Sunday-school teachers and of Christian workers generally. In its earlier days it gave prominence to regular reports of the daily union prayer-meetings established in Philadelphia and New York. During the civil war it was a recognized helper of the United States Christian Commission, and special editions of it to the number of ten and twenty thousand copies a week were often taken by that organization for distribution in the army and in the army hospitals. Another feature of its earlier work was the printing in its pages of verbatim reports of the principal State and national Sunday-school conventions.

The adoption of the system of uniform Sunday-school lessons, known as the "International Series," in 1873, opened to *The Sunday-School Times* a wider and more important field, in the supply of varied helps to the study of these lessons throughout this country and abroad. Its weekly circulation has increased since then from fifteen thousand to upward of fifty-two thousand, and now extends to every State and Territory in the United States, and to more than twenty foreign countries. Moreover, a separate edition of it, under the name of *The American Sunday-School Times*, is published for circulation in Great Britain. The office of publication is No. 725 Chestnut Street.

The *Dental Cosmos* was commenced as a monthly publication in August, 1859, as successor to the *Dental News-Letter*, which had been issued as a quarterly for the twelve years preceding. It was published by the then firm of Jones & White, and edited by J. D. White, M.D., D.D.S., J. H. McQuillen, D.D.S., and George J. Ziegler, M.D. Dr. White retired at the end of the sixth volume. Drs. McQuillen and Ziegler retired at the close of the thirteenth volume, and its editorial management was assumed by J. W. White, M.D. In 1861, Mr. Jones retired from the firm, and the publication was continued by S. S. White up to the time of his death, in 1879. It was then continued by the trustees of his estate until the formation, in July, 1881, of the S. S. White Dental Manufacturing Company, which still publishes it.

The *Legal and Insurance Reporter*, a semi-monthly journal, devoted to legal insurance interests, is published at 605 Sansom Street. It was first issued in December, 1859, by James Fulton, who came from County Antrim, Ireland, studied law in this city under F. Carroll Brewster, and from ill

health disposed of the journal to its present proprietor, Charles Albert Palmer, in 1865. Mr. Palmer has consequently managed the *Reporter* successfully for nineteen years. George Washington Hawkins for a number of years served as assistant legal editor, while William Hardcastle Browne and Robert D. Coxe have acted in a similar capacity. Able talent still contributes to its columns.

**The Child's Treasury** is published semi-monthly and monthly by the Reformed Church Publication Board, at No. 907 Arch Street. It is a four-page sheet, for circulation among the children of the Sunday-schools of the Reformed Church, and has been in existence since 1859.

**The Lutheran Sunday-School Herald**, established in 1860, is published monthly by the Lutheran Publication Society, at No. 42 North Ninth Street.

**The Sunday Courier** made its appearance in 1861, but speedily collapsed.

**The Sunday-School World** is royal octavo in size, thirty-six pages, issued monthly for teachers and families as an aid in the study of the Bible, in the formation of Christian character, and in the discovery and application of the true principles and methods of teaching. It is published by the American Sunday-School Union at No. 1122 Chestnut Street, having been established in 1861 as a quarto journal of sixteen pages, and edited by F. A. Packard, LL.D., until his death, in 1867, when he was succeeded by the Rev. Richard Newton, D.D., who resigned on account of ill health in 1878, when the present editor, Rev. Edwin W. Rice, was appointed to the place. *The Sunday-School World* contains explanations of the International Lessons by the Rev. John Hall, D.D., of New York, Professor Post, of Syria, Mrs. Alice W. Knox, and others. It is practically the successor of a series of periodicals published by the American Sunday-School Union, the original of which was the *American Sunday-School Magazine*, established in July, 1824.

**The Palmetto Flag** was first issued early in 1861 as a pro-slavery journal, and, after the attack by the Confederates on Fort Sumter, it came out with an article justifying the assault. The next day a mob attacked the office of the *Flag*, situated on Chestnut Street, below Fourth, and began to tear out the place, and would probably have wreaked their vengeance on the innocent printers had not Mayor Alexander Henry appeared on the scene. At his approach the crowd fell back, and after listening to a brief address that he made, quietly dispersed. The paper was soon discontinued.

**The Lutheran** was founded in 1861, and is issued weekly from the Lutheran Book Store, at No. 117 North Sixth Street. It was for years known as the *Lutheran and Missionary*.

**The American Exchange and Review** was begun in February, 1862, as a monthly magazine, with contents of a miscellaneous character, but most promi-

nently devoted to financial and economic topics, and the industrial technologies. It had special departments appropriated to insurance, finance, patents, arts, and practical science. The first publishers were Whiting & Co., No. 712 Chestnut Street, succeeded in February, 1863, by Fowler & Moon, No. 521 Chestnut Street. In 1871 the magazine became the property of the Review Publishing and Printing Company, at the northwest corner of Fourth and Walnut Streets, Samuel S. Moon, president, and I. H. C. Whiting, secretary. In January, 1877, it became a special publication, devoted to insurance and its collateral sciences. In its new purpose it embraces a large range of social and financial data and applied science, treating of all subjects cognate to every branch of insurance, from marine averages to the computation of life insurance premiums in all the diversities of the latter. John A. Fowler has been editor-in-chief since the commencement of the publication.

**The Quarterly Eclectic Medical Journal of Pennsylvania**, edited by Henry Hollembach, was commenced in July, 1862, and in January, 1863, was changed to a bi-monthly, under the title of *The Eclectic Medical Journal of Pennsylvania*, and published by the Eclectic College of Pennsylvania, and edited by John Buchanan. It was continued until 1872.

**The Christian Recorder**, a weekly religious paper, is an organ of the African Methodist Episcopal Church, under the editorial direction of Rev. B. T. Tanner, with the publication office at No. 631 Pine Street. It has been in existence since 1862.

**The Dental Quarterly**, devoted to the interests of dental science, the publishers of which were Johnson & Lund, made its appearance in 1862, and went out of existence in 1867.

**The West Philadelphia Hospital Register**, printed and published at the United States Army General Hospital (Satterlee), West Philadelphia, was first issued on Feb. 14, 1863, and published weekly for a few months.

**The Age**, a daily morning paper, was issued for the first time March 25, 1863, by A. J. Glossbreuner & Co., at No. 430 Chestnut Street. The firm comprised Adam J. Glossbrenner, Francis J. Grund, and William H. Welsh. Other gentlemen, prominent Democrats of the city, also had a pecuniary interest in the undertaking, which was designed to be a party organ. It was a seven-column folio at the beginning, but was enlarged to eight columns April 27, 1863. The paper began its editorial salutatory by declaring that "*The Age* is to be a national Democratic journal, conducted on national Democratic principles, without an unworthy play of words or sophistical qualification to diminish the force of these terms." *The Age*, as it boasted at the outset, was a radical Democratic journal. As a consequence, it was bitterly attacked by certain Republican journals, and never failed to strike back. Its articles partook of the violent temper of

the times. During the whole war period it conducted a warfare of great vigor and virulence against the Republican party, and it was frequently charged with being in sympathy with the South. Upon more than one occasion *The Age* establishment was menaced by angry mobs, who were with difficulty restrained from attacking the premises.

The original partnership continued but a short time. A few months after it was formed, in July, 1863, Mr. Grund withdrew, and the paper was thereafter published by Messrs. Glossbrenner & Welsh until February, 1866, when Mr. Glossbrenner sold his interest to James M. Rohb. The firm then became Welsh & Robb. Dating from Mr. Rohb's connection with *The Age*, the paper entered upon an era of satisfactory prosperity. In June, 1868, the office was removed to Nos. 14 and 16 South Seventh Street. On the 2d of March, 1871, Mr. Welsh withdrew, his interest being purchased by Charles J. Biddle,—who for a long time had been one of the editors of the paper,—and the firm then became Rohb & Biddle. A weekly edition of *The Age* was started June 6, 1863. In 1875 the publication of *The Age* was discontinued, the entire establishment passing into the hands of the proprietors of *The Times*, which was issued for the first time on March 13th of that year.

*The Sunday Times* was first issued Dec. 6, 1863, at No. 136 South Third Street, by Robert C. Smith, J. Travis Quigg, and W. G. McAllister, under the firm-name of Robert C. Smith & Co. F. T. S. Darley, a talented writer, was a member of the editorial staff. Mr. Smith was a native of Princeton, N. J., was a practical printer, having been connected with the *New York Herald*, the *Ledger*, and other papers. In 1869, Col. J. H. Taggart and his eldest son, Harry L. Taggart, purchased the paper and began a vigorous war upon the variety theatres, which resulted in a number of libel suits. Col. Taggart also assailed the management of the Franklin Savings-Fund, whose cashier was afterward convicted of peculation, and served several years' imprisonment. Col. Taggart was born at Georgetown, Kent Co., Md., Jan. 22, 1821. His journalistic career began when he was but ten years of age, when he entered the office of the *National Gazette*, published in Philadelphia, by William Fry. He was for the greater part of seventeen years a compositor on the *Ledger*. In 1849 he, with Lambert W. Holland, published the *Pennsylvania Volunteer*, devoted to military matters, which, six years later, was merged into the *City Item*. In 1860, Col. Taggart purchased the interest of James P. Magill in the *Mercury*, with George W. Jones as a partner. During the early portion of the war of the Rebellion he served with distinction as colonel of the Twelfth Regiment, Pennsylvania Reserves (Forty-first of the line). In 1863 he was preceptor of the free military school to prepare applicants (white) for the command of colored troops. After the close of the war he resumed the profession of journalism, purchasing the *Sunday Times*

in 1869, as already stated. H. L. Taggart, the junior member of the firm, was born in Philadelphia, March 23, 1845. Before his connection with the *Sunday Times* he had considerable newspaper experience upon the *Sunday Dispatch*, *Sunday Mercury*, and other journals.

As an evidence of the business prosperity of this journal, the proprietors, in 1882, erected a fine building at No. 819 Walnut Street, which has been stocked with a complete modern printer's outfit, embracing the various rapid printing machinery.

*The Sunday Observer* was issued for the first time on Dec. 6, 1863, and died out in six weeks.

*The Philadelphia Photographer*, an illustrated monthly journal, was commenced in January, 1864, Benerman & Wilson, publishers, and E. L. Wilson, editor.

*The Evening Telegraph* was first issued on Jan. 4, 1864, from its present office, No. 108 South Third Street. At that time there was but one afternoon journal published in Philadelphia. In its salutatory, it "based its hopes for a share of public favor upon the ground that the rapid growth of Philadelphia in population, wealth, and all of those substantial rewards of industry, intelligence, and virtue would afford support to another afternoon journal." It thus professed to be a purely business venture, and as such it has been pre-eminently successful. It was, at the start, a four-paged paper, with seven columns to the page, and was sold at two cents per copy. At the close of the first year it was enlarged to eight pages, of six columns each, and the price was increased to three cents, at which it has since remained. The original projectors and proprietors of the paper were J. Barclay Harding and Charles E. Warburton. The former was a son of Jesper Harding, whose name figures so conspicuously in the history of Philadelphia journalism. He had been thoroughly fitted for the task of starting a new journal by service under his father, and lived to see the *Evening Telegraph* firmly established. After his death, which occurred on Oct. 29, 1865, the paper passed under the sole control of Mr. Warhurton, his brother-in-law, who still remains its proprietor, publisher, and editor-in-chief. Mr. Harding was an active politician, as well as a working journalist, and at the time of his death was collector of internal revenue for the First District of Philadelphia. His associate and successor, Mr. Warhurton, has, however, studiously kept out of the political arena, and, since the death of Mr. Harding, no person associated with the conduct of the *Evening Telegraph* has held any public office, or taken part personally in political strife.

The paper has been Republican in its politics from the start, but its Republicanism has been tempered by a sturdy independence. In the first number it said, "We recognize the President, his cabinet, and the other sworn officers under them to be 'the government,' and we feel they can and should be trusted, unless they shall knowingly and willingly fail to per-
