SUBJECT: Teikoku Seiki Sangyo K.K., Ayabe Factory

TO : Commanding General, I Corps, APO 301
Attn: Mil Govt., Res & Ind Section

1. It is recommended that the Ayabe Factory of Teikoku Seiki Sangyo K.K., a Privately-Owned Munitions Plant (22-49) be removed from the list of reparations plant.

2. This plant was actually never put into operation. The factory site was established with a niew to moving machinery from the Chikko Shichijo Plant of the same company, located in Osaka. However, before this could be carried out the Osaka plant was hit and burned during an air-raid. The fire caused extensive damage and the machinery moved from Osaka to Ayabe, for storage purposes only, was all machinery that had been heavily damaged.

3. An inspection of the machinery at Ayabe by this office indicates that it has no value for reparation purposes in that it was damaged beyond economical repair and, in most case, is fit for salvage only.

SUBJECT: Application for Removal from O.D.5 of Teikoku Precision Industry Co.Ltd., Nomura Plant.

TO : Commanding General
I Corps
APO 301

1. Subject plant has been reviewed as directed by O.D. 5/5; and as a result, this team instructed subject plant to prepare the enclosed application.

2. Subject plant has been frequently inspected by this team for maintenance and in connection with issuance of a reconversion permit. The general layout, building design, nature of equipment etc., are modern and efficient and could well be designed originally to produce either aircraft engine parts or machine tools. However, in the plant's application for a reconversion permit submitted 1 June 1946, considerably prior to the preparation of O.D. 5/5, the company repeatedly pointed out that they were originally designed to produce turret lathes. Attached to the application is a statement of the Chief of the Economic Department of Hyogo-ken that the plant was originally designed as a turret lathe plant and later ordered to change production plans to aircraft parts.

3. If the plant's statements made prior to the issuance of O/D. 5/5 and the statement of the Chief of the Economic Department of Hyogo-ken can be accepted as evidence of the original design of the plant then the plant does not meet the criteria set forth by O.D. 5/5. The plant is already converted and has been in operation since June 1946.

4. Subject application is submitted to your headquarters for decision as to original design, and interpretation of criteria set forth in O.D.5/5, this headquarters is inclined to believe that the plant was not originally designed as an aircraft plant,

TO: CG, I Corps, APO 301, Subj: "Application for Removal from O.D. 5 of Teikoku Precision Industry Co.Ltd., Nomura Plant" dtd 13 Nov 46.

and since it has been reconverted, does not meet the criteria and should be removed from the list.

1. The Nomura Plant of Teikoku Precision Industry Company, Ltd., is designated as Plant No. 45, Hyogo Prefecture, on the list of installations subject to reparations. The plant is listed as an aircraft producer. The company requests that the Nomura Plant be exempted from reparations, due to the failure of this company to qualify as an aircraft producer under the announced criteria.

2. From information contained in the application, it is the opinion of this headquarters that the plant should not be classified as an aircraft factory. Nevertheless, it is recommended that this plant remain on the reparations list. The Nomura Kojo was designed and erected in 1943 for the production of machine tools. The plant did not get into production of this commodity, but immediately began the manufacture of aircraft parts. This production continued until the end of the war.

3. It would appear that the Nomura Kojo would qualify equally as a machine tool producer, or as an aircraft plant. It is the recommendation of this headquarters that the application of the subject company for removal from the reparations list be denied.

1. It is recommended that the petition of the Nomura Plant of Teikoku Precision Industry Co., be denied.

2. This plant while not originally designed for aircraft production was primarily engaged in the production of aircraft parts.

3. Since machine tool plants were selected on the basis of reducing the productive capacity considered surplus to the minimum peacetime requirements of Japanese economy no recommendation is made as to the advisability of listing this plant as a machine tool selection rather than an aircraft selection.

11- FUTURE PLAN OF PRODUCTION: As mentioned below -

A- General Descriptions: The electric meteres & etc. listed on the following plan had been manufactured in our Chikko Factory, as stated on the separate application, towrads the end of the war, and we expected to continue same. As it is, nevertheless, disadvantageous to let Chikko Factory only work on these lines due to the probable risks of sea water damages as well as the disorder of traffic to be caused by typhoon in future as occurred over Chikko area on 18/9/1945 and also to the fact that we are still now sufferring from the recent flood, we transferred machineries to make induction meters & etc. together with the relative workers from Chikko Factory to this Asahi Factory. Having already completed all the necessary preparations, we have partly commenced manufacturing thereby.

(to be continued)

11-Future Plan of PRODUCTION: As enumerated below -

A-GENERAL DESCRIPTIONS: Since the establishment of our company, we had been continuously manufacturing in this factory Volt, Nut, Spike and Rivet towards the end of the war.

Electric motors and fans etc. had been made only up to the end of 1944 in this factory. We had planned, after the war, to resume the manufacture of electric goods by mass production method. In view, however, of the disadvantages in doing so due to the recent flood and the probable inconveniences of traffic to be caused by typhoon in future as occurred on 18/9/1945 We had to switch off this plan to our Asahi Factory, and transferred thereto the majority of the machineries of electric goods together with the relative workers.

Consequently, we have planned in this factory to resume the manufacturing of Volt, Nut, Spike and Rivet etc . as well as a part of Electric Goods as undermentioned (Ref. to the separate application for our Asahi Factory).

B-ITEMS & OUTPUT TO MAKE:

(1) Volt, Nut, Spike	Rivet	35 KGs.	per month
	Spike	570 "	" "
	Nut	58 "	" "
	Volt w/nut	225 "	" "
(2) Machinery Parts for Rayon Mfg.	Mushroom	5,530 pcs. per month :	66,500 pcs. per annum

(Orders taken for this line from our old customer, Toyo Rayon K.K)

C-PRINCIPAL MATERIALS REQUIRED:

(1) Materials required for making Volt, Nut, Spike, & etc.	Steel	Square Rod	656 KGs.	per month
	"	Round Rod	485 "	" "
	"	Flat Rod	87 "	" "
	Cokes		650 "	" "
	Packing materials		50,000 bags	" "
