The common colewort, or Dorfetftire kale, is now almoft loft near London, where their markets are ufually fupplied with cabbage plants inftead of them. The beft method to caltivate this plant in the fields is, to fow the feeds about the beginning of July, cloofing a moit feafon, which will bring up the plants in about ten days or a fortnight; the quantity of feed for an acre of land is nine pounds: when the plants have got five or fix leaves they flould be hoed, as is practifed for turnips, cutting down all the weeds from amongit the plants, and alfo thinning the plants where they are too thick; but they flould be kept thicker than turnips, becaufe they are more in danger of being deftroyed by the fly: this work flould be performed in dry weather, that the weeds may be killed. About fix week after, the plants hould have a fecond hoeing, which, if carefully performed in dry weather, will entirely deftroy the weeds, and make the ground clean, fo that they will require no farther culture: in the fpring they may be either drawn up and carried out to feed the cattle, or they may be turned in to feed upon them as they tland; but the former method is to be preferred, becaufe there will be little wafte; whereas, when the cattle are turned in amongf the plants, they will tread down and deflroy more than they cat, efpecially if they are not fenced off by hurdles.

The two lan forts of cabbages are varicties fit for a botanic garden, but are plants of no ufc. They are
$\underbrace{\text { Brafica., annual plants, and perilil when they have perfected }}$ their feeds.

The beft mecthod to fave the feeds of all the forts of cabbages is, about the end of Norember you fhould make choice of fome of your befl cabbayes, which you flould pull up, and carry to fome thed or other covered place, where you flould hang them up for three or four days by their flalks, that the water may drain from between their leaves; then plant them in fome border near a hedge or pale, quite down to the middle of the rabbage, leaving only the upper part of the calbage above ground, obferving to raife the earth about it, io that it may fland a little above the level of the ground; cfpecially if the ground is wet, they will require to be raifed pretty much ahove the furface. If the winter thould prove very hard, you mun lay a little flraw or peafe haulm lightly upon them, to fecure them from the frofl, taking it off as foon as the weather proves mild, teft hy keeping them too clofe they fhould rot. In the fpring of the year thefe cabbages will fhoot out ftrongly, and divide into a great number of frall branches: you mult therefore fupport their flems, to prevent their being broken of by the wind; and if the weather fhould be very hot and dry when they are in flower, you thould refreht them with water once a.week all over the branches, which will greatly promote their feeding, and preferve them from mildew. When the pods begin to change brown, you will do well to cut off the extreme part of every hoot with the pods, which will frengthen your feeds; for it is generally obfrerved, that thofe feeds which grow near the top of the fhoots, are very fubject to run to feed before they cabbage; fo that by this there will be no lofs, but a great advantage. When your feeds begin to ripen, you muft be particularly careful that the birds do not deltroy it, for they are very fond of thefe feeds. The beft method to prevent this, is to get a quantity of birdlime, and daub over a parcel of lender twigs, which fhould be faftened at each end to ftronger flicks, and placed near the upper part of the feed in different places, fo that the birds may alight upon them, by which means they will be faftened thereto; where you mult let them remain, if they cannot get of themfelves: and although there fhould not be above two or three birds caught, yet it will fufficiently terrify the refl, that they will not come to that place again for a confiderable time after.

When your feed is fully ripe, you muf cut it off; and after drying, thrafh it out, and preferve it in bags for ufe.
But in planting of cabbages for feed, it will be proper never to plant more than one fort in a phee, or near one another: for example, never plant red and white cabbages near each other, nor Savoy with white or red cabbages ; for they will, by the commisture of their efluvia, produce a misture of kinds: and it is faid to be owing to this neglect, that the gardeners rarely fave any good red cabbage feed in Britain, but are obliged to procure frefh feeds from abroad: as fuppofing the foil or climate of Britain alters them from red to white, and of a mised kind betwixt both; whicreas, if they thould plant red cabbages by themelelves for feed, and not fuffer any other to be near them, they might continue the kind as good in Britain as in any ether part of the world.

Cauliflowers have of late years been fo far improved in Britain, as to cxcced in goodnefs and magnitude what are produced in moft parts of Europe, and by the fkill of the gardence are continued for feveral monthy together; but the mof common feafon for the great crops is in May, June, and July. Having procured a parcel of good feed, you mull fow it about the 2 ift of Augul, upon an old cucumber or melon bed, fifting a little earth over the feeds, about a quarter of an inch thick; and if the weather fhould prove extremely hot and dry, you flould fhade the beds with mats, to prevent the earth from drying too faft, and give it gentle waterings as you may fee occafion. In about a month's time after fowing, your plants will be fit to prick out: you thould therefore put fome frefh earth upon your cucumber or melon beds; or where thefe are not to be had, fome beds fhould be made with a little new dung, which fhould be trodden down clofe, to prevent the worms from getting through it ; but it flould not be hot dung, which would be hurfful to the plants at this feafon, efpecially if it proves hot ; into this bed you fhould prick your young plants at about two inches fquare, obferving to thade and water them at firft planting ; but do not water them too much after they are growing, nor fuffer them to receive too much rain if the feafon fhould prove wet, which would be apt to make them black fhanked, as the gardeners term it, which is no lefs than a rottennefs in their Rems, and is the defruction of the plants fo affeted. In this. bed they flould continue till about the 3 oth of OMober, when they mult be removed into the place where they are to remain during the winter feafon; which, for the firt forwing, is commonly under bell or hand glafies, to have early cauliflowers, and thefe fhould be of an early kind: but in order to have a fucceflion during the fealon, you fhould be provided with another more late kind, which fhould be fown four or five days after the other, and managed as was direfted for them. In order to have very eari'y cauliflowers, you thould make choice of a good rich fpot of ground that is well. defended from the north, eall, and weft winds, with hedges, pales, or walls; but the firtt are to be preferred, if made with reeds, becaufe the wind will fall dead in thele, and not reverberate as by pales or walls. This ground fhould be well trenched, burying therein a good quantity of rotten dung; then level your ground, and if it be naturally a wet foil, you flould raife it up in beds about two feet and a half, or three feet broad, and four inches above the level of the ground; but if your ground is moderately dry, you need not raife it at all: then plant your plants, allowing about two feet fix inches difance from glafs to glafs in the rows, always putting two good plants under each glafs, which may be at alout four inches from each other; and if you defign them for a full crop, they may be three feet and a half row from row: but if you intend to make ridges for cucumbers between the rows of caulifower plants (as is generally pracifed by the gardeners near L.ondon), you muft then make your rows about eight feet afunder; and the ground between the rows of cauli:lowers may be planted with cabbage plants, to be drawn off for coleworts in the fpring. When you have planted yout plants, if the ground is very dry, you flould guve them a little witer, and then fet your glafies over them, which may semain quite clofe down over them

  $\square$

Eramica. till they have taken root, which will be in about a week or :en days time, usiefs there fhould be a kindly hower of rain ; in which cale you may fet off the glaffes, that the plants may receive the benefit of it ; and in about ten days after plantinz, you fhould be provided with a parcel of forked nlicks or bricks, with which you thauld raife your glaffes about three or four inches on the fide toward the louth, that your plants may linve free air; in this manner your glaffes fhould remain over the platits night and day, unlefs in frofty weather, when you fhould fet them down as clofe as poflible; or if the weather fhould prove very warm, which many times happens in November, and fometimes in December, in this cafe you fhould keep your glafies off in the day-time, and put them on only in the night, left, by keeping the glaffes over them too much, you thould draw them into flower at that feafon; which is many times the cafe in mild winters, efpecially if unikilfully managed. Toward the latter end of February, if the weather proves mild, you fhould prepare another good fot of ground to remove fome of the plants into, from under the glaffes, which fhould be well dunged and trenched (as before) : then fet off your glafies; and, after making choice of one of the moft promifing plants under each glafs, which fhould remain, take away the other plant, by raifing it up with a trowel, \&ic. fo as to preferve as much earth to the root as polfule; but take care not to difturb or prejudice the roots of the plants which remain. Then plant the plants which you have taken out at the diflance before directed, viz. if for a full crop, three feet and a half, row from row; but if for ridges of cucumbers between them, eight feet, and two feet four inches diflance in the rows: then, with a fmall hoe, draw the earth up to the ftems of the plants which were left under the glaffes, taking great care not to let the earth fall into their hearts; and fet your glaffes over them again, raifing your props as inch or two higher than before, to give them more air, obferving to take them off whenever there may be fome gentle fhowers, which will greatly refreft the plants.

In a little time after, if you find your plants grow fo faft as to fill the glafies with their leaves, you fhould then fightly dig about the plants, and raife the ground about them in a bed broad enough for the glaffes to fland, about four incles high, which will give your plants a great deal of room, by railing the glaffes fo much higher when they are fet over them; and by this means they might be kept covered until April, which otherwife they could not, whithut prejudice to the leaves of the plants; and this is a great advantage to them, for many times we have returns of fevere froils at the latter end of March, which prove very hurtful to thefe plants, if expored thereto, efpecially after having been nusfed up under glafiec.

After you have finilled your beds, you may fe? your glaffes oser your plants again, obferving to raile your props pretty ligh, efpeci.slly if the weather be mild, that they may havefree air to frengthen them; and in mild fofe weather fet of your glaffes, as alfo in gentle thowers of rain; and now you mull begin to harilen them lyy degices to enduse the open air; loovever, it is advifable to les your glafies 1 cm ain over them as lomp as poflible, if the nights thould be frolly, which will greatly forsard your flants; but you matit not let your
glaffes remain upon them in very hot furfline, efpeci- Erafica. ally if their leaves prefs againt the fides of the glates; for it hath often been obferved in luch cafes, that the moifture which bath rifen from the ground, together witl the perfpiration of the plants, which by the glaffes remaining over them hath been detained upon the leaves of the plants, when the fun hath Grone hot upon the fides of the glaffes, have acquired fuch a powerful heat from the beams thereof, as to fcald all their larger leaves, to the no fmall prejudice of the plants: nay, fometimes large quantities of plants have been fo af. fected therewith, as never to be worth any thing after.

If your plants have fucceeded well, toward the end of April fome of them will begin to fruit: you mult therefore look over them carefully every other day, and when you fee the flower plainly appear, you muft break down fome of the inner leaves over it to guard it from the fun, which would make the flower yellow and unfightly if expofed thereto; and when you find your Hower at its full bignefs (which you may know by its outfide parting as if it would run), you mult then draw it out of the ground, and not cut them off, leaving the ftalk in the ground, as is by fome practifed; and if they are defigned for prefent ufe, you may cut them out of their leaves; but if defigned to keep, you hould preferve their leaves about them, and put them into a cool place; the beft time for pulling them is in a morning, before the fun hath exhated the moi. fture; for cauliflowers pulled in the heat of the day, lofe that firmens which they naturally have, and become tough.

But to return to our fecond crop (the plants being raifed and manured as was directed for the early crop, until the end of October), you mult then prepare fome beds, either to be covered with glafs-frames, or arched over with hoops, to be covered with mats, \&c. Thefe beds hould have fome dung laid at the bottom, about fix inches or a foot thick, according to the fize of your plants; for if they are fmall, the bed ftould be thicker of dung to bring them forward, and fo vice verfa; this dung frould be beat down clofe with a fork, in order to prevent the worms from finding their way through it ; then lay fome good frefly earth about four or five inches thick thereon, in which you fhould plant your plants about two inches and a half fquare, obferving to flade and water them until they have tahennow root : but you mull not keep your coverings clofe, for the warmth of the dung will occafion a large damp in the bed, which, if pent in, will greatly injure the plants. When your plants have taken root, you muft give them as much free open air as poffible, by keeping the glaffes off in the day-time as much as the weather will permit; and in the night, or at fuch times as the glaffes require to be kept on, raife them up with props to let in fiefl air, unlefs in frofly weather; at which time the glaffes hould be covered with mats, fraw, peafe-luaulm, Exc. but this is not to be done but in very hard frofls; you muft alfo oblerve to guard them agrainf great rain, Which in winter time is very hurtful to them, but in mill weathor, if the glaffes are kept on, they flould be propped to admit frefh air; and if the under leaves grow yellow and decay, be fure to pick them off: for if the r:erther hould prove very bad in winter, fo that you thould be obliged to keep them clafe covered for two or three days together; as it forceimes happens,

Profica. thefedecaycd leaves will render the inclofed air very noxious; and the phants petfipiring pretty much at that time, are often deflroyed in vall quantities.

In the beginning of February, if the weather be mild, you muft begin to larden your plants by degrees, that they may be prepared for tranfplantation : the ground where you intend to plant your cauliflowers out (which fhould be quite open from trces, \&c. and rather moift than dry) having been well dunged and dug, flould be fown with radilhes a week or fortnight before you iatend to plant out your caulitlowers; the fowing of radifhes is particularly mentioned, becaufe if there are not fome radilies among them, and the month of May fhould prove hot and dry, as it fometimes happens, the fly will feize your cauliflowers, and eat their leaves full of holes, to their prejudice, and lome:imes their deftruction; whereas, if there are radilhes upon the fpot, the Alies will take to them, and never meddele with the catlitlowers fo long as they laft: indeed, the gardeners near London mix fpinach with their radilli-feed, and fo have a double crop; which is an advantage where ground is dear, or whicre perfons are fraitened for room; otherwife it is very well to have only one crop amongt the cauliflowers, that the ground may be cleared in time.

Your ground being ready and the feafon good, about the middle of February you may begin to plant out your caulitlowers; the dillance which is generally allowed by the gardeners near London (who plant other crops between their cauliflowers to fucceed them, as cucumbers for pickling, and winter cabbages) is every other row four feet and a half apart, and the intermediate rows two feet and a half, and two feet two inches diffance in the rows; fo that in the latter end of May or beginning of June (when the radifthes and fpinach are cleared off), they put in feeds of cucumbers for pickling, in the middle of the wide rows, at three feet and a half apart ; and in the narrow rows plant cabbages for winter ufe, at two feet two inches diflance, fo that thefe fand each of them exactly in the middle of the fquare between four cauliflower plants; and thefe, after the caulithowers are gone off, will have full room to grow, and the crop be bereby continued in a fucceffion through the whole feafon.

There are many people who are very fond of water. ing cauliflower plants in fummer; but the gardeners near London have almoft wholly laid afide this practice, as finding a deal of trouble and charge to little purpofe; for if the ground be fo very dry as not to produce tolerable good cauliflowers without water, it feldom lappens that watering of them makes them much better; and when once they have been watered, if it is not confiantly continued, it had been much better for them if they never had any; as alfo, if it be given them in the middle of the day, it rather helps to fcald them: fo that, upon the whole, if care be taken to keep the earth drawi up to their ftems, and clear them from every thing that grows near them, that they may have free open air, you will find that they will fucceed better without than with water, where any of thefe cautions are not friclly obferved.

But in order to have a third crop of cauliflowers, you flould make a flender hot-bed in February, in which you flould fow the feeds, covering them a quaster of an inch thick with light mould, and covering the bed
with glafs-frames. When the plants are comse ur, and have goten four or five leave?, you thould prepare another ho:-bed to prick them into, which may lic about two inches lquare; and in the beginning of April hardes them by digrees, to fit them for tranflanting, which thould be done the middl. of that month, at the ditlance dirested tor the fecond crop, and muft be managed accordingly: thefe, if the foil is moil where they are planted, or the fealon cool and meift, will produce good cauliflowers about a moath after the fecond crop is gone, whereby their feafon will be greatly prolonged.

There is alfo a fourth crop of caulillowers, which is raifed by fouling the feeds about the 23 d of May; and, being tranfplanted, as hith been before diretted, will produce good caulitlowers is a kindly feafon and good foil after Nichaelmac, and continue through Oitober and November, and, if the feafon permit, often a great part of December.

All the fpecies of cabbage are fuppofed to be hard of digeftion, to afford little nourifunent, and to produce fldtulencies, though probably on no very good foundation. They tcid frongly to purrefaction, and sun into this fate focner than almolif any otber vege$t$ :ble; when putrefied, their fmell is likewife the mott offenive, greatly refembling that of putrefied animal fubltances. A decoftion of them is faid to looren the belly. Of all thefe plants cauliflower is reckoned the eafiett of digefion. The white is the molt fetid, and the red moft emollient or lasative; a decoction of this $\mathrm{l}_{\text {aft }}$ is recommended for foftening acrimonious hu.. mours in fome diforders of the brealt, and in hoarfenefs. The red cabbage is chietly ufed for pickling. In fame countries they bury the white cabbage when full grown in the autumn, and thus preferse if all winter. The Germans cut them to pieces, and, along with fome aromatic herbs and falt, prefs them clofe down in a tub, where they foon ferment, and are eaten uader the name of Sour-crout. See that article.

BRASSICAVIT, or Brachicarit, in the manege, is a horfe whofe fure-egs are naturally bended archwife : being fo called by way of diftinction from an arched horle whole legs are bowed by hard labour.

BRAULS, Indian cloths with blue and white flripes. They are otherwife called turbans, becaufe they ferve to cover thofe ornaments of the head, particularly on the coaft of Africa.

BR AUNA, a town of Germany, in Bavaria, feated on the river Inn. It has a ftrong fortrefs: notwithAanding, it was taken by the Auftrians in $1 / 743$. E. Long. ${ }^{3}$ 3. 3. N. Lat. 48 . 10.

BRAUNSBURG, a town of Poland, in Regal Prullia, with a very commodious harbour, and belonging to the king of Pruflia. It is feated near the Baltic fea, in E. Long. 20. O. N. Lat. 54. 15.

BRAUNSFIELD, a town of Germany, in the circle of the Upper Rhine, and country of Soimes, with a handfome palace or cafle. E. Long. 8. $3^{2}$. N. Lat. 50. 22.

BRAVO, one of the Cape de Verd iflands on the coalt of Africa, remarkable for its cxcellent wines, and inhabited by Portuguefe. The land is very high, and confints of mountains which look like pyramids. It abounds in Indian corn, gourds, water melons, potatoes, horlec, affes, and hogs. Thare is alfo plenty of filh on

## B R A

the coaft, and the ifland produces faltapetre. W. Long. 25.35. N. I.at. 14. O.

Brayo, a town of Africa, on the coan of Ajan, with a pretty good harbour. It is an independent place, and is about 8 o miles diftant from M..gadoxu. E. Long. 41.35 N. Lat. I. 0.

BRAURONIA, in Grecian antiquity, a fefival in honour of D:ana, furnamed Braurcnia, from its having heen obferved at Brauron, an Athenian borough. This feflival was celebrated once in five years, being ma. naged by ten men, called in Greck iggotasor. The vietim offered in facrifice was a goat, and it was cuftomary for certain men to fing one of Homer's Iliads. The matt remarkable perfons at this folemnity were young virgins, habited in yellow gowns, and confecrated to Diana. It was unlawful for any of them to be above ten or under five years of age.

BRAWN, the flefh of a buar fuuctd or pickled: for which end the boar flould be old; becaufe the older he ic, the more horny will the brawn be.-The method of preparing brawn is as follows: The boar being killed, it is the flitches only, without the legs, that are made bramn; the bones of which are to be taken out, and then the Hefl frimkled with falt, and laid in a tray, that the blood may drain off: Then it is to be falted a little, and rolled up as hard as poffible. The length of the collar of brawn fhould be as much as one fide of the boar will bear, fo that when rolled up it will be nine or ten inches diameter.

The cellar being thus rolled up, is to be boiled in a copper, or large kettle, till it is fo terder, that you can run a flraw through it; then fet it by till it is thorough cold, and put it into the following pickle. To every gallon of water, put a handful or two of falt, and as much wheat-bran: Buil them together, then drain the bran as clear as you can from the liquor; and when the liquor is quite cold, put the brawn into it.

BRAY, Sir Reginald, a celebrated architect and politician, was the fecond fon of Sir Richard Bray, one of the privy council to King I Ienry V1. Sir Reginald was inllrumental in the advancement of King Henry VII. to the throne of England; and was greatly in favour with that prince, who beftuwed honours and wealth upon him. His $\mathbb{K i l l}$ in architecture appears from Henry VII.'s chapel at Wefminfter, and the chapel of St George at Windior, as he had a principal concern and direction in the building of the former, and the finifhing and bringing to perfection the latter, iu which he was alfo a liberal benefactur. In the middle of the fouth aifle of the above chapel is a fpacious chapel built by him, and nill called by his name. He died in 1501; and was interred in the above chapel, probably under the flone where lies Dr Waterland; for, on opening the vault for that gentleman, who diect in 1740, a leaden colfin of ancient form was found, which, by other appearances, was judged to be that of Sir Reginall, and was, by order of the dean, immediately arched over.

Bray, Dr Thomas, an eminent, learned, and pious divine, was born at Marton, in Shrophire, in the year 1656 , and educated at Oxford. He was at length preSented to the vicarage of Over-Whitacre, in Warwickmire : and in 1690 , to the rectory of Sheldon, where the compofed his Catechetical I.eetures; which procured
him fuch reputation, that Dr Compton, bifhop of Lone don, pitcheo upon him as a proper perfon to model the infant church of Maryland, and eftablifh it upon a folid foundation, and for that purpofe he was invefted with the office of commiffary. He now engaged in fe. veral noble undertakings. He procured fums to be railed for purchafing finall libraries for the ufe of the poor minifters in the feveral parts of our plantations: and the better to promote this defign, he publithed two books; one entitled Bibliotbeca parocbialis, or a fcherne of fuch theological and other heads as feem requifite to be perufed or occafionally confulted by the clergy, together with a catalogue of books which may be profitably read on each of thofe pomts; the other, Apof. tolical Charity, its nature and excellency confidered. He endeavoured to get a fund eftablithed for the propagation of the gofpel, efpecially among the uncultivated Indians; and by bis means a patent was obtained for erecting the corporation called The fociety for the propagation of the gospel. He, by his indultry, procured relief for priloners; and formed the plan for the fociety for the reformation of manners, charity-fchools, \&c. He wrote, i. His Martyrology, or papal ufurpation, in one volume folio; 2. Dirteroriam miffonarnam; and other works. This excellent man died in 1730 , aged 73.

Bray, a port town of Ireland, in the county of Wicklow, and province of Leinlter, feated on St Gcorge's channel, eight miles fouth of Dublin. W. Long. 6. 16. N. Lat. 53. 8.

Braz fur Seinc, a town of France, in Champagne, and in Senunois, on the confines of Brie. E. Long. 2. 15. N. Lat. 48. 35 .

BRAYLE, among fortfmen, a piece of leather flit to put unon the hawh's wing, to tie it up.

BRAZED, in Heraldry, a term ferving to defcribe three chevernns, one clafping another.

BRAZEN, fomething confifting of brafs, or formed out of it. See Brass.
Brazen Age. See Age.
$B_{\text {RAIEN }} D i / f$, among miners, is the fandard by which the other difles are gauged, and is kept in the king's hall.
$\widehat{B}_{\text {RAZEN }}$ Sea, in Jewifl antiquity, one of the facred ntenlils in the temple of Solomon. It was caf in the plain of Jordan, and removed from thence into the inner court of the temple ; where it was placed upon 12 oxen, three of which louked towards each quarter of the world. It was ten cubits from the one brim to the other, five cubits in height, and 30 cubits in circumference, and contained 3000 bathso The brim of it was perfechly round, and lo it cominued in the two upper cubits; but below the brim, in the three lower cubits, it was fquare. It was a bandbreadth thick, and the brim was wrought like the brint of a cup, with nlowers of lilies. About the body of this huge veffel there were two borders of engravings, being the heads of oxen in demi.relief; out of which fome fuppofe the water iffued, and that they wcre made as cocks and conveyances for that purpofe. -This brazen or molten fea, was deffigned for the priefls to wall themfelves in before they performed the fervice of the temple. The fupply of water was through a pipe out of the well Ltam; though fome are of opinion, that it was conflantly fupplied with water by the Gibconites.

## B R E [ $38 j]$ B R E

Brasier BRAZIER, an artificer who makes and deals in Bread. all kinds of brafs ware. This trade, as exercifed in Britain, may be reckoned a branch of the fmithery, though they feldom keep forges, except for brazing or foldering, and tinning the infides of their veffels, which they work up chiefly out of copper and brafs prepared rough to lheir hands. They confift of a working part, and a Mop-keeping part, which latter many carry on to a great extent, dealing as well in all forts of iron and fteel, as copper and brafs goods for houfehold furniture ; and latelv have fallen much into felling what is called French plate, made of a fort of white metal, filvered and polithed to fuch a degree that the eye cansot foon diftinguilh it from real filver.

BRAZIL. See Brasil.
BRAZING, the foldering or joining two pieces of iron together by means of thin plates of brafs, melted between the pieces that are to be joined. If the work be very fine, as when two leaves of a broken faw are to be brazed together, they cover it with pulverized borax, melted with water, that it may incorporate with the brafs powder, which is added to it: The piece is then expoled to the fire without touching the coals, and heated till the brafs is feen to run.

Brazing is alfo the joining two pieces of iron together by beating them hot, the one upon the other, which is ufed for large pieces by farriers, \&c.

BRAZZA, a town and ifland on the coalt of Dalmatia, in the gulf of Venice, oppofite to Spalatro, and fubject to Venice. E. Long. 28. o. N. Lat. 43. 0.

BREACH, in a general fenfe, denotes a break or rupture in fome part of a fence or enclofure, whether owing to time or violence.-Inundations, or overflowings of lands, are frequently owing to breaches in the dikes or fea banks. Dagenham breach is famous; it was made in 1707, by a failure of the Thames wall in a very high tide. The force wherewith it burft in upon the neighbouring level tore up a large channel or paffige for water 100 yards wide, and in fome places 20 feet deep, by which a multitude of fubterraneous trees that had been buried many ages before were laid bare.

Breach, in Fortification, a gape made in any part of the works of a town by the cannon or mines of the befiegers, in order to make an attack upon the place. To make the attack more difficult, the befieged fow the breach with crow-feet, or fop it with chevaux de frize.-A practicable breach, is that where the men many mount and make a lodgment, and ought to be 15 or 20 fathoms wide. The befiegers make their way to it, by covering themfelves with gabions, earthbags, \&c.

Breach, in a legal fenfe, is where a perfon breaks through the condition of a bond or covenant ; on an action upon which, the breach mult be afigned: And this affignment muft not be general, but particular, as, in an action of covenant for not repairing houfes, it ought to be affigned particularly what is the want of reparation : and in fuch certain manner, that the defendant may take an iffue.

BREAD, a mals of dough kneaded and baked in an oven. See Baker, Baking, and Barm.

The grains of all vegetables are almolt entirely sbern. Dia. compoled of fubitances very proper for the nourifhment of animals; and amongit grains thofe which contain a
farinaceous matter are the molt agreeable and mon nu. tritive.

Man who appears to be defigned by nature to cat of all fubitances which are capible of nourifhing liom, and Itill more of vegetables than animals, has, from time immemorial, and in all parts of the carth, ufed farinaceous grains as the princip:l bafin of his food: but as thefe grains cannot be without difficulty eaten by men in their natural ftate, this active and intelligent animal has gradually found means not only to cxtract the farinaceous part, that is, the only nutritive part of thefe grains, but alfo to prepare it fo that it becomes a very agrceable and wholefome aliment, fuch as the bread we now generally eat.

Nothing appears fo eafy at firft fight as to grind corn, to make a pafte with the flour and water, and to bake this pafte in an oven. They who are accule tomed to enjoy the advantages of the finelt human inventions, without reflecting on the labour it has coft to complete them, think all thefe operations common and trivial. However, it appears very certain, that for a long time men no otherwife prepared their corn than by boiling and forming compact vilcous cakes, not very agreeable to the tafte, and of difficult digefo tion. Before they were able to make bread of good tafte and quality, as we have now, it was neceffary to invent and complete ingenious machines for grinding corn, and feparating the pure flour with little trouble and labour ; and that inquiries, or rather fome happy chance, which fome oblersing perfon availed himlelf of, hould difcover, that flour, mixed with a certain quantity of water, is fufceptible of a fermentation which almoft entirely deftroys its vifcidity, beight. ens its talte, and renders it proper to make a light bread, very agreeable to the tafte, and of ealy digef. tion.

This eflential operation, on which the good quality of bread depends, is entirely of the province of che miftry. It would add to the honour of the ancient cultivators of chemilry, to attribute to them fo ufeful and important a difcovery; but, unhappily, it is too probable that they had no fhare in it. The ancient chemifls were engaged in other purfuits than that of bread and other common objects. They hoped to make gold ; and what is bread in comparifon with gold?

Howeter that be, to the fortunate invention of raifing the patte before baking we owe the perfection of the art of making bread. This operation confifts in keeping forme pafte or dough, till by a peculiar fipituous fermentation it fwells, rarefies, and acquires a fmell and tafte quich, pungent, fpirituous, fomewhat four, and rather difagreeable. This fermented dough is well worked with fome frefh dough, which is by that mixture and moderate heat difpofed to a fimilar but lefs advanced fermentation than that above mentioned. By this fermentation the dough is attenuated, and divided ; air is introduced into it, which being incapable of difengaging itfelf from the tenacious and folid palte, forms in it fmall cavities, raifes and fivells it: hence the fmall quantity of fermented pafte which difpofes the reft to ferment, is called leaven, from the French word lever, figniffying to raile.

When the dough is thus raifed, it is in a proper fate to be put into the oven; where, while it is baked, it $3^{\circ} \mathrm{C}$ dilates

Bead. dilates itfelf hill more by the ratefuation of the air, and of the firituous fubfiance it contains, and it forms a bread full of eycs or cavities; confequently light, and ontirely different from the heary, compact, vifcous, and indigefted maftes, made by baking unfermented dourh.

The invention of beer, or wine of grains, furnilhes a r.ew matter ufful in the making of bread. This matter is the froth which forms upon the furface of thefe liquors during fermentation. When it is mixed with $\begin{aligned} & \text { ough, it railes it better and more quickly than }\end{aligned}$ ardinary leaven. It is called yenft or larm. By means of this, the finen lighteft bread is made. It often happens, that bread made with leaven dough has a fourifl and not agreeable tafte; which may proceed frons ton great a quantity of leaven, or from leaven in which the fermentation has advanced too far. This inconvenience does not happen to bread made with yeaft ; becaufe the fermentation of this fubftance is not too far advanced, or becaufe more attertion is given to that finer bread.

It may be afled, Why, fince dough is capable of fermenting fpontaricoufly and fingly, as we fee from the leaven, a fubflance is added to difpofe it to ferment? The true reafon is, That all the parts of a fermenting fubfance do not ferment at the fame time, nor to the fame degree; fo that fome parts of this fubllance have finifhed their fermentation, while others have not yet begun. The fermentable liquors which contain much fugar, as hydromel, and mult of wines, give prnofs of this truth; for, after thefe liquors have become very vinons, thes have fiill very diftinctly a faccharine tafte: but all faccharine matter is fill fufceptible of fermentation; and, in $f, \mathrm{E}$, if vinous hydromel, or muf, or even new beer, be difilied, fo that all their ardent fpirit ftall be feparated, and the rufiouums diluted with water, we fhall fee a fecond fermentation take place, and a new quantity of ardent fpirit formed.

The fame thing precilely happens to dough, and fill more fenfitly, from its vilcofity and want of fluidity; fo that if it be left to ferment alone, and without the help of leaven, as the fermentation proceeds very fowly and fucceffively, the parts which ferment firf will have become four and vapid before all the reft be fufficiently attenuated and clanged, by which the bread will acquite a difagreeable tafte.

A mixture of a fmall quartity of leaven with dough effectually prevents this inconvenience; becaufe the effect of this leaven, and of all fermenting fubflances, is to difpofe to a fimilar fermentation all matters capable of it, with which it is mixed; or rather, by means of leaven, the fermentation of all the parts of fuch fubftances is effected more nearly at the fame time.

Bread well raifed and baked differs from unfermented bread, not only in being lefs compan, lighter, and of a more agrecable tafte, but alfo in being more cafly mifcible with water, with which it does not form a vifcous mafs, which circumfance is of great importance in digeftion.
Cullen ontle It is obfervable, that without bread, or fomewhat Ala/. ulde of this form, no nation feems to live. Thus the Laplanders, having no com of their nwn, make a fort of Gread of their dried fiftes, and of the inner rind of the pine, which feems to be ufed, not fo much for their
nourihment as for fupplying a dry food. For this mankird feem to have an univerfal appetite, rejeching bland, flippery, and mucilaginous foods. This is not commonly accounted for, but fucms to depend on very fimple principles. The prepatation of our food depends on the mixture of the animal Huids in every flage. Anang others the faliva is rieceffary, which requires dry food as a neceffary ftimulus to draw it forth, as bland, flippery, fluid aliments are too inert, and make too fhort flay in the mouth, to produce this effect, or to caufe a fufficient degree of manducation to emulge that liquor. For this reafon we commonly ufe dry bread along with animal food, which othernife would be too quickly fwallowed. For blending the oil and water of our food nothing is fo fit as bread, affifted by a previous manducation. For which purpofe, bread is of like neceffity in the flomach, as it is proper that a fubfance of folid confillence thould be long retained there. Now the animal fluids muft be mixed with our aliments, in order to change the acefcency it undergoes. But liquid foods would not attain this end, whereas the folid fimulates and emulges the glands of the flomach. The bread then appears to be exceedingly proper, being bulky without too mucha folidity, and firm without difficulty of fulution.

Among the ancients we mett with various denomi- Suppl. to nations of bread; as, 1. Panis filigeneus, called alfo Cbamberi's mundus, atbleticus, ifurgia, colipbus, avd robys, an- Dia\%. Fwering to our white bread; being made of the pureft flour of the beft wheat, and only ufed by the richer fort. 2. Panis fecundus or focundarius, called alfo fmilaceus or fmilogincus, the next in purity; being made of fine flour, only all the bran not fifted out. 3. Aulofyrus, called alfo fyncomifus and confufaneus, made ol the whole fubitance of the wheat, without either rethenching the finer flour or coarfer bran; anfwering to our houfihold bread. 4. Cacaliaceus, apparently the fame with what was otherwife denominated fordidus, as being given to dogs; furfuraceus, furfureus, or furfurativus, becaufe made in great part of bran; and, in the middle age, bilus, on account of its browneis; fometimes alfo leilo. There were other forts of bread, denominated from the manter in which they were made, or the ufes they were applied to; as, r. The militaris, which was prepared by the foldiers and officers in camp with their own hands; for which purpofe fome had hand-mills, others pounded the corn in a mortar, and baked it on the cuals. 2. Clibanites, that baked in an oven, by way of contradilitinction from that baked on the hearth or under the embers. 3. That called fubcineriius, or fub cincre cosius; limetimes alfo reverfatus, becaufe it was to be turned in the baking. 4. Nauticus, anfwering to our fea-bifcuit, and denominated accordingly lis coctus, becaufe baked feveral times over to make it keep the longer. Other kinds of bead were denominated from their qualities and accidents; as, 1. The panis,ficcus, that which had been long baked; fuch as were the lis coctus, naval and buccellated bread. 2. Madidus, a fort made of rye or bear, fometimes alfo made of fine flour, wherewith they fmeared their faces. by way of a cofmetic, to render then fmooth. 3. Acidus, of four bread, which was acidulated with vinegar. 4. Azymus, that unleavened or unfermented.

The French have alfo a great variety of breads; as

Breal. queen's bread, alamode bread, bread de Segovie, de Gentillay, quality-bread, \&c. all prepared in peculiar manners by the bakers of Paris. The bread de Goneffe excels all others, on account of the waters at Goneffe, a town three leagues from Paris. It is light, and full of eyes, which are the marks of its goodnefs. Pain de manege, is that which each family bakes tor itferf. Spice-bread, pain d'epice, denotes break baked and iced over with the foum taken off fugar in refining houles; it is fumetimes alfo made with honey and other forts of feafoning, and anfwers to what the ancients call panis mellitus.

Among us, bread is chiefly divided into white, wheaten, and houfehold; differing only in degrees of purity. In the firf, all the bran is feparated; in the fecond, only the coarler; is the third, none at all: fo that fine bread is made orily of hour; wheaten bread of hour and a mixture of the finer bran; and houlehold, of the whole fubflance of the grain, without taking out either the coarfe bran or fine flour. We alfo meet with fymmel bread, manchet or roll bread, and French bread: which are ouly fo many denominations of the fineft and whiteft bread, made of the pureft flour ; except that in ill-roll bread there is an addition of milk, and in French bread, of eggs and butter alfo. In Lancallire, and feveral of the torthern counties of England, they have feveral forts of oateu bread; as, 1. The bannock, which is an oat-cake, kneaded only with water, and baked on the embers. 2. Clap-bread, which is made into thin hard cakes. 3. Bitchinefs bread, which is made of thin batter, and made into thin foft oat-cakes. 4. Riddle-cakes, which are thick and four, have but little leaven, and are kneaded fiff. And, 5. Jannock, which is oaten bread made up into loaves. Add to thefe, peafe-bread, much ufed in many parts of Scotland; being bread confifing either wholly of the Hour of peale, or of this and oat-meal mixed: the dough, fometimes leavened, fometimes made only with Water, is formed cither into bannocks or cakes, and baked over the embers; or into what they call laps, i. e. a kind of thtilin rolls, ard baked in the overr. In the flatute of afize of bread and ale, 51 Hen. HII. mention is m?de of waftel-bread, cocket-bredd, and bread of treet; which antwer to thethree kinds of bread now in ufe, called whbite, zuricaten, and boufehold bread. In religions houfes, they heretofore difinguilhed bread by the names efquires bread, panis armigcrorum; monks breaul, panis convantualis; boys bread, ponis putrorum; and fervants bread, panis fomulorum, cailed alfo panis forvicnatais. A like diitribution obtained in the houfcholds of nobles and princes; where, however, we find fome other denomisations; as mefo fengers breal, penis nuncius, that given to meffengers as a reward of their labour; court-bread, panis curialis, that allowed by the lord for the maintenance of his houfhold; eleemorynary bread, that diftributed to the poor by way of alms.

IT is for the intereft of the community that the food of the poor flould be as various as polible, that, in time of dearth and fearcity of the ordinary kinds, they may not be without ready and cheap relources. To the difcovery of fuch refources feveral benevolent philofophers having fuccefffully tarned their infuiries, we
thall lay before the reader the refult of their expertments.

1. Breas of Pobatoes *. Potatoes, previoully de- "From prived of their $\mathfrak{k i m}$, cut into thin fices, and put be-Cbymiqus treen paper, will dry in a heat fomewhat lefs than $35^{\circ}$ dea $P_{\text {orrmes }}$ of Reaumur's thermometer; and, when thus dried, de Terre, they will preferve their white colour. By this procefs pe. par M. they lofe about twothirds of their weight, and they appoth. mamay then be reduced to a fine powder. A little of jor del ho. this powder thrown upon the fire fends out a fmoke, tel des inaccomp.anied with a fmell refembling burnt bread. As valides this fmell is perceived from all farinaccous vegetables ${ }^{\text {Pariso }}$ when treated in the fame manner, M. Parmentier thinks it may be confidered as the charanteriftic of the prefence of an amylaceous $\dagger$ matter. 'This fmell does $\uparrow$ See the not, however, he obferves, arife from the amylaceous rote infra. or fibrous part feparately, but from both taken together. The powder of potatoes, obtained in the manner deferibed above, has the fmell and tafte of wheat; and, like it, is devoured by rats and mice; but, even when moft finely powdered, it has not the feel or brightnefs of the hour of wheat; although, on a chemical analyfis, it yields the fame produts. It is alfo nutritious, and keeps well for a long time.

Finding fo great a fimilarity between the meal of wheat and what may be called the meal of potatoes, M. Parmenticr riext endeavoured to make bread of them when mixed in different proportions, His trials were made with one-fourth, one-third, one-ialf, and two-thrist, of the potatomeal, the remainder being flour from wheat. Theefe proportions, with the addition of a little falt and yeaft, yielded bread which was well talled, but which had fermented little, was brown, and covered with hard brown crufts. Bread made from the meal of potatoes alone, with the addition of falt and yeaft; was eatable, but very heavy, unfermented, and exceedingly brown. This bread, from the meal of potatoes alone, was apt to crumble into powder. 'To give it more adhefion, he mixed with the meal a decoction of bran, or a mixture of honey and water; either of which made it lighter and more fermented : it obtained alfo a crufl of a golden colour, became well tafted, and fufficiently adhefive. M. Parmentier obtained bread allo, well fermented, and of a good colour and tafte, from a mixture of raw po-tato-pulp wita meal of wheat, or potato-meal, with the addition of yeufl and falt.

Potatoes, when ufed for makiug bread, are not readily difpofed to ferment ; without which, bread is very iufipid, and not cafily digefted. But M. Parmentier found, from a variety of experiments, that good bread might be made from equal quantities of flour and po-tato-meal. He concludes, therefore, with recommending the mixture of potatoes, in times of fearcity, with the flour of wheat, intlead of employing rye, barley, or oats, as has frequently been done.

When grain is altogether wanting, he recommends the $u f 0$ of bead made from a mixture of the amylaceous powder of potatoes and of their pulp, this mixture being fermented with leaven or with honey. The meal of this root, when diluted with hot water, acquircs a tenacious and gluey confilitence. However fair the menl of potatoes may be, it always gives a gray colour to the bread maste by mixing it with the foom of

## B R E

Pread. Wheat: but a mixture of the pulp of potatoes with the flour of wheat does not produce brown-coloured bread.
M. Parmentier made bread, very much like that of wheat, by a mixture of the following four fubftances, viz. four ounces of amylaceous powder of potatoes, one dram of mucilage extracted from barley, one dram of the bran of rye, and a dram and a half of glutinous matter dried and powdered.
2. Bresid from different Vegetables not commonly in

- From

Memoire Sur les vegetaux qui tourroient furpléer en temps de difette a ceux que l'on ema ploye 6 cm m:ancment a tanourriture des L.ammes, \&ic. par MI 13armentier. $U / e^{*}$. Although horle-chefnut has not hitherto been employed, yet it is certain that wholefome bread, without any bitternefs, may be obtained from it. AI. Parmentier advifes, that the fruit, after the k in is taken off, and the juice prefled from it, be made into a palte. This mafs muft be diluted in water, and then frained through a fieve. A milky-coloured liquor is thus feparated, which, on flanding, depofits a fine powder. This, being dried, is without either fmell or talle, and very fit for aliment ; the mafs from which it is procured retaining the bitternefs of the fruit.

The roots of the bryona, when treated in the fame manner, yielded a fimilar white powder. By the fame treatment alfo, fire, white, infipid, inodorous powders may be procured from the roots of the iris, gladiolus, ranunculas, fumaria, arum, dracunculus, mandragora, colchicum, filipendula, and helleborus; plants which grow fpontaricoufty, and in great abundance.

Of acorns bread has frequently been made; and to this day, in fome countries, they are in common ufe. The metbod of preparation which M. Parmentier recommends is, that they be deprived of their cover by boiling, then dried and powdered, and afterwards baked in the fame manner as the flour of wheat. When fully ripe, and madc into a palte, they were deprived of their aftringency by merely preffing their juice from them. 'The mafs remaining after the preffure, when dried, was eafily reduced to a fine powder by no means difagreeable.

The gramen coninum arvenfe, in its appearance, approaches to corn; and fome naturalifts have confider-
ed it as the original fpecies from which all our grain is produced. Its roots are fweet-tafted, and have long of them for bread, it is only neceflary that the roots fhould be cleanled, cut fmall, dried, and pounded. This porder, M. Patmentier obferves, does not diftolve in cold water or lpirits; but it does in boiling water, which it renders thick and cloudy, and, upon cooling, the whole mafs obtains a gelatinous confiftence. Upon a chemical analyfis, it yields an acid empyrcumatic oil, which poffeffes a fingular odour, refembling that which is perceived on burning the plant. The fpongy refiduum, calcined in the air, gives a fixed alkali. Thefe properties inconteftably prove, that it contains an amylaceous (A) matter fimilar to that of grain, which appears to be the nutritive part of vegetables. This amylaceous matter, formed into a jelly, and diffufed in water, keeps for a long time without fuffering any change; it then turns acid, and at length putrefies.

The amylaceous matter of acrid and poifonous plants, although innocent and nutritive, cannot be converted into bread without the addition of fome mucilaginous fubftance. In times of great fcarcity, common bran will anfwer the purpofe; but when potatoes are to be had, the addition of a proper proportion of thefe is to be preferred.
M. Parmentier gives an account of the bread which he obtained from the amylaceous powders of the different vegetables mentioned above, with the addition of potatoes and a finall quantity of common leaven of grain. This bread appeared in general to be well fermented ; it was of a good white colour, and free from any difagreeable odour: but to the tafte, it was fomewhat infipid; which, however, be imagines, might have been corrected by the addition of a proper quantity of falt.

As the refources againft fcarcity here pointed out can be procured only at particular feafons, the author propofes a method for preferving the matter thus obtained. For this purpofe, he advifes, that bread prepared in the manner mentioned above fould be care-
(A) M. Beccari of the Bolognian academy has difcovered in the flour of wheat two diftinct fubftances. The one he terms an animal or glutinous matter; the other, an amylaceous matter or vegetable pafie.

The gluten has been fuppofed to be the nutritive part of corn, from its not diffolving unlefs in vegetable acids; from its afluming a fpongy form in boiling water; from its fuppofed analogy to the animal lymph; and, laftly, from the fimilitude which the products it affords, on a chemical aralyfis, bear to thofe obrained from animal fubfances. M. Parmentier, however, from various experiments, was led to conclude, with the celebrated Model of Peterfburg, that the gluten or animal matter of Beccari exifts in the bran, and is not the nutritive part of the wheat. Having made experiments with four different kinds of flour, it appeared that the quantity of animal matter was always proportioned to the coarfenefs of the flour. Hence, were this gluten the nutritive part, the coarfef bread, or that which contained mon bran, would affurd the greateft quantity of nourifhment. The contrary of this, however, is now known to be fact.

The amylaceous part, or, as fome have termed it, the fecula, of wheat and other vegetables, is a peculiar gum, not loluble in fpirit of winc, vincgar, or cold water. It contains more acid, and lefs water, than the or dinary gums. It is found in many of thofe plants that make the nouriflment of men and other animals. Hence M. Parmentice concludes it to be the nutritive matter.

Though we are not to confider the glutinous matter as the nutritious part of regetables, yet it is a very neceffary ingredient. It is that which preferves the cohefion of the pafte in fermenting bread: it is that which forms the vifcid pellicle, and llops the air in fermentation; gives the favoury tafte to bread; occafiuns it to be light, to ferment, and which forms the fmall cells fcen in it. It is found efpecially near the cortical part of grain; and this accounts for its being found in the greateft quantity in coarfe brown meal. It is this gluten which renders wheat a fuperior aliment to the other grains and roots.

## $B$ R E

[ 389 ] B li E

Bread. fully dried, reduced to powder, and then kept in a clofe cafk. By this means, he is of opinion that it may be preferved for a very long tinue, and will always be ready to make an agreeable and wholefome panada by the addition of a little butter and falt.
M. Parmentier, in order to difcover the degree of power wherewith this alimentary powder nourilhed, made himfelf the fubject of experiment ; and found, that three ounces of it for dinner, and as much for lupper, made into panada with water, was a fufficient quantity of aliment for a day. From his difcharge by fool while he ufed it, he had reafon to believe that it is almont totally alimentary. He concludes with recommending it not only as ufeful in times of fcarcity, but as a proper fubflitute for lea-bifonit, and as a fpecies of food well adapted for armies and hofpitals.
3. Cheap method of making wholefome BREEAD, when From a e:ter in the Mufeuns Ruflicum et Commerciale wheat-Hour is dear, by mixing turnip with it *.
"At the time I tried this method, bread was very dear, infomuch that the poor people, in the country where I live, can hardly afford themfelves half a meal
carefully toafted, and infufed or lighlity boiled in water, imparts a deep colour, and a fufficiently agreeable reffringent tafte. 'This liquor, taken as common drink, has done good fervice in a weak lax flate of the flomach and inteltines; and in bilious vomiting and purging, or the cholera morbus; examples are related in the E:dinburgh effays of feveral cales of this kind cured by it, without the ufe of any other medicine.-In Weftphalia there is a very coarfe bread eaten, which ftill retains the opprobrious name given it by the French traveller of Bonpournickel, "good for his horfe Nickel." It is the fame with what the Romans called panis furfuraceus, or panis impurus, from its not being cleanfed from the bulk; and panis ater, from the blacknefs of its colour: though we learn from Pliny, that the Romans for 300 years knew no other bread. The Germans* make Hoffman two forts of waters by diftillation from this bread; the Obfer, Cberno one with, the sther without, the addition of a firituous liquor: to both which great virtues are afcribed. That without any thing fpirituous, is made out of the juice of craw-fifh, may-dew, rofe-water, nutmegs, and faf* fron, diftilled from a large quantity of this bread. This is efteemed a great reftorative, and given in heftic habits. The other is difilled from this bread and Rhenifh wine, with nutmegs and cinnamon. This is given in all the diforders of the Atomach, vomiting, lofs of appetite, and other complaints of the fame kind : and befides thefe, there is a fpirit difilled from it by the retort in the dry way, which, when feparated from its fetid oil, is efteemed a powerful fudorific, and very valuable medicinc in removing impurities of the blood.

Bread is alfo medicinal, applied externally, as is vulgarly known *. Mr Boyle aftures us he drew a menflruum from bread ftronger than aquafortis, and which would act even upon glals itfelf + .

Bread-Trre. See Artocarpus, Botany Indeas. Bees-birkad. See Bee.
Caflada Bread. See Jatropha, Botany Index.
Earth Breadt. "s In the lordmip of Jofcaw in From the Earto BREAD + . In the lordmip of Molcaw in German Ethe Upper Lufatia, a fort of white earth is found, of Germander which the poor, urged by the calamities of the wars ${ }^{2} 7^{6} 4$. whicls raged in thofe parts, make bread. It is taken out of a hill where they formerly worked at faltpetre. When the fun has fomewhat warmed thisearth, itcracks, and fmall white globules proceed from it as meal ; it does not ferment alone, but only when mixed with meal. Mr. Sarlitz, a Saxon gentleman, was plealed to informi us, that he has feen perfons who in a great meafure lived upon it for fome time. He affures us that he procured bread to be made of this earth alone, and of different mixtures of earth and meal ; and that he even kept fome of this bread by him upwards of fix years: he further fays, a Spaniard told him, that this earth is alfo found near Gelonne in Catalonia."

Eucbarif or Sacramental Bread, in the Proteflant churches, is common leavened bread, in conformity to the ancient practice. In the Romifh mafs, azymous or unleavened bread is ufed, paiticularly in the Gallican church, where a fort is provided for this purpole called pain à chanter, made of the pureft wheaten flour prefled between two iron plates graven like wafer-moulds, being firll rubbed with white was to prevent the palte from Hicking. The Greeks obferve divers ceremonies in their making the eucharift bread. It is neceflary
$\qquad$ - a-day. This put me upon confidering whether fome cheaper method might not be found than making it of wheat-meal. Turnips were at that time very plentiful. I had a number of them pulled, wafhed clean, pared, and boiled; when they were become foft enough to mafh, I had the greateft part of the water preffed out of them, and afterwards had them mised with an equal quantity in weight of coarfe wheat-meal; the dough was then made in the ufual manner, with yeaft or barm, falt, water, \&c. It rofe very well in the trough; and after being well kneaded, was formed into loaves, and put into the oven to be baked. I had at the lame time fome other bread made with common meal in the ordinary way. I baked my turnip bread rather longer than the other. When they were drawn from the oven, I caufed a loaf of each fort to be cut ; and found, on examination, the turnip-bread was fweeter than the other, to the full as light and as white, but had a little tafte (though nowife difagreeable) of the turnip. Twelve hours afterwards I tafted my turnip-bread again, when I found the tafte of the turnip in it farce perceivable, and the frell quite gone off. On examining it when it had been baked 24 hours, had I not known that there were turnips in its compofition, I flould not have imagined it: it had, it is true, a peculiar fweetifh tafte, but by no means difagreeable; on the contrary, I rather preferred it to the bread made of wheat-meal alone. After it had been baked 48 hours, it underwent another examination, when it appeared to me to be rather fuperior to the other; it ate freftacr and moilter, and had not at all abated in its good qualities: to be thort, it was fill very good after a week: and, as far as I could fee, kept as well as the bread made of common wheat-meal.
"In my trials of this bread by the tafte, I was not fatisfed with eating it by itfelf; I had fome of it fpread with butter; I tafted it with cheefe; I ate of it toafted and buttered, and finally in boiled milk and in foup: in all thefe forms it was very palatable and good.

Bread, in Kledicine. Befides the alimentary, bread has alfo medical, qualities.-Decoctions, creams, and jellies of bread, are directed in fome difpenfarics. Bread
\}jread. the perfon who bakes it have not lain with his wife the day before; or, if it be a woman, that he have not converfed with har huband. The Abvfinians lave an apartment in their churches for this fervice, being a kind of facrify. F. Sirmond, in his difquifition on azymous bread, thows from the council of Toledo, that anciently there were as many ceremonies ufed in the Latin church in the preparation of the unleavened bread as are ftill retained in the eaftern churches. He eites the example of Queen Radegond., who diftributed with her own hands in the church, the bread which the herfelf had made. It appears alfo from the difpute of Cardinal Humbert againft the Greeks, that in the Latin church no bread was ufed for the euchariff, but what was taken out of the facrifty, and had been made by the deacons, fubdeacons, and even priefts, who rehearfed feveral pfalms during the procefs.

Ecclefiaflical writers enumerate other fpecies of bread allotted for purpofes of religion; as, 1. Calendarius, that anciently offered to the prieft at the kalends. 2. Prebendarius, the fane with capitularis, that diftributed daily to each prebendary or canon. 3. Benediflus, that ufually given to catechumens before baptifm, in lieu of the eucharific bread, which they were incapable of partaking of. 'The panis benedictus, was called alfo panasium and culogiunn, being a fort of bread bleffed and confecrated by the pricft, whereby to prepare the catechumens for the reception of the body of Chritt. The fame was ufed afterwards, not only by catechumens, but by believers themfelves, as a token of their mutual communion and friendhip. Its origin is dated from the 7 th century, at the council at Nantz. In the Gallican chusch we ftill find panis benedialus, pain benit, ufed for that offered for benediction, and afterwards diftributed to pious perfuns who attend divine fervice in chapele. 4. Confecrated bread is a piece of wax, pafte, or ever, earth, over which feveral ceremonies have been performed with benedictions, \&c. to be fent in an Agnus Dei, or relic-box, and preferited for veneration. 5. Unleavened bread, panis azymus. The Jews eat no other bread during their pafiuver: and exact fearch swas made in every houre, to fee that no leavened bread was left. The ufage was introduced in memory of their hafty departure from ligypt, when they had nut leifure to bake leavened. 6. Shew-bread was that offered to God every Sabbath-day, being placed on the goluen table in the holy of holies.

Horfe-BREAD is made of wheat, oats, and beans; to which fometimes are added anifeed, gentian, liquorice, fenugreek, eggs, and ale; and fometimis ryc and white wine are uled.

For race-horfes three forts of bread are ufually given with fuccefe, fur the fecond, third, and fourth nights fceding: they are all made of beans and wheat worked with barm ; the difference confilting chi. fly in the proportion of the two formar. In the firl kind, three times the quantity of bean is ufed to one of wheat; in the fecond, equal quamtities of both; in the ethird, these times the quantity of wheat to one of beans.

- Seo 1f. Alfac* of Brear. "The price and weight of bread is wheat. We hive divers tables of the weights of the losves both of wheat, whenten, and hi. oufchuld breat, at every price of wheat. If bresd want one ouace in $3^{6}$,
the baker furmerly was to fuffer the pillory: now, to forfeit $\overline{5}$ s. . $o r$ every ounce wanting; and for every defect lelis than an ounce, 2s. 6d; fuch bread being complained of and weighed before a magiftrate within 24 hours after it is baked or expofed to fale within the bills of mortality, or within three days in any other place. It is to be obferved, bread lofes weight by keeping: in fome experimente, recited by Batholine, the diminution was uear one-fourth in fix months. The fame author affures us, that in Norway, they make bread which keeps 30 or 40 years; and that they are there fonder of their old hard bread, than elfewhere of new or foft; fince the older it is, the more agrea:ble it grows. For their greateff feafts, particular care is taken to have the oldeft bread; fo that, at the chriftening of a child, they have ufually bread which had been bas ked perhaps at the chriftening of his grandfather. It is made of batley and oat-meal baked between two hollow flones.

BrEAD-Room, in a thip, that defined to hold the bread or biket.

The boards of the bread-room fhould be jointed and caulked, and even lined with tin-plates or mats. It is allo proper to warm it well with charcual for Several days before the bifket is put into it; fince nothing is more injurious to the bread than moifture.

BRLADTH, in Geometry, one of the three dimenfions of bodies, which multiplied into their length conflitutes a furface.

BREAK, in a general fenfe, fignifies to divide a thing into feveral parts with violence.

In the art of war, to break ground, is to open the treuches before a place.

Among fportmen, to brak a borfe in trotting, is to make him light upon the hand in trotting, in order to make him fit for a gallop. To treak a horfe for bunting, is to fupple him, to make hins toke the habit of ruming.

BREAKERS, a name given by failors to thofe billows that break violenily nver locks lying under the furface of the fea. They are diftinguified both by their appearance and found, as they cover that part of the fea-with a perpetual foam, and produce a hoarfe and terrible roaring, vesy differm from what the waves ufually have in a deeper bottom. When a ftip is unhappily driven amorig breakers, it is hardly poffible to fave her, an evely blllow that heaves her upwatds ferves to dafl her down with additional force when it breaks over the rocks or fands beneath it.

BREAKING, in a mercantile fyle, denotes the becoming hankrupt. See Bankrupt.
braining-bulk, in the fea-language, is the fame whit urlading purt of the cargo.

makes it fmooih and Mippery, fo as to divide the fluid more readily, but atio poilons and dedroys thofe worms which at !hrough the planks in the conafe of a voyage. Beaming may be porformed cither when the thip lies aground after the tide has ebbed from l.er, or by docking, or by carcening.

BREAST, in Anatomb, denotes the fore-parts of the thorax. Sce Anstomy Iudex.

Smiting, the brealt is one of the exprefions of penitence. In the Komifs church, the prieft 'euts his breat in rehearfing the general confeffon at the beginning of the mafs.

Breasts, or Mamme, in Anafomy. See Anatomy Index.

The breafts are ufually two; though we allo meet with infances of trimamia or women with three breafts *, and even fome with four, all yielding milk alike $\dagger$.

Breast-Ilooks, in Ship-Building, are thick pieces of timber jncu:vated into the form of knees, and ufed to ftrengthen the fore-part of the fhip, where they are placed at different heights directly acrofs the ftem, lo as to unite it with the bows on each fide. The brealthooks are ftrongly connected to the flem and huspfepieces by tree-nails, and by bolts driven from without through the planks and hawfe-picces, and the whole thicknefs of the breathooks, upon whofe infide thofe bolts are forelocked or clinched upon rings. 'They are ufually about one-third thicker, and twice as long, as the knees of the decks they fupport.

BREASt-Plate, in antiguity, a piece of armour worn to detend the breafl, originally believed to be made of hides, or hemp, twifted into fmall cords, but afterwads made of brals, iron, or other metals, which were fume times fo exquifitely hardened, as to be proof againit the greatell force.

BREAST-Plate, in Jewifh antiquity, ne part of the prieftly $v$ flments anciently worn by the hight priefts. It was a folded piece of the fame rich embroidered ftuff of which the ephod was made; and it was fet with twelve precious flones, on each of which was engraven the name of one of the tribes. They were fet in four rows, three in each row ; and were divided from each other by little golden fquares or partitions in which they were fet. The names of thele fones, ard that of the tribes engraven on them, as alfo their difpofition on the brealt-plate, are as follows:

This brealt-plate was fattened at the four corners; thofe on the top to each flooulder by a golden hook or ring at the end of a wreathed chain; and thofe below, to the girdle of the ephod, by two ilrings or ribbons, which had likewife two rings and hooks.

This ornament was never to be fevered from the prieflly garment; and it was called the memorial, to put the high-prieft in mind how dear thofe tribes ought
to be to him, whofe names he wore oal his brean. It is allo called the lrealplate of jullyment, becrufe it hacl the divine oracle of Uron arad Thamnim annexed to it. Sce Jrim and thummim.

Brefst-Plate, in the manege, the frap of leather that ruls trom one fide of tie faldle to the other, over the how'? briaft, in order to keep the faddle tight, and hinder it from fiding backwards.

Brfast-IHork, in fortification, the fame with Parapet.

BREATH, the air infpired and expelled again in the action of refpration.

Thie ancients were very watchful over the laft breath of dying perfons, which the nearelt relations, as the mother, father, brother, or the like, received in their mouths.

BREATHING, the fame with Respiration.
ERECHIN, a town of Scotland, in the county of Angus, fituated in W. Long. 2. 18. N. Lat. 56. 40. It confilts of one large handfome fircet, and tho Imallet; and is on the fide of a fmall hill, and wafled by the river Southefl, over which there is a fone-bridge of two lurge arches. At the foot of the town is a long row of houfes medependent of it, built on ground held in feu frem the family of Northefk. It is a royal borough, and, with four others, fends a member to paliament. In refpect to trade, it has only a fmall thare of the linen manufacture. It lies at no great diflance from the harbour of Montrofe; and the tide flows within two miles of the town; to which a canal might be made, which perhaps might create a trade, but would be of certain fervice in conveying down the corn of the country for exportation.

Brechin was a rich and ancient bithopric, founded by Pennanter. David 1. about the year 1150 . At the Reformation, Tour in its revenues, it, money and in kind, amounted to 7001. Scolfand. a-year; but, after that event, were reduced to 1501 . chictly by the alieration of lands and tythes by Alexander Camphell, the firf Proteflant bilhop, to his chieftairs the eatl of Acsu 11 . - The Culdees had a convent here. Their abbot Leod was witnefs to the grant made by King David to his new abbey of Dunfermline. In after times, they gave way to the Mathurines or Red Friars. The ruins of their houfe, according to Maitland, are ftill to be feen in the College Wynd.Here was likewife an 青ofpital called Maifon de Dien, founded in 1256 , by William de Breehin, for the repofe of the fouls of the Kings William and Alexander; of John earl of Chefter, and of Huntingdon his brother; of Henry his father, and Juliana his mother. Albinus billop of Brechin, in the reign of Alexander II. was witnefs to the grant. By the walls which are yet ftanding, behind the wefl end of the chief fireet, it appears to have been an elegant little building.

The cathedral is a Gothic pile, fupported by 12 pillars; is in length 166 feet, in breadth 61 : part is ruinous, and part ferves as the parifl church. The weft end of one of the aiftes is entire : its door is Gothic, and the arch confifts of many mouldings; the window of it neat tracery. The fteeple is a handfome tower, 120 feet high; the four lower windows in form of long narrow openings; the belfry windows adorned with that fpecies of opening ca!led the quatrefoil: the top battlemented, out of which rifes a handfome fire,-At a

## B R E [ 392$] \quad$ B R

Brechin, fmall diftance from the aifle flands one of thole finguldr Brecknock.
round towers whofe ufe has fo long bafled the conjec.
tures of antiquaries. Thefe towers appear to have been peculiar to North-Britain and Ireland: in the laft they are frequent; in the former, only two at this time exill. Tuat at Brechin ftood originally detached from other buildings. It is at prefent joined near the bottom by a low additional aille to the church, which takes in about a fixth of its circumference. From this aille there is an entrance into it of modern date, approachable by a few fteps, for the ufe of the ringers; two handfome bells are placed in it, which are got at by means of fix ladders placed on wooden femicircular floors, each relling on the circular abutments withinfide of the tower. The height from the ground to the roof is 80 feet ; the inner diameter, within a few feet of the bottom, is 8 fect; the thicknefs of the wall at that part, 7 feet 2 inches; fo that the whole diameter is ' 5 feet 2 incher: the circumference very near 48 feet; the inner diameter at top is 6 feet $y$ inches; the thicknefs of the walls 4 feet 6 inches; the circunference. 38 feet 8 inches: which proportion gives the buildng an inexpreffible elegance: the top is roofed with an octagoral fpire 23 feet high, which makes the whole 103 . In this fpire are four windows placed alternate on the fides, refting on the top of the tosser; near the top of the tower are four others facing the four cardinal points: near the bottom are two arches, one within another, in relief; on the top of the outmoft is a crucifixion: between the mouldings of the outmoft and inner are two figures; one of the Virgin Mary; the other of St John, the cup, and lamb. On each corner of the bottom of this arch is a figure of certain beafls; one poflibly the Ctlidos nian bear ; and the other, with a long fnout, the boar. The fone-work within the inner arch has a fmall nit or peep-hole, but without the appearance of there hiving been a door within any modern period; yet there might have been one originally; for the filling up confills of larger flones than the refl of this curious rotund. The whole is built with moft clegant malonry, which Mr Gough obferved to be compofed of Go courfes.This tower hath often been obferved to vibrate with a high wind.

The caftle of Brechin was built on an eminence, a little fouth of the town ; it underwert a long fiege in the year 1303 ; was gallantly defended againf the Englifh under Edward III; and, notwithftanding all the efforts of that potent prince, the brave governor Sir Thomas Maule, anceftor of the family of Parmure, held out this fmall fortrefs for 20 days, till he was flain by a ftone caft from an engine on the 20th of Auguf, when the place was infantly furrendered. The family of Panmure have now a noble houfe on the fite of the old cafle.-Brechin is alfo remarkable for a battle fought near it, in confequence of the rebellion raifed in 1452, on sccount of the murder of the earl of Douglas in Stirling caftle. The victory fell to the royalifts under the carl of Huntly. The malecontents were headcd by the earl of Crawford, who, retiring to his cafle of Finhaver, in the frenzy of difgrace declared, that he would willingly pafs feven years in hell, to obtain the glory that fell to the flare of his antagonift.

BRECKNOCK, or Brecon, a town of BrecknockShire in Wales, and capital of the county. It is called by the Welch Aber Hondey, and is feated at the con-

Ruence of the rivers Hondey and URk, over which there Brecknock. is a handfome Aone bridge. It is an ancient place, containing three churches, one of which is collegiate, and is feated at the weft end of the town. The houfes are well built. Here was formerly a ftately caftle, and a Arong wall, through which there were three gates, that are all demolithed. It fends one member to parlament, It is well inhabited, which is in fome meafure oning to its being the town where the affizes are kept; and there is here a confiderable woollen-manufactory. The markets are well fupplied with cattle, corn, and provifions. W'. Long. 3. 15. N. Lat. 52. 0.

BRECKNOCKSHIRE, a county of Wales, bounded by Radnorlhive, on the north; Cardignnfhire and Caermarthenfhire, on the weft; Herefordhire and Monmouthllire, on the eafl ; and by Glamorganflire and Monmouthoire, on the fouth. It is 35 miles in length, 30 in breadth, and about 100 in circumference. It is furrounded with hills, which renders the air in the valleys pretty temperate. The foil on the hills is very ftony, but the flreams defcending from thence into the valleys render them fruitful both in corn and grafs. The chief commodities here are corn, cattle, fifh, and otter's fur, befides manufactures of cloth and ftockings. The principal sivers are the Unk, the Wye, ard the Yrwon. 'The chicf towns are Brecknock, Bealt, and Hay.

Two miles to the eaft of Brecknock is a large lake, called Brecknock Meer, and by the Welch Lhyn Savado dan; it is two miles in length, and nearly the fame in breadth. It contains plenty of otters, tench, perch, and cels. The county fends one member to parliament. It is in the diocefe of Landaff, and contains 61 parifues, and is divided into fix hundreds.

BREDA, a town in Holland, the capital of Dutce Brabant. It is a large, populous, well built city, regularly fortified after the modern way, and is one of the flrongeft places on the Dutch frontiers. It is feat. ed on the river Meck, in a marlly country, which may be overflowed and rendered inaccentible 10 ant army. It is 4000 paces in circumference, and contains ups wards of 2000 boufes. The town is of a triangular fio gure, and the ramparts are all planted round with elms. At every angle there is a gate built with brick. The great church is a noble firucture, remarkable for its fine fire, which is 362 feet high. The maufoleum of Augelbert II. count of Naffau, is a curious piece, as dorned with feveral ftatues and infcriptions fuitable to the occafion. In 1577 the gatrifon delivered this city to the Statesogeneral; but it was retaken in 158 I by Cloude de Barlaimount, affifted by the baron de Frefin, who was prifoner therein. In 1590 , Prince Maurice took it again from the Spaniards.

In 1625 it was invefted by Spinola ; when it endured a fiege too remarkable not to deferve a particular detail.

The citadel, which formed the refidence of the princes of that family, was furrounded by a ditch of pro. digious depth filled with water, and a ftrong wall defended by three great baftions; and the nrfenal was celebrated for its extent, and the vaft quantities of arms and military fores it contained. Spinola, perfeetly acquainted with the ftrength of the place, thought he fhould expole his whole army to imminent deftruction, foould he attempt an affault before he had regularly

Ereda. carried on his approaches. He even refolved upon reducing the city by famine, as the method attended with leaft danger to his army; and accordingly began with drawing trenches round, for the fpace of four mites, erecting forts and redoubts at certain diftances.

On the other hand, the garrifon, confifting of feven thoufand infantry, and feveral troops of horfe, compofed of Englith, French, and I)utch foldiers, took the moft vigorous meafures for their own defence. The Englifh wcre under the command of Colonel Morgan, who had frequently diftinguihed his valour in the lervice of the States: the French were directed by Colonel de Hauterive; and the Dutch troops were fubject to the immediate orders of Colonel Lohre, though the whole received their iufructions from Juftin de Naflau, the governor. The firt advantage was gained by BagJioni, who feized a large convoy of provifions and llores coming up the river, converting the boats into a bridge. This lofs difpirited the befieged, and reduced them to a ftated allowance of bread; and what added to their misfortunes, though they were ignorant of it, was the death of Prince Maurice, from whom they were in hopes of receiving telief.

Meanwhile Spinola profecuted the fiege with the utmoft diligence and vigour. On his puhing his trenches near the baftions, the befieged began a terrible fire to retard his approaches, and kept it up with fuch vehemence and obflinacy, that Spinola was in hopes they muft foon furrerider for want of ammunition. But here he formed a falle judgment of the prudence of Juftin de Naffau, who finding he could not accoinplifh his purpofe by his fring, refolved to try the effeet of water. With this view, he fopped up the courfe of the river Marck; and having formed a large bafon of water, opened the fluices, fwept away men, horles, and houfes, in an inundation, and overflowed the whole country. The chief force of the torrent fell upon Spinola's quarters, and he exerted his utmoft ability to remove the confequences. He dug large pits, and cut out ditches and canals to receive the water; but thefe being filled, and the whole ground covered over, fo as to appear one uniform mals of water, ferved only to entrap his cavalry. The inundation was augmented by the rains which happened to fall; a mortality among the foldiers and horfes enfued; and of his whole army, Spinola had farce twelve thoufand men fit for fervice by the month of December. With thefe inconfiderable remains, lines of vaft extent were to be defended, the works were to be advanced, the fallies from the garrifon repulfed, and provifions to be conveyed into the camp, while Spinola, the foul of action, was confined to a fick-bed.

In the garrifon, an epidemical difeafe and fcarcity likewife prevailed; but the excellent regulations made, and frictly obferved, enabled the town to hold out three or four months beyond the time expected. The magiftrates bought the corn for the bakers; obliging them ro fell the bread to the inhabitants and gartifon at a price fixed, and returning the overplus of their pay to the foldiers. A variety of other prudent regulations were eflablified by the magiftrates and governor, fuch as we do not find equailed by any intances recorded in hiftory upon a fimilar occafion, and all esincing the fleadinefs, fagacity, courage, and ability, of
Voz. IV. Part I.

Juflin de Naffau. A kind of rivalhip appeared be tween him and Spirola, which fhould beft fulfil their feveral duties. The Spanifh general caufed himfelf to be carried about the works in a litter; he infpecteci and directed every thing; and difplayed the activity of full bealth at the time his life was in imminent danger from an acute malady. He ordered feveral breaches in the line to be prepared. Thefe the Hollanders liad made by fap, with a view of introducing fuccours to the befieged. He drove piles into all the ditches and canals through which their boats could pafs. He made drains to clear off the waters of the river Marck ; and fucceeded in a great meafure by dint of perfeverance, vigilance, and conduct. He was now reinforced with a body of eight thoufand foot, and one thoufand five hundred horle; many of the fick were perfectly recovered by his extreme care; and his army was again become formidable, amounting to twenty-five thoufand infantry, and eight thoufand cavalry. Nor was Prince Henry idle, who now fucceeded to the titles and dominions of his brother Maurice, and was elected governor of Holland, Zealand, Guelderland, Utrecht and Overyffel. He preffed Fiance for affirt. ance, and was joined by a body of cavalry under the conduet of the count de Rouffi and the marquis de Rambures. With this reinfoccement, and a body of German infantry, he attacked the enemy's lines, and after an obfinate conflict was repulfed. He advanced a fecond time; but Spinola, who entertained a high opinion of his valour and conduct, did not choofe to wait for him in bis lines; he marched out with the greater part of his army, feized opon a convenient polt, and obliged the prince a fecond time to retire towards Boifleduc. Henry, finding no profpect of being able to relieve the garrifon, fent a permiftion to the governor to furrender on the beft conditions he could obtain. This plan, which was figned with no name, fell into the hands of the befiegers, and Spinola fent it open, by a trumpet, to Juftin de Naffau, offering him an honourable capitulation; but that intrepid governor, fufpecting the letter was forged, becaufe it was anonymous, replied civilly, that a permifion was not an order to furrender; and that he fhould better follow the prince of Orange's intentions, and flow his refpect for Spinola, by continuing to defend the city to the laft extremity.

By this time the garrifon was dimininged by difeafe, fatigue, want, and hardhip, to balf the original number; but Juftin put on fuch a countenance, as concealed his fituation from Spinola. He frequently [allied out upon Baglioni's quarters, where the Italians were perillhing with cold and hunger, the whole fubfiftence of the befiegers depending on the contributions raifed in the neighbouring territories. This inconvenience produced a mutiny in the camp, that could not be appeafed without applying violent remedies, and executing within fight of the whole army the chief ringleaders. One of the mutineers blew up Spinola's chief magazine, ralued at two hundred thoufand livres. Uiged more by neceflity than compafion for the befieged, Spinola fent a meflage to the governor, exhorting him not to force hin to extremities, which might be attended with fatal confequence to a brave garrifon; but Juflin, with equal art and diffimulation, anfwered, that Spinold was certainly ill ferved by his 3 D

## B R E

Breda. Spies, as he appeared wholly unacquainted with the ftate of affairs in Breda, which was fully provided for a fiege of fereral months, and defended by foldiers who preferred death to the neceffity of furrendering. At that time the befieged we:e not informed of the death of the prince of Orange. They flatered themfelves with the hepes of fpeedy fuccour, and were entirely ignorant of Prince Henry's late difappointment. When they wrote to the army an account of their miferable condition, Henry returned an anfwer, written with his own hand, and figned with his name, apprifing them of the death of Maurice, the unfuccelsful attempts made to raife the fiege and throw in fuccours, the grat inferiority of his troops in point of numbers, and the death of King James, whereby he was difappointed of a ftrong reinforcement ; coricluding, that he left the city entirely to the difcretion of the governor and other principsl officers. Juftin was thunderftruck with the contents of this letter. He had hitherto concealed the total want of provifion ard ammunition from the enemy, and his own garrifon, except a few officers and other perfons in whom he repofed confidence. The colonels Haurerive and Morgan would liften to no propofitions, faying, that the nonour of their feveral counries was concerned, and that they were refponfible for the conduct of the Englih and French forces. They therefore required an exprefs order from the prince of Orange to furrender, notwithfanding they pined under the united preflure of fatigue, farcity, and difeafe. Jallin acquainted the prince with their refolutior, and he fent back an order to furrender, theeatening with capital punithment whoever fhould difobey; but he requefted that the garrifon would firf acquaint him by a certain number of fires, lighted up in different parts of the city, how many days they fhould be able to hold out. Upon receipt of this order, eleven fies were kindled ; but as the prince had fent a dupli. cate of the onder by another meffenger, and this fell into the hands of the enemy, Spinola was now acquainted with the defperate circum?tances of the befieged. By this acruifition he likewife difcovered the myftery of the elevers fires: a council of war was affembled to deliberate whether they flould ftay the eleven days, and then oblige the garrifon to furrender at difcretion, or immediately offer conditions worthy of fo brave a garifon. The Spanill oficers were of the former opinion; the count de Berg and Spinola fupported the latter. At laft the marquis, determined to purfue the dictates of his noble generofity, fent fuch terms as could not be refufed. The count de Berg conducted the negociation. Two feparate capitulations were drawn up, one for the garrifon and the other for the city, and both the moft honourable and advantageous that could be devifed. 'They were accepted, and the garrifon marched out on the 6th of June, after having fuftained a fiege for ten months, whereby they were diminifled two thirds; nor was the lofs inferior on the part of the inhabitants. Spinola drew up his army to falute them, and, furrounded by his field officers, paid particular compliments to the governor, the colonels Morgan, Hauterive, and Lohre. He diffributed money among the foldiers, ordered the fick and wounded to be treated with the utmoll tendernefs, conveyed the reft in the manner moft commodious for them to Gertruydenburg, and difplayed all the fenti-
ments of a hero in the regard paid to the valour and merits of his enemies.

Breda was retaken by the prince of Orange, for the United Provinces, in 1637 . There was a congrefs held there, and peace concluded, in 1667 , between the Dutch and the Englifh. E. Long. 4. 45 . N. Lat. 51.35.

Breda, Folon Vav, painter of hiftory, landfcape, and converfations, was born at Antwerp in 1683 , the fon of Alexander Van Breda, an artift who was much efteemed for latidfapes, views of particular fcenes in Italy, fairs, and markets, with a variety of animals and figures. He was infructed by his father : and having the advantage of a good example and a good director, added to his own great application, he continued his fudies with his father till he was 18 ycars of age. A mong the variety of capital paintings which were at that time in the poffeffion of Jolin de Wit at Antwerp, Breda fixed upon tbofe of Velvet Breughel, which he copied with extraordinary fuccefs; and he was alfo eniployed for nine years in copying the pifures of feveral other great matters; which he performed with fuch incredible exactnefs as farcely to lcave it in the power of any judicious perfon to diftinguifh the originals from the copies. Having at length eftablihed his reputation in Holland, he went to London with Ryfrack the fculptor, and there gradually rofe into fuch efteem, that he was vifited by perfons of the higheft rank, and particularly patronized by the unfortunate earl of Delwentwater, who was beheaded for rebellion in $57: 5 . \mathrm{He}$ found fo much encouragement in Londan, that he was employed by the court and the nobility, and could fcarce execute the large demands for his performances. After a refidencc of lome years in England, he returned to Antwerp loaded with riches, the honourable teAtimonies of Englift liberality, as well as of his own merit ; and in the year 1746 , when Louis XV. arrived in that city, he fo far honoured this mafter as to purchafe four of his piefures: One reprefented Carif at the fea of Tiberias; another, Chrift performing miracles; and the other two were landfcapes, with a number of figures, fo exquifitely drawn and finifhed that it would be difficult to diftinguiftied them from thofe of Velvet Breughel. He certainly approached nearer to thofe great mafters whofe manner he imitated, namely, Breughel and Wouvermans, than any other artift of this time. His landfapes are in the ftyle and tafte of the former; and his converfations, hiftorical figures, fairs, fkimmifhes, or battles, are in the manner of the latter. His colouring is good; his Pilkington's touch neat; his fries and diftances natural and beati- Diif. ful; and lis tafle of defign agreeable. He had as much fire in his compofition, and perhaps more genius, than Breughel, in thofe fubjects which he painted in the flyle of that mafler : his figures are generally well plared; his grounds fkilfully broken; every fmall figure hath its particular charakter, and occupies its proper place; and, in fhort, he is a painter of fucla a rank, that the valuc and eflimation of his works muf always increafe. He died in 1750.

BREECH of a great gun, or cannon, the end next the touch-hole.

BREECHES, a garment worn by males, reaching from the girdle to the knees, and ferving to cover the hips, thighs, \&c.

## B R E

The ancient Romans had nothing in their drefs anfwering to our breeches and fockings; inftead of which, under their lower tunics and waiftcoats they fometimes bound their thighs and legs round with filken farves or fafciar, called tibialia and femoralia. Breeches appear to be a babit peculiar to the barbarous nations, elpecially thole inhabiting the colder countries of the north; whence ' 「acitus calls them barbarum tegmen. We find mention made of them among the ancient Getre, Sarmatx, Gauls, Germans, and Britons; they alfo obtained among the Medes and Perfians, as being a people of Scythian origin; they alfo afterwards got footing in Italy, fome pretend, as early as the time of Augultus; but without much foundation, that emperor's breeches, mentioned by Suetonius, being apparently only fwaths tied over his thighs. However this be, breeches were at laft received into Italy, and grew fo highly into falhion, that it was thought neceflary, under Honorius and Arcadius, to reftrain them by law, and expel the bracarii or breeches-makers out of the city; it being thought unworthy of a nation that commanded the world, to wear the apparel of barba. rians.

BREECHINGS, in the fea-language, the ropes with which the great guns are lafhed or faltened to the hip's fide. 'They are thus called, becaufe made to pals round the breech of the gun.

BREEDING, in a general fenfe, the producing, nourifhing, and educating, all manner of young animals.

Breentng, in a moral fenfe, denotes a perfon's deporment or behaviour in the external offices and decos rums of focial life. In this fenfe we fay well-bred, illbred, a man of lreeding, \&c. Good-breeding is hard to define; none can underftand the fpeculation but thofe who have the practice. Good-breeding amounts to much the fame with what is otherwife called polilenefs, among the ancient Romans urbanity. Good-breeding is near to virtue, and will of itfelf lead a man a great part of the way towards the fame. It teaches him to rejoice in atts of civility, to feek out objects of compallion, and to be pleafed with every occafion of doing them good offices. Lord Shaftefbury compares the well-bred man with the real philolopher : both characters aim at what is excellent, afpire to a jult tafte, and carry in view the model of what is beautiful and becuming. The condust and manners of the one are formed according to the molt perfect eafe, and good entertainment of company; of the other, according to the fricteft intereft of mankind: the one according to his rank and quality in his private Itation ; the other according to his rank and dignity in nature. Horace feems to have united both characters,
थuid verum atque dicens curo et rogo, et omnis in boc fum.
See the article Good-MANNERS.
Breeding of Horjes. See Equus.
BreEDiNg of Fijb. The neceffary qualities of a pond, to make it ferve well for breeding filh, are very different from thofe which are to make it ferve for the feeding of them, infomuch that fome particular ponds ferve only for one of thefe purpofes, and others for the $n$ ther; and farce ever the fame pond is found to anfwer for them both. In general, it is much more rare to find a good breeding pond than a good feeding one.

395 ] B R E
The beft indications of a grood-breeding pond are thele; Brecolfer: that there be a good quantity of sulties and grafo about its fides, with graselly fhoals, fuch as harfe-ponds ufually have: when a pond has this property, and takes to the breeding of firh, it is amazing what a progrefs will be made in a little time. The fpawn of fith is prodigious in quantity; and where it fuccects, one is able to produce many millin.es: thus, in one of thefe breed. ing ponels, two or threc melters, and as many fpawners, will, in a very little time, fock the whole country. When thefe ponds are not meant entirely for breeding, but the owner would have the fill to grow to fome fize in them, the mothod is to thin the numbers, becaufe they would otherwife ftarve one another, and to put in other fifh that will prey upon the young, and thin them in the quickeft manner. Eels and perch are the moft ufeful on this account ; becaufe they prey not only upon the fawn itfelf, but uron the young fry from the fird hatching to the time they are of coniderable fize. Some fifn are obferved to breed indifferently in all kinds of waters, and that in confiderable plenty; of this na. ture are the roach, pike, and perch.

BREENBERG, Bartholonew, an excellent painter, was born in 1620 . He is bell krown by the name of Bartolomeo, an appellation beftoved upon him, for diftinction fake, by the fociety of Flemin printers at Rome called Bentuogels. He was born at Utrecbt; but in the early part of his life went to Rome. His Audies in the art of painting were attended with fuch fuccefs, that lis pictures were held in the higheft cftimation. He gieatly excelled in landfcapes, and thefe he enriched wit! hiftorical fubjects. The figures and auimals which he introduced were very fpirited, and drawn in a mafterly manner; efpecially when they were not larger than the fize in which he ufually painted them. He died in 1660 , aged 40 years. He alfo etclied from his orn deffgns a fet of 24 Viezus and Land/capes, ornamented with Ruins.

BREEZE, a hifting wind that blows from fea or land for fome certain hours in the day or night; common in Africa and fome parts of the Eaft and TVelt Indies.

Breezes differ from etefue or trade-winds, as the former are diurnal, or lave their periods each diy; and the latter are anniverfary, and blow at a difance from land. The fea-breezes rule by day, and the land-breezes by uight; fo that, dividing their empire, they remain conflant as the feafons of the year, or courfe of the fun, on which they feem to depend: not but that they appear fooner or later, ftronger or weaker, in fome places than in others; and vary the alternative according to the feveral latitudes, fituations, and foils, Evc. of the countries where they are found. Sec the article Wind.

Brefze-F/y. See Tabanus, Entomology Index.
BREGENTZ, or Bergentz, a town of Tyrol in Germany, fituated at the eall end of the lake of Conflance, in E. Long. 9.40. N. Lat. $47 \cdot 36$.

BREGMA, in Anaromy, the fame with finciput. Sce Anatomy Index.

BREEHAR, one of the Scilly iffonds, lying almolt directly weft of the Land's End in Cornwall, about the diltance of 30 miles. It lies between the inles of Miw carnl, Guel, Trefcaw, and Samfon. It is the roughelt and moft mountainous of them all, and not many years

## B R E

Brchons 11 Bremer.
fince, there were only two families in it, but now there are 13. There are a few poor houfes called the town of Brebar; and there are feveral barrows edged with ftone, in which they buried confiderable perfons in ancient times; befides many monuments of the Druids. Some are of opinion, that this with the rell made but one illand, which is the reafon why fo many antiquities are now found in moft of them.

BREHONS, the provincial judges among the ancient Irith, by whom juftice was adminiftered, and controverlies decided. Thefe fages were a diftinct tribe or family, to whom competent lands were allowed in inheritance. In criminal cafes the brehon had the eleventh part of all the fines; which could not but be confiderable at a time when murders, rapes, robberies, and the like offences, were only fubject to pecuniary commutations.

Brehon-Laus, or Leges Brehonica, denote the general maxims or rules of law obferved by the brehons, and baving the force of laws throughout all the provinces of Irelond. Several fragments of the leges brebonice are fill extant in public and private libraries. The moft complete collection is that belonging to the duke of Chandos; containing $22 \frac{1}{2}$ theets clofe written, full of abbreviated words, and not very legible. By the ftatute of Kilkenny, made under Edward IlI. it is enated that no Englifh fubject flall fubmit to a trial by the brebon law, on the penalty of high treafon. Notwithftanding which, many were fill under a neceffity of being concluded by the Irifh laws and cuftoms, till the whole kingdom was fettled on an Englifh bottom by King James I.

BREMEGARTON, a handfome and pretty confiderable town of Swifierland, in the territory of FyenAempter, between the cantons of Zurich and Bern. The inhabitants deal chielly in paper ; and their religion is the Roman-catholic. It is divided into the upper and lower towns, and is very advantageoully feated on the river Rufs. E. Long. 8. 25. N. Lat. 47. 20.

RREMEN, a large, populous, and very ftrong town of Germany, capital of a duchy of the fame name, with an archbilliop's fee, fecularized in favour of the Swedes, but now belongs to the cletor of Hanover. The river Wefer runs through the middle, and divides it into the old and new town. In September 1739, while the in$h_{\text {babitamts were afleep, the magazine of powder was fet }}$ on fire by lightning, and all the houfes were fhaken, as if there had been a violent earthquake, which threw them into a terrible conflernation. The town is divided into four quarters, each of which has a burgomafer; and in the middle there is a large market-place, with the fiatue of Rolando: Bremen drives a very large trade for iron, flax, hemp, and linen, with France, England, Spain, and Portugal; and in return takes back other provifions, with which it fupplics Weftphalia and the countries about Hanover. It alfo gets a great deal by its filleries; the trade for blubber with the fouth of Germany is very confiderable. E. Long. 8.45. N. Lat. 53. 40.

BREMEN, a duchy of Germany, in the province of Lower Saxony, lying between the rivers Wefer and the Elbe; of which the former feparates it from the duchy of Oldenburgh, and the other from that of Holftein. The air is cold ; but the country is fertile, and well
peopled. It formerly belonged to the Swedes, but was Bremerrafterwards fold to the king of Great Britain, as elec- Veerd tor of Harover, in 1716 . In the winter it is fubject Brerewoos. to inuidations. In 1617, on Chriftmas-day, feveral $\underbrace{\text { Brerewood. }}$ thoufand cattle were downed, befides feveral hundred of mell: and the country was fo covered with water, that it has coft immenfe fums to repair the dykes. Bremen is the capital town.

Bremin-Vecrd, a town of Germany, in the circle of Lower Saxony, and duchy of Bremen. It is an open town, feated on the tiver Ooft, and was formerly the place of refiderice of the archbithop. E. Long. 8. 35. N. Lat. 53. 58.

Brennage, Brennagium, in middle-age writers, a kind of tribute paid in lien of bran, or bran itfelf, which the tenants were obliged to furninh for the fupport of the lord's hounds. The word is alfo written brennage, brenagium, and brenaige, bernagium, brenaticum, and brennaticum.

BRENNUS, a celebrated captain among the Gauls, who, about 388 years before the Chriftian era, entered Italy with a powerful army; made great conquefts there; defeated the Romans; and facked Rome. 'The capitol alone was defended; and Camillus coming to iss relief, drove the Gauls not only out of Rome, but out of all Italy. See (Hifory of) Rome.

BRENT, a town of Devonhhire, with a market on Saturdays, and two fairs, on May $13^{\text {th }}$ and October 1oth, for horned cattle. It is but a fmall place, and lies on the road from Exeter to Plymouth, being 26 miles fouth-weft from the former, and 198 weft by fouth of London. W. Long. 5. 7. N. Lat. 50. 30.

BRENG-Goofe, a fpecies of goofe with a black neck, and a white collar round; ufually confounded with the barnacle, though in reality a diftinct fpecies. See Anas, Ornithology Index.

BRENTFORD, a town of Middlefex, on the great London road to the well. It is divided into old and new Brentford, in which laft are the church and mar-ket-houfe, and where the county elections are held. It is a long place, well ftocked with public houfes, and is feated on the river Thames, in W. Long.o. 1o. N. Lat. 51. 26.

BRENTWOOD or Burntwood, a town of Effex in England. It ftands on a rifing ground in the road from London to Colchefter, and has feveral good inns. E. Long. 0.25 N. Lat. 5 I. 38.

BREREWOOD, Edward, a very learned Englifh mathematician and antiquary, was the fon of Robert Brerewood, a tradefman, who was thrice mayor of Chefter; and born in that city in the year 1565 . He was educated in grammar learning at the free frhool in Chefter; and afterwards admitted, in 1581 , of Brazen-nofecollege in Oxford. In the year 1596, he became the firlt profeffor of aftronomy in Grefham-college in London; where he led the fame private and retired courfe of life that he had before done in Oxford. He died there of a fever, upon the 4 th of November $161_{3}$, much lamented. He was a great fearcher into antiquity and curious knowledge; but is remarkable for having never publifled any thing during his lifetime. After his death came out the following works. 1. De ponderibus et pretiis veterum nummorum. 2. Inquiries touching the diverfities of languages and religion through the chief parts of the world. 3. Elementa logica in gra-

## B R E [ 397 ] B R E

Brefcia tiam fiutliofic juventutis in Acad. Oxo:. 4. Traçatus Brcilau $\underbrace{\text { Brehau. }}$ quidam logici. 5. 6. Two teatifes on the Sabbath. 7. Tractatus duo, quorum primus of de meforis, fccun-
dus de oculo. 8. Commentariion etbica Ariforclis. Mr Wood tells us, that the original manufript of this, written with his own hand, is in the fimalleft and neatef characters that his eyes ever beheld: and that it was finifhed by him on the 27th of OAober 1586. 9. Patriarchal government of the ancient church.

BRESCIA, a ftrong and handfome town of Italy, with a bilhop's fee and good citadel. It is the capital of Brefciano in the territory of Venice, and is feated in an agreeable plain on the river Garza, in E. Long. 10. 5. N. Lat. 45.3 s.

BRESCIANO, a province of Italy in the territory of Venice; bounded on the north, by the Grifons and the bifhopric of Trent ; on the eaft, by the lake Garda, the Veronefe, and the duchy of Mantua; on the fouth, by the duchy of Mantua and the Cremonefe; and on the weft by the Cremafco, the Bergamafoo, and the Valtelina. It is watered by feveral fmall rivers, which render it very fertile; and is full of towns and villages, of which Brefcia is the capital.

BRESELLO, a fmall town of Italy, in the duchy of Modena, feated on the river $\mathrm{P}_{0}$, in E. Long. 10.25. N. Lat. 44. 55.

BRESCICATE, in commerce, a kind of baize, in which there is fome trade carried on with the negroes, between the river Gambia and Sierra Leona. The beft forts for tbat purpofe are the blue and the red.

BRESLAU, a fmall duchy of Lower Silefia, in Germany, lying between thofe of Wolaw, Olfe, Brieg, Schwednitz, and Lignitz. It is everywhere level and flat: is an excellent corn country, yielding alfo good pafture ; abounding alfo with herds of cattle aud flocks of theep; but deftitute of wood, except in one diftrict or circle ; and the roads in general are very bad. It is an immediate principality, that is, one of which both the property and jurifdiction belong to the king, forming a part of one of the three bailiwics into which all the immediate principalities are divided.

Breslau, the chief town of the duchy of that name, and of all Silefia, is fituated at the conflux of the Oder and Ohlau, in E. Long. 17.5. N. Lat. 51. 4. Including the fuburbs, it is of great extent; having many large regular fquares, broad ftreets, ftately public and private edifices; but the fortifications are of no great importance. Here are in particular a great many churches and convents belonging to the Catholics; of the former are feveral alfo belonging to the Lutherans, one to the Calvinifts, and another to the Greeks. The Jews have likewife two lynagogues, the bifhop a ftately palace, and the Lutherans two gymmafiums. The Popilh univerfity is a noble ftructure, nor is the exchange deftitute of magnificence. This city is the feat of all the high colleges; and the third in rank, next to Berlin and Konigferg, in all the Pruffian dominions. The magiftracy of it is Lutheran, and its trade and manufactures are very confiderable. Several of the monafteries and nunneries are very magnificent ; and there are alfo fome good public libraries in it, with twn armouries, a college of phyficians, and a mint. Breflau is very populous, and much frequented by Hungarian, Bohemian, Polifl, and other merchants, having feveral
yearly fairs. The city was taken by the king of Pruffia in 1741, and retaken by the Auftrians in 1757; but the king of Prufliatook it back again in the fame year,

Brefic
Brcfe. and gained a fignal victory over the Auftrians at Leu. then, a village not far from the capital.

BRIESSL, a province of France, bounded on the north by Burgundy and the Franche Compte; on the eall, by Savoy; on the fouth, by Vienuois; on the welt, by the principality of Dombes and the Somme. It is 40 mulces from worth to fouth, and 23 from caft to weft. It is fertile in corn and hemp, has fine paftures, and feveral lakes with plenty of fifh. It is divided into the higher and lower; the firlt is on the fide of Bourges, and the fecond towards St Trivier and the river Sonne. The Irench got poffeflion of it in 1601 . The principal places are Bourg en Breffe, Montluel, Pont de Vaux, and Coligny.

BR ESSICI, in Geography. See Breste.
BREST, a maritime town of France, in the department of Finifterre, feated on the declivity of a hill on the fide of its port, which is the largeft in the kingdom, and will hold 500 mips at a time. There is an arfenal with fea-ftores, which was placed there on account of its nearnefs to the woods, mines of iron, and other things proper for the building of hips. It was entirely confumed by fire in 1744 , which was an irreparable lofs to France. The entrance into the port is guarded by a frong cafle feated on a rock, which cannot be attempted on the fea fide, becaufe it is craggy, and is defended on the land fide by a large ditch and other fortifications. The Atreets of Breft are very narrow, ill contrived, few in number, and have all a defcent. A great quay furrounds this fide of the port, which is above a mile in length, and 200 paces broad; and there are magazines on the quay full of all foreign merclandifes. On the other fide of the port the firse church of Notre Dame is fituated; and in a faburb, which is as big as half the city, there is a flrong tower oppofite to the caftle, at the entrance of the port ; there is alfo a great quay on this fide, bordered with large magazines, partly within the rock, which has been cut away to enlarge the place. Thefe are extended almoft as far as the bottom of the harbour, where there are two docks very commodious for the building of large fhips: the thops and houfes of the workmen are all around them: the rope-walks are feparated from the city by one of thefe docks. The entrance into the harbour is called the gullet, and is a paffage extremely difficult on account of the funk rocks on both fides of the fhore; but thero are experienced pilots who carry fhips in very fafely. The Englifh attempted to take poffelfion of this harbour in 169 , , hut were difappointed. W. Long. 4 . 26. N. Lat. 4 e 23 .

Brest, or Breaf, in Architçfure, a term fometimes ufed for the member of a column, more ufually called torus. See Torus.
$B_{\text {REST }}$.Summers, in timber buildings, are pieces in the outward fide thereaf, into which the girders are framed: this, in the ground-floor, is called a cell; and, in the garret-floor, a beam.- As to their fize, it is the fame with that of giders. See Girders.

BRESTE, the palatinate of, is one of the provinces of Cujava, in Poland. It lies between the palatinates of Ploeiko, Rava, and Lencici Wiadiflaw. It is divi-
ded into four chatelanies, and Brefte is the capital of the rihole.

Breste, or Bre $/$ fric , the capital of the palatinate of Breflici, and of Polefia in Poland, feated on the river Bog, 80 miles call of Warfaw, and fubject to Poland. It is a fortified town, and has a calle built upon a rock. Here is a famous fynagoguc, reforted to by the Jews from all the countrics in Europe. E. Long. 24.0. "1. Lat. $4^{1 .} 35$.

BRET, a name the people on the coafts of Lincolnfhire give to the common turbot, a fifh extiemcly plentiful with them, and taken in vaft abundance. The way of catching them is in a net trailed on the ground by two horfes; the one going up to the middle of bis body in water, the olher on fhore.

BRETESSE, in Heraldry, denotes a line embattled on both fides.

BRETHREN and sisters of the free spirit, in Ecclefiaftical Hiflory, an appellation affumed by a new feet which fprung up towards the clofe of the thirteenth century, and gained many adherents in Italy, France, and Germany. They took their denomina* tion from the words of St Paul, Rom. chap. viii. ver. 2. 14.; and mintained, that the tue children of God were invefted with the privilege of a full and perfect fresdom from the jutifdiction of the law. They were enthufiafts to a degree of diftration, both in their principles and practice. They refembled the Begbards, by which name they were fometimes called, in their afpect, apparel, and manner of living. Some of their profeffed principles sefembled thofe of the Pantheifts; for they held, that all things flowed by emanation from God; that rational fouls were portions of the Deity, and that the univerfe was God; and that, by the power of contemplation, they were united to the Deity, and acquired hereby a glorious and fublime liberty, both from the finful lufts and the common inftincts of nature : and hence they concluded, that the perfon, who was thus abforbed in the abyfs of the Deity, became a part of the Godhead, and was the fon of God, in the fame fenfe and manner that Chrift was, and that he was freed from the obligation of all laws human and divine. They treated with contempt all Chriftian ordinances, and all external acts of religion, as unfuitable to the flate of perfection at which they were arrived. Some of them were honefl but deluded enthufiafts; and they endured the torments inflicted upon them by the inruifitors with aftonifting calmnefs and triumph. Others proceeded to the mof extravagant licentioufnefs of corduct. They held their fecret affemblies fark naked, and lay in the fame beds with their fpiritual finers, and indiferiminately with other women, without the leaft feruple or hefitation: modefly and decency being, accordirig to their creed, marks of inward coriuption. And fome of them procceded ftill farther, and maintained, that the divine man, or believer, could not fin, let his conduet be ever fo horrible or atracious. Many ediels were publified againf them; but notwithanding the feverities they fuffered, they continued till about the middle of the fifteenth century. They were called by feveral other names, fuch as Schweflrionce, Picards, Adamites, and Turlupins.

Brethren and Clerks of the Common Iife, a denomination alfumed by a rcligious fraternity towards the lat-
ter end of the fifteenth century. They lived under the Brethren, rule of St Auguftin, and were eminently ufeful in promoting the caufe of religion and learning. Their fociety was firft formed in the preceding ceritury, by Gerard de Groote, a native of Deventer; but did not flourifh till about the period above mentioned, when it obtained the approbation of the council of Conftance, and became very refpectable in Holland, the Luwer Germany, and the adjacent provinces. It was divided into two clafies; the lettered lirethren or clerks, and the illiserate: they lived in feparate habitations, but maintained the clofert fraternal union. The former applied to the fludy of polite literature, and the education of youth; whilf the latter were employed in manual labour, and the mechanic arts. They were frequently called Begbards and Lollardi, by way of reproach.

White Brethren, fratres albati, were the followers of a leader about the beginning of the fifteenth century, who was arrayed in a white garment; and as they were alfo clothed in white linen, they were difinguithed by this title. Their leader was a prieft from the Alps, who carried about a crofs, like a flandard, and whofe apparent fanctity and devotion drew together a number of followers. This deluded enthufiaft practifed many acts of mortification and penance, endeavoured to perfuade the European nations to renew the holy war, and pretended that he was favoured with divine vifions. Boniface IX. ordered him to be appreliended and committed to the flames, upon which his followers difperfed.
bRETON, or Cape-Britain, an ifland near the eaflern continent of North America, lying between 45 and 47 degrees of north latitude. It is feparated from Nova Scotia by a narrow ftrait called Canfo, and is about 100 miles in length, and 50 in breadth. It is furrounded with little fharp-pointed rocks, feparated from each other by the waves, above which lome of their tops are vifible. All its harbours are open to the eaft, turning towards the fouth. On the other parts of the coall there are but a few anchoring places for fmall veffels, in crecks, or between iflets. Except in the hilly parts, the furface of the country has but little folidity, being every where covered with a light mofs, and with water. The dampnefs of the fuil is exhaled in fogs, without rendering the air unwholefome. In other refpests, the climate is very cold; owing either to the prodigious quantity of lakes, which cover above half the illand, and remain frozen a long time; or to the number of forefts, that totally intercept the rays of the fun; the effect of which is befides decreafed by perpetual clouds.

Though fome fiflermen had long reforted to this ifland cvery fummer, not more than 30 or 40 had ever fixed there. The lirench, who took puffeflion of it in Auguft 1713 , were properly the firf inhabitants. They changed its name into that of Ife Roynle, and fixed upon Fort Dauphin for their principal lettlement. This harbour was two leagues in circumference. The fhips came to the very thore, and were fiteltered from winds. liorclls aflording oak fufficient to fortify and build a large city, were near at hand; the ground appeared lefs barren than in other parts, and the fifhery was more plentiful. This harbour might have been sendered impregnable at a crifling expence; but the difliculty

## B R E

Breton.
difficulty of approaching it (a circumfance that had at firf made a fronger impreflion than the advantages relulting from it) occafioned it to be abandoned, after great libour had been bellowed upon the undertaking. They then turned their views to Louifbourg, the accefs to which was eafier; and convenience wan thus pieferred to fecurity: the fortification of Louibourg, however, was not begun till 1720 .

In the year 1714 , fome filhermen, who till then had lived in Newfoundland, fettled in this iftand. It was expected that their number would foon have been increafed by the Acadians, who were at liberty, from the treaties that had been granted them, to remove with all their effects, and even to difpofe of their eflates; but thefe hopes were difappointel. The Acadians chole rather to retain their poffefions under the dominion of Britain, than to give them up for any precarious advantage they might derive from their attachmeat to France. Their place was fupplied by fome diftrefied adventurers from Europe, who came over from time to time to Cape Bretor, and the number of inhabitants gradually increafed to 4003 . They were fettled at Louifbourg, Fort Dauphin, Port Touloufe, Nerucka, and on all the coalts where they found a proper beach for drying the cod. The inhabitants never applied themfelves to agriculture, the foil being unfit for it. They often fowed corn, but it feldom came to maturity; and when it did thrive fo much as to be worth reaping, it had degenerated fo confiderably, that it was not fit for feed for the next harvelt. They have only continued to plant a few pot-herbs that are tolerably well tafted, but mult be renewed every year from abroad. The poornefs and ficarcity of paltures has likewife prevented the increafe of catile. In a word, the foil of Cape Breton feemed calculated to invite none but fithermen and foldiers.

Though the ifland was entirely covered with forefts before it was inhabited, its wood has fcarce ever been an object of trade. A great quantity, however, of foft wood was found there fit for frising, and fome that might oe ufed for timber : but the oak has always been fearce, and the fir never yielded much refin. The peltry trade was a very ineonfiderable coject. It confilted only in the fkins of a few lymies, elks, mulk-rats, wild cats, bears, otters, and foxis both of a red and filver-gray colour. Some of thefe were procurcd from a colony of Mickmac Indians who had fettled on the illand with the French, and never could raife more than 60 men able to bear arms. The sell came from St John's, or the reighbou:ing continent. Greater advantages mighe poffibly have been derived from the coal-mines which abound in the ifland. They lie in a horizontal direction: and being no more than fix or eight feet below the furface, may be worked without digging decp, or draining off the waters. Notwithftanding the prodigious demand for this coal from New England, from the year 1745 to 1749 , thefe mines would probably have teen forfaken, had not the hips which were fent out to the French illands wanted ballaft. In one of thefe mines a fire has been kindled, which could never yet be extinguifhed.

The peopie of Cape Breton did not fend all their fing to Europe. They fent past of it to the French fouthern inlands, on board 22 or 25 hips from 70 to 140 tons burden. Befides the cod, which made at leaf half
their cargo, they exported to the other colunic tim. Ei : :ber, planks, thin oak-boards, falted falmon and mes. kerel, train-oil, and feal-coal. All the!e were prid for in fugar and coffee, but chiefly in rum and molafers. The intand could not confume all the fe commodtries. Canada took off but a finall part of the overplus; it was chiefly bought by the people of New England, who gave in exchange fruis, vegetables, wood, brick, an I cattle. This trade of exclange was allowed; but a fraggling trade was added to it , carried on in flom, and falt fill.

This inank, the key of Canada, was attacked by the Englith in 1745 ; and the event is of fo fingular a nature, that it deferves a particular detail. The plan o: this firt invafion was laid at Bollon, and New England bore the expence of it. A merchant named Pepierel, who had excited, encouraged, and directed the enterprife, was intrufted with the command of an army of 6050 men, which had been levied for this expedition.
Though thefe forces, convoyed by a fquadro: from Jamaica, brought the firf new's to Cape Breton of the danger that threatened it ; though the advantage of a furpuife would have fecured the landing without oppofition ; though they had but 600 regular troops to enecunter, and Soo inbabitants hattily armed; the fuccefs of the undertaking was flill precarious. What great exploits, indeed, could be expected from a milicia fuodenly affembled, who had never feen a fiege or faced an enemy, and were to act under the dirsetion of fca. officers only. Thefe uncxperienced troops flood in need of the aflilitance of fome fortunate incident, which they were indeed favoured with in a fingular manner.

The confruction and repairs of the fortifications had always been left to the care of the garrifon of Louifbourg. The foldiers were eager of being employed in thele works, which they confidered as conducive to their fafety, and as the means of procuring them a corsfortable fubfiftence. When they found that thofe who were to have paid them, appropriated to themlelves the profit of their labours, they demanded juftice. It was denied them, and they were determined to affert their r:ght. As thefe depredations had been flared between the chief perfons of the colony and the fubaltern officers, the foldiers could obtain no redrefs. Their indignation ayaint thefe rapaeious extortioners sofe to fuch a height, that they defpiled all authority. They had lived in an open rebellion for fix mothes, when the Britilh appeared before the place.

This was the time to concilinte the minds of both parties, and to unite in the common caufe. The fols diers made the firt advances; but their commanders miltufted a generofity of which they themfelves were ineapable. It was firmly believed that the fuldiers were only defirous of fallying out, that they might have an opportunity of deferting; and their own cfficers kept them in a manner prifoners, till a defence io ill managed had reduced them to the neecfity of capitulating. The whole illand flared the fate of Louil: bourg, its only bulwark.

This valuable poffeffion, zefooed to Framee by the treaty of Aix-la-Chapelle, was again attacked by tie Britifo in 1758 . On the $2 d$ of June, a fleet of 23 hlips of the line and 18 frigates, earrying 16,000 well difiplined troops, anchored in Carbarus bay, within half a

Breton. league of Louibburg. As it was evident it would be to no purpufe to land at a great diffance, becaufe it would be impoliole to bring up the artillery and other neceffaries for a confiderable fiege, it bad been attempted to render the landing impracticable near the town. In the prudent precautions that had been taken, the befiegers faw the dangers and difficulties they had to expef: but. far from being deterred by them, they had recourfe to ftratagem, and while by extending their line they threatened and commanded the whole conn, they landed by force of arms at the creek of Cormorant.

This place was naturally weak. The French had fortified it with a good parapet planted with cannon. Behind this rampart they had pofted 2000 excellent foldiers and fome Indians. In front they had made fuch a clofe hedge with branches of trees, that would have been very difficult to penetrate, even if it had not been defended. This kind of pallifade, which concealed all the preparations for defence, appeared at a diffance to be nothing more than a verdant plain.

This would have preferved the colony, had the affailants been fuffered to complete their landing, and to adrance with the confidence that they had but few obfacles to furmount. Had this been the cafe, overpowered at once by the fire of the artillery and the fmall arms, they would infallibly have perifthed on the fhore or in the hurry of embarking; efpecially as the fea was juft then very rnugh. This unexpected lofs might have interrupted the whole project.

But all the prudent precautions that had been taken were rendered abortive by the impetuofity of the French. The Englifh had fcarce begun to move towards the flore, when their enemies haftehed to difcover the fnare they had laid for them. By the brifk and hafy fire that was aimed at their boats, and flill more by the premature removal of the boughs that mafked the forces, which it was fo much the intereft of the French to conceal, they gueffed at the danger they were going to rufh into. They immediately turned back, and faw no other place to effect their landing but a rock, which had been always deemed inacceffible. General Wolfe, though much taken up in reimbarking his troops, and fending off the boats, gave the fignal to Major Scot to repair thither. That officer immediatcly removed to the foot with his men. His own boat coming up firft, and finking at the very inflant he was ftepping out, he climbed up the rock alonc. He was in hopes of meeting with 100 of his men who had been fent thither fome hours before. He found only ten. With thefe few, however, he gained the fummit of the rock. Ten Indians and 60 Frenchmen killed two of his men, and mortally wounded three. In fite of his weaknefs, he ftood his ground under cover of a thicket, till his brave countrymen, regardlefs of the boifterous waves and the fire nf the cannon, came up to him, and put him in full poffeflion of that important poft, the only one that could fecure their landing. The lirench, as foon as they faw that the enemy had got a firm footing on land, betook themfelves to the only remaining refuge, and flut themfelves up in Louifhourg. The fortifications were in a bad condition, becaufe the fea fand, which they bacd been obliged to ufe, is by no means fit for works of mafonry. The revctments of the feveral curtains were entirely crumbled away. There was only one cafemate
and a fmall magazine that were bomb proof. The gar- $£$ Erettigaw rifon which was to defend the place confifted only of 2900 men.

Notwithfanding all thefe difadvantages, the befieged were determined to make an obflinate refifance. It is fearce credible that the French were confirmed in their refolution by the courage of woman. Madame de Drucourt was continually upon the ramparts, with her purfe in ber hand; and firing herfelf three guris every day, feemed to difpute with the governor her humand the glory of his office. The befieged were not difmayed at the ill fuccefs of their feveral fallies, or the mafterly operations concerted by Admiral Bofeawen and General Amherf. It was but at the eve of an affault, which it was impoffible to fuftain, that they talked of furrendering. They made an honourable capitulation; and the conqueror fhowed more refpeet for his enemy and for himfelf, than to fully his glory by any act of ba:barity or avarice.-The poffeffion was confirmed to Great Britain by the peace $\mathrm{I}_{6}$; fince which the fortifications have been blown up, and the town of Louifbourg difmantled.

BRETTIGAW, a territory or valley of the Grifons, lying between the Rhine and the county of Tyrol, and along the river Lanquet. The fortrefs of Caflels is the principal town.

BREVE, in Law, is any writ directed to the chancellor, judges, ीheriffs, or other officers, whereby a perfon is fummoned, or attached, to anfwer in the king's court, \&c.
$B_{R E T E}$ Perquirere, the purchafing of a writ or 1icenfe for trial in the king's courts; whence comes the prefent ufe of paying 6s. 8 d . fine to the king in fuit, for money due on bond, where the debt is 401 . and of 10s. where it is sool. \& c .

Breve de Recto, is a writ of right or licenfe for a perfon ejected, to fue for the poffeffion of the eftate detained from him.

Breve, in Mufic, a note or character of time, in the form of a diamond or fquare, without any tail, and equivalent to two meafures or minims.

BREVET, in the French cuftoms, derotes the grant of fome favour or donation from the king; in which fenfe it partly anfwers to our warrant, and partly to letters patent.

Brevet, more particularly denotes the commifion of a fubaltern officer, being ouly written on parchment, and witbout feal. A brevet officer is one whofe rank in the army is above his pay: for inflance, a brevet major ferves only as a captain, and receives pay as fuct.

BREUGHEL, PETER, an eminent painter, commonly called Old Breugbel, to diftinguill him from his fort, was born at a village of the fome name near Breda, in the year 565 ; and was the firft pupil of Peter Cock, whofe dauthter lie marsied. It was cufomary with hiin to drefs like a country-man, in order to be more eafily admitted into the company of country-people, and be allowed to join in their frolics, hy which means he became perfectly acquainted with their manners and gefures, of which he made excellent ufe in his piftures. 1le travelled to France and Italy, and for a long time fludicd landicapes on the mountrins of Tyral. His humorous turn of mind difplayed iffelf in all his pictures, which gencrally confificd of country-dances,

## B R E

Ereughel marriages, fports, and diverfons; though he fometimes performed pieces from the hillorical parts of the holy Seriptures. At his return from Italy, he fettled at Antwerp, and in his laft illnefs caufed his wife to gather together all his immodeft pieces and burn them before his face. It is uncertain in what year he died. Of the works of old Breughel, the great duke of Tufcany has, Chrift carrying his crofs, with a great oumber of figures; and a country feaft. The emperor has the tower of Babel, the maff cre of the Innocents, and the converfion of St Paul, of his painting : the elector Palatine, a landicape, with St Philip baptizing Queen Candace's eunuch; and St John preaching in the wildernefs, with a great many figures. Old Breughel alfo, for his amufement, is faid to have engraved fome few plates of landfcapes and grotefque fubjects.

Breuehel, Peter, the younger, was the for of the above-mentioned artill, and named Helli/b Breughel, from the horrible fubjects he delighted to repretint. He engraved alfo, according to M. Heineken ; but his works are not fpecified. He died in 1642 .

Brevghel, Yohn, commonly called Velvet Breughel, from hi, generally wearing velvet clothes, was the fon of Peter Breughel, and born about the year 1575. He firt applied himfelf to painting flowers and fruit, in which he excelled ; and afterwards bad great fuccefs in drawing landfcapes, and views of the fea, fet off with fmall figures. He lived long at Cologn, where he acquired great reputation. He travelled to Italy, where his fame had got before him ; and where his fine landfcapes, adorned with fmall figures, fuperior to thofe of his father, gave very great fatisfaction. If a good judgement may be formed from the great number of pictures he left behind him, all highly finifhed, he muft have been exceedingly induftrious. Nor did he fatisfy himfelf with embellifhing his own works only, but was very uleful in this refpect to his friends. Even Rubens made ufe of Breughel's hand in the landfcape part of feveral of his fmall pidures, fuch as his Vertumnus and Pomona; the fatyr viewing the fleeping nymph; and the terreftrial paradife, which is looked upon as his matter-piece. He died in 1642. -Several of his works are to be feen in the archbifhop's gallery at Milan; particularly a hunting piece with a vaft many figures; a landfcape reprefenting a defert, with the picture of St Hierom painted by Cerano, alias Gio Baptifta Crefpi. In the Ambrofian library are 20 pieces of this mafterly hand; particularly Daniel in the lion's den, the infide of the great church at Antwerp, the four feafons on copper, and the burning of Gomorrah. In the poffeffion of the elector $\mathrm{Pa}-$ latine at Duffeldorp, Chriff preaching on the fea-fhore; a country-dance; a fea-port, with a great many figures: a coach and two chariots, with a multitude of figures and animals; a landfcape, wherein Flora is crouned by a nymph; St John preaching in the wildernefs; a fmall fea-landfeape, and feveral other pieces. In the poffefion of the late king of France, a woman pl.ying with a dog, the battle between Alexander and Darius, both in wood: Orpheus in hell, \&sc.

BREVIARY, a daily cffice, or book of divine fervice, in the Ronan church. It is compofed of matins, lauds, firl, third, fixth, and ninth veipers, and the compline or poft comımunio.

The breviaty of Rome is general, and may be ufed Yol. IV. Part II.
in all places; but on the model of this various others Breviery have been built, appropriated to each diuccfe, and each order of religious.
The breviary of the Greeks is the fame in almoft all churches and monalleries that follow the Greek rites: the Grecks divide the pfalter into 20 parts. In general, the Greek breviary confifts of two parts: the one containing the office for the evering, the other that of the morning, divided into matins, lauds, firf, third, fixth, and ninth veipers, and the compline ; that is, of feven different hours, on account of that faying of David, Scpties in dic laudem dixi tibi.

The inflitution of the breviary is not rery ancient; there have been inferted in it the lives of the faitits, full of ridiculous and ill-attefted flories, which gave occafion to feveral reformations of it, by feveral councils, particularly thofe of Trent and Cologn; by feveral popes, particularly Pius V. Clement VIIII. and Urban Vill.; and alfo by feveral cardinals and bifhops, each lopping off fome extravagancies, and bringing it nearer to the fimplicity of the primitive offices. Originally, every body was obliged to recite the breviary every day; but by degrees the obligation was reduced to the clergy only, who are enjoined, under penalty of mortal fin and ecclefiaftical cenfures, to recite it at home, when they cannet attend in public. In the ifth century, there was particular referve granted in favour of bifhops, who were allowed, on extraordinary occafions, to pals three days without rehcarfing the breviary.

This office was originally called curfus; and afterwards, the breviarium: which latter name imports that the old office was abridged ; or rather, that this collection is a kind of abridgment of all the prayers.

The breviaties now in ufe are innumerable; the difference between them confifts principally in the number and order of the pfalms, hymns, paternofters, aveMarics, creeds, magnificates, cantemus's, benedictus's, canticamus's, nunc dimittis's, miferere's hallelujahs, gloria patri', \&ic.

Breviary, in Roman antiquity, a book firf introduced by Auguftus, containing an account of the application of the public money.

BREVIATOR, an officer under the eaftern empire, whofe bufinefs it was to write and tranflate briefs.-At Rome thole are fiyled breviators, or atbreviators, who dictate and draw up the pope's briefs.

BREVIBUS, A rotulis liberandis, a writ or command to a heriff to deliver to his fucceffor the county, with the appurtenances, and the rolls, writs, and other things to his office belonging.

BREVIER, among printers, a fmall kind of type or letter between bourgeois and minion.

BREVITY, in a general fenfe, that which denominates a thing brief or fhort.

Brevity is more particularly ufed in fpeaking of the ftyle or compofition of difcourfe. Brevity of difcourfe is by fume called bracbylogia and breviloquentia; fometiones laconifmus. 'lacitus and Perfus are rematkable for the brevity of their ftyle. There are two kinds of brevity, one arifing from drynefs, poverty, and narrormefs of genius; the other from judgment and rcllection; which latter alone is laudable. .Brevity is fo effential to a tale, a fong, and an epis ram, that without it they neceffarily languifh and berome dull. Rhetorictars make brevity one of the principal marks

## B R E [ 402 ] B R E

Brevium or conditions of eloquence: but the rules they preII \{cribe for attaining it, are difficult to apply, fo as ftill to keep the due medium between too much and too little. A juft brevity is attained by ufing all the words which are neceffary, and none but thofe which are neceffary. Sometimes it may alfo be had, by choofing a word which bas the force of feveral. It is this lalt kind which Quintilian admires fo much in Salluft ; and the imitation of which, by other writers, has cauled fo much obfcurity.

BREVIUM custos. See Custos.
BREVORDT, a town of Guelderland, in the United Netberlands, fituated in E. Long. 6. 35. N. Lat. $52^{\circ}$.

BREWER, Anthony, a dramatic poet who flourifhed in the reign of King Charles 1. and appears to have been held in high eftimation by the wits of that time, as may be more particularly gathered from an elegant complimens paid to him in a pocm called Steps to Parnafus, wherein he is fuppofed to have a magic power to call the mufes to his affiftance, and is even fet on an equality with the immortal Shakeffeare himfelf. There are, bowever, great difputes among the feveral, writers, as to the number of his works. 'Thofe which have been afcribed to him with any certainty are, J. The country girl, a comedy. 2. The love-fick king, a comedy. And, 3. Lingua: a piece in regard to which Winftanley records a remarkable anecdute, which points it out to have boen in forme meafure the innocent caule of thofe troubles that difturbed the peace of thefe realms in the middle of the $17^{\text {th }}$ century. He tells us, that whea this play was acted at Cambridge, Oliver Cromwell (then a youth) acted a part in it. The fubflance of the piece is a contention among the Senfes for a crown, which Lingua had laid for them to find. The part allotted to young Cromwell was that of Taflus or Touch; who having obtained the contefted coronet, makes this firited declamation :

> Rofes and bavs, pack hence! this crown and robe My brows and body circles and invefts:
> How gallantly it fits me ! fure the flave
> Meafur'd my head who wrought this coronet.-
> They lie that fay complexions cannot change!
> MIy blood's ennobled, and I am transform'd
> Unto the ficred temper of a king.
> Mechinks I hear my noble parafites
> Seyling me Cafar, or Great Alexander, I.icking my feet, \&ic.

It is faid that be felt the whole part fo warmly, and more efpecially the above-quoted fpeech, that it was what firft fired his foul with annbition, and excited bim, from the poffefion of an imaginary crown, to flretch his vieu's to that of a real one; for the accomplifhment of which he was content to wade through feas of blood.

Brewer, a perfon who profeffes the art of brewing. There are companies of hrewers in moft capital cities; that of loudon was incorporated in $14^{27}$ by Henry V1, and that of Paris is fill older.

The apparatus and utenfils of a brewer, or a brewhoufe, are. A furnace malle clofe and hollow for faving fuel, and with a vent for the fmoke left it taint the liquor; a copper; which is preferable to lead; a mafkvat near the head; a cooler near the mall-vat; and a
guile-vat under the cooler: adjoining to all are feveral Brewirg. clean tubs, to receive the worts and liquors.

BREWERS Haven, a good barbour at the north end of the iiland of Chiloe on the coaft of Chili, in South America, and in the South fea. The Dutch landed forces here in 1643 , defigning to get pofieflion of fome part of Chili; but they were driven from thence by the Spaniards and the natives. W. Long. $82^{\circ}$. S. Lat. $42^{\circ}$.

BREWING, the operation of preparing ale or beer from Malt.

Though the art of brewing is undoubtedly a part of $\underset{\text { No fetted }}{\text { r }}$ chemiftry, and certainly depends upon fixed and inva-theory of riable principles, as well as every other branch of that brewing. fcience, thefe principles have never yet been thoroughly inveltigated. For want of a fetled theory, therefore, the practice of this art is found to be precarious; and to lucceed unaccountably with fome, and mifgive as unaccourtably with others. Some few hints, however, have been thrown out, in order to eftablinh a regular theory of brewing; the pringipal of which we fhall day before our readers.

The ufual procefs of brewing is as follows: A quan-Common tity of water being boiled, is left to cool till the height procefs deof the fleam be over; when fo much is poured to a fribed. quartity of malt $i_{1}$ the mafhing tub, as makes it of a confitence ftiff enough to be juft well rowed up: after ftanding thus a quarter of an hour, a fecond quantity of the water is added, and rowed up as before : laftly, the full quantity of water is added; and that in proportion as the liquor is intended to be frong or weak. -This part of the operation is called masking. - The whole now ftands two or three hours, more or lefs, according to the ftrength of the wort or the difference of weather, and is then drawn off into a receiver; and the mafling repeated for a fecond wort, in the fame manner as for the firt, only the water mult be cooler than before, and muft not fland above half the time. The two worts are then to be mixed, the intended quantity of hops added, and the liquor clofe covered up, gently boiled in a copper for the face of an hour or two; then let into the receiver, and the hops fifrained from it into the coolers. When cool, the batom or yeaft is applied; and it is left to work or ferment till it be fit to tun up. For fmall beer there is a third mafhing with the water near cold, and nut left to fand above three quarters of an hour ; to be hopped and boiled at difcretion. For double heer or ale, the liquors refulting from the two firft malhings mult be uled as liquor for the third mafthing of freft malt.

From confidering this procefs, and the multiplicity Difficulties of circumftances to be attended to in it, we may eafilyattending fee that it mult be a very precarious one. The fuccefs it. of the operation, i. e. the goodnefs of the beer, mult depend upon the quality of the nalt from which it is made; on that of the water with which it is infufed; on the degtec of heat applied in the infufion ; on the length of time the infufion is continued ; on the proper degree of hoiling, the quantity and quality of the hops employed ; on the proper degree of fermentation, \&c.: all which, as already obferved, have never yet been thoroughly inveftigated and afertained.

The manner of making malt Sir Robert Murray de- Sir Robert fcribes as follows. - Take good barley newly thrafhed, Murray's \& c.; put about fix Englifi quarters in a ftone trough malt-ma-

## B R E

Erewing. full of water, where let it feep sill the water be of a bright reddilh colour; which will be in about three days, more or lefsaccording to the moifure or drynefs, fmallnefs or bignefs, of the grain, the leafon of the year, or the temperatuse of the weather. In fummer, malt never makes well; in winter it requires longer fleeping than in fpring or autumn. It may be known when it is Reeped enough by other marks befides the colour of the water; as by the exceflive fiwelling of the grain, if it be over-fleeped, and by too much foftnefs; being, when it is in a right temper, like the barley prepared to make broth of. When it is fufficiently fleeped, take it out of the trough, and lay it in heaps to let the water drain from it; then, after two or three hours, turn it over with a fcoop, and lay it in a new heap, 20 or 24 inches deep. This is called the coming boap, in the right management whereof lies the principal fkill. In this heap it may lie 40 hours, more or lefs accordiag to the forementioned qualities of the grain, \&c. before it come to the right temper of malt ; which that it may do equally, is mainly defired. While it lies in this heap, it murt be carefully looked to after the firft 15 or 16 hours: for ahout that time the grains begin to put forih roots; which, when they have equally and fully done, the malt muft, within an hour after, be turned over with a fcoop; otherwife the grains will begin to put forth the blade and fpire allo, which muft by all means be prevented. If all the malt do not come equally, but that which lies in the middle, being warnelt, come the fooneft; the whole mult be turned, fo that what was outmoft may be inmoft; and thus it is managed till it be all alike. As foon as the malt is fufficiently come, turn it over, and 〔pread it to a depth not exceeding five or fix inches; and by that time it is all fpread out, begin and turn it over again three or Gour times. Afterwards turn it over in like manner once in four or five hours, making the heap deeper by degrees; and continue to do fo for the fpace of 48 hours at leaft. This frequent turning it over, cools, dries, and deadens the grain; whereby it becomes mellow, melts eafily in brewing, and feparates entirely from the hufk. 'Then throw' up the malt into a heap as bigh as you can; where let it lie till it grow as hot as your band can endure it, which ufually happens in about the fpace of 30 hours. This perfects the fureetnefs and mellownefs of the malt. After it is fufficiently heated, throw it abroad to cool, and turn it over again about fix or eight hours after; and then lay it on a kiln with a hair-cloth or wire fpread under it; where, after one fire which mult laft 24 hours, give it another more flow, and afterwards, if need be, a third: for if the malt be not thoroughly dried, it cannot be well ground, neither will it diffolve well in the brewing ; but the ale it makes will be red, bitter, and unfit for keeping.

From this account of the procefs of malting, it appears, that, befides the proper management in wetting, turning, \&ec. the drying is an article of the utmolt confequence ; and concerning the proper degrees of heat to be empluyed for this purpofe, Mr Combrune has related the following experiments. "In au earthen pan, of about two feet diameter, and three inches deep, I put as much of the paleft malts, very unequally grown, as filled it on a level to the brim. This I pla. ced over a little charcoal lighted in a fmall flove, and
kept continually firring it from bottom to top; at Erewing. firft it did not feel fo damp as it did about half an hour after.
"In about an bour morc, it began to look of a bright orange colour on the outlide, and appeated more fwelled than before. Every onc is fenfible how long-continued cuftom alone makes us futficient judges of colours. Then I macerated fome of the grains, and found they were nearly fuch as are termed broun malts. On ftirring and making a beap of them towards the middle, I placed therein at about half depth the bulb of my thermometer, and found it rofe to 140 degrees: here the malt felt very damp, and had but little fmell.
"At 165 degrees 1 exanined it in the fame manner as before, and could perceive no damp: the malt was very brown; and, on bcing macerated, fome few black fpecks appeared.
"Now many corns, neareft the bottom, were become black and burnt; with all the diligence I could ule, I placed my thermometer nearly there, and it role to 175 degrees. But the particles of fire, arifing from the fove, aft on the tbermometer in proportion to the diftance of the fituation it is placed in; for which, through the whole experiment, an abatement of 5 degrees thould be allowed, as near as I could eftimate; fo, a little after, putting $m y$ thermometer in the fame pofition, where nearly half the corns were black, it howed 180 degrees. I now judged that the water was nearly all evapurated, and the heap grew black apace.
"Again, in the centre of the heap raifed in the middle of the pan, I found the thermometer at 180 degrees ; the corn talted burnt ; and the whole, at top, appeared about one half part a full brown, the reft black: on being macerated, ftill fome white fpecks appeared; which I obferved to proceed from the barley corns which had not been thoroughly germinated, and whofe parts, cohering more together, the fire, at this degree of heat, had not penetrated them: their tafte was infipid, the malts brittle, and readily parting from the $\mathfrak{k k i n}$ : but the thermometer was now more various, as it was nearer to or farther from the bottom; and there I judged all the true malt to be charred.
"However, I continued the experiment; and, at 190 degrecs, Itill found fome white fpecks on macerating the grain ; the acrofpise always appearing of a deeper black or brown than the outward fkin: the corn now fried at the bottom of the pan.
"I next increafed the fire; the thermometer, placed in the mean between the bottom of the pan and the upper edge of the corn, howed 210 degrees. The malt hiffed, fried, and fmoked abundantly; though, during the whole procefs, the grain had been kept flirring, yet, on examination, the whole had not been equally affected with the fire. I found a great part thereof reduced to perfect cinders, eafily crumbling to dult between the fingers, fome of a very black hue without glofs, fome very black with oil fhising on the outfide. Upon the whole, two-thirds of the corn were perfeetly black; the reft were of a deep brown, more or lefs fo as they were hard, fteely, or imperfect. ly germinated; which was eafily difcovered by the length of the thoot. Moft of them feemed to have loft their cohefion, and had a talte refembling that of high roalted coffee.
"In the laft flage of charring the malt, I fet thereon a mine glafs inverted, into which arofe a pinguious oily matter, which tafted very falt. Perhaps it may not be unneceffary to fay, that the length of time this experiment took up was four hours, and that the effeê it had both on, myfelf and the perfon who attended me was fuch as greatly refembled the cafe of inebriation.
"Though, from hence, it is not poffible to fix the exact degree of heat in which malts charr, yet we fee fome black appeared when the thermometer was at 165 degrees, that fome were entirely black at 175 and at 180 degrees, that the grains thus affected were fuch as had been perfectly germinated, and that thofe which bore a greater heat were defective in that point; whence we may conclude with an exactnefs that will be fufficient for the purpofes of brewing, that true germinated malts are charred in heats between 175 and 180 degrees; and that, as thefe correfpond to the degrees in which pure alcohol, or the fineft fpirit of the grain itfelf boils, or difengages itfelf therefrom, they may point out to us the reafon of barley being the fitteft grain for the purpofes of brewing."

From thefe experiments, our author has conftructed the following table of the different degrees of the drynefs of malt, with the colour occafioned by each degree.

## Deg.

119 White.
124 Cream colour.
129 Light yellow.
134 Amber colour.
${ }_{1} 3^{8}$ High a mber.
143 Pale brown.
148 Brown.
152 High brown.
157 Brown inclining to black.
162 High brown fpeckled with black.
167 Blackifh brown with black fpecks.
171 Colour of burnt coffee.
176 Black.
"The above table (fays he) not only fhows us how to judge of the drynefs of malt from its colour, but alfo when a grift is compofed of feveral forts of malt, what effect the whole will have when blended together by extraction; and although poffibly fome fmall errors may arife in judgments thus formed by our fenfes, yet as malts occupy different volumes in proportion to their drynefs in the practice of brewing, if the refult of the water coming in contact with the malt flow the degree expected, fuch parcel of malt may he faid to tave been judged of rightly in the degree of dryncfs it was eftimated to; fo that the firf trial either confirms, or fets us numerically right as to our opinion thereof."
Mr kich. It is found by experience, that the lefs heat emardfon' ob- ployed in drying the malt, the fhoter time will be refervatiors. quited before the beer is fit to be ufed; and of this our quited before the beer is if to be ufed
author las given the following table.

| 1eg. | Deg. |  |  |
| :--- | :--- | :--- | :--- |
| 119 | 2 weeks. | 143 | 8 months. |
| 124 | 2 month. | 147 | 10 months. |
| 129 | 3 months. | 152 | 15 months. |
| 134 | 4 months. | 157 | 20 months. |
| 138 | 6 months. | 162 | two years. |

Lafly, Mr Combrune hath given the following table, Brewing. fhowing the tendency beers have to become fine, when properly brewed from malts of different degrees of drymefs.

Deg. Culour of malt,
IIg White.
124 Cream colour.
129 Light yellow.

In a pamphlet entitled "Theoretic hints on an im-Mr Riclıproved practice of brewing malt-liquors, \&c. by John ardion's obRichardfon," we bave the following obfervations on fervations. the nature and properties of malt.
"The procefs of making malt is an artificial or forced vegetation, in which the nearer we approach the footfleps of nature in her ordinary progrefs, the more certainly fhall we arrive at that perfection of which the fubje $\{$ is capable. The farmer prefers a dry feafon to fow his corn in, that the common moiflure of the eath may but gently infinuate itfelf into the pores of the grain, and thence gradually difofe it for the reception of the future fhower, and the action of vegetation. The malther cannot proceed by fuck flow degrees, bur makes an immerfion in water a fubflitute for the moinure of the earth, where a few hours infufion is equal to many days employed in the ordinary courfe of vegetation; and the corn is accordingly removed as foon as it appears fully faturated, leff a folution, and confequently a deftruction of fome of its parts, floould be the effect of a longer continuance in water, inflead of that Separation which is begun by this introduction of aqueous particles into the body of the grain.
"" Were it to be fpread thin after this removal, it would become dry, and no vegetation would enfue; but being thrown into the couch, a kind of vegetative fermentation commences, which generates heat, and produces the firf appearance of germination. This Itate of the barley is nearly the fame with that of many days continuance in the earth after fowing: but being in fo large a body, it requires occafionally to be tuined over, and fpread thinner; the former to give the outward parts of the heap their flare of the iequired warmth and moifure, both of which are leffened by expofure to the atr; the latter to prevent the progrels of the vegetative to the putrefabive fermentation, which would be the confequence of luffering it to proseed beyond a certain degree.
"To lupply the moillure thus continually decreafing by craporation and confumption, an occafional but fparing

Brewing. fparing fprinkling of water fhould be given to the floor to recruit the languining powers of vegetation, and imitate the fhower upon the corn-field. But this fhould not be too often repeated; for, as in the field, ton much min, and too little fun, produce rank ftems and thin eare, fo here would too much water, and of courfe too little dry warmth, accelerate the growth of the malt, fo as to occafion the extration and lols of fuch of its valuable parts, as by a llower procefs would have been duly feparated and left behind.
"By the flow mode of conducting vegetation here recommended, an actual and minute feparation of the parts takes place. The germination of the radicles and acrofpire carries off the cohefive properties of the barley, thereby contributing to the preparation of the faccharine matter, which it has no tendency to extract or otherwife injurc, but to increafe and meliorate, fo long as the acrofpire is confined within the huß; and by how much it is wanting of the end of the grain, by fo much does the malt fall hort of perfection, and in proportion as it has advanced beyond, is that purpofe defeated.
" This is very evident to the moft common obfervation, on examining a kernel of malt in the different ftages of its progrefs. When the acrofpire has thot but half the length of the grain, the lower part only is converted into that yellow faccharine flour we are folicitous about, whillt the other half affords no other figns of it than the whole kernel did at its firf germination. Let it advance to two-thirds of the length, and the lower end will not only have increafed its faccharine flavour, but will have proportionally extended its bulk, fo as to have left only a third part unmalted. This, or even lefs than this, is contended for by many maltfers, as'a fufficient advance of the acrofpire, which they fay has done its bulinefs as foon as it has paffed the middle of the kernel. But we need feek no farther for their conviction of error, than the examination here alluded to.
" Let the kernel be flit down the middle, and tafted at either end, whilt green; or let the effects of maftication be tried when it is dried off; when the former will be found to exhibit the appearances juft mentioned, the litter to difcover the unwrought parts of the grain, in a body of flony hardnefs, which has no other effest in the math-tun than that of imbibing a large portion of the liquor, and contributing to the retention of thofe faccharine parts of the malt which are in contakt with it; whence it is a rational inference, that three bufhels of malt, imperfer in this proportion, are but equal to two of that which is carried to its utmoft perfection. By this is meant the farthef advance of the acrofpire, when it is juft burfting from its confinement, before it has effected its enlargement. The kernel is then uniform in its internal appearance, and of a rich fweetnefs in flayour, equal to any thing we can conceive obt inable from imperfect veyetation. If the actofpire be fuffered to procced, the mealy fubilance melts into a liquid fweet, which foon pafies into the blade, and leaves the huf: entirely exhaufted.
" The fweet thas produced by the infant efforts of vegetation, and loft by its more powerful action, revives and makes a fecond appearance in the ftem, but.
is then too much difperfed and altered in its form to Brewing, antiver any of the known purpofes of art.
"Were we to inquire, by what means the fame barlcy, with the fame treatment, produces unequal portions of the faccharine matter in different fituations, we fhould perhaps find it principally owing to the different qualitics of the water ufed in malting. Hard water is very unfit for every purpofe of vegetation, and foft will vary its effects according to the predomina. ting qualities of its impregnations. Pure elementary water is in itfelf fuppofed to be only the vehicle of the nutriment of plants, entering at the capillary tubes of the roots, rifing into the body, and there difperfing its acquired virtues, perfpiring by innumerable fine pores at the furface, and thence evaporating by the pureß diftillation into the open atmofphere, where it begins anew its round of collecting freth properties, in order to its preparation for frem fervice.
"This theory leads us to the confideration of an. attempt to increafe the natural quantity of the faccharum of malt by adventitious means; but it mult be obferved on this occafion, that no addition to water will rife into the veffels of plants, but fuch as will pafs the filter; the pores of which appearing fomewhat fimilar to the fine Atrainers or abforbing veffels employed by nature in her micer operations, we by analogy conclude, that properties fo intimately blended with water as to pass the one, will enter and unite with the economy of the other, and vice verfa.
"Suppofing the malt to have obtained its utmort. perfection, according to the criterion here inculcated, to prevent its farther progrefs, and fecure it in that Itate, we are to call in the affiftance of a heat fufficient to deftroy the action of vegetation, by evaporating every particle of water, and thence leaving it in aftate of prefervation, fit for the prefent or future purpofe of the brewer.
" Thus having all its moifture extracted, and being by the previous procefs deprived of its cohefive pro. perty, the body of the grain is left a mere lump of flour, fo eafily divifible, that, the hufk beirg taken off, a mark may be made with the kernel, as with a. piece of foft chalk. The extractible qualities of this flour are, a faccharum clofely united with a large quantity of the farinaceous mucilage peculiar to bread. corn, and a fmall portion of oil enveloped by a fine earthy fubltance, the whole readily yielding to the impreffion of water applied at different times and different degrees of heat, and each part predominating. in proportion to the time and manner of its application.
" In the curing of malt, as nothing more is requifite than a total exsrication of every aqneous particle, if we had in the lealon proper for malting, a folar heat, fufficient to produce perfect drynefs, it were practicable to reduce beers nearly colnurlele; but that being wanting, and the force of cuftom having made it neceffary to give our beers various tinctures and qualities refulting from fire, for the accommodation of various taftes, we are neceffitated to apply fuch heats in the drying as fall not only anfwer the purpofe of prefervation, but give the complexion and property required.
"To effect this wi:h certainty and precifion, the introduction

Brewing. introduction of the thermometer is neceffary; but the real advantages of its application are only to be known by cxperiment, on account of the different conflruction of different kilns, the irregularity of the heat in different parts of the fame kilu, the depth of the malt, the diftance of the bulb of the thermometer from the floor, \&c. \&c. for though fimilar heats will produce fimilar effects in the fame fituation, yet is the difperfion of heat in every kiln fo irregular, that the medium fpot muft be found for the local fituation of the thermometer ere a ftandard can be fixed for afcertaining effects upon the whole. That done, the feveral degrees neceflary for the purpofes of porter, amber, pale beers, \&c. are eafily difcovered to the utmolt exactnefs, and become the certain rule of future practice.
"Though cuftom has laid this arbitrary injunction of variety in our malt liquors, it may not be amils to intimate the loffes we ofren fullain, and the inconseniences we combat, in obedience to her mandate.
"The further we purfue the deeper tints of colour by an increafe of heat beyond that which fimple prefervation requires, the more we injure the valuable qualities of the malt. It is well known that fcorched oils turn black, and that calcitred fugar affumes the fame complesion. Similar effects are producible in malts, in proportion to the increafe of heat, or the time of their continuing expofed to it. The parts of the whole being fo united by nature, an injury cannot be done to the one, without affecting the other: accordingly we find, that fuch prots of the fubject, as minght have been feverally extracted for the purpofes of a more intimate union by fermentation, are, by great heat in curing, burnt and blended fo effectually together, that all difcrimination is loft, the unfernientable are extracted with the fermentable, the integrant with the conflituent, to a very great lofs botls of (pirituofity and tranfparency. In paler malts, the extracting liquor produces a feparation which cannot be effected in brown, where the parts are fo incorporated, that unlefs the brewer is very well acquainted with their feveral qualities and attachmentc, he will bring over, with the burnt mixturc of faccharine and mucilaginous principles, fuch an abundance of the fcorched oils, as no fermentation can atteriuate, no precipitants remove; for, being in themfelves impediments to the action of fermentation, they leffen its efficacy, and being of the fame fecific gravity with the beer, they remain fufpended in, and incorporated with the body of it, an offence to the cye, and a naufea to the palate, to the latefl period."

The next confideration is the quality of the water to be employed in brewing; and bere foft water is univerfally allowed to be preferable to hard, both for the purpofes of mafling and fermentation. Tranfparency ic, however, more eafily obtained by the ufe of hard than foft water : fiff, from its imaptitude :o extraft fuch an abundance of that light mucilaginous matter, which, tloating in the beer for a long time, occafions its turpidity; fecondly, from its greater tendency to a flate of quictude after the vinous fermentation is finifloed, by which thofe floating particles are more at liberty to fulfide; and, lafly, from the mutual aggregation of the carthy particles of the water with thofe of the matcrials, which by their greater fpe-
cific gravity thus aggregated, not only precipitate Erewingo them'elves, but carry down alfo that lighter mucilage juft mentioned. For thefe reafons, hard water is not well adapted to the brewing of potter, and fuch beers as require a fullnefs of palate, when drawn to the great lengths of the London brewery, and of fome country fituations.

The purity of water is determined by its lightnefs; and in this, diftilled water only can claim any material degree of perfection. Rain water is the pureft of all naturally produced : but by the perpetual exhalations of vegetables, and other fine fubitances floating in the atmorphere, it does not come down to us entirely free from thofe qualities which pond and river waters poffefs in a greater degree. Thefe, efpecially of rivers running through fens and moraffes, from the quantity of grafs and weeds growing therein, imbibe an abundance of vegetable folutions which occafions them to contain more fcrmentablc matter, and confequently to yield a greater potion of firit ; but at the fame time induces fuch a tendency to acidity as will not eafily be conquered. This is more to be apprehended towards the latter end of the fummer than at any other time; becaufe thefe vegetable fubflances are then in a ftate of decay, and thence more readily impart their pernicious qualities to the water which paffes over them.

At fuch an uufavourable time, fhould the brewer be neceflitated to purfue his practice, it will behove him to pay the utmoft attention to the caufe of this difpofition in his liquor, and thence endeavour to prevent the ill confequences, by conducting his procefs to the extraction and combination of fuch parts of the materials as his judgment informs him will beft counteract its effects.

Where there is the liberty of choice, we would recommend the ufe of that water which, from natural purity, equally free of the auferity of imbibed earths, and the ranknefs of vegetable faturation, has a foft fulnefs upon the palate, is totally flavourlefs, inodorous, and colourlefs; whence it is the better prepared fur the reception and retention of fuch qualities as the procefs of brewing is to communicate and preferve.

The next lhing to be confidered is the proper degree of heat to be employed in making the infufion; and here it is evident, that though this muft be an object of the utmofl importance to the fuccefs of the operation, it is extremcly difficult, perhaps impofible, to fix upon a precife flandard that fhall at all times fully anfwer the purpofe. On this fubject Mr Richardfon preferts us with the following oblervations.
"The quality of the faccharine part of malt refem. Mr Richbles that of common fugar, to which it is practicable ardfon's obto reduce it; and its claracteriftical properties are entirely owing to its intimate connexion with the other on the deer trec of parts of the malt, from which fuch diftinguifling fla-lieat. vnurs of beers are derived as are not the immediate refult of the hop. Were it not for thefe properties, the brewer might adopt the ufc of fugar, molaffes, loney, or the fivect of any vegetable, to equal advantage; which cannot now be done, unlefs an eligible fuccedaneum be fnund to anfwer that purpofe. As we are at pretent circumfaniced, a fearch on the other fide would turn more to the brewer's account. We have in many a fupcrabundance of the groffer principles; and would

## B R E

Brewing. government permit the introduction of a forcign addition to the faccharine, which is too deficient, many valuable improvements might be made from it; as we could, by a judicious application of fuch adventitious principle, produce a fecond and third wort, of quality very little infcrior to the firft.
"But in thefe experiments a very particular attertion would be neceflary to the folvent powers of the water at different degrees of heat, and to the ir quiry dow far a menfrutum faturated with one principle many be capable of diffolving another. Such a confideration is the more neceflary on this occation to direet us clear of two extremes equally difgreeable: the firll is, that of applying the menitruum pure, and at fuch a heat as to bring off an over proportion of the oleaginous and earthy principles, which would occafion in the beer, thus wanting its natural hate of faccharum, a harhnefs and autterity which fcarce any time the brewer could allow would be able to diffipate: the other is, that of previounly loading the menfrum with the adopted fweet in fuch an abundance as to deflroy its folvent force upon the characteritical qualities we wif to unite with it, and thereby leave it a mere folution of fugar. The requifite mean is that of confidering what portion of the faccharine quality has been extracted in the firft wort, according to the quantity of water and degree of heat applied; and then to make fuch a previous addition of artificial fweet as will juft ferve to counterbalance the deficiency, and affimilate with that portion of the remaining principles we are taught to expect will be extracted with the fucceeding wort.
" Foom the mature of the confituent principles of malt, it is eafy to conceive, that the former, or faccharine or mucilaginous parts, yield mofl readily to the inpreffion of water, and that at fo low a degree of heat as would have no vifible effect upon the latter. If, therefore, we are to have a certain proportion of every part, it is a rational inference, that the means of obtaining it reft in a judicious variation of the extrasting heat according tu the feveral proportions required.
" A low degree of heat, acting principally upon the faccharum, produces a wort replete with a rich foft freet, fully impreguated with its attendant mucilage, and in quantity much exceeding that obtainable from increafed heat; which by its more powerful infinuation into the body of the mal: a ating upon all the parts together, extracts a confiderable purtion of the oleaginous and earthy principles, but falls fhort in foftnefs, fulnefs, fweetnefs, and quantity. This is occafioned by the coagulating property of the mucilage, which, partaking of the nature of flour, has a tendency to run into pafte in proportion to the increafe of heat applied; by which means it not only locks up a confiderable part of the faccharum contained therein, but retains with it a proportionate quantity of the extracting liquor, which would otherwife have drawn out the imprifoned fweet, thence leffening both the quantity and quality of the worts. And this has fonetimes been known to have had fo powerful an effed, as to have occafioned the fetting of the goods, or the uniting the whole into a palty mats; for though heat increafes the folvent powers of water in mof inflances, there are fome in which it totally deftroys them. Such is the
prefence of tour, which it converts into pafte; be- Erewing. fides thofe of blood, eggs, and fome other animal fuisfances, which it invariably tends to harden.
"From a knowledge of thefe effeets, we form our ideas of the variations neceffiry in the heat of the extracting liquor: which are of more extenfive utility than has yet been intimated, though exceedingly limited in their extent from one extreme to the other.
" The moft common effects of too low a heat, befides fometimes producing immediate acidity, are an infipidity of the thavour of the beer, and a want of early $\operatorname{tranf}$ parency, from the fuperabundance of inucilaginous matter extracted by fuch heats, which, after the utmoft efforts of fermentation, will leave the beer turbid with fuch a cloud of its lighter feculcncies as will require the feparation and precipitation of many months to difperfe.
" The contrary application of too much heat, at the fame time that it leffens this mucilage, has, as we have feen before, the effect of diminilling the facchan rum alfo; whence that lean thin quality obfervable in fome beers ; and, by extracting an over proportion of oleaginous and earthy particles, renders the buffefs of fermentation difficult and precarious, and impreffes an aufterity on the flavour of the liquor which will not eafily be effaced.
" Yet the true medium heat for each extraca cannot be univerfally afcertained. An attention not only to the quality of the male, but to the quantity wetted, is abfulutely neceffary to the obraining every due advantage; nor muft the period at which the beer is intended for ufe be omited in the account. The quality of the water alfo claims a flare in the confideration, in order to fupply that deficient thimefs and want of folvent force in hard, and to allow for the natural fulnefs and fermentative quality of foft; a particular to which London in a great meafure owes the peculiar mucilaginous and nutritious quality of its malt liquors.
"Although the variations above alluded to are indifpenfable, it is eafy to conceive, from the fmall extent of the utmoll variety, that they cannot be for diftant. If, therefore, we know that a certain degree extracts the firft principles in a certain proportion, we need not much confideration to fix upon another degree that thall produce the required proportion of the remaining qualities, and effect that iqual diffribution of parts in the extract which it is the bufinefs of fermentation to form into a confiftent whole."

The principal ufe of boiling, as it refpects the worts of boiling particularly, is to feparate the grofer or more palpable worts. parts of the extract, preparatory to that more minate feparation which is to be effected in the gyle tun. The eye is a very competent judge of this effeet for the concretions into which the continued ation of boiling forms thefe parts are obvious to the nighteft inipection, whilit the perfect tranfparency of the interflices of the worts points out its utility in promoting that defirable quality in the becr. Thefe coagulable parts are formed from the fuperabundant mucilage already mentioned; and hence they are found in greater proportion in the firf worts than in thofe that come alter; at the fame time, they are in thefe laft fo mingled with a quantity of oleaginous matter, that they become much more difficulty coagulable in the wak.

Brewing. worts than in fuch as are flronger, and hence thefe require to be much longer boiled than the others.

During this operation the hops are generally added, which are found to be abfolutely neceffary for prevent.. ing the too great tendency of beer to acidity. The fine effential oil of hops being moft volatile and fooneft extracted, we are therefore taught the advantage of boiling the firf wort no longer than is fufficient to form the extract, without expofing it to the action of the fire fo long as to diflipate the finer parts of this moft valuable principle, and defeat the purpofe of obtaining it. To the fubfequent worts we can afford a larger allowance, and purlue the menns of prefervation fo long as we can keep in view thofe of llavour ; to Which no rules can pofitively direet, the procefs varying with every variety of beer, and differing as effentially in the production of porter and pale ale as the modes of producing wine and vinegar.

The confequence of not allowing a fufficient time for the due feparation of the parts of the wort and extraction of the requifite qualities of the hop muft be obvious. If we proceed to the other extreme, we have every thing to apprehend from the introduction of too large a quantity of the groffer principles of the hop, which are very inimical to fermentation; and from impairing the fermentative quality of the worts themfelves, by fuffering their too long expofure to the action of the fire paffing through them, whereby they are reduced to a more denfe confiftence, and their parts too intimately blended to vield to the feparating force of fermentation with that eale the perfection of the product requires.
sation. the liguor properly; for if this is not done, whatever care and pains have been taken in the other parts, they will be found altogether infufficient to produce the liquor defired. The firft thing to be done here is to procure a proper ferment ; for though all fermentable liguors would in time begin to ferment of themfelves, yet, being alfo fufceptible of putrefaction, the vinous and putrefactive ferments would both take place at the fame time in fuch a manner that the product would be entirely fpoiled. There are only two kinds of artificial ferments procurable in large quantity, and at a low price, viz. beer-yeaft and wine-lees. A prudent management of thefe might render the bufnefs of the brewery for diftillation, as in the bufisefs of the malt-difiller, *See Difit-\&c. much more eafy and advantageous *. Brewers testin. have always found it a confiderable difficulty to procure thefe ferments in fufficient quantities, and preferve them conftantly really for ufe; and this has been fo great a difcouragement to the bufinefs, that fome have endeavoured to produce othcr ferments, or to form mixtures or compounds of particular fermentable ingredients; but this has been attempted without any great fuccefs, all thefe mistures falling floort even of common baker's leaven in their ufe. Whoever has a turn for making experiments and attempting improvements of this kind, will find it much eafier and more advantogeous to prelerve and raife nurferies of the common ones, than to devife mixtures of pthers. Yeaft may be preferved by freeing it from its moifter parts. This may be done by the fuis's heat, but nowly and imperfeefly. The befl method is by gently prefling it in canyas bags: thus the liquid part, in which there
is fcarce any rirtue, will be thrown off, and the folid will remain behind in form of a cake, which may be packed in a barrel or box, and will keep for a long time fweet and fragrant, and fit for the fineft ufes ; and the fame method may be taken either with winelees or the flowers of wine. The former may be brought from abroad with great eafe in this manner: the latter may be made with us from the lees, by only diffulving them in water, and ftirring them about with a Atick ; by this means, the lighter, more moveable, and more active part of the lees will be thrown up to the top, and may be taken off and preferved, in the manner above mentioned, in any quantity defired. By this means, an cafy method is found of raifing an ino exhauftible fund; or a perpetual fupply of the moft proper ferments may be seadily formed in the way of fucceflive generation, fo as to cut off all future occafion of complaint for want of them in the bufirefs of diftillation. It muft be oblerved that all ferments abound in effential oil much more than the liquors which produce them; whence they very ilrongly retain the particular flavour and fcent of the fubjeet from whence they were made. It is requifite, therefore, before the ferment is applied, to confider what Havour ought to be introduced, and accordingly what ipecies of ferment is moff fuited to the liquor. The alteration thus caufed by ferments is fo confiderable, as to determine or bring over any naturally fermentable liquor of a neutral kind to be of the fame kind with that which yielded the ferment. The benefit of this, however, does not extend to malt, or to any other matter that does not raturally yield a tolerably pure and taftelefs fpirit, as it otherwife makes not a fimple, pure, and uniform flavour, but a compound and mixed one.

The greateft circumppection and care are neceffary in regard to the quality of the ferment. It muft be chofen perfecily fweet and freft : for all ferments are liable to grow mufty and corrupt; and if in this cafe they are mixed with the fermentable liquer, they will communicate their naufeous and filthy flavour to it in fuch a manner as never to be got off. If the ferment is four, it muft by no means be ufed for any liquor ; for it will communicate its flavour to the whole, and even prevent its rifing to a head, and give it an acetous, inflead of a vinous, tendency. When the proper quantity is got ready, it mull be put to the liquor in a flate barely tepid, or fcarce lukewarm. 'The beft method of puting them together, fo as to make the fermentation Itrong and quick, is as follows. When the ferment is folid, it munt be broken to picces, and gently thinned with fome of the warm liguor; but a complete or uniform folution of it is nut to be expected or defired, as this would weaken its efficacy for the future bufinels. The whole intended quantity being thus loofely mixed in fome of the lukewarm liquor, and kept near the fire or elfewhere in a tepid Atate, free from tuo tude commerce with the external air. more of the infenfibly warm liquor ought at proper intesvals to be brought in, till thus by degrees the whole quantity is fet at work together. When the whole is thus let at work, fecured in a proper degree of warmth, and kept from a too free intercourfe with the external air, it hecomes as it were the bufinels of nature to tinifl the operation.

In the operation of fermentation, however, the de-
gree of heat employed is of the utmoft confequence. In forming the extract, of ${ }_{3}$ the mall, the variation of a few degrees of heat produces an impurtant difference in the effect. In the heat of fermentation, fimilar confequences refult from fimilar variety. Under a certain regulation of the procefs, we can retain in the beer, as far as art is capable, the finer mucilage, and thereby preferve that fulnefs upon the palate which is by many fo much admized: on the other hand, by a flight alteration, we can throw it off, and produce that evennefs and uniformity of flavour which has fcarce any characteriftical property, and is preferred by fome oully for want of that heavinefs which they complain of in full beers. If a more vinous racy ale be required, we can, by collecting and confining the operation within the body of the wort, caufe the feparation and abforption of fuch an abundant portion of the oleaginous and earthy principles, as to produce a liquor in a perfect fate at the earlieft period, and fo highly flavourous as to create a furpicion of an adventitions quality. But though all this may be done, and often hath been done, the proper management of fermenting liquors depends fo much upon a multiplicity of flight and feemingly unimportant circumftances, that it hath never yet been laid down in an intelligible manner; and no rules, drawn from any thing hitherto publifhed on the fubject, of brewing, can be at all fufficient to direct any perfon in this matter, unlefs he hath had conficicrable opportunities of obferving the practice of a brewhoufe.
To what we have now faid we thall only add, from a praftical treatife on brewing lately publifled, the names of the materials and their proportions, which are employed by the London brewers in the manufacture of the different kinds of malt liquors.

This yielded 89 barrels and two firkins of porter.

Another proportion of materials for Porter.

This proportion of materials yiclded 87 barrels one firkin.

judge, officer, \&c. to act contrary to his duty; and fometimes it lignifies the taking or giving a reward for 2 public office.

In the eaft it is the cuftom never to petition any fu. perior for juftice, not excepting their kings, without a prefent." This is calculated for the genius of delpotic countries; where the true principles of government are never underfood, and it is imagined that there is no obligation due from the fuperior to the inferior, no relative duty owing from the governor to the governed. The Roman law, though it contained many fevere in-Blacil? junctions againft bribery, as well for felling a man's Commerto. vote $i_{1}$ the fenate or other public aflembly, as for tie bartering of common jullice; yet, by a ftrange indulgence in one inftance, it tacitly encouraged this practice; allowing the magiftrate to receive fmall prefents, provided they did not on the whole exceed 100 crowns a-year; not confidering the infinuating nature and gigantic progrefs of this vice, when once admitted. Plato, therefore, in his ideal republic, orders thofe who take prefents for doing their duty to be punifhed in the fe-. vereft manner : and by the laws of Athens, he that offered a bribe was allo profecuted, as well as he that received a bribe. In England this offence of taking bribes is punithed, in inferior officers, with fine and imprifonment; and in thofe that offer a bribe, though not taken, the fame. But in judges, elpecially the fuperior ones, it has been always looked upon as fo heinous an offence, that the chicf julfice Thorpe was hanged for it in the reign of Edward 111. By a ftatute 11 Henry IV. all judges and officers of the king convieted of bribery, ftall forfeit treble the bribe, be pumifhed at the king's will, and te difcharged from his fervice for ever. And fome rotable examples have been made in parliament, of perfons in the higheft fations, and otherwife very eminent and able, but contaminated with this fordid vice. Thus in the reign of King James I the earl of M. lord treafurer of England, being impeached by the commons, for refufing to hear petitions referred to him by the king, till he liad received bribes, \&c. was, by fentence of the lords, deprived of all his offices, and difabled to hold any for the future, or to fit in parliament ; he was alfo fined 50,0001 . and imprifoned during the king's pleafure. In the IIth year of King George I. the lord chancellor M__ had a fomewhat milder punifhment: he was impeached by the com. mons, with great zeal, for bribery, in felling the places of mafters in chancery for exorbitant fums, and other corrupt practices, tending to the great lofs and ruin of the fuitors of that court ; and the charge being made good againft him, being before divelted of his office, he was fentenced to pay a fine of $30,0 \mathrm{col}$, and imprifoned till it was paid. It is faid that one of the peers, if not two, who vuted againft him, had been poffeffed of the office of chancellor, and told the places of mafters in chancery whenever vacant.

Briafly in Elcaions. See Elections.
BRIClANI, thofe of the order of that name. This was a military order, inflituted by St Bridget, queen of Sweden, who gave them the rules and conftitutions of thofe of Malta and St Augultin. This order was approved by Pope Urban V. They were to fight for the burying of the dead, to relieve and affit widows, orphans, the lame, fick, \& c.

BRICK, a fat reddith earth, formed into long fquares,

Brick.

## $\xrightarrow{-}$

 fquares, four inches broad, and eight or nine long, by means of a wooden mould, and then baked or burnt in a kiln, to ferve the purpofes of building.Bricks are of great antiquity, as appears by the facred writings, the tower and walls of Babyloa being built with them.

The Greeks chicfly ufed three kinds of bricks; the firt whereof was called didneor, i. e of two palms; the lecond retecabagar of four palms; the third miveadugor, of five palms. They had alfo other bricks, jult half each of thofe, to render their works more folid, and allo more agreeable to the fight, by the diverfities of the figures and fizes of the bricks.

The dimenfions of the brick chiefly ufed by the Romans, according to Pliny, were a foot and a half long, and a foot broad; which meafures agree with thofe of feveral Roman bricks in England, which are about 17 inches long, and is broad, of our mealure. Sir Henry Wotton fpeaks of a fort of bricks at Venice, of which ftately columns were built; they were finf formed in a circular mould, and cut, before they were burnt, into four or more quarters or fides; afterwards, in laying, they were jointed fo clofe, and the points concentered fo exactly, that the pillars appeared one entire piece *. The ordinary Paris brick is eight inches long, four ebroad, and two thick, Frencls meafure, which makes fumething more than ours. But this fmallnefs is an advantage to a building, the ftrength of which confils much in the multitude of angles and joints, at leak if well laid, and having a good bond.

Bricks among us are various, according to their various forms, dimenfions, ufes, method of making, \&c. The principal are, compals-bricks, of a circular form, ufed in fteyning of walls: concave or hollow bricks, on one fide fat like a common brick, on the other hollowed, and ufed for conveyance of water: feather-edged bricks, which are like common fatuten bricks, only thinner on one edge than the other, and ufed for penning up the brick pannels in timber buildings: cogging bricks are ufed for making the indented works under the caping of walls built with great bricks: caping bricks, formed on purpole for caping of walls: Dutch or Flemifh bricks, ufed to pave yards, fables, and for foap-boilers vaults and cifterns : clinkers, fuch bricks as are glazed by the heat of the fire in making: fandel or famel-bricks, are fuch as lie outmon in a kiln or clamp, and confequently are foft and ufelefs, as not beine thoroughly burnt: great bricks are thofe twelre inches long, fix broad, and three thick, ufed to build fence-walls: plafter or buttrefs bricks, have a notch at one end, half the breadth of the brick; their ufe is to bind the work which is built of great brick: Atatutebricks, or fmall common bricks, ought, when burnt, to be nine inches long, four and a quirter broad, and two and a half thick; they are commonly uled in paving cellars, finks, hearths, \&c.

Wolridge, and othersafter him, have endeavoured to excite brick-makers to try their Bill in making a new kind of brick, or a compofition of clay and fand, whereof to form window-frames, chimney-pieces, door-cafes, and the like. It is to be made in pieces faftioned in moulds, which, when burnt, may be fet together with a fine red cement, and feem as one entire piece, by which may be imitated all manner of ftone work. The thing thould feem feafible, by the earthen pipes made

Wotfon's Elkm. of l. ii.

Supplemext ro Chambers
fire, thin, and durable, to carry water under ground at Portfmouth; and by the earthen backs and grates or chimneys, formerly made by Sir Juhn Winter, of a great bignel's and thicknefs. If chimney-pices thus made in moulds, and dried and butnt, were not found fmooth cnough, they might be polithed with land and water 3 or were care taken, when they were half dry in the air, to have them polithed with an inltrument of copper or iron, then leave them till they were dry enough to burn, it is evident they would not want much polifting afterwards. 'The work minht ever, be glazed, as potters do their fine earthen ware, either "hite or of any other colour ; or it might be vemed in imitation of marble, or be painted with figures of virious colours, which would be much cheaper, perhaps equally durable, and as beautiful, as marble itfelf.

Bricks are commonly red, though there are fome alfo of a white colour, for which fort Walpit in Suffelk is famous. Bricks may be made of any earth that is cleat of flones, even fea-oufe; but all will not burn red, a property peculiar to eatths which contain ferruginuas particles, In England, bricks are chiefly made of a hazely, yellowifh-coloured, fatty earth, fomewhat red. difh, vulgarly called loam. The earth, according to Leibourn, ought to be dug before winter, but not made into bricks before fpring. For the making of fuch bricks as will At and the fiercelt fires, Stourbridge clay or Windfor loam are efteemed the beft. In general, the earth whereof bricks are made ought not to be too fandy, which would render them heavy and brittle; nor too fat, which would make them crack in drying.

The firf ftep in the procefs of brick-making is cafting the clay, or earth. The next ftep is to tread or temper it, which ought to be performed doubly of what is efually done; fince the goodnefs of the bricks depends chiefly upon this firft preparation. The earth it felf, before it is wrought, is generally brittle and dufty; but adding fmall quantities of water gradually to it , and working and incorporating it together, it opens its body, and tinges the whole with a tough gluey band or fubitance. If, in the tempering, you overwater them, as the ufual method is, they become dry and brittle, almoft as the earth they are made of; whereas, if duly tempered, they become fmooth and folid, hard and durable. A brick of this liff fort takes up near as much earth as a brick and a half made the contrary way; in which the bricks are fongy, light, and full of cracks, partly through want of due working, and partly by mixing of aflies end light fandy earth to make it work eafy and with greater difpatch; as alfo to fave culm or coals in the burning. We may add, that for bricks made of good earth, and well tempered, as they become folid and ponderous, fo they take up a longer time in drying and bunning than the common ones; and that the well drying of bricks before they are burned prevents their cracking and crumbling in the burning.

Bricks are burnt either in a kiln or clamp. Thofe that are burnt in a kiln, are firf fet or placed in it; and then the kiln being covered with pieces of bricks, they put in fome wood to dry them with a gentle fire; and this they continue till the bricks are pretty dry: which is known by the fmoke's turning from a darkifl colour to tranfprent fmoke : they then leave off putting in wood, and proceed to make ready for burning; which is performed by putting in brufl, furze, fpray, heath, go:s, they dam up the mouth or moutls of the kiin with pieces of bricks (which they call /hining) piled up o:se upon another, and ciofe it up with wet brick-eath infead of mortar. The thinlog they make fo high, that there is but juf room above it to thrull in a faggot: then they proceed to put ia more faggots, till the kiln and its anches look white, and the fire appears at the iop of the kiln; upon which they fiacken the fire for an hour, and let all cool by degrees. This they continue to do, alternately heating and facking, till the ware be thoroughly burnt, which is ufually effected in 48 hours.

About London they chiefly burn in champs, built of the brick; themfelves, after the manber of arches in kilus, with a vacancy between each brick, for the fire to play through ; but with this difference, that inftead of arching, they fpan it over by making the bricks project one over another on both fides of the place, for the woond and coals to lie in till they meet, and are bounded by the bricks at the top, which clofe all up. The place for the fuel is carried up firaight on both fides, till about three feet high ; then they almoft fill it with wood, and over that lay a covering of fea-coal, and then overfpan the arch; but they firew fea-coal alfo over the clamp, betwist all the rows of bricks; laftly, they kindle the wood, which gives fire to the coal, and when all is confursed, then they conclude the bricks are fufficiently burnt.

In Dr Percival's effins ${ }^{*}$, we have the following ex. periment of the effects of bricks on water. "Two or inree pieces of common brick: were fleeped four days in a bafon full of difilled water. The water was then decanted off, and examinet by various chemical tefts. It was immifcible with foap, ftruck a lively green with fyrup of violets, was rendered fightly lactefcent by the volatile alkali, and quite milky by the fised alkali and by a folution of faccharum faturni. The infufion of tormentil root produced no change in it." This experiment, he obferves, affords a Atriking proof of the impropricty of lining wells with brick, a practice very common in many places, and which cannot fail of rendering the water hard and unwholefome. Clay gencrally contains a variety of heterogeneous matters. The coloured loams often participate of bitumen, and the ochre of iron. Sand and calcareous earth are fill more common ingredients in their compofition; and the experiments of Mr Geoffroy and Mr Pott prove, that the carth of alum alfo may in large quantity be extracted from clay. Now as clay is expofed to the open air for a long fpace of time, is then moulded into bricks, and burnt, this procefs refembles in many refpects that by which the alum-ftone is prepared. And it is probable that the white eflorefetice which is frequently obfervable on the furface of new bricks, is of an aluminous nature. The long expofure of clay to the air before it is moulded into bricks, the fulphureous exhalations of the pit-coal ufed for burning it, together with the fuffocating and bituminous vapour which arifes from the ignited clay itfelf, fufticiently account for the combination of a vitriolic acid with the earth of alum.

Oil of Bricks, olive oil imbibed by the fubftance of bricks, and afterwards diftilled from it. This oil was once in great repute for curing many difeafes, but is - ox jufly laid afide.

BrICK-Leycr, an artificer, whofe bufincfs is to build wit!' bricks, or make brick-wark.

Brick-loye:s work, or bufinefs, in London, includes tyliug, walling, chimney-work, and paring with brichs and tyles. In the cointry it alfo includes the mafon's and plafterer ${ }^{2}$ sufnef.

The materials ufed by brick-layers are bricks, tyles, mortar, laths, mails, and iyle pins. Their tools are a brick towel, wherewith to take up mortar; a brick-axc, to cut bricks to the determined thape; a $f_{\mathrm{s} w}$, for fawing bricks; a rub-none, on which to rub them ; alio a fquare, wherewith to lay the bed or bottom, and face or furface of the brick, to fee whether they are at right angles; a bevel, by which to cut the under fides of bricks to the angles required; a fmall trannel of inon, wherewith to mark the bricks; a fluat-fone, with which to rub a moulding of brick to the pattern deferibed; a banker, to cut the bricks on; line-pins to lay their rows or courfes by ; plumb-rule, whereby to carry their work upright; livel, to conduct it horizontal; fquare, to fet off right angles; ten faot rod, wherewith to take dimenfons; jointer, wherewith to ruil the long joints; rammer, wherewith to beat the foundation; crow and pick axe, wherewith to dig thrcugh walls.

The London brick-lyyes make a regular company, which was incorporated in 1565 ; and confints of a mafer. two wardens, 20 aflifants, and 78 on the livery.

BRICK-Laying, the art of framing edifices of bricks.
Moxon hath an exprefs treatife on the art of brick:laying; in which he defribes the materials, tools, and method of working, ufed by brick-layers.

Gieat care is to be taken, that bricks be laid joint on joint in the middle of the walls as feldom as may be; and that there be good bond made there, as well as on the outfides. Some brick-layers, in working a brick and half-wall, lay the header on one fide of the wall perpendicular to the header on the other fide, and fo all along the whole courle; whereas, if the header on one fide of the wall were toothed as much as the firetcher on the other fide, it would be a fronger toothing, and the joints of the headers of one fide would be in the middle of the headers of the courfe they lie upon of the other fide. If bricks be laid in winter, let them bc kept as dry as poflible; if in fummer, it will quit cofl to employ boys to wet them, for that they will then unite with the mortar better than if dry, and will make the work flronger. In large buildings, or where it is thought too much trouble to dip all the bricks feparately, water may be thrown on each courfe after they are laid, as was done at the building the phyficians college, by order of Dr Hooke. If bricks are laid in fummer, they are to be covered; for if the mortar dies too bafily, it will not bind fo firmly to the bricks as when left to dry more gradually. If the bricks be laid in winter, they flould alfo be covered well, to protect them from rain, fnow and frof; which laft is a mortal enemy to mortar, efpecially to all fuch as have been wetted juft before the frof affaules it.

BRICK-Maker, is he who undertakes the making of Bricks. This is moftly performed at fome fmall dia flance from citics and towns; and though fome, through ignorarice, look upon it as a very mean employ, becaufe laborious, yet the mafters about London, and other capital citiee, are generally men of fublance.

BRICKING, among builders, the counterfeiting of

Erick, 3 bofek-iwali on flater: which is jone by fasearing it lirulegroom. over with red uchre, and making the jaints with an edged tool ; thefe left are afterwards filled with a fine
plafter.

BRIDI:, a weman newly married. Among the Greeks, it was cu\{omary for the urine to be conducted from her fpether's houfe to her hufband's in a chariot, the evening being cholen for that purpofe, to conceal her bluthes; the was placed in the middle, he: huband fitting on one fide, and one of her moft intimate friends on the other ; torches were carried before ber, and the was entertained on the pafiage with a fong fuitable to the oacafion. When they arrived at their journey's end, the axle-tree of the coach they rode in was burnt, io fignify that the bride was never to return to her father's houfe- Among the Romans, the bride was to feem to be ravilbed by force from her mother, in memory of the rape of tise Sabines under Romulus: She was to be carried home in the night-time to the bridergroom"s heufe, accompanied by three boys, one whereof carried a torch. and the other two led the bride; a fpindle and difaff being carried with her: fhe brought three pieces of money called aftes, in lier hand to the bridegroom, whofe doors on this oceafion were adorned with flowers and branches of trees: being here interrogated who the was, fhe was to anfwer Caia, in memory of Caia Cecilia, wife of Tarquin the Elder, who was an excellent /arifica or fpintrefs; for the like rafon, before her entrance, the lined the door-polts with wool, and fmerred them with greale. Fire and water bcing fet on the threfoold, fle touched both; but farting back from the door refufed to enter, till a: length fhe paffed the threfoold, being careful to ftep over without touching it: here thee keys were given her, a nuprial fupper was prepared for ber, and minftrels to divert her ; fhe was feated on the figure of a priapus, and here the attendant boys refigned her to the prontobe, who browght her into the noptial chamber and put her to bed. This office was to be performed by matrons who had only been once married, to denote that the marriage was to be for perpetuity.

BRIDEGROOM, a man newly married, the Spoufe of the bride.

The Spartan bridegrooms committed a kind of rape upon their brides. For matters being agreed on between them two, the woman that contrived and managed the match, having thaved the bride's hair clofe to her thin, dreffed her up in man's clothes, and left her upon a mattrefs: this done, in came the bridegroom, in his ufual drefs, having fupped as ordinary, and ftealing as privately as he could to the room where the bride lay, and untying her virgin girdle, took her to his embraces; and having ftaid a fhort time with her, returned to his companions, with whom he continued to fpend his life, remaining with them by night as well as by day, unlefs he ftole a flort vifit to his bride, which could not be done without a great deal of circumfeection, and fear of being difcovered. Among the Romans, the bridegroom was decked to receive his bride; his hair was combed and cut in a particular form; he had a coronet or chaplet on his head, and was dreffed in a white garment.

By the ancient catrons, the bridegroom was to forbear the enjoyment of his bride the firll night, in honour of the nuptial benediction given by the prieft
on that div v. In Scotlond, and feriaps aifo fome Erdereet. parts of England, a cuttum called morelact, obriined; Eridpe. by which the lord of the manor was entitled to the firf w y trf. nizhe" habitation with his tenant's uride + .

FRIDENTELL. a wot houfe, or place of corrcc ancl Late. tion for vagrants, frumpets, and other diforderly per- \& 88. fons. Thefe are made to work, being maintained with t See Ägro clohing and diet; and when it feems good to their governors, they are fent by palies ino their native countries; bowever, while they remain here, they are nut only made to work, but, according to their crimes, receice once a-fortnight fuch a number of aripes as the governor commands.

Hrinewell. near Fleet-fireet, is a foundation of a mirt and fingular nature, partaking of the bofpital, the prifon, and work-houfe; it was founded in 1553, by F.dward V1. who gave the place where King John had formerly kept his court, and which had been repaired by Henry Vill. to the city of London, with 700 merks of land, bedding, and other furniture. Several youths are fent to the hofpital as apprentices to manufacturers, who refide there; they are clothed in blue doublets and breeches, with white hats. Having faithfully lerved their time of feven years, they have their freedom, nnd a donation of iol. each, for carrying on their refpective trades.

BR.IDGE. A bridge is a mode of conveyance from one part of fpace to another, the intermediate part being either impaffable, or dificult, or otlerwife of an inconrenient accefs. The flength muft be in proportion to the weight which is to be fupported; the extent, or width of the paflage being likewife taken into confideration. This paflage may be of a confiderable diftance, and the weight to be fupported inconfiderable; for example a ficier is the greateat weight. to be fupported; and the can foin as much matter from her bowels as will anfwer ber purpole, and can find fupperts upon which foe can make the extremities of her bridge to reft. But not to take up time to mention the ingenuity (or under whatever rame it may be defigned) of infcets, birds, or quadrupeds, who difcover admirable inftances of art fuitable to their nature, and ules fitted for their fituation, our chief intention is to inveftigate the different exertions of the rational part of the creation, and their manner of accommodating themfelves to anfwer their neceflary exigencies, particularly at prefent confining ourfelves to the formation of bridges of different kinds. The mot fimple part of thefe, we cannot doubt, were in ule from the beginning of time. When any pafiage exceeded the ftep or flretch of a man's legs, we cannot imagine, but his natural invention would lead him to apply a fone, if of fufficient length to anfwer his purpofe; but if not, a piece of wood, or trunk of a tree, would be employed in the fame way to render the paffage more ealy for himfelf.

Hifory does not inform us that this ufeful art was carried to any great extent, in the ages of the antediluxians; but we can farcely imagine but they were acquainted with it, fo far as we have mentioned, and even :o a greater degrec. Can we fuppofe that fuch geniufes as difcovered the method of founding and working in iron and brais, and the formation and ufe of mufical infruments, would be wanting in difcoreairsf methods fo intimately connceted with their

## B R I [4I4 ] B R I

 own advantage? We have no accounts handed down to us, that they occupied houfes compofed of different apartments, and of different ftories or flats ; yet we find the infinitely wife and merciful Governor of the univerfe, when admoniflung Nouh refpecting the building of an ark for his fafety, fpeak tu him of different rooms and flories, of which it was to confif, in terms with which Noah was well acquainted. As the Almighty always accommodates himfelf to the capacities of his creatures, if Noah had not been acquainted with thefe terms, can we doubt that the Almighty would not have furnifhed his favoured fervant with a perfpective view of thefe rooms and fories as he did to Moles, when giving him inftructions to raife and conftruet a fabric of which he formerly never had obtained a view? But this amounts to no more than that it might be, and therefore we will not dwell upon it.Of what took place after the flood, we have no remains of antiquity, for many years, of this art being cultivated to any extent; although it is furprifing, thet upon viewing the beautiful and luperb dome of the heavens, and the variegated arch that at times made its appearance, that an imitation of neither of thefe was not earlier attempted. Among the eaftern nations, and after them the Egyptians, who have left us fo many monuments of grandeur and art, very little of the arch is to be found in any degree of elegance. In fome of the late refearches into their antiquities, a zodiac painted in lively colours, and fome vaultings cut in a rock, have been difcovered; but what is formed of different ftones is but of a rude compofure; yet being of the more carly period, we cannot but conclude, that they gave the idea to the Greeks, who improved it in a more elegant flyle.

It is prohable that the Chinefe, even at an earlier period, arrived at a degree of perfection and ele. rance in this art, which neither the Greeks nor the Pomans every reached. We, who boaft, and not vithout fome reafon, of the elegance and extent to which we have carried it, have not outdone them. We find that they have conftructed a bridge of one arch, the fpan 400 cubits, in the ordinary computation 600 fect, fro:n one mountain to another; the height of this arch is likewife given of 500 cubits or 750 feet. It is univerfally allowed, that if Noah was not the founder of that monarchy, it was fome of his grand-children, at a very early period; their form of government refembles the patriarchal, which is in favour of Noah's being their founder, and that they cultivate thefe arts, of which he inftructed them in the rudiments: but this is not a place for difcuftion of this fubject.

But to return to the Grecks and Romavs, of whofe liftory we know more than we do of the other: $\Lambda$ lthough we have admitted the Egyptians to have fruck out the plan, yet, in point of elegance, in combining the parts of the arch, we will not deny the Greeks to have the firft thare. On account of an effigy, having Janus upon the one fide, and a bridge on the oppofite, fome have afcribed the honour of the art to him: he might indeed, on account of his improvements of the art, Shewn himfelf deferving of having, along with his effigy, the diftinguifhing art he had excelled in, engrafed on the metal, as a memoral of his merit. Whether
the bridge improved by Janus were over land or water wee are not informed ; but certain it is, that.neceffity, which is the mother of invention, could not fail to form fchemes for conveyance over water. We fund boats, or fome Ipecies of fhips, ufed at a pretty early period; and we are furprifed not to find them more eatly than we have account of. A boat or flip is an inverted arch turned down into the water. Of a bridge of this kind, we find Darius avail himfelf in paffing the Hellefoont, or the Bofphorus, for we find different hillorians of different opinions which of them he paffed, and the word Propontis anfwers to either: al. though we rather agree with thofe that make the paflige at the Dardanelles, or in that frait. This mode of paffage is ftll in ule, and found very conveni. ent ; bit we can farcely fuppofe that Darius, and his officers, and court, never heard of a bridge before that idea fluck them, in the execution of which they fo happily fucceeded. It is highly probable that they were acquainted with, and had formed bridges in their own country, and that want of materials to make a folid wall, induced them and others to conftruet arches, for the purpofe of aqueducts, of which there is fo much occafion in Perfia, on account of the fcarcity of water ; and as they knew not the mode of conveying theis water in pipes.

Among the Romans we find arches of different kinds, and particularly triumphal arches; although thefe were not always formed of lafting materials, but their aqueducts were; of which the remains of feveral are found in France, Spain, and others of their ancient territories. Celar formed a bridge over the Rhine, Trajan over the Danube; with many others, the particular mention of which would not much amufe our readers; at the fame time we hope it will not be difagreeable to give a fhort account of Trajan's bridge, in the words of Dion Caffus. "Trajan built a bridge over the Danube, which in truth one cannot fufficiently admire; for though all the works of Trajan are very magnificent, yet this far ex. ceeds all the others. The piers were 20 in number, of fquare fone; each of them 150 feet high above the foundation, 60 feet in breadrh, and diftant from one another 170 fret. Though the expence of this work muft have been exceeding great, yet it becomes more extraordinary by the rives's being very rapid, and its bottom of a foft rature; where the bridge was built was the narroweft part of the river thereabout, for in other parts of the river it was double or treble this breadth; and although on his account it became fo much the decper, and more rapid, yet no other place was fo fuitable for this undertaking. The arches were afterwards broken down by Adrian; but the piers are flill remaining, which feems as it were to teflify, that there is nothing which human ingenuity is not able to effect." From this account, the whole lengtly of this bridge is 4770 feet, that is 500 feet lefs than an Englith mile. 'lhe archited of this great work is faid to be Apollodorus of Damafcus, who, it is likewife faid, left a defeription of the work;; but how much it is to be regretted that it is nowhere found on record!

Among the moderns, the Fiench and German engineers, and perhaps the Italians, ought not to be neglected. Of thofe who have written on the lubjeet,

## B Pr I

Bricige. we may name Belidor, of whom it is faid, that he had the beft information, from his acquaintance and knowledge of the chief works of France and Germany, as well as from his experience as an engineer. His directions as to an arch or bridge are fhortly thus; that the piers ought to be one-fifth part of the opening, and not lefs than one-fixth; that the arch fones ought to be one thirty. fourth part of the opening: In general, that the pier ought to be of that ftrength, that it will fupport its arch as an abutment, which by practice he finds one-fifth part of the opening to be fufficient ; but gives as a rule, one-fixth part, and two feet more; that is, an arch of 36 feet, one-fixth is $6+2=8$, the thicknefs of the pier. And where the arch is 72 or more, he deduces three inches for every fix feet above 48 ; therefore the pier of 72 would be 14 , that is two feet more than the one-fixth part; but with the above allowance the pier is only 13 ; when the width is 96 or above, he allows the one-fixth part of the opening as quite fufficient: this he feems only to deduce from obfervation, without addncing a reafon; now why a wide arch fhould be fupported by more flen. der piers, in proportion, does not appear quite confiftent with his principles; that the pier mult be of fuch flrength as to ferve for an abutment to the arch thrown upon it, independent of the other arches, which, when thrown, are allowed to be a counterpoife to the preffure. Although we do not fee why it is applicable to his principles, we will afterwards have occafion to fhow, that it tends to corroborate the principles we mean to advance.

We find another experienced engineer, Mr Gautier, who only differs from Belidor, in fo far as we obferve, as to the length of the arch-ftones. Gautier directs, that if the arch is 24 feet, the arch-flose ought to be 2 feet; if 45,3 feet; if 60,4 feet; if 75,5 feet; if 96, 6 feet ; if the ftone is of a durable nature : if foft, of greater dimenfions. Belidor gives the general rule, one twenty-fourth part of the opening : this mutt certainly be confidered under fome limitation; for, if the arch is only 12 feet, the arch-ttone would be only fix incbes, which, we think, will be thought too flight ; and arches over doors and windows would not be three inches; but although he mentions no limitation, we fuppofe, if a 24 feet arch is allowed 2 feet of an archfone, the rule may with fafety be followed; and that a fix foot ftone, of a durable nature, inay be an archftone, although the fpan was 150 or 200 feet.

Under whatever names later engineers have acted, we find Belidor has in general been followed; both by Mr Mylne and others. Peter of Colechurch, a prieft, architect of the London bridge, has given his pier a much greater flrength, being more than half the opening; the piers being from 25 to 34 feet, 18 in number; the width of the river only 900 feet over, which this bridge extends.

An ample reparation is made for thefe inconveniences in Weftminfter bridge; the piers more flender, a more eafy paffage for the water, the piers being only 17 feet. The breadth of the river 1223 feet. The arches are all femicircular, and fpring from about two feet above low-water mark; they confin of 13 large arches and two fmaller; the middle arch is 76 feet fpan, and the other arches decreafe on each fide by four feet. The paflage for carsiages is not of an eafy
$415] \quad \mathrm{B} \quad \mathrm{R}$
afcent, having 30 feet of rife in 611.5 feet; it is fup- Bridge. plied with plainfones for foot paffengers on each lide; $\underbrace{-}$ the ledges adorned with baluftrades, and femi-octagonal towers, which form the receffes of the foot-way; the whole width is 44 feet. The whole is allowed to be elegant and well executed.

We now take a view of Blackfriar's bridge (fig. 12. Plate CXXX.), which prefents us with fomething novel, is agreeable to the eye, and no precaution is neglected that could contribute to its ftrength, or give addition to its elegance. Its arches are of the elliptic form, at leat nearly fo. Upon examination of the figure of which we are poffeffed, the middle arch is a fpan of 100 feet, the flat part of the arch is defcribed with a radius of about 57 feet; and the leffer circles on each fide $35 \frac{3}{4}$ or 36 nearly; this fmall arch is continued below its diameter, till its chord become 16 feet nearly, and its verfed fine 5 feet, which gives it the degree of novelty alluded to; and which is far from being difagreeable to the eye. The fhoulders are compactly filled with ruble-work; the bed of each row tending to the centre of the arch. To the height the arch can be raifed without a fupporting frame, an inverted femicircle is drawn, the convexity of the arch refting upon this ruble-work, which is formed of Kentifh rag, but other hard ftone will equally anfwer the purpofe, as this cannot be everywhere procured. This inverted arch anfwers two material ufes; it prevents this rable being raifed by any lateral preffure; and which we think the moft material is, that it makes thefe parts of the arch, which form the greateft lateral preflure, to abut upon one another; of confequence there is little or no lateral preffure upon the pier. But we Chall refer our obfervations upon this as well as the preceding arches, till we have given fome account of other bridges; as we winh to make the article conduce to the information of our readers, and at the fame time methodical.

The bridge of the greatef extent in England, is that built over the Trent at Burton; its length is 1545 feet, fupported by 34 arches.

The moft fupendous bridge in Europe, is that built over the Tave in Glamorganhire, confifting only of one arch, the fegment of a circle whofe diameter is 175 feet ; the chord of the fegment or fpan of the arch is 140 feet; the height 35 , and abutments 32 feet; the architect of this fupendous arch was William Edsard, a country mafon; it was executed in the year 1756.

We have likewife an account of the famous bridge the Rialto at Venice, the defign of Michael An gelo. On account of its flatnefs and extent, being $98 \frac{7}{2}$ feet fpan, it is reckoned a mafter-piece of art. It was built in the year 1591 . Its height is only 23 feet above the water, but we find it now outdone by a country mafon in Britain.

The next fpecies of bridge to be noticed is a ruflen bridge; this fpecies of bridge is formed of bundles of rufles, which being covered with boards and planks, form a paffage over marthy ground. Bridges formed of cafks, bottles, or fometimes bullocks bladders blown up, and attached to one another, have been ufed upon occafions by armies. They have been named afcogafri. The materials are carried along with the army in their march, which when joined, Ifrutions by water; which they terna a poitable bridge: materials of the above kind being light, and many of them, as barrels, being ufeful for other purpoles. Bridges may be ufed of them to a very great extent.

Dras-bridges differ only in form and materials, being made of sood, and turning at one end upon hinges, or, when opening in the middie, at boih ends, for the purpofe of allowing thips to pafs up and down a river; in this cafe the pafiage over the middle arch is formed by edraw-bridge; the manner of raifing them being fo univerfally known, it would be fuperfluous to defribe.

A Flying-bridge, is a bridge formed of one or more boats joined together, and covered with planks in the mamer of flooring, furrounded with a rail or baluftrade; according to its breadeh it has one or more mans to fupport a rope at a proper height ; one end turns round a windlafs, the other end of the rope is faftened to an anchor in the middle of the water; the rope is kept from finking in the water, by refting on fmall boats at proper diflances, that float and lupport the rope. The bridge is then wrouglat by one or more rudders, from fide to fide of the river; the rope is lengthened or flootened by the windlafs, according to the breadth of the river. Some of thefe bridges are formed with an upper and lower deck, for conveying cavalry or infantry at the fame time, or a greater number of infantry; it being well underitood by military gentlemen, that the greater number that can be conveyed over at once, they can the fooner form into defenfible corps, and fupport one another till their firength is fo augmented the: they can act on the offenfive.

In Piate CXXIX, we bave reprefented aflying bridge of this kind. Fig. r. is the refpective vicw of the coulfe of a river and its banks; $a, b, c, d$, two long boats, or batteaux, which fupport the bridge; GH, KL, two matls joined at their tups by two tranfverfe beams, and a central arch fupported in a vertical pofition, by two pair of fhrouds, and two chains LN, HR. M, a horfe, or crofsepiece, upon which the cable MF ef refts; the ufe of this cable is to re-act upon the working of the rudders, and prevent the bridge from being carried down by the current of the water. Eis the windla fs formerly mentioned; $a, b$, the rudders. $A B, C D$, two portions of bridges of boats, faftened to the banks on cach fide of the river, and between which the bridge traverfes. $c, f$, Chains fopported by fmall floats, fometimes five or fix of them placed at pioper dillances; the number to be ofed will be regulated according to the length of the cable; one of them is plated at the anchor, fo as the cable may fining above the furface of the water as near as the depth of the river will permit.
lite 2 . is a plan of the Tame bridge ; $a, b, c, d$, the two boats that fupport it. K, G, the two matts. KFG, the tranfverle piece, over which the cuble pafies; E, the wind afs about which the cable is wound ; $a, b$, the rudjers; o, a boa: ; $c$, one of the haters that fupport the chain; $\mathrm{N}, \mathrm{N}$, pumps for extraching the witer vut of the boat; P, P, capitanc.
lig. 3. $A$ iateral clazation of the bridge, $A, c$, ne n? the bouts; $l$, the rudder; 1 : the windmits ; $M$, the borfe; GH, ol.c of the mants; E, N, H, F, the cable.

In this viers the baluftrade along the fide of the bridge Bridge. is in full view.

Fig. 4. is an elevation of the hinder part of the bridge or flern. $a, b$, The two boats; GH, KL, the two malis; HL, the upper tranfverfe beam ; $p, q$, the lower tranfverfe beam, over which the cable paffes, and occafionally flides from the one malt to the other; and muft on that account be kept well greafed ; $p k, g$ g, fhrouds extenditg from the fides of the bridge to the top of the matts ; M. the crofs-piece, over which the cable paffes to the windlafs.

Befides thefe lemporary bridges of boats already mentioned, there are permanent bridges formed of boats, as at Rouen, Beaucaire, and Seville. Thofe of Rouen and Seville are the moff noted; that at Roven was confructed to fupply the ftone bridge built by the Romans, faid to have been a flately fabric. The boats are very firm, well moored with ftrong chains, and kept in proper repair. It is almoft 300 yatds in length, paved with flone as a freet. A bridge of boats has the advantage of other bridges, if well moored, for as the water rifes, whether by rains or tide, they keep afloat. This bridge is reprefented by fome as a wonder of the prefent age; others fay, it is far furpaffed by that of Seville; but when we reflect upon that conaructed by Darius over the ftraits of the Dardanelles; and on that by Cæjar over the Rhine, we cannot view either of them with fo much furprife.

We find fome of a different conftruction, called floating bridges; which we think thould rather be filed niding bridges; they are fo conftructed that the one lies above the other, when not in wefe. When intended to be ufed, by drawing of ropes turned over pulleys, the upper one moves forward, till it paffes over the other, when they are joined in one, and form the intended paffage. It will readily occur to our readers, that thefe mult be much limited, as to their length, both on account of their weight, and the ftrength of the rope that it would be neceflary, both to pufin them over, and return them to their place; they can only be of ufe in paffing a moat, in befieged places, or fuch as are of inconvenient accefs and litthe frequented.

We cannot omit taking notice of fome natural bridges, in particular two very remarkable ones; the one in Virgini., defcribed by Mr Jeflerton in his state of Virginia. It commences at the afcent of a hill, which feems to thave been cloven afunder, by fome convulfion of nature; the fiffure at the baidge is by fome meafurements laid to be 270 feet; by others only 205 ; width at bot:om 45 feet, at top 90 , which gives the length of the bridge; the thicknels at the fummit of the arch, is to feet: confiderable part is of earth, upon which grow many large thees; the refidue is of the fame materials with the hill on both fides, which is a folit! limeflone rock, and forms the arch, which is of a femi-ellipticall form, very flat ; the beight of this arch above the Water (the wl:ole being 205, and 40 the thicknefs) is 165 fect; the breadth at the middle is about 60 feet. It has i:) lodges, but what is formed on fome parts by the rook, but even at thefe, few can fland upon their icet 10 lock down; but go ou hands and feet to peep over. On the contrary the view from below is moft delightful, and enchanting. The fiffure cortinuing narrow, and Araight, bothabove and below; and of fuch taeight
that it cxhibits a profpect, for about five miles; gives a flost but very pleafing view of Blue ridge on the one fide, and Nurth mountain on the other ; the ftreans that paffes below it, is called Cedar ereek, and falls into James river. The bridge is in the county of Rockbridge, to which it has given the name. We bave no account of the time when it was produced. It has, however, formed a paflage between two mountains otherwife impafiable, but at a great diftance from it.

The other is in the province of Angaraez in S. America, defcribed by Don Ulloa, It is from 16 to 22 feet wide; iti feet deep, of breadth one and one third of a mile, and is not ferfibly greater at top than at bottom. Don Ulloa thinks it has been effected by the wearing of the water, which runs below it; if fo, it would have worn down plain and fmooth; or moft to that fide on its defcent, where the rock was of fofter materials; but he juforms us that the cavities on the one fide, where equally hard, fo tally with protuberances of the other, that if they met they would fit in all their indentures, fo as to leave no face void; from which we are rather inclined to conclude, that it has been formed by fome violent convulion of nature.

In comparing the two, although we find in the bridge in Virginia, the fame quality of rock on both fides, and with the bridge itfelf, we do not find the protuberances on the one fide anfwering to cavities on the other; if any fuch have been, the protuberances muft have been effaced by time.

Before we proceed to make obfervations on the different forms already defcribed, and the principles of their conftrution; we will lay down a theory founded upon approved philofophical principles ; and we will endeavour to fimplify our expreffion, fo as to be underfood by the mechanic, and, we hope, not defpifed by the philofopher.

The bridges we have defcribed, are formed of arches of different curves; thofe of the circle and ellipfe are the moft prevalent. Thefe are formed of certain materials, fo joined rogether, as to retain the curvilineal form of the original curve from which it is taken, whether circle, ellipfe, or other curve; and as it is only a part of the curve, and compofed of different materials, the extremities of the arch muft lave fome fufficient fupport, to retain the materials in the form of the intended curve. Although authors that lave treated upon this lubject, have not agreed upon fixed principles to afcertain the ftrength of thefe abutments, or fupports; yet all agree, that they mult be fufficient to fuftain the impreflung force.

It is an univerfal principle in nature, that all bodies, on or near the furface of the earth, tend by the laws of gravity towards its centre, unlefs prevented by fome force, that bas the power to refift them, or change their direction. If we attend particularly to one body, having all its parts tending equally to the centre of the earih, and fupported in that pofition, it will retain its polition. If we fuppofe another bady to prefs upon it, fo as to change that pofition it has on its fupport or force away its fupport, in whole, or in fuch part, that a greater part of the body has a tendency to the centre, more than it has to its fupport; it will fall toward the earth in a direction to its centre.

Let A, B. Fig. 5. Plate CXXIX. be two fupports, fuppofe one foot fquare, of height 5 feet, or any other height lefs or more, flanding perpendicular; and let a Vol. IV. Part II.

## 417 ] B R I

piece of the fame dimenfions, wood or flone, of three Eru'ge. feet in length, be placed acrofs in equilibrium; the perpendicular fupport is not preffed by this weight, but in the perpendicular direction; if a fecond jicce of fise feet is laid upon the other, in the fane wray, projecting two fcet over on each fide, they will fiill remain in equilibrio, and fo on till the two bodies upon the two uprights meet one another, as in the figure, the plănks or logs DI) meet in E , without affecting the fupports, except in the perpendicular direction ; the equilibrium being preferved, no force impofed will make the fupport give way, that will not feparate the particles of matter, or break its contexture; neither will any weight puin it over, that is not greater than the perpendicular preffure: for action and reaction are equal, acting in contrary directions. The force, then, that it will fupport before it yield, to prefs upon its fupport, is equal to the number of fquare feet that refts on the lurface, and turns upon the angular point F. Now fuppofe this operation continued the whole length of the bridge, and the whole level blocks in contact with one another, received by the abutments, or landftools, the bridge will fupport any weight that the ftrength of thefe blocks cculd fuf. tain, and the abutments reaet opon; this would be a bridge formed of the Egyptian arches, not very clegant, but of great ftrength, as each block is fupported at one foot diftance; and the upper ones in contact with one another, only react by their own ftrength, at one foot diffance without fupport; and by the reaction of the land abciments, cannot yield to give any lateral preflure upon the pier.

Let us now fuppofe a femicircle or any other arch defcribed, the fupcrtluous matter is carried off, and the arch remains in tlrength and beauty. Now inftead of balancing the blocks by counterpoife on each fide of the fupport, let this be taken off, and applied as weights above the pier, being equal in weight to thofe that form the arch, the equilibrium is fill preferved, without any lateral preflure. This may be illuftrated by a very fimple experiment. Let $A, B, C, D$, fig. 6 . be four blocks; the firlt $A$, a fquare, which reprefents the bafe; the fecond B , a pentagon, inforibed it a circle of the fame radius about which the fquare is defcribed, placed with one of its angles to the perpendicular edge of the fquare, a perpendicular or plumb falls within the bafe, it is therefore firmly fupported; let the hexagon $C$, be placed upon one of the fides of the pentagon, the two angles likewife coinciding; in this the perpendicular falls over the bafe, it will therefore be no longer firmly fupported, but will fall, and if attached to the pentagon, would carry a part of it along with it, except prevented by friction and conffency of the texture of the materials. In this fituation let it be retained, till a pentagon is placed on the oppofite fide of the hexagon; the plumbline or perpendicular, as it now ftands, falls within the bafe, and will be again fupported fo as to carry an additional block raifed upon it, or require a confiderable force to pull it over to that fide, to which the hexagon was inclined to fall. The conclufion we would draw from the above, is that if the column or pier is of fuch dimenfions at top, where the fpring of the arch rifes, that a weight of fuch materials as the arch is compofed of can be raifed, not exceeding the height of the vertex or crown of the arch, as will counterpoife that part of the arch, that produces the lateral prefure; tben a

E:idse. fier of fuch dimenfion is of fufficient ftrength to fupport fuch an arch, till the other arches are thrown, and the whole made to abut upon columns that will counterpoife the whole with any incunibent weight propofed.

The manner we would recommend to apply the arches to their pier, and to one another is, that they abut upon one another, as in fig. 7, 8, and 9. In fg. 10, Plate CXXX. we take a femicircular arch of 75 feet fpan; our arch-ftone we thimk of a fufficient ftrength at three feet length; our pier fix feet, equal to the two arch-ftones. As-every arch can be raifed to a certain height, without the fupport of the centre arch; allowed, to the 3 eth degree or $\frac{f}{3}$ of the diftance to the crown of the aich. TVe have divided the quadrant or half of the arch into 83 equal parts; and where more than half of the arch-ftone falls over the perpendicular, we confider as the height, not to be exceeded without fupport: the weight of matter upon the pier to this height, we compare with the weight of matter from that contained in the arch-ftones; or, rather, what breadth of pier will contain a quantity of matter that will counterpoife the weight of the arch-flones, of an arch of given Span, and length of arch-fones to the crown of the arch.

In inveftigations of this kind, we find recourfe is had to trigonometrical calculations, and to algebraic and fluxionary equations. Foreign writers, as Belidor. give us rules, collected from fuch comtructions as fuited their tafte; and moft of the algebraic and fluxionary equations that we have inveftigated, take their data from fome bridge, the conftruction of which pleafes them, and bring their refult agreeable thereto; and with fome degree of confidence tell us that they are right, as it has agreed to the conftruction of fo able an engineer. If we allow ourfelves to follow this method, we can never expect to make improverants. '

A late writer (Atwood) has treated learnedly, and we think judicioully, upon this fubject; be confiders each of the arch-itones, as a wedge abutting upon one another, and the whole upon the landitool, or upon the pier of the particular arch, and is refifed by a force or preflure, with a force which he expreffes by a line placed at right angles to an arch-tone, at that part of the arch which would begin to reft upon the centre arch, which here he calls BS, but fays, that the length of the line or the point $S$ is not determined: this, we hope, will be found to be determined in the refult of our thenry.

We hope our readers will excufe us in departing from the method of inveftigation formerly mentioned; and, in following that plain geomettical method, which every mechanic is able to underftand, and judge of; and which, at the fame time, we flatter ourfelves the learned will not find caufe to challenge.

The thicknefs of our pier we have taken is, $\Lambda b$, fig. 10. fins feet; each divifion of our arch is equal to two fect on the outfide, and tending to the centre of the circle as a wedge : the infide incafures $t .8$ feet ; the mean is $1.9 \times 3$; the length of the flone is 5.7 feet of furface; we fuppofe it taken three feet into the arch, equal 17.1 folid feet, in each of our divifions; the feale half an inch 10 10 feet. The folid meafure, on the whole, is cafily found; the
$30^{\circ}$ is at $a$, but the arch will ife without the fupport bridge. of the centre arch tu c. Now, the number of divi- $\sim^{\sim}$ fions from $a$, to the centre of the arch, is $22.2 ; 17.1$ folid feet each, is 374.75 folid feet; our pier of fix: feet contains to the height $a$, the furface $\mathrm{A} b d a$; at a mean, taken as in the table, $a$, is 72.75 , being each two feet, is 145.5 fuperficial feet, $\times 3$ : the af fumed depth is 436,5 lolid feet, being fully in equilibrium with the arch-ltones; but, as the arch will rife to $\varepsilon$, there is an additional weight of 229.5 folid feet, which will be allowed more than a counterpoife to the preflure of the arck, without any aid from the pier, which has unly the perpendicular preflure to fupport. The counterpoife is, therefore, by this afcertained, which will fupport this arch till the other arches are raifed; which, as they all abut upon one another, the land-ftool muft be made of fuch ftrength as to counterpoife the whole; which is afcertained upon the fame principles, and leaves no ftrefs upon the piers but the perpendicular preflure alone. This pier is farce $\mathrm{f}_{\frac{7}{2} \text { th }}$ part of the opening, by which, the river having fo free a paflage, will affect the bridge by preflure but very little : but this will fall in our way to confider afterwards. Fig. 7. is a perfpective view of one archt of a bridge, on this conftruction, with part of an adjoining arch on each fide.

Wher the fituation of the river, or other circumfances, or when a fegment of a circle is made choice of for the eafe of the paffage, or economy in the ufe of materials and mafon work; or the bafe of the arch, or furface of the pier, will not admit of mafon work to bear upon the fpring of the arch, of fuch weight as to produce a fulficient counterpoife to the arch-flones that produce the lateral preffure, the pier muft be made of greater breadth, as, if much flatter than fig. 8. the pier, in that cafe, ought to have been of the breadth as reprefented by the dotted line $a b, a b$; but this is afcertained in projecting the plan. Fig. 8. is a perSpective view of one arch, with its adjoining arch, and part of the abutment on the land fide, which will be confidered afterwards. At the fame time, as the fall of an arch is attended with very great lofs, both in money, time, and lofs of materials; which might prove hurtful to many ingenious undertakers of fuch works; by way of precaution, if they fhall doubt that the flendernefs of our pier will fupport the arch till the others are thrown, for none can doubt them afterwards, beams may be made to abut upon one another, and upon each pier, as in fig. 8.: this is no lofs of time or materials, as it will fupply, in part, the fupports of the centre arches, upon which the arch of the bridge is raifed; and it is a precaution ufed, upon a fmaller fcale, when in front walls of houfes; the whole is often fupported upou areades of fhop-doors and windows, many of their piers not exceeding nine or ten inches: a crofs.bar or piece of wood is laid acrofs, to prevent their yiclding or lofing the perpendicular, till the whole is completed. Now, the preflure upon the arch is not fo grear, as moft writers have affigned to it; that is, the whole incumbent weight of all the materials above it, together with that of paffage. The art of mafonry is fuch, that the veds or rows of ftones fo bound one with another, that each makes a preffure on its contiguous part, fo as to form an arch of themfelves. We fee in well-built walls a vaft excavation

Eridge, made in the lower part, or in the middle of the wall, and the upper part of the building not aflected. In like manner, the arches being all raifed to the height that they can be, without fupport of the centre arch, they are completed and filled up to the level of the keyfone, but not higher. The arch is propcrly fecured, if the principles of equilibration, in filling up, are properly attended to; but if one fide is overloaded either in filling up, or in building, it muft twif the arch, and if not infantly to break it, mult tend to an uncertainty as to its durability. For although fome have concluded, they fay, from a refult of their calculation, that the mathematical theory of equilibrated arches is of little value to the engineer; we do not hefitate to affert, that, if preferving the equilibrium, both in raifing the areh, and filling up the haunches, is not attended to, we would not affert it to be in favour of its durability; and we know of no principles in philofophy that will fupport the opinion, that thefe can be neglected with propriety; neither do we think fuch a practice will be readily adopted by a fkilful engineer.

Among the various writers upon bridges, fome prefer the circular arch, both for flrength and elegance. Others contend, that it is exceeded in both by the elliptic arch. Others will give the preference to the Catenarian arch; and we are told, that the excellency lies on the fide of the parabolic curve. We do not think it incumbent on us to combat each of thefe, neither do we think our readers would thank us for fo doing. It may, however, be expected that we fhould not pafs them entirely unnoticed. In the firft place, then, we are of opinion, that the arch that bears mont equably throughout the whole, one part upon another, has the beft claim to ftrength. Our reafon is, which we illuftrate thus, let $A B, A C$, be placed as in fig. in. Suppofe a weight placed upon them in fuch manner as to prefs equally upon the point $A$, the two bodies $A B$, AC , will in that point fupport the greateft weight: if the fame weight is laid in the middle, between A and C , or A and B , they will each yield to the preffure; for the weight is not equally divided between them. But if thefe bodies are fo placed, that in every pofition on which a weight can be applied to them, that the weight being equally fupported by both, this being the cafe with the circie (fig. 7.), inclines us to give it the preference as to ftrength. As to elegance, we know, that regularity is a qualification that fuits every tafte: and here the circle cannot be outvied. It is not, however, without its difadvantages; with regard to expediency, the femicircular arch is fometimes too ligh for the fituation of fome bridges. In this cafe, the elliptic arch (fig. 9), formed upon the greater axis, offers itfelf, in point of expediency, and refufes to yield in point of elegance. It is bold enough to affert, that if frength of materials forms its compofition, and be properly abutted, it will not vield, in point of Atrength, in any exigence to which it may be oppofed. In point of economy, it claims a preference to the femicircular arch; for our part, we are inclined to own the reafonablenefs of its claim, and to give it the preference to the fegment of a circle (fig. 8.), which might perhaps be preferted in point of expediency, as it can be rendered as flat as the ellipfe; but its flatnefs we rather confider as a dif-
advantage, as in the rife of the water, it is apt to choke its courfo and overturn it; whereac, the cllipfe being nearly formed of two fegments of circles of different radii, the fmaller arches at its extremity tife more in the perpendicular, and give more fope to the current of the water; and likewife, it does not require a fironger pier than a femicircle of the fame diameter. The fegment, on the other hand, if fat, requires a fronger pier, and therefore tends more to choke the currcnt of the river, which ought always to be avoided when it can be done.

In the Catenarian arch, as every one will obferve, when a chain or rope is fixed at each end, and allowed to fall down in the middle, the curvature is not equal throughout ; and we therefore cannot think: it entitled to equal claim with the circle or ellipfe. The fame objection may, with equal propriety, be made to the parabola. This curve, near its vertex, has nearly the property of a circle; but every one who knows a parabola, is convinced how much it deviates from it afterwards; although everywhere it retains the property of its own curve.

We now take a review of the different bridges we have mentioned, and make fome obfervations upon them. In general, we remark, that all the writers upon this art have formed the abutments of eacb particular arch, to be placed in the pier below the fpring of the arch; on which account many have conflruct. ed their piers of greater flrength than neceflary. The firt we mentioned, was that by the Roman emperor Trajan, over the Danube : the arches being broken down by the emperor to impede the paffage of his invaders, we cannot, with certainty, compute the lateral preffure upon the piers; but their height being 150 feet from the foundation, mult have confiderable ftrength to react upon an arch of 170 fect fpan; which would act upon this column as upon a lever of 150 feet length. We fint this pier is 60 feet of thicknefs, more than one-third of the opening; one-ffith would have been 34 feet: we cannot think this architect has acted without principles; but it is unneceflary for us to comjecture what thofe were. If we had been informed of the figure of the arch, we might have come near; it probably was a femicircle, and if fo, perhaps 20 feet thick of pier, even at that height, might have been of fufficient itrength.

The nest we have mentioned, are thofe formed up. on the principles, or rather by the rules, given by Belidor; for, although he has not condefcended to lay down his plinciples, it does not appear that he has proceeded without principles. Upon inveltigating what mult be the breadth of a pier that will form an abutment to an arch of 75 feet fpan, we have formerly flated that this arch can be raifed to (fig. 10.), without applying the centre arch: from the centre of this arch-ftone we raifed a perpendicular $p e$, and from the lower pat of the arch-flone dres the line $f g$ parallel to it : this line $f_{\mathcal{F}}$ we fuppofed to cut the centre of the pier in $g$. Suppole him to have allowed a part of the pier equal to the length of his arch-Hone, which we have in this Ggare taken three fect, one-twenty-fourth of the opening nearly, viz. $b b, A k$, for the perpendicular fupport of " the arch-flores to $c$. We find $b g$ meafures five and a balf feep, we therefore extend $b_{g}$ to $/$, which is in fett, and A/14 feet for the breadth of the pier: in place of taking the whole width of the bridge, we take only three feet as formerly. The number of equal divifions from $c$ to the vertex or middle of the keytone, is $20 \frac{1}{2}$ : each of the equal divifions at three breadth contains 17.1 folid feet, as by our former meafure, which multiplied by $20 \frac{1}{2}$ is 350.55 folid feet. The pier, it feet breadth by fix in height, viz. the height he fuppofes his pier, and three deep, is 252 folid feet: the folid building $c f_{g} m$ being fupported in the perpendicular, he confiders as a part of his abutment, of which $f_{g}$ meafures 26 feet, by $c f 3$, and by 3 in depth, is $234+252=486$ folid feet, to counterpoife 350.55 folid feet, which he confiders mure than fufficient. Suppofe then the pier is 13 feet, at the above height it contains 234 feet +234 as before $=458$ feet, which to account for accidents, and from his praftice and obfervation gives his rule, which we fuppofe is fully accounted for. If the height of the pier is more than fix feet, he would add to the breadth of his pier in propertion, which he does not take notice of, but afferts, that when the fpan is above 80 , that one.fixth of the opening is fufficient in ffrength to refift every exigence; but if the arch is a fegment, the fame rule we have given will fird the breadth of the pier, but would give it more than 14 feet. Belidor confines his rule to the femicircular arches. We have already mentioned what we think a proper limitation to his rule for taking the 24 th part of the arch for the length of his arch-flone.

London bridge was executed in flone, under the direation of Peter of Colechurch, a prieft; it was 33 years in building, being begun by King Henry in 1176, and finifled by King John in 1209. The piers are 18 in number, from 25 to 34 feet thick. In what mamer this prief executed fo great an undertaking at that time, and in thefe days of ignorance, we are not informed; he has, however, given it fuperabundant Arength of pier, and choked up the courfe of the river, from 900 feet to 194 : but as this objection is about to be removed, we need fay no more about it.

Weftminfter bridge is generally allowed to be an elegant and noble fabric. The height of the pier is only eight feet from the bed of the river; the thicknefs, for a fufficient counterpoife to the arch, could not exceed 14 feet : the architeet, Mr Labley, has given it 17 : his arches are femicitcular, the middle 76 feet fpan; his afcent one-twentieth part of the half width of the river, which is here 1223 feet, onehalf is 601.15 , the rife $30 \frac{1}{2}$ feet in that extent.

The next we notice is Blackfiars (fig. 12.), executed by Mr Mylne, whofe ingenuity and ability as an engineer are univerflly acknowledged. The middle arcls is a fpan of 100 feet , of the elliptic form; by which, with other advantages, the paflage is rendered more commodisus, the afcent being more cafy; the quicknefs of the rife of the arches of the fmall circles, with the thitnefs of the large circle, are particularly well adapted to give a more eafy paffige to the river, rifing cither from o tide or other accidental caufes, renders the choice of the elliptic arch here very judicious: we are likewife much pleafed with the ingenuity of the inverted arch; it effectually prevents any rifing of the ruble wark that fills the interfices between the arches, by any preflure whatever; as it
abuts upon the arch-ftones at E , it preffes their joints $\underbrace{\text { Fridge. }}$ upon one another, in a more effectual manner than perhaps could be accomplifhed by any other method; but the effect produced by it, and in which we think its excellency mofly confifts, is, that it makes the arches, at that point, where they produce the greateft lateral preflure, to abut upon one another, and thus take off the lateral preflure from the pier. It does not a little furprife us, that Mr Mylne did not avail himfelf of this, by which his pier would have been at leaft one-half thinner: in place of this, he has made it at the extremity of the greater axis, $\mathrm{A} a, \mathrm{~B} b, 19$ feet, and increafed it in a circular form to 22 feet; experience having proved, that when the refifting force is placed in the pier, one-fifth of the opening is more than fufficient for the refifting force; why, he, after taking off the refifing force, fhould contract the courfe of the rives from 100 feet to 70 , when 19 feet, as has been fhewn, by many experiments in practice, was more than fufficient, although he had not taken off this refiftance, by making the two arches abut upon one another. The deptls of the wrater, at ordinary tides, is not lefs tban 16 feet, and by the principles of bydroftatics, the preffing force of a folid foot of water, at that depth, is equal to $8500 \mathrm{lb} . \times 30$ the number of feet contracted, is $255,000 \mathrm{lb}$. or 113.8 tons upon the found of his pier, more than neceflary; and which he might have avoided. We hope we fhall be excufed for thefe remarks, as a work of this kind is executed for general ufe, and to point out what might efcape the moft eminent; and far fuperior to what we can pretend to; we mut likewife point out, under the fame apology, and at the fame time apologize for our own ignorance, in not underftanding the fignification of the word joggle, as here applied; we underftand the Scots phrafe to jeggle, which is loofe and infirm in pofition, when a maton is bedding a flone, if it is too heavy for trial by his arms, he ftands upon it with his feet ; if he do not find it firm, he fays it is not firm, it joggles in fuch a pofition, and we think the Teutonic favours this Scoticifm. Nay, how a phrafe that fignifies isfirm, flould be ufed to give firmnefs, may be owing to our ignorance of that language that gives it fuch a fignification; but this does riot at all derogate from the method. It is, beyond doubt, that each fone is fo bound with another by it, that they are rendered as one flone; and that one cannot be forced from its place without carrying the whole along with it, or pulling the fone afunder, which no weight that can come upon a bridge would do.

That the above may be the better underftood, we have given a drawing of the middle arch, and part of the adjoining arches: AB, fig. 12, is the length of the greater axis of the ellipfe, and fpan of the arch 100 feet; C the centre of the elliple; $c$ the centre of the circle, that deferibes the flat part of the arch ; $f, f$ reprefent the two foci, or in this, the centres of the leffer circles; D, 1 ) the inverted arches abutting upon the arch-fones E, E; V the vertex or crown of the arch; F, F the thicknefs of the pier at the bed of the river; $A n B b$ the thicknefs of the pier at the extremity of the greater axis. Whe have put on the bolting in one of the arches, done with the Kentilh ragftone; the bolts about a cubic foot furk half-way into each flone; the flones in the pier aro bolted with firm

## B R I

Bridge.
oak, of a folid foot, dovetailed into each flone, which renders the whole pier firm as if one llone.

What las been faid on the breadth of piers, renders any obfervations on the bridge over the Trent at Burton, or the fingle arch over the Tave in Glamorganhire, unneceflary; the abutments of the latt being on lind, the method of obtaining their ftrength will be pointed out when we fpeak of the abutments of iron bridues, of which there are now 反everal in England.

The firlt, as defribed in the Pailofophical Magazine, over the Severn near Coalbrookdale in Shropthire, was built by Mr Abraham Darley; the iron work was caft at Coalbrookdale in 1779. It conffits of one arch of 100 feet fix inches of Span; rifes to the height of 45 feet ; confifts of ribs, each caft in two pieces, fecured at the crown by a calt iron key-plate ; and connected horizontally and vertically, by caft iron braces formed with dovetails, and forelocks; the ribs are covered with caft iron plates; the railing is of iron; the weight of the whole is $387^{\frac{1}{2}}$ tons. The iron work executed by Mef:. Wilkifon and Darley, iron-mafters, of which they have great credit, being the firf inftance of that material being applied in the bridge-way. In 1801 it appeared as perfect as when put up, except what was owing to the failure in the flone abutments, which had occafioned fome cracks in fome of the fmall pieces.

The fecond bridge of this kind was built over the fame river at Builtwas, at the expence of the county of Salop, agreeable to a plan under the direction of Mr Telford furveyor of the public works in that county; the iron work was call at Coalbrookdale in 1795 , and 1796 : it confifts of an arch of 130 feet fpan; the rife of the arch 27 feet from the fpring to the fotit. The fituation of the road here rendered it neceffary to be kept low; the outfide ribs are made to go up as high as the tops of the railing, and are connected with the ribs that bear the covering plates by bars of iron call with deep flanches clofe to each other, and form an arch of themfelves; fo that the bridge is made upon the whole, compan and firm: the weight of the whole is 373 tons $18 \frac{1}{2}$ cwi. Some fmaller arches and an aquedutt at Longdon, have been made under Mr Telford's direstion in the fame county.

The next upon a large fale made of iron, is that over the river Wear at Monk-Wearmouth, in the county of Durham. This bridge, fig. ${ }_{13}$. is the fegment of a circle, whofe radius is 443 or 444 feet; the fpan of the arch, or length of the bridge is 236 feet ; the height of its vertex above the fpring of the arch is $3+$ feet; and height above the furface of the water 60 feet, fo that vefiels of confiderable burden may pals below it without interruption. The width of the bridge or breadth of the road-way is 32 feet; it is formed of fix. ribs, placed about five feet diftant from one another; each rib confifts of 125 blocks of caft iron, five feet in hicight, and two feet broad at the middle; the lines dravn from this to the centre of curvature determine the length of the block above and below, and the circle defcribed with the radius of curvature gives the convexity of the upper part of the block, and the concavity in the lower, agreeable to the curvature of the whole arch of the bridge; the parts of the block are reprefented in fig. 14. upon a large fale.

In each of the three longitudinary parts of the block,
there is a fquate groove one inch deep, into which is fitted a bar of wrought iron of the fame dimenfoons with the groove, into which it is inferted matked $b, b, b$, by which the blocks are joined together to form the rib. Thefe ribs are conneeted laterally by a hollow bar of caft iron, fig. 15. about four inches diameter, and five feet long, with flanches, through which iron holts are made to pafs it, and the fides of tiee ribs fixed with forews or forelocks; two of the blocks are joined by the bars of wrought iron, and co:nnected with a bar of another rib by the iron hollow bar, as reprefented in fig. 16. All the ribs joincd together and connected in the fame manner as in fig. 16. complete the arch of the bridge. 'To fupport the beams that form the road-way, circular pieces are formed of call iron, to abut upon one another at their horizontal diameter, the beams that form the road-way refling upon the circular pieces at the vertical diameter, which gives a firmnefs to thefe fupports, that no weight coming upon the bridge can injure. The beams or plauks are then covered with plates of iron, and fuch materials as are reckoned to be befl adapted to form the road, and prevent water paffing through to the injusy of the bidge; we have therefore no doubt of the ilrength of the circular fupports, and this figure is always pleafing to the eye; but perhaps in point of economy the form of a fupport we have given in fig. 13. and added a fhort defcription, might be fufficiently ftrong, and we think contains lefs metal, which will produce a faving. As we bave at the end of this paragrapla given a delcription of the parts agreeable to the figure, we only add, that it was conftructed under the direction, and chietly at the expence of Rowland Burdan, Efq. then M. P. for that county ; it was caft at the manufactory of Meff. Walker of Rotherham in YorkMire, and does honour to the projector and iron-mafters; it is nearly double the fpan of that at Builtwas, and more than double the middle arch of Black fiiars Bridge. We have feern what is called a perfpective drawing of this bridge, but as it is in mariy inftances faulty, and in fome inftances ridiculous, we would not wifh fuch a piece to appear in our work; in the back ground drawing, the houfes vanilh ir the direction quite oppofite to the point of fight, and the view which is allowed to be from below, the eye is made to fee quite through between the arch, and the road-way at both ends of the bridge, although at the height of 60 feet, and diftance of 236 . Qur drawing we defcribe thus: A, fig. 14, is one of the blocks, $b, b, b$, are bars of wrought iron funk into their grooves, B, fig. 15 . is the hollow crofs bar which joins the ribs in the manner as reprefented fig. 16. which fhews two picces joined, and bolted by the wrought iron bars, and the bolts reprefented at $1,2,3$, and the two ribs joined by $B, B, B$, in which manner the whole bridge is connected ; the front of the ribs in langth is reprefented on fig. 9 . by $a, a, a, a$, the other $t i b s$ by the different lines, which appear in the perfpective; E is an arch through which a road paffes, and fretches along belind the three houles by the fide of the hill. The blocks placed in a vertical pofition, in the fame manner as in the front of the bridge, are to be confidered as curvilineal ; but the great extent of the radius could not be conveniently applied, and at that fmall difance would difer little from a right line when viewed feparatcly. Fig. 17. is the fupport we propofed in point
of economy to fupply the place of the circles, the flanches refling and coinciding with the curvature of the arch, and all abutting with one another form a covering arch, by which the blocks perhaps might be thought of lufficient ftrength, although fomewhat lefs than five feet in height, the uprigtt $g$. of fuch height along, as the beams of the road-way might reft at the diftance of five feet, or thereby, from another.

Our only doubt of the durability of iron bridges is, that the water being blown in by forms, refis on the flats of the iron, and tends to corrode it and wafte its parts; and wh $t$ will be of the wo: It confequence, find its way into the joints. Perhaps if between thefe, thin plates of lead were placed, the two pieces might have their joints clofed, by abutting upon the lead, and the fame precaution being taken with the wrought iron, where inferted into the grooves of the cafl metal, the water would be prevented from entering, or fettling in the interflice.

Two other bridges we find defcribed, for both of which patents are obtained, the one by Mr Jordan for a fufpended bridge, intolled in December 1796, the patent obtained, and defcription January ${ }^{1} 797$, which exhibits the principle of the invention with its advantages, and a perfpective drawing. It confifts of two fufpending ribs, one on each fide of the bridge, which are to extend over the whole breadth of the river: if this diffance is thought to be ton great for one freteh, it is propofed to raife two other ubs on the oppofite fide, to meet and abut upon one another ; on this account a pier is required, upon which the two abutting ends snay reft, and as it bears only the perpendicular preflure, it may be fo thin, as to make little obftraction to the current of the river. The fufpending arch being erected, is to be underfood to be of fuch flrength as to bear the bridge fufpended to it from the arch; bars defcend on each fide to which crofs beans or bars of iton are fixed on each fide of the bridge at proper diftances; along thefe others are extended in a direction acrofs the river, and covered in fuch a way as to form a paflage for carriages and paf. fengers in every defcription. It has this particular advaritage, that it admits of a draw-bridge.

The advantages propofed by the patentee are: That the fpan may be greater by this than by other conAructions, and that the dillances between the abutrefies and intermediate pier, may be greater than heretofore, or if more piers are requifite between pier and pier: more particularly, 1. A bridge of this conftruction requires lefs time to execute, it not being fubject to the interruption of tides. 2. That it is done at lefs expence. 3. The afcent ealier. 4. They are not fo li able to decay. 5. They may be repaired with more certainty and facility, and at lefs expence. 6. They will not be fubjeft to the accidents which have deAroycd others. 7. They may be crected at any extent, in regard to length and width. 8. They can be fecured as to form one entire picce. 9. They can be preferved in their parts from decays of an accidental nature, and affifted in their durability, by the application of different prefervatives. 10. And lafty, It is clearly evident on infpection of lie figute, that bridges of this conlltuction, whatever their length be, are in no refpect fubject to the continual accidents which arife to
bridges on the common condruction, from currents, Pridgc. tides, fiells, inundations, \&c. \&c.

In this bridge, there is much ingenuity difplayed; and very confiderable advantages attached to the ufe of it; as it is a level, the paffage over it is eafy; it being well adapted for a draw-bridge where requifite, renders it worthy of attention, and in feveral fituations it might be advifable to adopt it ; but at fame time, we are not certain, that fo many advantages would accrue from the ufe of it, as is propofed by the patentee; for inftance the fufpending arch muft be raifed by faffolding as well as other arches; and this fcaffolding we apprehend, muft be preferved till the whole of the bridge is finilhed. On the other hand, if piers are to be raifed, they may be flender, having only the perpendicular weight to fultain, and will on that account be little interruption to the courfe of the river.

The other patent is obtained by Mr John Nafh, architect, Dover-ftreet, London, for his invention of an iron bridge, Fcb. 7. 1797, on a new and improved conftruction. What the patentee here propofes, is that in forming the arches and piers for a bridge, in place of arch-ftones, that boxes of caft iron, or plate iron, be formed to the fize and figure of the arch-ftone; and that thefe boxes be caft with a bottom, or that the botiom may be put in before ufing. The piers are raifed by like boxes, the firt row of boxes being laid for the found of the bridge, and fixed to the bed of the river by piles driven into the ground ; the boxes ate then filled with clay, fand, fand mixed with lime, fone of any kind, fmall or great, brick, with or without lime; being thus filled, another row of boxes is placed, and bedded as if flone; filled up in the fame manner till prepared for throwing the arch. The arch-boses being prepared as already mentioned, are placed in the fame manner as arch-ftones are placed in an arch; and being filled as before directed, the arch is completed and formed of folid materials cafed with iron; and that iron may not abut on iton, he propofes plates of lead laid betwist each box, and in this manner the bridge is finifhed, forming one folid mafs cafed with iron.

In fome parts of this, and other countries, the fituation is fuch, that neither fone nor lime can be procured, but at an enormous expence; in fuch a fituation the invention would be meritorious; as a bridge could be erected forming a convenient paffage, the boxes being filled with fuch earthy or Itony materials as the place could fupply, and if filled with fmall or round ftones, the interfices might be filled with mortar, to tender them folid. In fome places fo fituated, that although Rone is to be got in quantity and quality fufficient, yet lime cannot eafily be procured, the invention might fucceed; but we fuppofe that when both fone and lime can be procured, few would think of cafing it with iron, which is lefs durable than fone, when conflantly expofed to the air, in wet and dity. A body of folid iron is very different from a thin plate, expofed on both fices to materials different from itfelf.

We come now th the defcription of the grcatef undertaking of this kind, that ever graced the Britifn annals, or was accomplifhed in Europe or the world, that we have accounts of, except in Clina, as formerly mentioned. The London Lidge, which, though clumfily

Brilise. clumbily executed, and with no great judgment, has performed its fervice faithfully for near 603 years; but on account of the advance in trade, and neceffary improvements, it muft now be fuperfeded by this noble fabric, that will even dazzle the eyes of the enlightened world,

This interefing project has fo far engaged the attention of the leginature, that a felect committee has been appointed of fuch members as were no ways concerned in any of the plans brought forward; they have made three valuable reports, that refpecting this bridge being contained in the third report, viz. the rebuilding of I, ondon bridge, by which colliers, and coafting veffels, and all veffels of light burden, are to be admitted to pals the new London bridge, and to ftrip and difcharge goodsimmediately at wharfs, and warehoules, to be contructed along the banks of the river, and oppolite to the centre of the city; for which purpole this new bridge is to be formed of caft iron 65 feet high, clear above high water, with inclined planes connecting it with the prefent freets, and fuch other improvements as may grow out of this alteration. The bed of the river is to be deepened, fo as to admit fhips of 200 tons lying afloat at low water; and that no incroachment may be made on the property of thofe connected with the fhore, it is propofed to contrast the courle of the river to 600 feet, according to Mr Jeffon's report, by which room will be procured for the inclined platre, or wharfs, and warehoufes. The plan of the bridge is projected by Meflrs Telford and Douglas ; the fpan 600 feet, equal to the width of the river when contrac. ted, which is now accomplifhed, and we underfand the plan is far advanced in the execution; but a plan of fo great extent muft be fubject to many unavoidable interruptions.

A hort account of the plan of the bridge will not be unacceptable to our readers, as it will enable them to form a more perfect judgment of this magnificent ftructure. The whole is of caft iron, which is lefs liable to corrode than hammered iron; the ribs are caft in as large portions, as can conveniently be moulded; they are connected together by crofs and diagonal tie-braces, in fuch a manner, that any of the pieces of the ribs or braces can be taken out, and replaced, without injuring the whole, or interrupting the paffage, thus the bridge can be kept in repair with eafe, and convenience; all the frames are fo connected vertically and borizontally, from the folfit of the arch, to the road-way, that the whole will act as one folid frame; and are lo difpofed from the middle of the arch, to the abutment, as to give a greatcr width to the bridge at entrance from the ftore, from the different inclined planes, which enter to the bridge from three different direEtions, by which the public will be accommodated by three different bridges, as to entrance and egrefs.

The inclined planes which afford entrance to the bridge from the fhore, and flreets, will give ample room for warehoufes, vaults, and other conveniences for depofiting the goods, before they can be put on board, or after they are unfhipped, till they can be conveniently carried off by the proprietors.

We come now, as propofed, to afcertain the flrength of an abutment that will fupport, or counteract the preffure of any number of arches, abuiting upon one aro.
ther, in the maner we have propofed. Throw up the Prif.. contents of the number of feet in all the arch-ftones, from the one end of the bridge to the other; divide this between the two abutments, and find what bafe is necuftary to contain a number of feet equal to the half, upon each pier from the fring of the arch to the height of the road-way, with onc-fourth or onc-third alded, for allowance made for fuperincumbent weight upon the bridge, or any default in equilibration or otherwayc, carc being always taken to fecure a proper found to abutments. To find the abutmerts of iron bridges, being of fo great extent as thofe now raifed, or may be raifed; take a bafe that will contain a weight of ftone, equal to half the weight of the bridge from the [pring to the roadnway with what is thought neceffary to add for extra weight upon the bridge; here it is fill more neceffary to attend to a proper found, and further it may be neceflary in large arches of tone, or an iron arch, to bolt the ftones together according to Mr Mylne's method; as the great preffure is laid upon them before the cement has faftened the ftones, this may be the caule of the failure in the abutment in the Shrophire bridges; and alfo of others. Such magnificent fructures are worthy of every attention.

We bave already treated, and we hope with fatisfaction to our readers, of the principles upon which this theory is founded. We thall now adduce fome undeniable inftances, from the practice of modern and ancient architects. Firft, upon a fmall fcale, we find vaults thrown, of 8,10 , or more feet of arches abutting upon one another, upon thin walls; fome not exceeding 10 inches, and 6 feet in height; and arches from 18 to 20 feet, the fupporting wall from which the arch fprings not exceeding 14 inches, the arclies below the femicircle, the main abutments being of fufficient flrength. Upon a larger fale, in the Gothic architecture, it has univerfally been practifed to fupport the arches by abutments on the outfide of the wall, but not without exception, and where this exception has been made, we find the arch equally well fecured, and with much fuperior grandeur and elegance. In that fuperb ftructure of Gothic architecture, St Giles's Church, commonly known by the name of the High Church, Edinburgh, the fteeple fands upon four columns, not fronger in proportion to its weight than the fis feet pier we propofe for an arch of 75 feet fpan; this centre part of the building is fupported by the parts to the eaft and weft, and by arcades, forming aifles in the other direction, none of them exceeding half its height or thereby; it riles above them with its majeftic bead, adorned with an imperial crown; and for fupporting the fately arches that form this crown, no outfide abutments are prepared ; in this, the exception above referred to confifts; it feems as if by the artift intended for the fupport of our theary. The weight is laid upon the thoulder at the fpring of the arch, but with fo much elcgance as if it were only intended, to form an ornamental part of the propofed figure; and under the appearance of an ornament concealing its real ufe. Some of the arch-flones likewife are projected outward, in the horizontal direction, ornamented at their extremity, and, at the fame time that they enrich the crown with an additional ornament, they are a counterpoife to the arch at that flace. To complete the de-

## B R I <br> B R I

Eridge.
 caption, to adorn the propofed figure throughout, and to finith a well proportioned and elegant crown, the fummit is put upon it, at the fame time fecuring the keyfone, which without this precaution nould by the fide preffure have fprung upwards, and have brought the whole arches to ruin.
'That thefe arches are as well protefted by the weight placed at the fpring of the arch, as any that are fupported by abutments, we need only as a proof produce their ftability, in refifting, notwithftanding of its great height and expofure in fituation, the boifterous effects of the elements, and the concuffion arifing from the vibration of large bells, fuppended in it, and fo frequently rung.

From the principles formerly laid down, and the authority now adduced in fupport of our theory, we hope that it has received ample confirmation. And we venture to conclude, that we have pointed out a method to every mafon, and engineer, how in drawing bis plan, he may be able to afcertain the weight to be laid on the fhoulder of his arch, to counterpoife the weight, according to the intended fpan, and what thicknefs he has occafion to make his pier, without encumbering it, not only with ufelefs matter, but what is materially injurious to the firength of his bridge, by choking the current, and caufing it act with ten times more force upon it, than it otherways would do, as we have formerly flown.
We cannot pafs the inflance of ancient architecture laft mentioned, whthout obferving what attention has been paid to the principles of equilibration; and, although the architects have not communicated the principles upon which they executed their plans, they give evident proofs of their having followed fome regular theory. Can we fuppofe that the projector of St Giles's church, Weftminfter abbey, and innumerable others, could have produced fuch elegant and welproportioned ftructures accidentally, without a well regulated principle to ant upon, or that the projector of this imperial crown we have been defcribing, had not thoroughly digefted all its parts and ornaments, before it began to be erected. The ancient architects have, however, thought proper to leave to poflerity to colled their principles from the works that have been executed. The moderns are actuated with more liberality of fentiment, in laying down their principles, as well as executing their projects, many of which will do honour to the age, and leave poferity both principles and examples to follow, and improve upon.

After having treated upon the rife and progrefs of bridges, from what we know, from the moft early periods; it may appear fomewhat ankward that the foundation is neglected, and the manner of preparing; but when it is confidered that this muft be regulated by the fuperftructure, to be raifed upon it-; that although it mult be the firf part, with which we begin, it mult be the laft in the plan; and in founding a bridge there is indeed much to be confidered: and as we propofe to offer fome methods for founding, which fo far as we know have not appeared, we will be attentive to lay them before our readers, under the article Foumiation.

We have deferibed bridges of different materials, but have mentioned none of wood; this will come pro-
perly to offer itfelf under the article Centre, in which we intend to offer fome concife and fimple conftruction, and fome forms of wooden bridges, that in point of elegance and Arength, may not only vie with, but fuperfede the ufe of iron bridges in many inftances.

 fig. 10.
From the fpring of the arch, (fig. 10.) parallel lines are drawn from the divifions of the arch, to the perpendicular $d b$, being each two feet at the outer part of the arch-ftone. Thefe divifions are marked in the figure $1,2,3, \& \%$. ; the meafures of each of thefe lines are inferted in column 2 d ; the firft and fecond are added together as marked in column ift, their fum is inferted in column 3 d, the half or arithmetical mean in column $4^{t h}$. In the fame manner the 2 d and 3 d , the $3^{\text {d }}$ and $4^{\text {th }}, \& \mathrm{c}$. The fura of the means when added make 72.75 , being each 2 feet diftant, is 145.5 fuperficial feet, $X_{3}$ in depth is 436.5 folid feet; but as thefe parallel divifions decreafe in breadth as they afcend from the fpring of the arch, the mean deficiency in folid meafure, as above, in the work, .39375 , being deducted from the 436.5 , leaves the remainder 436.1 folid feet. Between the 10 th and $13^{\text {th }}$ divifion the deficiency is greater, as above, amounting to 2.655 folid feet, to be deducted from 229.5: there remains 226.845 folid feet, which added to 436.1 is 662.945 the refifting force, to counteract the lateral preffure of the archftores 374.75 , reckoned from $a$; but reckoned from $c$, which the counterpoife is raifed to, there being only $20 \frac{1}{2}$ divifions, the lateral preflure only amounts to 347.55 folid feet, little more than one half of the oppofing force. The arch then muft be fufficiently fecured without any addition to the pier, more than furnifhing a bafe for this weight.

We have chofen to exprefs both forces by folid feet, in place of weight, as the weight will differ according to the quality of the fone; whereas the folid foot is applicable to every quality of tone of which an arch is raifed, Atones from the fame quarry being nearly of the fame fpecific gravity, and of confequence a folid foot will be as nearly of the fame weight. If from different quarries, the weight of a folid foot of each can be eafily afcertained. The above table, and work of means and deficiency, we might have exprefled in algebraic and fluxionary equations, the fmall lncrement of deficiency being the fluxions. We fhould have had the appearance of being more learned, but whether we fhould have been more ufeful to the generality of out readers, we leave them to judge; but we think it becoming in every learned man, to exprefs himfelf fo, as to be univerfal. ly underftood, otherwife we think his learning is mifapplied, if not fufpicious.

Bridge, in Gunnery, the two pieces of timber which go between the two tranfums of a gun-carriage, on which the bed refts.

Bridge, in $M u f f c$, a term for that part of a ftringed inftrument over which the flrings are flretched. The bridge of a violin is about one inch and a quarter high, and near an inch and a half long.

Bridge-Town, the capital of the illand of Barbadoes, fituated in W. Long. $61^{\circ}$. N. Lat. $13^{\circ}$. It ftands in the inmoft part of Carlifle bay. This origirally was a moft unwholefome fituation, and was chofen entirely for its convenience for trade; but is now deemed to be as healthy as any place in the ifland. The town itfelf would make a figute in any European kingdom. It is faid to contain 1500 houfes, and fome con. tend that it is the fineft the Britilh pofiefs in America.

Vol, IV. Patt II.

425 ] B Il I
The houfes in general are well built and furithed, and their tents as high as fuch houfes would let for in London. The wharfs and quays are well defended from

Bralp.
:ontb. the fea, and very convenient. The barbour is fecured from the north-tall wind, which is the conllant tradewind there; and Carlife-bay is capable of containing 500 hlipe, and is formed by Needham and Pelican points. But what renders Bridge-town the fineft and moft defirable town in the Weft Indies, is its fecuity againft any attacks from foreign enemies. It is defended on the weftward by James-fort, which mounts 18 guns. Near this is Willoughby's fort, which is built upon a tongue of land ranning into the fea, and mounts 12 guns. Needham's fort thas three batteries, and is mounted with 20 guns; and St Ame's fort, which is the ftrongelt in the in ind, ftaruds more within land. In fhort, according to Mr Douglas, there is all along the lee-flure a breaft-work and trench, in which, at proper places, were 29 forts and batteries, having 308 cannon mounted, while the windward thore is fectred by high rocks, fleep cliffs, and foul ground. Such was the Itate of the fortifications in 1717 ; but fince that time they have been much frengthened. Bridgetown is deftitute of few elegancies or conveniences of life that any city of Europe can afford. The church of St Michael exceeds many Englifh cathedrals in beauty, largenefs, and conveniency; and has a fine organ, bells, and clock. Here alfo is a free-Ccitool for the inftruction of poor boys, an hofpital, and a college. The latter was erected by the fociety for propagating the Chriftian religion, in purfuance of the will of $\mathrm{Co}-$ lonel Chriftopher Codrington, who left about 20001. a-year for its endowment, for maintaining profeflors and fcholars to fludy and practife divinity, furgery, and phyfic. See Codringtgn.

BRIDGENORTH, a town of Shrophire in England, feated on the river Severn, which divides it into two parts; but they are united by a handfome fone bridge, and thefe are called the upper and the lower town. It is faid to have been built by Ethelleda, widow of Etheldred king of the Mercians, about the year 675. Robert de Belizma, fon of Robert de Montgomery, built the caftle, and maintained it againft King Henry 1. by which means it wis for feited to the crown, and remained fo till the reign of Richard III. who gave it to John Sutton Lord Dudley. Thistown has undergone feveral fieges; and in the civil war it fuffered very much, many fine buildings, and the whole town, being almoft deftroyed by fire, when Sir Lewis Kirke defended the citadel for King Charles. There are now no other remains of the caftle than a fmall part of the towers, and a place yet called the ca/te, within the walls of the oid one; within which flands one of the churches, dedicated to St Mary Magdalen, which was made a free chapel, and exempted from epifcopal jurifdiction. The other church is at the north end of the town, on the higheft part of the hill, near to whofe church-yard Rood a college, which was deftroyed by fire in the civil wars, together with the church jutt mentioned; which has been fince rebuilt by the inhabitants. In this town is a free-fchool which fends and maintains cighteen fcholars at the univerfity of Oxford. On the weft banks of the river are the remains of an ancient and magnificent convent, under which were feveral remarkable vaults and caverns running to a great
length.

## B R I

Eridge- length. Part of the Cowgate fireet is a rock, rifing water perpendicularly, in which are feveral houfes and teneBridport. ments that form a very agreeable though grotefque group. In many other places there are alfo caves and dwellings for families, in the rocks; and indeed the whole town has a very fingular appearance. This tuwn fends two members to parliament. W. Long. 2 30. N. Lat. 52. 40.

BRIDGEW'TER, a town of Somerfetftire in England, feated on the river Parret, over which there is a tone-bridge, near which thips of 100 tons burden may ride with eafe. It is a large well frequented place, with the title of a duchy, ard fends two members to parliamont. There are in it feveral large inns, and the market is well fupplied with provifions. W. Long. 3. O. N. Lat. 5 I. 15.

BRIDLE, in the manege, a contrivance made of ftraps or thongs of leather and pieces of iron, in order to keep a horfe in fubjection and obedience.

The feveral parts of a bridle are the bit or fnaffe; the head-flall, or leathers frum the top of the head to the rings of the bit; the fillet, over the fore-head and under the fore-top; the throat-band, which buttons from the head-band under the throat; the reins, or long thongs of leather that come from the rings of the bit, and being calt over the horfe's head, the rider holds them in his hand; the nofe-band, going through loops at the back of the bead-Atall, and buckled under the cheeks ; the trench; the cavefon; the martingal; and the chaff-halter.

Pliny affures us that one Pelethronius firft invented the bridle and faddle; though Virgil afcribes the invention to the Lapithæ, to whom he gives the epithet Peletbronii, from a mountain in Theffaly named Pelethronium, where horles were firf begun to be broken.

The firf horfemen, not being acquainted with the art of governing horfes with bridles, managed them only with a rope or a fwitch, and the accent of the voice. This was the practice of the Numidians, Getulians, Libyans, and Maffilians. The Roman youth alfo learned the art of fighting without bridles, which was an exercife or leffon in the manege; and hence it is, that on Trajan's column, foldiers are reprefented riding at full fpeed without any bridles on.

Scolding-Bridle. See Brank.
BRIDILINGTON, a fea-purt town in the eaft riding of Yorkfhire in England. It is feated on a creek of the fea near Flamborough-head, having a commodious quay for fhips to take in their lading. It has a fafe harbour, and is a place of good trade. It is more generally known by the name of Burlinglon, as it gave title to an earl of that name, though the earldom is now extinet. E. Long. 0. 10. N. Lat. 54.15.

BRIDON, or Swaffle, after the Euglifh faftion, is a.very nender bit-mouth without any branches. The Englift make great ufe of them, and fareely ufe sny true bridles except in the fervice of war. The Irench call them bridons, by way of diftinction from bridles.

BRIDPORT, a cown of Dorfethire in England. It has a luw dirty fituation between two rivers, which, at a little diflauce, juining a fmall ftrean, formerly made a convenient harbuur; but it is now quite ehoked up with fand. It fends two members in parlisment, who are chofen by the inhabitants who are houfekecpers. It is noted for making of ropes and cables
for Chipping; whence arifes a proverb of a man that is hanged, that he is flabbed with a Bridport dagger. W. Long. 3. O. Nat. 50.40.

BRIEF, in Law, an abridgement of the client's cafe, made out for the influction of counfel on a trial at law; wherein the cafe of the plaintiff, \&c. is to be briefly but fully ftated: the proofs muft be placed in due order, and proper anfwers made to whatever may be o'ojected to the client's caufe by the oppofite fide ; and herein great care is requifite, that nuthing be omitted, to endanger the caule.

Brief, in Scots Law, a writ iffued from the chancery, directed to any judge-ordinary, commanding and authorifing that judge to call a jury to inquire into the cale mentioned in the brief, and upon their verdict to pronounce fentence.

Apoflolical Briets, letters which the pope difpatches to princes, or other magiftrates, relating to any public affair.-Thefe briefs are diflinguilhed from bulls, in regard the latter are more ample, and always written on parchment, and fealed with lead or green wax ; whereas briefs are very concife, written on paper, fealed with red wax, and with the feal of a fihherman, or St Peter in a boat.

BRIEG, a torm of Silefia in Germany, fituated in E. Long. 17. 35. N. Lat. 50. 4c. It might have paffed for a handlome place before the laft fiege; the caftle, the college, and the arferial, being very great ornaments, and moft of the houfes very well built. But the Pruffians, who befieged it in 1741 , threw 2172 bombs into it, and 4714 eannon bullets, which redueed a great part of the town to almes, and quite ruined a wing of the caftle. It was obliged to furrender, after fuftaining feven days continual fire. The Pruffans, to whom this place was ceded by the place, have augmented the foxtifications, and built a new fuburb.-The town flands upon the Oder; on the other fide of which there are plenty of fallow-deer, and large forefts of beech and oak trees. They have a yearly fair, at which they fell above 12,000 horned cattle. Since 1728 , they have begun to manufacture fine cloth.

BRIEL, a maritime town of the United Provinces, and capital of the illand of Vuorn. It was one of the cautionary towns which were delivered into the hands of Queen Elizabeth, and garrifoned by the Englifh during her reign and part of the next. The Dutch took it from the Spaniards, in 1572, which was the foundation of their republic. It is feated at the mouth of the river Meufe, in E. Long. 3. 56. N. Lat. 52.53.

BRIESCIA, a palatinate in the duchy of Lithuania, in Poland. The name given to it by fome is Polefia. It is bounded on the north by Novogrode, and Truki; on the welt, by thofe of Bielfko and Lublin; on the fouth, by that of Chelm and Upper Volhinia; and on the eaft, by the territory of Rziezica. This province is of confiderable extent from eaft to weft, and is watered by the rivers Bug and Piipefe : it is full of woods and marthes; and there are lakes that yield large quantities of fift, that are falted by the inhabitants, and fent into the neighbouring provinces.

BRIEUX, St, a town of France, in Upper Brittany, now called the department of the North Coaft, with a billop's fce. It is feated in a bottom, furrounded with mountains, which deprive it of a profpect of the fea, though it is not above a mile and a quarter
from

## B R I [ 427$] \quad \mathrm{B}$ R I

Brig from it, and there forms a frall port. The churches, flreets, and fouares, are tolerably handfome ; but the town is without walls and ditches. The church of Nichael is in the fuburb of the fame name, and is the largeft in the place. The convent of the Cordeliers is well built, and the garden is fpacious. The college, which is very near, is maintained by the town for the influction of youth. W. Long. 2.58. N. Lat. $\pm 8.33$.

BRig, or Brigantine, a merchant-hip with two malls. This term is not univerfally confined to veffels of a particular conftruction, or which are mafted and rigged in a manner different from all others. It is varioully applied, by the mariners of different European nations, to a peculiar fort of veffel of their own marine. Amongft Britifh feamen, this vellel is diflinguifled by having her main-fails fet nearly in the plane of her keel; whereas the main-fails of larger thips are hung athwart, or at right angles with the thip's length, and fantened to a yard which hangs parallel to the deck: but in a brig, the foremolt edge of the mainfail is faftened in different places to hoops whicb encircle the mainmalf, and llide up and down it as the fail is hoifted or lowered : it is extended by a gaff above and a boom below.

BRIGADE, in the military art, a party or divifion of a body of foldiers, whether horfe or foot, under the command of a brigadier.-An army is divided into brigades of hotfe and brigades of foot: a brigade of horie is a body of eight or ten \{quadrons; a brigade of foot confitts of four, five, or fix battalions. The eldeft brigade has the right of the firft line, and the fecand the right of the fecond ; the two next take the left of the two lines, and the youngeft ftand in the centre.

Brigade-Major, is an officer appointed by the brigadier, to affit him in the management and ordering of his brigade.

BRIGADIER, is the general officer who has the command of a brigade. The eldeft colonels are generally advanced to this poft. He that is upon duty is brigadier of the day. They march at the head of their own brigades, and are allowed a ferjeant and ten men of their own brigade for their guard.- But the rank of brigadier-general in the Britifh Service is now abolified.

Brigadiers, or Sab-brigadicrs, are pofts in the horle-guards.

BRIGANDINE, a coat of mail, a kind of ancient defenfive armour, confiting of thin jointed fcales of plate, pliant and eafy to the body.

BRIGANTES, (Tacitus), a people of Britain, reaching from lea to fea, the whole breadth of the illand (Ptolemy). Now Yorkfhire, Lancafhire, Durham, Weftmorland, and Cumberland (Camden). Alfo a people of Ireland, of uncertain pofition.

BRIGANTIA, or Brigantium, in Ancient Geograply, a tuwn of Vindelicia; now Bregentz, in Tyrol, at the ealt end of she lake of Conitance.-Another Brigantium in the Alpes Cottix; which laft is probably Briançon, a town on the borders of Dauphiny.
bRIGANTINE. See Brig.
BRIGANTINUS lacus, in Ancient Geography, a lake of Rhætia, or Vindelicia, which Tacitus includes in Rhretia. Ammian calls the lake Brigantia.

It took its uame either from the Brigantii, the people Brigantinus inhabiting on it, or from the adjoining town. Nuw the lake of Conflance or Bodenze.

Erigg .

Brigantinus Portus, in Ancient Geosraphy, a port of the Hither Spain; fo called from Flavium Brigantium. Now El Puerto de la Corunna, commonly the Grogne.

BRIGG, by fome called Clamford Bridges, a town of England, in Lincolnflure, feated on the river Ankam. W. Long. O. 20. N. Lat. 53. 40.

BRIGGS, Henry, one of the greateft mathematicians in the 16 th century, was born at Warley Wood in the parifh of Halifax in Yorkthire, in 1556 . In 1592, he was made examiner and lecturer in mathematics, and foon after reader of the phyfic lecture founded by Dr Linacre. When Grefham college in London was eftablifhed, he was chofen the firft profeffor of geometry there, about the beginning of March 5596. In 1609, Mr Briggs contracted an intimacy with the learned Mr James U'her, afterwards archbinop of Armagh, which continued many years by letters, two of which, written by our author, are yet extant. In one of thefe letters, dated in Augult 1610, he tells his friend he was engaged in the fubject of eclipfes; and in the other, dated March 10. 1615, he acquaints him with his being wholly employed about the noble invention of logarithms, then lately difcovered, in the improvement of which he had afterwards a large thare. In 1619, he was made Savilian profeffor of gcometry at Oxford; and refigned his profefforlhip of Grefham college on the 25 th of July 1620 . Soon atter his going to Oxford, he was incorporated maller of arts in that univerfity; where be contirued till his death, which happened on the 26th of January 1630. Dr Smith gives him the character of a man of great prabity; a contemner of riches, and contented with his own flation; preferring a lludious retirement to all the fplendid circumftances of life. He wrote, 1. Logarithmorum chilias prima. 2. Arithmetica logaritbmica. 3. Trigonometria Britannica. 4. A fmall tract on the northwelt paffage ; and fome other works.

Briggs, William, an eminent phyfician in the Jatter end of the 27 th century, was the fon of Auguftin Briggs, Eff. four times member for the city of Norwich, where our author was born. He ftudied at the univerfity of Cambridge; and his genius leading him to the fludy of phylic, he travelled into France, where he attended the lectures of the famous anatomif M. Vicuffens at Montpelier. After his return, be publifhed his Opbthalmographia in 1676 . The year following he was created doctor of medicine at Cambridge, and foon after was made fellow of the college of phyficians at Lordon. In 1682 , he quitted his fellowMip to his brother; and the fame year, his Tbeory of Vifion was publifhed by Hooke. The enfuing year he fent to the royal fociety a continuation of that difcourfe, which was publifhed in their Tranfactions; and the fame year, he was by King Charles II. appointed phyfician to St Thomas's hofpital. In 1684 , he communicated to the royal fociety two remarkable cafes relating to vifion, which ware likewife printed in their Tranfactions; and in 1685 he publifhed a Latin verfion of his Theory of Vifion, at the defire of Mr Newton, afterwards Sir Ifaac, profeflor of mathematics at Cambridge, with a recommendatory epiltle from him pre-

Bright- fixed to i. HIc was afterwards made phyfician in orhelmoftone dinary to King William, and continued in great efteem for his fill in his profeflion till he died, September $4^{\text {th }}$ 1704.

BRIGHTHELMSTONE, a fea-port town of SHfSex in England. It is a pretty large and populous town, though ill built, and has a pretty good harbour. WV. Long. O. 10. N. Lat. 50. 50. It was at this place King Charles II. embarked for France in 165 t, after the battle of Worcefter. It has lately been confiderably extended and embelliftied, in confequence of its laving become a place of great refort for fea-bath. ing.

BRIGITTINS, or Bridgetins, more properly Brigittins, a religious order, denominated from their founder, St Bridget or Birgit, a Suedith lady in the If th century; whom forme reprefent as a queen; but Fabricius, on better grounds, as a princely, the daughter of King Birgenes, legillator of Upland, and famous for her revelations. The Brigittins are fometimes alto called the Order of our Saviour; it being pretended, that Chrift himfell dictated the rules and constitutions observed by them to St Bridget. In the main, the rule is that of St Auguftin; only with certain addtrons fuppofed to have been revealed by Chrift, whence they aldo denominate it the Rule of our Saviour. -The firf monaltery of the Bridgetin order was erected by the foundrefs about the year 1344, in the diocefe of Lincopen; on the model of which all the reft were formed. The conftitution of the fe houses was very fingular: though the order was principally intended for nuns, who were to pay a facial homage to the holy Virgin, there are also many friars of it, to minifter so them fpiritual affitance. The number of nuns is fixed at 60 in each monaftery, and that of friars to 13 , anfwerable to the number of apofles, of whom St Paul made the $3^{\text {th }}$; befides which there are to be four dea. cons, to reprefent the four doctors of the church, St Ambrofe, St Auguftin, St Gregory, and St Jerome; and eight lay-brothers; making together, fays our author, the number of Chrin's $7^{2}$ difciples. -The other being inftituted in honour of the Virgin, the direction is committed to an abbefs, who is fuperior not only of the nuns, but aldo of the friars, who are obliged to obey her. Each houfe confifts of iwo convents or momafterics, Separately included, but having one church in common; the nuns being placed above, and the friars on the ground. The Bridgetins profess great mortificaton, poverty, and felf-denial, as well as devotion; and they are not to ponies any thing they can call their own, not fo much as a halfpenny; nor even to touch rooney on any account. 'This order fpread much through Sweden, Germany, the Netherlands, \&ic. In England we read hut of one monaftery of IBrigittins, and this built by 11 -my V. in $1^{1} 5$, oppofite to Richmond, now called Simbloufe; the ancient inhabitants of which, fence the uffolution, are fettled at Iifoon. The revenues were reckoned at 14951 . per annam.

BRIGNOL.ES, a town of France, in the department o! Var, formerly Provence, famous for its prunes. It is heated arrony; mountains, in a pleafant country, 275 miles S. S. E. of Paris. E. Long. 6. 15. N. Lat. 43. 24

BRIIIUEGA, a town of Spain, in New Caftile, where General Stanhope with the Englifl army were
taken prifones, after they had feparated themfelves from that commanded by Count Staremberg. It -is Seated at the foot of the mountain ' Tajuna, 43 miles noth-eaf of Madrid. W. Long. 3.20.N. Lat. 4 I. O.

BRIL, Matthew and Paul, natives of Antwerp, and good painters. - Mathew was born in the year 1550 , and ftudied for the molt part at Rome. He was eminent for his performances in hiftory and land. Scape, in the galleries of the Vatican; where he was employed by Pope Gregory XIII. He died in 1584, being no more than 34 years of ages.-Paul was born in 1554 : followed his brother Matthew to Rome: painted feveral things in conjunction with him ; and, after his deceafe, brought himfelf into credit by his landfcapes, but efpecially by thole which he compofed Pitkington's in his latter time. The invention of them was more Did. pleafant, the difpofition mote noble, all the parts more agreeable, and painted with a better gusto than his earlier productions in this way; which was owing to his having studied the manner of Hannibal Carrache, and copied forme of Titian's works in the fame kind. He was much in favour with Pope Sixtus V.; and for his fucceffor Clement VIII. painted the famous piece, about 68 feet long, wherein the faint of that name is reprefented catt into the fa with an anchor about his neck. He died at Rome the year 1626 , aged 72 .

BRILLIANT, in a general fenfe, fomething that has a bright and lucid appearance.

Brilliant, in the Manege. Abrifk, high-mettled fately horfe is called brilliant, as having a raifed neck, a fine motion, and excellent haunches, upon which he fifes, though ever fo little put on.

Brilliants, a name given to diamonds of the fineft cut. See Diamond.

BRIM denotes the outmoft verge or edge, efpecially of round things. The brims of veffels are made to project a little over, to hinder liquors, in pouring out, from running down the fide of the veffel. The brimming of veffels was contrived by the ancient potters, in imitation of the fupercilium or drip of the cornices of columns: it is dore by turning over forme of the double matter when the work is on the wheel.

Brim, in country affairs. A tow is said to brim, or 10 go $t 0$ brim, when the is ready to take the boar.

BRIMSTONE. See Sulphur, Chemistry Index.

Brimstone Medals, Figures, \&c. may be catt in the following manner: Melt half a pound of brimfone over a gentle fire: with this mix half a pound of fine vermillion; and, when you have cleared the top, take it off the fire, fit it well together, and it will diffolve like oil: then caff it into the mould, which Gould be firn anointed with oil. When cool, the figure may be taken out ; and in cafe it Should change to a yellowift colour, you need only wipe it over with aquafortis, and it will look like the fincil coral *.

I3R IN, a flong town of Bohemia, in Moravia. is pretty large, and well built: the aftembly of the fates is held alternately there and at Olmutz. The cattle of Spilberg is on an eminence, out of the town, and is its principal defence. It was inverted by the king of Prulfia in 1742, but he was obliged to raife the fiege. It is near the river Swart, in L. Long. 7. 8. N. Lat. 49. 8.

BRINDISI, an ancient celebrated town of Italy,

 in Terra d'Orranto, and lingry of Naples, with archb:hup's fee. lis walls are fill of great extem but the inhabited houfes do not fill abuve half the enclofure. The freets are crooked and rough; the buildings poor and ruinous; no very remarkable church or edifice. The cathedral, dedicated to St Theodore, is a work of King Ruger, but not equal in point of architecture to many churches founded by thit monarch, who had a frong paniun for building. Little remains of ancient lbrundufum, except innumesable broken pillass fixed at the comers of ftreets to defend the houfes from carts; fragments of coarle molaic, the floors of former habitations; the column of the lighthoufe; a large marble bafon, into which the water suns from brazen heads of deer; fome infcriptions, suins of aqueducts, coins, and other fmall furniture of an antiquary's cabinet. lis caftle, built by the empesor Frederick II. to protect the northern branches of the harbour, is large and fately. Charles V. repaired it. The port is double, and the finelt in the Adriatic. The outer part is formed by two promontories, which flretch off gradually from each other as they advance into the fea, leaving a very uarrow channel at the bafe of the angle. The illand of St Andrew, on which Alphonfus l. built a fortrefs, lies between the capes, and fecures the whole road from the fury of the waves. In this triangular fpace, large thips may ride at anchor. At the bottom of the bay the hills recede in a femicircular fhape, to leave room for the inner haven; which, as it were, clafps the city in its arms, or rather encircles it, in the figure of a flag's head and horns. 'This form is faid to have given rife to the name of Brundufoun, which, in the old Meffapian language, fignified the head of the deer. In ancient days, the communication between the two havens was marked by lights. placed upon columns of the Corinthian order, flanding on a rifing ground, in a direet line with the channel.Of thefe one remains entire upon its pedeftal. Its capital is adorned with figures of Syrens and Tritons, intermingled with the acanthus leaf, and upon it a circular vafe, which formerly held the fire. A modern infcription has been cut upon the plinth. Near it is another pedeftal of fimilar dimenfions, with one piece of the maft lying on it. Thee face between thefe pillats anfwered to the entrance of the harbour. "The whole kingdom of Naples (fays Mr Suinburne) cannot Alow a more complete fituation for trade than Brindifi. Here goodnefs of foil, depth of water, fafety of anchorage, and a centrical pofition, are all united; yet it has neither commerce, hulbandry, nor populoufnefs. From the oblructions, in the channel which communicates with the two havens, arifes the tribe of evils that aflict and defolate this unhappy sown. Julius Cæfar may be faid to have begun its ruin, by attempting to block up Pompey's deet. He drove piles into the neck of land between the two ridges of hills; threw in earth, trees, and ruins of houfes; and had nearly accomplifned the blockade, when lomprey failed out arid efcaped to Greece. In the 15 th century, the prince of Taranto funk fome thips in the middle of the pafige, to prevent the royalits from entering the port, and thereby provided a refting place for fea weeds and fand, which foon accumulated, choked up the mouth, and rendered it im.
practicable for any veffils whatfocver. In 1752 the cril was increafed, fo as to hinder cven the waves from beating through; and all communication was cut off, except in violent eaferly sinds, or rainy feafons, when an extraordinary quantity of frefh water raifes the level. Irom that period the port became a fetid green lake, full of infection and noxious infects; no fih but cels could live in it, nor any boats ply except canocs made of a fingle tree. They can hold but one perfon, and overfet with the leaft irregularity of motion. The low grounds at each end were overflowed and converted into marthes, the vapours of which created every furmer a teal peftilence; and in the courle of very few years, fwept off or diove away the largeft portion of the inhabitasts. From the number of eighteen thoufand, they were reduced in 1766 to that of five thourand livid wretches, tormented with agues and malignant fevers. In 1775 above fifteen hundred perfons died during the autumn; a woful change of climate! Thirty years digo, the air of Brindif was $c$ lleemed fo wholelome and balfamic, that the convents of Naples were wont to fend their confumptive friars to this city for the recovery of their health. This ftate of mifery and deftruction induced the semaining citizens to apply for relief to Don Carlo Demarco, one of the king's minifters, and a native of Brindifi. In confequence of this application, Don Vito Caravelli was ordered to draw up plans, and fix upon the means of opening the port afrefl: Don Andrea Pigonati was laf year fent to execute his projects; and, by the help of machines and the labour of galley-naves, has fucceeded in fome meafure. The channel has been partly cleared, and has now two fathom of water. It can admit large boats, a great Itep towards the revival of trade; but what is of more immediate importance, it gives a free paffage to the fea, which now ruthes in with impetuofity, and runs out again at each tide; fo that the water of the inner port is fet in motion, aud once more rendered wholefome. The canal or gut is to be feven hundred yards long, and drawn in a ftraight line from the column. At prefent its parapets are defended by piles and fafcines; but if the original plan be purfued, fone piers will be erected on both fides. When the canal fhall be fcooped out to a proper depth, and its piers fulidiy $c$ Etablifhed, veffels of any burden may once more enter this land-locked port, which affords room for a whole navy. Docks wet and dry may be dug, goods may be thipped at the quay, and convenient watering-places be made with great eafe. If merchants fould think it a place of rifing trade, and worthy of their notice, there is no want of face in the town for any fadory whatever. Circulation of canc would give vigour to hufbandry, and provifions would foon abound in this market. The fands at the foot of the hills, which form the channel, are to be laid out in beds for mufcles and oyfters. Some ccclefiaftics are raing nurferies of orange and lemon trees; and other citizens intend introducing the cultivation of mulber-ry-trees, and brceding of filk-worms. The engincer would have done very little for the health of Brindifi, had he only opened a paffage, and given a free courle to the waters; the marbies at each extremity of the harbour would fill have infected the air: he, therefore, at the expence of about a thoufand ducats, lad the feas filled ug with earth, and a dam raifed to con-

## B R I

Brindif fine the waters, and prevent their flowing back upon Brindlev. the meadows. The people of Brindifi, who are fenfible of the bleffings already derived from thefe opera-
tions, who feel a return of health, and fee an opening for commerce and opulence, feem ready to acknowledge the obligation. They intend to erect a flatue to the king, with infcriptions on the pedeflal in honour of the minifter and agents. The workmen, in cleaning the channel, have found fome medals and feals, and have drawn up many of the piles that were driven in by Cefar. They are fmall oaks ftripped of their barli, and ftill as frefh as if they had been cut only a month, though buried above eightcen centuries foven feet under the fand. The foil about the town is light and good. It produces excellent cotton, with which the Brindifians manufacture gloves and Itockings.
"It is impoffible to determine who were the founders of Brundufum, or when it was firf inhabited. The Romans took early poffeffion of a harbour fo convenient for their enterprifes againft the nations dwelling beyord the Adriatic. In the year of Rome 509, they fent a colony hither. Pompey took refuge here; but finding his poft untenable, made a precipitate retreat to Greece. In this city Oعtavianus firft affumed the name of Ccefar, and here he concluded one of his hort-lived peaces with Antony. Brundufium had been already celebrated for giving birth to the tragic poet Pacuvius, and about this time became remarkable for the death of Virgil. The barbarians, who ravaged every corner of ltaly, did not fpare fo rich a town; and, in 836 , the Saracens gave a finifhing blow to its fortune. The Greek emperors, fenfible of the neceffity of having fuch a port as this in Italy, would have reftored it to its ancient frength and fplendour, had the Normats allowed them time and leifure. The Greeks Aruggled manfully to keep their ground; but, after many varieties of fuccefs, were finally driven out of Brindifi by William I. The frenzy for expeditions to Paleftine, though it drained other king doms of their wealth and fubjects, contributed powerfully to the reeftablifmment of this city, one of the posts where pilgrims and warriors took fhipping. It was alfo benefited by the refidence of the emperor Frederick, whofe frequent armaments for the Holy Land required his prefence at this place of rendezvous. The lofs of Jerufalem, the fall of the Grecian empire, and the ruin of all the Levant trade after the Turks had conquered the Eaft, reduced Brindifi to a tate of inactivity and defolation, from which it has never been able to emerge." E. Long. 18. 5. N. Lat. 40. 52.

BRINDLEY, James, a mofl uncommon genius for mechanical inventions, and particularly excellent in planning and conducting inland navigations, was born, in 1716 , at Tunfted in Derbyfhire. Through the mifrannagement of his father (for there was fome little property in his houfe) his education was totally weglected ; and, at feventeen, he bound himfelf apprentice to a mill-wright, near Macclesfield, in Cheflire. He ferved his apprenticefhip; and, afterwards, felting up for himfelf, advanced the mill-wright bufinefs, by inventions and contrivances of his own, to a degrce of perfection which it had not axtained before. His fame, is a moft ingenious mechanic, fpreading widely, his genius was no longer confined to the bufinefs of his profection: for, in 1752 , he crected a very extraordi-
nary water-engine at Clifton, in Lancahire, for the Brirdley. purpofe of draining coal-mines; and, 1755, was employed to execute the larger wheels for a new filk mill, at Congleton, in Chefhire. The potteries of Staffordthire were allo, about this time, indebted to him for feveral valuable additions in the mills ufed by them for grinding flint-Atones. In 1756, he undertook to erect a Ateam-engine near Newcattle under Line upon a new plan; and it is believed that he would hase brought this engine to a great degree of perfection, if fome interefted engineers had not oppofed him.

His attention, however, was foo:s afterwards called off to another object, which, in its confequences, hath proved of high importance to trade and commerce; namely, the projecting and executing "Inland navigations." By the fe navigations the expence of carriage is leffened; a communication is opened from one part of the kingdom to another, and from each of thele parts to the $\{e a ;$ and hence products and manufactures are afionded at a moderate price. The duke of Bridgewater hath, at Worfley, about feven miles from Malichefter, a large eflate abounding with coal, which had hitherto lain ufelefs, becaufe the expence of land-carriage was too great to find a market for confumption. The duke, wifling to work thefe mines, perceived the neceflity of a canal from Worfley to Manchefter; upon which occafion Brindley, now become famous, was confulted; and declaring the fcheme practicable, an ant for this purpofe was obtained in 1758 and 1759. It being, however, afterwards difcovered, that the navigation would be more beneficial, if carried over the river Irwell to Manchefter, anotler act was obtained to vary the courfe of the canal agreeably to the new plan, and likewife to extend a fide-branch to Longford bridge in Stretford. Brinley, in the mean time, had begun thefe great works, being the firf of the kind ever attempted in England, with navigable fubterraneous tunnels and elcvated aqueducts; and as, in order to preferve the level of the water, it fhould be free from the ufual obftructions of locks, he carried the canal over rivers, and many large and deep valleys. When it was completed as far as Barton, where the Irwell is navigable for large veffels, he propofed to carry it over that river, by an aqueduct of thirtynine feet above the furface of the water; and though this project was treated as wild and chimerical, yet, fupported by his noble patron, he began his work in Sept. 1960, and the firft boat failed over it in July 1761. The duke afterwards extended his ideas to Liverpool; and obtained, in 1762 , an act for branching his canal to the tideway in the Merfey; this part of the canal is carried over the rivers Merfey and Bolland, and over many wide and deep valleys.

The fuccefs of the duke of Bridgewater's undertak. ings encouraged a number of gentlemen and manufacturers in Staffordthire, to revive the idea of a canalmavigation through that county; and Brindlcy was, therefore, engaged to make a furvey from the Trent to the Merfey. In 1760 , this canal was begun, and conducted under I3rindley's direction as long as he lived ; but finifhed after his death by his biother-in-law Mr Marftall, of whom he had a great opinion, in May 1777. The proprictors called it, "the canal from the Trent to the Merfey;" but the engineer, soore emphatically, "the Grank Trunk Navigation,"

B I
Brindley.

## $\underbrace{\text { Brin. }}$

on account of the numerous branches, which, as he juftly fuppofed, would be extended evesy way from it. It is 93 miles in length; and, befides a large number of bridges over it, has 76 locks and five tunnels. 'The mof remarkable of the tunnels is the fubterraneous paflige of Harecafte, being 2880 yards in length, and inore than 70 yards below the furface of the earth. The fcheme of this inland-navigation had employed the thoughts of the ingenious part of the kingdom for upwards of 20 years before ; and fome furveys had been made: but Harecaltle hill, through which the tunnel is conitructed, could neither be avoided nor overcome by any expedient the moft able cagineers could devife. It was Brindley alone who furmounted this and other the like dificultics, arifing from the variety of Atrata and quickfands, as no one but himfelf would have attempted to conquer.

Brindley was engaged in many other fimilar undertakings; for a fuller account of which, not being confiftent with our plan, we refer the reader to the "Biographia Britannica;" or rather to a curious and valuable pamphlet, publifhed fome years fince, and entitled, "The Hiftory of Inland Navigations, particularly that of the duke of Bridgewater." He died at Turnhurf in Staffordhire, September 27.1772, in his 56th year; fomewhat immaturely, as it fhould feem: but he is fuppofed to have fhortened his days by 100 intenfe application, and to have brought on a hectic fever, which continued on him for lome years before it confumed him. For he never indulged and relaxed himfelf in the common diverfions of life, as not having the leaft relifh for them; and, though once prevailed on to fee a play in London, yet he declared that he would on no account be prefent at another; becaufe it fo difurbed his ideas for feveral days after, as to render him unfit for bufinefs. When any extraordinary difficulty occurred to him in the execution of his works, he generally retired to bed; and has been known to lie there one, two, or three days, till he has furmounted it. He would then get up, arid execute his defign without any drawing or model : for he had a prodigious memory, and carried every thing in his head.

As his tation in life was low, and his education totally neglected, fo his exterior accomplifhments were fuitable to them. He could indeed read and write, but hoth very indifferently; and he was perhaps, in his way, as abonomis fapiens-"s of mother-wit, and wife without the fchools"-as any man that ever lived. "He is as plain a looking man as one of the boors in the Peake, or one of his own carters: but when he fpeaks, all ears liften; and every mind is filled with wonder, at the things he pronounces to be practicable." The fame author gives us allo no ungracious idea of his moral make: "being great in himfelf, he harbours no contracted notions, no jealouly of rivals : he conceals not his methods of proceeding, nor aks patents to fecure the fole ufe of the machines, which he invents and expofes to public view. Senfible that he muft one day ceale to be, he felects men of genius, teaches them the power of mechanics, and employs them in carrying on the various undertakines in which be is engaged. It is not to the duke of Bridgewater only that his fervices are confined: he is of public utility, and employs his talents in rectifying the miltakes of defpaiting worknien, \&c. His powers thine molt

in the midn of difinculties; when rivers and moon- Frins. tains feem to thwatt his defigns, then appears his valt $\underbrace{- \text {, }}$ capacity, by which he makes them fubfervient to his will."

IBRINE, or PICKLE; water replete with fatine particles.

Brine taken out of brine-pits, or brine-pans, ufed by fome for curing or pickling of fith, withow suifing the fame into falt; and rock falt, without: c fining it into white-falt; are prohibited by I Ann. cap. 23.

Brine is either native, as the fea-water, which by coction turns to falt; or factitious, formed by diffolv. ing falt in water. In the falt-works at Upuick in Worcefterfhire, there are found, at the fame time, and in the fame yit, three forts of brine, each of a different Itrength. They are drawn by a pump ; and that in the bottom, firft brought up, is called $\mathrm{frf}_{\mathrm{h}}$ man ; the next. middle man; and the thitd, lafi man.

Leach-Brine, a name given to what drops from the corned falt in draining and drying, which they preferve and boil again; being Atronger than any brine in the pit. There is fand found in all the Siaffordhire brines after coction: but naturalifts oblerve, it did not preexill in the water, but rather is the produch of the boiling. Some fteep their feed-wheat in brine, to prevent the fmut. Brine is alfo commended as of efficacy againft gangrenes.

Brine alfo denotes a pickle pregnant with falt, wherein things are fteeped to keep.

Bring-Pans, the pits wherein the falt-water is retained, and fuffered to ftand, to bear the action of the fun, whereby it is converted into falt. There are divers forts of falt-pans, as the water-pans, fecond-pan, funpars; the water being transferred only from one to another.

Brine-Pit, in falt-making, the falt fpring from whence the water to be boiled into falt is taken. There are of thefe fprings in many places; that at Numptwich in Chefhite, is alone fufficient, according to the accourit of the people of the place, to yield falt for the whole kingdom; but it is under the government of certain lords and regulators, who, that the market may not be overflocked, will not fuffer more than a certain quantity of the falt to be made yearly. See the next article.

BrINE-Springs, are fountains which flow with falt. water inftead of frefh. Of thefe there are a good number in Sauth Britain, but though not peculiar to this ifland, are far from being common in the countries on the continent. There are forme of them in feveral different countries; and perhaps, on a due fearch, others might be difcovered*. The moft remarkable of thefe "Campbernss already known are, one at Eaft Chennock in Somer- Podisical Setfhire, about 20 miles from the fea. Another at Survey, Leamington in Warwickfine, very near the river p. $7^{6 .}$ Learn; which, however, is but weak. Such a fpring likewife runs into the river Cherwell in Oxfordhire, and feveral more in Weftmorland and Yorkfhise : but as they are but poor, and the fuel in molt of thofe counties fcarce and dear, no falt is prepared from them. At Borrowdale near Grange, three miles from Kefwick in Cumberland, a pretty ftrong fpring rifes in a level near a mofs, 16 gallons of the water of whicd: yield one of pure falt; which is the more remarkable,

## B R I

Suine II
Bring.
when it is confidered that the fame cuantity of falt cannot be obtained from lefs than 22 gallons of the waters of the German ocean. At a place called Salt-W゙ater Haugh, near Butterby, in the bihopric of Durham, there is a multitude of falt-fprings which rife in the middle of the river Weare, for the fpace of about 40 yards in length and ten in breadth; but particularly one out of a rock, which is fo frorgg that in a hot fummer's day the furface will be covered with a pure white filt. At Wefon, in Staffordhire, there are brine pits which afford about a ninth part of very fine white falt. There are others at Enfon, St Thomas, and in the parifh of Ingeftre, but fo weak that they are not wrought; though it is believed, that by boring, Itronger fprings might be found in the neighbourhood. In Lancaflire there are feveral falt fprings, but (if we except that at Barton, which is as rich as the fpring at Norwich) by no means fo famous as thofe of Cheflire, called in general by the name of the wiches. Namptwich on the river Weever, has a noble fpring not far from the river, which is fo rich as to yield one fixth-part of pure white falt. At fix miles diftant fands Northwich, at the confluence of the Weever and the Dan; where the brine is fill richer, fince they obtain fix ounces of falt from 16 of water. There are, even at this day, fome vifible remains of a Roman caufervay between thefe two towns. The inhabitants of Wales, who, before that country was incorporated into England, were fupplied chielly, if not folely, with that neceffary commodity from thefe two towns, called the former Hellatb Wen, and the latter Hellatb $D u ;$ i. e. the white and black falt pit. In 1670 , a rock of falt was difcovered at a fmall difance from Norwich, which has been wrought to a great depth, and to a vaft extent, fo as to be juflly efteemed one of the greatell curiofities in England; and it is highly probable, that there is an immenfe body of foffil falt in the bowels of the earth, under this whole county; fince, upon boring, brine pits have beer, found in many places on both fides the river Weever. This is the more likely, fince at Middlewich, which fands at the contluence of the Croke and the Dan, there are falt fprings with a fre?h brook running between them. The brines from thefe pits are of unequal frength; but when mixed, they commonly obtain four ounces of falt from a pound of brine. Experience fho: $\cdot$ s, that in thefe fprings the water is ftrongeft neareft the botrom, richer in dry weather than in wet, and when long drawn than when firft wrought. But thefe are no rules in refpect to other falt-fprings, fince in thofe of Franche Compte the brine is Arongeft in wet weather. There are feveral other bodies diffolved in thefe brines befides falt; in fome a fulphureous fubftance, which fublimes as the brine heats; a fort of dirty ocbre which difcolours the brine, but, if fuffered to fland, fpeedily fubfides; and in molt brines a calcareous, or rather felenitic earth, which fettles to the but-
t See Salf, tom of the parist.
and Spring. To BRING-To, in Navigation, to check the courfe of a thip when fle is advancing, by arranging the fails in fuch a manner, that they fhall counterad each other, and prevent her cither from retreating or moving forward. In this fituation the ftip is fuid to lie by, or lie to; having, according to the fea-phrafe, Some of her fails aback, to oppofe the force of thofe
which are full; ot haring them otherwile flortened by Eringing.to beine furied, or loauled up in the brails.

Bringing-to, is generally ufed to detain a thip in any particular fation, in order to wait the approach of fome other that may be advancing towards ber; or to retard her courfe occafionally near any port in the courfe of a voyage.

Bringing-in a Horfe, in the manege, the fame as to fay, keep down the nofe of a horfe that boars and toffes his nole in the wind: this is done by means of a branch.

BRINLNG or cors, in hurbandry, an operation performed on the wheat-\{eed, in order to prevent the fmut. A liquor is to be prepared for this purpofe, by putting 70 gallons of water into a tub (like a mafhtub ufed for brewing), and a corn-buthel of unflaked limeftone. This is to be well ftirred till the whole is diffolved, and left to fland for 30 hours; after which it is to be drained off into another tub, in the manner practifed for beer. In this way about a hogfhead of frong lime-water will be obtained, to which muft bc added three pecks of falt. The wheat muft be feeped in this pickle, by running it gently, and in fmall quantitics, into a broad-bottomed baket of about 24 inches in diameter, and 20 inches deep, and firring it. The light feed that floats muff beflrained off with a frainer, and muft not be fown. When the bafket has been drawn up, and drained of the pickle, the wheat will be fit for fowing in two hours after the brining.

Brining of bay-ricks, a practice common in America, of mixing falt with the hay as it is facked.

BRIONNE, a town of France in Normandy, feated on the river Rille. E. Long. 0. 51. N. Lat. 49. 51.

BRIOUDE, a town of France, in the department of Upper Loire, formerly Lower Auvergne. There are two Brioudes, three quarters of a mile from each other; the one is called Cburch Brioude, the other Old Briotde. The houfes are built after the antique manner, and are badly difpofed. The canons are all temporal lords and counts. It is in no diocefe, but depends immediately on the pope. There are feveral convents; and, among the refl, the church of St Ferrol, which is highly celcbrated. Near the Old Town is a flone-bridge on the liver Allier, which confifts of one arch: this is efteemed a Aupendous flructure, and is thought to be a work of the Komans. The inhabitants lave no manufactures. It is fituated in E. Lang. 3. 25. N. Lat. 45. $\mathrm{I}_{4}$.

BRIQUERAS, a town in Piedmont, fcated in the valley of Lucern, three miles from the town of that name, and four fouth of Pignerol. It had a very firong caftle towards the latter end of the 16 th century; but when the French got footing in it, it was ruined, that is, before they delivered it up to the duke of Savoy in 1696 . E. Long. 7. 24. N. Lat. 44. 41.

BRISACH, a town of Germany, and capital of Brifgaw. It was twice in pofleffion of the lirench; but reftored to the houfe of Auflria, in confequence of treaties of peace. It was a very itrong place, but the fortifications have been demoliflied. It is feated on the Rhine, whete there is a bridge of boats. E. Long. 7. 79. N. Lat. 48. 5.

Brisach, Ne:u, a town of France, in the department of the Upper Rhine, built by order of Louis XIV. over againft Old Brifach, and fortified by Vauban. It is $3^{2}$ miles fouth of Straiburg. E. Lung. 7. 45. N. Lat. 48.5.

BRISEIS, or Hippodama, in fabulous hiftory, the wife of Mynes King of Lyrnefla. After Achilles had taken that city, and killed her hutband, the became his captive. That hero loved her tenderly; but Agamemon taking her from him, the became the accidental caufe of numberiefs diforders in the Grecian army. Achilles, enraged, retired to his tent; and, till the death of Patroclus, refufed to fight againft the Trojans 'The refentment of this prince is fimely painted in the Iliad.

BRISGAW, a territory of Germany, in the circle of Suacia, on the eaftern bank of the Rhine, about 50 miles in leneth, and 30 in breadth. The principal places are Old Brifach, New Brifach, Freyburgh, Rhinmarck, and an illand in the Rhine.

BRISIACUS mons, in Ancient Geograpby, a town on the right or eall fide of the Rhane. Now Brifach, fituated on a round hill; a fortified town of Suabia, and diftinguilhed by the wame of Old Brifach. E. Long. 7. 15. N. Lat. 48. 10.

BRISSOT, Peter, one of the ableft phyficians of the 16 th century, was born at Fontenai le Comte in Poictou. He fludied at Paris; and, having taken his dofor's degree, bent his thoughts to the reforming of phyfic, by reltoring the precepts of Hippocrates and Galen, and exploding the maxims of the Arabians: to this purpofe he publicly explained Galen's works, inAtead of thofe of Avicenna, Rhafis, and Meflue. He afterwards refolved to travel to acquire the knowledge of plants; and going to Portugal, practifed phyfic in the city of Ebor?. His new method of bleeding in pleurifies, on the fide where the pleurify was, raifed a kind of civil war among the Portuguefe phyficians; it was brought before the univerfity of Salamanca, who at laft gave judgment, that the opinion aferibed to Briffot was the pure doctrine of Galen. The partizans of Denys, his opponent, appealed in 1529 to the emperor, to prevent the practice, as being attended with deftructive confequences; but Charles III. duke of Savoy happening to die at this time of a pleurify, after having been bled on the oppofite fide, the profecution dropped. He wrote an Apology for his practice; but died before it was publifhed, in 1552 ; but Anthony Luceus, his friend, printed it at Paris three years after. Renatus Morean procured a new edition of it at Paris, in 1622 ; and ancexed to it a treatife entitled De miflione fanguinis in plouritide, together with the Life of , riffor.

BRISTLE, a rigid gloffy kind of hair found on fiwine, and much uied by brufh-makers, \&c.

BRISTOL, a city of England, and inferior to nonc, except London, fur wealth, trade, nd number of inhabitants. Briftol is a corruption of Brighefow, as it was called by the Saxons. It is thought to have flood anciently altogether on the weft or Somerfethire fide of the $\Lambda$ von, before the bridge was built; but after that, it came to be partly in Somerfethine and partly in Gloucefterfhire, until it was made a county of itfelf, though even before that. in the parliament rolls, it was always placed in Somerfethire. At prefent, the

Vor. IV. Part II.
caft fide is by much the largeft and moft populouse, It had anciently a callle, built by Robert carl of Gloucefter, natural fon to Henry 1. which was demolified by Cromwell ; and the glound is naw laid out into Afrects. The corporation confills of a mayor; recorder; twelve aldernen, of whom the recorder i, one; two theriffs; and twenty-cight common coum il men. The recorder is generally a icrjeant at law, and fits as judze in capital and all other criminal caufe. She mayor, to fupport his dignity, and defray his extraordinary expence, is entitled to cettain fees from flups, which long ago amounted to 5001 . or 6001 . Briftol is a binhop's fee, being one of the fix erected by King Henry Vlif. out of the fpoils of the monafteries and religious houfes which that motiarch had got diffolved. The cathedral church was the church of the abbey of Si Auftin in Brillol, founded by Robert Fitzharding fon to a king of Danmark, once a citizen here, by him filled with canons regular in the year 1148 . At the reformation King Ilenry VIII. placed therein a dean and fix prebendaries, which mode of government ftill continues. Duing a great part of Queen Elizabeth's relgn, his fee was held in commendam by the bifhop of Gloucefter. This diocefc was tormed chiefly out of the diocefe of Salibury, with a fmall part from the diocefes of Wells and Worcefter. It contains moft of the city of Briftol, and all the county of Doifet, in which are 236 parifhes, of which $6+$ are impro priated. It hath only one archdeaconry, viz. of Dorfict ; is valued in the king's books at 3881. 85. 4d. and is computed to be annually worth 15001 . including its commendams. The tenths of the clergy are 3531 . $185.0 \frac{3}{4}$ d. This fee hath yielded to the flate one lord pirivy feal. The revenues of the abbey of St Augultine, or St Autlin, in Brifol, were valued at the diffolution at 67001 . 13. Ind. when it was erected into a cathedral by King Henry VIII. by the name of the Cathedral Cburch of the Holy Trinity. To this cathedral belong a bilhop, a dean, an archdeacon, a chancellor, fix prebendaries, and other inferior officers and fervants. Befides the cathedral, there are 18 pa-rill-churches; and here are diffenters of all denominations, of whom the Quakers are very refpectable both for their wealth and numbers. (If the parim-churches, St Mary Ratcliff is reckoned one of the fineft, not only here, but in the whole kingdom. In this church, befidestwo monuments of the founder William Cannings, who had been five times mayor of this city, one in the habit of a magiftrate, and another in that of a prieft (for in his latter days he took orders), there is one of Sir Willam Penn, father to the famous Quaker. The old bridge over the Avon confifted of four broad arches, with houles on both fides like thofe formerly on London bridge; but this has been lately pulled down, and another erected in its place. No carts or waggons are admitted into Brifol, for fear of damaging the vaults and gutters made under ground lor carrying the filth of the city into the river. Queeri's-fquare, in this city, is larger than any in London, except Lincoln's-Inn Fields, and has in the centre an equeftrian flatue of Kirg William 111. All the gates of the city remain entise, and a part of the walls; the reft were razed in the reign of William Rufus. It is almoll as broad as long, about feven miles in citcumference, and contains about 95,000 inhabitants. Of the hofpitals, the chief

## a:e, 1. "liat railed Oreen Eilizabchis, in which 100

 boys ate traght reading, writing, arithmetic, and navigation ; fix of whom, ishen they so cus, have sol. atad the rell Sl. Ss. to bind them apprentices: the maller is allowed 450!. a-year, for the maintenance of the boys. 2. Colfon's holpital; in which 100 boys are maintainet for feven years, and tanght and apprenticed, in in Queen Elizaberli's. 3. Another founded by the fame acnileman in 1691 , for 12 men and 12 women, rith an allowance of $\hat{3}^{\text {c. per week, and } 2} 2$ racks of coals in the year. This charity colt tle founder 25,000 . 4. Another founded parily by Mr Cohion and partly by the merchants, in which is men on account of the merchants, and 12 men and wamen on sccount of $\mathrm{Mr}_{5}$ Cullon, are maintained. 5. An infirmary, which was opened in 1736 for the fick, lame, and diffreffed poor of the city, which is maintained by fubrotiption, befides 50021, bequeathed to it by John Eldridge, Efq. formerly comptroller of the cultoms at this port. There are, befides thefe, a bridewell. feveral alinc-houfer, and charity-fchoois. There is alfo a guldhall for the feffoans and affizes; the mayor's and fleriffs courts; a council-houfe, where the mayor and aldermen mect every day, except Sundays, to adminifer juftice; a landfome new exchange, with three entrances, about two-thirds as large as that in London, and a quay balf a mile in length, the moft commodious in England for fhipping and landing goods, for whith purpofe it is provided with feveral crancs. In College-green is a tlately hiuh crofs, with the effigies of feveral kings round it. In Winch-flree: is a guard-haufe, with barrirks for foldiers. As to the trade of this city, it was compisted many years ago to be much greater in proportion, efpecially to America and the Weft Indies, than that of London. Fifty fail, fome of them ftips of confilerable burthen, have arrived here at one time, or very near one another, from the W'ef lndies. For this irade, and that to Ireland, it is much hetter fituated :hen London, belides the great advantages it poffefles of an inland navigation by the Wye and Severn. 'Their trade extends to the Paltic, Norway, Holland, Hamburgh, Guinea, and the Straits. The largeft mips are difcharged at Kingroad, four milles below the city, and the goods are brought to the quay by lighters. For building, equipping, and repairing fhips, there are cocks, yards, rope-walks, and hip-wrights. Here are fome confiderable woollen manufactures; and no lefs than $1 ;$ glals-houfes, for whicls Kingfwood and Mendip furnilh the coals. The city companics are 13 : 1. The merchant adventurers. 2. The merchant tailors. 3. The mercers. 4. The foap-boilers. 5. The tobacconifts. 6. The butchers. 7. The barbers. 8. Tise tylers. 9. The holliers, who are the fled-men. Io. Shoemakers. is. Coopers. 52. Bukers. 13. Smiths. For fupplying the city with water there are fix public conduts: and handfome hackney coaches may be hired at very reafonable rates, but they do not ply in the frects. There are allo llage coaches, which fet out cuery day for Bath, London, and other places. $\Lambda$ mile below the city, clule by the river is the hot well, whofe waters are fpecific for the diabetes, and sood in phehifical, fcorbutic, and inflammatory diforders. Hither is a great refort in the fummer of invalids, as well as other company; for whole accommodation and entertainment there is a pump-room, ball-room, colfec-houfe, withtaverne, and a great number of elegant lodging houles, both below on a level with the well, and abore in the delight ful village of Clitton, which is fituated on the brow of a hill, from : $:$ hence there are downs extencirg feveral miles, where the company ricie out for exercife. Nothing can be more fure and falutary than the ar of thefe downs, which afford a variety of the moft romantic and agreeable profpects, comprehending Kingroad, with the thips at anchor, the mouth of the S:vern, and the mountains of Wales. In the rocks abore the well are found thofe fix-cornered stones called Bri/hnl-fontes; tut they are not to plentiful now as in Camden's days, when, he fays, whole bufhels might have been eafily gathered. In this city is a theatre, where plays are acted almoft every night during the recefs of the concedians from the metropolis. There are two annual fairs, to which the concourfe is fo great, that the neiglbouring inns have fllled 100 beds a piece with their gucls. In the winter feafon there is an aficmbly every Thatday for the gayer part of the citizens of both fexes. About half way betwixt Briflol and Bath, at a piace called Tarmly, a company of Briflol merclants liave ciceted a noble manufacture of pins and other brats utenfils which emplovs a great number of hands, including about 200 children of both fexes from feven to twelve or thirteen years of age. All the different operations of melting, plitting, drawing, hammering, turning, \&c. are performed by wheels worked with water, which is raifed by two fire engines of a very curiovs mechanifm. The city of Briftol gives the title of earl to the family of Hevey, and fends two members to parliament. It is worth obferving, that whoever marries a citizen's daughter becomes frec of the rity.

New-BrIstol, the capital of the county of Bucks in Pennfylvania, fituated on the river Delarrare, about 20 miles north of Philadelphia, in W. Long. 75. N. Lat. 40.45 .

Bristol Water. Of the four principal warm waters naturally produced in England, this is the leaf fo. As the Bath waters are proper whete the lecretions are defective, to the Briftol water is of fervice where they exceed the requirements of health. The Bath water warms; the Brithol cools. Bath water helps the flomach, inteftines, arid nerves ; the Biftol favours the lungs, kidneys, and bladder. Except a jaundice attend, the Briftol water may be of ufe in dropfies by its drying and diuretic qualities. Dr Winter afferts, that there is no iron in Brifol water ; and that its mineral contents are chalk, lapis calcareus and calaminaris. Five gallons of this water, after evaporation, afforded only $\tilde{z}_{5}$ iii. and gr. 2. of mineral fubftances. The difeafes in which this water is ufeful are internal hemorrhagics, immoderate menfes, internal inflammations, fpitting blood, dyfertery, purtlent ulcers of the vilcera, confumption, dropfy, furvy with heat, ftone, gravel, frangury, habitual gout, atrophy, now fever, ferophula, glects, and diabetes, in which laft it is a fpecific, and may be drank as frecly as the thirst requires it. "The hotter months are the beff for ufing it. The Briftol and Matluck waters are of exactly the fame qualities. Doctors Mead and Lane firtt eftablifhed the reputation of Briftol waters in difeafes of the kidneys and bladder.

BRITAIN, or Grfat Deitain, the moft confuer-

Eriftul, Eritain.

## B $\quad$ If <br> B R I

Rritain. able of all the European inlands, extends from the Lizard Point, in the latitude of about $50^{n}$, to Duneibayhead, in latitule $58.30 . \mathrm{N}$. or, taking it in a Atraight line from north to louth, about eight degrees or 550 miles; and from Dover-head on the eall to Land'send on the weff comprehends about feven degrees of longitude, which may be computed at about 290 miles; but the form being very irregular, and leffening continually towards the north, proper allowance muil be made in computing its dimentions.

The ancient name of this inland was Allion, the name

Britain being then common to all the inlands round it. Hence Agathemerus, fpeaking of the Britifh iflands: "They are many in number (fays he) ; but the moft confiderable among them are Hibernia and Albion." And Ptolemy, to the chapter wherein he defcribes the ifland now called Great Britain, prefixes the following title: "Thefituation of Allion, a Britifh illand." But as this far excelled the other Britifh illands, the name of Albion in procefs of time was laid quite afide, and that of Britain ufed in its fead. By this name it was of both thefe names is very uncertain. Some derive that of Albion from the Greck word alphon, which, accord- ing to Feftus, fignifies whiee, the chalky clifis, that in feveral places rife on the louthern coats, having that colour; while others pretend this name to have been borrowed from a giant feigned to huve been the fon of N -piune, and mentioned by feveial ancient authors. Somectymologills have recourfe to the Hebrew, and others to the Phœenician; alben in the former fignifying white, and olp in the latter fignifying bisk. The origin of the name Britain is no lefs uncertain than that of Albion. Nennius and fome other britifh writers derive it from Brutus, whom they likewife call Brito, the fith in defeent from the celebrated Eneas. Others derise it from the Britifh words pryd cain, that is, ת weste form. loftence by degrees into Britnnnia. Camden derives it f:um the word brill, which, in the ancient language of the illand, fignifies painted; and tenia, impering, in Gresk, a region or country ; fo thai the word Brithanin, changed in procefs of time into Britannia. exprefles what the Pritons really were, that is, printed. Somner, difliking Camalen's ciymology, profinfes another, viz. that the natse Bribatin comes from boyd.o; fignifying, in the Britilh tongue, rage, and yointing out the volent moion of the tea that fur rourid, the ifland. Mr Whitaker, in his Hiftory of Mancheiler, derives it from the word brih, lriet, lirit, Lris, or briz, which, he fays, fignifies divided or firiped. Againt the firl of thele etymologies it may be object$r \cdot d$, that it is founded on a fable : and againtt the other four lies one common and unanfwerable objection; which is, that the name of Britain was given to the inland by forcigners, who could not borrow it from the Britifls tongue, with which they were in all likclibood unacruainted. That the ifland received the name of Britgin from forciguers is evident, fince the s:atives never flyled themfelves Britons, nor their country Briain; the ir true name being Cumri, or Cumbri; whence Canl ria the name of Wales to this day among the Welfi.

The !earned Porhart, fpeaking of the colonies and larguage of the Phenicians, offers a conjecture which moll of our modern writers have alopted as the moft
natural. The Plicunicians, according to that writer, called this illand and fume others near it, liarat Anac, that is, the land or country of tin or lead, and more contractedly Bratanac; which name, patling from the Phoenicians to the Greeks, and from thefe to the Rumans, might have been foftened into that of Lrisamicue, and Britannia. That the Phocuicians firft difcovered thefe inands, which were afterwards by the Greets called Ca/ficerides, and are proved by Camden to be our Scilly illands, appears both from Strabo and Pliny; of whom the former tells us, that the Phouicians firft brought tin from the Caffiterides, which they fold to the Greelis, but kept the trade to themfelves, and the place private; and the latter writes, the Mediocritus was the firlt who brought lead from the Caffiterides; where Bochart fhows that we ought to read Melichartus, who is the Phonician Hercules of Sanchoniatho, to whom that nation alcribes their firf weftern difeoreries. But notwithitanding the care of the Phcenicians to conecal thefe illands, the Greeks at laft difcovered them; and gave them the name of Caffereries, which, in the Greek tongue, fognifies the lame with Barat Anac in the Phoenician. This name sas at firll given to the illands of Scilly already mentioned, but by degrees communicated to all the others lying in the fane fea. 'Thus Hochart. But after all, his opinion, however planfible in appearance, may be as foreign to the purpufe as any of the reft ; many inflances of names given to new difcovered countries lhowing that the origin of fuch names is not always owing to realon, but often to chance or caprice.
'The general divifion of Britain is into Engeasd, Scoteand, and Wales; for a particular delcription and hittory of which, fee thefe articles.

In the year 1603 , the kingdoms of Scotland and James VI. England fell under the dominion of one fovereign, by the acceffion of James VI. of Scotland to the throne of England. He derised his title to the latter from being the grandfon of Margaret, eldeft daughter to Henry Vfl. of that kingdom; and, on the failure of all the male line, his hereditary right remained inconte:lable. Queen Elizabeth, with lser latef breash, had recognized him for her fuccefior; fo that few lovereigns ever afcended a throne with more approbation of their fubjects, or greater hupes of 2 peaceable and happy reign.

Thefe hoper, however, were foon blafled; and the hifory of this monarch's reign conlifts of little elfe than a detail of difputes and contentions between him and hiv parliament. A particular and minute account of fuch tianfactions could afford very litule entertaitment; but it is of importance to know their origin, as they are to be reckoned the ultimate caufes of thofe fucceeding events which make fo confuicuous a figure in the ammals of Britain.

In thofe barbarons ages which preceded the period General we are now cutering upon, the hunan mind, enervated thate of the by fuperitition, and obleured by ignorance of every art and icience, leemed to have given up a!l pretenfiuns to liberty, cither religiuus or civil. Unlimited and uncontrouled defpotifm prevailed everywhere; and thourh Fingland fuftered lefs in this relpect than almoft any other nation, the many examples of arbitrary power escrted by her fovereigns, Queen Elizateth herfelf, Jimes's immeriate ptedecefor, not excepted, flow that

## B R I

Eritain.
they were very far from being then a free people. An inconteftable proof of this, and an evidence how little reftraint at that time the people could lay upon the authority of the fovereign, is, that the proceedings of parlizment were accounted, even by themfelves, of lo little confequence, that they were not at the trouble to keep journals of them. It was not till the year I607, four years after the acceffion of James, that parliamentary journals were kept, at the motion of Sir Edwin Sandys, a member of great authority in the houfe.

The proceedings of the parliament being at that time of fo little confequence, it is no wonder that the feffions were not regular, or that little attention was paid to the choice or continuance of the members. In the reign of Elizabeth, and her predeceffors, the feffions of parliament did not continue above the twelfth part fo long as the vacations. It was then ufual, after parliaments had been prolonged beyond one lelfion, for the chancellor to excrt a difcretionary authority of iffuing thew writs to fupply the place of any members whom he judged incapable of attending, either on account of their employment, ficknees, or other impediment. No practice could be more dangerous to liberty than this, as it gave the chancellor, and confequently the fovereign, an opportunity of garbling at pleafure the reprefentatives of the nation : yet fo little was liberty at that time underftood, that the commons, of their own accord, without the leaft court influence or intrigue, and contrary to fome former votes of their own, confirmed the chancellor's power in this refpect in the 23 d of E lizabeth. Nor did they proceed any farther in the affertion of their privileges, than to vote, that "during the fittirg of parliament there do not, at any time, any writ go out for the clinofing or returning any member without the warrant of the houfe."

Towards the end of the 16 th or beginning of the $17^{\text {th }}$ contury, a great revolution took place, though inSenfibly, throughout all Europe. Arts and fciences began to flourifh, commerce and navigation were greatly extended, and learning of all kinds began to diffule itfelf. By more enlarged views, the love of freedom began, in England efpecially, to take place in the breafts of moft people of birth and education; and this was greatly promoted by an acquaintance with the ancient Greek and Latin hiftorians. From the example of the republics of Greece and Rome, whofe members had fo often facrificed their lives for the fake of liberty, a patriotic fpirit began to arife; and a defire of circumferibing the exceffive prerogative and arbitrary proceedings of the crown began fecretly to take place throughout the natiod.

Nor was the defire unreafonable, or without a folid foundation. During the laft years of Queen Elizabeth's reign, the commerce, navigation, and number of feamon in Englard, had fenfibly decayed. A remonftrance from the Trinity-houle in 1602 fays, that lince 1588 , the number of feanen and chipping had decayed about a third part. Every fpecies of domeflic indultry was fettered by monopolies; and by exclufive companies, which are only another fpecics of monopoly, almoft all forcign trade, except that to lirance, was brought into the hands of a few rapacious engroffers, and all profpect of foture improvement in commerce was for ever facrifoed to a little temporary advantage of the fovereign.

3 ] B R I
Thefe companies, though arbitrarily erected, had car-
Britait. ried their privileges fo far, that almon all the commerce of England centered in London ; the cuitom of that port alone amounted to 110,0001 . a-year; while thofe of all the kingdom belides amounted only to 17,0501.; nay, the whole trade of Loudon was confined to about 200 citizens, who were eafily enabled, by combining among themfelves, to fix whatever price they pleafed both on the exports and imports of the nation. Befides this, the fubjects were burdened by wardfhips and purveyances. The latter was an old prerogative of the crown, by which the officers of the houfebold were empowered to take, without confent of the owners, provifions for the king's family, and carts and horlics for the removal of his baggage, upon paying a ftated price for them. The king had allo a power of fending any perfon, without his confent, on whatever meffage be pleafed; and thus be could eafily force any individual to pay him whatever money he chofe, rather than be fent out of the country on a difagreeable errand. Money extorted from irdividuals, by this or any other method, was called a benevolence.

Thefe were fome of the grievances under which the James's are nation at this time laboured, and thefe the rifing firit bitrary fyof patriotifm tended to redrefs. This difpofition, how. Atem of goever, the fevere government of Elizabeth bad confined vermment. within very narrow bounds: but when James luccecd. ed to the throne; a foreign prince, lefs dreaded and lefs beloved ; fymptoms of a more free and independent genius immediately appeared. Happily James neither perceived the alteration, nor had fufficient capacity to check its early advances. He had ellablifled in his own mind a fpeculative fyftem of abfolute government, which few of his fuljects, and nowe but traitors and rebels, he thought, would make any fcruple to admit. He confidered limfelf as entitled to equal prerogatives with other European Covereigns, not confidering the military force with which their defpotifm was fupported. The almoft tinlimited power which, for upwards of a century, had been cxercifed by the Englifu fovereigns, he confidered as due to royal birth and title, not to the prudence and fpirit of thole monarchs, or the colle jundures of the times. In his ferfon, therefore, he imagined all legal power to be centcred by an hereditary and a divine rizht ; nay, fo full was be perfuaded that he was the abfolute proprietor of li:s fubjects, that in his fpeech to the parliament in 1621 , he told them, that he "wiflod them to have faid that their privileges were derived from the grace and permiffion of him and his anceftors." And when the fame parliament protefted that "the liberties, franchifes, privileges, and juridictions of parliament, are the ancient and undoubted birthright and inheritance of the fubjects of England," he was fo enraged, that fending for the journals of the commons, he, with his own hand, before the council, torc out this proteflation; and ordered his reafons to be inferted in the council book.

Such were the oppofite difpolitions of the prince and parliament, at the commencement of the Scottifh line; difpofitions juft beginning to exift and to appear in parliament, but thoroughly eftablithed, and openly avowed on the part of the king, throughout his whole reign.

The confequence of fuch oppofite difpofitions prevailing in the king and parliament was, that during this reign

Eritain. ly infected with puritanifm. Though the feverities of Elizabeth had almolt totally fuppreffed the Papifts, it had been otherwife with the Puritans. So much had they increafed by the very means which had diminithed the number of Catholics, that no lefs than 750 clergymen of that perfuafion figned a petition to James on his fucceffion. They hoped that the king, having received his education in Scotland, and laving always profeffed an attachment to the church eftablified there, would at leaft abate the rigour of the laws enacted againt the Puritans, if he did not fhow them particular favour and encouragement. But in this they were miftaken. He bad obferved in their Scots brethren a violent turn toward republicanifm, and a zealous attachment to civil liberty. In the capacities both of monarch and theologian, he had experienced the little complaifance they were difpofed to fhow him. They controuled his commands; difputed his tenets; and to his face, before the whole people, cenfured his conduct and behaviour. This fuperiority affumed by the prefbyterian clergy, the monarchic pride of James could never digent. Though he had been obliged while in Scotland to court their favour, he treafured up on that account the ftronger refentment againft them; and was determined to make them feel in their turn the weight of his authority. He therefore not only rejeeted the petition of the 750 clergymen above mentioned, but throughout his whole reign refufed to relax in the leaft the feverity of the laws again? Proteflant nonconformifts, though very often petitioned in their favour by his parliament.

The fame principles which occafioned in James fuch He favours an averfion to the Puritans, prompted him greatly to the Epifco- favour the Epifcopals, and even the Papifts, as being pals and Papifts, greater friends to defpotifm. In his youth he had been fofpected of a bias towards the religion of the latter; and when he afcended the throne of England, it is certain he often endeavoured to procure fome mitigation of the laws againft them, if not an abfolute toleration. But in this be was conftantly oppofed by the parliament; and indeed the ftong inclination flown by James to eftablifh Epilcopacy throughout every corner of his dominions, tended very much to alienate the minds of the generality of his fubjects, efpecially in Scotand, entirely from him.

In May 617 , the king fet out for Scotland, exprefly with the defign of eftablifhing Epifopacy in that kingdom. He did not, however, pranofe to abolifh Prefbytery entirely, and fet up abfolute Epifcopacy in its room. He defigned to content himfelf with eftablifhing the royal authority above the ecciefiaftical, and introducing fome ceremonies into the public worthip, fuch as kneeling at the facrament, private communion, private baptifm, confirmation of children, and on the obfervance of Chritmas, \&c. But as
reign the prerogatives of the crown were violently and openly attacked; but the chief grounds of difcontent werc money and religion. 'I'he king's high notions of the royal prerogative made him im ugire be had a right to whatever fums he pleafed to demand; and his profufion caufed him to diffipate in a thort time the fcanty fupplies he could extort from the parliament, who feem to have behaved as unreafonably on the one hand as James himfelf did on the other. With regard to religious matters, the nation was at that time great- the themelves. Every ecclefratical court ponisied the power of excommunication; which was then attended with fore very ferious temparal confequences, befides the fpiritual ones which are fuppofed to flow from it. The perfon excommunicated was flumned by every one as profane and impious: his whole eftate during his life-time, and all his moveables for ever, were forfeited to the crown. A fentence of excommunication was fometimes pronounced in a fummary manner, by any ecelefiaatical court bowever inferior, againt any perfon whether he lived within the bounds of their jurifdiction or not. And by this means, the whole tyranny of the inquifition, though without its orders, was introduced into Scotland. But the clergymen were not fatisfied with this unbounded authority in ecelefialtical matters; they affumed a cenforial power over every part of adminiftration; and in all their fermons and even prayers mingling politics with religion, they inculeated the moft feditious and turbulent principles. One Black, a minifter of St Andrew's, went fo far as $\mathbf{8}_{5}$ to pronounce in one of his fermons, that all kings were of fome of the devil's children; and in his prayer for the queen he then. ufed thefe words, "We inuft pray for her for the fafhion's fake, but we have no caufe : fhe will never do us any good." Another minifter preaching in the principal church of that capital, faid, that the king was poffeffed with a devil; and that, one devil being ex. pelled, feven worfe lad entesed in his place. To which he added, that the fubjects might lawfully rife, and take the fword out of the hands of their fovereign.

16
We can fearcely wonder that James fhould be defirous The king's of fubjugating fuch rebellious and turbulent fpirits as defign mifthefe; and, on the other hand, coufidering the ex- gives in treme weaknefs of this monarch's underfanding, and that he imagined himfelf able to manage not only furious religionifts, but even the mof powerful foreign nations, with no other weapon than mere argumentation, we can as little wonder at his want of fuccefs.In thort, fo far was James from being able to eftablifa his royal anthority above the ecclefiaftical, that be found himfelf unable to introduce a fingle ceremony. He returned therefore with the mortification not only of feeing his fchemes entirely baffled with regard to Scotland, but of liaving difgufted even the few of that nation over whom religious prejudices did not prevail: for they, confidering the ceiemonies fo much infilted on by the king as trivial and infignificant, could not help thinking the national honour facrificed by a fervile imitation of the inodes of worllip practifed in England, and that their fovereign betrayed equal narrownefs of mind, though in an oppofite manner, with thofe he fo much condemned.

The like bad fuccefs attended James when he at-fuccefs atenipted fome oppofition to the puritanical innovations gainft the in England. He had obferved in his progrefo through Pariians in that ling iom, that a judaical obfervance of the Sunday gaind ground every chay ; and that by this means, under coluur of religion, the people were deburred from fuch fports and recteations as contributed to their tealely as woll as amplement. Impoining, therefore, that it would be eafy to infule cheerfulnefs into the datk firit of devotion which then prevailed, he ified a proclamation to allow and encourage, after divine fenvice, all kinds of lauful games and exercifes; and this proclamation his fubjeets regarded as an inftance of the utmoft profanenefs and impiety. In 16z0 a bill was brought in by the commons for the more flrict obfervance of the Sunday, which they affected to call the falbath. One Shepherd oppofed this bill, objected to the appellation of Sablath as puritanical, and feems even to have juftified fports on that day. For this he was expelled the houfe by the fuggefion of Mr Pym; and in the fentence pronounced againf Shepherd, his offence is faid to be great, exorbitant, and uaparalleled.

This Retch, we hope, will be fufficient to give the reader a tolerable idea of the fituation of affairs during the reign of James I. We now proceed to give an account of the few remarkable tranfactions which occurred in this perind.

The firf thing of any confequence was a confiracy formed, the very year of the king's acceftion to the throne, to difplace him, and beftow the kinglom on Arabella Stuart, a near relation of James's, and equal. ly defcended from Henry YII. With regard to this confiracy every thing remains fill myllerious, as it was at the time when the confpiracy itfelf was difcovered. What renders it remarkable is the concern Sir Walter Raleigh was faid to have in it; for which he was tricd, condemned without fufficient proof, fuffered 13 years imprifonment in the tower, and was ifterwards executed out of complaifance to the Spaniards. See kaleteli.

In 1605 was difcovered the famous sumpoudder treafon, the anniverfary of ulich, difcovery hath ever afterwards been celebrated with rejoicings. Its origin was as follows: On the acceffion of James, great expectations had been formed by the catholics, that be would prove favourable to them, both as that was the religion of his mother, and as he himfelf had been fufpected of a bias towards it in bis youth. It is even pretended that he liad entered into a poffive engagement to grant them a tolstation as foon as he flould mount the throne of England. Here, howcver, they found their hopes buitt on a falfe foundation. James on ail occafions expreffed his intention of caccuting flrietly the laws enacted againn them, and of perfercring if all the tigonous meafures of Gieen Elizabeth. A plan of tevenge was firf thougtt of by one Caterby, a gentleman of good pasts, and of an ancient family. He communicated his mind to Percy, a deleendant of the houfe of Northumberlind. 'The la'ter propo'ed to :Iffaffinate the king; but this feemed to Catcfly very far from being adergate to their purpofe. He told Percy, that the king would be fucceeded by his clisdren, who would alfo inherit his maxims of governmerit. He told him, that even though the whole rey 1 family were defroyed, the parlioment, notility, elid gentry, who were all infeged with the lame icerefy, would raife anotler !'rotellant prince to the threse.
"To ferve an" good purpofe (fays he), we muf deAroy, at one blow, the king, the royal family, the lords and commons; and bury all out enemies in one common ruin. Happily they are all affembled on the firf meeting of parliament; and affurd us the opportutunity of glorious and uffful vengeance. Great preparations will not be requifite. A fer of us may run a mine below the ball in which they meet; and choofing the rery moment when the king barangues both the houfes, corfign over to defruation thofe determined foes to all piety and religion. Mean while, we our. felves flanding aloof, fafe and unfufpected, fhall triumph in being the inftruments of divine wrath, and nall behold with pleafure thofe facrilegions walls, in which were paffed the ediets for proferibing our church and butchering her children, toffed into a thoufand fragments; while their impious inhabitants, meditating perhaps fill new perfecutions againft us, pafs from flames abore to flame below, there for ever to endure the torments due to their offences."

This terrible fcheme being approved of, it was re-preparafolved to communicate it to a few more. One Thomastions tor Winter was fent over 10 Flanders in queft of Fawkes, ${ }^{3}$ an officer in the Spanifh fervice, of approved zeal and courage. All the confpirators were bound by the mof folemn oaths, accompanied with the facrament; and to fuch a degree had fuperfition effaced every principle of humanity from their minds, that not one of themever entertained the fmalleft compunction for the cruel maffacre they were going to commit. Some indeed were ftartled at the thoughts of deftroying a number of catholics who muft necefiarily be pretent as treetators, or'attendants on the king, or as having feats in the houfe of peer:- But Tefmond a Jefvit, and Garnet fuperior of that order in Englatid, renoved thofe fruples, be fhowing that the intereft of religion required in this cate the facrifice of the irnocent with the guilty.

This happenced in the fpring and fummer of 1604 ; When the cunfpirators alfo hired a houfe in Percy's name, adjoining to that in which the parliament was to aflemble. Towards the end of that year they began to pierce through the wall of the houfe, in order to get in below that where the parliament was to fit. The wall was three yards thick, ard conlequently occalioncd a great deal of labour. At leigh, however, they approached the other fide, but were then Itartled ! y a noife for which they could not well account. Upon inquiry, they found that it came from a vant below the houfe of lords; that a magazine af ccals had been kept here; and that the coals were then felling off, after which the vault would be !et to the higheft bidder. Upon this the raule was immediately hired by Petcy; 36 barrels of powder lodged in it ; the "hole covered up with faggots and billets; the doors of thee cellar boldiy flung nperi; and every body admitted as if it contained nothing dangerous.
lieing now, as they thought, :fiured of fuccers, the confuira:nts begen to plan the temaining part of their cutertrile. The king, the quetn, and limece Henay, were espected to be prefent at the opening of the porhiaremt. The duke, by reafon of his tender age, would be abfent, and it was refolsed that Percy ficuld ficize or maroles bin. Tlie princefs Elizabeih, likenife a child, was kopt at Lo:d Harington's houfe in Warwichell.ire; and fome others of the corffiraters e"gaged

## B R I

Ysitain. to aifemble their friends on preterice of a hunting match, when they were to feize that princefs, and immediately procham her queen. The day fo long withed for at latt app:uached; the dreadtul fecret, thongh, communicited to more thin 20 perfons, had been religioutly kept for near a year and a halt; and nothng, could be forefeen which could potibly prevent the firecef of their defica. Ten day before the mecting of parliament, however, Lord Monteagle, a catholic, ion to Lord Morley, reccived the thlowing letter, which
had been duvered to his iervant by .n mknown hand. "My lord, out of the lose I bear to fome of your friends, I have a carc for your prelen vation. 'itherefore I would advife you, an you tender you: life, to derife fome cxenfe to dide of your attendance on this parlia. ment. For God and man have determined to punifis the wickednefo of this time. And think not fighigly of this advertifement; hut retire gourfelf into the country, where you may expect the event in fofety. For though there be no appearance of any fir ; yet, I fay, they flall receive a cerrible blow this parliament; and yet they thati not fee who hurts them. This counfel is not to be contumned, becaufe it may do you good, and can do you no harm: for the danger is over as foon as you have burned this letter. And I hope God will give you the grace to make good ufe of it, to whofe holy protection 1 commend you." -Though Monteagle imagined this leiter to be only a ridiculous artifice to frighten him, he immediately carried it to Lord Salifbury, fecretary of nate; who laid it before the king on his arrival in town a few days after.

The king looked upon the letter in a more ferious light. From the manner in which it was wrote be concluded that fome defign was forming to blow up the parliament-honfe with gunpowder, and it was thought advifable to fearch the vaults below. 'The lord chamberlain, to whom this charge belonged, purpofely delayed the fearch till the day before the meeting of parliament. He remarked thofe great piles of wood and faggots which lay in the våult under the upper-houfe; and cafing his eye upon Fawkes, tho food in a corner and piffed himfelf for Pcrcy's fervant, he took notice of that daring and determined courage which was confpicuous in his face, and fo much ditlinguifled this confpirator even amongft the other heroes in villainy that were concerned in the fcheme. Such a quantity of fuel, alfo, for one who lived fo little in the town as Percy, appeared fomewhat extraordinary; and, upon comparing all circumflances, it was refolved to make a further fearch. About midnight, Sir Thomas Knevet, a junice of peace, was fent with proper attendants; and before the door of the vault, finding Fawkes, who had juft finifbed all his preparations, he immediately feized him, and, turning over the faggots, difcovered the powder. The matches and every thing proper for fetting fire to the train were taken in Fawkes's pocket; who feeing now no refuge but in boldnefs and defpair, expreffied the utmoft regret that he had lof the opportunity of firing the powder at once, and of fweetening his own death with that of his cnemies. For two or three days he difplayed the fame obfinate intrepidity; but, on being confined in the tower, and the rack juf fhown to him, his courage at laft failed, and he made a full difcovery of all the confpirators.

Cately, Percy, and the other criminai-, on learmang Lrim i. that 「awkes was arrefled, hurried away to Warwick: nire; where Sir FAfward Digby, innagining the: his ciroin conferle aks had ficsered, was aiready in arnes, to mom la fize the princefs Eizabeth. She bad efcaped intomand. Coventry; and they were obliged to put them?dives in a poffare of defence assinft tic cruntry-prople. who were rafed from all quarteres and armod ty the theniffo. The confpirators, wut all their attendants, never ex. ceedid the rumber of 80 perfors; and being furrounded on every fite, could no longer have any hopo cither of prewiling or elcapiag. Having therefore coufefled themfelvec, and received abfolution, they boldly prepared for deeath, and refulved to fell their lives as dear as pofible. But evon this mifierable confolation was demed them. Some of their porvder took fine, and dilabled them from defending themfelves. The poople then ruftert in apon them. Percy and Catenloy were killed with one ihot. Digby, Rookwoad, Winter, and whers, being taken prifoners, were tried, confeffed their guilt, and died, as well as Garnet, by the hands of the common cxecutioncr. The loods Srourton and Mordaunt, two catholics, were fined, the former of 40001 , the latter of 10,0001 . by the flarchamber; becaufe their abfence from parliament had occafioned a fufpicion of their being made acquainsed with the confpiracy. The earl of Northumberland was fived 30,0001 . and detained Several years a prifoner in the tower; becaufe, not to mention other grounds of fufpicion, he had admitted Percy into the number of gentemen penfioners, without his taking the requilite oaths.

In 1612 , James appears in his moft advantageous James's poiut of view, namely, as leginator of Ireland, and wife conthe perfon who undertook to civilize the barbarous in. duct in the habitants of that kingdom, and to render their fubjec. le eqifatues tion durable and ufeful to the crown of England. In of Irelasd. this work, James proceeded by a fleady, regular, and well-concerted plan. He began "ith abolifing the ancient Irill cuftoms which fupplicd the place of laws, and which were exceedingly barbarous and abfurd. By the Brehon barr, every crime however enormous was punifhed, not with death, but by a fine. Murder iffelf was compenfated in this way. Every one had a value affixed to ham, called his eric; and whoever was able to pav this, might kill him whon he pleafed. As for fuch fight offences as oppreftion, extortion, or other things of that nature, no penalty was aflixed to them, nor could any redrefs for them ever be obtained. By the cullon of gavclkinde, upon the death of any perforis his land was divided among all the males of the fept or family, both baftard and legitimate : and after partition made, if any of the fept died, his portion was not mared out among his fons; but the chieftain at his difcretion made a new partition of all the lands belonging to that fept, and gave every one his fbare : as no man, by reafon of this cuftom, enjoyed the fixed property of any land; to build, cultivate, or improve, mult have been fo much loft labour. Their chieftains were eftabilined by election, or, more properly fpeaking, by force and violence. Their authority was abfolute; and, notwithltanding certain lands were affigned to the office, its chief profit refulted from exactions, duce, affefments, for which there was no fixed law, and which were levied at pleafurc.

## $B R \quad[440] \quad B M I T$

$\Lambda$ te: abolifhing thefe cuftoms, and fubftituting Englih law in their place; James having taken all the natives under his protection, and declared them free citizens, proceeded to govern them by a regular adminitration, military as well as civil. A fufficient ar ir was maintained, its dicipline infpected, and its pay tranfenited from Eng!and, in order to prevent the foldiery from preying upon $t$ e country, as had been ufual in former reigns. When O'Doghartie raifed an infurtection, a reinforcement was fent over, and the rebellion immediately extinguifted. All minds being firlt quieted by an univerfal indemnity, circuits were eltablithed, jultice adminilleted, and crimes of every kind fererely punifhed. As the lrih had been univerfally engaged in a rebellion againf Eliz tbeth, a refignation of a!l the rights formerly granted them to feparate jurifdictions was rigoroufty exacted; a refignation to private eflates was even required; and when they were reltored, the proprietors received them under fuch conditions as might prevent all future tyranny and oppreflion over the common people. The whole province of Ulifer having fallen to the crown by the attainder of rebels, a company was eftablithed in London for planting new colonies in that fertile country. The property was divided into moderate fhares, the largeft not exceeding 2000 àcres; Tenants were brought over from England and Scotland: The Irith were removed from the hills and faftneffes, and fettled in the open country: Hufbandry and the asts were taught them, and by thefe means Ulfter, from being the moft wild and diforderly province in Ireland, foon

25
Death of Henry prince of Wiales. became the beft cultivated and moft civilized.

This year was alfo remarkable for the death of Henry prince of Wales, who died fuddenly on the Gth of November, not without ftrong fufpicions of poifon, for which the king himfelf was blamed. On opening his body, however, no fymptams of poifon appeared; but his death diffufed an univerfal grief throughout the nation, he being reckoned a prince of extraordinary accomplifhments.

The marriage of the princefs Elizabeth with Frede-

Marriage of the prin. cefs Elizabeth with the elector palatine. ric clętor palatine, which was celebrated February 14th 16 I , ferved to diffipate the grief which had arifen on account of Prince Henry's death. But this marriage, in the event, proved nuhappy to the king as well as his fon-in-law. The eletor, trufting to fo great an alliance, engaged in enterprifes beyond his firength; ard James, not being able, and indeed perhaps not willing, to affilt him in his diftrefs, loft entirely what remaincd of the affections of his people.
The elector Thefc bad confequences did not begin to appear till chofren king the year 1619 . At that tine the flates of Bohemia of Bohemia. having takern arms againf the emperor Mathias, in defence of the Proteflant religion, and continued their revolt agzint his flucceffor Ferdinand II. and being alarmed at his mighty preparations againft them, made an offer of their crown to the clefor palatine. To this they were induced by the greatnefs of his connections, as being fon-in-law to the king of England, and nephew to Prince Mauricc; whofe authority in the United Provinces was almoft abfolute; and the young palatine, ftimulated by ambition, without confulting either James or Maurice, whofe oppofition he Sorefaw, immediately accepted the offer, and march-
ed all his fooces into Bohemia, in fupport of his new Buitaift fubjects.

The affairs of the new king were not long of co- Defeated ming to an unfortunate crifis. It was known almoft and driven at one time in England, that Frederic being defeated out of his in the great and decifive battle of Prague, had fed dominions. with his family into Holland; and that Spinola the Spanifh general had inraded the palatinate, where meeting with little refiftance, except from one body of $24=0$ Engliftumen comranded by the brave Sir Horace Vere, he had in a little time reduced almoft the whole principality. In 1621, the bat of the empire was publithed againtt the onfortunate ele Eor, and the execution of it was committed to the duke of Bavaria. The upper palatinate was in a litte time conquered by that prince; and meafures were taken in the empire for beftowing on him the electoral dignity of which the palatine was defporled. Frederic was now obliged to live with his numerous family in poverty and diftrefs, either in Holland, or at Sedan, with his uncle the duke of Bouillon; and the new conquefts of the Catholics throughout all Germany were attended with pcrfecutions againlt the Proteflants.

At this news the religious zeal of the Englifh was Englifh ino inflamed to the higheft degree; and they would have fiff for a plunged headlong into a war with the houfe of Auf. war with tria, without relleeting in the leaft on the confequences that might enfue. The fufferings of their Proteftant brethren in Germany were the only objects of confideration, and the neutrality and inative fipitithown by James was loudly exclaimed againft. But though the houlc of Auftria. Jomes might have defended his pacific meafures by very plaufible arguments, it is certain that fome of his motives were the moft ridiculous that can be imagined. Such was the opinion that he himfelf entertained of bis own wifdom, that he imagined himfelf capable of difarming hoftile nations by dint of argument ; and that the whole power of Aufria, though not awed by the power of England, would fubmit to his arbitration, merely out of refpect to his virtue and moderation.So much alfo he was wedded to his opinion concerning the prerogative of kings, that he imagined, wherever there was a contention between any fovereign and his fubjects, the latter behoved always to be in the wrong; and for this reafon, from the very firlt he had denied his fon-in-law the title of king of Bobemin, and forbade him to be prayed for in the churches under the appellation. Befides thefe reafons, James was on another He is defin account extremely averfe to come to a rupture with rous of a Spain. He had entertained an opinion peculiar to him- Spanifn felf, which was, that any alliance below that of a king mis fon. was unworthy a prince of Wales; and he never would allow any princeifs but a daughter of France or Spain to be mentioned as a match for his fon. This piece of pride, which really implied meannefs as if he could have received honour from any alliance, gave Spain an opportunity of managing this monarch in the mofl important concerns. With a view to engage him to a neutrality with regard to the fuccefion of Cleves, the eldefl daughter of the king of Spain had been indirectly offered duing the life of Prince Henry. The bait, howewer, did not then take; James, in confequence of his alliance with the Dutch, marched 4050 mein to the affiftance of the Proteflants, by which means

thitain.

## 441 B R

with their advice, unlefs when he pleafed to afk it , \&ic. The commons in return framed the proteftation alrea. dy mentioned, which the king tore out of their jour. nals, and foon after diffolved the parliament. The leading members of the houfe, Sir Edward Coke and Sir Robert Phillips, were committed to the tower; three others, Selden, I'ym, and Mallory, to other prifons; and, as a lighter punifhment, fome others were fent into Ireland to execute the king's bufinefs. Sir John Saville, however, a powerful man in the houfe of commons, and a zealous oppofer of the court, was made comptroller of the houfehold, a privy counfellor, and foon after a baron. This event is memo. rable; as being the firf inflance in the Englini hiflory, of any king's advancing a man on account of par. liamentary intereff, and of oppofition to his meafures.

This breach between the king and parliament foon Origia of made politics become a general fubject of difcourfe, the facions and every man began to indulge himfelf in reafonings of whig and and inquiries concerning matters of thate; and the fac- tory. tions which commenced in parliament were propagated throughout the nation. In vain did James, by reiterated proclamations, forbid difcourfes of this kind. Such proclamations, if they had any effect, ferved rather to inflame the curiofity of the public. In every company or fociety the late tranfactions became the fubject of argument and debate; fome taking the fide of monarchy, others of liberty; and this was the origin of the two parties fince known by the name of Whigs and Tories.

For five years, James continued the dupe of the Tames court of Spain. Though firmly refolved to contract the favour no alliance with a heretic, the king of Spain bad con- of the court tinued to procraftinate and invent one excufe after an- ${ }^{\text {of Spain. }}$ other, while he pretended to be very willing to con. clude the match. At laft the king of England, finding out what was really the matter, refolved to remove that obftacle if poffible. He iflued public orders for difcharging all Popifh recufants who were imprifoned; and it was daily apprehended that he would forbid, for the future, the execution of the penal laws againft them. For this conduet he was obliged to apologize, and even pretend that it was done in order to procure from foreign princes a toleration for the Proteftants; the feverity of the Englifh laws againf Catholics, he faid, having been urged as a reafon againft thowing any favour to Proteftants refiding in catholic kingdoms.

Thefe conceffions in fasour of the Catholics, however ill relifhed by his fubjects, at lait obtained James's end with regard to the marriage. The earl of Briftol, ambafiador at the court of Spain, a minifter of vigilance and penetration, and who had formerly oppofed the alliance with Catholics, being now fully convinced of the Spanifh fincerity, was ready to congratulate the king on the completion of his projects. The Spanifh princels is reprefented as very accomplifhed; the was to bring with her a fortune of 600,0001 .; and, what was more, not only Briftol confidered this match as an infallible prognoftic of the palatine's reftoration, but the Spaniards themfelves did the fame. All things being therefore agreed upon between the parties, nothing Marriase was wanting but the difpenfation from Rome, which with the in might be confidered as a matter of mere formality. greed upotar The king exulted in his pacific counfels, and boafted of his fuperior fagaciey and penctration; when all his

A-utering profpects were blated by the temerity of the dukic of Buckingham, who governed bath court and nation with almof unlimited fway.

This nobleman had fuddenly been raifed to the higheft honours. Though poffifled of fome accomplifh. ments of a courtier, be was utterly devoid of every ta. lent of a minitter; but a: once partook of the infolence which attends a fortune nevily acquired, and the impetuofity which belongs to perfons born in high ftations, and unaçuainted with oppofition. Among thofe who had experienced the arrogance of this overgrown favourite, the priace of Wales himfelf had not been entirely fared; and a great coldnefs, if not eninity, had for that reafor taken place betwetn them. Buckingham being defrous of putting an erid to this coldnefs, and at the fame time envious of the great reputation of the earl of Briftol, perfuaded the prince to undertake a journey to Madrid; which, he faid, would be an unexpected gallantry; would cqual all the fictions of Spanifh romance; and, fuiting the amorous and enterprifing character of that nation, muft immediately introduce him to the princels under the agreeable character of a devoted lover and daring adventurer. Little perfuafion was necealary to prevail with Prince Charles to undertake this journey; and the impetuofity of Buckingham having extorted a confent from James, our two adventurers fet out, Pince Charles as the knight-errant, and Buckingham as the〔qui.e. They travelled through France in difguife, afluming the names of Jack and Tom Smith. They went to a ball at laris, where the prince firft faw the princefs Henvietta whom he afterwards married, who was then in the bloom of youth and beauty, and with Theil kind love. On their arrival at Madrid, every body was sception infurprifed by a flep fo little ufual among great princes. that king- The Spauifh monarch made Charles a vift, expreffed dom.
only prompted them on one occafion to defire more conceftions in the religious articles; but, on the oppo. fition o! Brifol, they immediately defifted. The pope, however, hearing of Charles's arrival in Madrid, tacked fome new claufes to the difpenfation; and it became neceffary to tranfmit the articles to London, that the king might ratify them. 'This treaty, which was Atticles of made public, confifted of feveral articles, chietly re the margarding the exercife of the cartholic religion by the in-riage fanta; and, among thele, nothing could reafonably be traty, found fault with, except one article, in which the king promiled that the children thould be educated by the princefs till they were ten years of age; ulich undoubtedly was infifted upon with a view of feafoning their minds with catholic principles. But, befides this public treaty, there were fome plivate articles fworn to by James, which could not have been made public without grievous murmurs. A fufpenfion of the penal laws againf the Englifh Catholics was promifed, as likewife a repeal of them in parliament, and a toleration for the exercife of that religion in prisate houfes. Meanwhile Gregory XV. who granted the difpenfation, died; and Urban VIII. was chofen in his place. Upon this event, the nuncio refufed to deliver the difpenfation till it thould be renewed by Urban. This the crafty pontiff delayed, in hopes that, during the prince's refidence in Spain, lome expedient might be fallen upon to effect his converfion. The The prince king of England, as well as the prince, became impa-returns. tient: but, on the firf hint, Charles obtained leave to return ; and Philip graced his departure will all the circumflances of civility and refpect which had attended his arrival. He even erected a pillar on the fpot where they took leave of each other, as a monument of mutual friendhip: and the prince, having fwom to the obfervance of all the articles, embarked on board the Englifh flect at St Andero.

The modeft, referved, and decent behaviour of Charles, together with his unparalleled confidence in them, and the romantic gallantry he had practifed with regard to their princefs, had endeared him to the whole court of Madrid. But in the fame proportion that Charles was beloved and efteemed, was Buckingham defpifed and hated. His fallies of paffion; his indecent freedoms with the prince; his diffolute pleafures; his arrogant impetuous temper, which he neither could nor would difguife; were to the Spaniards the objects of peculiar averfion. They lamented the infanta's fate, who muft be approached by a man whofe temerity feemed to refpect no laws divine or human. Buckingham, on the other hand, fenfible how odious he was ham prebecome to the Spaniards, and dreading the influence vailonhims which that nation would naturally acquire after the arrival of the infanta, refolved to employ all his credit in order to prevent the marriage. By what arguments he could prevail on the prince to offer fuch an infult to the Spanifl nation, from whom he had received fuch generous treatment ; by what colours he could difguife the ingratitude and imprudence of fuch a meafure ; thefe are totally unknown to us: certain it is, however, that when the prince left Madrid, he was firmly determined, in oppofition to his moft folemn promifes, to break off the treaty with Sasin. On their arrival at London, therefore, the prince and Buckingham affymed the entire direstion of the negociatiou; and it

Britain. was their bufinefs to feek for pretences by which they $\underbrace{}_{\text {could give a colour to their intended breach of treaty. }}$ At laft, after many fruitlefs artifices were employed to delay or prevent the efpoufals, Briftol received pofitive orders not to deliver the proxy which had been left in

44
Philip obiges himtelf to procure the re ftitution of the palatiHate. his hands, or to finifh the marriage, till fecurity was given for the full reftitution of the palatinate. Philip underitood this language : but being determined to throw the whole blame of the rupture on the Englif, he delivered into Brifol's hand a written promife, by which he bound himfe]f to procure the reftoration of the palatinate either by perfuafion or by every other poffible means; and when he found that this conceffion gave no fatisfaction, he ordered the infanta to lay afide the title of princefs of Wales, which the bore after the arrival of the dilpenfation from Rome, and to drop the ftudy of the Englifh language; and as he knew that fuch rafh counfels as now governed the court of England would not ftop at the breach of the marriage-treaty, be immediately ordered preparations for war to be made throughout all his dominions.
Matchwith A match for Prince Charles was foon after negoHenietta, ciated with Henrietta, daughter of the great Henry princefs of France. IV. and this met with much better fuccefs than the former. However, the king had not the fame allure-- ments in profecuting this match as the former, the portion promifed him being much fmaller; but, willing that his fon thould not be altogether difappointed of a bride, as the king of France demanded only the fame terms that had been offered to the court of Spain, James thought proper to comply. In an article of this treaty of marriage, it was flipulated, that the education of the children till the age of ig fhould belong to the mother ; and this probably gave that turn towards popery which has fince proved the ruin of the unfortunate family of Stuart.

Wear declared againft Spain. relieving his fein depiu by force of orm, hope of war againft Spain and the emperor, for the recovery of the palatinate; 6000 men were fent over into Holland to affift Prince Maurice in his fehernes againft thofe powers; the people nere everywhere elated at the courage of their king, and were fatisfied with any war which was to exterminate the Papifts. This army was followed by another confifting of 12.000 men , commanded by Count Mansfeldt; and the court of France promifed its afilance. But the Englifh were difappointed in all their views: the troops being embatked at Dover, upon failing to Calais, found no orders for their admiffion. After waiting for fome time, they were obliged to fail towards Zealand, where no proper meafures were yet confulted for their difembarkation. Meanwhile, a peffilential difurder crept ir among them, fo long cooped up in narrow veffels: half the army died while on board; and the other half, weakened by ficknefs, appeared too fmall a body to march into the palatinate; and thus ended this ill-concerted and fruitlefs expedition. Whether this misfortune had any effect on the king's conflitution or not, is uncertain; but he was foon after feized with a tertian ague, which put an end to his life on the 2 g th of March 1625, after having lived 59 years, and reigned over England 22, and over Scotland almoft as long as he lived.

James was furceeded by his fon Charles I, who a-
feconded the throne amidat the highent praifes and ca- Mrizan. reffes of his fubjects, for what way perhaps the moll blame-worthy action of his life, namely, his breaking off the match with the Spanifl princels, and procuring the rupture with the houfe of Auftrias Peing young ifis affeeand unexperienced, he regarded thefe praifes as fin-tionfor bis cere; and therefore was fo impatient to affemble the prople. great council of the nation, th it he would gladly, for the fake of defpatch, have called together the fame parliament which fat under his father, and which lay at that time under prorogation. But being told that fuch a meafurc would appear unufual, he iffued wits for fummoning a new parliament on the gth of Iay; and it was not without regtet that the arrival of the princef, Henrietta, whom he had efpoufed by proxy, obliged him to delay, by repeated prorogations, their meeting till the 18 th of June, when they affembled at Weftminfter for the defpatch of bufinefs.

Charles inherited from his father great diftrefs for his 5 r . money, very ligh notions of the royal prerogative, and racter. a violent attachment to Epifcopacy. As to his character, he feems to have been obflinate, though not refo. lute; and therefore, though it was ficarce ever poffible to make him give up his point, he never could carry on his defigns with that fpirit which was necelfary for their fuccefs. In other refpects, he appears to have poffefled every virtue requifite to conflitute the charater of a good man. At prefent believing his fub. jects to be in perfect friendthip with him, as he was with them, he refolved that their bounty to him fhould be entirely unafked, and the genuine effect of mutual confidence and regard. Aceordingly, his difcourfe to His file the parliament was full of fimplicity and cordiality, ipeech to He lightly mentioned the occafion he had for fupply. h's parliaHe employed no intrigue to influence the fuffrages of the members. He would not even allow the officers of the crown, who had feats in the houfe, to mention any particular fum which he had occafion for; but trufted entirely to the wifdom and affection of his parliament, who perfectly well knew his circumfances.
It is almof impofible to read without indignation Therr ican an account of the return made by the commons to this dalous progenerous bebaviour of their fovereign. They knewscedings. that all the money granted by the laf parliament had been expended on military and naval preparations; and that great anticipations were likewife made on the revenues of the crown. They were not ignorant that Ctarles was loaded with a debt contracted by his father, who had borrowed money both from foreign princes, and from his own fubjects. They had learned by experience, that the public revenues could with difficulty maintain the dignity of the crown, even under the ordinary charges of government. They were fenfible that the prefent war was, very lately, the refult of their own importunate applications and entreaties, and that they had folemnly engaged to fupport their fovercign in the management of it. They were acquainted with the difficulty of military enterprifes directed againft the whole houle of Auftria; againft the king of Spain, poffeffed of the greateft riches and mont extenfive dominions of any pritice in Eurcpe ; againft the emperor Ferdinand, hitherto the molt fortunate monarch of the age, who had fubdued and nfonifhed Germany by the rapidity of his victories. Deep impreflions they faw mun be made by the Britifn 3 K 2

Eritain. firord, and a vigorous offenfive war be waged againf thefe mighty potentates, ere they would refign the palatiate which they had now fully fubdued, and which they held in fecure poffefion by its being furrounded with all their other territories. To anfwer, therefore, all thele great and important ends; to fatisfy their soung king in the firlt requef he made them; to prove their fenfe of the many royal virtues, particularly economr, with which Charles was endued; the commons thought proper to confer on the king a fupply of 112,0021 . To learch for the reatons of fuch an extravayant piece of conduct would be needlefs; it is impolfible they could be good.

It is not to be fuppofed that Charles, or any perfon of common fenfe, could be infenfible of fuch treatment as this; he behaved, however, with great moderation. He reprefented in the moft explicit manner the necef fity there ras for a large fupply: he even condefcended to ufe entreatics: he faid that this requefl was the firft he had ever made them; that he was young, and in the commencement of his reign; and if he now met with kind and dutiful ufage, it would endear him to the ufe of parliaments, and would for ever preferve an entire harmony between him and his people.-To thefe reafons and entreaties, the commons remained inexorable; they even refufed the addition of two fifteenths to the former fupply. Inltead of this, they renewed their ridiculous complaints againt the growth of Popery, which was now their only grievance. They fowed their intolerant fpirit by demanding a flrict execution of the penal laws againit the Catholics; and remonfrated againft fome lite pardons granted to priefts. They attacked Montaguc, one of the king's chaplains, on account of a moderate book which he had lately compoied, and which, to their great dif-

Fing's re=
lution to
fivour the Catholics. guft, faved virtuous Citholics as well as other Chriflians from etcrnal torments. Charles gave them a gracious and complaifant anfwer; but firmly refolved to abate fomewhat of the rigorous laws againft that u.sfortumate party, which his engagements with France abfolutely required. No meafure, however, throughout the whole reign of this prince, was more difguitful to his bigotted fubjects, or by its confequences more fatal to himfelf than this refolution. The l'uritans bad continued to gain ground during the whole reign of James, and now formed the majority of the houfe of commons; in confequence of which, petitions were prefented to the king for replacing fuch able clergymen as had been filenced for want of conformity to the cercmonies. They alfo enacted laws for the frict obfervance of Sunday, which they affected to call the fallath, and which they fanctified with the molf melancholy indolence; and it is worthy of notice, that the different appellations of Sunday and Sabbatb were at that time known fymbols of the different parties.Parianment In corifequence of this behaviour in Charles's firf pardimolved. liament, it was diffolved on the 12 th of Auguft 1625 , es and a new one called on February 6. 1626.

## Ils fiheme.

 res rife mu. borrow from lis fubjects on priry-\{eals; the advanwey.and its bad fuccefs increa'ed the clamours zgainft the court.

Charles's fecond parliament immediately adopted the fame views with the former; however, they voted him ingsed of his 57
Proced a fupply of three fublidies (168,0001.), and threc-fff-fecond parteenths; but the paffing this vote into a law was re-liament. ferved until the end of the feffion, that in the mean time they might have an opportunity of forcing the king to make what conceffions they pleafed. 'Ihis harfi and undutiful conduct was greatly refented by Charles; but he found himlelf obliged to fubmit, and wait the event with patience. In the mean time they attacked the duke of Buckingham, who was become generally obnoxious; and he was alfo impeached by the earl of Brifol, on account of his conduct with regard to the Spanill negociation. The easl's impeachment, however, was entirely overlooked, and the commons were able to prove nothing otherwife of any confequence againft him. The king imagining that Buckingbam's greatef crime was the having been fo much in favour with his fovereign, commanded the t.ule exprefsly not to meddle with his minifter and fervant, but to finifh in a few days the bill they had begun for the fubfidies; otherwile they mult expect to fit no longer.

Suggeftions of this kind had a bad cffe8; and when The $5^{8}$ the king proceeded further to throw into prifon two mons difmembers of the houfe who had managed the inpeach. guted. ment againit. Buckingham, the commons declared that they would proceed no further in bulinefs till they bad fatisfaction in their privileges. Chatles alleged as the reafon of this meafure, certain feditious expreflions, which, he faid, had, in their accufation of the duke, dropped from thele members. Upon inquiry it appeared that no fuch expreffions had been ufed, and the members were accordingly releafed. Soon after, the houle of lords, moved by the example of the commons, claimed liberty for the earl of Arundel, who had been lately confined in the tower; and after many fruitlefs evafions the king was obliged, though fomewhat ungracefully, to comply.

The next attack made by the commons would have proved decifive, had it fucceeded, and would have reduced the king to an abfolute dependence on his parliament. Thicy were preparing a remonftrance againft the levying of tonnage and poundage without confent of parliament. This article, together with the new impofitions laid on merchandife by Jancs, conftituted near one-half of the crown-revenues ; and after having gained this point, they were to petition the king, which then would have been the fame thing with commanding him, to remove Buckingham from his prefence and councils. The king, however, being a-pat 59 larmed at the yoke they were preparing for him, dif-dibulved. folved his parliament a fecond time, June 15.1626.

Charles having thus made fuch a breach with his parliament as there was no hopes of repairing, was obliged to have recourfe to the exercife of every branch of his prerogative in order to fupply himfelf with moncy. A commiffion was openly granted to compound with the Catholics, and agree for difpenting with the penal Jaws enacted againt them; and by this expedient the king, indeed, filled his coffers, but gave univerfal difguft to his fubjects. From the nobility he defired alfiftance: from the city he required a loan of 100,000 .

Eritain. The former contributed nowly: but the latter, covering themfelves under many pretences and excufes, gave at laft a flat denial. In order to equip a fleet, a difribution by order of the council was made to all the maritime towns; and each of them was required, with the affillance of the adjacent counties, to arm as many velfels as were appointed them. The city of London was rated at 30 thips: and this is the firlt appearance, in Charles's reign, of thip-money; a taxation which had once been impofed by Elizabeth, but which, when carried fome fteps farther by Charles, produced the moft violent difcontents.- Thefe methods of fupply were carried on with fome moderation, till news arrived of the king of Denmark being totally defeated by Count 'Tilly the imperial general; but money then becoming more than ever necellary, it was fuggefted ent method of fupply was by a general loan from the fubject, according as every man was affeffed in the solls of the laft fubfidy. That precife fum was tequired which each would have paid, had the vote of four fubfidies been paffed into a law: care, however, was taken, that the fums thus exacted were not to be called fubfidies but loans; but it was impoffible to avoid obferving, that thus the liberty of the fubject was entirely deffroyed, and all parliaments rendered at once fupes fluous.

Many people throughout England refufed the fe loans, and fome were even active in encouraging their neighbours to infift upon their common rights and privileges. By warrant of the council, thefe were thrown into prifon. Moft of them patiently fubmitted to confinement, or applied by petition to the king, who commonly releafed them. Five gentlemen, however, Sir Thomas Darnel, Sir John Corbet, Sir Walter Earl, Sir John Heweningliam, and Sir Edmond Hambden, demanded releafe, not as a favour from the court, but as their due by the laws of their country. No particular caufe was alligned for their commitment. The fpecial command of the king and council alone was pleaded. And it was alleged, that by law this was not fufficient reafon for refufing bail or releafement to the prifonerc. The queftion was brought to a folemn trial before the court of king's bench; and the whole kingdont was attentive to the iflue of the caufe. By the debates on this fubject it appeared, that perfonal liberty had been fecured by no lefs than fix different ftatutes, and by an article in magna charta itfelf. It appeared, that, in times of turbulence and fedition, the princes infringed upon thefe laws; and of tinis alfo many examples were produced. The difficulty then lay to determine when fuch violent meafures were neceflary; but of that the court pretended to be the fupreme judge. As it was legal, therefore, that thefe five gentlemen fhould plead the fatute, by which they might demand bail, fo it was expedient in the court to remand them to prifon, without determining on the neceflity of taking bail for the prefent. This was a cruel evation of juffice; and, in fact, fatisfied neither party. The court infifted that no bail could be taken: the country exclaimed that 63 the prifoners onght to be fet free.
Var decla- While the king was thus embroiled with his parliaed againt ment at home, and with powerful nations abroud, he rance. rafly engaged in a war with France, a kingdom with which he had but lately formed the moft natural alli-
ance. All hiftorians agree that this war proceeded from the rivalhhip of the duke of Buckingham and Cardinal Richelieu; both of whom were in love with the queen of France; and an inveterate enmity being thus produced between thefe favourites, they refolved to involve their refpective nations in the difpute. However this be, war was declared againt France; and Charles was taught to hope, that hoftilities with that hingdom would be the fureft means of procuring tranquillity at honme. - The fuccefs of this war was proportionable to Ead fuccerfs the wifdom with which it was commenced. Bucking-of Buckingham was appointed commander; and be being entirely ham. unacquainted both with fea and land fervice, managed matters fo ill, that he lof two-thirds of his army, and returned in total difcredit both as an admiral and general.

The difoontents in England now role to fuch a beight, that there was reafon to apprehend an infurrection or rebellion. Charles was alfo reduced to the greatef dillrefs for want of money. That which he had levied by virtue of his prerogative came in very flowly, and it was dangerous to renew the experiment on account of the ill humour of the nation in general. A third parliament therefore was called, March ${ }^{2} 7$ th a third 1628 ; whom Charles plainly told at the beginning of parliament the felfion, that "if they flould not do their duties, in called. contributing to the neceflities of the ftate, he muff, in difcharge of bis confcience, ufe thofe other means which God had put into his hands, in order to fave that which the follies of fome particular men might otherwife put in danger." This parliament behaved in a much more reafonable manner than either of the two former ones. The nation was now really aggrieved by the late arbitrary proceedings. They began with voting againft arbitrary imprifonments and forced loans; after which, five fubfidies $(280,0001$.) were voted to the king. With this fum, though much inferior to his waits, Charles declared himelf well fatisfied; and even tears of affection ftarted in his eye when informed of this conceffion: the commons, however, refolved not to pafs this rote into a law, before they had obtained from the king a fufficient fecurity that their liberties floculd be no longer violated as they had formerly been. They refolved 66 er violated as they had formerly been. They refolved fetition of
to frame a law, which they were to call a petifion of right fraright, in which they fhould collect all the arbitrary ex-med. ertions of the prerogative which Charles bad expofed to their view, and thele they were to aflault at once by their petition. The grievances now complained of were, forced loans, benevolences, taxes without confent of parliament, arbitrary imprifonments, billeting foldiers, and martial law: They pretended not, as they aflirmed, to any unufual power or privileges; nor did they intend to infringe the royal prerogative in any refpect : they aimed only at fecuring thofe rights and privileges derived from their ancellors.

The king, on his patt, now began plainly to fhow, Dupplicity that he aimed at nothing lefs than abfolute power, of the king This reafunable petition he did his utmoft to evade, by repeated meflages to the houfe, in which he always of fered his royal word that there fhould he no more infringements on the liberty of the fubject. Thefe meffages, however, had no effect on the comamons : they knew how infufficient fuch promi'es were, without further fecurity; and therefore the petition at lalt paffed both lource, and nothing was wanting but the royal
$\underbrace{\text { Pritin. }}$ afient to give it the force of a law. The king accordingly came to the houfe of peers, fent for the comnons, and being feated in the chair of ftate, the petirion was read to him. In anfwer to it, he faid, "The king willeth, that right be done according to the laws and cufloms of the realm, and that the flatutes be fut into execution; that his fubjects may have no reafon to complain of any wrong or oppreffion contrary to their juft fights and liberties, to the prefervation whereof he holds himfelf in confcience as much obliged as of his own prerogative."

This equivocal anfwer was highly refented. The commons reterned in very ill humour. Their indignation would undoubtedly have fallen on the unfortunate Catholics, hat not their petition againf them already received a fatisfactory anfiwer. To give vent to their prefent wrath, therefore, they fell on Dr Manwaring, who had preached a fermon, and, at the fpecial command of the king, printed it ; which was now found to contain doetrines fubverfive of all civil liberty. It taught, that though property was commonly lorged in the fubject, yet, whenever any exigency required fup. ply, all property was cransferred to the fovereign ; that the confent of parliament was not neceflary for the impofition of taxes; and that the divine laws required compliance with every demand, however irregular, which the prince ftould make upon his fubjects. For thefe doctrines Manwaring was fentenced to be imprifoned during the pleafure of the houfe; to be fined 10001. to the kiug; make fubmiffion and acknowledgment for his offence ; be fuffended three years; be incapable of holding any ecclefiaftical dignity or fecular office; and that his book be called in and burnt. No fooner, however, was the feffion ended, than Manwaring received a pardon, and was promoted to a living

68 of confiderable value. Some years afterwards he was promoted to the fee of St Afaph. At laft, the king, feeing it was impofible to carry his point, yielded to the importunities of parliament. He came to the houfe of peers, and pronnuncing the ufual form of words, "Let it be law as is defired," gave full fanction and authority to the petition. The houfe refounded with acclamations, and the bill for live fubfidies inmediately paffed.

The commons, however, were not yet fatisfied; they began again to attack Buckingham, againft whom they were implacable: they alfo afierted, that the levring of tonnage and poundage without confent of parliament was a palpable violation of the ancient liberties of the people, and an neen infringement of the petition of right
69 fo lately granted. The king, in ader to prevent a rcPatlament monfrance on that fubject, fuddenly prorogued the parliament, on June 26.1698.

The commons fvon got rid of therir enemy Buckingham; who was murdered on the 23d of Auguft this fame year, by one Felton, who had formerly ferved un- der him as a lieutenant. The king did not appear much concerned at his death, but retained an affection for his family throughout his whole lifetime. He defired alfo that Felton might be tortured, in order to extore from him a difcovery of his accomplices; but the judges declared, that though that pracice had been formerly very common, it was altogether illegal.
ithnesabout In 1629, the ufual contentions between the king lomagearaland his parliamen: continued. The great article on prondag:. which finally created in him a difyuft at all parliaments, was their claims with regard to tonnage and poundage. The difpute was, whether this tax could be icvied without confent of parliament or not. Charles, fupported by multitudes of precedents, maintaitied that it might; and the parliament, in conferuence of their petition of right, afferted that it could not. The commons were refulved to fupport their rights: and the difputes concerning tonnage and poundage went hand in hand with fome theological controverfies; particularly concerning Arminianifm, which the Puritans, who now formed the majority of the $n$ tion, oppofed with the greateft violence, and which confequently crept in among thofe who profefled Epifcopacy, where it hath ftill maintained its ground more than in any other party.

The commons began with fummoning before them the officers of the cultom-houfe, to give an account by what authority they had leized the goods of thofe merchants who had refufed to pay the duties of tonnage and poundage. The barons of exchequer were quefioned with regard to their decrees on that head. The theriff of London was committed to the Tower for his activity in fupporting the officers of the cultom-houle. The goods of Rolles, a merchant, and member of the houfe, being feized for his refufal to pay the duties, comolizints rere made of this violence, as if it were a breacis of privilege. Cliarles, on the other hand, fupported tis uffiecers in all thefe meafures, and the quar. rel between him and the commons became every day higher. Sir John Elliot framed a remonftrance againft tonnage and pouridage, which he offered to the clerk to read; but it was refufed, and he then read it himfelf, The queftion being called for, Sir John Finch the fpeaker faid, that he liad a command from the king to adjourn, and to put nn queltion; upon which be rofe and left the chair. The whole houfe was in an uproar; the ipeaker was puthed back into the chair, and forcibly hed in it, sill a fhort remunftrance was formed, which was inflantaneoully paffed by almoft univerfaI acclamation. Papifts and Arminians reere now declared capital enemie, to the commonwealth. Thofe who levicd tunage and poundage were bratided with the fame epithet. And even the merchants, who fhould voJuntarily pay thele duties, were Aeclared betrayers of Englift libery. and public enemies. The doors being locked, the gentieman-ufter of the houfe of lords, who was fent by the king, could qet no admittance till this remondrance was finifted. By the king's order he took Parliamen the mace from the table, which put an end to their pro-diffolved. ceedings, and on the soth of March the parliament was diffolved. Some of the members were imprifoned and fined; hot this feverity ferved only to increafe the general difcontent, and puint out the fufferers as proper leaders for the popular party.

Charles being now difgufted with parliaments, refol-Peace with red to call no more; but finding himfelf deftitute France ane of refources, was obliged to make peace with the two Spain. powers with which he was at war, A treaty was figned with France on the $14^{\text {th }}$ of April, and another with Spain on the $5^{\text {h }}$ of Noveriber 1630 , by which Charles bound himfelf to olferve a ncutrality with zegard to the affair: on the continent. His conduct to his fubjects cannot now appear entirely blamelef, nor the gencral
difconter:

Friain. difonterit akogether without found.uticn. As if, however, he had refulued to ruin himfelf, and to lofe the fmall degrees of affection which remained among his fubjects, Charles now began to let about making innovations in religion. Archbihop Laud had obtained a prodigious afeendancy over the king; and, by his fuperlitious attachment to foalill ceremonies, led him into a conduet that proved fatal to himfelf and to the kingdom in general. The bumour of the nation ran at that time in a channel petfocly the reverfe of fuperdition. The ancient ceremonice which had been fanctified by the permiftion and practice of the fult reformers, could fcarce be retained in divine fersice. Laud chofe this time, of all others the muft improper, for renewing the ceremonies of the fourth and fisth century, when the Corillian church, as is well known, was funk into the fuperftitions which were aftersards continucd and augmented by the policy of the church of Rome. So openly were thefe tenets efpoufed, that not only the difontented Puritans believed the church of England to be relapling fat into the Romin fuperflition, but the court of Rome itfelf entertaned hopes of regaining its authosity in this ifland. To forward Laud's good intentions, an offer was twice made him, in private, of a cardinal's hat ; which he declined accepting. His anfwer was (as he fays hirafelf), that "fomething dwelt within him which would not fuffer his compliance till Rome was other than it is." It muft be confeffed, however, that though $L$ aud deferved not the appellation of a Papif, the genius of his religion was, though in a lefs degree, the fame with that of the Romith. The fame profound refpect was exacted to the facerdotal character; the fame fubmillion to the creeds and decrees of fynods and councils required; the lame pomp and ceremony was affected in worlhp; and the fame fuperftitious regard to days, pollure, meats, and vellments. Orders were given, and rigoroufly infitied on, that the communion table fhould be removel froin the middle of the area where it lad hitherto llood in all churches except cathedrals. It was placed at the eait end, sailed in, and denominated an altar; as the clergyman who officiated commonly received the appellation of prieft. All kinds of ornaments, efpecially pictures, were introduced. Some of thefe, apon inquiry, were found to be the very fame that were to be met with in the mals-book. The crucifix too, that perpetual confolation of all pious Catholics, and terror to all found Proteftants, was not forgot on this occasion.

In return for Charles's indulgence towards the church, Laud and his followers took care to magnify on every occafion the regal authority, and to treat with the utmoft difdain or deteflation all puritanical pretenfions to a free and independent conftitution. From this fubjection, however, they took care to exclude themfelves, and infifted upon a divine and apoftolical charter in preference to a legal and parliamentary one. The facerdotal character was magnified as facred and indefeafible; all right to firitual authority, or even to private judgment in fpiritual fubjects, was refufed to profane laymen: ecclefiaftical courts were held by bihhops in their own name, without any notice taken of the King's authority : and Cbarles, though exeremely jealous of every claim in popular aflemblies,

Seemed wather so encourage than reprefs thefe encroachments of his clergy.

The principles which exalted prerogative werc put Hia arbier in practice during the whole time that Charles rulediy and unwithout parliaments. He wanted money for the fup-popular goport of government; and he levied it, either by the re- vemment. vival of obfolete laws, or by violations of the privileges. Though humane and gentle in his nature, he gave way to feverities in the ftar-chamber and high commiffion, which feemed neceflary in order to fupport the prefent mode of adminiftration, and fupprefs the rifing firit of liberty throughout the kingdom. Tonnage and poundage were continued to be levied by royal authority alone. The former arbitrary irapofitions were llill exacted; and even new impofitions laid upon the different kinds of merchandife. The cuftom-houfe officers received orders from the council to enter into any houfe, warehoufe, or cellar; to fearch any trunk or cheft ; and to break any bulk whatever, in default of the payment of cuftoms. In order to exercife the militia, each county, by an edict of the council, was affeffed in a certain fum for maintaining a mufter-mafter appointed for that fervice. Compofitions werc openly made with recufants, and the Popin religion became a regular part of the revenue. A commifion was granted for compounding with fuch as were poffeffed of crown-lands on defective titles; and on this pretence fome moncy was exafted of the people, \&c.

While the Englifh were in the utmon difcontent, ${ }^{H e} 76^{\circ}$ and almof ready to break out in open rebellion by iempts to thefe arbitrary proceedings, Charles thought propereftablinh to attempt fetting up Epifcopacy in Scotland. The Epícopacy canons for eftablithed ecclefiaftical jurifdiction were ${ }^{\text {inScotland. }}$ promulgated in 1635 , and were receired without much appearance of oppoficion; yet with great inward apprehenfion and difcontent. The frit reading of the liturgy was attempted in the cathedral church of Se Giles in Edinburgh, in 1637 ; but this produced fuch a tumult, that it was not thought fafe to repeat the experiment. An univerfal combination againft the religious innovations began immediately to take place; but Charles, as if abftinately bent on his own deftruction, coutinued inflexible in his purpofe, though he had nothing to oppofe to the united force of the kingdom, but a pruclamation, in which he pardoned all palt offences, and exhorted the people to be more obedient for the future, and to fubmit peaceably to the ure of the liturgy. This proclamation haftened forward the infurrection which had been flowly advancing before. Four cobles as they were called, were formed in Edur Four iables, as they were called, were formed in Edin-infurrec-
burgh. One confifted of nobility, another of gen-tion. try, a third of minifters, and the fourth of burgeffes. The table of gentry was divided into many fubordinate ones, according to the different counties. In the hands of the four tables, the authority of the whole kingdom was placed. Orders were iffued by them, and everywhere obeyed with the utmoll regularity; and among the firft acts of their government was the production of the Corenamt.

This famous covenant confifted of a renunciation of Account ef Popery, formerly figned by James in his youtb, and the cove. filled with many virulent invectives againft that party. vant. A bond of union followed, by which the fubfrribers obliged themfelves to refift all religious innoratiuns,

## B $\bar{H}$

$\underbrace{\text { Ficain. }}$ and to defend each other againf all oppofition whatfoever : And all this for the greater glory of God, and the greater honour and advantage of their king and country. The covenant was fubfcribed by people of all ranks and conditions. Few difapproved of it in their hearts, and fill fewer dared openly to condemn it. The king's miniters and counfcllors themfelves were molily of the fame way of thinking; and none but rebels to God, and traitors to their country, it was thought, would withdraw themfelves from fo lalutary

The king now began to be alarmed. He lellt the marquis of Hamilton, as commifloner, with authority to treat with the covenanters. He required the covenant to be renounced and recalled; and he thought that on his part he made very fatisfactory conceffioris, when he offered to fufpend the canons and liturgy till in a fair and legal way they could be received, and fo to model the high commiftion that it fhould no longer give offence to his fubjects. In anfwer to this demand the covenanters told him, they would fooner renounce their baptifm; and invited the commifioner himfelf to fign it. Hamilton returmed to London; made another fruitlefs journey with new conceflions to Edinburgh; seturned again to London, and was immediately fent back with ilill more fatisfactory conceffions. The king was now willing to abolift entirely the canons, the liturgy, and the high commifion court; he even refolved to limit extremely the power of the bifhops, and was content if on any terms he could retain that order in the church of Scutland. And to enfure all thele gracious offers, he gave Hamilton authority to fummon firft an affembly, and then a parliament, where every national grievance fhould be redreffed.-Thefe fucceffive conceffions only flowed the weaknefs of the king, and encouraged the malcontents to rife in their demands. The offer, however, of an affembly and a parliament, in which they cxpected to be entirely maas vory wilingly embraced
Charles perceiving what advantage his enemies had reaped from their covenant, refolved to bave a covenant allo on his fide; and he ordered onc to be drawn up for that purpofe. It confifted of the fame violent renuncistion of Popery with the other; which, though the king did not approve of it, he thought proper to adopt, in order to remove all the fufpicions entertained againt him. As the coveranters, in their bond of mutual defence againft all oppofition, had been careful not to except the king; Charles had formed a bond which was annexed to this renunciation, and which exprefled the fubferibers loyally and duty to his majefly. But the covenanters perceiving that this new covenant was only meant to weaken and divide them, received it with the utmuf foorn and deteflation. And, witlout delay, they proceeded to model the aflembly from which fuch great achicpements were 8: expectel.
Tivent The affembly met at Glafyow in $I_{3} 6_{3}$. A firms depraceelingstermination had been entered into of uiterly abolifhing rimbly.
of the afo Epifcopacy; and, as a prepurative to it, there was laid before the preßbytery of Edinburgh, and folemnly read in all the churches of the kirgdom, an accufation againft the Liftsops, as guilty, all of them, of herefy, fimony, bribery, perjury, cheating, incell, adulicry, fornica-
tion, common-fwearing, drunkennefs, gaming; breach of the fabbath, and every other crime which had occurred to the accufers. The bihops fent a protett, declining the authority of the affembly; the commiffioner too protefted againft that court, as illegally conflituted and elected; and, in his majefty's name, diffolved it. This meafure was forefeen, and little regarded. The court itill continued to fit and do butinefs. All the acts of aftemhly, fince the acceifion of James to the crown of England, were, upon pretty reatonable grounds, declared null and invalid. The acts of parliaments which offected ecclefiaftical affirs were un that very account fuppoled to have no authority. And thus the whole fabric which James and Charles, in a long courfe of years, had been rearing with much care and policy, fell at once to the ground. The covenant likewife was ordered to be figned by every one, under pain of excommunication.

In 1630 , the covenanters prepared in earnef for $P 82$ war. The earl of Argyle, though he long feemed totion for temporife, at laft embraced the covenant; and he be-war by the came the chief leader of that party. The earls covenan Rothes, Caffils, Montrofe, Lothian, the lords Lindefey, Loudoun, Yefter, and Balmerino, alfo diftinguilhed themfelves. Many of their officers had acquired reputation in the German wars, particularly under Guftavus; and thefe were invited over to afift their country in its prefent neceflity. The command was entrulted to L. Aly, a \{oldier of experience and ability. Forces were regularly enlifted and difciplined. Arms were commiflioned and imported frum foreign countries. A few cafles which belonged to the king, being unprovided of victuals, ammunition, and garrifons, were foon feized. And the whole country, except a fmall part where the marquis of Huntly flill adhered to the king, being in the covenanters hands, was foon put into a colerable pofture of defence.

Charles, on the other hand, was not deficient in his By the endeavours to oppufe this formidable combination. Byking. rcgular economy he had not only paid all the debts contracted in the French and Spanifh wars, but bad amafled a fum of 200,000 .; which he had referved for any fudden exigency. The queen had great intereft with the Catholics, both from the fympathy of religion, and from the favours and indulgences which the had been able to procure them. She now employed her credit, atd perluaded them, that it was reafonable to give large contrihutions, as a mark of their duty to the king, during this urgent neceflity: And thus, to the great fcandal of the Puritans, a confiderable fupply was gained. The king's ftect was formidable and well fupplied. Having put 5000 land forces on board, he intrufted it to the marquis of Hamilton, who had orders to fail to the frith of Forth, and caufe a diverfron in the forces of the malcontents. An atmy was levied of near 20,000 foot and 3000 liorfe; and was puit under the command of the earl of $\Delta$ rundel, a nohleman of great family, but celebrated nether for military nor political abilities. The carl of Efex, a man of ftrict honour, and extremely popular, elpecially among, the Coldiery, was appointed lieutenant-general : The earl of Holland was general of the horfe. The king himfelf joind the army, and he fummoned all the peers of England to attend him. The whole had

the appearance of a fplendid court rather than a militaly armament, and in this fituation the camp arrived at Berwick.

The Scottin army was equally numerous with that of the king, but inferior in cavalry. The officers had more experience; and the foldiess, though ill difciplined arid armed, were animated, as well by the national averfion to England, and the dread of becoming a province to their old enemy, as by that religious enthufiafm which was the occation of the war. Yet fo prudent were their leaders, that they immediately fent very fubmilfive meffages to the king, and craved leave to be admitted to a treaty. - Charles, as ufual, took the wortt courfe. He concluded a fudden pacification, in which it was ftipulated, that he fhould withdraw his fleet and army; that within 48 hours the Scots fhould difmifs their forces; that the king's forts fhould be reflored to him, his anthority be acknowledged, and a general affembly and parliament be immedrately fummoned, in order to compofe all differences.

This peace was of no long duration. Charles could not prevail on himfelf to abandon the caufe of Epifcopacy, and fecretly intended to feize every favourable opportunity to recover the ground he had lof. The aflembly, on the other hand, proceeded with the utmoft fury and violence. They voted Epifcopacy to be unlawful in the church of Scotland: they figmatized the canons and liturgy as popift: they denominated the high commiffion tyranny. The parliament, which fat after the affernbly, advanced pretenfions which tended to diminif) the civil power of the monarch; and, what probably affected Charles ftill more, they were proceeding to ratify the acts of aftembly, when by the king's inftructions Traquaire the commifioner prorogued them. And on account of thefe chaims, which might have been eafly forefeen, war was recommenced the fame year.

No fooner had Charles concluded the peace, than he found himfelf obliged to difband bis army, on account of his want of money; and as the foldiers had been held together merely by mercenary views, it was not poffible, without great trouble, expence, and lofs of time, to reaffemble them. On the contrary, the covenanters, in difmifing their troops, had been careful to preferve nothing but the appearance of a pacification. The officers had orders to be ready on the firt fum. mons: The foldiers wese warned not to think the nation fecure from an Englifh invafion: And the religious zeal which animated all ranks of men made them immediately fly to their ftandards, as foon as the trumpet was founded by their fipiritual and temporal leaders.

In 1640 , however, the king made חijft to draw an army together; but finding himfelf unable to fupport them, was obliged to call a parliament after an intermiffion of about 11 years. As the fole defign of the king's calling this parliament was to obtain a fupply, and the only reafon they had for attending was to procure a redrefs of grievances, it is not to be fuppofed there could be any good agreement between them. The king accordingly infifted for money, and the parliament on their grievances, till a diffolution enfued. -To add to the unpopularity of this meafure, the king, notwithfanding his diffolving the parliament, allowed Vos. IV. Part II.
the convocation to fit; a practice of which, fince the Reformation, there had been very few examples, and which was now by many deemed very irsegular. Befides granting to the king a fupply from the fpiritual $t y$, the convocation, jealous of innnvations fimilar to thofe which had taken place in Scotland, impofed an oath on the clergy and the graduates in the univerfities, by which every one fwore to maintain the eflablifhed government of the church, by archbifhops, bithops, dears, chapters, \&c. Thefe fteps were decmed illegal, becaufe not ratified by conlent of parlisment ; and the oath, containing an \&c. in the middle of $i t$, became a fubject of general ridicule.
The king, difappointed of parliamentary fubfidies, Charles dif. was obliged to have recourfe to other expedients. "he trefied for ecclefiaftical fubfidies ferved him in fome flead; and it money. feemed but jult that the clergy fould contribute to the expence of a war which had been in a great meafure of their own raifing. He borrowed money from his minifters and courtiers; and fo much was he be. loved among them, that above 300,0001 . were fubfcribed in a few days. Some attempts were made towards forcing a loan from the citizens: but ftill reqeJed by the fpitit of liberty, which was now become unconquerable. A loan of 40,0001 . was extorted from the Spanifh merchants who had bullion in the Tower. Coat and conduct money for the foldiery was levied on the counties; an aacient practice, but which was fuppufed to be abolifhed by the petition of right. All the pepper was bought from the Eaft India Company upon truft ; and fold, at a great difcount, for ready money. A fcheme was propofed for coining two or three hurdred thoufand pounds of bafe money. Such were the extremities to which Charles was reduced. The frem difficulties, which amidtt the prefent diffreffes were every day raifed, with regard to the payment of fhip. muney, obliged him to exert continual acts of authority, augmented extremely the difcontents of the people, and increafed his indigence and neceffities.

The prefent expedients, however, enabled the king, though with great difficulty, to march his army, cottfifting of 19,000 foot and 2000 horfe. The earl of Northumberland was appointed general ; the earl of Strafford, who was called over from Ireland, lieutenantgeneral; Lord Conway, general of the horfc. A finall Hleet was thought fufficient to ferve the purpofes of this expedition. The Scots, though fomewhat fuperior, were fooner ready than the king's army, and marched to the borders of England. Notwithftanding their warlike preparations and hoftile attempts, the covenanters fill preferved the moft fubiniffive language to the king; and entered England with no other defign, they faid, than to obtain accefs to the king's prefence, and lay their humble petition at his royal feet. At Newburn upon Tyne they were oppofed by a detachment of 4500 Royalifts men under Conway, who feemed refolare to dilpute defeated at with them the paffage of the river. The Scots firft en- Newburn. treated them, with great civility, not to flop them in their march to their gracious fovereign; and then attacked them with great bravery, killed feveral, and chafed the reft from their ground. Such a panic feized the whole Englith army, that the forces at Neweaftle fled immediately to Durbam; and not yet thinking themfelves fafe, they deferted that town, and retreated into Yorkflire.

## B R I [ 450 ] B R I

Britain. The Scots continued to adrance: they difpatched meffengers to the king, who was now artived at York. They touk cate, after the advantage they had gained, to redoubie their expreflions of loyalty, duty, and fubmiffion to his perfon; and they even made apologies full of forrow and contition for their late victory: Charles was in a very difleffed condition; and, in order to prevent the further advance of the Scots, agreed to a treaty, and named 16 Englifh noblemen to meet with in Scots commiffioners at Rippon. Strafford, upon whom, by reafon of Northumberland's ficknefs, the command of the army had devolved, advifed Charles rather to put all to hazard, than to fubmit to fuch unworthy terms as he faw would be impofed upon him. He advifed him to puft forward and attack the Scots, and bring the affair to a quick decifion; and if he was ever fo unfucceffful, nothing worfe could befal him than what from his inaltivity he would certainly be expofed to; and, to flow how eafily this project might be executed, he ordered an affault to be made on fome quarters of the Scots, and gained an advantage over them. This falutary advice Charles had not refolution to follow. He therefo:e refolved to call a council of the peers; and as he forefaw that they would advife him to call a parliament, he told them in his frr!t feeech, that he had already taken that refolution. In order to fubfite both armies (for the king was obliged to pay his enemiss, in order to fave the northern counties), Charles wrote to the city, defiring a loan of 200,0001 . And the peers at York, whofe authority was now much greater than that of their fovereign, joined in the fame 20 requen.
parliament meets.

The parliament met November 3. 1640: the houfe of coramons had never been obferved fo numerous; and, that they might Arike a decifive blow at once againd the court, they began with the impeachment of the earl of Strafford. That nobleman, who was confidered as prime minifter, both on account of the credit be poffeffed with his mafter, and his own uncommon vigour and capacity, had now the misfortune of having incurred the hatred of all the three kingdoms. The Scots looked upon him as the capital enemy of their country. He had engaged the parliament of Ireland to advance large fubfidies to be employed in a war againft them; he had levied an army of 9000 men, with which he had menaced all their weftern coaft : he had obliged the Scots who lived under his government to renounce the covenant, \&c. : he had governed I reland, firf as deputy, and then as lord-lieutenant, during eight years, with great rigilance, activity, and puadence, but with very little popularity. In a nation fo averfe to the Englifh government and religion, thefe very virtues were fufficient to draw on him the public hatred. His mamers, befides, were at bottom hauphty, rigid, and fevere; and no fooner did adverfity begin to feize him, than the concealed averfion blazed up at once, and the Irift parliament ufed every expedient to aggravate the charge againt him.

The univerfal difcontent which prevailed throughout the Fenglith nation was all pointed againf the earl of Strafferd ; though for no other reafon but becaufe he was the minifter of thate whom the king moll favoured and trufted. His extraction was honourable, his paternal fortunc coufiderable: yet envy attended his fudden and erca: clevation; aind his former affociates in popu-
lar counfels, finding that he owed his advancement to Britain. the defertion of their caufe, reprefented him as the great apoflate of the commonwealth, whom it Lehoved them to facrifice as a victim to public juftice.

From fo terrible a combination againft a fingle perfon, nothing elfe could be expected, than what really Unjutly happened. Strafford was impeached, moft unjufly con-executed. demmed, and at laft executed, in the year 1641 . It was not without extreme difficulty that the king could be brought to confent to his execution. He came to the houle of lords, where he expreffed his refolution never to employ Strafford again in any public bufinefs; but with regard to the treafon for which he was condemned, he profeffed himfelf totally diffatisfied. The commons voted it a breach of privilege for the king to take notice of any bill depending before the boufe. Charles did not perceive, that his attachment to Strafford was the chief motive for the bill; and the greater proof he gave of this attachment to his favourite minifler, the more inevitable did he render his defruction. The houfe of lords were intimidated, by popular violence, into paffing the bill of attainder againft the unfortunate earl. The fame battery was next employed to force the king's affent. The populace focked about Whitehall, and accompanied their demand of juftice with the loudefl clamours and moft open menaces. A thoufand idle reports of confpiracies, infurrections, and invafions, were fpread abroad. On whatever fide the king caf his eyes, he faw no refource nor fecurity. All his fervants, confulting their own fafety rather than their mafter's honour, declined interpofing with their advice between him and his parliament. The queen, terrified at the appearance of fo great a danger, preffed Charles, with tears, to fatisfy his people in this demand, which it was hoped would finally content them. Archbifhop Juxon alone had the courage to advife him, if he did not approve of the bill, by no means to confent to it.

Strafford, hearing of the king's irrefolution and anxiety, wrote to him a letter, in which he defired his own execution, in order to give peace to the nation : and at laft, after the moft violent anxiety and doubt, Charles granted a commiffion to four noblemen, in his name, to give the rayal affent to the bill; flattering himfelf perhaps, that as neither his will confented to the deed, nor was his hand immediately engaged in it, he was the more free from all the guilt which attended it. Thofe conmiffioners he empowered at the fame time to give his affent to a bill yet more fatal to himfelf, viz. 'That the prefent parliament fhould not be diffulved, prorogued, or adjourned, without their own confent.

By this laft bill Charles rendered the power of his By this laft bill Charles rendered the power of his parliament
enemies perpetual, as it was already uncontroulable. perpetual. The reafon of this extraordinary flep was, that the commons, from policy, more than neceffity, had embraced the expedient of paying the two armies by borrowing moncy from the city. Thefe loans they repaid afterwards by taxes levied on the people. At laft the citizens, rither of themfelves, or by fuggeftion, began to flat diflicultics with regard to a farther loan which was denianded. "We make no fcruple of tiulling the parliament (hid they), werc we certain that the parliament was to continue till our repayment. But, in the prefent precarious fituation of affairs, what fecurity can

93 Difrelis of he king on ccount of is execu. ion.

## B R I

Pritain. be given us for our money?" In order to obviate this, objection, the above-mentioned bill was fulderily brought in, and having paffed both houfes with great rapidity, was at lalt brought to the king ; who, being opprefled with grief on account of the unhappy fate of Strafford, did not petceive the pernicious confequence of the bill.

All this time the commons had ruled in other refpects with an uncontrouled fway. Soon after the impeachment of Strafford, Laud was acculed of high treafon, and conmitted to cuftody. To avoid the like fate, lord keeper Finch and fecretary Windebank fled, the one into Holland, the other into France. The houfe inftituted a new fpecies of guilt, termed delinquency: thofe who had exercifed the powers neceffary for the defence of the nation, during the late military operations, were now called delinquents. In confequence of this determination, many of the nobility and prime gentry of the nation, while only exerting, as they juftly thought, the legal powers of magiftracy, found themfelves unexpectedly involved in this new crime of delinquency. The commons, however, by their inftitution, reaped this multiplied advantage; they difarmed the crown, they eftablihed the maxims of rigid law and liberty, and they fpread the terror of their own authority. All the theriffs who had formerly exacted thip money, though by the king's exprefs command, were now declared delinquents. The farmers and officers of the cuftoms who had been employed during fo many years in levying tonnage, poundage, \&c. were likewife denominated criminals of the fame kind, and were afterwards glad to compound for a pardon, by paying r 50,000 . Every difcretionary or arbitrary fentence of the ftar-chamber and high commiffion courts, which from their very nature were arbitrary, underwent a fevere ferutiny; and all thofe who had concurred in fuch fentences, were voted to be liable to the penalties of law. No minitter of the king, no member of the council, but what found himfelf expoled by this determination. The judges who had formerly given judgement againft Hambden for refufing to pay hip money, were accufed before the peers, and obliged to find fecurity for their appearance. Berkley, a judge of the king's bench, was feized by order of the houle, even when fitting in his tribunal. The fanction of the lords and commons, as well as that of the king, was declared neceffary for the confirmation of ecclefiaftical canons. Monopolifts and projectors, if of the king's party, were now expelled the houfe; but one Mildmay, a notorious monopolift, was allowed to keep his feat, becaufe he was of the popular party. In fhort, the conftitution was completely new-modelled; and during the firf period of the tranfactions of this remarkable parliament, if we except Strafford's attainder, their merits in other refpects fo much overbalance their miltakes, as to erttitle them to very ample praifes from all lovers of liberty. Not only were furmer abufes remedied, and grievances redreffed; great provifion for the future was made, by excellent laws againt the return of the like complaints. And if the means by which they obtained fuch mighty advantages favoured often of artifice, fometimes of violence; it is to be confidered, that rewolutions of government camot be effected by mere force of argument and reafoning; and that, factions being once excited, men can neither fo firmly regulate
the tempers of others, nor their own, as to cufure them. felves againill all exorbitancies.

Had the parliament flopped here, it had been happy for the nation; but they were now refolved to be fatisfied with nothing lefs than the total abolition of monarchy. The king lad promifed to pay a vifit, this fummer, to his fubjects, in Scotland, in order to fettle their government ; and though the Englift parliament was very importunate with him to lay afide that journey, they could not prevail with him fo much as to delay it. Having failed in this, they appointed a fraall committee of both houles to attend him, in order, as was pretended, to fee the articles of pacification execated, but really to be fpies upon the king, to extend ftill farther the ideas of parliamentary authority, as well as eclipfe his majefty. Endeavours were even ufed, before Charles's departure, to have a protector of the kingdom appointed, with a power to pafs laws without having recourfe to the king. About this time, the Marriage king concluded the marriage of the princefs Mary with of the prinWilliam prince of Orange. He did not conclude this cefs mary alliance without communicating his intentions to par- with the of liament, who were very well fatisfied with the propo- Orange. fal. They adjourned from Sept. 9th to Octoker 20th, 1641.

Charles arrived in Scotland Auguft 14th 1641 , with Charles ar a defign to give full fatisfaction if polfible to this reftefs rives in kingdom. Some good regulations were made; the Scolland. bench of bihhops, and lords of articles, were abolifhed; it was ordained that no man fhould be created a Scotith peer, who poffefted not 10,000 marks (above 5001 .) of annual rent in the kingdom; a law for triennial parliaments was likewife enacted; and it was ordained, that the laft act of every parliament fhould be to appoint the time and place for bolding the parliament next enfuing; the king was alfo deprived of that power formerly exercifed, of ifluing proclamations which en- yor joined obedience under the penalty of treafon. But His great the moft fatal blow given to royal authority, and what concelfions. in a manner dethroned the prince, was an article, that no member of the privy-council, in whofe hands, during the king's ablence, the whole adminiftration lay, no officer of ftate, none of the judges, flould be appointed but by advice and approbation of parliament. Charles evers agreed to deprive of their feats four judges who had adhered to his interefts; and their place was fupplied by others more agreeable to the ruling party. Several of the covenanters were alfo fworn of the privy-council; and all the minifters of fate, counfellors and judges, were, by law, to hold their places during life or good behaviour. The king, while in Scotland, conformed himfelf to the eftablifh ed church; he beftowed penfions and preferments on Henderfon, Gillefpy, and other popular preachers: he practifed every art to foften, if not to gain, his greateft enemies; the earl of Argyle was created a marquis, Lord Loudon an earl, and Lefly was dignified with the title of Lord Leven. But though Charles was thus obliged to heap favours on his enemies and overlook his friends, the forraer were not faticfied, as believing all he did procecded from artifice and necefity; while fome of the latter were difgutted, and thought themfelves ill rewarded for their pall fervices.

Argyle and Hamilton, being feized with an apprebeafion, real or pretended, that the earl of Crauford

## B R I

and others meant to affafinate them, left the parliament fuddenly, and retired into the country : but, upon invitation and affurances, returned in a few days. This event, which in Sentland had no vifible confuquence, was commonly denominated the incident; but though the incident had no effect in Scotland, it was attended with very ferious confequences in England.

102 or rather probably were glad of the hint: they infinuated to the people, that the malignants, fo they called the king's party, had laid a plot at once to murder them and all the godly in both kingdoms. They applied therefore to Eflex, whom the king had left general of the fuath of England; and he ordered a guard to at-
tend them.
In the mean time a mof dangerons rebellion broke out in Ireland, with circumfances of unparalleled horror, bloodfhed, and devaltation. The old Irifh, by the wife conduct of James, had been fully fubdued, and proper means taken for fecuring their dependence and fubjection for the future; but their old animofity fill remained, and only wanted an occafion to exert itfelf. This they obtained from the weak condition to which Charles was reduced, and this was made ufe of in the following manner.

One Roger More, a gentleman defended from an ancient Irifh family, but of narrow fortune, firft formed the project of expelling the Englifh, and afferting the independency of his native country. He fecretly went from chieftain to chieftain, and roufed up every latent principle of difcontent. He maintained a clofe correfpondence with Lord Macguire and Sir Phelim O'Neale, the mofl powerful of the old Irill; and by his perfuafions foon engaged not only them, but the moft confiderable perfons of the natio:, into a confpiracy; and it was hored, the Englifin of the pale, as they were called, or the old Engliih planters, being all Catholice, rrould afterwards join the party which reftored their religion to its ancient fplendor and authority. The plan was, that Sir Phelim O'Neale, and the other confirators, fhould begin an infurrection on one day throughout the provinces, and fhould attack all the Englifh fetlements; and that, on the very fame day, Lord Macguire and Roger More flould furprife the cafle of Dublin. They fixed on the beginning of winter for the commencement of this rcvolt; that there might be more difficulty in tranforting forces from England. Succours to themfelves, and fupplies of arms, they expected from France, in conlcquence of a promife mate them by Cardinal Richelieu; and many Irifh officers who had ferved in the Spanill troops had given aflurances of their concurrence, as foon as they fau an infurrection entered upon by their Catholic brethren. Ness, which every day arrived from England, of the fury expreffed by the commons againft all Papifte, ftrack freft terror into the Irift mation, flimulated the confpirators to execute their fatal purpofe, and aflured them of the concurretice of their countrymen.

Such a propenfity was difcovered in all the lrifh to revolt, that it was deemed unnectfary as well as dangerous to truft the fecret in many hards; and though the day appointed drew nigh, no di'covery had yet been mide to qovernment. The king, indeed, had received information from his ambaffadors, that fomething
was in agitation among the Irifh in foreign parts; but Eritain. though he gave warning to the adminiffration in Ireland, his intelligence was entirely neglected. They were awakened from their fecurity only that very day before the commencement of hollilitics. The canle of Dublin, by which the capital was commanded, corrtained arms for $10,000 \mathrm{men}$, with 35 picces of cannon, and a proportionable quantity of ammutition. Yet was this important place guarded, and that too without any care, by no greater force than 50 men. Macguire and More were already in town with a numerous band of their retainers; others were expected that night; and next morning they were to enter upon what they efleemed the eafieft of all erterprifes, the furprifal of the calle. O'Conolly, however, an Irifhman, but a Proteftant, difcovered the confpiracy. The juftices and council hed immediately to the cafle, and reinfurced the guards. The city was immediately alarmed, and all the Proteflants prepared for defence. Mure cfcaped, but Macguire was taken; and Mahon, one of the confpirators, being likewife feized, firt difcovered to the juflices the project of a general infurrection.

But though O'Conolly's difcovery faved the cafle Horrid crach from a furprife, Mahon's confeflion came too late toelties of the prevent the intended infurrection. O'Neale and his rebels. confederates had already taken arms in Ulifer. The boufes, cattle, and goods of the Englift were firft feized. Thofe who heard of the commotions in their neighbourhood, inflead of deferting their habitations, and affembling together for mutual protedion, remained at home in hopes of defending their property; and fell thus feparately into the hands of their enemies. An univerfal maffacre now commenced, accompanied with circumflances of unequalled barbarity. No agc, fex, or condition, :was fpared. All connections were diffolved, and death was dealt by that hand fiom which protection was imploced and expected. All the tortures which wanton cruelty could devife, all the lingering pains of body, the anguith of mind, the agonies of defpair, could not fatiate sevenge excited without injury, and cruelty derived from no caufe. Such tnormities, in fhort, were committed, that though attefled by undoubted evidence, they appear almofl incredible. The ftately buildings or commodious habitations of the planters, as if upbraiding the floth and ignorance of the natives, were confumed with fire, or laid level with the ground; and where the miferable owners, flut ip in their houfes, and preparing for defence, perifled in the flames, together with their wives and children, a double triumph was afforded to their infulting focs. If anywhere a number affembled together, and refolved to oppofe the affaffins; they were difarmed by capitulations and promifes of fafety, confirmed by the moft folemn oaths. But no fooner bad they furrendered, than the rehels, with perfidy equal to their cruelty, made them thare the fate of their unhappy countrymen. Others tempted their prifoncrs, by the fond love of life, to embrue their hands in the blood of friends, brothers, or parents; and having thus rendered them accomplices in their own guilt, gave them that death which they fought to fhun by deferving it.

Such were the barbarities by which Sir Phelim O'Neale and the Irifh in Ulter fignalized their rebellion. Morc, fhocked at the recital of thefe enormities, flew

## B R I

Britain. to O'Neale's camp; but found that his authority, $\underbrace{}_{\text {which was fulficient to excite the Irifh to a rebellion, }}$ was too feeble to reftrain their inhumanity. Soon after, he abandonel the caufe, and retired to Fl landers. lirom Ulfer, the flames of rebellion diffufed themfelves in an inflant over the other three provinces of Ireland. In all places, death and flaughter were nor uncommon; though the lrifl in thefe other provinces pretended to af with moderation and humanity. But cruel and bar'barous was their humanity! Not content with expelling the Engliih from their houfes, they ftripped them of their very clothes, and turned them out naked and defencelefs to all the feveritics of the feafon. The heavens themfelves, as if confpiring againt that unhappy people, were armed with cold and tempelt unufual to the climate, and executed what the fword had left unfinifhed. By fome computations, thofe who perifted by all thefe cruetties are fuppofed to amount to 150 , or 200,000 ; but by the moft reafonable and moderate, they are made to amount only to 40,000 ; though probably even this account is not free of exaggeration.

The Englith of the pale, who probably were not at firft in the fecret, pretended to blame the infurrection, and to deteft the barbarity with which it was accompanied. By their proteflations and declarations they engaged the jullices in fupply them with arms, which they promifed to employ in defence of government. But in a little time, the interefts of religion were found to be more prevalerit over them than regard and duty to their native country. They chofe Lord Gormonftone their leader; and, joining the old Irith. rivalled them in every aEt of cruelty towards the Englifh Protef. tants. Befides many fmaller bodies, difperfed over the kingdom, the main army of the rebels amounted to 20,000 men, snd threatened Dublin with an immediate fiege. Both the Englifh and Irifh rebels confpired in one impofiure, by which they feduced many of their countrymen. They pretended authority from the king and queen, but efpecially the latter, for their infurrection; and they affirmed that the caufe of their taking arms was to vindicate the royal prerogative, now inraded by the puritanical parliament. Sir Phelim O'Neale, having found a royal patent in the houfe of Lord Caulfield, whom he had murdered, tore off the feal, and affixed it to a commiffion which he had forged for himfelf.

The king received intelligence of this infurrection to anfitt in while in Scotland, and immediately acquainted the Scots guelling the parliament with it. He hoped, as there had all along revellion. been fuch an outcry againf Popery, that now, when that religion was appearing in its blackef colours, the whole nation would vigoroufly fuppert him in the fuppreflion of it. But here he found himfelf miftaken. The Scots confidering themfelves now as a republic, and conceiving hopes from the prefent diftreffes of Ireland, they refolved to make an advantageous bargain for the fuccours with which they fhould fupply the neighbouring nation. Except difpatching a fmall body of furces, to fupport the Scots colonies in Ulfter, they would, therefore, go no farther than to end commiffioners to London, in order to treat with the parliament, to whom the fovereign power was in reality transferred. The king, too, fenfible of his utter inability to fubdue the Irifh rebels, found himfelf obliged,
in this exigency, to have recourfe to the Friglifi par. liament, and depend on their affiftance for fupply. He told them that the infurrection was not, in his opision. the refult of any raft enterprife, bat of a formed confpiracy againt the crown of England. To their care and wifdom, therefore, he fivid, he committed the conduct and profecution of the war, which, in a caufe fo importane to national and religious interefts, muft of neceffity be immediately entered upon, and vigoroufly parfued.

The Englih parliament, now re-affembled, difcovered in each rote the fame difpofitions in which they had feparated. Nothing lefs than a total abulition of monarchy would ferve their turn. But this project it had not been in the puwer of the popular leaders to have executed, had it not been for the paffion which feized the nation for the prefbyterian difcipline, and the wild enthufiafm which at that time attended it. By the difficulties and diftreffes of the crown, the commons, who poffefled alone the power of fupply, had aggrandized themfelves; and it feemed a peculiar happinefs, that the Irilh rebellion had fucceeded, at fuch a critical juncture, to the pacification in Scotland. That expref. fion of the king's by which he committed to them the care of Ireland, they inmediately laid hold of, and interpreted in the moft unlimited fenfe. They had on other occafions been gradually encroaching on the executive power of the crown, which forms its principal and moft natural branch of authority; but with regard to Ireland, they at once affumed it, fully and entirely, as if delivered over to them by a regular gift or affignment. And to this ufurpation the king was obliged paflively to fubmit, both becaule of his iriability to refift, and left he fhould expofe himfelf fill more to the charge of favouring the rebels; a reproach eagerly thrown upon him by the popuiar party as foon as they heard that the Irifh pretended to act by his commition. Nay, to complete their charaCter, while they pretended the utmoft zeal againft the infurgents, they took no Iteps for their fupprefion, but fuch as likerwife gave thenz the fuperiority in thofe commotions which they forefaw mult be foon excited in England. They levied money under preterice of the Irifh expedition, but teferved it for purpofes' which concerned them more nearly; they took arms from the king's magazines, but fill kept them with a fecret intention of making ufe of them againd himfelf: whatever law they deemed necentary for aggrandizing themfilves, they voted, under colour of enabling them to recover Ireland; and if Charles withheld his royal aftent, the refufal was -imputed to thofe pernicious counfels which had at firft excited the Popifh rebellion, and which fill threatened total ruin to the Proteflant intereft throughout his dominions. And though no forces were for a long time fent over into Ireland, and very little money remitted during the extreme diftrefs of that kingdom; fo ftrong was the people's attachment to the commons, that the fault was never imputed to thofe pious zealots, whofe votes breathed nothing but death and deftuetion to the Irifl rebels.

The condut of the parliament towards the king now became exceedingly unreafonable, unjutt, and cruel. It was thought proper to frame a general remonltrance of the ftate of the kingdon ; and accordingly the committee, which at the firft meeting of the parliament had

Pritain. $\xrightarrow{+}$

[^11]

Britain. been chofen for that purpofe, were commanded to finifh their undertaking. The king returned from Scotland November 25 th 164 s . He was received in London with the fhouts and acclamations of the populace, and with every demonitration of regard and affection. Sir Richard Gournay, lord mayor, a man of great merit and authority, had promoted thefe favourable difpofitions; and had engaged the populace, who fo lately infulted the king, and who fo foon after made furious war upon him, to give him thefe marks of their dutiful attachment. But all the pleafure which Charles reaped from this joyful reception was fonn damped by the remonftrance of the commons, which was prefented to him together with a petition of the like nature. The bad counfels which he followed were there complained of; his concurrence in the Irifh rebellion plainly infinuated; the fcheme laid for the introduction of popery and fuperftition was inveighed againf ; and for a remedy to all thefe evils, the king was defired to entruft every office and command to perfons in whom his parliament thould have caufe to confide. By this phrafe, which was very often repeated in all the memorials and addreffes of that time, the commons meant themfelves and their adherents. To this remonftrance Charles was obliged to make a civil reply, notwithftanding his fubjects had tranfgreffed all bounds of refpect, and even good manners, in their treatment of their fovereign.

It would be tedious to point out every invafion of

Commons affume the Sovereignty. he prerogative now attempted by the commons: but finding themfelves at laft likely to be oppofed by the nobility, who faw their own depreftion clofely connected with that of the crown, they openly told the upper houfe, that " they themfelves were the reprefentatives of the whole body of the kingdom, and that the peers were nothing but individuals, who held their feats in a particular capacity; and therefore, if their lordinips would not confent to acts neceflary for the prefervation of the people, the commons, together with fuch of the lords as were more fenfible of the danger, mult join together and reprefent the matter to his majelty." Every method proper for alarming the populace was now put in practice. The commons affected continual fears of deftruction to themfelves and to the whole nation, They excited the people by never-ceafing inquities after confpiracies, by reports of infurrections, by feigned intelligence of invafions from abroad, and by difcoverics of dangerous combinations at home, againft Papifts and their adberents. When Charles difmified the guard which they had ordered during his abfence, they complained; and, upon his promifing them a new guard under the command of the earl of Lindefay, they abfolutely refufed the offer: they ordered halberts $t o$ be brought into the hall where they affembled, and thus armed themfelves againf thufe confiracies with which they pretended they were hourly threatened. Several reduced officers, and young geritlemen of the inns of court, during this time of diftrefs and danger, offered their fervice to the king. Between them and the populace there pafied frequent Akirmilics, which ended not without bloodfhed. By
way of reproach, thefe gentlemen gave the rabble the name of round-beads, on account of their ftort cropt hair ; while they diflinguiffed the others by the name of cavaliers. And thus the nation, which was before
fufficiently provided with religious as well as civil caules Tritain. of quarrel, was alfo fupplied with party-names, urider which the factions might rendezvous and fignalize their mutual hatred.

Thefe tumults continued to increafe about Weftminfter and Whitehall, The cry continually refounded againlt bifhops and rotten-bearted lords. The former efpecially, being eafily diftinguifhable by their habit, and being the object of violent hatred to all the fectaries, were expofed to the mofl dangerous infults. The archbifhop of York, having been abufed by the populace, haftily called a meeting of his brethren. By his bin 10 advice a proteflation was drawn up and addreffed to the tire from king and the houfe of lords. The bilhops there fet the houfe of forth, that though they had an undoubted right to fit ${ }^{\text {lords. }}$ and vote in parliament, yet in coming thither they had been"menaced, affaulted, affronted, by the unruly multitude, and could no longer with fafety attend their duty in the houfc. For this reafon they protefted againft all laws, votes, and refolutions, as null and invalid, which fhould pafs during the time of their forced abfence. This proteftation, which, though juft and legal, was certainly ill-timed, was figned by twelve bifhaps, and communicated to the king, who haftily approved of it. As foon as it was prefented to the lords, that houfe defired a conference with the commons, whom they informed of this unexpected proteltation. The opportunity was fcized with joy and triumph. An impeachment of high treaton was immediately fent up againft the biftops, as endeavouring to fubvert the fundamental law, and to invalidate the authority of the legiflature. They were, on the firft demand fequeftered from parliament, and committed to cuftody. No man in either houfe ventured to fpeak a word in their vindication: fo much was every one difpleafed at the egregious imprudence of which they had been guilty. One perfon alone faid, that he did not believe them guilty of high treafon; but that they were ftark mad, and therefore defired they might be fent to bedlam.

This was a fatal blow to the royal interen ; but it foon felt a much greater from the imprudence of the king himfelf. Charles had long fuppreffed his refentment, and only frove to gratify the commons by the greatnefs of his conceffions; hut finding that all his compliance had but increafed their demands, he could irr no longer contain. He gave orders to Herbert his at- Six mem. torney-general to enter an accufation of high treafon, in bers of par-. the houfe of peers, againft Lord Kimbolton, one of the peached by moft popular men of his party, together with five com- the king's moners, Sir Arthur Haferig, Hollis, Hambden, Pym, order. and Strode. The articles were, That they had trateroufly endeavoured to fubvert the fundamental laus and government uf the kingdom, to deprive the king of his regal power, and to impole on his fubjects an anbitrary and tyrannical authority; that they had invited a foreign army to invade the kingdom; that they had aimed at fubverting the very right and being of parliaments ; and had actually raifed and countenanced tumults againft the king. Men had farce leifure to wonder at. the precipitancy and imprudence of this im. peachment when they were allonifhed by another meafure aill more rafh and unfupported. A ferjeant at arms, in the king's name, demanded of the houfe the five members, and was fent tack without any politive anfwer.

## B R T

Britain.
$\underbrace{12}_{112}$ He goes in perion to feize them
antwer. This was followed by a conduct nill more estraordinary. The next day, the king himfelf was feen to enter the houfe of cummons alone, advancing through the hall, while all the members ftood up to reccive him. The fpeaker withdrew from his chair, and the king took poffeffion of it. Having feated himfelf, and looked round him for fome time, he told the houfe, that he was forry for the occafion that furced him thither; that he was come in perfun to feize the members whom he had acculed of high treafon, feeing they would not deliver them up to his ferjeant at arms. Then addrefling himfelf to the \{peaker, he defired to know whether any of them were in the houfe; but the [peaker, falling on his knees, replied, that he had neither eyes to fee, nor tongue to Cpeak, in that place, but as the houle was pleafed to dired him; and he alked pardon for being able to give no other anfwer. The king fat for fome time, to fee if the accufed were prefent; but they had efcaped a few minutes before his entry. Thus difappointed, perplexed, and not knowing on whom to rely, he next proceeded amidit the invectives of the populace, who continued to cry out, Privilege! privilege!' to the common council of the city, and made his complaint to them. The common council anfwered his complaints by a contemptuous filence; and, on his return, one of the populace, more infolent than the reff, cried out, "To your tents, O Ifrael !" a watch-word among the Jews, when they intended to abandon their princes.

When the commons affembled the next day, they pretended the greatefl terror; and paffed an unanimous vote that the king had violated their privileges, and that they could not affemble again in the fame place, till they fhould obtain fatisfaction, and have a guard for their fecurity. The king had retired to Windfor, and from thence he wrote to his parliament, making every conceflion, and promiling every fatisfaction in his power. But they were refolved to accept of nothing unlefs he would difcover his advifers in that illegal meafure; a condition to which, they knew, that, without sendering himfelf for ever vile and contemptible, he could not poffibly fubmit.

The commons had already fript the king of almoft all his privileges; the bifhops were fled, the judges were intimidated; it now only remained, after fecuring the church and the law, that they fhould get poffefron of the fword alfo. The power of appointing governors and generals, and of levying armies, was ditl a remaining prerogative of the crown. Having therefore firft magnified their terrors of Pupery, which perhaps they actually dreaded, they proceeded to petition that the Tower might be put into their bands; and that Hull, Purtfmouth, and the fleet, fhould be intrufted to perfons of their choofing. Thefe were requefts, the complying with which fubverted what remained of the cunItitution; however, fuch was the neceffity of the times, that they were fift contefted, and then granted. At lan, every compliance only increafing the avidity of making freft demands, the commons defired to have a militia, raifed and governed by fuch officers and commanders as they fhould nominate, under pretence of $f e-$ curing them from the Irifl Papifts, of whom they were under the greatelt apprehenfion.
Refured by It was here that Charles firft ventured to put a Aop the king. to his conceffions; and that not by a refulal, but a delay. He was at that time in Dover attending the queen

## $455] \quad \mathrm{B}]$ I

and the princefs of Orange, who had thought it prudent ta leave the kingdom. He replied to the petition, that he had not now leifure to conffder a matter of fuch gieat importance; and therefore would defer an anfwer till his return. But the commons were well aware, that though this was depriving him cven of the fladow of power, yet they had now gone too far to recode; and they werc thercfore defirous of leaving him no anthority whatever, being confcious that themfelves would be the firf victims to its fury. They alleged, that the dangers and diftempers of the nation were fuch as could endure no longer delay; and unlefs the king Thould fpecdily comply with their demands, they flould be obliged, both for his fafety and that of the kingdom, to embody and direct a militia by the authority of both houfes. In their remouftrances to the king, they defired even to be permitted to command the army for an appointed time: which fo exalperated him, that he exclaimed, "No, not for an hour." This peremptory refufal broke off all further war refole treaty; and both fides were now refolved to have re-ved on becourfe to arms.

Charles, taking the prince of Wales with him, retired to York, where he found the people more loyal, and lefs infected with the frenzy of the times. He found his caufe there backed by a more numerous party among the people than he had expected. The queen, who was in Holland, was making fucceffful levies of men and ammunition by felling the crown-jewels. But before war was openly declared, the fhadow of a negociation was carried on, rather with a defign to pleate the people than with a view of reconciliation. Nay, that the king might defpair of all compofition, the par-shameful liament fent him the conditions on which they were requifition ${ }^{\circ}$ willing to come to an agreement. Their demands were of parliacontained in 19 propofitions, and amounted to a total ment. abolition of monarchical authority. They required that no man hould remain in the council who was not agreeable to parliament : that no deed of the king's ilhould have validity unlefs it paffed the council, and was attefted under their hand; and that all the officers of flate fhould be chofen with confent of parliament; that none of the royal family fhould marry without confent of parliament or council ; that the laws fhould be executed againf Catholics; that the votes of Popifh lords fhould be excluded; that the reformation of the liturgy and churcli-government thould take place according to the advice of palliament; that the ordinance with regard to the militia be fubmitted to ; that the juftice of parliament may pals upon all delinquents; that a general pardon be granted, with fuch exceptions as fhould be advifed by parliament ; that the forts and caftles be difpufed of by confent of parliament; and that no peers be made but with confent of both houfes. War on any tcrms was efteemed, by the king and all his counfel. lors, prelerable to to ignominious a peace. Charles rejected accordingly refolved to fupport his authority by force by Charles of arms. "His towns (he Caid) were taken from him; his thipe, his amm, and his money: but there till remained to him a good caufe, and the hearts of his loyal fubjects; which, with God's blefling, he doubted not would recover all the reft." Coliecting therefore fome forces, he advanced fouthwards, and crected his royal tlandard at Nottingham.

The king lound him!elf fupported in the civil war

Britain. by the nobility and more confiderable gentry. They, dreading a total confufion of rank from the fury of the populace, inlifted themfelves under the banner of their monarch: from whom they received, and to whom they communicated, their luftre. The concurrence of the bilhops and church of England alfo increafed the adherents of the king; but it may be fafely affirmed, that the high monarchical doctrines fo much inculcated by the clergy, had never done him any good. The bulk of the nobility and genitry who now attended the king in his diftrefles, breathed the fpirit of liberty as well as of loyalty: and in the hopes alone of his fubmitting to a limited and legal government they were willing to facrifice their lives and fortunes.

On the other band, the city of London, and moft of the great corporations, took part with the parliament; and adopted with zeal thofe democratical principles on which thefe affemblies were founded. The example of the Dutch commonwealth, too, where liberty had fo happily fupported induftry, made the commercial part of the nation defire to fee a like form of government eftablifhed in England. Many familics alfo, who had enriched themfelves by commerce, faw with indignation, that, notwithfanding their opulence, they could not raife themfelves to a level with the ancient gentry; they therefore adhered to a power by whofe fuccefs they

At firft every advantage feemed to lie againt the royal caufe. The king was totally deftitute of money. London, and all the fea-ports, except Newcaftie, being in the hands of parliament, they were fecure of a confiderabie revenue; and the feamen naturally following the difpofition of the ports to which they belonged, the parliament had the entire dominion of the fea. All the magazincs of arms and ammunition they feized at firt ; and their fleet intercepted the greateft part of thofe fent by the queen from Holland. The king, in order to arm his followers, was obliged to borrow the weapons of the train bands, under promife of reftoring them as foon as peace fthould be fettled. The nature and qualities of his adherents alone gave the king fome compenfation for ail the advantages poffeffed by his adverfaries. More bravery and activity were hoped for from the generous firit of the nobles and getutry, than from the bafe difpoftion of the multitude. And as the landed gentlemen, at their own expence, levied and armed their tenants, befides an attachment to their maflers, greater force and courage were to be expected from thefe tuflic troops than from the vicious and enervated populace of cities. Had the parliamentary forces, however, exerted themfelves at firf, they might have eafily difipated the fmall number the king had been able to collect, and which amounted to no mocre than 800 horfe and 300 fnot ; while his encmies were within a few days march of him with 6000 inen. In a fhort time the parliamentary atmy were ordered to march to Northampton; and the earl of Effex, who had joined them, found the whole to amount to 15,000 . The king's army toa wiss foon reinforced from all quarters; but fill, having no force capable of coping with the parliamentary army, he thought it prudent to retire to 1) erby, and from thence to Shrew (hury, in order to countenance the levies which his friends were making in thofe parts. At Wrllington, a day's march from Shrewilury, he rade a rendezvous of all his forces,
and caufed his military orders to be read at the head of every regiment. That he might bind himfelf by reciprocal obligations, he here protefted folemnly before his whole army, that he would maintain the Proteftant religion according to the church of England; that he would govern according to the known flatutes and cuftoms of the kingdom; and particularly, that he would obferve inviolable the laws to which he had given his confent during this parliament, \&c.

While Charles lay at Shrewibury, he received the They gain news of an action, the firft which had happened in thefe an advan. parts, and wherein his party was victorious. On the tage over appearance of commotions in England, the princes Ru- heir enspert and Maurice, fons of the unforturate elector palatine, had offered their fervice to the king; and the former at that time commanded a body of horfe which had been fent to Worcefter in order to watch the mo. tions of Effex, who was marching towards that city: No fooner had the prince arrived, than he faw fome cavalry of the enemy approaching the gates. Without delay he brifkly attacked them, as they were defiling from a lane, and forming themfelves. Colonel Sandys their commander was killed, the whole party reuted, and purfued above a mile.

In 1642 , October 23 d, happened a general engage- sattle of ment at Edgehill, in which, though the royalifts were Edgehill at firf victorious, their impetuofty lotl the advantage they had gained, and nothing decifive happened. Five thoufand men, it is faid, were found dead on the field of battle. Soon after, the king took Banbury and Reading; and defeated two regiments of his encmies at Brentford, taking 500 prifoners. Thus ended the campaign in 1642 ; in which, though the king had the advantage, yet the parliamentary army amounted to 34,000 men, and was much foperior to his; notwithflanding which, his enemies had been fo far humbled as to offer terms of peace.

In 1643, the treaty was carried on, but without any ceffation ol hoftilities; and indeed the negociation went no farther than the firf demand on each fide; for the parliament, finding no likelihood of coming to an accommodation, fuddenly recalled their commiffioners. On the 27 th of April, Reading furrendered to the parliamentary forces under the earl of Effex, who commanded a body of 18,000 men. The earl of Northumberland united in a league for the king the counties Anfociation of Northumberland, Cumberland, Weftmorland, and the king. the bithopric; and engaged fome time after other counties in the fame affociation. The fame nobleman alfo took poffeftion of York, and diflodged the forces of the parliament at 'Tadcafter, but his victory was not decifive. Other advantages were allo grained by the royalifts; the molt important of which was the battle of Stratton, where the poet Waller, who commanded the parliament's army, was entirely defeated, and forced to ParlamenAly with only a few horfe to Brillol. This happened on defeated at the $13^{\text {th }}$ of July; and was followed by the ficge of that Stratton. city, which furrendered to Prince Rupert on the 25 th of the fame month.

Though the taking of Briftol had cot the royalifts dear, yet fuch a continued run of fuccefs bad greatly difpirited the oppofite party; and fuch confufion now presailed at London, that fonse propofed to the king to march direelly to that city, which it was hoped might be reduced either by an infurrection of the citi-

124 Charles befieges Gloucelter.
zens by vidory or by treaty, and thus an erid put to the civil diforders at once. This advice, however, was rejected, on account of the great number of the London militia; and it was refolved firf to reduce Gloucetter, in confequence of which the king would have the whole courfe of the Severn under his command. The rich and malcontent counties of the weft having then loft all protection from their friends, might be enforced to pay large contributions as an atonement for their difaffection; an open communication could be preferved between Wales and thefe new conquefts; and half the kingdom being entirely freed from the enemy, and thus united into one firm body, might be employed in re-eflablifhing the king's authority throughout the remainder.

The fiege of this city commenced Augufl roth ; but being defended by Maffey a refolute governor, and well garrifoned, made a vigorous defence. The confternation at London, however, was as great as if the enemy had been already at their gates; and in the midth of the general confufion, a defign was formed by Waller of forcing the parliament to accept of fome reafonable conditions of peace. He imparted his defign to fome others; but a difcovery being made of their proceedings, he and two others were condemned to death. Waller, however, efcaped with a fine of 10,0001 . The city of Gloucefter in the mean time was reduced to the utmof extremity ; and the parliament, as their laft refource, difpatched Effex with an army of 14,000 men,

 ced to raife the fiege.126
Battle of Newbury.

127 Advanteges gaired by Fairfax and Cromweil.

18 8 l.ond Fairfax defeated at Atherton. order to force the king to raife the lege of that city. This he accomplifhed; and when he entered, found only one barrel of gunpowder left, and their whole provifions nearly exhaufted. On his return to London, he was intercepted by the king's army, with whom 2 defperate battle erifued at Newhury, which lafted till night. Though the victory was left undecided, Effex next morning proceeded on his march, and reached London in fafety, where he received the applaufe for his conduct he deferved. The king followed him on his march; and having taken poffeflion of Readirg after the earl left it, he there eftablifhed a garrifon, and ftraitened by that means Londun and the quarters of the enemy.

In the north, during the fummer, the earl, now created marquis of Newcafle, had raifed a confiderable force for the king; and great hopes of fuccefs were entertained from that quarter. There appeared, however, in oppofition to him, two men on whom the event of the war finally depended, and who began about this time to be remarked for their valour and military conduet: Thefe were, Sir Thomas Fairfax, fon to the lord of that name; and Oliver Cromwell. The former gained a confiderable advantage over the royalifts at Wakefield, and took General Goring prifoner: the latter obtained a victory at Gainfborough over a party commanded by the gallant Cavendifh, who perifhed in the action. But both thefe defeats were more than compenfated by the total rout of Lord Fairfax at Atherton moor, and the difperfion of his army, which happened on the 3ut of July. After this victory, the marquis of Newcaftle fat down before Hull with an army of 15,000 men ; but being beaten off by a fally of the garrifon, he fuffered fo much that he thought proper to raife the fiege. About the fame time, Manchefter, who advanced from the eaftern affociated coutaties, haYoi. IV. Part II.
ving joined Cronuscll and young Fairfax, obtained a confiderable victory over the royalitts at Horn callle ; where the two laft mentioned officers gained renown by their conduct and gallantry. And though fortune had thus balanced ber favours, the king's party ftill remained much fuperior in thofe parts of England; and had it not been for the garrifon of Hull, which kept Yorkhire in awe, a conjunction of the nothern forces with the army of the fouth might have been made, and had probably enabled the king, infead of entering on the unfortunate, perhaps imprudent enterprife of Gloucefter, to march diteelly to London, and fut an end to the war. The battle of Newbury was attended with fuch lofs on both fides, that it put an end to the cam. paign of 1643 , by obliging both parties to retire into winter quarters.

The event of the war being now very doubtful, the king and parliament began both of them to look for affiftance from other nations. The former caft his eyes on Ireland, the latter on Scotland. The parliament Englifis of England had ever invited the Scots, from the com-parliament mencement of the civil diffenfions, to interpofe their afk affittmediation, which they knew would be very little fa- ance fiom vourable to the king, and which for that reafor he had declined. Early in the fpring 1643 , this offer of mediation had been renewed, with no better fuccefs than before. The commiffioners wcre alfo empowered to prefs the king to a compliance with the preßbyterian worthip and difciplinc. But this he abfolutely refufed, as well as to call a parliament in Scotland; fo that the commiffioners, finding themfelves unable to prevail in any one of their demands, returned home highly diffatisfied. The Englifh parliament being nnw in gieat diftrefs, gladly fent commifioners to Edinburgh, to treat of a more clufe confederacy with the Scottilh na-
tion. The perfon they principally trufted to on this treat of a more clufe confederacy with the Scottilh na-
tion. The perfon they primcipally trufted to on this occafion was Sir Henry Vane, who in eloquence, adoccafion was Sir Heary Vane, who in eloquence, ad-
drefs, capicity, as well as in art and diffimulation, was not even furpaffed by any one in that age fo famous for adive talents. By his perfuafions "as framed at Edinburgh the Solemn Licague and Covenant; which soletho off ced all former protettations and vows taken in both seeque and cff ced all former proteltations and vows taken in both ie-que and
kingdoms, and long maintained its credit and autho-covenant rity. In this covenant, the fubfcribers, beficles en-framed. gaging mutually to defend each other againt all opponents, bound themfelves to endeavour, without refpee of perfons, the extirpation of popery and prelacy, fuperfition, herefy, and profanenefs; to maintain the rights and privileges of parliamerts, together with the king's authority; and to difcover and bring to ju-
ftice all incendiaries and maliynants. They vowed alfo the king's authority; and to difcover and bring to ju-
ftice all incendiaties and malignants. They vowed alfo to preferve the reformed religion eftablifhed in the church of Scotland; but by the artifice of Vane, no declaration more explicit was made with regard to England and Ireland, than that thofe kingdoms fhould be reformed according to the word of God, and the example of the pureft churches.

Great were the rejoicings among the Scots, that they fhould be the happy inftruments of extending their mode of religion, and diffipating the profound darknefs in which the neighbouring nations were involved. And being determined that the lword fhould carry conAnd being determined that the word fhould carry con-
viction to all refractory minds, they prepared themfelves with great vigilance and activity for their military enterpitiles; fo that, having added to their other

Charlesaffiled by the Irith.
furces the troops which they had recalled from Ireland, they were ready by the end of the year to enter England under their old general the carl of Leven, with an army of above 20,000 men. The king, in order to fecure himfelf, concluded a ceffation of arms with the Irifh rebels, and recalled a confiderable part of his army from Ireland. Some Irifh catholics came over with thefe troops, and joined the royal army, where they continued the fame cruelties and diforders to which they had been accuflomed. The parliament voted, that no quarter in any action thould ever be given them. But Prince Rupert, by making fome reprifals, foon rcprefled this imhumanity.

The campaigu of 1644 proved very unfortunate to the royal caufe. The forces brought from Ireland were landed at Moftyne in North Wales, and put under the command of Lord Biron. They befieged and took the callles of Hawarden, Beefor, Acton, and Deddington-houfe. No place in Cheflire or the neighhourhood now adhered to the parliament, except Lantwich; and to this place Biron laid fiege in the depth of winter. Sir Thomas Fairfax, alarmed at fo great a progrefs, affembled an army of 4000 men in Yorkfhire; and having joined Sir William Brereton, was approaching to the camp of the royalills. Biron and his foldiers, elated with fucceffes in Ireland, entertained a moft profound contempt for their enemies. Fairfax fuddenly attacked their camp. The fwelling of the river by a thaw divided one part of the army from another. That part oppofed to Fairfax, being driven from their poff, retired into the church at Acton, where being furrounded, they were all taken prifoners. The other retreated with precipitation; and thus was diffipated or rendered ufelefs that body of forces which had come from Ireland. This happened on the 25 th of January ; and on the 1 Ith of April, Colonel Bellafis was totally defeated at Selby in Yorkfhire by Sir Thomas Fairfax, who had returned from Chefhire with his victorious forces. Being afterwards joined by Lord Leven, the two generals fat down befure the city of York; but being unable to inveft that city completely, they were obliged to content themfelves with incommoding it by a loofe blockade. Hupeton, having affembled a body of 14,000 men, endeavoured to break into Suffex, Kent, and the Couthern affociation, which feemed well difpofed to receive him; but was defeated by Waller at Cherington. At Newatk, however, P'rince Rupert totally defeated the parliamentary army which befieged that place; and thus preferved the communication open between the king's northern and fourhern quarters.

The great advantages the parliament had gained in the north, feemed now to fecond their unwarrantable enterprifes, and finally to promife them fuccefs. Manchefler having taken Lincoln, had united his army to that of Leven and l'airfax; and Yurk was now clofely beficged by their numerous forces. That town, though vigoroully defended by the marquis of Newcaftle, was reduced to the laft extremity, when Prince Rupert. having joined Sir Charles Lucas who commanded Newcafle's horfe, haltened to its relief wish an army of 20,000 men. The Scots and parliamentary generals railed the fiege, and drawing up on Marfon moor, propufed to give batcle to the royalifls. Prince Rupert approached the town by another quatier, and in-
terpofing the river Oufe between him and the enemy,
Britain. fafely joined his forces to thofe of Newcaftle. The marquis endeavoured to perfuade him, that having fo fuccefffully effected his purpofe, he ought to be contented with the prefent advantages, and leave the enemy, now much diminifhed by their loffes, and difconraged by their ill fuccefs, to difolve by thofe mutual diffenfions which bad begun to take place among them. The prince, however, hurried on by his natural impetwolity, gave immediate urders for fighting. The battle was loff, the royal army entirely pultied off the field, and the train of artillery taken. Immediately after this unfortunate action the marquis of Newcafle left the kingdom, and Prince Rupert retired into Lancafhire. The city of York was furrendered in a few days, and Newcaftle foon after taken by florm.

This was a fatal blow to the royal caufe, and far Extravafrom being balanced by an advantage gained at Cro-gant depredy bridge by the king over Waller, or even by the mands of parliadifarming of Effex's forces, which happened on the nerit. Ift of September. On the 27 th of October, another battle was fought at Newbury, in which the royalifts were worlted, but foon after retrieved their honour at Dennington cafle, which fnifhed the campaign in 1644.

In 1645, a negociation was again fet on foot, and the commifioners met at Uxbridge on the 3oth of January; but it was foon found impoffible to come to any agreement. The demands of the parliament were exorbitant ; and, what was worle, their commiffioners owned them to be nothing but preliminaries. The king was required to attaint, and exeept from a general pardon, 40 of the moft confiderable of his Englif, fubjects, and 19 of his Scots, together with all the Popifh recufants who had borne arms for him. It was infifted that 48 more, with all the members of either houfe who had fat in the parliament called by the king at Oxford, all lawyers and divines who had embraced the king's party, thould be rendered incapable of any office, be forbidden the exercife of their profeflion, be prohibited from coming within the verge of the court, and forfeit the third of their eflates to the parliament. It was required, that whoever had borne arms for the king thould forfeit the tenth of their eflates, or if that did not fuffice, the fixth, for the payment of public debts. As if royal acthority were not fufficiently annibilated by thefe terns, it was demanded that the court of wards fhould be abolifhed; that all the confiderable officers of the crown, and all the judges, fhould be appointed by parliament; and that the right of peace and war flould not be excrcifed without confent of parliament. A little before the commencement of this fruitlefs treaty, the parliament, to thow their determined refolution to proceed in the fame haughty imperious method in which they had begun, brought to the block Archbinhop Laud, who had long Ew ${ }^{536}$ been a prifuner in the tower, and was incapable of gi-of land. ving offence to any.

While the king's affairs thus went intu decay in Exploits of England, they feemed to revive a little into Scotland, Mone earl of through the conduct and valour of the earl of Montrofe, a young nobleman newly returned from his travels. Ie had been introduced to the king ; but not meeting with an agreeable reception, had gone over to the convenanters, and been active in forwarding all

Brisuin. $\underbrace{\text { Birlain. }}$ violnnce. Being commiffioned, however, by the tables, to wait upon the king while the army lay at Berwick, he was fo gained by the civilities and careffes of that monarch, that he henceforth devoted himfelf entirely, though fecretly, to his fervicc. For attempting to form an aflociation in favour of the royal caule, Montrofe was quickly thrown into prifon; but being again releafed, he found the king ready to give ear to his counlele, which were of the boldeft and moft daring kind. Though the whole nation of Scotland was occupied by the covenanters, though great armies were kept on foot by them, and every place guarded by a vigilant a dminiffration, he undertook by lis own credit, and that of a few friends who remained to the king, to raife fuch commotions, as would foon oblige thofe malcontents to recal the forces which had fo fenfibly thrown the balance in the favour of parliament. The defeat at Marlton-moor had left him no hopes of any fuccours from England; he was therefore obliged to ftipulate with the earl of Antrim, a nobleman of Ireland, for fome fupply of men from that country. And he himfelf having ufed various dif. guifes, and pafied through many dangers, arrived in Scotland, where he lay for fome time concealed in the borders of the Highlands.

The Irih did not exceed 1100 foot, very ill armed. Montrofe immediatly put himfelf at their head; and being joined by 1300 Highlanders, attacked Lord Eleho, who lay at Perth with 6000 men, utterly defeated him, and killed 2000 of the covenanters. He next marched northwards, in order to roufe again the marquis of Huntly and the Gordons, who had taken arms before, but been fuppreffed by the covenanters. At Aberdeen, he attacked and entirely defeated Lord Burley, who commanded 2500 men. Montrofe, however, by this victory, did not obtain the end he propofed; the marquis of Hutitly fhowed no inclination to join an army where he was fo much eclipfed by the general.

Montrofe was now in a very dangerous fituation. Argyle, reinforced by the earl of Lothian, was behind hin with a great army. The militia of the nothern counties, Murray, Rofs, and Caithnefs, to the number of 5000 , oppofed him in front, and guarded the banks of the Spey, a deep and rapid river. In order to fave his troops, he turned afide unto the hills; and after fome marches and countermarches, Argyle came up with him at Faivy cafte; and here, after fome 隹irmifhes, in which he was always victorious, Montrofe got clear of a fuperior army, and by a quick march through thefe almoft inacceffible mountains put himfelf abfolutely beyond their power.

It was the misfortune of this general, that very good or very ill forture were equally deftructive of his army. After every victory his Scots foldiers went home to enjoy the foil they had acquired; and had his army been compofed of thefe only, he mult have foon been abandoned altogether: but his Irifhmen laving no place to which they could retire, adhered to him in every fortune. With thefe, therefore, and fome reinforcements of the Atholmen and Macdoulds, Montrofe fell fuddenly upon Argyle's country, letting loofe upon it all the horrors of war. Argyle, collecting 3000 men, marched in queft of the enemy, who had retired with their plunder; and he lay at Innerlochy,

## $459] \quad \mathrm{B} \mathrm{R} \mathrm{I}$

fuppofing himfelf to be ftill at a good dinance from Rritain, them. The carl of Seaforth, at the liead of the garrifon of Inverncfs, and a body of 5000 new levied troops, preffed the royalifts on the other fide, and theatened them with total deftruction. By a quick and unexpected march, Montrofe haftened to Innerlochy, and prefented limfelf in order of battle before the covensnters. Argyle alone, feized with a panic, deferted his arny. They made a vigorous refiftance, however; but were at laft defeated and purfued with great flaughter: after which Montrofe was joined by gieat numbers of Highlanders; Seaforth's army dififeried of itfelf; and the lord Gordon, eldeft fon of the marquis of Huntly, having efcaped from his uncle Argyle, who had hitherto detained him, now joined Montrofe with a confiderable number of his fullowers, attended by the earl of Aboyne.

The council at Edinburgh, alarmed at thefe vidories, fent for Baillic, an officer of reputation, from England; and, joining him in command with Urrey, fent them with a confiderable army againft the royalifts. Montrofe, with a detachment of 800 men, had attacked Dundee, a town extremely attached to the covenant ; and having carried it by affault, had given it up to be plundered by his foldiers; when Baillie and Urrey with their whole force came upon him. He inflantly called off his foldiers from the plunder; put them in order; fecured his retreat by the moft filiful meafures; and having marched 60 miles in the face of an enemy much fuperior, without flopping, or allowing his foldiers the leaft fleep or refreflmerit, at laft fecured himfelf in the mountains. His antagonifts now divided their forces, in order to carry on the war againf an enemy who furprifed them as much by the rapidity of his marches as by the boldnefs of his enterprifes. Utrey met him with 4000 men, at Alderne He defeats near Invernefs; and trufting to his fuperiority in num-1wo armies, bers (for Montrofe had only 2000 men), attacked him in number in the poft which he had chofen. Montrofe, having to his owro. placed his right wing in flong ground, drew the beft of his forces to the other, and left no main body between them; a defect which he artfully concealed by fhowing a few men through trees and bulhes with which that ground was covered. That Urrey might have no leifure to perceive the ftratagem, he inftantly led his wing to the charge, made a furious attack on the covenanters, drove them off the field, and obtained a complete victory over them. Baillie now advanced, in order to revenge Urrey's defeat; but he himfelf met with a like fate at Alford. Montrofe, weak in cavalry, lined his troops of horfe with infintry; and, after putting the enemy's horfe to rout, fell with united force upon their foot, which were entirely cut in picces, though with the lofs of the gallant Lord Gordon on the part of the royalifts.- Having thus prevailed in fo many battles, which his sigour always rendered as decifive as they were fuccefiful, he prepared for marching into the fouthern provinces, in order to put a total period to the power of the covenanters, and diffipate the parliament, which with great pomp and folemnity they had ordered to meet at St Johnflone's.

While Montrofe was thus fignalizing his valour in Parliamen. the north, Fairfax, or rather Oliver Cromwell under lary amm'? his name, employed himfelf in bringing in a nevo mo "tew me.

## B $\quad \vec{R} \quad 1$

Lnjtain.

del into the parliamentary army, and throwing the whole troops into a different ftrape; and never furely was a more fingular army eftablifted, than that which was now fet on foot by the parliament. To the greateft number of the regiments chaplains were ritt appointed. The officers affumed the fpiritual duty, and united it with their military functions. During the in. tervals of action, they occupied themfelves in fermons, prayers, and exhortations. Rapturous ecftafies Lupplied the place of fudy and reflection; and while the zealous devotees poured out their thoughts in unpremeditated harangues, they millook that eloquence, which to their own furprife, as well as that of others, flowed in upon them, for divinc illuminations, and illapfes of the Holy Spirit. Wherever they were quartered, they excluded the miniter from his pulpit ; and, ufurping his place, conveyed their fentiments to the audience withall the authority that followed their power, their valour, and their military exploits, united to their apparent zeal and fervour. The private foldiers were feized with the fame fpirit; and in flort, fuch an enthufinfm leized the whole army as was perhaps fcarce ever equalled.

The royalifts ridiculed this fanaticifm of the parliamentary armies, without being fenfible how much reafun they had to dread it. They were at this time equal, if not fuperior, in numbers to their enemies; but fo licentious, that they were become more formidable to their friends than their enemies. The commanders were mof of them men of diffolute characters; in the weft efpecially, where Goring commanded, univerfal foil and havock were committed; and the whole country was laid watte by the rapine of the army; fo that the moft devoted frierds both to the church and fate wifhed there for fuch fuccefs to the parliamentary forces as might fut an end to thefe diforders.
Royalifs The natural confequence of fuch enthufiafm in the defeated at parliamentary army, and licentioufnefs in that of the Naleby. king, was, that equal numbers of the latter would no longer maintain their ground againft the former. This appeared in the decifive battle of Nafeby, where the forces were nearly equal; but after an obflinate en. gagement, Charles was entirely defeated, 500 of his officers and 4000 private men made prifoners, all his artillery and ammunition taken, and his infantry totally difporfed; fo that fearce any victory could be more complete.

After this fatal battle, the king retired firf to Hereford, then to Abergavenny; and remained fome time is Wales, from the vain hope of raifing a body of infantry in thefe quarters, already haraffed and exhaufted. His affairs now, however, went to ruin in 2ll guarters. Fairfan retook Lecicefter on the 17 th of June. On the roth of July, he raifed the Giege of 'Jaunton; and the royalifts retired to Lamport, an opentown in the county of Somerfet. Here they were fltacked by Fairfax, and beat from their poft, with the lofs of 300 killed and 1400 taken prifoners. This was fullowed by the lofs of Bridgewater, which Fairfax took three days after; making the garrifon, to the number of 2600 men, prifoners of war. He tben reduced Bath and Sharburn; and on the 1tth of September Priful was furrendered to him by Prince Ru- pert, though a few days tefore he had boafted in a
letter to Charles, that he would defend the place for Eritain. four months. This fo enraged the king, that he immediately recalled all the prince's commifions, and fent him a pafs to go beyond fea.

The Scots in the mean time, baving made themfelves mafters of Carlifle after an obftinate fiege, marched fouthwards and invelled Hereford; but were obliged to raife the fiege on the king's approach. And this was the laft glimpfe of fuccefs that attended his arms. Having marched to the relief of Chefter, which was anew befieged by the parliamentary forces under Colonel Jones, his rear was attacked by Pointz, and an engagement immediately enfued. While the fight was continued with great obftinacy, and victory feemed to incline to the royalifts, Jones fell upon them from the other fide, and defeated them with the lofs of 600 killed and 1000 taken prifoners. The king with the remains of his army fled to Newark; and Charles rea from thence efcaped to Oxford, where he fhut himfelftires to Ox. up during the winter feafon.

After the furrender of Briftol, Fairfax and Cromwell having divided their forces, the former marched weltwards in order to complete the conqueft of DevonChite and Cornwall; the latter attacked the king's garrifons which lay to the ealt of Briftol. Nothing was able to fland before thefe victorious generals; every town was obliged to fubmit, and every body of troops that pretended to refift were utterly defeated. At laft, new's arrived, that Montrofe himfelf, after ${ }^{1} 4.3$ fome more fucceffes, was defeated; and thus the only defeated. hope of the royal party was deftroyed.

When that brave general defcended into the fouthern counties, the covenanters, affembling their whole force, met him with a numerous army, and gave him battle at Kilfyth. Here he obtained his moft memorable victory: 6000 of the covenanters were killed on the fpot, and no remains of an army left them in Scotland. Many noblemen, who fecretly favoured the royal caufe, now declared openly for it, when they faw a force able to fupport them. The marquis of Douglas, the earls of Annandale and Hartfield, the lords Fleming, Seton, Maderty, Carnegy, with many others, flocked to the royal ftandard. Edinburgh opened its gates, and gave liberty to all the prifoners there detained by the covenanters. Among the reit was Lord Ogilvy, fon to Airly, whofe family had contributed very much to the victory gained at Kil-fyth.-David Leely was detaclied from the army in England, and marched to the relief of his diftreffed party in Scotland. Montrofe advanced ftill further to the fouth, allured by the vain hopes, both of roufing to arms the earls of Hume, Traquaire, and Roxburgh, who had promifed to join him ; and of obtaining from England fome fupply of cavalry, in which he was very deficient. By the negligence of his fcouts, Lefly, at Philip-haugh in the foreft, furprifed his army, much diminifted in numbers from the defertion of the Highlanders, who had retired to the hills, according to cuftom, to fecure their plunder. After a Marp conflie, in which Montrofe exerted great valour, his forces were routed by Lefly's cavalry, and he himfelf forced to fly to the mountains.

Nothing could be more affecting than the fituation in which the king now was. He now refolved to grant the parliament their own terms, and fent them

Britain. repeated mellages to this purpole, but they never deigned to make him the leaft reply. At lafl, after reproaching him with the blood filt during the war, they told him that they were preparing forne bills, to which, if he would confent, they would then be able to judge of his pacific inclinations. Fairfax, in the Charlesfur-order to lay fiege to Oxford; and Charles, rather renders himfelf to the Scots, than fubmit to be taken captive and led in triumph by his infolent fubjects, refolved to give himfelf up to the Scots, who had never teflified fuch implacable animo. fity againlt him, and to trult to their loyalty for the reff. After pafting through many bye-ways and crofsroads, he arrived in company with only two perfons, Dr Hudfon and Mr Afhburnham, at the Scots camp before Newark, and difcovered himfelf to Lord Leven their general.

The reception he met with was fuch as might be expected from thefe infatuated bigots, deftitute of every principle of reafon, honour, or humanity. Inftead of endeavouring to alleviate the diftreffes of their fovereign, they fuffered him to be infulted by the clergy men. They immediately fent an account of his arrival to the Englifh parliament, and they as quickly entered into a treaty with the Scots about delivering up

145

## who rell

him to the
Englifl.

146
The ariny begin to ufurp the fovereign power. their prifoner. The Scots thought this a proper time for the recovery of their arrears due to them by the Englith. A great deal was really due them, and they claimed much more than actually belonged to them. At lalt, after various debates between them and the parliament, in which they pretended to great honour, and infifted upon many punctilios, it was agreed, that, upon payment of 400,0001 . the Scots fhould deliver up the king to his enemies; and this was chee fully complied with. Thus the Scots juftly fell under the cenfure of having fold their king who had thrown himfelf upon their mercy; a flain peculiar to the nation, and unparalleled in hiftory either ancient or modern. It muff, however, be acknowledged, that the infamy of this bargain had fuch an influence on the Scots parlia. ment, that they once voted that the king fhould be protected and his liberty infifted on. But the general affembly interpofed; and pronounced, that as he had refufed to take the covenant which was prefled on him, it became not the godly to concern themfelves about his fortunes. In conlequence of this, the parliament were obliged to retract their vote. The king, being delivered over to the Englih commiffioners, was conducted under a guard to Holdenby in the county of Northampton, where he was very rigoroufly confined; his ancient fervants being difniffed, himfelf debarred from vifits, and all communication cut off with his friends or family.

The civil war being now over, the king abfolved his followers from their allegiance, and the parliament had now to enemy to fear but their own troops. From this quarter their danger only arofe; and it was not long before they found themfelves in the fame unfortunate fituation to which they had reduced the king. The inajority of the houfe were prebyterians, but the majority of the army were independents. The former, foon after the retreat of the Scots, feeing every thing reduced to obedience, propofed to difband a confiderable part of the army, and fend the reft over to Ireland. This was by no means relifhed, and Cromwell
took care to heighten the difaffection. Infead of preparing to dilhand, therefore, the foldiers refolved to petition; and they began by defiring an indemnity, ratified hy the king, for any illegal actions which they might have committed during the war. The commons voted that this petition tended to introduce mutiny, \&c. and threatened to proceed againt the promoters of it as cnemies to the flate and difurbers of the public pace. The army now began to fet un for A mit the public peace. The army now began to fet up for A malitary
themifelves. In oppofition to the parliameut at Weft-parliament
formed. minfer, a military parliament was formed. The principal officers formed a council to reprefent the body of peers ; the foldiers elected two men out of each company to reprefent the commons, and thefe were called the agitators of the army; and of this aflembly $\mathrm{C}_{10}$ well took care to be a inember. The new parliament foon found many grievances to be redrefled ; and $\mathrm{f}_{\mathrm{p}}$ cified fome of the moft confiderable. The commons were obliged to yield to every requeft, and the demands of the agitators rofe in proportion. The commons acculed the army of mutiny and fedition; the army retorted the charge, and alleged that the king had been depofed only to make way for their ufurpations. Cromwell, in the mean time, who fecretly Cromwel conducted all the meafures of the army, while he ex- feizesthe claimed againft their violence, refolved to feize the king's perfon. Accordingly a party of 500 horfe appeared at Holmby caftle, under the command of one Joyce, originally a taylor, but now a cornet; and by this man was the king conducted to the army, who were haftening to their rendezvous at Triplo-heath rear Cambridge. Next day Cromwell arrived among them where he was received with acclamations of joy, and immediately invefted with the fupreme command.

The commons now faw the defigns of the army; but it was too late, all refiftance was become vain : Cromwell advanced with precipitation, and was in a few days at St Alban's. Even fubmiffion was now to no purpofe; the army ftill rofe in their demands, in proportion as thefc demands were gratified, till at laft they claimed a right of modelling the whole government, and fettling the nation.

Cromwell began with accufing eleven members of the houfe, the very leaders of the prebyterian party, as guilty of high treafon, and being enemies of the army. The commons were willing to protect them; but the army infifting on their difmiffion, they voluntarily left the houfe. At laft the citizens of London, finding the conititution totally overturned, and a military defpotifm beginning to take place, inflead of the kingly one they were formerly afraid of, began to think ferioufly of reprefling the infolence of the troops. The common council affembled the militia of the city; the works were manned; and a manifefto publifbed, aggravating the hoftile intentions of the army. Find. ing that the commons, in compliance with the requeft of the army, had voted that the city militia ftould be dibanded, the multitude role, befieged the door of the houfe, and obliged them to reverfe that vote they had. fo lately paffed. The affembly was, of confequence, divided into two parties; the greater part fiding with the citizens; but the minority, with the two fpeakers at their head, were for encouraging the army. Accordingly the two fpeakers, with $G_{2}$ of the members,

## B R I <br> [ 462 ] <br> 3 li I

Brisain.

149 Sixty-two numbers of parliament join the army.
fecretly retired from the houfe, and threw themfelves under the protection of the army, who were then at Hounflow-heath. They were received with flouts and acclamations; their integrity was extolled; and the whole force of the foldiery, to the number of 20,000 men, now moved forward to reinflate them in their places.

In the mean time, the part of the houfe which was left, refolved to refift the encroachments of the army. They chofe new freakers, gave orders for enlifting troops, ordered the train-bands to man the lines; and the whole city boldly refolved to refift the invafion.

150 The reft Eubmit. But this refolution only held while the enemy was at a diftance; for when Cromwell appeared, all was obedience and fubmifion; the gates were opened to the general, who attended the two \{peakers and the reft of the members peaceably to their habitations. The eleven impeached members being accufed as caufes of the tumult, were expelled; and moft of them retired to the continent. The mayor, theriff, and three aldermen, were fent to the tower: feveral citizens, and officers of the militia, were committed to prifon; the lines about the city levelled with the ground; and the command of the Tower was given to Fairfax.

It now only remained to difpofe of the king, who remained a prifoner at Hampton-court. The independent army, at the head of whom was Cromwell, on one hand; and the prefbyterians, in name of both houfes, on the other; treated with him feparately in private. He had fometimes even hopes, that, in thefe Atruggles for power, he might have been chofen macdiator in the difpute; and he expected that the kingdom at laft, being fenfible of the miferies of anarchy, would of its own accord be hufhed into its former tranquil condition. At this time he was treated with fume flattering marks of difinction; he was permitted to converfe with his old fervents; his chaplains were permitted to attend him, and celebrate divine fervice their own way. But the moft exquifite pleafure he enjoyed was in the company of his children, with whom he had feveral interviews. The meeting on thefe occafions was fo pathetic, that Cromwell himfelf, who was once prefent, could not help being moved, and was heard to declare, that he never beheld fuch an affeating fcene before. But thefe inftances of refpect were of no long continuatice. $\Lambda s$ foon as the army had gained a complete vietory over the houfe of commons, the king was treated not only with the greateft difrefpect, but even kept in continual alarms for his own perfonal fafety. The confequence of this was, that Charles at laft refolved to withdraw himfelf from the kingdom. Accordingly, on the IIth of November 1647 , attended only by Sir John Berkeley, Afh-
rived. He could not hope to remain long concealed at 'Titchfield: the queftion was, what meafure fhould next be embraced? In the neighbourhood lay the ille of Wight, of which Hammond was governor. This man was entirely dependent on Cromwell, which wased in the a very unfavourable circumftance; yet, becaufe the infe of governor was nephew to Dr Hammond the king's fa- Wight. vourite chaplain, and had acquired a good reputation in the army, it was thought proper to have recourfe to him in the prefent exigence, when no other rational expedient could be thought of. Anburnham and Berkeley were difpatched to the ifland. They had orders not to inform Hammond of the place where the king lay concealed, till they had firft obtained a pro. mife of him not to deliver up hin majelty, even thaugh the parliament and army fhould require him ; but reStore him to his liberty, if he could not protect him. The promife would have been but a flender fecurity: yet even without exaeting it, Alhburnham imprudent. ly, if not treacheroully, brought Hammond to Titchfield; and the king was obliged to put himfeif into his hands, and to attend him to Caribbroke caftle in the ifle of Wight, where, though he was received with great demonftrations of refpect and kindnefs, he was in reality a prifoner.
While the king continued in this forlorn fituation, ${ }^{18} 53$ Cromwell found himfelf upon the point of lofing allin danger the fruits of his former fehemes, by having his own trom ihe principles turned againft himfelf. Among the Inde- levellers.
pendents, who in general were for no ecclefiaftical fub. principles turned againft himfelf. Among the Inde-
pendents, who in general were for no ecclefiaftical fubordination, a fet of men grew up called leveliers, who difallowed all fubordination what foever, and declared that they would have no other chaplain, king, or general, but Jefus Chrif. Though this would have gone down very well with Cromwell, as long as it was only directed againf his enemies, he did not fo well reling it when applied to himfelf. Having intimation that the levellers were to meet at a certain place, he unexpectedly appeared before them at the head of his red regiment, which had hitherto been deemed invincible. He demanded, in the name of God, what thefe meetHe demanded, in the name of God, what thefe meet-
ings and murmurings meant? he expoftulated with them upon the danger and confequence of their precipitant fehemes, and defired them immediately to depart. Inftead of obeying, however, they returned an infolent anfuer; wherefore, ruming on them in a fury, he laid two of them dead at his feet. His guards difperfing the refl, be caufed feveral of them to be hanged upon the fpot, and fent others to London; and thus diffipated a faction no otherwife criminal than in having followed bis own example.

Cromwell's authority was greatly increafed by the He defects laft mentioned action; but it became irrefifible in con-the Scots. fequence of a new and unexpected addition to his fuc. ceffes. The Scots, perhaps afhamed of the reproach of having fold their king, and fimulated farther by the Independents, who took all occafions to nortify them, raifed an army in his favour, and the chief command was given to the earl of Hamilton: while Langdale, who profeffed himfelf at the head of the more bigotted party who had taken the covenant, marched at the head of his feparate body, and both invaded the nurth of England. Though thefe two armies amounted to above $20,000 \mathrm{mcn}$, yet Cromwell at the head of 8000 of his hardy veterans, feared not to give them battle. 152

 E While the king continued in this forlorn fituation, Cromwell

[^13] burnham, and Leg, he privately left Hampton-court; and his cfeape was not difcovered till near an hour after ; when thofe who eritered his chamber, found on the talle fome letters direfled to the parliament, to the general, and to the oflicer who had attended him. All night he travelled through the forefl, and arrived next day at Titchfield, a feat of the carl of Southanpton, where refided the countefs dowager, a woman of bonour, to whom the king knew he might fafely entruft his perfon. Before he arrived at this place, be had gone to the fea-cnafl : and expreffed great anxicty that a duip which be feemed to look for had not ar-

Britain. He attacked them one after another; routed and difperfed them; took Hamilton prifoner; and, following his blow, entered Scotland, the government of which he fettled entircly to his fatisfaction. An infurredion in Kent was quelled by Fairfax with the fame eafe; and nothing but fuccefs attended all this ufurper's attempts.

During thefe contentions, the king, who was kept a prifoner at Caribroke cafle, continued to negociate with the parliament for fettling the unfpeakable calamities of the kingdom. The parliament now faw no other method of deftroying the military power, but to deprefs it by the kingly. Firequent propofals for an accommodation paffed between the captive king and the commons; but the great obftacle which had all along flood in the way, ftill kept them from agreeing. This was the king's refufing to abolifh Epifcopacy, though he confented to alter the liturgy. However, the treaty was ftill carried on with vigour, and the parliament for the firft time feemed in earneft to conclude their negociations. But all was now too late. The victorions arry, with Cromwell at their head, advanced to Windior, and with furious remonftrances hegan to demand vengeance on the king. The unhappy monarch had been lately fent under confinement to that place; and from thence he was now conveyed to Hurft caftle in Hampllire, oppofite to the ine of Wight. 'The parliament in the mean time began to illue ordinances for a more effectual oppofition to thefe military encroachments, when they were altonifled by a meflage from Cromwell, that he intended paying them a vifit next day with his whole army; and in the mean time ordering them to raife him 40,0001 . on the city of London.

The commons, though deflitute of all hopes of prevailing, had fill the courage to refift, and to attempt in the face of the whole army to finith the treaty they had begun with the king. They had iaken into confideration the whole of his conceffions; and though they had formerly vored them unfatisfactory, they now renewed the confultation with great vigour. After a violent debate which latted three days, it was carried in the king's favour by a majority of 129 againf 83 , that his conceflions were a foundation for the houfes to proceed upon in fettling the affairs of the nation.
${ }^{3} 56$ Colonel Pride's purge. This was the laft attempt in his favour ; for the next day Colonel Pride, at the head of two regiments, blockaded the houfe; and fcizing in the paflige 41 members of the Prefbyterian party, fent them to a low room telonging to the houfe, that paffed by the denomination of Hell. Above 160 members more were excluded; and none were allowed to enter but the mont furious and determined of the Independents, in all not exceeding 60. This atrocious invafion of parliamentary rights commonly pafied by the name of Pride's Purge, and the remaining members were called the Rump. Thefe foon voted, that the tranfactions of the houfe a few days before were entirely illegal, and that their general's conduct was jufl and neceflary.

Nothing now remained, to complete the wickednefs of this parlimment, but to murder the king. In this affembly, therefure, compofed of the molt obfcure citizens, and officers of the army, a committee was appointed to bring in a charge againft the king; and on their report, a vote paffed declaring it treafon in a
king tu levy war againf his parliament. It was therc. fore refulved, that a high coust of juffice fhould be appointed, to try his majefty for this new inverted treafon. For form's fake, they defired the concurrence of the few remaining lords in the upper houle; but there was virtue enough feft in that body unanimounly to reject the propofal. The commons, however, were not to be flopped by fo fmall an obtacle. They voted that the concurrence of the houfe of lords was unneceflary, and that the people were the origir of all jut power. To add to their zeal, a woman of Herefordhlire, illuminated by prophetical vifions, dcfired ad. mittance, and communicated a revelation fle pretended to have received from heaven. She affured them that their meafures were confecrated from above, and ratified by the fanction of the Holy Ghoft. This in. telligence gave them great comfort, and much confirmed them in their prefent refolutions.

Colonel Hartifon, the fon of a butcher, was commanded to conduet the king from Hurt caftle to Windfor, and from thence to London. His afflited fubjeds, who ran to have a fight of their fovereign, were greatly affected at the change that appeared in his face and perfon. He had permitted his beard to grow ; his hair was become venerably gray, rather by the preflure of anxiety than the hand of time; while the reft of his apparel bore the marks of misfortune and decay. He had long been attended by an old decrepid fervant whofe nanme was Sir Philip Warzeick, who could only deplore his mafler's fate without being able to revenge his caufe. All the exterior fymbols of fovereignty were now withdrawn, and his attendants had orders to ferve him without ceremony. He could not, however be perfuaded that his adverfaries would bring him to a formal trial; but he every moment expected to be defpatched by private affaffination.

From the 6th to the 20th of January was fent in His tial. making preparations for this extraordinary trial. The court of juflice confited of 133 perfons named by the commons; but of thefe never above 70 met upon the trial. The nembers were chiefly compofed of the principal officers of the army, mot of them of very mean birth, together with fome of the lower houle, and a few citizens of London. Bradhaw a lawyer was chofen prefident; Coke was appointed folicitor for the people of England; Dorillaus, Steele, and Aike, were named affiftants. The court fat in Weftminferhall. When the king was brought forward before the court, he was conducted by the mace-bearer to a chair placed within the bar. Though long detained a prifoner, and now produced as a crininal, he fill maintained the dignity of a king. His charge was ilsen read by the folicitor, accufing him of having been the caule of all the bloodfhed which had flowed fince the commencement of the war; after which Bradhaw directed his difcourfe to him, and told him that the court expected his anfwer.

The king began his defence with declining the autharity of the court. He reprefented, that having been engaged in treaty with his two houfes of parlia. meat, and having finithed almoft every article, he expeeted a different treatment from what he lad now received. He perccived, he fail, no appearance of ath upper houle, which was neceflary to conftitute a juit tribumal. He alleged that he was bimfelf the hing

## B R I [ 464$] \quad$ B R I

Eritain. and fountain of las, and confequently could not be tried by laws to which he had never given his affent ; that having been intrulled with the liberties of the people, he would not now betray them by recognizing a power founded in ufurpation; that he was willing, before a proper tribunal, to enter into the particulars of his defence; but that before them he mult decline any a pology for his innocence, left he thould be confidered as the betriyer of, and not a martyr for, the conftitution. Bradihaw, in order to fupport the authority of the court, infifted, that they had received their authority from the people, the fource of all right. He prefled the king not to decline the authority of the court that was delegated by the commons of England, and interrupted and overruled him in his attempts to reply. In this manner the king was three times produced before the court, and as often perfifled in declining its jurifdiction. The fourth and laft time he was brought before this felf-created tribunal, as he was proceeding thither, he was infulted by the foldiers and the mob, who cried out, "Juftice! juftice! Execution! execution!" but he continued undaunted. His judges having now examined fome witneffes, by whom it was proved that the king had appeared in arms a. gainft the forces commiffoned by parliament, they pronounced fentence againft him. He feemed very ansious at this time to be admitted to a conference with the two houfes, and it was fuppofed that he intended to refign the crown to his fon; but the court refufed compliance, and confidered his requeft as an artifice to delay juftice.

The behaviour of Charles under all thefe inflances of low-bred malice was great, firm, and equal. In going tlirough the hall from this execrable tribunal, the fol. diers and rabble were again inftigated to cry out JuAtice and execution! They reviled him with the moft bitter reproaches. Among other infults, one mifcreant prefumed to fpit in the face of his fovereign. He patiently bore their infolence: "Poor fouls (cried he), they would treat their generals in the fame manner for fixpence." Thofe of the populace who fill retained the feelings of humanity exprefled their forrow in fighs and tears. A foldier more compaftionate than the reft could not help imploring a blefling on his royal head. An officer overhearing lim, ftruck the honeft centinel to the ground before the king; who could not help faying, that the punifument exceeded the offence.

At his return to Whitehall, Charles defired permif. fion of the houfe to fee his children, and to be attended in his private devotions by Dr Juxon late bifhop of London. Thefe reguefts were granted, and alfo three days to prepare for execution. Every night between his fentence and exccution, the king flept found as ufual, though the noife of the workinen employed in framing the fcaffold continually refounded in his ears. The fatal morning being at laft arrived, he rofe early; and calling one of his attendants, he bade him employ more than ufual care in dreffing him, and preparing him for fo great a folemnity. The ftecet before Whitehall was the place dellined for his execution ; for it was intended that thas flould increafe the feverity of his puniftsment. He was led through the banqueting-houfe to the feaffold adjoining to that edifice, attended by his friend and fervans Biflop J:xxon, a man of the fatme mild and iteady virtues with his matler. 'The feaffold, which was
covered with black, was guarded by a regiment of foldiers under the command of Colonel Tomlinfon ; and on it were to be feen the block, the axe, and two executioners in madks. The people, in crowds, ftood at a greater diftance. The king furveyed all thefe folemn preparations with calm compofure; and, as he could not expect to be heard by the people at a diftance, he addreffed himfelf to the ferw perfons who food round him. He there juftified his own innocence in the late fatal wars : be obferved, that he had not taken arms till after the parliament had ftown him the example; and that he had no other object in his warlike preparations, than to preferve that authority entire which had been tranfmitted to him by his anceflors. But, though innocent towards his people, he acknowledged the equity of his execution in the eyes of his Maker: he owned that he was juftly punifhed for having confented to the execution of an unjuft fentence againft the earl of Straf. ford. He forgave all his enemies; exhorted the people to return to their obedience, and acknowledge his fon as his fucceffor; and fignified his attachment to the Proteftant religion as profeffed by the church of England. So ftrong was the impreffion made by his dying words on thofe who could hear him, that Colonel 'romlinfon himfelf, to whofe care he had been committed, acknowledged himfelf a convert. At one blow his head was fevered from his body. The other executioner then, holding up the head, exclaimed, "This is the head of a traitor."

It is impoffible to defcribe the grief, indignation, Grief of and aftoniffment, which took place not only among the nation the fpectators, who were overwhelmed with a flood of on that acforrow, but throughout the whole nation, as foon as the report of this fatal execution was conveyed to them. Each blamed himfelf either with active difloyalty to the king, or a paffive compliance with his deftroyers. The very pulpits that ufed to refound with infolence and fedition were now bedewed with tears of unfeigned repentance; and all united in their deteftation of thofe dark hypocrites, who, to fatisfy their own enmity, involved a whole nation in the guilt of treafon.-Charles was executed on the 30 th of January 1649 , in the 49 th year of his age, and $24^{\text {th }}$ of his reign. He was of a middling Atature, robult, and well proportioned. His vifage was pleafant, but melancholy; and it is probable that the continual troubles in which he was involved might have made that impreffion on his countenance.

It being remarked, that the king, the moment be-piety of fore be ftrctched out his neck to the executioner, had the king faid to Juxon, with a very earneft accent, the fingle in his laft word Remember, great myfteries were fuppofed to be moments concealed under that word; and the generals vehemently infilted with the prelate that he fhould inform them of the king's meaning. Juxon told them, that the king, having frequently charged him to inculcate on his fon the forgivenefs of his murderers, had taken this opportunity in the laft moment of hes life, when his commands, he fuppofed, would be regarded as facred ard inviolable, to reiterate that defire; and that his mild fpirit thus ferminated its prefent courfe by an aet of benevolence to his greatelt enemics.

The diffolution of the monarchy in England foon Diffolution followed the death of the monarch. When the peers of the Eng. met on the day appointed in their adj urment, hey farmoentered unon bufinefs; and fent duna fome vutes to

## $B \quad \mathrm{R}$ I

Britain. the commons, of which the latter deigned not to take

## $\xrightarrow{\square}$

 the leaft notice. In a few days after, the commons voted, that the houle of lords was ufelefs and dangerous; for which reafon it was abolifhed. They voted it ligh trealon to acknowledge Charles Stuart, fon of the late king, as fucceffor to the throne. A great Ceal was made; on onc fide of which were engraven the arms of England and Ireland, with this infcription: "The great feal of England." On the reverfe was reprefented the houfe of commons fitting, with this motto: "On the firt year of freedom, by God's blefling reftored, 1649 :" The forms of all public bufinefs were changed from being tranfacted in the king's rame, to Enthufiafin that of the kecpers of the liberties of England. The and tyran- court of king's bencla was called the court of public ny of the lonch. Nay, fo cautious on this head, it is faid, were republicans. fome of the republicans, that, in reciting the Lord's165 Charles II. invited int Scotland. prayer, they would not fay, "thy kingdom," but "thy commonveealth, come." The king's flatue in the exchange was thrown down; and on the pedeftal thefe words were infcribed: Exit tyrannus, regum ultimus; "The tyrant is gone, the laft of the kings." The commons, it is faid, intended to bind the princefs Elizabeth apprentice to a button-maker; the duke of Gloucefter was to be taught fome other mechanical employment: but the former foon died of grief, as is fuppofed, for her father's tragical end; the latter was fent beyond fea by Cromwell. The commons next proceeded to punifh thofe who had been moft remarkable for their attachment to their Jate fovereign. The duke of Hamilton, Lord Capel, and the earl of Holland, were condemned and executed; the earl of Norwich and Sir John Owen were alfo condemned, and afterwards pardoned. Thefe executions irritated the Scots: their loyalty began to return; and the infolence of the independents, with their vi\&ories, inflamed them fill more. They determined, therefore, to acknowledge Prince Charles for their king, but at the fame time to abridge his power by every limitation which they had attempted to impofe on his father.

Charles, after the death of his father, having paifed fome time at Paris, and finding no likelihood of affirtance from that quarter, was glad to accept of any condition. The Scots, however, while they were thus profeffing loyalty to their king, were neverthelefs cruelly punifhing his adherents. Among others, the brave marquis of Montrofe was taken prifoner, as he endeavoured to raife the Highlanders in the royal caufe; and being brought to Edinburgh, was hanged on a gibbet 30 feet high, then quartered, and his limbs fuck up in the principal towns of the kingdom. Yet, notwithftanding all this feverity, Charles ventured into Scotland, and had the mortification to enter the gate of Edinburgh where the limbs of that faithful adherent were ftill expofed.

The young king foon found that he hat only exchanged his exile for imprifonment. He was furrounded and incefiantly importuned by the fanatical clergymen, who having brought royalty under their feet, were refolved to keep it lill fubfervient, and to trample upon it with all the contumely of upltarts. Charles pretended to give ear to their difcourfes; but, howcer, made an attempt to efcape. He was overtaken and brought back; when be owned the greatnefs of his fault, and teftified his repentance for what he lad done. Crounwell,

Vol. IV. Patt II.
in the mean time, who had been appointed by the parliament to command the army in Ireland, profecued the war in that kingdom with his ufual fuccefs. He Cron wel ${ }^{267}$, had to encounter the royalifts commanded hy the duke fuccefs in of Ormond, and the native Irifia led on by G'Neale. Irctand. Thefe troops he quickly overcame; and moft of the towns, intimidated by his cruelty, opened their gates at his approach. He was on the point of reducirg the whole kingdom, when he was recalled by the parliament to defend his country againft the Scots, who had raifed a confiderable army in fupport of the royal caufe.
On the return of Cromwell to England, he was cho. Infatuation fen commander in chief of the parliamentary forces, in the room of Fairfax, who declined oppofing the prefbyterians. The new general immediately fet forward for Scotland with an army of 16,000 men, where he was oppofed by General Lefly, who formed an excellent plan for his own defence. This prudent commander, knowing his men to be inferior in valour and difcipline, however fuperior in numbers, to thofe of Cromwell, kept himfelf carefully in his intrenchments. At laf Cromwell was drawn into a very difadvantageous poft near Dunbar, where his antagonifs waited deliberately to take advantage of him. From this imminent danger, however, he was delivered by the madnefs of the Scots clergy. They, it feems, had been wrefling in prayer with the Lord night and day, and at laft fancied that they had obtained the fuperiority. Revelations were made to them, that the heretical army, together with Agag their general, would be delivered into their hands. Upon the affurances of thefe vifions, they obliged their general to defcend into the plain, and give the Englifi battle. When Cromwell faw this mad action, be aflured his followers, that the Lord had delivered them into his bands, and ordered his army to fing pfalms, as if already certain of victory. The Scots, though double the number of the They are Englifh, were foon put to tlight, and purfued with defented great flaughter, while. Cromwell did not lofe in the action above 40 men.

After this defeat, Charles put himfolf at the head of the remains of his army; and thefe he further flrength. ened by the royalifts, who had been for fome time excluded from his fervice by the covenanters. He was fo clofely purfued by Cromwell, however, that he foon found it impoflible to maintain his army. Obferving, therefore, that the way was open to England, he immediately directed his march toward that country, where he expected to be reinforced by all the royalits in that part of the kingdom. In this however, he was deceived: the Englifh, terrified at the name of his opponent, dreaded to join him. But his mortification was greatly increafed, when at Worcefter he was informed that Cromwell was marching with hafly frides from Scotland with an army of 40,000 men. This news was Charles de. fcarcely arrived, when Cromwell himfelf was there. He ieated at fell upon the town on all fides: the whole Scots army was either killed or taken prifoners; and the kirg himfelf, having given many proofs of perfonal valour, was obliged io fly.

The young ling now entered upon a fcene of adventures the mon wis 191 ventures the moit romanic that can be imagined. Af. His adven-
ter his hair was cut off, the better to difguife his per-tures aiter lon, he wooked for fome days in the habit of a peafant, $3 \mathrm{~N} \quad$ cutting

Eritain. cutting faggots in a wood. He next made an attempt to retire into Wales, under the conduct of one Pendrel a puor furmer, who was fincerely attached to his crufe. In this attempt, however, he was difappointed; every pals being guarded to prevent their efcape. Being obliged to return, he met one Colonel Carelefs, who had efcaped the carnage at Worcefter, In his company the king was obliged to climb a fpreading oak; among the thick braticles of which they fpent the day together, while they heard the foldiers of the enemy in purfuit of them below. From thence he paffed with imminent danger, feeling all the varieties of famine, $f$ fatigue, and pain, till he arrived at the houfe of Colonel Lone, a zealous royalift in Stafordfhire. There he deliberated about the means of efcaping into France; and Britulol being fuppofed the propereit port, it was refolved that he thould ride thither before this gentleman's fifter, on a vifit to one NIrs Norton, who lived in the neighbourhood of that city. During this journey, he every day met with perfons whofe faces he knell; and at one time paffied through a whole regiment of the enemy's army.

When they arrived at Mrs Norton's, the firf perfon they faw was one of his own chaplains fitting at the door and amuling himfelf with feeing people play at bosls. The king, after having taken proper care of his horfe in the flable, was fhow to an apartment which Mrs Lane had provided for him, as it was faid he had the ague. The butler, however, being fent to him with fome refreftwent, no fooner beheld his face, which was very pale with ansicty and fatigue, than he recolleeted his king and mafter; and falling on his knees, white the teats freamed down his cheek?, cried out, "I am rejoiced to fee you majefty." The king was alarmed ; but made the butier promife that he would kecp the fecret from cvery mortal, even from his mafter; and the honefl fervant punctually obeyed him.

No flup being found that would for a month fet fail from Bififol either for France or Spain, the hing was obliged to go elfewhere for a paffage. He therefore repaired to the houle of Colonel Wyndham in Dorfethiire, where he was corJially seccived. His mother, a venctable matron, feemed to think the end of her life notly rewarded in having it in her power to give protection to her king. She expreffed no difiatisfaction at hating loil three fons and one grandchild in the defence of his caufe, fince the was honoured in being inftrumental in his own prefervation.

Purfuing from thence his journey to the fea-fide, he once more hai a very narrow efcape at a little inn, where i- fet up for the night. The day lad been appointel for a lolemn fant and a fanatical weaver, who had leen a foldier in the parliamentary army, was prenc ing againft the king in a litte chapel fronting the houfe. Chayles, to avoid fufpicion, was himifelf arnong the audience. It happened that a fmith, of the fame principles "ith the weaver, had been examining the horles belonging to the paffengers, and came to al: fare the preacher, that he knew by the fathion of the floce, that one of the fitangers horfes caine from the north. The preacher immedintely aflirmed, that this horfe could belong to no other than Charles Stuart, and inflantly went with a comfable to featch the inn. Bur Charles had taken timely precautions, and left the iun before the conftable's arrival.

At Shoreham, in Suffex, a veffel was at faft found, Britain. in which he embarked. He was known to fo mary, that if he had not fet fail at that critical moment, it $\quad y_{7}$ had been impoffible for him to efcape. After 41 days to frcapes concealment, he arrived fafely at Fefchamp in Normandy. No lefs than 40 men and women lad at dif. ferent times been privy to his efcape.

Cromwell in the mean time returned in triumph; Cromwell ${ }_{7}{ }^{7}$ and his firlt care was to depref, the Scots, on account treats Scot. of their having with hfood the work of the gofpel, as he land as a called it. An act was pafied for abolfhing royalty in provinced Scotland, and annexing that kingdom as a conquered province to the Englifh commonwealth. It was empowered, however, to fend fome members to the Englifh parliament. Judges were appointed to diftribute juftice; and the people of that country, now freed from the tyramity of the ecclefiaftics, were not much diffatisfied with the government.

All the parts of the Britifl dominions being now re- War with duced to perfect fubjection to the parlianent, they next the Durct. refolved to chanife the Dutch, who had given but very flight caufes of complaint. It happened that one Dr Doriflaus, who was of the number of the late king's judges, being fent by the parliament as their envoy to Holland, was wfeflinated by one of the royal party who had taken refuge there. Some time after, alfo, Mr St John, appointed their ambafiador to that court, was infolted by the friends of the prince of Orange. Thefe were thought fufficient reafons for a dcclaration of war againt the Hollanders by the commonwealth of England. The parliament's chief dependence lay in the activity and courage of Blake their admital; who, though he had not embatked in naval command till late in life, yet furpaffed all that went before him in courage and dexterity. On the nther fide, the Durchoppofed to him their fanous admiral Van Tromp, to whom their country never fince penduced an equal. Many were the engagements between thele celebrated admirals, and various was their fuccefs. Several dreadful encounters ferved rather to flow the excellency of the admirals than to determine their fuperiotity. At lat the Dutch, who felt many great difidrantages by the lofs of their trade, and by the total fulpenfion of their fifheries, were willing to treat of a peace. The parliament, however, gave but a very unfavourable onfwer. They fudied to keep their navy on foot as long as they could; rightly judging, that while the force of the nation was exetted by fea, it would diminilh the formidable power of Cromivell by land.

This great afpirer, however, quickly perceived their Cromwel? defigns; and therefore, fecure in the attachnent of ecfolves to the army, refolved to feize the fovereign power. He fcize the perfuaded the officers to prefent a petition for payment of arrears, and redrefs of grievances. His orders were obeyed: a petition was drawn up and prefented, in which the oflicers, after demanding their arrears, defired the parliament to confider how many years they had fat, and what pretenfions they had formerly made of their defigns to new-motel the houfe, and eftablifth frecdom on its broadef bafis. They alleged, that it was now full time to give place to others; and however meritorious thir adions might have been, yet the reft of the nation had fome right, in their turn, to manifent their patriotifn in defence of their country. The houfe was highly offended : they appointed a committee

Britain. to prepare an act, ordaịing that all perfons who prelented fuch pections for the future fhould be deemed guilty of high treafon. 'To this the officers made a very warn remonflance, and the parlizment as angry a reply. Cromwell, being informed of this altercation, flarted up in the utmof feeming fury, and turning to Major Vernon, ciied out, "that he was compelled to do a thing that made the very hair of his head fland on end." Then haftening to the houfe with 300 fol--diers, and with the marks of violent indignation ort his countenance, he entered, took his place, and attended to the debates for fome time. When the queltion was ready to be put, he fuddenly ftarted up, and began to load the parliament with the vileft reproaches for their tyramy, ambition, oppreflion, aud robbery of the public. Upon which, ltamping with his foot, which was the fignal for the foldiers to enter, the place was immediately filled with armed men. Then, addrefling himelf to the members, "For flame (faid he), get you gone. Give place to honefter men; to thofe who will ınorc faithfully difcharge their truft. You are no longer a parliament; I tell you, you are no longer a parliament; the I.ord has done with you." Sir Harry Vane exclaiming againft this conduct, "Sir Harry! (cries Cromwell with a loud voice), O Sir Harry Vane! The Lord deliver me from Sir Harry Vane!" Taking hold then of one of the members by his cloak, "Thou art a whoremafte," cries he; to another, "Thou art an adulterer;" to a third, "Thou art a drunkard;" to a fourth, " Thou art a glutton, \&c." " It is you (continued he to the members), that have forced me upon this. I have fought the Lord night and day, that he would rather nlay me than put me upon this work." Then pointing to the mace, "Take away that bauble," cried he: after which, turning out all the members, and clearing the hall, he ordered the doors to be locked; and putting the keys in his pocket, re. turned to Whitehall.

Thus the whole civil and military power centered in Cromwell, who by this bold tranfaction becane, in eflect, king of Great Britain, with uncontroulable authority. Being willing, however, to amufe the people with the form of a commonwealth, he propofed to give his fubjects a parliament; but fuch a one as thould be altogether obedient to his commands. For this purpofe it was decreed, that the fovereign power fhould be vefted in 144 perfons, under the denominnsion of a parliament; and he undertook to make the choice bimfelf. The perfons pitched upon were the lowefl, meanef, and moft ignorant among the citizens, and the very dregs of the fanatics. To go further than others in the ablurdities of fanaticifm was the chief qualification upon which each of thefe valued himfelf. Their very names, borrowed from fcripture, and ren. dered ridiculous by their mifapplication, ferved to fhow their excefs of folly. One of them particularly, who was called Praife God Borebone, a canting leatherfeller, gave his name to this odd affembly, and it was called Barelone's Parliment. They were chiefly compofed of Antinomians; a fect that, after receiving the fipirit, fuppored themfelves incapable of error; and the fifth-monarchy-men, who every hour expected Chrif's fecond coming on earth. They began by choofing eight of their tribe to feek the Lord in prayer, while the reft calmly fat down to deliberate upon the fuppref-
fion of the clergy, the univerfities, and courts of ju- Pritain. flice; and inftead of all this, it was their intent to fubfiture the law of Mofes.

It was impoffible fuch a legiflature as this could Who are afland; even the vulgar began to exclaim againft it, and out.
Cromwell himfelf to be afthamed of their ablurditics. He had carefully clofen many perfons among them who were entirely devoted to his interefts, and thefe he commanded to difmifs the afiembly. Thefe accordingly met by concert carlier than the reft of their fratenity ; and obferving to each other that this parlizment liad fat long enough, they haftened to Cromisell, with Roufe their fpeaker at their head, and into his hands refigned the authority with which tie had invefted them. Cromwell accepted their refignation with pleafure: but being told that fome of the ir number were refractory, be fent Colonel White to clear the houfe of fuch as ventured to remain there. They had placed one Moyer in the chair by the time that the colonel had arrived; and he being akked by the colonel, What they did there? Moyer replied very gravely, 'lhat they were feeking the Lord. "Then you may go elfewhere (cried White) ; for, to my certain knowledge, the Lord hath not been here thefe many years."

The fhadow of a parliament being thus diffolved, the Cromwell officers, by their own authority, declared Cromwell declared protector of the commonwealth of England. The protector. mayor and aldermen were fent for to give folemnity to his appointment, and he was inflituted into his new office at Whitehall, in the palace of the kings of England. He was to be addreffed by the title of High. $n e / s$; and his power was proclaimed in London, and other partsiof the kingdom. It was now, indeed, in a great meafure necefiary that fome perfon fhould take the fupreme command; for affairs were brought into fuch a fituation, by the furious animofities of the contending parties, that nothing but abfolute power could prevent a renewal of former bloodihed and confufion. The government of the kingdom was adjufted in the He fettles following manner. A council was appointed, which the goverso was not to exceed 21; nor to be under $1_{3}$ perfons. ment. Thefe were to enjoy their offices for life, or during good behaviour; and, in cafe of a vacancy, the remaining members named three, of whom the protedor chofe one. The protector was appointed the fupreme magiArate of the commonwealth, with fuch powers as the king was poffeffed of. The power of the fword was vefled in him jointly with the parliament when fitting, or with the council at other times. He was obliged to fummon a pal liament once every three years, and to allow them to fit five months without adjournment. A flånding army was eftabliflied of 20,000 foot and 10,000 horfe; and funds were affigned for their fupport. The protector enjoyed his office for life; and on his death, his place was to be fupplied by the council. Of all thefe claufes the ftanding army was fufticient fin Cromwell's purpofe; for, while poffefled of that inflrument, he could mould the reft of the conflitution to his pleafure at any time. He chofe his council from amorig his officers, who had been the companions of his dangers and victories, to each of whom lie affigned a penfion of roool. a-year. He took-care to have his troops, upon whofe fidelity he depended for fupport, paid a month in advance : the magazines were alfo well provided, and the public treafure managed with frugality

and care; while his activity, vigilance, and refolution, were fo well exerted, that le difcovered every confiracy againd his peıfon, and every plot for an infurrection, before they took effect.
'Thus Cromwell continued to govern, though without alluming the title of king, in as ablolute a manner as the moft defpotic prince in Europe. As he was feared at home, fo he made bimfelf refpected abroad. The Dutch, having been humbled by repeated defeats, were obliged to fue for peace. Cromwell obliged them to pay deference to the Britih Alag. He compelled them to abandon the interells of the king, to pay 85,000). as an indemmification for former expences, and to reflore to the Englift Eaft India Company a part of thofe dominions which they had been difpoffeffed of by the Dutch during the former reign. The miniftry of France thought proper to pay deference to the imperious character of the protector; and he having lent that court a body of 6000 men to at tack the Spanith dominions in the Netherlands, who obtained a fignal victory, the French put Dunkirk into his hands as a reward for his attachment. By means of the celebrated admiral Blake $\dagger$ be humbled Spain prodigioufly, as alfo the Algerines and Tunefines. Penn and Venables, two other admirals, made an attempt on the ifland of Hifpaniola; but failing of this, they fleered to Jamaica, which was furrendered to them without a bluw. Yet fo little was thought of the importance of this corqueft, that, on their return, the two admirals were cormitted to the tower, on account of the failure of the principal object of their equipment.

It is not to be fuppofed that a numerous ftanding army could be maintained, and fo many foreign wars carried on, without incurring extraordinaty expences. The protector's revenues were fo much exhaufled, that he was obliged to have recourfe to methods which he probably would not have chofen, had he not been driven to them by neceflity. One or two confiracies entered into by the royalifts, which were detected and punifhed, ferved him as a pretence to lay a heavy tax upon all that party, of the tenth penny on all their poffeffions. In order to raife this oppreffive impofition, ten majorgenerals were inflituted, who divided the whole kingdom into fo many military juridictions. Thefe men had power to fubject whom they pleafed to this tax, and to imprifon fuch as denied their jurifdiction. Undet colour of thefe powers they exercifed the moll arbitrary authority; the people had no protection againft their exactions; the very malk of liberty was thrown off, and all property was at the difpofal of a military tribunal. It was in vain that the nation cried out fur a free parliament. Cromwell aftembled one in confequence of their clamours; but as fpeedily diffolved it when he fourd it refractory to his commands. At laft, as perlisments were always held in fuch ellimation by the people, he refulved to give them one, but fuch as Aloult be entirely of his own choofing, and chiefly compofed of his creatures. Leeft any of a different complexion flould enter the houfe, guards were placed at the door, and none admitted but fuch as produced a warrant from his council.

The principal defign of convering this affembly was, that they thould offer him the crown, with the title of king, and all the other enfigns of royalty. His creatures, therefore, tock cate to infinuat the confution
there was in legal proceedings. without the name of a Britain. king ; that no man was acquainted with the extent or limits of the prefent magiftrates authority, but thole of a king had been well afceitained by the experience of ages. The motion was at laft formally made in the houle, eafily carried through, and nothing was now wanting but Cromwell's own confent to have his name enrolled among the kings of Ergland. 'This confent, however, he never had refolution enough to give. His doubts continued for fome days; and the conference carried on with the members who made him the offer, fo far as it is on his part intelligible, feems to argue that lie was defirous of being compelled to accept the which he offer: however, the conference ended in his total re-sefufes. fulal.

With all thefe proffered honours, and with all his His miferadefpotic power, the fituation of Cromwell was far from ble fitua. being enviable. Perhaps no fituation, however mean, ${ }^{\text {tion, }}$ or luaded with contempt, could be more truly diftrefsful than his, at the time the nation was loading him with congratulations and addreffes. He had at laft rendered himfelf hateful to every party, arid he owed his fafety to their mutual hatred and diffidence of one another. His arts of diffimulation were exhaufted; none could be deceived by them; even thofe of his own party and principles difdaining the ufe to which he had converted his zeal and profeffions. Though the whole nation filently detefted his adminiftration, he had not been completely wretched if he could have found domeftic confolation. But even his own family had em. braced republican principles with fo much vehemence, that they could not without indignation behold him invefted with uncontroulable power ; and Mrs Claypole, his favourite daughter, upbraided him, on her deathbed, with all the crimes which led him to trample on the throne. To add to all this, not only were confpiracies formed againft him, but he was at laft taught, upon reafoning principles, that his death was not only defirable, but his affafination would be meritorious. A book was publifhed by Colonel Titus, a man who had formerly been attached to his caule, entitled Killing no murder. Of all the pamphlets that appeared at that time, or perhaps of thofe that have fince appeared, this was the moft eloquent and mafterly. Cromwell read it, and is faid never to have fmiled afterwards.

The ufurper now found, that the grandeur to which he had facrificed his former tranquillity was only an ine let to frefli inquietudes. He was lounted with perpetual fears of affaflination. He wore armour under his clothes, and always kept piftols in his pockets. His afpeet was clouded by a fettled gloom, and he regarded every ftranger with fufpicion. He was aluays attended by a numerous guard, and travelled in a hurry. He never returned from any place by the road he went; and never llept above three nights together in the fame 189 la chamber. At latt he was delivered from this life and deatr. of horror and anxiety by a tertian ague, of which be died Scptember 3 d 1,658 , after having ufurped the govermment nine years.

Oliver Cromwell was fucceeded in his office of pro-Richard tector' by his fon Richard, who immediately called a Cromwell parliament. To this affembly the army prefented a re-protector. monftance, defiring fome perfon for their general in whom they could confide. The houfe voted fuch meet-

Britain.

Rump parliament reinflated.
ings and remonftrances unlawful: upon which the officers, furrounding Richard's houfe, forced him to diffolve the parliament ; and foon after he ligned an abdication of the govermment. His younger brother Henry, who had becn appointed to the command in Ircland, followed Richard's example, and refigned his commillion without ftriking a blow.

The officers, thus left at liberty, refolved to reflore the rumpp parliament as it was called, confiliting of that remnant of a parliament which bad condemned Charles. They were no fonler reinllated in their authority, however, than they began to humble the army by calhiering fome of the officers, and appoisting others on whom they could have more dependence. The officers immediately refolved to diffolve the affembly. Lambert, one.of the general officers, drew up a chofen body of troops; and placing them in the freets which led to Weftminfter-hall, when the fpeaker Lenthal proceeded in his carriage to the houre, he ordered the liorfes to be turued, and very civilly conducted him home. The other members were likewife intercepted ; and the arny returned to their quarters to obferve a folemn faft, which generally either preceded or attended their outrage. A committee was then elected, of 23 perfons; of whom feven were officers. Thefe they pretended to invelt with fovereign authority ; and a military government was effablifined, which gave the nation a profpect of endlefs fervitude and tyranny without redrefs.

Upon hearing that the officers had by their own authority difolved the parliament, General Monk, who was then in Scotland with 8000 veteran troops, protefted againt the meafure, and refolved to defend the national privileges. As foon as he put his army in mation, he found himfelf eagerly fought after by all parties; but fo cautious was he of declating his mind, that, till the very laft, it was impoffible to know which fide he defigned to take. A remarkable inftance of this cautious behaviour was, that, when his own brother came to him with a meffage from Lord Granville in the name of the king, he refufed all converation with him upor hearing that he had told his errand to Mr Price, the general's own chaplain, and a man of known pro. bity and honour.
Hearing that the officers were preparing an army to oppofe him, Monk amufed them with negociations; and the people, finding themfelves not entirely defencelefs, began to declare for a free parliament. The Rump, finding themfelves invited alfo by the navy and part of the army, again ventured to refume their feats, and to thunder votes in their turn againft the officers and that party of the army by which they had been ejezted. Without taking any notice of Lambert, they fent orders to the troops to repair immediately to the garriforis appointed for them. The foldiers obeyed; and Lambert at laft found himetf deferted by his whole army. Monk in the mean time proceeded with his army to London. The gentry, on his march, flocked round him with addreffes, exprefing their defire of a mew parliament; but that general, fill cortinuing his infexilule taciturnity, at laft came to St Albans, within a few miles of the capital, leaving all the world in doubt as to his motives and defigns. Here he fent the parliament a meffage, defiring them to remove fuch forces as remaised in London to country quarters. Some of the regiments willingly obeyed this order;
and fuch as did not, Monk turned out by force: afte which be took up his quarters with his army in Weftminfter. '1"he houfe voted him thanks for his fervices: 196 he defired them to call a free parliament ; and this foon Monk tal:es infuired the citions 10 cof fubrifion infired the citizens to refute fubmifion to the prefent ters at
government. They refolved to pay no taxes until the Weftminmembers formerly cxcluded by Colonel Pide flould be fter. replaced. For this they were punihed by Monk, at the defire of the parliament. He arrefted II of the Punifles moft obnoxious of the common-council; broke the the city of gates and portcullifes; and, having expofed it to the Londun. fcorn and contempt of all who hated it, he returned in triumph to his quarters at Weftminfter. The next day, however, he made an apology for this conduct, and promifed for the future to co-operate with the mayor and common-council in fuch fchemes as they nould approve.
'The commons were now greatly alarmed. They Refores tried every method to gain off the general from his new the fealliance. Some of them even promifed to invef him cluded with the dignity of fupreme magiftrate, and to fupport marliament. his ufurpation. But Monk was too juft, or too wife, to hearken to fuch wild propofals; he refolved to reftore the fecluded members, and by their means to bring about a new election.

The reftoration of the expelled members was eafily effected; and their number was fo much fuperior to that of the Rump, that the chiefs of this laft party now thought proper to withdraw in their turn. The reftored members began with repealing all thofe orders by which they had been expelled. They renewed and erlarged the general's commiffion ; fixed a proper ftipend for the fupport of the fleet and army ; and, having paffed thefe votes, they diffolved themfclves, and gave orders for the immediate afembling of a new parliament. Meanwhile, Monk new-modelled his army to New par the purpofes he had in view. Some officers, by his di- liament afrection, prefented him with an addrefs, in which they iembled. promifed to obey implicitly the orders of the enfuing parliament. He approved of this engagement, which he ordered to be figned by all the different regiments; and this furnifhed him with a pretence for difmiffing all the officers by whom it was rejected.

In the midft of thefe tranfactions, Lambert, who had been confined in the Tower, efcaped from his prifon, and began to raife forces; and as his activity and principles were fufficiently known, Monk took the earlieft precautions to oppofe his meafures. He difpatched againft him Colonel Ingoldry, with his own regiment, before Lambert had time to affemble bis dependerts. That officer had taken poffeffion of Daventry with four troops of horfe: but the greater part of them joined Ingoldthy; to whom he himfelf furrendered, not with. out exhibiting ftrong marks of pufillanimity.

All this time Monk fill perfited in his referve; nor would he intruft his fectet intentions with any perfon, except onc Morrice, a gentleman of Devonfhire. He was of a feoentary and Ctudious difpofition; and with him alone did the general deliberate on the great and dangerous enterprife of the reftoration. Sir John Granville, who had a commiffion from the king, applied for accefs to the gencral ; but he was defired to communicate his bufinefs to Morsice. Granville refufcd, though twice urged, to deliver his meflage to any but the general himfelf: fo that Monk, nong finding he could de-

Britain.

leave;
Sprin.
pend on this minifter's fecrecy, opened to him his whole intentions; but, with his ufual caution, refufed to com. mit any thing to paper. In confequence of thefe, the king left the Spanifh territories, where he very narrowly efcaped being detained at Breda by the governor, under pretence of treating him with proper refpect and formality. From thence he retired to Holland, where he refolved to wait further advice.

The new parliament being affembled, Sir Harbottle Grimflone was chofen fpeaker, a man known to be a royalift in his heart. The affections of all were turned towards the king; yet fuch were their fears, and fuch dangers attended a freedom of Speech, that no one dared for fome days to make any mention of his name. At length Monk gave directions to Annefly, prefident of the council, to inform them that one Sir John Granvilte, a fervant of the king's, had been, fent over by his

201
His mef-
fage to the parliament. majefty, and was now at the door with a letter to the houle of commons. This meflage was received with the utmof joy. Granville was called in, the letter read, and the king's propofals immediately accepted of. He offered a general amnefy to alt perfons what foever, and that without any exceptions but what fhould be made by parliament. He promifed to indulge fcrupulnus confciences with liberty in matters of religion; to leave to the examination of parliament the claims of all fuch as poffeffed lands with contefted titles; to confirm all thefe conceffions by ant of parliament; to fatisfy the army under General Mork with refpect to their arrears, and to give the fame rank to his officers when they fhould be enlifted in the king's army.

In confequence of this good agreement between king and parliament, Montague the Englift admiral waited on his majefty to inform him that the fleet expected his orders at Scheveling. The duke of York immediately

202 He lands in England. went on board, and took the command as lord high admiral. The king embarked, and landing at Dover, was received by the general, whom he tenderly embraced. He entered London in 1660 , on the 29th of May, which was his birth-day; and was attended by an imnumerable multitude of people, who teflified their joy by the loudeft acclamations.

Charles II. was 30 years of age at the time of his reftoration. Being naturally of an engaging countenance, and poffeffed of an open and affable difpofition, he became the favourite of all ranks of his fubjects. They had now felt the miferies of anarchy, and in prnportion to thefe miferies was the ratisfaction they felt on the acceffion of their young monarch. His firft meafures were calculated to give univerfal fatisfaction. He feemed defirous of lofing the memory of paft aninofities, and of uniting every party in affection for their prince and country. He admitted into his council the moft eminent men of the nation, without regard to former diflinctinns. The predyterians fhared this honour equally with the royalitts. Calamy and Baxter, prefbyterian clergymen, werc even made chaplains to the king. Admiral Montague was created earl of Sandwich, and General Monk duke of Albemarle. Morrice, the general's friend, was created fecreta:y of fate. But what gave the greatef contentment to the nation was the judicious choice which the king at firft mate of his principal minifters and favourites. Sir Edward Hyde, created earl of Clarendon, was prime minifler and chancollor. The marquis, cieated duke of Ormond,
was fleward of the houfehold; the earl of Southamp- Eiftain. ton high-treafurer ; Sir Edward Nicholas fecretary of ftate. Thefe men, united together in the flricteft friendhip, and combining in the fame laudable inclinations, fupported each others credit, and purfued the interefts of the public.

The parliament having been fummoned without the king's confent, received at firft only the titie of a conrevtion; and it was not till after an act paffed for that purpofe, that they were acknowledged by the name of parlicment. Both houfes owned the guilt of the former rebellion, and gratefully received in their own name, and in that of all the fubjects, his majefty's gracious pardon and indemnity. The king had before promifed an indemnity to all criminals, but fuch as fhould be excepted by parliament : he now iffued a proclamation, declaring, that fuch of the late king's judges as did not furrender themfelves within 24 days fhould receive no pardon. Nineteen furrendered themfelves; fome were taken in their flight; others efcaped beyond fea. The peers feemed inclined to great feve. rity on this occafion; but wese reftrained by the king, who in the moft earneft terms preffed the act of general indemnification.

After repeated folicitations, the act of indemnity Regicide paffed both houfes, with the exception of thofe whopusilhed. had an immediate hand in the king's death. Even Cromwell, Ireton, and Bradhaw, though dead, were confidered as proper objects of refentment: their bodies were dug from their graves; dragged to the place of execution; and, after hanging fome time, buried under the gallows. Of the reft who fat in judgment ont the late monarch's trial, fome were dead, and fome thought worthy of pardon. 'Ten only, out of 80, were dooned to iminediate deffuction; and thefe were enthufiafts who had all along acted from principle, and who, in the general fpirit of rage excited againft them, Mowed a fortitude that would have done honour to a better caufe.

This was all the blood that was fled at the reftoration. The reft of the king's judges were reprieved, and afterwards difperfed into feveral prifons. The army was difbanded, that had for fo many years governed the nation; prelacy, and all the ceremonies of the church of England, were reftored; at the fame time that the king pretended to preferve the air of moderation and neutrality. In $f_{3} \mathrm{E}$, with tegard to religion, Charles, in his gayer hours, was a profeffed deift; but in the latter part of his life he fhowed an inclination to the Catholic perfuafion, which he had ftrongly imbibed in his infancy and exile.

On the $13^{\text {th }}$ of September this year, died the young Death of duke of Gloucefler, a prince of great hopes. The king the duke on was never fo deeply affected by any incident in his life. The princefs of Orange. having come to England, in order to partake of the joy attending the iefloration of her family, with whom fac lived in great friendflaip, foon after fickened and died. The queen-mother paid a vifit to her fon, and obtained his confent to the narriage of the princefs Henrietta with the duke of Orleans, brother to the French king. The parliament having met on the 6th of November, and carricd on bufinefs with the greatell unanimity and difpatch, were diffolved by the king on the $2 g^{\text {th }}$ of December Parliamen 1660.

## B R I

Britain. During the reign of Charles II. the fpirit of the people feemed to take a turn quite oppofite to that in the time of Charles I. The latter found his fubjeets animated with a ferocious though ignorant zeal for liberty. They knew not what it was to be free, and therefore imagined that liberty confilted in throwing off entirely the royal authority. They gained their point : the urhappy monarch was dethroned and murdered; but inflead of liberty, they found themfelyes involved in much worfe tyrany than befure. Bing happily freed front this tyramy by the retloration, they ran into the contrary extreme; and inflead of an unbounded fpirit of oppoftion, there was nothing now to be found but as unbounded a fpirit of fubmiffion; and through the flavihn fubmiffions and conceffions of the people in this reign, Cbarles found means to render himfelf at lat almoft quite abfolute, and to govern without requiring, or indeed without having any occafion for partiament.

A like revolution took place with regard to religious matters. During the former reigns a firit of the moll gloomy enthufiafm had overfpread the whole ifland, and men imagined that the Deity was only to be pleafed by their denying themfelves every focial pleafure, and refufing every thing that tended to make life agreeable. The extreme hypocrify of Cromwell and his affuciates, and the abfurd condust of others, fhowed that this was not religion; but, in avoiding this error, they ran into one equally dangerous; and every thing religious or ferious was difcounterianced. Nothing but riot and diflipation took place everywhere. The court fet them the example; nothing but fcenes of gallantry and feffivity were to be feen; the horrors of the late war became the fubject of ridicule; the formality of the fectaries was difplayed on the tlage, and even laughed at from the pulpit. In fhort, the belt mode of religion now was to have as little as poffible; and to avoid not only the hypocrify of the fectaries, but cven

In the midft of this riot and diffipation, the old and fithful followers of the royal fanily were left unrewarded. Numbers who had fought both for the king and his father, and who liad lont their whole fortunes in bis fervice, fill continued to pine in want and oblivion; while in the mean time their perlecutors, who had acquired fortunes during the civil war, were permitted to enjoy them without molefation. The wreteled royalifts petitioned and murmured in vain; the monarch fled from their expoftulations to feenes of mirth and feftivity; and the act of indemnity was generally faid to have been an act of forgivenefs to the king's enemies, and of oblivion to his friends.
In 166 t , the Scots and Englifh parliaments feemed to vie with each other in their proteftations to the king. In England, monarclyy and epifcopacy were difed to the greateff fplendor. The bifhops were permitted to refume their feats in the houfe of peers; all military authority was acknowledged to be vefted in the king. He was empowered to appoint commiffioners for regulating corporations, and cxpelling fuch members as had intruded them?elves by violenre, or profefled primciples dangerous to the conftitution. An act of unifurmity was pafled, by which it was required that every clergyman fhould be re-ordained, if he had not before received epifcopal ordination; that he fhould
declare his confent to every thing contained in the boot of Common Prayer, and fhould take the oath of canonical obedierice. In confequence of this law, abcre 2200 of the prefbyterian ciergy refigned their curcs at once. In Sootland the right of the king was efferted in the fullett and moft poinive terms to be hereditary, divine, and indefealible. His power was extended to the lives and poffeffions of his fubjects, and from lis origimal grant was faid to come all that they erijoged. They voted him an additional revenue of fo,cocl. ; and all their former violences were treated with a degree of the utmond detefiation.

This intoxication of loyalty, howerer, began fuon The nation to wear off. The king's profufion and extravagance dirgufted in his pleafures, together with his indolence in admini- wing's er ftration, furnifhed opportunities of making yery difad-uravagance vantageous comparifons between him and Olives Cromwell. Thefe animofities were heightened by the ejectcd clergy, efpecially when they faw Dunkirk, which lad been acquired during the ufurper's vigorous adminiftration, fold to the French for 70,000 . and that merely to fupply the king's extravagance. From this time (Auguft 17 th 1662) Charles found himfelf perpetually oppofed, and this parliaments granted fupplies much more reluctantly than before.

A few months before, the continual exigencies of Marriage the king had forced him to conclude a marriage with the Infanta of Portugal for the fake of her portion, which was 500,0001 . in money, together with the fortrefs of Tangier in $\Lambda$ frica, and of Bombay in the Eaft Indies. The charicellor Clarendon, the dukes of Ormond and Southampton, urged many reafons againd this match, particulally the likelihood of lier never having any childrem; but all their objections could not prevail, and therefore Clarendon fet himfelf to promote it as far as lay in his power. Still, however, the king's neceffities were greater than his fupplies. He therefore refolved to facrifice his minitler the great Clarendon to the refentment of the parliament, to whom he was become obnoxious, in order to procure fome more fupplies for himfelf. In 1663, an extraordinary fupply was demanded: the king fent for the commons, on the rath of June, to Whitehall. He complained of their inattention; and by acquainting them of a confpiracy to feize the cafle of Dublin, he hoped to furnith a reafon for demanding a prefent fupply. Four fubfidies were inumediately granted, and the clergy in convocation followed the example of the commons. On this occafion the earl of Biiffol ventured to impeacli the chancellor in the houfe of peers; but as he did not fupport his charge, the affait was dropped for the pre. fent.
With a view probably of having the money to be War with. emploged for that purpole in his hands, Charles was the Dutcho induced to declare war againft the Dutch in 166 In this war the Englifh, under the command of Sir Robert Holmes expelled the Dutch from Cape-Corfc cafle on the coall of Africa, and likewife fcized on their fettlements of Cape Verd and the ille of Goree. Sailing from therice to America, the admiral polfefied himfelf of Nova Bclgia, fince called New Tork; and which has ever fince contirued fubject to Britain. On the other hand, Dc Ruyter, the Dutch admiral, difpoffefeed the Englifh of all their fettlements in Guinea except Cape Corle. He afterwards faited to America, where

Britain. he attacked Barbadoes and Long Inand, but was repulfed. Soon after, the two moft confiderable fleets of each nation met ; the one under the duke of York, to the number of 114 fail; the other commanded by Op-

213 Terrible bartles at sea.

2:4
Durch fleet
appeass in
1 he
Thates. of the Dutch navy, of narly equal force. The engagement began at four in the morning, and both fides fought with equal intrepidity. The duke of York was in the hottelt part of the engagement, and behaved with great firit and compofure, while many of his lords and attendants were killed befide him. In the heat of the action the Dutch admiral's hip blew up; which fo difcouraged and difheartened them, that they fled towards their own coaft, having 30 hips funk and taken, while the victors lof only one. This fuccefs of the Englih fo much excited the jealoufy of the neighbouring Itates, that France and Denmark immediately refolved to protect the republic from fuch formidable enemies. De Ruyter the great Dutch admiral, on his return from Guinea, was appointed, at the head of 76 fail, to join the duke of Beaufort the French admiral, who it was fuppofed was then entering the Britifh channcl from Toulon. The duke of Albemarle and Prince Rupert now commanded the Britifh fleet, which did not exceed 74 fail. Albemarle detached Prince Rupert with 20 fhips to oppofe the duke of Beaufort ; againft which piece of rafhnefs Sir George Ayfcue protefted in vain. The fleets thus engaging upon unequal terms, a moft memorable battle enfued. The firt day, the Dutch admiral Evertzen was killed by a cannon-ball, one of their fhips was blown up, and three of the Englifh Thips taken; the combatants were parted by darknefs. The fecond day they renewed the battle with incredible fury. Sixteen frefh thips joined the Dutch; and the Englifh were fo flattered, that their fighting hips were reduced to 28. Upon retresting towards their own coant, the Dutch followed them; where another dreadful conflict was beginning, but parted by the darknefs of the night as before. The morning of the third day the Englin continued their retreat, and the Dutch their purfuit. Albemarle came to the defperate refolution of blowing up his oun Thip rather than fubmit to the enemy, when he found himfelf happily reinforced by Prince Rupert with 16 thips of the line. By this time it was night; and the next day the fleets came again to a clofe combat, which was continued with great violence, till they were parted by a milt. Sir George Ayfcue having the misfortune to ftrike on the Galoper fands, was taken, with a hip of 100 guns.

Both fides claimed the vichory, but the Dutch certainly had the advantage in this engagement. A fecond, however, equally bloody, happened foon after, with larger flects on both fides, commanded by the fame admirals. In this the Dutch were vanquihied; but they were foon in a condition to face their enemies, by the junction of lieaufort the French admiral. The Dutch fleet appeared in the Thames, conducted by their great admiral. The Englifh were thrown into the utmoft confternation: a chain had been drawn acrols the river Medway; and fume fortifications had been added to the forts along the bank. But all thefe were unequal to the prefent force: Sheernefs was foon taken; the Dutch paffed forward and broke the chain, though Eortified by funce nhişs funk by Albemarle's orders.

Deflroying the hiipping in their paffage, they flill ad- Britain. vanced, with fix men of war and five fire-hips, as far as Upnore cafle, where they burned three men of war. The whole city of London was in conflernation; it was expected that the Dutch might fail up next tide to London bridge, and dellroy not only the Chipping, but even the buildings of the metropolis. The Dutch, however, were unable to profecute that project from the failure of the French who had promifed them affiffance. Spreading therefore an alarm along the coaft, and having infulted Norwich, they returned to their own coafts.
During thefe tranfactions abroad, happened a great Plague and plague at London, which deftroyed 100,000 of the in- fire at Lonhalitants. This calamity was foon followed by another, fill more dreadful if pofible. A fire broke out in a baker's houfe in Pudding-lane near the bridge, and fpread with fuch rapidity, that no efforts could extinguif it, till it laid in afhes the moft confiderable part of the city. This calamity, though it reduced thoufands to beggary, proved in the end both beneficial and ornamental to the city. It rofe from its ruins in greater beauty than ever; the ftreets being widened, and the houfes built of brick inftead of wood, became thus more wholefome and fecure. In fo great a calamity it is remarkable that not a fingle life was lon.

Thefe complicated misfortunes did not fail to excite many murmurs among the people: The blame of the fire was laid on the Papifts: the Dutch war was exclaimed againft as unfuccefsful and unneceffary, as being an attempt to humble that nation who were equal enemies to Popery with themfelves. Charles himfelf alfo began to be fenfible, that all the ends for which he bad undertaken the Dutch war were likely to be entirely fruftrated. Inftead of being able to lay up money for himfelf, the fupplies of parliament had hitherto been fo fcanty, that he found himfelf confiderably in debt. A treaty therefore was fet on foot, which was conclid- Peare wi ded at Breda on the 211月 of July 1667. By this treaty Holland the only advantage gained by Britain was, the ceffion corcluded. of the colony of New York. It was therefore judged difgraceful, and the blame of it thrown upon the unhappy earl of Clarendon. Along with this, he was ${ }^{217}$ charged with the fale of Dunkirk; the bad payment of diffraced. the feamen; the difgrace by the Dutch fleet ; and his own ambition. His daughter, while yet in Paris, had commenced an amour with the duke of York; and under a fulemn promife of marriage had admitted hin to her bed. Her lover, however, either of his own accord, or through the perfuafions of his brother Charles, aftervards married her; and this was imputed as a crime to Clarendon. On thefe accufations, the king, who on accnutit of his rigid virtue had never much loved this nobleman, ordered the feals to be taken from him, ad given to Sir Orlando Bridgemen. Clarendon was again impeached; and though the charges were manifelly frivolous, yet fo Arong was the popular torrent againt hins, that he thought proper to willdraw into France. Soon after, the king furmed an alliance with he, Sol French king from completing his conquef of the Ne. land and therlands. The greatell part of this country he had al_Sweden ready fubducd, when be was unexpectedly fopped by this league; in which it was agreed by the contracting

## B R I [ 473$] \quad \mathrm{B} \quad \mathrm{R}$ I

Britain. posvers, that they would conftute tivemfeives aristers of the differences bet ween France and Spain, and check the exorbitant pretenfions of either.

The king now began to at in a very arbitrary manner. He had long wifhed to extend his prerogative, and to be able to furnifin himfelf with whatever fums he might want for his pleafures, and therefore was molt likely to be pleafed with thofe minillers who could llatter both his wifhes at onct. Thefe he found in Clifford, Afhlcy, Backingham, Arlington, and Lauderdale, a junto dillinguilled by the name of the calal; a word formed by the initials of their names. The filt effects of their advice was a fecret alliance with France, and a rupture with Hulland. Soon after this, the duke of York declared himfelf a Papif; and liberty of confcience was proclaimed to all leetaries, whether diffenters or Papifts: a proclamation was iflued containing very rigorous claufes in favour of prelfing; another full of menaces againft thofe who thould feeak undutifully of his majefty's meafures; and even againt thofe who heard fuch difcourfes, unlefs they informed in due time againft the offenders. All thefe things gave very great and juft offence to the people; but they were efpecially alarmed at the alliance witn France, and jufly afraid of the treachery of that nation.

On the 2Sth oc My 1672, the Englifh fieet under the duke of York was furpriled by the Dutch in Southwold bay. About eight in the morning began a molt furious engagement. The gallant Sandwich, who commanded the Englih van, drove his fhip into the midat of the enemy, beat off the admiral that ventured to attack him, funk another fhip that attempted to board him and three fire-hips that offered to grapple with him. Though his veffel was torn with thot, and out of 1000 men there only remained 400 , he flill continued to fight. At laf, a fire-hip, more fortunate than the reft, having laid hold of his velfel, ber deftruction became inevitable, and the earl himfelf was drowned in attempting to frim to fome other Mhip. Night parted the combatants; the Dutch retircd, and were not followed by the Englith. The lofs fuldained by the two maritime powers was nearly equal; but the French fuffered very little, not having entered into the heat of the engagement. It was even fuppofed that they had orders for this conduet. and to fpare their own hlips, while the Dutch and Englifh Thould weaken each other by their mutual animofities.

The combined powers were much more fucceffful againft the Dutch by land. Louis conquered all before him, crofied the Rhine, took all the frontier towns of the enemy, and theatened the new republic with a final diffolution. Terms were propofed to them by the two conquerors. Louis offered them fuch as would have deprived them of all power of refifting an invafion from France by land. Thofe of Charles expofed them equally to every invafion by fea. At laf the murmurs of the Eniclifinat feeing this brave and induftrious people, the fupporters of the Protefant caufe, totally funk and on the brink of deffrution, were tuo loud not to reach the king. He was obliged to call the parliament, to take the fenfe of the nation upon his conduct ; and be foon faw how his fubjects flood affected.

The parliament met on the 2 th of February 1673 . They began with repreffing fome of the hing's extraordinary Aretches of prerogative, and taking means for

Vol. IV. Part II.
uniformity in rcligious matters. A law was paffed entitled the rff act, impoling an oath on all who hould enjoy any public benefice. Befides the taking the oaths of allepiance and the king's fupremacy, they were ob- Teftack liged to receive the facrament once a-year in the ciftablithed church, and to abjure all belief in the doftrine of eranfubfantiation. As the diffenters alfo had foconded the efforts of the commons againf the king's declaration of indulgence to Roman Catholics, a bill was paffed for their eafe and relief, which, however, went with fome difficulty through the houfe of peers. The Dutch in the mean time continued to defend themfelves with fuch valour, that the commons began to defpair of fuccefs. They therefore refolved that the flanding army was a grievance : they nest declared, that they would grant no more fupplies to carry on the Dutch war, unlefs it appeared that the enemy were fo obrinate as to refufe all reafonable conditions. To cut flort thefe difagreeable altercations, the king refolved to prorogue the parliament; and with that intention, went unexpectedly to the houle of peers, from whence Tumiti he fent the ulher of the black-rod to fummon the houfe the houfe of commons to attend. It happened that the uher and of comthe fpeaker met nearly at the door of the houfe; but ${ }^{\text {mons. }}$ the fpeaker being within, fome of the members fuddenly fhut the door, and cried, "To the chair." Upon which the following motions were inflantly made in a tumultuous manner: That the alliance with France was a grievance; that the evil counfellors of the king were a grievance; that the earl of Lauderdale was a grievance: and then the houfe rofe in great confution. The king foon faw that he could expeet no fupply from the commons for carrying on the war which was fo difagreeable to them ; he refolved, therefore, to make a feparate peace with the Dutch, on terms which they had propofed by the Spanifh ambaffador. For form's fake, he alked the advice of his parliament: who concurring heartily in his intentions, a peace was concluded accordingly.

The prepoffefion which Charles had all along fhown National for France, and bis manifeft inclination upon all occa-drcortentio fions to attach himfelf to that kingdom, had given great offence to his people. Along with this, other circumftances confpired to raife a general difcontent. The toleration of Catholics, fo much wifled for by the king; the bigotry of the duke of Yotk, the heir apparent to the crown, and his zeal for the propagation of the $\mathrm{Ca}-$ tholic religion; excited a confternation not altogether without foundation, as if the Proteftant religion was in danger. This fear and difcontent was carefully kept up and fomented by wicked and defigning men, who to promote their own interefts would not feruple to advance the groffelt fallehoods. In 1678 , an account of a plot formed by the Papilts for dettroying the king and the Proteflant religion, was given in by one Kirby a chemift, Dr Tong, a weak credulous clergyman, and Titus Oates, who had likewife been a clergyman, but one of the moit abandoned mifcreants that can be imagined. The circumftances attending this pretended difcovery were fo perfectly incredible, that it appears amazing how any perfon of common fenfe could give ear to them $\dagger$. Neverthelefs, fo much were the minds of + See Oafer the nation in general inflamed againt the Catholics at this time, that it not only produced the deflruction of individuals of the Romifh perfuafion, but an univerfal

Britain.
maffac:e of that unhappy feet was apprehended. The parliament, who ought to have repreffed thefe delufions, and brought back the people to calm deliberate inquiry, were found more credulous than even the vulgar themfelves. 'The cry of plot was immediately echoed from one laoufe to the other; the country party could not flip fo farourable an opportunity of managing the paftions of the people; the courtiers were afraid of being thought dinluyal if they flould doubt the guilt of thore who were accufed of defigns againft the king's perfon. Danby, the prime minifter, himfelf cutered into it very furioufly, and perfited in his inquiries notwithfanding all the king's advices to the contrary. Charles himfelf, who was the perfon that ought to have been moft concerned, was the only one who treated it with contempt. Nothing, however, could fop the popular fury; and for a time the king was obliged to give way to it.

During the time of this general uproar and perfecution, the lord treafurer Danby was impeached in the houfe of commons by Seymour the fpeaker. The principal charge againf him was, his having written a letter to Montague the king's ambaffaoor at Paris, directing him to fell the king's good offices at the treaty of Nimeguen, to the king of France, for a certain fum of money; contrary to the general interefts of the confederates, and even of thofe of his own lingdoms. Tlough the charge was jult, yet Danby had the happinefs to find the king refolved to defend him. Charles affured the parliament, that, as he had acted in every thing by his orders, the held him entirely blamelefs; and though he would deprive him of all his employ:ment:, yet he would pofitively infift on his perfonal fifety. The lords were obliged to fubmit: however, they went on to impeach him, and Danby was fent to the Tower ; but no worfe confequences followed.

Thefe furions proceedings had been carried on by a houfe of commons that had continued undiffolved for above 17 years. They were now diffolved, and another parliament was called; which, however, proved as unmanageable as the preceding. The members refolved to check the growth of Popery by ftriking at the root of the evil; and therefore brought in a bill for the total exclufion of the duke of I'ak from the crown of Eng. land and Ircland, which paffed the lower houre by a majority of 79. 'They next voted the king's flanding army and guards to be illegal. 'They proceeded to eflablift limits to the king's power of imprifoning delinquents at will. It was now alfo that the celcbrated flatute called the babens corpus aft was paffed, which confirms the fubject in an abfolute fecurity from oppreflive power.

Diring thefe iroubles, the duke of York had retired ro Bruffels; but an indifpnfition of the ling led him back to England, to be ready in cale of any finitter accident, to affert his right to the throne. After prevailing upon his brother to difgrace his natural fon the duke of Monmouth, who was now bečume very popular, he himfelf retired to Scotland, under pretence of quicting the apprehenfions of the Forglinh nation, but in reality to ftrengthen his interefts in that past of the empire. This feceffion ferved llill more to inflame the country party, who were frongly attached to the duke of $\boldsymbol{\text { Ilonmouth}}$, and were cefolved to fupport him againft the duke of Yosk. Mabs, petitions, pore burnings,
rrere artifices cmployed to keep up the terrors of Popery, and alarm the court. The parliament had frown favour to the various tribes of infoumers, and that ferved to increafe the number of thefe mifcreants; but plots themfelves allo became more numerous. Plot was fet up againf plot; and the people were kept fufpended in the moft dieadful apprehenfion.

But it was not by plots alone that the adverfe parties endeavoured to fupplant each other. I'umultuous petitions on the one band, and flattering addrefles on the other, were fent up from all quasters. Wherever the country party prevailed, petitions were fent to the king filled with grievances and apprehenfions. Wherever the church or court party prevailed, addreffes were framed, containing expreftions of the higheft regard to his majefty, and the deepeft abhorrence of thofe who en. Petitionere deavoured to difurb the public tranquillity. Thus the and abhornation came to be difinguifted into petitioners and $a b$. ress, who. borrers. Whig and Tory, alfo, were now firf ufed as terms of reproach. The whigs were fo denominated from a cant name given to the four prefbyterian conventiclers, (whig being milk turned four.) The tories were denominated from the Irifh banditti fo called, wbofe ufual manner of bidding people deliver was by the Irifh word Toree, or "Give me."

All this time the hing had tyrannized over the Scots 230 in a very cruel manner. Being apprized of the ten-eftablific $c-$ dency of prefbyterian principles to a republican form pircopacy of government, Charles, like his predeceffors, had en- in Scotland. deavoured to introduce Epifcopacy there, but in a much more violent manner than had been formerly attempted. The right of patrons had for fome years been abolifhed; and the power of electing minifters had been velled in the kirk-feffions and lay elders: but it was now enacted, that all incumbents who had becn admitted upon this title fhould receive a prefentation, and be inftituted anew by the biftop, under the penalty of deprivation. In confequence of this, 350 parifhes were at once declared vacant. New minitters were fought for all over the kingdom, and none was fo vicious or igno- Occafichs rant as to be rejefed. The people, as might havedifcontent. been expected, were difpleafed to the higheft degree; they refolved, however, to give no fign of mutiny or fedition, notwithfanding their difcontent. This fubmiffion made their cafe flill worfe; it being foolifhly imagined, that, as they did not complain for a little ill ufage, they would fubmit altogether if they were worfe treated.

Affairs remained in a peaceable fituation, till, in Preflyter 166:, a very fevere act was paffed in England againf ans perfeconventicles, and this feverity was imitated by the Scots cuted. parliament, who paffed an an of the fame kind. Military furce was next let loofe. Whercver the pcople had generally forfaken their churches, the guards were quartered throughout the country. They were commanded by Sir James 'Turner, a man of a very furious temper and diffolute life. He went about and received lifts from the clergy of thofe who abfented themfelves from the churches, or were fuppofed to frequent conventicles. Without any proof, or leg I convidion, he demanded a fine from them; and quartered foldiers on the fuppofed criminals till he reccived payment. An infurrection being dreaded during the Dutch war, now forces were levied, and entrufted to the command of Dalzicl and Drummond, tho men of very crucl difpe-

Eritain. fitions, and the Scots parliament gave full fcope to all their enormities.
Reprefentations were now made to the king, who promifed fone redrefs. But his lenity came too late. The people, in 1668 , rofe in arms. They furprifed Turner in Dumfries, and refolved to have put him to death; but finding his orders to be more violent than his execution of them, they fared his life. At Lanark they renewed the covenant, and publifhed their manifefto; where they profeffed thair fubmiftion to the king, and only defired the re-eftablilhment of prefbytery, and of their former minifters. Their forces never exceeded 2000 men; and though the country in geHeral bore them great favour, men's fpirits were fo fubdued, that the infurgents could expect no firther increafe of numbers. Dalzicl took the field to oppofe them. The number of the covenanters was now reduced to 800 , and thefe no way capable of contending with regular forees. Having advanced near Edinburgh, they attempted to find their way back into the weft by Pentland-hills. Here they were attacked by the king's troops, and recived the firft charge very refolutely: but that was all the action. Immediately they fell into confufion, and fled. About 40 were killed on the fpot, and 130 taken prifoners.

So long ago as the year 166 r , the prefbyterians had deputed one Sharpe to lay their grievances before the king. Inftead of this, their deputy abandoned the caufe altogether, became their violent enemy, and as a reward of his treachery was made archbiftop of St Andrew's. After the battle of Pentland-hills, this man was the foremof to take vengeance on the unhappy infurgents, whofe oppreffed ftate and inoffenfive behaviour had made them objects of univerfal compalfion. Ten were hanged on one gibbet in Edinburgh; 35 before their own doors in different places. They might all have faved their lives, if they would have renounced the covenant; but this they abfolutely refufed. The executions were going on, when the king wrote a letter to the privy-council, in which he ordered that fuch of the prifoners as thould fimply promife to obey the laws for the future fhould be fet at liberty, and that the incorrigible fhould be fent to the plantations. This letter was brought to the -nu-cil by Burnet, but was not immediately delivered by Sharpe. What his motives were for this delay, we pretend not to fay; but certain it is, that no action of his life will bear a worfe confruttion than this. It had been cuftomary to put thefe poor creatures to very fevere tortures, in order to make them confefs that to be falfehood which they believed to be true. By Sharpe's delay, one Hugh Maccail had been tortured, who would otherwife have efcaped; and fo violent were the torments he endured, that he expired under them. He feemed to die in an ectacy of joy. His laft words were uttered with an accent which ftruck all the byftanders Farewell (faid he) fun, moon, and fars; farewell world and time; farewell weak frail body: welcome eternity; welcome angels and faints; welcome Saviour of the world; and welcome God the judge of all."
In 1670 , an act againft conventicles was paffed, feemingly with a defign of mitigating the former perfecuting laws; though even this was fevere enough. By this aet, the hearer in a conventicle (that is, in a dif-
fenting affembly where more than five befides the fami-
Erital ly were preferit) was fined 5 . for the firft offence, and ros. for the fecond ; the preacher 201. for the firit offence, and 401. for the fecord. The perion in whofe houfe the conventicle met was fined a like fun with the preacher. One remarkable claufe was, that if any difpute flould arife with regard to the interpretation of any part of the act, the judges fhould always explain the doubt in the fenfe leail favourable to conventicles, it being the intention of parliament entirely to fupprefs them.

As the violent ${ }^{2 ; 8}$ ineffectual to obtain his purpofe in Scotland, in 1678 comprethena fcheme of comprehenfion was tried, by which it was fion ard inpropofed to diminifh grearly the authority of the bi- dalgence. dhops, to abolifh their negative voice in the ecclefiaftical courts, and to leave them little more than the righ: of precedency among the prefbyters: but this too was rejected by the people, who well knew its tendency. The next fcheme was an indulgence. By this, the moft popular of the expelled preachers, without requiring any terms of fubmifion to the eftablifhed religion, were fettled in vacant churches; and fmall falaries of about 201. a-year were offered to the reft, till they thould be otherwife eftablifhed. This bounty was rejected as the wages of criminal filerice, and the replaced minifters foon repented of their compliance; conventicles multiplied, and the covenanters daily met in arms at their places of worthip, though they ufually difperfed themfelves after divine fervice.

Thefe mild methods being rejected, a renewal of the Ferfecution perfecution commenced urider the adminittration of the renewed. duke of Lauderdale, and in which Archbiftop Sharpe had a principal hand. It was an old law, and but feldom put in exention, that a man who was accufed of any crime, and did not appear to take his trial, might be intercommuned; that is, he might be publicly outlawed; and whoever afterwards, either on account of buinefs, relation, or charity, had the leaft intercourfe with him, was fubject to the fame penalties which the law could inflict on the criminal himfelf. A great many writs of intercommuning were now iffued againt the covenanters; by which abfurd method of proceeding, crimes and punilhments were multiplied to an extreme degiee.

Application was made to Charles for fome redrefs of thefe grievances: but he was too much taken up with his pleafures to take any cffectual means of putting a fop to them; nay, even while he retracted them, he was perfuaded to avow and praife them in a letter to the privy-council. The confequence of all this was, Archbihihop that the covenanters were at laft fo much enraged againt Sharpe, whom they confidered as an afoftate, and experienced to be an unelenting perfecutor, that, on the $\mathrm{\jmath}^{d}$ of May 1679, he was way-laid and murdered with all the circumftances of unrelenting cruelty. The murder of Sharpe produced a perfecution ftill more violent, which at laft brought on another infurrection.

The covenatuters finding themflves obliged to meet Second | $24 \tau$ |
| :---: | in large bodies, and bring arms along with them for furrection. their own fecurity, fet forth a declaration again!s prelacy, which they publifhed at Rutherglen, a mall borough near Glafgorr; and in the market-place there they burned feveral aets of parlizment which had efta-

## B R I

Eritain. blifhed that mode of ecclefiafical government, and had prohibited all conventicles. For this purpofe they chofe the $29^{\text {th }}$ of May, the anniverfary of the reftoration; and previoully extinguihed the bonfires that had been kindled on that occafion. Count Graham, afterwards Vifcount Dundee, an active and enterprifing of ficer, attacked a great conventicle upon Loudon-hill, but was repulfed with the lofs of 30 men. The covenanters then finding themfelves unwarily engaged in rebellion, were obliged to perfevere; and therefore pufted on to Glafgorr, which, though repulfed at firft, they aftervards made themfelves mafters of. Here they difpoffeffed the eftablifhed clergy, and iffued proclamations, in which they declared that they fought againft the king's fupremacy, againft Popery and Prelacy, and againd a Popilh fuccefor.

Charles, being now alarmed, difpatched againf the covenanters a fmall body of Englifh cavalry under the duke of Monmouth. He joined the Scots guards, and fome regiments of militia levied from the well-affected counties; and with great celerity marched in queft of the infurgents. They had taken poft at Buthwell-bridge between Hamilton and Glafgow; where there was no accefs but by the bridge, and where a fmall body was able to defend it againft the king's army. The whole army of the covenanters never exceeded 8000 men, and they had in reality no other generals than their clergymen. Monmouth attacked the bridge, and the covenanters maintained their poft as long as their ammunition lalted. When they fent for more, they received orders to quit their poft and retire; and this imprudent meafure occafioned an immediate defeat. Monmouth paffed the bridge without oppofition, and drew up his forces oppofite to the encmy. His cannon aloue put them to the rout. About 700 were killed in the purfuit; for, properly feeaking, there was no action. Twelve hundred were taken prifoners, and treated vith humanity by Monmouth. Such as promifed to live peaceably under the prefent government were difmified: and about 300 who refufed this condition were mhipped for Barbadoes, but unfortunately periflied by the way. Two of their clergymens were hanged. Soon after, an act of indemnity was paffed: but Lauderdale took care that it hould afford little protection to the unhappy covenanters; for though orders were given to connive thenceforward at all conventicles, he found means under a variety of pretences to clude the exccution of them.

It is now certainly known, that King Charles II. had furmed a fehene of overturning the eftablified religion, and fubftituting Popery in its place; as alfo of rerdering himfelf abfolute. In this, however, be met with violent oppofition from his patiaments; and as this onc of 1679 leemed even to furpafs their predeceffors in violence, the kink was induced to diffolve them and call another in 1680. By this Ilrp, however, he was no proceclings gainer. They voted the legality of petitioning the Cfpalla- king; and fell with extreme violence on the abhorrers, ment. who in their addrefles to the crown had expreffed their difapprobation of thofe pectitions. Great numbers of thefe were feized by their order in all parts of ling. land, and committed to clofe cuftody: the liberty of the fubject, which had been fo carefully guarded by their own recent law, was every day violated by their arbitrary and capriciuns inprifonments. One Stowel of

Exeter put a flop to their proceedings: he refufed to obey the ferjeant at arms who was fent to apprehend him; he ftood upon his defence, and faid he knew no law by which the houfe of commons pretended to commit him. The houfe, finding it equally dangerous to proceed or recede, got off by an evafion. They voted that Stowel was indifpofed: and a month's time was allowed him for his recovery. It is happy for the nation, that fhould the commons at any time overleap the bounds of their authority, and capricioully order men to be put in prifon, there is no porser, in cafe of refiftance, that can compel the prifoners to fubmit to their decrees.

The chief point, however, laboured by the prefent parliament was, to obtain the exclufion bill, which, though the former houfe had voted, was never yet paffed into a law. It paffed by a great majority in the houfe of commons, but was thrown out by the houfe of peers. All the bifhops except three voted agairif it ; for they were of opinion that the church of Englatid was in much greater danger from the prevalence of Prefbyterianifm than Popery. The commons were extremely mortified at the rejeation of their favourite bill : in revenge they pafled feveral other difagreeable ants, among which one was, That, till the exclufion bill was pafled, they could not, confiftent with the truft repofed in them, grant the king any manner of fupply; and that whoever hould hereafter lend, by way of advance, any money upon the branches of the king's revenue, hould be refponfible to parliament for his conduf. Charles, therefore, finding that there were no hopes of extorting either money or obedience from the commons, came to a refolution of once more diffolving the parliament. His ufter of the black rod according- parliain ly came to diffolve them while they were voting that difliolved. the diffenters hould be encouraged, and that the Papifts had burned the city of London.

It was for fome time a doubt whether the king would ever call another parliament: his neceffitics, however, furmounted all his fears of their violence; and, in 168 I, he fummoned his parliament to meet him at Oxford, New one that he might thus have an opportunity of puniming ealled at the city of London by fhowing his fufficions of their Oxford. loyalty. In this, as in all former parliaments, the country party predominated; and they trode evactly in the fame paths with their predeccffors. The fame fpeaker was chofen, and the exclufion bill urged more fiercely than before. Erncly, one of the king's minifters, propoled that the duke fhould be banillied 500 miles from England; and that on the king's deceale the next heir thould be conntuted regent with regal power. Yit even this expedient, which left the duke the bare title of king, could nat obtain the attention of the houfe. Nothing but a total exclufion could fatisfy them.

Each party had now for fome time reviled and ridiculed each other in panphlets and libels; and this practice at laft was attended with an incidat that deferves notice. One Fitzharris, an Inif I'apil, employed a ${ }^{246}$ Scotfinan named Fiverhard to write a libel againf the Fitzharis. king and the duke of York. The Scot was acually a fipy for the contrary party; and fuppofing this a trick to entrap him, he difoovered the whole to Sir William Waller, an eminent juflice of the peace; and, to convince him of the truth of his information, pofted the magiffate and two other pesfons privately, where they heard

Britain. heard the whole conference between Fitzharris and himfelf. 'The libel compofed between them was replete with the utmoft rancour and fcurrility. Waller carried the intelligence to the king, and obtain a "arrant for committing Fitzharris, who happened at that very time to have a copy of the libel in his pocket. Seeing himfelf in the hands of a party from whom he expected no mercy, he refolved to fide with them, and throw the odium of the libel upon the court, who, he faid, were willing to draw up a libel which thould be imputed to the exclufioners, and thus iender them bateful to the people. He enhanced bis fervices to the countryparty by a new Popifh plot more tremendous than any of the foregoing, and in which he brought in the duke of York as a principal accomplice.

The king imprifoned Fitzharris; the commons avowed his caufe. They voted that he fhould be impeached by themfelves, to fereen him from the ordinary forms of juftice: the lords rejected the impeachment; the commons afferted their right: a commotion was likely to enfue; and the king, to break off the contef, went to the houfe and difolved the parliament, with a fixed refolution never to call another.

From this moment the king ruled with defpotic power. His temper, which had always been eafy and merciful, now became arbitrary and crucl ; he entertained fpies and informers round the throne, and imprifoned all fuch as he thought moft daring in their defigns. He refolved to humble the prefbyterians: they were divefted of their employments and their places; and their offices given to fuch as held with the court, and approved the doctrine of non-refiltance. The clergy began to teflify their zeal and their principles by their writings and fermons; but though among thefe the partizans of the king were the moll numerous, thofe of the oppolite faction were the moft enterprifing. The king openly efpoufed the caufe of the former; and thus placing himfelf at the head of a faction, he deprived the city of London, which had long headed the Londonde-popular party, of their charter. It was not till after prived of is an abject fubmiffion that he reftored it to them, having
por charter. previoutly fubjected the election of their magiftrates to his immediate anthority.

Terrors alfo were not wanting to confirm this new fuecies of monarchy. Fitzharris was brought to a trial before a jury, and condemued and executed. The whole gang of fpies, witneffes, infurmers, faborners, which liad long been encouraged and fupported by the leading patriots, finding now that the king was entirely mafter, turned fhort upon their ancient drivers, and offered their evidence agaisft thofe who firft put them in motion. The king's minillers gave them encourayement; and in a flort time the fame injuftice and the fame cruelties were practifed againf Prelbyterian fchemes that had formerly been practifed againit Catholic treafons. 'The king's chief refentment was levelled again!t the earl of Shaftefbury; and, indeed, not without reafon, as he had bad a very active hand in the late difturbances. No tums were fpared to feek for evidence, or even to fuborn witnefiec, againft this intriguing and formidable man. A bill of indictment being prefented to the grand jury, witnefles were examined, who fwore to fuch incredible circumances as muft have invalidated their teftimony, even if they had net been branded as perjured villains. Among his
papers, indeed, a draught of an affociation was found, which might have been conftrued into treafon; but it was not in the carl's hand-writing, nor could it be proved that he had ever communicated this fcheme to any bady, or fignified his approbation of any fuch project. The fluctiffs had fummoned a jury, whofe principles coincided with thofe of the earl; and that probably, more than any want of proof, procured his fafety.

In 1783, the city of London was deprived of jis charter; which was reltored only upon terms of the utmoft fubmiffion, and giving up the nomination of their own magiftrates. This was fo mortifying a cir- Other corcumiltance, that all the other corporations in England porations foon began to fear the fame treatment, and were fucceflively induced to furrender their charters into the lands of the king. Confiderable fums were exacted for refloring thefe charters; and all the offices of power and profit were left at the difpofal of the crown. Refiftance row, however juftifiable, could not be fafe ; and all prudent men faw no other expedient but fubmitting patiently to the prefent grievances.

There was a party, however, in England, that fill cherilhed their former ideas of freedom, and refolved to refore liberty to their country by dethroning the king who acted ir fuch a defpotic manner. The principal confpirators were Monmoath, Shaftefbury, Ruffel, Eir fex, Howard, Algernon Sidney, and John Hamden grandfon to the great man of that name. Monmouth engraged the earl of Macclesfield, Lord Brandon, Sir Gilbert Gerard, and other gentlemen in Cheihire. Lord Rufiel fixed a correfpondence with Sir William Courtney, Sir Francis Knowles, and Sir Francis Drake, who promifed to raife the wef. Shaftefbury, with one Fergufon, an independent clergyman, and a reftlefs ploter, managed the city, upon which the confederates chiefly relied. Thefe fchemes bad been laid in 1681 : but the caution of Lord Ruffel, who induced the duke of Monmouth to put off the enterprife, faved the kingdom from the horrors of a civil war; while Shaftelbury was fo flruck with a fenfe of his impending danger, that he left his houfe, and lurking about the city, attempted, but in vain, to drive the Londoners to an open infurrection. At laft, enraged at the numberlefs cautions and delays which clogged and dcfeated his projects, he threatened to begin with his own friends iingly. However, after a long flruggle betwcen fear and rage, he abandoned all hopes of fuccefs, and fled to Amiterdam, where he foon after died.

The lofs of Shafteflury, though it retarded, did not fupprefs, the defigns of the confpirators. The remaining fix formed a council; they correfponded with Argyle and the malecontents in Scotland; and refolved to profecute the fcheme of the infurrection, though they widely differed in principles from one another. Monmouth afpired to the crown; Ruffel and Hamden pro. pofed to exclude the duke of York from the fuccefion, and redrefs the grievances of the mation; Sidney was for reftoring the republic, and Effex joined in the fame wifl. Lord Howard was an abanJoned man, who, having no principles, fought to embroil the nation, to gratify his private intereft in the contufion.

Befide, thefe, there was a fet of fubordinate confpi-Defign of rators, who frequeutly met together, and carricd on aflaninatprojects quite unknown to Nonmouth ard his coun- For, ined

## B R I [ 478 ] B R I'

Qritain. cil. Anong thefe was Colonel Rumfey, an old republican officer ; Lieutenant-colonel Walcot, of the fame flamp; Goodenough, under-fheriff of London, a zealous and noted party-man; Fergufon, an independent minifler ; and feveral attorneys, merchants, and tradefmen of London. But Rumfey and Fergufon were the only perfons that had accefs to the great leaders of the confpiracy. Thefe men undertook the defperate refolutionof affifinating the king in his way to Newmarket; Kumbold, one of the party, poffeffed a farm upon that road, called the Ryc-boufe, and from thence the confpiracy was called the Rye-boufe plot. They deliberated on a fcheme of flopping the king's coach by overturning a cart on the highway at this place, and fhooting tiim through the hedges. The houfe in which the king lived at Newmaket accidentally took fire, and he was obliged to leave Newmarket eight days fooner than was expected; to which circumfance he owed his fafety. Soon after this the confpiracy was difcovered; Rufiel, Sidney, and Walcot, were executed; Lifex cut his own throat; Hamden was fined 40,0001 . ; and fcarce one efcaped who had been in any manner concerned, except the duke of Monmouth, who was the moft culpable of all.

This was the laft blood that was fhed on account of plots or confpiracies, which continued during the greateft part of this reign. Severe punifhments, however, were inflicted on many who treated the duke of York unworthily. The famous Titus Oates was fined 100,0001 . for calling him a Pop:ih traitor; and he was imprifoned till he fhould pay it, which he was abfolutely incapable of. A fimilar fentence was pafied upon Dutton Colt. Sir Samuel Barnaditon was fined 10,000 . for having in fome private letters reflected or. the government. The government of Charles was now as ablolute as that of any prince in Europe; but to pleafe his fubjeets by an aft of popularity, he judged it proper to marry the lady Anne, his niece, to Prince George brother to the king of Denmark. This was the laft remarkable tranfation of this extraordinary

All this was done in the fpace of half an hour. The Britain. doors were ther thrown open. Six prelates, who had before attended the king, were fent for to give him the facrament. Kenn, bifhop of Bath and Wells, read the vifitation of the fick; and after he faid tbat he repented of his fins, the abfolution. The king affifted with feeming devotion at the fervice; but his mouth being diftorted with fits, and his throat contracted, he could not fwallow the elements. He profeffed, however, his fatisfaction in the church of England; and expired on the 6th of February, between 11 and 12 o'clock: having reigned 25 years, and lived 55 .

The firf act of James Il's reign was to affemble the privy council: where, after fome praifes bellowed on the memory of his predeceffor, he made profeffions of his refolution to maintain the eftablifhed government both in church and ffate; and as he had heretofore ventured his life in defence of the nation, he would fill go as far as any man in maintaining all its juft rights and privileges.

This difcourfe was received with great applaufe, not $S$ oly only by the council, but by the whole nation, Ad. dreiles II. drenes came from all quarters, full of duty, nay of the moft fervile adulation. From this charge, however, we ${ }_{256}$ muft except that of the Quakers, which is remarkable Quakers for its good lenfe and fimplicity. "We are comeaddrefs.d (faid they) to tellify our forruw for the death of our good friend Charles, and our joy for thy being made our governor. We are told that thou art not of the perfuafion of the church of England no more than we: wherefure we hope that thou will grant us the fame liberty which thou alloweft thy lelf. Which doing, we wifh you all manner of happinels."

The king, however, foon fhowed, that he either was Impruden not fincere in his promifes, or that he entertained fobehaviour lofty an idea of his own regal power, that even his of the new utmoft fincerity could tend very little to the fecurity of ${ }^{\text {king. }}$ the liberties of the people. All the cuftoms, and the greater part of the exercife, which had been voted to the late king for his life only, were levied by James without a new act for that purpofe. He went openly to mafs with all the enfigns of his dignity; and even fent one Caryl as his agent to Rome to make fukmiffions to the Pope, and to pave the way for the readmifion of England into the bofom of the Catholic church. From the fuggeftions of thefe men all his meafures were undertaken. Oue day when the Spanifh ambaffador ventured to advife his majefly againft putting too much confidence in fuch kind of people, "Is it not the cuflom in Spain (faid Janes) for the king to confult with his confeflor?" "Yes (anfwered the ambaflador), and that is the reafun why our affairs fucceed fo very ill."

Jame's firn parliament, which was compofed monly of zealous torics, was 11 rongly inclined to comply with the meafures of the crown. They voted unanimoully, that they ftould fettle on the prefent king, during life, all the revenue enjoyed by the late king till the time of his deceafe. For this favour, James aflured them, that he would fecure them in the full enjoyment of their laws; but with regard to religion, no anfwer could be extorted, for that he was refolved to alter. In every thing, howcrer, religion excepted, James merited every In fome praife. He applied himfelf to bufinefs with untemit-behaves ting attention. He managed his reverue with the well.

## B R I [ 479 ] B R

Rritain. fritact economy. He retrenched fuperfluous capchices, and flowed himfelf zealous for the glory of the nation. He endeavoured to expel from court the vices which had prevailed fo much duting the former reign, and to refore decency and morality. He prefided daily at the council, at the boards of admiralty and treafury. He even entered into the whole detail of the concerns of the great departments of the flate. But his bigotry for the Romilh religion fullied all his good qualities, and rendered him feared for his violence, where he was not defpifed for his weak nefs.

But while every thing was fubmited in tranquillity to James at home, a form was gatheting abroad to difturb his repofe. For a long time the prince of O . range had entertained hopes of alcending the Britifh throne, and had wen ufe! all his endeavours to exclude James from it. Nonmouth, who, fince bis lalt confpiracy, had been pardoned, bat ordered to depart the kingdon, had retired to Holland. He was received by the prince of Orange with the higheft matks of diftinction, and even became his chief favourite, through whom all favours were to be obtained. When the news of Charles's death arrived, indeed, the prince made a fhow of altering his note, and difmifled Monmouth, though he fill kept a clofe correfpondence with him. The duke retired to Bruffels, where, under the aufpices of the prince of Orange, the refolved to invade England, with a defign of feizing the crown for himfelf. He was feconded by the duke of Argyle, who formed the feheme of an infurrection in Scotland; and while Monmouth attempted to make a rifing in the weft of England, it was refolved that Argyle fhould alfo try his endeavours in the north. The generofity of the prince of Orange, however, did not correfpond with the warmth of his profeffions. The unfortunate duke derived from his own plate and jewels his whole fupply for the war; and the enthufiafm of a rich widow fupplied Argyle with 10,0001. wherewith he purchafed three veffels, which he loaded with arms and ammunition:

Argyle was the firt who landed in Scotland, where he publified his manifeftoes, put himfelf at the head of 2500 men , and ftrove to influence the people in his favour. But a formidable body of the king's forces coming againt him, his army fell away; and he himfelf, after being wounded in attempting to efcape, was taken prifoner by a peafant who found him flanding up to the neck in water. He was from thence carried to Edinburgh, where after fuffering many indignities he was publicly executed.
liy this time Monmouth had landed in Dorfetfhire with rcarce 100 followers. His name, however, was fo popular, and fo great was the hatred of the people to James on account of his seligion, that in four diys he had affembled a body of above 2000 men. They were indeed all of them the lowelt of the people, and his declarations were fuited entirely to their prejudices. He called the king the duke o 'York; and denominated him a traitor, a tyrant, a murderer, and a Pupills ufurper. He imputed to him the fire of Lendon, and even affirmed that he had poifoned the late king.

Monmou'h continued to make a rapid progrefs, and in a flort time fourd himfelf at the head of $6000 \mathrm{~m} . \mathrm{n}$; but was daily obliged to difinif great rumber, foi stant of arms. 'The king was not a little alarmed at
his invafon. Six resineents of 33atilh troan were Entai cailed ower from Holland; and a body of regu!ars, to the number of 3000 , was fent, under the command of the earl of leverflam and Churchill, to check the progrefs of the rebels. They took poit at Sedgemore, a nefeated at village in the neighbourhood of Bridgewater, and were Sedyencre. joined by confiderable numbers of the country militia. Here Monmouth refolved, by a defperate effort, to lofe his life or gain the kingdom. He drove the royal infantry from their ground, and was on the point of gaining a complete victory, when the cowardice of Gray, who commanded the horfe, brought all to ruin. l'his nobleman tled at the firf onfet; and the rebels, being charged in llank, gave way after a three hours contelt. About 300 were killed in the engagement, and 1020 in the purfuit. Monmoutl fled above 22 miles from the field of battle, till his horfe funk under hirm. He then alighted; and, exchanging clothes with a Thepherd, fled on foot, attended by a German count who had accompanied him from Holland. Being quite cxhaufted with lunger and fatigue, they both lay down in a field, and covered themfelves with fern. The Mepherd being found in Monmouth's clothes by the parfuers, increaled the diligence of the Cearch; and by ${ }^{2} 26_{3}$ the means of blood-hounds he was detected in his mi-a mof miferable fituation, with raw peafe in his pocket, on which ferable fituhe had lived for fome days. He burf into tears when ation. feized by his enemies; and petitioned, with the mof 264 abject fubmifion, for his life. On his way to London, Attemptsin he wrote a fubmifive letter to the king, promifing difeo. vain to obverics, fhould he be admitted into his prefence. The ${ }^{\text {tain mercy, }}$ curiofity of James being excited by the letter, he fent Sheldon a gentleman of the bed-chamber to meet Monmouth. In his converfation with Sheldon, he aked who was in cluief confidence with the king? and boing anfwered that it was Sunderland, Monmouth knocked his breat in a furprife, and faid, "Why then, as I hope for falvation, he promifed to meet me." He defired Sheldon to inform the king, that feveral of his accomplices in rebellion were in the confidence of his majcfty; and he gave him a particular account of the part which the prince of Orange had acted in this whole affair.

Sheldon, on his return from the duke of Monmouth, began to give an account to the king of what he had learned from the unhappy prifoner. Sunderland, pretending bufinefs, came into the room. Sheldon llopped, and fignified his defire to fpeak in private with the king. Janes told him he might fay any thing before that lord. Sheldon was in great perplexity ; but being urged, he told all that Monmouth had afferted. Sunderland appeared for fome time confuled: at length he faid, with a laugh, "If that is all he can difcover to fave his life, be will derive little good from his information." Nonmouth himfelf was foon after brought before the king. Sunderland by an artifice enfured the death of the unfortunate duke, to fave himfell and the other adherents of the prince of Orange. When he faw Monmout!'s letter to Jmmes, and beard the difcoveries made by Sheldon, he is is faid to have advifed him, that, as he could affure him of the certainty of a pardon, he ougint to d-ny what he had faid in prejudice of his fuends, wh:o culd ferve him on lome oth. r more favoutable necalion. The credulece dukes fri:ised by the advice of Sunderland, fupprefied what

## 13 R I

进: ain. he had $\mathrm{f}_{\text {aid }}$ to Sheldon, when he was examined by the king. He mentioned nothing of the coricern which the prince of Oange had taken in the invafion ; though a point on which James was already fufficiently informcd. D'Avaus, the French miniltcr to the States, had given a circumftantial account of the whole conduct of the princo to Louis XIV. who had ordered it to be privately communicated to the king of England. The minitter who had bcen fent from Holland to congratulate James on the fiappreffion of Argyle's rebellion, was in a gric vous agony when he heard that the king was refolved to fee Monmouth. "Thougb he found that he faid nothing of his matter (faid James), he was never quiet till Monmouth was dead."

The unfortunate duke mase various attempts to obtain mercy. He wrote to the queen dowager; he fent a letter to the reigning queen, as well as to the king himfelf. He begged his life, when admitted into his prefence, with a meannefs unfuitable to his pretenfions and high rank. But all his intreaties and fubmiffions were of no avail. James told him, that he was much affected with his misfortunes, but that hio crime was too dangerous in its example to be left unpunifned. In his latt moments he behaved with a magnanimity worthy of his former courage. When he came to the fcaffold, he belhaved with decency and even with dignity. He fpoke little; he made no confeffion: nor did he accufe tended his death that created a horror among the fpectamangled bytors. The executioner miffed his blow, and fruck him the execu- flightly on the floulder. Monmouth raifed his head tioner. from the block, and looked him full in the face, as if reproaching him for his miflake. He fluck him twice again, but with feeble frokes; and then threw the axe from his hands. The fheriff forced him to renew his attempt ; and the head of the dulke, who feemed already dead, was at laft fevered from his body.
256
Rebels cru--ily treated.

Tho?e concerned in the duke of Monmouth's confpiracy were punifled with the utmofl feverity. Imme- diately after the battle of Sedgemore, Feveriham hanged up above 20 prifoners; and was proceeding in his executions, when the biftop of Bath and Wells infurmed him that thele unhappy neen were now by law entitled to a trial, and that their execution would be deemed a real murder. Ninetcen were put $t$ death in the fame manner at Bridgewater by Colonel Kirke, a man of a favage and bloody difpofition. This vile fellow, practifed in the arts of ीlaughter at Tangiers, where he ferved in garrifon, took pleafure in committing inflances of wanton barbarity. He ravaged the whole country, without making any diftinction between friend and foe. His own regiment, for their peculiar barbarity, went under the ironical title of Kirke's lambs. It did not, however, appear, that thefe cuuelties were committed by the direction, or even with the approbation, of James; any more than the legal flaughters that were committed by Judge Jefferies, who was fent down to try the delinquents. The natural brutality of this man's temper was inflamed by continual intoxication. No fewer than 80 were executed by his noders at Darchefter ; and on the whole, at Excter, Taunton, and Wclls, 250 are computed to have fallen by the hand of juftice as it was called; nor were women exempted from the general feverity, but fuffered for harbouring their neareft kindred. Jefferies on his re-
turn was immediately created a pecr, and foon after Britain. vefled with the dignity of chancellor. In jultice to the king, however, it muft be owned, that in his Memoirs he complains, with apparent indignation, of "the Ilrange havock made by Jefferies and Kirke in the welf ; and that he attributed the unpopularity, which afterwards deprived him of the crown, to the violence and barbarity of thofe pretended friends of his authority. He even afcribes their feverities, in fome degree, to a formed defign of rendering his government odious to his fubjects; and from thence it is probable, that no exact or impartial accounts of thefe cruelties had reached his ears, at leaft till long after they were committed.

James now began to throw off the makk, and to endeavour openly to eftablifh Popery and arbitrary power He toid the houfe of commons, that the milhtia were found by experience to be of no ufe; that it was neceffarv to angment the ftanding army; and that he had employed a great many Catholic officers, in whofe favour he had thought proper to difpenfe with the teft required to be taken by all who were employed by the crown. He found them ufeful, he faid, and he was determined to keep them employed. Thefe ftetches of power naturally led the lords and commons into fome degree of oppofition ; but they foon acquiefced in the king's meafures, and then the parliament was diffolved for their tardy compliance. This was happy Parliament ppy daflolved. for the nation; for it was perhaps impoffible to pick out another houfe of commons that could be more ready to acquiefce in the meafures of the crown; but the diffolution of this parliament was generally looked upon as a fign that James never intended to call another.

Parliament
diflolved. The parliament being difmiffed, James's next ftep Catholics was to fecure a Catholic intereft in the privy council. promoted. Accordingly four Catholic lords were admitted, viz. Powis, Arundel, Belafis, and Dover. Sunderland, who faw that the only way to gain preferment was by Popery, became a convert. Rochefler, the treafurer, was tuined out of his office, becaufe he refufed to conform. Even in Ireland, where the duke of Ormond bad long fupported the royal caufe, this nobleman was difplaced as being a Proteftant; and the Lord Tyrconnel, a furious Roman Catholic, was placed in his Read. In his zeal for Popery, it is faid, that James flooped fo low as even to attempt the converfion of Colonel Kirke; but the daring foldier told him, that he was pre-engaged; for he had promifed the king of Morocco, when he was quartered at Tangiers, that, if ever he changed his religion, he would turn Mahometan.

At laf the clergy of the church of England began to Englith take the alarm, and commenced an oppofition to conrt clergy opmeafures. The pulpits now thundered out againf Po. pofe the pery; and it was urged, that it was more formidable courl meaflom the fupport granted it by the king. It was in vain that James attempted to impofe filence on thefe topics; initead of avoiding the controverfy, the Proteflant preachers purfued it with greater warmth.

To elfeet his defigns, the king determined to revire the high commiffion court, which had formerly given the ration fo much difguff, and which had been abolifhed for cver by act of parliament. An ecclefiaftical commifion was iffucd out anew, by which feven com-

Britain. miflioners were invefted with a full and unlimited authority over the whole church of England. -The next ftep was to allow a liberty of concience to all fedtaries; and he was taught to believe, that the truth of the Catholic religion would then, upon a fair trial, gain the victory. In fuch a cafe, the fame power that granted liberty of confcience might reftrain it $;$ and the Catholic religion alone be allowed to predominate. He therefore iffued a declaration of general indulgence, and afferted that nonconformity to the eflablifhed religion was no longer penal. In Scotland, he ordcred his parliament to grant a toleration only to the Catholics, without interceding in the leall for the other diffenters who are much more numerous. In Ireland, the Proteftants were totally expelled from all offices of truft and profit, and Catholics put in their places. Thele meafures fufficiently difgufted every part of the Britifh empire; but to complete the work, James publicly fent the earl order to exprefs his obedience to the Pope, and reconcile his kingdoms to the Catholic communion. This proceeding was too precipitate to be relifhed even by the pope himfelf; and therefore the only return he made to this embafly was the fending a nunco into England. The nuncio made a public and folemn entry into Windfor; which did not fail to add to the general difcontent; and becaufe the duke of Somerfet refufed to attend the ceremony, he was difmiffid from his employment of one of the lords of the bedchamber.

Soon after this, the Jefuits were permitted to erect colleges in different parts of the kingdom, and to exercife the Catholic worthip in the moft public manner. Farher Francis, a Benedictine monk, was recommended degree of mafter of arts. The univerfity rejected him on account of his religion; and prefented a petition to the king, befeeching bim to recal his maridate. James difregarded their pettion, and denied their deputies a hearing ; the vice chancellor himfelf was fummoned to appear before the high commiffion court, and deprived of his office; yet the univerfity perfifted, and Father Francis was refufed. The place of prefident of Magdalen college being vacant, the king fent a mandate in favour ot one Farmer, a new convert, and a man of bad character in other refpects. The fellows of the college mide very fubmiffive applications for recalling his mandate ; but the election day coming on before they received an antwer, they chofe Dr Hough, a man of learning, integrity, and refolution. The king was incenfed at their prefurnption; an inferior ecclefidftical court was fent down, who finding Farmer a man of fcandalous charafter, iffued a mandate for a new election. The man now recommended by the king was $D$ et ir Parker; a man of an abandoned char at. $r$, but verv willing to embrace the Catholic religion. The fellows refufed to comply with this injuretion; which fo irritated the kine, that he came down to Oxford in perfon, and ordered the fellows to be brought before him. He reproached them with their infulence and difobedience ; and commanded them to choole Parker without delay. Anorher refutal on their fide ferved itill more to exafperate him; and finding them refolute in the defence of their privileges, he ejected them all except two from their benclices, and Parker was put in Vol. IV. Part II.
$48 \mathrm{I}] \quad \mathrm{B} \quad \mathrm{R} 1$
poffeffion of the place. Upon this the college seas Mritan. filled with Catholics; and Charnock, one of the two that remained, was made vici-prefident. $\mathrm{Cl}^{273}$ efill

In 1686, a fecond declaration for liberty of con- ! w with fcience was publufhed almoth in the fame terms with the Catholics. former; but with this peculiar injuiction, that all divines fhould read it after fervice in thers churches. The clergy relo!ved to difohey this order. Layde bifhop of St Afaph, Kenn of Bath and Wells, Tumer of Ely, Lake of Chichefter, White of Peterborough, and 「relawney of Briftol, together with Sancroft the primate, concerted an addrefs in form of a petition to the king, which, with the warmeft expreffions of $z$ alal and fub. miffion, remonftrated that they could not $r$ ad his declaration confiltently with their confcience or the refpect they owed the Protellant religion. The king received their petition with marks of furprife and difpleafure. He faid he did not expert luch an nddrefs from the church of England, particularly from fome among ft them; and perfilled in his orders for their obey. ing his mandate.

As the petition was delivered in private, the king fummoned the billops before the council, and there queilioned them whether they would acknowledge it. They for fome time dectined giving an anfwer; but being urged by the cbancellor, they at laft ouned the $27+$ petition. On their refufal to give bail, an order was Binhops imaimmediately drawn for their commitment to the Tower, prifoned. and the crown lawyers received directions to profecute them for a feditious libel. The king gave orders that they fhould be conveyed to the Tower by water, as the The whote whole city was in commotion in their favour. The city in compeople were no fooner informed of their danger, than motion in they ran to the river-fide, in prodigious multitudes. their facraving their bleffug ; calling upon Heaven to protect them, \&c. The very foldiers by whom they were guarded, kneeled down before them, and implored their forgivenef.

The 29 th of June 1686 was fixed for the trial of the bifhops; and their return was ftill more fplendidly attended than their imprifonment. Twenty-nine peers, a great number of gentlemen, and an immenfe crowd of people, waited upon them to Weftminfer-hall. The difpute was learnedly managed by the lawyers on both fides. The jury withdrew into a chamber where they pafled the whole night ; but next morning they return - They art ed into court, and pronounced the bifhops not guilty. acquatted. Wefminiter-hall inftantly rang with loud acclamations, which were communicated to the whole extent of the city. They even reached the camp at Hounflow, where the king was at dinner in Lord Fevertham's tent. His m:jefty demanding the caufe of thole rejoicings, and being informed that it was nothing but the foldiers flonting for the delivery of the billops; "Call you that nothing? (ried he); but fo much the worfe for them." Immediately after this, the king tiruck out two of the judges, Powel and Holloway, who had appeared to favour the bihhops. He uffued orders to profecute all thofe clergymen who had not read his declaration, and all had refufed it except 200. He fent alfo a mandate to the new fellows whom the had obernded on Maydalen college, to elect for prefident, in the room of Parker lately deceafed, one Gifford, a doctor of the Sorbnnne, and titular bifhop of Madura.

As the king found the clergymen everywhere averfe

Protain. to his meafures, he was willing next to thy what be could do with the army. He thought if one regiment mould promife implicit ubedience, their example mould Attach- foon inluce others to cumple. He thercfore orderid army :o the one of the regiments to be drawn up in his prelence, Proteftant and defired that fuch as weie againll his late declaration religion.

Firth of a prince of liales.
$=79$ Treachery of Sunderland. of liberty of confcience thould lay down their arms. He was furprifed to fee the whole battalion ground their arms, except two officers and a few Roman Ciltholic foldiers.- A fortunate circumflance happened about this time in his family. A fe "days before the acquittal of the bifhops, the queen was brought to hed of a fon, who was baptized by the name of James. This would, if any thing could at that time, have ferved to eftablifh him on the throne: but fo great was the animofity againft him, that a fory was propagated that the child was fuppofititious; and fo great was the monarch's pride, that he fcorned to take any precautions to refute the calumny.

Though the enthufiafm of James himfelf bordered upon madnels, the molt wild of his religious projects feem to have been fuggefed by his enemies to accomplifh his ruin. The earl of Sunderland, whom he chitlly trufted, was a man of abanduned principles, infatiable avarice, and fitted by nature for fratagem, deception, and intrigue. The love of money was his ruling paffron, and he fold his influence to the highelf bidder. To fuch a degree was he mercenary, that he became at once the pentioner of the piince of Orange and of the king of France. The former, who had long fixed his eye on the Euglifh throne, watched James's motions, and took cvery advantage of his errors. He had laid his [chemes to extenfively, that nothing but the birth of a male beir to the crown of England could polfibly prevent him from an almoll immediate poffefion of the kingdom. He had the addrefs to render twothirds of the powers of Europe interelted in his fuccers. The treaty of Augfburg, formed to break the power of France, could not accomplifh its object without the acceflion of England. The boufe of Auftria, in both its branches, preferred their political views to their zeal for the Romith faith, and promoted the dethronement of James as the only means to humble Louis XIV. Odefchalchi, who under the name of Innocent XI. then filled the panal chair, was gained to the mealures of the prince of Orange by other confiderations, as well as through his fixed averfion to France. The prince of Orangefent his intimate friend the prince of Vaudemont to Rome, $t o$ procure the aid of the Pupe. He explained to his Holinefs, that the Catholic princes were in the wrong to expect any advantage to their faith from James, as his being a declared Papift rendered his people averfe to all his meafures. As for himfelf, fould he have the good tortune to mount the throne of England, he might tak any Itep in favour of the Roman Catholics with. out jealouly: and he promifed to procure a tolcration for the P prits, fhould the Pupe, the emperor, and the king of Spain, favour his attempt. This negociation procured she defired off ही. Innocent contributel, with the muney of the church, to expel a Roman Catholic prince from his thrunce.

Though the contell with the bilhops had completed the king's unposishriv, 'ie derived the fuddennefs of lis ruin from the lis!b of a piuce o! Wales. That cir-
cumblance increafed the fears of his fubjects in proportion as it raifed his fecurity and hopes. In the reign of a prince to be cducated under the prejudices of fuch a father, rothing but a continuance of the fame uncanftitutional meafuses could be expected. So low indeed was his credit funk among his people at this time, and fuch prefcience they all feemed to have of his fate, that the child had like to have died before a wet nurfe could be procured to fuckle him.

The prince of Orange, feeing the national difcontent He applies now raifed to the higheft pitch, refolved to take ad-to James's vantage of it. He began by giving one Dykevelt, his fubjects; envoy, inftructions to apply in his name to every religious feet in the kingdom. To the church-party he fent affurances of favour and regard; and protelted, that his education in Holland had no way prejudiced him againt Epifcopacy. To the nonconformifts he lent exhortations, not to be deceived by the infidious careffes of their known enemy, but to wait for a real and fincere protector, \&c. In confequence of thefe infinua- by 252 tions, the prince foon received invitations from the mont he is invil confiderable perfons in the kingdom. Admirals Her-ed into bert and Ruffel affured him in perfon of their own and Eoglanel. the national attachment. Henry Sidney, brother to Algernon, and uncle to the earl of Sunderland, came over to him with affurances of an univerfal combination againft the king. Lord Dumblaine, fon to the earl of Danby, being mafter of a frigate, made feveral voyages to Holland, and carried from many of the nobility tenders of duty and even confiderable fums of money to the prince of Orange. Soon after, the bintop of London, the earls of Danby, Nottingham, Devonflire, Dorfet, and Several other lords, gentlemen, and principal ci,izens, united in their addreffes to him, and in. treated his fpeedy defcent. The people, though long divided between whig and tory, now joined againft their unhappy fovereign as a common enemy. William therefore determined to accept of their invitations; and this the more readily, as be perceived the malccontents had conducted themfelves with prudence and fecrecy. Having the principal fervants of Jamcs in pay, he was minutely informed of the moft fecret actions and even defigns of that prince. His intelligence came through Siduey from Sunderland, who betrayed the very meafures which he himfelf had advifed. The prince had a fleet ready to fail, and troops provided for action, before the beginning of June 1688 .

The king of France was the firl who gave James James ${ }^{28_{3}}$ waruing of his danger, and offered to affift him in re-warned of pelling it. But he declined this friendly offer, left it his danger ftould be faid that he had entered into a private treaty with that monarch to the prejudice of the Proteltant religion. Being alfo deceived and betrayed hy Sunderland, he had the weaknels to believe, that the reports of an invafion were invented in order to trighten him into a Ilriat conncetion with France. He gave credit to the repeated affurances of the fates, that the armament prepared in their ports was not defigned againft England. Nay, he even believed the affertions of the pince himelf, whofe interef it was to deceive. Sunderland defcanted againft the poffibility of an invafion, and turned to ridicule all who believed the report. Having by the prior confent of James taken poffeffion of all the foreign correfpondence, he fupprefied every intelligence

## $B$ R I

Eritain. intelligence that might alarm; andeven all others whom Iames trufted, except Dartmouth, affected long to give
28.
no faith to the reports of an invafion.

Louis finding his firf offers rejected, next propofed to malch down his army to the frontiers of the Dutch provinces, and thus detain their forces at home for their own defence. But this propofal met with no better reception than the former. Still Louis was unwilling to abandun a friend and ally whofe intereft he regarded as clofely connected with his own. He ventured to remonftrate with the Dutch againll the preparations they were making to invade England. The Dutch treated his remonftrances as an officious impertinence, and James himfelf declined his mediation.

The king of England, having thus rejected the affiftance of his friends, and being left to face the danger alone, was aftonifhed with an advice from his minifter in Hulland, that an invafion was not only projected but avowed. When he firft read the letter containing this information, he grew pale, and the letter dropt from his hand. He faw himfelf on the brink of defruction, and knew not to whom to apply for protection. In this emergency, Louis wrote to James in his own hand, that to divert the Dutch from their intended invafion of England, he would lay fiege to Maeftricht with 30.000 men. James communicated this intelligence to Sunderland, and he to the prince of Orange. Six thnufand men were thrown into Maeftricht; and the defign of Louis, as being impracticable, was laid afide. On this Louis being difgufted with James, turned his arms towards Germany. The dauphin laid fiege to Philipfburg, on the 5th of OEtober; and Prince Clement of Bavaria, by throwing a ffrong garrifon into Cologne, effectually fecured the ftates of Holland from any fudden danger from the arms of France.

James had now no refource but in retreating from thofe precipitate meafures which had plunged him into inextricable diffrefs. He paid court to the Dutch, and offered to enter into any alliance with them for their common fecurity. He replaced in all the counties of England all the deputy lieutenants and juftices who had been deprived of their commifions for their adherence to the teft and penal law. He reftored the charters of fuch corporations as he had poffeffed himfelf of; he annulled the high commifion court; he reinftated the expelled prefident and fellows of Magdalen college; and was even reduced to carefs thofe bifhops whom he had fo lately perfecuted and infulted.

All thefe conceflions, however, were now too late ; they were regarded as the effects of fear and not of repentance. Indeed, it is faid, he very foon gave proofs of his infincerity: for hearing that the Dutch fleet was difperfed, he recalled thofe conceffions he had made in favour of Magdalen college; and to flow his attachment to the Romin church, at the baptifm of the prince of Wales, he appointed the pope one of the fpoufors.

In the mean time, William fet fail from Helvoetfluys with a fleet of near 500 veffels, and an army of above 14,000 men. Fortune, however, feemed at firft every way unfavourable to his enterprife. He was driven back by a dreadful ftorm; but he foon refitted his Heet, and again fet fail for England. It was given out that this invafion was defigned for the ceafts of France;
and many of the Englifh, who faw the flect pafs along their coalts, little fufpe Ced the place of its dellination. It happened that the fame wind which fent the Datch to their place of deffination, detained the Englifl Heet in the river; fo that the Dutch paffed the ftraits of Dover without moleftation ; and after a voyage nf two days, landed at Aroxholme in Tarbay, on the 5 th of November, the auniverfary of the gunpowdertreafon.

But though the invitation from the Englifh was very general, the prince for fome time had the mortification to find himfelf joined by very few. He continued for ten days in expectation of being joined by the malecontents, and at laft was geing to defpair of fuccefs. But juft when he began to deliberate about reimbarking his forces, he was joined by feveral perfons of confequence, and the whole country foon after flocked to his ftandard. The firlt perfon that joined the prince was Major Burrington, and he was quickly followed by the geatry of the counties of Devon and Somerfet. Sir Edward Seymour made propofals for an affociation, which was figned by great numbers; and every day there appeared fome effect of that univerfal combination into which the nation had entered againft the meafures of the king.

This was followed by the defection of the army. Defection Lord Colchefter, fon to the earl of Rivers, firt de-of King ferted to the prince. Lord Cornbury, fon to the earl James's of Clarendon, carried off the greateft part of three re-armygiments of cavalry at once; and feveral oricses of difinction informed Feverham their general, that they could not in honour fight againft the prince of Orange. Soon after this the unhappy monarch found himfelf deferted by his own ferrarits and creatures. Lord Church. ill had been raifed from the rank of a page, and had been invefted with a high command in the arny; he had been created a peer, and owed his whole furtune to the king's bounty: yet even be deferted among the relt; and carried with him the duke of Grafton natural fon to the late liing, Colonel Berkcley, and others.

In this univerfal defestion, James, not knorsing Difrefled where to turn, began to think of requefling affiftance fituation of from France when it was now too late. He wrote to the king. Leopold emperor of Germany : but in vain; that monarch only returning for anfwer, That what he had forefeen had bappened. James had fonse dependence on his fleet; but they were entirely difaffecled. In a word, his interefts were deferted by all, for he had long deferted them himfelf. He ftill found his army, however, to amount to $20,000 \mathrm{men}$; and had he led them immediately to battle, it is poffible they might then have fought in his favour. But James's misfor. tunes had deprived him of his natural firmnefs and refolution; and feeing himfelf deferted by thofe in whons he thought he could have placed molt confidence, he became fufpicious of all, and was in a manner deprired even of the power of deliberation. In this extremity of diftrefs, the prince of Denmark, and Anne, James's favourite daughter, perceiving the defperation of his circumfances, cruelly rcfolved to take part with the prince of Orange. When the king was informed of this, he was ftring with the mof bitter anguifh. "God help ine (cried he), my own children have forfaken me." To add to his diflrefs as a parent, he was

Eritain. acculed of being acceffary to the death of his own child. Her nurfe, and her uncle the earl of Clarendon, went up and down like diflracted peifons, affirming that the Papifts had murdered the princefs. They publicly afked the queen's fervants, whither they had conveyed her? and they contributed to inflame the populace, whofe zeal had already inflamed them to tumult and diforder. It was, however, foon known that the fled, under the conduct of the bilhop of London, to Northampton.

On the 30th of November 1688, James fent three of his noblemen to treat with the prince of Orange. But though the latter knew very well that the king's commitioners were in his interefts, his behaviour fhowed plainly that he now thought the time of treating was paft. For fome time he would not admit them to an audience; and when he did, would give do fatisfactory anfwer. James now began to be afraid of his perfonal fafety. But what moft affected him was the terrors of the queen for herfelf and her infant fon. He therefore refolved to fend them abroad. They croffed the river in a boat, at Whitehall, in a formy and rainy day. They were carried to Gravefend in a coach, under the conduet of the Count de Lauzun. A yacht, commanded by Captain Gray, which lay there ready for the purpofe, foon tranfported them in fafety to Calais.

293
James's atcempts to leave the kingdum.

The king was now fo difpirited and diftracted, that he refolved to leave the kingdom at once, and thus throw every thing into confufion. He threw the great feal into the Thames; he left none with any authority to conduct affairs in his abfence; and he vainly hoped to derive advantage to his affairs from anarehy and diforder. About twelve at night, on the 10 th of December, he difguifed himfelf, took a boat at Whitehall, and croffed the river. Sir Edward Hales, with another friend, met him at Vauxhall with horfes. He mounted ; and being conducted through by-ways by a guide, he paffed in the nighttime to the Medway, which he croffed by Aileslord-bridge. At Woolpeck he took freflh horfes, fent thither before by Shelden one of his equerries who was in the fecret of his flight. He arrived at 10 o'clock at Embyferry near FeverTham, where a cuftomhoufe hoy, hired by Sir Edward Hales, lay ready to receive them on board. But the wind blew frefh, and the veffel had no ballaft. The mafter, therefore, eafily perfuaded the king to permit him to take in ballaft at Shilnefs. It being half ebb when they ran afhore, they defigned to fail as foon as
the veffel fhould be afloat. But when the veffel was almoft afleat, flie was boarded by three fifher boats belonging to Feverllam, containing 50 men . They feized the king and his two companions, under pretence of their beine $P$ pifts that wanted to efcape from the kingdom. Thry turned up Feverfham water with the tide; but nill the king remained unknown. Sir Edward Hales placed privately 50 guineas in the hands of the captain, as an earneft of more fhould he permit them to efcape. He promifed: but was fo far from keeping his word, that he took what money they had, under preterice of fecuring it from the feamen; and having poffeffed himfelf of their all, he left them to their fate. The unfortunate fugitives were at length carried in a coach to Feverfham, amid the infults, cla-
mours, and fhouts of the failors. When the king was brought to the inn, a feaman who had ferved under him knew him, and melted into tears; and James himfelf was fo much moved at this inflance of his affection, that he wept. The other fiftermen who had treated him with fuch indignity before, when they faw his tears, fell upon their knees. The lower inhabitants of the whole village gathered round him; but the better fort fled from his prefence. The feamen, however, formed themfelves into a guard round him, and declared, that " a hair of his head fhould not be touched." In the mean time, Sir James Oxendon, under the pretence of guarding him from the rabble, came 295 with the militia to prevent his efcape. The king found His great a change in his condition when he was taken out of diftrefso the hands of the failors. The commanders of the militia flowed him no refpect. He was even infulted by the common foldiers. A letter which he intended to fend to London for clothes, a change of limen, and fome money, was flopped by thofe who pretended to protect his perfon.

All things in the mean time ran into confufion at London, and the prince of Orange exercifed in his own perfon all the functions of royalty. He iffied a declaration to the difbanded army to reaffemble themfelves. He ordered the fecretary at war to bring him a lift of the king's troops. He commanded the lord Churchill to collect his troop of horfe guards. He fent the duke of Grafton to take poffeftion in his name of Tilbury fort. The affembly of peers adjourned to the councilchamber at Whitehall, and, to give the appearance of legality to their meeting, chofe the marquis of Halifax for their prefident. While this affembly was fitting, on the $1^{\text {th }}$ of December, a poor countryman, who had been engaged by James, brought an open letter from that unfortunate prince to London. It had no fubfeription; and it was addrefled to none. It contained, in one fentence only, his deplorable condition when in the laands of a defperate rabble. This poor meffenger of their fallen fovereign had long waited at the council door, without being able to attract the notice of any who paffed. The earl of Mulgrave at length, apprized of his bufinefs, had the courage to introduce him to the council. He delivered his open letter, and told the fate of the king with tears. The affembly were fo much moved, that they fent the earl of Feverfham with 200 of the guards towards Fevertham. His inflructions were to refcue him firlt from 296 danger, and afterwards to attend him to the fea coaft, curns to fhould he choofe to retire. He chole, however, to re-London. turn to London ; but the prince of Orange fent a meffage to him , defiring him to advance no nearer the capital than Rochefter. The meffenger miffed James by the way. The king fent Feverfham with a letter to the prince of Orange, requefting his prefence in London to fettle the nation. He himfelf proceeded to that place, and arrived on the 16 th of December. Doubting the fidelity of the troops who were quartered at Weftminfler, he chofe to pafs through the city to Whitehall. Never prince returning with vichory to his capital was received with louder acclamations of joy. All the freets were covered with bonfires. The bells were rung, and the air was rent with repeated fhouts of gladnefs. All orders of men crowded to his

Britain. coach; and when he arrived at Whitehall, his apartments were crowded with people who came to exprefs their joy at his return.

The prince of Orange received the news of his return with a baughty ait. His aim from the beginning was to force him by threats and feverities to relinquilh the throne. The Dutch guards were ordered to take poffeffion of Whitehall, and to difplace the Englift. your family will be ruined." Thefe fpirited remonArarices had no effect upon James. He refolved to quit the kingdom; and having communicated his deGign to a few of his friends, he paffed at midnight through the back-door of the houfe where he lodged, and with his fon the duke of Berwick, and Biddulph one of his fervants, went in a boat to a fmack which lay waiting for him without the fort at Sheemefs. By seafon of a hard gale they were forced to bear up toward Leigh, and to anchor on the Effex fide, under
the lee of the land. When the gale nackened, they reached the Buoy of the Narrows without tacking; but not being able to weather the Goodwin, they were forced to fail through the Downs. Seven Mips lay there at anchor ; but the fmack paffed unqueftioned along. Unable to fetch Calais, the bore away for Boulogne, and anchored before $\Lambda$ mbleteufe. The king landed at three o'clock in the morning of Tuelday, December 25 th and taking polt, foon joined his queen at St Germains.

James having thus abandoned his dominions, the prince of Orange remained matter of them of courfe. By the advice of the houfe of lords, the only member of the legiflature remaining, he was defired to fummon a parliament by circular letters; but the prince, unwilling to act upon fo imperfect an authority, convened all the members who had fat in the houfe of commons during any parliament of Charles II. and to thefe were added the mayor, aldermen, and fifty of the common council of London; and the prince, being thus fupported by an aflembly deriving its authority from himfelf, wrote circular letters to the counties and corporations of England to call a new parliament.

The houfe being met, which was moltly compofed The throne of the whig party, thanks were given to the prince of declared Orange for the deliverance he had brought them; after which they proceeded to fettle the kingdom. A vote foon paffed both houfes, that King James II. having endeavoured to fubvert the conftitution of the kingdom, by breaking the original contract between the king and his people, and havirg by the advice of Jefuits and other wicked perfons, violated the fundamental laws, and withdrawn himfelf out of the kingdom, had abdicated the government ; and that the throne was thereby vacant.

The king being thus depofed, it was eafy for Will William liam to get himfelf appointed his fucceflor. Propofals raifed to were made for electing a regent. Others were for in- the fovevefting the princefs of Orange with legal power, and reignty. declaring the young prince fuppofititious. To thefe propofals, however, William oppofed the following decifive argument, viz. that "he had been called over to defend the liberties of the Britifh nation, and that he had lappily effected his purpofe; that he had heard of feveral fchemes propofed for the eftablifing of the government; that, if they chofe a regent, he thought it incumbent upon him to inform them that he would not be that regent; that he would not accept of the crown under the princefs his wife, though he was convinced of her merits; that therefore, if either of thefe fehemes was adopted, he could give them no affiltance in the fettlement of the nation; but would return home to his own country, fatisfied with his aims to fecure the freedom of theirs." Upon this, after a long debate in both houfes, a new fovereign was preferred to a regent by a majority of two voices. It was agreed that the prince and princefs of Orange hould reign jointly as king and queen of England; while the adminiftration of government fhould be pla. eed in the hands of the prince only. The marquis of Halifax, as fpeaker of the houfe of lords, made a folemn tender of the crown to their highneffes, in the name of the peers and commons of England. The prince accepted the offer ; and that very day, February 13. 1689, William and Mary were proclaimed king and queen of England.

Though Mary was comprehended in the royal title, fle never poffefled either the authority of a queen, or the influence of a wife. Her eafy temper had long been fubdued by the ftern feverity of a hurband who had very few amiable qualities. Being brought up in a manner under the tuition of her fpoufe, and in fome degree confined by his orders, fhe was accultomed to adopt implicitly his political maxims and even his thoughts; and in conlequence of her want of importance with him, the ceafed to be an object of confequence in the cyes of the nation.

William began his reign with iffuing a proclamation for continuing in office all Proteftants that had been in place on the firft of the preceding December. On the 17 th of the month he formed his privy council, which confifted chiefly of fucls perfons as had been mof active in raifing him to the throne. To gratify as many as poffible of his friends, the feveral boards, and even the chancery, were put into commiffion. The bencbes of the exchequer and common law were filled with perfons who had diftinguifhed themfelves againft the meafures of the late king. The earl of Notfingham who had violently oppofed the elevation of William, and the earl of Shrewflury who had adhered to his views, were made fecretaries of ftate. The marquis of Halifax, and the earl of Danby, though rivals in policy, were admitted into the cabinet; the firft as lord privy feal, the lecond as prefideat of the council. His Dutch friends in the mean time were not forgotten by the king. Bentinck, his favourite, was made a privy counfellor, groom of the fole, and privy purfe. Auverquerque was appointed mafter of the horfe. Zuylfein received the offiee of mafter of the robes. Schomberg was placed at the head of the ordnance.

Though thefe inftances of gratitude were no doubt neceflary to William, the generality of the nation were difpleafed. The tories were offended at being excluded from his favour, efpecially as they had departed from their principles in order to ferve him. The nation in general were much prejudiced againft foreigners, and univerfal difoontent enfued uponfeeing them preferred. The king, who hat been bred a Calvinift, was alfo very ferongly inclined to favnur that fect ; and his prejudices in favour of C.llvinifm were :almof equal to thofe of James in favour of Popery. Finding, therefore, the clergy of the church of England little inclined to take the oaths to the new government, he begon openly to indulge his own prejudices in favour of difPenters. Having come to the huufe of lord, to pafs fome bills, on the 16 th of March, he made a feeeth, urging the necoffity of admitting all Prot-ftants indifcriminately into the public fervice. He told his parJiament, that he had fomething to communicate, which would conduce as much to their fettlement as to the difappointment of their cnemies. He infortred them, Inf home dilappointment of theif cnemies. He infornued them, ofd difenters fices of truft ; and he hoped that they were fenfible of rejected.
adherents of the church complained that the ruin which they feared from the Papifts in the preceding reign was now to be dreaded from the Proteftant diffenters. They affirmed, that if the eftablifhed religion was to be deftroyed, it mattered little by whofe hands it muft fall. A bill brought in by the miniftry for abrogating the former oaths of fupremacy and allegiance was rejected.

An attempt to difpenfe with the facramental teft was made without fuccefs in another form. The courtparty propofed that any man fhould be fufficiently qualified for any office by producing a certificate of his having received the facrament in any Proteftant congregation. But this motion was alfo rejefted in the houfe of lords by a great majority. William repeated his attempts of a comprehenfion; but he was ultimately unfuccefsful, and in the coronation-oath the churchparty inferted a claufe highly favourable to themfelves, viz. that the king fhould maintain the Proteftant religion" as eftablifhed by law." To this claufe William is faid to have difcovered an apparent unwilling. nefs to fivear.

For thele and other reafons the government of Wil. liam was for fome time but in a very tottering condition. The king, either through want of health or inclination, interfered but little in the affairs of the nation. Ireland was ftrangely neglected. Halifax and Danby, who had in a manner raifed the king to the throne, caballed with his enemies. They perceived that the people, with the fame levity that induced them to defert their former fovereign, were beginning to be difeontented with their new prince. Every thing feemed to tend to a change. Halifax himfelf declared, that were James to conform with the Proteftants, he could not be kept four months from reafcending his throne. Dinby averred, that, were the late king to give fatisf ciion for the lecurity of religion, it would be difficult to ofpofe his refloration. From thefe apparent difcontents of the nation, the friends and erriffaries of lames affumed more boldnefs. They tampered with the fervants of the crown, and inflamed the army. The former they alarmed with the profpect of a fudden change; the latter they roufed into indignation by the manifert preference given by William to his countrymen the Dutch.

Though the kingdom of Scotland did not at firft re- He is ace ${ }^{3 \times 6}$ cognize the authority of William, yet the party of knowJames never attained fufficient ffrength to be of any ef- ledged king feetual fervice to him in that hingdom. Thirty Scots in Scotpeers, and near 80 gentlemen, then in London, had waited in the beginning of January on the prince of Orange. Withoot any authority from the regency fill fubfiting in Edinburgh, they formed themiclves into a kind of convention. The prince of Orange in a formal manner afked their advice. He withdrew, and they adjourned to the council-chamber at IVhitehall. The duke of Hamilton being chofen prefident, explained the diftracted ftate of Scotland. He reprefented, that difurders, anarchy, and confufion, prevailed; and he trged the neceflity of placing the power fomewhere till a convention of thates ftould be called to form a latling and folid fettlement. When the heads of their addrefs to the prince of Orange were fetted, and ordered to be crigrofed, the carl of Arran unexpe\&tedly arofe, and propoled to invite back the king. 'The meet- the neceffity of a liw to fettle the oatho to he taken by fuch perfons as flould be admitted inten place. As he doubted not, he frid, that they would fulficiently provide againf P'pils, fo he hoped that they would leave room for the admiffion of all Protefiants that were able and willing to ferve.

This propofition was rejefted with :eliemence. The

Mritain. ine, however, adhered to the prince of O.ange; and wited on him in a body, requefling him to take the adminiftration into his hands. He thanked them for the erult they had repared in hims and a convention was ordered to meet at Edinburgh on the $14^{\text {th }}$ of March, aind it was provided that no exception or limitation whatever flould be made, except that the members fhould be Protellants.

A leceffion, however, was made from this convention, in favour of James. The archbilhop of Glafgow, the earl of Bilcarras, and the vifcount Dundee, were authorifed by an inftrument figned by the late king, at that time in Ircland, to call a convention of the Rates at Stirling. But this meafure was difappointed, firt by the wavering difpofition of the marquis of $A$ thol, and afterwards by the delay and folly of the party. At laft, the vifiount Dandee, being alarmed by an information of a defign formed by the covenanters to affaffinte him, left Edinburgh at the head of 50 horfe. When he paffed under the walls of the cafte, the duke of Gordon, who held that place, and favoured the raufe of Jimes, called him to a conference. He ferambled up the precipice, and informed the duke of his defigns in favour of the late king. He conjured him to hold out the cafte, under a certainty of being relieved. The novelty of the fight collected multitudes of fpectators. The convention were alarmed. The prefijent ordered the doors to be locked, and the keys to be laid upon the table. The drums were beat to alarm in the town. A parcel of ill-armed retainers were gathered together in the fleet by the earl of Leven. Dundee in the mean time rode off with his party. But when they found themfelves fecure, the duke of Hamilton adjourned the convention, which relieved the adherents of James from dreadful apprehenfions for their own fafety. Fifty members retired from EJinburgh; and that circumflance procured an unanimity in all the fucceeding refolutions of the convention. Soon after this, it was determined in a committee, that James had forefoulted his right to the crown. by which was meant that he had perpetually excluded himfelf and his whole race from the crown, which was thereby become vacant. This refolution was approved by the convention, and another was drawn up for raifing William and Mary to the vacant throne; in confequence of which they were proclaimed at Edinburgh on the 1 ith of April 1689.

The cafle of Edinbuigh was fill kept, in the name of James, by the duke of Gordon : but defpairing of any relief, and preffed by a fiege, he furrendered it. on the $1^{\text {th }}$ 解 J June, upon honourable terms. The adherents of James, terrified with this unexpected miffortune, now turned their eyes to the vifcount Dundee. That nobleman having been in vain urged by the convention to return, they had declared him a fugitive, an outlaw, and a rebel. General Mackay had been fent to Scotland by William with four regiments of foot, and one of dragoons; and Dundee heing ap- prifed ot his defign to furprif, him, retired to the Grampian mountains with a few horfe. He marched from thence to Gordon caftle, where he was jui. ed by the earl of Dunfermaline with 50 g-ntlemen. He then paffed through the county o Murady to Invernefs. Macdonald of Keppoch lay with 700 men betore that town; after having ravaged, in his way from his own country,
the lands of the clan of Marintofh. Dublec having promifed to the magillates of Inverncts to repay, at the king's return, the money cxtorted from them by Macdorald, induced the latter to join him with all his men. Ile could not prevent them, however, from firft returning home with their fpoil. He accompanied them to Lochaber, and on the Sth of May arrived in Badenoch. From thence be wrote letters to the chiefs of all the clans, appointing the:n to meet at a general rendezvous in Lochaber, on the 8 th of the fime month. In the mean time, paffing fuddenly through Achol, he furprifed the town of Perth. Lar hopes of gining to his party the two troops of Scots dragoons who lay at Dundee, be marched fuddenly to that place: but the fidclity of Captain Balfour, who commanded them, difappointed his views. Having raifed the land-tax as he pafferl, Dundee returned through Athol and Rannoch to hold the diet of rendezvous at Lochaber. Here he was reinforced by feveral Highland chieftans, fo that his army amounted to 1500 men. He purfued Mackay for four days, who had advanced to Invernefs, but alterwards retreated to Strathbogie, leaving the whole Highlands expofed to the enemy.

Soon after, however, Dundee found himfelf furrounded with many difficulties. The officers of the Scots dragoons, who held a fecret correfpondence with him, wrote him falle intelligence, as an excufe for their own fears. They informed him, that a party of Irilh, who had endeavoured to land in Scotland, under the duke of Berwick, were driven back, and the duke himfelf taken prifoner; and that Mackay had been reinforced with a regiment of Englifh horfe, and another of foot. On this intelligence, Dundee retreated to Badenoch. The natives of the low country who ferved in his army quitted him without leave; and the Highlanders plundered the country wherever they came: at laft he himfelf fell fick, while Mackay hovered on his rear. A flight ikirmith happened, in which the Highlanders prevailed; but they ioft their baggage during the action. Dundee at length arrived at Ruthven; but Mackay being reinforced with a bedy of 1200 men advanced again him, and other reginent; had arrived at Perth and Dumblain. The Highlanders now deferted every night by hundreds; their gallant leader himfelf uras forced to retire to Lochaber, "here only 200 of his whole force remained with him ; and to complete his misfortunes, he receired at the fame time news of the furrender of the caftie of Edinburgh.

On the 23 d of June, letters arrived from King James, wih a promife of immediate fuccours from Ireland; upon which Dundee ordered the neighbouring clans to affemhle round his flandard. But fill he had fcarce any thing but the mere bodies of his men with which he could profecute the war. The Highlanders were armed only with their own proper weapons, and he had no more than 40 pounds of powder in his whole army. All difficulues, however, were furmounted by the active fpirit of the general, tor whoni the army entertained an enthufiallic zeal. On the sith of July, He is filiain the par of Killicranky. An engagement enfued, in which the Hightanders were vichorions. Two thoufand of Mackay's men were lolt either in the field or $\underbrace{\text { Eris.mm. }}$ $\underbrace{\text { Er.trti. }}$

in the purfuit; but the victory coft the Highlanders very dear, for their brave general was mortally wounded. He furvived the battle, however: and wrote an account of the vietory to King James: he even imagined his wound was not m retal ; but he died the next morning at Blair. With him ended all the hopes of James in Scotland. Colorel Camon, who fucceeded Dundee in the command, poffefled neither his populdrity nor his abilities. After fome infignificant actions, in which the valour of the foldiers was more confpicuous than the conduct of their leader, the Highlanders difperfed themfelves in difguft ; and the war foon after ended favourably for William, without any repulfe given to this enemies.

During the troubles in England, which had terminated in placing William on the throne, the two parties in Ireland were kept in a kind of tranquillity by their mututl fears. The Protefants were terrified at the profpect of another maffacre; and the Papilts expeited every day to be invaded by the joint force of the En:lifh and Dutch. Their terrors, however, were ill founded; for though Tyrconnel Cent Ceveral meffages to the prince, that he was ready to deliver up the kingdom to any force that might make a furrender decent, his offers were always rejected. William was perfuaded by the marquis of Halifas, that, fhould Ireland yield, no pretence could remain for keeping an army in pay; that then, having no army to protect his authority, he might as eafily he turned out as he had been brought in; that the Englifh nation could never remain long in a flate of good humour ; and that he might perceive they already began to be difcontented. Thefe infidious arguments induced Wil. liam to neglect Ireland in fuch a matiner as is juftly looked upon to be one of the greatef blemifhes in his whole reign. His enemies, indeed, though perhaps without any good foundation, affien a worfe caule, viz, that Rhould England be confirmed under his government, Ireland coult not long hold nut ; and that the obftinacy of his Irifh enemies wruld give a pretence for forfeitures, to gratify his Englifh, but efpecially his forcign triends.

Tyrconned, difappointed in his views of furrendering Ireland to the prince of Orange, affected to adhere to James. The whole military force of the king. dom at that time amounted only to 4000 men, and of thefe only 600 were in Dubling and what was llill worfe, all of them were fo mucls difpoled to quit the fervice, that the lord deputy was obliged to iffue commifforis for levying new forces. Upon this, a halfarmed rabble, rather than an army, rofe fuddenly in various parts of the kingdom. Having nn pay from the king, they fuhfifted by depredation, and regarded no difcipline. The Proteftants in the north armed themfelves in their own defence; and the city of Londonderry, relying on its fituation, and a night wall, Thut its gates againft the new-raifed army. Proteflant parties in the mean time rofe everywhere, declaring their refolution to unite in felf-defence, to preferve the Proteffint religion, to continue their dependence on England, and to promote the meeting of a free parliament.

To preferve appearances, William now fent Genesal Hamilton, an Iriftman and a Roman Catholic, to
treat with Tyrconnel; but inftead of perfuading that Britaint lord to yield to William, this meffenger advifed him to adhere to James, In the mean time James himfelf alfured the lord deputy, that he was ready to fail from Breft with a powerful armament. Hamilton, afluming fpirit from the hopes of this aid, marched againt 312 the northern infurgents. They were routed with cori-They are fiderable fllughter at Drumore; and Hillborough, defented at where they had fixed their head-quarters, was taken Drumore. without refiftance: the city of Londonderry, however, refolved to hold out to the laft extremity.

On the 7 th of March 1689 . James embarked at Breft. The whole force of has expedition confifted of 14 fhips of war, fix frigates, and three fine-fhips. Twelve hundred of his native fubjects in the p.y of France, and 100 French officers, compofed the whole army of James. He landed at Kinfale without oppofition on the ath of me month where the was receive fition on the 12 th of the month, where he was recelv-in Ireland
ed with the utmon demonitzations of joy. His firt care was to fecure, in the fort of Kinfale, the money, arms, and ammunition, which he brought from France; and put the town in fome pofture of defence; which having done, he advanced to Cork. Tyrconnel arrived at this place foon after, and brought intelligence of the rout at Drumore. The king was fo much pleafed with his attachment and fervices, that he created him a duke; after which he himfelf advanced towards Dublin. The condition of the rabble, who poured round him under the name of an army, was not calculated to raife his hopes of fuccefs. The moft of them were only provided with clubs; fome had flicks tipt with iron; and even of thofe who were beft armed, fearce two in a hundred had mufkets fit for fervice. Their very numbers idifleffed their fovereign, and ruined the country; infomuch that James refolved to difband the g'eatefl part of them. Mure than 100,000 were already on font in the different parts of the ifland. Of thefe he referved 14 regiments of horfe and dragoons, and 35 regimerits of foot; the reft he ordered to their relpective homes, and armed thote that wereretained in the befl manner he could.
$B$ ing received at Dublin with an appearance of univeríal jov, J mes proceeded immeliarely to bufivels. He ordered, by proclamation, a'l Proteflants who had abandoned the kingdom to return. He commanded, in a lecond proclamation, all Papiffs, except thofe in his army, to lay up their arms. and put an end to the robberies and depredations which they had committed in the violence of their zeal. He raifed the valur of the curren y by a proclamation; and he fummored a parlisment to meet on the gth of May, to fettle the affrirs of the kingdom. The Proteftant clergv reprefented their grievances in an addrefs; and the univerfity of Dublin appeared with complaints and congratulations. He affured the firf of his abfolute protection, and a full redrefs; and he promifed the latter wot only to defend, hut cven to enlarge, their privileges.

On the 8ih of April, James left Dublin, refolving is forced to lead his army againn the infurgents in perfon. r ts the They retired before him, and the king laid fiege to tiege of Loridonderry. The befieged made fuch a vigorous dendy. refillance as has made the place remarkable ever fince*:* © Loso but being reduced to the laft ixtremity, they would donderry. have been obliged to furrender, had not they been re-

Britain. lieved on the 28 th of July by feven fhips laden with provifions; upon which the ficge was immediately raifed.

In the mean time, the diftrefied fituation of James, and his abfolute dependence upon France, drove him into meafures which otherwife he never would have thought of. His foldiers for fome time had been fupported by their officers, or fubfifted by depredation. The funds of the officers were at laft exhaufted, and the country itfelf could no longer bear the riot and injuftice of the foldiers. Preffed by thefe difficulties, James, by the advice of his council, refolved to coin pieces of copper, which fhould be reecived for filver. He faw well enough the inconveniences of this meafure; but all Ircland pofiefied not the means of paying the army in current coin to the middle of June. Of the French remittances only 200,000 livres remained; and the king found it abfolutely neceffary to referve that fum, to forward his meafures with regard to Britain, and to procure intelligence of the motions of his enemies. The army was fatisficd even with this appearance of money, and the people received the fictitious coin in hopes of being repaid in a more favourable itate of affairs. A tax of 20,0001 . a month, granted for 13 months by the parliament, furnifhed government with an appearance of refources; and in the mean time the king endeavoured to fupport the former revenue. He opened a trade with France to fupply the want of commerce with England. But the French, knowing thcir own importance, and the neceffity of the unfortunate monareh's affairs, claimed and obtained advantages in traffic which offended his own fubjects.

To add to the diftrefs of James, Ireland was now invaded by 10,000 men under the command of the duke of Schomberg. They appeared on the 12 th of Auguf 1689, in 90 tranfports, on the coaft of Donaghadee, in the county of Down. Next day Schomberg landed without oppofition his army, horles, and train of artillery. Having marched to Belfaft on the 15 th, he continued in that place four days to refrefh his troops. He invefted Carrickfergus, and threw into it 1000 bombs, which laid the boufes in afhes. The garrifon having expended their powder to the laft barrel, marehed out with all the honours of war. But Schomberg's foldiers broke the capitulation. They difarmed and ftripped the inhabitants, without any regard to fex or quality; even women, flark naked, were publicly whipped between the lines; and all this under pretence of cruelties of the fame kind having been committed by the Papifts.
Though Schomberg was an experienced general, who had paffed a life of 80 years almof continually in the field, he found himfelf at a lufs how to carry on the war in Ireland. He did not confider the dangers that threatence the health of his troops by confining them too long in one place; and he kept them in a low moift camp near Dundalk, alnof without firing of any kind ; fo that the men fell into fevers and fluxes, and died in great numhers. The enemy were not lefs afficted with fimilar diforders. Both camps remained for fome time in fight of each ether ; and at laft, the rainy feafon approaching, both armies quitted their camps at the fame time, and retised into winterquarters.

Vol. IV. Part II.

The bad fuccefs of the campaign, and the miferable Eritain. fituation of the Proteltants in Ircland, at length indu- 317
eed William to attempt their relicf in perlon. Ac-and cordingly he left London on the 4 th of June 1690 , William is and arrived at Carrick fergus en the 24 th of that month. perfun. From thence he pafied (1) Ligurn, the head quarters of the duke of Schomberg. He seviewed at LoughBritland his army, which confifted of 36,000 men, and was conspofed of Englint, Dutch, Germatns, Danes, and French. Being fupplied with ewery necefary, and in high health and finits, they feemed abfolutely certain of victory. The lrifh army, having abandoned Ardee at their approach, fell back to the ivith of the $11^{8}$ Boyne. On the bank of that river they were juincd Eatele at by James, who had marehed from Dublin at the head the Boyne. of his French auxiliarics. The banks of the Buyne were fleep; the fouth fide hilly, and fortified with ditches. The river itfelf was deep, and it rofe very high with the tide. Thefe advantages induced James, contrary to the opinion of his officers, to keep pofictfion of this poft. His army was inferior in numbers, diccipline, and every thing, to his enemics : but tlight, he thought, would difpirit his troops, and tarnifh his own reputation; he therefore refolved to put the fate of Ireland on the iffue of a battle. Urged by his friends in England, and encouraged by a projected invafion of that kingdom by France, he had refolved to quit Ireland; and to this he was farther encouraged by the affurance of aid from a powerful flect that had already entered the narrow feas. But the frength of his fituation, and the ludden appearance of the enemy, which made even a retreat dangerous, induced him to defer his purpofe.

William was no fooner arrived, than he rode along william in the river's fide, in fight of both armies, to make pro-danger. per obfervations on the plan of battle; but in the mean time, being perccived by the enemy, a cannon was privately brought out and planted againft him where he was fitting. The fhot killed feveral of his followers, and he himfelf was wounded in the fhoulder. The news of his being flain was inftantly propagated through the Irifh camp, and even fent off to Paris; but William, as foon as his wound was dreffed, rode througla the camp, and quickly undeceived his army.

The next day (June zoth) the battle began at fix ${ }^{320}$ in the morning. James's forces behaved with great feated. refolution, but were at lant defeated with the lojs of 1500 men. The Proteftants loft but about one-third of that number; but among thefe was their brave general the duke of Schomberg. He was killed by a difcharge from his own troops, who, not knowing that he had been accidentally hurricd into the midit of the enemy, fired upon the body of men who furrounded him. During the aetion, James itwod on the hill of Dummore, furrounded with fome fquadrons of horfe; and at intervals was heard to exclaim, when he faw his own troops repulfing thofe of the encmy, "O fpare my Englifh fubjects !" While his troxps were yct fighting, he quitted his flation; and leaving orders to guard the pals at Duleck, made the bett of his way to 32 r Dublin. He advifed the magitrates of that city to He tlies te make the bed terms they could with the victors; and France. he himfolf fet out for Wraterford, where he immediatcly embarked for France. When he firlt deferted his troops at the Boync, Olicgan, an old Lrilh captain, was heard

Britain. to fay, "That if the Englifh would exchange gencrals, the conquered army would fight them over again."
322 War conti-
Warconti- The rictory at the Boyne was by no means decifive,
pued in his and the friends of Jamos refoved to continue their opabience. and the friends of James refoved to continue their oppofition to William. Sarsfield, a popular and expe- rienced general, put himfelf at the head of the ariny that bad been routed at the Boyne, and went farther into the country to defend the banks of the river Shannon. James appointed one St Ruth to command over Sarsfield, which gave the Irifh univerfal difoontent. On the other liand, General Ginkle, who had been appointed to command the Englih army in the alfence of William, who was gone over to England, advanced towards the Shannon to meet the enemy. The only place where it was fordable was at Athione, a ftrong walled town built on both fides of the river, and in the hands of King James's praty. The Englifh foon made themfelves mafters of that part which was on the hither fide of the river; but the part on the oppofite bank being defended with great vigour, was for a long while thought impregnable. At length it was refolved in a council of war, that a body of forlorn hope fhould ford the fream in the face of the enemy; and this defperate enterprife was performed with great refolution; the enemy were driven from their works, and the town furrendered at diferetion. St Ruth marched his army to its relief, but he came too late; for he no fooner approached, than his own guns were turned againf him; upon which he infently matched off, and took poft at Aughrim, at ten miles diftance, where he determined to wait the Englid army. Gin-
323 kle did not decline the combat, though he had only

St Ruth, Jame:'s general, defcated, and killed.

324
Limeric be-
giged 18,000 men, while the lrifh were above 25,000 ftrong. A defperate engagement cnfued; but at laft St Ruth being killed, his troops gave way on all fides, and retreated to Limeric, where they determined to make a final ftand, after having loft near 5000 of their beft men.

Ginkle, wifhing to put an end to the war at once, fuffered as many of the Irifh as chofe to retire to $\mathrm{Li}^{-}$ meric. In this laft retreat the Irift forces made a brave defence. The fiege commenced Auguft 25 . 1691. Six weeks were fpent before the place without any decifive effect. The garrifon was well fupplied with provifions, and provided with all means of defence. The winter was approaching, and Ginkle

## zerms al.

lowed them
by Ginkle. bad orders to finill the war upon any terms. He thercfore offered fuch conditions as the 1rifh, had they been victors, could fearce have refufed with prudence. He agreed, that all in arins flould receive their pardon: that their eflates fhould be reflored, their attainders annulled, and their outlawries reverfed : that none fhould be liable for debts incurred through deeds done in the courfe of hotilities: that all Roman $\mathrm{C}_{2}-$ tholics fhould enjoy the fame toleration with regard to their religion as in the reign of Charles 11.: that the gentry fhould be permitted to make ufe of arms: that the infering fort flould be allowed to exercife their sallings and profeffions: that no oaths lut that of allefiance fhould be required of high or low : that flould the troops, or any number of them, choofe to retire into any fureign fervice, they thould be conveyed to the continent, at the expence of the king. Sarsfield, whu had nbtained the title of enrl of Luran from James afier his abdication, was permitted to retain a dignity
which the laws could not recognife. The lords juni- Prizith. ces had arrived from Dublin on the firf of Oetober. They figned the articles together with Ginkle; and thus the lrifh Papifts put a happy period to a war which threatened their party with abiolute ruin. In confequence of this treaty, about $\$ 4,000$ of thofe who had fought for King James went over to France, having tranforts provided by government for conveying them thither. When they arrived, James thanked them for their loyalty, and told them that they fhould fill fight for their old mafter; and that he had ubtained an order from the king of France for their being new elothed, and put into quarters of refrefhment. In this manner all James's expectations from Ireland were entirely fruffrated, and the kingdom fubmitted quietly to the Englifh government.
In the begimning of the year 1692, an action of un- Maftacre exampled barbarity difgraced the gorernment of Wil-ot Clenco liam in Scotland. In the preeeding Auguft, in confequence of a pacifieation with the Highlanders, a proclamation of indemnity had been iffued to fuch infurgents as fhould take the oaths to the king and queen, on or befure the laft day of December. The chiefs of the few tribes who had been in arme for James compliced foon after with the proclamation: but Miacdonald of Gleneo failed in fubmitting within the limited time; more, however, from accident than defign. In the end of December, he came to Colonel Hill, who commanded the garrifon in Fort William, to take the oaths of allegiance to the government. Hill having furnifted Macdonald with a lctter to Sir Culin Campbell, fleriff of the eounty of Argyle, directed him to repair immediately to Inverary, to make his fubmiffion in a legal manner before that magiflratc. The way to Inverary lay through almoft inpaflable mountams; the feafon was extremely rigorous, and the whole country covered with a deep fnow. So eager, however, was Macdonald to take the oaths, befure the limited tinue fhould expire, that though the road lay within half a mile of his own houfe, he would not itop to rifit his family. After various nbAtructions, he arrived at Inverary. The time was elapfed, and the flacriff hefitated to receive his fubmifion; but Macdonald prevailed on him by his importunities, and even tears. Sir John Dalrymple, afterwards carl of Stair, attended King William as fecretary of fate forScotland. He took advantage of Macdonald's neglecting to take the oaths within the ti:ae prefribed, and procured from the king a warrant of military exeention againft him and his whole tribe. As a mark of his own cagernefs, or to fave Dalrymple, 11 illiam figned the warant both above and below, with his own hand. The fecetary, in letters exprefiive of a brutal fercity of mind, urged the offices who commanded in the Highlands to excente their orders with the utmoft rigour. Campbell of Glenlyon, a captain in Argyle's regiment, and two fubalterns, were ordered with 120 men to repair to Gleneo on the firtl of February. Campbell, being uncle to young Macdonald's wife, Was received by the father with all mamer of friendinip and hofpitality. The men wele treated in the haties of his ten mis with free quarters and kind entertainment.. Till the $13^{\text {th }}$ of the munth, the troops lived in good lumour and familiarity with the perple. The ollieers on the very night of the maffacre pafied the evening and played at eards in Macdonald's houfe. In the night, Lieutenant

## B R I [ 401 ] B R I

Britain. Lieutemant loindfay, with a party of foldiers, called in a friendly manner at his door. He was intantly admitted. Maedonald, as he was rifing to receive his gueft, was fhat dead behind his back with two bullets. His wife had already put on her clothes; but fie was Atripped naked by the foldiers, who tore the rings off her fingers with their tecth. The llaughter was become general. To prevent the pity of the foldiers to their holts, their quarters had been changed the night bcfore. Neither age nor infirmity was fpared. Some women, in defending their children, were killed; boys, imploring mercy, were thot by officers, on whofe knecs they hung. In one place, nine perfons, as they fat enjoying themelves at table, were lhot dead by the foldicrs. In Inverriggen, in Campbell's uwn quarters, nine men were firft bound by the foldiers, and then fhot at inter. vals, one by one. Near 40 perfons were maflacred by the troops. Several who tled to the mountains perimed by famine and the inclemency of the feafon. Thofe who efeaped owed their lives to a tempefluous nighto Lieutenant-colonel Hamilton, who had the charge of the exceution from Dalrymple, was on his march with 400 men , to guard all the paffes from the valley of Glenco; but was obliged to ftop by the feverity of the weather; which proved the fafety of the unfortunato tribe. He entered the valley next day; !aid all the houfes in afhes; and carried away all the cattle and fpoil, which were divided among the officers and foldiers.

It can fearcely be imagined that a maflacre attended with fuch circumitances of treachery and breach of the laws of hofpitality, could pafs without forne animadverfion; though the exprefions of Cunningham, a writer very partial to the character of King William, feem to account it a fault that it thould ever have been inquircd into. "Mr James Johntone, one of the fecretaries of ftate (fays he), from motives of revenge caufed the affair of Glenco to be laid before parliamen. This being fomewhat difingenuoufly managed, was the occafion of mueh trouble to many people. The earl of Breadalbin was committed to the caftle of Edinburgh : but the lord vifcount Stair, who lay under fome fufpicion on that account, in a very artful fpeech endeavoured to refolve the whole matter into a mifapprehenfion of dates; which, he alleged, had led both the actor in the llaughter complained of, and thofe who now accufed him, into miltakes. In conclution he aflirmed, that neither the king nor any other perfon was to be blamed, fave only the mifled captain, who did not rightly underitand the orders that had been given him." The moft difgraceful circumftanees of the maflacre are by the fame author concealed; as he only tells us, that " it unhappily fell out, that the whole clan of Glenco, being fonewhat too late in making their fubmilion to King William, were put to the fword by the hands and orders of Captain Camplell ; which gare great offence to the king. It is certain the king had caufe of refentment againit fome of his courtiers on account of this fonl action; but he thought fit not to queftion them for it till he could fettle himfelf more firmly on the thronc."
lt is not improbable, that partly to efface the remembrance of thismallacre, and the tham inquiry above mentioned, the king now caufed his commifiioner to declare in the Scots parliament (the fame that had inquired into the affair of Glenen), "That if the members found
it would tend to the advancement of trade that an act nould be pafied for the encouragement of fuch as flould acquire and eftabliflı a plantation in Africa, America, or any other part of the world where plantations might be lawfully acquired, that his majefty was willing to declare he would grant to the fubjects of this kingdom, in favour of thefe plantations, fuch rights and privileges as he granted, in like cafes, to the fubjects of his other dominions." liclying on this and other flattering promifes, the nobility and gentry of Scotland advanced $400,00=1$. towards the eltablithment of a counpany for carrying on an Eaft and Weft lndia trade; and 1200 veterans who had ferved in King Willian's wars were fent to cffect a fettlement on tise peninfula of Darien, which lies between the Atlantic and Pacific occans, and in the narrowelt place is not above of miles over; and of confequence is equally well adapted for trading with both the Indies.

The new colony was well received by the natives, and matters began to wear a promifing afpect, when the king, on the earnef folicitations of the English and Dutch Eaft India Companies, refolved to gratiify the latter at the expence of his Scetill fubjects; and knowing that the new colony mutt want fupplies of provifions, he fent orders to the governor of Jamaica and the Englifh fettlements in America to iflue proclamations, prohibiting, under the fevereft penaltics, all his majefty's fubjects from holding any correfpondence with the Scotifh colony, or anfiling it in any mapc with armes, ammunition, or provifons: "Thus (fays Mr Knox) the king's heart was hardened againt thefe new fettlers, whom he abandoned to their fate, though many of them had been covered with wounds in fighting his battles.
"Thus vanifhed all the liopes of the Scotifl nation, which had engaged in this defign with incredible alacrity, and with the mof fanguine expectations that the misfortunes of their country would, by this now channel of commerce, be completely healed.
"The diltreffes of the people, ulon receiving authentic accounts of the fortune of their coleny, fearcely admit of any defcription. They were not unly dilappointed in their expectations of weaith and a renewal of their commerce, but hundreds, whe had ventured their all, were abfolutely ruined by the mifiar. riage of the defign.
"The whole nation feemed to join in the clamour that was raifed againtt their fovereign. They taxed him with double dealing, inhumanity, and bafe ingra. titude, to a people who had lavihed their treafure and beft blond in fupport of his government, and in the gratification of his ambition; and had their power been equal to their acrimony, in all probability the ifland would have been involved in a civil war."

Such is the account of this tranfaction given by Mr Knox; on the other hand, Mr Cunningham tells us, that "the lame parliament (which had inouired into the Glenco affair) alfo had under their confideration a fcheme for fettling a trade and planting a colony in Anerica, which proved afterwards an occafion oi nianifold evils, and was matter of great complaint both to the Englim and the Spaniards. The Scots, carrying on the fettlement of the colony which has been juft mentioned with extravagant parade, and noife, and fubferiptions, filled not only England but all other

## B R I

Eritain. countries alio, with apprchenfions left Scotland fhould, in procefs of time, become the emporium of all the trade of Europe. But they never confidered how few would truft their fortunes to the difpofal of fuch a numerous nobility, nor calculated the frauds of their own managers: by which means the whole affuir was afterwards ruined. Difoords ariing on this head between the two kingdoms, old hoftilities were recalled to mind; the cattle were driven off from the borders; the cultons were dcfranded, and other injuries committed; and at latt the Spaniards complained of the Seots. Therefore, to prevent the mifchiefs which might arife to both kingdoms, the king had nothing fo much at heart as to bring about an union upon as fair terms as he could," Sic.

The total reduction of Ireland, and the difperfion and extermination of the Highland chieftans who favoured his caufe, did not entirely put an end to the hopes of James. His chicf expectations next were founded on a confpiracy among his Englifh adherents, and in the fuccours promifed him by the French king.
the head of $\sigma_{3}$ fhips of the line, was appointed tofavour the defcent. His orders were, at all events, to attack the enemy, in cafe they thould oppofe hini; fo that every thing promifed the banished king a change of fortune.

Thefe preparations on the fide of France were foon known at the Englifh court, and every precaution taken for a vigorous uppofition. All the fecret machi. nations of the banifhed king's adherents were difcovered to the Englifh miniftry by fpics; and by thefe they found that the Cories were more faithful than even the Whigs who had placed King William on the throne. The duke of Marlborough, Lord Godolphin, and even the princefs Anne herfclf, were violently fufpected of difaffection. Preparations, however, were made with great tranquillity and refolution, to refift the growing florm. Admiral Ruffel was ordcred to put to fea with all poffible expedition; and he foon appeared with 99 fhips of the linc, befides frigates and fire-1hips. At the head of this formidable fleet he fet fail for the coait of France ; and, near La Hogue, he difcovered the enemy under 'Tuurville, who prepared to give :him battle. The engagement began between the two admirals with great fury, and the reft of the fleet foon followed their example. The battle latled for ten hours; but at laft victory declared on the fide of numbers: the French uefeated fled for Conquet road, having loft four fhips in the firit day's action. The purfuit continued for two days following : three French flups of the line were defiroyed the next day; and 18 more, which had taken refuge in the bay of La Hugue, were burnt by Sir George Rooke. In this manner were all the Frencl preparations fruftrated; and fo decifive was the blow, that from this time France feemed to relinquifh all claims to the ocean.

This engagement, which happened on the 21 ft of May 1692, put a final period to the hopes of James. No further attempts were made in his favour, except fome plots to affaflinate King William, which ended only in the deffruction of thofe who formed them. But it was never thoroughly proved that James countenanced thefe plots in the leaft; it rather appears, that in all cafes he expreffed the utnoft abhorrence of fuch attempts. In 1697, the abbe de Pulignac, ambafiador James of ${ }^{331}$ from France in Poland, wrote to his mafter, that tered the thoughts were entertained of the late king of Britain, crown of in the new clection which happened on the death of Poland; John Sobiefti king of Poland; and that James had been already named by fome of the diets as his fucceffor. Louis was eager to feize an opportunity of ridding himfelf with honour of a prince whofe pretenfions lie could no longer fupport. The friends of which be James were alco fanguine fur the projeet ; but he him-refufes. felf refufed it. He told them, that " he would ever retain a grateful remembrance of his friends in Poland. That, however, he would not accept of the crown, had it actually been offered; much lefs would he endeavour to obtain by folicitation any erown which was not actually his duc. That his acceptance of any other feeptre would nmount to an abdication indeed of that which he deemed his right. That therefore he was refolved to remain in his prefent forlorn condition, puffelling lefs hopes than ever of being reftored, rather than to do the leaft act of prejudice to his family." The fame year, at an intervicw between King William and

## B R I [ 493] B R I

by the death of his queen, who was taken off by the Eritain. fimallpor on the 28th of Dccumber 169 . For forme time he was under a dincere concern for her lofs; but Deauh of as pulities had taken entire poffefion of his mind, he Uueen loft all other concerns in the greatnefs of his apprchen- Mary. finns for the balance of power and the fluctuating interefts of Eurupe.

His chicf motive for accepting the crown was to en- National gage England more deeply in the concerns of Europe difonten?. His great ohjest had been to humble the French, and all his politics confifted in forming alliances againft them. On the other hand, many of the Engliih had no fuch animolity againft the French: and thefe, therefore, confidered the intereft of the nation as facrificed to foreign conncxions; and complained that the continental war fell molt heavily on them, though they had the leaft intereft in its fuccefs. Thefe complaints were heard by William with the moft phlegmatic indifference; he employed all his attention only on the balance of power, and the interefts of Europe. He becamc unmindful of the cultivation of internal polity, and, as be formed alliances abroad, increafed the influence of party at home. Patriotifm began to be ridiculed as an ideal virtue; and the practice of bribing a majority in parliament became univerfal. The example of the great was caught up by the vulgar ; principle, and even deccncy, was gradually banifhed ; talents lay moneultivated, and the ignorant and profligate were reccived into favour.

The king, upon accepting the crown, was refolved to preferve as much of the prerogative as poffible; and he fometimes exerted a branch of it which his predeceffors had never chofen to make ufe of, viz. the power of refufing his affent to fome bills that had palfed both houfes. From this and other caufes there were perpetual bickerings between him and his parliaments. At laft William became fatigued with oppofition. He admitted every reftraint upon the prerogative in England, upon condition of boing properly fupplied with the means of hunibling France. Provided the parliament fupplied him with the means of executing this, he permitted them to rule the internal polity as they pleafed. For the profecution of the French war, the lums granted were indeed incredible. The nation, not contented with furnifhing him fuch fums of money as they were capable of railing by the taxes of the year . mortgaged thofe taxes, and involved themfelves in debts which they have never fince been able to difcharge.
'The war with France continued during the greatelt part of this king's reign ; but at length the treaty of Ryfwick, in 1697 , put an end to thole contentions in which England had engaged without policy, and came off at lait without advantage. In the general pacification, her interelts feemed entirely deferted ; and for all the treafures the had fent to the continent, and all the blood which had been thed there, the only equivalent reccived was an acknowledgment of Willian's title from the king of France.

The king, being now freed fron a forcign war, fet himfelf to itrengthen his authority at hume. As he could not bear the thoughts of being a king without military command, he conceived hopes of keeping up, in the time of a profound peace, thofe forecs which had been granted during the time of danger. The commons, lowever, to his great mortification, pafied a vote,
that all the forces in the Englifh pay, excceding 7000 men, fthould be forthwith dibanded; and that thofe retained Aould be natural-born fubjeets of England. With this vote the king was exceodingly difpleafed. His indignation, indeed, was kindled to tuch a degree, that he actually conceived a defign of abandoning the government. From this, however, his minithers diverted him, and perfuaded him to confent to the pating of the bill.

Thefe altercations continued daring the remainder of this reign. Willian confidered the commons as a body of men defirous of power for themfelves, and coniequently bent upan obitrueting all his projects to fecure the liberties of Europe. He feemed but little attached to any particular party in the houfe, all of whoun he found at times deferted or oppofed him. He thacreforc veered to Whigs and Tories indifuriminately, as intereft or the immediate exigence demanded. He confidered England as a place of labour, anxiety, and altercation. If he had any time for amufement or relaxation, he retired to Loo in Holland, where, among a few friends, he gave a loofe to thofe coarfe feflivities which alone he was capable of rclihing. Here he planned the different fuccellion of the princes of Europe, and laboured to undermine the fchemes and the power of Louis his rival in politics and fame.

But however feeble William's defire of other amufeIle engages Pritain in a coniederacy a zainat France. ments might be, he fcarce could live without being at variance with France. Peace bad fcarce been made with that nation, when he began to think of refources for carrying on a new war, and for enlifting his Englifh fubjects in the confederacy againf that nation. Several arts were ufed for inducing the people to fecond his aims; and the whole nation feemed at laft to join in defiring a Frencle war. He had been in Holland concerting with his allies operations for a new campaign. He had engaged in a negociation with the prime of Hefle; who afiured him, that if he would befiege and take Cadiz, the admiral of Caftile and feveral other grandees of Spain would declare for the houfc of Auftria. The elector of Hapover had refolved to concur in the fame meafures; the king of the Romans, and Prince Louis of Baden, undertook to invel Landau, while the emperor promifed to fend a powerful reinforcement into Italy : but death put a period to his projects and his ambition.

William was naturally of a very fechle conflitution; and it was by this time almoft quite exhaufled by a feries of continual difquictude and action. He had endeavoured to repair his conttitution, or at leall to conceal its decay, by excreife and riding. On the 2 Ift of Fe bruary i>O2, in riding to Hampton-court from Kenfington, his horfe fell under him; and he was thrown with fuch violence, that his collar-bone was fractured. His attendants conveyed him to the palace at Hamp-ton-court, where the fracture was reduced; and in the evening he returned to Kenfington in his coach. The julting of the carriage difunited the fracture; and the bones were again replaced by Bidloo his phyfician. This in ar robuft conftitution would have heen a tritling misfortune; but to him it was fatal. For fome time he appeared in a fair way of recovery ; but falling afleep on his couch, was foized with a hivering, which terminated in a fever and diarrhoca, that foon beeame dangerous and defperate. Pereciving his end approaching,
the objects of his former care lay next his heatt ; and the fate of Europe feemed to remove the fenfations he might be fuppofed to feel for his own. The earl of A:bemarle arriving from Holland, he conferred with him in private on the porlure of affairs abroad. Two days after, having reecived the facrament from Archbihop Tennifon, he expired on Sunday March 8th; having lived 52 years, and reigned 13.-He was in his perfon of a middle ftature, a thin body, and a delicate conftitution. He had an aquiline nofe, fparkling eycs, a large forehead, and a grave folemn afpect. He left behind him the elaracter of a great politician, though he bad never been popular; and of a formidable general, though he had been feldom viforinus. His deportment was grave, phlegmatic, and fullen; nor did he ever fhow any fire but in the day of battle.

Cunningham fays, that "at the very laft monment, when his mind was otherwife oppreffed, he retained a juft fenfe of the redemption of mankind, and the remembrance of his good fubjeets. Thus he lay fo quietly and compofed, with his eyes fixed upon heaven, when his fpecch failed him, that no man could die either better prepared, or with greater conflancy and piety, than this prince; of whofe juft praifes no tongue. thall be filent, and no time unmindful. And if any king be ambitious of regulating his councils and ace tions by the bright examples of the mond famous great men, he may form to himflelf the idea of a great prince and a grand empire, not only from the king's life, but from the public records of the Englifh and Dutch nations."

William was fucceeded by the princefs Anne, who Acceffion $\begin{array}{r}32 \\ 3\end{array}$ had married George prince of Denmark. She afeended of Queen the throne in the $3^{8 \text { th }}$ year of her age, to the ge-Anne. neral fatisfaction of all partics. Willian had died at the cve of a war with France: and the prefent queen, who generally took the advice of her miniftry on every important occafion, was now urged by oppofite councils; a part of her minifry being inclined to war and another to peace. At the head of thofe who oppufed a war with France was the carl of Rochefler, lord lieutenant of Ireland, firf coufin to the queen, and the chief of the Tory faction. At the head of the oppofite party was the carl afterwards duke of Marlborough, and fince fo much renowned for his rittories over the French. After giving the reafons for both their opinions, that of Marlborough preponderated : the queen refolved to declare war; and communicating her intentions to the houfe of cummons, by whom it was approved, war was proclaimed accordingly. In this declaration of W 343 war, Louis was taxed with having taken poffeftion of red againt a great part of the Spanih duminions; with defigning France. to invade the liberties of Europe, to obftruct the freedom of navigation and commerce; and with having offered an unpardonable infult to the queen and her throne, by acknowledging the title of the Pretender: he was accufed of attenipting to unite the crown of Spain to his own dominions, by placing his grandfon upon the throne of that kingdom, and thus of endeavouring to deftroy the equality of power that fubfifted among the flates of Eurnpe. This declaration of waron the part of England was feconded by fimilar declarations by the Dutch and Germans, all on the fane day.

Louis XIV. whofe power had been greatly circumfcribcd

Brixzin. fcribed by William, cxpected on the death of the latter to crier on a field open for new conquefts and fame. At the news of the Euglifh monarch's dcath, therefore be could not fupprefs his rapture, the people of l'aris, and indced through the whole kingdom, teltified their joy in the molt public manner. At fecing, thercfore, luch a combination againlt him, the French munarch was filled with indignation; but his refentment fell chiefly on the Dutch. He declared with great emotion that as for thofe gentlemen pedlars the Dutch, they hould one day repent the ir infolence and prefumption in declaring war againft him whofe power they had formerly felt and dreaded. By thefe threats, however,
$34+$ the affairs of the allies were no way influenced. Marlborough was appointed general of the Britifl forces, and by the Dutch he was chofen generalifimo of the allied army ; and indeed his after conduct thowed, that no perfon could pulfibly have been chofen with greater propricty. He had learned the fift rudiments of war ander the famous Marflal Turenne, having been a voIunteer in his army ; and by that gencral his future greatnefs was, prognofticated.

The firlt attenipt that Marlborough rade to deviate from the general practices of the arny was to advance the fubaltern officers, whofe merits had been hitherto neglected. Regardlefs of feniurity, wherever he found abilities, he was fure to promote them; and thus he had all the upper ranks of commanders rather remark-
able for their fkill and talents than for their age and

## 345

 His tuccefs in his firt saupaign. experience. In his firft campaign, in the begimning of July 1702, he repaired to the camp at Nimegucn, where lie found bimfelf at the head of 60,000 men well provided with all neceffaries, and long difciplined by the belt officers of the age. He was opprofed on the part of France by the duke of Burgundy, a youth of very little experience in the art of war; but the real acting general was the marihal Bouffers, an officer of courage and activity. But wherever Marlborongh advanced, the French were obliged to retire befure him, leaving all Spanifl Guelderland at his diferction. The duke of Burgundy finding himfelf obliged to retreat before the allied army, rather than cxpofe himfelf longer to fuch a mortifying indignity, returned to Verfailles, leaving Boulfers to command alone. Boufflers retired to Rrabant: and Marlborough ended the campaign by taking the city of Liege; in which was found an immenfe fum of money and a vaft number of prifoners.This good fortune feemed to confule the nation for fome unfucceffful cxpeditions at fea. Sir John Munden had permitted a French fquadron of If fhips to efcape him by taking fhelter in the harbuur of Corunna; for which he was difmilfed the fervice by Prince George. An attempt was made upon Cadiz by fea and land, Sir George liouke comnanding the navy, and the duke of Ormond the land forees; but this alfomifcarried. At Vigo, however, the Britifh arms were attended with better fuccefs. The duke of Oi mond landed with 2500 men at the diftance of fix miles from the city, while the Heet forcing their way into the harbour, the Fronch fieet that had taken refuge there were burned by the enemy to prevent their falling into the hands of the Englith. Eight lhips were thus burned and run athore; but ten fhip of war were taken, together with cleven galleons, and above a million of money in filver, in the ivelt

Indics, Admiral Benbow had been flationed with ten Britein. nips to diffrefs the enemy's trade. Jeing informed that Du Cafle the French admiral was in thofe feas with a force equal to his own, he refolved to attack Bra:sy him; and foon after difcovered the encmy's fquadron and death near St Martha fteering along the flore. He quickly of dmiral gave orders to his captains, formed the line of battle, Penbow. and the engagenent began. He found, howeter, that the reft of the fleet had taken fome difgult at his conduct ; and they permitted him to fuftain, almof alone, the whole fire of the cnemy. Neverthelels, the engagement continued till night, and he determinad to rerew it next morning. But he had the mortification to perceive that all the reft of his fluips had fallen back cxeept one, who joined him in urging the purluit of the enemy. Four days this intrepid feamen, allifled by only one fhip, purfued and engayed the eneny, while his cowardly officers remained at a diflance behind. His laft day's battle was more furious than any of the former: alone, and unfupported by any of the reft, he engaged the whole French fquadron; when his leg was flattered by a cannon-ball, and he himelf died fuon after of his wounds. Two of his cowardly affociates wore fhot on their arrival in England ; one dicd on his paffage thither; the reft were difgraced.

The next parliament, which was convened by the queen, was highly pleafed with the fuccefs of the Britifh arms on the continent. The houfe of commons was compufed chielly of Tories, who voted 40,000 feamen and the like number of land forces, to act in contins otal junction with thofe of the allies. Soon after, the quetn crearied. informed her parliament, that the was preffed by the allies to augunent her forces; and upon this it was refolved that 10,000 more men frould be added to the continental army, but on condition that the Dutch mould immediately break off all commerce with France and Spain; a condition which was very readily conplied with.

In the beginning of April 1703 , the duke of Marl- Sucefo borough croffed the fea, and aflembling the allied army, Marlboopened the campaign with the fiege of Bonn, the refi- rough, dence of the elector of Cologne. This held out but a fhort time. He next retook Huy; the garrifon of which after a vigorous defence, furrendered prifoners of war. Limburgh was next befieged, and furrendered in two days; and thus the campaign concluded, the allies having fecured the country of Liege and the electorate of Cologne from the defigns of the enemy.

In the campaign of 1704, the duke of Marlborough informed the Dutch that it was his intention to march to the rclief of the empire, which had been fot fome time oppreffed by the French forces; and the States gave lim full pawers to march as he thought proper, with affurances of their affiftance in all his endeavours. The French king, finding Bouftlers no longer capable of oppofing Marlborough, appointed the marihal de Villeroy to command in his place. But Marlborough, who, like Hannibal of old, was remarkable for Atudying the difpofition of his antagunills, having no great fears from Villeroy, immediatcly llew to the afiiftance of the emperor. Taking with him about 13,000 britifh troops, he advanced by hally marches to the banks of the Danube; he defeated a body of 1 rench and Baranians flationed at Donavert to oppole him; then paffed the river, and laid under contribution the dukedum.

Britsin. of Batarin which had fided with the enemy. Villeroy, who at firf attempted to follow his motions, feemed all at once to have loit fight of his enemy; nor was he apprifed of his route till informed of his fuccefics. But, in the mean time, Marfbal Tallard prepared by another soute to obftruc Marlboreugh's retreat with an army of 30,000 men. He was faon after joined by the duke of Bavaria's forces; fo that the Fremel army in that part of the continent amounted to 60,000 veterans, commanded by the two bett reputed generals then in
350
French defeated at Blenheim.

To oppofe thefe powerful generals, the duke of Marlborough was joined by a body of 30,000 men under the celebrated Prince Eugene. The allied army, with this reinforcement, amounted to about 52,000 . After various marehes and countermarches, the two armies *See Bler- met at Blenheim*. A terrible engagement enfued, in which the French were entirely defeated, and a country of 120 leagues extent fell inta the hands of the conquerors. Soon after finifting the campaign, the duke repaired to Berlin, where he procured a reinforcement of 8000 Pruffians to ferve under Prince Eugene in Italy. Thence he pracecded to negociate for fuccours at the court of Hanover; and foon after returned to England, where he was received with every pullible demonitra-

The arms of Britain, in the mean time, were not lefs fortunate by fea than by land. The town of Gibraltar was taken by the prince of Hefie and Sir George Rooke: but fo little was the value of the conqueft at that time underftood, that it was for fome time in debate whether it was a capture worth thanking the admiral for; and at laft it was confidered as unworthy of public gratitude. Soon after, the Britih fleet, to the number of 53 flips of the line, came up with that of France, confifting of 52 men of war, commanded by the count de Thouloufe, off the coalt of Malaga. This was the laft great naval engagement in which the French ventured to face the Britifi on cqual terms. The battle began at ten in the forenoon, and continued with great fury for fix hours; when the van of the French began to give way. The Britifh admiral for two days attempted to renew the engagement; but this was as cautivully declined by the French, who at laft difappeared totally. Both fides claimed the victory, but the confequence decided it in farour of the Britih.

In the mean time, the Spaniards, alarmed at the taking of Gibraltar, fent the marquis of Villadurias with a lange army to retake it. France: alfo fent a feet of 13 hijps of the line: but part of them were difperfed by a tompect, and part takien by the Britifh. Nor was the land army more fuccefful. The fiege continued for four months; during which time the prince of Heffe, wha commanded the town for the Englifh, gave many proofs of valour. At length, the Spaniards having attempted to feale the rock in vain, finding no hopers of takhig the place, were contented to draw off their inen and abandon the enterprife.
While the Britill were thus vietorious by land and fea, a new ferne of contention was opened on the fide of Spain. Philip V. grandfon of Louis XIV. had been placed on the throne of that kingdom, and received with the juyful cuncurrence of the greateft part of his fubjece. He had alfo been nominated fucceffor to the crown by the late king of Spain's uill. Lut in a
former treaty among the powers of Europe, Charles, Britain. fon of the emperor of Germany, was appninted heir to that, crown; and this treaty had been guaranteed by France leerlelf, though fhe now refoived to reverfe that confent in favour of a defeendant of the heufe of Bourbon. Charles was till farther led on to put in for the crown of Spain, by the invitation of the Catalonians, who declared in his favour ; and with the affiftance of the Britifh and Portuguele, promifed to arm in his caufe. Upon his way to his newly afiumed dominions, he landed in England; where he was received on thore by the dukes of Somerfet and Marlborough, wha conducted him to Windfor. He was kindly reecived by He is lups the queen; and furnithed with 200 traniports, 30 dhips ported by of war, and 9000 men, for the conquef of that exten- Quecn five empire. The earl of Peterborough, a man of ro- Aune. mantic bravery, offered to conduct them; and his fingle fervice was reckoned equivalent to armies.

The firft attempt of this general was on the city of $\frac{356}{35}$ Barcelona, at that time defended by a garrifon of 5000 balcen. men. The fort Monjuc, fituated on a hill that commanded the city, was attacked; the outworks were taken by form, and the powder-magazine was blown up by a diell; upon which the fort immediately furrendered, and the city capitulated in a ftort time after. The coriqueit of all Valencia fuccceded the taking of Barcelona. Charles became mafter of Arragon, Carthagena, Granada, and Madrid. The Britifh general entered the capital in triumph, and there proclained Charles king of Spain without oppolition
To thefe fuccefles, however, very little regard was French paid in Britain. The vichories of the duke of Marl-feated at borough alune engroffed their attention, In 1706 , he Ramillies. opened the campaign with an army of 80,000 men. He was met by the French under Villeray near the village of liamillies *. An engagement enfued, in which * See Ra* the duke gaind a victory almof as complete as that of nillies. Blenheim had been; and the whole country of Brabant was the reward of the victors. The French troeps were now difpirited; the city of Paris was in confufion ; Louis, who had long been flattered with conqueft, was now humbled to fuch a degree as almoft to excite the compaffion of his enemies. He intreated for peace, Louis fues but in vain; the allies carried all before them; and in vain for. his very capital began to dread the approach of the peacc. conquerors. But what neither his ammies nor his politics could effect, was brought about by a party in England. The diffenfion between the Whigs and To ries faved France, that now feemed totering on the brink of ruin.

The councils of the queen had hitherto been gavern- Revolutio ed by a Whig miniftry; for though the duke of Marl- inethe counn borougld flarted in the interef of the oppofite party, cils of he foom joined the Whigs, as he found then mult fim- Onecn cere in the defign of humbling France. The people, however, were now in fact beginning to change, and a general fpirit of toryifin to take place. The queen's perfonal virtues, her fucceffes, her deference for the chergy, and their great veneration for her, began to have a prevailing influence over the whle nation. Pero ple of every rank were not affinmed to defend the mont fervile tenets, when they tended to flater or incerafe the power of the forereign. They argued in favour of frict hereditary fucceltion, divine right, and non-refiftance to the regal power. The Tories, though joining in

B R I [ 497
Britain. vigorous meafures againft France, were never ardently their enemies: they rather fecretly bated the Dutch, as of primciples very oppofite to their own; and longed for an opportunity of withdrawing from their friendthip. They began to meditate fchemes of oppofition to the duke of Marlborough. Him they confidered as a felf-intertfled man, who facrificed the real advaritages of the nation, in protracting a ruinous war for his own private emolument and glory. They faw their country oppreffed with an increafing load of taxes, which by a continuatice of the war muft inevitably become an intolerable burden. Their difcontents began to \{pread, and the tories wanted only a few determined leaders to affitt them in removing the prefent miniftry.

In the mean time, a fucceffion of loffes began to diffipate the conquering frenzy that bad feized the nation in general, and to incline them to wifh for peace. The earl of Galway, who commanded the army in Spain, was utterly defeated at Almanza + by the duke of Berwick ; and in confequence of this victory, all Spain, except the province of Catalonia, returned to their duty to Philip their lawful favereign. An attempt was made upon Toulon, by the duke of Savoy and Prince Eugene by land, and an Englifh tieet by fea; but to no purpofe. The fleet under Sir Cloudenley Shovel, having fet fail for England, was driven by a violent florm on the rocks of Scilly. His own hhip was iont, and every perfon on board perifted. Three more thips met with the fame fate; while three or four others we:e faved with the utmoft difficulty. In Germany, Matfall Villars the French general carried all before him, and was upon the point of reltoring the elector of Buaria. The only hopes of the people lay in the activity and condur of the duke of Marlburough, who opened the campaign of 1707 , about the middle of May ; but even here they were difappointed. The duke declined an engagement; and after feveral marchings and countermarchings, both armies retired into winter quarters about the end of OAober. The French made vigorous preparations for the next campaign; and the duke returned to England to meet with a reception he did not at all expeat, and which, as far as appears, he did not deferve.
The moft remarkable tranfaction, howevcr, of this ycar, and indeed of this whole seign, was the union between the two kingdoms of Scotland and England. Though governed by one fovereign fince the time of James I. of England, yet each nation continued to be ruled by its refpective parliament; and often profeffed to purfue oppofite interefts to thofe of its neighbour. The union had often been unfuccefffully attempted before, and had indeed been the caufe of the bloody wars in the time of Edward I. and III. of England. In all the former propofals on that head, both nations were fuppofed to remain free and independent; each kingdom having its own parliament, and fubject only to fuch taxes and other commercial regolations as thofe parliaments thould judge expedient for the benefit of their refpective ftates. After the deftruction of the Darien colony, in the manner already related, King William had endeavoured to allay the national ferment by refuming the affair of an union with as much affiduity as his warlike difpofition would allow. The terms propofed were the fame with thofe formerly beld out, viz. a federal union, fomewhat like that of the \& Vol. IV. Part II.
ftates of Holland. With this view the Scots wete, prevailed on to fend 20 commiffioners to London; who, with 23 on the part of England, met at Whitehall in the month of Otober 1702. Here they were honoured with a vifit from the queen, in order to enliven their proceedings and finsulate them to a more fpeedy difpatch of bulinefs: but the treaty was entircly broken off at this time by the Scotifa commiffioners infifting, that the rights and privileges of their countrymen trading to Africa and the Indics ftould be preferved and maintaiped. It was, however, refu med in the ycar 1706, when the commiffioners again met on the 16 th of April, in the council-chamber of Whiteha!l. The Scotill commiffioners ftiil propofed a federal union; but the Englifts were determined on an incorporation, which hicwid not afterwards be diffolved by a Scotifs parliament. Nothing but this, they faid, could fettle a perfect and lafting fiendilip betwixt the two nations. The commiffioners from Sectland, however, fill continued to refit that article which fubjected their country to the fame cuftoms, excifes, and regulations of trade as England; but the queen being perfuaded to pay two vifits in perfon to the commiffioners, exerted therlelf fo vigoroufly, that a majority was at laft gained over; and all the ren yielded, though with reluctance, excepting Lockhart of Carnwath, who could not by any means be perfuaded either to fign or feal the treaty.

The frticles being fully prepared on the 223 of July, The articles they were prefented next day to her majefly by the mof vio-lord-keeper, in the name of the Englith commifioners; lently opat the fime time that a fealed copy of the inftrument pofed in
was likewile delivered by the lord chancellor cf Scot. was likewile delivered by the lord chancellor of Scot.land. They were moft gracioufly received; and the fame day the queen dictated an order of council, threatening with profecution fuch as fhould be concerned in any difcourfe or libel, or in laying wagers with regard to the union. Notwithfanding all this harmony, however, the treaty was received with the utmoll difapprobation in Scotland. The terms had been carefully concealed, fo that nothing tranfpired till the whole was at once laid before parliament. The ferment was then fo general, that all ranks of people, however divided in other refpects, united againft this detefted treaty. The nobility and gentry were exafperated at the annihilation of parliament, arid the corlequent lofs of their influence and credit. The body of the people cried out, that the independence of the nation was $\mathfrak{f a}-$ crificed to treachery and corruption. They infilled that the obligations laid on their members to flay fo long at London, in their attendance on the Britifa parliament, would drain the country of its money, impoverifh the members themfelves, and fubject them to the temptation of being corrupted. Nor was the commercial part of the people better fatisfied. The diffolution of the India company, the taxes laid on the neceflaries of life, the vaft number of duties, culloms, and reftrictions, laid upon trade, were all of them matter of complaint. Before this time the trade of ScotIand had been open to the Levant, the Baltic, France, Spain, Portugal. Holland, and the Dutch plantations; and it feemed difficult to conceive how the commerce of the country could be advanced by laying reftrictions upon it to thefe places, efpecially as the compenfation allowed, viz. the privilege of trading to the Enclith

## B R I

Britain. Brin. plantations in America, mut have been a very trifing advantage, when the amount of the whole exports to thefe places did not near equal the expence of defending them. The moft violent difputes took place in the parliament. The lord Belbaven made a mof patbetic fpeech, enumerating the miferies that would attend this treaty; which drew tears from the audience, and to this day is reckoned prophetic by many of the Scotifh nation. Almof every article of the treaty was the fubject of a proteft; addrefles againft it were prefented to parliament by the convention of royal boroughs, the commifioners of the general affembly, the company trading to Africa and the Indies, as well as from thires, Atewartries, boroughs, towns, and pariftues, without diftinction of whig, tory, prelbyterian, or epifcopal.

Nor was the refentment of the common people with. out doors lefs than that of the members within. A coalition was formed hetwixt the Prefbyterians and cavaliers: and to fuch a height did the refentment of the people arrive, that they chofe officers, formed themfelves into regiments, provided horfes and ammunition, burnt the articles of union, juftified their conduet by a public declaration, and refolved to take the route to Edincurgh and diffolve the parliament.

In the mean time, the privy council iffued a procla. mation againft riots, commanding all perfons to retire from the ftreets whenever the drum fhould beat ; ordering the guards to fire on thofe who fhould difobey this command, and indemnifying them from all profecution for maiming or flaying the lieges. Even thefe precautions were infufficient. The duke of Queenfberry, the chief promoter of the union, though guarded by double lines of horfe and foot, was obliged to pafs through the ftreets at full gallop, amidft the curfes and imprecations of the people, who pelted his guards, and even wounded fome of his friends who attended him in the coach. In oppofition to all this fury, the duke of Queenflerry and others attached to the union magnified the advantages that would accrue to the kingdom from the union; they took off the refentment of the clergy, by promoting an act to be inferted in the treaty, by which the Prefbyterian difcipline was to be the only government of the church of Scotland, unalterable in all fucceeding times, and a fundamental article of the union. Emiflaries were employed to difunite the Cameronians from the Cavaliers, by demonftrating the abfurdity, finfulnefs, and danger, of fuch a procesdin:. The India Company was flattered with the profpeet of being indemrified for the loffes they had fuftained, and individuals by tharing an equivalent. Their laft manocurre was to bring over a party in the Scop parliament, nicknamed the Squadrone Volante, from their fluctuating between miniftry and oppofition, without attaching themelves to any party till the criticul moment, which was either in cement both kingdoms by a firm union, or involve them in the calamities of war. By this unexpected ftroke, the miniftry obtained a decifive victory, and all oppofition was "ain. The artieles of treaty were ratified by parliament, with fome trifling variations, on the 25th of March 1707; when the duke of Querinferry fimally diffolved that ancient affembly, and Scotland ceafed to be a feparate indererdent kingdom.

On the conclution of the treaty, the gueen informed
both houfes of the Englifh parliament, that the treaty Eritain of union, with fome additions and alterations, was ratified by an act of the parliament of Scotland: that the had ordered it to be laid before them, and hoped it would meet their approbation. She obferved, that they had now an opportunity of putting the laft hand to a happy union of the two kingdoms : and that fhe thould look upon it as a particular happinefs if this great work, fo often attempted before without fuccels, could be brought to perfection in her reign. Objections, however, were ftarted by the tory party; but they were at that time too weak to be heard with any attention. Sir Joln Parkington compared the new treaty to the marriage of a woman without her confent. It was ari union carried on by corruption and bribery within doors, and by force and violence without. The promoters of it had bafely betrayed their truft, by giving up their independent conftitution : and he would leave it to the judgment of the houle, whether or not men of fuch principles were fit to be admitted into their houfe of reprefentatives. Lord Haveriham, in the upper houfe, faid, the queftion was, Whethe two nations, independent in their fovereignties, that had their diftinct laws and interefts, different forms of worfhip, church-government and order, fhould be united into one kingdom? He fuppofed it an union made up of fo many incongruous ingredients, that thould it ever take effect, it would require a ftanding power and force to keep them from falling afunder, and breaking in pieces every moment. Above an hundred Scotifh peers, and as many commoners, he faid, were excluded from fitting and voting in parlia. ment, though they had as much right to fit there as any Englifh peer had to fit and vote in the parliament of England. The union, he faid, was contrary to the fenfe of the Scotifh nation ; the murmurs of the people had been fo loud as to fill the whole kingdom, and had reached even the doors of parliament. That the government had iffued a proclamation, pardoning all flaughter, bloodfhed, and maiming, committed upon thofe who fhould be found in tumults; and from all thefe circumftances he concluded, that the people of Scotland were averfe to an incorporating union, which, he fuppofed, would be a moft dangerous expedient to both nations. All thefe arguments, however, were anfwered by thofe of the oppofite party with fuch fuccefs, that the union was unalterably completed on the firft of May 1707; and the ifland took the name of "The United Kingdom of Great Britain." The queen expreffed the highef fatisfaction when it received the royal affent, and faid, "She did not doubt but it would be remembered and Spoken of hereafter, to the honour of thofe who had been inftrumental in bringing it to fuch a happy conclufion. She defired that her fubjects of both kingdoms thould from henceforward behave with all poffible refpect and kindnefs towards one another ; that fo it might appear to all the world they had hearts difpofed to become onc people." The firft of May was appointed a day of public thankfgiving; and congratulatory addrefles were fent up from all parts of England, excepting the univerfity of Oxiord. The Scots, however, were totally filent on the occafion.

In his treaty, it muft be obferved, that the commiffioners on the part of England were not only able
ftatefmen,

## B R I [ 499$] \quad$ B R I

Britain. fatefmen, but, for the moft part, well dikilled in trade, which gave them an evident adrantage over thofe of Scotland, who confifted of lords and gentlemen who had no commercial knowledge. Hence they were overmatched by the former in the great objects which were to give the turn to national profperity; though they were very careful to preferve all their heritable offices, fuperiorities, jurifdictions, and other privileges and trappings of the feudal ariftocracy. Had the Englifh commiffoners made a liberal ufe of the advantages afforded them at this time, it would have been in their power greatly to have enriched themfelves as well as the inhabitants of Scotland; "but inftead of this (fays Mr Knox), in negociating witha ruined kingdom, they were influenced by the then narrow flort-fighted principle of commercial monopoly; and the confequences were fuch as might, with a fmall degree of reflection, have been forefeen. Inftead of a folid compact, affording, upon the whole, reciprocal advantages, and which it would have been the inclination as well as intereft of both nations to preferve inviolate, the conceffions on the part of Scotland, and the reltrictions on their trade, were fo quickly and feverely felt, that about the fixth year after the ratification of the treaty, the fixteen peers who firit reprefented Scotland in the upper-houfe, though molt of them had been the fupporters of adminittration in promoting the union, unanimounly moved for its diffolution. The motion was followed by a violent debate, in which, however, the Scotilh peers were at laft overruled, and thenceforth the nation fubmitted reluctantly to its fate. The metropolis, having no manutactures, now beheld itfelf deprived of its only fupport by the tranflation of the parliament to Lon. don. The trading towns pined under the duties and reftritions on their commerce; the whole kingdom, after fo many fatal difafers, feemed completely ruined beyond recovery, and all degrees of men funk under the weight of thefe complicated misfortunes. The firft fruits of the treaty in Scotland were a board of cuftoms and another of excife, the appointment of commitfoners, collectors, \&c. with other neceffary officers, who were immediately diftributed over the feveral feaports and diftricts of tlie nation. In many parts they were roughly ufed, particularly the excife officers; and in the Orkneys, the officers were fo frightened by the country people, that for fome time the bufinefs was obliged to be poltponed."

In 1708 , there was a warm debate in the grand of the Scotscommittee of the houfe of lards, accafioned by a bill privy coun-paffed by the commons for rendering the union of the
two kingdoms more entire and complete, whereby it was enacted, that, " from the firft of May 1708 , there fhould be but one privy council in the kingdom of Britain."—OF this affair Mr Cunningham gives a particular account, and informs us that he himfell had a hand in the affair, and that he had "from his youth borne a juft hate to the privy council of Scotland." The arguments for the diffulution were its enormous ftretches of power and acts of cruelty; that it could now be of no other ufe in Scotland than that the court might thereby govern every thing at pleafure, and procure fuch members of parliament as they thought proper; againt which both Scots and Englifh ought now carefully to goard themfelves. On the other hand, it was argued, that the abule of the power complained of was no argument for the entire diffolution of the coumcil, thougi it was for a reftriction and limitation of it; that it was neceflaly that a privy council fhould remin in Scotland, out of regard to the ancient cuftoms of the country, and to reftain the rage of the people, which was then ready to break out beyond all bounds. The diffolution, however, was carried by 50 againit 40 ; after which the nation being deprived of this laft fragment of their ancient government, the oppofers of the union raifed the animofities of the people to a dangerous height; but the ferment abated after an ineffectual attempt in favour of the pretender.

We mult now return to the duke of Marlborough, Fiench dewho had gone over to Flanders, where he feemed re-feated at folved to pulh his good fortune. Peace had been of-Oudenarde. fered more than once; treaties entered upon, and as often fruftrated. After the battle of Ramillies, the king of France had employed the elector of Bavaria to write letters in his name to the duke of Marlborough, containing propofals for opening a congrels. He offered to give up either Spair, and its dominiors, or the kingdoms of Naples and Sicily, to Charles of Auftria, and to give a batrier to the Dutch in the Netherlands. But thefe terms were rejected. The two armies on'ce more mer in numbers nearly equal at * Oudenarde (A). * See Oudes An engagement enfued, in which the French were de-narde. feated, and Lifle (B) the frongelt town in Flanders, Ghent, Bruges, and all the other towns in that country, foon after fell into the hands of the victors. The campaign ended with fixing a barrier to the Dutch provisces, and it now only remained to force a way into the provinces of the enemy.

The French king being now in a manner reduced to defpair, agan fued for peace; but the demands of the allies were fo high, that he was obliged to reject them, $3 \mathrm{R}_{2}$
and
(A) In this engagement the electoral prince of Hanover, afterwards George II. of Britain, greatly diftinguilled himfelf, and gained the whole glory of the firftattack. In the engagement his horfe was killed under him, and Colonel Lufchki clofe by his fide. "On that day (fays Cunningham) this excellent young prince difcovered fuch courage as no man living ought to forget, and as all pofterity will never furpals."
(B) At the fiege of Lifle, Cunningham relates the following anecdote of the magnanimity of a common foldier. "This man had the good fortune to take priloner Major-general Colbert, brother to the marquis de Torcv. The prifoner, greatly taken with the clemency, humanity, and gond behaviour of the foldier, offered him 200 louis d'ors, and a captain's pof for life, if he would give him his liberty. The foldier, however, refifted the temptation. alleging the difhonour that would attend fuch conduct; and afking him at the fame time, how. when raifed to the rank of a captain, he could look his general in the face for whom he had fought for fom ny years? -This inftance of fidelity weighed fo much with Prince Eugene and the duke of Marlborough, that the former made him a prefent, and the latter gave him a captain's commiftion."

Fistala. and prepare for another campaign. This rvas in the year rycg. The firt attempt of the allies was on the city of Tournay, garrifoned by $12,000 \mathrm{~m} 3 \mathrm{n}$, and exceedingly ftrong both by nature and art. After a terrible fiege of 21 days, the town capitulated; and a month afterwards the citadel, which was fill ifronger than the town. Next followed the bloody batte of + Sre MIsel $^{2}$ Malplaquet + ; where the allied army, conffing of 110,000 men, attacked the French confifing of 120,000, frongly pofted, and fortified in fuch a manner that they feemed quite inacceffible. Nothing, however, was able to fand before the allied army; they drave the French from their fortifications: but their victory ooft them dear; 20,000 of their beft troops liy dead on the field of battle (c). The coniequence of this viftory was the furrender of the city of Mons, which ended the cam368 paizn.
Laft cam- The laft campaign of the duke of Marlborough, paign of the which happened in the year 1711, is faid to have exmarfhal Villars, the fame who had commanded the French in the battle of Malplaquet. He contrived his meafures fo , that, by marching and countermarching, he induced the enemy to quit a ftrong line of intrenchments without friking a blow, which he came afterwards and took poffeffion of. This enterprife was followed by the taking of Bouchain, which was the laft military achievement of this great general. By a contimuance of conduet and fuccefs alinoft unparalleled, he had gained to the allies a prodigious tract of country. From the beginning of the war, which had now colltimued nine years, he had perpetually advanced, and never retreated before his enemies, nor loft an advantage he had obtained over them. He moft frequently gained the enemy's pofts without fighting ; but where he was obliged to attack, no fortifications were able to refilt him. He had never befieged a city which be did not take, nor engaged in a battle in which he did not come off victorious. Thus the allies had reduced utider their command Spanifh Guelderland, Limbourg, Brabant, Flanders, and Hainault; they were mafters of the Scarpe; the capture of Bouchain had opened for them a way into the-heart of France, and another campaign might have made them mafters of Paris: but on the duke's return from this campaign, he was accufed of having taken a bribe of 6002l. a-year from a Jew
He is dof. who had contracted to fupply the army with bread; nuffed from and the queen thought proper to difmifs him from all all his empluyments.

On the removal of this great general, the command of the Britifh forces was given to the duke of Ormond. The tranfactions which followed, as reprefented by Mr Cunningham, are by no means favourable to the character of the Britifl nation. He reprefents the people at large as blinded by a headftrong and furious clergy, who wincd to revive the abfurdities of the Romilh religion, and to unite the Englifh and Gallican churches; the gencral of the army acting a moft infidious part, by giving the enemy intelligence of the
defigns of the allies before he declared that he was not to act in concert wish them ; and the queen herfelf as commanding him to act fuch a fhametul part, nay as acting in a fimilar manner herlelf. Prince Eugene complained much of the inativity of the Englifh genetal, though he feemed to be unacquainted with hi treachery; while the whole army loaded him with execrations, calling him " a ftupid tool, and a general of ftraw." All this, however, was in vain; the duke continued to prefer the commands of his fovereign to every other confideration.

The difyrace of the duke of Marlborough had becn owing to the prevalence of the tory party, who had now got the whig miniftry turned out; the confequence of this was, that in fpite of all the remonfrances, memorials, \&c. of the allies, the Britifh army in Flanders was ordered not to act offenfively. Hence the operations languithed, a confiderable body of the allies was cut off at Denain, and the French Peace with retook fome towns. A peace was at laft concluded in $\mathrm{Fl}_{\text {ance }}$ 1713 between France and Britain. In this treaty it was itipulated, that Philip, now acknowledged king of Spain, hould renounce all right to the crown of France, the union of two fuch powerful kingdoms being thought dangerous to the liberties of Europe. It was agreed, that the duke of Berry, Philip's brother, and after him in fucceffion, hould alfo renounce his right to the crown of Spain, in cafe he became king of France. It was ftipulated, that the duke of Savoy fhould poffefs the inland of Sicily with the title of king; together with Feneftrelles, and other places on the continent; which increafe of dominion was in fome meafure made out of the fpoils of the French monarchy. The Dutch had the barrier granted them which they fo much defired; and if the crown of France was deprived of fome dominions to enrich the duke of Savoy, on the other hand the houfe of Aufria was taxed to fupply the wants of the Hollanders, who were put in poffeflion of the flrongefl towns in Flanders. The fortifications of Dunkirk werc demolihed. Spain gave up Gibraltar and the ifland of Mitiorca. France refigned her pretenfions to Hudfon's bay, Nova Scotia, and Newfoundland ; but was left in poffeffion of CapeBreton, and the liberty of drying fifh upon the flore. A mong the articles glorious to the Britifh nation, their fetting frec the French Proteftants confined in the prifons and galleys for their religion, was not the leaft meritorious. For the emperor it was flipulated, that he fhould poffefs the kingdom of Naples, the duchy of Milan, and the Spanifh Netherlands. The king of Pruflia was to have Upper Guelder; and a time was fixed for the emperor's acceding to thefe articles, as be had for fome time obftinately refufed to affift at the negociation. This famous treaty was figned at Utrecht on the laft day of March 1713 .

This year was alfo remarkable for an attempt of the Scolifh peers and commons to diffolve the union, diffolve the which, as has been obferved, had proved exceedingly difagreeable and diftreffful to the nation. During the debates
(c) Cunningham differs prodigioufly from this account. His computation being no more than 6000 killed and 9020 wounded on the part of the allies, and 7000 killed and $t 0,000$ wounded on the part of the French.

Britur. debates on this fubject, the earl of Pcterborough endeavoured to prove the impolfibility of difflving the treaty, which he compared to a mariage, that, being once contracted, could not be diffulved by any power on eirth. He oblerved, that though England, who in the national marriage, mult be fuppofed to reprefent the hufband, had in fome inflarces been unkiad to the lady, the oughe not prefently to fue for a divorce; and added, when the uaion was termed a mere political exp-dient, that it could not have been made more folemn, utlefs, like the ten commandments, it had come from heaven. The duke of Argyle alfo, who had originally promoted the union, now declared againa it, and faid, that unlefs it were diffolved, he did not long expef to have either property left in Scotlan! or liberty in England. By fome other peers it was alleged, that the union had not produced its intended effeef ; that it had been defigned to promote friendihip between the two nations; but, fo far from anfwering the purpofe, the animofities between them were never fo great as then; and if they were feparated again, they would be better friends. This motion was overruled in the houfe; but the difcontent of the people ftill continued, and addreffes were prepared threughout the kingdom, and matters were in danger of coming to the wort extremities, when the attempt of the pretender in 1715 fo divided the minds of the people, that no unanimous effort could ever afterwards be made; though the union was long generally corfidered, and fitl is by fome individuals, as a national grievance.

The hiftory of the latter part of this reign confilts entirely of the intrigues of the whigs and tories againit each other; which, as they are now of no importance, it is needlefs to take up time in relating, further than that the tory influence continued to prevail. Whether the miniftry at this time wifhed to alter the fucceffion from the Hanoverian line, cannot now be clearly made out ; but certain it is, that the whigs firmly believed it, and the tories but faintly denied the charge. The fufpicions of the former became every day ifronger, particularly when they faw a total removal of the whigs from all places of trult and confidence throughout the kingdom, and their employments beftowed on profeffed tories, fuppofed to be mairtainers of an un. broken hereditary fucceffion.

The violent diffenfions between thefe two parties, their unbounded licentioulnefs, cabals, and tumults, made the queen's fituation very difagreeable; her health declined; and on the 28 th of July $\mathrm{r}^{2} 14$, fhe fell into a lethargic inferifibility. Notwithitanding all the medicines the phyficians could prefcribe, the diffemper gained ground fo faft, that next day they defpaired of her life. All the members of the privy council without diftinction were now fummoned from the different parts of the kingdom; and they began to provide for the fecurity of the conftitution. A letter was fent to the elector of Hanover, informing him of the queen's defperate fituation, and defiring him to repair to Holland, where he would be attended by a Britifl fquadron to convey him to England. At the fame time they difpatched inftructions to the earl of Strafford at the Hague, to defire the States-general to be ready to perform the guaranty of the Proteftant fucceffion. Precautions were taken to fecure the fea-ports; and the
command of the fleet was boftowcd upon the earl of Fritain. Berkeley, a profefed whig. Thele meafures, which were all dictaied by that party, anfwered a double end. They argued the alacrity of the whigs in the caufe of their new fo:ercign, and feemed to imply that the flate was in danger from the dilaftection of the uppofite party.

On the zoth of July the queen feemed to be fomewhat relieved by the medicines which had been given her. She rofe from her bed about eight in the morning and walked a little. After fome time, cafting her eyes on a clock that flood in her chamber, the continued to gave at it for fome minutes. One of the ladies in wating aked ber what he faw there more than ufual ? to which the queen only anfwered by turning her eyes upon her with a dying look. She was foon after leized with an apnplectic fit ? from which, however. fle was fomewhat rccovered by the affiftance of Dr Mead. She continued all night in a flate of flupefacion. She gave fome figns of life betwist twelve and one the next day; but expircd the following morning, a little after feven o'clock, hasing lived 49 years, and reigned upwards of 12 . This princefs was remarkable neither for her learning nor ber capacity. Like all the reft of her family, the feemed rather fitted for the duties of private life than a public flation; being a pattern of conjugal fidelity, a good mother, a warm friend, and an indulgent miftrefs; and to her honour it certainly mult be recorded, that during her reign none fuffered on the fcaffold for treafon. In her ended the line of the Stuarts; a family who never rewarded their friends, nor ever avenged them of their adverfaries; a family whofe misfortunes and mifonducts are not to be paralleled in hiftory.

The queen had no fooner refigned her breath than she isfue the privy couticil met, and three inftruments were pro- ceeled by duced, by which the elector of Hanover appointed fe- George I. veral of his known adherents to be added as lords juflices to the feven great officers of the kingdom. Orders alfo were immediately iflued out for proclaiming George king of England, Scotland, and Ireland. The regency appointed the earl of Dorfet to carry him the intimation of his acceffion to the crown, and to attend him in his journey to England. They fent the general officers, in whom they could confide, to their pofts; they reinforced the garrifon of Portlimouth, and appointed the celebrated Mr Addifon fecretary of flate. No tumult, no commotion, arofe againft the acceffion of the new king; and this gives a frong proof that the tories, had they really intended to exclude him, never took any rational meafures to accomplifh their purpofe.

The king firt landed at Greenwich; where he was He 375 received by the duke of Northumberland, captain of in England. the lifeguard, and the lords of the regency. From the landing-place he walked to his houfe in the park, accompanied by a great number of the robility and other perfons of diftinction, who expected to make their court in this reign in confequence of their turbulence and oppofition to the reigning party in the laft. George I. was 54 years old when he afcended the Britifis throne. His mature age, his fagacity and experience, his numerous alliances, and the general tranquillity of Europe, all contributed to eftablith his interefts, and promife him a peaceable and happy reign. His virtues,

Bitain. though not fhining, were folid; and he was of a very different difpofition from the Stuart family whom he fucceeded. Thefe were known to a proverb for leaving their friends in extremity; George, on the contrary, foon after his arrival in England, was heard to fay, "My mxim is, never to abandon my friends, to do juftice to all the world, and to fear no man." To thefe qualitics of refolution and perfeverauce, he joined great application to bufinefs. One fault, however, with regard to England, reerained behind : he fludied the interefts of the kingdom he had left, mose than of thofe he came to govern.

The new king foon difcovered his inclination to fupport thofe who had raifed lim to the throne, that is, the whig party. When he retired to his bed-chamber, after his firft landing, he fent for fuch of the nobility as had diftinguifhed themfelves by their zeal for his fucceffion. He expreffed the greatef regard for the duke of Marlborough, juft then arrived from the continent, whither he had been driven by the violence of the tories. The fame friendithip he profeffed for the other leaders of the whigs; but the tories found themfelves excluded from the royal favour. The king did not feem fenfible that the monarch of a faction rules bat one half of his fubjects. It was his misfortune, and confequently that of the nation, that he was hemmed round by men who foured him with all their own interefts and prejudices. The whiss, while they pretended to fecure the crown for the king, were ufing all their arts to confirm their own interefts, extend their connections, and give laws to their fovereign. An inftantaneous change was made in all the offices of truf, honour, or advantage. The names of the contending parties were changed into thofe of Hanoverians and Facolites. The former governed the fenate and court, oppreffed whom they would, bound the lower orders of people by fevere laws, and kept them at a diftance by vile diftinetions; and then taught them to call this liberty.

In confequence of thefe partialities, the highef dif-
were not in the leaft more agreeable to the generality. Britain. The tories affirmed, that, under a whig adminiftration, herefy and impiety were daily gaining ground. The lower orders of the clergy joined in thele complaints, and pointed out feveral tracts publifhed in favour of Arianifm and Socinianifm. The miniftry not only refufed to punifi the delinquents, but filenced the clergy themfelves, and forbade their future difputations on thefe topics.-The parliament was now difolved, and another called by a very extraordinary proclamation.diffoved. In this the king complained of the evil defigns of men difaffected to his fucceffion; and of their having mifreprefented his conduct and principles. He expreffed his hopes, that his fubjeets would fend up to parliament the fitteft perfons to redrefs the prefent diforders. He intreated that they would elect fuch in particular as had expreffed a firm attachment to the Proteflant fucceffion when it was in danger. In the election of this important parliament, uncommon vigour was exerted on both fides; but by dint of the moneyed intereft that prevailed in corporations, and the activity of the miniftry, a great majority of whigs was returned both in England and Scotland.

Upon the firf meeting of this new parliament, the 3379 moft violent meafures were refolved upon againft the proceedingo late miniftry. Part of them kept away from bufinefs. of the new A committee was appointed to infpect all the papersparliament. relative to the late treaty, and to pick out fuch of them as might ferve for grounds of accufation againft the late miniftry. The earl of Oxford was impeached of high treafon, and fent to the tower. The violence of the commons was anfwered with equal violence without doors. Tumults became every day more frequent, and every tumult ferved only to increafe the feverity of the legiflature. They now paffed an aet, declaring, that if any perfons to the number of 12 , unlawfully affembled, thould continue together one hour after being required to difperfe by a juflice of peace or other officer, and after hearing the act againft riots read in public, they flrould be deemed guilty of felony without benefit of clergy. This is a very fevere act, and one of the greateft refrictions on the liberty of the fubject that has paffed during this century; as, by it, all meetings of the people, either for the purpoles of amufement or redrefs, are rendered criminal, if it hall pleafe any mapiltrate to confider them as fuch.

Thefe vindictive proceedings excited the indignation of the people, who perceived that the averues of royal favour were clofed to all but a faction. A rebellion commenced in Scotland, where to their other grievances they joined that of the union, which they were taught to confider as an opprefion. The malcontents of this country had all along maintained a correfpondence with their friends in Englanal, who were now driven by refentment and apprelienfion into a fyfem of politics they would not otherwife have dreamed of. Some of the tory party, who wete men attached to the Proteftant religion, and of moderate principles in government, began to affociate with the Jacobites, and to wifh in began to affociate with the Jacobites, and to wifh in ${ }^{3} \mathrm{sog}$
earneft for a revolution. Scotland firft flowed them Rebe'lion the example. The earl of Mar, affembling 300 of his in Scotland valfals in the Highlands, proclaimed the pretender at Caftcton; and fetting up his flandard at Braemar, af fumed the title of lieutenant -gencral of his majefy's forces. To fecond thefe attempts, two vefiels arrived

## B R I

Eritain. from France, with arms, ammunition, and a number of officers, together with anfurances to the earl, that the pretender himfelf would fhortly come over to head his own forces. In confequence of this promife, the earl foon found himfelf at the head of 10,000 men well armed and provided. He fecured the pals of Tay at Perth, where his head-quarters were eftablifhed; and made himfelf matter of the whole province of Fife, and all the fea-coaft on that fide of the frith of Forth. He marched from thence to Dumblain, as if he had intended to crofs the Forth at Stirling-bridge; but there he was informed that the duke of Argyle, who on this occafion was appointed commander in chief of all the forces in North Britain, was advancing againf him from Stirling with all his own clans, affifted by fome troops from Ireland. Upon this, he thought proper at firft to retreat : but being foon after joined by fome of the clans under the earl of Seaforth, and others under General Gordon, an experienced officer, who had fignalized himfelf in the Ruffian fervice, he refolved to face the enemy, and directed his march towards the fouth.

The duke of Argyle, apprized of his intentions, and at any rate willing to prove his attachment to the prefent government, refolved to give him battle in the neighbourhood of Dumblain, though his forces did not amount to half the number of the enemy. In the morning, therefore, he drew up his army, which did not exceed 3500 men, in order of battle; but he foon found himfelf greatly outflanked by the infurgents. The duke, therefore, perceiving the earl make attempts to furround him, was obliged to alter his difpofition, which, on account of the fcarcity of general officers, was not done fo expeditioufly as to be finiflhed before the rebels began the attack. The left wing of the duke's army received the centre of the enemy, and fupported the firft charge without fhrinking. It feemed even for a while victorious, and the earl of Clanronald was killed. But Glengary, who was fecond in command, undertook to infpire his intimidated forces with courage ; and, waving his bonnet, cried out feveral times, Revenge! This animated the rebel troops to fuch a degree, that they followed him clofe to the points of the enemies bayonets, and got within their guard. A total rout began to enfue of that wing of the royal army ; and General Witham, their commander, flying full fpeed to Stirling, gave out that the rebels were completely victorious. In the mean time, the duke of Argyle, who commanded in- perfon on the light, attacked the left of the enemy; and drove them before him two miles, though they often faced about and attempted to rally. Having thus entirely broken that wing, and driven them over the river Allan, he returned back to the field of battle; where, to his great mortification, he found the enemy victorious, and patiently waiting for the affault. However, inftead of renewing the engagement, both armies continued to gaze at each other, neither caring to begin the attack. In the evening, both parties drew 'off, and both claimed the victory. All the advantages of a victory, however, belonged to Argyle. He had interrupted the progrefs of the enemy; and, in their circumflances, delay was defeat. In fact, the earl of Mar foon found his loffes and difappointments increafe. The cafte of Invernefs, of which he was in polfeffion, was
delivered up by Lord Lovat, who had hitherto profef-
Britain. fed to act in the intereft of the pretender. The marquis of Tullibardine forfook the earl, in order to dcfend his own patt of the country; and many of the clans, fecing no likelihood of coming to a fecond engagement, returned quictly home.

In the mean time the rebellion was fill more unfuc. Badicon- ${ }^{352}$ cefffully profecuted in England. From the time the duct of pretender had undertaken this wild project at I'aris, in James's which the duke of Ormond and Lord Bolingbroke were ${ }^{\text {party. }}$ engaged, Lord Stair, the Englifh ambaffador there, had penetrated all his defigns, and fent faithful accounts of all his meafures and of all his adherents to the minillry at home. Upon the firft rumour, therefore, of an infurrection, they imprifoned feveral lords and gentlemen, of whom they had a fufpicion. But thefe precautions were not able to fop the infurrection in the weftern countics, where it was already begur. All their preparations, however, were weak and ill conducted ; every meafure was betrayed to goverument as foon as projected, and many revolts were reprefied in the very outfet. The univerfity of Oxford was treated with great feverity on this occafion, Major-general Pepper, with a frong detachment of dragoons, took poffeffion of the city at day-break, declaring that he would inflantly fhoot any of the fludents who fhould prefume to appear without the limits of their refpective colleges.

The infurrection in the northern counties came to $3^{89}$ greater maturity. In the month of October 1715 , of the carl the earl of Derwentwater, and Mr Forfter, took the of Derfield with a body of horfe, and, being joined by fome ventwater. gentlemen from the borders of Scotland, proclaimed the pretender. Their firft attempt was to feize upon Newcafle, in which they had many friends; but finding the gates fhut againft them, they retied to Hexham. To oppofe thefe, General Carpenter was detached by government with a body of 900 men, and an engagement was hourly expected. The rebcls had two methods by which they might have conducted themfelves with prudence and fafety. The one was to march directly into the weftern parts of Scotland, and there join General Gordon, who commanded a flong body of Highlanders. The otber was to crofs the Tweed, and boldly attack General Carpenter, whofe forces did not exceed their own. From the infatuation attendant on the meafures of that party, neither of thefe courfes was purfued. They took the route to Jedburgh, where they hoped to leave Carpenter on one fide, and penetrate into England by the weftern border. This was the effectual means to cut themfelves off either from retreat or affiftance. A party of Highlanders, who had joined them by this time, at firl refufed to accompany them in fuch a defperate incurfion, and one half of them actually returned to their own country. At Brampton, Mr Fofter opened his commiffion of general, which had been fent him by the earl of Mar, and there he proclaimed the pretender. They continued their march to Penrith, where the body of the militia that was affembled to oppole thew fled at their appearance. From Penrith, they proceeded by the way of Kendal and Lancafter to Prefton, of which place they took poffeffion without any refiftance. But this was the laft flage of their ill-advifed excurfion; for General Wills, at the head of $y 000$ men, came up.

Britain.
$\underbrace{}_{35_{4}}$ Rebels for ced to furrander at prefton.
$3^{5} 5$ Abfurd conduct of James's party in France.
to attack them; and from his attivisy there was no efcaping. They now, therefore, began to raile barricadoes about the town, and to put the place in a pofture of defence, repulfing the firt attacks of the royal army with fuccefs. Next day, however, Wills was reinforced by Carpenter, and the town was invefted on all fides. In this deplorable fituation, to which they were reduced by their own rafhnefs, Foifter hoped to capitulate with the general; and accordingly fent Colonel Oxburgh, who had been taken prifoner, with a trumpeter to propofe a capitulation. This, however, Wills refufed; alleging that he would not treat with rebels, and that the only favour they had to expeet was to be fpared from immediate flaughter. Thefe were hard terms, but no better could be obtained. They accordingly laid down their arms, and were put under a ftrong guard. All the noblemen and leaders were fecured, and a few of their officers tried for deferting from the royal army, and thot by order of a court-martial. The common men were imprifoned at Chefter and Liverpool : the noblemen and confiderable officers were fent to London, and led through the freets pinioned and bound together, to intimidate their party.

Though the fehemes of the pretender appear to have f been foolithly enough conducted in Britain, yet they were much more fo in France. Bolingbroke had been made his fecretary at l'aris, and Ormond his prime minitter. But thefe fatefmen quickly found that nothing could be done in favour of his caule. The king of France, who had ever efpouled the interell of the abdicated family, was juft dead; and the duke of Orleans, who fucceeded in the government of the kingdom, was averfe to londing the pretender any affiftance. His party, however, which was compoled of the lowell and the moll ignorant exiles from the Britifh domiuions, affected the utmolt confidence, and boafted of a certainty of fuccels. The deepeft fecrets of his cabinet, and all his intended meafures, were bandied about in coffee-houfes by perfons of the loweft rank both in fortune and abilities. Subaltern officers refolved to be his generals; and even proflitutes were entrulted to manage his negociations. Little therefore could be expected from fuch affifance and fuch councils.

Though, by this ime, the pre:cnder might eafly have feen that his affairs were defperate ; yer, with his ulual infatuation, he refolved to hazard his perfon among his friends in Scotland, at a time when fuch a meafure was ton late for fuccefs. Paffing, therefore, through France in difguife, and embarking in a fmall veffel at Dunkitk, he arrived, afeer a voyage of a few days, on the coafls of Scotland, with only fix gentlemen in his train. He paffed unknown through Aberdeen to Feltereffo, where lie was met by the earl of Mar, and about 30 noblemen and genilemen of the firlt quality. There be was folemnly froclaimed; and his declaration, dated at Comerey, was printed and difperfed. He went from thence to Dundee, where lie made a public entry; and in two days more he arrived at Scoos, where he intended to have the ceremony of his coronation performed. He ordered thankfgivings to be made for his fafe arrival; he erjoined the minillers to pray for him in their churehes; and willout the . mallefl hare of power, went through the ce-
remonies of royalty, which threw an air of ridicule on all his conduct. Having thus fient fome time in unimportant parade, he refolved to abandon the enterprife with the fame levity with which it was undertaken. Having made a fpeech to his grand council, he informed them of his want of money, arms, and ammunition, for undertaking a campaign, and therefore deplored that he was obliged to leave them. He once more embarked on board a fmall French fhip that lay in the harbour of Montrofe, accompanied with feveral lords, his adherents; and in five days arrived at Graveline.

General Gordon, who was left commander in chief of the forces, with the affiftance of Earl Marefehal, proceeded at their head to Aberdeen, where he fecured three veffels to fail nothward, which took on board fuch perfons as intended to make their elcape to the continent. He then continued his march through the Highlands, and quietly difmifled his forces as he went forward. This retreat was made with fuch expedition, that the duke of Argyle, with all his activity, could never overtake his rear, which confifted of 1000 horfe.

The rebellion being ended, the law was put in force with all its terrors; and the prifons of London were crowded with thofe deluded perfons, whom the mindflry feemed refolved not to pardon. The commons, in their addrefs to the crown, declared they would profecute, in the moll rigorous manner, the authors of the late rebellion; and their meafures were as vindictive as their refolutions were fpeedy. The earls of Derwentwater, Nithidale, Carnwath, and Wintown, the lords Widrinton, Kenmuir, and Naine, were impeached ; and, upon pleading guilty, all hut Lord Wintown, received fentence of death. No intreaties could prevail upon the miniftry to fpare thefe unhappy men. The houfe of lords even prefented an addrels to the throne for mercy, but without effect ; the king only anfwered, that on this, as on all other occafions, he would act as he thought moll confiftent with the dignity of the crown and the fafety of the people. Orders were accordingly difpatched for executing the lords Derwentwater, Nithfdale, and Kenmuir, immediately ; the rett were refpited to a farther time. Nithfdale, however, had the yood fortune to efcape in woman's clothes that were brought him by his mother the night before his execution. Derwentwater and Kenmuir were brought to the fcaffold on Tower-hill at the time appointed. Both underwent their fentence with calm intrepidity, and feemingly lefs moved than thofe who beheld them.

An aft of parliament was next rade for trying the private peffons in London, and not in Lancafhire where they were taken in arms. This was confidered, by fome of the belf lawyers, as an alteration of the ancient conflitution of the kingdom, by which it was fuppoled, that every prifoner fhould be tried in the place where the offence was committed, as a jury of sicighbeurs would be beft qualified to enter into the nature of the offence. In the beginning of April, commiflioners for trying the rebels niet in the court of common pleas, when the bills were found againft Mr Furlfer, Mr Macintofh, and 20 of their confederates. Forfler efcaped from Newsate, and reached the coltincret in fafety; the reft pleaded not guilty. Pirs

Cruel treatment of the rebels.

Britain. the keeper of Neregate, being fufpected of having connived at Forfter's efcape, was tried for his life, but acquitted. After this, Macintofh, and feveral other prifoners, broke from Newgate, after having mallered the keeper and turnkey, and difarmed the centinel. The court proceeded to the trial of thofe that remained; four or five were hanged, drawn, and quartered, at Tyburn. The judges appointed to thy the rebels at Liverpool found a confiderable number of them guilty of high treafon. Two and-twenty were executed at Manchefter and Prellon; about 1000 experienced the king's mercy, if fuch it may be called, to the tranfported to North America.

The rebellion being thus extinguifhed, the danger of the flate was made a pretence for continuing the parliament bcyond the term fixed for its diffolution. An act, therefore, was made by their own authority, repealing that by which they were to be diffolved every third year, and the term of their duration was extended to feven years. This attempt in any delegated body of people to increafe their own power by extending it, is contrary to the firf principles of juflice. If it was right to extend their duration to feven years, they might alfo perpetuate their authority; and thus cut off even the fladow of a nomination. The bill, however, paffed both houfes, and all objections to it were confidered as difaffection. The people might murmur at this encroachment, but it was too late for red refs.

Domeftic concerns being thus adjufted, the king refolved upon a voyage to the continent. He forefaw a ftorm gatheriag from Sweden. Charles X11. was highly provoked againf him for having entered into a confederacy with the Ruffians and Danes during his abfence at Bender, and for having puichafed from the king of Denmark the towns of Bremen and Verden, which conftituted a part of his dominions. In confequence of this, Charles maintained a clofe correfpondence with the diffatisfied fuhjects of Great Britain; and a fcheme was formed for landing a confiderable body of Swedifh forces, with the king at their head, in lome part of the ifland, where it was expected they would be joined by all the malcontents in the kingdom. Count Gyllenbure, the Sivedifh minifter in London, was peculiatly active in the confpiracy; but being feized with all his papers, by order of the king, the confederacy was broke for that time. A bill, however, was pafled by the commons, forbidding all commerce with Sweden ; the trade with which country was at that time of the utmuft confequence to the Englifh merchants. Gearge having paffed through Holland to Hanover, in order to fecure his German dominions, entered into a new treaty with the Dutch and the regent of France, by which they agreed mutually to af. fift each other in cafe of an invation; and for his further fecurity, the commons granted him 250.000 . But the death of the S:vedih monarch, who wa, foun after killed at the fiege of Fredericthall in Nurway, put an end to all difquietude from that quarter.

Amone the manv treaties for which this reign was zemarkable. one had been concluded, which was ralled the quadruple alliance. It was agreed between the emperor, France, Hollind, and Britain, that the emperor fhould renounce all pretenfions to the crown of Spain, and exchange Sardinia for Sicily with the duke of Savoy; that the fucceffion to the duchies of Tuf-

Yos. IV. Part II.
cany, Parma, and Placentia, Mould be fettled on the queen of Spain's eldeft fon, in cafe the precent polfcifors fhould die without male iffue. This treaty, however, was by no means agreeable to the king of Spain; and confequently it became prejudicial to the Englif, as it iuterrupted the commerce with that kingdom. A war foon after commenced between Spain and the em- W with peror, who was confidered as the principal contriver of spatre. the treaty; and a numerour Lody of Spanifa forces were fent into Italy to luppert Philip's pretenfions in that quarter. The regent of France attempted in vain to difluade him, and the king of Britain offered his mediation with the tike bad fuccel: ; their interpofition was confidered as partial and mijut. A Sparifl war was then refolved on. A fquadion of 22 flips was equipped with all expedition, the command of whicla was given to Sir George Byng, and ordered to fail for Naples, at that time threatened with a Spanilh army. He was received with the greateft joy by the Neapolitans; who informed him that the Spaniards, to the amount of 30,000 , were then actually landed in Sicily. In this exigence, as no affifance could be given by land, he refolved to fail thither, fully determined to purfue the Spanilh fleet on which the army was embarked. Upon coming round Cape Faro, he perceived two fmall Spanifl veffels; and purfuing them clofely, they led him to their main lleet, which, before noon, he difcovered in line of battle, amounting in all to 27 fail. The Spaniards, however, notwithftanding of their fuperiority in number, attempted to fail away; but finding it impuffible to make their efcape, they kept up a tunning fight, and the commanders behaved with great courage and aclivity; in Spite of which they were all taken except three, which were preferved by the conduct of one Cammoc, their vice-admiral, a native of Ireland. Sir George Byng behaved on this occafion with great prudence and refolution : and the king wrote him a letter with his own hand, approving his conduct.

The rupture with Spain was thought to be favourable Intended to the interefls of the pretender; and it was hoped that invafion by by the affifance of Cardinal Alberoni, the Spanifh mi nitter, a new infurrection might be excited in England. The duke of Ormond was the perfon fixed upon to conduct this expedition; and he obtained from the Spanifh court a fleet of ten fhips of war and tranfports, having on board 6000 regular troops, with arms for 12,000 more. But tortune was fill as unfavourable as ever. Having fet fail, and proceeded as far as Cape Finifterre, he was encountered by a viulent ftorm, which difabled hiv flect, and frultrated the expestion. This misfortune, toyether with the bad fuccefs of the Spanift arms in Sicily and other parts uई Europe, induced Philip to with for a ceffation of arms; and he at laft confented to lign the quadruple alliance, by which means peace was again reftored to Europe.

Tranquillity being thus eftablifhed, the miniftry pro- Irifh pariia ceeded to fecure the dependencs of the Irifh parliament ment made on that of Eneland. One Maurice Annefley had ap- dependent pealed to the houfe of peers of England from a decree britaim made by the Irin peers, and their decree was reverfed. The Britilh peers ordered the barons of exchequer in Irelad to pur Mr Aunefley in pofteflion of the lands he liad lof by the decree of the lords in that kingdem. The barons obeved this order; and the Irifh peers paf-

## B R I [ 506 ] B R I

Yy:
fed a rote againgt them, as having attempted to dimirith the juit privileges of the parliament of Ireland; and at the fame time ordered the barons to be taken under the cuftody of the hlack rod. O: the other hand, the houfe of lords in England refolved, that the harons of the exchequer in Ireland had acted with cousrage and fidelity; and addrefled the king to fignify his appréation of their conduet, by fome marks of his farour. To complete their int.mtion, a bill was prepar. ed, by which the Irilh boufe of lords was deprived of all right of firal jurifdiction. The bill was oppofed in both houfes, but particularly by the commons. It was there afferted by Mr Pitt, that it would only increafe the power of the Englifh peers, who were already but too formidable. Mr Hungerford demontrated, that the Jrifh lords had always exerted their power of finally deciding caufes. Notwithtanding all oppofition, the bill was carried by a great majority, and foon after received the royal affent.

This blow was feverely felt by th: Irifh; but was
39.

Snuth-fea fcheme. by no means fo great as that which the Englith about this time felt from the South-fia fobeme, which commenced in the year 1721 . To explain this as concifely as poffible, it muft be obferved, that ever fince the revolution under King William, the government not having fufficient fupplies granted by parliament, or what was granted requiring time to be collected, they were obliged to borrow money from feveral different companies of merchants; and among the $\mathrm{r}+\mathrm{fl}$ from that company which traded to the South-fea. In the year I716, the government was indebted to this company about nine millioris and a half of money; for which they granted at the rate of 6 per cent. intered. As this company was not the only one to which government was indebted, Sir Robert Walpole formed a defign of Ieflening the national debt, giving the feveral companies an alternative either of accepting a lower intereft, namely 5 per cent. or of being paid the principal. The different companies chofe rather to accept of the diminifhed interell than to be paid the principal. The South-fea Company, in particular, having augmented their loan to ten millions, were contented to receive s00,0001. annually as intereft, inftead of 600,0001 . which they ufua!ly received. In the fume manner, the governors and company of the bank, and other companies, were contented to receive a diminifhed annual interef for their refpedive loans; all which greatly leffened the debts of the nation.

In this fituation of things, one Blount, a fcrivener, propofed to the miniftry, in the name of the South-fea Company, to buy up all the debts of the different companies, and thus for the South-fea Company to become the fole creditors of the ftate. The terms he offered to govermment were extremely advantageous. The SouthPea Company was to redeem the debts of the nation out of the hands of the private proprictors who were creditors to the government, upon whatever terms they could agree on; and for the interef of this money which they had thus redeemed and taken into their own hands, they would be contented to be allowed by government 5 per cent. for fix years; after which the intereft fhould be reduced to 4 per cent. and thould at any time be redeemable by parliament. For thefe purpofes a bill paffed looth houles. 13ut now cime the part of the fcheme big with fraud and ruin. As the dircc-
tors of the South-fea Company could not of themfelves Eriain. be fuppofed to poniefs fo much money as was fulficient to buy up the debts of the nation, they were empunered to raife it by opening a fubfcription to an imaginary fcheme for trading in the South feas; from which commerce immenfe advantages were promifed, and nill greater expeited by the rapacious credulity of the people. All the creditors of government, therefore, were invited to come in, and exchange their fecurities, viz. the fecurity of government, for that of the Sourh-fea Company. The directors books were no fosncr opened for the firft fubfeription, than crowds came to $m$. ke the exchange of government flock for South-fea fock. The delufion was artfully continuted and fpread. Subfctiptions in a few days fold for double the price they had been bought at. The fcheme fucceeded beyond even the projector's hopes, and the whole nation was infected with a finit of avaricious enterprife. The infatuation prevailed; the flock increafed to a furprifing degree, even to near ten times the value of what it was firf bought for.

After a few months, however, the people waked from their dream of riches; and found that all the advantages they expected were merely imaginary, while thoufands of families were involved in one common win. Mayy of the directors, by whofe arts the people $\mathbf{D} 395$ were taught to expect fuch great benefits from a traffic purifhed: to the South feas, had amaffed confiderable fortunes by the credulity of the public. It was fome confolation, however, to the people, to find the parliament haring in the general indignation, and refolving to Atrip thofe unjut plunderers of their poffeffions. Orders were firft given to remove all the directors of the South-fea Company frors their feats in parliament, and the places they poffeffed under government. The principal delinquents were punilhed by a forfeiture of all fuch poffeffions and eftates as they had acquired during the continuance of this popular frenzy. The next care was to redrefs the fufferers. Several juft and ufeful refolutions were taken by parliament, and a bill was feeedily prepared for repairing the late fufferings as far as the infpection of the legifature could extend. Of the profit arifing from the South-fea fcheme, the fum of feven millions was given back to the original proprietors; feveral additions were alfo made to their dividends out of what was poffeffed by the company in their own right; and the remaining capital llock was alfo divided among the old proprietors at the rate of 33 per cent. - In the mean time, petitions from all parts of the kingdom were prefented to the houfe demanding juftice; and the whole nation feemed exalparated to the highef degree. Public credit fuflained a terrible fhock. Some principal members of the minillry were deeply cencerned in thefe fraudulent tranfactions. The bank was drawn upon fafter than it could fupply; and nothing was heard but the ravings of difappointment, and the cries of defpair.

By degrees, however, the effects of this terrible ca- Unfuccef lamity wore off, and matters returned to their former ful expeditranquillity. A new war with Spain commenced. Ad tion of ad miral Hofier was fent to South America to intercept fier. the Spanifl galleons; but the Spaniards being apprifed of his defign, relanded their treafure. The greate it part of the Britift fleet fent on that expedition was rendered entirely unfit for fervice. The feamen were cut off in great numbers by the malignity of the cli-
mate and the length of the voyage, white the admiral himfelf is faid to have died of a broken heart. In order to retaliate thefc hoflilities, the Spaniards undertook the fiege of Gibraltar; but with as little fuccefs on their fide. In this difpute France offered her mediation; and fuch a reconciliation as treaties could procure was the confequence: a temporary peace enfued; both fides only watching an opportunity to renew hoflilities with advantage.

Soon after the breaking up of the parliament in the year 1727 , the king refolved to vifit his electural dominions of Hanover. Having appointed a regency in his ablence, he embarked for Holland, and lay, upon his landing, at a little town called Voet. Next day he proceeded on his journey; and in two days more, between ten and eleven at night, arrived at Delden, to all appearance in perfect health. He fupped there very heartily, and continued his journey early the next morning; but between eight and nine ordered his coach to ftop. It being perceived that one of his hands lay motionlefs, Monfieur Fabrice, who had formerly been fervant to the king of Sweden, and who now attended King George, attempted to quicken the circulation, by chafing it between hisown. As this had no effect, the furgeon who followed on horfeback was called, and he rubbed it with \{piritc. Soon after, the king/' tongue began to fiwell, and he had juff ftrength enough to bid them haften to Ofnabureh. 'Then, falling infenfible into Fabrice's arms, he never recovered; but expired about 11 o'cluck the next morning, in the 68th year of his age, and i $3^{\text {th }}$ of his reign. His body was conveyed to Hanover, and interred among bis ancellors.

On the acceffion of Gearse It the two great parties into which the nation had fo long been divided, again changed their names, and were now called the court and country parties. Throughout the greateft part of this reign, there feem to have been two objects of controverfy, which rofe up in debate at every feffion, and tried the frength of the opponats; thefe were the na. tional debt, and the number of forces to be kept in pay. The government on the prefent king's acceftion owed more than $30,000,000$ of money; and though there was a long continuance of profound peace, yet this fum was found conftantly increafag. It was much wondered by the country party how this could happen, and it was as conftantly the bufinefs of the court to give plaflible reafons for the increafe. Thus, demands for new fupphes were made every feffion of parliament, either for the purpofes of fecuring friends upon the continent, of guarding the kingdom from internal confpiracies, or of enabline, the miniltry to an vigoroufly in conjunction with the powers in alliance abroad. It was vainly alleged that thofe expences were incurred without prefcience or neceffity; and that the increafe of the national debt, by multiplying and increaling taxes, would at lafl become an intolerable burden to the poor. Thefe arguments were offered, canvaffed, and rejected; the court party was conftantly victorious, and every demand was granted with cheerfulnefs and profufion.
The next thing worthy of notice in the reign of George II. is the claritable corporatimn. A fociety of men had united then feives into a company by this name; and their profited intention was to lend money at legal intereft to the poor upon fmall pledges, and to perfons of higher rank upon proper fecurity. Their capi-
tal was at firf limited to 30,0001 . but they afterwards Fritam. increafed it to 600,000 . This money was fupplied by fubfeription, and the care of conducling the capital was intrufted to a proper number of directors. This company having continued for more than 20 years, the camier, George Robintan, member for Marlow, and the warehoufe-keeper, John Thompfon, difappeared in oue day. Five hundred thoufand pounds of capital were found to be funk or embezzled by means which the proprietors could not difcover. They therefore, in a petition, reprefented to the houfe the manner in which they had been defrauded, and the diflrefs to which many of the petitioners were reduced. A fectet committe being appointed to examine into this grievance, a moft iniquitous fcene of fraud was foon difcovered, which had been carried on by Thomfon and Robinfon, in concert with fome of the directors, for embezzling the capital and cheating the proprietors. Many perfons of rank and quality were concerned in this irflamous confpiracy; and rven fome of the firf charakters in the nation did not efcape cenfure. No lefs than fix members of parliament were expelled for the mon fordid afts of knavery. Sir Robert Sutton, Sir Archibald Grant, and George Robinfon, for their frauds in the management of the charitable corporation Scheme; Dennis Boud, and Serjeant Burch, for a fraudulent fale of the late unfortunate earl of Derwentwater's eflate; and laflly John Ward, of Hackney, for forgery. It was at this time afferted in the houfe of lords, that not one fhilling of the forfeited eflates was ever applied to the fervice of the public, bat became the reward of fraudulence and venality.

This happened in the year 1731 ; an in 1932, a Excife 40 r fcheme was formed by Sir Robert Walpole of fixing a fcheme re. general excife. He introduced it by recounting the jected. frauds practifed by the factors in London that were employed in felling the American tobacco. To prevent thefe frauds, he propofed, that inflead of having the culloms levied in the ufual manner upon tobacco, all hereafter to be imported fluuld be lodged in warehoufes appointed for that purpofe by the officers of the crown; and flould from thence be lold, upon paying the duty of 4 d . per pound, when the proprietor found a purclafer. This propofal raifed a violent ferment, both within doors and without. At laf, the fury of the people was worked up to fuch a pitch, that the parliament-houfe was furrounded by multitudes, who intimidated the miniffry, and compelled them to drop the defign. The milcarriage of the bill was celebrated with public rejoicings in London and Weftminfer, and the minifter was burned in effigy by the populace at London.

On this occafion an attempt was made to repeal the feptennial bill, and bring back triennial parliamente, as fetted at the Revolution. But nutwithflanding the warmh of the oppofition, the miniftry, exerting all their firength, were vißorious, and the motion was fuppreffed by the majity However as on this oceafion 402 the country party feemed to have gained fuength, it difiotved. was thought proper to diffolve the parliament : and an. other was called by the fame proclamation.

The fame difputes were carried on in this parliament as in the former. New fubjeats of controverly offered every day, and both fides were eager to feize them. A convention agrecd on by the miniftry, at the Pra-

## B R I

Britain. do, with Spain, became an object of warm altercation. By this the court of Spain agreed to pay 95,0001. to the Eaglifh, as a fatisfaction for all demands; and to difcharge the whole in four months from the day of ratification. This, however, was confidered as not equivalent to the damages that had been fuftained, which were faid to amount to $340,0 c 01$. On this occafion the minifter was provoked into unufual vehemence, and branded the oppofite party with the appellation of traitors. The minifry, as ufual, were viftorious; and the country party finding themfelves out-numbered and out-voted in every debate, refolved to withdraw for ever: Walpole, being thus left without oppofition, took the opportunity of paffing feveral ufeful laws is their abfence, in order to render the oppofite party odious or contemptible.

In 1739, a new war commenced with Spain. Ever fince the treaty of Utrecht, the Spaniards in America had infulted and diftrefled the commerce of Great Britain ; and the Britill merchants had endeavoured to carry on an illicit trade in their dominions. As a right of cutting logwood in the bay of Campeachy, claimed by the Britih, gave them frequent opportunitie of puthing in contraband commodities upon the continent, the Spaniards refolved to put a ftop to the evil by refufing liberty to cut logwood in that place. The Spanith guardacoftas cuntinued their feverities upon the Britifh, and many Britifi fubjechs were fent to dig in the mines of Potofi. One remonftrance followed another to the court of Madrid; but the only anfwers given were promiles of inquiry, which produced no reformation. In 1739, war was declared with
4.4 all proper folemnity; and foon after, Admiral VerPort Belo non, with fiv illips only, deftroyed all the fortifications taken. of Porto B-ilo, and came away victorious, with fcarce the lofs of a man.

As the war was thus fuccefffully begun, fupplies were cheerfully granted to profecute it with all imaginable vigour. Commodore Anfon was fent with a fquation of thips to dillrefs the enemy in the South feas, and to co-operate occafionally with Admiral Ver- non acrofs the ithmus of Daricn. This fquadron was defigned to act a fubordinete part to a formidable armament that was to be fent againft New Spain; but through the mifmanagement of the miniliry both theie fohemes were frufrated. Aufon was detained till too late in the feafon; he then fet out with give fhips of the linc, a frieate, and two llore-fthips, with about 1400 mer. Cumsing into the formy South feas at a vers wrong fenlin of the year, he encountered the moft tersible ftorms; hi fleet was difiperfed, and his crew cicplorable iffic...d with the icurvy; fo that with murth deffirulty he gained the delightful ifland of Juan Fe eandez. Here he was joind by one Mip and a friv: tu of feven guns. From thence failing along the couft of Chill, he plundered and burnt the town of Paita. He nest traverfed the great Pacific ocean, in hopes of meeting with one of the immentely rich gal. leans that trad.e from the Puilippine iflands to Mexico. llaving refrefhed his men at the ifland of Tinian, he fet furvard to China; and returning the fome way he came, at lift difeovered the gatleon, which he engaged, and took; and with this prize, valued at 313,0001 . together with other captur to the vilue of about as much more, lie returned bome, afies a voyage of three
years. By this expedition the public fulained the lofs of a fine fquadron of hips, but a few individuals became foffefled of immenfe fortunes.

The other expedition ended ftill more unfortunately. The armament confifted of 29 ftips of the line, and almoft an equal number of frigates, furnifhed with all gena. kinds of watlike fores, near 15,000 feamen, and as many land forces. The moft fanguine hopes of fuccefs were entertained; but the miniffy detained the fleet without any vifible realon, till the feafon for action in America was almoft over. At laft, however, they arrised before the wealthy city of Carthagena. They foon became mafters of the frong forts which defended the harbour. But though by this means they advanced a good deal nearer the town, they found great difficulties ftill before them. It was afferted, that the fleet could not lie near enough to batter the town, and therefore the remaining forts muft be attempted by fcalade. This dangerous experiment was tried; the guides were flain by the enemy's fire, and then the forces miftook their way. Inftead of attempting the weakeft place of the fort, they attacked the flongent, and where they were expofed to the fire of the whole town. Their fcaling ladders were too mort, and at laft, after bearing a dreadful fire with great refolution for fome hours, they retreated, leaving 600 men dead on the fpot. The tertors of the climate now began to be more dreadful than thofe of war. The rainy feafon commenced with fuch violence, that it was impoffible for the troops to continue their encampment. To thefe calamities was added the diffenfion between the fea and land commanders, who blamed each other, and at lail could be only brought to agree in one mortifying meafure, viz. to reimbark the troops, and withdraw them as quick as poffible.

The mifcarriage of this enterprife produced the greatef difcontents; efpecially as other caufes of complaint were now juined with it. Sir John Norris had twice failed to the coaft of Spain at the head of a very powerful fquadron, without doing any thing to the purpofe. The commerce of Britain was greatly annoyed by the Spanifh privateers, who had taken 407 ftips fince the commencement of the war; while the Britifh fleets feemed to be quite inactive, and to fuffer one lofs after another, without endeavouring in the leaft to make proper reprifals. Thefe diforitents burft all at once upon Sir Robert Walpole; a majority in the houfe of commots was formed againt him; he was created earl of Orford, the parliament being adjourned for a few days for that purpofe; and he refigned all his employments.

The remuval of this minifter gave univerfal fatisfaction. His antagonifts cutertained great hopes of feeing him punimed: but he lad laid his follemes too well to be under any apprehenfions on that account; and what was worfe, the new miniftry wese no fooner got in, than they trod in the fooifteps of thofe they had fo much exclaimed againfl. The nation had now gos become difgulted with naval operations. The people An army wifted for a renewal of their victories in Flanders, and fent into the king ardently joined in the fame wifh. An army Flanders. of 16,000 men was therefore ihipped over into Flanders, to take part in the quarrels that were then begimning on the continent. Immenfe triumphs were expected from this undertaking; but they forgot that lert Walpole.

Eritain. the army was not now commanded by the duke of Marlborough.

In order to give fome notion of the origin of thefe continental quarrels, it is neceffary to go back for fome years. After the duke of Orleans, who had been regent of France, died, Cardinal Fleury undertook to fettle the confufion in which the kingdom was then involved. Under him France repaired her loffes, and enriched herfell by commerce. During the long interval of peace which this minifter's counfels had procured for Europe, two powers, till now unregarded, began to attract the notice and jealoufy of the neighbouring nations. Thele were Ruffia and Pruflia. The other flates were but little prepared to renew war. The empre remained under the government of Charles VI. who had been placed on the throne by the treaty of Utrecht. Sweden continued to languifh from the deftruetive projects of Charles XII. Denmark was powerful enough, but inclined to peace; and part of Italy fill remained fubject to thole princes who had been impored upon it by oreign treaties.

All thefe ftates, however, continued to enjoy a profound peace, until the death of Auguftus king of PoIand, by which a general flame was once more kindled in Europe. The emperor, affifted by the arms of Ruffia, declared for the elector of Saxony, fon to the deceafed king. On the other hand, France declared for Staniflaus, who had long fince been nominated king of the Poles by Charles of Sweden, and whofe daughter the king of France had fince married. Stanillaus was gladly received at Dantzic, and acknowledged king of Poland; but here he was befieged by 10,000 Ruffians, the city taken, and he himfelf with difficalty made his efcape. France, however, fill relolved to afift him, as this, it was thought, would be the moft effectual method of diftefling the houfe of Auftia. Thefe views of France were feconded by Spain and Sardinia, both of which hoped to grow rich by the Spoils of Auftia. A French army, therefore, overran the empire, under the conduet of the old marilial sillars; while the duke of Mortemar, the Spanifh general, was equally victorious in the kingdom of Naples. The emperor was foon obliged to fue for peace; which was granted, but Stanillaus was neglected in the treaty. It was flipulated that. he fhould renounce all claim to the kingdom of Poland; for which the emperor gratified France with the duchy of Lorraine, and fome other valuable territories.

The emperor dying in the year 1740 , the French began to think this a favourable opportanity for exerting their ambition. Regardlefs of treaties, thercforc, particularly that called the Pragmatic Sancion, by which the late emperor's dominions were fettied upon his daughter, they caufed the elector of Bavaria to be crowned emperor. Thus the queen of Hungary, daughter of Charles VI. was at once Atripped of her inheritance, and was left for a whole year deferted by all Europe, and without any lopes of fuccour. Ac the fame time the loit the province of Silefa by an irsuption of the young king of Pruffia, who took the opportunity of her defencelefs ftate to renew his pretenfons to that province, of which his anceftors had been unjuftly deprived. France, S3xony, and Bavaria, attacked the rell of her dominions: Britain was the only ally that feemed willing to affift her; in which,
however, Sardinia, Holland, and Ruffia, foon after Britair. concurred.

It inult be owned that Britain had no other reafon for interfering in thefe difputes, than that the fccurity of the electorate depended upon nicely balancing the different intetefts of the cmpire; and the miniftry were willing to gratify the king. His majefty informed the parliament, that he had fent a body of Britifh forces into the Netherlands, which he had augmented by 16,000 Hanoverians, to make a diverfion upon the dominions of France, in favour of the queen of Hungary. When the fupplies came to be confidered, by which this additional number of Hanoverian troops was to receive pay from Britain for defending their own caufe, mof violent parliamentary debates enfued; but the miniftry carried their point by the 1trength of numbers.

But, however prejudicial thefe continental meafures Relieved might be to the true interells of Great Britain, they by the Brieffectually retrieved the queen of Hungary's defperate affairs, and foon began to turn the fcale of victory on her fide. The French were driven out of Bohemia. Her general, Prince Charles, at the head of a large army, invaded the dominions of Bavaria. Her rival, the nominal emperor, was obliged to tly before her ; and being abandoned by his allies, and fripped eren of his hereditary dominions, retired to Frankfort, where he lived in obfcurity.

In the mean time, the Britifl and Hanoverian army Batule of advanced, in order to effeet a junction with that of Dettingern. Prince Charles of Lorraine, in which cafe they would have outnumbered their entinies. To prevent this, the French oppofed an army of 60,000 men, upon the river Mayne, under the command of the marilial de Noailles, who polted his troops on the calt fide of the river. The Britifh army was commanded by the earl of Stair, who had learned the art of war under the great Prince Eugene; neverthelefs he fuffered himlclf to be encluled by the enemy on every fide, near a village called Deftingen. In this fituation, the whole army, with the king himelf, who had by this time arrived in the camp, mult have been taken, had the French behaved with prudence. Their impetwofity, however, faved the whole army. They paffed a defile which they ought to have contented themelves with guarding; and, under the conduet of the duke of Gramont, their horfe charged the Britilh foot with great furv. They were received with great sefolution ; and at laft cbliged to repals the Mayne with precipitation, and the lofs of about 5000 men.

Though the Britill? were victorious in this engage- Intended ment, the French were very little difconcerted by it. invafion of They oppofed Prince Charles, and interrupted his at- Britun by tempts to pars the Rhine. It Italy they alfo gained the French. fome advantages; but their chief hopes were placed on an intended invafion of England. Frous the violence of parliamentary difputes in England, France lad been perfuaded that the country was ripe for a revolution, and only wanted the prefence of the pretender to bring about a change. An irsuation was therefore aclually projented. The troops dellined for the expedition a. mounted to 15,000 ; and preparations were made for embarking them at Dunkirk and fome of the ports neareft to England, under the eye of the young pretender. The dube de Roçuefuille, with 20 ghips of

## B R

Bricain. the line, was to fee them fafcly landed on the oppofite fhore, and the famou: Count Saxe was to command them when landed. But the whole projeet was difconcested by the appearance of Sir John Norris, who with a fuperior fleet made up to attack them. The Fremch Heet was obliged to put back; a very hard gale of wind damaged their tranfports beyond redrefs; and the French, now frultrated in their fcheme of a fudden defeent, thought fit openly to declare war.

The national joy for Sir John Norris's fuccefs, however, was foon damped by the mifcarriage of Admirals Matthews and Leflock; who, through a mifunderftanding betiveen themfelves, fuffered a French teet of 34 fail to efcape them near Toulon. In the Netherlands the Britifh arms were attended with llill worfe uccefs. The French had there affembled an army of 120,000 men, commanded by Count Saxe, natural fon to the late king of Puland, an officer of great experience. The Englifh were headed by the duke of Cumberland, who had an inferior army, and was much inferior in the knowledge of war to the French general. Count Saxe, therefore, carried all before him. In $17+3$, he befieged Fibourg, and in the beginnirg of the campaign 1744, invefted the ftrong city of Tournay. To fave this place, if polfible, the allies refolved to hazard an engagement; and on this enfued the bloody battle of Fontenoy, in which the allies left on the field of battle near i2,0<0 men, and the French almoit an equal number. In confequence of this victory, Tournay was foon after taken by the French. To balance the bad fuccefs, however, Admirals Rowley and Warren had retrieved the honour of the Brotin flag, and made feveral rich captures at fea. The fortrefs of Louibourg, a place of great confequence to
the Britifh commerce, furrendered to General Pepperel ; while a Cho:t time after, two French Eaft India Mips, and a Spanifh fhip from Peruladen with treafure, put into the harbour, fuppofing it fill their own, and were taken.
Yiung pre- During this gleam of returning fuccefs, Charles Edter derlandsward, the fon of the old pretender to the Britifh crown, w Scotland. refolved to make an attempt to recover what he called his right. Being furnifhed with fome money foon France, he embarked for S otland ahoard a fmall frigate, accompanied by the marquis of Tullibardine, Sir Thomas Sheridan, and lome others; and for the conquell of the whole Britith empare, ouly brought with him feven officers and arms for 2000 men.

Fortune, however, feemied noway more fayourabic to thas attempt than to others fimilar to it. His convoy, a flitip of 60 gunc, was fo difabled in an engagement with an Englill man of war, that it was obliged to return to hrefl, while he continued his courfe to the weftern parts of Scotland. On the 27 th of July 1745 , he landed on the coall of Lochaber, and was in a little time jained by the Hi,hlanders, to the number of 1500 : the mimiftry at firft could fearcely be induced to credit his arrival; but when they could ton langer douht of it, they fent Sir Juln Cope with a fmall body of forces to nppore his priguctis.

By this time the young adventurer was arrived at Perth, where he performed the ceremony of proclaiming his father king of Great Britain. From thence defecnding towards ledinluargh, and his firces contimually increafing, be contered the cap::al withou: oppo-
fition; but was unable, from want of cannon, to reduce the caftle. Here he again proclaimed his father; and promifed to diffolve the union, which was confidered as one of the national grievances. In the mean time, Sir John Cope being reinforced by two regiments of dragoons, refolved to give the enemy battle. The rebels attacked him near Prefonpans, and in a few minutes put him and his troops to flight, with the lofs of 500 men.

The vietory gave the rebels great influence; and had the pretender marched directly to England, the confequence might have been fatal to freedom. But he was amufed by the promife of fuccours which never came; and thus induced to remain in Edinburgh till the feafon for action was loft. He was joined, bowever, by the earl of Kilmarnock, Lord Balmerino, lords Cromarty, Elcho, Ogilvy, Pitlligo, and the eldeft fon of Lord Lovat, who with their vaffals confiderably increafed his atmy. Lord Lovat himfelf, fo remarkable for his treachery, was an enthufiaft in favour of the pretender, but was unsrilling to act openly for fear of the miniffry. But while Charles tras thus trifling away his time at Edinburgh, the Britifh miniAtry were taking effectual methods to oppofe him. Six thouland Dutch troops, that had come over to the affiftance of the crown, were defpatched northward under the command of General Wade; but, as it was then faid. thefe could lend no affiftance, being prifoners of France apon their parole, and under engagements not to oppole that power for a year. But however this be, the duke of Cumbetland foon after arrived from Flanders, and was followed by another detachment of dragoons and infantry, well difciplined and inured to action; and Lefides thefe, volunteers offered themfelves in every part of the kingdom.

At laft, Charles refolved upon an irruption into 418 England. He entered that country by the weftern England. border, and took the town of Carlifte; after which he continued his march fouthwards, having received affurances that a confuderable body of forces would be landed on the fouthern coalts to make a diverfion in lis favour. He eftablifhed his head quarters at Manchefter, where he was joined by about 200 Eaglifh formed into a regiment, under the command of Colonel Townley. From thence he purfued his march to Derby, intending to go by the way of Chefler into Wales, where he hoped to be joined by a great numbur of malcontents; but in this he was prevented by the factions among his followers.
$B=$ ing now advanced within 100 miles of London, Great conthat capital was in the utmofl conflernation; and had fernation he procecded with the fame expedition he bad hitherto at Londom ufcd, perhaps he might have made himfelf mafter of it. But ne was rendered incapable of purfuing this or any other tational plan, by the difcontents which began to prevail in his army. In fact, the young pretender was but the nominal leader of his forces; his generals, the Highland chiefs, being averfe to fubordination, and ignorant of command. They were now unanimous in their refolution to return to their own countiy, and Rebels re Chates force to co 'They reireale halve to are lithe without any lufs; and from thence croffing the rivers Eden ant! Solway, entered Scotland. They next marched to Glafyow, which was laid under fevere contributions. From thence adrancing to Stirling,

## B R I

Pritain. they were joined by Lord Lewis Gordon at the head of fome forces which had been affembled in his abfenee. Other clans likewife came in ; and from fome fupplies of money received from Spain, and forne $\mathfrak{k i r m i h}$ es with the royalifts, in which he was vieforious, the pretender's aftairs began to wear a more promifing afpeet. Being joined by Lord I Drummond, he invelted the caftle of Stirling, in the fiege of which much time was confumed to no purpofe. General Hawley, who commanded a confiderable body of forces rear Elinhurgh, undertook to raife this fiege, and adranced towatds the rebel army as far as Falkirk. After two days fpeut in mutu ally examining, each others fltength, an engagement enfued, in which the king's forces were entirely defeated, with the lofs of their tents and artillery.

This was the end of oll the tiumphs of the rebel army. The duke of Cumberland having arrived, was put at the head of the troops at Elinburgh, which amounted to about 14,000 men. With the fe he advanced to Aberdeen, where he was joined by feveral of the nobility attached to the houfe of Hanover; the cnemy in the mean time retreating before him. He next advanced to the banks of the Spey, a deep and rapid river, where the rebels might have difputed his paffage; but their contentions with one another were now rifen to fuch a height, that they could farce agree in ainy thing. At laf they refolved to wait their purfuers. An engagement enfued at Culloden ${ }^{*}$, near Invernefs; in which the rebels were defeated with great flaughter, and a final period was put to all the hopes of the young adventurer. The conquerors behaved with the greatef cruelty; refufing quarter to the wounded, the unarmed, and the defencelefs; fome were flain, who had only been feetators of the combat, and foldiers were feen to anticipate the bafe employment of the executioner. The duke immediately after the action ordered 36 deferters to be executed: the conquerors fpread terror wherever they came; and after a fhort fpace, the whole country round was one dreadful fcene of plunder, flaughter, and defolation.

Immediately after the engagement, the young pretender fled away with a captain of Fitzjames's cavalry; and when their horfes were fatigued, they both alighted, and feparately fought for fafety, There is a ffriking refemblance between the adventures of Charles II. after the battle of Worcefler, and thofe of the young pretender after the battle of Culloden. For fome days he wandered in the country. Sometimes he found refuge in cavey and cottages, without any attendants at all. Sometimes he lay in forefts with one or two companions of his dilfrefs, continually purfued by the troops of the conqueror, there being a reward of 30,000 l. offered for taking him either dead or alive. In the courfe of his adventures, he had occafion to truf his life to the fidelity of above 50 individuals; not one of whom could be prevailed upon, by fo great a reward as was offered, to betray him whom they looked upon to be their king's for.

For fix months the unfortunate Charles continued to *ander in the frightful wilds of Glengary, often hemmed round by his purfuers, but fill refcued by fome providential accident from the impending danger. At length a privateer of St Maloes, hired by his adbezents, arrived in Loch Nanach, in which he embratked
in the mon wretched attire. He was clad in a floor: coat of black frize, thread-bare; over which was a common Highland plaid girt round him by a belr, from which hung a piftol and dagger. He had not becn flifeted for many weeks; his eyes were hollow, his vifage wan, and his conftitution greatly impaired by famine and fatigue. He was accompanied by Sullivan and Sheridan, two Irifh adherents, who had Mared all his ealamities; together with Cameron of Lochiel, his brother, and a few other cxiles. They fet fail for $\mathrm{Hc}{ }^{424}$ F'rance; and after having been chafed by two Englifh to France. neen of war, arrived in fafety at a place called Roficau near Morlaix in Bretngne.

While the pretender was thus purfued, the feaffolds Rebels exe and gibbets were preparing for his adherents. Seven.cuted. teen oflicers were hanged, drawn, and quartered, at Kennington common in the neighbourhood of Iondon; nine were executed in the fame manner at Carline, and eleven at York. A few obtained pardons. and a confiderable number of the common men were tranfported to America. The easls of Kilmarnock and Cromarty, and Lord Balmerino, were tried and fourd guilty of high treafon. Cromarty was pardoned; but Kilmarnock and B.lmerino were cxecuted; as was alfo M: Radcliffe brother to the late earl of Derwentwater, who was fentenced upon a former conviction. Lord Lovat was tried, and fuffered fome time after.

Immediately after the fupprefion of the rebellion, New regurthe legiflature undertook to eflablifh feveral regula-lations in tions in Scotland, which were equally conducive to Scotland. the happinefs of the people and the tratiquillity of the united kingdoms. The Highlanders had till that time continued to wear the military drefs of their anceftors, and never went without arms. In confequence of this, they confidered themfelves as a body of people dirtinat from the reft of the nation, and were ready upon the therter notice to fecond the infurrections of their chiefs. Their habits were now reformed by an act of legiflature, and they were compelled to wear clothes of the common fathion. But what contributed Aill more to their real felicity was the abolition of that hereditary jurifdiction which their ehieftans exerted over them. The power of their clieftans was totally deflroyed, and every fubject in that part of the king. dom was granted a participation in the common liberty.

Soon after the battle of Culloden, the duke of Cumberland returned to Flanders, where he refumed the command of an army to which he was by no means equal. The French carried every thing before them; ${ }^{427}$ Allie= deand they reduced under their dominion all thofe flrongfeated in towns which had been taken by the duke of Marlbo-Flar.dere rough, and formed a bartier to the United Provinces. They gained a confiderable vi\&tory at Roucrox; which, however, cont them as many men as they deftroyed of the enemy; but thefe they could more eafily fpare, as they were much more numerous. Another victory which they obtained at La Feldt, ferved to deprefs the allied army fill lower. But the taking of Bergen-opzoom, the flrongen fortification of Brabant, reduced the Dutch to a flate of defperation.

Thefe victories and fucceffes in Flanders were, how. Lofies of ever, counterbalanced hy alnoft equal difappointments. the Frinch In Italy, the marfhal Belleille's brother, attempting to in othcr penctrate at the head of $94,000 \mathrm{men}$ into Piedimont, ${ }^{\text {rats }}$

## B R I [ $5 \nmid 2] \quad$ B R I

Briain. was defeated and killed. A reet was fitted out for the recovery of Cape Bicton, but without fuccefs. Two others were fitted out, the one to make a defcent upon the Britith colomes in America, and the other to car ry on the op-rations in the Eaft Indses; but thefe were aitacked by $\Lambda$ nfon and Warren, and nine of their mips : aken. Soun after this, Commodore Fox, with fix th ps of war, wook above 40 French thips richly laden from St Domingo; and loon after this the French tl-et was defeated by Admiral Hawke, who took feven

For a lone time Lonis had been defirous of a general tranquillity; and this defire be had even expreffed to Sir John Iizonier, who was taken prifoner at the battle of I.a Feldt. But now the bad fuccefs of his admirals at [ea, his armies in Italy, the frequent banksuptcie of his merchants at home, and the election of a fadtholder in Holland, who gave fpirit to the opnofitinn; all thele contributed to make him weary of the war, and to propofe terms of accommodation. This was what the allies had long wimed for, but had been ethamed to demand. A congrels, therefore, was beld at Aix-la-Chapelle, where a treaty was concluded on the following terms; $t$. That all prifoners on each fide dhould be mutually given up, and all conquefts reftosed. 2. That the duchies of Parma, Placentia, and Guattalla, flould be ceded to Don Philip, heir apparent to the Spanifh crown; after whom thefe dominions flould return to the houfe of Auftria. 3. That the fortifications of Dunkirk towards the fa Mould be demolimed; and that the Britifh flip annually fent with !laves to the coaft of New Spain fhould have this privilege continued for four years. 4. That the king of Pruffia frould be confirmed in the poffefion of Sile. fia, and that the queen of Hungary fhould be fecured in the poffeffon of her partimotial dominions. But the moft mortifying claufe was, that the king of Great Britain fhould immediately, after the ratification of this treaty, fend two perfons of rank to France as hoflages, until reftitution Mould be made of Cape Breton and all other Britifh conquefts made during the war. No mention was made of the fearching Britifh veffels in the American leas, though this was the original caufe of the gurret. The limits of their refpective poffeffions in North America were root afcertained; nor did they reccive any equivalent for thofe forts which they reflored to the enemy.

In the year 1755, died Firederic prince of Wales, of a pleurify, thought at firft to be no way dangerous. He was greatly regretted; for his good-nature had rendered him piopular, and thofe who oppofed the prefent adniniftration had grounded all their hopes of redrefs upon hin arceffinn to the throne.

Some time before this, viz, in the year 1749, a folieme was entered upon, which the nation in general imagined would be very advantageous. This was the encouraging thofe who had been difcharged the army or nevy to become fetters in Nova Scotia. Thiscoun-
ury is cold, barren, and almnf incapable of cultivation. Neverthelefs, on account of this barren fpot, the. Einglifh ard lirench renewed the war, which foon after fpread with fuch terrible devallation over every part of the glohe. The naffeflion of this country was reckoned nee Srary in deferd the Einglifin colonies to the north, and to pefecerve their fuperiority in the fifleries in that
part of the world. The French, however, who had been long fettled in the back parts, refolved to ufe every method to difpofiefs the new comers, and fpirited up the Indians to begin holkilities. Another fource of difpute alfo fprung up foon after in the fame part of the world. The French, pretending to have firlt difcovered the mouth of the river Miffifippi, claimed the whole adjacent country towards New Mexico on the eall, quite to the Apalachian mountains on the weft. In order to affert their claims, as they found feveral Englath who had fettled beyond thefe mountains, they difpoffefled them of their new Settlements, and built fuch forts as would command the whole country round about.

Negotiations, mutual accufations, and hoflilities, firft took place between the two powers; at length, in 1756, four operations were undertaken by the Britifh in America at once. Colonel Monkton had orders to drive the French from their encroachments upon the province of Nova Scotia. General Johnfon was fent againft Crown Point; General Shirley againft Niagara, to fecure the forts on the river; and General Braddock againf Furt du Quefne. In thefe expeditions, Monkton was fuccefsful; Jonnfon alfo was vietorious, though he failed in taking the fort againt which he was fent; Shirley was thought to have loft the feafon of operation by delay; and Braddock was defeated and killed.

In return for this bad fucrefs, the Britifh made reprifals at fea; and in this they were fo fuccefaful, that the French navy was unable to recover itfelf during the continuance of the war that was hortly after declared on both fides. The firf Step of the French was to threaten an invafion. Several bodies of their troops were fent down to the coafts that lay oppofite to the Britinn flores; thefe were inflructed in the manner of embarking and relanding from flat-bottomed boats, which were made in great numbers for that expedition. The number of men amounted to 50,000 ; but all difcovered the utmof reluctance to the undertak: ing. The miniftry were greatly alarmed. They ap. plied to the Dutch for 6000 men, which they were by treaty obliged to furrith in cafe of an invafion. This fupply was refufed; the Dutch alleging, that their treaty was to fend the troops in cafe of an actual, and not a threatened, invafion. The king, therefore, finding he could not have the Dutch forces till their affif. ance would be too late, defifted entircly from his demand; and the Dutch with great amity returned him thanks for withdrawing his requeft. Upon this, 10.000 Heflians and Hanoverians were brought nver. But this occafion-d great difcontent. The minitfy were reviled for fuch difgraceful condefcenfion, as if the nation was unable to defend itfelf. The people only demanded a vigorous exertion of their own internal Arength, and then feared no force that could be led to invade them.

The Britifh invafion, however, never took place: Ahiotcz $43^{3}$ but a French army landed in Minorca, and invefted meaded. the citadel of St Pholip's, which was reckoned the Ilrongef in Europe; but the garrifon was weak, and no way fitted to ifand a vigorous firge. To raife this fiege, Almiral Byrig was difpatched with a Iquadron of ten men o! war, with orders to relicve Minorca, or at any rate to throw a body of troops into the garri-

## B R I <br> [ 513']

little ifland of Aix, an eafy and an ufeleís corqueft: foon after which, they returned home without attempting any thing clfe. By this mifcarriage the minilly werc fo difcouraged, that they had thouglits of abandoning the king of Pruffia to his fate; and the king was actually meditating a nerotiation of this nature, when he was prevented by the expoltulations of his diltrefled ally. From motives of generofity, therefore, more than of intereft, it was refolved to continue to affilt him; and fuccefs, which had long fled from the Britifh arms, once more began to return with double fplendour.

It was in the Ealt Indies where this returning fuc-Briti, $i^{4}$ fuc cefs firf began to appear (for an account of which feecols in the the article Indostan) ; and their conquefts in the weft- Eal Indioern part of the world were about this time ftill more fplendid than thofe in the eall. But thefe fucceffes Mr Pitt muft, partly at leaft, be afcribed to the vigorous admi-comes into niftration of Mr William Pitt, who about this time power. came into power. An expedition was fet on foot againft Cape Breton, under General Amherft and Admiral Bofcawen : another under General Abercrombie, againg Crown Point and Ticonderago; and a third under Brigadier-General Forbes, againft Fort du Quefne. The fortrefs of Louifbourg, which defended the inland of Cape Breton, was very ftrong both by nature ar.d art; the garrifon was numerous, the commander vigilant, and every precaution had been taken to prevent a landing : but the activity of the Britilh furmounted every obftacle, the place was furrendered by capitulation, and its furtifcations were demolithed. The expedition againft Fort du Quefne was equally fuccelsful; but that againft Crowis Point once more mifcarried. General Abercrominie attacked the French in their intrenchments, was repulfed with great flaughter, and obliged to retire to his camp it Lake George. But though in this refpect the Britih arms were anfuccefoful, yet, upon the whole the campaign of 1758 was greatly in their favour. The raking of Fort du Quelne ferved to semove from their colonies the terror of the incurfions of the Indians, while it interrupted the correfpondence along a chain of forts with which the French had environed the Briting fettlements in America; fo that the fisceeding campaign promifed Amherft found them deferted and dellroyed. There now remained, therefore, but cne decifive blow to reduce all North Arerica under the Britift dominion;
great fuccefs.

In 1759 , it was refolved to attack the French in feveral parts of their empire at once. General Amherft with a body of 12,000 men was commanded to attack dured Clown Point; Gencral Wolie was to undertake the ficge of Quebec; while General Prideaux and Sir William Johnlon were to attempt a French fort near the cataracts of Niagara. This laft expedition was the firlt that fucceeded. The fiege was begun with vigour, and promifed an eafy conquet; but General Pridcaux was killed in the trenches by the burfting of a mortar, fo that the whole command devolved on General Johnfun. A body of French troops, fenfible of the importance of the place, attempted to relieve it; but were utterly defeated and difperfed; foon after which, the garrifon furrendered prifoners of war. On his arrival at the forts of Crown Point and Ticonderago, General protect, while Britain promiled him troops and money to affirt his operations. Auftria had their aims on the dominions of Pruffia, and drew the elector of Saxony into the fame defigns. In thefe views the Aultrians were feconded by France, Sweden, and Ruffia, who had hopes of acquiting a fettlement in the weft of Europe.

Thus the king of Pruffia launched into the tumult of war, baving only the king of Britain for his ally, while the moft poicnt ftates of Europe were his antagonifts. He now perfo med exploits perlaps unequal437 led in the annals of modern ages; for a particular account of which, fee the article Prussid. The Britilh minittry, in order to procure a diverfion in his favour, planined an enterprife againft the coaft of France. The deflination of the fleet equipped for this purpofe was kept a profound fecret. At lafl it appeared befure Rochefort; where the commandere, having trilled away their time in deliberating how to proceed, fecured the

Brizain. Canada. This expedition was commanded by Admiral Saunders and General Wolfe. The enterprife was attended with difficulties which appeared unfurmountable; but all thefe dificulties were got over by the coaduft of General Wrolfe, and the hravery of his men. Ile engaged and put to flight the Fiench under Mon:calm; but to the great regret of the Britifh, their ger.ersl was killed in the ation. The furrender of Crebec was the confequence of this victory, which was foon followed by the cefion of all Canada. The following feafon, indeed, the French made a vigorous effort to recover the city; but by the refolution of Governor Mlurray, and the appearance of a Eritifh fleet under the command of Lord Colvile, they were obliged 10 abandon the coterprife. The whole province was Soon after reduced by the prudence and activity of Ge. neral Amhert, who obliged the Frencl army to capitulate ; and it has fince remained annexed to the Britifl cmpire. About the fame time alfo the ifland uf Guadaloupe was reduced by Commodore More and General Hopfon.

The Britih affais in Germany had at the beginning of the war worn a very unfavourable afpect. The Hanoverians were commanded by the duke of Cumberiand, who was greatly outnumbered by the enemy. He was driven beyond the Wefer, the paffage of which might have been difputed with fome appearance of fuccefs; but the French were fuffered to pafs it unmolefted. The Hanoverians were driven from one part of the country to another, till at length they made a flaad near a village called Hafonkack, where it was hoped the numbers of the enemy would have the leaft opportunity of coming to a general engagement. The Hanoverians, however, left the field of battle to the French, after a faint refiftance. Their enemies purfued, and the duke retired towards Stade; by which means he marched into a country from whence he could neither procure provifions nor attack the enciny with any hopes of fuccefs. Here, being unable either to e icape or advance, he was compelled to fign a capitulation by which the whole army laid down their arms, and were difperfed into different quarters of cantonment. By this remarkable capitulation, which was called the Capitulation of Clofer Seven, Hunover was obliged to fubmit quictly to the French, who were now determined to turn their arms againt the king of Iruffia.
The IlanoSoon afier this capitulation, both fides began to verianstake complain that the treaty was not fricly obferved. "Ihe uparms. Hanoverians exclaimed againf the raparity of the French general and the brutality of his foldiers. The French retorted the charge againft them, accufed them of infolence and infurrection; anl being fenfible of their own fuperiority, refoived to bind them flrietly to their terms of agreement. The Hanoverians only wifhed for a pretence to take arms, and a general to licad them. Neither was long wanting. The oppreffions of the tax-gatherers, whom the Firench had appointed, were confidered as fo fevere, that the army rofe to vindicate the freedom of their country, while Ferdinand, prince of Brunfwick, put himfelf at their head. As foon as this was known in Britain, large fupplies were granted toth for the fervice of the king of Prufis, and to enable the llanoverian army to act vigoroully in conjunation with him. A fmall body of

Britilh forces was fent over to join Prince Fercimand Fritain. under the duke of Marlborough. After fome inconfider. able fuccefles at Crevelt, the duke of Marlborough dying, the command of the Britifh forces devolved on Lord George Sackville. A mifunderfandirig arofe be- $\mathrm{F}^{4} 43$ tween him and Prince Ferdinand, which appeared at feated at the battle of Minden that was fought fhortly after. Minden. Lord George pretended that he did not underfland the orders fent him by the prince, and of confequence did not obey them. The allies gained the vi\&ory, which would have been more decifive had the Britilh commander obeycd his orders. He was foon after recalled, tried by a court-martial, found guilty of difobedience, and declared incapable of ferving in any military command for the future.

444
After this viGory it was imagined that one rein-Geinan forcement more of Britifh troops would terminate the war contiwar in favour of the allies; and that reinforcement was nued with quickly fent. The Britith army in Germany was aug-cefs. mented to upwards of $30,000 \mathrm{men}$, and fanguine hopes of conqueft were gencrally entertained. Thele hopes, however, were foon found to be ill-founded. The allies were defeated at Corbach; but retrieved their honour at Exdorf. A v:ßory at Warbourg followed flartly after, and another at Zierenberg: but then they fuffered a defcat at Compen; after which, both fides retired into winter-quarters.

On the 25 th of Ottober 1760, happened the death Death of ${ }^{4+5}$ of King George II. He had rifen at his ufunl hour, King and obferved to his attendants, that as the weather was George II. fine, he would take a walk into the gardens of Kenfington, where he then refideri. In a few minutes after his return, being left alone, he was heard to fall down upon the floor. The noife of this bringing his attendants into the room, they lified him into bed; where he defired with a faint voice, that the princefs Amelia might be fent for: but before the conld reach the apartment, he expired, in the $77^{\text {th }}$ year of his age and $33^{\text {d }}$ of his reigu. An attempt was mate to bleed him, but without effect ; and afterwards the furgeons, upon opening him, difcovered that the right ventricle of the heart was ruptured, and a great quantity of blood difcharged through the aperture.

King Georke 111. afcended the throne amidn the Geat fucgreateft fucceffes both by fea and land. At this time, ceff of the indeed, the efforts of Britain in every quarter of the arms. globe were truly aftonithing. The king of Prufia received a fubfidy; a large body of Englifh forces commanded the extenfive peninfula of India; another army of 20,000 men confil med their conquelts in North America; 30,000 men were employed in Germany; and a great many more were difieffed in the different garrifons in different parts of the world; but all this was furpaffed by the aftonilling naval force, which carried command wherever it came, and had totally amihilated the French maritime power. The courage and conduet of the Englifh admirals excelled every thing that had been heard of hefore; neither fuperior force, nor number, nor even the terrors of the temper, could. intimidate them. Admiral Hawke pained a complete vietory over an equal number of French thips in Quiberon Bay on the coaft of Bretagne, in the midt of a tempeft, during the darknefs of night, and, what a feaman fears Itill more, in the neighbourhood of a rocky thore.

## B R I

As foon as his prefent majefly had met with his parliament which was on November 18. 1760, he confirmed the hopes of his allies, and gave aflurances of his intentions to profecute the war with vigour. By this time, however, the people were in fome meafure weasy with conquefts; efpecially with thefe in Germany, frotr which they could never hope for any folid advantage, and which were gained at an immenfe expence to the nation. Difputes concerning the propriety of the German war were carried on, and the general run of popular opinion feemed to be rather againft than for it. For fome time, however, no change took place in the method of carrying on the war. In ${ }^{17} 7 \mathrm{t}$ propofals of peace were made between the belligerent powers of Europe ; and for this purpofe Mr Stanley rras fent to Paris and Mr Buffy to London: but the French, defigning to drav Spain into a confederacy with them, feem not to have been fincere in their intentions; and thus the treaty came to nothing. An enterprife was projected againt the ifland of Belleille, near the coant of France, which was conducted by Commodore Keppel and General Hodgfon *. The place was corquered, with the lofs of 1800 men killed and wounded on the part of the Britilh; and however unimportant this conqueft might be, the rejoicings on account of it were great. In Germany, the campaign was unfucceffful on the part of the allies. At firft, indeed, they drove the French quite out of the territory of Heffe, and laid fiege to the city of Caffel ; but being defeated at Stangerod, they were forced to raife the fiege, retire behind the Dymel, and again abandon Heffe to their enemies. Here they were followed and attacked by the Fiench; who, though defeated in that attempt, were with difficulty prevented from making themfelves mafters of Munfter and Brunlwick.

All this time an apoearance of negociation lad been carried on ; but at laft the French having brought their defigns with the court of Spain to a bearing, Mr Buffy delivered to Mr Pitt a private memorial, figtifying, that, in order to eftablifh the peace on a lafting foundation, the king of Spain might be induced to guaranty the treaty: and to prevent the differences which then fubffited between Britain and Spain from producing a frefi war in Europe, he propofed, that in this negociation the three points which had been difputed between the crown of England and Spain might be finally fettled. Firft, the reftitution of fome captures made upon the Spanilin flag. Secondly, the privilege of the Spanifh nation to fifh upon the banks of Newfoundland. Thirdly, the demolition of the Englifh fettlements made in the bay of Honduras. 'This memorial was returned as wholly inadmifible. Mr Pitt declared, that it would be looked upon as an affront to the dignity of his mafter, and incompatible with the fincerity of the negociation, to make any further mention of fuch a circurnfance.

Mr Pitt being now thoroughly convinced of the fi-
found that Mr Pite was in the right, and war was declared between Great Britain and Spain. As PortuPritain. ral was an ufeful ally of Britain, it was refolved by w 450 the French and Spaniards to attack that kingdom, Spain. which was then in no capacity of defending itfelf. 'l'he Portuguefe monarclı was by the moft haughty memerials commanded to accede to the confederacy againtt Britain, and threatened with the vengeance of France and Spain in cafe of a refufal. It was in vain that lie promifed to obferve a ftrict neutrality, and urged the obligations he was under to the king of Britain; this moderate and scafonable reply only drew on more haughty and infulting anfwers. His Portuguefe majefty, however, continued to reject their propofils in the moft refolute manner; and concluded his laft declaretion with thefe words, that " it would affect him lefs, though reduced to the laft extremity, of which the great Judge is the fole arbiter, to let the laft tile of his palace fall, and to fee his faithful fubjects fpill the lalt drop of their blood, than to facrifice, together with the honour of his crown, all that Portugal holds moft dear ; and to fubmit, by fuch extraordinary means, to become an unheard-of example to all pacific powers, who will no longer be able to enjoy the benefit of neutrality, whenever a war fhall be kindled between other pcwers with which the former are connected by $\mathrm{Fr} 4 \mathrm{~s}^{\prime} \mathrm{r}$ defenfive treaties." The declaration was made on the Spain de27th of April 1762 ; and foon after, France and Spain clare war jaintly declared war againft Portugal.
, Portugal,
As the defign of the courts of France and Spain in making war with Portugal, was profefledly to prevent Great Britain from the military and commercial ufe of the ports of that kingdom, their principal endeavours were aimed at the two great ports where the Britill ufed to refide, viz. Opoto and Lifbon. With this portugal view, three inroads were to be made; one to the no:th; invaded. another more to the fouth; while the third was made in the middle provinces, in order to fuftain thefe two bodies, and preferve a communication between them. The firtt body of troops was commarded by the marquis of Sarria; and entered the north-ealt angle of Portugal, marching towards Miranda. This town might foffibly have retarded their progrefs, had not a powder-magazine been blown up by accident; and the Spaniards entered on the $9^{\text {th }}$ of May by the breaches made by this cxplofion. From thence they marcised to Braganza, which furrendered fix days after Mirand?. Moncorvo was taken in like manner; cvery thing was clear before them to the banks of the Douro; and they became matters of almoft the whole extenfive province of Tralos Montcs. Oporto was given up for lof, and the admiralty prepared tranfports to carry off the effects of the Britifh merchants. On the banks of the Douro, however, the career of this body was $\mathbb{1}$ opped. The peafants, animated and guided by fome Britilh offieers, feized a difficult pafs, and drove the enemy back to Moncorvo.

The fecond body of Spamards enterect the province of Beira, at the villages called Fal de Mula and Val de Coelba. They were joined by llrong detachments, amounting to almolt the whole army in Tralos Montes; and immediately laid fiege to Almeidd, the ftrongeft and beft provided place on the frontiers of Portugal. This place was defended with fufficient refolution; but, like the refl, was obliged to furrender on the

Britain. 25 th of Augun. The Spaniards then overran the whole territory of Caftel Branco, a principal diftrict of the province of Beira, making their way fouthward until they approached the banks of the Tagus. During the whole of their progrefs, and indeed during the whole of the canrpaign, the allied troops of Great Britain and Portugal had nothing that could be called an army in the field, and they could not think of oppofing the enemy in a pitched battle. All that could he dore was by the defence of palles, fkirmilh, and furprife.

By this time the count of La Lippe Buckeburg had arrived in Portugal, to the inexpreflible joy of the whole nation. The third Spanifin army had allembled on the frontiers of Elremadura, with a defign to invade the province of Alentijo; and had this body of troops been joined to the others, they would prabably, in fpite of all oppofition, have forced their way to Liffon itfelf; had it aeted feparately, it might have greatly

453
Snaniards
decic ted by Genteral
Burgoyne, diftreeted the deferndants, fo as to enable fome other body of furces to penetrate to that city. The count, therefore, refolved to prevent their entrance into the kingdom; and with this view difpatched Brigadiergeneral Burgoyne to attack an advanced body of Spaniards which lay on their frontiers, in a cown called Palentia de Alcantarn. On the 27 :h of Augult the town was furprifed; the gencral was taken who inttended to have commanded in the invafion, together with one colonel, two captains, and 17 fubaltern officeis. One of the beft regimeats in the Spanill fervice was alfo entirely deftrayed; and thus the enemy were in all probability prevented from critering Alentejo.

That part of the Spanifh army which acted in the teritory of Caftel Branco had made themfelves mafters of feveral important paffes, which they obliged fome bodies of Portuguefe to abandon. The combined army of Britilh and Portuguefe pretended to retire before them, in order to draw them into the mountainous tracts. They attacked the rear of the allies, but were repulfed with lofs. Still, however, thicy continued mafters of the country, and nothing remained but the pafinge of the Tagus to enable them to take up their quarters in the province of Alentejc. This the count defigned to prevent; and in this fervice General Burgoync was employed, who formed a defign of furprifing them. The execution was committed to Coloand the Fanf ludies. From the Jirench were taken the iflonds of Martinicn, St Lucia, St Vincent, and Grenada; from the Stianiards the flrone fortrefs called Havannab, in the illand of Cuba. By the acquifition of the firft mentioned iflands the Britifl became the fole and undifurbed puffeffors of all the Caribbees; and held that chaia of imumerable iflands which forms an
immenfe bors, extending from the eaftern point of Hif. paniola, almoft to the continent of South America. The conquell of the Havannah coft a number of brave men; more of whom were deftroyed by the climate than the enemy $\dagger$. It was in this place that the tleets + See Hafrom the feveral parts of the Spanifh Weft Indies, call- vannab. ed the salleons and fista, afiembled, before they finally fet out on their voyage for Europe. The acquifition of this place, therefore, united in itfelf all the advan- $45^{6}$ tages which can be acquired in war. It was a mili- Imniente tary advantage of the bigheft clafs: it was equal to plunder the greateft maval victory, by its effect on the enemy's the phace. marine; and in the plunder it equalled the produce of a national fubidy. Nine of the enemy's men of war, with four frigates, were taken; three of their capital thips had been funk in the harbour at the beginning of the fiege; two more were on the flocks in great forwardnefs, and thefe were deftroyed. In money and valuable merchandifes, the plunder did not fall thort of 3,000, cool. fterling. To this fuccefs in the weftern Capture of part of the world may be added the capture of the the HerSpanifh regifter-fhip called the Hermione, by the Active and Favourite king's fhips. This happened on the 21ft of May 1762 , juft as fhe was entering one of ports of Old Spain, and the prize was little fhort of 1,000,0001. Aterling.

In the Eaft Indies an expedition was undertaken Philippines againft the Philippine illands, which was committed to reduced. Colonel Draper, who arrived for this purpofe at Madras in the latter end of Junc 1762 . The 79 th regiment was the only regular corps that cowld be fpared for this fetwice. Every thing was conducted with the greatelt celerity and judgment. The Britifl forces landed at Manilla on the $24^{\text {th }}$ of September; on the 6th of October the governor was obliged to furrender at difcretion; and foon after, the galleon bound from Manill 459 Manilla to Acapulco, laden with rich merchandife, to gallcon the value of more than half a million, was taken by two taken. trigates called the Argo and Pantber. By the conquelt of Manilla, $1_{4}$ confiderable inlands fell into the hands of the Bitith; which from their extent, fertility, and convenience of commerce, furnihed the materials of a great kingdom. By this acquifition, joined to our former fucceffes, we fecured all the avenues of the Spanifh trade, and interrupted all communications between the parts of their valt but unconnected empire. The conquelt of the Havanmah had cut off in a great meafure the intercourfe of their wealthy continental colunies with Europe: the reduction of the Philippines exclu. ded them from Afa; and the plunder taken was far more than fullicient to indemnify the charges of the expedition; a circumiftance not very cormmon in modern warc. It amounted to upwards of a million and a half; of which the Eaft India Company, on whom the charge of the enierptife in a great meafure lay, were by contract to have a third part.

All this time the war in Germany had continued Vaft extens? with the utmof violence; the allies under Prince Fer of the Bridinand had continued to give the highen proofs of tifhens. their valour, but no decifive advantage could be obtained againft the French. It was, however, no longer the intereft of Britain to continue a deftructive war. There never had been a period fo fortunate or glorious to this ifland. In the courfe of this war fle had conquered a tract of continent of immenfe ex-

Britain. tent. Her American territory approacked to the bo:ders of Alia, and came near to the fionticrs of the Rulizan and Chinefe dominions. She had conquered 25 illands, all of them diftinguiftable for their magnitude, their riches, or the importance of their fituation. By fea or land the had gained 12 buttles, had reduced nine fortifed cities, and near 40 cathles and lorts. She had taken or dellroyed above 100 hhip, of war from her enemies, and acquired at leaft $10,000,0001$. in plunder.

By fuch unexampled and wide-extended conquelts, it is no wonder that the French and Spaniards were delirous of a peace ; which was at length concluded at I'aris on the roth of February ${ }_{7} 63$. The terms granted them were by many thou;ht too favourable. The principal of them were, 'Ihat tlie French king ीhould relinquifh all claims to Nova Scotia; that he fhould likewife give up all the country of Canada; and that for tbe future the boundary betwist the Britilh and French dominions in America floould be fixed by a line drawn along the middle of the river Miffilippi from its fource to the river lbberville, and from thence drawn by a line along the middle of this river, and the lakes Manrepas and Pontchartrain, to the fea. The illands of St Pierre, Miquelon, Martinico, Guadaloupe, Marigalante, Defirade, St Lucia, and Belleille, were re!lored to France : Minorca, Grenada, and the Grenadines, St Vincent, Dominica, and Tobago, were ceded to Britain. In Africa, the illand of Goree was reftored to France; and the river Senegal, with all its forts and dependencies ceded to Great Britain. In the Eaft Indies, all the forts and factories taken from the French were reftored. In Europe, the fortifications of Dunkirk were to be deftroyed; and all the countries, fortreffes, \&c. belonging to the electorate of Hanover, the duke of Brunfwic, and the count of La Lippe Buckeburg, reftored. With regard to Spain, the Britifh fortifications on the bay of Honduras were to be demolifhed; and the Spaniards were to defift from their claim of a right to fith on the Newfoundland bank. 'The Havannah was reftored; in confequence of which, Florida, St Auguftine, and the bay of Penfacola, were ceded to Britain, and the Spaniards were to make peace with Portugal: all other countries not particularly mentioned were to be reflored to their refpective owners at the beginning of the war.

The conclufion of the war did not by any means tend to heal thofe divifions which had arifer on the refignation of Mr Pitt; on the contrary, it furnifhed abundant matter of complaint for the difcontented party, whofe views feem at that time only to have been the embarraffrent and diflurbance of an adminill ration
which they were not able to fubvert. At the time the embarrafment and difturbance of an adminiflration
which they were not able to fubvert. At the time the treaty was under conflderation, however, only fome faint attempts reere made to oppofe it; but it foon apfaint attempts ryere made to oppofe it; but it foon ap-
peared, that though this oppofition had proved fo feeble, the fpiriz of the party was far from being exhaufted. The thate of affairs at that time indeed great. ly favomied the views of thofe who delighted in turbulence and faction. A long and expenfive war had drained the national treafure, and greaily increafed the
public debt. Heavy tases had already been impofed, and drained the national treafure, and greatly increafed the
public debt. Heavy taseshad already been impofed, and it was ftill as neceffary to keep up thefe, and even to it was ftill as neceflary to keep up thefe, and even to
impofe new onec, as though the war had not ceafed. Thus the bulk of the nation, who imagined that con-
queft and riches ought to go hand in hand, were eafily induced to belicve that adminiflation arbitrary and oppreflive, which continued to load them with freflitaxes after fuch great fucceffes as liad attended the Britifh arms for fome years paft.

It mult indeed be owned, that the new adminintr- Gr ${ }^{463}$ clation appear not to have been fufficiently wary in tisis ${ }^{n}$ faifet repect. Anons other methods of railiog the fup- dir tus. plies for ${ }^{7} 76_{3}$, they had thought proper to lay a duty of four fillings per hoghead upon cyder, pavable by the maker, and to be collected in the fane manner as other excifes. The other articles of fipply furnilhed alfo matter of declamation for the membere in oppofition ; but this inflamed the popular fury to a great degree, and made them readily imbiive as iruth suatever was hrown out by the minority in their parliamentary debates. Befides the utual declamations, that it was oppreffive, unconftitutional, and injurious to the landholder and farmer, the imailsels of the fum to be raifed by it was now urged. This was faid to indicate, the $t$ the fupplying the wants of government could not be the fole motive for impuling fuch a duty. It was tiarther uiged, with nuch how of lamentation, that now the houles of all orders of people, noblemen of the firfe rank not excepted, were liable to be enterea and fearched at the plealure of excifemen, a proceeding which they denominated in exprefs teim, "a bacge of flavery." 'Thus it was fpoken of throughout all the cyder counties, by the city of London, and by mott of the incorporations throughout the kingdom. The city had been difpleafed by the late changes in admısiftration, and had not yet recovered their good humour. They inftructed their reprefentatices to oppofe the palling of the bill with nll polfible vigour, and gave in petitions againd it to every branch of the legiflature : a meafure till that time totally unprecedented; two protefts were alfo entered againtt it in the houfe of lords; and in thort the kingdom of England was thrown into an almolt univerfal ferment.

It is not to be doubted that the friends of adminiflration were able to bring arguments fufficiently platfible in favour of their fcheme: but the utmoff force of reafon will go but a very little way in quieting popular clamour: and while oppofition was railing againt miniltry within doors, every method was taken to excite the fury of the people without. Virulent libels, the audacity of which far exceeded any thing known in former tinics, now made their appearance; and fuch was the general intemperance in this refpect, that it would be difficult to determine which fide paid leaft re. gard to any kind of decency or decorum.

In the midat of this general ferment, the earl of Bute Refignas ${ }^{464}$ unexpectedly refigned his place of firlt lord of the iton of the treafury. His r-fignation quickly became an objectearl of of general feculation; by fome he was highly cenfured Bute. for leaving his friends at the time when a litlle perfeverance might have defeated all the defigns of his enemies, and eftablifhed his own power on the moll folid foundation. Such condact, they faid, muft difcourage the friends of government, and at the fame time give proportionable encouragement to its adverfaries to infu!t it, as they perceived minill ry unable to refilt the firt guft of popular furs. Others contended, that the earl was perhaps the lealf influenced by popular opinion of any man in the world. IIe had demonfrated

Popular ferment ftill contiHuts.
$4^{66}$
Characters of the new minifters.
his firmnefs by taking a lead in the dangerous but neceflary affair of concluding peace; and, this being accomplifted, he had fully obtained his end, and performed the fervice to his country which was defired. He now refolved that the factious party flould not have even the pretence of objecting his perfonal ambition as the caufe of difturbances which they themfelves had excited; and thus his refignation would tend 10 put an end to thefe troubles, at the fame time that it thowed the authors of them in their proper colourc.

The event, however, flowed that the former reafoning was, in the prefent cafe, neareft the truth. The popular refentment was not in the leaft abated by the refignation. His lordfhip, though now withdrawn from the oftenfible adminiftration of affairs, was ftill confidered as principal dircetor of the cabinet; and this opinion gained the more ground that none of the popular leaders were yet taken in, nor any apparent change made in the condurt of the new adminiftration.

No reafonable objection could now be made to thofe who filled the great offices of Atate. Mr Grenville, who fucceeded the earl of Bute in the treafury, was a man of approved integrity, underflanding, and experience. Lord Holland was univerfally confidered as a very able man in office, and had already filled many high employments with a great degree of reputation. The other fecretary Lord Egremont, though he had not been long in office, was in every refpect of an unexceptionable character. The other departments were filled in a fimilar manner, yet the difcontents and public clamours were not diminifhed. It was now faid that the new minifters were not ctofen on account of any fuperior gifts of nature or fortune, but merely becaufe they had the art of infinuating themfelves into favour at court in fuch a manner that any inconvenience would be fubmitted to rather than part with them. The fole realon of their appointment therefore was, that they might act as the paflive inftruments of the late mintifter, who though, from confiderations of his own perfonal fafety, he had thought proper to retire from bufinefs, yet had not abandoned his ambitious projects, but continued to direct every thing as though he had fill been prefent. Oppofition to the new ininifters was therefore oppofition to him; and it became thofe who underflood the true intereft of theit country, and had a real regard to it, not to fuffer fuch a fcheme of clan. defline adminifration.

Whether the party who made thefe affertions really belicued them or not cannot be known; but the cfleft was exactly the fame as though they had. The great object of lioth parties mont probably was power ; but their diferent fituntions required that they fiould profefs different political principles. The friends of Lord Bute and of the fucceeding adminifration were for preferving tu the crown the full exercife of a power which could not be difputed, viz. that of choofing its own fervants. Their oppencnts, without denying this puser, eontended, that, according to the fpirit of the conllitution, the crown fhould be dired ad to the exercife of this public duty unly by motives of national utility, and not by private firendlip. In appointing the uflicess of flate, therefore, they infinted that refucet Diould be paid to thofe poffeffed of great talents,
who had done eminent fervices to the nation, cnjoyed the confidence of the nobility, and had influence amongit the landed and mercantile interefts. The obfervance of this rule, they contonded, was the only proper balance which could be had againft the enormow influence of the crown arining from the difpofal of fo many places; nor could the nation be reconciled to this power by any other means than a very popular ufe of it. Men might indeed be appointed according to the ftrict letter of the law; but unlefs thefe were men in whom the majority of the nation already put confidence, they never would be fatisfied, nor think themfelves fecure againft attompts on the conflitution of the kingdom. When minifters alfo found themfelves recommended to the royal favour, and as it were prefented to their places, by the efteem of the people, they would be fludious to deferve and fecure themfelves in it ; and upon thefe (which they called the principles of whigs) they faid that the govermment had been honourably conducted fince the Revolution, and the notion would never be at peace till they were again eftablified on the fame bafis.

## 460

In the mean time the difpofition to libel and in . Mr wilkes vective feemed to have gone beyond all bounds. The apprehendpeace, the Scots, and Scottified adminiftration, afford- ned on a geed fuch fubjects of abufe to the pretended patriots, that rant. miniftry refolved at laft to make an example of one of them by way of deterring the reft from fuch licentioufnefs. For this purpofe the paper called the North Briton was made choice of, which, in language much fuperior to any other political work of the time, I ad abuled the king, the miniftry, and the Scots, in an extravagant manner. One particular paper ( $\mathrm{N}^{0}$ alv.) was deemed by thofe in power to be actionable; and Mr Wilkes, member of parliament for Aylefbury, was fuppofed to be the author. A warrant was therefore granted for apprehending the author, publithers, \&xc. of this performance, but without mentioning Wiikes's name. In confequence of this, however, three mefiengers entered his houfe on the night between the 29 th and 3oth of April 1763, with an intention to feize him. He objected, however, to the legality of the warrant, becaufe his name was not mentioned in it, and likewife to the latenefs of the hour; and on threaten. ing the meffengers with violence, they thought proper to retise for that night. Next morning he was apprehended without making any refiftance, though lome violence was neceflary to get him into a hackneycoach, which carried him before the fecretaries of fate for examination.

On Che . Wilks be in cull 470 fin findy, application was made for a babeas corpus; but ceedings aas this could not be fued out till four in the afternoon, gainft him. feveral of his friends defired admittance to him, which was peremptorily refufid on pretence of an order from the fecretaries of fate. This order, however, though repeatedly demander, could not be produced, or at lealt was not fo; on which account the gentlemen, concciving that they were not obliged 10 pay any $1 e$ gard to meffengers acting only by a verbal commiffion, entered the place whore he was without farther quenion.

This illegal ftep was quicily followed by feveral o. thers. Mr Wilkes's houfe was fearched, and his papets feized in his abfence; and though it was ccrtain that a
babcas

Britain, habeas corpus was now obtained, he was neverthelefs comanited to the Tower. Here not only his friends, but even feveral noblemen and gentemen of the firf diftivetion, were deried accefs; nor was his own brother allowed to fee him more than others. On the thid day of May he was brought betose the court of common pleas, where hee made a moft patriotic fpeech, fetting forth the love he had for his majelly, the bad conduct of minittry, not forgetting his own particular grievances, and that he had been treated "worfe than a Scotch rebel." His cale being learnedly argued by feveral eminent lawyers, he was remanded to the Tower for thrce days; atter which be was ordered to be brought up, that the affair might be finally fettled.

Next day Lord Temple received a letter from Secretary Egremont, informing him, that the king judged it improper that Mr Wilkes flould continue any longer a colonel of the Buckinghamflite militia; and foon after Temple himfelf was removed from being lordlientenant of that county. Mr Wilkes then being brought to Welfmintter-hall at the time appointed, made another flaming fpeech; after which the judges took his cafe into confideration. Their opinion was, that the warrant of a fecretary of flate was in no refpect fuperior to that of a common juffice of peace; and on the whole, that Mr Wilkes's commitment was illegal. It was likewife determined, that his privilege as a member of parliament was infringed : this could not be forfeited but by treafon, felony, or breach of the peace; none of which was imputed to him; for a libel, even though it had been proved, had only a tendency to diflurb the peace, without any actual breach of it. Thus it was refolved to difcharge him; but, befure he quitted the coutt, a gentleman of eminence in the profefion of the law flood up and acquainted the judges, that he had juff received a tooe from the attorney and folicitor general, intreating his lordhip not to give Mr Wilkes leave to depart till they came, whicly would be intintly, as they had fomething to offer againt his plea of privilege. This motion, however, being rejefted, the prifoner was fet at liberty.

Mr Wilkes had no fooner regained his freedom than he fhowed himfelf refolved to make all the advantage he could of the errors committed by the minifiry, and to excite as general a ferment as poffible. For this purpufe he wrote a very impudent letter to the earls of Egremont and Halifax, informing them, that his houfe had been robbed, and that the folen goods were in the pofelfion of one or bot.s of their lordilips, infifting upon immediate rellitution. This letter was printed, and many thoufand copies of it difperfed; foon after which an anfiser by the two noblemen was publifled in the newfapers, in which they informed him of the true caule of the feizure of his papers, that his majefly had ordered him to be profecuted by the attorney-gencral, and that fuch of his papers as did not lead to a proof of his guilt fhould be reftored. This was quickly ficceeded by a reply, but the correfpondence ceafed oa the part of their lordflips. Mr Wilkes, however, creeted a printing-prefs in his own houfe, where he advertifed the proceedings of the adminiftration, with all the original papers, at the price of a guinea. The North Briton now again made its
appearance; the popular party wcre elated besond Eritam. meafure with their fuccefs; thofe who had fuffered by general warrants fought redrels at law, and commonly obtained damages tir beyold not only their real fufferings, but even beyoud their mon fancuine expectations. Daring the whole fummer, the minds of the people were kept in continval açitation by political pamphlers and libels of various kinds, while the affair of general warrants fo engrofled the general attention, that be the time the parlidment fat duwn, Norember 15.1763, fcarce any other fubject of converfation could be flarted in company.

On the meeting of parliament his majefly mentioned in his fpeech the attempts that had been made 10 ingsagaink: divide the proople; and before the addreffes could be lim in pamade in return, a meffige was fent to the commons, liament. informing them of the fuppofed offence of Mr Wilkes, and of the proceedings againt him, the exceptionable paper being alfo laid before the houfe. After warm debates, the North Briton was deemed a falle, fcandalous, and feditious libel, tending to excite traitorous inlurrections, \&c. This was followed by another, that the privilege of parliament does not extend to the writing and publifhing of feditious libels, nor ought to obfrect the ordinary courfe of the laws in the fetedy and effectual profecution of fo heinous and dangerous an offence. It did not, however, pafs the houfe of commons without a vigorous oppofition, and feventeen members of the upper houfe protedted againft it.

The North Briton, No xlv. being condemned, as al- Difituanready mentioned, was ordered to be burnt by the hang- ceson burnman: but this could not be done without great oppo- ing the fition from the mob. The executioner, conflables, offi- Brith cers, and even the chief perfons concerned, were pelted with filth and dirt, and fome of them infulted in the groflef manner. Mr Harley, one of the theriffs and member of parliament for London, was wounded by a billet taken from the fire; the flaves of the conftables were broken, and the whole officers and executioner driven of the field ; while the remains of the paper were carried off in triumph from the flomes, and in return a large jack-boot was burnt at Temple-bar, while the half-burnt North Briton was difplayed amidat the acclamations of the populace.

Mr Wilkes, in the mean time, determined to make The urdes the beft ufe of the vietory he had already gained, and fecretary therefore commenced a profecution in the court of fined for common pleas againf Robert Wood, Efq. the under Feaing Mr fecretary of flate, for feizing his papers. The caufe papers. was determined in his favour, and Wood condemned in 10001 . damages, with full conts of fuit.
The profecution with which Mr Wilkes had bern Mr Wilkes threatened was now carried on with great vigour ; profecired, but in the mean tiuse, baving grofsly affronted Sansel wourcied in Martin, Efq. member for Camelford, by his abu- a duel. and five language in the North Briton, he was by hat outlawed. gentleman challenged, and dangeroufly wounded in the belly with a pittol-bullet. While he lay ill of tis wound, the houfe of commons put off his trial frota time to tinie; but beginning at laft to forpect that there was fome coliufion betwixt him and hiv phyfician, they enjoined Dr Heberden, and Mrr Hawkins an eminent furgean, to attend him, and report his cafe. Mr Wilkes, however, did not think proper to

Iritan. admit a vifit from thefc gentlemen; but foon after took a journey to France to vifit his daughter, who, as he gave out, lay dangeroufly ill at Paris.

The commons having now lof all patience, and being certified that he had refufed to admit the phyficisn and furgcon fent by them, proceeded againit him in his abrence. The evidence appeating quite fatisfactory, he was expelled the houfe, and a profecution afterisards commenced againft him before the houfe of lords, on account of an obicene and blafphemous pamplhet, in which he had mentioned a reverend and learried biftop in a moft ftameful manner. The event of all was, that, failing to appear to anfwer the charges againf him, he was outlawed, which, it was then fuppofed, would for ever conign his patriotifm to oblivion.

The extreme feverity fhown to Mr Wilkes did not at all extinguith the fpirit of the party. A general infatuation in farour of licentious and abufive writings feemed to have taken place; and to puilifh libels of this kind without the leaft regard to truth or juftice was called liberty. At the very time that Mr Wilkes was found guilty of publilhing the infamous pamphlet above mentioned, the common council of London prefented their thanks to the city reprefentatives for their zealous and fpirited endeavous to affert the rights and liberties of the fubject, " by their laudable attempt to obtain a feafonable and parliamentary declaration, That a general warrant for apprehending and feizing the authors, printers, and publifhers of a feditious libel, together with their papers, is not warranted by law." Their gratitude they fhowed to lord chief juftice Pratt, for his decifion in Wilkes's affair, by prefenting him with the freedom of the city, and defiring him to fit for his picture to be placed in Guildhall. Thefe extravagant proceedings, however, did not pafs without flrong oppofition, and were confidered by the fober part as highly unjuft and improper, as well as indecent.

The violent clamours which had been excited and ftill continued, though in a lefs violent degree, did not prevent adminiftration from paying that attention to the exigencies of the nation which its prefent fituation undoubtedly required. The practice of franking blank cosers to go free per poft to any part of Great Britain or Ireland, had arifen to an incredible height, and greatly prejudiced the revenue. The hands of members of parliament were not only counterfeited, but the covers publickly fold without the leat fcruple; and befides this, the clerk; of the poft office claimed a privilege of franking, which extended even farther than that of the members of the houle; the latter being renricted to a certain weight, but the former denying that they were fubject to any reftriction of this kind. The matter, however, was attended with conliderable difficulty when it came to be examined in the houle of commons. It was found, that though the vaft increafe of franks was deirimental to one branch of the revenue, it was ferviceable to another by the immenfe confumptinn of Ilamps it occafioned; but at laft the following ast was paffed as an effectual remedy, viz. That from the of of May $17 \sigma_{4}$, no Ietters or packets frould be excmpted from pollage, except fuch is were fent to or from the king; or fuch as, not exceeding two ounces in weight, hoould be figned
by a member of either houfe, the whole of the fuperfeription being in his own handwriting; or fuch as noould be directed to members of parliament, or other perfors fpecifed in the aft. It was likenife enacted, that printed votes and proceedings in parliament, fent without covers, or in covers open at the fides, and only figned on the outfide by a member, fhould go free, though fuch parkets were liable to be fearched; and to give the greater force to thefe regulations, it was made felony and tranfportation for feven years to forge a frank. At this time it was proved, that the annual poftage of letters fent free would amount to 70,0001 . and that the profits accruing to the clerks of the poltoffice amounted to between 8001. and 17001. each.
 for fettling the illand of St John, and for the fale of tling the the lately acquired American iflands. The former was ifland of St propofed by the earl of Egremont, who prefented a me- John, and morial to his majefty on the fubject. In this he de- felling the fired a grant of the whole ifland of St John's, in the landuered gulf of St Lawrence, to hold the fame in fee of the crown for ever; fpecifying particularly the various divifions, government, \&cc.; but for reafons unknown, the plan was never put in execution. The fale of the conquered lands took place in March, ${ }^{1764}$. Thefe were particularly the iflands of Grenada, the Grenadines, Dominics, St Vincent, and Tobago. Sixpence an acre was to be paid as a quit rent for cleared lands, and a penny a foot for ground-rent of tenements in towns, and fixpence an acre for fields; but no perfon was to purchafe more than 300 acres in Dominica, or 500 in the other iflands.

One of the moft remarkable tranfactions of this year Renewal was the renewal of the charter of the bank, for which of the charthe latter paid the fum of $1,100,000$ l. into the exche-ter of the quer as a prefent to the public, befides the advancing a million to government upon exchequer b:lls. Another, and, by its confequences, fill more momentous affair, however, was the confideration of methods to raife a revenue upon the American colonies. This had been formerly propofed to Sir Robert Walpole; but that prudent minifter wifely declined to enter into fuch a dangerous affair, faying, that he would leave the taxation of the colonies to thofe who came after him in oflice. The reafon given for fuch a proceeding was the defraying the neceftiry chasges of defending them; which thuugh extremely reafonable in itfelf, was done in fuch a manncr as excited a flame not to be extinguift. ed but by a total lofs of the authority of the parent flate. Bufore this time, indeed, hints had been thrown out, that it was not impoflible for the colonifts to withdraw their dependence on Britain ; and fome difputes had taken place betwixt the different provinces, which were quicted only by the fear of the French, and feemed to prognoflicate no good. It was thought proper therefore now, when the colonies were not only fecured but extended, to make the experiment whether they would be obedient or nut. 'They contained more than two millions of people, and it was evidently necclfary to raife a revenue froun fuch a numerous body. Some thought it might be dangerons to provoke them; Lut to this it was replicí by adminiftration, that the danger matt increafe by furbearance; and as taxation was indifpenfable, the fooner the experiment was made the better. Tlie fatal trial being thus determi-

Britain, ned, an act was paffed for preventing fmuggling, fo that the duties liid on the Ametican trade might come into the hands of government. As this time an illicit trade was carried on betwixt the Britilh and Spanilh colunies, which feemed to bid defiance to all law and regulation ; and was no lefs dilagreeable to the Spanulh than to the Britifin court. In fone refpects, however, the fupprefion of this was very inconvenient, and even intolerable to the colonifts; fur as the balance of trade with Britain was againlt them, it was impoffible they could procure any fpecie except by trading with the Spaniards, by whom they were paid for their goods in gold and filver. This, and another act requiring them to pay certain duties in cafh, was probably the reafon of that exceffive refentment hown by the Americans to government, and their abfolute refufal to fubmit to the flamp-act which was alio pafled this year.
The augmentation of the revenue being the principal object of adminiftration at this time, the fuppreffion of fmuggling at home, as well as in America, was taken into confideration. Though the great number of cutters and other veffels fitted out by government for this purpofe had produced very falutary effecto, the ine of Man, which belonged to the duke of Athol, and was not fubject to the cuftomboufe laws, lay fo conveniently for the purpofes of fmucgling, that the utmof vigilance of governmert was not fufficient to fupprefs it. The event was a treaty betwist gnvernment and the duke, by which the latter, for a lum of money, ceded all the fovereignty in the iffand be could claim, and cutters were placed on the coafts and in the harbours of the ifland as in other places of the kingdom.

This difpofition to ausment the revenue by all poffible methodis, feems to have ferved to keep up the gebersl opinion of the oppreffive and arbitrary meafures athout to be purfued by government. The ill humour of : ace B itith patriots ftill continued; and the ilamp bills were received in America with the utmof indig. nation. The arguments for and againft American tasuions re now of no importance: and the particulars of their oppoftion are related under the article Uniterd States of Amertca. Here we thall only take notice, that the oppofition of the colonifts proved very dil?reffans to the mother country, on account of the vatt fums they owed. At this time they were indebtted to the meechants of London four millions iterling; and fo ready were the latter to give them credit, that fome of the American legillatures paffed ads againft incurring fuch credit for the future. A petition on a the fubjeet was prefented to the houfe of commons; but as it denied the parliamentary right of tax tion, it was not allowed to be read. It was then prouofed, on the pait of adminiftration, that the agents fhould join in a petition to the houfe for their being heard by counfel in behalf of their refpective colonies againft the tax. The agents, however, not thinking theinfelves empowered to grant fuch a petition, the negociation was broken off, and matters went on in America as we have elfewhere related.

In other refpects, the minitity took fuch fleps as were undeniably proper for fupporting the honour and dignity of the nation. Some encroachments having been made by the French and Sp:niards, fuch remonftrances were made to their refpective courts, that fa-
tislaction was quickly made; and though every trifle was fuflicient to open the mouths of the popular party, it was impolible als yet to find any jult caule of complaint. The difpofition to tumult and infurrection, however, feems to have been now very general. The Infurrec-filk-weavers reliding in Spittalfields being diftrefed for tion of the want of employment, which they tuppofed to proceed Spitta. from the clandeftine importation of French filks, latd thear cale before his najelly in the year 1764, who gracioufly promifed then relief. The fufferers were relieved by the bounty of the public; but this feemed to render the matter worfe, by confirming them in babits of indolence and idlenefs. At the fame time 2 bill, which was fuppofed to tend to their relief, being thrown out, they began to affemble in vall numbers, which, gradually increafing, are foid to have amounted at latl to 50,000 ; feveral diforders were committed, and it was not without the affifance of the foldiety, and the utmof vigilance of the magillrates, that the riot could be lupprefled.

During this infursection, the ferment betwixt the court and popular parties continued with unabated vigour. The minifters were flill attacked in numberlefs publications, and accufed as being merely dependents and fublitutes to the earl of Bute; nor could the utmolt care on the part either of that nobleman or the minifters blunt the fhafts of calumny and mifreprefentation. An accident, however, now produced a con- $1114 n e f 50$ fiderable revolution at court, though it had very little the king effect-in calming the minds of the people. This was and regenan illnefs with whicla the king was feized in the begin-cy bill. ning of the year, which filled the public with apprehenfions, and produced a bill for fettling the affairs of the kingdom in cafe of the crown falling into the hands of a minor. In fettling this bill, minifters were faid to have behaved with very little refpect to the princels-dowager of Wales, and indurtioufly to have excluded ber from a thare of the goverument. Thefe Change of proceedings were thought in a great meafure to have minilty. alienated the affection of his majelly from the miniltsy, who had hitherro been in great favour : Nor did their fubfequent condust thow them to be at all defrous of regaining what they had lofi. They now contrived to have the earl of Bute's brother turned out of a very lucrative poft which he enjoyed in Scotland, and in which he had never given the leaft caufe of complaint. A fepp of this kind could rot be agreeable to his majefty, ner could it recommend them to the popular party in England, who always manifefted a perfect indifference as to what paffed in Scotland. On this occafion Lord Chatham is fuid to have been folicited again to accept the office which he had formerly filled fo much to the fatisfaction of the nation, and to have declined it. A new minifry, however, was foon formed, at the -492 recommendation of the duke of Cumberland. The fterspecomduke of Grafton and the honourable Mr Conway, bro- mended by ther to the earl of Hertford, were appointed fecreta the duke of fies of tate, the marguic of Rockingham firf lord of Cumberthe exchequer, and Mi Dowdefwell chansellor and under treafurer of the exctequer. The effice of lord privy feal was conferred on the duke of Newcafte, and all other places were filled with men not only of known integrity, but fuch as were agreeable to the people. Thele changes, however, were not yet able to give fatisfaction. The opinion that afoirs were fill mana-

Fritais. ged by the earl of Bute continued to prevail, and was indufrioutly kept up by the political writers of the time. The city of London expreffed their difcontent on the occafion of addrefling his majefty on the birth of a third fon. They now took the opportunity of afuring him of "their faithful attachment to his royal houfe; and the true honour of his crown, whenever a happy eflablifbment of public meafures 乃ould prefent a favourable occafion; and that they would be ready to exert their utmolt abilities in fupport of fuch wife counfels as apparently tended to render his majefty's reign happy and glorious."

Thefe expreffions flowed fuch an evident difapprobation of his majefty's choice, that it could not fail to offend both king and miniftry; but before the latter could fhow any token of refentment, they lof their great friend and patron the duke of Cumberland. His death happened on the 31 亿ी of October 1965. He had been that evening affiting at one of thole councils frequently held in order to put matters in a way of being more fpeedily difpatched by the privy council; where being feized with a fuoden diforder of which he had forne fymptoms the evening before, he fell Cenielefs in the arms of the earl of Albemarle, and expired alnoft inftantaneounly. His death was greatly lamented, not only by their majefties, but by the whole nation, being univerfally efteemed not only as a brave commander, but an excellent member of fociety, an encourager of induftry, and an active promoter of the arts of peace.

493
The clamour againft Lord Bute ftill kept up.

In the mean time, the difcontents which inflamed the American colonies continued alfo to agitate the minds of the people of Great Britain; nor indeed was it reafonable to expect that they could be fatisfied in their prefent condition; commerce being almoft entirely deftroyed, manufactures at a ftand, and provifions extravagantly dear. 'The vaft fums owing to the Busflif merchants by the Americans alfo feverely affected the trading and manufacturing part of the coustry. Thefe amounting to feveral millions, the colonifs abfolutely refufed to pay unlefs the obnoxi. ous laws thuuld be repeated. Adminiftration were therefore under the neceffity of inftantly enforcing the ftamp act by fire and fword, or of procuring its immediate repeal in parliament. The lofs of the duke of Cumberland was now feverely felt, as he had been acculformed to affif adminiftration with his advice, and was highly refpected by the nation for his good fenfe. At this period, however, it is doubtful if human wifdom could have prevented the confequences which enfucd. Adminiftration endeavoured, as much as perhaps was poffible, to awoid the two extremes, either of rufting infrantly into a civil war, or of facrificing the dignity of the crown or nation by irrefolution or weaknef. 'I'hey fufpended their opinion until they hould receive certain iutelligence from the American governors how affairs fuod in that country; and their letters on that occafion ftill do them honour. The oppofite party animadverted fevelely an this conduet. They infifted on having the molt coercive methods immediately put in execution far enforeing the laws in which they themfelves liad fo great a flare; and it is probable that they
but at the fame time another was made, declaring the Britaia. right of parliament not only to tax the colonies, but to bind them in all cales whatever.

The repeal of the ftamp act occafioned univerfal joy Tranquilli. both in Britain and America, though, as parliamentty is not infifted upon their right of taxation, which the oppo-reitored by fite party denied, matters were ftill as far from any real its repeal. accommodation as ever. This ill humour of the Americans was foon after augmented by the duties laid upon glafs, painters colous, and tea, imported into their country, while at home the dearnefs of provifions, and fome improper fleps taken by miniftry to remedy the evil, kept up the general outcry againf them. A general difpofition to tumult and riot ftill continued; and unhappily the civil power now feemed to lofe its force, and a general anarchy, under the name of liberty, to be approaching.

In this ftate of affairs adminiftration were once more difturbed by the appearance of Mr Wilkes, who had returned from his exile, and on the diffolution of parliament in 1768 , though an outlaw, food candidate for the city of London. He was received by the populace with loud acclamations, and feveral merchants and people of large property efpoufed his caufe, and a fubfription was entered into for the payment of his debts. He failed, however, in his defign of reprefenting the city of London, but inftantly declared himfelf a candidate for Middlefex. The tumults and riots which now took place were innumerable ; and fuch was the animofity betwixt the two parties, that a civil war feemed to be threatened. Our limits will not allow of any particular detail of thefe tranfactions. It will be fufficient to take notice, that on a legal trial the outlawry of Mr Wilkes was reverfed, and he was condemned for his offences to pay a fine of roool. and to be imprifoned for tweive months. Being idolized by the people, however, and powerfully fupported, he was repeatedly chofen member for Middlefex, and as often rejected by the houfe of commons. The tumults on this occafion were not always ended without bloodhed; and the interpofition of the military was conftrued by the patriots as an indication of a defign to eftablifh minifterial authority by the mof barbarous methods. In fhort, the behaviour of the people of England and America was at this time fo very much alike, that both feemed to be actuated by one firit, and the rage of the Englift patriots undoubtedly contributed to confirm the colonifts in their difobedience.

T'he diffenfions which had fo long prevailed in the pifference kingdom did not pafs unnoticed by the other Euro-with Spaia pean powers, particularly the French and Spaniards. concerning Both had applied themfelves with afliduity to the in- Faikland's creafe of their marine; and many began to prognoni- illands. cate an attack from one or other or both of thefe 11 ations. The Spaniards firf ftowed an inclination to come to a rupture with Bitain. The fubject in difputc was a fettlement formed on Falkland's inlands *, Sec Falh. near the fouthern extremity of the American conti-land's nent. A fcheme of this kind had been thought of as JJands. early as the rcign of Charles II. but it was not till af- 500 ter Lord Anfon's voyage that much attention had An Ennglifit been paid to it. In the printed account of it, his lord-formerly fuip thowed the danger incurred by our navigatorspropofed through the treachery of the Portugucfe in Brazil; on thefe and that it was a matter of the greateft importance to ${ }^{\text {itlands. }}$ difcover

## B R I

 difcover fome place more to the fouthward, where fhips might be fupplied with neceffaries for their voyage round Cape Horn; and, among others, he pointed out Falkland's iflands as eligible for this purpufe. When at the head of the admiralty his lordhip alfo forwarded the fcheme as much as poffible; and fome preparations were made for puting it in execution: but as it met with oppofition at home, and gave offence to the court of $M$ idrid, it was laid afise till the year 1764 , when it was revived by Lord Exmont. Commodore Byron being then fent out with proper neceffaries, touk poffeffion of them in the name of his majelty, and reprefented them in a favourable light; while his lucceffor, Captain M Bride, affirmed, that the foil was utterly incapable of cultivation, and the climate intolerable.Be this as it will, the iflands in queltion had attracted alfn the notice of the French. So low, however, had that nation been reduced by the late war, that no project of the kind could yet be put in execution at the public expence. M. Bougainville, therefore, with the affiftance of his friends, undertook to form a fettlement on Falkland's iflands at their own rifk. The fcleme was put in execution in the beginning of the year 1764 ; and a fettlement formed on the ealtern part of the fame inand where Commodore Byron had eftablifhed an Englifh colony on the weftern fide. His account of the country was ftill more favourable than that of the Englifa commander; but as the project had been undertaken with a view to other difcoveries and advantages, which probably did not turn out according to expectation, the French adventurers foon became weary of their new colony; to which alfo the difpleafure of the Spaniard, who were greatly offended, did not a little contribute. M. Bougainville, therefore, being reimburfed in his expences, and the French having given up every claim of difcovery or right of poffeffion, the Spaniards landed fome troops in 1776, took puffeffion of the fort built by the French, and changed the name of the harbour from Port Louis to Purt Solidad.

In the year 1769 , Captain Hunt of the Tamar frigate, happening to be on a cruize off Falkland's illands, fell in with a Span:if fehooner which had been at Port Solidad. During all this time it is uncertain whether the Britilh and Spanifh fettlers knew of one another or $n t$. From the behaviour of Captain Hunt we hlould fuppofe that they did not; as he charged the commander of the fchooner to depart from that conft, being the property of his Britannic mijelly. The fchooner, however, foon returned, bringing an officer from the governor of Buenos Ayres, who gave the like warning to Captain Hunt in depart from the coalt, as delonging in the king of Spain. Some altercation enfued ; but Captain Hunt, not choofing to carry matters to evtremities, fet fail for England, where he arrived in June 1770.

At the departure of Captain Hunt, two frigates were left at Falkland', intands. Ore of thefe was loft in a lhort time after; and on the fourth of June 1770, a Spanifh fricate arrived at the Englith fettlement named Fort Egmont, with a number of guns and other warlike ute dils for carrying on a regular fiege. In three days, four other frigates arrived, laden in the fanne manner; fo that the Englifh commander. Captain Farmer, finding all refiftance vain, was obliged to ca-
pitulate. The Englifh were ordered to depart within
Britair a limited time, carrying with thom what flores they could; and the Spanifh commander declared himelf anfwerable for what they flould leave on the ifland. The time allowed them to remain at Port Egmont was to be determined by the governor ; and for the geteater fecurity, the rudder was taken off from Captan Framer's ©hip, and kept on flore till the appointed perion ; after which the frigate was permitted to depart, and in 70 days arrived at Portmouth.

An infult to the Britifh hig fo audacious, feemed Parliamento render war inevitable unl is proper reparation was taly a an very fpeedily made. It was accordingly montioned in relung to the feech from the throne, November 13. 1770 ; this affar. and an immediate demand of latistaction for the in.jury was promifed, and that the neceflary preparations for war, which had been begun ftould not be difcontinued. The affars of America were allo raken notice of, where grounds of complaint thill exifted, notwithfand. ing the ceflation of thofe combuntions which had diftreffed the commerce of this country. Thefe promifes, with regard to the affairs of Falkland's infands, however, were far from giving general fatisfaction. The fpeech, as the work of miniftry, was moll volently attacked by oppofition; and an addrefs in anfwer to it, it was faid, would be an eulogium on minitters, who did not deferve it. News had arrived, they faid, from Falk. land's illands in June, which fufficiently demonifrated the defigns of Spain; and Gibraltar and Minorca were left open to the attacks of that power, without any preparation being made on our part to icfift them. The whole conduct of the minillry was faid to be pufillanimous; and the love of peace, which was given out as the reafon of their unwillingnefs to refent the injury, was treated with contempt.

A motion was now made in both houfes for an inquiry into the conduct of the Spaniards on this occafion, and that all the papers and letters relative to it fhould be laid before parliament. The demand, horrever, was oppofed by miniftry, who infifted that the laws of negociation precluded the idea of expofing any letters or papers fent in confidence while the negociation was depending; and they fferted that the king of Spain had difevowed the conduct of his officer, and promiled fatisfaction. It would have been rath, they faid, to proceed to extremities betwixt the two crowns, when perhaps the officer only was to blame; but if, after remontrance, the coust of Spain refuled fatisfaction, we were then authorized to torce that jultice which was refufed in an amicable manner.

Some time before thi, Mr Harris, the Englifin mi- Negricianifter at the court of Madris, di'patched a letter to he Spanifh Lord Weymouth, informing him that a thep had arrived amballador. from Buenos Ayres whth an account of the intended expedition againf Port Egmont, the number of men to be employed, and the the fixed for in departure ; at the fame time that it ws aflerted by Prince Maferans, the Spanith ambaffador, that he had every reafon to believe that the governor of Bueno, Ayres hat employed force at Purt Egmont without any orders; and hoped that, by difavowing this proceeding, he might prevent any mifunderll ading betwixt the two kingdoms. To this his lordfhip replied in a fuirited manner, aking, among other things, Whether the prince had any orders to difavow the proceedings of the governor?

## B $B$ <br> $\left[\begin{array}{ll}524\end{array}\right]$ <br> B R 1

Ritan. -r And, on lis reply in the negative, a formal difwowal was demanded. After fume time, his lordinp was informed that the prince had orders to difawow any parricular orders given to M. Bucarelli, the governor of Puenos Ayres, and at the fame time to fay, that he had acted agreeably to his general inflrufions and oath as governor; that the ifland thould be refored; and that it was expected the king of Britain would, on his part, difarow the conduct of Captain Hunt, whofe menace had induced the governor to act as he did.

This reply did not by any means prove agreeable; and foon after the conduet of the court of Spain became fo fufpicious, that Mr luaris was ordured to quit the court ol Madrid; and the correfpondence between Prince Maferans and the court of England was no longer continued. About this time Lord Weymouth refigned his office, and was fucceeded by the eall of Rochford; and the affair of Falkland's inlands was no longer openly foken of. On the fitting down of the parliament, January 22 1971, however, it was again brought befcre the houfe, and the declaration of the Spanifh ambaffador, with Rochford's acceptance, were armounced. Prince Maferans then dilivowed, in the name of his matter, the violence ufed at Purt Egmont; to the reftitution of which he agreed, and hoped that this reftitution frould be looked upon as ample fatis. faction, and at the fame time as not affecting the quefion concerning the prior fovereignty of the iflands. This produced a new demand for copies of all papers, letters, and declarations of every kind relating to Falkland's illands : but though it was now feemingly complied with, the oppefite party affirmed that it was ftill only in part ; for befides a chafm of near two months, during which time there "as no account whatever, none of the copics of the claims or reprefentations made by the court of Spain fince the firf fectlement of the illands we:e given up. Thus a fufpicion was produced, that the concealment of thefe papers, and the deficiencies in the order of their dates, might proceed from fome mifconduct during the periods in quention; and which adminiftration was willing to conceal from the world. To thefe otjections it was replied, that every paper which could be found in the feveral offices had been prefented; and that if there had been any correfpondence between the two courts of which no rotice was taken in them, it mull have been verbal; Lut, at any rate, there were papers fufficient to enable the houfe to determine the propriety or impropriety of their conduct throughout the whule tranfaction; for every thing decifive or explicit was in writing, and every writing was laid before them.

All thefe excules, however, could not yet fatisfy oppofition. It was reported, and generally believed, that I'rance had interpofed in the affair ; in confequence of which, a motion was made to addrefs his majelty for information whether any fuch interference had talion place, and of what nature it was, or in what manner it had been conducted. The minifer denied that there had been any fuch interference: but it was infifted that this was infufficient; that the word of the king vas requilite, as that of the miniller could not be latistactury, even luppofing him to be upright. It did not, however, appetr that any correfpondence in, writing had taken place betwixt the wo routs: and when the minifice was afed, whether France liad ever met-
pofed as mediator? he anfwered, that Engiand whad Eritam. not cmployed France in thit capacity; but that the word interinofed was of a meaning too rague for disect explanation; and it was unufual to demand verbal negociaticus, while papers were laid before them: 'I hat as all Europe had an eye to the comproming of differences betwixt Atates, it was not to be fuppoled that France would be altogether filest; but nothirg (fiys he) difhonourable has ever paffed." (Ippofition fill infifted that they had a right to have an account of virbal negociations as well :s others; and that if this right was given up, a minifter had no more to do, when he wifhed to promote an infidious meafure, than to conduet it by verbal correfpondence. The motion however, was loft by a great majoity in both houfes.

This manner of decidine the queftion was fo far from a general allaying the general ferment, that it rendered it much difit tifacworle. The tranfaction was confidered as entirely dit. tion w th graceful to the Britifh nation; nor were all the argu- the manner monts that could be ufed by the minifteral party in any the ..f. is is degree fufficient to overihrow the general opinion.determince. The reflitution of the ifland was thought to be an inadequate recompenfe for the affront that had been offered; and the ohjections to it were urged on a motion for an addrefs to return thatiks for the communication of the Sparith declaration, and to tellify their fatisfaction with the addrefs that had been obtained. This addrefs was not carried without confiderable difficulty, and produced a proteft from 19 peers. On the part of Spain, however, every part of the agreement was oftenfibly fulfilled; Port Egmont was reftored, and the Bitifh once more took poffefion of it, though it was in a fhort time after evacuated, according to a private agreement, as was fufpeeted, between the miniftry and the court of Spain: but of this no evidence ever ap. pearcd to the public.

In other refpects, the greatef difcontents raged throughout the kingdon: A fire which happened at Portfmouth in the year 1770 excited numberlefs jealoufies, and was by fome imputed to our enemies on the continent. The affair of the Middlefex election was never forgotten; and notwithftanding many repulfes, the city of London llill ventured to prefent new petitions to the throne. In one prefented this year by Mr Beckford, the lord mayor at that time, they lamented the heavy difpleafure under which they feemed to have fallen with his majefty, and renewed a petition, fiequently prefented before, concerning a diffolution of parliament. This, however, met with a very unfavour. able anfwer : his majenty informed the lord mayor, that his fentiments on that fubject continued unchanged; and that "he fhould ill deferve the title of Father of his people, fhouid he fuffer himfelf to be prevailed on to make fuch a ufe of his prerogative as he could not but think inconfiltent with the intereft, and dangerous to the confliution, of the kingdom." Mr Beckford kes ${ }^{503}$ was fo far from being difteartened by this anfwer, that abie fpeech he demanded leave to fpeak to the king: which being ot Mrocekobtained, be made a feeech of confiderable length, and ford to his concluded with telling his majefty, that "whoevel had already dared, or fhould beteafier endeavour, by falfe infuluations and fuggeftions, to alienate his majelly's affections from his loyal fubjects in general, and the city of London in particular, was an enemy to his majelly's perfon and family, a violator of the public

## B R I <br> $525] \quad \mathrm{B} \quad \mathrm{R}$

## Firitain

peace, and a betrayer of our bappy conflitution as it was ellablithed at the glorious revolution," To this no anfwer was made, though it gave great offince: and when Mr Beckford went dfterward, to St James's with an addrefo on the queen's fofe delivery of a princefs, he was told, that "as his lordihip had thuught fit to fpeak to his majelty after his anfwer to the late remonftrance; as it was unufunt, his mijel!y defired that nothing of the kins might bappen for the future."

This behaviour of Mr Be-kford was by many of the court-party cenfured in an extreme degree, as indecent, unprece lente t, mpatent, and little fhert of high treafon; whlle, on the other hand, he was on the fame account railed to the highelt pinnacle of popular favour. He did not long, how'ver, enjoy the applaufe of the people, dying with in a bloort tine after he made the celebrated fpeech above mentioned, and his deatir was reckoned an irreparable lofs to the whule party. Several other patitions were prefented on the fubject of popular grievances; hut the perpetual neglect with which they were treated at laft brought that mode of application n:so difufe. A ne:x fubje 2 of contention, however, no voffered itfelf. The navy was in a bad condition, and the failars everywhere avoided the fervice. Sowards the end of Augull 16 thips of the line were ready to put to fia; but the legality of prefs warrants being queftioned, the manning of them became a matter of great difficulty. The new lord mayor, Brafs Croby, refufed to back the warrants; which proved a vexatious mater to the miniftry. They were further provoled by the unbounded liberty to which the prefs had been carried; and the mode of proceeding againt fome libellers had produced many complaints regarding the powers of the attorney general. He had filed informations and carried on profecutions, ex officio, without going through the forms obferved in all other cafes.-"This (it was faid by the patriotic party) was inconfiftent with the nature of a free government. No power can be more dangerous to private liberty, nor to the virtue or principles of him who enjoys it. The attorncy atts under a minifter, and hi, fenfe of duty mult be very ftrong, or his independence very thoroughly fecured by contentment, if he is at no time tempted to fiverve from the laws of confcience and equity. It is in his power to give what name he pleales to a paper, and call it feditious or treafonable; then, without the interference of a jury. he proceeds to try the offender; who, though he may be acquitted, may neverthelefs be ruined by the expences attending his juftification." Examples were cited on this occafion of very flagrant oppreffion and injuftice from this very power: the laws, it was faid, were become changeable at the pleafure of a judge; and the liberty of the fubject was taken from him whenever he became obnoxious to his fuperiors. As thefe proceedings had therefore been the caufe of very general complaint, a motion was made in the houfe of commons to bring in a bill for explaining and amending an act of the 4 th and 5 th of William and Mary to prevent invidious informations, and for the more eafy

This motion was rejected by a great majority; the mi- nifterial party urging, that the power of the attomey general was the fame that ever it had been, and found-
ed on common law. The abufe of power was no argument againt the legal exercife of it ; it was darseTu, to uvathrow cildblilied conforns; the actions of the attaracy general were cognizable by paliament, which controul mult for ever prevent a licentious exertion of his power, Exc.

Thef atguments, however, even with the rejection Dirputes ${ }^{513}$ of the motion, did not put an end to the difputes onconcernios this head. The courts of juttice themfelves were at the b. hathis time beld up in a very defpicable light, on ac- vieur of the count of fome late decifions which had been deenjed judges. contrary tu law and ufual practice. By thele the judges had affumed a power of determining whether a paper was a libel or not; and the bufineis of the jury was confined to the determination of the fact regarding its publication; and thus it was fard to have appeared, that the judges had it in their power to punifh a man who had bren found guilty of publifhng is paper, whether 战itious or not. Lord Chatham. in a Ipeech on the Middlefex election, took occafiun to mention thefe abufes; and was anfivered by Lord Manffield, who looked upon himfelf to be particularly pointed at. The former, however, was fo little convinced by his atifwer, that he drew from it an additional confirmation of his own arguments; and moved that a day fould be appointed for tâking into conffderation the conduct of the judges; in which he was ally feconded by the iate lord chancellor. A committee was accordingly moved for on December 6th ry70, to inquire into the matter; but after much debate, was rejected by 1841076 . The affair, however, did not yet leem to be terminated. Lord Mansfield gave notice next day, that on Monday he would communicate to the houfe of lords a matter of the utmof importance; but when that day came, be produced nothing but a paper containing the cafe of TVoodfall the printer as tried in the court of king's bench, that whoever pleafed might read or take copies of it. This was locked upon as exceedingly frivolous, and greatly dif. appointed the expectations of the whole boufe. His lordhip wos afked, whether he meant that the paper mould be entered on the journals of the houle or not? To which he anfuered, that he had no fuch intention, but only that it Arould be left in the hands of the clerk; on which the affair would probably have been overlooked altogetier, had not the late lord chancellor, who all along ftrongly fupported the motion, ftood up to accufe Lord Mansfield, from the very paper to which he appealed, of a practice repugnant to the lave of England. Hence he took occation to propofe fome queries relative to the power of juries, and challenged his antagonift to a debate either at that time or foon after. But this method of proceeding was complained of as too precipitate, and an excufe was likevife made for not affigning a day for the debatco at any other time; fo that the matter foon funk into oblivion. It was, however, loudly talked of withuut doors; and the judges, who had already fallen much in the eflimation of the people, now became much more obnoxious. Pamphlets were printed containing the moft levere accufations; comparifons were made betwixt fome of the law lords and their predeceflors, and even the print fhops were filled with ridiculous and fatirical pictures.

An accident which took place foon after contri-
buted

## B R

buted alfo greatly to leffen the claatacter not only of the ininillerial party, but even that of both houles of parliament takencollectively, in the eyes of the vulgar, to als extreme degree; and indeed it mull be owned that nothing could be more derogatory to the honour of the firlt afiembly of the nation, or to that of the individuals who compofed it. A motion was made on the 10th of Decenber 1770 by the duke of Mancheller, that an addrets the prefented to his majelly, that he would be gracioully plealed to give orders for qui. kening our preparations for defence in the Weft Indies and in the Mediterranean; and particularly for fecuring the polts of Gibraltar and Minorca. But whit his grace was defcatiting on the negligence of miniftry in leaving polts of luch importance in a defencelefs flate, he was fuddenly interrupted by Lord Gower, who infifted on having the houte immediately cleared of all but thofe who had a right to fit there. "When motions (faid hr) are thus brought in by furprife, and without the knowledge of the houfe as to their contents, it is impofible hut fuch things may be fpoken as are improper for the general ear; efpecidtly as the enemy may have fies in the houfe, in order to convey fecret intelligence, and expofe the nakednefs of our poffeffions." His lordfhip was anfwered by the duke of Richmond, who complained of the interruption given to the duke of Mancheffer as a proceeding both irregular and infidious. This produced a confiderable degree of altercation; and the cry of "Clear the houfe!" refounded from all quarters. Several members attempted to \{peak, but finding it impofible, and piqued at this thameful beha- viour, 18 or 19 of them left the houfe in a body. The members of the houfe of commons then prefent were not only commanded to depart, but fome of the lords went perfonally to the bar, and infifted on their leaving the houfe immediately. Thefe unfortunate members alleged in excufe, that they attended with a bill, and were there in the difcharge of their duty; but this availed nothing: they were peremptorily ordered to withdraw till their meflage fhould be delivered; and after going through the ufual forms, were turned out of doors amidn the greateft tumult and uproar. In the mean time the lords, who had juft left the houfe of peers, had gone to the lower houle, where they were lillening to the debates, when the commoners, who had beenturned out of the houfe of lords, arrived full of indignation, and making loud complaints of the affront they had received. This was refented by turning out indifcriminately all the fpecta. tois; among whom were the 18 peers jult mentioned, who were thus thut out from bath houfes. The affair terminated in a mifunderfandng betwixt the two houfes, which continued during the whole feffion. Sixteen lords joined in a proteli ; and in the warmeff terms cerflu:ed the treatment they had met with, as well as the unprecedented behaviour of adminiItration, who had thus attempted to luppetfs the freedom of argument, and render the contuct of the houfe an object of coufure and ridicule to the whoie world.

After the difcuffion of the affair of Falkland': flands in the manner already related, a moft unheard of inflance of corruption uas laid before pasli ment int the borough of New Shorcham in Suffex. The contef
was occafioned by the returning officer, Mr Roberts, having returned a candidate with only 37 votes, when the other had 87 ; and on bringing him to trial for this ftrange proceeding, the following feene of villany was laid open. A great nember of the freemen of the borough had formed themfelves into a fociety called the Chrifian Society, or Club; but inflead of keepng up the characler indicated by this title, it was clearly proved by the returning officer, who formerly belonged to it, that it was employed only for the purpofes of venality. A feltel committee of the members ware appointed to fell the borough to the highell bidder. The committee men never appeared at elections themfelves, but gave orders to the reft, and direcied them how to vote; and after the election was over, thared the profits among themielves. Though all this was clearly proved, the returning officer was ilifmifited with only a reprimand from the fpeaker of the houfe of commons, for having telifaffed upon the forms to be facredly oblerved by a returming officer. A more fevere punifmment, however, was relerved for the borough, and thule wretches who had affumed the name of the Cbrifian Club. A motion for an inquiry being carried unanimoully, a bill was brought in to incapacitate 81 freemen of this borough, whole names were mentioted, from ever voting at parliamentary elections; and, for the mare iffectually preventing bribery and corruption, the attomey-general was ordered to profecute the committee belonging to the Chrittian club: the members were allowed counfel; and many different opinions were offered regarding the mode of punithment. Some were mercifully inclined only to reprimand them, while others propofed to disfranchife the borough; however, the bill for incapacitation was paffed at length, though it did not receive the royal affent till the laft day of the feffion.

The unbounded licentioufnets of the prefs now called the attention of parlidment, though the evil Extreme peared in a manner incapable of being checked ped and and the this time neither rank nor character were any fecurity prefs. againft the voire of calumny from one party or other; and indeed it was hard to fay on what fide the moft intemperate violence appeared. The minfltry, how. ever, provoked by a long couife of oppofition, made the loudefl complaints of the freedoms taken with their names; while it was retorted by oppofition, that the abufe from one quarter was as great as from the other. Some members of the houfe of commons cumplained that their fpeeches had been mifreprefented in the papers, and endeavoused to put a fop to the practice of printing them. It was now confidered as a matter contrary to the flanding order of the houfe to print the fueeches of the members of parliament at all; and a motion for calling two of the priacipal printers to (or 518 account was carried by a confiderable majority. The the houle of printers, however, cid not attend the fummons of the cwinmors meffenger ; and a final order for their appeatance "as directed to be left at their houfes, and declaed to be fufficient notice when left at ther houfes. The difobedience of the printers on this occafion was undoubtedly heightened by the favour they hoped to obtain from the popular party; and indeed it was wot without the moll fevere animadverfions that the iminiftry were alde to carry their mations agandt them. This oppofition increafed by its being farther moved

Reitain. that they flould be taken into cuffody by the ferjeant at arms for contempt of the orders of the houfe. The temper and difpofition of the people towards the houfe was now objecied, and the great impropriety of adding to their alarms by any umeceflary ltretch of the executive power; but the majority urged the neceffity of preferving the dignity of the houfe, and putting an end to thofe exceffive freedoms which had been taken with its members. The ferjeant at arms next complained, that not being able to meet with the printers at their houfes, he had been treated with indignity by their fervants; on which a royal proclamation was ilfued for apprehending Wheble and Thomfon, the two obnoxious printers, with a reward of 501 . annexed. But in the mean time fix other printers, who had rendered themfelyes equally obnoxious on a fimilar account, were ordered to attend the houfe, though the motion was not carried without great oppofition, during which time the houfe divided between 20 and 30 times. Some of the delinquents were reprimanded at the bar, and one who did not attend was ordered to be taken into cuftody for contempt. Wheble being apprehended in confequence of the proclamation, was carried before Mr Alderman Wilkes, by whom he was difcharged. To this magiftrate it appeared that Mr Wheble had been apprehended in direct violation of his rights as an Englifhman, as well as of the chartered privilcges of a citizen of London; which opinion he declared in a letter to the earl of Halifax, one of the fecretaries of Rate. Thomfon was difcharged in the fame manner; but the captors received certificates from the magiftrates, in order to obtain the promifed sewards. J. Millar, one of the fix who had refufed to attend, was taken into cuftody from his own houfe by the meffenger of the houfe of commons. On this be fent for a conftable, and was carried along with the meffenger before the lord mayor, and Aldermen Wilkes and Oliver, at the manfion-houfe. The lord mayor refufed to deliver up the printer and meffenger at the requef of the ferjeant at arms ; and after fome difputes the meffenger was committed to prifon, as he had been accufed by Millar of affault and falfe imprifonment, and the ferjeant had refufed to find bail; however, he was immediately releafed upon the bail being given.

By this affront not only the majority but many of the popular party alfo were greatly irritated: however, the members in oppofition took care to lay all the blame on the abfurd conduet of adminiftration with regard to the Middlefex election; in confequence of which they had incurred fuch a general odium, that the people thwarted every meafure propofed by them, The lord mayor was ordered to attend the houle next day; at which time he pleaded that he had acted in no manner of way inconfiftent with the duties of his office; as, by an oath which he took when entering upon it, he was bound to preferve the franchifes of the city, and his conduct was farther to be vindicated from the terms of the city charters, as recognifed by at of parliament. It was then moved that he fhould be allowed counfel; the qucftion appeating to belong to the lawyers, as his lordfhip did nut pretend to deny the privileges of the houfe, though he contended for an exemption from that privilege by virtue of charters
and an act of patiament. This motion, however, was overruled, it being infiffed that no counlel could ever be permitted againit the privilcges of the houfe. 'This refufal of cuunfel took its rife from a tranfaction in the rcign of Herry VIII. and was now pleaded as the cuftom of parliament. Some propofed that the lord mayor ftould be heard by counfel, provided the privilege of the houfe was not affected; but it was confidered as abfurd to the laft degree, that his lordfhip fhould be heard by counfel on every point except the very one in queflion. At the fame time a motion was carried, that the lord mayor's clerk fhould attend with the book of minutes; and notwithftanding all oppofition, he was obliged to expunge out of it the recognizance of Whittam the meffenger. This was followed by a refolution that there fhould be no more proceedings at law in the cafe; a great altercation enfued, and feveral of the minority at laft left the houfe in the utmofl rage.

Though it was now one o'clock in the morning, the minitherial party were fo ardent in the profecution of their victory, that they refufed to adjourn; procecding now to the trial of $M_{r}$ Oliver, who, as well as And againft the lord mayor, was far from exprefling any forrow Alderman for what he had done. Some propofed to cenfure his conduet, others were for expulfion; but when it was propofed to fend him to the Tower, the utmof confufion and mutual reproach took place: fome members declated that they would accompany him to the place of his confinement ; others left the houfe, while miniftry ufed their utmof endeavours to perfuade him into fome kind of apology or conceffion for what he had done; but finding that to no purpofe, they at laft carried the motion for his imprifonment, and he was committed accordingly. Ample amends, how- Both com. ever, were made for this punillment by the unbounded mitted to popular applaife heaped on both the lord mayor and the Tower. alderman on this occafion, and which indeed threatened very ferious confequences. Some days after the commitment of Mr Oliver, when the lord mayor attended at the houfe of communs, feveral very alarming infults were offered to many of the members, particularly Lord North; who on this occafion loft his hat, and narrowly efcaped with his life. Some of the members of the minority interpoled, and expoftulated with the mob on the impropriety of their conduct, by which means all further difturbance was prevented; and had it not been for this timely interference, it is fuppofed that the fray would not have ended without much bloodfhed.

After the confufion was in fome meafure difpelled, the debates concerning the lord mayor again took place. Many arguments were brought againft proceeding farther in the matter; but being difregarded, the minority members left the houfe. His lordnip refufed the favour offered him of being committed to the cuftody of the ferjeant at arms, upon which it was refolved to commit him to the Tower; the motion for this purpofe being carried by 200 againft 39. Mr Wilkes, on being ordered to attend, wrote a letter ad- Ridiculous dreffed to the fpeaker of the houfe, in which he ob. haft to aferved, that no mention had been made of his being a teft with member; and that if his feat in parliament, to which Wilkes. he had been duly elected, was to be granted him, he would attend and juftify his conduct. Adminiftration,
B 1
lowever, were :oo wife now to encounter this hero, and at the fame time were under no little embarrafliment how to get off ; fo at lalk they were reduced to the miferable fint of orderiag him to atter:d on the $8: h$ of April 1771, at the fame time that they adjourned the houle to the $9!!$.

The many afforts and indignities which adminiftr-. tion had of late been ohliged to put up with now rendered it abfolutely necefiary to fall upon fome method to fhus that their authority was not altogether loft. For this purpole a committee was appointed by ballot to inguire into the reaton why there had been fo many obllructions to the authority of the houfe of commons. This committec having fat from the $28: 13$ of March to the 30th of April, at latt gave in the following report. "Iour committee beg leave to obferve, that in the diligent fearch they have made in the journals, they have not been able to find an inflance that any court or magiftrate has prefumed to commit, during the fitting of parliament, an officer of the houfe for executing the orders of the houfe. They further bey leave to obferve, that they have not been able to find, that there ever has been an infance wherein this houfe has fuffered any perfon, committed by order of this houfe, to be difcharged, during the fame feffions, by any authority whatever, without again committing fuch perfons. As therefore, with regard to J. Millar, who was delivered from the cuftody of the meffenger by the lord mayor, who for the faid offence is now under the ceafure of the houfe, it appears to your committee, that it highly concerns the dignity and power of the houfe to maintain its authority in th is inflance, by retaking the faid J. Millar ; the committee recommend to the confideration of the houfe, whether it may not be expedient that the houfe ftould order that the faid J. Millar fhould again be taken into cuffody of the ferjeant at arme; and that his deputy or deputies be furictly enjoined to c:ll upon the magifirates, ufficers of the peace, and other perfons, who by the fpeaker's wasrant are required to be aiding and affifting to him in the execution thereal, for luch altift arice as the faid ferjeant, his deputy or denuties, fhall find necelfary, to enable him or them to take into cuflody the fiid J. Millar.

N$u$ thing could have been more imprudent than the urging with fuch violence a conteft againft firch erntemntible adverfarics; and in which they were finally b fitd. What they intended fur punifhment really afforded the criminals matter of triumph and exultation. Every honour t'at the city of London could beflus was conferred upon the magillrates, while the complaints and execrations of the people at latge became louder than ever. Every fiep taken ahout this time by adminiftration feemed calculated to add to the

## ¢2 2

## DiTatiface

 - om no accrunt of the cm banknent bul. public ill humcur. 'Towards the end of the feffion a bill was broupht in "for enabling certain perfons to enclufe and embank part of the river 'Ihames, adjoissing to Durhum-sard, Saliftury-ffreet. C ill-fireet, and Beaufort-buildings in the county of Muddefox." This bill was oppofed, as appearing constary to the ancient riglits and privileges of the city of I.omion; but was eafily carried throuk buth houfes, though it produced a proteft in the upper houfe; and a few days betore the rifing of the feltion, the citv of London petitioned againft it In this petition it was complained of as aviolent and unjuf tranfaction, totally anprecedented; being an invalion of the property which the city claimed in the foil or bed of the river. It was afterwards compl ined of in a remonftrance, as an infringement of the rights of the people, and urged as a realon tor the diffolution of parlament.

The only other tranfaction of moment during this 527 feflion related to the E f India Company. It was aftiorscosnow propofed to raife 2000 neen in England for the fidered. fervice of the company, the officers to be appointed by the king, and to be paid by the company. But after much fpeculation, it was rejected as unconfitutional and dangeruus to keep an armed force in tie kingdom which was not paid by government; and that, however inconfiderable the number propofed was at prefent, it might toon be increafed on any frivolous pretence. It was likewife urged, that it would prove an obftruction to the recruiting tervice for our oun army, on account of the fuperior advantages of enlifing in the company's fervice. The advocates for the bill urged the inconveniency of fending out a fufficient number of men annually to recruit the Indian forees; and that, unlefs parliament ftould adhere to the promife they formerly made of affifting the Company in recruiting, they would be daily expofed to valt lofs and expence from the ticks of recruiting patties. The feftion rofe on tie 8 th of May. In the peech from the throne, it was oblerved, that the fatiffaction obtained from his Catholic majefly for the injury done this kingdom, and the proots of the pacific difpofition which the courts of France and Spaia lad given by laying afide their armaments, enabled us to reduce our foices by fea and land. The real manifelled by perlyment could not fail to convince the world of its fficetcnate attachment to the cress and regard to the interel's of the country. His maj. fly's endeavous were promiled to put in end to the troubles which fitl pievailed in forma parts of the continum; thank were given to the commons for the unanimous cheerfulnels, and public fpirit with which they had granted the fupplies; and an apology was made for the extracrdinary demands which had been made. Tle 'peech concluded with advifing the members to ufe thein beft endeavours, in their refpedive lations ald counties, to moder the na. tionsl happineds complete, by difcouraging needlefs fu!pirions and domette diflustances. His majelly had no orher obje etw, and could haye no other interefis, than to ceign ir the heart, of a free and happy people ; and it was his earnoft wifl that his futjects might not be prevented, by mint kes or inimotities among themfelves, from enjoying the happinefs they had in their porer.

The many defeats that had been received by oppofi-Popular tion during this and the foregoin' reftions now tegan party difto difcourage them from procceding fuch lengths in couraged. the cause of pariotifm as thry had formesly done. Many of them had alfo lof much of their popularity by taking an active part againtt the ptinters; ind as every notion had been carricd in favour of adminiftration by nearly two to one, a geneal difcouragement and languor besan to take plase among the popular party. The only gainers indeed ty the lave conterituons were the city magillates and printens who had been pumilied ty the hou'e of commons. On the rifing of the parliament, when the lord mayoz and alderman were

## B R

Britain. releafed from the tower, they were welcomed by every mark of congratulation. The city was illuminated; and the mob, as uffl, took vengeance on the refractory by breaking their windows. A committee was even appointed to carry on a profecution againft the fpeaker of the houfe of commons; but as this did not feem likely to afford atiy addrefs, they determined once more to have :- courfe to the throne. Accordingly, on the toth of July 177 t , another petition and remonflance was prefented, the furjects of which were the embankments on the Thames, the proceedings againft the magiftrates; and a fpeedy diffolution of parliament was requefled. But this met with as unfavourable an anfwer as before. His majelly replied, that he was ready to put an end to the real grievances of his faithful fubjects: but he was forry to find that a part of them fill renewed requelts which he had repeatedly refufed to comply with.1

In the fpeech from the throne, when the parliament met, January 21. 1772, his majelty obferved, that the performance of the king of Spain's engagements, and the beh iviour of the other European powers, promifed a continuance of peace; and though the neceffity of keeping up a refpectable naval force was evident, yet no extraordinary aid for that purpofe would be neceffary; and he concluded with recommending the molt vigilant and active attention to the concerns of the country, with an affurance of the interpofition of the crown to remedy abufes or fupply defects. Little difpute was made about the addreffes in anfwer to this
fpeech, though an ample fubject of altercation very foon occurred. This was a motion made by adminiftration, intimating the neceflity of raifing 25,000 leamen for the fervice of the current year; it being alWays neceflary, they faid, for us to preferve a fuperiority to the French in the Ealt Indies, which had not been the cafe fince they fent a confiderable fleet thither. "It was equally neceffary (they added) to pre. ferve the prefent frength of the Weft Indies unimpaired; as the Spaniards knew the importance of our fettements there too well not to make an attack upon them fiff if ever a rupture fhould tak place. Twenty of the beft hips in the navy were alfo now employed as guard-hips, and wanted nothing but men to fit them for actual fervice."

A decl +ration of this kind, coming immediately af. ter the affurances of peace that had been given from the throne, was faid to be a contradiction; that the peace eft.blifhent would thus be angmented till we were overburdened hy it; 500,0001 . would thus be added to the national expences: and as the fame augmentation might every year be made on fimilar pretences, we fhould thus be obliged to fubmit to the hardflips of war in time of a profound peace. If the aflurances of peace from the throne were well foundell, the force in the Eaft Indies was already too great ; if, on the contrary, a war was at hand, it would be too fmall notwithflanding the propofed angmentation; and the fame way Jamaica was likely to fuffer from the inferiority,

Thefe remonftances were by no means fufficient to put a ftop to any meafure which had at this time been fuggefled by adminiflration. The queftion for the angmentation was carried without a divifion: after which the fubject of religion came to be difcuffed.

Vor. IV. Part II.

This was occafioned by the general tendency to Aria. Bruza, nifm or Socinianifin, ulich had for tome time prevailed to a great degree, and had at lafl infected the cltablified church in fuch a manner, that the fubfeription to her Itandards was reckoned intolerable by many of the clergy. Meetings had been frequently held by the difcontented members, in order to conlider of fome mode of relief; and in the beginning of February $177 \%, \mathrm{P} \cdot \mathrm{i}: ~$ : in aabout 250 of them, with feveral profentors of law and and $\{: 1 \mathrm{l}$ phyfic, joined in a petition to the houfe of communs, XXXIX exprefling their difatisfaction with lubfription to any atricies. human forms, and praying for relief. In this petition they afferted, that they held certain righes and privileges from God alone, without being lubject to any other authority; fuch as the exercife of their own reafon and judgment, by wilich they were inll ructed and confirmed in their belief of the Chiftian religion, as contained in the Holy Scriptures. They accounted it a blefling to live under a government which maintained the fufficiency of the Scriptures to iuftrue in all things neceflary to falvation. Hence they concluded, that they had a right from nature, as well as from the principles of the reformed religion, to judge for themfelves what was or was not contained in the Scriptures. Frome this invaluable privilege, however, they found themfelves in a great meafure precluded by the laws relative to fublcription; by which they were enjoined to acknowledge certain articles and confeffions of faith framed by fallible men as entirely agreeable to Scripture. They prayed therefore to be relieved from fuch an impofition, and to be reftored to their undoubted right of interpreting Scripture for them?elves, without being bound by any human explanation of it, or being required to acknowledge by fubfription or declaration the truth of any tormulary of religious faiths and doctrine whatever, excepting the Holy Scripture itfelf.

The affair of fubfription they looked upon to be not only a grievance to themfelves, but an encroachment on their right as men and members of a ProteAtant eflablifhment, as well as a great hinderance to the fpreading of the Chriftan religion, tending to difcourage further inquiry into the true fenfe of Scripture, to divide communions, and to caufe a mutual difike betwixt fellow Proteflants; giving occafion for unbelievers to reproach and vilify the clergy, by reprefenting them as puilty of prevarication, and of accommodating their faith to lucrative views and political confiderations. It affirded allo to Papits, and others difaffected to the religious eftablithment of the church of Englond, an occafion of reflecting upon it as inconfiftent, and authorizing doubttul and precarious doctrines, at the fame time that the Scripture alone was acknowledged to be certain and fufficient for ialvation. It had likewife a tendency to divide the cleryy among themfelves; fubjecting one part, who af. ferted their privilege as Proteftants, to be reviled both from the pulpit and the prefs, by another who feemed to judge the articles they had fubleribed to be of equal authority with the Scripture ittelf; and, lafty, it occafioned foruples and emberrafiments of confcience to thole who were about to enter into the minillty, or prevented the cheerful exercife of it to thofe who were already entered. By reafon of thefe embarrafliments the clerical part of the petitioners found themfelves un$3 X$ der

Esitain. Esにain.
der grent dificulties, being obligest in fome fenfe to join with the adverf,ries of revelation, in fuppoing the one true fulle of Saripture to be exprefied in the prefont eftablihed fytem of futh; or elfe to incur the reprach of having deferted their fubicription, \&c. while fach of the petitioners as had been elucated with a bew to the profefions of civil law and phylic co. 1.1 not but thisk it a great hardflip to be obliged, as they all were in one of the u:iverfities, even at their foll matriculation and admilfion, though at an age very improper for fuch important difquifitions, to fubforibe therr affent to a varicty of theological tenets, concerning which their private opinions could be of no conlequence to the public, in order to entitle them to academical degrees in thofe faculties; more efpecially as the courfe of their ftudies and attention to their praxice did not affurd them leifure falficient to examine how far thefe tenets were confonant to the wo:d of God.

This petition was prefented by Sir William Meredith, who, along with the other members who favoured the c:ufe, enfurced it by many arguments drawn from the pronciples of toleration. They maintained alfo that nothing but hypocrify and prevarication could arife from obliging men to fublcrite what they did not believe; that the repeal of the laws for fubfription would prevent the increafe of diffenters, fo very conflyicuous at this time, and incline many of them to return to the church. The articles themfelves were faid to have been compiled in a hurry; that they contained donrines highly controvertible; and that this reftraint on the conlciences of men was of all others the greateft hardflip. The majority of parliament, however, were found inimical to the petition, though fome who oppofed it at prefent wifhed for time to confider it more deliberately, or to refer it to a committec of the clergy. By the reft it was urged, that the matter of the petition was a violent infraction of the laws of the Eaglifh religion ; and that if this was granted, another would foon follow againtt the liturgy. The conduct of mony of the petitioners, inffesd of being founded in any regard for religion, had its origin in liypocify and diffolutenefs, and certainly proce ded in many inflanees from a dißelicf of the Trinity, and of the divinity of our Saviour. The complaints of men were to be difregarded when they wilhed to profit by the emoluments of the chorch without fubrecibing to its laws; befides, the king was bourd by bis coronation oath to continue the chaschgovernment without alteration. It was likewife urged, that if people were to be reflrained by no other article than an affent to the troth of the feriptures, the church would fuon be overrun with impiety. Many had already founded blafphomnas tenets on the right of private opinion; and though it could not be denied that every man has this right for himfelf, yet none has a right to obtrude his fingularities upon others; and if any of the clergy fonnd the delicacy of tbeir confciences affected after they had accepted of benefices, they were welcome to leave them.

Some of the more moderate oppofers of the petition crideavoured to vindicate the character of the clergy from the imputations laid upon them; and contended that the leginature had a controuling power cres the articles of the union, and confermed their af-
fertion by mentioning the act againf occafotal con- ritain. formity, as well as another againit elective pattonages, both of them paflid fince the union : and it feemed to be the general with of the houle that the profeflors of law and phyfic might be releved from fubfription, though they did not confider their mare in the matter as of any great importance to the publie. It was at laft thrown out by a majority of tiear 150 .

The rejection of the lubfeription bill was followed Rejected by that of a bill for quieting the poffefions of his majefty's fubjects from dormant claims of the church ; after which the attention of parliament was called to one of the utmof importance, and which was introduced by a m-ffage from the king. This was the famoucroyal 5 soyal marriage-bill, occafioned by the marriage of the riage-bill. duke of Cumberland with Mrs Horton, a widow lady, danghter of Lord I nham, and fifter to Culonel Lattrel, and that of the duke of Gloucefter with the countefsdowager of Waldeyrave. By the meffige it was recommended to both houfes to take it into their confideration, whether it might not be expedient to fupply the defects of the laws then in being, and by fome new regulations more effectually to orevent the defcendants of his late majelly (excepting the iffue of the princeffes who had marricd, or might hereafter marry, into foreign families) from martying without the confent of his majefly, his heirs, and fucceflors. In confequence of this a bill was brought in, declaring all fuch marriages, without the confent above mentioned, to be null and void. The defeendants of his majelty, however, if abuve the age of 25 years, might marry without the royal confent, provided they gave intimation twelve months beforchand to the privy council, and no oppofition to the match was made by parliament during that interval.

This bill met with the moft violent and powerful Procefts aoppofition. The principal arguments againft it weresainf it. expreffed in two protefts from the upper houfe, and were to the following purpofe : 1. The dodrine that marriages in the royal family are of the higheft importance to the ftate, and that therefore the kings of this realm have ever been trufted with the care thereof, is both abfurd and unconflitutional; though it would from that period have the force of a parliamentary declaration. The immediate tendency of this was to create as many prerogatives to the crown as there are matters of importance in the fate; and to extend them in a matuner as rague and exceptionable as had ever bren done in the mofl defpotic period. 2. The enacting part of the bill had an inconvenient and impolitic extent; namely, to all the defcendants of Geo. II. In procefs of time, that defcription might become very general, and comprehend a great number of people ; and it was apprehended that it would be an intolerable grievance, for the marriages of fo many fubjects, perhaps difperfed among the various ranks of civil life, to be fubject to the refrictions of this act; efpecially as the abectors of this doctrine had alfo maintained, that the care and npprobation of the marriage allo included the education and cuftody of the perfon. 'This extenfive power might in time make many of the firf families of the kingdom entirely dependent on the crown; and it was regretted that all endeavours to limit, in lome degrec, the generality of that defription, had proved ineffectual. 3. The time of nonage for the royal family appeared to be improperly cxtended be-

Britain. yond the limit of 21 years; a period which the wifdom of the conflitution feems with great wifdom to have affigned to minority. 4. The deferring their marriage to the age of 26 mipht alfo be attended with other bad confequences, by driving them into a diforderly courfe of life, which ought to be particularly guarded againft in thofe of fuch an exalted flation. 5. The power given by this bill to a prince tn marry after the age of 26 , is totally defeated by the provifo which declares the confent of parlament to be ultimately neceffary. Thus great difficulties muft be laid on future parliaments, as their filence in fuch a cafe mult imply a dilapprobation of the king's refufal; and their concurrence with it might prove a perpetual prohibition from marriage to the party concerned. 6. The right of conferrng a difcretionary power of prolibiting all marriages, appears to be above the reach of any legillature wherever, as being contrary to the inherent rights of human nature ; which, as they are not derived from, or held under, the fanction of any civil laws, cannot be taken away by them in any cafe whatever. The legiflature no doubt has a right to prefcribe rules to marriage as well as to every other kind of contract; but there is an effential difference between regulating the mode by which a right may be enjoyed, and eltablifhing a principle which may tend entirely to annihilate that right. To difable a man during life from contracting marriage, or, which is the fame thing, to makic his power of contracting fuch marriage dependent neither on his own choice nor on any fixed rule of law, but on the arbitrary pleafure of any man, or fet of men, is exceeding the power permitted by Divine Providence to human legillature, and directly contrary not only to the divine command, but alfo to the rights of domeltic fociety and comfort, \&c. 7. This bill has a natural tendency to produce a dilputed title to the crown. If thofe who are affected by it are in power, they will eafily procure a repest of this act. and the confirmation of a marriage made contrary to it; and if they are not, it will at leaft be the fource of the mon dangerous faction that can exit in any country, viz. one attached to a pretender to the crown; whofe claim, he may affert, has been fet afide by no other authority than that of an act to which the leginature was not competent, as being contrary to the common rights of mankind. 8. The bill provides no fecurity againt the improper marriages of princeffes married into foreign families, and thofe of their iffue; which may full as materially affect the intereft of this nation as the marriages of princes refiding in the dominions of Great Britain. It provides no remedy againt the improper marriage of the king reigning, though evidently the moft important of all others to the public. It provides nothing againft the indifcreet marriage of a prince of the blood, being regent at the age of 21 ; nor furnithes any remedy againft his permitting fuch marriages to others of the blood royal, being fully invefted with the legal power for this purpofe, without the affiftance of council.

The anfwer to all thefe arguments was, that the in conveniences fo much talked of were merely imaginary ; and if the king thould make any improper ufe of his authority, parliament had it either in their power to prevent the effect, or to punith the minifter who advifed it. The crown, it was faid, was dihonoured by im-
proper connexions, and many of the greatef national Lrizar. calamities have proceded from inproper ablances between the royal family noll lubject?; and that it, from after experience, we thould find any mat. rial pricy inces enfue from this act, it coult an ealiy be repealed at that time as thrown out now, and on better grounds. It was very rapidly carried through ooth hufes; in the upper houfe by 90 to 25; and in the luwer by 165 to 115 .

Trough ilse late decifion concerning fubfcription to pill for the the 39 articles did not feem to promife much fuccet, reln fol to aiy movations in religious.matters, yet the c fe of propofed. diffenting minitters was introduced foon after the difculfion of the royal marriage act ; the advocates for it being encouraged to bring it forward chietly on acccunt of fome favourable hints thrown out in the debates on the fubfription bill. A petition was now prefented by a great body of thefe people, praying to be relieved from the hardithip of fubfribing to the articles of a church to which they did not belong. This, hawever, was molt violently oppoled by the opponenis of the fromer bill, though with very little fuccefs in the houle of commons, "here it was carried through by a prodigious majority. Here it was maintained that nothing can advance the true intereft of religion fo much as toleratoon; and if articles of fubfeription are neceffary, it mult only be for men deflitute of principle, and who would, in compliance with ambition or avarice, as readily lublcribe to one fet of articles as another. If thus any of the fundamental doctrines of Chrifianity are impugned, there are abundance of law's in exiftence to correct the impiety. The diffenters have indeed altered fome of their original forms and doctrines, but that only in matters of indifference. It is the dfeet of learning, leifure, and refmement, to give men many opportunities of altering eftablithed forms. This lias been the cafe formerly, and always will be. The diffenters have long been virtually exempted from this fubfeription; and yet the piety and decency of many of them, particularly in Scotland and Ireland, where no fuch laws are in being, fufficiently fhow that mer, whofe minds are ftedfaft in the purity of religion, will not be confined nor intucnced by laws of human invention. But though the difleaters enjoy full liberty by connivance at prefent, where is their fecurity aqaink the fulden attacks of malice and envy, which may be backed by the fanction of law? Every neglect of a law by connivance is an additional proof of the neceffity of abrogating that law: and Iiberty is but an empty name, where it is enjoyed by an overfight only, as it were, of our fuperiors. In the rejeked. houfe of lords, however, the hill was rejected by a majority of 70. Here the doctrine of univerfal toleration was ftrenuoully oppofed, as well es the great danger fet forth to which the church of England would be expofed by departing from the laws whicin guarded its privileges. The diffenters, it was faid, had great caufe to be fatisfied with the favour they eljoycd ty co mivance; and the laws ware only kept on record as a nec filary curb, left in the degeneracy of a declining kingdom, religion ftoould be deflitute of protection againft herefy and blafphemy.

The only other affairs of this fellion were fome at. Eaft India tempts at an inquiry into the affairs of the Euft India 2!ariss Company, which were now in a very critical fituation. Thefe, however, did not come under confideration till

## B R I $\quad[532] \quad \mathrm{B} \mathrm{R}$ I

Eritain. the, next feffion, which took place November 26. 1772 , when his majefly gave this fituation of the affairs of the company as a reafon why he had called them together fooner than ufual. The continuance of the pacific difpofition of other powers was mentioned, and fatisfaction exprefied that the continuance of peace had afforded an opportunity of reducing the naval eftablifhment, though a great force muft always be neceffary for the defence of thefe kingdoms. Economy was promifed with regard to the fupplies, and it was recommended to take every method that could be devifed to remedy the dearnefs of provifions.

The affairs of the Enf India Company took up the greatelt part of the prefent feffion. It had been projceted, as far back as the year 1667, when they were in a very flourifhing condition, to bring them under the infpection of government, that the nation might fhare the immenfe wealth fuppofed to be enjoyed by the company. The defign, however, did not fucceed at that time, nor would it probably have been cafily brought to bear, had not the affairs of the company been embarraffed by the bad conduct of their fervants. During the laft feffion a bill had been brought in for Ieftraining the governor and council from all kind of trade, as well as for enlarging the power of the company over its fervants. The bill, however, was rejected after the fecond reading, and indeed was thought to have been propofed only to introduce the fucceeding bufinefs. The debates on the fubject procured in a great meafure the general belief of two points of much importance to the fuccefs of the fcheme, viz. that the affairs of the Eaf India Company were in a very bad fituation, owing to the behaviour of its fervants; and that the company was at any rate infufficient for the government of fuch extenfive poffeffions; of confequence that there was an evident neceffity of giving up the management of it to the crown. A motion was now made in parli ment, by a gertleman unconnected with adminilitration, for a feleet committee to inquire into the affairs of the company: but many reafons were urged againf this appointment, particulanly that the feafon was too far advanced for a bufinefs of fuch importance; that the committee, being a fecret one, was not accountable for its conduct; and that as the minifter would have it in his power to nominate the members of the committee, confiderable partiality might on that account take place. The motion, howcwer, was carried without a divifion; and the members were chofen by ballot.

The affairs of the Eaft India Company proceeded from bad to worfe during the recefs. The treafury at hone wo quie cxhaufted ; while bills to a vaft amount dr.wn on 13er.gal were nearly due; which, with their debe to the L tuk and other public offices, along with the fum to be paid to government, reduced then almont to "te brink of bankruptcy. They were therefore reduced to the expedielt of borrowing a fum of money from adminiffration : but their application was received with great indifierence. The minifer defired them to appiy to parliament. 'The reports of the felect com. mittee, in the mean time, contrary to the promic of fecrec;", were pullilithed, and gave the public no favourable upinion of the behaviour of the company's fervants. On the meeting of parliament, the minifter moved for another committee, under the sitle of the committee of
fecrecy, to confift of 13 perfons, for taking into confi- Britaia. deration the ftate of the company's affais ; which might thus undergo a full invefligation without any thing being known to the world, which had excited fuch indignation in the former cafe. The members of this new committee were alfo to be chofen by ballot; fo that no objection could militate againft them that did not militate with equal ftrength againt the whole houfe. It was objected, that this mode of fecret inquiry, by a fmall number, was unprecedented and unconflitutional ; that the members would in effect be nominated by the minifter, and act under his direction; and that a free invefligation by the whole parliament was effentially different from that by a fecret committee. In the latter cafe, every information that the minifter thought proper to conceal would be withheld ; at any rate, a committee of fecrecy is an evident abfurdity; a committee can be no longer a fecret than during the time it takes up for inquiry. Its proceedings muft be laid before the public; and in cafe of unjuft accounts, the parliament had no means of being undeceived. Thefe reafons, however, were of no avail at prefent. The committee of fecrecy was carried, as the other had been, without a divifion; and, as had been predicted, the members, though chofen by bal. lot, were almolt all of them devoted to adminiftration. The felect committee was likewife revived, that they might be, as it was faid, checks upon one another; fo that between them the nation would have every requifite degree of information on the whole affair.

In a very fhort time after the appointment of the Reflraining fecret committee, a report was given in, ftating that the bill propocompany were in great diftrefs for want of money; and fed. as this was the cafe, a bill ought to be brought in for reftraining them from fending out fupervifors to India, a fcheme which they had meditated at this time. The minifter and his adherents enlarged greatly on the utility of this bill; which, they faid, was highly expedient. It was the fincere wifh of parliament to render them a great and glorious company: it was abfolutely neceffiary for this purpofe not to allow them to engage in an expenfive commiffion, at a time when their affairs were fo much embarraffed that they were obliged to apply to government for a loan. It was even doubted whether the company, without the fanction of parliamentary authority, had power to appoint a commifion of this kind. On the other hand, the minifter's propofal was faid by oppofition to be unconflitutional and infidious. 'The want of cafth at prefent experienced by the Eaf India Company was not of fuch great importance, their credit being then as fully citablifhed as ever. They had made choice of a fet of men in whom they could confide; the many loffes occafioned by their fervants rendered the commiffion indifpenfably neceffary; and the expence would be paid from the favings which muft undoubtedly arife from fo prudent a ilcp. It was unreafonable, bccaufe the Eaft India Company, or any other, are diffreffed, to allow them no opportunities of cstricating themfilves. The company could not be faid to want refpect for parliament; they had flowed this already by delaying the departure of the commiffion till the inquiry begun by the houfe was finifhed: nor could they be wanting in refpect to their own intereft, character, and conftitution; which they feemed to flow by every pofitible mark of oppofition to this

Britain. bill. Adminiftration boafted of their intentions and their wilhes to render this company great and glorious: but how could we expect greatncfs or glory to proceed from a quarter where it did not exift? The dignity of parliament was leffened, and its glory effaced, by the conduct of minifters, and the many wantou aets of authority lately committed. It was a curious method of rondering a company great and glorious to plunder the proprietors of immenfe fums of money by exorbitant grante, or by taking away their charters; for after this ant it was plain that charters could no longer be depended upon. The gentlemen belonging to the company, and then prefent in the houfe, offered to pledge themfelves, that the commiffion of fupervifion fhould not be allowed to depart, until, from further report, a full knowledge of the company's affairs fhould be acquired. This, however, was inftantly rejected, it being faid to be defective in fecurity; that the Eaft India Company would not fcruple to make an agreement of this kind to day and break it to morrow; which could only be prevented by an act of parliament, efpecially as the miniftry had no motives for promoting this meafure, but a regard for the welfare of the company, and a defire to reflore its affairs to a better flate.

Notwithftanding all the arguments ufed by adminiflration in favour of this bill, however, the company -were fo far from thinking it to their advantage, that they ufed every endeavour to prevent its pafing into a law. They petitioned; and fome of their fervants were examined in the houfe of commons, in order to thow the necelfity of fupervifors being fent out, who might be qualified to reduce their affairs to fome order by being on the foot, and emabled to curb the exceffes of which the company's fervants had too frequently been guilty. During this examination it appeared, that from the year 1765 to 1773 the expences of the company had increafed from 700,0001 . to $1,700,0001$. annually, and that goverument had received near two millions from the company every year; that they had iminenfe profits in extraordinaries, while the proprietors loft confiderably of the dividend which the profits of their trade alone would have produced. In fpite of all oppofition, however, the bill for reflraining the company from fending out any commifion of fupervifion was carried by a majority of 153 to 28 . In the houfe of lords it met with fimilar fuccefs, being carried by 26 to 6 , though the minority thought proper to enter a proteft. The realons given againf it in this proteft were, that it took away from a great body corporate, and from feveral fiee fubje Ets of this realm, the exercife of a legal franchife, without any legal caufe of forfeiture affigned. The perfons appointing the commiffioners had by law a right to elect, and the perfons chofen had a legal capacity of being elected. The fupervifors had a full right vefted in them agreeable to the powers aud conditions of their appointment; but though no abufe was fuggefled, nor any delinquency charged upon them, thoie legal rights and capacities were taken away by a mere arbitrary act of power, the precedent for which leaves no fort of fecurity to the fubject for his liberties. The bill feemed likewife a manifer violation of the public faith. The charter of the Eaft India Company was granted by the crown, authorized by act of parliament,

533 ] B R I
and purchafed for valuable confiderations of money lent and paid. By this the company were allowed to manage their own affairs as they thought proper, and by perfons of their own appointment; but by this bill the exercife of the power juft mentioned was fufpended for a timc, and by grounding the fupervifion upon the actual interference of parliament with the affairs of the company, ellablifhed a principle which might be ufed for perpetuating the rellraint to an indefinite length of time. It is indeed difficult to fettle the legal boundary of legillative power: but it is evident that parliament is as much bound as any individual to oblerve its own compacts; otherwife it is impof. fible to underftand what is meant by public faith, or how public credit can fubfift. It appeared by evidence upon oath at the bar of the houfe of lords, that the company had received aflurances from their chairman and deputy chairman, that the appointment of a commiffion for fuperintending and regulating their affairs would be approved by adminiftration; and it was extremely hard that they fhould be able to find no fecurity for their charter privileges againft thofe very minifters under whofe faraction they had reafon to believe they were all along acting. It was allo the more incumbent on the company at prefent to give the moft flrict attention to their affairs, to enable them to anfwer the exorbitant demands of go vernment; as it appeared from the witnelies at the bar, that its exactions amounted to more than the whole profit of the late acquifitions, and the trade enfuing from them ; while the proprietors, who had fpent fo much, and fo often rifked their all for obtaining thefe acquifitions, had not been permitted even to divide fo much as the profits of their former trade would
have afforded.

540
The felect commitee now gave in their fecond re-Second report, containing a ftatement of the debt, credit, and port of the effects of the company in England; beginning with an felect comaccount of the cafl in the company's treafury on the mittee. Ilf day of December $177^{2}$, and containing a llatement of all their debts and claims againgt them in every part of the world. Thus it appeared that the cafh, credit, and effects of the company amounted to $6,397,2991$. sos. 61. and their debts to $2,032,3061$. State of 54 r which veing deducted from the above account of ther the compaeffects, left a balance in favour of the company of ny's alfairs. $4,364,993$ l. ros. 6 d. without any valuation of the forufications and buildings of the company abroad. The The itateflatement, however, was complained of as unfair; and tisft unfait was faid, that impartiality was not to be expected from a fet of men who had it in their power to make what report they pleald for the intereft of government meafures: but the members protelled their innotence; and adminiffration infifted, that, until proof could be brought that the flatement was unfair, the houfe was bound to adhere to it as juft.

The bufinels was revived after the holidays by an Applicatian application from the company to goverrment for a loan of the cumof $1,500,0001$. for four years, at 4 per cent. interelt, pany to gewith liberty of repaying the fame according to the a vernment bilities of the company, in payments of not lefs than 300,0001 . ; and that the compmy mould not make a dividend of more than 6 per cent. until the loan fthould be reduced to 750,0001 . ; that then they might raife their dividend to 8 per cent. and after the whole.

## B R I

-3intain. $\xrightarrow{-7}$
loan was difcharged, that the furplus of the nett pro fits ariing in England, above the faid dividend, frould be appropriated to the payment of the company's linnd debt, until it was reduced to $1,500,0001$. when the furplus profits flould be equally divided between the public and the company. It was alfo requelled, that the company fhould be releafed from the heavy penal intereft incurred by the non-payment of mancy owing in confequence of the late acts for the indemnity on teas; and that they flonuld be difcharged from the annual payment of the 400,0001 . to the public for the remainder of the five years fpacified in the agreement. They farther requefted, that the accounts of the Duannee revenucs, of the charges of collection, expences of Sergal, company's accounts of fales, \&c. flould be delivered annually to parliament, and that leave might be given to export teas free of all duty to America, and to foreign parts. This requell was julged expedient to be granted, and the following refolutions were agreed to: "That the affairs of the Enft India Company are in fuch a flate as to require the affitance of parliament; that a loan is neceffary to reinftate the company's affairs; that the fupply be granted; and that care be taken that the company be prevented oom experiencing the like exigencies for the future." The two following motions were allo founded upon the report of the fecret committee, viz. That, funpofing the public fhould aivance a loan to the Eafi India Company, it was the opinion of the committee that the dividend fhould be effrained to 6 per cent. until the payment of the fum advanced; and that the company be allowed to divide no motc than 7 per cent. urtil their bond-debt be reduced to $1,500,0001$.

Thefe fevere reftriftions were judged proper by adminiftration for the fecurity of the public, and were fuch, they faid, as every creditor has a right to make

545 Oppouled in vai: by the company.
$54{ }^{6}$
Trinturial righe ot the c many to in a poil1e fitions dorict. beforehand with a perfon who wifhes to borrow money from him. The company, however, replied, that the reflictions were contrary to the propofals they had made, and void of foundation, as being built on the erroneous reports of the fecret committee. The chairman of the company dcclared at a general court that the government had agreed, or would agree, to the propofed increafe of dividend, before the particiuation of profits took place betwixt the government and company; the firft lord of the treafury had told him fo, and now wifhed to deny what he had faid by ufing the fe exprefinns in private converfation, and when he did not confider the chairman as acting nificially. But if this was the cafe, to what purpofe did public men hold converfations, fince they were afterwards to deny or forget what paffed ? Some time was alfo demanded to confider of thefe motions; but that being denied, the queftion was put and carried as mimifry withed.
The next fep was to deprive the company of their territorial right th the countries they poffeffed in the Ean Indics. This had been allowed them in the molt explicit masner, as appears by fome of the papers which paffed between the French and Englift minifters during the negocidicins for the treaty of Patis; from one of which papers the fullowing is an extraet: "Refpeting thofe territorial acquifitions which the Englifh Eall India Company have made in Afia, every difpue relative there:o muf be fetted by that com.
pany it felf, the crown of England having ne right to in erfere in what is allowed to be the legal and exciufive property of a hody corporate belonging to the Englifh nation." This territorial right, however, was now denied. After reading the company's petition, Lord Noth told the houfe that it was the opinion of feveral great lawyers, that fuch territorial poffifions as the fubiects of any flate flall acquire by conqueft, are vitually the property of the flate, and not of thofe individuals who acquire them. It was his opinion, however, that it would be more beneficial to the public and to the Eall India Company, to let the territorial acquifitions remain in the poficflion of the company for a limited time not exceeding fix years, 10 commence from the agreement betwixt the public and the compary. At the fanje time it was moved, that no participation of profits fhould take place betuixt the public and the company until after the repayment of $1,400,0001$. advariced to the company; and the reduction of the company's bond debe to $1,500,0001$. That, after the payment of the loan advariced to the company, and the reduction of their bond debts to the fum fpecified, thret-fourths of the nett furplus profits of the company at home, above the fum of 8 per cent. upon their capital ftock, fhould be paid into the exchequer for the ufe of the public, and the remaining tourth be fet apart either for seducing the company's bond debt, or for compofing a fund for the difcharging of any contingent exigencies the company might labour under.
Thefe proceedings were exceedingly difagreeable to The comthe company. They now prefented a petition com- pany petiplaining of the injuftice of demanding any farther tior again terms on account of a loan, after that loan was difchar- ally. ged. The limitations of the company's dividend to 7 per cent. after the dikharge of the loan, until their bond-debt fhould be reduced to $1,500,000$. .eemed not to be founded upon any juft calculation of their commercial profits; nin could it with reafon be alleged that it was neceffary either to their credit of that of the public to reflatin them in fuch a masener. The addutional dividend of y per cent. was an o! joed of fome confequence to the proprietors, but vers litile tw the difchatge of their debt to the public; and the h. dflips of being limited in this manner were excecdinuly aggravated by the loffes fullained, and the experices they had incurred in acquiring and fecuring the territorial revenues in India, at the rifk of their whole capital, while the public reaped fuch great advantages. The limitation of the company to a term not caceeding fix years for the puffeffion of their lndian ternitories they looked upon to be eatirely arbitraty, as it might be conftrued into a final decifion againft the company refpecting thofe territories to which they infifted that they had an undoubted right. Neither could they acquiefce in the refolutions by which three-fourths nt the furplus nett profits of the company at home, above the fum of 8 per cent. per annum upow their capital fork, flould be paid into the eachequer for the ufe of the public, and the remainder be cmployed either in further rcducing the company's londdebt, or for compning a fund to be fet apart for the ufe of the cumpany in cafe of extraordinary emergencies; fuch un. heard-of difpofal of their propesty without their ernlint not being warranted by the largen pretenfions e-
they ware :u luager relponfiule to them for thatir a'c. tions. By the eftablifiom of of general prefidency over all the affairs of the company, and by the nomination of judges for India, goverrmen: would in Aficiz transler the whole manacment of the aftairs of the company to the crown, and the company would have no farther thare in the bufinels than to pay what falaries the crown thought fit to aflian them. The pro- 558 prietors of $500 \%$. flock prefented a petition, fetting the proforth, that, by King William's charter granted to the company, and repeatedly confirned fince that time, in confideration of many large fums repeatedly advan. ced by the company to the public, they were legaliy poff:lfed of a right of voting at the election of direc. tors, making of by-laws, or in any other matter relating to the affairs and governmert of the company; but by a claufe in this regulating bill they were deprived of this right, and that under a pretence of preventing the pernicious practice of fplitting thock by collulive transfers; but fo far were the proprietors from giving way to fuch practices, that in the year 1767 they petitioned parliament for an act, by which the leveral proprietors entitled to vote flould be obliged to hold this qualification fix months at leafl before the exercife of their right, afterwards extending the time to twelve months, rather than the ant fhould fail of its intended effect. This propofed increafe of the qualification of the voters, however, could not in any degree anfwer the end defired; for the fplitting of ftock being conifined to fuch proprictors as held large quantities, they would find it an eafy matter to place their focks in the hands of lalf the number of perfons, and thus extend their influence in a great and undue proportion; but if ever government conceived defigns againt the company, they would find it much eafier to exectute them while the proprietors were few and opulent, than when they were numerous, and at the fame time independent and poffeffed of moderate furtunes. This petition produced a motion in the houfe of commons, "That it does not appear that the pro-Mution in prietors of 5001 . Itock in the Eaft India Company the r favous have been gunty of any delinquency in the exercite of fojected ins. their charter-rights accordiny to the feveral act of par- of come liament made in their bebalf." This, however, being cons. rejected, their regulating bill paffed in the houfe of commons by a majoity of more than fix to one. In the houfe of lords it paifed by $7+10$ 17. The duke of Richmond moved for a conference with the houle of commons; but this was refufed. He then moved that copies of all the paoers which had been laid before the commons flould be laid before the lords alfo; but this being likewile refufed, he joined fix oiher members in a proteft, the lubftance of which was, that the whole was a fcheme of government to get the power and wealth of the company into their hands; pointing out at the famt time the many particular infringements on public and private rights by pafling the bill.

All this time inquiries went on by the fele? and Ce-fnsentrac cret committees; the affairs of the company were in-tum ,is the veftigated from the ytar $\$ 756$, and m ny vieveffes "ampauy's examined concerning them. A icport was preten'ef the telect by General Buigoync, cuntaining many charges of man lelect cruelty and rapacity in the contuct of levers! pentle-commat-
$\underbrace{\mathrm{r}=\mathrm{r}^{\prime} \text { t,inn }}$ All their rights and pivilerges, by denying them the difinal of their own property after their creditors were properly fe ured by law. Their petition concluded with affariog minifers, that, rather than Cobmit to thefe conditions, they defired that any clams agraint the poffenions of the compmy might receive a legal decifion; from which, whatever might be the event, they would at leaf luave the fatisfaction to know

No regard beins flown to this petition, the motions were carried in favour of adminillration. To make fome kind of recompenfe, however, it was agreed on their part, that as the cumnany had a tock of teas amunting to about 17 millions of peunds in their warchoufes, they thould be alluwed to export as much of it as they thought proper free of duty, and employ the money thence arifing for the behoof of their own

This concefion in favour of the Eaft India Compsny proved in the event the lofs of the American colonies; nor indeed could thefe arbitrary proceedinga with fuch a confiderable body tend to imprefs the minds of any part of the nation with ideas farourable to the views of adminitration. In other refpects the miniter abated nothing of the difpofition he bad from firlt to laf flown with regard to the company. On in England, as well as the adminitration of all its prefidencies in Afia, in order to fuhject all their affairs, both at home and abroad, to the immediate power of the crown. No delinquency was charged, nor any fpecific ground of forfeiture affigned; yet by this bill more than 1200 freemen were to be disfranchifed and deprived of any voice in the management of their property. By cutting off the 500\%. Atockholders, the proprietary would become more manageable sy the crovn; nor was there any fecurity that the diveitors . 750 uld be faithful to the interefts of the company when what they could call their own. affairs.
the $3^{6}$ of MIy 1773 the following refolutions were laill down by him as the foundation of a bill for the eftablifhing certain regulations for the better management of the Eaft India Company, as well in India as in Europe. Thefe were, 1. That the court of directors fhould in future be elected for four years; fix mem. bers annually, but not to hold their feats loneer than four years. 2. That no perfon thould vote at the election of the directors who hid not poffefed their fock twelve months. 3. That the !tuck of qualification hould for the fuiure he roool. inftead of 5001 . 4. The mayor's court of Calcutta fhould for the future be confined to fmall mercantile caufes, to which its juridi\&tion only extended before the territorial acquifitions. 5. That, inftead of this court, thus taken away, a new one thould be eflablithed, confifting of a chief jutice and three puifne judges. 6. Thefe judges to be appointed by the crown. 7. That a fuperiority be given to the prefidency of Bengal over the other prefidencies in India. Each of thefe refolutions was carried by a great majority. The falaries of the jutges were fixed at 6000 . each, and that of the chief juftice at 80001 . The governor of the council was to ditagree-cil 10,0001 . each. By the friends of the company, de to the however, the bill was fuppofed to have a tendency to effect a total alteration in the company's conilitution have 25.0001 . annually, and the members of the counmpany.

Britala the company; particularly with regard to the depofi-
$\qquad$

554 Lord. live accutcd.

* Ser Indiplan. tion of Surajab Dowlah in 1756 . This was faid to have been the origin of all the evils that had happened fince that time. He infifted much on the treachery ufed in brinsing about that revolution, and particularly the fietirious treaty with, Onnichund; expofing the conduet of Lord Clive, who had caufed Admiral Watfor's name to he affixed to that treaty, which the admiral had refuled to fign in per ron *. He concluded with moving for the rellitution of all the money received in prefents or otherwife in lndia, while the receivers acted in a public cap citw ; and at laft flated the following refolutions: "That all acquifitions made under the influence of a military force, or by treaty with foreign powers, do of riph: belong to the ftate; that to appropriate acquifitions obtained by fuch means is illegal; and that great fums of money had been obtained by fuch means from the fovereign princes in Indiae" The general belief that many of the company's fervants had acted in a moft infamous manner, was at this tinse foftrong, that the above refolutions were carsied almoft unanimoully. Lord Clive defended himfelf by general proteftations of innocence; which, however, gained but little credit, till he entered into a particular refutation of the charges againft him. His friends were not of opinion that thefe were of an atrocious nature, and wifhed to excufe him by policy, neceffity, \&c. rather than load him with any great degrce of guilt. The treaty with Omichund was jullified by neceflity. Some faid, indeed, that as Omichund had the character of the moft acromplifhed villain in Afra, an Englithman only wifhed to have a trial of fkill with lism. This fevere farcalm, however, was a mere piece of wit, without any folid foundation; for the crime, if any there was in that tranfaction, undoubtedly lay in the dethroning a fovereign prince by means of traitors, not the cheating of thele traitors of their resward. Indeed, if once we admit treachery into our dealings at all, it is in vain to pretend any fubjection to the rules of juftice; for we are already beyond its jurifdition.

General Burgoyne now moved, "That Lord Clive, in confequence of the powers vefted in him in India, had received at various times prefents to the amount of $23+, 000$. Sterling, to the dithonour and detri* ment of the fate;" but this being rejected after violent debates, the following was fubftituted: "That Lord Clive did, in fo doing, abufe the power with which he was ertrufted, to the evil example of the ferrants of the public." This alfo being rejected, another

535
He is acquitted.

556
Proceed. ingsin 1. merican ar tiirs. meritorious fervices to his country." Thus the matter was concluded, and the affairs of the company delivered into the hands of admisiftration, who decl..sed that their regard for its welfare was the fole motive for bringing about this revolution.

The affairs of the leaft India Company were fucceeded by thofe of America. The ill humour occafioned by the taxes laid on that couniry has been already taken notice of. 'Th. ftamp act haci excited among them a fpirit of induftry, economy, and a defire of ferving themfelves with their own manufakures, which had never been forgorten. This was, at that time, as well as afterwatds, imputed to wilfulnefs, or the difcontent
of a few, which would afterwards fubfide of itfelf, or be fuppreffed by the voice of the majonity; when things would of courfe revert to their old channel. The tritling tax on tea, however, which had not been repealed, and the allowance given to the company to export what quantities they pleafed, now threw matters into a ferment not to be quelled by any means whatever. The various proceedings in America, the tumults, and fubfequent war, are fully taken motice of under the arricle United States of AaErica. Here it only remains to give an account of the manner in which the legillature and people of Great Britain were affected by thefe events. It has already been remarked, that ever fince the conclufion of the peace in 1763 the difpofition fhown by government to augment the revenue, for which indeed there was at that time an evident neceflity, had produced in the popular party of Great Britain a fpirit very fimilar to that manifefted by the Americans, though in an inferior degree; fo that the pattiots of Bitain : ffected to confider the Americans as opprefled by government, and fuffering in the fame caufe with themfelves. The deflruction of the tea at Bulton and other places in America, however, confiderably diminifhed the number of their friends, and made many of thofe who ftill adhered much lefs fanguine in their caufe. The matter was announced to parliament by a fpecial meflage from the throne. Load North and the other minifters fet forth the conduct of the colonilts, particularly of the town of Bofton, in a moft atracious light, and concluded that now government was perfectly juftifiable in any meafures they might think proper to redrefs the wrong, and intlict fuch punifment on the toun as the enormity of the crime fecmed to deferve. Oppofition did not pretend to exculpate, though it was ftill attempted to excufe them, by deriving all the difturbances in that country from the arbitrary and abfurd meafuses purfued and obfinately adhered to at home. This heavy charge the miniftry evaded by drawing the attention of the houle to the more important confideration, Whether the Americans were now to be dependant, or independant, on Great Britain? The Bofton port-bill being then brought in, was carried, but not without confiderable oppofition, bath within and without doors. A petition was firf prefentid by Mr Bollan, apent for Debates on the council of Maflachufet's Bay, urging an act of port-bill, Oueen Elizabcth for the fecurity of the libesty of the and peticolonics. This uas prefented before the bill had actually made its appearance; hut fo little regard was paid to it , that, dusing the very time it lay on the table, the bill was brought in by Lord North. Alter it had piffed two reading!, that gentleman prefented another, defiring to be heaid in behalf of the town of Bofton, for the council of $\mathrm{N}_{\text {affachulet's Boy. This was ablo- }}$ lutely rcfufed; becaule, though Mr Bollan was agent for the colony, he was not for the corporation of the town of Bullon. Neither could he be fo for the council of Maffachufet's Bay; for as that was neceflarily fluctuarme, the body which had appointed him was now no longer exifting. This appeared very inconfttent to many of the members, and produced a greater oppofition in the houfe than would othetwife in all probability have enfued. A new petition quickly followed from the lord mayor, in the name of the natives and inhabitants of North America refiding at that

## B R I [537] B R I

Fritain, time in Iomlon. This was written in a more fpirited Ayle, and boidly infifted that the bill was illegal, unprecedented, anjuft ; and that, under fuch a precedent, no man or body of men in America could have a moment's fecurity; the charge being brought by the enemies of the town, and the puniffoment inflicted without hearing them in their own defence, or cven making them acquainted with the charge ; and they concluded with thefe remarkable words, that "the attachment of America would not furvive the jultice of Britain." As little regard being paid to this as to the former petitions, and all propolals for a delay rejected, the bill pafied both houfes without a divifion; the minority, notwithfanding their oppofition, not choofing to diffent publicly from the firft ftep taken by government to reduce the difobedient colonies. That this obnoxious bill might not be fent to America without fome mitigation, however, they propofed the repeal of the duty on tea laid on in 1767 ; but this was alfo rejected, probably from a vain expectation that the oppofition of the Americans was that of a mere tumultuous mob, and that by flowing a proper firit and perfeverance the miniftry could not fail to come of victorious at laft.

The extreme obftinacy fhown by minifters, in this firt inflance, undoubtedly proved very prejudicial to their caufe, not only by exafperating the Americans, but by roufing the indignation of minority, and making their oppofition fo violent and determined, that the Americans could not but conclude that they had a very ftrong party in their favour on this fide of the Atlantic. This appeared in every fubfequent tranfaction relating to the colonies. The bill for regulating the government of Maflachufet's Bay did not pafs without a proteft, from which we thall only extract the following fentence : "This act, unexampled in the records of parliament, has been entered on the journals of this houfe as voted nemine diffentiente, and has been fated in the debate of this day to have been fent to the colonies as paffed without a divifion in either houfe, and therefore as conveying the uncontroverted univerfal fenfe of the nation. The defpair of making effeQual oppofition to an unjuft meafure has been conftrued into an approbation of it."

The like corifequences enfued on paffing the aet for the impartial adminiftration of juflice. In the proteft on this occafion the lords ufed the following expreffions: "The bill amounts to a declaration, that the houfe knows no means of retaining the colonies in due obedience but by an army rendered independent of the ordinary courfe of law in the place where they are employed. A military force fufficient for governing upon this plan cannot be maintained without the inevitable ruin of the nation. This bill feems to be one of the many experiments towards the introduction of effential innovations into the government of this empire. The virtual indemnity provided by this bill for thofe who fhall be indicted for murders committed under colour of office, can anfwer no other purpofe. We confider that to be an indemnity which renders trial, and colffequently punifhment, imprafticable. And trial is impracticahle, when the very governor, under whofe authority acts of violence may he committed, is impowered to fend the inffruments of that violence to 5000 miles diftance from the feene of their offence, be-

Vom IV. Part II.
yond the reach of their profecutor, and the local evi- Tritais. dence which may tend to their conviction. The authority given by this bill to compl the tranfportation from America to Great Britain of any number of witneffes at the pleafure of the parties profecuting and profecuted, without any regard to their age, fex, health. circumftances, bufinefs, or duties, fecms to us fo cxtravagant in its principle, and fo impracticable in its exccution, as to confirm us farther in our opilion of the fpirit which animates the whole fyftem of the prefent American regulations."

A fill greater oppofition was made to the Quebec Lebates on bill, infomuch that, before it could be carried, the mi the Puebei niflers were obliged to drop much of that high and bill. alpising tone to which they had accufomed themfelves in talking of American affairs. The minority contended, that here, without any neceffity pleaded, or cven fuggefted, an arbitrary influence was extended by act of parliament to that province, furnifhing a dangerous precedent, an an additional inflance of the averfion which miniftry bore to the rights of the people. They argued likewife in favour of the mode of trial by juries, and thought that the eftabliftoment of the Roman Catholic religion there gave it a preference over the Proteftant, which was now only to be exercifed by toleration. The people at large alfo were alarmed at the religious part of the bill, and it is not impoflible that the fufpicions conceived at this time might contribute in fome meafure to the dangerous infurrections of 1779 and 1780 .

At the conclufion of the feffion his majefly expreffed the greateft fatisfaction at what had been done, and hopes of the good effects that would attend the new regulations. The reception they met with in America is related in its proper place; in Britain the people feemed to wait the event with indifference, but their bad fuccefs with the colonits furnifhed the minority with new matter of reproach to caft on adminiffration. The parliament in the mean time was diffolved by proclamation, and a very fhort time allorred for the election of new members; fo that if oppofition at that time had any ffrength, they had not now time to exert it. The new parliament met on the 30th of November Parlazmen 1774; when his majefty acquainted the houfes that a tary pro1774; when his majefty acquainted daring fpirit of refifance fill prevailed in A meri- $177 \downarrow$ seedings in ca, notwithfanding the moft proper means had been taken to prevent the mifchiefs thence arifing, and affured them that they might depend on a firm refolution to withfand every attempt to weaken or impair the fupreme authority of this legillature over all the dominions of the crown. In anfwer to this fpeech the minority demanded a communication of all the letters, orders, and inflructions, relating to American affairs; but this being overruled, and the addrefs carried as a matter of form, American affairs were delayed, in fpite of all oppofition, till after the holidays. In the queftion on the addrefs, the flrength of adminiftration was to that of their adverfaries as 264 to 73 .

In the beginning of 1775 the minority received a Lord Chaconfiderable acceffion of Arength by the return of Lord tham's mo. Chatham, who, after long sbfence, again made his ap- recal of the pearance in parliament. He now teftified his difap-twops reprobation of the meafures which had been purfued jeacd.
with regard to America in the warmeft terms; moved for addrefling the hing to recal the troops from Bofton;
predicted,

## B R I

Ithain. preuitacu, that if miniters went on in the way they had done for fome time, they would m.ke the crown not worth the !.ing's wearing; that the kingtom was undone, Exc. All his elog̣icuce, howevar, pruved at this time inefiectual; alniaifration was determined epon forcing the $\Lambda$ inericans into fubjection, and his motion was rejected by 68 to 19.

Lorl North now prefented the papers which hat been cal!al for by the minority; but lelt the publication of parricular namts thould prove detrimental tu individuals, only fucla parts as adminifration thought proper for public infpection were laid before the houfe. This was complained of, but to no purpofe; and the papers, in their mutilated Alate, wcre laid before a committee of the whole houfe. In the mean time petitions again! cocrcive meafures with America had been received from moft of the trading companies uf the kingdom: which, though highly difpleafing to adminiftration, could not be ablclutely rejeeted, though it was fully determined not to yield to their requiells in the fmalleft degree. A committee was therefore appointed to take them into confideration, which was not to take place until the American aflairs were alfo confidered. The reafon given fur this method of proceeding was, that the confideration of commercial matters ought not to juterfere with thofe of the political kind: each of them being fufficiently embarraffing without any other. This delay of hearing thele petitions was fuipofed to be an abfolute rejection of them in effiert; and fo indeed it proved to be, the committee to which they were configued being bumorounly called the committe: of oblivion. The merciants of London, however, were determined not to give up the point until they had exerted themfelves to the utmoft. They drew up a paper in which they denied the diftinction eftablithed by miniftry. They affirmed that the corineation between Great Britain and America was chiefly of a commercial mature, and that the manifold regulations adopted for the mutual profperity of the colonies and of the mother-country formed the great political clain which united them to one another. Qieeflions of commerce and policy, therefore, with regard to them, ought never to be divided, but examined jointly, and could never be thoroughly undertood if confidered is any other way.

This remonfrance was feconded by all the powers of oppofition; but the truth was, that adminiffration had already determined what line of conduct they were to follow, and therefore wifhed to hear as little as poffible on the fubject. "War (fays Dr Ardrews) was now the word : and notwithltanding no weightier reafon could be given for not attending to what the merchants had to fay, than this very deternination, yet that was the very motive that impelled minifters to refufe them a hearing, left thefe fhould make it appear how unwife it was to precipitate the nation into fuch a meafure."

But though there is not the leaft reafon to doubt that adminiffration were now fully determined upon a war, and therefore wifhed to be troubled with as few
569

## Arguments

 ufed in tasour of ad. miniltraTun. objeftions as poffible, they were by no means deficient in arguments for the defence of their own cunduct. They alleged that the petitions fu much recommended to the attention of the houfe "ere principally the work of a factious party. The advantages accruing from theAmcrican trade were owing to the dependent fituation of the colones, who now aimed at a fuperiority o:e: Great Eitain, or at lealt at haking off cr.tirely the fuperiority which the mother-country had till nuw exescifed over them without the fmalielt complaint. It was the advontage of the merchants themfelves that was confulted by maintaining thet fuperiority; and the merchants themfelves would be the firft to feel the bad confequences of its being lolt. War and its confeŗuences are no doubt very terrible, but fometimes are necefiry, to prevent greater evils. The greateft evil that can befal a trading nation is the lofs of its commerce; and were the Ansericans to perfift in their courfes at that time for a few years lunger, this confequence muft inevitably enfue.

It was befides infifted, that though adminiftration were to yield the prefent conteft, the warmeft advocates for America could not pretend to fay what would be the laft of its demands. The Americans aimed in reality at the repeal of whatever appeared obnoxious to their immediate intereft: But that and their real intereft differed very much. The greatefl political evil that could betal them was to be deprived of the political and commercial fupport they received from Great Britain; and to this they mult ultimately fubmit, if they fhould ever fucceed in the purfuit of that delufive phantom of independence which they naw accounted thacir happief fituation. In fhort, adminifration infifted, not without a great thow of reafon, that the Americans were not to be reclaimed by conceffions. Meicantile people, indeed, might imagine fo, from the facility with which conceflions would be made, and the Ipeed with which tranquillity would be reftored. But tratiquillity procured in this manner would lat no longer than till the colonies, unfettered by any regulations, perceived, or imagined they perceived, the benefit of dealing with other countries, and carried their own commodities wherever they thought proper. This was the point at which_they inconteftably aimed, whatever they might pretend to the contraty; for, notwithflanding the boafts they made of the vaft bufinefs tranfacted with Britain, it was well known to arife from the immenfe credit they were indulged with thene, and which they could not expeet elfewhere.

The honour and character of the nation were now alfo faid to be at fake. The Britifh had often taken up arms for matters of lefs confequence; why then ftould they now hefitate in a cafe like the prefent, where honour and interefl both called upon then for the moft vigorous and fpeedy exertions? Formesly it was the cuftom of the merchants to fecond the willes of miniftry in this refpect, inftead of oppofing them. The inconvenience of fufpending their profits for a time mult be fubmitted to, and their enemies would experience as many if not more of the fame kind and it would be unworthy of the character they had fo long fuftained, to yield to indignities for the fake of profit. The loffes above mentioned, bowever, would be but trifling in comparifon of thofe that would fullow in time to come, floould Britain from want of fpirit give up the affertion of her juft rights. This was a policy hitherto unknown in Bhitain, which had heretofore been noted for the ardour and celerity with which they were maintained.
The end of all this altercation was, that the motion

## B R I

Britain. in farour of the merchants petitions was rejected by
$57^{\circ}$.
. February 1775. The intent of this bill, he faid, was to fettle the troubles in America, and to affert at the fame time the fupreme legißative authority and fuperintending power of Great Britain over her colonies. This was to be done by their acknowledging on their part the fupremacy of the Britifh leginature and the fuperintending power of parliament. No taxes were to be levied in America but with the free confent of their affemblies. It afferted a right in the erown to keep and ftation a military force eftablifhed by law in any part of its dominions; but declared, that it could not be legally employed to enforce implicit and unlauful fubmifion. A congrefs might alfo be held, in order to recognize the fupreme fove. reignty of Great Britain over the colonies, and to fettle, at the fame time, an annual revenue upon the crown, difpofeable by parliament, and applicable to the exigencies of the nation. On complying with thefe conditions, the acts complained of by congrefs were to be fufpended, with every other meafure pointed out as a grievance, and the conftitution of their governments to remain as fettled by their clarters. This bill was, however, deemed at once totally inadmiffible, on account of its alleged partiality to America, by the various conceffions it enacted, and particularly by empowering the colonies to affemble in congrefs; a meafure which, of all others, was at that time the mof offenfive, and fuppofed to be the mof injurous to the Britih interef.

Lord Chatbam was by no means deficient in arguments in fupport of his favourite plan; but thefe, though fupported by all the powers of eloquence, proved unfucceffful; the propofal was ultimately rejected by 6 r to 32 . So determined were the majority in giving this an entire rejection, that it was not even permitted to lie upon the table; which, however, may be confidered as a piece of indignity offered to that great man, proceeding rather from the indifference with which he had been received at court for fome time, than from any real and thorough conviction of the inutility of the plan he propofed.

A new petition was next prefented to the houfe of commons by the proprietors of eflates in the Weft India iflands: reprefenting their alarm at the affociation of the Americans, and their intended foppage of trace with the Britifh iflauds; the fituation of which, they faid, would be very calamitous, if the acts in quefion were not immediately repealed. The trade of thefe
infands was at that time of the mott extenfive nature.
Eritaip. All quarters of the globe were concerned in it; the returns centered in Bitan, and were an immenfe addition to its opulence, infomuch that the Britilh property there amounted to no lefs than 30 millions flerling. But the Weft Indies, however wealthy, did not produce the neceflaries of lite in fufficient abundance for their inhabitants. Large importatiuns were continually wanted, which could only be fupplied from Nortl America; and were they to be cut off from a communication with that continent, they would fhortly be reduced to the utmoft diftrefs. Such was the fubftance of this petition ; to which no more attention was paid than had been to the reff. To adminiftration all pe-Rejectes. titions now appeared to be the contrivance of faction; and it was faid, that however inconvenient the coercive meafures might be, they ought not to be retarded by the confideration of any temporary loffes. As it was neceffary, however, to let the nation know the ultimate refolves of adminiftration refpecting America, it was at laft done by Lord North in a long fpeech, in which the moft remarkable circumfances relating to the difpute were enumerated. It was afferted, that univerfal fermentation, then prevailing in America, proceeded from the unwarrantable arts and practices ufed to difpofe them againt the ruling powers in Britain; and afferted, that, notwithtanding all their complaints, the public charges borne by individuals in A me:rica were, on the ftricieft computation, nut more than I to 50 , when compared with what was paid by individuals in England. Nothing, therefore, hut a fettled determination to quarrel with the parent fate could induce the Americans to perfift in their difobedience to the lawful injunctions laid upan them, which were neither injudicious nor oppreffive; but on the con* trary, framed with all poffible lenity, and counterbalanced by advantages which were not poffefled by Britain. It was therefore a firit of refiflance which animated America, and not a difcontent at oppreffions, which plainly had no exiftence. For this reafon it was propofed to the houfe to fend a greater force to America; and to pafs a temporary act, fufpending all the foreign trade of the diferent colonies of New England, and particularly the Newfoundland fiflery, until they confented to acknowledge the fupreme authority of the Britifh legindature. Sic. upon which thefe refirictions Should be taken off, and their real grievances, if any fuch there were, redseffed upon making proper application. New England, they faid, was juftly fingled out upon this occafion, as being the moft guily of the whole. The pthers, as lefs faulty, it was hoped, would yield with lefs compulfion; but the queftion now was fimply, Whether we would at once abandon all claims on the colonies, and inftantly give up the advantages arifing from our fovercignty, and the commerce dependent on it? or Whether we hould refort to the meafures indifpenfably neceffary to enfure both?

An addrefs was now carried, which, in the ideas of or the ad oppofition, amounted to an abfolute declaration of war. drefs on the The confequences, therefore, were printed out with the American $\rfloor$ utmoft freedom, and fome even denied the charge of papers. rebellion fixed on the province of Maflachuft's Bay. The people there, they fail, had done nothing but what the conlfitution allowed; they had refifted arbitrary meafures; and the examples fo frequently fet

## Britain.

them it feme vere fufficient to judify their conduct. The a pellation of rebels, they raid, was dangerous, and migir better be fpared; it would only ferve to render the $n$ defperate, and infpire them with a decernination to rafilt to the laft, from an apprebenfion that their lives and properties were forfeited. This laft confideraton, however, was made very light of by adminiftrati n. Great frefs, they faid, was laid upon the union $0^{\prime}$ the colonies, but a very little time would fhow with how much impropriety. The principles on which they were aflociated were too felfodenying to be fupported by human nature, and were too inimical to the intereft and feelings of individuals to bind them long together. In other refpects this union of the colonies might be viewed with indifference, and even contempt. The natives of America, it was faid, were no foldiers; they were averfe to military difcipline, and incapable of fubordination; they were of a lothful and fpiritlefs difpofition; uncleanly, liable to ficknefs, and eafily overcome by fatigue. Such people as thefe would never face a Britifh army : and a very fmall force would be neceflary to put an end to all their projects of independence.

Thefe were the principal arguments for and againft this addrefs, which was carried by 296 to 106\%: but fo important was the fubject of it deemed by the mi- nority, that a motion was made for recommitting it, on account of the confequences that would probably refult from the profecution of the meafures rccommended. A very long and violent debate enfued: the event of which was, that adminiftration contended as ufual for the neceffity of enforcing obedience with fire and fword. The Americans, they faid, were become incorrigible through forbearance; lenity was a fubject of derifion among them, and was imputed to imbecillity and fear ; they imagined themfelves able to abolifh the fovereignty of Britain in that country, and were now refolved to do it. It was therefore incumbent on every native of Britain in fuch a cafe to fland forth, and vindicate the iritereft and glory of his country; and it was the duty of parliament and miniftry to call forth the whole fpirit of the nation to a conteft in which every thing deat to them, both in their public and private capacitice, was fo deeply concerned.

In this, and fome former debates, the danger of being involved in foreign wars on account of the colonies had been infifted on; but this was looked upon by adminiffration to be improbable. It was hardly to be imagined, they faid, that foreign powers would behave in a mannice fo very impolitic as to encourage rebellions in other colonies, which might, in a very fhort time, become precedents for imitation in their own. The number of friends 10 government in America was likewife very much relicd upon. A proper reinforcement to the troops already there would encourage thofe to declare themfelves who were at prefent too timid to a. vow their fentiments: Thefe, if duly fupported, would be found to be no inconfiderable number; and when ydded to the forces flationed among them, would undoubtedly counterbalance the fower of the malecontents. This project of arming the Americans againft ore another was reprobated by oppofition more than all the reff. The addrefs itfelf was a meafure replete with barbarity as well as imprudence; tending to put
arms in the hands of every man throughout the conti- Britain. nent who fufpected the defigns of the Britifi adminiftration, and to expofe to ill ufage and ruin every perfon who was known, or imagined, to be a friend to Great Britain. The Americans were faid to afpire at independence; but if any thing could bring this about, it would be the conduct of miniftry. The moft obedient and loyal fubjeds cannot have patience for ever with a tyrannical government. They will undoubtedly rife at laft and affert their tights; and thofe who ftyle them rebels on that account ought to remember, that oppreflion not only produces but juftifies refiflance. It had always been believed by the Americans, without any contradiction from Britain, that internal taxation in America belonged to the affemblies of the colonies, and to them only. There were opinions in all nations, which the legiflature would refpect, while they produced no bad confequences. This opinion ought not therefore to have been attacked at fuch an improper feafon, after having been virtually recognized by the repeal of feveral acts, and apptoved by fome of the moft learned and intelligent people in the kingdon. It was the greateft misfortune that could befal a flate, when its rulers endeavoured, without any apparent neceffity, to alter the fyftem and maxims of goverring long adopted, and the utility of which had been confirmed by experience. This was, however, the cafe with Britain. The mildnefs and benignity which were wont to direct the meafures of former minifters were now laid afide for feverity and imperioufnefs; while implicit obedience rras impofed upon the colonilts, as the only condition by which they could purchafe peace.

The afperfions of cowardice, fo largely thrown upon the Americans by the minifterial party, did not pafs unnoticed. It was obferved, however, that were thefe ever fo juft, the very nature of their country would fight for them. By this alone our military enterprifes would be retarded and impeded in a confiderable degree; while the fintews of war would undoubtedly be greatly relaxed, as the fufpenfion of fuch a confiderable commerce as that of our colonies could not fail to be feverely fclt.

Befides all this, the views and principles of minifters were attacked in the moft violent manner. They were faid to be reviving the old exploded doctrines of hereditary right and paflive obedience.-They required the Americans to fubmit unconditionally to the will of Great Britain, for no other reafon but becaule flee was the parent flate : but if no better reafon could be produced, they could not be jufly blamed for their difobedience. The tics between Great Britain and her colonics, however, were of a far more noble as well as more binding mature than even origin and confanguinity. Thefe ties were the conflitution tranfmitted from Britain, and the brotherly affifance hitherto afforded them by Englifhen ; and which ought to render the name dear to them. While thefe ties remained unviolated, there was no room to complain of their behaviour; but they would never fubmit to defpotic authority in Englifhmen more than in any others. Such unwarrantable principles rendered it no longer a queftion, whether the meafures of adminilltration flould be confidered, but whether the minifters themfelves ought not to be deprived of the power they excrified fo unconditutionally.:

Pritain. confitutionally: And the queftion was not now between Great Britain and America, but, whether we frould give up our colonies or our minitters.

Language of this kind excited the indignation of the minitterial party to a very high degree. They now charged minority in very plain terms, with the guilt of all that had happened. A factious republican fpirit, they faid, was gone forth; by which every perfon who wrote or \{poke on the American caufe was actuated; and which had not only induced the Americans to commence a rebelliun againft the pareat flate, but had filled the houfe with incendiaries. The final iffue of the difpute was, that the recommitment of the addrefs was lolt by 288 to 109 . The debates were the moit violent that had ever been known in the Britifh parliament ; and fo important was the fubject reckoned, that not only the natives of Britain, but even the foreign minillets in London, watched the motions of adminiftration with the utmoft anxiety, as confidering it a point which might probably give a new face to the affairs of all Europe.

All thefe victories of adminiffration were not fufficient to prevent new enemies from flarting up. Petitions had been preparing by the London merchants trading to America, and from thofe concerned in the Weft India trade, to be prefented to the houfe of lords. This tafk was undertaken by the marquis of Rockingham, but he was prevented by a previous motion ia favour of the addrefs. A long and violent debate, however, enfued concerning the necelity and propriety of receiving them. The papers on which the addrefs had been founded were faid to be partial and mutilated, for which reafon the houfe ought to pay the greater regard to the reprefentation of the merchants; whofe teftimony, as perfons deeply and effentially interefted in bringing truth to light, might be depended on with much greater fafety. It was urged, that they earneftly defired to be heard before the houfe took any final determination with regard to America; a refufal would amount to a public declaration, that parliament was refolved to oppofe the fenfe of the petition, right or wrong; and fuch treatment was in cevery refpect unwarrantable, and no lefs contrary to found policy than to equity and good manners.

All thefe reprefentations, however, had no weight with adminiftration : they affected great forrow at being obliged to declare that the petition could not be received confiltently with the interef of the kingdom; they put the merchants in mind that the American proceedings threatened fatally to diminilh the commercial greatnefs of this kingdom, in which cafe none would fuffer fo mucls as themfelves; and they infifted that confidence ought to be put in the wifdom of parliament, as it was not doubted that by properly afferting the fupremacy of the Britill leginture in the manner propofed, all thofe advantages about which they were fo anxious would be fecured. They were therefore exhorted to fubmit to temporary inconveniences, whicis could not be avoided in the prelent pofture of affairs, though probably they would not be of long duration.

In the mean time matters went on from bad to worfe in New England; fo that it was foon perceived either that the friends of gavernment in that colony did not exert themfelves, or that they were far from
being fo numerous as had been imagined. In order to make their coercive plan the more effectual, therefore, it was now judged neceflary to extend it fo that every individual of the colony thould become fenfible 578 of the punifthment. This, it was fuppofed, would be On the done by a bill for reftraining the four provinces of New New EngEngland from commerce with Great Britain, Ireland, fand reor the Britill Wett India iflands; and prohibiting bill. them from carrying on the fifhery at Newfoundland. The realons given for this were in fubfance the fame with thofe for the others; and indeed both parties had now lo much exhaufted their arguments, that very litthe new matter was left for either. Every ftep taken by miniftry, and every propofal made by them, however, produced a violent debate; and though they conflantly gained the victory, it was not without the mortification of hearing their principles and conduct reprobated in the moft opprobrious manner. In the preferit inflance the bill was carried by 26 r againf 85 ; but a petition againt it was quickly offered by the London merchants concerned in the American trade, fetting forth the danger that would accrue to the fifheries of Great Britain from fuch a prohibition.

From the evidence brought in fupport of this peti-General action it appeared, that ten years before the American count of the fifheries had been in fuch a flourihing flate, that the finherics. four provinces of New England alone employed near 46,000 tori of hipping and 6000 feamen; and that the produce of their fifheries in the foreign markets amounted in the year 1764 to upwards of 320,000 l. Since that time they had greatly increafed; and what rendered the fifheries particularly valuable was, that all the materials ufed in them, excepting only the timber for building the veffels, and the falt for curing the fin, were purchafed in Britain, and the nett proceeds of the trade were alfo remitted thither. It appeared alfo, that it would not be practicable to tranf$\mathrm{fer}_{\mathrm{r}}$ thefe filheries to Halifax or Quebec, though ever fo much encouragement were given to either of thefe places, as they had neither veflels nor people to man them, and would never be able to procure fupplies of feamen from New England on account of the averfion of the inhabitants to the government of thele two provinces.

Some other circumftances were likenife urged as Arong reafons againft this bill; particularly the commercial concerns of the city of London with New England (to which alone the colony Itood indebted for near a million), and the bad confequences of it to the people of Nantucket. This is a barren ifland, lying of 5 So off the coalt of New England, about 15 miles long, habitants of and three broad, containing about 6000 inhabitants, al- Nantucket. moft all Quakers. The natural produce of this ifland, it was alleged, could not maintain 20 families; but the indultry of the inhabitants was fuch, that they kept 130 veffels conftantly employed in the whale-fifhery, which they carried ou in the north feas, to the coants of Africa and Brazil, and even as far as the Falkland iflands and the floores of Terra Magellanica. Thefe people, it was faid, ought undoubtedly to have been exempted from the common calamity, were it only from the applaufe due to to much induftry and refolution.

The inflance of Nantucket was fo Atrong, that adminiftration, with all their obllinacy, were obliged to
relax a little; and, of their own accord, afforded them the relief they had fuch juft reafon to expect. That the petition in the main might prove unficcefsful, however, another was prefented by the inhabitanis of Poole, the tenor of which was directly opponite to that of the city of London. In this it was fet forth, that the rellrietions propofed by the bill would not prove derimental to the traie of England, which was fully able, with proper exertions, to fupply the demand of foreign markets. The advantage of the $N$-wfoundland fimery more than that of Ne:r England to this courtry was, that it bred a great number of hardy feamen peculiatly fit for the fervice of the navy, while the New England feamen were, by ast of parliament, exempt from being preffed. It appesared alfo from the examination of witneffes taken in fupport of this petition, that the fifhery from Britain to Newfoundlard employed about 400 fhips. amounting 10360.000 tons, and 2000 thallops carrying 20,000 tons and narigated by as many feamen. Each leafon produced 620,000 quintals of fifh, and the returns at a moderate rate were valued at 500,0001 .

The bill was debated with great animofity in the heufe of peers, and produced a remarkable proteft, in which the meafures of government were foken of with great feverity. "That government (faid hey) which attempts to preferve its autharity by deftroying the trade of its fubjects, and by involving the innocent and gruilty in a common ruin, if it acts from a choice of fuch means, confeftes itfclf unworthy; if from inability to find any other, admits itfelf wholly incompetent to the end of its inflitution." They alfo reprobated in fevere terms the affertion already mentioned, that the Americans wanted fpirit to refift, and that Baitain would find them an eafy conqueft. Such language was reprefented as altogether void of foundation, and the mere effect of party-fpirit and refentment. It was alfo the more improdent and unadvifed, as tending, in calc of coercive meafures, to llacken the care and folicitude with which they ought to be purfued, and to occafion remiflnefs in thofe to whom they might be entrulted, from a perfuafron that the enemy to be encountered was not to be ferred, and could eafily be overcome.

The final refulution of redusing the co'onics by force being low taken, it became necelfary to make proper preparations for the purpole; and in this the conduct of adrrinifration was little lel's cenfured than in other refpects. As the above-mentioned opinion, that the 1 mericans were timid and incapable of becoming foldiers, prevailed ereatly at that time, a force of 10,000 . men was judged fufficient to reduce the province of New England to obedience. This was vehemently oppofed by the minority. They infilled that the force was totally inadequate, and only calculated to produce expence to no purpofe. The firll impreffion, they very jully obferved, ought to be decifive, if polftule; and in order to render it fo, it was neceffary to fend fuch a liret and army as might cufure the confidence of the public, and be certainly capable of furmounting all obnacles. Many of the friends of adminifaration wree ef the fame fontiments in this refpeet ; and the only reafon affigned for aceing utherwife was a hope that the Amsricans nould, upon mure mature confideration, defift from il cir uppofition. 'That they might the more reidily be induced to this fubmilion,

Lord North's conciliatory propofition was formed. By Britain. this it was enacted, that when the governor, council,
and affembly of any of the colonies, fhould propofe to Lord make a provifion for the common defence, \&c. and if North's fuch provifion thould be approved of by the king inconciliatory parliament, the levying or impoling of taxes on that bill. colony thould then be forborne, thofe duties excepted which it might be expedient to impore for the regulation of commerce; the nett produce of which thould be carried to the account of the colony where it was raifed. But this propofal, though highly extolled by the friends of adminiflation, was no. lefs reprobated by minority than the others had been. It was faid to be infidious, and calculated for the purpole of raifing a revenue, which was now faid to be the object of minifters. There was no effential difference between the prefent and former modes of taxation. The colonies were as effectually taxed without their confent by requiring them to pay a fated fum, as by laying a fumber of duties upon them to the fame amount. There was befides a capital deficiency in the propofol, viz. that no fum was fecified; fo that the Americans were left totally ignorant of wh:t the demands of Britain might be. After a long debate, however, the queftion was carried in favour of adminilitation hy 274 to 88.

The like fate attendsd a petition tri the throne from the ifland of Jamaica. Infead of relaxing any thing of their Ceverity, the minifty now included the fouthern colonies in the reftrictions laid on New England. S:ill, huwever, the petitioners were indefatigable in their endeavours to be heard. The Weft Indıa mer. Inefectual chants and planters feconded their laff petition by a endeavours large detail of circumfances relating to the Britifh Indsa plant. inands in that past of the world. This affair was con-ers. ducted by Mr Glover, a gentleman equally celebrated for his literary talents and commercial knowledge. From his inveltegations it appeared, that, exclufive of the intrinfic worth of the iflands themfelves, their ftock in trade and other property amounted to no lefs than 60 millions; the exportation to Britain had of Immenfe late been near 200.000 hogftheads and puncheons of value of fugar and rum, amounting to no lefs than four millions thefe in value; the direct revenue arifing from which was 700,000 pounds, befides that which accrucd from the ${ }_{5} \$ 6$ collateral branches depending upon it. All this, how-All concil. ever, was ureed in vain. Concilintory propofals were atory promade by MIr Burke and Mr Hartley, but they were pofals inef rejected by great majorities. Thefe propolals, indecd, fectual but inllead of ferving the caufe they were meant to pro-detrimenmote, did the very reverfe. A dread was entertained ${ }^{\text {all. }}$ of the confequences which might enfue from the republican opinions now fu prevalent in the colonies, and all partiality towards them was looked upen in fuch a criminal lighe, that their opponents becante deaf, on many occalicus, to the voice of reafon and $5^{8} 7$ lumanity when niged in the:r behalf. On the other Extreme hand, the favourers of America urged on by a furious violence rff zeal, and even refentment againft thofe whom they both pare looked upon to be promoters of arbitrary meafures, erred equally in their oppofition to miniffry. This violcnt party Ipirit appeared nut only among the fcople at large, bat broke forth with the utmoft fury in parliament, where :he debates ofen refombled the ballitge of B:llingfate ratber than the deliberations of the firl afimbly in a great and powerfal nation.

Fritain. In this temper of mind it is no wotider that the Atate of affairs was foarce ever truly reprefented by cither pars. Gosernment continued to ente new lawa, now in vain, arganft the Americans; their antagonits oppofed thefe in a manaer to litile different from what has been alseady related, that any farther account of the debates would be as unentertaining as tediuas. Other petitions were prefented and treated with ne. glect. The increafe of unton and preparations for war among the colonifts were by the miniferial party treated as the mere commotions of a headfrong mob; and by the other as an afliciation of an injured and virthous people, who were about to found a mighty empire in the wef, while Britain was to dink in utter difgrace and contempt by their mere feceffion, without making any account of their exploits in the field, which could not fail to equal thofe of the heroes of antiquity. On the fame principles the event of the Kkirmifh at Lexington was magnified by the one into a "difgraceful defeat" on the part of the Britill; and by the other treated with abfolute unconcerin, as if no regard whatever was to be paid to it, nor any inference drawn from thence concerning the fate of the wat in general. Thus alfo the battle at Bursers Hill, and all the tranfactions of the year 1775 , were unfairly Aated by both parties; and the only conlequence enfuing from thefe mifreprefentations was the infiaming to a viulent degree the refentment betwist the two parties; one of which deprefled the Americans to the rank of confummate poltroons, while the other exalted them almolt to that of demiguds.

While thefe altercations continted to agitate the minds of the fuperior clafles of people in Britain, the middle and lower ranks remamed in a kind of indifference, or rather were againit the proceedings of minifry. This oppofition could not indeed influence the councils of the nation, but in other refpects it proved very troublefome. The levies were obitructed, and the recruiting fervice was never known to go on fo heavily; numbers of people of that defcription not only refuling the ufual proffers, but even reprobating the caufe in which they were folicited to engage. Befides this, feveral officers of high rank thowed a great
finguifhed himfelf by his oppofition to minifterial meafures, refigned the command of his regiment rather than fight againft the caufe he had efpoufed fo warmly. His example was followed by that of feveral other officers; and it is not to be doubted that, while this flep conferred upon them a very confiderable fliare of popularity, it excited in the minds of minifitry an equal degree of refentment. Lord Effingham, in particular, received the public thanks of the cittes of London and Dublin ; both of which fhowed an extreme averfion to the commencement of hoftilities with America. The former, indeed, could farce reftrain themfelves within any bounds of moderation. After the affair at Lexington they framed a remonffrance and petition, animadverting in the moft fevere manner on the miniftry and parliament; and it was not without the greatelt difificulty that the more moderate party procured one to be drawn up, under the name of an "humble petition," couched in lefs reprehenfible terms.

In the mału time éecral inconvenieaces began to de Lutai: fels in diferent parts of the nation. 'The fufpeadion of the fale and purckafe of neyro flaves in the Wett Difterites Indies and in North America, and the prohibition to of the naexport arms and gumpowder, liad greatly impeded the tion in conAfricsirtade from fisillol aud Liverpool. In confe-fequence of quence of this, a great number of hips which former the Anerily lailed from thefe ports had been laid up, and near can was. 3000 failors belonging to Liverpool difmiffed from fervice. Their fituation foon rengered them riotous; and it was not without the affifance of the military that they were guclled. Thefe diffeffes, however, made no impreflion on adminitration; who having once laid it down as a maxim, that the futjection of America was the greatelt political good that could happen to Britain, were, in a confitence with their o:vn principles, obliged to overlook every difatter that might happen in the mean time as a temporal inconvenience, which ought not to be regarded in the profecution of a great and magnificent plan.

But whatever might be the views of adminiftration in this refpect, it was far otherwile with the generality of the nation. They felt the prefent inconveniences reverely, while the fubjugation of America prefented them with no folid foundation to hope for an equivalent. It was with the utmont fatisfaction, therefore, Latt petithat they received the news of Mr Penn's arrival in tion of cond 1775, with a new petition from the congrefs to be grefsrejectpretented to the king; after which he was to give it to ed. the public. Their expectation, howevor. was foon dif. appointed. The petition was delivered to Lord Dartmouth on the if of September; and in three days it was replied, that no anfwer would be given to it. This laconic procedure excited no fmall furprife, as it was unverfally allowed that the language of the petition was refpectful, and that it expreffed the highef defire of peace and reconciliation. Lord Dartmouth's anfwer, therefore, could not but be confidered as a find renunciation of all figendly intercourfe with the colonies, and which would drive them into a connexion with foreign powers; a relource at which they themfelves had hinted when they firlt took up arms. It was alfo thought not only to be injudicious in itfelf, but very ill-timed, and not at all confiftent with the fituation of the affairs of Britain at that time. On the ather hand, the friends of adminiftration infifted, that the petition offered nothing that could in a confiftency with the dignity of the Britills empire be taken any notice of. Inttead of profefting any repentance for their own conduct, they had offered ftipulations, and even required conceffions on the part of Britain. It was likewife faid on the part of adminiftration, that fear had a flare in framing the propofals now held out. The Americans were very Cenfiole, that though the firf fteps taken by Britain had not anlwered the purpofe, much greater efforts would quickly follow; and that, without being allowed fome time, it was imponfible they could bring their matters to bear. The petition, therefore, might be confidered as written with a view to procraftinate matters, which was by no means admiffible on the part of Britain. The culonies were al. ready well apprifed of the conditions on which they wonld be reftored to favour; and had it at any time in their power to put a lop to the operations of wat by acceptiag thefe conditions: but it would be imprudent

## $\mathrm{B} R$ I $[544] \quad \mathrm{B} R \quad$ I

aritain. to fop the military preparations upon fuch an uncer-
$\qquad$ tain expectation as the petition from congrefs held out. It was allo plain, that a great majority of the ration approved of the meafures of government ; for ajdicfies were received from all quarters, rccommend. ing, in the moft explicit manner, a vigorous exertion againll America.
The rejection of this petition inflamed the minds of both parties more tban ever againft each other. The obfolete diftinction of Whio and Tory was now revived, and that with fuch animofity, that Britain itfelf, as well as America, now feemed in danger of becoming a leat of war and bloodthed. The tories were acculed as the promoters of thofe fanguinary eddrefles already mentioned. They were faid to be the great mifinformers of government; and the falfe reprefentations they induftrioully procured from all quarters had contributed more than any thing elfe to inflame the animofty and produce the civil war. They were upbraided with their attachment to the Stuart family. England, it was faid, had, through their machinations, been made a fcene of blood in the laft century; and had been perpetually tottering on the brink of ruin from the reftoration to the revolution. At that time indeed the more fenfible part of the nation, wearied out with perpetual attempts to enflave them, took the refolution of expelling an ill-advifed monarch, whom nothing could prevent from purfuing their pernicious plans to his own ruin. But the tories were an incorrigible race, who could not be cured even by experience; for though they had feen repeated inflances of the mif. chief attending their plans, they adhered to them with as great obftinacy as if the greatefl benefits had on all occafions accrued from them. Diffenfion at home and difgrace-abroad had been the couftant attendant of their councils; while the only objects they ever had in view wete the eftablifhment and propagation of their orn tenets; for thefe alone they laboured, the honour ard intereft of the nation being entirely out of the queftion. Thefe they would willingly facrifice to the points above mentioned; and as an inftance of the effects of their councils, the treaty of Utrecht was melltioned. Here, faid their antagonifts, the fruits of a triumphant war, carried on for twelve years, were loft at once by thofe feuds which the tories occafioned through their reflefs endeavours to compafs their iniquitous projests.

On the nther hand, the tories fid that the whigs were the genuine defcendants and reprefentatives of thofe republican incendiaries who had in the laft cenquty overturned the conftitution and defolated the kingdom. They pretended indeed to affert the liberty of Britain; but under this pretence they wifted to engrofs all the authority to themfelves, as might eafily be proved by an impartial examination of their conduct in the unhappy times alluded to. In the prefent difpute the principal queftion wat, Whether the king and parliament, when united, were to be obeyed or refift. ed? The tories infifted that they were to be oheyed; the whigs that they were to be refifted. The tuuth was, therefore, that there were two parties in J3ritain; the one of which was of opinion, that the colonies owed obedience to Great Britain in all cales whatever, and that in cafe of refulal they ought to be compelled to, obey; but the other, though it acknowledged the
fame obligation on the colonics, thnught it was unad- Britalit. vifable to force it. The only conntitutional method of deciding this queftion was hy an appeal to parliament. That appeal had alrcady been made, and parliament had determined on compulfion. The decifion ought therefore to be confidered as that of the voice of the nation; and were a parliamentary m:jority to be viewed in any other light, all things would fall into confufion, and no rule of government remain. The doetrines of the whigs were alfo faid to be inadmiffible in found policy. Authority, fovereign and uncone trouled, mutt refide fomewhere; and allowing every charge of bribery and corruption (which were brought by the other party molt liberally) to be true, it were ftill better to be governed in fome inftances by fuch means, than to have no government at all. This muft at laf be the cafe were continual appeals to be made to the people; as they would undoubtedly be followed by perpetual broils at home as well as difallers abroad.

To thefe violent bickerings at home, fome very fe-Misforrinus commercial misfortunes were now added. It had tunes of been reprefented as very probable, during the laf fefo foundland fion of parliament, that the bill for depriving the peo-fleet. ple of New England of the benefits of the Newfoundland fifhery, would redound greatly to the intereft of Great Britain, by throwing into her bands alone the profits which were formerly divided with the colonies. This expectation, however, proved totally void of foundation. The number of fhips fitted out that year was farcely greater than ufual. The congrefs had alfo prohibited them from being fupplied with provifions; fo that not only thofe on board the fhips, but even the inhabitants on the ifland of Newfoundland itfelf, were in danger of perifting. Many of the ftrps were there. fore obliged to go in queft of provifions, inftead of profecuting the bufinefs on which they came. On the whole, therefore, inflead of any increafe, the profits of the fifnery fuffered this year a diminution of near 500,0001 . Along with this, fome uatural caufes cooperated, which, by the more fuperfitious, were conpers, fidered as the effects of divine wrath. A moft violent Vielent and and uncommon ftorm took place in thefe latitudes du-defiructive ring the fifhing feafon. The fea rofe full 30 feet above ftorm. its ordinary level ; and that with fuch rapidity, that no time was allowed for avoiding its fury. Upwards of 700 fifhing boats perilhed, with all the people in them; and fome fhips foundered, with their whole crews. Nor was the devaftation much lefs on flore, as the waters broke in upon the land, occafioning valt lofs and deftruction.

## 596

By thefe misfortunes, the general ftagnation of com-Ineffecual merce, and the little fuccefs that had hitherto attended pettions, the Bitifin arms, the mercantile part of the nation were scc. thrown into defpair. Petitions were poured in from all quarterc, the contents of which were fimilar to thofe already mentioned, and their reception was cxectly the fame. Minifters had determined on their plan; and the only difficulty was, how to put it in execution as quickly as they defired. For this purpofe, application Disfiulty was made to the petty ftates of Germany, who are of procuwont to hire out their forces, and who had frequently ing fofent auxiliaries to Britain in former cafes of exigency. rign fuc. At prefent, however, the fcheme met with confiderable difficultics, occafioned by the diftance, as well as the

## B R I [ 545 ]

Britain, danger, of the defertion of the mercenaries. The princes were likewife alarmed at the appearance of lofing fo many fubjects for cver; while the latter were no lefs ftartled at the propofal of being tranfported acrofs the ocean into a new world, there to be expoled to all the miferies of war, with very little hope of ever feeing their native country again. Other refources, however, were devifed, by calling in the affitance of the Heflians, and obtaining from Holland that body of Scots troops which had been fo long in their fervice. But in botls thefe views adminiftration were difappointed. All the flates of Europe looked upon Britain with an invidious eye, though none fo much as Holland and France; thefe being the two powers who had moft reafors to hope for advantage from the quarrel. A very ftrong party in Holland contended for the American intereft. Pamphlets were daily publifted at Amfterdam in juftification of the colonies: their cafe was compared with that of the Netherlands in former times: and they were exhorted to perfevere in their claims againft the pretenfions of Britain. Her they reprefented as infatiably covetous of wealth and power, and defirous of feizing every thing fhe could. She was alfo taxed with being of a domineering difpofition, and that the had become intolerable, fince ber fucceffes in the war of 1755, not only to her neighbours, but to the whole world: nay, that even during the war the had exerciled an abfolute fovereignty at fea, and did not fcruple to avow a right and title to rule over that element.

But though thefe powers thus early exprefl'd their hoftile difpofition towards Britain, it was otherwife with the princes of Heffe and Bronfwick; by whom, and fome other German princes of inferior note, a confiderable number of troops were fupplicd. At the fame time, that as many Britifh forces as polible might be emploved, large draughts were made from the garrifons of Gibraltar and Minorca, who were fupplied in return with an equal number of men from the electorate of Hanover. In juftice to the minifters, indeed, it mult be owned, that they profecuted the fcheme they had undertaken with all poffible vigour; infomuch that the expences already began to occafion confiderable alarm. This was owing, in the firft inflance, to the bad fuccefs of the Britihh arms, which occafioned a demand on this country altogether unlooked for. It had always bcen fuppofed, that the Britifh army would be completely victorious; or at leaft would remain fo far mafters of the field, that they could eafily command what fupplies of frefh provifions were necelfary. Inftead of this, they were now cooped up in fuch a manbier as to be actually in danger of perihing for want. The fupplies, therefore, of neceffity, were fent from Btitain; and indeed the exertions for their relief were fuch as murlt give high ideas of the opulence and fpisit of the Britial nation. For thefe troops there were fhipped no fewer than 5000 live osen, 14,000 theep, with a proportionable number of hogs, immenfe quantitics of vegetables, prepared with all polible care; 10,000 buts of fmall beer, and 5000 buts of firong beer. Some idea of the expences of thefe articles may be obtained from an account of what was paid for articles trifing in comparifon of the above. For a regiment of light horfe in Bofton, 20,0001 were paid for oats, hay, and beans. The articles of viregar, ve-

Vol. IV. Part II.
getables, and calks, at no lefs; and every thing elfe in proportion. The contingencies occafoned by military operations amounted to near 500,000 . 'I'he prodigious expences, therefore, of maintaining an inconfiderable armament at fuch a diftance, could not fail to give a very unfavourable opinion of the war at lage, and juftly raife fufpicions, that even the treafures of Britain would not be able to defray the expence. One advantage, however, was derived from fuch immenfe profufion; the price of every thing was augmonted; that of fthipping particularly rofe one-fourth in the ton: and though the profits made by contractors and their numerous friends were complained of, the benefits which accrued to multitudes employed in the various branches of public bufinefs feemed in fome meafure to make amends for every thing.

Misfortune, however, feemed now to attend every Almoft all fcheme in which Britain engaged herfelf. Some part the Boton of it, indeed, in the prefent cafe, might be derivid from mifmanagement. The failing of the tranfjorts was delayed fo long that their voyages were loft. 'They remained for a long time wind-bound; and, after lcaving port, met with fuch formy weather, that they were tofted to and fro in the Channel till moft of the live fock they had on board perifhed. After clearing the coalt of England, their progrels was retarded by a continuance of bad weather. They were forced by the periodical winds from the coaft of America into the ocean. Some were driven to the Wcft Indies, others were captured by American privateers, and only a very few reached the harbour of Bolton, with their cargnes, quite damaged, fo that they could be of little or no ufe. Notwithfanding the immenfe fupplies above mentioned, therefore, a fubfeription was fet on foot for the relief of the foldiers, as well as of the families of thofe who died in the fervice. This was liberal on the whole, though many refufed to contribute, from their difapprobation of the caufe; and bitter complaints were made of want of economy throughout the whole American department.

All this time the violent animofities between the parties continued; the defire of peace was gradually extinguified on both fides; and the foundation laid of an eminity fcarcely ever to be extinguified. Each ties feerned to be ferioully of opinion that the other would willingly ruin the nation if pollible; a remarkable infance of which was the commitment of Stephen ${ }^{669}$ Sayre, Efq. banker (one of the Theriffs of the preced- Mr Sayre ing year), to the Tower for high treafon. The ac- to the cufation laid againf him was no lefs than that of hav. Tower. ing formed a defign to feize his majefty as he went to the houfe of lords: but the fcheme itfelf, and the me. thod in which it was to be executed, appeared both fo ridiculons, that the prifoner was very foon difcharged; after which he commenced a procefs againft Lord Rochfort for falle imprifonment.

With refpect to the parliamentary proceedings du-Parliamen ring this period, very little can be faid, further than tary dethat every meafure of adminiftration, whether right bate or wrong, was violently oppofed. The employment of foreign troops, and adnitting them into the fortreffes of Gibraltar and Minorca, were molt feverely cenfured, as being contrary to the bill of rights. Adminiltration contended that this bill only forbade the introduction of a foreign milisary power into the kingdom du-

Fritain. ring ferce; but the times were not peaceable, and the introduction of the troops was evidently with a view to queil a rebellion. The force defigned for the conqueft of America was then declared to be inadequate to the purpofe; but it was replied on the part of miniftry, that the defign was to conciliate, not to conquer. The force ( 25,000 men) was fufficient to frike terror; and though this fhould not inftantly be produced, conciliatory offers would fill be held out after every blow that was ftruck.

605 Milinaryoperations of cans.

In the mean time the Americans, fenfible of the dangerous fituation in which they Good, exerted themfelves to the utmof to didodge the Britifh troups from Bofton. This being at length accomplifhed in March 1776, they proceeded to put their towns in the mof formidable liate of defence; infomuch that they feem, if properly defended, to have been almoft impregnable. This was evident from the repalfe of Sir Peter Parker at Charlcfown: But they did not exert equal firit in the defence of New York; where, befides lofing the town, they rcceived fuch a defeat as feemed to threaten
thecir affairs with total ruin. See $A m$ merica.

## $6=6$

 Their caufebelicved in people in view it appeared to the generality of the Ir tain to was be fuccefsful campaign of 1776 as looked upon as fo decifive, that little room was left be delperate. to fuppofe the Americans capable of ever retrieving their affairs. Oppofition were much embarraffed, and now almont reduced to the fingle argument of the interference of foreign powers, which they had often unfuccefsfully ufed before. Belides this, indeed, the obflinacy of the Americans in refuling the offers of Lord Howe, even at the moment of their greatelt depreffion, feemed to be a very bad piefage. The flength of miniflry, however, now becane fo decifive, that whatever they propofed was immediately carried. The number of feamen lor 1777 was augmented to 45,000, and upwards of five millions voted for the expence of the navy, and to difcharge its debt. The expences of the lund-fervice amounted to near three millions, befides the extraordinaries of the formor year, which
697 amounted to more than $1,200.000$. ; and though this Vaftexpen-vall provifion became the lubject of much complaint ecs ant.nt- and animadverfion, the power of niniltry filenced eveing the war ry oppofer.
Perp'raty ljut however adminiftration might now triumph,
of alminifration on the news of Gieneral Burzoynes defca.

1ㅇ? Tricy entif eate the frives with great dexreziy. theis cxultation was but of fhort continuance. The misfortune of Cenctal Burgoyne at Saratoga threw the whole nat:on into a kind of defpair, and reduced the minully to the greatelt perplexity. 'The great diffculty now tras to coatrive means for raifing a fufficient number of torces to carry on the war: but from this they catricated themlelves by what mult be allowed a mafterly contrivance. This wns the encouraging levies for government fervice by cities and private perfons; and as the defign waskept a profound fectet before the Chriftmas recefs, they wese not difturbed by the danferous clamours of oppofition. 'The recel's was purporcly extended in orcier to pive time for the fe heme to take effect; and before parliament met again it was a Etually accomplifed, foit at minifiess could once more free their opponents without any fear.
615 Another and mose waiphty confderation, however, The Fretich now occurred. 'The Europern Hates in general had rica.
refflve so long beheld the grandeur of I3ritnin with an invidious eyc. I he news of the difafter at Sara:ogil was there-
fore reccived among them as thofe of the defeat of Pritair. Charles XII. at Pultowa was among the porvers whom he had fo long commanded. Of all thefe the French, for obvious reafons, were the moft aftive in fupporsing the Americans. Numbers of the young nobility were eager to fignalize themfelves in the American caufe; and amony the reft the marquis de la Fayette, a young nobleman of the firf rank and fortune. Impelled by an enthufiatic ardour in favour of the American caufe, he purchafed a veffel, loaded her with military ftores, and failed in her with feveral of his friends to America, where he prefented his fervices to congrefs. From them he met with a mof gracious reception, and was invefted with a command, in which be loft no opportunity of diftinguighing hinifelf. Befides this nobleman, feveral other officers from France and Germany actually entered the American fervice, and by their military talents greatly contributed to the exertions which the colonies were afterwards enabled to make.

This affifance, however, would have been but trifling, had not the Fiench court alfo interefted itfelf in their behalf; for by the time, or very foon after, the news of General Eurgoyne's difafter arrived in Britain, a treaty was on foot betueen the French court and the United States of America.

Even before this time France had fhowed fuch an extreme partiality towards the Americans, as might have plainly indicated their defign of ultimately affitting them in their national capacity. The encouragement given to the American privatcers in, all the ports of France land produced ftrong remoniftrances on the part of Britain ; and an order was at laft demanded, that all thefe privatcers with their prizes thould depart the kingdom. With this they found it neceflary to comply at that time, left reprifals fhould be made by capturing their whole Newfoundland fleet then out on the fiffery. So many delays, however, were made on various pretences, that not a fingle veffel was difmiffed flom any of their ports. So far indeed were the French court from any defign of this kind, that in the month of July 1777 the whole body of merchants throughout the kingdom were affured from government that they might depend on protection in their trade with America.

All this time the greateft preparations were made throughout the whole kingdon of France for war; fo that the mof judicious politicians were of opinion that a rupture with that power flould have immediately followed the commencement of hoftilities with America, and for which the bchaviour of the former furniftied abundant reafons of juftification. Whatever might have been the motives of the Britih minifty, however, it is certain, that in defance of probability, even when joined by the moft acrimonious cenfures of oppofition, they continued to pretend ignorance of any hofile intentions in the court of France, until that court of its own accord thought proper to announce them. This Treaty was done by a formal notification to the coust of Bri. with Ametain in the month of March 1778 , and that in the rica anmont mortifying tcrms. In this declaration it was an- hourced to nounced, not only that a treaty of friend haip and com-of Eritais merce was concluded hetwixt France and America, but Britain was infulted with being told that America was actually in poffeffen of independency, as if the for-

## B R I

Britain. mer had already exerted her utmont efforts without being able to reduce them. A merit was alfo nade of having entcred into no commercial flipulations in favour of France exclufive of Britain. Nothing, therefore, could be more offenfive; and though it could not decently be faid on the part of the French monarch that he wihed for war, yet his pacife intentions were conveyed in fuch haughty terms, that the whole could only be confidered as a declaration of thofe hollilities which he pretended to avoid.

Both parties now united in their opinion that a war with France was unavoidable; but they were not fur that reafon any farther advanced towards a reconciliation. It mult be owned, indeed, that the misority had now, according to their own account, received very great provocation. They had from the beginning reprobated the American war, and prognufticated its bad fuccef. In this they had been overruled, and the character of the Americans reprefented in fuch a manner as almoft to preclude the idea of their being able to refift. 'They had refifted, however; and by deftroying or taking prifoners a whale army, verified thofe predietions which had been fo often treated with ridicule. The popular party had, times without number, infifted in the molt earne!t manner for fome kind of conceffion towards America; but this had conftantly been refufed with an unparalleled and inveterate ubftinacy. They now faw thefe very conceffions offered to America after the defeat of Burgoyne, which, had they bien granted in time, would have prevented all the mifchief. Added to all this, the expences for the enfuing year had been hurried through the houfe before the Cluriftmas vacation; the levies had been raifed by fubfcription without confent of parliament at all ; yet both thefe procedings had been determined to be ftrißly legal and conftitutional. Every inquiry into the meafures of government had been fruftrated; and one into the fate of the nation in general, which could not be abfolutely rejected, was rendered ineffectual by delays and evafion. Laftly, 'lhey now faw their country involved in a foreign war with a nation well provicled for all emergencies, while we had fupinely fuffered them to go on, without making the leaft effort to put ourfelves in a proper ftate of defence.

For thefe reafons oppofition infifted that the prefent miniftry ought no longer to be trufted with the management of public affiairs. An acknowledgment of the independence of America was row by many fuppofed to be the only rational fep that could be taken, which might now be done with a good grace, and which we would unavoidably be obliged to take at laft whether we would or not. By acknowledging this independence before they had time to enter into exclufive engagements with France, their trade would be open to all the world. This of courfe would Jeffen their correfpondence with France, and leave them at liberty to form fuch connections as they thought molt proper. The minifterial party, however, ftill infifted on vigorous meafures, reprefenting it as a fpiritlefs and difgraceful meafure to bend beneath the power of France, and fetting forth the refources of Great Britain as fufficient to refilt the eftorts of all her enemics. The difhonour of leaving the American loyalifts expofed to the refentment of their country-. saen was alfo fet forth in the ftrongeft manner. Thefe,
by very intelligent people, werc faid to be by far the greater number. Was it not more eligitie, on the very ftrength of fuch an affirmation, (1) make trial of its veracity, and to put arms into their hands? Whatever the danger of the experiment might be, we could not abandon them without expeting our repetation, and lofing that charakter uf fidelity to our engagements for which we had hitherto been fo jully refpected. Unanimity in the prefeut cale was flrongiy, and indeed very juttly, infifted upon; but when oppofition complained of fome occult irrefilbble influence by which the councils of the nation were dirceted, in defpite of every fuggeftion of reafon and argument, the charge was denicd in the frongeft manner, and miniAters difclaimed every motive of their conduct, cxcepting that of an internal conviction of its own rectitude.

Notwithftandirg the violence of thefe altercations, however, the greatcit courage and fleajinefs was main. felted by the coul and deliberate part of the nation. The French refolved in the firft place to excite a ge-Invation neral terrer by threatening an invanion. This was threatened evidently impracticable, without their procuring firft fryenct. the fuperiority at fea: yet as multiteres in the country were apt to be terrified by the very mention of a French invafon, orders weie ifiued to draw out and embody the militia, which was then compofed of men in every refpect as well exercifed and difciplined as any regular troops. It was complined, however, that a French fquadron of 12 hips of the line had 6.615 failed from Toulon without any ubfruction, under fails with the command of the count d'Eftaing. The moll fquadron grievous apprehenfons were entertained from the great from Touiliferiority of Lord Howe's naval force, which might expofe him to a total defeat, and the whole flect of tranfports to be taken or deftroyed by the enemy. But whatever might have been the probabilities in this cale, it is certain that eirher the fortune or conduct of this commander were fuch, that no exploit of any great confequence was ever performed by him. That matters, however, might be put in the belt lituation puffible, addrefles were moved for the recalling of the fleets and armies from America, in order to lation thems in places where they might contribute more effectually to the defence of the kingdom. This was oppofed not only by adminftration, but even by fume of the moft popular members of oppofition themfelves. Of this opinion were Lord Chatham and the earl of Shelburne; the former of whom rcfifted it with a veliensence of fpeech peculiar on this occafion.

The operations of the French in America, with the Evploits of various fuccefs of the war, are related under the article d'Eftaing. United States of Ambrica. Here we have only to take notice, that d'Eltaing having failed in his attempt on the Britifh fleet at New York, and in affifting his allies in their attempt on Rhode Ifland, as well as having by other parts of his conduct greatly difgufted them, failed for the Weft Indies, where he unfuccefofully attacked the ifland of St Lucia*. Being repulfed in this attempt, * See St he failed to the ifland of Grenada, which he reduced, Lucis. treating the vanquifhed in a very cruel manner $f ; \dagger$ Sce Gree while a body of troops difpatched by him alfo reduced rudx. the inland of St Vincent.

By this time the French admiral was powerfully reinforced; fo that his fleet confifted of 26 fail of the

Eritain. line and 12 frigates. During the time he was employed at Grenada, Admiral Byron with the Britim fquadron was accompanying the homeward-bound Weft-India flect till out of danger ; after which he failed with a body of troops under General Grant for the recovery of St Vincent; but before they could reach that ifland, certain intelligence was received of

617 Ergagcment betwixt him and Admiral Byron. the defeent at Grenada. On this they fleered directly for that illand, where they encountered the French fleet without hefitation, notwithflanding the great fuperiority of the latter. At this time the French「quadron amounted to 27 fail of the line and feven frigates; while that of Britain confifted only of 21 line of battle lhips and one frigate. The Britifl admirals, Byron and Barrington, endeavoured to bring the enemy to a clofe engagement, but this was as ftudioully avoided by d'Efaing; and fuch was the dexterity and circumfpection with which the latter conducted matters, that it was only by feizing the tranfient opportunities of the different movements occafioned by the wind and weather, that fome of the Britifh flips could clofe in with their antagoniifs. Even when this was the cafe, the engagement was carried

619
Travery of forne Englim caf* tains. on upon fuch turequal terms, that the Britifh Chips were terribly hlattered. For fome time Captains Collingwood, Edwards, and Cornwallis, Atood the fise of the whole French fleet. Captain Fanfhaw of the Monmouth, a $6_{4}$ gun fhip, fingly threw himfelf in the way of the enemy's van to ftop them. Several of the Britith flips forced their way to the very mouth of St George's hasbour on the ifland of Grenada; but finding it in the hands of the French, an end was put to the engagement; nor did the French care to renew it, though the Britihh hips had fuffered very mauch.
619 General State of the fuccefs of the American and Wert Indian wiap.

D'Eftaing now having received frefla reinforcements, fet fail for the continent of America, after convoying the homeward-bound ficet of French merchantmen in their return from the Weft India illands. His difaftrous attempt on the town of Savannah, with the fubfequent diforder betwixt him and the colonifts, are telated under the article United States of America. Here we have only to take notice, that thus the fears which had been excited by the fuperiority of the French in the Weft Indian feas were effectually difipated. The illands of Dominica, St Vincent, and Grenada, were indeed loft ; the firft being taken by the marquis de Bonille, governor of Murtinico, and * See thofe the two lail by d'Eftaing as already related *: but articles.

See St Lucia.
at Martinico, the admiral himfelf having narrowly efcaped. He had failed out of that harbour, in order to favour the efcape of the convoy already mentioned; which having partly effected, he withdrew; but was purfued fo clofely, that he had farcely time to fhelter himfelf under the batteries on flsore.

Thefe fucceffes, which happened in the years 1778 , r779, and beginning of 1780 , kept the event of the war pretty much in ari equilibrium on the weftern feas and continent; but in the mean time the moft unhappy diffenfions prevailed through every department of the Britifh government in Europe, which threatened at laft to involve the whole nation in confulion and bloodfhed.

## 620

Among other charges brought by the members in Bad rondioppofition againf the miniftry, that of neglecting the navy had been one of the moft confiderable; nor indeed does it appear that the charge was altogether without foundation. Without a fleet, however, it was now impoffible to avoid the danger of an invafion. At this time, indeed, the fleet was in a very weak condition, but the valour and experience of the officers feened in fome meafure to compenfate that defect. The chief command was given to Admiral Keppel, who had fer-Operations ved with uncommon reputation during the laft war. of adniiral Admirals Sir Rubert Harland and Sir Hugh Pallifer ferved under hinn, both of them officers of undoubted courage and capacity. Arriving at Portfmouth towards courage and capacity. Arriving at Portfmouth towards wagement the
the end of March 1778, Admiral Keppel exerted him- French felf with fo much induftry and diligence, that exclufive fleet. of thofe fhips which it was found neceflary to difpatch to the coaft of North America under Admiral Byron, a fleet of 20 fail of the line was got in complete readinefs by the beginning of June, and ten more in a forward Itate of preparation.

At the head of this fleet Admiral Keppel failed from Porfmonth on the 1 3th of June, in order to protect the valt number of commercial fhipping expected from all parts of the world, and at the fame time to watch the motion of the French fleet at Breft.

On the arrival of the Britifh fleet off the coaft of France, two French frigates approached it, in order to make their obfervations. Thefe were the Licorne of 32 guns and the Belle Poule of 26. In confequence of a fignal to give chafe, the Milford frigate overtook the Licorne towards the clofe of the day, and requefted the French captain to come under the Britiln admiral's ftern; upon his refufal, a hlip of the line came up, and compelled him to come into the fleet. Next morning, the Licorric feeming by her motions to be altering her courfe, a thot was fired acrofs her way as a fignal for keeping it. Hereupon the difcharged a broadfide and a volley of fmall arms into the America of 64 guns that lay clofe to her, and immediately fruck. The behaviour of the French captain was the more aflonifhing, as Lord Longford, captain of the Amcrica, was at that inftant engaged in converfation with him in terms of civility; but though fuch behaviour certainly merited fevere chaftifement, no hoftile return was made.

The Arethufa of 26 guns, commanded by Captain Mathal, with the Alert cutter, was meanwhile in purfuit of the Belle Poule, that was alfo accomparied by a fchooner, and the chafe was continued till they were both out of fight of the fleet. On his coming up, he

## B R I [ 549$] \quad B \quad R \quad I$

Britain. informed the French captain of his orders to bring him to the admiral, and requefted his compliance. This being refufed, the Arethufa fired a fhot acrofs the Belle Poule, which the returned with a difcharge of her broadfide. The engagement thus begun, continued more than two hours with uncommon warmth and fury.

The Belle Poule was greatly fuperior not only in number, but in the weight of her metal : ber guns were all 12 pounders; thofe of the Arethufa only fix: Notwithfanding this inferiority, fhe maintained fo defperate 2 fight, that the French frigate fuffered a much greater lofs of men than the Britith. The flain and wounded on board the former, amounted by their own account, to near 100; on board the latter they were not half that proportion.

Captain Fairfax in the Alert, during the engagement between the two frigates, attacked the French fchooner, which being of much the fame force, the difpute continued two hours with great bravery on buth lides, when fhe fruck to the Englifh cutter.

The Arethufa received fo much damage, that the became almoft unmanageable; the captain endeavoured to put her into fuch a pofition, as to continue the engagement ; but was unable to do it. Being at the fame time upon the encmy's coaft, and clofe on the fhore, the danger of grounding in fuch a fituation obliged him to act with the more caution, as it was midnight. The Belle Poule, in the mean time, flood into a frall bay furrounded with rocks, where fhe was protected from all attacks: fhe had fuffered fo much, that the captain, apprehending that the could not Itand another engagement, had refolved, in cafe he found himfelf in danger of one, to run her aground; but her fituation preveated any fuch attempt; and as foon as it was day-light, a number of boats came out from fhore, and towed her into a place of fafety. Notwithflanding the evident and great fuperiority on the fide of the French, this action was extolled by them as a proof of fingular bravery, and the account of it received with as much triumph as if it had been a victory.

On the 18th of June, the day following the engagement with the Belle Poule, another frigate fell in with the Britilh fleet; and was captured by the admiral's orders, on account of the behaviour of the Licome.

The capture of thefe French frigates produced fuch intelligence to the admiral, as proved of the utmof importance, at the fame time that it was highly alarming. He was informed that the fleet at Breft confifted of 32 flips of the line and 12 frigates. This was in every refpect a moft fortunate difcovery, as he had no more with him than 20 fhips of the line and three frigates. The fuperiority of the enemy being fuch as neither fkill nor courage could oppofe in his prefent circumfances; and as the confequences of a defrat mult have been fatal to this country, he thought himfelf bound in prudence to return to Purtfmouth for a reinforcement. Here he arrived on the $27^{\text {th }}$ of June, and remained there till the flips from the Mediterranean, and the Spanifh and Portuguefe trade, and the fummer fleet from the Weft Indies, coming home, brought him a fupply of feamen, and eriabled him to put to fea again, with an addition of ten fhips of the line. But ftill there was a great deficiency of frigates, owing to the great numbers that were on the American ftation,
and the neceffity of manning the fhips of the line fre- Eritain. ferably to all others.

In the mean time, the preparations at Breft being fully completed, the French fleet put to fea on the 8th of July. It confited of 32 fail of the line, befides a large number of frigates. Count $\mathrm{D}^{\prime} \mathrm{O}_{1}$ villiers commanded in chief. The other principal officers in this fleet were counts Duchaffault, de Guichen, and de Graffe; Monfieur de Rochechoart and Morifieur de la Motte Piquet. A prince of the blood royal had alfo been fent to ferve on board of this Heet; this was the duke of Chartres, fon and heir to tle duke of Or!eans, firt prince of the blood royal of France in the collaperal line. He commanded one of the divifions in quality of admiral.

On the $9^{\text {th }}$ day of July, the Britifh flect failed out of Portfnouth in three divifions; the firft commanded by Sir Robert Harland, the third by Sir Hugh Pallifer, and the centre by Admiral Keppel, accompanied by Admiral Campbell, an officer of great courage and merit. The French had been informed that the Britifh lleet was greatly inferior to their own; which was but too true at the time when they received this information. Being yet unapprifed of the reinforcement it was returned with, the admiral failed at firf in queft of it, intending to attack it while in the weak condition it had been reprefented to him.

As the Britih admiral was equally intent on coming to action as foon as poffible, they were not long before they met. On the 23 d of July they came in fight. But the appearance of the Britifh thips foon convinced the French admiral of his miftake, and he immediately determined to avoid an engagement no lefs cautioufly than be eagerly fought it before.

Herein he was favoured by the approach of night : All that could be done on the part of the Britifh was to form the line of battle in expectation that the enemy would do the fame. During the night the wind changed fo favourably for the French, as to give them the weather gage. This putting the choice of coming to action, or of declining it, entirely in their own power, deprived the Britifh admiral of the opporturity of forcing them to engage as he had propoled.

During the fpace of four days, the French had the option of coming to action ; but conftantly exerted their utmof care and induftry to avoid it. The Britifh fleet continued the whole time beating up againit the wind, evidently with a refolution to attack them.
 this purfuit, the Britilh admiral had the mortification to fee his endeavours continually eluded by the vigilance and precaution of the enemy not to lofe the leaft advantage that wind and weather could afford.

The chafe lafted till the 27 th of July. Between ten and eleven in the morning, an alteration of wind and weather occafioned feveral motions in both fleets, that brought them, unintentionally on the part of the French, and chiefly through the dexterous management of the Britifh admiral, fo near each other, that it was no longer in their power to decline an engagement. Both fleets were now on the fame tack : had they fo remained, the Britifh fleet on coming up with the French would have had an opportunity of a fair engagement, Thip to thip; which would hardly have failed of proring very decifive: but this was a manner of combat-

## B R I [ 550 <br> B R I

Britain. ing quite contraty to the wihes of the French admiral. Infead of seceiving the Britift fleet in this polftion, as foon as he found that an action muft enfue, he put his thips on the contrary tack, that, failing in oppofite directions, they might only fire at each other as they paffed by. By this means a clofe and fidelong aftion would be effectually evaded. As foon as the van of the Bratifh fleet, confifting of Sir Robert Harland's divifion, came up, they directed their fire upon it ; but at too great a diffance to make any impreffion : the fire was not returned by the Britifh fhips till they came clofe up to the enemy, and were fure of doing exccution. In this manner they all paffed clofe alongfide each other in oppofite directions, making a very heavy and deftructive fire.

The centre divifion of the Britifh line having paffed the rearmon hips of the enemy, the firft care of the admiral was to effect a renewal of the engagement, as foon as the fhips of the different fleets, yet in action, had got clear of each other refpectively. Sir Robert Harland, with fume thips of his divifion, had already tacked, and fuod towards the French; but the remaining part of the fleet had not yet tacked, and fome wete dropped to leeward, and repairing the damages they had received in the action. His own fhip the Vi@ory had fuffered too much to tack about inflantly; and had he done it, he would have thrown the fhips aftern of him into diforder. As foon as it was practicable, however, the Vichory wore, and fieered again upon the enemy before any other thip of the centre divifion; of which not above three or four were able to do the fame. The other haips not having recovered their flations near enough to fupport each other on a renewal of action, in order to collect them more readily for that purpofe, he made the fignal for the line of a battle ahead. It was now thrce in the afternoon; but the Thips of the Britifh fleet had not fufficiently regained their fations to engage. The Vifury lay neareft the enemy, with the four flips above mentioned, and feven more of Sir Robert Hatland's divifion. Thefe twelve were the only fhips in any condition for immediate fervice; of the others belonging to the centre and to Sir Robert Harland's divifion, three were a great way aftern, and five at a confiderable diftance to leeward, much difabled in their rigging.

Sir Hugh Pallifer who comnended the rear divifion during the time of action, in which he behaved with fignal bravery, came of courfe the laft out of it; and in confequence of the admiral's fignal for the line, was to bave led the van on tenewing the fight; but his divifion was upon the contraty tack, and was entirely ont of the live. The Frencl, on the other hand, expecting direetly to be re-attacked, had clofed together in tacking, and were now fperading themfelves into a line of battle. Oa difcovering the pofitiun of the Britilla flips that were fallen to Iceward, they immediately flood towards them, in order to cut them off. 'This obliged the admiral to wear and to fleer athwart the enemy's foremof divifion, in order to fecure them; directing, at the fame time, Sir Robert Harland to form his divifion in a line aftern, in order to face the enemy till Sir Hugh Pallifer could come up, and enable him to - A more effectually.

The adnuiral, in muving to the protection of the deeward hips, was now drawing near the enemy. As

Sir Hugh Pallifer fill continued to windward, he made Prisin. a fignal for all the fhips in that pofition to come into his wake: Sir Hugh Pallifer repeated this fignal ; but it was unluckily miftaken by the flips of his divifion as an order to come into his own wake, which they did accordingly; and as he flill remained in his pofition, they retained theirs of courfe.
Sir Robert Harland was now direfled to take his fation ahead, and the fignal repeated for Sir Hugh Pallifer's divifion to come into his wake; but this lignal was not complied with, any more than a verbal mef. fage to that purpole, and other fubfequent fignals for that divifion's coming into its flation in the line, before it was too late to recommence any operations againf the enemy.
In the night, the French took the determination to put it wholly out of the power of the Britifh fleet to attack them a fecond time. For this purpofe, three of their fwifteft failing vefiels were fixed in the flations occupied during the day by the three admirals fhips of the refpective divifions, with lights at the malt-heads, to deceive the Britilh tleet into the belief that the French fleet kept its pofition with an intent to fight next morning. Protected by this fratagem, the remainder of the French fleet drew off unperceived and unfufpected during the night, and retired with all fpeed towards Breft: they continued this retreat the whole courfe of the following day, and entered that port in the evening. Their departure was not difcovered till break of day; but it was too late to purfue them, as they were only difcernible from the maftheads of the largelf fluips in the Britilh fleet. The three thips that had remained with the lights were purfued: but the veffels that chaced them were fo unable to overtake them from the damages they had received in the preceding day's engagement, that they were quickly recalled; and the admiral made the beft of his way to Plymouth, as being the neareft port, in order to put his fleet into a proper condition to return in queft of the enemy.

The killed and wounded on board the Britifh flcet, amounted to fomewhat more than 500 ; but the French, it has been afferted on grounds of great credibility, luft 3000 . This appears the lefs improbable, from the confideration that the French, in all their naval engagements, aim principally at the mafts and rigging, and the Britift chiefly at the body of the fhips.

This action, whatever might have been the merit of the commanders, proved a fource of the moft fatal animofities. The bulk of the nation had fo long been accuflomed to hear of great and glorious victories at fea, that it was fuppofed a kind of impoflibility for a French and Britifh flect to encounter without the total ruin of the former. The event of the laff engage ment, therd ticifm; and complaints were made, that, through the and trial of bad conduct of the blue divifion, an opportunity had the admibeen loft of gaining a complete victory over the French ${ }^{\text {ra }}$ llect. Thefe complaints were quickly introduced into the public papers; and were carried on with a warmth and vehemence that fet the whole nation into a fernemt of the mofl violent and outrageous nature. The $f_{1}$ iend of Sir Hugh Pallifer, the vice-admiral of the blue, were no lefs violent in the defence of his condact than his opponents wese in its condemnation;

## B R

Britain. while thofe who efpoufed the caufe of the admiral, manifelted no lefs determination in accufing him of being the real caufe of the efcape of the French Heet, through his difobedience of the fignals and orders of his commander, and by remaining at a diflance with his divifion, inflead of coming to the affiftance of the refl of the fleet.

An accufation of fo weighty a nature very much alarmed Sir Hugh Pallifer. He thercfore applied to Admiral Keppel for a juftification of his conduet ; and required of him to fign and publifh a paper relative to the engagement of the $27^{\text {th }}$ of July; therein feccifying as a fact, that he did not intend by his fignals on the evening of that day to renew the battle then, but to be in readinefs for it the next morning.

On the rejection of this demand, Sir Hugh Pallifer publifhed in one of the daily papers a variety of circumflances concerning that engagement; reflecting feverely on the conduct of the admiral, and prefacing the whole by a letter figned with his name.

An attack fo public, and fo detrimental to his character, induced Admiral Keppel to declare to the admiralty, that unlefs Sir Hugh Pallifer fhould explain this matter to his fatisfaction, he could not, confiftently with his reputation, ever act conjointly with him.

This altercation happening before the meetirg of parliament, was of courfe taken notice of when it met. In the houfe of peers an inguiry was demanded into the condut of the commanders of the lleet on the 27th of July, on account of the declaration of Admiral Keppel, that he would not refume the command until fuch an inquiry had taken place.
. In the houfe of commons alfo it was urged, that as Admiral Keppel had expreffed a public refufal to ferve in conjunction with Sir Hugh Pallifer, the caufe of fuch a declaratiors ought to be invelligated. Admiral Keppel and Sir Hugh Pallifer, who were both prefent in the houfe on this occafion, foke feverally to the point in queftion in fupport of their refpective conduct. The iflue of the contert between them was, that a motion was made for an addrefs to the crown to bring Sir Hugh Pallifer to a trial for his behaviour in the late engrgement with the French lleet. In anfwer to this motion, Sir Hugh Pallifer replied, in a fpeech of great warmth and vehemence, that he had already demanded and obtained a court-martial to fit on Admiral Keppel, whom he charged with having through his mifconduct caufed the failure of fuccefs in that engagement.

This intelligence was received with great aftonifhment in the houfe. It had been, and ftill continued to be, the general defire of individuals of all parties, to heal this breach between the two officers at a time when the fervices of both were $\mathrm{f}_{0}$ much needed. It was therefore with univerfal concern the houfe was informed of the determination that had been taken to bring Admiral Keppel to a trial. The admiral, however, conducted himfelf on this occafion with remarkable temper and coolnefs of expreffion. He acquiefced without reluctance in the orders that had been laid upon him to prepare for a trial of his conduct; which he hoped would not, upon inquiry, appear to have been difhonourable or injurious to his country, any more than difgraceful to himfelf.

The conduct of the board of admiralty in admitting the charges againt Admiral Keppel, and appointing a
trial, was greatly condemned in the lioufe. It Iras B,ritain. faid to have been their duty to have laboured with the utmolt earneftnefs, and exerted their whole official in. Huence, tu Ititle this unhappy difagreement between two brave and valuable men ; the confequences of which they well knew, and ought to have obviated, by interpofing as reconciliators, inftead of promoting the difpute, by confenting to bring it to a judicial and public hearing. On the other hand, it was anfwered, that they could not, confiftently with the impartiality which they owed to every officer of the navy, refufe to receive all matters of complaint relating to fubjects of their department. 'They had no right to decide on the merits of any cafe laid before ihem, but were bound to refer it to a court compofed of naval officers, who were the only proper and competent judges of each others conduct ia profeffional matters. In conformity with thefe principles, which were founded upon the clearef equity, they left the decifion of the prefent altercation to the gentlemen of the navy; whofe honour and integrity in all inflances of this kind had never been called in queftion, and by whofe verdict alone it was but jult and reafonable that every officer in that line of fervice fhould wift tolland or fall.

The arguments upon this fubject were urged with great heat and violence on both fides. They produced uncommon animofity and rancour, and gave rile to a fpirit of contention that diffufed itfelf through all claffes of fociety. Such was the height of palfion that prevailed everywhere, that the critical circumftances of the nation were wholly forgotten, and the attention of the public entirely abforbed in this fatal difpute. Individuals of all ranks and all profeflions engaged in it with as much zeal as if they bad been perfonally concerned in the iffue. The diflatisfaction that was excited upon this occafion among the upper claffes in the navy, appeared in a memorial prefented to the king by twelve of the eldeft and moft diltinguifhed aomirals, at the head of whom was the name of Lord Hawke. The conduct of Sir Hugh Pallifer was therein condemned without referve; that of the admiralty itfelf ras feverely cenfured, as having eftablifhed a precedent pregnant with the moll ruinous confequences to the naval fervice of the kingdom. By the meafure it had now adopted, that board had fubmitted to become the inftrument of any individual who might be prompted by iniquitous motives to deprive the navy of its belt and higheft officers. It was a deftructive violation, they faid, of all order and difcipline in the navy, to permit and countenance long concealed, and afterwards precipitately adopted charges, and recriminatory accufations of fubordinate officers againit their commanders in chief. It was no lefs improper and fandalous, to fuffer men at once in high civil office, and in fubordinate command, previous to their making fuch accufations, to attempt to corrupt the judgment of the public, by publithing libels on their ofticers in a common newspaper, which tended at once to excite dilfenfions in the navy, and tu prejudice the minds of thofe who were to try the merits of the acculation againft the fuperior officer.

It was remarkable in this memorial, that the majority of thofe who fubferibed it were not only ollicers of the firft rank and importance in the navy, but kuconnefted with the oppofition, and attached by vatious . motives

## B R I [ $55^{2}$ ] B K I

Britain. motives to the court and minitty. This evinced their conduct in the prefent inftance to have been uninfluenced by confiderations of party.

No bufinefs of any confequence was agitated in either of the houles of parliament while the trial continued. It began upon the 7 th of January 1779, and lafted more than a month, not ending till the 1 th day of February enfuing. After a long and accurate inventigation of every fpecies of cvidence that could be produced, the court-martial acquitted Admiral Keppel of all the charges that had been brought againft him in the moft complete and honourable manner. He was declared to have asted the part of a judicious, brave, and experienced officer; and the accufation was condemned in the moll fevere manner.

Buth houfes of parliament voted him their thanks for the eminent fervices he had performed, and the whole nation refounded with his applanfe. The city of London beftowed every honour and mark of refpect in its power upon Admiral Keppel; while the refentment againft his accufer was fo ftrong, that it confrained him to retire wholly from public life, and to refign all his employments.

But notwithftanding the high degree of national fayour and efteem in which Admiral Keppel now food, he thought it prudent to withdraw from a fituation wherein he found himfelf not acceptable to thofe in 623 power, by refigning his command.

The conduet of thofe who prefised at the admiralty board now became an object of fevere cenfure; and a number of facts were cited to prove that its conduct for many years paft had been highly reprehenfible. The debates were uncommonly vinlent; and the refolution to condemn the conduct of the admiralty was loff only by a majority of 34. Adminiffration, however, ftill kept their ground; for though a fecond attempt was made to flow that the flate of the navy was inadequate to the vaft fums beftored upon it, the point was again loft by much the fame majority. The argument ufed by the miniftry in defence of their conduct in this cafe was, that the flips now conftructed were of a much larger fize, and confequently much more expenfive than formerly. But however they might be victorious in argument, it is certain that the
624 Refignation neral fatisfaction at prefent. Not only Admiral Keppel, of admirals but Lord Howe, declared his refolution to relinquift the Ker; Howe, and olber offi. . ers. fervice while it continued under the direction of its managers at that time. Their tefignation was followed by that of Sir Robert Halland, Sir John Lindfay, and feveral others; nay, fo general was the diflike to the fervice now become, that no fewer than 20 captains of the firft diftinction had propofed to go in a body to refign their commifions at once; and were prevented from doing fo only by the great occation they faw there was at that time for their fervices.

This extreme averfion to the fervice produced a direa attack upon Lord Sandwich, at that time firf lord of the admiralty. But thnugh in this as well os nother
$\mathrm{C}_{25}$
Inquiry in.
the . prevent an inquiry intn the caute of our want of fucto the cun- cefs in the $\Lambda$ merican war. This was infifed upon by American W21:
duet if the Lord and General Howe, whofeconduct bad been fo Lord and General Howe, whofe conduct bad been fo much refleaed upon, that a vindication was become abfolutely noceflary. The inquity was indeed very
difagreeable to adminiftration, and therefore evaded as long as poffible. From the evidence of Lord Cornwallis and other officers of high rank, however, it appeared that the forces fent to America were not at any time fufficient to reduce it; that the Americans were almoft univerfally unfriendly to the Britifh caufe; and that the nature of the country was fuch, that the conqueft of it mutt be exceffively difficult. It appeared alfo, that the camp of the Americans on Long Ifland was fo ltrong, that it could not have been attacked with any probability of fuccefs, after their defeat in ${ }^{1} 776$, without artillery and other neceffary preparations. In every inftance, therefore, the general's conduct was flown to have been the moft eligible and judicious poffible. Thefe facts, however, being direaly oppolite to what the miniftry wifhed to appear, counter evidence was brought in, with a vierv to invalidate the teftimony of the very refpectable witneffes above mentioned. In this bufinefs only two were examined, viz. Major-general Robertion, and Mr Jofeph Galloway an American gentleman. From the evidence of Mr Galloway efpecially, it appeared, that the conduct of General Howe had not been unexceptionable; that the greater part of the Americans were friendly to the caufe of Britain ; that the country was not fo full of obllructions as had been reprefented; woods and forefls being no obftructions to the marching of armies in as many columns as they pleafed; that foldiers might carry provifions for 19 days on their backs, \&c.

Though no ftrefs could be laid upon fuch extravagant affertions proceeding undoubtedly from ignotance, yet they fully anfwered the purpofe of miniftry at this time, viz. procraftination, and preventing the difagreeable truths above-mentioned from ftriking the minds of the public too forcibly. The event of this inquiry, into Cene however, encouraged General Burgoync to infilt for ral Buran examination of his conduct ; which indeed had been connex cons. fo unmercifully cenfured, that even the minifters began to think he had fuffered too much, and that he ought to be allowed to vindicate himfelf. He was accordingly permitted to bring witneffes in his own behalf; and from the moth refpectable evidence it appeared that he bad acted the part, as occafion required, both of a general and foldier; that the attachment of his army to him was fo great, that no dangers or difficulties could thake it; and that, even when all their patience and courage were found to be ineffectual, they were Aill ready to obey his commands, and die with arms in their hands. A great number of other particulats relating to his expedition were alfo cleared up entirely to the honour of the general, and feveral charges againit him were totally refuted. It appeared, however, that the $A$ mericans, far from being the contemptible enemy they had been called, were intrepid and refolutc. On the whole, it was remarked by a great number of the moft judicious people in the nation, that the fyirit of defamation, which for fome time had been fo prevalcut, muft at haft produce the mof fatal efficts ; by depriving the ration of its beft officers, through the averfion that would be produced in them, both in the fea and land depatments, to enter into a fervice where they were certain of being calumniated.

Afrer the refignation of Admiral Keppel, the command of the Channel ficet was beftowed, though not without violent debates, on Sir Charlcs Hardy, a brave
britain. and experienced oflicer, but now advanced in years, and who had retired from the fervice with a defign of never returning to it, being at that time governor of Greenwich holpital. The choice of an admiral to command this theet was now of the greater importance, on account of the acceffion of Spain to the general ASee Spain.confederacy which took place this ycair. The quarrel, like that with France, was formally intimated by the Spanih miniter on the 17 th of June 1779 ; and like that alfo was attended with new but ineffectual pro-

629
Schemes for the internal de fence of the nation pofals of an accommodation with America, and removal of the minilty. The imminent danger, however, to which the nation was now expofed, required a vigorous exertion, and various projects for its internal defence were haid before the parliament. The principal of thefe were the raifing of volunteer companies to be added to the regiments of militia belonging to the counties where they were raifed, and the augmenting the number of militia. The latter was judged unadvifable, on account of the neceflity there woculd be to fend a great number of regular farces out of the kingdom, which would require new fupplies of recruits; and the inereafe of the militia might prove detrimental to the recruiting fervice. The firit and magnanimity difplayed on this occafion, however, did the highef honour to the national character, and fully juftified the opinion generally entertained of its opulence and valour. All parts of the kingdom feemed actuated by a laudable zeal to concur in every meafure neceffary for its defence; large fums were fubferibed by people of rank and aftuence; and companies were raifed, and regiments formed, with fuch alacrity, as quickly banithed all apprehenfions for the fafety of the kingdom.

On the other hand, the French, now thinking themfelves fecure of victory by the acceffion of the whole ftrength of Spain to their caufe, began to extend their plans of conqueft. A fquadron was fitted out under the command of the marquis de Vadrenil, deftined to reinforce the fleet commanded by D'Efaing. But before its proceeding thither, an attack was made on the Britih fettlements on the rivers Senegal and Gambia in Africa. Thefe were eafily conquered ; and on this occafion the French quitted their own ifland of Goree, which was very foon after taken poffeffion of by Sir Edward Hughes in his way to the Eaft Indies. Unfuccels- Thefe unimportant and diflant conquells, however, beful attempt ing infufficient to produce any great eclat, it was reon Jerfey. folved to ftrike a blow nearer home, by the conquelt of Jerfey and Guernfey. An attempt was accordingly made; but with fo little fuccefs, that not a fingle man could be difembarked on the ifland they intended to conquer. The enterprife, however, proved indirectly of great fervice to the caufe of America. A fleet of 400 merchantmen and iranfports were at that time on the point of failing for New York, under the conduct of Admiral Arbuthnot; but that officer, being informed of the attack on Jerfey, thought it his duty to come to the affiflance of the ifland rather than proceed on his voyage. This delay was followed by another, occafioned by bad weather; fo that the fleet, which was laden with warlike fores and neceffaries, did not arrive till the end of Auguft, and feveral important enterprifes proje C ed by Sir Henry Clinton were of courfe laid afide.

Vot. IV. Part II.

The Frencl, in the mean time, determined to make Frite no a fecond attempt on Jerley; but their fquadron, being $\underbrace{}_{6=2}$ attacked by another under Sir James Wallace, was French driven aftore in a frmall bay on the cont of Normandy, fifucitron of under cover of a battery. Thither they were purfued r gates ic by the Britilh commander, who filenced the batecty, ftroycdty took a large frigate of $3+$ guns, with two rich prizes, Wailuces. and burned two other frigates and feveral other vof? fels.

Thus difappointed in their attempt on Jerfey, a Invalion oi project was formed of invading Great Britain itfelf; Ģeat mia and the preparations for it, whether ferious on not, tain prowere fo formidable, that they very juilly cacted a cor:- jeqled. fiderable alarm in this country. Not only were the beft troops in the French fervice marched down to the coafts of the Britifh channel, but tranfports wcre provided in great numbers, and many general officers promoted; the commanders alfo who were to have the charge of this important expedition were named by government. A junction was formed betwixt the French and Epanifh fleets, in fpite of the endeavours ufed on the part of Britih to prevent it; and therl Formade the allies made their appearance in the Britith feas with appearance upwards of 60 lhips of the line, befides a vaft number oin the cure of frigates and other armed veffels.

All this formidable apparatus, however, ended in They take nothing more than the taking of a fingle laip, the Ar-o: lya dent, of 64 guns. They had paffed the Britifl fleet fingle fliv? under Sir Charles Hardy in the mouth of the Channel without obferving him. Sailing then along the craft of England, they came in fight of Plymouth, where they took the Ardent, as has been alrcady mentioned; after which they returned, without making the leaft attempt to land anywhere. The Brutif admiral made good his entrance, without oppofition, into the Chanel, on their quitting it, which a fitong eafterly wind obliged them to do. He endeavoured to ertice them up the Channel in purfuit of him; but the great ficknefs and mortality on board their hhipe. as they gave out, obliged them to retire, in order to repair their flups, and recruit the health of their people. Thus ended the firt, and indeed the greateft, exploit performed by the combined fleets in the Britifh feas. An annual parade of a fimilar kind was afterwards kept up, which was as formally oppofed on the part of the Britilh; but not the leaft act of hoftility was ever committed by either of the Channel fleets againft each other.

Though this ill fuccefs, or rather pufillanimity, manifeft in the conduct of the combined fleets, was fuch that the French themfelves were afhamed of it, the appearance of them in the Channel furnified oppofition with abundance of matter for declamation. All ranks anmuricas of men, indecd, now began to be wearied of the A-war genemerican war; and even thofe who had formerly been rally difas the moft fanguine in defence of coercive meafures, greeable. now began to be convinced of their inutility. The calamitous effects produced by the continuation of thefe meafures, indeed, had by this time rendered the far greater part of the people exceedingly averfe to them; and the almoft univerfal wifh was, that the oppreflive burden of the American war floould be call (ffr, and the whole national ftrength exerted againf thofe whom, on account of our frequent contefts with them, we had been accuftomed to call our natural enemies,

Eritain. For this purpofe the nutiunal firit continued to be exerted with unaba:ed vigour. Large fums were fubfcribed in the feveral counties, and enployed in raifing volunteers, and forming them into independent companies; aflociations were alfo formed in the rowns, where the irblabitants beftowed a contideratle purtion of the'r time in training themfelves to the ufe of arms. The Enf India Company now forgot their quarrels with mihiftry, and not orily preferited government with a fum fufficient for levying 6000 feamen, but at its own coit added three 74 gin thips to the nasy. Adminiftration were not get, however, weaty of the plins they had laid down, and which they feemed inclined to profe. cute, and indecd did profecute, as long as the nation would fupport them. The virulence of oppofition, therefore, flill continued; and what was worfe, every part of the kingdom feemed to imbibe their fertiments. Among other charges now brought againft them was that of mifapplying the national force. An hundred thoufand men were employed fur the internal defence of the kingdom; which being much more than fufficient for the purpofe, ought therefore to have been dif. tributed into places where it might have acted to adrantage. The army of Great Britain, it was faid, now amounted to 300,000 men; the navy to 300 Sail, including frigates and armed veffels; twenty millions had been expended on the fervice of the year 1779: and yet, with all this force and treafure, the utmoll boaft that minifters could make was, that the enemy bad been hitherio kept at bay, and not allowed to invade Great Britain. Nor were the charges lefs heavy in other refpects. Veteran officers had been paffed by to make room for thofe of inferior merit. The difconten's and miferable flate of Ireland *, the lofes of the Weft lndia inlands, \&ic. were all put to the account of minifters; and it was faid, that the univerfal cry of the nation was for their difmiffion. Their incapacity was now vifible to cerery body; and it was a matter of univerfal furprife how they durf retain their flaces in ofpofition to the gencral defise of the nation.
To all this miniflry replied in a refolute and determined manner, denying or refuting every circumftance; and at laft, after violent debates, gained their point of in addefes without any amendment propofing tbeir removal, in the upper houfe by 82 to 41 , and in the lower by 253 to 134. The enormous expence already incurred, however, and hereafter to be incurred, for the carrying on of the war, occafioned fuch a general alarm, that it was no longer poffible to refufe compliance with fome fcheme of economy, or at leaft giving it a patient hearing. The duke of Richmond propofed that the crown hrould fet the example, and moved for all addrefs to this purpofe; but the motion was loft by 77 to 36 . The carl of Shelburne next undertook the difcuftion of the fubject; and having, in a moft claborate feech, compared the expences of forsher times with the prefent, and thown the immenfe difparity, he proceeded to thow the seafons. Thefe were, that minifters formerly employed fewer perfons, and obliged them to be conterit with fmaller profits. One contractor fupplicd all the troops in Amerca during the laft wat, and his agreement was to furnifu a sation of provifions at fixpenice; but fo different was the management now, that the tation of provifious,
inftead of fixpence, coft two hillings. One perfon only had eni yed contracts to the amulut on $\mathrm{r}, 3 \mathrm{CO}, \mathrm{co} 2 \mathrm{l}$. ; $3,720.0001$. had prafed though the hands of another contracior to be tranimititd to America: but no voucher had been given for the expenditure of this immerfe fum; the acccunts being contained in a few lines, accounting for 20,0001 . in one line, $30,0<01$. in another, \&ic. Thus, he faid, the minittry acquired a muft unbounded and unconftitutional influence; and having the dangerous puwer of expending the national treafure without any check, corruption and veriality everywhere aboundcd. He moved, therefore, that the expenditure of thofe valt fums annually funk in extraordinaries fhould be brought under fome controul; and that to extend the public expences beyond the fums granted by parliament, was an invafion of its peculiar and exclufive rights,

Though this motion of the earl of Shelburnc's, and fome others of a fimilar tendency, were rejected on folid principles according to the miniftry, the minds of the people were far from being conciliated to their views. Intead of this, the opinion began to be $50 \sigma_{39}$ general, that minifters exercifed an unconflitutional in- Cinionof Huence over the reprefentatives, and that fuch influence was very much augmented within thefe few years, it was now fuppofed by numbers of people, that nothing fhort of a change in the conflitution of that nothing fhort of a change in the conftitution of 640
parliament could remedy the evil complained of. To Procices a this purpofe a petition was framed in the city of York, on the 30th of December 3779, where a number of the moit refpectable people in the county had affem- of combled, and delegated 61 gentlemen as a committee to mons. manage the correfpondence neceffary for carrying on the defign, and forning an affociation to fupport and promote it. In the prefent petition it was fet forth, that, in confequence of the war in which the nation was involved, the public debt was greatly augnented, taxes increaled, and trade and manufactures much affected. The profufion attending the war was complained of; and parliament was requefled, previous to the raifing of any new taxes, to inquire into, and correct the abufe of expenditure in the public money; to reduce exorbitant emoluments, abolifh finecure places and unmerited penfions, and apply the produce to the exigencies of the flate. This petition was followed by others of a fimilar kind from 27 of the principal counties, and moft of the large towns in England. The mof fevere and opprobrious language was ufed in the county-meeting with tegard to the minittry and parliament. The latter were reprefented as void of all principle, ready to facrifice both confcience and reptutation to the will of thofe in power; and, in thort, bound by noties but thefe of the moft fordid intereft; ready of all occafions to entich themfelves by the fpoils of their country; and perfons to whom the honour or interefl of the kingdom were matters of no confideration. The court, on the other hand, was louked upon as the receptacle of every one who harboured ill defigns againft the people of Britain, and where nubody food any clance of advancing himelff but by adulation and extreme fervility.

The emiffaries of America and the other enemies of Great Britain are faid to have been active in fomenting thefe difcords, which at this period arofe to a hcight unknown for a contury pafte The miniftry,

Britain. hosvever, contirwel firm and undaunted. Previous to the taking of any of the petitions into confideration, they iufifted on going through the bufinefs of the fupply, by determining the ways and means; nor did either the number of Englifh petitions, or an additional one from the ifland of Jtmaica fetting forth the extreme danger that illand was in, make them alter their refolution in the leaft.

At laft, in the beginning of February 1780, a plan was brought forward by Mr Burke, for fecuring the independency of parliament, and introducing economy into the various departments of government. This plin, among other things, propofed the abolition of the olfices of treafurer, comptroller, and cofferer of the houfehold; treafurer of the chamber, matier of the houfehold, the board of green cloth, with f.veral other places under the fteward of the houfehold; the great and removing wardrobe, the jewel office, the robes, board of works, and the civil branch of the board of ordnance. Other reformations were alfo propofid; but though the temper of the times obliged the minifter to admit the bills, and even to pretend an approbation of the plan, he meant nothing lefs than to admit it in its full extent, or indeed in any part, if it could poffibly be prevented. When the plan, therefore, which he had approved in general, came to be particularly contidered, he was found to he determined againft every part of it. The general temper of the p-ople, without doors, however, feemed now to have affected many of the members of parliament, and made them defert their old ftandard. An economical plan propofed in the houfe of lords by the earl of Shelburne was rejected only by a majority of 101 to 55 . This was the ftrongelt oppofition that had appeated in that houfe for many years; but in the lower houle matters Atill went worfe. The firft propofition in Mr Burke's plan was to abolifh the office of fecretary of fate for the colonies; and the utmoft efforts of adminiftration could preferve this office only by a majority of 208 to 201. The board of trade was abolithed by 207 to 198 : hut this was the ouly defeat futtained by minitry at prefent; all the reft of the plan being rejested excepting only one claufe, by which it was determined that the offices of lieutenant and enfign, \&c. belonging to the yeamen of the guards, fhould not any longer be fold, bur given to officers in the army and navy on half pay, and of 15 years ttanding in their refpective lines of fervice.

This ill fuccefs was very mortifying to Mr Burke, who had expeted to fave more than a million anmally to the ration. Adminiftration, however, had fill a greater defeat to meet with than what they had experienced in the abulition of the board of traje. The 6th of April was the day appointed for taking into confideration the numerous petitions, from balf the kingdom of Equland, already mentioned. They were introduced by Mr Dunning; who, in a very elaborate fpeech, fet forth the many attempts that had been made to introduce reformation and economy into the plans of government. Thefe had been defeated by minifterial artifice, or overthrown by mere dint of numbers: he concluded therefore, and mored as a refolation of the houre, That the influence of the crown had increafed, was iacre:afing, and ought to be diminifhei. This motion being carried after a long and
violent debate, he next moved, thit the houfe of com. Eritar, mons was as competent to examine into :and correct abufes in the expenditure of the civil lift as in any other branch of the public revelue. To this another was added by Mr Thomas Pitt, That it was the duty of the houfe to provide an immediate and effectual tedrefs of the abufes complained of in the petitions. The miniftry now requefled that nothing farther might be done that night: but fuch was the temper of the houfe, that both thefe motions were caried without a divifion; after whicb they were read a firf and fecond time, and agreed to without a divifion.

Minillty had never received fuch a complete defeat, nor ever been treated with fo much afperity of language. The news of the proceedings of this day were received by the people at large with as much joy as if the moft complete victory over a foreign enemy had been announced. Oppofition, however, though mafters of the field at prefent, did not imagine they had obtained any permanent victory, and therefore refolved to make the moft of the advantages they had gained. It was moved by Mir Dunning at the next meeting, that to afcertain the independence of parliament, and remove all fufpicions of its being under undue irfluence, there floould, every feffion, feven days after the meeting of parliament, be lad before the houfe an account of all the fums iffued out of the civil liff, or any other branch of the revenue, fince the laft recefs, in favour of any of its members. This pafied with little difficulty; but when he moved that the treafurers of the chamber and houfehold, the cofferer, comptroller, and mafter of the houlfhold, with the clerks of the green cloth, and their deputies, fhould be excluded from isaving feats in the houfe, a warm debate enfued; and the motion was carried only by 215 againft 213 . This They again was the latl triumph of the popular party; their next get a mamution, for the exclufion of revenue officers, being jerity in thrown out by 224 agairift 195. A laft effort was their tismade, by Mr Dunning's propolal of an addrefs to the throne againft proroguing or diffolving the parliament, until meafures had been taken to prevent the improper infuence complained of in the petitions. On this occafion the cebates were long and violent: but the motion was lolt by 254 againft 203. Minillty would gladly have fcreened their fiend from the vengeance of oppolition; alleging the latenefs of the hour, it being then paft midnight. The fpeaker of the houfe, however, perceiving Mr Fox about to rife, infifted that the houfe thould remain fitting; and thus the deferters from the popular party were condemned to hear their condurt fet forth in fuch terins as perhaps were never applied on any other occafion to members of the Britilli fenate.

This laft vicory of adminiftration confirmed the dif- ireadtul fitistaction and ill op:nion which the people had con-dilturbar. ceived of the majority of their reprefentatives. It was count of in the height of that ill temper which the conduct of the popinh parliament had created in the multitude, that thofetill. difcontents broke out which were fo near intolving the kingdom in tuivelfal defotation. The hardhips urder which individual profeffing the Roman Cathotic perluafion had labourcal for many years in Englind, had. lately aw ikened the confferation of the liberal minded. The inutility and impropricty of perfeeuting people from whom no danger was apprehended, assd
$\mathrm{B} \quad \mathrm{R}$ I , $\left[\begin{array}{r}5.5 \\ \hline\end{array}\right.$
Bitan. who were not fufpected of difafiection to the civil conflitution of this country, induced feveral perfons of rank and influence to undertake the procuring them relief.

The calamities of the times had afforded the Englifh Roman Catholics a very proper occafion to manifeft their attachment to government. They prefented a moft loyal and dutiful addrefs to the king, containing the ftrongeft aflurances of affection and fidelity to his perfon and the civil government of this country.
" Oar exclufion (faid they) from miny of the benefits of that conflitution, has not diminifhed our severence for it. We behold with fatisfaction the felicity of our fellow-fubjects; and we partake of the general profperity which refults from an inflitution fo full of wifdom. We have patiently fubmitted to fuch reAtrictions and difcouragements as the legiflature thought expedient. We have tbankfully received fuch relaxations of the rigour of the laws, as the mildnefs of an enlightened age, and the benignity of the Britifh government have gradually produced; and we fubmifGively wait, without prefuming to fuggeft either time or meafure, for fuch other indulgence as thofe happy caufes cannot fail in their own feafon to effect.
"We beg leave to affure your majefty, that our diffent from the legal eftablifhment in matters of religion is purely confcientious; that we hold no opinions adverfe to your majeffy's government, or repugnant to the duties of good eitizens; and we truft that this has been flown more decifively by our irreproachable conduct for many years paft, under circumftances of public difcountenance and difpleafure, than it can be manifented by any declaration whatever.
"In a time of public danger, when your majefty's fubjects can have but one intereft, and ought to have but one wifh and one fentiment, we think it our duty to allure your majefty of our unreferved affection to your government, of our unalterable attachment to the caufe and welfare of this our common country, and our utter deteflation of the defigns and views of any foreign power againft the dignity of your crown, and the lafety and tranquillity of your fubjects.
"The delicacy of our fituation is fuch, that we do not prefume to point out the particular means by which we may be allowed to teftify our zeal to your majefty, and our wifhes to ferve our country; but we entreat Icave faithfully to aflure your majefly, that we fhall lue perfectly ready, on every occafion, to give fuch proofs of our fidelity, and the purity of our intentions, as your inajefly's wiffom and the fenfe of the nation thall at any time deem expedient."

Thi, addrefs was prefented to the king on the firft day of May 1778 , and was figned by the duke of Norfolk, the carls of Surrey and Shrewbury, the lords Stourtor, Petre, Arundel, Dormer, Teynham, Clifford, and Limton; and by $\mathrm{IG}_{3}$ commoners of rank and fortune.

The orily obflacle that flood in the way of their wifhes was, the difficulty of overcoming the prefudices of the lower claTes, who would probably difappruve and condemo the indulgence flown to the people of : perfuafion which they hard been taught to look upon with horrer and detefation. But nutrithilanding the frepoffe frons of the vulgar, it was celermined by fereral individuals of generous and liberal Sentiments, to
eipoufe their caufe as far as it could be done confiftently with the principles of the conftitution and the general temper of the times. Their being patronized by fome of the principal leaders in oppofition, was a circumflance greatly in their favour; as it howed that thofe who profefied to be the moft ftremuous friends to the freedom and conflitution of this country, did not imagine they would be endangered by treating the Roman Catholics with more lenity than they had hitherto experienced.

About the middle of May , Sir George Saville made a motion for the repeal of fome penalties enacted againft theur. He grounded his motion on the neceffity of vindicating the honour and afletting the true principles of the Proteftant religion, of which the peculiar merit was to admit of no perfecution. It ill became the profeflors of fuch a religion to be guilty of that intolerance with which they reproached others. The flatutes he meant to repeal were fuch as gave occafion to deeds that debafed and were a difgrace to human nature, by inciting relations to diveft themfelves of the feelings of humanity, aud by encouraging the rapacity of informers.

He reprefented the addrefs above quoted as a full proof of the loyal difpofition of the Roman Catbolics, and as an unfeigned teftimony of the foundnefs of their political principles. In order, however, to filence the objections of thofe who might fufpect them of duplicity, a teft was propofed of fo binding and folemn a nature, that no man could be fuppofed to imagine that any anthority could annul its efficacy.

The pains and penalties of the ftatutes to be repealed were laid before the houfe by Mr Dunning. By thefe flatutes it was made felony in a foreign clergyman of the Roman communion, and high treafon in one that was a native of this kingdom, to teach the doctrines or perform divine fervice according to the rites of that church; the eftates of perfons educated abroad in that perfuafion were forfeited to the next Proteftant heir; a fon or any other neareft relation, being a Proteftant, was empowered to take poffeflion of his own father's, or neareft of kin's effate, during their lives; a Roman Catholic was difabled from acquiring any legal property by purchafe.

The mildnefs of the Britifh governmerit did not indeed countenance the practice of the feverities enacted by thefe ftatates : but flill the profpect of gain fubjected every man of the Roman perfuation to the ill ufage of informers ; as on their evidence the magiftrates were bound, however unwilling, to carry thele cruel laws into exccution.

In confequence of thefe reprefentations, the motion made in favour of the Roman Catholics was received without one diffenting voice; and a bill in purfuance to its intent was brought in and paffied both houfes. The teft or oath by which they wese bound, was conceived in the flongef and moll cxpreflive terms. They were enjoined to lwear allegiance to the king's perfon and family, and to abjure elpecially the pretenfions to the crown afiumed by the perfon called Charles $1 I I$. They were to declare their difhelief and deteftation of the following pofitions: That it is lawful to put individuals to death on pretence of their being heretics; that no faith is to be kept with lieretics; that princes excommunicated by the pope and council, or by the

B R I [ 5 $\underbrace{\text { Britain, }}$ See of Rome, or any other authority, may be depofed the pope of Rome, or any other forcign prelate or fovereign, is entitled to any temporal or civil jurildiction or pre-eminence, either directly or indirectly, in this kingdom. They were folemnly to profels, that they made the aforefaid declarations with the utmoit fincerity, and in the fricteft and plaineft meaning of the words and language of the telt, without harbouring any fecret perfualion that any difpenfation from Rome, or any other authority, could acquit or abfolve them from the obligations contracted by this oath, or declare it nuil and void.

The indulgence flown to the Roman Catholics in England, encouraged thofe of the fame perfation in Scotland to hope for a fimilar relief. Several gentlemen of that nation of great rank and character, and who were members of parliament, expreffed their warmeft wifhes that it hould be extended to their country; and declared their intention to bring in a bill for that purpofe the following feffion. The defign was approved by the general aflembly of the church of Scotland; who rejected, by a majority of no lefs than 100 , a remonftrance that had been propofed againft it. In confequence of thefe flattering appearances, a petition was prepared for parliament on behalf of the Roman Catholics in Scotland. But the exe expectations were foon damped. A pamphlet was publifhed againtt the doctrine and profeffors of the Popilh religion, which reprefented them as the common foes to mankind and the difturbers of all ftates; and this being circulated among all clafles, raifed a number of enemies to the intended petition.

The oppofition was at firft chiefly conducted by fome perfons at Edinburgh, who affumed the title of Committee for the Proteltant Intereft ; and under that denomination carried on a correfpondence with all thofe who coincided with their opinions, and who formed a very large proportion of the common prople in Scotland. As the committee at Edinburgh, from its refi.dence in the capital of the kingdom, was deemed to conitit of perfons of the firf importance, it directed in a manner the motions of all the others.

The perfons who made up this committee, however, acted from no mean or mercenary views : they aimed only at the prefervation of the Proteflant religion, and the liberties of their country; both which they conceived were in danger, from the indulgence of government to individuals of the Roman Catholic perfuafion.

Aftuated by thefe ideas, they exerted themfelves with fo much activity, that the principal gentlemen of the Catholic perfunfion thought it requifite for their fafety to convey an intimation to the Britih minifry, that they were defirous to drop the application they had propofed to make for an indulgence fimilar to that which had beert granted to their fellow-fubjects in England of the fame communion.

They pablithed alfo in the newfapers the reprefentation they had made to miniltry; hoping thereby to convince the pablic, that they were fincerely defrous to remove any caufe of dillatisfaction on their own account, and to fubmit to any inconveniency fooner than occafion diftubance. But matters were now gone too far to be conciliated by any means.

On the 2d day of Fitbruary 1779 , the populnce met

57 ] B R 1
according to appointment, in order to carry into execution the various projects they had in contemplation. They began by an attack upon a houfe inhabited by a Roman Catholic bilhop, with others of his perfoafion, and which contained a place of worfhip. They comma:ted it to the flames. They defroyed in the fame m tmer another houfe that bad alfo a chapel; after which they proceeded to vent their refentment on feveral individuals of that perfoafion by burning their effects.

The next objects of their vengcance were thofe who had patronized the Roman Catholics. They befet the houfes of Dr Roberton and Mr Crofby; but, on hearing of the intentions of the rioters, the friends of both canie their affiftance in fuch numbers, and fo well prepared to repel the fury of the populace, that they did not dare to exercife the violence they had premeditated.

This difappointment, which was accompanied by further precautions againft their malevolent defigns, put an end to the attempts of the mob at Edinburgh. But the firit of diffatislaction at the indulgence intended to the Roman Catholics ftill remained in full force. Miniftry was held out as harbouring a Cecret determination to undermine the Proteffant religion, and to introduce Popery; and loaded in confequence with the mof outrageous invectives.

By degrees the fame ungovernable firit was communicated to part of the Englifh nation. The cry againt Popery became daily more loud amoug the inferior claffes; and that inveteracy which had fubfided during fo many years, began to revive in as powerfol a degree, as if the nation were actually under the impending terrors of perfecution. To this were added the fecret fears of others; who fill imagined it was not inconfiftent with good policy to difcourage a religion, from the profeffors of which fo much danger had accrued to the conllitution of this country in former times. Thefe, though averfe to all acts of violence, thought it neceffary to keep alive the antipathy to it, and by no means to fhow the leaft willingnefs to grant any further indulgence than it had hitherto experienced.

From this motive they were of opinion, that a fufpenfion of the laws enacted againft it, though tacit and uracthorized, was fufficient to remove all complaints of harflnefs and oppreflion on the part of the Roman Catholics; and they looked upon the penal fratutes as a requifite bar to confine them within the bounds of fubmiflion, and fear of oftending.

Thus a fociety was formed in London, which took the title of the Proteftant Afociation, of which Lord George Gordon, who had rendered himflf corificuous in Scotland by his oppofition to the repeal, was elected prefident : and it now prepared to act in a decifive mamer againft the relolutions of the legifature.

On the 2gth of May ir 80 , the affociators heidi a meeting in order to fettle in what manne: they frould prefent a petition to the houlc of comntons againft the repeal of the penal flatutes. A long ficech was wode on this occation by their prefident, who reprefentes the Ronan perfuation as frining ground rapidy in this country; that the only method of Aupping its progrefs, was to go up with a firited remonillance to

Bntaiu.
2.:tai.. their rep:efentatives, and to tell them in plain and refolute terms that they were determined to preferse their religious freedom with their lives, \&zc.

This harangue being received with the louden applaufe, he mosed, that the whole body of the aftociation hiould meet on the 2d day of June in St George's Fields, at ten in the morning, to accompany him to the houfe of commons on the delivery of the peti:ion. This being unanimoutly antented to, he informed them, that if he found himfelf aitended by fewer than 20,000 , be would not prefent the petition. He then directed they fhould furm themfelves into four divifions; the firf, fecond, and third, to confift of thofe who belonged to the City, Weltminfter, and Southwark; the fourth of the Scotch refidents in London. They were, by way of diftinction, to wear blue cockades in their hats.

Three dass previous to the prefertation of the petition, he gave notice of it to the houfe, and acquainted it with the manner in which it was to be prefented; but this was received with as much indifference and unconcern as all his former intimations.

On the 2d day of June, according to appointment, about 50 or 60,000 men affembled in St George's Fields. They drew up in four feparate divifions, as hid been agreed, and proceeded to the parliament houfe, with Lord Gcorge Gordon at their head. An immenfe roll of parcbment was carried before them, containing the names of thofe who had figned the petition.

On their way to the houle, they behaved with great peaceablenefs and decency; but as foon as they were arrived, great difturbinces took place. The rioters began by compelling all the members of both houfes they met with, to put blue cockades in their hats, and call out, "No Poperv." They forced fome to take an oath that they would vote for the repeal of the Popery a\&t, as lhey nyled it. They treated others with great indignity, pofling themfelves in all the avenucs to both houfes; the doors of which they twice endeavoured to break open.

Their rage was chiefly direfted again the members of the houfe of lords; feveral of whom narrowiy efeaped with their lives.

During thefe dilfurbances, Lord George Gordon moved for leave to bring up the petition. 'lhis was readily granted; but when he propofed it mould be taken into immediate confideration, it was flrenoonfy oppofed by almon the whole houfe. Enraged at this oppofition, he came out feveral times to the people during the debates, acquainting them how ayerfe the houfe appeared to grant their perition, and noming particulaly thofe uho had fpoken againli it.

Seve: al members of the houle expollulated with him in the warmelt terms on the unjuftriablene fs of his conduet ; and one of his relations, Colonel Gordon, thentened to run him through the moment any of the rioters fhould furce their eatrance into the houfe. It was fome hours before the houfe could carry on its deliterations with any regulatity, which llas not dune till the members were relieved hy the arival nf a party of the gurde. Odar being rellored, the bulinefs of the fectition was refumed; when Lord George Gordon inlel them it liad been figned by wear 120,002 Britifn Wrotofan: fulje?s. He thesefore i:fin:d :hat the pe-
tition flould be confidered without delay. But notwithatanding the dangers with which they were monaced, and the proof which the mover of the petition had givell that no means thould be left uncmployed to compel them to grant it, the commons continued immoveable in their determination. Of 200 members, then preferit in the houfe, fix only voted for it.

In the mean time the mob had difperfed itfelf into various parts of the metropolis, where they demolifhed two Romith chapels belonging to foreign minifters; and openly vented the moft terrible menaces againft all people of that perfuafion.

On the $4^{\text {th }}$ of June they affembled in great numbers in the eallem parts of London ; and attacked the chapels and houtes of the Roman Catholics in that quarler, ftripping them of their contents, which they threw into the freet, and committed to the flames.

They renewed their outrages on the following day, deflroying feveral Romifh chapels, and demolifhing the houfe of Sir George Saville, in refentment of his having brought into parliament the bill in favour of the Roman Catholics.

Next day both houfes met as ufual ; but finding that no bufinefs could be done, they adjourned to the 19 th.

During this day and the following, which were the 6th and 7 th of June, the rioters were abfolute mafters of the metropolis and its environs.

Some of thofe who had been concerned in the demolition of the chapels belonging to foreign minifters, having been feized and fent to Newgate, the mob collected before that prifon, and demanded their immediate releafe. On being refufer, they proceeded to throw firebrands and all manner of combuftibles into the keeper's houfe; which unhappily communicated the fire to the whole huilding; fo that this immenfe pile was foon in flames. In this fecne of confufion, the prifoners were all releafed. They amounted to about 300 ; among nlom leveral were under fentence of death. They let fire, in the fame mamer, to the King's bench and Fleet prifons, and to a number of houfes belong!ng to Roman Catholics. The terror oecafoned by thefe incendiaries was fuch that moft people hung out of their windous pieces of blue falk, which was the colour affumed by the rioters; and chalked on their doors and Chutters the woids, "No Popery," by way of fynifying they wese friendly to their caufe.

The night of the $7^{\text {th }}$ of June concluded thefe horrors. No lefs than 36 difitrent conflagrations were counted at the fame time. The hank had heen threatened, and was twice affailed; but happily was too well gearded for their attempts. In the evening, large bodies of thonps arrived from all patt, and came in tiane to put a fop to the progrefs of the rioters. They fell upon them everywhere, 3nd multitudes were flain and wounded, befides the numbers that peribhed through intoxication. It was not until the afternoon of the 8th, that people began to recover form their conflernatios. Dusing great part of the day, the difarders of the preceding night bad created foterrible an alarm, that the mops were almon hniverfally fhut up aver all London. The metancholy eficets of mifguided z.cal were not, howcver, confined fulely to London. 'The ou:ragecus difpofition of the populace was freparing

## B R I

Britain. to act the like horrid fecnes in other parts of Englata. The mob rofe in Hull, Briftol, and Bath; but throush the timely interpofition of the magiflracy, thefe paces were faved from their fury.
O. the fuhfiding of this violent and unexpected commotion, it was thouglit proper to fecure Lord George Gordon. He was arrefted, and committed clofe prifoner to the Tower, after having undergone a lons examination before the principal lords of the councal.

On the rgth of June, both houles met again according to adjournment. A fpeech was made on this occafon from the throne, acquainting them with the meafures that had been trken in confequence of the difurbances, and affaring them of the utmoft readinefs to concur in whatever could contribute to the fafety and maintenance of the laws and liberties of the people. The fpeech was highly appruved: but the conduct of adminiftration was feverely cenfured, and charged with unpardonable neglect for not calling forth the civil power, and employing the military in due time to obviate the michiefs that had been committed. Miniftry excufed itfelf, from the want of fulficient Arength to anfwer all the demands of affiftance that were made during the riots, and the abfolute impofibility of fupprefling them till the arrival of troops from the country. The various petitions were now taken into confideration that had been prefented for the repeal of the ast which had occafioned the riots; but the houfe continued in the faree mind. Neverthelefs it was thought proper to yield fomewhat to the prejudices of the people, by palling a bill for preventing perfons of the Popith perfurfion from teaching or educating the children of Proteltants; bat this was afterwards thrown out by the lords.

Nothing could have happened more opportunely for the prefent miniftry than the riots juft now related; for fuch were the alarm and terror occafioned by them, that the ardour which had appeared for promoting popular meetings and affociations, and for oppofing the meafures of government, was in a great degree fupprefled. The county meetings were reprefented as having a tendency, like the Proteftant Affociation, to bring on infurrections and rebellions. Many began to confider all popular meetings as extremely dangerous; and among the commercial and monied people, there was not an inconfiderable number, who were fo panicfruck by the late riots, that all attention to the principles of the conftitution was overruled by their extreme anxiety about the prefervation of their property. Had it not been for thefe events, though the minifter was again at the head of a majority in parliament, it is probable that the fpirit of oppofition which prevailed in the different counties would have compelled adminiffration to make fome conceffions to the people. But thefe tranfations extremely ftrengthened the hands of adminifitation, and rendered the exertions of the popular leaders lefs formidable. The popular party were alfo fomewhat weakened, by the diffenfions which tonk place among them in the county meetings, and affemblies of that kind, relative to annual parliaments and other political regulations which were propoled to be adopted.

In the fuppreffion of thefe riots, however, the interEerence of the military without the command of the

Picair. c.vil magifate became a mater of furpicion to the people at large. In the boule of lo:ds the duke of Richmond expiefled as capectation that fome of his maj-ity's miniders would rile, and give their lordRips allurances, that the mealures taken in cricer to fupprefs twe riuts, which were def ufible only upon the ground of necelfity, would be to llated; and that what was illegally done, on the ground of nectifity, would be cured by an act of indematity.

Various other obfervations were threwn out relative to the king's prerogative and military law : upon which Lurd Mansfeid obferved, that neither the king's pretogative nor military law had any thing to do with the conduct of government in therr endervours to quell the late outrages. All men, u. all ranks, defcriptions, and denominations, were bound, by their oath of allegiance, to interpofe for the prevention of acts of high trealon, or felony, wherever any attempts to perpetrate fuch crimes were made in their prefence ; and were criminal, if they did not do it. In the whole of thefe proceedings, therefore, the military had not acted in their technical capacity as military, but had merely exercifed their duty as civil men, which they, in common with other civil men, had both a right and an obligation to exercife. When a body of men were convened, without proceeding to the actual perpetration of treafonable or felonion: acts, then, by a claufe in the riot-act, the prefence of the civil magiftrate was neceffary, before the military could interpofe at all; and for this reafon, that as no acts of felony were committed, they could have no plea in the civil character for meddling at all. But by the fatute-law of the country, it became felonious in any combination of men to perfevere in that combination, after the riot-act had been read by a juftice of the peace; and this being dune, then, and not till then, they had a conflitutional reafon for their interpofition; namely, the privilege and duty of hindering the commiffion of felony, whenerer they had it in their power. This being, therefore, the plain vaice of the law, his lordfhip did not fee how any prerogative of the king had been excrcifed, nor how military law had been eftablifhed. Nothing had been done out of the regular courfe of the law, and no power had been affumedby the foldiery, which they did not poffefs as civil individuals, and not in their technical capacity as members. of the military.

This doctrine was far from being agreeable to the nation in general, and was very freely cenfured both in newfpapers and pamphlets. It was admitted, that if foldiers came accidentally, as individuals, to any place where felonies were committing, they might interfere, as well as others of the king's fubjects, in the prevention of them. But this was a different cafe from that of bodies of armed troops being fent under officers commiffioned by the king, and with orders to act againft riotous and diforderly perfnns without any authority from the civil magiflrate. It was maintained that the confitution of England knew no fuch character as a mercenary foldier, at the fole will of the executive power. Soldiers were held to their duiy by laws which affected no other part of the community : and no foldier, as fuch, could be employed in the fervice of the conftitution, without a particular act of parliament in lis favour. The idea that a mi-

Eitain. litary man was convertible into a foldicr, or a citizen, as royalty might move its fceptre, was a novel idea, and only made for the prefent occafion. Mercenary armies were underfood to confift of men, who had either detached themfelves or been forced from civil focieties. Laws were made nn thofe fuppofitions, regarding their liberties and lives, foch as no members of civi! foriety could fubmit to. Soldiers were only tolerated by annual bills, and under repeated pretences; and the very idea of blending them with the common fubjects of the fate, and giving perfons of their dtfcription a right of judging on its molt imputant occurrences, siould have filled our anceftors with horror. The laws tolerated an army for certain periods, and under certain reftrittions; but there was no law which admitted the interference of the military in any of the operations of civil government.

It was acknowledged, that the late atrocious riots had rendered an extraordinary exertion of power abfolutely necefiary: but it was at the fame time contended, that the interpofition of the army in thofe outrages, without any authority from the civil magiltrate, was an act of prerogative unconflitutional and illegal, though perfectly feafonable and beneficial. The public fafety and benefit might fometimes excufe exertions of power, which would be injurious and tyramnical on ordinary occafions: but the utmolt care thould be taken, that fuch extraordinary exertions fhould not be eftablimed as precedents, which might operate very fatally to the conflitution. An ad of indemnity to the miniftry, therefore, on account of the necellity of the cafe, fhould be immediately p.ifted. But if a large ftanding army was kept up, and the king was underfood to be invefted with a power of orlering the troops to act difcretionally, whenever he fhould judge proper, without any authority from the civil mapifratc, the people could have no poflible fecurity for their liberties. In vain might be their appeale to the courts of juftice: for the efficacy of appeals of that kind. in fuch cafes, would depend on the pleafure of the prince.

Nany were filled with fimilar apprehenfions, and alarmed at the dangerous precedent which the late exertions of the military afforded, however neceffary they might be from the very fingular circumftances of the cafe. Among others, Sir George Saville, in an ad'refs to his conftituents fome time afterwards, declared, that he confidered them as "fully, effectually, and abfolutely under the difcretinn and power of a military force, which was to act without waiting for the authority of the civil maginrates."

A letter written by L.ond Amberf to Lieutenant-co. lonel Twifleton, who commancled the troops employed in London for the fupprefion of the riots, and which was underfood to be an order for difarming the citizens, was much canvaffed in both houfes of parliament. The letter, however, was denied to have fuch a meaning, and was faid to be levelled only at diforderly perfons who were found in arms. It excitcd, neverthelefs, no inconfiderable alarm; and was an inducemert, added to the confideration of the late riots, to lead a great number of citizens to provide themfelves with arms, and to juin in plans of military affociation, that they might be enabled to proteet themfelves and
the city from vicience and outrage, withont any future interpofition of the military.

We muf now proceed to a detail of the operations ${ }_{646}$ of the war, which, notwithftanding the powerful con- gacements, federacy againft Great Britain, feemed rather to be in at fea, \&c. her favour than otberwife. The Spaniards had begun their military operations with the fiege of Gibraltar, but with very little fuccefs*; and the clofe of the * See Gib. year 1779, and beginning of 1780 , were attended rallar. with fome confiderable naval advantages to Great Britain. On the 18 h of December i779, the fleet under the command of Sir Hyde Parker in the Weft Indies captured nine fail of French merchant Thips, which, with feveral others, were under the convoy of fome Mips of war. Two days after he detached Rear Admi* ral Rowley in purfuit of three large French thips, of which he had received intelligence, and which were fuppofed to be patt of Monf. la Mothe Picquet's fquadron returning from Grenada. His fucceis there has been already mentioned; and about the fame time feveral other veffels were taken by the fame fquadron commancied by Sir Hyde Parker.

On the 8 th of January 1780 , Sir George Brydges Rodney, who had been intrulled with the command of a Aleet, one object of the deflination of which was the relief of Gibraltar, fell in with 22 fail of Spanifh thips, and in a few hours the whole flect was taken.

In little more than a week after, the fame for tunate admiral met with fill more fignal luccef. On the 16 th of the month he engaged, near Cape St Vincent, a Spanifi fleet, confifting of 11 hips of the line and two frigates, under Don Juan de Langara. The Spaniards made a gallant defence; but four of their largett fhips were taken, and carried into Gibraltar. Thefe were, the Ploœnix of 80 guns and 700 men, on board of which was the admiral, Don Juan de Langara; the Monarca, of 70 guns and 600 men, Don Antonio Oyarvide commander; the Princefla, of 70 guns and 600 men, Don Manuel de Leon commander; and the Diligente, of 70 guns and 600 men, Don Antonio Abornoz commander. Two other 70 gun hips were allo taken; but one of them was driven on fhnse on the breakers and loft, and the other was likewife driven on thore, but afterwards recovercd. Four fthips of the line efcaped, and the two frigates: but two of the former were much damaged in the action; in the courfe of which one Spanifi Mip, the San Domingo, of 70 guns and 600 men, was blown up. The five men of war taken were renarkably fine flips; and were afterwards completely refitted, manned, and put into the Englifh line of battle. The Spanith admiral and his officers applied to Sir George Rodney to obtain the liherty of returning to Spain upon their parole of honour: but this he declined for fome time, becaufe he was informed that a great number of Britih feamen were then priloners in Spain, who ought to have been releafed. Huwever, afterwards receiving affurances that thefe fould be immediately fet at liberty, he releafed the Spanith admiral and officers upon their parole; and the prifoners in general were treated with fuch generofity and humanity, as appeared to make a great imprefion upon the coust of Madrid and the Spanift mation. When Admiral Rodney had fipplied the garifon of Gibraltar

Britain. with provilions, ammunition, and money, he proceeded on his voyage to the Weft Indies; having fent home part of his fleet, with his Spanim prizes, under the command of Rear-Admiral Digby; who took a French man of war on his return, the Prothée, of 64 guns and 700 men.

On the 20th of March there was an action in the Weft Indies, between fome French and Englifh men of war, the former under the command of Monf. de la Mothe Piquet, and the latter, being part of Sir Peter Parker's fquadron, under that of Commodore Cornwallis. The engagement was maintained on both fides with great fpirit; but the French at length gave up the conteft, and made the beft of their way for Cape François.

Admiral Rodney having arrived in the Weft Indies, and taken upon him the command of his majefty's fhips at the Leeward Iflands, an action happened between him and the French fleet under the command of Count de Guichen, on the 19th of April. The Britifh fquadron confifted of 20 thips of the line, befides frigates; and the Frerich flect of 23 Ships of the line, and feveral frigates. The action began a little before one, and continued till about a quarter after four in the afternoon. Admiral Rodney was on board the Sanduich, a 90 gun thip, which beat three of the French flips out of their line of battle, and entirely broke it. But fuch was at length the crippled condition of the Sandwich, and of feveral other fhips, that it was impoffible to purfue the French that night without the greateft difadvantage. The victory was, indeed, claimed on both fides; but no hip was taken on either: and the French retired to Guadaloupe. Admiral Rodney's fhip, the Sandwich, had fuffered fo much, that for 24 hours the was with difficulty kept above water. Of the Britifh there were killed in this engagement 120, and 353 were wounded.

On the $15^{\text {th }}$ of May, another action happened between the fame commanders. It did not commence till near feven in the evening, only a few fhips having engaged, which were foon feparated; and the whole ended in nothing decifive. Of the Britifh 21 were killed, and 100 wounded. The fleets met arain on the igth of the fame month, when anotber action enfued; but this alfo terminated without any material advantage on either fide. In the laft engagement 47 of the Britifh were killed and 193 wounded. Ac. cording to the French accounts, the total of their lofs, in thefe three actions, amounted to 158 killed, and 820 wounded.

It was a very unfavourable circumitance for Great Britain, that the French fhould have fo formidable a fleet in the Weft Indies: and this great force of the enemy was augmented in June, by being joined with a Spaniih fquadron near the ifland of Dominica. The French and Spanifh fleets, when united, amounted to 36 fail of the line. They did not, however, attack any of the Britif inlands, or even reconnoitre the fleet under the command of Sir George Brydges Rodney, whicb then lay at anchor in Gros Iflet bay. Such, indeed, were the vigilance and good conduct of that adruiral, and fo fenfible were the inhabitants of thefe iflands of his fervices, that the houfes of affembly of St Chriftaphers and Nevis prefented addreffes to him, teltifying Vor. IV. Part II.
their gratitude for the fecurity they enjoyed in confequence of his fpirited and feafonable exertions.

In the month of June, Admiral Geary, who commanded the grand fleet, took twelve valuable merchant hips bound from Port au Prince to Bourdeaux and other ports of France: But in the month of July a very important and unexpected capture was made by the Spaniards, which could not but excite much alaria in Great Britain. On the 8th of Auguf, Captain Moutray, who had under his command the Ramilies of 74 guns and two frigates, with the trade bound for the Eaft ard Weft Indies under convoy, had the mitfortune to fall in with the combined fleets of France and Spain, which had failed from Cadix the preceding day. The Ramilies and the two fr.gates efcaped : but the reft were fo completely furrounded, that five Ealt Sdiamen were taken, and 50 merchant hips beand tor the Weft Indies. Their cargoes were extremely valuable : it was one of the moll conuplete naval captures ever made; and was a heavy froke to the commerce of Great Britain. The Spaniards on this occafion behaved to their prifoners with great attention and bumanity; and appeared difpofed to make an adequate return for the generous treatment which their countrymen had experienced from Admiral Rodney. This lofs, however, great as it was, was fcarcely fufficient to compenfate the capture of Fort Omoa fiom the Spaniards, where upwards of three millions of dollars were gained by the victors, and, among other valuable conmodities, 25 quintals of quickfilver, without which the Spaniards could not extract the precious metals from their ores; the lofs of which confequently rendered their mines ufele $f_{5}$.

But while the Britifh were making the moft vigorous efforts, and even in the main getting the better of the powers who oppofed them fairly in the field, en nies were raifed up throughout all Europe, who, by reaion of their acting indirestly, could neither be oppofed nor refilled. The poner which moft openly Account manifefted its !oftle intentions was Holland; but be-the armed fides this, a mofl formidable confederacy, under the neutrality. title of the armed ncutrality, was formed, evidently with a defign to crutb the power of Great Britain. Of this confederacy the emprefs of Ruffia declared herfelf the head; and her plan was intimated on the 26th of February 1780, in a declaration addicfled to the courts of London, Velfailles. and Madrid. In this piece it was oblerved, that though from the conduct of her imperidl majefly it might have been hoped tbat ber fubjects would have been allowed peaceably to enjoy the fruits of theis induftry, and of the advantages belonging to all neutral trations, experience had proved the contraty: her imperial majefty's fubjects had been often mplefted in their navigation, and retarded in their operations, by the hips and privateers of the belligerent powers. Her imperial majefty therefore declared, that the found. herfelf under the neceffity of, removing thofe vexations which were offered to the commerce of Ruffia, as well as to the liberty of commerce in general, by all the means compatible with her dignity and the welfare of her lubjects: but before nie came to any ferious meafures, and in order to prevent all new mifunderftandings, the thought it juft and cquitable to expofe to the eyes of

4 B
all

## B R I

Eri: Eri:...... ail Europe the principles which we had adopted fur her conduet, and which were contained in the following propolitions :

1. That neutral fhips fhould enjoy a free navigation, even from port to port, and on the coafts of the belligerent powers.
2. That all effens belonging to the fubjects of the belligerent powers flould be luoked upon as free on board fuch neutral thips, excepting only fuch goods as were fipulated contraband.
3. Her imperial majefty, for the proper underftanding of this, refers to the articles 10. and 11. of her ireaty of commerce with Great Britain, extending her obligations to all the other belligerent powers.

In the treaty made between Great Britain and Rulfia in $173+$ it is faid, "The fubjects of either party may freely pafs, repafs, and trade in all countries whir, uow are, or hereafter flall be, at enmity with the other of the faid parties, places actually blocked up or befieged only cxcepted, provided they do not carry any warlike Atores or ammunition to the enemy : as for all other effects, their thips, pafiengers, and goods, fhall be free and unmolefted. Cannons, mortars, or other watlike uter.fls, in any quankity beyond what may be neceffary for the fhip's provifion, and may properly appertain to and be judged neceflary for every man of the flip"s crew, or for each pafienger, fhall be decmed ammunition of war; and if any fuch be found, they may feize and conficate the fame according to law: but neither the veffels, paffengers, or the refl of the goods, fhall be detained for that reafon, or hindered from purfuing their voyage." The fame enumeration of the goods, tlipulated as contraband, was given in the treaty concluded between Great Britain and Ruffia in 1766.
4. That in order to determine what claracterizes a port blocked up, that denomination fhould not be granted but to fuch places before which there were afually a number of enemy's thips flationed near enough fo as to make irs entry dangerous.
5. That thefe primeiples floould ferve as rules in the judicial proceediogs and fentences upon the legality of prizes.

Her imperial majefty declared, that the was firmly refolved to maintain thele priticiples; and that, in order to protet the honour of her flag and the fecurity of the commerce and navigation of her fubjects, fhe had given all order to fit out'a confiderable past of her naval forces. She added, that this ineafure would have no intluence on the ftrict and rigorous neutrality which fie was refolved to obferve, fo long as fie fhould not be proveked and forced to depart from her principles of morleration and impartiality. It was only in that extremity that her flect. would be ordcred to ant wherever her honour, interef, and neceflity flould require. This declaration was alfo commminicated to the flates-general by Prince Gallizzin, envoy extraordinary from the emprefs of Ruffia; and the invited them to make ar commuri caufe with her, fo far as fach an union might ferve to protect commerce and navigation. Simulir communications and invitations were alfo made to the courts of Copenlagen, of Stockholm, and of Liblon, in order, it was Said, that, by the united care of all the ncutral maritime powers, the sinvigation of all the neutral trading nations might be eflatlitied and legalized, and a fyftem adopted fourd-
ed upon juffice, and which, by its real advantage, Britain. might ferve for rules to future ages.

The memorial of the emprefs of Kullia, though very unfavourable to the views of Great Britain, received a civil anfwer from that court : but by other powers it was received, as it might naturally be expected, with much more cordiality. In the anfwer of the king of France it was faid, that "what her imperial majefly claimed from the belligerent powers was nothing elfe than the rules preferibed to the French navy; the execution whereof was maintained with an cxablnefs known and applauded by all Europe." He exprefled bis approbation of the principlcs and views of her imperial majefty; and declared, that from the reafures fle had now adopted, "folid advantages would undoubtedly refult, not only to her fubjects, but alfo to all nations." The kings of Sweden and Denmark alfo formally acceded to the armed neutrality propoled by the emprefs of Ruffia, aod declared their perfect approbation of her fentiments. The §ates-general did the fame: but on account of that flownefs of deliberation which prevails in the councils of the republic, it was not till towards the clofe of the year that their concurrence was notified to the court of Rulfia, It was refolved by the powers engaged in this armed neutrality to make a commoly caufe of it at fea againth any of the belligerent powers who fhould violate, with refpeft to neutral nations, the principles which had been laid down in the memorial of the emprefs of Ruflia.

But though the Britifh ministry could not openly Oigin of ${ }^{64}$ engage in war with all the other powevs of Europe, the was they deternined to take fevere vengeance on the with the Dutch, whofe ingratitude and perfidy now became a Dutrb. general fubject of fpeculation. It has already been oblerved, that, ever lince the commensement of hoftilities with the Americans, the Dutch hrad fown much partiality towards them. This continued to be the cafe, even beyond what the natural avidity of a mercantile people could be fuppofed to praduce: Frequent memorials and remondrances had of confequence paffed between the two nations, and the breach gradually grew swider and wider, until at laft inatters came to an extremity, by a difcovery that the town of Amferdam was about to enter into a commercial treaty with America. This happened in the beginning of Sep. tember 1780, by the capture of Mr Laurens, lately prefident of the American congrefs, and who had beent empowered by that body to conclude a treaty with Holland. Mr Laurens himfelf was inftantly committed prifoner to the tower of London, and a fpirited remonftrance was made to the fates of Holl:nd, requiring a formal difavowal of the tranfaction. To this, bowever, no other. anfwer could be cbtained, than that they would take the matter into confideration according to the forms and ufages of the country; and that a reply would be given as foon as the nature of their government wuuld adroit.

Sucls an equivocal anfiwer could not by any means be fatisfactory; and therefore the mofi vigorous meafures were refolved on. On the 25th of January 1781, it was announced tu the houfe, that his majefty had been obliged to direct letters of marque and reprifal to be iffucd againf the fates-general and their fubjects. For the caufes and motives of his conduct in this re-

## $\mathrm{B} R 1 \quad\left[\begin{array}{lll}563\end{array}\right] \quad \mathrm{B} R \mathrm{I}$

Speef, he referred to a public manifefo againf that republic, which he had ordered to be laid before the houfe. The charges againft the republic, however, were briefly fummed up by lood North in his fpeech on the occafion. The flates, he faid, in open violation of treaties, had not only refufed to give Great Britain that affiftance which thofe treaties entitled her to clain when attacked by the houle of Bourbots, but had alfo, in direct violation of the law of nations, contributed as far as they could to furnift France with warlike Aores, and had alfo at length thought proper to countemance the magiftracy of Amfterdam in the infult which they had offered to this country, by entering into a treaty with the rebelious colonies of Great Britain, as free and independent ftates. By the treaty of 1678 , it was fipulated, that, in cafe Great Britain was attacked by the houfe of Bourbon, the had a right to take her choice of either calling upon the flates-general to be. come parties in the war, and to attack the houle of Bourbon within two months, or of requiring an aid of 6000 troops, and 20 hips of war, which the ftates were to furniflı immediately after the claim was made. But though this country had always preferved her faith with Holland, yet that republic had refufed to fulfil the terms of this treaty.

His lordfhip farther obferved, that the fates-general had fuffered Paul Jones, a Scotchman, and a pirate, a ting without legal authority from any acknowledged government, to bing Britih Ahips into their ports, and to refit there (A). A rebel privateer had alfo been faluted at the Dutch infand of St Euftatius, after the had been fuffered to capture two Britin Alips within cannon-fhot of their forts and caftles. A memorial was prefented at the Hague, in June r779, on the breaking out of the war with Spain, to clain the aid we were entitled to require by the treaty of 1678 ; but of this not the leaft notice was taken on the part of the ftates. Two other notices had fince been delivered, each of which met with the fame reception. The Britifh miniftry had done all in their power to bring the flates to a true fenfe of their interef: and when the neceflity of the cafe compelled them to ficize on the Dutch fhips carryitg fores to Trance, they had paid the full value for the cargoes, and returned the hips; fo that neither the private merchant, the private adventurer, nor the ftates, had fulfered. France only bad felt the inconvenience, by iner being deprived of
that affiftance which fie would have received from thofe cargoes.

With refpect to an obfervation that bad been made, that the treaty laid before the houfe, between the Dutch and the $\Lambda$ mericans, was nothing more than a contemplative project, his lordhip remarked, that it was actually figned and fealed ; the names of $V$ an Ber. kel the penfionary of Amfterdam, and Monf. de Neuville, a mercliant and burgefs of that city, being fubfcribed to it on the part of the magillracy of Amfterdam, and the name of John Lee, as commiftioner or agent for the congrefs of America. The ftates-general had alfo refufed to pay the leaft attention to the requifition in his majefty's memorial, delivered by Sir Jofeph Yorke, that proper notice nould be taken of Van Berkel and his affociates; fo far as fuch a refufal could be implied by. a contemptuous filence. As to the principal magiftrates of Amllerdam, they were fo far from difavowing the fact, or attempting to palliate $i t$, that they gloried in the whole tranfaction; and exprefsly declared, even to the flates-general, that what they had done was what their indifpenfable duty required.

His lordflip added, that he lamented the neceffity of a war with Holland; but it appeared to him to be an unavoidable meafure. He confeffed the fituation of this country to be truly alarming; but when he confidered the pawerful fand that had already been made againt the moft alarming confederacy that had ever been formed againit Great Britain, the little fuccefs that the enemies of this country had met with in all their various attempts againt it, and the fpirit and re. fources of the nation, the public profpecis appeared to him much lefs gloomy than fome gentlemen though: proper to reprefent them. Our difficulties were certainly great ; but he trufted that they were by no means infuperable. He was neither defirous of concealing their magnitude, nor afraid to meet them, great as they muf be acknowledged; becaufe he was convinced, that when the force of this country was fully exerted, it was equal to the conteft; and that the only means of obtaining an honourable and a juft peace, was to thow ourfelses capable of carrying on the war with fpirit and with vigour.

Before this national refolution, however, could pof. fibly have been communicated officially to the naval commanders in the Weft Indies, the Dutch were actu$4{ }_{4}{ }_{2}$
ally
(A) This man, who had been formerly a fervant in Lord Selkirk's houfe, had landed in 1778 and plundered it of the plate, but without doing any farther mifchief. The aftion, however, was very difagreeable to his o:on party; and, at the defire of Dr Franklin, the plate was afterwards reftored. After this exploit, he attempted to Cet fre to the town of Whitehaven, but without fuccefs. In 1779, he made a defcent on the coaft of Ireland, but withotit committing any act of hoftility. His people indeed carried off fome fheep and oxen, hut their captain paid liberally for what they had taken. In the month of September 1779 he appeared in the Erith of Forth with feveral prizes. They advanced up the Frith above the ifland of Inchkeith, fo as to be nearly oppofite to Leith. His defign was fuppofed to have been to burn the mipping there; but he was prevented from attempting this by a flrong went wind; and fuch meafures were alfo taken for the defence of the harbour, by crefing batteries and otherwife, that he would probably have mifcarried had any attempt been made. On leaving the coaft of Scotland, he fell in with the Serapis and Scarborough, both of which he took after a molt defperate engagement; by which all the veffels were reduced almoft to wrecks. Thefe were car. ried into a Dutch harbour; and it was this tranfaction to which Lord North now alluded. He was called a pirnte, on account of his not being at that time properly fumifted with a commiffion cither from France or America, though this was denjed by the oopofite party.

Eritain. ally attacked. They defencelefs illand of St Euftatius
649 Capture of St Euftatius.

* See St

Eujutius. was, on the $3 d$ of February 1781, fummoned by Admiral Kodney and General Vaughan to furrender to the arms of Great Britain, and only one hour given to confider of it. The immenfe property on the inland was conficated, and a fate intituted, with fuch circumfances of apparent rapacity, as not only became the fubject of a difcuffion in parliament, but drew upon this mation, whether jufly or not we pretend not to determine, the ill will of all Europe *.

The Ditch nation feem not in the prefent cafe to have behaved with any degree of prudence. Notwithflanding their provoking conduet towards Britain, they had made no preparations for war in cafe of being attacked. Notwithftanding this inactivity, however, it fill appeared that they retained their ancient valour, and were in fact the moll formidable naval enemies Britain had to contend with. By the month of Augul 178 z they had equipped a confiderable fquadron, the command of which was given to Rear-2dmiral Zoutman. On the $5^{\text {th }}$ of that month, this fquadron fell in with the Britih fleet commanded by Admiral Hyde Parker. The force commanded by the Dutch admiral confifted, according to thcir own account, of one of 74 guns, one of 68 , one of 64 , three of 54 , and ene of 44 , befides frigates: but the Englifh account prefents the Dutch Heet as confinting of eight two-decked fhips. No gun was fired on either fide till they were within the diflance of half mufket-fhot. The action began about eight in the momithg, and continued with an unceafing fire for three hours and forty minutes. Both fides fought with equal ardour, and little advantage was gained on either. When the heat of the action was over, both fquadrons lay to a confiderable rime near each other, when the Dutch Mips of war with their convoy bore away for the Texel; and the E.nglifll flips were all too much difabled to follow them. A Dutch 74 gur, hip funk foun after the action. On board the Britilh fleet 104 were killed and 339 wounded; and the lof, of the Dutch was probably greater. Admiral Z.notman, in the account of the engagement eraufmited by him to the fladtholder, faid, that his men "fought like lions;" and it was faid by the Britifh admiral, in the account fent by hin to the admiraley, that "his majefty's officers and men hehaved with great bravery, nor did the enemy flow lefs gallantry." The admiral of the Dutch fleet was promoted, honoraty rewards were given to the principal officers, and two months pay to the men, for their behaviour in the action. When Admiral Parker's fleet arrived at the Nore, his majchy, in order to tellify his fenfe of his merit, went on board his thip, with the avowed defign, a, it is faid, of conferring on him the honour of knighthood: but this the admiral thought proper to desline; and it was generally luppofed, that this veteran officer was much difgufed, that more fhips had not been fent to him, for which he had applied, and which he conceived might have been fpared, fo that he might lave been enabled to obtain a com-

Van efferts Thus the war was fill carried on in various parts of of Britain. the giohe in fucls a manner as feemed to cvince the impoffisility of cruflung; the power of Great Britain by any force whatever. In Europe, the utmoft efforts of France and Spain were able to producs nothing more
than the annual parade of a mighty fleet in the channel. This was anfwered by the appearance of a Britilla fleet fo formidable that the allies never durf attack them. The ftates of Holland had drawn out their force; and this too was oppufed by one, which, if infufficient to conquer, was at leaft able to prevent their effecturg any thing detrimental to our poffefiens. In the Eaft Indies the united powers of the French and Indians had been conquered, and the Dutch fettlements had fuffered feverely *. In the year 1781, however, • See Irdo. the Britith naval power in the Weft Indies feemed to fan. fiak, and fome events took place which threatened a 652 total ruin of the empire in thefe parts. This was Difaltrous owing to the vaft loperiority of the combined fleets of events of France and Spain, by whom that of Britain was now the year fo tar outnumbered, that they could not achieve any ${ }^{173 s}$. thing of confequence. An ineffectual attempt on the illand of St Vincents* was made by Admirable Rodney; * See St and an indecifive engagement took place, April 28th $V$ incentso 1781, between Admiral Hood and the count de Graffe; the event of which, however, if not advantageous, was certainly honourable to Britain, as the French had a fuperiority of fix thips of the line. The damage done Tobago to the Britifh thips having obliged them to retire totaken. Barbadoes to refit, the French took that opportunity to make a defcent on the ifland of Tobago $t_{0}$. The go- $\dagger$ See To vernor, Mr Fergufor, made a gallant refinance; but bago. was at lat obliged to furrender, as no profpect of fuccours appeared. On his return to England he complained loudly that the iflatid had been unneceflarily lof. Admiral Rodney had fent Rear-admial Drake with fis fail of the line, three frigates, and fome troops, to the affiltance of the ifland; but they were fent too late, and the inland had capitulated before any relief was afforded it. In a letter of Admiral Rodney, which was publithed in the gazette, fome furprife was exprefied, that the place had furrendered fo foon : upon which Governor Fergufon publifhed an account of the fiege, figned with his name, in all the London papers, in which he rectiminated on the admiral. The governor's narrative was fo perfpicuous, fo apparently fatisfactory, and bis charge againft the admiral fo flrong, that it was thought incumbent on the latter to vindicate his conduct : but no anfwer to the governor's accufation ever appeared.

Befides the inconveniences which the Britih Weft Difontents India iflands fuffered in confequence of the war, it was in the Werk alfo a misfortune to fome of them that they were invol- Indands ved in dometlic difputes, occafioned by their diflatisfaction at the cunduct of their gevernors. This was particularly the cafe with Jamaica and Barbadoes, in both which illands there were frequent contells about this time between the houfes of affembly and the governors. But the remonflances of the inhabitants on the fubject did not meet with much attention from thufe who had it in their power to afford them relief: for it feemed, indeed, to be a kind of maxim with the Britifh adminiftration at this period, to pay litile regard to any complants from the fubjects of the empire, refpecting any ahufe of authoity, from whatever quatter they might come, Ireland only excepted; and, with refrect to that kingdom, they were induced to relax a little from the high tone they were accuflomed to affume, by the powerful ind energetic arguments of the Irinh volunteers. See Ireland.

Britain. The great and decifive ftroke, however, which happened this year, was the capture of Lord Cornwallis with the divifion of the army under his command. Other events, indeed, were fufficiently mortifying. The province of Weft Florida had been reduced by the Spaniards; Minorca was befieged by them with an apparent impoffibility of holding out ; the ifland of St Eultatius was furprifed by the French; and in fhort every circumftance feemed to proclaim the neceffity of putting an end to a war fo calamitons and deffructive.

All the difafters that had yet happened, however, were not fufficient to induce the minifiry to abandon their favourite fcheme of war with the colonies. The parliament met on the 27 th of November 178 I . It has already been obferved, that in the year 1780 the miniftry had received fuch a fignal defeat as feemed to progriofticate the ruin of their power. They had indeed afterwards acquired a majority, and the estreme terror produced by the riots had contributed not a little to the eftablifhment of their authority. The remembrance of what had paffed, however, mof probably induced them to a diffolution of parliament; while the fucceffes at Charleflown and other parts of America, once more gave them a decided majority in both houfes. But the difafters of the year 1781 involved them in the utmofl difficulty and difirefs. In the fpeech from the throne, his majefty obferved, that the war was ftill unhappily prolonged by that reftefs ambition which firf excited the enemies of his crown and people to commence it, and which fill continued to difappoint his earneft defire and diligent exertions to reflore the public tranquillity. But he fhould not anfwer the cruft committed to the fovereign of a free people, nor make a fuitable return to his fubjects for their zealous and affectionate attachment to him, if he confented to facrifice, either to his own defire of peace, or to their temporary eafe and relief, thofe effential rights and permanent interefts, upon the maintenance and prefervation of which the future frength and fecurity of Great Britain mult depend. The events of war he faid, had been very unfortunate to his arms in Virginia, having erided in the lofs of his forces in that province. No endeavours, he added, had been wanting on his part to extinguifh that fpirit of rebellion which his enemies had found means to foment and maintain in the colonies, and to reftore to his deluded fubjects in America that happy and profperous condition which they had formerly derived from a due obedience to the laws; but the late misfortune in that quarter called loudly for the firm corsurrence and affittance of parliament, in order to fruttrate the defigns of their enemies, which were equally prejudicial to the real interefts of Amcrica, and to thofe of Great Britain. At the clofe of the fpeech, his majefty obferved, that among the many ill confequences which attended the continuation of the prefent war, he fincerely regretted the additional burdens which it muft unavoidably bring upon his faithful fubjects: but he ftill declared his perfect conviction of the juftice of his caufe; and that he had no doubt, but that, by the concurrence and fupport of his parliament, by the valour of his fleets and armies, and by a vigorous, animated, and united exertion of the faculties and refources of his people, he
thould be enabled to reftore the blefling of a rafe and honourable peace to all his dominions.

A motion for an addrefs of thanks, couched in the ufual fiyle, was made in the houfe of commons. It was urged, that a durable and advantageous peace could refult only from the firm, vigorous, and unremitting profecution of the war. The prefent was not the time to reliuquilh hope, but to refolve upon exertion. By defpair we fould invite calamity to overwhelm us; and it would ill become a great and valiant people, whofe refources were yet powerful and numerous, to fubmit where they thould refif; to look with indifference upon their political importance; and to tarnifth, by indolent pufillanimity, the national and dear-bought glories both of remote and recent retas, inflead of oppofing, with augmented force, a combination whofe inveterate efforts to throw out of the feale of Europe the whole political exiftence of Great Britain, were flrengthened by the late victory over Lord Cornwallis in Virginia. But if a general fpirit of unanimity, fo requifite at one of the mofl alarming and important periods in the Buitifh annals, were to arife within the walls of parliament, and thence to diffufe itfelf throughout the body of the people, the gloom that hovered round us would rapidly difperfe, and great fucceffes would conduct the nation back to all its prifline fplendour and felicity.

This was vehemently oppofed by Mr Fox and Mr Burke. The latter remarked, that if there could be a greater misfortune than had already been undergone by this kingdom in the prefent difgraceful conteft, it was hearing men rife up in the great affembly of the nation to vindicate fuch meafures. If the miniftry and the palliament were not to be taught by experi.. ence; if neither calamities could make them feel, nor the voice of God make them wife; what had this fallen and undone country to hope for? If any thing could tend to deject the people of England, to make them defpair of their fituation, and refign themfelves to their fate, it muft be to receive information that their minifters, after all that had been fuffered, were yet determined to go on with the American war. A battle might be luft, an enterprife might mifcarry, an ifland might be captured, an atmy might be loft in the beft of caufes, and even under a fyftem of vigour and forefight; becaufe the battle, after all the wildom and bravery of man, was in the hands of heaven: and if either or all thefe calamities had happened in a good caufe, and under the aulpices of a vigilant adminiffration, a brave people would not defpair. But it was not fo in the prefent cafe. Amidft all their fufferings and their misfortunes, they faw nothing fo diftreffing: as the wcaknefs or wickednefs of their minifters. They feemed fill determined to go on, without plan, and without forefight, in this war of calamities; for every thing that happened in it was a calamity. He confidered them all alike, vichories and defeats; towns taken, and towns evacuated; new generals appointed, and old generals recalled; they were all alike calamities in his eyes, for they all fpurred us on to this fatal bufinefs. Victories gave us hopes, defeats made us defperate, and both indligated us to go on. They were, therefore, both calamities; and the king's fpeech was the greateft calanity of all; for the king's fpeech

## B R I

fhorred us the difpofition of the minifters: and this difpolition was not to retreat an inch; to go on, to plunge us deeper, to make our fituation more difgraceful and more unhappy.

In the courfe of the debate, it was contended on the part of adminifration, and particularly by Lord North, that by the addrels, as originally propofed, the houfe did not pledge themfelves to any cortinuance of the American war: but this was flrongly denied by the gentlemen in oppofition. However, the point was at laft decided in favour of miniftry by a majority of 216 10 129; and the addrefs was then carried as originally propufed.

In the houfe of peers, a motion for an addrefs fimiJar to that of the houfe of commons, was made by Lord Southampton, and feconded by Lord Wralfingham. It was vigoroufly oppofed by the earl of Shelburne; who oblerred, that feven years had now elapled fince blood was firf drawn in America; and from that period to the prefent the affairs of Great Britain had been continually growing worle. A long progrefs in the was had left us in a fituation in which there were no advantages to confole; but dangers and calamities liad arifen, which were unknown to us at the commencement of holilities. Of nearly 87,000 men fent to America, how few had returned! What treafures had been in vain expended! What enormous debts accumulated! The mon liberal nationa] fupplies had been followed by nothing but calamities; and the whole proceedings of the miniftry manifefted a want of fyftem and of intelligence. Among other inflances of mifmanagement, his lordfhip remarked, that, inflead of blocking tip the French fleets within their own harbours, or immediately intercepting them on their putting out to fea, we had fuffered them to fail far upon their expeditions to our diftart fettlements; and when they had acquired this great advantage, we flowly followed their powerful armaments with inconfiderable fquadrons, and farcely ever reached the place of deftination till the enterprifes of the enemy were totally accompilifted. His lordnip alfo declared it to be his opinion, that the capture of Earl Cornwallis was owing to the preceding capture of St Euftatius. As to the farther profecution of the war with the leaft profpect of fuccefs, it was totally importfille: the nation was too much exhaufted both of men and montey; recruits were not to be procured for the army; and as to our navy, if we had the beft firt lord of the admiralty, and the ablest hoard that ever lif, it was impoffible to provide for all the diflant fervices of fo extenfive a war. The reafon was obvious. The fine navy that belonged to Great Britain at the conrlufion of the lat war liad been fuffered to rot and noulder away; while France and Spain liad recruited and repaired their marine during the whole period of the peace.

Among other ftriqures on minifterial conduct, it was whersed by the duke of Richmond, that at prefent fearcely a feventh part of the people were reprefented, $\because$ hile all the remainder had no concern whatever, either vistually or individually, in the management of their own affirs; which their lordhips well knew, the confitution of this country, as originally framed, gave them a right to have. He appealed to the houfe, - bectier many of their Icrdfaips did not mame the
members for feveral boroughs, and whother the repre- Britain. fentatives were not chofen only by the management of two or three burgeffes. Were this point reformed, his grace declared, that he fhould fill expect to fee the country capable of regaining fome portion of its former greatnefs. He alfo made fome obfervations or the interior cabinet, which had, he faid, been the ruin of this country. To prove its mifchievous tendency, he imfanced the declaration of the late earl of Chatham, who confefled to the houfe, "that he was duped and deceived, and that he had not been ten days in the cabinet before he felt the ground rotten under lis feet." His grace likewile faid, that though it was the middle of war, he made no fcruple to recommend it moft ftrenuoufly to government, immediately to fet about curtailing the numbers of the army, and that as much as poffible. He recommended, that arms fhould be put into the hands of the people, for the purpofes of domeftic defence; and he did not doubt but that in this cale, they would act with greater power and fuccefs, than even the mon numerous military forces. He alfo advifed withdrawing the troops from America, augmenting the navy as much as poffible, and fending fuch fuccours to the Weft India inands as might enable them effectually to refift any attempts from the enemy.

Lord Stormont defended the addrefs as originally propofed; and obferved, that the language of the fpeech from the throne was proper to be held by any prince worthy of the crown, in a moment like the prefent; and the long eftablified cuftom rendered fuch an addrefs as had been moved the fit anfwer to it . The prefervation of America, as a dependent part of the britifh empire, was too important to be relinquin. ed; and the prefent crifis, fo far from juftifying defpair, called for a redoubled ardour, and for immediate exertion.

The lord-chancellor faid, that the prefent fpeech foom the throne, like all others at the commencement of a feffion, was no more than a brief flate of the nation, delivered in the ancient ftyle of compofition, and conformably to effablinied uiage, from almoft the firit exiftuce of parliament; and as to the addrefs, its language not being fpecifically binding, their lordnips might vote in favour of it, without pledging themfelves to fupport any future minifterial meafure whatever. The houfe at length divided, when Lord Shelburne's amendment was rejeeted by a majority of 75 to 3t. A flort proteft againlt the addrefs was entered by the duke of Richmond, the marquis of Rockingham, and earl Fitzwilliam; in which they declared, that they diffented "for reafons too often urged in vain for the laft feven years, againt the minous profecution of the unjuf war carrving on by his majefty's minitters againt the people of Noth $\Lambda$ merica ; and too fatally confirmed by repeated experience, and the late difgraceful lufs of a fecond army, to lland in need of repetition."

Though minifters thus fuccceded in carrying the addreffes in the ufual form, they did not meet with the like luccefs in their main plon of carrying on the war. Motions Afers the debate on the number of feamen, which was againit the fixed at 100,000 for the enfuing year, Sir James Low- American ther moved as a refolution of the houfe, "That the war by Sir war carried on with America had been incffectual for Lawther.

## B R I

Britain. the purpofes for which it was undertaken; and that all farther attempts to reduce that continent by force of arms would be in vain, and muft be injurious to this country, by weakening her powers to refift her ancient and confederated enemies." 'This was fupponted by a number of arguments intellarded with the mofl fevere retlections on minifterizl conduct. In the courfe of this debate it was obferved, and indeed with evilent truth, that every flate of confequence in Eusope withheld its fuccours, and left us to contend alone againft a multitude of enemies; fo that we thould feasch in vain for an ally from one corner of the univerfe to the other. As to the American war, in which the miniAry fo madly perfifted, it was not like a war between two rival and two neighbouring flates, about a barrier or a boundary; a contelt which, however it ended, could not detract much from the importance or weight of either. It was a war in-which the conclafion of every campaign was. againft us; in which we weakened no enemy by our efforts; in which we had fuffered every thing, without gaining any thing. The American war had been a war of delufion from the beginning to the end. Every promife had beea broken, every affertion had been fallified, every object bad been completely given up. The minittry had faid one thing one day; and the next day they had come down again, and with grave faces faid what was directly contrary. But it was time to put an end to thefe delufions; not the leaft profpect of fuccefs in the war now remained; the period was therefore come, when it was indifpenfably neceffiry that the parliament thould interfere, in order to avert that ruin with which this unhappy country was fo immediately threatened.

The motion was oppofed by Lord North; who faid, that if it was agreed to by the houfe, it mult put an end to the American war in every thape, and even cripple the bands of government in other refpects. It would point out to the enemies of this country what were to be the mode and operations of the war; and thus inform the enemy in what manuer they might beft point their operations againlt this country during the next campaign. Geeat Britain muft not retain any poit in the colonies; for that would be confidered as one mode of attempting to reduce the Americans to obedience by force. But was it not manifeft, that there might be a neceflity of retaining certain pofts in America, for the convenience even of carrying on the war againft France and Spain?

With refpect to the American war in general, his lordfhip acknowledged, that it bad been extremely unfortunate; but he affirmed, that the misfortunes and calamities which had attended it, though of a moft ferious and fatal nature, were matters rather to be deplored and lamented as the events of war, in themfelves perpetually uncertain, than to be afcribed to ary criminality in minifters. He had always confidered the American war as a war of the moft cruel neceflity; but at the fame time as a war commenced for the fupport of the juft rights of the crown and of the parliament of Great Britain. He would alfo venture to declare, that as the war was unfortunate to all his fellowfubjects, fo it was particularly diftreffing to bimfelf. He had always confidered it as the heavieft cal:amity of his life; and if, at any time, a facrifice, not only of the emoluments of his fituation, but even of the whole
of lis private fortune, could have farchafed for his Britaircountry a fafe and honourable peace, he would tave niade that facrifice with the utmont cheerfulnels, and thought the opportunity of offering it the greatelt blefling which could politibly have Lefallen him. His lordfhip adjecl, that though he totally difapproved of the motion, yct he was willing to declare it to be his opision, that it would not he wife nor right to go o: with the American war as we had hitlerto done; that is, to fend armies to traverfe from the fouth to the north of the provinces in their interior parts, as hat been done in a late cafe, and which had failed of producing the intended and the defired eflect.

This new method of carrying on the war was as Oppoted by mucia difapproved of as the other; nor indeed did it General feem to be generally believed that any material altera- Burgoyne. tion was to take place in the minitterial fyllem. General Burgoyne obferved, that declaring a defign of maintaining pofts in America, of the rature of New York, was declaring a defign of offenfive war; and that fuch a maintenance of pofts would prove an improvident and a prepofterous war. The great if not the only purpofe of keeping places of arms upon an enemy's coaf, and efpecially upon a continent, muft be for offenfive war. During the glorious adminiftration of the earl of Chatham, a place of arms was intended to be eftablifhed at St Malo's; and it was afterwatds eftablifhed at Relleifle upon a more extenfive view than that of a mere inlet into the country. It made a powerful diverfion, and drew a great military force from Germany, to protect the whole range of coaft from Bayonne to Dunkirk, which was threatened by an embarkation from that place of arms. But the circumftance which rendered that menace againf the French coaft either practicable or formidable was, our dominion of the fea. At that refplendent era, our naval flag rode in the very bays of France as fecurely as if anchored at Spithead; and a few frigates would have convoyed an army of 20,000 mell to any one point of the French or Spanifl coaft. This then could be produced as a juft precedent for a place of arms. But what other precedents exifted? The command of a frait, by which it was poffible either to give an inlet for commerce, or to divide the ports of an enemy. Of fuch a nature was Calais, which, together with Dover, kept feparate as often as we thought proper the great ocean and the German fea. Such alfo was Gibraltar ; a place of arms that gave a virtual fuperiority to the navy of England, though with an it:ferior number of flips, as feparating the ports of the houfe of Bourbon in the ocean from their ports in the Mediterranean, and preventing the junction of their Reets. But New York, as a place of arms; could anfwer no poffible purpofe but to fced an impracticable war, and to multiply that fyftem of contracts, loans, and influence, which, after having operated to the lofs of every dependence of the country, was ready to give the final blow to the laft remains of property and liberty in the country itfelf.

The general added, that he had not bitherto touched He recants upon the principle of the American war. The imprac. his original ticability of it was a fufficient juftification for fup-principles porting the prefent motion. But he was now con-conccrning vinced that the principle of the American war was wrong, though he had not been of that opinion when

Eritain. he formerly engaged in the fervice in America. He had been brought to this conviction by obferving the uniform conduct and behaviour of the people of Amesica. Paffion, prejudice, and interef, might operate fuddenly and partially; but when we faw one principle pervading the wholc continent, the Americans refolutely encountering difficulty and death for a courfe of years. it mult be a ftrong vanity and prefumption in our own minds, which could only lead us to imagine that they were not in the right. It was realon, and the finger of God alone, that implanted the fame fentiment in three millions of people. He would aflert the truth of the fact againft all which either art or contrivance could produce to the contrary. He was likewife now convinced, upon comparing the conduet of the miniftry, as time had developed their fyltem, that the American war formed only a part of a general defign levelled againft the conttitution of this country and the general rights of mankind.

After fome farther debate, Sir James Lowther's motion was rejected by a majority of 220 to 179 . This, however, was a majority in which the minifry had little reafon to exult; as it was fufficiently apparent, from the numbers who voted againft adminiftration, that the uninfluenced fenfe of that houfe was clearly and decifively againft any farther profecution of the Ameri-
can war.
Other arguments to the fame purpofe with thofe of General Burgoyne, juft mentioned, were ufed in the debate on the army eftimates. On the 14 th of De-
cember, the fecretary at war informed the houfe, that the whole force of the army, including the militia of this kingdom, required for the Cervice of the year 1782, would amount to $\mathbf{~} 86,220$ men, and for this force the parliament had to provide. The fum required for thefe troops for pay, clathing, and other articles, amounted to four millions two hundred and iwconty thouland pounds. This military force exceeded that of the laft year by 4074 men; and the expence was confequently greater by 29,0671. 15s. The increafe was occafioned by the greater number of troops alseady fent, or then going, to the Eaft Indies. But the expence of thofe troops, was to be reimburfed by the Eafl India Company.

After fome farther ftatements relative to the military force of the kingdom, and its expence, had been made by the fecretary at war, Colonel Barré rofe, and with great vehemence declared, that the eflimates of the army which were laid before that houfe were fandalous and evalive. There was a much greater number of non-effedive men than were flated in the eflimates. In fact, they amounted to a fifth part of the army. The houfe fhould alle recollect, that the eflimates lying on the table did not compofe the whole of the expences of the army; for extraordinaries of feveral millious were yet to come. Neither were the men under the foveral defcriptions given by the fecretary at war the whole number of military force einployed. Other troops were employed folely at the difcretion of the minifter, and paid irregularly and unconditutionally, without the affent or knowledge of the legiflature; particularly the provincial corps in America, amounting to nine thoufand men in actual fervice, the ftatement of which force, though it had been called for from year to year, was never brought into the eflimates.

## B R I

With refpect to the army eftimates, the colonel proceeded to obferve, that in many inflances they were flled with fuch abandoned impofitions, that there appeared an actual defign to treat inquiries from the parliament with fovereign contempt. Several regiments, of which the number of men did not amount to one hundred, were fet down at eight hundred ; and others not having more than fifty were mentioned in the eflimates as confifing of five, fix, or feven hundred men. Indeed, too large a part of the armies, for which that houfe had been perfuaded to give their votes, exifted only upon paper. Amongft other regiments, the royal Englifh fufileers had not even a fourth of their complement. The royal Scotch fufileers were in a worfe predicament. Their number fell thort of even one hundred men. The 60 h regiment was ftated as amounting to 3500 men, when the fact was, that it did not confift of 1500 ; and many others might be enumerated in the fame fituation. The ftatement of the eftimates relative to garrifons, particularly thofe of Gibraltar and Minorca, were equally delufive and overcharged.

Lord George Germaine faid, that the reafon why the provincial corps had not been included in the eftimates was, that fome thare of the public money might be fpared, by avoiding to vote an eflablifhment for thefe troops. They were raifed and paid in a manner by much the moft economical for the nation. They were folely under the management of the commander in chief; and an officer, called the infpector-general of the provincial corps, regularly took care to mufter them from time to time; nor was a fingle man paid for if not in aetual employ. His lordmip alfo informed the houfe, that the miniftry were unanimoully of opinion, that, confidering the prefent fituation of affairs, and the misfortunes of the war, it would not be right to continue any longer the plan on which it had hitherto been conducted; and therefore that a frem army would not be fent to fupply the place of that captured at York-town under Earl Cornwallis.

Sir George Saville expreffed the Strongeft difapprobation of any farther profecution of the American war, or of raifing ary more troops for that purpofe. He adverted to the intimation which had been given by the minittry, that a change was to be made in the mode of conducting the American war. This, he faid, was in fact telling the houfe, that they were determined to profecute the war with all the feeble efforts of which they were yet capable. Every unprejudiced and fenfible obferver muft perceive, that fo extraordinary a conduct refembled, if it did not indicate, the violence of infanity. General Conway declared, that he entirely difapproved of a continuance of the American war in any form, as he wifhed that it might 10 tally ceafe. He eagerly defired the recal of our fleets and armies, and was anxious for an entire and immediate prevention of thofe calamitics which had almof completed the deflruction of the empirc. He confidered an avowal of the independence of America as a fevere misfortune, and a debafing froke againft Great Britain; but of the two evils he would choofe the leaft, and he would fubmit to the independency of America. In hoot, he would almoft yield to any circumfance whatfoever, rather than perfift a day longer in the profecution of fo pernicious a war. Ideas had

Britan. been flatel Mclative to a war of pofte, among which New Yuak had been paticularly mentioned. But on what military authority did the minitiry prefume to think that New York was tenible? What garrifun would be able to maintain it? The diverlity of military opinions given on this fubject ferved rather to alarm than to convince. 'To fecure New l'ork, the poffefion of Long Inand, which is a hundred miles in length, is abfolutely neceffary; and it was well known that Sir Henry Clinton, with all his troops, did not confider himfelf as fecure. Nutwithflanding thefe and other arguments, however, the quefion was carried in favour of miniftry by a confiderable majority, and the fupplies were voted accordingly.

Befides the grand queftion for and againf the continuanice of the American war, feveral other matters of fmaller moment were agitated this feflion; particularly the affair of St Eult tins $\dagger$ as already mentioned, an inquiry into the ftate of the navy, and into the caufes of our bad fuccefs in the American war. All thefe quellions were carried in favour of miniftry, though not without a Atrength of oppofition they had never experienced before. A morion for cenfuring Lord Sandwich was loft only by 236 to 217 ; and fo general did the defire of a change of adminiftration now appear, that it excited no fmall degree of furprife that the prefent minifters fhould ftill retain their places. Nothing could fet in a more flriking point of view the deteftation in which they were held, than the extreme averfion hown at admitting Lord George Germaine to the dignity of peerage. On this occafion, the Minden bufinefs was not only ripped up, but efter his actual ipvefliture, and when he bad taken his feat in the houfe, undcr the title of Lord Vifcount Sack ville, a fecond debate enfued relative to the difhonour the peers hrad fuftained by his admiffion into their houfe. It was moved by the marquis of Cacrmarthen, that "it was reprehenfible in any minifler, and highly derogatory to the honour of that houfe, to advife the crown to exercife its indifputahle right of creating a peer, in favour of a perfon labouring under the heavy cenfure of a court martial," which was particularly fated in the motion, and alfo the public orders given out on the occation by the late king. The marquis urged, that the houfe of peere being a court of honour, it behoved them moft carefully to preferve that honour uncontaminated, and to endeavour to mark out, as forcibly as poffibly, the difapprobation which they felt at receiving into their affembly, as a brother peer, a perfon Atigmatized in the orderiy books of every regiment in the feivice. The earl of Abingdon obferved, that he could not help concciving, that although there was not a right of election, there was and muft be a right of exclufion, selted in that houfe, when the admiffion of any peer happened to be againft the fenfe of their lordflips. His judgment of this arofe not only from the iden, that that houfe was poffeffed of original rights, as independent of the crowri as of the people; but from the circumftance of their being the hereditary counfellors of the crown, againf the fenfe of whom. he held, the crown could not of right exert itfelf. His lordhip declared, that he confidered the ar'm: fion of Lord George Germaine to a peerage, to be no lefs an Infufterable indignity to that houfe, than an outhageous infult to the people it large. It was an indignity to Voz. IV. Part II.
that houfe, becaufe it was conneting them with one whom every foldicr was forbidden to afficiate witho It was an infult to the people; for what had the perfon raifed to the pecrage done to merit honours fuperior to his fellow-citizens? He had only one clain to any kind of promotion ; and that was. it. at he had undone his country, by executing the plan of that accurfed, invifible, though efficient cabinet, frons whom, as he had received his orders, fo he lad obtained his reward.

Loord Sachville declared, that he neither knew by whofe advice he had been raifed to thic dugnity, nor thought, that, in a point of this nature, the recummendation of any minifter was in the leaft needful. To befow honour was the peculiar and univerfally admitted prerogative of the ctown, provided that the parties advanced to them were competent to receive them. This he infifted was the cale at prefent. The fentence of the court-martial was flated as the ground of the objection againt his elevation to the peerage; but even fuch a fenterice did not amount to any legal difability whatfoever. Twent v-three years had elapfed fince the court-martial which fat upon him had pronounced that fentence; and he flould naturally fuppofe, that fuch of their lordfhips, and of the public in general, as were at all acquainted with the peculiarly hard and unfair circumfances which accompanied his tria!, had been long accuflomed to behold this bufinefs in its proper point of view. Aflailed by an excefs of acrimony, at leaft equal to any that a Britill officer could have experienced from enemies at once implacable and unjuf. he was condemned, unheard, and punifled previoufly to his trial. In thefe circumfances, it was well knowno that the had challenged his accufers to come forward; that he had provoked inquiry ; and had infifted upon a trial. He was affured at the time, that if the determination of the court-martial Gould even prove capital, it would be carried into execution : but no intimations of this kind could difa fuade hion from infifing that a trial Chould take place; and he flattered himfelf, that the candour and equity of their lordhips would lead them to conclude, that fuch behaviour, under fuch circumftances, could only refult from a confcioufnefs of innocence. To the fentence of it he had fubmitted; and, as the refult of fuch fubmiffion, he thought that he had then acquit. ted himfelf to his country and to the public. At the prefent moment, it was extremely fingular, that although neither the charge, nor the defence, nor the evidence, nor in thort any one part of the proceedings on the trial, was before their lordhips, they were called upon to put the fertence a fecond time in force againft him. He trufted, however, that their lordhlips would call to mind the occurrences which had taken place with refpect to himfelf, fubfequent to that period. In 1765, not more than four years after the trial, he was appointed to an uffice in adminiffration. Previoufly to his acceptance of the propofitions then made to him that he fould bear a part in adminifration, it was agreed for him to become a member of the council-board. There be accordingly took his feat; and thenceforward confidered fuch a circumflance as virtually a repeal of the fentence of the courtmartial. A revifion of the proceedings of the courtmartial was now unattainable; for during the face of
yptedn. 23 years, the period of time which had elapfed fance the trial, every member who had fat upon it except one had been dead and buried. An atiempt tu invefligate the motives which aflated the fiveral members of the court was equally imanticable. Hc hoped, therefore, their lordihips would be of opinion, that he was fully competent to rcceive the tille which his fovereign had been graciously plealed io beftow upon him; and that it was neither expedient, necelary, nor becoming, for that houfe, to tly in the face of the crown, or to oppole its indifputable prerugative, becaule it had advanced an old and faichful fervant to the dignity of a feat among their lordhips.

The duike of Richmond oblewed, that from the reign of Edward III. to the time of Henry VII. it was exprelisly flated, in evcry new patent of the creation of a peer, that fuch creation was made with the content of farliament; nor did a fingle inftance occur, during the whole of this period, of any title being granted without the particular acquiefcence of the lioufe of lords. After the reign of Henry VIL. the crown carried with a confiderably lefs reffraining hand this exercife of the prcrogative; and during the latter aras, it had been genesully regarded as an inconteflable and eftablifhed right. It appeared, however, that the alicient principles of the Britih conftitution had fat boundaries to reltrain this exercife of the prerogative; and that formerly a legal difability was not the only circumftance which might anount to a difqualifcation for the pecrage. Some infiamations had been thrown out refpecting the decifion of the cuurt-martial, which were far from being well grounded. When the court-martial took place, lur the purpofe of determining the criminality or the innoc*ace of the noble vilcount, the times were not, as had been reprefented, remarkable for the predominance of clamour or of faction. He oblerved, that their lordhips were not ignorant, that the noble vifcount sefted a cunfiderable part of the vindication of his behaviour at th: battle of Minden, upon the fuppofed exiftence of a Ariking variation in the orders dulivered from Prince Ferdinand to the commender of the cavalty. It was underflood that the firlt order was, that the cavalry fhould adrance; and the fecond, that the Britifh cavalry mould advance. Yet even under thefe fuppofed curtradichory orders, it was evident that the noble lord fhould advance; and, certainiy, the dillance being thort, be crijoyed a fufficient fpace of time for obedience to bis inilructionc. Lord Southampton, who delivered one of the meff.ges, was now prefent in the houfe; and it fhould feem, that he had no chuice, on this occafion, but 10 acknowledge, either that he did not properly deliver fuch orders to the noble vilcount, or that the latter, having properly received them, neglected to obey them. But whitever difficulties might have arifen, during the endeavours to determine ex. aetly how much time had actually been lolt, in confequence of the noncompliance of the noble vifcount with the orders which he received, his grace faid, that he could with much facility have folved what all the witneffes examined as to this point were not able pufitively to determine. If, as he was lummoned to appear upon the trial, his depofition had been called for, he could have proved, becaufe he held all the while his watch within his hand, and feldom ceafed to look
at it, that the time luft when the nicble vifcount oelayed to advance, under pretence, that, secciving fiscia contradichury orders, it was impoffible for him to difcover whether he cught to adrance with the wbole cavalry, or only with the Britifh cavalay, was cre bour and a balf. It was, therefore, extremely evident, that the noble lord had it in his power to base brought up the cavalry from the diflance of a mile and a quarter; in confequence of which, by joining in the batthe, they might have sendered the victory more bri!liant and decifive. But, before the arrival of this cavalry, the engagement was concluded. Such was the teftimory, his grace faid, which, having iad the henour to ferve, at the battle of Minden, under Priace Ferdinand of Branfuick, he mult have borne, if, being fummoned, the members of the court-matial had thought proper to have ex:mined him on the trial. Under fuch ciscumflances, the noble vifcount could have little reafon to cumplain of the fentence of the court-martial, of the orders which followed, or of the lals of his commitlion.

The motion was powerfully fupported by other are guments, both by the duke of Richmond himfelf and other peers; but, however, was rejected by a majori-. ty of 93 againft 28. A proteft was entered, figned
by nine peers, in which the lentence and the public orders were particularly fated; and in which they de. clared, that they " could not look upon the railing to

## 663

 Proteft a the peerage a perfon fo circumblanced, in any other him. light than as a mafare fatal to the interells as well as to the glory of the cromn, and to the dignity of that houfe; infulting to the memory of the late fovereign, and likewife to every furviving branch of the illuttrious houfe of Brunfwick; repugnant to every principle of military difcipline, and directly contrary to the maintenance of the honour of that houfe, and to tha honour which has for ages been the glorious characteriftic of the Britift nation, and which, as far as could depend on them, they found themfelves called upon, not more by duty than inclination, to tranfmit pure and unfullied to pofterity."The ruinous tendency of the American war was Motion for now fo frikingly appasent, that it became neceffary an addefs for thofe who tad a juft fenfe of the dangerous fituaa againf the ion of their country, who withed well to its intereft American or even to prevent its deflruction, to exert their moft ed. vigurous efforts to put an end to fo fatal a conteft. Accordingly, on tlie 22d of February, a motion was made by Gcneral Conway, "That an humble addrefs hould be prelented, earneflly imploring his majefty, that, taking into his roy.l confideration the many and great calamities which had attended the prefent unfortunate war, and the beavy burdons thereby brought on his loyal and affectionate people, he would be gra. cioufly pleafed to liften to the humble prayer and ad. vice of his fathful commons, that the war on the continent of North America might no longer be purfued for the impracticable purpofe of reducing that country to obedience by force; and expreffing their hope that the carnelt defire and diligent exertion to reflore the public tranquillity, of which they had reccived his majelly's molt gracious aflurances, might, by a happy reconciliation with the revolted colonies, be forwarded and made cffectual; to which great end, his majefty's faithful commons would be ready moft cheerfully to

## B R I

Eritain. give their utmon affiftance." In the fpeech by which he introduced this motion, the general fet forth the enormities with which the Britilh arms had fo frequently been fligmatized by oppofition, and the excellive animolity of the Americans. Not a fingle friend to the Bitill government (he faid) could be difcuvered amongt the inhabitants of North America from one end of the country to the other. We had, indeed, at prefent no object to costend for: for if it could be adinitted for a moment, even for the fake of argument, that it were poflible we might conplese at the laft, what benefits would repay the ffruggle for che vitlory? We thould then only gain a deferi, a country depopu. lated by the war, which our defpotifm and barbarity, our avarice and ambition, our antipathy for freedom, and our paffion for injuftice, had kindied in her bofom. But all expectations of this kind were in the higheft degree vain and abfurd; though he had received intelligence (the general faid) from a perfon lately arrived from America, in whofe veracity, experience, and difcernment, he could implicitly confide, that the people of that country, although in arms againft us, were ftill anxious for the accomplinment of peace. He was alfo affured, that certain individuals, at no confiderable diftance, were empowered on the part of the congrefs to treat with the minifters of Great Britain for the attainment of fo effential an object. Thefe circumftances were not unknown to government; and a noble lord, who bad lately retired from the office of a fecretary of ftate for the American department, had been particularly applied to on this interefting occafion. What reafon could the minifters affign why they had neglected to improve this fingular advantage, and feemed to fpurn at all ideas of negociation? Could it be poffible, that a feries of ignominious mifcarriages and defeats had not yet operated as a cure for the inhuman and deftructive love of war? Such was the fituation of the nation, that it behoved the minifters to negociate for peace almoft on any terms. But as they had hitherto done nothing of this kind, it was indifpenfably neceflary that the parliament hould interfere, and put an immediate end to a war fo calamitous, fo fatal, and fo deftructive. The motion was feconded by Lord John Caverdifh, who remarkell, that the Ametican war had been a war of malice and refentment, without either dignity in its conduct, probability is its object, or juffice in its orioin. It was, however, vigoroufly oppofed by alminiftration, who hail ftill fufficient ftrength to gain their point, though only by a fingle vote, the motion being rejected by 197 to 193.
The increafing Arength of oppoftion now flewed that the downfal of miniftry was at hard. The decifion of the laft queltion was confidered as a victory gained by the former, and Mr Fox inftantly gave notice that the fubject would be refumed in a few days, under another form. It was accordingly revived on the $27^{\text {th }}$ of February; on which day a petition from the city of London was prefented to the houfe, foliciting the houfe to interpofe in fuch a manner as fhould prevent any farther profecution of the American war ; after which General Conway moved, that it fhould be refolven, "That it was the opinion of that houfe, that the farther profecution of offenfive war on the continent of North America, for the purpofe of reducing
the revolted colonics to obedrence by force, woald be the means of weakening the cfforts of this counity againlt her European enemies, and tend, under the prelent circumitunces, dangeroufly to increafe the mutual enmite fo tatal to the interefts both of Great Lritain and America; and, by preventing a happy reconciliation whth that countiy, to frultrate the earnelt defire gracioully exprefled by his majelly to reflore the bieffings of public trannuillity."

In the fpeech by whith he introduced this motion, the general took notice of fome objections that had heon made to his lormer motion, under the idea that it was uncontitut.onal in that houle 10 interfere with its advice in thofe things which efpecially ard indifputably belonged to the executive puwer. It appear- pa 666 ed, however, irnm :he journals, that from the days of fas a a richt Edward I11. Juwn to the prelent reign, parliament to advife had at all tires given a lvice to the crown in matters the king. relating to war and peace. In the reign of Richard II. it was frequently done; and alfo in that of Henry IV. One remarkable inftance of this was in the reign of Henry VII. when that prince confulted his parliament refpecting the propriety of fupporting the duke of Britanny againft France, and alfo of declaring war againft the latter; and be told his parliament, that it was for no other purpofe then to hear their advice on thefe heads that he called the m together. In the reign of James l. the pariament interfered repeatecly with their advice refpecting the Palatinate, the match with Spain, and a declaration of war againn that poreer. In the time of Charles 1. there were fimilas interferences; and in the reign of his fon Charles 11. the parliament made repeated remonftrances, but particu. larly in 1674 and 1675 , on the fubject of the alliance with France, which they urged ought to be renounced, and at the fame time recommended a frict union with the united provisces. To fome of thefe remonArances, indeed, anfwers were returned not wery fatisfactory; and the parliament were infornied, that they were exceeding the line of their duty, and encroaching upon the prerogative of the crosm. But fo little did the commons of thofe days relifh theie anfwers, that they addreffed the king to know who it was that had advifed his majelly to return fuch anlwers to their loyal and conftitutional remosifrances. In the reign of King William, repented inflances were to be found in the journals of advice siven by parliament relative to the lrifh war and the war on the cortinent. The like occurred frequently in the reign of $Q$ ten Anse: that princefs, in an addrefs from the patiament, was advifed, not to make peace with France urtil Spain Chould be fecured to Auftia; : $n d$ alfo, not to confent to peace until Durkisk fhould be demolified. In fhort, it was manifeft from the whole hiftory of Englifh parliaments, that it was ever confidered as conftitutional for parliament to interfere, whenere it thought proper, in all matters fo impottant as thofe of peace and war. The general urged other arguments in fupport of his motion, Whicls was feconded by Lord Althorpe; and pelitions from the mano-, burgefes, and commonalts of the city of Biahn', and from the merchants, tradefmer, and inhabitarits of that city, againft the American war, were rea!. In wd:r to evade coming to any immediate d tumination on the queftion, a propofition was made by A1P TV:${ }_{4} \mathrm{C} 2$ lace, lice, the attorney-general, that a truce fiould be entered into with America; and that a bill doould be prepared to enable his majefty's minilters to treat on

## C67

fitotion for the nelsrefs ca ried. this ground: and under the pretence of allowing time for this meafure, he moved, "that the prelent debate hould be adjousned for a fortnight." The houle disided upon this motion, when there appeared for it 215 , and arainft it 234 ; So that there was a majority of 19 againt the miniter. The original motion of General Conway was then put and carried without a dirtion. The general immediately followed up his firf motion with another for an addrefs to the king, in which the Aincrican was was fpoken of precifcly in the fame terms made u?e of in the motion, and in which his majefty was folicited to put a ilup to any farther profecution of oftenfive war againit the colonies. This motion was agreed to; and it was alforefolved, that the addrefs thould be prefented to his ma.
ces Adireis preien:ed wit his ınajc:ty's क. n fiser. jefty by the whole houle. The addrefs was accordingly prefented on tise ift of Narch; when bis majufty returned an anfiver, in which he declared, that there were no oljects nearer to his heart than the eafe, happineds, and profperity of his people; that the houfe of comn:ons might be affured, that, in purfuance of their advice, he flould take fuch meafures as flould appear to him to be moft conducive to the reftoration of harmony between Great Bitain and her revolted colonies, fu effential to the prolperity of both; and that his efforts fhould be directed, in the molt effectual manner, againt our Eurupeari enemies, until fuch a peace could be obtained as fhould confift with the interefts and permenent welfare of his kingdams. But though the pruccedings of the houfe of commons, in adjreffing lis majuty againd any farther profecution of the American war, gave general fatisfaction, the royal anfwer, however, was not thought fufficiently explicit. It was therefore obferved by General Conway, in the houfe of commons, on the $4^{\text {th }}$ of March, thot he hoped he fhould be fupported by the houfe in his defire of fecuring the nation againt the poffibility of a doubt that the American war was not now completely concluded. Something, perbaps, might yet be wanting, by which minifters might be fo exprefily bound, that, however, defirous of evafion, they would
continent of North Amcrica, for the purpole of reducing the revolted colonies to obedience by force." Atter fome debate, the motion was agreed to without a divifion; and on the 6th of the month, after a num. ber of papers bad been read in the houle of peers relative to the furrender of Earl Cornwallis and the army under his commar. ${ }^{\prime}$, the two following motions were made by the duke of Chandos. Firtt, "That it was the opinion of that houfe, that the immediate Refoluzions caule of the captute of the army under Earl Cornwal-t. lis in Virginia, appeared to have been the want of a of tiornfufficient naval force to cover and protect the fame." wallis reSecondly, "That the not coverirg and protecting the army under Earl Cornwallis in a pioper manner, was highly blameable in thofe who advifed and plaraned the expedition." After fome debate, the motions were rejected, upon a divifion, by a majority of 72 to 37 .
'Thus the miniftry fill kept their ground, and with the moft aftonifhing rcfolution conbated the powers of oppofition, which were daily increafing. On the 8th of March feveral refolutions were moved by Lord John Refolutions Cavendifh; one of which was, that "the chief caufe againtt n.iof all the national misfortunes was the want of fore- nifiry profight and ability in his majelly's minifters." Anuther pofed. relpected the immenfe fum expended on the war, which was not denied to be lefs than 100 millions. The expenditure of this fum became an object of fevere ferutiny; but ftill all inguiry was fruftrated. Mr Burke affirmed, that all public documents relative to the fnances, exhibited the mifmanagement, profufion, and enormities, of an unprincipled adminiltration; as an inltance of which he adduced the prefents gisen to the Indians for their fervices during the laft year, amounting to no lefs than 100,0001 , Several other particulars were pointed out; but the motions were loft by 226 to 216.

The unpopularity of Lord North was now farther augmented by his propofal of fome new taxes, particularly on foap, the carriage of goods, and places of entertainment. Oppofition therefore flill determined to force him to refign; which indeed it feemed improbable that he would voluntarily do. On the 15 th of March it was mored by Sir John Rous, that "the na- Another tion could have no further confidence in the minillersmotion awho had the conduct of public affaiss." 'The debate gainft the was remarkable for an argument, in the aff:irs of Ame- ininiftry. rica, perfectly original, and unprecedented in all that had been faid or written on the fubject. Sir James Marriot informed the houfe, that though it had been frequently pretended, that the inhabitants of the colonies were not reprefented in the Britifh parliament, yet the fact was otherwife; for they were actually reprefented. 'lhe firit colonization, by national and fovereign authority, he remaked, was the eftablilhment of the colony of Virginia. The grants and charters made of thofe lands, and of all the fuhfequent colonies, were of one tenor, and exprefled in the following terms: "To have and to hold of the king or queen's majefty, as pait and parcel of the manor of Eaft Greenisich, within the county nf Kent, reddendum, a certain rent at cur cafte of Eafl Greenwich, \&c." So that the inhabitants of America were, in fact, by the nature of their terure, reprefented in parliament by the knights of the thire for the county of Kent. This curious le-

## B R I

Eritain. gal difcovery, that the American colonies were part and parcel of the mator of Eaft Grcenwich, though delivered by the leamed judge with all proper gravity and folemnity, yet excited fo much merriment in the boufe, that it was with great difficulty, for fome time, that the lpeaker could preferve any kind of order.

Lord North endeavorred to vindicate his own adNorth's de-minitlration. He affirmed, that it could not be deence of his wn conlamities oringinated from the meafures of the prefent adminifration. The repeal of the American ftampact, and the pafling of the declaratory law, took place before lis entrance into office. As a private member of parliament, he gave his vote in favour of both; but, as a minifler, he was not refponfible for either. When he accepted his poft, the times were fcarcely lefs violent than the prefent. He approached the helm when others had deferted it ; and, flanding there, he had ufed his utmoft efforts to alfilt his country. That the American war was juft and requifite, and profecuted for the purpofe of lupporting and maintaining the rights of the Britih legillature, was a pofition, for the truth of which he would ever contend, whillt he enjayed the power of arguing at all upon the fubject. As to peace, he not only wifhed moft earnefly for it, but alfo for the formation of fuch a miniftry as might at once prove weicome to the country, and with unanimous cordiality co-operate for the welfare and the honour of the ftate. It was no: an attachment to the honours and emoluments of office which had kept him fo long in place; and he fhould difdain to throw impediments in the way of any honourable and faluary coalition of parties, though for the adjuftment of an adminiftration from which te might perceive himfelf excluded. The houfe at length diviled upon the queftion, when there appeared for it 227 , and againft it 236 ; fo that there was a majority of nine in !avour of auminiftration.

Notwithtanding this feemingly favourable determination, it was fo well known that the minifty could not fland their ground, that, four days after, a fimilar motion to that made by Sir John Rous was to have been made by the earl of Surrey; but when his lordfhep was abouc to rife for that purpofe, Lord North addrefled himfel: to the fpeaker, and endeavoured to gain the attentoon of the houfe. This occafioned fome altercation, it being contended by many members, that the earl of Surrey ought to te heard firft. But Lord North being at length fuffered to proceed, he obferved, that as he underflood the motion to be made by the noble earl was fimilar to that made a few-days before, and the object of which was the removal of the minifters, he had luch information to communicate to the houfe, as muit. he conceived, render any fuch motion now unneceflary. He could with authority aflure the houfe, that his majefty had come to a full determination to change his minifters. Indeed, thofe perfons who had for fome time conducted the public affairs were no longer bis majefty's minitterc. They were not now to be coufidered as men holding the reins of government, and iranfacting meafures of flate, but merely remaining to do their official duty, till other minifters were appointed to take their places. The fooner thofe new minifters were appointed, his lordhip declared, that, in his opinion, the better it mould be
for the public bufinef, and the general interens of the nation. He returacd thanks to the houle for the ma-

 obliged to furrender to M. de Grafie the French admiral, and the marquis de Bouille, who had already fignalized himfeif by feveral exploits *. Jamaica was *See Nevis marked out as the next victim; but afi end of all thele and Sf Cbrio afpiring hopes was faft approactiong. The advantares fofber'so hitherto gained by the French in their naval engagements with the Britifh fleet bad proceeded from their keeping at a great diftance during the time of action, and from their good fortune and dexterity in gaining the wind. At laft, the French admiral, de Grafee, probably prompted by his natural courage, determined, after an indecifive action on the 9 th of April 1782, to ftand a clofe engagement with his formidable antagonif Admiral Rodney. This, with him, appears to have been a mattes of choice, as he interfcred to pre-

Triain. vent the lofs of a difabied fhip, by parting with which he might bave avoijed the difafter that followed. entirsly de- of memorable engagement than place off the illand feated and Britifh fleet confilted of 37 thips of the line, , The then priiumer ly Adtuiral Rodney. Britifh fleet confilted of 37 thips of the line, and the French of 24. The engagement commenced at feven o'clock in the mosning, and continued with unremitting fury till half pait fix in the evening. It is faid,
that no other fignal was made by the admiral but the general one for action, and that for clofe fight. Sir George Rodney was on board the Formidable, a Thip of 90 guns; and the count de Graffe was on board the Ville de Paris, a fluip of tio guns, which was a prefent to the French king from the city of Paris. In the courfe of the action, the Formidable fired nearly So broalfides; and for three hours the admiral's thip was iavolved in fo thick a cloud of fmoke, that it was almoft invigble to the nfficers and men of the refl of the fleet. 'The van divifion of the Britifh Heet was commanded by Sir. Sameel Hood, and the rear divifion by Rear-admiral Drake; and both thefe offieers greatly diftinguifhed themfelves in this important action. But the decifive turn on this memorable day was given by a bold manouvre of the Formidable, which broke the French line, and threw them into confufion. The firf French fhip that fruck was the Cefar. a 74 gun fhrp, the captain of which fought nobly, and fell in the action. It is faid, that when fhe ftruck fhe had not a foot of canvas without a fhot hole. Unfortunately, foon after the was taken poffeffion of, the tock fire by accident, and blesv up, when about 200 Frenchmen perifhed in her, together with an Englilh lieuten ant and ten Englifh feamen. But le Glorieux and le Hector, bot? $7+$ gun Mips, were allo taken by the Britifh flet ; fogether withl'Ardent of 64 gunc; and a French 74 gun thip was alfo furk in the engagement. It was a very clofe and hard-fought action on both fides, but the French tleet was at length totally defeated. It was almoll dark when the Ville de Paris Hack, on board which the count de Graffe had fought very gallantly. Five thoufand five hundred troops were on toard the French fleet, and the havock among thefe was very great, as well as among the French leamen. The Britilh had 230 killed and 759 wounded. Captain Blair, who commanded the Anfon, and feveral other officerc, were killed in the action; and Lord Kobert Manners, who commanded the Refolution, died of his wounds on his return home. On the s9th of the fame month, a fquadron which was detached from the main feet, under the command of Sir Samuel Hood, captured the Cato and the Jafon, two Fiench men of war of 64 guns each, and allo l'simible of 32 guns, and the Ceres of 18 . About the fame time alio the fleet under Admiral Burringion took from the Fiench, off Uhant, le Pegafe of $7+$ guns, l'schionnaire of 64 , and ten fail of veffels under their convoy.

It was univerfally allowed, that in this engagement the French, notwithiftanding their defe it, behaved with the greate? valour. De Graffe himfelf did not furrender till 400 of his people were killed, and only himfelf and two whers remined without a wound. The captain of the Ca'ar, after lise enfign-faff was hot away, and the fhip almon hattered to pieces, cauked his colours to be nailed to the malt, and thus conenued fighejug till he was killed. The valil, when taken, was a
mere wreck. Other French officers behaved in the fame manner. The valour of the Britifh requires no encomium; it was evident from their fuccefs.

This victory was a very fortunate circumitance both for the intercit and reputation of the Britifl admiral. Before this event, the new miniflry had appointed Admiral Pigot to fuperfede him in the command in the Weft Indies; and it was underftood, that they meant to fet on foot a rigid inquiry into the tranfactions at St Euflatius. But the fplendour of this victory put an end to all thoughts of that kind: he received the thanks of both houfes of parliament for his fervices; and was created an Englift peer, by the title of Baron Rodney, of Rodncy Stoke, in the county of Somerfet. Sir Samuel Hood was alfo created Baron Hood of Catherington, in the kingdom of Ireland; and Rear- $A$ dmiral Drake, and Captain Affleck, were created baionets of Great Britain. Some attempts were allo made, in the houfe of commons, to procure a vote of cenfure agairnt the new miniftry, for having recalled Lord Rudney; but the motions made for this purpofe were rejected by the majority.

The count de Graffe, after his defeat, was received on board the Barfleur man of war, and afterwards landed on the illand of Jamaica, where he was treated with great refpect. After continuing there fome time, he was conveyed to Eigland, and accommedated with a fuite of apartments it the Royal Hotel in Pall-mall. His fword, which he had delivered up, according to the ufual cuftom, to Admiral Rodney, was returned to him by the king. This etiquette enabled him to appear at court, where he was received by their majefties and the royal family in a manner fuitable to bis rank. From the time of his arrival in Lnndon to his departure, which was on the 12 th of Auguft 1782 , he was vifited by many perfons of the firft fathon and diftinction, and was much employed in payng vifits to the great officers of flate, and fome of the principal nobility of the kingdom, by whom he was entertained in a very fumptuous and hofpitable ftyle. He received, indeed, evcry mark of civility which the Britifl nation could bellow; and was treated witl much refpect even by the common people, from the opinion that was generally entertained of his vainer and merit.

Though the defigns of the Frencl againf Jamaica were now effectually fruftrated, the victory was not followed by thole beneficial confequences which by many were expected. None of the Lritifh illands which had been taken by the French in the Well Indies were afterwards recaptured; though it was hoped that this would have been the refult of our naval fuperority in thofe feas. It was alfo an unfurtunate circumflance, that fome of thofe fhips which were taken by Admiral Rodney were afterwards lon at fea; particularly the Ville de Paris, Gloricux, and Hector. A Britifh man of war, the Centaur, of 74 gens, was alfo funk in lat. 48 deg. 33 min . and long. 43 deg .20 min . on the $24^{\text {th }}$ of September $17^{82}$, in confequence of the difabled fate to which it was reduced by fome very violent forms. Before the fhip funk, the uficers and crew had fultained great hardfhips: moft of them at lat went down with the flup; but the lives of $C+1$ an Inglefield the commander, and ten other officers and feamen, were preferved by their getting on board a pinnace. But even this was laky; and wheu : y

Britais. weat into it they rere neatly in the mačale ab the Weltern ocean, vithout compafs, quadrant, great coat or cloak; all very thinly clothed, in a gale of wind, and with farcely any provifions. After undergoing extreme hardhips and fatipucs for 16 days, they at length reached the inland of Fay:ill, one of the Azores. 'They were fo much reduced by wast of food and inceffant labour, that, after they had landed, fome of the foutelt men belonging to the Centaur were obliged to be fupported through the thects of Fivall. The Jamaica homeward-bound 日ect was allo difperfed this year by a hurricane off the banks of N゙cwfoundland, when the Ranillies of 74 guns and feveral merchantmen fuundered.

The Baiinh nasy alfo funained, about this time, a conliderable lo's at home, by the Royal George, of soo guns, being cverfet and fark at Portinouth. This melancholy accident, whicls bappened on the 29 th of At:gult, was occalimed by a partial heel being given to the hip, with a view to cleanfe and fweeten her; but the guns on one fule beins remaved to the other, or at leaf the greater part of them, atid her lower deck ports not being lathed in, and the fhip thwarting on the tide with a fquali from the north-weit, fie filled with water, and funk in the face of about three minutes. Admiral Kempenfelt, a very brave and meritorious officer, other officers, upwards of 400 Ceamen and 200 wumen, befldes many children, periihed in her.

Thus the profecution of the war feemed to be at tended with endlefs difafters and difficulties to all patties. The fignal defeat above mentioned not only fecured the iffand of Jamaica effectually from the attempts of the French, but prevented them from entertaining any other project than that of ditreffing the commerce of individuals. In the begiming of Nidy an expedition was undertaken to the remote and inhofpitable regions of Hudfon's Bay ; and though no force exifted in that place capable of making any refitance, a 74 gun hip and two 36 gun frigates were emoloved on the fervice. All the people in that part of the world either fled or furrendered at the firf limmons. The lufs of the Hudfon's Bay company, on this occafion. amounted to 500,000 l. but the humanity of the French commander was confpicuous in leaving a fufficient quantity of provifions and ftores of all kinds for the ufe of the Britith who had fled at his appoach.

Another expedition was undertaken by the Spaniards to the Bahama illands, where a like eafy conqueft was obtained. The illand of Providence was defended only by 360 men, who being attacked by 5000 , could make no refilfance. A very honourable capitulation was granted by the victors, who likewife treated the garrifon with great kindnefs afterwards. Surne fettlements on the Mofqueto fhure were allo taken by the Spaniards : but the Bay-men, affifted by their negroes, bravely retook fome of them; and having formed a little army with the Indians in thofe parts, headed
 tw incir conters. The affir of Cu:naliis had flown that it was impoffille fur Hilitan to conquer America; twe defeat of de Giaffe had remedered the reduction of the Brisibl pefferions in the Weft Indics impracticable by the French; the final repulic before Gibialtar, and its reiief aftornards by the Britiß flect $t$, put an end + See Gito that favourite enterprife, in which almot the whole bralar. neength of Spain was enaployed ; while the engagement of the Nutch with Admiral Paker flowed them that wotling could be gained by a naval war with Britain.

Wre have already taken notice, as fully as the limitscsange ${ }^{679}$ of this article would admit, of the wents whith led to minitity in the removal of Lord North and the other minifters who Britain. for fo long a time had directed public meatures in this kingcom. On this occanfon it was faid that bis majefty exprefied a confderable agitation of mind at being in a manner compelled to make fuech an entire change in his councils; for the members in oppoftion would form no coalition with any of the old minitry, the lord chancellor only excepied. On the 29th and $30: h$ of March 1782 , the marquis of Rockingham was appointed firlt lord of the treafury; Losd John Cavendith chancellor of the exchequer; the earl of Shelburne and Mr Fox principal fecretaries of fate ; I.ord Camden prefident of the council; the duke of Richmond mafter of the ordnance ; the duke of Grafton lord privy feal ; Admiral Kcppel firlt lord of the admiralty; Genetal Connay commander in chief of all the forces in Grat Britain: Mr 'Ihomas Townfhend fecretary at war; Mr Burke pasmafter of the forces; and Colonel Barré treafurer of the navy. Other offices and honours were likewife conferred on different members of the oppofition; ancl fome were raifel to the peerage, particularly Adaniral Keppel, Sir Fietcher Nution, and Mr Derming.

The frot bufnefs in which the new niniffy erga-semocian ged, w..s the taking fuch meafures as were proper totions for effectuate a general peace. No time was loft in thepeace. purfuit of this great object, or in taking the neceffary Iteps for its attoinment. Accordingly, the emprefs of Runia having offered her mediation, in order to reftore peace bewcen Great Britain and Holland, Mr Secretary Fox, within two days after his entrance into office, wrote a letter to Monf. Simolin, the Rufian minitter in London, informing him, that bis majefty was ready to enter into a negociation for the purpofe of fetting on foot a treaty of peace, on the terms and conditions of that which was agreed to in 1674 between his majelly and the republic of Holland; and that, in order to facilit te fuch a treaty, he was willing to give immediate orders for a fufpenfion of hoftilities, if the ftater-general were difpofed to agree to that meafure.

But the fates of Holland did not appear inclined to a fep rate peace; nor perhaps would it have been agreeable to the principles of found policy, if they had agreed to any propolitions of this kind. Howevcr, immediately after the change of miniftry, necoriations for a general peace wete commenced at Paris. M. Grenville was invefted with full poners to treat with all the parties at war; and was allo directed to propole the independency of the ${ }_{3} 3$ United Provinces of America, in the firf inllance, inflead of making it a condition of a general treaty. Admiral Digby and Gencral Carlcton

- A. Were allo direded to acquant the American congrt's - with the pasific vecws of the Brivith court, and w th the ofier that was made to acknowledge the independence 6s, of the United States.

D ath of th- wascquie of ROLI? 1-ama ce af, rew (1): gec 17 t! nem ? ? 1 y.

13 : beture this work of pacitation had made any contidsable progrefs, the neve miniltry fulkained an irrepa: Whe l. R, Lu the seath of the marquis of Rockingr. m in Julv 1-92. Wiven before this event, confiderable :purchent:ons were entertained of their want of u: ton ; but the death of the nobleman jult mentioned occufioned a:s ablutute diffolurion. The earl of Shelburre, who fuccceced him as firill lord of the treafury, profid fo difigy eatle to fome of his colleagues, that Mr liox, Iord Juhn Civendih, Mr Burke, Mr Frederick Nonazgue, and two or three others, inflantly refiened their plicec. Others, however, though little atl: ched to the earl, kept their places; and his lordhip found means to attach to his interef Mr William Pitt, fon to the late carl of Chatliam. Though then in an early fage of life. that genteman had dithinguifted himfelf greatly in parliment, and was now pieviled upon to accept the oflice of chancellor. The leceding members of the cabinet were at pains to explain their motives to the houfe for taking this llep. Thefe were in exeneral a fufpicion that matters would be managed differently from the plan they had propofed while in office, and particnlarly that American independence sould not be allowed: but this was pofitively denied at the time; and with truth, as appeared by the event. There appeared indeed a duplicity in the conduct of the earl of Shelbume not eafily to be accounted fur. Even after it had been intimated by General Cisleton and Admiral Digby, that the independence of the united provinces flould be granted by his maj =fly in the firf inftance, inflead of making it a condition of a provifional treaty, his lordhip expreffed himfelf to the following purpufe: "He had formerly been, and fill wac, of opinion, that whenever the independence of America was acknowledged by the Britifh parliament, the fun of England's glory was fet for ever. This had been the opinion of Lord Chatham and other able fatefmen; neverthelefs, as the majority of the cabinct were of a contrary opinion, he acquiefced in the meature, though his ideas were different. He dif not will to fee Emelind's fon fet for ever, but louked for a Cpark ta be left which might light us up a new day. He withed to God that he had been deputed to congrefs, that he might plead the caufe of America as well as Britain. He was convinced that rhe libertics of the former were gone as foon as the independence of the Hates was allowed: and he concluded his farech with obferving, that be was not afraid of his expueflions being repeated in America; there being great numbers there who were of the fame opinion wihh him, and percecived ruin and independence

## e63 linked togetlier."

Givesocen. If his lordhip really was of npinion that his oratoAron to the rial powers were able to perfuade the Americans ont toralla. pall Eri. tain. of a fyitem for which they had foughe fo defperately for a number of years, it is much to be feased he overrated them. No obfruftion, however, arofe to the general parification. As early as November 30. 1782, the articles of a provifional treaty were fettied
tinue to enjoy, without molettation, the righe to take filh of every kind on the grand bank, and on all the other banks of Newfoundlarid; and that they foould likewife exercife and continue the fame privilcge in the ficte of the sulf of St Lawrence, and at erery other piace low prow in the fea, whete the inhabitants ufed heretofore to ${ }^{\text {ty }}$ with fill. The inhabitants of the united 11 ates were likewife Anerica. to have :he liberty to take filh of every kind on fuch part of the cualls of Newfound and as Britith feamen fhall rcfort to: but not to cure or dry them on that illand. They were alfo to poflefs the privilege of fifhing on the cnafls, bays, and crecks of the other dominions of his Britannic majefly in America; and the American filhermen were permitted to cure and dry fith in any of the unfettled bays, harbours, and creeks of Nova Scotia, Magdalen illands, and Labrador. But it was agreed, that, after fuch places thould be fetthed, this righe could not be legally put in practice without the content of the inlubitants and propristors of the ground. It was accorded, that creditors upon either fide foould meet with no impediment in the profecution of their claims. It was contracted, that the congrefs hoould earneftly recommend it to the legillatures of the refpeclive flates, to provide for the rellitution of all ellates and propetties which had been confifcated, belonging to real B itifh fubjects, and of the eftates and properties of perfons selident in difriets in the pofi flion of his majeflys arms, and who had not borne arms againft the united itates. It was refolved, that perfons of any other defcription fhould have free liberty to go to any part whatfoever of any of the thirteen united flates, and remain in it for twelve manths unmoletted in their en'eavours to recover fuch of their eftates, rights, and propertics, as might not have been conficated; and it was concented that the congrefs hould eannelly recommend to the feveral flates a revifion of all ath or laws regarding the premiffes, fo as to render them perf. Ely couffifent, not only with jufice and equity. but with that ipirit of conciliation which, on the return of the bleffing of peace, Anould univerfally prevail. It was underllood that no future confifations thould be made, nor prolecutions commenced againftany perfon, or body of men, on account of the part which he or they had t:ken in the prefent war; and that thole who might be in confinement on fuch a charge, at the time of the ratitiation of the treaty in America, fhould be inmediately lit at liberty. It was concluded that there thould be a firm and perpetual peace between his Britannic majefly and the ur ited fates; that all hollilities by fea and land thould immediately ceafe; and that prifoners on both fides thould be fet at liberty. It was determined that his Britannic majefy mould expeditivuly, and without commiting deflruction of any fort, withdraw all his armies, garritions, and tlects, from every port, place, and harbour, of the united flates. The navigation of the river Miffifippi, from its fource to the ocean, wes to remain for cever free and open to the fubjects of Great Brit in and the citizens of the united Rates. In fise, it was agreed in the event, that if any place or ternitory belonging to Great Britain, or to the united ftetes, thould be conguered by the arms of either before the arrival of the provifional articles in Amcrica, it fiould be reftoted without compenfation or difliculty.

In the treaty betwect Great Britain and France, it
was agreed that Newfoundland floould remain with England, as before the commencement of the war; and, to prevent difputes about boundaries, it was accorded that the French fifhery fhould begin from Cape St John on the eaftern fide, and going round by the north, fhould have for its boundary Cape Ray on the weftern fide. The iflands of St Pierre and Miquelon, which had been taken in September 1778, were ceded in full right to France. The French were to continue to fifh in the gulf of St Lawrence, conformably to the fifth article of the treaty of Paris. The king of Great Britain was to reftore to France the ifland of St Lucia, and to cede and guarantee to her that of Tobago. The king of France was to furrender to Great Britain the iflands of Grenada and the Grenadines, St Vincent, Dominica, St Chriftopher's, Nevis, and Montferrat. The river of Senegal and its dependencies, with the forts of St Louis, Podor, Galam, Arguin, and Portendice, were to be given to France ; and the ifland of Goree was to be reffored to it. Fort James and the river Gambia were guaranteed to his Britannic majelly; and the gum trade was to remain in the fame condition as before the commencement of hoftilities. The king of Great Britain was to refore to his moft Chriftian majefly all the eftablifhments which belonged to him at the breaking out of the war on the cont of Orixa and in Bengal, with the liberty to furround Chandernagore with a ditch for draining the waters; and became engaged to fecure to the fubjects of France in that part of India, and on the coafts of Orixa, Coromandel, and Malabar, a fafe, free, and independent trade, either as private traders, or under the direction of a company. Pondicherry, as well as Karical, was to be rendered back to France; and his Britannic majefty was to give as a dependency round Pondicherry the two diffricts of Valanour and Bahour; and as a dependency round Karical, the four contiguous Magans. The French were again to enter into the poffefion of Mahe, and of the comptoir at Surat. The allies of France and Great Britain were to be invited to accede to the prefent pacification; and the ferm of four months was to be allowed them, for the purpofe of making their decifion. In the event of their averfion from peace, no affiffance on either fide was to be given to them. Great Britain renounced every claim with refpect to Dunkirk. Commiffioners were to be appointed refpectively by the two nations to inquire into the flate of their commerce, and to concert new arrangements of trade un the footing of mutual convenience. All conquefts on either fide, in any part of the world whatfoever, not mentioned or alluded to in the prefent treaty, were to be reftored without difficulty, and withont requiring compenfation. It was determined that the king of Great Britain fhould order the evacuation of the iflands of St l'ierre and Miquelon, three months after the ratification of the preliminary treaty, and that, if poffible, before the expiration of the fame period, he fhould relinquifh all connexion with St Lucia in the Weft Indies, and Goree in Africa. It was ftipulated in like manner, that his Britannic majefly fhould at the end of three months after the ratification of the treaty, or fomer, enter into the poffeffion of the illand of Grenada and the Grenadines, St Vincent, Dominica, St Chritopher's, Nevis, and Monterrat. France was to
Yoz. IV. Part II.
be put into poffeffion of the towns and comptoirs which were to be reftored to her in the Ealt Indies, and of the territories which were to ferve as dependencies round Pondicherry and round Karical, fix months after the ratification of the definitive treaty; and at the termination of the fame term fhe was to refore the towns and difticts which her arms might have taken from the Englifh or their allies in that quarter of the globe. The prifoners upon each fide were reciprocally to be furrendered, and without ranfom, upon the ratification of the treaty, and on paying the debts they might have contracted during their captivity. Each crown was refpectively to reimburfe the fums which had been advanced for the maintenance of their prifoners by the country where they had been detained, according to attefted and authentic vouchers. With a view to prevent every difpute and complaint on account of prizes which might be made at fea after the figning of the preliminary articles, it was mutually fettled and underfood that the veffels and effects which might be taken in the Channel, and in the North feas, after the face of twelve days, to be computed from the ratification of the prefent preliminary articles, were to be reltored upon each fide; that the term fhould be one month from the Chanrel and the North Ceas, as far as the Canary illands inclufively, whether in the ocean or the Mediterranean ; two months from the Canary illands as far as the equinoctial line or equator; and laflly, five months without exception in all other parts of the world.

Thefe preliminary articles of peace were concluded at Verfailles on the 20th of January $\mathrm{r}_{7} 8 \mathbf{3}$, between Mr Alleyne Fizzherbert, minifter plenipotentiary on the part of his Britannic majefty, and Charles Gravier, comte de Vergennes, the minifter plenipotentiary on the part of the king of France. At the fame time the preliminary articles of peace between Great Britain and Spain were alfo concluded at Verfailles between Mr Fitzherbert and the comte d'Aranda, the minifter plenipotentiary for the Spanifh monarch. It was agreed that a fincere friendfhip fhould be reeftablifted between his Britannic majefty and his Catholic majefty, their kingdoms, flates, and fubjects, by fea and land, in all parts of the world. His Catholic majefty was to keep the ifland of Minorca; and was to retain Weft Florid. Eaft Florida was to be ceded to him by the king of Great Briain. Eighteen months from the date of the ratification of the definitive treaty were to be allowed to the fubjects of the latter who had fettled in the ifland of Minorca and in the two Floridas, to fell their eftates, to recover their debts, and to tranfport their perfons and effects, without being reftrained upon account of their religion, or on any other pre. tence whatever except that of debts and profecutions for crimes. His Britannic majefty was, at the fame time, to have the power to caule all the effects that might belong to him in Eaf Florida, whether artillery or others, be carried away. The liberty of cutting logwood, in a diltict of which the boundaries were to be afcertained, without moleftation or difturbance of any kind whatfoever, was permitted to Great Britain. The king of Spain was to reftore the iflands of Providence and the Baharsas, without exception, in the condition in which they were when they were conquered by his arms. All other conquefts of terri4 D tories

## B R I

Eritain tories and countries upon either fide, not included in the prefent articles, were to be mutually reftored without difficulty or compenfation. The epoch for the reftitutions to be made, and for the evacuations to take place, the regulations for the releafe of prifoners, and for the ceffation of eaptures, were exactly the fame as thole which have already been related, as ©tipulated in
657 the preliminary articles with France.
The peace No fooner were thefe articles ratified and laid before vehernently parliamert, than the moft vehement declamations againft condemned. miniftry took place. Never had the adminiftration of Lord North himfelf been arraigned with more afperity of language. The miniftry defended themfelves with great refolution; but found it impoffible to avoid the cenfure of parliament. An addrefs without any amendment was indeed carried in the houfe of lords by 72 to 59 ; but in the lower houfe it was loft by 224 to 208. Oa the 21 ft of February, fome refolutions were mored in the houfe of commons by Lord George Cavendith, of which the roof remarkable were, that the conceffions made by Britain were greater than its adverfaries had a right to expeet; and that the houfe would take the cafe of the American loyalifts into confideration. The laft motion indeed his lordihip confented to wave ; but all the reft were carried againft minifiry by 207 to 190 . Thefe proceedings, however, could make no alteration with regard to the treaty, which
688 had already been ratified by all the contending powers, Peace con the Dutch only excepted. I'he terms offered them cluded with the Dutch.

6is Event of the war more favourable 10 Eritain than to he encaies. were a renewal of the treaty of 1674 : which, though the mofl advantageous they could poffibly expect, were puftively refufed at that time. Afterwards they made ati offer to accept the terms they had formerly refufed; but the compliment was then returned by a refural on the part of Britain. When the preliminary articles were fettled with the courts of France and Spain, a fufpenfion of arms took place with Hulland alfo; but though the defuitive arrangements with the other powers were finally concluded by the month of September, it was not till then that the preliminary articles were fettled with Holland. The terms were a general ieflitution of all places taken on both fides during the war, excepting only the fettlement of Negapatnam in the Eift Indies, which was to remain in the hands of Britain, unlefs an equivalent was given on the part of Holland. The navigation of the eaftern feas was to remain free and unniolefled to all the Rritify fripping. The other articles concerned only the exchange of prifoners and fuch other matters as are common to all treatics.

Thus an end was put to the moft dangerous war in which Britain was ever engaged ; and in which, notwithfanding the powerful combination againlt her, the fill remained in a flate of fuperiority to all her enemies. At that time, and ever fince, it has appeared, ho: much the politicians were miftaken who imagined that the profperity of Britain depended in a great meafure on her colonies: "Thuogh for a number of years hee had not only been deprived of thefe colonics, bunt oppufed by them with all their force ; though attactiod at the fame time by three of the greatelt powers in Europe, and looked upon with an invidious eye by all tie teft ; the damage donc to her enemies flill greatly exceeded that fhe had received. Their trade by fea was almoft ruincd; and on comparing the
lofs of fhips on both fides, the balance in favour of Bri- Britain. tain was 28 fhips of the line and 37 frigates, carrying in all near 2000 guns. Notwithftanding this, however, the flate of the mation appears to have been really fuch, that a much longer continuance of the war would have 690 been impracticable. In the debates, which were kept Mr Pitt's up with the greateft violence on account of the peace, account of Mr Pitt fet forth our fituation with great energy and the flate of ftrength of argument. "It was in vain (he faid) to at the conboaft of the ftrength of our navy; we had not moreclufion of than 100 fail of the line : but the fleets of France and the peace. Spain amounted nearly to 140 fhips of the line. A deflination of 72 hips of the line was to have acted againf Jamaica. Admiral Pigot had only 46 fail to fupport it; and it was a favourite maxim of many members of the houfe, that defenfive war mult terminate in certain ruin. It was not polfible that Admiral Pigot could have acted offenfively againft the iflands of the enemy; for Lord Rodney, when flulhed with viftory, did not dare to attack them. Would Adiuiral Pigot have recovered by arms what the minifters had regained by negociation? With a fuperior Heet againf him, and in its fight, is it to be conceived that he could have retaken Grenada, Dominica, St Chrifopher's, Nevis, and Montferrat ? On the contrary, is it not more than probable that the campaign in the W'elt Indics mult have terminated in the lofs of Jamaica?
"In the eaft, it was true that the fervices of Sir Edward Hughes had been highly extolled; but he could only be commended for a mercly defenfive refillance. Victory feemed to be out of the queftion; and he had not been able to prevent the difembarkation of a powerful European armament which had joined itfelf to Hy der Ally, and threatened the defolation of the Carnatic *. At home and in our own leas the fleets of * See Isthe enemy would have been nearly double to ours. dofan. We might have feized the intervals of their cruize, and paraded the Channel for a few weeks; but that parade would have only ferved to difgrace us. It was yet the only achievement in our power; for to have hazarded an engagement would have been equivalent to a furrender of the kingdom.
" Neither, in his opinion, was the flate of our army to be confidered as formidable. New levies could not be raifed in a depopulated country. We might fend upon an offenfive fcheme five or fix thoufand men; and what expectation could be excited by a force of this kind? To have withdrawn troops from America was a critical game. There were no tranfports in which they might be embarked; and if it had been poffible to embark them, in what miraculous manner were they to be protected againft the fleets of the enemy.
"As to our finances, they were melancholy. Let the immenfe cxtent of our debts be weighed; let our refources be confidered; and let us then afk, what would have been the confequence of the protraction of the war? It would have endangered the bankruptcy of the public faith; and this bankruptcy, it is obvious, if it lad come upon us, might have difilived all the tics of government, and have operated to the general ruin.
" 'ro accept the peace on the terms already related, or to continue the war, was the onily alternative in the power of minillers. Such was the ultimatum of France. At the fame time, however, it ought to be remember-

## B R I

Eritar. ed, that the peace obtained was better than could have been expected from the lownefs of our condition. We had acknowledged the American independenee; but what was that but an empty form? We had ceded Florida; but had we not obtained the iflands of Providence and the Bahamas? We had granted an cxtent of fifhery on the coaft of Newfoundland; but had we not eftablithed an exclufive right to the moft valuable banks? We had rellored St Lucia, and given up Tobago; but had we not regained Grenada, Dominica, St Chriftopher's, Nevis, and Montesrat? And had we not refcued Jamaica from inevitable danger? In $\Lambda$ frica we had given Goree ; but Goree was the grave of our countrymen; and we had fecured Fort James and the river Gambia, the beft and the moft healthy fettlement. In Europe we had relinquilhed Minorca; but Minorca is not tenible in war, and in peace it muft be fupported at a ruinous expence. We had permitted the reparation of the port of Dunkirk: but Duakirk could only be an object when thips of a far inferior draught to the prefent were in ufe; the change in the operations of naval war had taken away its importance. In the Eaft Indies ceffions had been made; but let it be remarked that thefe ceffions are inconfiderable in themfelves, and could not be protected by us in the event of hollilities. In fine, it was objected that we had abandoned the unhappy loyalifts to their implacable enemies. What is this but to impute to congrefs by anticipation a violence which common decency forbids us to expect? But let it be confidered, that the principle of affiting thefe unfortunate men would not have jultified minifters to have continued the war. And let it be confidered, that a continuation of the war would not have procured them any certain indemnity. The accumulation of our diftreffes mult have added to theirs. A year or two hence, harder terms of peace might have been forced upon our acceptance. Their fate then mult have been defperate indeed! But as matters were now fituated, there were hopes of mercy and reconciliation."

Having thus given as full an account as our limits would allow of the great national events to the conclufion of the peace in 1783 , we fhall now give a detail of fome others, which, though of fufficient importance
to deferve notice, could not be previoufly inferted with. out interrupting the narrative. It has repeatedly been obferved, that through the violence of parties, a general temper of diftruft and fufpicion took place throughout the nation, infomuch that the moft improbable fories with refpect to individuals began to gain credit, of which an inflance was given in the cafe of Mr Sayre. Fiom certain circumftances, however, it appeared, that there undoubtedly were perfons in the kingdom who wifhed if poffible to deftroy the national frength in fuch a manner
fyirit of winc. Had it catched fire, all the ftores in the ftorehoufe, fufficient to rig out 50 \{ail of men of war, would have been deftroyed. In the beginning of ${ }^{693}$ the year 1777, a fire happened at Briftol, which con-Ernatol. fumed fix or feren warehoufes; and by the finding of machines fimilar to thofe already mentioned, it was evident that the fire had not been accidental. The terror of the public was now greatly increafed, and the mof violent accufations againg each other were thrown out by the minillerial and popular parties. On this point, however, they foon came to a iight underftanding, by the difcovery of the author of all this mifchief. This was one James Aitken 604 John the Painter, a native of Edinburgh. Having diary difoo been from his early years accultomed to a vagrant life, to which indeed his profeflion naturally led him, he had gone through many different adventures. He had enlifted as a foldier, deferted, and when pinched by want, made no fcruple of betaking bimfelf to the highway, or committing thefts. Having traverfed a great part of America, he there imbibed the prejudices againft Britain to fuch a degree, that he at lalt took the extraordinary refolution of fingly overturnitg the whole power of the nation. This he was to accomplifh by fetting on fire the dockyards at Portf. mouth and Plymouth, and afterwards the principal trading towns of the nation. With this riew, he in fpected with the utmoft care thore docks and other places on which his attempts were to be made, in order to learn with what care they were guarded. This he found in general as negligent as he could wifh: and indeed had he not been fome way or other very deficient in the conftrution of his machines, he muft certainly have done a great deal of mifchief; for as his attempts were always difcovered by finding his machines, it was apparent that he had met with abundance of opportunities.

For fome time the affair at Portfmouth paffed, as He is 69 has already been mentioned, for an accident. It was prehended foon recollected, however, that a perfon had beentried.and feen loitering about the rope-houfe, and had even been exccuted locked up one nigbt in it; that he luad worked as a painter, and taken frequent opportunities of getting into that houfe, \&c. Thefe circumflances exciting a fufpicion that he was the incendiary, he was traced to different places, and at laft found in a prifon, to which he had been committed for a burglary. On his examination, however, he behaved with fucla affurance and apparent confcioufaefs of innocence, as almoft difconcerted thole who were authorized to examine him. At lait he was deceived into a confeffion by another painter, a native of America, who pretended to compaffonate his cafe. Thus evidence was procured againft him, but he ftill maintained his character to the very laft; rejecting and invalidating the teftimony of his falfe friend, on account of his bafenefs and treachery. He received his fentence with great fortitude; but at length not only confeffed his guilt, but left lome directions for preventing the dock-yards and magazines from being expoled to the like danger in time to come.

Thus it appeared that the whole of this alarm of treafon and American incendiaries was owing to the political enthufiafm of a wretched vagabond. Still, however, it appeared that the French court were very

Eritain. Well acquainted with many particulars relating to the fate of this kingdom, and the movements of their fquadrons, which ought by all means to have been kept fecret. Thefe treacherous proceedings were firft detected in the month of June 1780 . One Ratcliffe, mafter of a cutter, gave information that he had been hired by one Mr Rogere to carry packets to France, for which he was to be paid 20l. each time, and to have 100l. befides at a certain period. Apprehending at laft, however, that he might incur fome danger by continuing this employment, he gave information of what was going on to one Mr Steward, a merchant at Sandwich, by whom bis laft packet was carried to the fecretary of ftate. After being opened and fealed up again, it was returned, and he was directed to carry it to France as formerly. This was the fate of feveral fucceeding packets, though it was fome time before Ratcliffe faw the principal party concerned. At laft this was accomplifhed by his complaining to Mr Rogere that he had not been paid the rool. according to promife. A meeting being thus procured, it was found that the perfon who gave intelligence to the enemy was one M. Henry de la Motte, a French gentleman then refiding in London. On fearching his houfe, no papers of any confequence were found; but on nis arrival, he being abfent when the meffengers firft arrived, he threw fome out of his pocket, unperceived by any body, as he thought. The papers, however, were taken up by the meffengers, and gave plain indications not only of a treafonable correfpondence with the enemy, but that he was connected with one Henry Lutterloch, Efq. a German, who then refided at Wickham near Portfmouth. The perfon being alfo apprehended, not only made a full difcovery of the treafonable correfpondence with France, but gave abundant proofs of himfelf being one of the moft depraved and hardened of all mankind, lof to every fenfation excepting the defire of accumulating wealth. His evidence, however, and other Atrong circumilances, were fufficient to convict M. de la Motte, who was accordingly executed, though the king remitted that dreadful part of his fentence of having his heart taken out alise, \&c. During his trial, and on every other occafion, he bchaved in fuch a manner as fhowed him to be an accomplifled gentleman; and not only excited the compaffion, but the admiration of every one who faw him.

During the whole courle of the war, only one other perfon was detected in ally aet of treafon; and he appears to have been actuated merely by mercenary mo-

## 699

 David Ty rie a Scutf man, apprehended, tried, and executed. for correfyonding with the French.they were fent to the fecretary at war. By this, and another packet difcovered by William James, who had been employed to carry it to France, Tyrie was convicted and executed in the moath of Auguft 1782. He behaved with great refolution, and at the laft fhowed rather an indecent levity and unconcern, by laughing at the place of execution. The fentence not only took place in the dreadful manner appointed by law, but the crowd behaved with the moft thameful and unexampled barbarity. "Such (fay the accounts of his Barbarity execution) being the fingular conduct of many who were of the near the body, that happy was be who could procure crned who a finger, or fome veftige of the criminal !"-This un- artended happy man, while in prifon, had, with his compa-tion. nions, contrived a method of effecting their efcape, by working through a brick-wall three feet thick, and covering the hole with a plank coloured like the bricks; but the fcheme was difcovered by the impru. dence of Tyrie bimfelf alking the keeper how thick the wall was.

On the whole, it appears, that notwithftanding the exceflive altercation and vilulence of parties, which even went to fuch a length as to produce duels between fome members of parliament, neither the one nor the other entertained any defigns againf what they believed to be the true intereft of the nation. The one feem to have regarded its bonour too much, and been inclined to facrifice even its exiftence to that favourite notion: the other perhaps regarded the national honour too little; as indeed no advantageous idea could have been formed of the fpirit of the nation which could fubmit to the difmemberment of its empire without any firuggle. The event, however, has hown, that the lofs of the colonies, fo far from being a difadvantage, has been the very reverfe. The commerce of Britain, Prefent inftead of being dependent on America, has arrived at flourifhing a much greater height than ever, while the confequent fate of increafe of wealth enabled the nation to fupport that Great Brienormous debt, great part of which has been contracted, firf in defending, and then attempting to conquer the colonies.

Returning here to our narrative, it has been already The narraremarked, that in the debates in the houfe of commonstive reupon the treaties concluded under Lord Shelburne's fumed. adminillration, by which the American war was brought to a clofe, the terms of thofe treaties werc difapproved of by the majority of the boufe, and this difapprobation was exprefled by carrying an amendment to the miniAterial motion for an addrefs of thanks to his majefty. It does not appear however, that the nation at large difipproved of the conditions of the peace. All ranks of men bad long been weary of the war with the American colonies, and were willing to relinquilh every claim of fovereiguty over them. This point being decided, other objects of negociation were of too diminutive value to excite any great degree of public intereft. The Nature of majority which now voted againft adminiftration, con- the oppofififted of men brought together by views little connected with the accumplifiment of any patriotic object, lord Shel and in a manner which well merits the attention of the miniftra. hiltorian.

[^20]The death of the marquis of Rockingham left in a very disjointed itate the party which oppofed the Ame. sican war. Lord Shelburne's adminiftration appears to have been formed under the influence of the crown alone,

Britain. ous, that a new adminiftration muft be formed. Hence from that time public bufinefs remained at a fland, and the nation was kept in fufpenfe. The period was critical, on account of the termination of the war, at which gieat bodies of troops and feamen were to be difchar-- ged, and many pecuniary arrears paid off. The different regiments of militia were at this time difembodied, and failors and foldiers difmiffed in a flate of turbulence, natural to men accuftomed to arms, whofe pay is not correctly paid. Thefe and other circumftances, joined with the unfettled flate of the government, produced various diforderly proceedings at Port fmouth, Plymouth, and other places. In the mean time, a loan could not be negocisted by the minifry while they wanted the countenance of the boufe of commons. They fill, however, during the whole month of March, lingered in their places, and a variety of negociations were carried on by the court for the purpofe of attempting to form a new minifly, without an unconditional transfer of the government of the kingdom to the coalition. Confident of their orrn Atrength, however, this combination of men were defirous of attaining power upon their own terms, and continued to difplay their fuperiority in the houfe of commons, with a view to force their own reception at court. On the 24th of March, on the motion of Mr T. W. Coke, which was feconded by Lord Surrey, an addrefs was voted, requefting his majelty to take into confideration the diftracted flate of the empire after an exhaufting war, and to comply with the wifhes of the houfe, by forming an adminiftration entitled to the confidence of his people. His majefty anfwered, that it was his earneft defire to do every thing in his power to comply with the wiftes of his faithful commons. The delay, however, continued, and all defcriptions of men were involved in doubt, fufpenfe, and anxiety. On the 3 ift of the fame month, on the motion of Lord Surrey, a new addrefs was voted, urging in very earneft terms the formation of what was called an "effcient and refponfible adminiftration, formed upon principles of Arength and ftability, fuited to the flate of his majefly's affairs both at home and abroad." At laft, on the 2d of April, his majefly, yielding to what appeared neceffity, appointed an adminillation confiftprefident of the council, and the earl of Carlifle was advanced to be keeper of the privy-feal. Thefe formed the cabinet ; and the other offices of government were filled by their fupporters and friends. The sight l:onourable Charles Townftend was appointed treafurer of the navy; Mr Burke paymafter general of the forces; Lord Vifount Townhliend was made mafter-general of the ordnance. The feals were put in commif. fion. At the head of the commiffion was Lord Loughlsorough ; the right honourable Richard Fitzpatrick was appointed fecretary at war ; James Wallace, Effl. was made attorney-general ; John Lees, E:fq. folicitorgeneral ; the earl of Northington was appointed lnedLicutenant of Iseland; and, in Scotland, the honour-

## 582 〕 B R I

able Henry Erkkine was made lord-adrocate, in the Britain. room of Mr Henry Dundas.

The new adminiftration was no fooner inftalled, | $7 \times 9$ |
| :---: |
| ppolition | than an oppofition to it was formed, which, in the to the coa. houle of lords, was led by the duke of Richmond and lition nusL.ord Thurlow ; and in the houle of comirons by Mr uiftry. Pitt, and Mr Jenkinfon, afterwards created, at different times, Lord Hawkefbury and earl of Ijverpool.

The new adminiffration, on entering into office, Takes. were under the neceffity of inflatity negociating a loan of twelve millions, to fupply the neceffities of the flate. To provide for the intereft of this loan vatious taxes were propofed by Lord John Cavendifh, the chancellor of the exchequer. Thefe were impofed on bills of exchange, receipts, probates of wills and legacies, bonds, and law proceedings, flage coaches, quack medicines, carriages, letters-patent, Sic.; regifters of births, marriages, and deaths, were alfo taxed. Thefe taxes gave rife to debates which produced little intereft. The cafe was otherwife, however, with regard to another fubject in which Mr Pitt took the lead.

Towards the clofe of the American war, when want of fuccefs had begun to render it unpopular, it had repeatedly been urged both in parliament and in various publications, that the minifterial majorities in favour of the meafures purfued againft the colonies, would never have exifted if the people of this country had been fairly reprefented in the houfe of commons. By degrees this fentiment attracted attention; and to give countenance to a parliamentary reform, came to be regarded as a fure flep towards the attainment of popular favour. Accordingly, Mr Pitt, then a very young man, thought fit to endeavour to recommend himfelf to notice, by engaging eagerly in the purfuit of tbis object. Mr Pill's He opened the fubject in the houfe of commons on the motion for th of May, with an eloquent fpeech, in which, after de- a reform is claring his admiration of the general fabric of the Bri- parliament tifh conflitution, and that he wifhed not to alter but to reflore its true fpirit, which time and changes, accident and events, had enfeebled and diminifhed, he afferted, that the 亿ate of parliamentary reprefentation was partial and inadequate; the progrefs of undue influence alarming and ominous; that the true fpirit of liberty had decayed, and that the powers of controul, in different branches of the government, were debilitated: that wild Speculations of reform were afloat without doors; but that he was about to propofe the mof moderate and fafe, but neceffary meafures. He flated his plan of reform under three refolutions: ?. That meafures ought to be taken to prevent bribery and expence at elections. 2. That for the future, when the majority of voters of any borough thould be convided of notorious corruption, the borough ftrould he disfranchifed; and the minority of votes, not fo convicted, fhould be entithed to vote for the county in which the borough might be fituated. Lafly, 'That an addition ought to be made to the reprelentation, to confift of knights of the Mire, and of reprefentatives of the metropolis. Mr Pitt was nppofed "ith much earneftnefs by lords North and Mulgrave, and alfo by Mr Powis. He was fupported, however, by Mr Fox and Mr Beaufoy, and alfo by Mr Thomas litt, who offered, as a teflimony of his finccrity, to make

## B R <br> B R I

Britain. make a voluntary facrifice of his borough of Old Sarum. Mr Henry Dundas, who now attached himfelf to Mr Pitt, fupported on this occafion the mution of his friend, and afierted, that to comply with the wifhes of the people, would be the happieit ineans of putting an end to their complaints. Mr Pitt's refolutions were lof by a majority of 293 to 149 .

During the fame felfion, the new adminiftration brought forward a bill, admitting in exprefs terms the exclufive rights and abfolute fupremacy of the parliament and courts of Ireland, in matters of legillation and judicature; and for preventing any writs of error or appeal from the courts of that country to the courts of Great Britain. The bill pafied with little oppofition. It tended at the time to gratify the people of Ireland, though by increafing the line of feparation between the countries, it placed them in greater hazard of difunion, an event which could not be intended by government, and which therefore feems to thow, that this adminilltration had formed no plan for eftablidhing the connexion between the two countries on a permanent batis. An set was paffed duting the fame feffion for regulating the future commercial intercourfe of Great Britain and America. This act, however, appears to have been merely intended as a temporary meafure till a commercial treaty could take place.

Mr Dundas, during the prefent felfion, obtained leave to bring into parlisment a bill for regulating the affairs of India. The chief features of his plan conffited of fubjecting the prefidencies of Madras and Bombay, to a controuling jurifdiction, to be granted to the government of Bengal. This laft goverument he wifhed to eftablih in the perfon of a governor, who ftould be entitled to act when be thought fit, in oapofition to the opinion of his council. Another object of his bill was to fecure to the native proprietors their eflates in perpetuity, on payment of a fised tribute, and to extend thefe provifions to the nabob of Arcot and the rajah of Tarjore. Mr Dundas juftified the neceffity of this flatute, In confequence of the improper conduct and tyranny of the fervants of the Eaft India Company, and efpecially of their principal Cervant Mr Haflings, whom lie propofed to recal, and to fend out to India Lord Cornwallis, as governor-general, in his flead. The fcheme, however, proved abortive, but it led to other legiflative efforts upon the fame fubject.

Though Mr Pitt had been unfucceffful in his propofal to reform the reprefentation of the people in parliament; he did not fail immediately to bring forward a bill containing the project of an inferior fpecies of reform, that of the fees, gratuities, and perquifites in the different departments of the public offices. The object of it was ecoromy, for the purpofe of enabling the nation to fapport the debt incurred in fupporting the late war. The bill paffed through the houfe of commons, but was rejected in the houfe of lords.

Towards the clofe of the feffion, a petition from the Armerican loyalits was prefented to the houle of commons by Lord John Cavendif, in confequence of his majelly's command. It fated, that the petitioners, fome of whom were men of the firft character, fortune, and confequence, having adhered to Great Britain in the late conteft with the colonies, had been attainted in No:th America as traitors, and their effects confifcated by the legiflatures of the different flates. Many of the pe-
titioners were widuws and orphans, who had loft hufo Britaint bands and fathers, in confequence of their adherence to the Britih caufe; others were military and civil officers, clergy or uther profeffional men, who had loft their means of fubfiftence in the fame manner. They prayed the houfe of commons to grant them fuch relief as might feem adequate to their circumflances. Accordingly, upon the motion of the chancellor of the exchequer, an act was pafled appointing conmiffoners to inquire into the circumflances of fuch perfons as were reduced to diftrefs by the late diffenfions in America.

On the 23 d of June, a meflage from his majefty requefted aififance towards making a feparate eftablifhment for the prince of Wales. Sixty-thoufand pounds only were demanded for this purpole; and it was fated by the minitter of finance, Lord John Cavendih, that his majelty intended to allow the prince 50,0001 . ayear out of the civil lift, without requiring from the public any farther affitance than the above fum of 60,000 . which would be requifite to defray the extraordinary expence attending a new effablilhment. This laft fum was more readily granted, becaufe runsours had gone abroad, which were alluded to by Mr Pitt in the houfe of commons, that an intention had exifted on the part of the adminiftation, particularly of Mr Fox, to give the prince a very fplendid ellablifhment at the public expence; but that this propofal was not acceptable to his majefty. Mr Fox faid, that he undoubtedly confidered the propofed eftablifhment as too low; that if it had remained with him to have advifed an eftablifument, he would moft affuredly have propofed a fum more adequate to the object in view. The perfon, however, molt proper to decide in the bufinefs, had been of an opinion very different, and it was his duty to fubmit.

Parliament was fpeedily thereafter prorogued. TheRecefs. | rif |
| :---: | nation was now in a flate of tranquillity. Some anxi. State of the ety, however, exifted in the minds of men with regard nation. to the public welfare. The load of public debt which had been incurred feemed exceflive. Though com. merce began to how into new and extenfive channels, the returns of trade neceflarily required fume time to exhibit themfelves in the form of a tlourifhing revenue. In the interval, therefore, betweer the period at which the minifterial expenditure for the fupport of the war ceafed, and that at which the firft profits of foreign trade were received, a confiderable fhortcoming took place in the public revenue, and individuals experienced many difliculties. Thefe, however, gradually paffed away. Two inventions were, by degrees, brought to perfection, 7 New in which of thernfelves brought a profit to the public, al- ventions. mof equivalent to the burdens to which it had fubmitted in confequence of the American war. Thefe were the machine for fininning cotton, the invention of a man, originally of low rank (Arkwright), and the valuable kinds of pottery contrived by Mr Wedgwood. The firft of thefe, by producing at a cheap rate the moft beautiful cotton fabrics, put an end in a great meafure to the ufe of filk, and gave to the Britith manufacturers a kind of monopoly of many of the moft ufeful articles of clothing, while the other not onily drew to the nation immenfe fums from foreign countries, but from the bulky nature of the commodity, employed an immenfe tonnage of hipping in its exportatior.

In the mean time, men had lifure to refle fupon

## B R I [ 584 ] B R I

Britain. the nature of the coalition of political parties, which had recently taken place. The tendency of that mea- fure, and the pofible evils which might refult from it, did not at once prefent themfelves to the minds of men, becaufe it was not known to the public at large, that the fovereign had felt his own independence affected by the event. The general fentiment, however, was that of indignation againf the political parties, who had fo far forgotten all the principles which they had fo long and loudly profeffed, as to be capable of uniting with each other, for the fake of power or private emolument. It was univerfally faid that mo honefty was to be found among political men, and that no profeffion of patriotifm ought benceforth to be trufted. Thus a fevere wound was inflicted upon the public morals of the nation, by the want of confiftency which its molt confpicuous characters had exhibited. The wound was the more deep, in confequence of the apparent ftrength of adminiftration, which included in itfelf the men of greateft political influence in the kingdom, who were confidered as likely long to retain the power which they now porfefled.
720

Meeting of parliament, sYov. 1783 .

721
Mr Fox's
India bills.

In this ftate of affairs, parliament affembled on the ilth of November. In the fpeech from the throne, the neceflity of providing for the fecurity of the revenue, and of attending to the fituation of the Eaft India Company, were ftated to both houfes, as apologies for calling them rogether after fo thort lative to different parts of the revenue, Mr Secretary

Fox moved for leave to bring in two bills relative to the affairs of the Eaft India Company. By the firf of thefe bills, it was propofed to take from the Eaft In. dia Company the whole adminiftration of their territorial and commercial affairs, and to veft it in Seven directors, named in the bill; viz. Earl Fitzwilliam, the right honourable Frederick Montague, Lord Vifcount Lewifham, the honourable George Auguftus North, Sir Gilbert Elliot, Sir Henry Fletcher, and Robert Gregory, Efq. Thefe directors, or commiffioners, were to hold their office during four years, not to be removeable by his majefty, without an addrefs of either houfe of parliament. The directors were to be affifted by a board confifting of nine affiftant directors, who were to be removeable by five of the principal directors. The directors were to have full authority over all the company's fervants, and affairs civil or military. The fecond bill, which accompanied the firft in all its ftages, was intended to regulate the adminiftration of affairs in India. It forbade the exchange, acquifition, or invafion of any territoty in India, by the council general, or any prefidency there. It abolifted all monopolies in India; prohibited the acceptance of prefents, and made them recoverable by any perfon for his fole benefit. It fecured an eftate of inheritance to the native landholders, and provided againt the alteration or increafe of rents. It prohibited the moleftation of princes fubject to the conipariy, and reftrained the company's fervants from collecting or farming their revenues, or having any pecuniary tranfactions with them. It prefcibed a mode for adjufting the difputes between the nabob of Arcot, and the rajah of Tanjure, and between them and their Britifi creditors. It difqualified the agents of the company, or of any protected Indian prince, from fit-
ting in the Britih houfe of commors, and directed all offences againft the act to be profecuted in the courts of India, or in the court of king's bench.

The Eaft India Company's affairs had hitherto Boldnefs been governed in terms of the charters of the com-and novelty pany, by a court of proprietors, and a court of direc- of the meators elected by the proprietors. The rights of thefe ${ }^{\text {fure. }}$ courts, however, were thus to be abfolutely taken away, and their whole powers, or the fovereigity of Britifh India, was to be vefted during four years certain in the hands of feven individuals, nominated by the prefent adminiftration, through the medium of their parliamentary majority. It was undoubtedly a bold meafure, openly to affault the privileges of fuch a body of men as the Eaf India Company; but it was fill more new and fingular in the Britifh conititution, in the form in which it had exifted for more than a century, to vest a large portion of the executive power, including the command of armies, and an immenfe pecuniary patro. nage, in the hands of a few individuals, who were to hold their places for a fixed period, independent of the will of the crown. It was immediately faid, that by taking poffeffion in this manner of the patronage of Hindoftan, the prefent adminiftration had found means to render themfelves for a certain time avowedly inde. pendent of their forereign, and that they would not fail to renew their own powers at the end of that period. They were reprefented as not fcrupulous in the meafures adopted by them, to accomplifh this object of their ambition, feeing they treated with contempt, what has always been accounted extremely facred in England, the chartered privileges of an incorporation.

It is to be obferved, however, that the prefent adminiftration had in fome degree been led by circumftances, which previoully occurred, and which did not originate with them, to adopt Come decifive meafures for reducing India under better management than that in which it had been placed under the care of the Eaft India Company. Of thefe it will not be improper here to take a fhort review.

The circumftance of a great and wealthy empire, ha- Circumving been vanquiftied by a company of merchants, was a ftances thing fo new in the hiftory of the world, that it could which gav not fail to be attended with a variety of inconve- rife to Mr niences. The Eurofean nations have a near refemblance to each other in laws, manners, arts, and religion. The mutual jealouly, which for fome centuries they had been accuftomed to entertain of each cther, had prevented any of them from making great conquefts. When any power happened to acquire an addition of territory, this addition was never very great ; and the laws of neighbouring ftates being nearly alike, the conquered province fearcely experienced any misfortune from a change of mafters. Hence the evils attending upon great conquefts, had ceafed to be known among the nations of Europe. The conquerors and the conquered, being in all cales men of of fimilar characters and talents, eafily mingled with each other. 'The nobles of Alface were as well received at the court of France, as thofe belonging to the ancient dominions of that crown; and the natives of the Netherlands regarded with much indiflerence their tranfition from the dominion of Spain, to that of Aufria and of France. But when the Britill made conquells in Hindoltan, all the evils occur-

mifconduct. Inftances of all thefe were given by . Is Dundas, and he inferred the mecelfity of legiflative interpuftion for the purpofe of punifhing delinguents, and to take the power uut of thofe hands in which it had been fo grofsly abufed.

At the fame cime, Mr Dundas brought formard a Sir Thomd $\quad y=5$ variety of other refolutions, which were adopted by the Rumbold boufe, and wlich criminated in frong terms the late $\begin{gathered}\text { and } R \text { Nis }\end{gathered}$ governor of Madras, Sir Thomas Rumbold, and MIr Ha- Hatings fings, then governor-gencral of Bengal. Amung various sir Duida other charges, it was fated in the refolutions, that Sir Thamas Rumbold had remitted to Europe, between the 8th of February 1778 (the day of his arrival at Madras), and the beginning of Auguft in the fame year, the fum of 41,0001 . and during the two fubfequent years, a farther fum of 119,0001 . the whole amounting to 160,000 . although his falary did not exceed $\$ 3.3351$. per annum. and he had no other fair means of acquiring wealth. He was charged with having abolifhed the committees, inftituted to fuperintend the payment of the revenue due by the zemindars, or natives, holding lands under the company, and with having compelled thofe zemindars to travel many hundred miles, to negotiate feparately with himfelf, the terms on which they were to be allowed to hold their ellates. He was charged with having fuffered his private fectetary to receive a bribe of no lefs than 20,000 ; with having concealed other peculations of the company's fervants; with having given a leafe of lands to the nabob of Arcot, in direct difobedience of the company's orders; and with having violated the moft folemn treaties, entered into with the nizam of the Decas. In confequence of thefe, and other acculations contained in the refolutions moved by Mr Dundas, leave was given to bring in a bill of pains and penalties againft Sir Thomas Rumbold, and two of his affociates, Peter Perry and John Whitehill, for breaches of public truft and high crimes and mildemeanours; at the fame time, an act was palfed, reftraining thofe perfons from leaving the kingdom, obliging a difcovery of their property, and preventing its alienation. Sir Thomas Rumbold was heard by council at great length in his defence, to that nothing could be done during the fhort period that remained of the feffion 1782 . The unlettled fate of public affair prevented much attention from being given to the fubject, till the middle of the feftion 1783. The variety of acculations rendered a very minute defence neceifary, to which the members grecually becarre fomerrhat remifs in giving attention. At latt, on the 1 ft of July, a motion was made, and caried, for adjourning the further confideration of the bill till the It of October, by which means the whole proceeding fell to the ground. Sir Thomas Rumbold appears to have been willing to accept of indemnity without acquittal, and Mr Dundas never afterwards thought fit to revive the difcuffion.

In other refolutions brought forward on the 15 th of April 1782, Mr Dundas flated a variety of accuf3tions againft Warren Haftings, Efq. and Mr Horuby, and prevailed with the houfe to adopt a refolution, declaring it to be the duty of the directors of the Eaft India Company to recal the governor-general, and M. Hornfly the prefident, from their refpective offices. Accordingly, the court of directors iffued orders for this purpofe; but thefe werc appealed from, to a court + E

Pritair. of proprietors, who, on the 31 II of Oetober 1782 , pro. hilhited the court of directors from complying with the refolution of the houre of commons; the refult was, that Mr Halting. retained his office, and Mr Dundas, in the folliowing feflion of parliament, brought forward the bill which we have already mentioned, but which was

726
Repirt of the felect cumantec. not enasted into a law.
At the fame time that Mr Dundas, as chairman of the minifterial or fecret committee, brought furward the refolutions already mentioned; the felect committee, which chielly confifted of members of oppofition, preRented their report; and on the 18th of April 1782, General Smith, their chairman, propofed various refoJutions, in fome of which Mr Haftings was criminated along with Sir Elijah Impey, chief juftice of the fupreme court of Bengal. It is underftood that by means of inveltigations, which they carried on in this laft committee, the leading members of oppofition, particularly Mr Fox and Mr Burke, qualified themfelves for diresting at a future period the attention of the legifla-

$$

$$

of ${ }^{727}$ the Eaft India Com. pany. ture, and of the public, to the flate of Indian affairs.
Mr Fox made ure of his knowledge to bring forward the two important bills already mentioned, which propofed to veft the management of the whole af- fairs in India, fur behoof of the proprietors or ftockholders, in feren commifioners to be named by parliament. To juftify this ftrong meafure, it was alleged, that, by the mifmanagement of the courts of directors and proprictors, the affairs of the company had
been brought into a tate of extreme embarrafiment.
But the argument chiefly refted upon confilted of the enormous abules committed under the company's government in India, which rendered it absolutely neceffary to veff the adminiftration in other hands. Thefe abufes were arranged under three heads, as they affected, 1ft, The independent powers of India; 2 dly , The flates in alliance with us; and 3 dly, Our own territorial poffefions.

Under the firft clafs were ranged the extravagant projects and expenfive wars entered into by the company to extend their dominions; their violations of treaty; the file of their affifance in fupport of the ambition, rapacity, and cruclty of others; and the betraying in his curn every prince, without exception, with whom they had formed any connexion in India. The fecond clafs of abufes comprehended the corrupt and ruinous interference of the company in the internal government of the princes dependant on them; the trnjult cexction of exorbitant aids and tribute; the enormous peculations of the company's civil fervants, and the rapacity of the military.

With refrect to the management of the countries under the immediate dominion of the company, it was afferted by Mr Fox, and the fupporters of adminiftration, that the general fyftem of their conduet in India was directed to a lingle end, the iranfmiffion of wealth from that country to this. With this view, at one time, monopolies liad been eftablifted, not only of every article of trade, but cven of the neceffaries of life. At another period the privilege of pre-emption was fecured to the company, and thefe were fullowed by a variety of no lefs ruinous arbitrary preferences. By this oppreffive conduct the merchants and bankers of India, many of whom in extent of trade and credit were farcely equalled by thofe of the firft clafs in

Europe, being difabled from all undertakings of mag. nitude, fell gradually into decay, whilf the native cultivators and manufacturers were obliged to accept of a bare fufficiency for their maintenance, meafured out to them by the judgment of thofe who were to profit by their labour. But this was not the worit; for, in the progrefs of thefe deftructive meafures, the oppreflions and cruelties ufed by thofe to whom the execution of them was committed went far beyond the extent of the original evil. The fervants of the company adopting, as might naturally be expected, the principles of their employers; extended the practice of then to their own private purpofes; and, to complete the mifchief, they found themfelves under the necellity of fupporting the injuries done to the natives for their felfin ends, by new injuries done in favour of thofe before whom they were to account.

The cafe of the zemindars, and of the renters under them, was, if poflible, fill more deplorable. At the time we obtained the dewannee, or flewardhip, from the Mogul, the provinces of Bergal and Bahar had been laid wafte by a famine, that had carried off upwards of one-third of their inhabitants. The firft thing done for their relicf was to exact from the remaining part of the inhabitants the lame tribute that had before been paid by the whole. The country daily declining, and the diftrefs occafioned by this rapacious conduct threatening the lofs uf the objest for the fake of which it had been adopted, the company's government in India had proceeded to perhaps one of the moft arbitrary, the moft unjuft, and moft ciuel acts of power recorded in hiftory. They had fet up to public auction the whole landed interelt of Bengal, without the leaft regard to the rights of private property, or even a preference being given to the ancient poffeffors. The zemindars, moll of them perfons of ancient families and refpectable fortunes, were under the neceffity either of bidding againtt every temporary adventurer and defpetate fchemer, or of feeing their eitates transferred or delivered up to the management of ftrangers. The lowelt and moft knavifh jobbers entered into their patrimonial lands; and the banyan or black Ateward of the governor-general, in "particular, was found after this auction to be in poffeflion of farms amounting to the annual value of upwards of 130,0001.

Thefe fufferings of the natives under our dominion in Indin were greatly aggravated by their being almoft wholly excluded from any fhare in the expenditures of the company's government. All the principal collections of the revenuc, all the honourable, all the lucrative fituations in the army, all the fupplies and contracts of every kind, were folely in the hands of the Englifh. So that the natives, with very few exceptions, ware only employed as "the fervants or agents of Europeans, in lubordinate fituations in the army, and in the inferior depatment of collection, where it was impoffible to proceed a fep without their affiftance.

It was further urged, that the prefent government of India was not in its nature capable of reform. Nuthing could be expected from the court of proprietors or frockholders, becaufe the members, as individuals, derived more profit from giving fupport to Indian de. linquents, than they could ever hope to receive from

[^25]
## B R I

Britain. the fair dividends of the compang. The court of dire\{ors, being a reprefentative body, naturally partook of the imperfections of its confituents. The influence of delinquent fervants in India equally domineered there, and from the farne caufes, as in the court of proprietors. The intereft that a director pofiefled from his qualification in the company's profits did not exceed 1601 . a-year ; but the fupport be could thereby lend to an obnoxious ferrant abroad might be turned to much better acconnt, by being repaid with a thare of the boundlefs plunder of the eaft. It was flated, that the fon of a perfon who had been for fome time the chairman of that court, before he was in Bengal two months, fold the grant of a fingle contract for 40,0001.

Upon thefe and other topics, Mr Fox was fupported by the higheft efforts of the fplendid eloquence of Mr Burke. This lan genteman pointed out a few of the many lines of difference which were to be found between the vices of the company's government and thofe of the conquerors who preceded us in India. The feveral itruptions of Arabs, Tartars, and Perfians, had been, for the greater part, wafteful in the extreme: our entrance into the dominion bad been with finall comparative effifion of blood, arid was lefs effected by open force than by various frauds and delufions. But the difference in favour of the firlt conquerors was this ; the Afiatic conquerors had foon abated of their ferocity, becaufe they made the conquered country their oun. Fathers there depofited the hopes of their pofferity, and children there beheld the monuments of their fathors. Poverty, fterility, and defolation, were not a recreating profpeet to the eye of man, and few there were that could bear to grow old among the curfes of a whole people. If their paffion or their avarice drove the Tartar lords to acts of rapacity or tyranny, there had been time enough in the fhort life of man to repair the defolations of war by the arts of magnificence and peace. But under the Englifi government all this order was reverfed. Our conquelt there, atter 20 years, was as cruel as it had been the firf day. The natives fcarcely knew what it was to fee the gray bead of an Enggliftman. Young men (boys almoit) governed there, without fociety and without lympathy with the natives. They had no more focial habits with the people than if they Atill refided in England, nor indeed any fpecies of intercourfe but that which was neceflary to the making a fudden fortune with a view to a remote fet. tlement. Animated with all the avarice of age, and all the impetwofity of youth, they rolled in one after another, wave after wave ; and there was nothing before the eyes of the natives but an endlefs hopelefs profpect of new flights of birds of prey and paffage, with appetites continually renewing for a food that was continually wafting. Erery rupee of profit made by an Englifhman, was lof for ever to India. With us teere no retributory fupertitions, by which a foundation of charity compenfated for ages to the poor, for the rapine and injultice of a day. With us no pride crected itately monuments, which repaired the mifchiefs pride had produced, and adorned a country out of it own fpoils. England had erected no churches, no hofpitals, no palaces, no Cchools; England had built no bridges, made no high roads, cut no naviga-
tions, dug no refervairs. Esery other conqueror of every other defcription had left fome monumert, either of fiste or of beneficence, behind him. Were we to be driven out of India this day, nothing would re. main to tell, that it had been poffefferi, during the inglorious period of our dominion, by any thing better than the ouran-cutang or the tyger.

In oppofition to all this, Mr William litt contended, that atthough lindia undoubtedly wanted reform, the alteration to be adopied ought to be conntiturional, and not fuch as in its principle endangered the dafe's of every chartered incorporation in the kingdum. "1 lic India company's charter was not the refult of the maत prodigality of a Plantagenet, a Tudor, or a Stuart, but a fair purchafe deliberately made froms parliament, which could not be violated without a grols difegard to public faith. He aflerted, that by vefting the whole patronage of India in commiftioners nominally appointed by parliament, but actually felected hy adminiftra. tion, the influence of the crown would be augmented to a degree that would enable it, like an irrefifible torsent, utteily to overpower and fweep away the remaining liberties of our country. On the other hasd, Mr Dundas faid, he did not object to the meafure under confideration becaufe it increafed the influence of the crown, but becaufe it did what was much worfe, it placed a new and unexampled influence in the handes of the minifter and his party for five years, which would be independent both of the crown and of parliament. A fourth eflate was about to be created in the realm of the mof alarming nature, which in its progrefs might overturn the crown and fubvert the Britifh confitution.

On this occafion the bills were attacked not merely The bill by thole perfons who might be fuppofed to afpire to oppofed bs lupplant minifers in their offices, but alfo by feveral many ind country gentlemen of independent characters and high pendent reputation for integrity. They faid they had once regarded Mr Fox with the fondeft admiration. They reminded him of his conduct when a leader of oppofition, the perfeverance, the animation, and the ardour of his efforts, which rendered it impolfible to hear him without conviction, or to doubt the finglenefs of his zeal, and the fincerity of his reprobation. They dcclared they had expected from him the eftablifiment of our liberties upon the moft permanent bafis; but that they muft ever regard the connexion he had formed with Lord North, againtt whom his efforts had b:en fowell and fo fuccefffully directed, as an iultance of political defection and apoitafy that would admit of no defence; they had augured every thing unhappy and tremendous from that mometrt, and the meafure of that day proved their apprehenfions to have been well founded; it was big with corruption and misfortune: in confequence of it the crown would be no longer worth wearing, and it was impomble that the man who had brought it forward could ever hereafter be trufted as the minifter of this country.

The ordinary members of oppofition alfo attacked Mr Fox's motives on this occafion in very pointed terms. It appeared, they faid, that nothing could fatisfy his inordinate ambition fhort of a perpetual dictatorflip. They profeffed to perccive in him many refpectable qualities; but they could by no means confent to fee him exalted upon the ruins of the conllitum
tion.

## B R I <br> B R I

Eritain.
tion. "He would be crowned. How that might change his nature, there's the queftion." This idea was placed in a great variety of lights, and illuftrated by comparifons borrowed from Cafar, from Cromwell, and from Catiline. It was faid, that he was prepared to facrifice the king, the parliament, and the people, at the flrine of a party; and that he defired to elcuate his prefent connexions to a fituation in which no political convu'fons, and no thiftings of power, might be able to deltroy their importance and put an end to their afeendarcy.

The bills were fupported by various freakers, among whom were the two lecretaries of fate, Mr Burke, Mr Sheridan, Mr Erkine, Mr Lee, Mr Adam, Sir Grey Coupar, Mr Anftuther, AIr Courteney, Mr Rigby, Lord Maitland, and Sir Henry Fletcher. They were oppofed by Mr William Pitt, Mr Thomas Pitt, Mr Jenkinfon, Mr Powis, Mr Dundas, Mr Macdonald, Sir James Lowther, Mr Duncombe, Mr Martin, the marquis of Graham, Mir Arden, Mr William Grenville, Mr Beaufoy, Mr Wilberforce, Lord Mulgrave, and Mr Wilkes. During the progrefs of the bills the court of directors of the Eaft India Compary were heard againft then by counfel; and the mayor and common council of the city of London prefented a petition, praying they might not pals into laws. The firt bill, however, was carried, firlt by a majority of 229 to 120 , and eafterwards on the 8 th of December by a divifion of 208 to 102. On the 9:h of December it was prefented at the bar of the houfe of lords by Mr Fox, attended by a great number of members. On the firlt reading of the bill in the houfe of lords or the 11th of December, Earl Temple, Lord Thurlow, and the duke of Richmond, expreffed their abhorrence of the meafure in the moft unqualified terms, but without attempting to call a vote of the houle. Lord Thurlow, at the fame time, pronounced an ample panegyric upon the character and fervices of Mr Haltings, who, according to his lordhip, had eftablimed in Bengal a government of fuch order and energy, that he did not believe it would be in the power of the folly and ignorance of the mof favourite clerks Mr Fox's direckors could fent out, to throw Bengal into confufion in the term that was alfigned for the duration of his bill.

One of the peculins advantages attending the Britim conftitution, is the facility with which both prince and people receive political inftruction, and are put upon their guard againf any invafion of their rights. The parliamentary debates on this occafion being diffufed through the nation in the ufual way, by periodical publications, excited great intereft, and probably produced much alarm in the mind of the fovereign. He had reluclantly given way to the frength of the coalition, and conferred upon its leaders the firf offices of the flate. He now faw it alleged, with much plaufibility, that this combination of ambitious men, not Catisfied with the ordinary influence attending their fituation, were about to fortify themfelyes in the poffeffion of power in fuch a way as might gradually emable them to become independent both of him and his people. The moment feemed therefore to have arrived at which temporizing meafures muft prove ineffectual, and a fland be made for the fupport of the royal prerogative. Sucb at leaft appear to have been the feelngs under which his majefty acted upon this
occafion. On the IIth of December he had a confer. Eritanme ence with Earl Temple, in which he confeffed himfelf completely convinced of the correctnefs of the views of oppofition. It was now late, however, for his majeity 10 oppofe a meafure after it had been brought forward by the miniters of the crown, and carried through the houfe of commons apparently under the fanction of the royal authority. A refolution was, neverthelefs, adopted, to endeavour to prevent its farther progrefs by means of the houle of lords, many of the members of which were in habits of perfonal intimacy with the fovereign, bound, by offices which they held, to attend his perfon, and migbt be fuppofed ready to gratify his wifhes, could a fufficient pledge be given, that he had taken a decided part againt his urn minilters. What perfonal interviews pafled be-Earl Tem tween him and thefe noblemen is not known; but aple inticard was circulated, underfood to be fent by Earl mateshis Temple, in confequerice of written authority from his dijappromajefty, in which it was ftated, that "his majefty batoon of allowed Earl Temple to fay, that whoever voted forthe bill. the India bill was not only not his friend, but would be confidered by him as his enemy. And if thefe words were not ftrong enough, Earl Temple might ufe whatever words he might deem ftronger or more to the purpofe."

The confequence of this interpofition was, that, on the I $5^{\text {th }}$ of December, upon a queltion of adjournment in the houfe of lords, the minifters were left in a minority of 79 to 87 . On the fame day Mr Baker brought forward, in the houfe of commons, a motion to declare, that, to report any opinion of his majefly, upon proceedings depeoding in parliament, with a view to influence the votes of the members, is a high crime and mifdemeanour, and a breach of the fundamental privileges of parliament. The motion was feconded by Lord Maitland, and fupported by references to the journals, and by this principle, that advice ought only to be given to the king by his minifters, who are refponfible for all the meafures of government. Mr William Pitt oppofed the motion, as proceeding upon unauthenticated rumours; and afferted that the precedents alluded to in the journals, whicb bad been felected from the glorious times of King Charles I. were not applicable to the prefent cafe. Mr Pitt concluded with reproaching minifters for bafely retaining their offices, after it appeared, from their own ftatement, that they had loft the confidence of the prince. The motion, however, was carried by 153 againf 80. A, it was feared that a diffolution of parliament would inftantly take place, the houfe refolved, upon the motion of the honourable Thomas Erfine, That they would confider any perfon as an enemy to his country, who frould advife his majenty, in any manner, 10 interrupt their difcharging the im. portant duty of providing a remedy for the abufes which prevailed in the Eaft Indies. They alfo refolved to form themfelves into a committee on the flate of the nation on Monday the 22d. In the mean while, on Wedneiday the inth of December, Mr Fox's Mr Fox's India bill was rejucted in the houfe of lords, on a divi-bill reject. fion of 95 to 76, and, at $120^{\circ}$ clock on the night of thy the the 18 th , a meffage was delivered to the fecretaries of ${ }^{736}$ ftate, requiring them to tranfmit to bis majefty the change of feals of their offices, by the under fecretaries, as a per-miniltyy. fonal

## $B \quad$ R I [ 589$]$ B R I

fritain. funal interview would be difagrceabie. Early the next morning, letters of difmillion, figned Tomple, were fent to the other members of the cabinet, and a general refignation of offices took place.

A rees adminiftration was immediately formed, in which Mr William Pitt was appointed firf lord of the treafury and chancellor of the exchequer. The marquis of Caermarthen, and Mr Townhend, who had been created Lord Sidney, were made fecretaries of ftate; Lord Thurlow became lord high-chancellor ; the privy-feal was transferred to the duke of Rutland; Earl Gower became prefident of the council; the duke of Richmond was made mafter of the ordnance, and Lord Howe firt lord of the admiralty; Mr Grenville and Lord Mulgrave were appointed joint paymafters of the forces, and Mr Henry Dandas, treafurer of the navy. The office of lord advocate of Scotland, which this gentleman had formerly held, was now transferred from the honourable Henry Erfkine to Mr Ilay Campbell.

A fpectacle was now about to be exhibited, which had long been unknown in Britain, that of an adminiftration appointed by the crown, in direct oppofition to the houfe of commons. This, bowever, was no longer that houfe of commons which had fubdued the royal prerogative, and contended with fuccefs againft our ableft and moft ambitious monarchs. The late coalition had produced throughout the nation a general diffruft of the character of thofe who formed the majority of its members; and it was foon found, that a reprefentative body poffeffes little power or influence, and may fafely be difregarded, when it ceafes to render itfelf the organ of the fentiments of the public. It was expected that an immediate diffolution of parliament would take place; but the change of the bighert officers of the crown having been haftily made, it is probable that the new miniftry dreaded entering inItantly upon the bufinefs of an election againgt the powerful parties coalefced in oppofition to them ; perhaps alfo they might wifh to obferve the effect of the late meafures upon the public mind, and act as circumfances fhould direct. The majority, however, of the houfe of commons, feared a diffolution; and, on Monday the 22d of December, voted an addrefs to the king, flating the inconveniences to the public credit and the affairs of India, which would attend a prorogation or diffolution of parliament. His majefty returned an anfwer on the 24 th, acquiefcing, in general terms, in the fentiments contained in the addrefs, and affuring the hoofe, that after a fhort adjournment, their meeting would not be interrupted by any prorogation or diffolution. This anfwer was regarded as ambiguous; and a diffolution was expected to take place immediately after the ufual adjournment at Chriftmas.

When the houfe met on the 12 th of January, Mr Fox attempted to introduce, previous to any other bufinefs, the difcufion of certain refolutions, which had been prepared by the oppofition; while the new minifters endeavoured to be heard firf, by means of a Atratagem, which confifted of a declaration by Mr Pitt, that he had a m-ffage to deliver from the king. After fome tumult, Mr Fox was allowed to proceed. He called upon Mr Pitt to give the houfe fatisfactory affurances that no diffolution would take place: but this laft gentleman having declined to comply with
this requifition, Mr Fox moved, that the houfe fhould Britain. refolve itfelf into a committee on the ffate of the nation. The motion was carried, on a divifion of 232 to Refolutio 193. Various refolutions were then carried: I. That to of the iflue public money after a prorogation or diffolution of houle of parliament, unlefs an act flall have previoufly pafcd, commons appropriating the fupplies to fecific fervices, will be a againtt anthigh crime and mifdemeanour; a breach of public tion. tuult, derogatory to the privileges of parliament and to the conflitution of the country. Accounts of money already iffued were ordered, and the farther iffuing of any money was prohibited till three days after this account fhould be prefented. It was farther refolved, on the motion of the eall of Surrey, that, in the prefent flate of his majefty's dominions, an adminifitation was neceflary that hould have the confidence of that huufe and the public, and that the recent appointmeuts did not engage the confidence of the houfe. It was lattly refolved, on the motion of Mr Fox, that the fecond reading of the mutiny bill fhould be deferred to the 23 d of February.

Warm debates took place upon thefe refolutions, in 739 which the moft pointed perfonalities were caft out, the refoluarid retorted from both fides of the houfe. The coa-tions. lition was branded, as a corrupt confederacy of two defperate factions to feize upon the government of the country; and the India bill was reprefented as having been an experiment made by the late fecretary of flate, with a view, if not to place the crown on his own head, at leaft to raife himfelf to a degree of power fuperior to that of the fovereign. On the other hand, the party compofing the new adminilfration, was defcribed as a coalition, not indeed of parties, but of the fhreds and remnants, of the dregs and outcalts of parties; as a body collected for the purpofe of fighting the battles of fecret and unconifitutional influence, of trampling on the power and dignity of the houle of commons, of eftablifhing a government of cabil, intrigue, and favoritifm, and of deftroying the very principles of laudable ambition and honourable fervice in the flate.

On the $14^{\text {th }}$ of January, Mr Pitt obtained leave Mr Pitt's to bring in a bill for the better government and bill for remanagement of the affairs of the Eaft India Com-gulating pany. By this bill, commiffioners were appointed Inda. by his majefty, authorized to fuperintend and controul all operations of the courts of directors and proprietors of the Eaft India Company, relative to the civil and military government or revenues of the ter ritories and poffeffions of the company. This board of controul was to have accefs to all papers belonging to the company; and the court of directors was on no pretence to fend out orders to India, without the previous approbation of the board, which was alfo authorized to alter and amend the orders of the direchors. His majefty was authorized to name the commanders in chief in India, and to remove any governor, general, or member of the councils, of any Britihh fettlement in India; and all nominations by the court of directors to thefe offices, ware declared to be fubject to the approbation of his majelly; nor was the court of proprietors allowed, for the future, to revoke any proceeding of the court of directors which bad been approved of by his majefty. It was chielly objected to this bill, that it disfranchifed the Eaft India Company or violated their charter no lefs than Mr Fox's

Mr Pitt's bill rejected.
$74^{2}$ Another refolution of the com mons
againft ad-miniftration.

The public nedopt the caufe of the new minitry.
bill had done. A meeting of the court of proprietors, however, had paffed a vote in favour of the regulations contained in it; but at the fecond reading of the bill, on the 22 d of January, the bill was negatived upon a divifion of 222 againft 214 .

The difcuffion of this bill did not prevent the houfe of commons, in the mean time, from endeavouring to thake the determination of the court, and to intionidate the new adminiftration. A refolution was moved by Lord Charles Spencer, and carried by a majority of 205 againf 184 , which declared, in pointed terms, the difapprobation of the houfe, of the appointment and continuance in office of the prefent minilters, which they confidered as unconftitutional. On various occafions, Mr Pitt was called upon to explain upon what principle he ventured to remain in office after the houfe of commons had declared him unworthy of their confidence. He anfwered, that though novel and extraordinary, his conduct was by no meaus unconfitutional: That the immediate appointment or removal of a minifer did not reff with that houfe. That he neither could nor ought to remain long in fuch a fituation, he was ready to confefs; but he was bound to ufe his own difcretion to prevent the confequences that might attend an inftant refigation, which might leave the country without an executive government.

In the mean tinse, the public at large began to be greatly interefted in the difpute which had oc. curred between the king and the houle of commons. The common council of London voted an addrefs of thanks to his majefly for the difmition of his late minifters; expreffed their approbation of the conduet of the houfe of lords; and declared their refolution always to fupport the conftitutional exercife of prerogative. This addrefs was almof immediately followed by fimilar addrelles from the merchants and trades of the city of London, and from the city of Nurwich. , The contagion gradually extended itfelf from one part of the kingdom to another; addreffes poured in from every fide, and filled every day's gazette ; coming from corporations, from cities, from manufacturing torns, and from counties. Every addrefs ferved to infpire perfeverance and energy into the fuccefsful party, and to haften and render irrefifible the event of this extraordinary contelf. The coalition made fome attempts in the county of Middlefex, in Weftminlter, and in the great county of York, to turn the tide of addreffes in their own favour; but in thefe inftances, if they a voided a defeat, they gained no viclory.

In the meanwhile, as if the recent coalition of parA new co- ties deferved to be confidered rather as an example alition prepoled.? worthy of imitation than as an error to be avoided, a number of independent members of the boufe of commons attempted to heal the whole of the prefent breaches, by propofing a new coalition of parties, and the formation of an adminiltration upon a flill broader

## Mecting at

the St Al-,
ban's
tavern. bafis than formerly. On the 26th of January, nearly 70 members of the houfe of commons met at the St Albim's tavern, and figned an addrefs, to be prefented by a committee of their body, to the duke of Portland and Mr Pitt, requefting them to communicate with each other, on the arduous Pate of public affairs, and trufting, that hy a liberal intercourfe, every impediment might be removed to a cordial co-operation of suen of sefpectable characters, acting on the fame pub-
lic principles. In anfwer to this addrefs, hoth parties Britein exprefled themfelves defirous to comply with the wiftes of fo refpectable a meeting. But the duke of Portland declined any interview with Mr Pitt, for the purpole of union, while that gentleman fhould continue prime minifter in defiance of the refolutions of the houfe of commons. On the other hand, Mr Pitt declined refigning as a preliminary to negotiation.

To co-operate with the St Alban's meeting, one of its members moved, and carried unanimoully in the houfe of commons, a refolution, that the prefent critical fate of public affairs required an efficient, extend ed, and united adminiftration, entitled to the confodence of the people. A fecond refolution was carried on a divifion of 223 againft 204 , that the continuance of the prefent minifters in office was an obfacle to forming an efficient, extended, and united adminiftration. On the following day thefe refolutions were ordered, by a majority of $\mathbf{2 4}$, to be laid before his majefty. The meeting at the St Alban's tavern next came to a refolution, which was read to the houle of commons, in which they declared, that an adminifiration formod on the total exclufion of the nembers of the laft or prefent adminiftration would he inadequate $t o$ the exigencies of public affairs. Mr Fox declared his withes for an union, but infifted on the refignation of the chancellor of the exchequer in compliance with the refolutions of the houfe of commons, as an indifpenfable preliminary Itep. Ar litt, on the contrary, adhered to his office, and declared, that the loufe might addrefs the crown for his difmiffion; but till, in confequence of fuch a meafure, the king thould think proper to remove hins from his fituation, he laeld it neither illegal nor uncouftitutional to retain it, and would not recede from his former determination. He at the farme time fuggefted, that there might be perfons on the oppofite fide of the hoofe with whom he could not act. Lord North underftanding himfelf to be alluded to, declared his readinefs to relinquifh his pretenfions to an official fituation, if they fhould be deemed an obftacle to an union. This felf-denying declaration was received with great applaufe; and Mr Marfham, Mr Powis, and other members of the St Alban's affociation, in viun called upon Mr Pitt to yield to the preffing exigencies of his country. Thefe gentlemen ftill continued their efforts; and to remove the difficulty arifing from Mr Pitt's refulal to refign in compliance with the refolutions and addreffes of the houfe of commons, or to fave the honour of the houfe upon that fubject, they procured the royal interference for the purpofe of requefting, that a negotiation thould be fet on foot between the duke of Portland and Mr Pitt. A meffage was accordingly fent by Mr Pitt, acquainting the duke, that he was commanded to fignify to him his majefty's earnelt defire that his grace fhould have a perfonal conference with Mr Pitt for the purpofe of forming a new adminifitation, on a wide bafis, and on fair and equal terms. The duke requefled an explanation of the mellige with regard to the words equal terms, but Mr Pitt declined any preliminary dificuffion. The duke of Portland likewife propofed that he ftoould be permitted to underftand that the meffage implied a virtual refignation by Mr Pitt, or that he himlelf ftould receive his majeft's commands perfonally relative to the conference. Both of thefe

## B R I [ j91 ] B R I

Britan. communitation was to be expected relative to the refolutions of the houfe which had recently been hidd before the king. He replied that his majefy, after confidering all the circumflatices of the comitry, had not throught fit to difmifs his minifters, and that his minilters had not refigned. This produced a warm debate, in which it was obferved by Mr Fox, that it was the firft inflance fince the revolution, of a direct denial on the part of the crown, to comply with the wifhes of the houle of commons, and he threw out a hint that it might be neceffary for the houfe to proteet its own authority by refuling to vote the fupplies. To allow his majefty's minifters time, however, to confider well their fituation, he propofed to defer the report of the ordnance eftimate only for two days. The refufal of the fupplies was treated by the friends of the new adminiftration as a threat which the utmoft madnefs of faction would not ferioully attempt to executc, and which could never be juftified by his majefty's refufal to difmifs minifters who had been condemned without a trial. On a divifion, there appeared for poftponing the fupplies 208; againit it 196. On the 20th of February a now addrefs to the throne for the removal of the miniliters was carried by a majority of 21 . On the 27 th, his majefly's anfwer was reported by the fpeaker, in which it was flated that no charge or complaint was fuggefted againf the minifters, nor was any one of them fpecifically objected to; and, on the other hand, that numbers of his fubjects had expreffed to his majefly the utmoft fatisfaction on the change of his councils. This anfwer was abundantly artful, as it tended to divide the people at large from the houfe of commons; and, at the fame time, to perplex the coalition, who could not accufe the prime minifter of any political crime, as he was a young man who had never enjoyed the chief ditection of any important affair. A fecond addrefs to the throne was moved in the houfe of commons on the 1 ft of March, and agreed to by a majority of 12, remonftrating againft the anfwer to the former addrefs. His majefly replied in civil terms, but perfevered in his refolution to retain his minifters. The oppofition now made their laft effort. Mr Fox declared that he would nat propofe what is called an addrefs to the throne, becaufe he wilhed for no anfwer; but a humble reprefentation, to which it is not cuftomary to make an anfwer. This reprefentation confifted of a long remonftrance againft what was termed the unconftitutional appointment of an adminiftation in oppofition to the wifhes of the houfe of commons. It concluded by ftating that the houfe had done its duty by pointing out the evil, and that the blame and refponfibility muft henceforth lie wholly upon thofe who had prefumed to advife his majetly to at in contradition to the uniform maxims which had hitherto governed his own conduct, as well as that of every other prince of his illultrious houfe. The motion for this reprefentation was carried by a majority of only one vote, that is, by a divifion of 19t to 190 . Here the coalition appear to have felt themelves defeated, and to have finally Alban's aflociation.

On the 18 th of February the chancellor of the exchequer was required in his place in the houfe of consmons, to $\mathrm{f}_{\mathrm{r}} \mathrm{y}$, previous to the confideration of the queftion of fupply to the ordnance department, whether any
yielded to their dentiny, as they fuflered the mutiny bill, which had been their laft fecurity againft a premature diflutution, to pafs in the ufual terms.

While the fe contefts had been going on in the houre of commons, the houfe of lords was little attended to, and its trength, feems to have been as it were exhaufted by the extraordinary effort made by it in rejecting Mr tox's India bill. As its filence during fo critical a time was neither calculated to fupport its own dignity, nor the interell of the minifter, an effort was made on
the 1 th of February to bring it into action. Thie nor the interell of the minifter, an effort was made on
the 1 q $^{\text {th }}$ of February to bring it into action. Thie ear! of Effingham moved a refolution exprefive of the firm reliance of the houfe in his majefty's wifdom in the exercife of the prerogative of appointing his own minilters. This, which was meant as a counter refoIntion to the votes of the commons, palfed by a conflderable majority after a thort debate; and here the houte of lords, confcious of the fecondary place in point of importance which they held, if not in the conflitution, at leaft in the eflimation of the public, appear to have relapfed into their former taciturnity. On the 25 th of March, parliament was difoived. Difolution In the elections which immediately took place, the of parlianew adminiffration were extremely fucceffful. The ${ }^{\text {mert. }}$ Ealt India company and their fervants were uncom- $75^{\text {r }}$ monly zealous; and the diffenters, a powerful body in Elections. England, of a confcientious character and great activity, having regarded with indiguation the late coalition as the refule of a total difregard of all principle, caft their whole weight into the fame fcale with the influence of the crown. Upwards of 160 members of the late houfe of commons lof their feats; and of thefe, almoft the whole number were the friends of the late adminifration. Thus the defeat of what was looked To 7530 upon as a moft powerful and dangerous combination feat of the was completely accomplined, and its leaders were ren- coalition. dered of little importance in the legiflature of the empire.
Thus terminated the firength of the celebrated coa-Confequenlition, the fate and effects of which ought never toces of the be forgotten. That fatal mealure may be faid to coalition have abfolutely ruined the fortunes of the honourable Charles Fox, undoubtedly one of the molt accomplifh-to Alr Fox: ed flatefneen that the Britifh nation ever produced. From that periorl, he was generally regarded as unfit to be trufted with power; his eloquence ceafed to perfuade, and his counfels, even when full of wifdom, were regarded with diftruft, becaufe his odious coalition with Lord North conftantly rofe up in remembrance againft him, and fuggefted the ftrongeft fufpicions of his integrity, a citcumfance which loas probably proved on fome occafions not lefs unfortunate to his country than 755 to himfelf. The fame coalition undoubtedly bad a to the na tendency to diminith the attachment of the tration totion. the houfe of commons, and its confidence in that branch of the conflitution. It appeared that a majority of that houfe might be nothing more than a combination of factious men, alpiring to perfonal agegrandizement or emolument, and that in certain circumfances it might be neceflary for the people at large to arrange themfelves behind the throne, to obtain protestion agaiuft what is undoubtedly one of the worlt. and mont oppreffive of all govermments, that of a corrupted ariftocracy.

On the 18 th of May, parliament affembled, and in New par. th. liament.

## B R I [ 592 ] B R I

Britain. the fpeech from the throne, his majefly affured both houfes of his fatsfaction in mecting them, after recurring in fo important a moment to the fenfe of his people, and of his reliance that they were animated by the fame fentiments of loyalty and attachment to the conftitution, which had beer, fo fully manifetted througliout the kingdom: He directed their attention towards the affiars of the Eaft India Company; but warned them againf adopting any meafures which might affect the conillitution at home; and concluded with expreffing his inclination to maintain in their jull balance tbe privileges and rights of every branch in the legiflature.
 Company's affairs.

The eff.iirs of the Eaft India Company were fpeedi$1 y$ brought before parliament. On the $24^{\text {th }}$ of June, a bill was introduced by the chancellor of the exchequer, to allow the company to divide four per cent. on their capital for the halt year concluding at midfummer 178. The neceflity of the cafe was urged to juflify this bill to fupport the credit of the company; and it was alleged, that notwithftanding their prefent diftreffes, which were admitted to be great, there exifted a fufficient probability that their affairs upon the whole might warrant fuch a dividend. The bill paffed through both houfes, and received the royal affent. On the 2 d of July, Mr Pitt brought forward another bill, which had for its object to allow the company a refpite of duties due to the exchequer, to enable them to accept of bills beyond the amount prefcribed by former flatutes, and to eflablifh the regularity of their future dividends. This act gave rife to various debates, particularly, in confequence of a quefion.put by Mr Philip Francis, how far the honour of parliament would be pledged by this act to erable the Eaft India Company to make payment of the bills accepted by them, in cafe the funds of the company fhould prove deficient. Mr Eden alfo endeavoured to expofe the bill, by contrafting the two diffinct propofitions contained in it; the one for refpiting the duties due by the company, and the other for allowing the company to divide eight per cent. He alleged that thefe propofitions could only be juflified by being argued feparately, and by contending in fupport of the firft, that the company was fo poor that it required every poffible affiftance, and in fupport of the other, that their affairs were fo flourihing that they could well afford to make an enormous dividend. On the contrary, Mr Pitt contended that the company had fuffered like the reft of the Britifl empire by the late war, and therefore wanted a temporary relief; but that they were fill in the proper fenfe of the word actually folvent; that the beft hope exifted of their future profperity, which rendered the regular payment of their dividends a rational meafure, efpecially as government had juft received intelligence of peace being concluded in the Eaft with Tippoo the fon of Hyder Ally. This act alfo paffed into a law; and Mr Pitt, Atll farther to fupport the Eaft India Company, brought forward a bill to diminifl the duty upon tea for the fake of preventing fmuggling, and in lieu thereof, to fubftitute what has been called the commutation tax, or a tax upon windows. The amount of the revenue raifed from tea was between 700,0001 , and 800,0001 . and the ohject of this new att was to proportion it in fuch a way as to raile upon that article in future no
more than $\mathbf{8} 6,0001$, which it was fuppofed would enable the company to fell 13 millions of pounds of tea, inftead of tive millions and a half. Upon this and the former bills, by which fuch extenfive favours were conferred upon the Eaft India Company, Mr Fox animadverted at different times with great Severity; he aflerted, that confidering the tenor of thefe bills and the conduet of adminitration during the whole feffion, it was palpable that they were wholly under the direction of the Eall India Company, and that the company were making rapid ftudes, after having defpoiled and enflaved many millions of men in a diftant quarter of the globe, to reduce the inhabitants of this illand under their fway. The acts paffed, however, and received the royal affent. In themfelves they were fubordinate to the bill for regulating the general management of the affairs of the company. This a Et , though framed upon the fame model with that propofed by Mr Pitt in the laft parliament, yet differed from it in feveral points. The powers of the board of controul were enlarged. In cafes of urgency and fecrecy, the board were authorized to tranfmit their own orders to India, without their being fubject to the revifion of the court of directors. It alfo velted in the governor-general and council of Bengal, an abfolute power over the other prefidericies in tranladions with the country powers, and in all applications of the revenues and forces in time of war. The receiving of prefents was declared to be extortion and difobedience of orders, and all corrupt bargains to be mildemeanours, and punifhable as fuch. The company's fervants were required on their return to England, to lodge in the exchequer a flatement upon oath of their whole property. For the effectual punifhment of crimes committed in the Eaft Indies, a new court of juftice was conflituted, confifting of three judges appointed by the three courts, four peers taken by lot from a lift of twenty-fix, chofen at the commencement of every feffion of parliament, and fix commoners out of a lift of forty members chofen in like manner.

Mr Francis oppofed in flrong terms the general principle of this blll. He faid that by the confeffion of all parties, the court of directors were too weak to inforce their own orders. To remedy this weaknefs a clafling power was created, nominal on the part of the directors, rcal on the part of adminiftration. This he reprobated as injudicious, declaring that mere forms were of no ufe, and ought not to fubfilt when a conllitution was effentially altered. Mr Fox affirmed, as formenly, that this propofed board of controul violated the privileges of the India Company, no lefs than the enactment of his bills had done, while it increafed in a greater degree the dangerous influence of the crown. He treated with great contempt the new court of judicature, which he faid might fairly be called a bed of juflice, as juftice would fleep upon it, and thereby imbitter the calamities of India, by removing all fear of punifument. Upun the queflion whether the bill thould be referred to a committee of the whole houfe, the minifter was fupported by 276 voices, againf 61.

When the bill came to be difcuffed in the committee, Mr Pitt acted in a manner, which afterwards on many occafions ferved to dillinguifla his mode of tranlacting the mational bufinefs from that adopted by former mi milters.

## 13 R i <br> $593] \quad \mathrm{B} \mathrm{ir} \mathrm{i}$

Betain. nikers. inftead of coming forward like the leader of a party, with a meafure complete, in all its parts, which was to teceive the firm fupport of his adherents, Mr Pitt not only; of himfelf, propoled fome cifential alterations, but adopted thofe fuggefled by others, whether his friends or his antagonift. In the committee, the power of iffuing orders, in the firft initance, was limited to the cale of the court of directors neglecting to tranfmit difpatches to the board, after fourteen days notice, upon any fubject the board might think it necef. fary to take up. The directors were alfo empowered to eleet a fecret committee of three members, to communicate with the buard concerning fuch orders as the board might of its own authority tranfmit to India, The appointment of the curmander in chief of the army was withdrawn from his majefty, and left with the company, together with the negative upon nominations in general. Mr Dempiter and Mr Eden ftrongly reprobated the inquintorial fpirit of that provifion of the bill, by which perfons returning from India were sequired to give an account of their fortunes upon oath. Mr Samuel Smith fuggelled that merchants in particular fhould be exerpted from this inquifition, and Mr Dundas and Mr Pitt expreffed their willingnefs to admit the alteration; but Lord North having contended that this would make the matter worle, by pointing out to the public a certain clafs of individuals as lubjects of fufpicion, Mr Pitt relinquilh. ed the whole claufe. Mr Pitt himfelf, alfo, brought forward fome amendments of the conflitution of the new tribunal. As the claufes originally flood, the right of accufation refted folely with the attorney general, or the company. Inflead of this limitation, au. thority was given to anv other perfon or perfons to move the court of king', bench for an information. This court was alfo authorized to iffue commiffions to the courts in India, for the purpofe of taking depofitions. Th direeturs of the company, and perfons returning from India, were now excluded from the judicature that was to be erected. When the various amendments were reported to the houfe, Mr Sheridan treated the alteramons that the bill had undergone with a degree of ridicule, which proved extremely offenfive to the miniter. He remarked that $2 t$ new claufes were added, which were diflinguifhed by the letters of the alphabet; and he requefted fomegentiemen to fuggeft three more, to complete the horn-book of the miniltry. He fard the whole bill was a contention of two parties, the crown and the company, to outrun each other. . The company remonftrate $i$ againfl the bill as it originally ftood, becaufe orders were to be tranfmitted to India without th ir confent. To pleafe them, they were to have a fecret committee of three dire:tors; but the company were not a whit nearer their object, for the commattee were fworn to fecrecy: They might be vrefent at a court of discetors, and fee meafures carrying on diametrically oppofite to what they knew had been adnpted by the hoard of controul, withou: being able 10 apply any other remedy than a nod, or a wink, or a flake of the head, to intimate that they knew formething they darad not to divulge. Mr Fox, again, affirmed with great acrimony that the tendency of the prefent mealures was to facrifice to the Eaft India Company all that was dear to us, for the corrupt i fluence and under-hand fupport of the preVor. IV. Part II.

Ient adminiftration, and to eftablifh an Iudian government of the illarid of Great Braam. The bill finally palled the houle of commons on the 281) of Juy. In the houfe of lords it was oppofed by Lord Vifcount Stormont and the earl of Carlifle, upon principles fimilar to thofe upon which it had been refinted in tise houle of commons; but the minority there was extremaly feeble ln point of numbers, and the till paffed on the $9^{\text {b }}$ of Augult, though it was protefted againd by a tew noblemen, as ineffectual in its provifionc, unjuft in its inguifitorial fpirit, and unconlhtutional, as abolihing in certain inffances the trial by jusy.

All this while Mr Pitt's bill was little noticed by Mr Pott's the public at large. The popularity of his name was bill litele extrennely ligh. The cualitiun had become fo udious, notized bublie. that the miniftry by whom it had been fuperfeded, were regarded by the nation with the mott implicit confidence, and it was taken for granted that every thing muft be fafe in their hands. Neither could the molt dittinguifhed talents refcue the leaders of oppofition from general neglect. This was in a remarkable degree the cafe with Mr Burke, whofe rich, vasious, and exuberant eloquence, in competition with which all that remains of antiquity falls flort, could not now procure from the houle of commons even the appearance of attention. Early in July, the chancellor of the ex. chequer informed the houfe of cormmons, that Sir Elijah Impey, chief judge of the fupreme court of juitice at Bengal, had arrived in Encland, in conrequence of being recalled by his majefty purfuant to an addrefs of that houle. The acute fenfibility, or powerful imagination of Mr Burke, had induced him to intereft himfelf greatly in the fufferings of the natives of India under the Britih government. He now in vain called on the miniftry to enforce the refolutions of the hou'e, refpecting Sir Elijah Impey, by bringing him to trial. He repeatedly endeavnured to introduce as the fubject of deliberation the reports of the cummittees of the former parliament relpecting Indian affairs; but he was either defeated with little replv, by a motion for the order of the day, or overpowered and filenced by the loud and continual cl mour of the houfe.

During the prefent fettion it was found neceffary to Finance. have recuurfe to a loan of fix millions, to fettle the remaining expences of the American war. The naval eftablifiment was at the fame time fixed on a higher fcale than in former years of peace. " 1 'he number of feamen and marines was 26,000 ; but the military force was not large, as it did not exceed $\$ 7,500$ men for guards and garrifons. Several new taxes were impoled upon linen and cutton manufactures, hats, paper, candles, bricks, poftage of letters, horfes, hackncycoaches, perfons dealing in excileable cummodities, and perfons engaging in the amufoment of Alooting game or bunting. Thefe taxes in general met with little oppofition.

The feffion clefed with a motion, brought forward Reftorati by Mr Dandas, for the reftoration of the ellates for-oi Scotifi feited in Scotland, in the rebeilion of 1745 , to the de-forte.ted fendants or other heirs of the rehels. As this mea- eftates. fure had for its object the relief of individuals, whofe unequivocal att acisment and loyalty to his prefent maj:lly, and histamily, could not be fuppofer, even in alefs liberal and lefs enlightened age than the prefent, to 4 F
be

Eritain. be tainted or affeced by the crimes of their ancellors; it met with the perfect approbation of the commons. In the houle nf lords, however, it was oppofed by the lord chancellor Thurlow, both on the ground of its impolicy and partiality. It was impolitic, he faid, as far as it rendered nugatory the fettled maxim of the Bririfh conflituion, that iteafon was a crime of fo deep a dye, that nothing was adequate to its punifhment but the total eradication of the perfon, the name, and the family, out of the fociety which he had attempted to hurt. This was the widdom, he Caid, of former times. But if a more enlightened age chofe to relax from the efablihed feverity, he thought it oughe to be done with gravity and deliberation. It was, he faid, partial, becaufe the eftates forfeited in 1715 , and which were forfeited upon the fame grounds and principles as thofe in $17+5$, were pafied over in filence, whilit even a perfon who had forfeited in 1690 , was included in the provifion. The bill, however, pafied the lords, and received the royal aftent.

Whe miblic s.mufed by aerofatic cshbitions

At this time the Britihn nation enjoyed peace in all quarters of the world. The public attention being no lunger excited by national efforts, or the enterprifes of any political faction, was eafily direfted to objects of lefs importance. Of this nature was a French invention, that of air-balloons or the art of aeroflation, whith has hitherto proved of more curiofity than utility, but which at this period feaved greatly to amufe the worid. In France, two brothers of the name of Montgolfier, manufacturess of paper, conceived the jdea of fending up a bag or balloon full of heated air, and in repeated trials it afcended to a confiderable height. M. de Rofier appears to have been the firit who, in November 1783, undertook to fly through the air, without having the ballonn fecured by ropes, in company with the marquis d'Arlandes. Inflammable air, procured from the decompofition of water by means of fulphuric acid and iron filings, or zinc, was next ufed to fill a balloon made of varnifhed filk, with which Meffrs Charles and Robert afeended to the aftoniniment of the people. Vincenzo Lumardi, an Italian, was the firf who ventured to gratify the Britifh populace with a fimilar fpectacle. He afcended repeatedly into the atmofphere, from London, Edinburgh, and other places, and on each occafion was carried to confiderable diftances in the direction of the wind. Various other perfons imitated this example, and on the 16 th of Octoher of this year, Mr Blanchard, accompanied by Dr Jefferies, afcended, by the aid of a balloon, from Dover, and having foared over the Channel, arrived Cafely in France. This art, together with the intrepidity of the individuals who practifed it, excited much admiration at the time; but the impoffibility of giving to the balloon that direction in its progrefs which the traveller might wint, together with the extraordinary danger attending it, \{peedily brought it into neglect.

Parliament again affembled on the 25 th of Jan. 1784 . In the fyeech from the throne, the object particularly recommended to the attention of both houfes, was the final adjutment of the commercial intercourfe between Great Britain and Ireland. Farther meafures to prevent fmuggling were recommended, together with attention to the regulation of the public offices of the kingdom. The first bufinefs that was taken up, and
which was difcufled with great narmth, related to the choice of two members of parliament for Weftminfer, at the late general election. On that orcafion Lord Hood, Mr Fox, and Sir Cecil Wray had offered then:- ner furu felves as candidates. Lord Hood eafily carried listury. election, but between the other candidates the conteft was carried on with unexampled obflinacy. The $\mathrm{ch}-$ gaging manners of Mr Fox, who had for fometine reprefented the city of Wefminfter in parliament, enabled him at the prefent period, notwithfanding the general unpopularity of the coalition, to engage with ultimate fuccefs in this conteft. After the eleclion had continued upwards of fix weeks, it was concluded on the 17th May 1784 , leaving a majority of 235 votes in vavour of Mr Fox. The high bailiff at this time (being the very day previous to the return of the writ for the election) granted, at the requeft of Sir Cecil Wray, a fcrutiny into the votes which he had taken. This mode of proceeding was protefted againft by Mr Fox and feveral of the eleciors. Immediately on the meeting of the nev: parliament, the conduct of the high bailiff, in granting a fcrutiny under the above circumfances, was vehemently attacked by oppofition, and no lefs vehemently defended by adminittration. The object was repeatedly brought bcfore the houfe, by pectitions from the parties, and by motions of Mr Fox and his friends; for that gentleman, in the mean time, fat in the houfe as a member, having been elected under the influence of Sir Thomas Dundas, for a diftrict of beroughs in the north of Scotland. But on a motion of Lood Mulgrave, it was refolved by a confiderable majority, "that the high bailiff of Weltminter do proceed in the fcrutiny with all practicabie difpatch." In the beginning of February in the prefent year, the bufinefs was refumed in the houfe of commons. The icrutiny had continued eight months, and two parilhes out of feven had only been ferutinized, fo that it was admitted that probably more than two yeas longer would be neceffary to finifi the fcrutiny. In the mean time, of the votes for M1 Fox 71 had been objected to in the firft parifh, and the objections had been fullaiued only againf 25 ; whereat, in the fame parifh, out of 32 votes for Sia Cecil Wray that had heen objected to, 27 were declared illegal. In the fecond parif, the foruting of which was not finilhed, Mr Fox had loft 80 voters, and Sir Cecil Wray Go. On the 8th of February, Mr Welbore Ellis moved that a return of the election be immediately made by the high bailiff of Weftminfter. This motion, together with others which followed it, gave rife to a variety of debates of little importance to general hifory. At laft, on the 3 d of March, the motion having been repeated by Mr Siwbridge, it was carried on a divifion of 162 againft 124, and Lord Hood and Mr Fox were returned as members for Wefminfter.

On the 18 th of February, the attention of the houle Debt:of commons was called by a motion of Mr Fox to the the nat payment of the debts of the nabob of Arcot. The of arco Atatute which Mr Pitt had brought forward during the the preceding fummer, authorized in general termis the court of directors to efablifh, in concert with the nabob, funds for the payment of fuch of his debts as flould appear to be jufly due. The court of directors accordingly ordered the council at Madras in in"eftigate thefe ciebts; but the board of controul, with
fome

Rritain. fome trifling limitation, ordered the whole debts to be paid out of the revenues of the Carnatic. Mr Dundas undertook in the houle of commons the defence of the board of controul. He treated with ridicule a declaration made by Mr Francis during the debate, that rumours were abroad, of a collufion between the board of contrual and the creditors of $\mathbf{2 7 7 7}$. He faid it was not the firft time that his condut had been mifreprefented. It had been faid, jult with the fame degree of truth, that he had received a very large funa of money from an honourahle baronet (Sis Thomas Rumbold) on a particular occalion. He had flept peafectly quiet and ferene under the former charge, and he trulted be thould preferve his temper equally unruffled under the prefent accufation. He juftified the whole of the nabob of Arcot's debts. One fet of debts incurred in 1767 confilted, he faid, of money borrowed by the nabob at the rate of from 30 to 36 per cent. intereft, to pay off a fum due by the nabob to the company, which was at that time in the utmoft diltrefs, and the intereft had afterwards been reduced io 10 per cent. 'The fecond branch of the nabob's debts had arifen from funs borrowed to pay off his own cavalry, which the company had ordered him to reduce, but which he was unable to difmifs from want of money to pay their asrears. He borrowed this money, and the company engaged its credit for the loan. A third clafs of debes, incurred or confolidated in 1777, were acknowledged by the nabob to be valid, and were only approved of by the board of controul, fubject to his objections, or to objections by the company or the reft of the creditors.

Mr Burke, in a fpeech containing a full inveltigation of the fubject, flated, that, at the ellablifhment of the Britifh power in India, Madras and its dependencies formed one of the moft flourilhing tertitories in Afia; but fince that time it had fo declined, by the annual drain to England of nearly a million ferling, made by private gentlemen, that, in the year 1779, not one merchant of eminence was to be found in the country. Befide this annual accumulation of wealth, tranfmitted to Europe, it appeared that the nabob had contracted a debt with the company's fervants, to the amount of 588,000 . Aterling, which, in the year 1767 , was lettled at an intereft of 10 per cent. About the fame time the court of directors were further informed, that one million ferling had been lent by Britih fubjects to the merchants of Canton in China; and that this fum bore an intereft of 24 per cent. In the year 1777 , a fecond debt of the nabob of Arcot, amounting to $2,400,000$ l. was fettled at 12 per cent intereft; to this was added another debt, called the Cazalry debt, of 160,0001 . at the fame intereft. The whole of thefe four capitals, amounting to $4,440,000$ l produced at their feveral rates, annuities amounting to $\delta_{23,000}$. a-year, more than half of which food chargeable on the public revenues of the Carnatic. Thefe annuities, equal to the revenues of a kingdom, were poflefled by a fmall number of individuals of no confequence, fituation, or profeftion. Mr Burke admitted that the loan of 1767 was the faireft, as he could convid it of nothing worfe than the moft enormous ufury. The intere! at 36 per cent. was firt paid, then 25 , then 20 , and laftly the interefl was reduced to 10 per cent; but that all along the intereft had been added to the principal, fo that of $889,00 c l$. Mr Burke doubted whether the
nabolu ever faw 100,0201 , in real money. With re- Pritain. gard to the cavalry debt, Mr lurke ftated the facts to be the following. Intlead of ready money, the Einglith money-jobbers engaged to pay the nabob's cavalry in bills payable in four noonths, for which they were to receive immediatcly at lealt one per cent. per month, but probably two, that loeing the rate gencrally paid by the nabob; and the receipt of a territorial revenue for that purpofe was affigned to them. Inflead of four months, it was upwards of two years before the arrears of the caralry were difcharged; and being during all this time in the conftant leceipt of the afligned revenue, it is not improbable but that they paid off the nabob's troops with his own money. With refpect to the debt of 1777 , Mr Buske obferved that in different accounts the principal fum rofe from $1,300,0001$. to $2,400,000$. and that the creditors had never appeared the fame in any two lifts. In the year 17 SI, they were latisfied to have 25 per cent. at once truck off from the capital, yet they were now to obtain payment of the whole. With regard to all thele claims, Mr Butke alferted that the nabob and his creditors were not adverfaries but collufive parties; that in fact when the nabob of Arcot gave an acknowledgment of debt to an European, he rectived no money, and did nothing more than endcavour to fupport his oun influence over the fesvants of the company by receiving them into his pay. Mr Fox's motion for an inquiry into the conduct of the board of contioul on this occafion, in fupposting thefe debts, was negatived on a divifion by 164 againtt 69 . The fame motion was made on the fame day, with fimilar luccefs, by the earl of Carlifle, in the houfe of lords.

Mr Fitt had come into office with the fingular good Mr Yitl fortune of being highly approved of by the nation patronizes at large, while, at the fame time, he was felected to a paliafupport the royal presogative and authority, againft mentary the majority of the houfe of commons, then poflefled by the coalition. It is always diftucult for the human mind to fet popular approbation at defiance, and the love of it feldom fails to gain ftrength in the cliaracter of thofe perfons by whom it has once been enjoyed. Accordingly it became one of the features of Mr Pitt's conduet, to attempt at all times, if poltible, to reconcile the fervices expected from him by the crown with the purfuit, or at leaft with the apparent purfuit, of whatever meafure happened for the time to be the object of popular applaufe. The attempt to procure a reform of the reprefentation of the people in the houfe of com. mons, was one of thefe objects. He had formerly engaged in it while acting in oppofition, and now after he had become the firt minitter of the crown, he fill undertook to fland forward as its advocate. Every candid writer of hiftory muft be fenfible of the defective nature of the details which he is able to give of the caufes which produce or regulate the moft important occurrences. Thefe are fometimes brougbt to light in a future age, but on many occafions they remain perpetually unknown, In what way, or in confe. quence of what explanations, Mr Pitt contrived to retain the confidence of his mafter, while at the fatue time he flood forward as the champion of a reform, which nobody imagined acceptable at court, we do not know. It is certain, however, that after Mr Pitt

## B R I [ 596 ] B R I

attained to the chief place in the prefent adminiftration, he ftill continued to correfpond with the leading advocates for parliamentary reform, whofe meetings he had been accultomed to attend. In a circular letter tu Mr Wyvil, prefident of a committee of Yorkthire gentlemen, who had embarked in this caufe, it was flated that Mr Pitt had given authority to declare " that he would bring forward the fubject of a parliamentary reform, as early as poffible in the feffion; that he would liupport his intended propofitions to the atmoft of his itrength; and that he would exert his whole power and credit, as a man and as a minifter, honeftiy and boldly to carry fuch a fyftem as fhomld place the conftitution on a footing of permanent fecurity." Accosdingly, at the commencement of the Seffion, in the debates on the fpeech from the throne, when the fubject was alluded to, Mr Pitt took the opportunity to declare that on this bufinefs he laboured inceffantly. It was that which of all others was neareft his heart, but at that early period of the feffion to ftate his plan Ppecifically was impoffible. Much remained to be done, and his ideas were not matured. A reform in parliament comprehended, he faid, a great variety of confiderarions. It related to the effentials and the vitals of the conftitution. In this path he was determined to tread, but he knew with what tendernels and circumpection it became him to proceed; and he would requast the houfe to come to the fubject, uninluenced by any of the fchemes and hypotheles that had hitherto been fuggefted.

It was not till the 18 th of April, that Mr Pitt called the attention of the houfe to this important fubject. He declased himfelf aware of the pertinacity he mult expeet to encounter, in propofing a plan of reform; but he entertained more fanguine hopes of fuccefs than formerly, becaufe there never was a moment when the minds of men were more enlightened on this interefting topic, or more prepared for its difcuffion. He was affiduous to remove the objection of innovation. Anciently, he faid, great fluctuations exifted in the franchife of electiun. The number of members had varied, and even the reprefentations of the counties was not uniform. As one borough decayed, and another flourifhed, the firft was abolifhed, and the fecond invefted witb the right. This arole from a maxim, the application of which was entrufted to the crown, that the principal places, and not the decayed boroughs, flould be called upon to exercile the right of election. King James I. in his firll proclamation for calling a parl:ament, Jirected the fheriffs, net to call uponfuch borouglis to fevid nembers, as were fo utterly ruined as to be unerititled to contribute their hare to the reprefere.tion of the cour ty. He added, that it was by the treaty of union the number of the members of the houfe of cor mons wis fived, and that only from the date of that act was the diffretion of the crown upon this puint at an end. He faid, he was no advocate for a revival of this difcretiunary power, but that the maxim upon whil it "as frusided ous he now to be carried into effect. 'The outline of his plan was this : To transfer the sight of chousing reprefentatives from 36 of fuch boroughs, as had alrcady fillen, or were talling into decay, to the counties, and to frich chuef towns and cities as were at prefent bureprefented: Tlat a fund noould be provided, for the purpofe of giving to the owncrs and
holders of fuch boroughs, disfranchifed, an appreciated compenfation for their property: That the taking this compenfation fhould be a voluntary act of the proprie. tor, and if not taken at prefent, fhould be placed out at compound intereft, until it became an irrefigible bait to fuch proprietors. He alfo meant to extend the right of voting for knights of the fhire, to copytholders as well as freeholders. He confidered one million as a fufficient fund to be eftablifhed for purchafing the decayed boroughs. Befides the original 36 , he intended to purchafe the franchife of other boroughs, and to transfer the right of returning members to unreprefented large towns, that fhould petition piriament for this privilege. Thus, he faid, 100 members would be given to the popular intereft of the kingdom, and the jight of election extended to 100,000 additional perfons. It might be faid, he obferved, that it did not become that houfe, for chimerical fpeculations, to involve their conflituents in additional burdens; but he trufted, that in a matter fo dear and important to Englifhmen, they would not be intimidated by the circumfance of the coft. He conceived the purchafe to be above all price. It was a thing for which the people of England could not pay too dear. Alluding to the American war, he alked if the nation would have fuffered the calamities to which it had lately been expofed, if there had always been a houfe of commons, the faithful ftewards of the interelt of their country, the diligent checks on the adminilfration of the finances, the conftitutional advifers of the executive brauch of the legillature, and the fteady and uninfluenced friends of the people of England? Mr Pitt was aware that there was a fort of fqueamilhnefs and coynefs in that houfe, in talking of what might be the proper confideration for the purchafe of a franchife. Out of doors it was pretty well underfood, that men had no great objection to negotiate the fale and the purchafe of feats. But he would afk, was it, after all, fuch all infult to an Englifhman, to alk him to fell his invaluable franchife? was there any immorality in receiving a pecuniary confideration for the ceffion of a valuable benefit to our country ?

Mr Fox difapproved of purchafing from a majority of the electors of a borough, the property of the whole, and of holding out pecuniary temptations to an Englithman to relinquim his franchife, though he declared himflelf a friend to the general principle of a more equitable reprefentation. Mr Wilberforce fupported Mr Pitt's propolal, for this reafon in particular, that by putting an end to the reprefentation of the decayed boroughs, future dangerous ariflocratical coalitions would be prevented. Mr Pitt's propofal w'as watmly oppofed by Mr Powis, who alleged that the people of England had not called for a reform, as there were only eight petitions upon the table; that the bufinefs, therefore, in which Mr Pitt had unfortunately engaged himfelf, was a volunteer crufade, or a picce of political knighterrantry. He denied that the American war was to be imputed to the reprefentatives of boroughs; and made the important remark, that it was only in confequence of the exiftence of the elective franchife in a few decayed boroughs, that men of talents, like $M_{r}$ Pitt himfelf, had an opportunity of heing introduced into the fervice of their country. Lord North likewife oppofed all change, as the pcople were actually contented, bappy, and in full poffetion of their li. berties,

## B R I

Pritain berties, which rendered it, in his opinion, unneceffiry to inquire minutely how they came to enjoy thele advantages. Leave to bring in the bill was reluled, by a majority of 248 againft 174 .

As the fole object, on account of which the Englith monarchs anciently aflembled their patliaments, was to obtain money from their fubjects, fo the adjutment of the public expences, and levying adequate fupplies, always continue to occupy a large portion of the time of every feffion of parliament. The prodigal expenditure that had taken place during the late war, ftill required additional taxes. For this purpofe new demands were made upon hawkers and pedlars, and for gloves and other articles. Attornies were taxed, and the duties on male fervants and poft horfes were enlarged. A tax was likewife impoled upon retail fhops. This laft tax encountered very perfevering oppofition in parliament, as well as much unpopularity in the nation. It was reprefented as extremely unfair, becaufe it fell upon a fmall number of perfons of an induttrious character. Being levied in proportion to the thop rent, it fell almof exclufively upon the inluabitants of the metropolis; and it was obferved, that, unlike other taxes, the members of parliament who impofed it, were in no hazard themfelves of paying any part of it. Of all the taxes, however, which were propoled by the minifter, none encountered fuch farcaftic animadverfion as that upon maid fervants. Mr Pitt was generally underftood to be not very remarkable for his attachment to the other fex, and accurdingly Mr Sheridan accufed him, upon this occafion, of holding out a bounty to bachelors, and a penalty upon propagation. Sir James Johnfon and the earl of Surry expreffed themfelves with much humanity on the fubject, on account of the unprotected fituation of that portion of our fellow creatures againf whom this tax was directed; and Mr Fox luggefted the propriety of avoiding to tax perfors employed in works of domeltic economy and induftry, and of fubftituting a tax upon bachelors, which was accordingly adopted.

But the bufinefs that excited more attention than any other department of fupply, was that of the ordnance. As early as the year $\mathbf{1 7 8 2}$, the duke of Richmond had planned a very expenfive fyftern of furtifications, for the purpofe of protecting the different dock-yards of the kingdom. The idea had originated from the alarms occafoned by the combined Heet during the late war. The works had been for fome time carried on, and the fum of 50,0001 . annually voted, without much attention being given to the fubject. At laft, during the prefent Cefion, Mr Holdfworth, member for Dartmouth, moved, that an account fhould be laid before the boufe, of the expences alrealy incurred on fortification, at Plymouth, Purtfmouth, Gofport, Chatham, Dover, and Sheernels, together with a report of the probable expence of completing the fortifications of Port[mouth and Plymouth; and afterwards on the $14^{\text {th }}$ of March, the annual fupply of 50,0031 . for fortifications was oppoled. On this occafion, Captain James Luttrel of the navy defended the duke of Richmond's project, afferting, that fuch fortifications were neceffiry to protect not the kingdum at large, for that was not in view, but the principal dock-yards and naval flores, againf any fudden invalion. He obferved, that veteran troops only
could be oppofed to veteran troops in the open field; but within forts militia, leamen, and almoft any thout,

Britain. fpirited fellow, might be as ufeful as the moft experienced foldier. 'The poffefion, for 24 hours, of a fituation from which the dock, Itores, and fhipping, might be aftailed with red-hot fhot and lhells, would be a fatal blow to the navy, and ought to be guarded againft, by fortifying the fituations in which it might occur. 'Thus alfo the navy would not be under the neceffity of remaining always at home for the defence of our own ports, but would be enabled to leave them for the purpole of carrying on offenfive war. Mr Courteney oppofed the projected lyftem of fortification, together with Captain M‘Bride, General Bur. goyne, and Colonel Barré. This laft gentlemen contended, that the fuperiority of our navy, which ought always to be fupported, iendered it unneceflary for us to have recourfe to fortification. He made a general attack upon the duke of Richmond, as inexperienced in war, and as lavilhing away money upon an ablurd fyttem of fortification, while he oppreffed, by an ill-judged economy, the corps of engineers and artillery, which were the only parts of the army found ed in fcience and profeffionally learned. He concluded, by propofing, that a council of officers fhould be confulted on the fubject. Mr Pitt defended the duke of Richmond's character, but agreed to this laft propolal, of taking the opinion of a council of officers; which put an end to the debate.

A bill paffed for better regulating the office of the treafurer of thenavy, without anv fort of oppofition. Another bill, to which little objection was made, paffed, for the better examining the public accounts; but another fic bill brought forward by Mr Pitt, for the general reform of public offices, met with Atrenuous oppofition. Mr Sheridan afferted, that it was unneceffary, as the trealury poífeffed full power to make the reforms. He faid, that the bill had no important object in view, that it was a mere rat-catching bill, inftituted for the purpofe of prying into vermin abules; and Mr Burke following out this argument, contrafted, in flrong terms, the tritling economy which was here propoled, with the prodigality of the minifters in their proceedings refpecting the revenues of the Carnatic, in the fanction they had given to the pretended debts due by the nabob of Arcot. The bill, however, was fupported by Mr Powis and other independent members; and having paffed through both houfes, received the royal affent. During the firf nine years of Mr Pitt's adminiltration, his mode of management, in the treafury manner 775 department, at the head of which he was flaced, ap- which the pears to have been this: He inveltigated, witla as revenue nuch accuracy as poffible, the emoluments of all the was now fervants of government, in the various departments of office throughout the country; and wherever it was polfible to do fo, he retrenched the allowances of the inferior fervants of the fate, with confiderable feverity, leaving, in general, the higher and more confpicuous officers in the poffeftion of their ufual emoluments. He introduced a variety of regulations to prevent fmuggling, which he fuccelsfully repreffed; and he alfo collected the revenue with remarkable attention and accuracy. In former times, the cuftom with Britilh minifters ufually had been, to impofe a confid-rable number o! taxes, and to levy thefe taxes

## $13 \mathrm{R}^{\mathrm{I}}$

Brituin. mildy. If the revenue fell flort, it was augriented by more taxes levied in the fame negligent way. Thus individuals were never feverely treated; and the collection of the revenue bore a charaler of extreme lenity, for which the minifiter of the diy often fuffered, in confequence of the popular odium which he was under the neceffity of encountering, by propofing new taxes. But under Mr Pitt's ndminiftration, the revenue was colleted in every department with greater ftriatnefs; and thus he was enabied to obtain large fums of money, without the neceffity of impofing many new taxes.

One of the mof important efforts of legillation that were made during the prefent feffor of parliament, confifted of an attempt by Mr Pitt to effablifh a plan of commercial union between the two kingdoms of Great Britain and Ireland. This plan was propofed to the Irith houfe of commons on the 7 th of February, by Mr Ord. It confilted of ten articles, ufually ftyled the Irifb propofitions. They paffed with little debate, and an addrefs of approbation was voted to his majefly. On the 22 d of the fame month, Mr Pitt introduced the fubject to the Britifh houfe of commons. He fated the falfe and opprefive policy which had long been exercifed by government, in regard to Ireland, the object of which was to render her completely fubfervient to the intereft and opulence of this country. She had been flut out from every fpecies of commerce, and reftrained from fending the produce of her own foil to foreign markets. This policy had been gradually relaxed during the prefent century: but the fyttem had not been completely reverfid till within a few years preceding. Yet, although the foreign commerce of Ireland had been placed on a better footing, the intercourfe between the two countries had nocver been eftablifhed upon equal and reciprocal principles. Mr Pitt propofed to allow the produce of the colonies to be imported into Britain through Ireland, and to equalize the duties on the produce and manufactures of both countries. In return for this conceffion, he wifhed to flipulate, that the parliament of Ireland thould permanently and irrevocably fecure an aid towards defraying the expence of protecting the general commerce of the empire in time of peace. After fome debates upon the fubject, petitions from Liverpool, Pailley, Glafgow, NIanchefter, and other places, were prefented againt the meafure, to the anomm of 63 in number, the confequence of which was, that from the 16th of March to the 12 th of May, the houfe of commons were almoft inceflantly employed in hearing counfel and examining witaefes. Certain exceptions were now introduced to the general rule of admitting an equal commerce betweca the countries. Corn, meal, flour, and beer, were made exceptions in favour of Britifh agriculture. Various regulations were alfo introduced, to fecure an effe fual equality of duties upon every particular objeef of trade in both countries. The plan, after all its amendments, produced a great variety of debates, in the courfe of Jord North which Lord Nurth expreffed his wihh for a compl te recon- incorporating union of the two kingdoms, in prefemendsan rence to a partial fettlement, which inight preve the mion with Itreland.

Sackville, and the earl of Derby. They were fuc- Britain. ceffful, however, in both houfes; but by this time a great part of the Irih parliament had become diffatisfied with the plan. A majority of 127 voted in its favour in the houfe of commons againlt 108. But againfl fuch an oppofition adminiftration did not think fit to prefs its adoption.

The American war, in fome meafure, withdrew the inclinations of the Britifh nation, for a time, from ideas of conqueft and military fplendour. Commercial purfuits were now chiefly valued, and formed a great otject of purfuit, both with the government and the people. To fullow thefe with complete fuccefs, it was neceffary that a good underfanding thould be preferved with the neighbouring powers. This was accardingly done, though with lome difficulty, in confequence of certain foreign occurrences, not unworthy of attention.

Jofeph 11. was at this time at the head of the houfe projected of Auftria and of the Germanic body. Among the exchange os various projects which marked his reflefs career, he Bavaria, formed one of no fmall importance, which, had it ${ }^{\text {sc }}$ been attended with fuccefs, would icarcely have failed to affect the future condition of the Germanic body. He entered fecretly into a negotiation with the elector of Bavaria. then an infirm old man, for an exchange of that electorate for the provinces of the Auftrian Netherlands. The Netherlands were to be converted into a kingdom, and the future title was to be that of Auffrafia, according to fome, and of Burgundy, according to others, It appeass, that Count Romanzow, the Ruflian minifter to the diet of Frankfort, informed the duke of Deuxponts, the nephew and heir of the elector of Bavaria, of the fubfance of this treaty; and, at the fame time affured him, that the treaty wonld be carried into execution, whether he confented to the exchange or not. The duke gave notice of this alarming meafure in the month of Janualy of this year, to the celebrated Frederick II. king of Pruflia, who regarded it as a mof dangerous priject to his owin independence, as well as to that of the other German fiates. He endeavoured inflantly to fpread an alasm through Europe. He alleged, that the propofed exchange was in the higheft degree iniquituus and unfair. The population on both fides was indeed nearly equal ; but the extent of territory on the fide of Bavaria, more than doubled that of the low countrics, and their refpective revenues were equaily difptoportioned. In Bavaria, agriculture, commerce, and finance, were notoioully negleted; while, in the Aultrian Netherlands thefe refources were extended to their utmof pitch; fo that, while the territory which the cmperor hoped to acquire was capable of the moft confiderable improvements, that which he gave away might rather be expected to decline in political refources. Thefecircumfances, how. ever. wese of little impestance, compared with the political confequences which muft refult from fuch a meafure. The Netherlands being fituated at a diflance from the great body of the Aufrian dominion, had always proved rather a fource of weaknefs, than of Atength to that power. A confiderable revenue was indeed derived from thefe provinces; but it was often dearly bought, in confequence of the wars occafioned by the vicinity of France. Great political ef-
the refolutions were warmly oppofed by the earl of Carlitle, Lord Sior:nont, Lord Loughborough, Lord
forts had of late ycars been made by the court of Gienna, to avoid all futnse grounds of quarrel with the French monarchy. This had been accomplifled, by the marriage of an Auttian princefs, to the dauphin, now king of France; and the relinquifhment of the Netherlunds would have gone far towards completing the project. The poffefion of Bayaria, at the fame time, from its vicinity to the relt of the Auftrian dominions, would have fecured to the emperor a chain of terrioory from the banks of the Rhine along a great part of the courfe of the Danube; and would have befowed upon him fuch a preponderancy, as would have overturned all fladow of power in Germany that could have refifted the head of the empire. This mighty country, might thus, at no remote period, have been confolidated into one mafs, and Autria would probably have infantly ranked in every fenfe as the firft power in Europe.

Thus Frederick II. reafoncd. Succeeding events may, perhape, lead us to fulpect, that this acquifition of flrength by the houfe of Auftia, might have proved of conliderable utility to Europe; but at the time when the plan was propofed, it excited very general app:chenfions. The treaty for the exchange hat been concluded under the aufpices of Ruflia and France, and to them the king of Prufia addrefted his remonftrances. The emperor of Germany and the elector of Pavaria, however, foom found their plan fo ftrongly difapproved of by other powers, that they abfolutely difarowed it. The elector, in the Murich gazette, and the emperor by his ambaffadors, atlerted, that they had never entertained any defign of making fuch an exchange. But the court of France, inltead of derying the negotistion, contented itfelf with replying to the remonfrance of the king of Pruf. fia, that the exchange had been propofed, as depending upon the voluntary arrangemert of the parties; and, as the dolie of Deuxponts had refufed his confent, the propofition of courfe became fruitlefs. The cmprefs of Ruffia, was fo far from concealing her acceffion to the meafure, that fhe defended it as highly equitable.

Frederick, in the mean time, exerted himfelf with great affiluity ir negotiating a league with the electors of Hanover and Saxony, for the prefervation of the Germanic conftitution, and to prevent fuch ceflions and exchanges of territory as might prove injurious to the balance of power in the empire. A treaty to this purpore was concluded on the 23 d of July, and various German princes acceded to it, among whom have been enumerated the elector of Mentz, the landgrave of Heffe, Calfel, the dukes of Brunffick, Namur, Saxegotha, and the prince of Anhalt. The elector of Hanover appears to have entered with much readinefs into the tranfaction, and from that period a very intimate comnexion commenced between the courts of London and Berlin. By fome Britifl politicians, however, it was fuppofed, that the oppofition made to the imperial project was unwife, as it tended to excite a fpirit of hoftility againit us on the part of the houle of Aultria, which, of all the powers of the continent, was confidered as one of our mof natural allies, in confequence of the ancient hoffility which had exifed between that power and France, and which was thought likely to break out anew at come future feriod, notwithftanding the efforts at prefent
mide for its extinction. It was probuhly in confe. Pritio. quence of a jealouly of Irritain produced by this tranfaction, that the cmperor publifined an edict iotally prohibiting the importation of Britifl manafactures into any part of the Autrian dominions. In the courfe of the fummer a French ediet had allo refrieted the fale of various articles o§ Britilh manufacture, paticuiarly fadlery, hofiery, woollen cloths, and bard-ware, unlel's upon payment of duties, the amount of which swas equivalent to a prohibition. To counteract thefe pro-commerceedings, by which the commerce of this country mutt cial trearims eventually have been narrowed, commercial treaties negutiater. were i.egotiated with the courts of leterburgh and Verfailles. The later of the fe was undertaken in purfuance of a provifon in the defintive treaty of peace, and the negotiator appointed on the part of Gicat Britain on the gth of Deccmber was Mr Willians Eden. The acceptance of this appointment wias reprefented by the perfons who oppufed the prefent adminiltration as a fignal example of political apofaly, as it was Cuid that Mr Eden had not only been the ori. gina! projector of the celcbrated coalition in 1783 , but a principal fupporter of the refolutions made by the houfe of commons againft the adminiftration of Mr Pitt at the commencement of the year 1784 .

Parliament met on the $2 q^{\text {th }}$ of January 1786. In Meting o: the feech from the throne fome notice was taken of parliament. the cominental difpute already mentioned, which it was Cuid, had terminated in fuch a way as to threaten no internuption to the tranquillity of Europe. This Relation of cxcited fome debate, in which Mr Pitt declined enter- Britain and ing into any defence of the Germanic league, as he Hanover and his colleagues in office had not interfered in the debased. formation of it. He faid, that accident alone had placed the fuvereignty of Hanover and of this country in the fame hands, and he defired to have it underftood that Great Britain was by no means bound by ary leagues entered into by the elector of Hanover. He thought the only way for Great Britain to avoid embroiling herfelf in the quarrels of Hanover, was for our adminillration to remain as much as poffible unconnected with Hanoverian politics. Hence, unlefs in forne fingular cafes, he did not account it incumbent upon the minifter of this country to lay before parliament arrangements made by the advice of the miniters of that cleetorate.

Mi Fox, on the contrary, denied that the affairs of Manover could be feparated from thote of Britain. Ile fated the fuppofition, that it fhould hereafter appeas an cfential act of policy for Great Britain to join the court of Vienna againft the league of the Germanic princes, and that the elector of Hanover loould appear as ore of thofe princes at the head of his own troops. Mr Fox put the queftion, Whether a Bruif army could be directed to aet hoftilely againft troops kd by their fovereign in the character of elector of Humover? He remarked, that. when Gcorge I. purchafed Biemen and Verden from Denmark, the monifter at that time, General Stanhope, ufed precifely the fame language, and told the houfe of commors, that they had nuthing to do with his majefty's conduct refpecting his electoral domirions. The confequence, hewever, was, that the refentment of the Swedifh monarch Charles XII. on account of this tranfaction, threatencd Great Britain with a moft dange:ous invafon: and the very next

## B R I [600] B it I

Sritain. yeqr General Stanhope was under the neceffity of demanding additional fupplies, to enable his majefty to defray the expences to which he was expofed in con783 fequence of his purchate.
Duhe of The firf objee that came before parliament, to Richmond's which any great degree of public attention was directfo rincations. ed, related to the duke of Richmond's plan of fortificat:oris. In confequence of the debite which had
formerly taken place upon the fubject in the houfe of commons, the plan was remitted to the confideration of a board of officers on the $13^{\text {th }}$ of Aptil 1785. The duke of Richmond was appointed prefident of the board; in confequence of which General Conway, Lord Amherf, and Lord Vifcount Townflend, declined to ast, becaule he was their junior as an officer. Thofe who actually affited were Lieutenant-geuerals Carl Percy, Earl Cornwallis, Sir Guy Carleton, Sir William Howe, Sir David Lindfay, Sir Charles Grey, Lord George Lennox, and Johu Burgoyne, together with fix major-generals. The naval officers were Vice-admirals Barrington and Milbank, Rear-admials Graves and Lord Hood, together with Captains Hotham, Macbride, Bowyer, Luttrel, Sir John Jervis, and Sir Andrew Snape Hammond. On the roth of February Mr Pitt ftated to the houfe of conmons, that the board had reported to his majefty their approbation of the platis as perfectly adequate to the defence intended, and as being at the fame time the leaft expenfive in the conftuction, and requiring a fmaller force to man them, than any other that could be propofed. He flated, however, that it would be imprudent for him to lay before the public a matter of fcferious and delicate a nature as the report of the naval and military officers refpecting fo important a fubject as the defence of our dock-yaids; but he prefented an etimate of the expence neceffary to conftruct the fortifications which had been prepared by the board of engineers. The adverfaries of the meafure were not fatisfied with the withholding entirely the report of the board of officers. Mr Sheridan contended, that Mr Pitt might very pofibly have mifunderfood the report, which might be liable to different conffructions; and in this remark he was fupported by General Burgoyne, who propofed, that the minifter ftould lay before the houfe as much of the report as could be publifhed without danger to the Atate. He alleged, that, for the fake of obtaining a report in favour of his plan, the duke of Richmond had propofed hypothetical quettinus, which could not fail to be anfwered in the affirmative. General Burgoyne faid, he would not be guilty of a breach of confidence, by mentioning the hypothetical cafes that had been flated to the board, but that fome of them were as extravagant as it it were afked, "Suppofe by fome fltange convulfion of nature, that the ftraits between Dover and Calais fhould be no more, and that the coafts frould meet and unite, wnuid it not be a politic expedient, and abfolutely nectlary, to fortify the ifthmus or neck of land between France and England ?" It appeared during the dehate, that at the meetings of the board of officers the plan had been oppofed by Earl Percy and Captain Macbirte. Thic laf gentleman pointedly condemned the whole fyorm, affering the utter inutility of all kind of fortification for the national defence; and he
aflured the houfe, that his opinion was fuppotted by the fanction of Admiral Bartington.

The decifion of the houfe of commons refpecting $7^{9^{8} 4}$ the whole affair was delayed till the end of Eebruary, the pian of and in the mean time adminiffration corifented to pro- fortificaduce the greater part of the papers demanded. The timas. fubject was again brought forward by Mr Pitt, who propofed the following refolution, "That it appeared to the houfe, that to provide effectually for fecuring the dock yards of Portimouth ald Plymouth by a permanent fyftem of fortification founded upon the moft economical principles, and requiring the imalleft numbers of troops poffible to anfwer the purpofe of fuch fecurity, was an effential object for the lifety of the flate, intimately conneeted with the general defence of the kingdom, and neceffary to enable the fleet to act with full vigour and effed for the protection of commerce, the fupport of our diftant poffeffions, and the profecution of offenfive operations, in any war in which the nation might hereafter be engaged." Mr Pitt furported the meafure chiefly on tbis footing, that the protection of our dock-yards was apt to occupy a part of the navy in time of war, and thereby to reduce us to the neceflity of merely defenfive operations 3 whercas, by fortifying the dock-yards, the navy might with more fafety be lent to a diftance, which was with diffeulty accomplified in the late war, when it was neceffary to make a powerful effort for the rehef of Gibraltar. He afferted, that the fortifications propofed would afford a cheaper defence to the dock-yards than could be obtained by building an additional number of flips of war. He remarked, that luch hips could not be indefinitely increafed, as in the nature of things there mult exift a limit beyond which Great Britain can neither build nor man any additional veffels.

The oppofition to the fortifications was opened by the country yentlemen. Mr Biflard contended, that the ffrongholds now propofed to be built would become feminaries for practotian bands. He reprobated the idea of tearing the enfign of Britifh glory from the mafthead, and fixing it on the rampatts of a military garrion. The meafure was father oppofed by Sir William Lenox, General Burgoyne. Mr Marham, Mr Windham, Mr Courteney, Lord North, and Mr Fox. But it w'as defended by Vifcount Mahon, Lord Hood, Sir Charles Middleton, Captains Barclay; Bowyer, and Luttrel, Mr Hawkins Brown, and Mr Dundaso Captain Macbride afferted, that the report was improperly obs tained; that the duke of Richmond rather guided and diftated the decifion than merely preficted in the affembly; that it was the fiflt board of officers in which both gueftion and anfiwer came from the prefitient and fenter members : in every other cafe the junior officer gave his opinion firft, but that this eftablifled mode of proceeding had been completely reverfed. Mr Sheridan difenfied the fubject at great length. He contended, that the whole project was utterly unconftitutional: that there was a great and important diftinction between troops feparated from their fellowcitizens in garrifons and forts, and men living feattered and entangled in all the common duties and connexions of their countrymen. He afferted, that the flrong military holds now propoled, if maintained, as they mutt be in peace, by full and difciplined yarri-
fors,

Britain. fons, would produce tenfold the means of curbing and fubduing the country that could arife from doubling the prefent eftablifhment; with this aggravation, that the naval flores and magazines, the fources of future navies, the prefervation of which was the pretence for thefe unaflailable fortrefles, would become a pledge and hoftage in the hands of the crown to enfure the unconditional fubmiffion of the nation. He afferted, that the fyftem would not fop with Portfmouth and Plymouth: that the fame board of officers, going a circuit round the coafts of the kingdom, would eafily find abundance of places neceffary to be defended in like manner: that at various places between Chatham and Sheernefs extenfive lines had actually been begun under the aufpices of the duke of Richmond, which muft neceffarily he provided for according to the new fyftem.

The refult of the debate was, that upon a vote the houfe divided equally, 169 being upon each fide. The fpeaker gave his cafling vote in oppofition to the meafure. The fame queftion, however, was revived on the 17th of May by Mr Pitt, who propofed, that the plan of fortification fhould fill be carried on at Portfmouth and Plymouth, though upon a more limited fcale, amounting in all to 400,0001 . Mr Pitt's motion was oppofed with much feverity of language, and at length withdrawn. On the 7 th of June, the fum of 59,7801 . was, in confequence of a new eflimate, voted for the entire completion of the works already begun.

The attention of parliament was for fome time engaged during this feffion with a propofal, firf brought forward by Mr Charles Martham, for reducing the laws relative to the militia into one act of parliament, and providing for their being annually called out and difciplined. Mr Pitt oppofed the calling out of the militia annually; but afterwards, finding a different opinion to prevail, he confented, on condition that, though the whole number of men fhould be balloted for and enrolled, only two-thirds thould be actually employed, which would produce a faving of 40,0001 . The meafure in general of regularly calling out the militia did not pals without oppofition. Mr Rolle obferved, that it had been found prejudicial to the morals of the people, gave them habits of debauchery and idlenefs, and always rendered them worfe mem. bers of fociety than they were before. The militia bill, after it had paffed the commons, did not pafs without debate in the houle of lords. Lord Vifcount Townhend had been the original mover of the eftablifhment in the houfe of commons, in confequence of the difguft expreffed by the nation, when, in the year 1757, a body of Hanoverians and Heffians was brought into the kingdom for its internal fecurity. That mobleman now enlarged confiderably upon the fubject. He mentioned the militia of France, of Spain, of Pruffia, and of the emperor; and fhowed how much inferior Great Britain was to any of thofe powers in this important effablifhment. He treated with contempt the penurioufnefs of adminiffration with regard to this invaluable eftablifhment, while the buildings at Somerfet-koufe, the admiralty, and for the or'nance, engroffed fo much of the public expenditure. Eirl Stanhope (lately Vifcount Mahon) propofed the following amerdment upon the act, without making

Vok. IV. Past II.
any addition to the national expence: Ballot, faid he, Eritain, 21,000 militia, and inftead of five, let the term of their fervice be fix years. At the end of three years ballot 21,000 more; of this number call out, train, and exercile, only 7000 every year. Let this be dnne in rotation till the whole amount of 42,000 men has been difciplined, being double the number contained in the act. The propofal was only objeßed to becaufe it was too late in the feffion to debate the principle of the bill, and that if it were altered in that houfe it might be totally lof.

The fubject which the minifter probably winhed vir Pitt's fhould make a principal figure during this feffion of finking parliament, was the propofal of a finking fund to befundapplied towards difcharging the public debt. He had occafionally mentioned it, during the preceding feffion, as a great and important national meafure which he intend. ed to bring forward. Accordingly, early in the prefent feffion, Mr Pitt moved that certain papers thould be laid upon the table of the houfe of commons, to enable them to form an eftimate of the annual amount of the national revenue, as well as the amount of the public expenditure, from which they might judge of the exifting difpofable furplus, and of the fum it would be farther neceflary to provide to raife the total to the amount requifite to form the bafis of the intended finking fund. On the 7 th of March, Mr Pitt propofed the appointment by ballot of a felect committee of nine perfons to examine thefe papers, and to report the refult to the houfe. He flated his intention to be, to take every poffible tlep to give complete fatisfaction to the nation in a matter of fuch general concern; and he conceived that the folemnity of a committee, and the formality of a report, would anfwer this purpofe better than a fet of unconnected papers or the affirmation of a minifter. The members elected into the committee were, the marquis of Graham, Mr William Grenville, Mr Edward Elliot, Mr Rofe, Mr Wilberforce, Mr Beaufoy, Mr Johu Call, Mr Smith, and Mr Addington, the two laft of whom had been the mover and feconder of tbe addrefs upon the feech from the throne. After this committee had made its report, Mr Pitt, on the 29th March, propofed his plan to the commons in a conmittee of the whole houfe. He congratulated parliament upon the prolpects of the nation, in a fyle of animated eloquence. He remarked that the country had been engaged in a moft unfortunate war, which added fuch accumulation to our immenfe debts, that furrounding nations, and many among ourfelves, believed that our powers muft neceflarily fail, and we muft fink under the burden; but that the day was at length arrived when defpondency might be difregarded, and our profpects brightened on every fide, when the nation could look its fituation in the face, and eftablifh a fpirited and permanent plan for relieving itfelf of its incumbrances. Mr Pitt flated the revenue for the current year, as reported by the committee, to amount to 15,397,0001. The intereft of the national debt was $9,275,7691$ and the civil lift 900,0001 , which, together with the whole other expenditure for tbe army and navy, and other efablifhments, amounted to $54,478,0001$; of confequence, there remained a furplus of the annual itncome, above the expenditure, of 900.000 . One milliou he flated to be the fum annually to be contributed to the finking fund, and to make up the lum of 100.0001 .
wanted to complete this amount, he propofed furall additional taxes upon fpirits, timber, and hair powder and perfumery. He propofed that the fum of $1,000,000$. thus made up, hiould be placed in the hands of commillioners appointed for that purpofe, in quasterly payments of 250,000 . each, to begin on the 5 th of the following July. He wifled that the commiflioners mould confor of perfons of rank and diftinction; the fpeaker of the houfe of commons, the chancellor of the exchequer, the mafter of the rolls, the governor and deputy-governor of the bank of England, and the ac-romptant-general of the high court of chancery. Mr Pitt Caid, that, by taking care to lay out the finking fund regularly at compound intereft, the million to be applied would rife to a very great amount, in a period that is not very long in the life of an individual, and is but an hour in the exiftence of a nation. It would diminih the debt of this country fo much, as to prevent the exigencies of war from ever raling it to the enormons height they had bitherto done. In the period of 28 years, the fum of a million, annually inproved, wonld produce an income of $4,000,0001$. per annum. By placing the fum in the hands of commiffiuners, to be applied by them quarterly to the purchafe of ftock, no furn would ever lie within the grafp of a minifter great enough to tempt him to infringe upon this national revenue. It could nut bc done by fealth, and a minifter would not bave the confidence to come to that houfe exprefsly to demand
$7^{37}$
Debates on the firking fund. the repeal of fo neceffary a law.

Mr Fox approved in general of the inflitution of a finking fund, but thought 28 years too long a period to which to look forward for the effect of this plan. Before that term was arrived, it was not improbable we might have another war; and a varicty of circumflances might occur, which would operate as a temptation to a future chancellor of the exchequer, and a future houfe of commons, to repeal the at, ammul the irfititution, and divert the appropriation of its flock to the immediate fervices of the year. He flated two $f_{\text {pecific objections to the plan. The firft was that the }}$ fum appropriated ought not to have been made unalienable in time of war. The fecond objection was, that, by the inflitution, parliament being bound to nobody but it felf, the whole plan was liable to be annihilated by a future parliament. Hence, he recommended a plan formerly propofed, of paying off portions of the national debt by the fubfeription of individuals, to whom the faith of parliament Should be engaged to redeem or repay the fums advanced at certain flated periods. At a future flage of the bufinefs, Mr Fox repeated his objections, and at lall, in confequence of the acquiefcence of Mr Pitt, he introduced an amendment into the plan, of the following nature: That whenever a new loan thould hereafter be made, the minifter fhould not only propofe taxes fufficient to pay the intereft of the loan, but alfo fufficient to make good whatever it flould be found expedient to take from the finking furd to fupply the neceffities of the nation. He meant, that if, when a new loan of fix millions was propofed, there flould be one million in the hands of the commiffioners; in fuch eafe, the commiffioners floould take a million of the luan, and the bonus or douceur of that million mould be reccived by
them for the public; fo that, in fact, the public would only have five millions to borrow.

In the houle of lords, the other objecti on ated by Mr Fox to the conftitution of the finking fund, was urged with fome variation by Earl Stanliope. He pointed out in flrong terms the danger which would occur, in future wars, of diverting the fund from its proper deftination. He remarked that four millions of free revenue, to which the finking fund was finally to accumulate, would enable a minifter to obtain eighty millions by way of loan. He propofed therefore, that books fhould be opened at the bank to receive the names of fuch holders of ftock bearing three per cent. intereft as fhould confent to accept of 901 . for every 100l. of their prefent capital, wherever the public fhould be defirous of redeeming the faid capital at that price, and that all holders of this new fock flould be entitled to be paid off before any part of the other public debts Should be redeemed; referving always however, for a time, to the commifioners of the finking fund, the power of purchafing ftock at the market price. In recommendation of his fcheme, Lord Stanhope produced the letters of feveral eminent brokers, bankers, and merchants, and alfo of Dr Richard Price. Lord Camelford (formerly Mr Thomas Pitt), ohjected to this propofal, that the plan of paying off the national debt by purchafing it at the market price was more advantageous for the public, becaufe it made a period of war the time in which it would be molt ealy to difcharge the debt. The bill was therefore without any alteration paffed into a law.

This eftablifhment of a finking fund appears to have been the meft favourite of Mr Pitt's plans of Remarks finance, and that which produced to him the great-finking eft degree of popularity. In confequence of his hav-fuud. ing remained in power during the long and expenfive war which fucceeded its eftablifhment, it continued regularly and fully to be carried into effect. When a new loan was made, the minifter not only propofed taxes fufficient to pay the annual intereft of the new debr, but alfo fufficient to afford a furplus or finking fund of one per cent. per annum, to be applied by the commifioners towards the extinction of the debt.

With regard to the value of this, or of any other plan for paying off the public debts of a nation, it is perhaps flill fomewhat difficult to form a corred eflimate. It has been found by experience that the exiftence of a great public debt has the moft powerful influence in giving flability to a government, by attaching to its exiftence a numerous body of public creditors, who muft always dread the confequences of any infportant revolution in the conflitution of the flate. This will always be a fortunate or an unfortunate circumftance to a nation, according to the nature of its political conflitution. It is good, however, in fo far, as it alienates the minds of men from ralh and hefly projects of change, which muft always be dangerous. With regard to the direct effects of fuch a fund, in diminithing the public debts, it may be remarked, that, from what has hitherto occurred, it does not appear that in the prefent ftate of the European nations, eagcr as they are 10 engage in frequent wars, any finking fund can aqually extinguifh the debts of a nation. The ouly effect of fuch a fund, when well con-

## B R I [ 603 ] B R I

Briain. trived and fleadily adhered to, feems to be that it en. ables a nation $t o$ maintain its credit in very diflicult circumflances, and thereby to cariy on the accumulation of pulbic debt to the highelt puffible amount, and thereby to make trial in the completef manner, of all the moral and political conequences of the funding fyltem. But whotever may be the ultimate effect of the particular finking fund eflablified in 1586 . Mr Pitt had only the merit of adopting it and putting it in force; as it is now generally underllood, that the projed was not of his own contrivance, but only formed one, and that too not the moll efficient, of three plans prefented to him by Dr Price.

During the prefent feffion, Mr Pitt confiderably improved the revenue by fubjecting to the excife laws the duties levied upon wines. His chief object was to present the frauJulent manufacture of wine at home, which was afterwards fold as foreigu winc. This he faid would be accomplifhed by excife officers vifiting the cellars of dealers in wines. The propofal met with confiderable oppofition, from the general averfion to the extenfion of the excife laws, but it was neverthelefs carried into effect. When the eflimates for the navy were woted, fome oblervations were fuggelted by Captain Macbride, which are worthy of being recorded on account of their relation to the progreffive improvement of the chief defence of the Britith ifles. He cenfured extremely the voting very large fums of money for the repair of 60 and 64 gun hips, and obferved that our having fo many vefiels of this fort was a principal reafon of the many defeats we had fuffered in the laft war. The French had not now more than three or four $6+$ gun hips, and they took care not to build any new ones tupon that conflruction. Another thing againft our navy, was that the French it gun fhips were of 2000 tons burden, while our 74 's had been reduced to 1600 tons. Captain Macbride faid, he rerily believed, that if the number of our Ships were reduced by one-third, the navy of England would prove one-third the ftronger. He was fill more fevere in his condemnation of the fyflem of fuffering the fhips to remain in their copper bottoms during a time of peace. He contended, that if we perffled in this idea, there would be no occafion to argue whether fhips of one fize or another fhould be built, for we fhould foon have no novy in our poffeffion. The French had difcovered the folly of the practice, and for fome time had left off the mode of Sheathing their hips. We ought therefore to do the fame, or at leaft to take off the copper when the Ships were to lie long in Iill water. The copper corroded and ate more into their bolts than either worms or time. The confequence would be, that the inftant the thips which had been long laid by were fent to fea, their bottoms would drop out, and thoufands of brave feamen would perifh in the ocean. The idcas of Captain Macbride were confirmed by Sir Jobn Jervis; and, fo far as related to the Meathing with copper, by Captain Luttrel.

At this time the Britifh nation, recovered from the effects of the late war, was proceeding in a train of confiderable profperity. The adminiftration of juftice was proceeding at home in the ordinary uain lanctioned by the conflitution, and produced its ufual and natural effects of tranquillity and general fatisfaction. The
fovereign, in confequence of his domeflic vistues and regular life, was perfonally popular. The members of adminiftration had obtaincd their offices under circumftances which originally fecured the good will of the nation; and no public events had occurred to expofe their characters to any fevere trial, or to produce an alteration in the public opirion with regard to them. Still, however, the moft diflinguifhed member; of the late coalition continued to hold feats in parliament, and naturally wihed to attract the public notice, and to refcue themfelves from the ncgleet into which of late they had fallen. For this purpofe, they appear to have looked towards our Indian empire, for materials upon which to exert their talents, and to demonfrate their public fpirit. Their principal effort conffiled of an attempt, which was commenced during the prefent fellion, by Mr Burke, to bring to trial and punifhment Warren Haftings, Efq. late governor-general of Bengal, for crimes alleged to have been committed in that country.

There is fomething in the nature of the Britifh con-The acquiftitution, or rather, perbaps, of the conftitution of every free ftate, which renders the conqueft, or even the acquifition in any form, of foreign territories, not a little inconvenient. In the cafe of the Britifh American territories, a conftitution, lefs or more refem-ftates, bling that of Great Britajn, had been eflablifhed in every feparate colony or province. Thefe feparate conflitutions produced abundance of internal prolperity to the colonies; but the whole formed a di.jointed empire, flightly bound together by a limited cxecutive power, and delfitute of a common legillature. An attempt, made by the legillature of the parent ftate to make laws for the whole of the fubordinate commu. nities, gave rife to a war which ended in the difmemberment of the empire. The remaining foreign poffeffions, fuclz as Ireland and the Weft India iflands, might be fuppofed to remain in union with the metropolis of the empire, chiefly in confequence of their weaknefs, which rendered its protection neceffary to their fatety, or made them incapable of ereeting themfelves into feparate governments in oppofition to its will. The territories which had been acruired by the Britill nation in India, were, in this refpect, in a very peculiar fituation. It might, perhaps, have been poffible, by an incorporating union, and by extending the privilege of reprefentation, to combine into one firm and confolidated government the whole Britifh iflands, together with the American colonies: but this muit for ever be impofible with regard to the territory of Hindoflan. That great and fertile country being inliabited by men of a feebler race, and of a different language and character, is incapable of being united to the Britilh nation upon principles of equal political freedom. It had been originally acquired, not by a Mude in conquell made under the diref authority of the exe- "hich the cutive government of Britain; but by a company of Britim conmerchants, who, in a manner new in the hiflory of the world, by uniting the military fuperiority of Europeans with the arts of commercial men, contrived gradually to fubjugate one of the fairell portions of the habitable globe, containing a population many times greater than that of their native country. The progrefs of fuch a power towards empire, was neceffarily attended with the moft cruel hardhips to the natives of the

## B R I

fubjugated country. When the mercantile invaders poffefled abundance of European troops, they employed them in making direet conquefts of additional territory. When thefe troops were exhaufted by war or by the climate, or, having enriched themfelves, bad returned to Europe loaded with the fooils of the eaft, and left their former employers in that quarter in a fiate of confiderable weaknefs, the fervants of the company, who remained there, exerted their ingenuity to excite divifions among the native princes. When they could no longer act as principals, they appeared as feconds in every quarrel, and obtained new territories as the reward of their aid. With fuch views they formed and broke alliances with little delicacy; and, on receiving fupplies of troops from Europe, like other conquerors, they were never at a lofs for pretences, upon which to extend their dominion.

All this was the natural refult of the fituation of the Britifh Ealt India Company, with regard to the natives of Hindoftan. At the fame time, as the jealoufy of the neighbouring ftates of Europe, together with their equal progrefs in the art of war, had long put an end to the extenfion of conqueft, and produced much political moderation in the tranfactions of nations, many of the people of the ifland of Great Britain learned with aftonifhment, that their countrymen were conducting themfelves in Hindoftan, in a manner which in Europe would be regarded with the utmof abhorrence. Such feelings, however, were in general loft in the tentiment of national aggrandizement. Efforts, however, had been made to ameliorate as much as poffible the future government of India, by fubjecting it, by means of the acts of parliament already noticed, in a confiderable degree, to the direct authority of the executive government of this country, inftead of fuffering it to remain totally velled in a company of merchants. Here the prefent adminilltration appears to have wihed that the affair hould be fuffered to reft, and that whatever was paft fhould be overlooked and forgotten. This, however, did not fuit the prefent views of oppofition. Mr Burke, in particular, had been led by an ardent imagination to interef himfelf deeply in the calamities which had been fuffercd by the natives of India, in confequence of the conduct of our countrymen. His feelings and the policy of his party at this time coincided; and, accordingly, he endeavoured with much eagernef's to bring to trial and puniftument the moft diftinguifhed perfon who had of late years acted upon the great theatre of Indian affairs.
Dithcuities Great obftacles ftood in the way of Mr Burke's proin his way. pofed attempt to procure a parliamentary conviction of Mr Haftings. He had to overcome a long feries of unpopularity, the perfonal indifference that had been fhown to him by the houfe of commons, and their indifpofition fo much as to give him a hearing, together with a great degree of coldnefs, which the nation at large had gradually acquired with regard to all complaints of Eaft India delinquency. All thefe, however, he furmounted by efforts of the moft obflinate perfeverance, and of great eloquence, upon the fertile fubject of cruelty, oppreffion, and treachery, committed under the authotity of the Britift government in the eat. The public attention was gradually attracted to the fuliject ; and at laft it formed the great fubject of con.
verfation, and of political remark, in all parts of the ifland. T'o produce this change in the fentiments of the nation, the whole efforts of Mr Fox and the other members of oppofition were neceffary, in addition to the invectives of Mr Burke.
$79^{6}$
Mr Haftings had arrived in England on the 16 th Mr burke of June 1785, and on the 201h of that month, Mr procecting Burke had given notice of his intention to move for againf Mr Mantings an inquiry into the corduct of the late governor. On the day of the meeting of parliament, in January of this year, Major Scott, the particular friend of Mr Haftings, publicly reminded Mr Burke of the menace he , had thrown out, and requefted Mr Burke fpeedily to decide upon the part he was to take. Accordingly, about the middle of February, this gentleman having refolved to proceed againt Mr Hallings, by moving the houfe of commons to impeach him at the bar of the houfe of lords, endeavoured to prepare to fubflantiate the charges which were to be made, by propofing, that the houle fhould order production of various papers; and motions to this effect were renewed by him at different periods. Thefe motions gave rile to a variety of debates, in which Mr Dundas, who now acted as minifter for India affairs (being prefident of the board of controul), together with Sir Lloyd Kenyon, malter of the rolls, chiefly oppofrd Mr Buike, and placed confiderable difficulties in his way. Mr Pitt appeared alfo favourable to Mr Haftings; but, upon the whole, he thought fit to affume the character of acting as a candid and impartial judge upon the occafion, without affording protection to the accufed party, or favour to the accufer. Thefe debates excited much attention at the time, but are not of fufficient importance to require to be flated in detail in a concife hiftory of tbe period. At laft, in the month of April, Mr Burke prefented to the houfe his charges againft Mr Haftings, which amounted to 21 in number, to which an additional article was afterwards added. The charges were of various degrees of importance; and fome of them were of fuch weight as to excite a confiderable degree of public intereff. Mr Haftings was accufed of driving a whole people, the Rohillas, from their territory, uithout any pretence of jullice; of arbitrarily confifating the property of the native princes, and of imprifoning them and their fervants for the purpofes of extortion; of entering into war with the Mahrattas without neceflity; and of treacheroufly delivering the Mogul into their hands on making peace; together with a variety of other charges of lefs importance. On the 26th of April, Mr Haftings prefented a petition, requefting a copy of the articles, and to be heard in his defence againft them before any witnefies fhould be examined. This requeft was granted; and that gentleman having appeared at the bar, and flated in ample terms the great efforts which he had fuccefffully made for the aggrandizement of the Britifl power in the eaft, he entered into a particular defence of his conduct, in the particular points upon which he had been accufed. He afferted, that the Rohillas were a tribe of adventurers, in driving whom from an ufurped territory, he had only aflifted; that the princes or princeffes, whofe property he was accufed of having feized for the ufe of the conquerors, had deferved their misfortunes
by their treacherous intrigues or rebellion; that the war with the Mahrattas had not been commenced by him, and that the terms of the pacification were almolt univerfally conifidered as advantageous; that the Mogul had thrown himfelf into their hands, and was enfitled to no protection from the Britifh government. Upon every other point, he afferted, in a fimilar minner, not mercly the innocence, but the meritorious nature of his conduct, refting his defence chietly upon fuch arguments as conquering princes ufe to juftify their encroachments upon their weaker neighbours.

On the ift of June, Mr Burke brought forward, in the houfe of commons, his firft charge, which related to the expulfion of the Rohillas from their country, to the number of $60,000 \mathrm{men}$, women, and children. On this occafion Mr Burke exerted all his eloquence. He afferted the purity of his motives in his profecution; and reprefented it as not merely a queftion refpecting the character of an individual, or brought forward for the mere purpofe of inflicting a hardihip upon him, but a meafure neceffary for the eftablifthment of the principle of refponfibility, with regard to the future governors of our diftant poffeffions, and therefore as a national and imperial queftion, decifive of the good or ill government of millions now exifting or yet unborn. He lamented the difticulty of giving full effect to the charges, in confequence of the immenfe power and influence which the accufed governor had enjoyed, which ftill afforded him protection, and fuppreffed information. The remotenefs of the country, and the little intereft which the Britifh nation might take in the deftiny of an unknown people, augmented every other difficulty. However, from the honour and humanity of the houfe he trufted to furmount all obftacles. He defcribed, in interefling termis, the character of the Rohills, the fimplicity of their manners, the profperity of their country, and their zeal for agriculture and commerce; and denied that there exifted any plaufible ground to juftify the affiftance which Mr Haftings had given to one of their rapacious neighbours to expel them from their territory. After a debate, however, the houfe decided, by a yote of 119 againf 67 , that this charge did not contain fufficient matter of impeachment againit Mr Haftings.

The next article of crimination againft Mr Haftings, was founded upon his oppreffive conduct towards Cheit Sing, the rajah of Benares, from whom he firf arbitrarily demanded payment of a fum of mopey, in addition to his ordinary tuibute, and, on delay of payment, impofed upon him an enormous fine, of half a million fterling; infulted him by an ignominious arseft, and thereafter drove him from his dominions. This charge was opened by Mr Fox. He was oppofed hy Mijor Scott and Mr Grenville, who inveighed againft the rajah, as having been unwilleng to fupport the Britifh power in a dangerous conteft in which it Was at that time engaged, and as having favoured the views of its nemv. By this time, however, the repeated dfuftions of the fubject, which had occurred during the prefent feffor of parliament, had gradually begun to intereft the p blic at laree. Pamphlets wore publithed, in which Mr Hafting's charatter was very violently attacked, and as eagerly defended. His con.
duet as a governor in India, appeared, to the majority Eritain. of the people, fo totally inconfitent with thofe ideas of equity, which regulate the opinions of men in this country, that a violent degree of popular indignation was excited againft him. Hitherto he had been fupported in the huufe of commoris by thofe who ufually adhered to adminiffration, hough Mr Pitt himfelf had on all occafions declared his with to aft candidly as a judge, and to avoid treating the matter as a queftion to be fupported by a particular party. Upon this ar-Mr Pit ticle of charge, concerning the rajab of Benares, he joins the entered into the views of Mr Fox, and declared him-accufers of felf fatisfied, that Mr Haftings had in this cafe acted ${ }^{\text {Mr }}$ Haunjuftifiably. On a divifion, it was determined by a tings. majority of 119 againft 79, that this accufation contained matter of impeachment againft the late gover-nor-general of Bengal.

During this itffivi of parliament fome farther legifIntive provifions were made for regulating the government of India. On the 7 th of March a motion was made Propoials to by Mr Fraticis, and feconded by Mr Windham, for leave amend Mr to bring in a bill to explain and amend the regulating Pirt's India act, which had been brought forward and carried bit through by Mr Pitt, upon the fubject of India affairs. Mr Francis cenfured ftrongly three parts of Mr Pitt's act: ift, That which eftablifhes a double government of India at home, by two boards, the court of directors, and the board of controul. 2dly, He firongly condemned the exceffive power, by means of a conftant cafting voice in his council, which was beflowed upon the governor-genesal of Bengal. He faid, that a governor-general underftood nothing of his fituation, if he thought that any power, diredly vefted in his hands, would carry half the authority with it that would accompany the united acts of a governor and council. If he trufted to his own exclufive judgment, he would find himfelf furrounded by fome of the moit artful men that exifted; by natives, who, without our general knowledge, were infinitely fagacious, who obferved us attentively, and underfood us perfectly; and by fome Europeans, who, in every thing but their ha. bit and complexion, were perfect Afiatics. No fingle unaffited Engliih judgment was a match for fuch men, and for fuch peculiar faculties as would collect about him from the moment of his arrival. If he relied on his exclufive power, for want of clear and accurate knowledge he would rarely venture to exert it. Every man who approached him would tell him a different ftory, or give him a different opinion. He would ofien doubt, and no vigorous determination could exift in a good mind, that was not preceded by conviction. Even when he exerted his power, it would be feeble and ineffectual againft the univerfal combination and clamour of all ranks and interelts that wculd be formed to counternct him in every meafure that tended to corred abufe or reduce exorbitant emoluments. Latlly, Mr Francis feverely reprobated the inflitution, in. Mi Put's bill, of a fpecial court of juftice for the trial of Indian delinquents, which deprived fuch perfons of the privilege of a jury. He alluded, upon this fubject, to the petitions which wele underilood to be on their way from India againtl this part of the act.

Mr Dundas juftified, upon the opinion of Lord Macartney,

Sritan.
Macartney, the powers conferred upon the governorgeneral of Bengal. He afferted the necelfity of a new court of judicature, from the voluminous nature of the evidence in the cafes of Sir Thomas Rumbold and Mr Haftings, which could not be gone through by the ordinary form of a trial by jury. At the fame time he flated his own intention to bring fpeedily for- ward a bill for amending, in certain refpects, the segulating act of 1784 Mr Francis's motion was rejected, and Mr Dundas, on the 16th of March, brought forward his new bill for the regulation of India. It conferred ftill farther powers upon the gover-nor-general, authorizing him to a a in oppoftion to the fenfe of his council when he thought fit to take the refponfibility upon himfelf. The offices of commander in chief and governor-general were aifo united, and the board of controul was alone authorized to inquire into the fortunes of perfons ferving in India. The fervice there was alfo divided into branches; and it was declared, that the fervants of the company fhould rife by gradation only in thofe branches of fervice for which they had been prepared by their former habiss. After a variety of debates in both houfes, the bill was

In confequence of the commutation-a a , by which the duties upon tea were fo greatly diminihed, the Ean India Company had now increafed their annual fales of that commodity fron fix to foutteen millions of pounds. To enable them to carry on this great additional trade, they petitioned the houre of commons to permit an augmentation of their capital. A bill for that purpofe accordingly paffed throw gh both houfes in Junc, authorizing them to receive new fubfriptions to the amount of $1,000,2111$.; and to raife an additional fum of 800,000 !. by the fale of an annuity due to them by government.

The feffion of parliament terminated on the 1 th of July, and during the remainder of the year the Britifh empire enjoyed complete tranquillity. An incident, however, occurred, of a fingular natire, which called forth very univeral demonfrations of attachment to the perfon of the king from all orders of men. On alighting from his carriage on the $\therefore i$ of Augut, a womart approached his majefty, under the appearance of offering a petiition, but at the fane time amed a thruft at him with a knifc, which, howevel, did no harm. Her nume was Margaret Nicholfon. Being inflantly feized and examined lyy fone members of the privy council, with the affinanice of feveral medical gentlemen, hie was found to be infave, and ordeced to be confined for life in Bethlehem hofpital. A public thankifirivige was ordered for his majeffy's faftety, and addrefles of congratulation were felit to court from all parts of the country. Thefe were the more fincces, becaufe the prince of Wales was underflood to have attached himfelf by habits of friend dhip and intimacy to fome of the leading members of the late coalition. The life of the teigning monarch was therefore at this time confidered as exteremely valuable, on arccount of the fupport which it gave to a popular adminiilliration, and becaufe it prevented the government frum fallingy in:o the hands of a young man who was not yet fuppofed ts) have rifen above the inexperience and follies of youtb.

One of the moft important meafures of Mr Pitt's Prituin. adminiftration was carried into effect during the au- $\underbrace{\text { Prent }}_{\mathrm{SO}_{2}}$ tumn of this year. It confifted of a commercial trea- French ty, which, we have already remarked, Mr Eden was commercial fent to negotiate, and which was concluded on the treaty. 26 th of September of this year. This treaty fipulated, in general terms, that there fiould be a perfect liberty of navigation and commerce between the fubjects of the two kings in all their European dominious, with a view of giving fair encouragement to the produce and manufactures of both countries, by a difcontinuance of prohibitory duties, and by putting an end to illicit trade. A particular tariff was adjufted with regard to a gieat number of commodities, and all articles which it did not include were to be reciprocally imported on the terms allowed to the moft favoured nations. It was agreed, that French wine mould be fubject to no higher duties on importation than thofe which were paid on the wine of Portugal : that the duty on brandy fiould not exceed 7 s. per gallon: that $3^{\circ}$ per cent. ad valorem flould be levied upon beer: that the higheft duties on works of iron and copper, on cabinet ware and turnery, fhould not go beyond 10 per cent. adzalorem: that for faddlery, 15 per cent. thould be paid; for glafs and earthen ware, alfo for cotton and woollen articles, (with a prohibition of gocds mixed with filk) 12 per. cent.; for gauze 10; for millinery 12 per cent. On cambric and lawn the duty was to be 5 s . for about eight yards. Linen manufactured in either countiy was not to be burthened with a higher duty than was at this time paid for Dutch or Flemifh liwen imported into Britain; and for linen made in Ireland or in France, no greater furn was to be demanded, in the way of duty, than was now paid on the receipt of Dutch linen in the Irih ports. Each of the monarchs referved the right of countervailing, by additional taxes on certain commodities, the internal duties impofed on the manufactures, or the import charges paid on the raw material. It was alfo declared, that if either of the princes flould be at war, every thing thould be deemed free which might be found in the flhips of the refpective nations (with the exception of goods ufually decmed contraband) even though the whole or a part of the lading thould belong to the enemies of the other flate.

This treaty appears, upon the whole, to have been asceptabie to a confiderable majority of the nation. When p-rliament affembled on the 23 d of January 1787 , it was announced in the fpeech from the throne, and formed the firft fubjeet of deliberation. Mr Fox Debates on remarked, when the ufual addrefs to the throne wasthe commoved, that the treaty in queftion ought to be exa-mercial mined with much jealoufy, on account of its introdu- ${ }_{17}^{\text {treaty }}$. cing an innovation into the clablified fyftem of our policy. Ife faid, that all the wars of Great Britain had been wars of necellity, and that the jealoufy of the power of frames, which we munt now be called upon to lay afide, has been founded upon the fulleft experience of her ambicious character. He deprecated the insputation of being governce by vulgar prejudices, but, at the fame time, he declared it to be his opinion, that the extermal circumtances of the two nations crcate a rivalilip, 2nd, in fome degree, an en-

## B R I

sritain. mity, between them, which it is impoffible to prevent by any meafure which human fpeculation can devife. Nay, he would not hefitate to pronounce, that were fuch an event pollible, it was not to be wifhed for by any lover of this country. It, as lie fincerely wilhed, this was a mere conmercial treaty, the fiamers of it had only to prove, that the new chamel of trade which it opened wauld not obftruct, or would be more beneficial than all the other ancient channels which this kingdom had long been in poffeflion of, and which had been found to be the fources of her commercial wealth and profperity. But if, on the other hand, minifters avowed, that the treaty was intended as a political meafure, and that they had in view fome more clofe and intimate connesion with France, fuch as fhould render it in future more difficult for the twa countries to go to war than heretofore; they then would have to how ftrong and fatisfactory reafons for having purfued and concluded a meafure fo new in the hiftory of thefe kingdoms, and of fuch infinite magnitude and importance. He faid he might venture, however, to prophecy, that fuch an attempt, admitting it to be fafe and prudent, would prove vain and abortive. However volatile and inconflant the French nation may be accounted, the French cabinet, he remarked, had for centuries been the moft feady in Europe. To raife that monarchy to unlimited power had been its unvarying aim; and he afferted, that there exifted no reafon to fuppofe the had abandoned her purpofe. He obferved, indeed, as worthy of ferious confideration, that the arnyy of France was formerly the firf in Europe. It was now but the fourth, being inferior to thofe of Ruffia, Pruflia, and the emperor. On the other hand, her navy was daily increafing, and to that object her whole attention was directed. Was this a favourable fymptom of her friendly difpofition towards this country? Did it indicate any extraordinary partiality towards Great Britain? Did it not clearly prove, that her confidence was placed upon her continental allies, and that the was looking forward to, and preparing for, fome favourable opportunity of indulging her inveterate animofity againt her ancient enemies?

Mr Pitt, in reply, oppofed the principles ftated by Mr Fox, which went, he faid, to prove the neceffity and policy of a conflant animofity with France. He contended, that fuch a doctrine militates in the mot direct manner both againft humanity and common fenfe. He afferted, that if war is the greatelt of all evils, and commerce the greateft bleffing that a country can enjoy, it muft be the duty of thofe to whom public affairs are intrufted, to endeavour as much as poffible to render the one permanent, and to remove the profpect and dangers of the other. This, he faid, was the object of the prefent treaty. The advantages likely to arife from it would not only flrongly operate upon every fucceeding adminiftration in both countries, fo as to induce them to avoid a war as long as it could be avoided with honour and prudence, but would alfo ftrengthen the refources of the country towards carrying on a war whenever it thould become indifpenfably neceffary to engage in one. This was, he faid, the true method of makirg peace a blefling, that while it was the parent of immediate wealth and happinefs, it
fhould alfo be the nurfe of future ftrength and fecurity. The quarrels between France and Britain had too long continued to harafs not only thofe two great and refpectable nations themfelves, hut had frequently embroiled the peace of Europe; nay, had clislurbed the tranquillity of the moft remote parts of the world. They had, by their paft conduct, acted as if they were intended by nature for the deltruction of each other ; but he hoped the time twas now come when they thould jultify the order of the univerfe, and Shew that they were better calculated for the more amiable purpoles of friendly intercourde and benevolence.

One fome future occafions, Mr Fox unfuccefsfully endeavoured to prevail with the houfe of commons, previous to coming to any decifion upon the French treaty, to enter into an inquiry into the nature of our connexion, and the fate of our negotiations, with Portugal, our old ally, in confequence of what is called the Metbven treaty, which had long proved a fure fource for commercial advantage. Some difputes were at that time depending with Portugal, refpecting consplaints made by Britifl merchants; and Mr Fox afferted, that the proper period of treating with Portugal would have been before the conclufion of the treaty with France. This would have demonftrated to the world, that, whilll we were feeking new connexions, we had no intention of facrificing the old. Mr Pitt, on the contrary, contended, that we had acted wifely, in thewing Portugal beforehand, that we could do withous her, when about to open negotiations for the remedy of complaints.

On the i2th of February, the houle refolved itfelf into a committce for the purpofe of confilering the new commercial treaty with France. In a fpeech of three hours in length, Mr Pitt entered into a full explanation and defence of the treaty. As the fubject is of great commercial importance, and may, at fome future period of the Britifh hiftory, again become a fubject of confideration, we fhall here ftate the nature of his argument. He firf gave a general explanation of the treaty, and afterwards endeavoured to refute the arguments againft it, contained in a petition which had been prefented in oppofition to it, by Mr Alderman Newnham, from certain manufacturers affembled in the chamber of commerce.

He confidered the treaty in three points of view; as Defence of affecting our manufactures, our revenues, and our poli- the treaty tical fituation. With refpect to the firt, he undertook as affecting to prove, that though the treaty had been formed up- fur mancture on principles of ftrict reciprocity, yet that this country muft, from the nature of the cafe, unavoidably have the advantage. To underftand this, he raid, it would be neceliary for the committee to confider the relative ftate of the two kingdoms. It is a fact generally ad mitted, that France has the advantage in foil and climate, and confequently in her natural produce; whilc it is equally true, that Great Britain is decidedly fuperior in her manufactures and artificial productions. The wines, brandies, oils, and vinegars of France, are articles which we have nothing to put in competition with, except our beer. But it is equally clear, that we in our return poffefs fome manufadures, exclufively our own, and that in others we have fo eminently the advantage of our neighbours, as to put competition at dc-

## B R I

fance. Such, faid he, is the relative condition, and fuch is the precile ground, on which it is reafonable to fuppofe that a valuable correfpondence and connection between the two nations might be eftablifhed. Having each its own diftingt flaple, having each that which the other wants, and not clafhing in the great and leading lines of their refpective riches, they refemble two opulent traders in different branches, who might enter into a traffic mutually beneficial. But nothing, he faid, could be more evident, than that trade was more or lefs advantageous to any nation, in proportion to the degree of labour, induftry, and capital, employed in bringing its commodities to market, and to the excefs in value of the perfect manulactures above the raw materials: and this principle gave a decided advantage to us over the French. For, granting that large quantities of their natural produce would be brought into this country, would any man fay that we flould not fend more cottons by the direct courfe now fettled, than by the circuitous paflage formerly ufed? more of our woollens, than while rellricted to particular ports, and burdened with heavy duties? Would not more of our earthen ware, and other articles, which under all the difadvantages they formerly fuffered, ftill, from their intrinfic fuperiarity, forced their way regularly into France, now be fent thither? And would not the aggregate of our manufactures be effentially benefited in going to this market, loaded only with duties from 12 to 10 , and in one inflance only, five per cent? The article charged higheft in the traffic, viz. faddlery, gave no fort of alarm. The traders in this article, though charged with a duty of 15 per cent. were fo confcious of their fuperiority, that they cheerfully embraced the condition, and conceived that a free competition would be highly advantageous to them.

On the other hand, we had agreed by this treaty, to take from France, on fmall duties, the luxuries of her foil, which our refinements had already converted into necefiaries. Was it in the power of high duties to prevent the introduction of them at our tables? Was it then a ferious evil, to admit their wines on eafier terms? With refpect to brandy, the reduction of the duties would chiefly affect the contraband trade. Mr Pitt afferted it to be an undoubted fact, that the legal importation bore no proportion to the clandeftine; for while the former amounted to no more than 600,000 gallons, the latter, by the beft founded calculations, did not amount to lefs than between three and four millions of gallons. As this article, then, fo completely poffeffed the tafte of the nation, it could not furely be deemed wrong, to give to the ftate a greater advantage from it than heretofore, and, by crufhing the illicit, to promote the legal traffic in it. The oils and vinegars of France were comparativcly fmall objeets; but, like the former, they were luxuries which had taken the Shape of neceffaries, and, by receiving them on eafy terms, we could lofe nothing.

In the next place, it was neceflary to inquire whether in addition to the above, which were the natural produce of France, that kingdom had any manufactures peculiar to itfelf, or in which it fo greatly cxcelled, as to give us jult caufe of alarm, on account of the treaty, when viewed in that alpect ? Cambric was the firt that prefented itfelf; but in this article, it was notorious, that our competition with France had ceafed,
and there could be no injury in granting an eafy im- Britain. portation, to that which we were determined at any rate tohave. In every other article, there was nothing formidable in the rivalry of France. Glafs would not be imported to any amount. In particular kinds of lace, indeed, they had probably the advantage, but none which they did not enjoy independently of the treaty. The clamours about millinery, he thought vague and unmeaning. Viewing the relative circumftances of the two countries in this way, our fuperiority in the tariff was manitefl. The excellence of our manufactures was unrivalled, and, in the operation, mult give the balance to England. Another circumfance comparatively favourable to this country above France in the treaty, was the flate of population in both kingdoms. We had a market opened to us in a country containing above 20 millions of inhabitants, whilft we admitted France to trade with a nation, that was fuppofed to contain not above eight millions.

With regard to the effect of the treaty upon the re-Revenue. venue, he remarked, that although a confiderable reduction muft undoubtedly take place of the duties upon French wines, and even upon Portugal wines, fhould the provifions of the Methven treaty be ftill kept in furce, yet this would be balanced by the increafed confumption, and by putting an end to the fraudulent manufacture of home-made wine, which was brought to market as foreign wine, a practice which no regulations of excife had hitherto been able to fupprefs. If any lofs, however, thould occur, the article of cambric would alone go a great way towards indemnifying the revenue. He farther remarked, that our moft ingenious and laborious manufactures, in fleel and other metals, together with various productions of art, being henceforth entitled to admifion to France, on payment of a moderate duty, millions of perfons would be employed in the preparation of thefe objects; the taxes paid by whom would greatly augment the revenue. The high price of labour in England, faid he, arifes chiefly from the amount of the excife, and three fifths of the price of labour are fuppoled to come into the exchequer.

Upon the political tendency of the treaty, he recur- Political red to his former remarks. It was objected to, he fituation. faid, in as much as it went to compofe thofe jealoufies and deftroy that rivalhip, which had fo long fublifted between the two countries, and which, it was flated, was of the moft falutary confequence to Great Britain; and it was further infinuated, that there was no dependence to be placed on the faith of the other contracting party. The firft of thefe objections had, he faid, unfortunately gained fome degree of confideration from the uniform pratice of the two countries for centuries paft ; and he was fcarcely furprifed to hear, even from fuch enlightened men as he bad heard fpeak upon the fubject, that France and England were naturally and neceflarily cuemies. The fant, he was perfuaded, was directly the reverfe; for however ambition might have embroiled them with each other, fill there had always been, in the individuals of both countries, a difpofition towards a friendly intercourfe, and the people of France and Britain had each of tham virtucs and good qualities, which the other had liberality cnough to acknowledge and admire. To fuppofe that any two ftates were neceffarily enemies, was
an opinion founded neither in the experience of nations, nor in the hiftory of man. It was a libel on the conffitution of political focieties, and fuppofed the exiftence of diabolical malice in the original frame of man. Eut, after all, what reafon was there to imagine that the treaty was not only to extinguilh all jealoufy from our bofoms, but alfo completely to annihilate our means of defence? Was it to be fuppofed that the interval of peace between the two countries, would be fo totally unemployed by us, as to difable us from meeting France in war. with our accuftomed Atrength ? Did it not rather, by opening new fources of wealth, fpeak this forcible language, that the interval of peace, by enriching the nation, would be the means of enabling her to combat her enemy with more effect when the day of hoftility fhould come? It quieted no well-founded jealoufy, it flackened no neceflary exertions, it retarded no provident preparation; but fimply tended, while it increafed our ability for war, to poftpone the period of its approach. That we fhould not be taken unprepared for war, depended in no degree on this treaty, but fimply and totally on the ability and vigilance of the adminiftration for the time being.
The objections of the manufacturers to this treaty, were chiefly thefe: that the propofed intimate connection with France would afford opportunities of enticing away our workmen, and conveying the tools and raw materials of our manufactures out of the kingdom. To this it was anfwered: that the law upon thefe fubjects would remain as formerly, and afford the fame protection as at prefent to our manufactures, by reftraining the interference of foreigners upon the points alluded to. It was alfo obje Eted in general to the treaty, that the commodities in which France traded, being the produce of her foil, which could not fuffer in their quantities or quality by any lapfe of time, whereas, our conmodities being principally manufactures, which owe all their value to filful and ingenious labour, it was to be feared, that the French might by degrees became as induftrious and fkilful as ourfelves, and thereby enter into a fucceffful competition with us, in every branch of our prefent trade; while our foil and climate rendered it impoffible for us to equal them in the articles of their produce. To this objection it was replied, in general, that the difierent nature of the objects of Britiih and Fiench commerce was favourable to Britain, on account of the fuperior population employed in bringing our manufactures to market, and, at all events, that the threatened change could not occur in twelve years, which was the whole duration of the treaty. The miniftry might alfo, with juftice, have added, that the fureft mode of preventing a neighbouring nation from becoming the rivals of any branch of our manufactures, is to fupply them with thefe manufactures cheaply and in abundance, which muft have the effect of inducing them to divert their capital and their indultry into fome more profit.able channel. The moft likely channel, with regard to France, would be the production of wine, a branch of trade in which Britain never can have reafon to regard them with jealoufy. Mr Pitt concluded his fpeech, by moving a refolution, the object of which was, to carty the treaty into effect.

The members of oppofition objected to the treaty Vor. IV. Part II.
chiefly upon political confiderations. Mr Fox con- Erticist. tended that the only fituation in which Great Britain -809 could ftand, in the general fyllem of Europe, with Pulitical bonour, dignity, or fafety, was as a counterpoife to oljections the power of France: This had been our invariableftated aquality, in all the moft fluurifhing periods of our hi-gainf the Ifory; and it was this circumflance, operating upon the treaty. reftlefs ambition of France, not any inward antipathy of mind, nor the mernory of Crefly and Agincourt, that made the two nations natural enemies. To prove that no affurances of the friendhip of France were to be trufted, when a hope exifted of diminifing the power of Britain, he mentioned the correfpondence between the French minilters and Lord Stormont, during the firf years of the American war, in which they mof pointedly difavowed any intention of interference. He obferved that, when it was further confidered who the monarch was that then fat on the throne of France, a monarch of the moft mild and benevolent charatter, and celebrated for his love of juftice; and that the minifter who directed his councils was far advanced in the laft ftage of life, of a feeble and timid difpofition, and therefore unlikely to be led away by any new and vifionary projects of ambition; not a doubt could be left in any one's mind, but that the French nation was actuated by a regular, fixed, and fyftematic enmity to this country. France had, indeed, found that Great Britain could not be fubdued by direet efforts. Mr Fox, therefore, thought it reafonable to fuppofe, that the had altered her policy; that, inftead of force, the intended to employ ftratagem, to prevent our cultivating other alliances, to leffen the dependence of foreign flates upon us, to turn all our views to commercial profits, to entangle our capital in that country, and to make it the private in. tereft of individuals in Britain, rather to acquiefce in any future project of ambition, in which France might engage, than come to a rupture with her.

Mr Francis farther enlarged upon thefe ideas of Mr Fox, and reproached Mr Pitt with a defertion of the principles of his father Lord Chatham, the moft prominent feature of whofe political character was Antigallican. Mr Fiood, Mr Sheridan, and others, fupported the fame fentiments. Mr Powis and Mr Alderman Watfon oppofed the treaty, as bringing the Britih commerce unneceffarily into hazard at a time when it was extremely profperous. The treaty was defended by Mr Grenville, Mr Wilberforce, and Mr Dundas. This laft gentleman faid that he had heard much excellent political fpeculation, which, in his apprehenfion, had little relation to the fubject in queftion : that the treaty had nothing political in its nature, but was merely a meafure calculated to put it in the power of Britain to enable her artifts to circulate her manufactures in a much greater degree than could ever formerly be done, by opening to them one of the molt extenfive markets in the world. He contended that it cial treaty was wife to take advantage of a period of peace to ex-approved of tend our commerce, reduce our debts, and enrich the by the nation. The refolution propofed by Mr Pitt was ${ }^{\text {conmons. }}$ carried by a divifion of $2 \nmid 8$ againft 118 .

In the houfe of lords, the commercial treaty was oppofed with much warmth by Dr Watfon, bihop of I.landaff. He contended that we ought not to abandon a commercial fifferm, by which we had rifen to

Fritain. our prefent profpcrity, and far lefs to adopt a.fyflem which our anceflors had reprobated as detrimental to the welfare and greatnefs of the ration. The marquis of Lanfdowne (formerly Lord Sheiburne), defended the treaty with much ability. He faid that commerce, like other fciences, had fimplified itfelf, and that the old fyttem, with all its monopolies, prohibitions, protecting duties, and balances of trade, was juftly exploded ; that it was a proud day for the manufacturers of this country, to fee them come down in a body from thefe ftrongholds. He denied that the French nation entertained a lyftematic enmity againf Britain, and faid, that if commerce was to be free, there exifted no reafon for making an cxception with regard to France. Their wines, brandy, vinegar and oil, are luxuries which we can get elfewhere; whereas they cannot procure, with equal advantage, coals, lead, and tin. He concluded with declaring his opinion, that if this country hould decline, it would not be on account of this treaty, but for other obvious caufes. If we went on facrificing the army, the church, and the flate, to the paltry purpofe of procuring majorities in the two houfes of parliament, we could never expent to be profperous or powerful.

On the part of adminillration, the defence of the treaty in all its flages appears to have been chiefly en$8_{11}$ trufted to Lord Hawkefbury, (formerly Mr Jenkinfon). and by the He was oppofed by lords Loughborough, Stormont, lords. and Porcheller ; but it was carsied by a majority of 81 againft 35 .

During the prefent feffion, a plan for confolidating ridare into one act of parliament the whole duties impofed by ce:t in taxes. the flatutes of cultoms and excife, was brought forward by Mr Pitt, that it might be no longer neceflary either for merchants, or for revenue officers, to turn over the whole flatute book in fearch of the amount of the dutics upon particular commodities. The plan received the univerfal approbation of the houfe of commons. The duties impufed upon French merchandife, in purfuance of the late commercial treaty. were alfo included in the fameact, although that past of the meafure

813
was ecfifted by oppofition.

On the 2 Sth of March, Mr Beaufoy, member for Great Yarmouth, at the requefl of the doputies of the diffenting congregations about London, made a motion for the repeal of the corporation and teft acts. He obferved that the teft act was originally levelled againtt the Roman Catholics, and the corporation act againfl thofe fectaries who had agitated the kingdom in the times of Charles I. and during the ufurpation, with whofe character the diffenters of the prefent age have nothing in common. Mr Beaufuy contended that, as every man has an undoubted right to judge for himfelf in matters of religion, he ought nut on account of the exercife of that right to incur any punifhment, or to be branded with what is undoubsedly a mark of infamy, an exclufion from military fervice and civil truil. He referred to the examples of Scotland, Holland, Ruffia, Prullia, and the dominions of the emperor, in none of which he faid religious opinions were now made the ground of civil difqualification.

Lord North, who had now loft his fight, oppofed the propofed repeal, chiefly on the footing of the hazard attending imovation. He denied that a man is fub-
jected to ary punifiment, becaufe he does not choofe to receive the facrament of the Lord's Supper, according to the ufage of the church of Eugland. He only deprives himfelf of a privilege which he might otherwife enjoy, and which the lav, for the fafety of the church, had limited to perfons of particular opinions. Mr Pitt fupported the fame fide of the queftion, from the danger to the eflablifhed church, which would refult from intruffing official fituations to diffenters. Mr Fox fupported the motion in favour of the diffenters; remarking, however, upon this occafion, that from their conduct in a late political revolution, he could not be fufpected of teing biaffed by an improper partiality towards them. The motion was loft on a divifion of $\mathrm{r}_{7} 8$ againft 100.

On the 20th of April, Mr Alderman Newnham Prince ${ }^{814}$ brought under the view of the houfe of commons, the Wales's pecuniary fituation of the prince of Wales, whofe debts. affairs had, by this time, fallen into a flate of embarraffment. It appears that, previous to this period, a confiderable degree of coldnefs had been known to fubfit between the king and the prince. A judicicus liflorian will fcarcely account it worth his while to inquire after any other caufe for fuch a circumftance, than merely that which is to be found in the overpowering influence that the paffion of ambition poffeffes over the human miud, which fo feldom permits any monarch to regard with complacency the perfon who has the profpect of his fucceffion. In 1783 , when the prince came of age, Mr Fox and his colleagues, who were then in office, wifhed to grant him an annual income of too,000). but his majelly infifted that he thould only be allowed one half of that fum. In the year 1786 the prince was found to have contracted a debt of 100,0001 . exclufive of 50,0001 . expended on Carleton-houfe. He applied to his majefty to obtain relief from this incumbrance. On receiving a refufal, he inflantly difmificd the officers of his comut, ordered his hoifes to be fold, the works at Carletonhoufe to be flopped, and seduced his houfchold to that of a private gentleman. From thefe favings an annual fum of $40,0 c 01$. was vefted in truftees for the payment of his debts. This decifive and fpirited conduct was reprefented at court as difrefpectful to the king ; and from this period his majefly's diffatisfaction with the prince appears to have been no longer concealed. On occafion of the affault made upon the king's perfon by Margaret Nicholfon, it was remarked, that no notice of the accident was lent by the court to the prince of Wales; and when, upon receiving the intelligence, he inflantly went to Windfor, be was received there by the queen, but the king did not fee him. At this time a French plince, the duke of Orieans, then tho richeft individual in Europe, was in England, and was faid to have made a propofal to relieve the prince from all his pecuniary embarrafiments; but this dangerous offer was declined. In thefe circumfances the prince permitted his firtuation to be brought before the houfe of commons, with a view of fubmitting his condue to the judgment of the public. Accordingly, on the day already mentioned, Mr Neunham demanded of the chancellor of the exchequer, whether minifers intended to bring forward any propofition for the relief of the prince of Wales; afferting, that it would be difgraceful to the nation to fuffer lim to remain

## B R I [GI ] B R I

longer in his prefent reduced circumflances. Mr litt replied, that he had reccived no command from his majefty upon the fubject ; without which it was not his duty to bring forward an affair of fuch a nuturc. Upon this Mr Newramm intimated his intention of bringing forward a motion upon the fubject on the $4^{\text {th }}$ of May. On the $24^{\text {th }}$ of April, Mr Pitt reruelled to know the nature of the intended motion, declaing his wilh to avoid a difcufion of the fubject. He added, that if it was perffifed in, he would be under the neceffity of bringing before the public fome circumftances of extreme delicacy. At the fame time, Mr Rolle, an atherent of the miniflry, declared, that the queftion involved matter, which he threatered to bring into view, by which the conllitution both in clurch and flate mioht be elientially affected. 'This menace was known to allude to an intimate conrexion which was fuppofed to fubfist between the prince and Mrs Fitzherbert, a lady of a refpectable Roman Catholic family, with whom the feandal of the times alleged he had undergone the ceremony of marriage both by Catholic and l'roteflant clergymen, which, however, if true, could have no legal effects, in confequence of the provifions of the royal marriage-act. Mr Newnham faid, that his intended motion would be for an addrefs to his majefty, to relieve the prince of Wales from his prefent difficulties. When fome members expreffed their wifh that the affit might be privately accommodated in fome other manner; Mr Sheridan declared, that after the infinuations and threats which had been made, the prince could not recede with honour. Mr Pitt faid, that his remarks had no reference to the character of the prince, but merely to a correfpondence which had taken place relative to his pecuniary affairs.

On the 3oth of April, when the fubject was ngain mentioned, Mr Fox, who had been abfent during the former debate, ftated, that he had authority from the prince to fay, that there was no part of his conduct which he was unwilling to fubmit to public invelligafion. The allufions made to fomething full of danger to the church and fate, he treated as a tale fit to be impofed only on the lowent of the vulgar; and faid, that his highnefs was ready, in the other boufe, as a peer of parliament, to give his majelty, or his miniflers, any aflurances or fatisfaction on the fubject they might requise. Mr Fox, at the fame time, diredily aflured the boufe, that the whole fory alluded to was untrue. The refult rias, that an accommodation took place. The prince was allowed an ammal adelition to bis incume of 10,000 l. and 181,0001, was granted by parliament for payment of his debts.

During this feflion fome difcuffions occurred relative to the privileges of the Scotilh peetage. In the buufe of lords, after confiderable debate upon a motion of Lord Hopetoun, a refolution was adopted to enforce an ancient refolution of the houfe, of January 1708-9, which declared, that Scotifh peers, created Bitills peers by patent fince the union, have no right to vote at the elections of the fixteen who reprefent the body of the pecrs of Scotland in the Britiln parliament. In the houfe of commons allo, on the 23 d of May, a quetion concerning the fame body was agitated. It arofe in confequence of the fucceffion of the earl of Wemyfs to that carldom, whofe eldeft fon, Francis Charteris, who thus became Lord Elcho, reptefented
the boroughs of Lauder, Sic. in Szotland. Ry the Pintais ancient law of Scotland, the cldeft fons of peers could not fit in parliament, which confifted of one houfe only. By the treaty of sinion it is declie ed, that the tw:o kingdoms thould participate in the righes and immunities of each other. Sur John Sinclair moved, that a new writ foould be iffued for electing a member in the room of Fiancis Charteris, E!q. now become the eldelt fon of a peer of Scotland, ald therefure incapable of reprefenting the borougbs of Lauder, \&ic. In fupport of the motion fome very early precedents were alluded to; and, after fome debate, the motion was carried.

But the fubject which, above all others, fill con- Accuffion tinued during the prefent fefion to occupy the attcli- of Mr Hation of parliament, was the accufation of Nir Haftings. ftmgs. After exmmining Mr Mideleton and Sir Elijah Imprey as witneffes, in the begiming of February, Mr Sheridan, on the gth of that month, opened the third charge againft Mr Haftings, which offerted, that withont juftice, or any excufe of political neceffity, he lad feized the lands, and conficated the treafures, of the begums or princeffes of Oude, the mother and grandmother of the reigning nabob, whom be h-d ceen compelled to beconse the indrument of this rubbery. On this occafion the hall of the loufe of commo:ns was uncommonly crowded. Mr Sheridan's feeech arshierilafted five hours and a half. 'The futject of the charge den's ielewas well fitted for difplaying all the powers of pathetic brated cloquence, in confequence of the rank and the fex of fpeect, the parties whom, on this occafion, Mr IIaftings was acculed of having treated with the molt barbarous rapacity, treachery, and cruelty. Every advantaдe was taken of thefe circumftances, and Mr Sheridan's difcourfe was confidered as a model of fplendid ard impreffive pleading. When he fat down, the whole houle, which was filled with members, peers, and lirange:s, inftantly joined in a loud and long-continued tumult of applaufe, expreffing their approbation in the irreEular mode of repeatedly clapping with their hands. Mr Burke declared it to be the mont aftomilhing efiot of eloquence, argument, and wit united, of which there is any record or tradition. Mr Fox laid, that all that he had ever heard, or read, when compared with it, vanifhed like vapour before the fun; and Mr litt afferted, that it furpaffed all the eloquence of anmcient or modern times, and polffled every refource which genius or art could furnifh to controul and agjtate the human mind. After a fufpenfion of debate, forne of Mr Haftings's filends attempted to fpeak in reply, but found it impolfible to procure themfelves to be litened to wislo any appearance of favour. At laft fome members prupofed, that for the fake of decorum, the debate flould be adjourned. 'This propolal was carried; and, on the following day, Mr Francis refurned the charge, which was oppofed by Mr Burgef, Major Scott, Mr Nichols, Mr Vanfittart, and Mr Aldernan le Mefurier. After having heard the arguments on both fides, Mr Pitt rofe, and after having Itated the fenfe he entertained of the high importance of the whole procedure againft Mr Haltings, afferted, that he himfelf had endeavoured to give to every fact flated in each particular clarge, the fulled inventigation, and to perform his duty honeftly, impartially, and confcientioully. On the prefent occafion, he de-

Britain. clared himfelf fully fatisfied, that criminality was brought home to Mr Haftings, though not perhaps to the full extent alleged by the accufers. The motion for accufation was carried, upon a divifion of 175 againft 68.

At future periods of the feffion other charges were brought forward, and opened by Mr Thomas Pelham, Sir James Erfkine, Mr Windham, and Mr Francis. Mr Pitt adopted the caufe of the accufers, and on fome occafions, though in a mild manner, Mr Dundas did the fame. At one period of the acculation, Lord Hood flood forward in a very folemn manner, and requefted the attention of the houfe to the confequences of proceeding with too fcrupulous a nicety, to canvals the conduct of thofe who had filled ftations abroad of hith difieulty and important trult. Certain actions, which appeared to thofe at a diftance in a very criminal light, were yet, he alleged, on a nearer inveftigation, perfectly jultifiable on the grounds of abfolute and indifpenfable neceffity: fhould the fear of an impeachment by parliament be hung out to every commander in whofe hands was placed the defence of our national poffeffons, it muft neceflarily operate as a dangerous reftraint to their exertions, when it was confidered that no general or admiral had fcarcely ever been fortunate enough to conduct himfelf in the performance of his duty, without occafionally falling into circumfances, in which the public fervice compelled him to do things in themfelves not pleafing to his feelinge, not Arictly legal, but, from the indifpenfable neceflities of their fituation, perfectly juftifiable. The example fet by the houfe of commons in the prefent inflance, would, he faid, for ever fland before our future commanders, and create a great and dangerous clog to the public fervice. This, he was confident, would be the effect of punifling any harfiz and fevere, but perhaps neceffary and indifpenfable, acts of power, which the faviour of India had, for the public good, been found to commit. Mr Pitt oppofed the application of thefe fentiments to the cafe of Mr Harlings, aferting, that no adequate political neceffity had been pointed out which could juftify his conduct.

In the courfe of the proceedings, it appeared that feveral members were difpofed to confider the merits of Mr In flings as compenfating his crimes, and thus, though they voted bis conduct criminal on patticular occafions, they bad an intention of voting in his $f_{d}-$ vour, when the general queftion fhould come to be propofed, about the propriety of proceeding to impeachment. Upon this fubject, Major Scott took an opportunity to declare, that Mr Hattings and his friends wifled to declioe fuch a mode of defence; and he read to the houfe as a part of his own fpeech, a paper figned by Mr Haflings, in which be requefted that if a general vote of criminality fhould pafs againft him, by that houfe, they thould farther proceed inftantly to an impeachment, that he might have an opportunity
of defending himfelf judicially.

A comnittee was at laft appointed, to prepare articles of impeachment againft Mr Hutlings. It confifted of the following perfons, whofe names we flall recite, as exhibiting a lift of the moft active leaders of oppofition at this period. Mr Burke, Mr Fox, Mr Sheridan, Sir James Erfkine, the tight honourable 'Thomas Pelbam, the right honourable William Wyndham, the honour-
able St Andrew St John, John Anftruther, Efq. Wil- Brita liam Ad'am, Efq. M. A. Taylor, Efq. Welbore Ellis, Efq. the right honourable Frederick Montague, Sir Grey Cooper, Sir Gilbert Elliot, Dudley Long, Efq. Lord Maitland, the honourable George Auguftus North, General Burgoyne, and Mr Grey. An attempt was made, by Mr Burke, to procure the appointment of Philip Francis, Eíq. as a member of this committee, but without fuccefs. He was rejected by a majority of 96 to 44 , on account of his being confidered as the perfonal enemy of Mr Haftings, whofe meafures he had oppofed, and with whom he had fought a ducl, in India. On the $25^{\text {th }}$ of April, Mr Burke prefented the articles of impeachment. They were read, and ordered to be printed and confidered, on the gth of May. Upon that day Lord Hood repeated his former arguments againft them, and was fupported by Mr Smith, and the celebrated Mr John Wilkes. This laft gentleman infiffed frongly on the ${ }_{\mathrm{Mr} \mathrm{Ha}}^{\mathrm{H}}$. filence of the natives of India, upon the fubject of the lings d dreadfut oppreffion faid to have been practifed againft fended them, and attributed the greateff part of what appear- Mr Wil ed criminal in the conduet of Mr Haftings, to the craving and avaricious policy of this country, whofe demands had, in fome inflances, driven Mr Haltings to the ufe of means not frictly juftifiable. The amount of the charges, he faid, fuppofing the facts true, was this, that Mr Haftings, by oppreffion, by injuftice, and corruption, had obtained tor the Eaft India Company, nine millions and a half fterling. Mr Wilkes thought the acts complained of politic and juff; he could not honeftly vote for the impeachment of Mr Haflings, while he benefited by his mifdeeds. He added, that it appeared incomprehenfible to him, how gentlemen who condemned his actions, fuffered a day to pafs without propofing retribution to the fufferers.

The lord advocate for Scotland (Ilay Campbell, By flay Efq.) fupported this laft idea. He confidered the ne- Campb ceffities of the company, and the dangerous crifis of Efq. their affairs, as grounds of jullification for the flrong meafures purfued by Mr Haftings, in order to extricate them. The company having actually reaped the benefit of them, and fo far approved of them as never to have fignified any intention of reflitution; he could not, he faid, conceive with what propriety MrHaf tings could be impeached fur them. He further obferved, that Mr Haftings had been moft unjufly blamed, for various acts of adminilltration, in which he had only concurred with others; that the order of dates, as well as the flate of the council at different periods, ought to have been more diftinctly attended to in the charges. Mr Haftings had enjoyed the caft. ing voice in the council, only for a very fhort time, and twen then, Mr Barwell was equally refponfible with him. Afterwards Mr Wheeler, Sir John M‘Pherfon, Sir Eyre Coote, and Mr Stables, came gradually into the council. At one period, a coalition took place between Mr Hallings and Mr Francis. How do the profecutors acrount for this? And is Mr Hafo tings alone to be made accountable, during that period? He concluded with obferving, that in fuggesting what had occurred to him, in favour of Mr Haf tings, he had avoided faying any thing upon the topic of his extraordinary fervices in general, being doubt.

Eritan. ful whether upon the fuppofition of guilt, in any fpeci. fic article, a fot-off, as it is called, or balancing of accompts between merits and demerits, would relevantly be admitted; at the fame time, it was a mode of defence not altogether new. The proceedings in Lord Clive's cafe left no room to doubt, that lie owed his fafety to it; and there was nill a more illuftrious example of it in hiftory, the cafc of Epaminondas the Theban general, who, when tried for his life before the tribunal of his country, for having kept the command four months after he flould have laid it down, acknowledged the crime, but enumarated the glorious aftions which he had performed; and liaid lie would die with pleafore, if the fole merit of thefe were afcribed to him. This feeech procured his acquittal. The lord advocate thought Mr Haftings well entitled to make ufe of fimilar language to the Britith nation, when accufed of having acted illegally in India.-Mr Alderman Townftend juftified Mr Haftings on the ground of flate neceffity; and faid that he deferved the higheft applaufe, for not having food upon fo paltry a punctiliu, as confidering whether a meafure was rigidly correct and legal, when the immediate neceffity of the company's affairs, and the fulvation of India, were concerned.

Mr Pitt reprobated the idea of a fet-off in very Atrong terms. He acknowledged that many meafores during the adminiftration of $\mathrm{Mr} \mathrm{H}_{\text {altings were }}$ uncommonly brilliant, and that, in thefe, his merits were unqueftionable. But he trufted that no man, who ferioully regarded the honour of the houfe of commons, would expect that the juftice of the country could admit of any compromife whatever. He was forry his honourable friend, the lond advocate of Scotland, fhould conceive the honour of the reprefentatives of the Britifh nation not interefted in refcuing the Britifh character from that degree of infamy and degradation to which it had been reduced. The accufations which had been preferred againft Mr Haftings were now not only the caufe of the houfe, but, in his opinion, involved the honour of every member individually. Nor had he lefs hefitation, from the importance of the fubject, to fay it affected the government of the whole empire. It was a queftion which thook the balis of the conlitution, for it was literally a queftion of refponfibility. The policy and intereft of the country required, that an example fhould be made of the delinquent. The neceflity of this, he urged particularly from the difpofition he perceived in the abettors of Mr Haftings to juftify him on the principles of ex. pediency and neceffity. The queftion of impeachnent
on the roth of May, at the bar of the houfe of lords, Mr Burke, in the name of the houfe of commons, and of all the commons of Great Britain, impeached Warren Haftings, Efq. late governor-general of Bengal, of high crimes and mifderneanours; and informed the lords that the commons would with all convenient fpeed exhibit and make good articles againft him. On the 2 tit of the fame month, upon the motion of Mr Burke, Mr Haftings was taken into the cuftody of the ferjeant at arms of the houfe. He was immediately admitted to bail by the houfe of lords. He was bound in the lum of 20.0001 . and two fureties in 10,0001 . each. As the feffion of parliament was prorogued on
the 30th of May, the trial was neceffarily poftponed to another feflion, and by various delays it was ultimately protracted to an extraordinary length.

Britars.
825
The accufation of Mr Haftings, from the attention Reffections which it excited, and the talents which were exerted cufation of in it, is undoubtedly an event of confiderable import- Mr Haance in Britifl hiftory. It ended in the acquittal of fenses. the party accufed, but at the fame time the immenfe expence which he incurred, and the uneafinefs which he mult have fuffered from the high degree of odium which in the minds of many perfons was excited againf him, muft undoubtedly have amounted to a very fevere punifhment. A Britifh houfe of commons held him guilty of inhumanity, sapacity, perfidy, and tyranny, towards a mumerous and a civilized people that had been fubject to his power. Thefe fentiments were fo widely diffuled throughout Great Britain, that the minifler of the day, always fudious of popularity, thought it neceffary to join the general current of opinion, and this will probably be regarded as one of the inftances in which Mr Pitt mult have exerted fome kind of firngular dexterity in preferving the confidence of the court, while he feemed to favour a profecu= tion, that was not generally confidered as acceptable there.

The period is perhaps fcarcely yet arrived when a Bitifh hiftorian can fo fur elevate his mind above temporary and national prejudices as to enable him to appreciate correctly the merits of Mr Hallings, or the reafonablents of the accufations that were brought agairll him. In making the attempt, it is neceffary to confider correctly the fituation in which that gentleman flood. He was invefted by the Britith Eaft India Compary with abfolute poser over the people and the foil of a large portion of Hindotan, for the purpofe of governing that country for the proft of the company, and to acquire more extenfive territories for them if poffible. To fulfil the fervice in which he was employed, it was neceffary that he fhould procure a large revenue for the company, and at the fame time that he fhould enable the young men of rank, whom they ferit out in their fervice, fpeedily to return to Britain with great wealth; thefe being the only objects on ac. count of which the Eaft India Company, or the Britifh nation, had made great efforts for the conqueft of the ealt. But thefe objects evidently imply not that Hindoftan was intended to be mildly and gerierounly governed, but that it was to be plundered to the utmoft extent that it could bear without ruin. Accordingly, in $1782, \mathrm{Mr}$ Haftings, in one of his letters complained Ifrongly of the cruelty of his fituation, and of the expenfive eftabliffments and offices which he was under the neceffity of conflituting in India, to gratify the avarice of his employers, declaring that he had at that time about him 250 perfons, the younges fons of the firt families in Britain, all looking up to him for pationage, and expecting to be put in poffeffion of fudden riches. Thefe riches, it is evident, could not be drawn from the natives of Hindoftan without much oppreffion, and when this opprefion produced rebellion, or combinations of the native prinees againft the Britifh power, it became neceflary to be guilty of farther oppreffon, or more grievous extortion, to collect means whereby to fubdue the refiltance of the vanquithed people.

## B Ih I

Ritair.
It is almitted on ali hands, that Mr Haftings was alnoft unboundedly fucceffful in the fervice of his employers. He annually fent home great numbers of men loaded with the plunder of the calt, while at the fame time, by great activity and intrepidity, he collected refources wherewith to maintain and extend the Britilh power, and was enabled to furport it in all quarters againft the moft extenfive combinations of the princes of that country.

There are two fyftems of morality, according to which the character of fuch a man as Mr Haftings may be tried. The one is founded upon the principle of naticral attachment or patriotifm, and the other upon the great law of humanity. According to the firft of thefe, that conduct is moft worthy of applaufe, which tends in the highefl degree to promote the aggrandizement of our native country. Confidered in this point of view, the merits of Warren Haltings have feldom been furpafied; and he may juftly be ranked among thofe men whofe actions the hiltorians of Greece and Rome, and indeed of almoft all nations, have recorded with boundlefs admiration, atud he may well fland a comparifon with the firft heroes of antiquity. Such difficulties as perplexed Alexander of Macerlon, at the head of a great and well-difciplined army, repeatedly yielded to the energy of his talents, which often enabled him, with the moft trilling force, and by the mere afcendency of his perfonal character, to exercife a defpotic authority oves an immenfe country, and to extend the territories of his employers. It is true, that he plundered the princes of the Laft, but it was to aggrandize and enrich his country that he did fo. He sccounted their perfons and fortunes as of little confideration, becaufe he was the devoted fervant of Britain. Accordingly, the moft patiotic people in Europe, the French, whofe public enemy he had been, regarded hirn with admiration, and uniformly extolled bis actions as more than buman.

In oppofition to all this, if we are to weigh the conduct of Mr Haftings by thofe maxims of morality, which confider the great interefts and law of humanity as the rule by which human actions ought to be regulated, there can be no doubt that he muft be condemned. He can only be regarded as one of thofe robbers of nations, to whofe crimes lifforians and poets have given a fatal celebrity. He was guilty of plundering and opprefling a pacific race of men at the exuremities of the earth, in whole affairs neither he nor lis country had any jight to interfere. But the great eriminals in this cafe were the Britifh Eafl India Company, the Britilh legiflature, and the Britih nation, that font him uponfuch a fervice. Mr Haftings was only the guilty fervant of a guilty people; and it furely ill became the Britifl houfe of commons, that had authorized the acguifition of conquefts, that is, the exercife of murder and oppreffion in the Eat, and whofe contlituents had become rich by the plunder or the profits of fuch cinterprifes, to accufe as a criminal the mott fucceffful fervant of the flate. We therefore apprehend, upon the whole, that Mr Wilkes and the lord adrocate for Scotland relted Mr Haftings's defence upon an unanfwerable footing, when thcy confidered his crimes as lervices, which he was employed by hiscountry to perform for its aggrandizement, for the moral recitude of which he could not be refponfible to that power, from
which he derived his commifion, and which thought fit to reap the fruit of his labours.

During the year 1787 , the flate of a mity into which Britain France night be regarded as brough, Affars of Britain and France might be regarded as brought, in Holland. confequence of the commercial treaty, feemed likely to be dillurbed, in confequence of the aftairs of Holland. The grounds of difference were fpeedily adjufted ; but the events from which they rofe are worthy of notice, on account of their tendency to explain fome future occurrences in the hiflory of Euiope. The fate of the Dutch republic, or, as it was ufually called, the United Provinces, was always regarded as of much importance by Great Britain. That country, being fituated upon the mouths of the navigable rivers which communicate with fome of the mof important parts of the European continent, is the great paflage by which our manufactures reach their place of ultimate fale and confumption. In our moft important eforts for reducing the power of France, the Dutch had acied along with the Britifh nation. Their ftadtholder, who had at all times dreaded the power of the French, was difpofed to look for protection towards Britain, and was not underfood to have concursed zealoully, during the late war, in fupporting the caufe of France and America. The prefent Radiholder had united himfelf by affinity to the court of Prufia, with which that of Great Britain had of late begun to be upon terms of great cordialits.

In the hiftory of the United Provinces, during two Partiesin ${ }_{827}$ centuries, two parties are always found Atruggling for the Dutela fuperiority. The firft, was that of the houfe of O-republic. range, which had been firft raifed to power in confequence of the talents of its chiets, united with their rank and property, which had induced the flates to intrut to them the direction of their armies; firft, againf the Spanifh monarchy, from which the provinces had originally revolted, and afterwards againft the power of France. By their great public fervices, the princes of the houfe of Orange had eftablinhed, in their own favour, a kind of hereditary claim to the offices which they held in the republic, of fladthoider, captain-general of the forces, and adiniral. Thus there exifted, in their perfons, in fucceffion, a kind of limited monarchy, by which the Dutch republic was influenced and led, rather than formally governed:

The fecond party in the Dutch republic confifted of a kind of arillocracy, compofed of the fenates or town-councils of different cities, which pofleifed the power of nominating to the vacancies in their own order, that is, of ejecting their own fucceffors in office. This party was ufually denominated the party of the Aates, or the republican party. Its members were, in point of form, the Sovereigns of the country, and were the wcalthieft individuals in it. The chief corftitutional controul which the fladtholder poffifled over them, confifled of a regulation violently effablifhed by William 111. prince of Orange, in 1674, whereby he enjoyed a negative over the elechions to town governments, and a power, in certain cafes, of introducing members into them. It is to be obferved, however, that the mafs of the people at large, who always find greater fafety under the dominion of one great fuperior, than of a multitude of petty local chiefs, were always decidedly attached to the houfe of Orange, or to the power of the faldtholder, in oppofition to that

B R I dinary occafions to fupport its power.
of the town fenates or republican party. The ancicut nubles alfo, together with the clergy of the enablified chutch, and the officers of the army and navy, adhered to the fame family, and thereby cuabled it on or-

During the participation of the Urited Provinces in the late war againft Great B:itain, a propofal had been made to enrol bodies of voluntecrs in the different towns, for the purpofe of interial defence. The fenates of the towns, that is, the arillocratical, or, as they called themfelves, the refublican party, encouraged the formation of thefe armed hodies of burghers (over whom at their firf enrolment they had complete influence), as affording them a kind of counterpoife againft the military power, which, though paid by them, was commanded by the fladtholder. Thefe bodies of citizens, as foon as they were trained to the ufe of arms, began to be fenfible of their own importance. The opinions propagated in North America, during the war, were known all over Europe. They were received with confiderable avidity by the Dutch volunteers, and produced in that country a kind of a third or democratic party, whofe object was to procure for the citizens at large of the towns, a fhare in the nomination of the magiftrates. As the volunteer affociations were originally the creatures of the fenates or ariftocracy, for the purpofe of counterating the power of the ftadtholder, they appear, in their firf movements, to have been directed by that faction. One of their firft movements was at Utrecht. The armed burghers, amounting to 2243, prefented a petition to the flates of the province of Utrecht, requefling them to abolilh the regulation of 1674 , whereby the fladtholder was enabled to influence the nomination of the magiffracy. They prefented an addrefs of a fimilar mature to the to:sn fenate of Utrecht, and to the prince of Orange. As might have been expeited, the anfwer of the prince was unfavourable; but the magiftrates of Utrecht, in compliance with the wifh of the armed burghers, proceeded to fill up a vacancy in their own number, with. out confuting the prince. This event occurred in January 1784 ; but it appears, that in the conrfe of the fame year, either from the intrigues of the Aadtholder's court, or from a dread of betaking themfelves to the affitance of the new and dangerous democratic party, the fates of the province and town fenate of Uirecht, deferted the caufe of the armed burghers, whom they themfelves had infligated to attion, and recalled or anmulied the feps towards innovation which they had taken. The fenate and the armed burghers continued alternately to intimidate each other. By degreer, a fpirit of political reform, or innovation, diffufed itelf from Utrecht to the different towns in the provinces where bodies of volunteers or armed burghers bad been eftablified. The armed burghers of Utrecht elected a reprefentative body to watch over the management of public affairs; and varions other towns did the fame. Thefe reprefentative bodies foon quarelled with the old fenates; and the prince of Orange appears to have had it in his power to feled which of the parties he might think fit as his adherents. His ancient enemies were the ariftocracy or town fenates. At the fame time, as he could not, without the dangerous meafure of a total alteration of the conflitution of the United Provinces, derive a re-
gular and leçal fuppurt from the bodies of airaed burgho
Fritain. ers, lie refolved to fupport the ancient magittracies, and to rerl his power upon its ancient footing of intlaence over thefe magilitracies, though he knew them to be his rivals in political importance. Hence he fupported the magiffrates of Utrecht and other places ag aint the armed burghers. It would feem, that the ariltocracy of the province of Holland, who had always been the molt decided enemics of the family nf Orange, were not fatisfied with the difpofition of the prince to fupport the ancient conflitution, and refolved to attempt to undermine or overthrow his power, eyen at the hazard of a popular or democratic revolution, which mult be equally fatal to their own. This ariflocratical body, however, was not of an enterprifing character, and rather waited than attempted to direst the courfe of political events. In coafequence of the fupport given by the ftadtholder to the lienates of U . trecht and other places againft the armed burghers, thele laft, through the whole United Provinces, became difpofed to att in oppofition to him. In the meanwhile, the populace of the Hague retained their ufual attachment to his perfon and family. On the $4^{\text {th }}$ of Septeraber 1785, twelve volunteers of the corps of the town of Leyden, appeared at the Hague in uniform. The populace, offended by this appearance of defiance to the prince at the plice of his refidence, attacked and drove them into a neighbouring houfe, the windows of which they broke. A part of the garrifon, withost interfering with the populace, took the volunteers into cuftody, and fent them home privately by night. This not ferved as a pretext to the flates of Hulland to fuperfede the prince of Orange in the comnand of the garrifon at the Hague, which they intrufted to the deputies of Haerlera, a town that had been zealous in oppofitiun to the ftadtholder. As this prince bad been engaged in endlefs controverfies with the flates of Holland, in which the frength of the ariftocratical party was concentreted, this affront diove him to the refolution of leaving the Hague, which be did on the rath September 1,55 . He applied for protection to Great Britain, whofe caufe he had fupported in oppofing the refolution to give any affiftance to the Americans in the late war, and the king of Pruffid, the uncle of his wife. The ariflocratical party, on the contrary, made application to the court of Verfailles, which it had fupported by entering into the confederacy againft Great Britain, and from which it lad always received encouragement. At the fame time, it endeavoured to derive alfiftance, from uniting its caufe extenfively with that of the armed burghers.

In the mean time, the celebrated Frederick, king Interierof Pruffia, died, and was fucceeded by his nepleerr, ence of the Frederick William, the brother-in-law of the fladt- neighbour-2 holder. The French court appeared to cfoufe with in the vigour the united arifocratical and democratical par. offairs of ties in the United Provinccs. The new king of Pruf- Hulland. fia feems to have hefitated to engage in a difpute with France; and there is little doubt, that had the French conrt, on this occafion, appeared ready to aft with 1 i gour in fupport of their party in Holland, the rad:holder muft have fallen before his enemies; ncither :, it probable, that Britain would, at this time, have engaged in a new war on his account. But the French

## B R I

monarchy, under a benevolent and well-meaning but weak prince, was, at this period, rapidly finking into a flate of great feeblenefs, in confequence of the extreme embarraffment of its finances. A negotiation was at firt propoied between the courts of France and Berlin, for the purpofe of adjufting, in fome friendly manner, the differences between the ftadtholder and his enemies. The weaknefs of France, however, becoming gradually more obvious, Pruflia and Great Britain were foon induced to act a more decifive part in the affairs of Holland, chiefly, it is believed, in confequence of the fuggeftions of the Britilh ambaflador at the Hague, Sir James Harris. The ftadtholder had eftablifhed himfelf towards the eaftern part of the Dutch territory at Nimeguen. Though himfelf a man of little adtivity or enterprife, his princefs was of a different character. She ventured to unóertake a journey to the Hague, unaccompanied by her hufband, probably with a view to what actually happened. On the 28th of June 1787, the was arrefted by fome troops of the oppofite party; and this circumftance afforded an excufe to the king of Pruffia for interfering in the internal affairs of the United Provinces, to demand reparation for the infult offered to his fifter. A Pruffian army, commanded by the duke of Brunfwick, the bro-ther-in-law of the king of Great Britain, immediately prepared to invade Holland. To fecure additional aid to the prince of Orange, a treaty was concluded between Great Britain and the landgrave of Hefie Caffel, for the affiftance of 12,000 troops. In the mean time, the United Provinces remained in a Pate of great internal diftraction. The defects of their political conAtitution had originally occafioned the appointment of a ftadtholder; and no firmple fyftem was yet fubflituted in its ftead, which, by doing away the diftinctions of flates and provinces, might unite the force of the country, for the purpofe of enabling it to refirt fuch powerful aggreffion as that with which it was now threatened. The promifed aid from France did not arrive; troops had been levied by the fates of Holland, and the chief command of them was intrufted to the rhingrave of Salm, to whofe character little confidence appears to have been due. The duke of Brunfwick, at the head of a powerful army, entered the country. The reputation of the Pruffian armies in Europe was at this time extremely great ; and the frontier towns of Holland, which were capable of refifting fevere fieges, were now taken with facility, and without a fruggle. It is unneceffary to detail the progrefs of the Pruflian troops, which was extremely rapid, and in little more than a fortnight, the republican party found itfelf confined to the city of Amfterdam. This city was befieged on the ift of October. After much negotiation, and a variety of attacks, this city, which had fo often given laws to other fates, admitted a foreign garrifon to the poffefion of its gates. The influence of France was thus totally annihilated in Holland. The power of the fladtholder was reflored; but it was reflored by the power of Pruflia and of Britain. The confequence was, that a decided enmity to thefe two countrics, from that period, took poffeffion of the minds of a great portion of the inhabitants of the Dutch territorics. At the fame time, the people of that country appear, from this period, to have fallen into a kind of defpair, with tegard to their na-
tional independence. Their anceftors had derived importance from the relative weaknefs of the neighbouring flates; but from the experience of the event which now occurred, the people of Holland were made fenfible of their own weaknefs, amidft the powerful nations by which they were now furrounded.

When the Britifh parliament met on the 27 th of No- Meeting of veraber 1787 , the moft remarkable circumftarice alluded ${ }^{\text {Farliament. }}$ to in the king's fpeech was the affairs of Holland. He faid, that the difputes which fubbifted in the republic of the United Provinces had become fo critical, as to endanger their conflitution and independence, and were thereby likely in their confequences to affect the interefts of his dominions: That upon this account, he had endeavoured, by his good offices, to maintain the lawful government in thofe countries, and had thought it neceffary to explain his intention of counteracting all forcible interference on the part of France: That in conformity to this principle, when his mof Chriftian majefty, in coufequence of an application for affiftance againft the king of Pruflia, made by the party which had ufurped the government of Holland, had notified to him his intention of granting their requeft, he had declared, that he fhould not remain a quiet fpecfator, and had given immediate orders for augnenting bis forces both by fea and land: That in the courfe of thefe tranlacions, he had thought proper to conclude a fubfidiary treaty with the landgrave of Heffe Caffiel: That the rapid fuccefs of the Pruffian troops, having foon after enabled the provinces to re-eftablifh their lawful government, and all fubjects of conteft being thus removed, an amicable explanation took place between him and the moft Chriftian king; and both parties had engaged to difarm, and to place their naval eftablifhments on the fame footing as at the beginning of the year.

When the addrefs to the throne was moved as $\frac{833}{}$ ufual, Mr Fox took an opportunity of expreffing the opimion of fulle $\mathfrak{f}$ approbation of the meafures that had been late- the late ly, purfued, and took credit to himfelf, as one of thofe who had invariably been of opinion, that this country is at all times deeply interefted in the fituation of affairs upon the continent, and ought, whenever occafion required, to take an active and vigorous part in preferving the balance of power in Europe. He reminded the houle, how frequently he had warned them of the ambition of France when the commercial treaty was under difcuffion in the laft feffion. He had been thought too fevere and uncandid, from the diftruft he had then exprefled of its friendly profelfions, but within one year from the conclufion of that treaty, our new friend, this faithful commercial ally, had engaged to fupport, in Holland, a party in oppofition to us, ufurpcrs of the lawful government of their country. He approved of the principle of the fubfidiary treaty with Heffe Caffel, as enabling us to reduce our military eftablifiments at home, and to apply the public treafure to the increafe of our naval flength, the natural force of Great Britair.

In the houle of lords, the bifhop of Llandaff, after exprefling his fatisfaction in feeing the republic of the United Provinces again united in its views with Great opini Britain, flated a difficulty whiclo occurred to him, with regard to the principle in the law of nature and nations, which could authorize Great Britain and Pruffia

## B R I

Eritain. to interfere by force, in fetting the internal difputes of an independent ftate. Was it a right which every individual poffeffes, of affifting thofe whom he fees opprefied by unjuft force? No: that would be to take the queftion for granted, fince the opponents of the fladtholder will not allow that be was oppreffed by unjuft force. Was it the right of aflifting the majority of a country, to recover their ancient civil conftitution from the encroachments and ufurpation of a faction? He tooped the fact would bear out fuch a juftification ; but he was not well enough acquainted with the wifhes of the majority of the Dutch nation upon that head. Upon what other ground did he approve of our late interference? It was on the ground of felf-prefervation; for if France had gained Holland, we had becn undone. When it is faid that Holland, and the other flates of Europe, are independent flates, the propofition is true only to a certain degree; for they all depend one upon another, like the links of a chain; and it is the bufinefs of each to watch every other, left any one become fo weighty and porwerful, as to endanger the fecurity or political importance of every other.

During the late interference of Great Britain and Pruffia in the affairs of Holland, while a dread was entertained, that the difcontented party in the provinces might receive affiftance from France, and preparations were made on that account for fitting out a fleet, the lords of the admiralty had promoted 16 captains of the navy to the rank of admirals. In making this promotion, a felection had been made, in confequence of which upwards of 40 fenior captains had been paffed over, a circumfance which gave rife to various debates in parliament. To underfand the fubjef, it is neceffary to remark, that in 1718 an order of council directed the lords of the admiralty, in promoting officers to the rank of admirals in the navy, to prefer the fenior captains, providing only they were duly qualified for the rank to which they were to be promoted. By a fubfequent order of 1747 , the lords of the admiralty were authorized to place fuch captains, as fhould be found incapable by age or iufirmity of ferving as admirals, upon the lift of fuperannuated admirals, which had ufually received the appellation of the lift of the yellow admirals. In the promotion lately made, the board of admiralty had offered to place upon this lift of yellow or fuperannuated admirals, moft of the captains who were paffed over; but conceiving themfelves, from their capacity for future fervice, entitled to the rank of acting admirals, they had refufed the retreat that was offered them, and a general difguft prevailed among the officers in the navy, on finding that their hopes of reward for the moft active fervices, mult at all times depend on their intereft with the firf lord of the admiralty. On the 20th of $\mathrm{Fe}-$ bruary 1798, Lord Rawdon, in the houfe of lords, ftated their cafe, and propofed an addrefs to his majelly upon the fubject. The firft lord of the admiralty, Lord Howe, juftified the exertion of a difcretionary power, by the board, in promoting navy captains to the rank of acting admirals, as a man might be fit to command a fingle thip, who ought not to be intrufted with the care of a fleet. Lord Sandwich afferted the impropriety of interfering with the executive government in an affair of this nature, and Lord Rawdon's propofal of an addrefs was rejected.

The fame fubje ${ }^{\text {a }}$ was brought before the houlc of Britain. commons, in various forms, during the month of $A$ pril, by Mr Baftard. He flated the merits of fome of the individual captains whohad been paffed over as very great, and their fervices confpicuous, and afferted, that the moft notorions partiality had been exerted in the promotion. He was fupported by almoll all the navy officers who had feats in the houfe, particularly Sir George Collier and Captain Macbride, who declared. that nothing flort of ruin to the fervice mufl follow, if fuch a fyftem of promotion was to continue. Mr Pitt defended the admitalty, by afferting, that no fufficient degree of mifconduct had been lfated, as could authorize the interference of parliament with the exercife of its powers. 'The board was protected, by a friall majority of 150 againft 134.

During the prefent feffion fome debates were occafioned, by certain plans of the duke of Richmond. His project of fortifying certain places in Great Britain had been negatived by the houte of commors tain had been negatived by the houle of commons; Weft India
but a part of the fame plan, confinting of erecting forti-
fications for the defence of the Weft ludia illands, was frill perfevered in, and required an additional land force in that quarter, of 3064 men. He alfo wifhed to purchafe certain powder mills at Waltham abbey, upon a project that government fhould manufacture gunpowder there, for its own ufe. He farther propofed, to raife a corps of artificers for the ordnance department, to be divided into companies, and fubjected to martial law. This laft plan met with confiderable oppofition, but was carried by adminiftration, along with the other projects.

A bill was at this time brought into parliament, for fubjecting to higher penalties than formerly, all perfons who fhould export wool from the country, intending thereby to confirm the monopoly enjoyed by our own manufacturers in that article. The manufacturers afferted, that 13,000 packs of Britifh wool were annually fmuggled into France, which tended to raife the price of the commodity, againft our own manufaciurers. Several country gentlemen oppofed the bill, as an unjuft hardhip upon the profits of land in this country, which ought to have the world open, as a market for its productions. But the miniter, who was aware of the importatice of enjoying popularity with the commercial, that is, with the moft active part of the Bria tifh nation, gave full countenance to the bill, in cousfequence of which it paffed into a law:

In ftating the fituation of the revenue, Mr Pitt made Flourining fome remarks, defcriptive of the improving flate of the reate of the country, which are not unwotthy of being here noticed. He faid, that the receipt of the permanent taxes, in the year 1787 , exclufive of the land and malt tax, had been $13,000,0001$. The receipt of the taxes in the year 1783 , lad been $10,184,000$. Thus, there was an increale of revenue of three millions, of which not more than one million and a half accrued from new taxes. In the trade, the navigation, and the fifheries, the progreffive improvement bore an exact proportion to the increafed revenue.

53,000
The fouthern whale fifhery, a new and very valuable branch of trade, which we only took up at the beginning of the laft war, had alfo equally profpered.

In this finery, in 1785 , there were employed 18 fhips, producing $29,0001$. In 1787, there were employed 38 fhips, producing 107,0001.

On the 8 th of June the chancellor of the exchequer, Mr Pitt, called the attention of the houfe to the compenfation which was intended to be made to the American loyalifts, on account of the loffes fuftained by them in confeguence of their adherence to this country during the American war. He divided the loyalifts who had made claims of compenfation into four claffes. In the firft clafs he ranked thofe who had refided in America at the commencement of the war, and who had been obliged to abandon their eflates and property, which were feized and confifated by the Americans. He propoled that fuch loyalifts of this clafs as had not lot more than to,000l. fhould receive full compenfation; for loffes above that fum. and below 35,0001 . he propofed to grant 90 per cent. on the excels of loffes above 10,0col.; where the lufles were above 35,0001 . and not above 50,0001 . 85 per cent. was prupofed to be allowed on the excefs of lofies above 10,0001 . and where the lofs was above 50,0001 . 80 per cent. was to be allowed on all above 10,000 . The next clafs of claimants corififted of thofe who had loft property in America, but who had refided in England during the war. To the amount of 10,0001 . Mr Pitt propofed to indemuify thefe alfo in full; but that from all whofe claims amounted from 10,0001 , to 30,0001 . a deduction flould be made of 20 per cent. and a farther additional deduftion of 20 per cent. in progreflion upon every additional 50,0001 . claimed. The third clafs of claimants conlifted of loyalifts, who enjoyed places, and exercifed profeffions in America, and by adhering to this country, had loft their incomes. He propofed to put upon half pay thofe whofe incomes amounted to no more than 4001 . per annum, and to grant 40 per cent. upon any excels of income above 4001. pes annum, unlefs the income hoould exceed 15001. per annum, in which cafe 30 per cent. only furuid be allowed upon the excefs of income above 4ool. per annum. Lafly, It was propofed to pay the full amount of their claims to perfons connected with Went Florida; becaule, by the treaty of peace, that country had been ceded by Britain to a foreign power. Mr Pitt corcluded by moving, that, to fatisfy thefe claims, $t, 228,239$. Fhould be voted to the feveral American claimants for lofics, \&c. and 113,9521. $14 . \frac{3}{3} \mathrm{~d}$. in the Flozida claimants. The motion was unaninollly agreed to. The liberality with which the Britifs nation acted upon this occafion, merits approbation, as an inflance of the wifet policy, from its tendency in future difcontents, or infurrections in the fuburdinate parts of the empire, to fecure the attachment of perfons of property to the caule of the metro-
polis. As the claims of the American loyalifts were fated by themfelves, and not fcrutinized with extreme fevenity, it was generally underfood that thefe perfons were in very few inltances ultimate lofers by the part which they had taken, a circumftance of which the public did not difapprove.

The trade carried on by Great Britain and other Slave trade. European nations upon the coaft of Africa, for the purpofe of purchafing negro laves to be employed in the cultivation of the Welt India iflands, and certain parts of the continent of America, does not appear, till of late years, to have been confidered with that general attention, which a practice, fo abhorrent in its nature to the mild principles of modern pulicy and manners, might have been expected to excite. This may probably have been owing, partly to the diftance of the objeet, which tended both to conceal the fuffer. ings, and to leffen the fympathy of the public for the unfortunate fufferers; partly to the connivance of politicians, unwilling to examine too feverely into the neceflity of the means by which diftant colonies were enabled to pour luxury and wealth into the mother countries. The firft public attempt, we believe, that was made to put a flop to this traffic, was by the Quakers of the fouthern provinces of America, who, toon after the eftablilhment of their independence, not only prefented, for this purpole, a ftrong and pathetic addrefs to their feveral legiflative affemblies; but actually proceeded, as it was faid, in many inftances, to emancipate the flaves that were in their poffeffion. In Great Britain the fame fect appears alfo to have taken the lead ; and, after the example of their American brethren, prefented, in 1787, a fimilar petition to the parliament of this kingdom. The caufe foon after became extremely popular, and was taken up with great zeal and earnellnefs by various defcriptions of people. A fociety was formed, and a confiderable fum of money fuhfribed, for the purpofe of collecting information and fupporting the expence of an application to parliament. A great number of pamphlets were pub. lifled upon the fubject; feveral eminent divines recommended it from the pulpit, and in printed difcourfes; and, in the prefent feffion, petitions againf the African flave-trade were prelented from the two Englifin univergities, and from feveral of the moft confiderable towns and corporations in the kingdom.

By a fort of general confent, Mr Wilberforce had been intrufted with the care of bringing the bufinefs into the houfe of commons; but he being prevented by bad health, Mr Pitt, on the $9^{\text {th }}$ of May, having mentioned this circumftance, propofed that the houfe thould enter into a refolution, to take into confideration the circumilances of the flave-trade early in the next feflion. He added, that the privy-council had appointed a committee to inquire into the matter; and, that next feffion, the refult would probably be laid hefore the houfe to facilitate their inveltigations. Mr Fox and Mr Burke exprefled their regret on account of the propofed delay. They lamented, that the pri-vy-council, who had reccived no petitions from the people, fhould have inflituted an inguiry; and, that the houfe of commons, whofe table was loaded with petitions from every part of the kingdons, fhould not have inflituted an inquiry at all. If they fuffered the bufinefs of the buufe to be done by the privy-council, they

Bill to regulate the ranfportation of Micgroes.
they were abdicating their trun, and making way for an entire abolition of their functions. Sir William Dolben called the attention of the houfe to the condition of the flaves in one point, which he alleged called for an immediate remedy. He faid he neither alluded to their fufferings at home from the hands of their cruel countrymaen, nor to their fufferings from their unfeeling mallers, the planters in the Wett India iflands; but to that intermediate thate of tenfold mifery which they fuffered in their tranfportation from the cont of Africa to the Weft ladies. He entered into a hoort detail of the horrors of that dreadful paffage, which he faid was fcarcely lefs fatal in its effects upon the Britifh failurs, than upon the wretched flaves themlelves; and be declared himfelf ready to call evidence to the bar to prove the fact. This, he faid, called aloud for a remedy, and that remedy ought to be applied immediately. If parliament did not apply fome remedy, without delay, between the prefent feffion and the beginning of the next 10,000 lives would be loft. He wihed, therefore, that this grievance Thould be taken into confideration, independent of the general queftiun ; and that fome regulation, fuch as reltraining the captains from taking above a certain number of ftaves on board, eccording to the fize of their veffels, obliging them to let in freft air, and provide better accommodation for the flaves during their paf. fage, and fuch other regulations as flould fuggeit themfelves to the houle, fhould be adopted. This propofal met with general approbation; and, accordingly, a bill was brought forward, and paffed into a law, for regulating the tranfportation of the natives of Africa to the Britifla colonies in the Weft Indies. It met with fome unfuccefsful oppofition from the merchants of Liverpool, who petitioned, and were heard by counfel, againft it.

In the prefent feffion, the affairs of India flill continued to occupy the attention of the legiflature and of the public. During the apprehenfions of a rupture with France, on account of the affairs of Holland, government had refolved to fend out four additional regiments to India, on board the company's mips, for the protection of our poffeflions in that quarter; and the propofal had been received with approbation by the court of directors. After the danger was palt, government ftill adhered to their refolution of fending out four resiments, with a view to form a permanenit eftabliflament of the king's troops in that quarter. In confequence of this circumftance, a queftion arofe with the court of direstors of the Eaft India Company, a. bout the expence of fending out, and hereafter paying, thefe troops. By an act paffed in J 78 x , the company were declared liable for the expence attending fuch troops only as flould be fent out upon their own requifition. But adminiftration now contended, that the at brought furward by Mr Pitt in 1784, which gave to the board of controul a power of counteracting the orders of the court of directors, and of directing the application of the company's revenues, ought to be underfluod to authorize that board to carry into effect the propofed meafure. The court of directors, however, obtained the opinion of fome eminent lawyers in their favour; and, accordingly, refufed to take the troops on board the hips that were about this time to fail for Indis. For this reafon, on the 25 th of February, Mr Pitt propofed, in the houle of commons,
that all difficuities flould be removed by a declaratory Brinim. act, aflerting the intention of the legulature, in the act of 1784 , to have been agreeable to the conllruction 543 put upon it by the hoard of controul. This mode of tory bill. proceeding was trongly oppered. It was faid, that the claims of govermment upon the company ounh: io be tried in a court of low, inficad of being kirnus! $t$ before the houfe of common, where adminillration poffefled an undue influence. It was contended, ibat the mealure was in infelf illjudged, as it uould bave been more economical to have fulfered the company to have raifed four rogiments, which would have enal:led them to provide for many of their own ofticers, 600 of whom were living in India in very diftecfled fituatione, in confequence of having been reduced at the proce; or the mode might have been adopted, with beteer ad. vantage to the company, of fending out recruits to complete the king's regiments at that time in India, which would have erabled them to avoid the additional burden of all the officers of four new regiments. The meafure was farther condemned, as tending to produce confufion in lndia, by putting the power of the fword into two lands, and giving difgut to the officers in the company's fervice. It was added, that the power now claimed by the board of controul, of keeping an army of the king's forces in lndia, to any amount they thought fit, and of paying it out of the revenues of the company, was unconftitution l, as it enabled the king, contrary to the bill of rights, to leep a llanding army in time of peace.

But the point of view in which this declaratory act was chiefly refifted, referred to its tendency to deprive the Eatl India Company of the whole management of its own affairs, and the patronage arifing from its rea venues, which at the time that Mr Pitt's bill was paffed, had never been underltood to be the inteution of the legiflature or of government. Mr Pulteney and fome other members, who ufvally voted with Mr Pitt, now declared that they fupported his bill in 1784 , only becaufe it appeared to preferve uninjured the rights of the Eaft India Company; that the conflruction attempted to be put upon it in the declaratory bill, made it equally obnoxious with the celebrated bill rejected by the lords in 1783 , with only this difference, that what the one had for irs profeffed object openly and without difguife, the other was attempting to effect by fraud and dilimulation. Mr Powis argued, from the various amendments which the act had received in its paffage through the houfe, that no fuch ideas of its extent, as were now endeavoured to be eftablifhed, were then entertained of it, much lefs expreffed: and that if they had, it muft have been rejected. Mr Baring, one of the directors of the Eaft India Company, declares, that Mr Pitt's bill was generally underfood at the time, by that board, to be utterly incapable of the unlimited conftruction now put upon it ; and Colonel Barse declared, that having afked one of the directors, why they had fuffered the bill to pafs unrefifted and with the fanction of their concurrence, the direc. tor had admitted with him, that the bill darkly and tacitly conveyed powers to the board of controul, as holtile to the rights of the company as Mr Fox's bill ; but that they had a confidence in the adminiftration which intruduced it, and had no doubt of their exercifing thofe powers with gentlenefs and moderation.

## B R I

Britain. $\xrightarrow{-}$

Thefe fentiments excited great triumph on the fide of Mr Fox and his friends, who loudly congratulated themfelves upon the complete juftification which his India bill had now, they faid, obtained, by the tacit confeffion of his adverfaries themfelves.

In fupport of the declaratory act, Mr Pitt contended, that the exprefs object of the inflitution of the board of controul, was to take the entire management of the territolial poffeffions and the political government of India out of the hands of the company, leaving them only the direction of their commercial concerns. The board of controul was in future to be refponfible to the public for the profperity and fafety of our Indian pofieffions, and was therefore to be invefted with all the powers neceflary for the due difcharge of its important duties. He denied that adminiftration in 1784, had held any other language with regard to its nature or the authority it was to poffers. With regard to the economy and policy of the prefent meafure, he admitted, that there ought not to be two armies in India; but faid, that the army which exifted there, ought undoubtedly to be the king's; and foleminly protefted that his conduct was in no degree influenced by the profpect of additional patronage to be acquired by the crown. He added, that it was the intention of government to divide equally the new commifions with the Eaf India Company. Upon the conftitutional queftion of a ftanding army being kept in India by means of the company's revenues, he ftated, that all the exifting laws relative to flanding armies, were, in his apprehenfion, extremely inaccurate. If any danger was apprehended from the prefent act, he had no objection to receive any claufes that might be offered, from whatever part of the houfe they might come. On the 5 th of March, the bill was carried by a majority of 182 to 125 . In the houle of lords, the marquis of Lanfdowne expreffed the utmoft aftonifhment, that any one who recollected what had paffed in that houfe in the years 1783 and 1784 , could contend for a moment, that the principles of the prefent bill were contained in that of 1784 . Their lordfhips bad refufed to fuffer the bill of 1783 to be fent to a committee, becrafe it was bad in its principle; and yet the aet which they afterwards pafled in 1784 , as now intended to be explained, manifelly holds one and the fame principle. The prefcrence of the latter to the former, could not bave been given on account of its particular provifions. He, at leaft, fhould have preferred that which gave the government of India to parliamentary commiffioners for four years. It would now have expired. But if the power propofed fhould once be given to the crown, what time and exertion would not be required to recover it, or to keep within due bounds the influence of the crown, when all the patronage of India was added to the influence it already poffefled? If it was capable of erecting a fourth flate, and overturning the conflitution in foursh hands, how much more capable of milchief would it be when united in one of the three effatcs, and that the crown, there being eleven millions fterling per anum to ad-

General re- Upon the whole of this fubjeet, it ic, perhaps, no marks.
poars to have rendered inevitable. The Eaft India Company, by whom the conqueft had been made, was admitted, by all parties, to have fhewn itfelf unfit to govern that great country. The management of it, therefore, naturally devolved upon the executive branch of the Britifh conflitution, unlefs the conftitution itfelf was to be endangered, by intruiting the exercife of new and unufual powers to fome of the other branches of the legitlature, for whofe due exercife of fuch porvers the laws had made no provifion; or, unlefs a new kind of authority or power was to be created, as attempted by Mr Fox's India bill, the refult of which, as a political experiment upon the conftitution, or mode of adminiflering a part of the affairs of the empire, was neceflarnly hazardous, becaufe heretofore entirely without example.

The attention of the nation fill continued to be oc- Mr Hartcupied in no fmall degree by the profecution of Mrings' rial Haflings. The nembers of the committee, which du- in Wertmin ring the preceding feffion had prepared the articles of impeaclment, were now appointed to act as managers for the houfe of commons in conducting the trial. On the $13^{\text {th }}$ of February, the trial commenced with extraordinary folemnity in Weftminfter-hall, which had been fitted up for the purpofe. About II o'clock the houfe of commons, preceded by the managers, came from their own houfe into the hall, Mr Burke leading the proceffion. Thereafter, the houfe of peers came in proceflion, preceded by the clerks of parliament, the mafters of chancery, the ferjeants at law, and the judges. The inferior peers came firt, and the lord chancellor lan. The proceflion clofed with the royal family, including the queen; the prince of Wales advancing laft. In paffing to their feats, they bowed to the throne. That and the following day were confumed in reading the articles of impeachment, and the anfwers of Mr Hallings. On the 15th of February, M Mr Burke began an oration, which he continued du-oration of ring that and four following days, and in which his five days. talents were exerted with great fplendour, and his eloquence liftened to with admiration. After an appeal to the jultice of the court, on the part of the people of India, who came, he faid, in the name of the commons of Great Britain, but in their own sight, to the feat of ${ }^{*}$ the imperial juflice of the kingdom, from whence were originally derived all the powers under which they had fuffered, he entered into a detail of the hiftory of Hindollan from the earlicfl times. He gave a luminous view of the revolutions that had occurred in it; of the civil and religious inflitutions, together with the arts, cuftoms, and manners, of the various claffes of its inhabitants. He traced the progrefs of Britifin intrufion, and minutely defcribed the eftablifluments made by our countrymen. He gave an animated account of the bleffings which India might have derived from a communication with the moff enlightened nation in Europe; but lamented, that, intead of acting as friends or inftructors of the ratives, our countrymen had masked their way by treachery and rapine, and taught vice rather than virtue. He expatiated on their ufurpations of power, and their frequent enormities. He pecified the acts of Mr Haltings, reprefenting them as beyond all bounds arbitrary and rapacious, and endeavoured to hold bim up to execration as a monfter of tyranny. The governor-general had attempted to jultity his op-
\& Britain. preffions, by afferting that the $\Lambda$ fiatic governments were - all defpotic ; that he did not make the people dlaves, but found them fuch; that the fovereignty he was called to excrcifc was an arbitrary fovercignty, and that he had exercifed it in no other way than was done by the other fovereigus of Ala, or the native princes of the country, who at all times made every order of their fubjects, and all the property of the countries they governed, fubfervient to their policy or their extravagance. Mr Burke now reprobated this geographical morality, or thefe claims to abfolute posser. He denied that the Ealt India Cumpany, or that the Britith government, had it to beflow. He afferted, that no iuch arbitrary government was attempted to be jutified in the eaft: That every Mahometan government mult be a government regulated by law, that is, by the ldws of the Koran; and that the Gentoo laws proferibe every idea of arbitrary will in magiftrates. He contended that the conduct of tyrants and ufurpers, or the corrupt practices of mankind, were no principles upon which to regulate the duty of a Britim governor, who is bound to act, and ought to be judged by his country, upon Britih principles. Thele principles Mr Haftings was now accufed of having violated, not merely in his own perfonal conduct, but by employing under him, perfons whom he knew to be the molt worthlefs of human beings, and for whole enormous cruelties he was refponible. Thefe cruelties the accufer defcribed with fuch warmth of colouring, that many of his hearers were convulfed with horror. Mr Burke concluded his fpeech, or rather his courfe of orations, with declaring, that with confidence he impeached Mr Haftings in the name of the commons of Great Britain, whofe parliamentary trulk he had betrayed, and whofe national character he had difhonoured. That he impeached him in the name of the people of India, whofe laws, rights, and liberties he had fubverted, whofe properties he had deflroyed, and whofe country he had niade defolate. Latly, He impeached him in the name of human nature, which he had cruelly outraged in both fexes, in every age, rank, and condition of life.

The managers of the impeachment next propofed, for regulating the future condun of the impeachment, that they fhould proceed to a conclulion on both fictes, upon each article feparately, before they opened another; but the counfel for Mr Haftings infifted, that the houfe of commons ftould firft proceed to a conclufion upon the whole charges, before any part of the defence fhould be demanded. The houfe of lords deliberated upon this point. The lord chancellor Thurlow and others, who ufually voted with adminitlration, fupported the demand made by the counfel for Mr Haft ings, while Loid Loughborough, and others in uppofition, contended that it was imponfible to do fubftantial juftice in this way. The managers for the commors acquiefced in the decilion, and thereafter ertered upon the particular articles of charge. Two charges employed the houfe of lords during the remainder of the feffion ; as it was neceflary to occupy much

During the invethigations occafioned by the trial of Mr Hatings, and the difcuffion of indit aftairs, the oppofition party were led to bring forward an acculation againft Sir Elijah Impey, the fricad of Mr Hat-
inge, and lately chief jultice of the fupreme court of Bengal. Soon after the commencement of the prefent felfion, Sir Gilbert Elliot prefented to the houfe of commons fix articles, containing charges againt the late judge, of various high crimes and mifdemeanours. The lubttance of thefe charges amounted to an affertion, that the chief juftice had in a variety of inflances rendered himlelf the agent and tool of Mr Haftings, particularly in the dccifion of a confiderable number of important caufes. On this occafion, Sir Gilbert Elliot addreffed the houfe with much ability, in a ipeech of conliderable length. He began by exculpating himfelf from the imputations which ufually attach to the office of an accufer, that he is actuated by a natural malignity of temper, by perfonal refentments or interefs, or by the fpirit and paftions of party.

With regard to the lall, hc fated that Sir Elijah Impey had been declared criminal, by the voice of parliament, before the parties into whicb it was at prefent divided had any exiftence, and that the proceedings, out of which this acculation originated, had been carried on by perfons of all defcriptions and connexions, and were countenanced by every one of the adminiltsations, which had lucceeded each other during the laft fix years. He next congratulated the houfe, upon the proofs they bad given, that the griesances of Indiawere not only fit objects of their inquiries, but that their redrefs was the beft object of their power. He adverted to certain principles, which for obvious ends had been induftrioully diffeminated abroad, and had even been maintained in that boule, that India was indeed opprefled, but that it was accuftomed to oppreffion; and that it mult be oppteffed or abandoned. Thele fcandalous pofitions Sir Gilbert warmly controverted, and laid down in oppofition to them, what he thought nature and experience warranted him to affirm, that India mult be redreffed or loff.

Sir Gilbert Elliot then laid down a fecond principle; viz, that the only means left of reforming Indian abufe, was the punifhment, in fome great and fignal inftances, of Indian delinquency. This propofition he endeavoured to effablift with great ingenuity, in comparing the different force and efficacy of laws, as arifing from their pewal Canctions, when applied in our own internal admonitration, and in the government of diftant poffeflions. At home, where goverament had in fight, and was in contact with, the governed, their execution was eafy and certain; but in our remote cominions, we had to labour with all the difficulties that abfence, dillance, and ignorance could oppole. Againft this evil, no perfect remedy could be found, as experience had fully proved. Every refource of legiflive regulation had been exhaufted in vain; no device had becn left untricd, except the fimple expedient of diftributing reward to merit, and pains to guilt; the exemplay punifmment of detected crames was the only means left of convincing our dutant lutjects, that though diftance might delay, it could not finally avert, the cognizance and penalties ot jullice.

Of the parsicular charges which Sir Gilbert Ellict brought forward againf Sir Elijah Impey, that relpecting the fate of the rajah $\mathrm{N}_{\mathrm{L}}$ deomar, a Hindoo prince of the facred catt of the Bramins, was the moll remarkable. He had the weaknets, or in prudence, to become an informer or accufer, to the Eaft India Compatiy,

## B R I

Bitain. againft their principal fervant, Mr Haftings; the confequence of which was, that the gove nor-general was alleged to have procured an accufation to be brought againtt him, in the court where Sir Elijah Impey prefided; and there, on a charge of forgery, he was tried, condemied, and hariged, upon the authority of an Englifh ftatute; whereby all complaints againt the company's fervants were faid to be for ever ftifled, and the grievances of the eaft to have received a complete remedy. In the courfe of the feffion, witnefles were ex. amined againft Sir Elijah Impey. His defence 'was undertalen by the chancellor of the exchequer, with the folicitor, and attorney-general. The firft charge was rejected on the 9 th of May, by a divifion of 73 againft 55. On the 27th of May, the houfe voted a delay of procedure, during three months, and no impeachment refulted from the inquiry.

During the period which fucceeded the prorogation of parliament, in the prefent year, the only occurrence worthy of notice arofe out of the contefts of the northern nations. At this period, the relative Gate of the European powers had rapidly undergone a moft important alteration. During a century and a half, the power of the monarchy of France had been formidable to all Europe, and, at different periods, the moft extenfive combinations were found neceffary to refift its ambition. That monarchy, however, fince the clofe of the American war, had evidently loft its importance among the furrounding nations. lis influence over Holland had ever been one of its favourite objects of purfuit, but during the laft year, it fuffered that infuence to be overturned, without a Itruggle; and with regard to every external effort, France, at this time, appeared to have fallen into a flate of complete imbecility. The powers whofe ambition was now dangerous to the repofe of Europe, were Auftria and Ruflia; the latter, in particular, was extremely reftlefs and enterprifing. The emprefs Catharine II. had contrived to engage in her views the emperor of Germany, Jofeph II. and to prevail with him to engage in a languinary war on the eaftern frontiers of Europe, with a view to the partition of the provinces of the declining empire of the Turks; while France, the ancient ally of that power, was unable to give it any countenance or aid.

In the mean time, the fame emprefs held in a fate of extreme dependence upon herfelf, the two kingdoms, on her weftern bounday, Sweden and Denmask. After the fatal reign of Charles XII. by whofe extravagant military enterprifcs, the frength of the kingdom had been exhaufted, Sweden had funk into a flate of political weaknefs. The nobles in all parts of the country had refumed, in a great degrec, the independence of the feudal times, together with the anarchy to which that lorm of government was fo remarkably fubject. The crown and the people were equally infignificant, and the mutual animofities of the nobles fubjected the ftate to the intrigucs of neighbouring nations. 'The king of Pruftahad remarked, that there was, in their diet, a French party, and a Raffan party, but there was not an individual among them that fupported the party of Sweden. The prefent monarch, Cuftavus III. however, was now in the vigour of his age, and a man of a mont emhuliaftic and enterprifing character. By attaching to himfelf the jea.
fantry of the country, and their deputies is their diet, he had, in 1772, obtained his power to be declared abfolute; but the nobles had gradually recovered a portion of their authority, and, by the intrigucs of Ruffia, they were now become very dangerous to the throne. Thefe intrigues rendered the fituation of the Swedifh monarch extremely unhappy, and excited an impatient defire of flaking off his dependence upon Ruflia. He refolved, therefore, to take advantage of the prefent war, in which the had engaged with the Turks, to make an attack upon this miglity power, on its north. weftern frontier. To accomplifh this object with tolerable fafety, however, it was abfolutely neceffary that Sweden hould be fafe on the fide of Denmark. But the court of Denmark having always governed Norway in a harfh unfeeling manner, it is faid, that in the year 1772, Guftavus 111. gave great countenance and en• couragement to the maloontents of Norway. This laft circumftance has been alleged, by the Danes, as an excufe for a treaty into which their government fecretly entered at that time with Ruflia, whereby it was agreed, that, if Ruflia fhould be attacked, Denmark thould affit her with 12,000 auxiliary troops, and fix fhips of the line.

But whatever may have been the conduct of the king of Sweden in 1772 , there is no doubt that ever after that period he endeavoured, in the moft anxious manner, to conciliate the good will of the court of Denmark. At the clole of the year $\mathbf{1 7 8 7}$, he paid an unexpected vifit to the Danifh court, at Copenha. gen, in a manner totally deftitute of all ceremony, and there endeavoured to prevail with the prince re. gent and his council, who governed the kingdom during the incapacity of the king, to enter into his vieus with regard to Ruffia. He pointed out in the frengeft terms, the haughty fpirit with which that ambitious power annoyed all her neighbours; that if her prefent defign fucceeded, of partitioning the Ottoman cmpire, her frength would become fo valt, that Sweden and Denmark could afterwats only hope to fubfift as miferable dependants on her clemency. The court of Denmark, however, could not be prevailed upon to enter into thefe views, and appears ftill to have concealed its own fecret engagements with Rufia, or the part it meant to take in cafe of a war between Runia and Sweden.

In the month of July, the king of Sweden com-Warbe menced offenfive operations againtt Ruffia on the didetween of Finland. Here, however, the difcontents which Sweden a had been foftered by Ruflia among the Swedith nobles Ruffia. fpeedily came to view : Several oflicers declared, that the king had no right to make war without the confent of the tlates of the kingdom. The mutiny became general, and the troops refufed to advance. When the king was in this embarraffed fate, a Danift atmy $\$_{52}$ fuddenly advanced againft Sweden under Prince invade Charles of Heffic Caffel, accompanied by the prince of Sweden. Denmark, as a volunteer. To give this force the appearance of an auxiliary army, the prince of Heffe had been created a field mathal in the Ruffian fervice. The king of Sweden's afiairs were now extermely defperate. 'The fenate at Stockholm, during his abfence, had affumed extraurdinary powers, and had fummoned a meeting of the fates of the kingdom. The king, however, unexpectedly arrived at Stockholm from Iin-

## B R I [623] B R 1

Britain. land, and put an end to their proceedings. He inflantly fent off the whole regular troops from the capital, and having affembled the citizern, he declared, in a fpeech of great eloquence, that he intrufted to their fidelity the deferce of his capital, and the protection of the queen and royal family. His audience were inflantly feized with military enthufialm; the citizens armed and embodied themfelves, and performed the whole duty of the garrifon. Such of the officers as had retumed from the army in Firland, were infulted as traitore, and compelied to conceal themfelves.
${ }_{c}^{853}$ he king 0 isweden.

The king next haftened to the province of Dalecarlia, inhabited by a fierce and ignorant, but honeft people, celebrated for the ftare which they took in the memorable revolution by which Gultavus Vafa refcued his country from the defpotifm and unequalled cruelty of Denmark, which had maltacred the citizens of Stockholm, and almoft exterminated the nebility of the kingdom. The loyalty of thefe people was kindled to enthufiafm by this fecond vifit of a king to their mines and forefts, and 4000 of them inftantly came forth as volunteers. In the mean time, the Danim army was advancing along the fea coaft, which had been left undefended. A body of Swedes were taken prifoners, and the army advanced towards Gotten.
burg. The governor of this place, which is monly buitt of timber, and thetefore liable to inflant deftruction by bombardment, fummoned a meeting of the inhabitants, and recommended fumiftion to the invaders; to which they agreed. A Danifh olficer was, in the mean time, on his way to propofe terms for capitulation. Thus was the rich mart and great emporium of the forcign commerce of Sweden, the only port of any value which fae poffefled on the ocean, at the very point of being loft; nothing more being wanted to feal her defliny, than the arrival of the Danifa officer to conclude the capitulation. By unufual perfonal exertion, however, the king, at this critical periad, paffed unnoticed through the enemies parties, and entered the city. He affembled the people, and having exerted his ufual powers of perfuafion, the inhabitants unanimoully refolved to encounter every hazard in defence of the city. The place was thus faved for a moment; but its fituation, as well as that of the king himfelf, was fill extremely perilous. He had no adequate force within reach wherewith to refift the Danish army ; and the defperate obltinacy of his courage was fuch, that nobody doubted his determination to perilh in the ruins fooner than relinquifh the place, while the native fpirit of his fubjects would fcarcely permit thofe prefent to avoid becoming partakers of the ruin. On this uccafion, however, the city and the king, and perhaps the monarchy of Sweden, owed their fafety to the interference of a Britifh fubject.

It fo happened that at this important period there was no titled ambaffador in Sweden from any of the courts of London, Berlin, or Verfailles. Their place, however, was well fupplied by Mr Hugh Elliot, the Britilh envoy at Copenhagen. This gentleman, from the firlt notice of hofilities, difcerned the interelts of his country and of Euroge. He paffed over into Sweden, and offered his welcome mediation to the king. He next threatened the Danes with an immediate invafion by a Prulian army, fupported by a Britilh and Dutch fleet. He continued his threats
with fuch urgency and authority, that the Danifh com- Britan. mander was intimidated, and delayed his threasened ho. $\underbrace{-\quad-}$ filities. A Pruflian envoy foon arrived, and countenaticed all the threats of Mr Elliot; the confequence of which was, that after much fkilful negotiotion, is which Mr Elliot was not a little perplexed by the imapatient temper of the Swedifh monarcls; a fufperifion of hollilities was firll concluded, and afterwards, in the month of November, the Daniih troops totally cvacuated the territory of Sweden.
 year, it may be obferved, that on the $25^{\circ}$ h of April, a winh H O) treaty of defenfive alliance was concluded between land and Great Britain and the ftates general of the United Pruffia. Provinces, whereby bis Britannic majefly guaranteed the hereditary ftadtholderlhip in the houfe of Orange ; and on the $13^{\text {th }}$ of Augult, another treaty of defenfive alliance was concluded with Pruffia.

At the end of autumn of this year a domenf ic occur- $\$_{5} \delta_{5}$ rence took place of a fingular nature, and new in the Thllnefing' Britifh hiftory. The health of the fovereign had fuffered a gradual decline; a circumfance that was not afcribed to the freedom of indulgence, and the foftnefs of lux. ury, but, on the contrary, to too fevere a regimen, too laborivus exercife, too rigid abtemioufnefs, and too thort intervals of refl. As a remedy for the fymptoms that difcovered themfelves, the king determined to vifit the medicinal waters of Chelienham, and accordingly travelled into that part of the kingdom immediately after the prorogation of parliament, and did not return to the metropolis till the 18th of Auguf. No benefit anfwerable to the expectations that had been formed refulted from this excurfion. His health was in a precarious nate, and on the 22 d of Oftober fymptoms were obferved by one of the royal phyficians, of that alienstion of mind which was afterwards the occafion of fo many important and interefting tranfactions. For fome time it was thought proper to obferve as much fecrecy as poffible refpeating the nature of the king's indifpofition. The retreat of the $f_{0}$ vereign at Wiriofor was favourable to this purpofe; and for feveral days an opinion was entertained by the people in general, that his indifofition was a fever, and that it had rifen to fo alarming a beight as to threaten a fpeedy diflolution. The real nature of the cafe, however, could not long be fupprefied. By the Aructure and practice of the Englith conflitution almoft every fpecies of public bufinefs is, in fome manner, implicated with the royal prerogatives. The adminillration of political government, in particular, was by the prefent event virtually fufpended from its functions; and, notwithflanding the critical fetuation of Europe, and the very active flare we had lately taken in its concerns, it was now deemed impracticable to return any fort of anfwer to the difpatches of foreign courts, or of our own ambaffadors. In this fituation the moft natural expedient was to foffer the two houftes of parliament, which flood prorogued to the 20th of November, to meet at that time, and either adjourn for a fhort interval, or immediately proceed to difcufs the meafures it would be proper to adopt at the prefent crifis. Circular letters were accordingly addrefied to the members of the legillature on the 14 th, fignifying to them, that the indifpofition of the fovercign render: ed it doubtful whether there would be a poflibility of

Britain. receiving his commands for the farther prorogation of parliament. In that cafe, the two houfes mult of neceffity affemble, and the attendance of the different members was earneflly requefted.
ses
Parliament affembles.

Parliament being affembled, the lord chancellor obfersed in the houfe of lords, that the reafon of their being thus unufually called together without the ordinary notice, for the defpatch of bufinefs, arofe from the feverity of the king's indifpofition, which had rendered it impoffible for him to approach the royal perfon in order to receive lis commands. Lord Camden remarked, that the cuftomary practice of giving 40 days notice previouny to the meeting of parliament, was not in his opinion abfolutely neceffary. There was an exprefs act of parliament, that limited the notice, in cafe of treafon or rebellion, to 14 days; he therefore recommended an adjourument for that term; and at the fame time moved, that the chancellor, by order of the houle, fhould addrefs an official letter to every individual peer. Mr Pitt flated to the houfe of commons, that every authority had been confulted refpecting the prefent fingular fituation of affairs; but they did not point out either the poltibility of direct. ing a new prorogation, or enable minifters to open the feffion of parliament in any regular way. Under thefe circumftances it would be highly improper for the houfe to proceed to the difcuffion of any public bulinefs; and it was ab\{olutely necellary to adjourn. He therefore recommended the interval of a fortnight, when, if the king's illnefs thould unhappily contonue, it would be indifpenfably incumbent upon them to enter upon the immediate confideration of the flate of public affiirs. Mr Pitt farther moved a call of the joufe for the $4^{\text {th }}$ of Decomber, and that the fpeaker be directed to fend circular letters, requiring the attendance of every member on that day.

The tenour of the precedents afforded by the liiftory of England were regarded, upon the whole, as in favour of a protectorate or regency, under which the whole, or a confiderable part of the political power, fhould be confided to the next heir to the crown, or to the adult of the royal family mot nearly related to the king. A ciscumance that rendered this confideration more material upon the prefent occafion was, that the prince of $W$ ales was underfood to entertain an avowed partiality for the political connexion that had Profpect of charge of his debts, and an increafe of his anuma in a charge of come, as well as fome perfonal refentment to the mianiniftry.
ceffity as in times of war or public alarm. It is impoffible alfo to avoid remarking, upon this occafion, the effect of reputation in fupporting any political meafure. Mr Pitt, and his colleagues in office, were in poffeffion of the public favour in a degree in which perhaps no minifters in the Britifh annals ever enjoyed it for fo long a period of time. Upon Mr Fox and his affociates remained a part of that odium which the coalition and the India bill had originally excited. The prince of Wales himfelf was ftill lefs popular. The lobriety of his father's life was thought to form a contraft to his youthful indifcretions; and the rumous of his marriage with Mrs Fitzherbert was Atill propagated, and met with fume credit. In this Aate of affairs the king's minifters, who had ceafed to be any thing more than a kind of minifters by courtefy, had every advantage from the countenance of the public in their project of delaying as long as polfible the relinquifhment of their official fituations, by placing the exercife of the royal authority in new hands. On this occafon Mr Pitt conducted himfelf with great dexterity in contriving fubjects of difuffion in the houfe of commons, while his antagonifts feem not to have been aware of his purpofe, or, that while they were contending againft him for victory in debate upon fpeculative political queftions, they were in fact fighting his battle, by delaying the period of their own entrance into power.

Upon the re-affembling of parliament, on the 4 th of Report of December, a report of the board of privy council, containing an examination of the royal pbyficians, was prefented to the two houfes by Lord Camden and Mr Pitt; and it was fuggefled, that when the delicacy of the fubject, and the dignity of the perfon in queftion were confidered, parliament would probably perceive the propriety of acting upon this report, rather than of demanding that more direst and ample information to which, in frietnefs, they were entitled. This fuggeftion was undoubtedly reafonable, as it could not readily be fuppofed that the minifters of the crown could poffibly have acted fo directly in oppofition to their own interefts, as to have falfely reprclented their mafter as incapable of fupporting them in their offices. Mr Fon, Mr Burke, and others, however, would not take their word upon this point, but infifted upon the folemnity of an inquiry by a committee of the two houfes. The report of the committee was laid upon Report of the table of the houfe of commons, on the 1oth, when committe a farther propofition was moved by Mr Pitt, for the of the co appointment of a committec to inquire into precedents of cafes in which the perfonal exercife of the royal authority had been prevented or interrupted by infancy, ficknefs, infirmity, or any other caufe. Mr Fox obferved, that though he had no objection to the appointment of a committee for the purpole propofed, yet as it was notorious, that no precedent exifted which could be applied to the prefent cafe, he took this opportunity of ftating the following general principle; that in The prime confequence of its being afcertained, that the king right to was at prefent incapable of holding the $\epsilon$ secutive goo fereenced by vernment, the prince of Wales had as clear and ex-Mr Fox. prefs a right to alfume the reins and exercife the power of fovereignty during the continuance of the prefent incapacity, as if his father was actually dead. He added, bowever, thit though the prince's tight was per-

## B R I [ 625$] \quad \mathrm{B}$ R I

Britain. fed and entire, the two houles of parliament, as the organs of the mation, were alone qualifect to pronounce when he ought to take poffeflion of his right. In reply to this remark, Mr Pitt faid, he did not hefitate to aflirm, that for any man to affert fuch a right in the prince of Wrale, otherwife than as it was voluntarily conlerred upon him by the two houfes of parliament, was little lefs than ticafon to the conftitution of his country ; adding, that unlefs by their election, he had no more right, fpesking of frict right, to affume the government than any other individual fubject in England. He defired, that every man in that houfe, and every man in the nation, would conficer, that on their proceedings depended, as well the exifence of the conftution, as the intereft and honour of a fovereign, who was defervedly the idol of his people.

On the following day, the opinion which bad been Mated by Mr Fox, was, in the houre of lords, attacked by Lord Camden, and defended by Lord Loughborough and Lord Stormont. Minifters had now got an abffract queftion as a fubject for dsbate, of which they refolved not to lofe fight, efpecially as their fide of the queftion was likely to prove moft popular, being an affertion of the powers of parliament in oppofition to an afertion of hereditary right. Mr Pitt accordingly, when the fubject was next mentioned, faid, that the queflion that had been flarted refpecting the rights of parliament was of much greater magnitude and importance than thofe which related to the prefent exigency; and he hoped there would be an unanimous concurrence of opinion, that it was impof. fible to difmif, the queftion of right without its being fully difcuffed and decided. On the 16 th of December, in a committe upon the flate of the nation, he entered at large upon the fubject, and endeavoured to prove, that, by ancient precedent, the powers vefted in a regent had always been inferior to thofe of the king, and that parliament had interfered in cafes of royal infancy in appointing councils of regency, or a fingle regent or protector. At the fame time Mr Pitt admitted, that it would be expedient to intrull to the prince of Wales, whatever powers fhould be thought neceflary. Mr Fox, on the contrary, contended, that his doetrine was fuppotted by the very nature of a hereditary monarchy. He faid, hat upon Mr Pint's principles, if a man were quetioned, whether the monarchy is hereditary or not, the anfwer mult be, "I cannot tell; ath his majelty's phyfician. When the king of England is in health the mon rchy is hereditary, but when he is ill and incapable of exercifing the fovereign authority, it is then eleEcive." Mr Fox ridiculed the fubtiety of Mr Pitt's afiertion, that the prince of Wales had no more right than he had, at the fame time that he confeffed that parliament was not at liberty to think of any other regent. Mr Pitt's motion upon the quellion of right was carried, upon a divifion of 268 ayainft 204 .

On the 223 of December, Mr Pit propofed in the houfe of commons, a relolution, the object of which was, to declare, that it was neceflary for the purpufe of fupplying the prefent defect, and maintaining the entire conflitutional authority of the king, that the two boufes fould determine on the weans by which the royal affent might be given to th- lill, which they might adopt for conflituting a regency. The objcet

Yor. IV. Part II.
of this propofition was obvious; adminiflation had re- Mr its in folved not to confide the regency to the privice of Wales unlefs under reflrictions; but without the reyal afferst, an act of parliament, fixing thele reftrict., s, could not be p.ffed. They wihned, therefose, to devile a folemnity which, in this cale, flouid le beld equivalent to the royal affent. Mir litt propofed, that the great feal fhould be affixed by the lord chancellor to the act of parliament, and that this fhould be locd equivalent to the royal aftent. Mr Fox, on the contary prefled an immediate addrefs to the prince of Wales to take upon himfelf the regency. Long debates occurred upon the point in both houles of par'isment, in which adminiflation continued to be fupforted by the majority.

On the 21 of Janumy 1789 , a new caufe of delay oc-New decurred in confequence ol the death of Mr Cornwall, lays. the feaker of the houfe of commons. Mr Grenville was elected, in oppofition to Sir Gilbest Ellior, upon a divifion of 215 againft 144 . On the Gth of January, when the houle of commons were about to confider Mr Pitt's propofed regency bill, Mr Loveder moved for the appointment of a new committec to inquire into the flate of the king's health. The propofal, after a debate, was carried by adminiflration.
In the mean while Mr Pitt, in the name of the The relt of the cabinet, explained to the prince of Wrales, prince's in a letter, the reftritions which were meant to be consetponinfested in the regency bill. Thefe were, that the dence wimh care of the king's perion, and the difpofition of histion. houfehold, fhould be committed to the queen; and that the power to be exercifed by the prince thould not extend to the perfonal property of his father; to the granting any office, reverfion, or penfion, except where the law abfolutely required it , as in the cafe of the judges, for any other term than during the king's pleafure ; nor to the conferring any peerage, unlefs upon fuch perfons of the royal iffue as hoould have attained the age of 21 years. Mr Pitt added, that the ideas he had fuggetted were founded upon the fuppofition, that the royal malady was only temporary, and might be of thart duration. It would be difficult to fix at prefent the precife period for which thefe provifions ought to endure; but it weuld be open hereafter to the wifdom of parliament to seconfider them whenever circumfances might appear to render it eligible. In his anfwer, which was dated on the 2d of January 1789, the prince declared, wat it was with deep regret he perceived, in the propofitions of adminiftration, a project for introducing weaknefs, diforder, and infecurity, into every branch of political bufinefs; a project for dividing the royal family from each other, for feparating the court from the fate, and depriving government of its natural and accuftomed fupport; a foheme for difconnecting the authority to command fervice from the power of animating it by reward, and for alloting to him all the invidious duties of the king. ly ftation, without the means of foftening them to the public by any one act of grace, favour, or benignity. He llated it to be a principle of the Britilh conftitution, that the powers and prerogatives of the crown were beld as a trult for the benefit of the people, and were lacred, as they conduced to preferve that balance of the conftitution, which was the true fecurity of the liberty of the furject; and he objected to
making

Britaia. making trial in his pesfon, of an experiment to afcertain with how fmall a purtion of kingly porer the executive government of the country could be conducted. He afferted his convigion, that no event could be more repugnar.t to the feelings of his royal father on his recovery, than to know that the government of his fou and reprefentative had exhibited the fovereign power in a tate of degradation and diminined energy, a ftaic injurious in its praftice to the profperity of the people, and mifchicrous in its precedent to the fecurity of the monarch and the righes of his family. The prince declared himfelf refolved, however, to undertake, under every difudvantage, the office of regent, to avoid the evils which might otherwife arife.

We may here remark, that the mult fingular part of the project for the government of the kingdom appears to have been, that for confiding to the queen the power to remove, nominate, and appoint the officers of the royal houfehold ; affifted by a permanient council, to be felected by parliament, and to confift, in fome meafure, of the members of the prefent adminiftration. The annual income of the royal houfehold was computed to amount to 300,0001 . and the number of officers of which it confifted to 400 , an influence, that would certainly have been fufficiently formidable to a government in other refpects reftricted and limited. The lords of the bed-chamber had been made ufe of to defeat Mr Fox's projected India bill, and might, under a feparate ellablifhment, have proved embarrafling to the exifting government. It may alfo be remarked, that during the whole of the prefent reign, the queen had never previoully appeared to act beyond ber domeAlc 「pliere, a circumilance which tended not a little to increafe the perfonal refpectability of her hufband, as his corjugal fidelity and attachment had always been remarkable. In confequence, however, of her name being obtained at this time to the minifterial project, an idea came to be very generally entertained, that her influence or interference in political tranfactions was by no means inconfiderable.

It is worthy of remark, that on this occafion adminiffration were, no doubt, greatly encouraged in their purluit of the plan they had formed for rellricting the prince's power, by thic addrefles that were prefented to then from various parts of the kingdom, expreffive of the gratitude of the perfons by whom they were fent, for the affertion which had been made by the houfe of commons of their right of providing for the prefent deficiency.

On the 16 th of January, Mr Pitt propofed his regency bill, sefting it, in fome meafure, upor the decifive opinion of Dr Willis, who expreffed great hopes of the king's recovery. After long debates, the limitations were fupponted by a confiderable majority. In the houfe of lords, fimilar debates occuried, but there
new debates and votes, in which adminiftration fill maintained their fuperiority. The laft claufe provided, that when it fould appear to the queen, and the rnajority of her council, that the king was reflored to health, they fould be authorized to fignify it under their hands to the lord prefident of the privy council, who thould caufe it to be secorded in full council, and, having fo done, fhould fend a copy of it to the lord mayor of London, and caufe it to be pinted in the gazette. The king was then authorized to fummon nine privy counfellors, not members of the council to the queen, by the advice of any fix of whom, he fhould be authorized to iffue a proclamation, counter-figned by the fix privy counfellors, declaring his intention to refume the regal functions, and upon thefe formalities, the funaions of the regent Chould immediately ceafe. It was farther provided, that, after this proclamation, parliament hould forthwith afiemble for the tratilaction of bufincfe. The bill paffed the houfe of commons on Regency the 12 th of Feb . and was prefented to the houfe of loads bilf paties on the following day. It was difcuffed on the 17 th and 18 th, and a few amendments were introduced into it.

Here, however, the whole of thele proceedings the lords. terminated. On the 3 th of Februaty, the king had been declared by his phyficians to be in a ftate of progreffive amendment. An adjournment of the houfe of lords was therefore propofed on the 19th. On the Scfiono25 th, the king was declared by his phy ficians free from pered anewf complaint, and on the soth of March, the lord-chancellor, by the king's authority, addreffed both houfes of parliament in a feech, and the ordinary bufinefs of the feffoon commenced. The experiment was thus left untried, of the effects which the diminifhed authority of a regent might have produced, at the period in queflion, upon the practice of the Britifh goverument.

In the meanwhile, the adminiftation of Mr Pitt had been lefs fortunate in the kingdom of Ireland than in his orw country. The unexampled popularity that reconciled the people of Great Britain to all his meafures, and the odium and fufpicion that had fallen upon his opponents, had not hitherto, in any very eminent degree, communicated themiclves to the neighbouring iffand. The profpect of his departure from office, therefore, in that country, excited little regret, and its parliament made hafte to worfhip what they accounted the rifing fun. It had llood adjourned, previous to the royal incapacity, to the 20th January 1789 , and the marquis of Buckingham, then lord-lieutenant, with conlent of the privy council of Ireland, ventured to defer its meeting to the 5 th of February. On the 13 th of that month, two motions were offered to the cunfideration of the houfe of commons. The firf of them by Mr Grattan, the member mof dillinguilhed for his talents; and the fecond by Mr Conolly, the richeft of the Irifh commoners. By the firft, the royal incapacity was declared, and by the fecond, it was propoted to prefent the princ an addrefs to the prince of Wales, requelling him to moved. take upon himfelf the government, with its various powers, jurifdictions, and prerogatives. In fupport of thefe motions, it was argued by Mr Grattan, hat there were two modes of proceeding, familiar to the feveral branches of the lcginature; the one lcyiflation, and the other aildrefs. The former of thefe praceeded upon the fuppofition of a third eflate, and required the concurrence of that eflate, in order to give it validity; the latter was a function, exclufively the property of

## B R I

Britain. the two loufes, and which was in itfelf complete and Gual. The plan he recommended, advifed the crearion of a third eflate, in order to legilate; not the legiflating, in order to create a third eff.te. To fill up the exilling deficiency, was the only act the fituation made indilpenfable. Limiting, thercfore, their operation to the demand of the necellity, they parted with their extraordinary power, the very moment it was broupht completely into exercifc. This Mr Grattan confidered as the firt thing neceffary to be done; but as the addreffes of parliament, though competent to fupply the deficiency, did not, and could not with propiiety, annex to their ad the forms of law, be thought it advilable, after the acceptance of the segency, that there thould be an act pafted, for the purpole of recognizing and giving the eft tblifhed form, to the meafures which had preceded. The powers he recommended to be conferred upon the regent, were precifely thofe exercifed by the king; and the reafon of this, he faid, was to be found in the very nature of the prerogative, which was given, not for the fake of the king, but of the people, for whofe ufe, both kings, and regents, and prerogatives, were created and conftituted. He knew of no political reafon, why the prerogatives in quellion fhould be deftroyed, nor any perfonal reafon why they fhould be fufpended. He thought it unneceflary, to copy minutely the proceedings of England. The two nations concurred in the fame general object, the choice of a regent, which was a common concern, the particular modification of which munt be governed by the particular circumfances of the different counties.

The attorney-general, Mr Fitzgibhon, was the principal champion of adminiffration. He contended, that the Irih parliament ought to wait, till the prince of Wales was invefted with the authority of regert in England. He would then have the command of the great feal of that country, the affixing of which was requifite to give authenticity to every legillailie of in Ireland. Upon this laft folemnity be laid great firels; afferting that the moment a regent was appointed for Great Briain, Cuppofirg him to be a different perfun from the Irifh regent, he might fend a commiffiun under the great feal of England, appointing a lord lieutenant of Ireland; and to that commifion, their regent, at the peril of his head, would be oblized to pay obedience. He afferted, that the goverument of Ireland, under its prefent conflitution, could never go on, unlefs they followed Great Britain implicitly in all regulations of imperial policy. Mr Fitzgibbon predicted, that the unadvifed rafluefs of thofe who difregarded this rule, muft ultimately lead to a legiflative union with England, a meafure which he deprecated, but which was more furely prepared by fuch violence, than if all the fluices of corruption were prepared together, and poured in one overwhelming terrent upon the countries reprefentatives.

Mr Hutchinfon the fecretary of Atre, who at this time joined oppofition, contended, that the regent of England could wont, as fuch, give the roval affent to an Irifh bill, and Mr Curran enlarged upon the evils which attended elective monarchy. He contended, that, without overturning the conflitution, weither Britain nor Ireland could exert any cboice upon the fuhject, but munt receive into the royal oflice the beir of the monarchy.

The propofitions of Mr Grattan and Mr Conolly
were voted by the majority; and on the following day, Ruitam. all addrefs to the prince of Wales was alfo voted, and $\underbrace{}_{\text {Wher }}$ fent to the houfe of lords for their concurrence. It Addrels was adopted by the houle of lords by a great majurity. carried. The addrefs was carricd to the lurd-licutenant on the $19^{\text {th }}$ of February, who, however, refufed to tranlmit it to England; upon whish, the two houfes appointed fix commiffioners, to prefent the addref, immediatcly to the prince. 'thefe meafures, however, were farcely carricd through parliament, when the king's recovery rendered them incffectual; the confequence of which was, that the majority of the lrith parliament, who ware valy far from having intended to engage in a contef with the Britilh government, found themfelves in an awkward fituation. 'They mainssined for a flort time an appearance of firmnefs; but as the Britifh ad~ miniftation aroided difplaying any refentment, on account of the part they had acted, the legiflature of that country fpeedily refumed its ufual character of oblequioufnefs to the Britill government.

The fubject of the flave trade, which had been fug- Slavegefted to the confideration of parliament during thetrade. preceding feffion, was not regularly refumed till the 12th of May. In the interval, various petitions had been prefented againft the abolition of the trade, by perfons interefted in it, in London, Liverpool, Briftol, and other places. The report of the committee of privy council, of which Mr Pitt had given notice during the preceding fellion, was in the mean time prefented to the houfe of commons; and it is to be remarked, that, during the preceding year, the cnemics of ilne trade had been extremely active thoughout the country, in endeavouring to excite the general indigna:ton of the public againtt this odjous trafthc. Innumerable pamphlets were diftributed, either gratuitounly, or at a low piice, giving an account of the calamities endured by the unhappy matives of Afica, in confequence of it. The wars, in which their peity princes were tempted to engage, with a view to the capture of prifoners, whom they might fell to European traders, were fully explained; the wretched manner in whicto thefe flaves were tran ported to the iVeit India colonies, feticred and crowded together in fuch a way, as to occafion the deftruction of multitudes of them by difeafe, was reprefented by printe, which were diftributed along with the popular publications upon the fubject ; and, laflly, inftances of the cruelty of the maters in the Weft Indies were publimed, which had a tendency to render the whole white inhabitants there extremely odious. $I_{n}$ confequence of all thefe exertions, the public at large were induced to intereft themfloes with very great zeal, for the purpofe of procuring, if rot an abolition of the fate of flavery which exift in the Weft India illands, at leaft a complete prohibition of the importation of additional dlaves from Africa. To this laft object, the abolition of the trade for flaves to the coaf of Africa, the attention of the legilature was at this time co:sfined.

Mr Wilberforce opened the bufinefs, by fating the Mr Wilber effects of the trade upon Africa, as forming the prin-ficce's cipal motives of the wars in that country. He nextfpeechanoticed the mode of tranfportation, the mon wretched grint the part of the whole fubject, in which, he faid, fo much ${ }^{\text {llave-iade. }}$ mifery, condenfed in fo little room, was more than the human imagination had ever before conceived. Dif-

## B R

Eritain. ferent accounts of $\mathfrak{t h i s}$ matter were indeed given, he faid, by witnefles, according to their prejudices and interefts; but he obferved, that death was a witnefs that could not deceive, and the proportion of deaths would not only confirm, but, if poffible, even aggravate our fufpicion of the mifery of the tranfit. It would be found, upon an average of all the thips upon which evidence had been given, that, exclufive of fuch as perifhed before they failed, not lefs than $12 \frac{x}{2}$ per cent. died in the paffage. Befides thefe, the Jamaica report flated, that four and a half per cent. expired upon thore before the day of fale, which was only a week or two from the time of their landing; onethird more died in the feafoning; and this, in a climate exactly fimilar to their own, and where, as fome of the witneffes pretended, they were healthy and happy. The difeafes, however, that they contracted on Chipboard, the aftringents and wafhes that were employed to hide their wounds, and make them up, as it was called, for fale, were a principal caufe of this mortality. The negroes, it thould be remembered, were not purchated at firit, except in perfect health; and the fum of the different cafualties, taken together, produced a mortality of above 50 per cent. Mr Wilberforce added, that, as foon as he had advanced thus far in his inveftigation, he felt the wickednefs of the flave-trade, to be fo enormous, fo dreadful, and irremediable, that he could flop at no alternative Mort of its abolition. A trade founded on iniquity, and carried on with fuch circumitances of horror, muft be abolifhed, let the policy be what it might; and he had from this time determined, whatever were the confequences, that he trould never ref till he had effected that abolition. The principle upon which he founded the neceffity of the abolition, was not policy, but juftice: but though juftice were the principle of the meafure, yet he trufted, he fhould diftinctly prove it to be reconcileable with our trueft political interef. In the firft place, he afferted, that the number of negroes in the Weft Indies might be kept up without the introduction of recruits from Africa; and, to prove this, he enumerated the various fources of the prefent mortality. The firft was, the difproportion of the fexes, an evil, which, when the flave-trade was abolifhed, muft, in the courle of nature, cure itfelf. The fecond was, the diforders contracted in the tranfportation, and the confequences of the wathes and mercurial ointments, by which they were made up for fale. A third was exceffive labour joined with improper food ; and a fourth, the extreme diffolutenefs of their manners. Thefe would all of them be counteracted by the impofibility of procuring further fupplies. It was the intereft, they were told, of the maflers to treat their flaves with linduefs and humanity; but it was immediate and prefent, not future and diftant intereft, that was the great fring of action in the affairs of mankind.

Mr Wilberforce moved twelve propofitions, upon which, however, he obferved, that he did not mean to urge them to an immediate vote. They flated the number of Пlaves annually carried from Africa, imported into the Britif. Weft Iudies, and entered in the cuftomhoufe accounts: the number in the firft of thele articles amounting to 38,000 . They entered into the prohath demerits of the perfons fold to flavery; the coniequences produced upon the inbabitants of Africa,
and the valuable and important commerce to that courtry which might be fubfituted in the room of the flavetrade. They ftated the injury fuftained by the Britih feamen, and the fatal circumblances that attended the tranfportation to the flaves. They detailed the caufes of the mortality of the negroes, and enumerated the different items of calculation refpeeting the increafe of population in Jamaica and Barbadoes; and they concluded with declaring, that it appeared that no confiderable or permanent inconvenience would refult from difcontinuing the farther importation.

Upon this occafion, Mr Pitt fupported that fide of $\mathrm{Mr}^{878}{ }^{8}$ itt, the queftion which had previoufly received, in a very \&cc. opremarkable degree, the fanction of popular applaufe. pofe the He declared himfelt latinfied, that no argument, compatible with any idea of jultice, could be affigned for the cuntinuation of the flave-trade. He trufted, that the project now recommended, would not prove the means of inviting foreign porrers to fupply our iflands by a clandefine trade. Should fuch an illicit proceeding be attempted, the only language which it became us to adopt was, that Great Britain had refources to enable her to proteet her iflands, and to prevent that trade from being clandefinely carried on with them, which the bad thought fit, from a regard to her character and her honour, to abandon. It was highly becoming in Great Britain to take the lead of all other countries in a bufinefs of fo great magnitude; and he could not but have confidence that fureign nations would be inclined to fhare the honour, and contented to follow us as their patterns in fo excellent a work. Mr Fox highly approved of what Mr Pitt had faid refpecting the language it became us to hold to foreign powers. A trade in human flefh he confidered as fo fcandalous, that it was in the laft degree infamous to fuffer it to be openly carried on by the authority of the government of any country. A regulation of the trade had been propofed by fome perfons; but his deteftation of its exiftence led him, he faid, naturally to remark, that be knew of no fuch thing. as a regulation of robbery and reftriction of murder. There was no medium. The legiflature muft either abolift the trade, or plead guilty to all the iniquity with which it was attended. Mr Burke obferved, that, whatever were the prefent $f_{i}-$ tuation of Africa, it could never be meliorated under the prefent fyftem. While we continned to purchafe the natives, they mult for ever remain in a fate of favage barbarity. It was impuffible to civilize a flive: it was contrary to the fyftem of human nature. There was no country that continued under fuch difadvantageous circumftances, into which the ftradow of improvement hatl ever been introduced.

On the other hand, Mr Wilberforce's propofitions Slave $\begin{gathered}\text { Sy } \\ \text { wait }\end{gathered}$ met with confiderable oppofition. Mr Savage and fupported Mr Newnham, on the part of the city of London, hy vatious faid, that the meafure, if carried into effect, would micmbers. render the metropalis one frene of bankruptcy. Mr Dempter faid, that Mr Wilberforce's firit propofal ought to be, to make good out of the public purfe, the loffes which individuals would fuftain from the abolition of the trade. Lard Penrhyn afferted, that there were mortgages in the Weft lndia iflands, to the amount of 70 millions fterling; and that Mr Wilberforce's proicet would bind the rountry in equity, for the sepayment of this fum. Mr Hemuiker oppofed

Britan. the abolition, on account of the unalterable depravity of the Africans, which rendered them incapable of being civilized. And the fame fide of the queftion was farther fupported, upon various grounds, by Lord Maitland, Mr Marham, Mr Hufley, Mr Rolle, Mr Drake, and Mr Alderman Watfon. The merchants who oppofed the abolition, requefted leave to examine witneffes on their fide of the queftion. Mr Pitt obferved, that, in his opinion, all farther inquiry was unneceffay, and could only tend to wafte the time of the houfe. Afterwards however, be appeared to relas in this refpect, and the examination of witnefles was permitted, which confumed fo much time, that the bufinefs could not be brought to a conclufion during the feffion. The tranfactions of the houfe under this head, were concluded by the renewal of Sir William Dolben's act, to regulate, for a limited time, the mode of conveying flaves in Britith veffels from the coaft of Africa.

The annual bufinefs of the budget was not brought forward, in the prefent year, till the 1oth of June; and immediately previous to this difcuffion, the office of fpeaker of the houfe of commons was vacated, by the promotion of Mr Grenville to the fi-
tuation of one of the principal fecretaries of flate, on the refignation of Lord Sydncy. Upon this occafion, the marquis of Graham and Mr Grofvenor moved, that Mr Henry Addington, who was the perfonal friend of Mr Pitt, and the lon of Dr Stephen Addington, phyfician to Mr Pitt's family, thould be appointed to the chair. The name of Sir Gilbert Elliot was propofed on the part of oppofition, by the fame perfons who had brought it forward uposi a former occafion ; and Mr Fos and Mr Burke, in fupport of this amendment, took notice of the youth and inexperience of his competitor. At length the houfe divided, and the numbers appeared in favour of Mr Addington 215, and of Sir Gilbert Elliot 142.

In confequence of the expence incurred by the late armament, the allowance to the American loyalifts, and other circumflances, it was found neceffiry to have recourfe to a loan of one million, to defray the intereft of which, additional taxes were impofed upon newfpapers, advertifements, cards and dice, probates of wills, legacies to collateral relations, and carriages and horfes.

As one of Mr Pitt's modes of extending the revenue confited of exerting great vigilance in the fuppreffion of frouggling, he had formerly transferred the management of the revenue upon wine from the cuAoms to the board of excife. He now extended the fame plan to the article tobacco. He ovened the fub. ject in the houfe of commons on the 16 th of June, by obferving, that tobacco was now to be confidered as the finuggler's it aple, in the fame manner as he liad formerly dealt in tea, wine, arid fpirits. The quantity of tobacco confumed in this kingdom, was found to bear a tolerably near proportion to the quantity of tea, and at leaft one-balf of this quantity was the exclufive commodity of the fmuggler. The confumption amounted to 14 millions of pounds, and the lofs to the revenue, upon the half of this confumption, was three or four bundred thoufand pounds per annum. Under thele circumfances, Mr Pitt thought it neceflary to have recourfe to the fyfem of excife, by which the flock of the dealer is toxed inftead of the dury being coilected o: importation. He fupported his propofal, by allud-
ing to the fuccefs of the fame meafure, in increafing Britzin. the revenue upon winc.

As the excife laws authorize the revenue officers to Cearcls the houfes of the dealers, and as they fuperfede the favourite fyftem of adminiftering juflice by a trial by jury, their extenfion had former ly been extremely unpopular, and had nearly occafioned the ruin of different minifers, by whom it had been attempted; but, in confequence of the popularity of Mr Pitt's adminiftration, or in confequence of the long enjoyment of national profperity under the reigning family, without any very remarkable political Aruggles, Mr Pitt's projects for the purpofe of extending the excife, if not pofitively approved, were, at lealt contemplated with indifference. Petitions were, however, prefented againft the propofed alteration by the perfons about to fall under the new fyftem, and they were permitted to be heard by counfel. They afferted, that the introduction of the excife would lead to the difclofure of their art, and to the confequent ruin of their manufacture; and, that the operations of cxcife, fuch as gauging and weighing, were inapplicable to their commodity. Mr Fox, who was abfent during the firf Alages of the bufinefs, afterwards came forward. When the bill was under the confideration of Debate or a committee, he declared, that he had come down to the fubthe houfe, not fo much from any hope of fuccefsfully ject. oppofing the bill, as with a view to enter his general protef againft a fcheme which be completely difapproved. He had oppofed, and would oppofe, every extenfon of the excife laws, becaule he was convinced they were a fyftem of laws under which no freeman ought to live, and were utterly incompatible with the principles of juft and equal government. He was aware, that, in fome men, any new increale of revenue outweighed every other confideration. His own opinion was different, and if the excife on tobacco would produce half a million a year, he would fill oppofe it. It was the infringement of our liberties and confitution, hitherto regarded as ineltimable, that he refifted, and which he forefaw would fall a facrifice to confiderations of revenue. He remarked, that the meafure feemed little to intereft the public in general ; and, if parliament would not attend to their duty, and the nation abandoned it, he faw no profpect of femming the tide. It feemed as if liberty and a free conflitution were merely talked of, and not felt; as if they were words only fit to decorate a fpeech in parliament; a beautiful theory, but no longer compatible with practice or fit for enjoyment. Standing as we did, the firft country for literature, for fience, and all which could improve and adorn mankind, it mult mortify every man who admired the freedom of our confitution and the equity of our laws, that the fources of our eminence flould be fo completely and irremediably forgotten. Oa the contrary, Mr Gienville remarked, that, by the excife laws, fix millions of annual revenue were collected; that thefe laws had been promoted in the beft periods of our hiftory ; that only $3=00$ more people were nosv propofed to be put under them; that the conifitution had not hitherto been injured by thefe laws, and that their extenfion was abtolurely nectilaty, to enable the honeft trader, in the article in queftion, to carry on his bufinefs with fuccefo. The bill was carried by a large majority. It

## B-R I

Tritain.
SS:
Repeal of the ihoplax.
met with fimilar refifance in the houfe of lords from Lord Stormont, but with a fimilar iffue.

Mr Fux had annually brought forward a mntion for the repeal of the flop-tax, which had proved extremely unpopular in the capital. During the prefent feffion, Mr datt confented that the tax flould be abolithed. Mr Beaufoy again intruduced a mution for the repeal of the corporation and tefl acts. It was fupported by Mr Fox, but oppoled by Lord North and Mr Pitt, and rejected by a divifion ul 122 akatnll 102.

A bill was introduced into the houfe of lords by Earl Stanhone, for relieving the members of the chuch of England from various penaltics and difabilities under which they laboured, and for extending freedom in matters of religion to perfons of all denuminations, Papills excepted. The laws it chiefly intended to refeal, were laws impoling penalties upon perfons who did not frequent the eltablifhed worfhip, and prolititing men from fpeaking or writing in derogation of the doctrine of the bouk of Common Prayer. It allo repealed the laws enjoining the eating fifh on certain days, authorizing the imprifonment of perfons excommunicated, prohititing the exportation of women, and declaring all perfons who fhould go to court, without having previoully made a certain declaration, which probably had been made by no perfun now living, to be in the eye of the law Popith recufant convicts, which was a fpecies of outlawry. Lord Stanhope alfo mentioned certain canons, of which, however, he did nat propofe the repeal, becaufe he conceived them to be at prefent void of the force of law. By thefe canons, among other things, it was declared, that a perfon who fhould bring againit another a charge of impiety, thould not be allowed to be complained againt, as having acted out of malice, or from any other motive than from the difcharce of his confcience; and that no clergyman fhould, without licenfe from the bifhop, attempt, upon any pretence whatfoever, to caft out any devil or devils. Lord Stanhope deprecated the objection, that the liws he withed to repeal were obfolete, and never carried into exccution; and undertook to produce above 30 cafes within the lan 26 yeats, fome of them within 10 , and fome within one year, in which ment had been perfecuted under thefe laws; and, in fome inflances, the tables chairs, difles, and beds, of poor people, had been fold by public auction to pay the penalries of not going to church. Iord Stanhope's bill was oppofed by Dr Moore, archbithop of Cauterbury, who infifted, that if a man wete unfortunate enough to dibelieve the exiftence of a God, be ought not to be at lieerty to diffeminate fo dangerous a doctrine. Dr Warren, bilhop of Bangor, and Dr Halifax, biftop of St Afaph, obferved, that Lord Stanhope was miftaken in imagituing, that the canons to which he alluded had not the force of law, and afferted, that the clergy were fill bound by them, though the laity werc exempted. Thefe bifhops oppofed all innovations upon fuch a fubject as dangerous. Dr Hurfley, bifhop of St David's, admitted, that fome of the old laws alluded to ought to be repealed; but he ubjected to Lord Stanhope's bill, as rudely tearing away the foundation of the church of England, and ehereby weakening the Englifh conflitution. The bill was rejected; and the fame nobleman immediatcly , produced another bill, to prevent fuits for the recove-

## B R 1

ry of tithes from being inftitured in the ecclefiaftical courts, whofe proceedings, he alleged, were levere, efpecially againft Quakers, who, by their religious principles, were seftrained from the voluntary payment of tithes. This bill alfo was rejected.

On the firtt of July, the Ealt India Company pe-Ein India titioned the houfe of cunmons for permiffion to add an company additional fum of one million to their capital, the creafed. whole to be fubfrctibed by the prefent proptietors of Lall India flock. The requeft was granted with lit- 887 the dilliculty. On the fame day, Mr Dundas, as mi- Inda bna niller for India, or prefident of the board of controul, get. brought forward a flatenient of the revenues of $\mathrm{In}^{-}$ dia, which, after every atticle of expendizure in that countey "as deducted, he calculated at $1,820,0001$. Mr Francis ohjulted to tome pattculars of the thatement, and M jor Scutt, the friend and lupporter of Mr Hanings, rook this opportunity of remarlir., that when now, for tie fift time, an India hudget had been opened, Mr Francis had omitted to fay one word as to the flate of the government of that country, or to reprobate, is he had been accuftomed to do, the ty them under which it was adminiftered. That fyftem he affirmed to be the ame which had been introduced by Mr Haftings, adopted by Lord Cornwallis, anc fanctioned by the king's minillers. Thus the houfe of commons appeared, as he obferved, to be alternately engaged in condemning and reprobating the fyllem when they acted in one capacity, and beftowing upon it the higheft applaufe when they acted in another.

Durng the prefent fefliun, the trial ol M1 Haftingsfill Mr Hawent on before the houk of lords. The third charge fings's brought forward, refpecting prefents received by Mrtrial. Haftings during his goverr ment of Bengal, was opened by Mr Burke. In the conurfe of his fpeech upon this occafion, Mr Burke alluded to the trinl and execution of Nundcomar, and afferted that Mr Haftings had murdered that man by the bands of Sir Elijah Impey. The tranfaction refpecting Nundcumar made no lpecific part of the charges which bad been made aganf Mr Ilaftings by the houfe of cun mons ; and the quellion, fo far as Sir Eljah was amplicated in it, had been examined and rejeetud dur,ne the preceding feffion. Mr Haftungs, therefore, thousht paoper to prefent a petition to the houfe, in which he entrent.d them, either to caule the additional allepations that were urged againf him to be brought forward, and profecuted in fpecific articles, or to afiord himfoch other redrefs as they might judere futuole and proper. In this petition he mentioned restain other accufations that had been brought againt hins in the coulfe of the trial, which were not fpecifed in the anticles of impeachment. Mir Pitt fupported the petition; afersing, that the murder of Nundenmir was no part of the crine of peculation, and every fule ot evider ce was againft its being alleged. It had been charged in order to difcredit the character of the acculdd; but it was a rule in the counts of las, that nn, fact could be given in evidence to diferelit cyen a wituefs. If then the murder of Nuidcomer was not admiflible as evidence, it could only be uried as matter of aggravation, but it was impoffible iv altow his. The common fenfe of the !houfe, ani of all mankind, wnuld not permit the crime of murder to be ursed in aggravate a crime of peculation. Mr lox, on the consrary, quoted the cafe of a captain
of a hip, arain? whom murder was charged in having thrawn his cargo of flaves overboard, in order to prove that he had by finifter means endeavoured to defrand the underwriters of the amount of the infutance. The prefent cafe, Mr Fox fail, was exactly correfporident t.) this. It was impufible to relate the corrupt tranlaftions of Mr Haftings, without relating the crimes that had accompanied them, or to relate the crimes without mentioning the narnes of the perfous by whom they had been cominitted. A refolution, however, was moved by the manquis of Graham, one of the lords of the treafury, and carried, by which it was declared, that no authority $h$ ad been given by the houfe of commone, for making any allegation againी Mr Haflinge, refpeting the death of Nundcomar; and that the words of Mr Burke, complained of in the petition, ought not to have been fpoken.

The feflion of parliament was conciuded on the irth of Auguf, by a feech deliveted by the lord-chancellor, in the name of the king. The fummer pafted away in Great Britain, without producing ary memorable event, and parliament affembled aysin on the ift of January 1793. They were met by the king in perfon, who, is his fpecth from the throne, remarked, that he bad received continued aflurances of pacific difpofitions, from the different powers in Eutope, and congratulated the nation on the bappints it enjoyed, fron the increafing alvantazes of peace.

During the preceding fummer, the eventful career of the French revolution had commenced. To remedy the fate of expreme wraknefs, iuto which the government of France had fallen, in confequence of the public debis, and the embarrafiment of the finances, the king had called wgether the tlates of the kingdom, who had aflumed the title of the national a Membly. Their debates, which were held in public, diffufed extenfively a love of innovation, for the purpofe of teforming their ancient $g$ vernment, and eftablifhing a free conftitution. When the coust became alarmed by the violence of their proceedings, and attempted to fet bounds to their projects, the populace of the capital rofe in arms, and the military refufed to act againt them. The national aflembly proceeded in the dally difcuftion of new plans of change. Ther feized the ecclefitfical property and tithes, refulving to limit the clergy for the future to Atated falaries. They put an end to the monaftic inflitutions. They abolifted the whole order of nobility, and limited the power of the crnwn. Thefe, and other proceedings, which we flall fate in their proper place, could not fail to excite attention inf Britain, and accordinglv allufions to them became not unfrequent in the Britin parliament during the prefent feffion, and general quefions were dehated with more animation, and excited a higher degree of intereft, than they bad done during many years.

The fupplies for the navy and army, having been ftated to the houfe of commons at the fame amount as in the preceding feffion; this circumftance produced, with regard to the armv, fome animadverfions from Mr Marflim and Mr Pulteney, who al'eged, that from the ft te of Europe, our military efiblithment might fafely be reduced. Mr Fox oliferved, that if ever there could be a moment, in which he could be lefs jealous than te: al of an increafe of the army, the grefent was tha: precife momen:. The example of a
 purtions upun handin' armic, :ere enfuentea and chlumnious, and it was now miverfally kina :"n thoun h all Eurnpe, the a man, by becoming a fuldier, did not ceafe to be a citizan. He thought the new furm the govertiment of France was likely to affume, would render her a better neighbour, than when fie swas fubjeet to the intigucs of ambitous and interefted fazelmen. Mr Pitt acknomledged, that the tumultuous fituation of France afforded a profpe? of tranquillity; but he though:, that the opportunity ought to be feized, to raife cur aumy into fuch a flate of refpectability, as woul: leave no hapes to future hoftility. The prefent consulfions of Fiance, he obferved, muft fooner or later $S_{23}$ terminate in general harmony and regular order ; but Mr litt afo he confeffed there was a probability, that while the proves of fortunate arrangements of fuch a fituation might ren-the French der her mote formidable, they would alfo convert her rcoourion into a lefs reftefs neighbour. He hoped, be fhould do nothing wrong as an Englithman, while, as a man, he withed the refloration of the tranquillity of France, though that event appeared to him confiderably diflant. Whencver it arrived, and her inbabitants becamc truly frec, they muft be in polfefion of a freedom refulting from order and good government; they woukdthen ftand forward as one of the molt brilliant powers in Europe, nor could he regatd with envious ejes, an approsimation towards thofe fertiments which were chara\&teriltic of esery Britifl fulject. While Mir Pitt, who had commenced his own political catcer as the champion of political reform, and who, notwithlanding his official fituation, had, upor important occafions, reprefented himelf as not relinquifining his attaclment to his firf popuiar notions, was thus applauding the fift revolutionary movements of the French; his friends accounted themilelves at liberty to adopt fentiments of a different nature, upon the fome fubject. Vifcount Valletort who had moved the addrefs to the king on the firt day of the feffion, expreffed great compaffion on account of the unhappy fase of the king of Frarice, almolt a prifoner in his ors palace, and of the families of diftinction who had found it neceflary to fly to foreign countries, to avoid the unexampled barbaritie which were committed with impunity at home. Colonel Phipps aferted, that the praife beftowed by Mr Fox, upon the conduct of the French military, was a pror compliment to the profelfion in general, and, that if he had wanted a fubject for panegyric, he ought rather to have adverted to the conduct of the Englinh atmy, during the riots of 1780 , when they were noi led by falfe feelings to put themlelves at the head of fchemes of anarchy and crueley.

On the $9^{\text {th }}$ of February, when the vote of Cupply Mr ${ }^{\text {Se }}$. Fk for the army came a fecond time under confideration, hontile 'o Mr Burke resived the fubjeal of the French revolu-the Fre ch tion. He declared himfelf, in decided terms, an ene-revolutions my to the $m$ afures that had lately taken place in that country. He conceived it would be the greatef of all c.lamitice for Britain, if any fet uf mev among us thnul! reprefent the late traif?etions in France as a fit objeat for out imitation. On account of the weaknefs of Prauce, lowever, he condemnet the gre tefefs of our military eflablifhament. He declared, tlat on looking over the peosraphy of this quarter of the world, lie farm a great gap, a valt blank, the faace bither-

Britain. to occupied by France, and which was no longer of any importance.

## Facet ingens littore truncus, <br> Avulfumpue bumeris rapul, el fine nomine corpus.

France, he faid, had at difierent periods been as dangerous to us by her example, as by her hoflility. In the lath age, we hid been in danger of being entang. led, by ber example, in the net of a relentlefs defpotilin. Our prefent danger, from the model of a people, whule character knew no medium, was that of being led, through an admiration of fucceffful fraud and violence, to imitate the exceffes of an irrationial, unprincipled, profcribing, confilcating, plyndering, ferccious, bloody, and tyramical democracy. They had a good political cotiltitution the doy their ftates general affembled in feparate oiders; but this they had deftroyed. They had now no other fyltem, than a determination to deftroy all order, fubvert all arrangement. and reduce every defcription of men to one !evel. He was forry, that a proceeding like this thould be compared to the revolution in England, which neither impaired the monarchy, nor the church; but merely drove away a legal monarch, who was attempting arbitrary power.

Mr Fox expreffed great concern, on account of his dif. fering in opinion from Mr Burke, for whom he avowed the higheft reverence and efteem. He repeated his former opinion upon the fuoject of French aflairs, but decla. red himfelf an enemy of all ahfolute forms of government, whether monarchy, arifocracy, or democracy. Mr Sheridan, in more unqualified terms, thated his difapprobation of Mr Burke's fentimentso He expreffed his furprife, that any man who valued the Britifl government, fhould feel fuch abhorrence of the patriotic proceedings in France. He declared himfelf as ready as Mr Burke to deteft the cruelties which had been committed; but what, faid he, is the friking Iffon, the awful moral, that thefe outrages teach? A deeper abhorrence of that fyftem of defpotic government, that had fo deformed and corrupted human nature, and that by its extortions, dungeons, and torture, prepared beforehand a day of fanguinary vengeance, when the irritated populace fhould poffefs themfelves of power. He complimented individually, the Marquis de la Fayette, M. Bailly, and others of the French patriots. He arowed the hope, that the defpotifm of France would never be reftored; but obferved, that he ought not, on that account, to be confidered as approving a wanton perfecution of the nobility, or ari infult upon royaliy. Mr Buske anfwered Mr Sheridan with indignation. He denied that he was the advocate of defpotifm, but faid that Mr Sheridan had facrificed his friendmip for

## 896

## Conduct of

- M, Pitt. the applaule of clubs and affuciations.

Fox and Sheridan defend the French re. volution.

It is prohable, that by this time Mr Pitt was aware of the difficulty of his fituation, with regard to the French revolution. It was at thet period generally regrarded with approbation in Britsin, as an imitation of that 货irit, by which our anceftors had raifed their country to a career of uncxampled profperity and happinefs. At the fame time, M Pitt muft have known, that the court regarded it in a different light, and that, at no remote period, his ambition and his love of popularity might upon this quallion come to have very different interefts. On the occafion now mentioned,
he undcubicdly faw with fatisfaction, a divifion likely to occur amung thofe who had hitherto been his competitors for populaity, With that happy dexterity in dehate, for which he appears to have been at all times remarkable, he inftantly endeavoured to widen the breach, and to attach to hinself a man of to much popular eloquence as Mr Buske. He declared, that he agreed with him, in almoft every point that he had urged, refpecting the late commotions in France. He drew a comparifon, between the bappy and genuine freedom er joyed by Englifhmen, and the unqualified nominal liberty of France, which was in fact, at the pr: fent moment, the moll abfolute, disect. and intolerable llavery. He faid, he might differ from Mr Burke, in regard to fome particulars, but he trufled they did nut differ in fundamental princijiles. He telt himlelf bound to acknowledge, that the fentiments Mr Burke had that day profelfed, refpecing the Britifla conttitution, filled him with the funcerelt fati-faction; and the manner in which he had pledged himfelf, to mantain it for ever inviolate, encitled him to the gratitude of his fellow citizens at prefent, and of the laeft pofterity.

A new effort was made on the 2 d of March, to pro- Motion eure a repeal of the corporation and teft acts. The repeal the efforts of debate were more animated on this occafion corporatio than formerly. The diffenters had prevailed with Mr Fox to introduce the motion; and the clergy of the church of England, alarmed no doubt by the downfal of the church in France, were anxious to diffufe a fpirit of oppofition to the intended attack upon their privilcges. MrFs reprefented his whole argument as refting upon this principle, that no government has a sight to animadvert upon the feculative opinions of its fubjects, till thefe opinions produce a conduct fubverfive of the public tranquillity. It was faid, he remarked, that certain errors in religion tended to difo turb the public tranquillity; but fusely political etrors mult have this tendency in a greater degree: yet fuch was the abfurdity of our prefent teft laws, that a man who favoured arbitrary power in his fentiments, who Thould confider the abolition of trial by jury as no violation of liberty, and the invafion of the frectom and law of parliament as no infraction of the conftitution, might eafly pave his wav to the finf fituations in the Aate. There was no political teft to bind him; the obligation of all fuch tefts had been juflly exploded by the practice of the country, and what had been the confequence of this? A religinus telt was impofed for a political purpofe. The ohject of this teft had originally been, to exclude aritimonarchical men from civil offices. But, he faid, he would ever ieprobate fuch a procedure; it was acting under falle pretences; its teridency led to hypocrify, and fervid as a refraint onlv upon the confcientious and the honcf.

Mr Pitt fupported, as he had formerly done, the privileges of the eflablifhed church, afferting that though opinions might not be a warrantable ground for criminal accufation, yet lhey might afford a gond reafon for excluding particular individuals from the public fervice, and that to difcover dangetous opinions a tef might be highly expedient.

Mr Burke, faid, that he had abfented himfelf from two former difcuffions of the fubje et, becaufe his mind had not come to any decifion concerning it. He was

## B R I

now completely hoftile to the meafure. Mr Fox had ftated the principles of toleration and perfecution, but abftract principles Mr Burke declared himfelf to have always difliked. Of all abltract principles, however, thofe of natural right, upon which diffenters refted as their ftrong hold, were, in his opinion, the moll idle and the moft dangerous. They fuperfeded fociety, and fnapped afunder all thofe bonds which had for ages conflituted the happinefs of mankind. Mr Burke quoted certain paffages from the writings of Dr Price, Dr Priefley, and other eminent diffenters, from which it appeared, that they were the avowed enemies of the church of England. He adjured the houfe of commons to fuffer the fatal incidents which had attended the church of France, plundered and demolifted in fo difgraceful a manner, to awaken their zeal for our prefent happy and excellent eftablifhment. Mr Fox, in reply, declared himfelf filled with grief and fhame, on account of the fentiments which Mr Burke had on this occafion avowed, but afferted that all the principles he had ftated had formerly received the fanction of his friend. He thought Mr Burke, at prefent, milled by his exquifite fenfibility; his feelings had been fhocked and irritated by a miftaken idea of the tranfactions in France, which were, in reality, nothing more than the calamities, to which every country was unavoidably fubject, at the period of a revolution in its government. however beneficent and falutary. The propofed repeal of the teft and corporation laws was rejected, on a divifion of 294 againft 105 .
99s A few days thereafter, Mir Flood brought forward Mr Hlood 's motion for
2 reform of parliament. motion for the reform of the reprefentation of the people in parliament. Mr Flood propofed to add 100 nembers to the houfe of commons, to be elected by ham oppofed the motion, becaufe the country had profpered under the reprefentation as it ftood, and becaufe innovations were become extremely dangerous. Where, faid he, is the man that would repair his houfe in the hurricane feafon? Mr Fox, on the contrary, declared himfelf as much perfuaded as ever, of the neceffity of reform ; but he thought the majority of the nation of a different opinion, and therefore that the motion ought to be withdrawn. Were not this the cafe, he would confider the motion as extremely feafonable, becaufe no period could be more proper to begin a repair, than when a hurricane was near, and might poffibly burff forth. Mr Pitt confidered the propofal as brought forward at an improper time, and faid he wifted to wait for a more feafonable opportunity, when he would certainly again fubmit his ideas upon the fubject to the confideration of the houfe: By thefe remarks, Mr Flood was induced to withdraw his propofition.
On the 5 th of May, a meflage from the king informed both houfes of parliament of certain acts of hoftility committed by the Spaniards, by feizing three Britih veffers, that had attempted to eftablilh a foreign trade, berween China and Nootka Sound, on the wefl coaft of North America. The Spaniards conecived the whole of that part of the American coaft to be their property, and were the firf to give infurmation of what they had done, and required that Aeps flould be taken by the Britifh government to prevent future encroachments upon that coaft. The Britifh navy was inftantly augmented, and as a war with Spain, unaf-

Yol. IV. Part II.
fifted by France, could not be formidable, the public
Erituin. feemed to regard the approach of hoftilitics with little averfion. But thefe fame circumfances induced the Spaniards, on this occafion, very readily to come to an accommodation.

During the prefent feffion, little progrefs appears to have been made in the trial of Mr Hallings. Buth parties acculed each other, as the authors of the delays that took place. In the mean time, the fubject began to be in fome meafure neglected and forgotten by the
public.

On the roth of June, the king put an end to the feflion, by d feecli from the thronc, and this pasliament was diflulved.

At this peilod, the Auftrian Netherlands werc in a Difurb fate of great agitation. 'The people of the le promances in vinces had, at all times, been gorerned by a feudal the Allconftitution, in which great privileges were enjuyed therlands.

 marked and unanimous approbation of the whole houfe of commans On the following day, the feffion was 903 opened by a fpetch from the throne, in which his ma-Geech.

Pritain. jefty informed parliament, that the differences which had arifen with the court of Spain, were brought to an amicable termination: That a feparate peace had been made between Ruffia and Sweden, in which the Turks were not included, but that, in conjunction with lis allies, his majefty had employed his mediation to negotiate a treaty between Rullia and the Porte: That in like manner he was endeavouring to affift in putteng in end, by negotiation, to the diffenfions in the Netherlauds. It was added, that the peace of India had been interrupted by a war with Tippoo Sultan, fon of the late Hyder Ally; and the fpeech concluded with recommending to parliament a particular attention to the flate of the province of Quebec.

Various debates occurred, which are of little importance in a hifforical point of view, upon the negotiations with Spain, concerning the fur trade at Nootka on the weft coalt of North America, and the expenfive naval armament which had been fitted out to enforce

904
Divifiun among the meribers in eppofition. the claims of Britain.
In the beginning of March ry91, a bill was brought into parliament by $M_{s}$ Pitt, for regulating the government of the province of Canada in North America. This circumftance is chiefly worthy of notice, on account of an altercation to which it gave rife between Mr Burke and Mr Fox. In the laft feffion of the former parliament, Mr Burke had declared his difapprobation of the French revolution, while Mr Sheridan and Mr Fox had exprefied very oppofite fentiments. Mr Pirt laid bold of the opportunity to excite difunion among his antagoniffs, and declared hiwfelf highly fatisfied with $\mathrm{Mr}_{\mathrm{r}}$ Burke's attachment to the Britifh conflitution. Mr Burke had long been engaged in a career of fruitlefs oppofition to the exifing government. During the king's illnefs, in the end of the year 1788 , he at all times expreffed fuch a degree of indecent impatience when any expectation was expreffed in the houfe of commons of his majefty's feeedy recovery, as fufficiently demonfrated how eager he was to obtain poffefion of the emoluments of office. It is probable that the approbation expreffed by Mr Pitt, of Mr Burke's fears from the French revolution, fưgefted a decifive oppofition to the character of that revolution, as a mode of ingratiating himfelf with adminiftration, and that this idea, concurring with his former fentiments, fimu- lated his eager mind to devote his principal attention to this fubje.?. In November 5790 , he publifhed a treatife, in which he endeavoured to vilify the French national affembly, and to hold out the revolution as a fubject of alarm and of deteftation to all Europe. The nyle of copious and popular eloquence in which the book was written, together with the fentiments it con-. tained, produced a great fale of it among the higher orders of fociety. Replies were made to it by Dr Pricfley and othe:s; but that which was moft fuc.. cefforl 1.1 gainisg the attention of the public was, a panabilet publifhed at this time by Thomas Paine, who had formerly, in North America, publifhed a pamphlet entitled "Conmon Senfe," which was extremely prejudicial to the royal caufe throughout the colonies. His prefent work contained a flatement of the facts connesled with the French revolution, together with much fatirical remark upon what he accounted imperfections in the Britith conflitution. He was not equal to his learned antagonilt in copioufnefs of diotion, but
in fhrewoncfs of remark and concife energy of nyle he was far fuperior. Mr Burke's love of literary fame was very great. It had been higbly gratified by the attention paid to his book. He now faw his reputation rudely affaulted by a dangerous rival. His tersper was ruffled, and at the fame time te appears to have wifhed to fird an opportunity of feparating himfelf from his former political affociates. On the 6th of May, when the claufs of the Quebec bill were about to be read in a committee of the whole houfe, paragraph by paragraph, Mr Burke rofe, he faid, to fpeak to the general principle of the bill. He enlarged defark upon the importance of the a whe bil. He enlarged deeferts one tu perform, that of appointing a leginature for a diftant people. He thought the firf confideration ought to be the competency of the houfe to fuch an act. He faid, that by what was called the rights of man, a body of principles lately imported from France, "All men are by nature free, and equal in refpect to rights." If this code were admitted, the power of the Britith legiflature would extend no farther than to call together the inhabitants of Canada to choofe a comlitution for themfelves: rejecting this code, however, which was never pleashed without mifchief, he would aflume the principle, that this country had acquired the right of legiflating for Canada by right of conquelt. The next queftion was, what model was to be followed in innlituting a government for Canada; whether that of America, of France, or of Great Britain, which were the three great modern examples. Hence be took an opportunity to pronounce a vehement invcctive againft the principles and enactments adopted by the Fretich national affembly, in attempting to form a new couftitution. He was called to order by fome of his former fiiends; and an altercation enfued, during which he af. ferted, that a defign was formed in this country by certain perfons againf the conftitution. Mr Fux acrufed Mr Burke of leaving the queliion before the houfe to feek a difference with him, and to fortify millreprefentations of fomething which he had taid in a former debate concening the French revolution. He adhered to his former fentiments in approving the tevolution, though not the new conflitution of France. Mr Burke repeated his attack upun the French revolution. He declared that his friendlhip with Mr Fox was diffolved by that accuried event. Mr Fox, with much apparent agitation, endeavouted to fuften the afperity of Mr Burke, but without efiect. That gentleman had evidently refolved upon the part he was to act ; and this may be confidered as the firt occafion upon which any member of the Britifh legifature reprefented his own conduct as ferioufly influenced, to the extent of being led to defert his former political views and aflociates, in confequence of an alarm uniginating in the example of the French revolution.

During this feflion, the queflion of the flave trade Slavewas again brought forward by Mr Wilberforce, on the trace. 18th of April, in a very cupious fpeech, which he concluded by noving for leave to bring in a bill to prevent the further importation of African negroes into the Britifh colonies. He was fupported by Mr Pitt and Mr Fox. His motion, however, was negatived by a majority of 75. The zeal of the nation upun the fubject, however, had at this time become very great. The evidence which had been led before the houfe of

## $\mathrm{B} R \mathrm{I} \quad\left[\begin{array}{lll}6.3 & ] & \mathrm{B}\end{array} \mathrm{R}\right.$ I

commons, had reprefented this trade as the fource of multitudes of crimes, and of an immenfe mafs of mifery. Confiderable numbers of perfons became not a little ferupulous, cven about the ufe of fugar, a commodity faid to be produced by means of fo much wretchednefs and injuffice. In confequence of fubferiptions 10 a large amount, a company was eftablified with the view of civilizing the natives of Africa, and of cultivating, by the hands of freemen, the Weft India productions in that country. A bill for granting to this company a charter was introduced on the 28 th of March. They lixed their fettlement at Sierra Leone, on the weffern coalt of the central region of Africa; but the ultimate oljee of the undertaking has hitherto made little progrefs.

Oa the 28th of March, a meflage from his majefly announced, that his endeavours, in conjunction with his allits, to effect a pacification between Ruffia and the Turks, not having proved fucceffful, he judged it neceffary to add weight to his reprefentations, by making fome farther augmentation of his naval force. The gueftion in difpute was this: The emprefs of Ruftia had gradually been making progrefs in her attempt, for the fubjugation of the Turkifh provincts in her neighbourhood. After many efforts the had taken Oczakow, a town fituated upon the Black fea, at the minuth of the river Dnieper, and confidered as a fituation, which at a future period might emable her to carry war into the very heart of the Ottoman empire. 'The Turks, being greatly exhaufted, were reduced to the neceflity of purchafing tranquillity at almoit any price; but Pruflia, being alarmed on account of the growing greatnefs of Ruflia, had, in conjunction with Britain and Holland, offered to mediate a peace, with a view to procure the refloration of Oczakow to its former matlers. Ruffia refuled the offer of mediation. She alfo refufed to renew any commercial treaty with Briaan, though fie made one with France, and another with Spain. She even entered into a quadruple alliance with thefe two countries, and with Aufria, for the obvious purpofe of reflraining the influence of Pruffia, Britain, and Holland. Mr Pitt, in the ufual form, moved an addrefs to his majelty in confequence of the ineflage. He faid, that having entered into defenfive alliances, which were admitted to be wife and politic, we ought to adhere to them, and if polfible to prevent any changes in the general flate of affairs, which might render them nugatory. Pruffia was our ally; any event therefore which might affect that power, and diminifl its influence on the continent, would be irjurious to ourfelves, as far as our mutual interefls were united. The progrefs of the Ruffian arms againft the Porte gave fufficient caufe for alatm; fur fhould fuccefs ftill attend them, and the power of the Porte be fartber humbled by its afpiring rival, Pruffia would inflantly feel it; and not Pruffia alone, but all Europe, which might prove in danger of being flaken to its very foundation.

Mr Fox expreffed his conviction, on the contrary, that Pruffia could not be endangered by any progrefs which the Kuftian arms might make in Turkey. An alliance with Ruffia appeared to hin the moft natural and moft advant?geous which we could poffibly form. The addrefs was carried by a majority of 228 againft 235. Oppolition finding themfelves upon this occafion
fupported by greater numbers than wifal, and that a war with Kuffa was unpmpular throughout the ration, brought forward the queftion repeatedly for difeuftion. 'The refult was, that adminiftration, finding the curreas' of public opinion to run againft them, deferted thcir pretenfions, and refufed to fupport Prufia in attempting to fet bounds to the ambition of the Rufiant.

On confidering the fatc of Europe ht the time, we ap. General prehend that adminiftration were gruided, in their jea-fate of Euloufy of Ruffis, by the maxims which intluenced the rope. politics of Great Britain during thee beft periods of its hiflory. The Spanifl monarchy had long been in aftate of fuch debility as rendered it of little weight or importance on the continent of Eurnpe. France likewife, during a confiderable number of years, had fuffered her armies to decline, and had fallen by a fort of family compact under the influerice of Auflia. In confequence of the revolution, or rather of the weaknefs which preceded it, her capacity of interfering in foreign a!. fairs had been utterly lott. In the mean time, Aultria and Ruffia, relinquilhing all rivallhip, had of late years entered into a clofe combination, and acted in fubferviency to each others ambition. 'To preferve againt thefe two great military empires lome tolerable balance of power on the continent of Europe, it became abfolutely neecflary that Great Britain and Holland fhould join their whole Atrength to that of Piuffis and Sweden, and that thefe thould protect the Turks, merely for the purpole of preventing the further aggrandifement of the two great and warlike powers of Rufia and Auftria. Piufia at this time had farther endeavoured to fortify herfelf againf Ruffia, by encouraging an attempt made by the king, and fome of the patriotic nobles of Poland, to reform the fovernment of that ill-fated country, by abolifhing the feudal anarchy, rendering the throne hereditary, and eftablifhing a conflitution formed in imitation of that of Great Britain. The Britifh miniffy, however, finding a war with Rufia unlikely to prove popular, and that it was difliked by many of their friends in parliament, con. fented that Great Britain fhould relinquilh, on this occafon, the prout office of holding the balance of the continent, for which the had on former occafions fo lavilhly facrificed her blood and her wealth. The confequences of this defertion \{peedily appeared. Pruffia was under the neceffity of joining Ruffia and Autria in their fchemes of agyrandifement, at the expence of the weaker powers, that the might frengthen herfelf by a hare of the fpoil. How far the Britifl adminiftration acted with magnanimity in deferting what they accounted their duty, in compliance with the apparent wifl of the nation, is a queltion which was never difeuffed; becaufe the confequences of Great Biitain deferting its ufual political flation at this time were foon overlooked and forgotton, amidf the great events which fpcedily occurred to alter the relative force of the flates of Europe. But the impartiol voice of hiflory will probably hereafter record the event now alluded to in a manner little to the credit either of the people, or of the political partics, of Great Britain. During the preceding year, the public had no objection to a Spaniih war, becaufe plunder was to be won, while no danger was to be apprehended. They now difliked a war with Ruffia, in which nothing could be gained, while trade might be interrupted. From the

## B R I

Eritain. love of popularity, and the habit of refifling all the projects of adminiftration, oppofition at this time encouraged the pufillanimity of their countrymen, which foon coft Europe and Britain very dear; while the members of adminiftration, from the fear of lofing their places, fuffered their country to be degraded from its rank and influence in the fcale of Europe, and prepared the way for the partition of Poland, the projected partition of France, the war uf the revolution by which that project was refilted, and the immeafurable aggrandifement of that power which foon proved fo dangerous to Europe and to Britain.
An unfucceffful effort was made during this feflion of parliamont by Sir Gilbert Elliot, to procure for the mombers of the church of Scotland, an exemption fiom the tef act. The general arguments employed in favour of the application were nearly the fame with thofe formerly flated in fupport of a repeal of that flatute; and it was added, that, by the trcaty of union, the fub. jects of both countries were to have a free communication of right throughout the whole united empire, which the members of the Scotih Prefbyterian church could not enjoy while the Englifh teft act remained in force. To this it was replited, that it was certainly known to the Scotch, previous to the treaty of union, that the teft act exilted, as appears by their own debates on the fubject. This being the cafe, being fully aware of it, and voluntarily agreeing to the union notwithftanding its exiftence, any attempt to get rid of it at prefent was a kind of chicane which would never be countenanced in private conduct. The motion was rejected by a majority of 87 .
${ }_{21}^{213}$
Reliet of
protefting Catholes.

A pait of the body of the Roman Catholics in England were more fortunate, during the prefent feffion, in obtaining relief from certain penal flatutes. As the Romifh church was the great object both of political and religious terror in the firft Itages of the reformation in Europe, the Englinh flatute book was loaded with the moft rigorous edicts againt the profeflors of that obnoxious faith. Though in the year 1780 , fome of thefe were removed; yet in the year i791, in a well-known book, Burn's Ecclefiaftical Law, not lefs than 70 pages were to be found occupitd with the enumeration of the penal flatutes in force againf the Roman $C_{t}$ tholics. Among thofe were fome of the moft fanguinary nature. It was high treafon and death to make a convert to the Roman Catholic faith; fevere penalties were enacted againe Papifts for hearing mafs by fome flatutes, and by others they were compelled to attend the eftablifted worfhip, however contrary to their confciences. A reform in the penal flatutes was now more obvioufly reafonable, fince, in the year 1790, a body of Catholic diffenters had formally protefted againt the temporal power of the pope, and againft his aflumed authonity to releafe men from their civil obligations, or to difpenfe with the facrednefs of oaths. Mr Miltord brought forward a bill to relieve thefe protefing Catholic, from the penalties and difabilities so which perlons piofefling the Popifh religion were by law fubjetl. The bill paffed unanimoully, excepting that Mr Fox wiffied to extend it not merely to protefling, but to all Roman Catholics, upon this principle, that in his apprethenfion the fate has no right to inquire into the opinions of the people either political or seligious, but only to take cognizance of their actions.

This fentiment was oppofed by Mr Burke, who faid that opinions might influence the human paffions, and that the pafions govern the man; that it was therefore the duty of the fate to watch over the opinions of the people: but in this cafe, he obferved, there was no danger from the pope; it was not by him that the Americans were abfolved from their allegiance, nor had his interference produced any of the late revolutions in Europe.

The war uhich was now carrying on in India was 914 the caufe of fome debates during the prefent feflion.dia. Like all other wars in that quarter of the globe, it was undertaken, on our part, for the purpofe of aggrandifement, and on the part of our antagonift, from a jealoufy of the Britifh power. The oftenfible caule of its oftenfithe war, however, was this. The Dutch had long ble caufe. been in poffeflion of two forts, called Cranganore and Faccotah, upon the frontier of Hyder Ally's kingdom of Myfore. In the year 1780, Hydcr feized and garrifoned thefe forts, under the preterice that they belonged to a vaffal of his. Having fpeedily thereafter joined the Dutch and French againft the Britifh, the forts were given up to the Dutch; but in ${ }_{17}{ }^{8} 9$ Tippoo again claimed the forts. The Dutch, dreading his power, fold the forts to the rajah of Travancore, a vaffal or ally of the Britifh. 'lippoo, refenting this mode of evading his claim, made war upon Travancore ; but as the rajah had made his purchafe under fecret infructions from the Britifh government in India, he was defended by them. Thus the war was faid, of our part, to have been made in defence of the juft rights of our ally, the rajah of Travancore; while, on the other hand, it was contended that this was nothing more than an attempt made to fubdue the monarch of Myfore, and extend our eaftern empire, at a time when the power of France was atinihilated, and our own forces in great frength in that quarter.

916
In the trial of Mr Hafings little progrefs was made Trial of during the prefert feffion. As parliament had been Mr Hafdiffolved duing the dependance of the trial, a queftion ${ }^{\text {lings. }}$ occurred, whether that circumflance did not put an end to the impeachment. The friends of Mr Haftings adopted the affirmative fide of the queftion. They were fupported by Mr Erikine and the attorney and folicitor general, M•Donald and Scott ; while Mr Pitt, Mr Burke, and Mr Fox, contended, that a difflution had no effect upor an impeachment. The argument, from expediency, feemed to be upon their fide; as, if the houfe of commons were not to be held a permanent body, every judicial procteding of this kind would be futject to interruption from the prerogative of the crown. It was carried in the houfe of commons, that the impeachment was ftill depending, or, in the language of the lawyers, that it' did not abate by a diffolution of parliament. The fame decifion was adopted by a majority of the houfe of lords, on the 16th day of May; and the feffion of parliament was concluded on the 10 th of June.

As the avoused purpofe of the firt leaders of the Early ${ }^{917}$ revolution which had recently occurred in France, waslarty of the ellablifhment of a lyllem of political frecdom, or the freneb of a reprefentative government, with a hereditary revolution monarch at its head, and as one of the conficquences which they expected to follow from the eftablifliment

## $B \begin{array}{lll}\mathrm{B} & {\left[\begin{array}{lll}6 & 67 & \mathrm{~B}\end{array}\right] \quad \mathrm{R} \text { I }}\end{array}$

Britain. of the new fyftem, was the compicte abolition of wars, which, unmindful of the gencral temper and riolent paffions of men, they afcribed entirely to the ambition of kinge, the progrefs of the revelution was regarded with much favour by perfons of a fpeculative character in Great Britain. The reform of the Ruman Catbolic church, though it alarmed the Euglifl clergy, was favourably regarded by the Englifl dillenters, and the abolition of titles of honour was not difliked in a country where they are only enjoved by a few individuals, and are chiefly valued, not for themfelves, but on account of the privilege of hereditary legifation, by which they are accompanicd. The Englift alfo had at all times been accuftomed to boaft of their own political freedom, and of their fuperiority in this refpect over their Fsench neighbours. When the populace of Paris rofe in arms, when the military refufed to ast againft them, and the flate prifon or fortrefs of the Baftile was taken and demolithed, perfons fond of political fpeculation in Great Britain regarded with applaule, as an imitation of the efforts of our own anceftors, the attempts made by the French to Thake off their ancient defpotic government, and to renovate the ordcr of fociety. "Though the Britilh public at large had not yet given much attention to the fubject, yet, of the curious and the idle, a fufficient number had done fo to form parties who commemorated the $14^{\text {th }}$ of July, the day on which the Battile was taken, by convivial meetings in taverns in many of the moft confiderable towns throughout the illand. Thefe meetings were, on the whole, underftood to be rather unfavourably regarded by that defcription of perfons who are moft attached to the monarchical part of our conftitution, but no public expreftion of difapprobation had hitherto appeared. One of thefe feltive meetings was to have been held at Birmingham on Thurfday the 14 th of July i791, but on the preceding Monday, Some copies were left in a public houle, by a perfon urknown, of a hand-bill of a moft inflimmatory nature, which reprefented the late tranfactions in France as proper to, be imitated in England. The contents of this hand-bill, having been generally circulated, produced much converfation in the town, and the magiftrates offered a reward of 100 guineas for difcovering the author, printer, or publifter of it. In the mean time, the friends of the intended meeting thought it neceffary to difclaim the fentiments contained in the feditious hand-bill; but finding their views mi'reprefented, they at one time refolved that the meeting flould not take place. Another determination was afterwards afopted, and the company affembled to the amount of 80 in number. The houfe was foon furrounded by a tumultuous mob, who expreffed their difapprobation hy hiffes and groans, and by the thout of "church and king;" which became the watchword on this occafion, upon which the meeting immediately difperfed. In the evening of the fame day, the mob attacked and burned an unitarian meeting-houfe helonging to the congregation of the celebrated Dr Jofeph Prieftev, a man, who at that time, as an experimental philofopher, and a voluminous but moft ingenious and original writer upon a great variety of fpeculative fubiests, might be confidered as at the bead of Englift literature. Dr Prieftley himfelf had not been prefent at the convivial affembly above men-
tioned; at half-paft nine at night, however, he was under the neceffity of fuddenly efcaping with his fsmily from his own houfe, which was attacked by the mob. The whole of his library, his valuable philofophical apparatus, and his manufcripts and papers, were deffroyed. The magiffrates were accufed of having at firf favoured and given encoutagement to the mob, whufe fury they afterwards found it impolfible to refift. Duing three fucceeding days they deftroyed fome other mecting-houfes, together with the dwellinghoufes of feveral cininent diffenters in the neighbourhuod. It was not till Sunday night that fome parties of light dragoons arrived in Birmingham ; and the firt days of the week were fpent in fcouring the country, to clear it of the parties of rioters, who, in different directions, attacked the houfes of diffenters. Five of the rioters were tried at Worcefter, and one was convicted and esecuted. At Warwick twelve were tried, and four were convicted of burning and deftroying houfes; three were executed, and one was reprieved upon the application of the magiftrates, as it appeared that his interference in the riot was accidental, and that he had only made an opening into a houfe to let out a body of fnoke by which a party of the rioters were about to be fuffocated from fire of their own raifing.

At this time a foundation was laid on the European Remarks ${ }_{9}^{919}$ continent for the molt important political changes, on the ftatc The various nations of Europe had for fome centuries of Europe. owed their independence to the mutual jealoufies which they entertained. Many petty flates were altogether unable to contend in war againft their powerful neighbours; but they were fafe, becaufe thefe neighbours were held in check by other great powers, who would not permit their aggrandifement. When any one nation became dangerous by its ambition, the combination of a number of other flates reprefled its progrefs. In this way the Spanifh, and afterwards the French monarchies were retained within bounds. During the late century a new power, that of Ruflia, had become formidable in Europe, and its rulers contrived rather to undermine than to overthrow that balance of Arength to which the leffer flates of Europe had owed their fafety. A former Ruflian emprefs had entered into clofe ties of amity with the emprefs queen of Hungary, or head of the houfe of Auftric. This union had nearly proved fatal to the Pruffian monarchy, notwithflanding the talents of the great Frederick. The houfe of Auftria ${ }_{2}$ finding the advantage of fuch an alliance, attempted, at the fame time, to attach itfelf to France, its ancient hereditary enemy, by the marriage of the archduchefs Maria Antonietta to the dauphin. This marriage had fully produced its intended political effects. The French court, relinquifting its former policy of humbling Auftria, fuffered its armies to decay, and allowed itfelf to be led on all occafions by this more active power. The French revolution, which fo effentially altered the whole government of the ftate and order of fociety, by fubverting every cxifting eftablifhment, and exciting jealoufies and difcontent in every guarter, brought the nation, - in the eyes of foreign powers, into a thate of utter debility. The king and royal family had been expofed to endlefs infules and humiliations, and compelled to fubmit to a new conftitution, which placed the royal authority on a

## B R I

fritain. very precarious footing. The principal nobility had emigrated. The king himfelf had attempted to do the lame, but was feized, and brought back as a fugitive, and reluctantly placed at the head of a form of government of which he difapproved.

In this ftate of affairs the two great military powers, Ruffia and Aultria, acting in conjunction, faw nothing to reffif their ambition. They had recently wifhed to divide the beft provinces of the Turkith empire between them. The Auftrians had met with unexpected refiftance, and defifted from the attempt. The Ruflians, on their fide, were more fucceffful. The king of Pruffia, with the aid of Britain and Holland, had attempted to reftrain the progrefs of Ruffia; but being deferted by Britain, he now found it neceffary to be upon good terms with that power, and with Aufiria; and for that purpofe, as well as to avoid being left behind in the career of ufurpation and aggrandifement, to enter into all their ambitious fchemes.

Poland and France were, at this time, two of the weakelt fates in Europe. We have faid, that for the fake of erecting a barrier to his own flates, the Pruftian monarch had encouraged the king and the leading
nobles of Poland to form for their country a new political conffitution, by which its government might be ftrengthened; but Ruffia and Auftria had caft their eyes upon this country, with a view (in imitation of what they had done in 1772) to feize its beft provinces, and the king of Pruflia now found it neceffary to acquiefce in this project. The fate of France at this period held out great temptations to the formation of a fimilar project with regard to it. Leopold, emperor of Germary. in confequence of the ties of affinity, had a fair excufe for interfering in French affairs, to refcue the king from the fate of thraldom into which he had evidently been brought by his fubjects. At the fame time, the other pritices of Europe were become jealous of the example fet by France, of limiting the authority of a monarch, of deftroying the privileges of the nobility, and reducing to a level all claffes of perfons in the fiate. It therefore now formed a part of the plan of the united powers of the north to reflore the French king and his nobles; but at the farne time it was determined, to divide among themfelves or their allies a patt of the provirices of France. Thele points were

Bearn. The Swifs cantons, if they acceded to the Britain coalition, were likewife to receive certain territories. This treaty was publicly difavowed, tut at the lame time, it was univerfally talked of and believed throughout Europe, under the appellation of the concert of Princes.

9:2
The Britifi parliament affembled on the 3 Ift of Parlament January 1792. A variety of uninterefting debates oc- allenuled. curred, the principal of which related to the armament which had taken place on account of the difpute with Ruffia concerning Oczakow. As miniffry had adopted mild meafures, oppofition endeavoured to triumph over them, in confequence of their own fuccefsful refifiance to the intended interference in continental affairs. Adminiftration chiefly refled their defonce upon the importance of preferving the balance of power on the continent. As France had now totally furk into infignificance, they contended, that the only power now to be dreaded was Ruffia, which had fhowed a hoftile fpirit againft Great Britain, and could only be refitted by adhering to Prufia, and protecting the Turkilh empire.

During the preceding auturnn, the fecond fon of Duke of the king, the duke of York, had married a daughter of the king of Pruffia. This prince was known to be a favourite fon; and as the marriage was underftood to have been contracted, not as a political engine like the ufual marriages of princes, but from the private choice of the parties, it gave mucl fatisfaction to the public in Britain. The dowry of the princefs a mounted 1022,000 . a fum which, in the wealthy nation of Great Britain, was confidered as unworthy of notice in the folemn treaty entered into between the Britilh and Pruffian monarchs on this occafion. A provifion of 37,000 l. per annum was readily made by parliament for the parties.

On the ${ }^{5}{ }^{7}$ th of February, Mr Pitt brought for- Taxes be ward a ftatement of the public revene frogh for- Taxes be ward a fatement of the public revenue, from which it appeared, that about 400,000 . might te applied towards the extinction of taxes, or the payment of the national debt. He propofed, therefore, to remove an additional tax which had recently been impofed upon malt, together with the taxes on female fervants, on carts and waggons, and on houfes under feven windows, and a part of the duty on candles. The repeal of thefe taxes would, he faid, diminifh the revenue to the extent of 222,000 . and the other 200,000 l. he propofed to apply to the reduction of the national debt. Mr Pitt concluded by giving a moof flattering (natement of the profperity and happy profpects of the country, declaring, however, that thefe profpects were connefted with peace abroad and tranquillity at home, of any intefruption to which he appeared to entertain no doubt.

On the 2d of April, the queftion of the Africanslave-flave-trade was again brought under the confiderationtrads. of the houfe of commons by Mr Wilberforce. He difclaimed any project of immediately emancipating the negroes, whom he admitted to be in a tlate unfit to receive the enjuyment of freedom ; but he contendcd, that, by the immediate abolition of the importation of new llaves, the flate of thofe in the Welt Indies would be improved, by the neceffity under which the planters would he brought of treating them well, that they might produce families to fupport the population adjufted towards the clofe of the fummer 1791, at a meeting which took place at Pilnitz in Saxony between the emperor Leopold and the king of Pruffia. The treaty was intended to be kept, fecret; but it fpeedily tranfpired, and was afterwards, by the jealoufy which it excited in the French nation, the caufe of fome important events. Its general object is undicrflood to have been the partition of Poland, and of a part of Fiance. Poland was to be divided among the three great militaty powers in different proportions. With regard to Frarice, the emperor way to obtain Baratia: in exchange for which he was to comquer the French Nctherlands, and give them, alcng with the Auftrian Netlicrlands, to the elector of Bavaria. The archduke Charles was to obtain the duchy of Lorrain. Straburgh and Alface were to be refored to the empire. The king of Sardinia was to receive Dauphiny, if he accedcd to the coalition. Spain was to rereive, on the fame condition, the lirench part of the inand of $S$ : Domingo, with Corfica and Roufllon, and

## B R I

## $B \quad R \quad I$

Bitain. of the iflonds. From the evidence which had been led before the houfe of commons, Mr Wilberforce Hated varions inftances of extreme barbarity on the part of the traders in flaves, together with the lofs of feamen as well as of negroes, occafioned by the unhealthy ftate into which the latter fall in confequence of their captivity and expatriation. The flavetrade was defended on this occation by Colonel Tar'eton and Mr Jenkinfon, on the general principle of its having received the fanctivn of parliament, and that an immenfe yearly lofs would fall on the manufacturers and hipbuilders of this country in confequence of its abolition. Mr Willberforce was fupported by Mr Montague, Mr Whitbread, and Mr Milbank. Mr Dundas profeffed himfelf a friend to the abolition of the flave-trade, and that he only entertained doubts with refpeet to the mode of effecting it. He thought the African trade not founded in policy, and agreed, that the continuatiun of it was not eflential to the Welt ludia illands, where he thonght, that without it, the human race might not only be maintained but increafed; but he doubted of the propriety of a direct abolition of the trade. He propofed to accomolifh the object by regulations tending to promote the increafe of the negroes in the Weft Indies, and gradually to put an end to hereditary flavery. Mr Addington agreed in opinion with Mr Dundas. He thought the trade ought to exif for fome yeats longer, and therefore could no: vote for an immediate abolition; but he propofed certain regulations for giving grants of land or inoney to thofe who thould rear a certain number of children, to inititute premiums for the invention of inftruments of agriculture; and that the importation of males fthould be fubject to a heavier duty than that of females, to promote the population of the iflands, to which he thought the trade fill neceffary.

Mr Fox deprecated, upon this fubject, in חrong terms every kin! of deception or delution upon the country. He faid be neither felt, nor wilhed to feel, any thing like moderation on the queflion. Regula. tions would be as difgraceful as they would be impo. tent. He reprobated, in particular, Mr Addingtoris propofed premium for the tratifportation, that is, for the kidnapping, of females. He faid, he ftould like to fee the claufe by which this inhuman meafure was to be prefented to the parliament of England, or the man capable of conceiving words in which it hould be framed. Laft feffion, faid Mr Fox, we were cajoled, and taught to believe, that fomething would be early brought forward. Have we not paffed a year, and nothing has been done? Are we fill to be deluded and betrayed? Why were we not at an earlier period entertained by the propofition for a gradual abolition? Mr Dundas having moved, as an amendment of Mr Wilberforce's motion, that the trade fhould be abolifted "gradually," Mr Pitt declared his diGapprobation of the amendment. He lamented the ftate of babbarifm in which the wretched Africans were plunged in confequence of the trade; and repeated certain calculations which be had produced in the former fellion, to how, that the population of the iflands might be fup. ported without any fupply from Africa. The wotion for a gradual abolition was carsied by a majority of 68.

Qu the $23^{d}$ of April, Mr Dundas thated the regulations which he meant to propofe, towards accomplifhing, the abolition of the trade; thefe confifted chiefly of ancrealing the duties upon the age of the nogroes im. ported; of abolilhing the trade, fo far as not intended for the fupply of our own illands; of limiting the tonnage to be employed in it ; and, of punifhing Brition fabjects, guiley of crimes in the conduct of it. He propofed, that the importation of negroes into the Britifh colonies, thould ceale ors the Ift of January 1800 . Mr Wilberforce difclaimed all acquiefcence in thefe propofitions; and Mr Fox ridiculed them, by afking where was the baptifmal regifter kcpt on the coaft of Africa, to afcertain the age of thofe who were to be exported. Lord Mornington moved, that the abolition fhould take place on the ift of January 1793, exprefling his fatisfaction, that the great blow to the flavetrade was Itruck, but alleging, that it admitted of no modification, as we could not modify injultice, and could not carry on a trade which we bad condemned as inhuman. Lord Mornington's amendment, however, was rejected by a majority of 49. On a future day, he altered the period of abolition to the ifl of January 1795, and at laft confented that it thould be fixed for the ift of January 1796 , and this amendment was carried by a majority of 40. On the if of May, a feries of refolutions, fimilar on the whole to thofe propofed by Mr Dundas, were prefented to the houfe of commons by Mr Pitt. In the upper houfe, the advocate, for the abolition were lefs fucceffful; and they were not a little provoked, on finding one of the younger branches of the royal family, the duke of Clarence, declating himfelf decidedly hoflile to their wifhes, in what they accounted a quellion of humanity. On the 8th of May, the fubject came forward upon a quellion of form, regarding the expediency of hearing evidence at the bar of the house, or before a committee. The friends of the abolition, Lord Grenville, the bilhop of London, Lord Purchefter, Earl Stanhope, and Lord Rawdon, defired defpatch, and therefore urged the neceffity of a committee; but the duke of Clarence, the lord-chancellor, Lord Stormont, Lord Hawkefury, and the bilhop of St David's, pleaded with fuccefs, for hearing evidence at the bar. Evidence was accordingly ordered to be heard at the bar, which neceflarily pro duced delay, and little progrefs was made during the feffion.

On the 18 th of April, Mr Sheridan moved for an Scotch inquiry into the grievances, of which the royal bo-borougis roughs of Scotland had complained by petition. Of ${ }^{\text {leform. }}$ 66 royal boronghs, 50 conclired in the complaint, which Mr Sheridan now fupported. The petitions complained of the mifmanagement of the revenues of the boroughs by their magifrates, who were feif-ele Eted, that is, elected their own fucceffors, and, at the fame time, could not be called to account before any court of law. The remedy propofed by Mr Sheridan for the abufes, confited of abolifting the felf.electing power of the magiffratec, and of extending the right of election. Alluding to the fubject of the French revolution, he faid, that by afiuring us of tranquillity abroad, it aftorded leifure to look into abufes at home, and that the leffon which that event ought to afford, was this, that a rational and fober reformation of abufes, in a feafon of tranquillity, was the beft way of avoiding

[^28]

$\qquad$

## B R I <br> [ 640 ] <br> B R I

Britain, the evils of a reform accomplified by violence. The motiou was refilted by Mr Anfruther, Mr Dundas, and Sir J. St Clair Erfkine, upon the general ground that no frious grievance exilled, and the inquiry was refufed by a majority of 69 againft 27 .

Excepting fome dubetes relative to the French revolution, nothing farther of importance occurred during the prefent feffion: and that we may not afterwards have occafinn to interrupt our detail of the tranfacions dia. connected with this interefling event, we flall here take notice of the war which had for forne time been going or in India, and which was now brought to a fortunate termination. The weftern fide of the peninfula of Hindoftan confifts of a level country for about 70 miles inwards. At the back of this level tract of territory, and parallel to the ocean, suns a chain of lofty mountains, whofe front is abruptly broken towards the weft, forming tremendous precipices, but which on the other fide confift of an extenfive plain, gradually defcending eaftward to the bay of Bengal, and forming the territory of the Mahrattas, Myfore, Madras, the Carnatic, and other ftates included within that great peninfula. Tippoo poffeffed territory on both fides of thefe mountains, which are denominated ghauts (pafles), from the narrow paths or pafles, by which they are afcended. The Britifh Carnatic army, under General Meadows, was directed to attack the territories of Tippoo from the eaft; while the Bombay army, under General Abercromby, was to reduce the country to the weftward of the Ghauts. The Mahrattas, and the nizam of the Decan, agreed to attack Tippoo's country from the north and northeaft, where it touched their own territories; and Seringapatam his capital was fixed upon, as the point towards which the whole of the hoftile armies were to direct their efforts.

On the 15th of June 1790, General Meadows entered Tippoo's country. The grand army on this occafion amounted to 14,000 effective men, a body of European troops which no power in India could encounter in the field, on account of the fuperiority poffeffed by men of the race of Europe, over the timid and fuperfitious natives of that enfeebling climate. A variety of operations occurred, which are unintereftang in detail, on account of the want of equality between the contending parties. Little, however, appears to have been accomplithed towards the fubjugation of the enemy (excepting the capture of the country to the weftward of the Ghauts by General Abercromby) till the end of Februaty 1791, when Lord Cornwallis, having affumed the command in perfon, pruceeded againft Bangalore, which he reached on the 5 th of March. A breach being made in the walls by means of four batteries, the fort was formed on the 2 Ift , with little lofs to the Britifl. Of the garrifon not lefs than 1000 were maffacred with the bayonet, and a fmall number were taken. Earl Cornwallis being joined by above 14.000 of the nizam's troups, and 702 Europeans, with 4580 troops under Colonel Oldham, proceeded againt Seringapatam, in the neighbourhood of which he arrived on the 13 th of May, af-

## Tippoo re

 treats into bis capitalter a difficult march in bad weather over a billy and barren country. Tippoo now food an engapement, in which, thouglı he was beaten, he fuffered little lofs; but he was under the neceffity of retiring into kis
capital, which being defended by a river, which at Britnin. this feafon was fwelled with rains, afforded him protection. Lord Cornwallis finding bimfelf deftitute of provifions to fupport his army during a protracted fiege, and General Abercromby not having been able to join him from the weft, he judged it prudent to return to Bangalore, after deftroying his battering ar-Lord 930 tillery. On his retreat he was joined by the Mahrat-wallis retas, to the number of 30,000 . General Abercromby, ${ }^{\text {tires. }}$ in the mean time, retired acrofs the Ghauts to the weftward, with a fatigued and difpirited army, and thus for the prefent Tippoo efcaped the neceffity of flanding a fiege in his capital.

After his retreat, Lord Cornwallis employed himfelf for fome time in reducing various fmaller forts in the neighbourhood of Bangalore. Some of thefe are Strong io defcribed as of fuch prodigious natural ftrength, as reduced. would render them, in any other hands than thofe of the feeble natives of that country, abfolutely impreg. nable. Nundydroog is defcribed as built on the fummit of a mountain 1700 feet in height, three-fourths of which are abfolutely inacceflible. After a fiege, from the 22 d of September to the 18 th of OEtober, a breach was made, and the place was affaulted at midnight, and taken, though not by furprife. In confequence of the efforts of Captain Robertfon, little blood was fhed upon this occafion. The fortrefs of Savendroog, 18 miles to the weft of Bangalore, is defcribed as ftill more ftrongly fituated. It flands on the fummit of a vaft mountain or rock, which rifes half a mile in perpendicular height, from a table or bafe of eight or tert miles in circumference. At its fummit it is divided into two hills, which have each their peculiar defences, and are capable of being maintained judependent of the lower works. The whole mountain is furrounded by a ftrong wall, and in every accefible part crofs walls and barriers are erected; yet this flupendous fortrefs was taken in ten days.

In December, General Abercromby once more croffed the Ghauts, and proceeded eaftward towards the Mayfore country, while Lord Cornwallis, in the beginning of February 1792, adranced from Bangalore. He arrived on the 5 th within fight of Seringapatam, under the walls of which Tippoo Sultan was pofted to receive him. On the 6th of February, at sering2 eight o'clock in the evening, the Britifl made an at-tam betack on Tippoo's camp. After an engagement in dif- fieged. ferent points, fome parties of the Britith crofled the siver, and pofted themfelves upon the illand on which the city of Seringapatam fiands. Being thus preffed by the invaders in every quarter, his palace and beautiful gardens in their poffelfion, and his power reduced within the narrow limits of a fortrefs, Tippoo found it neceflary to endeavour to purchafe peace upon almoft any terms. With this view he releafed two prifoners, lieutemants Chalmers and Nafh , and requefted the former of thefe gentlemen to prefent a letter from him to Lord Coruwallis. The nperations of the fiege, however, fill continued to go on; and, on the 19th of February, the trencbes were opened, while the Bombay army, under General Abercromby, invefted the weftern fide of the capital. But a ceffation of hollilities was agreed upon on the 23 d of February. By the treaty of peace, concluded on this occafion, it prace wit was 部ulated: 117, That Tippoo was to cede one half tippoo.

Britain.
of his dominions to the allied Britifl and Indian powers; 2dly, That he was to pay three crores, and 30 lacks of rupees; 3 dly, That all prifoners were to be reflured ; ithly, That two of the fultan's three eldeft fons were to become hoftages for the due performance of the treaty. On the 26th, the two princes, each mounted un an elephant, richly caparifoned, proceeded from the fort to Lord Cornwallis's camp, where they were received by his lordfhip with his flaff. The eldeft, Ablul Kallich, was about ten, the youngef, Mooza-ud-deen, about eight, years of age. The princes were drefled in long white muflin gowns with red turbans, richly adurned with pearls. Educated from infancy with the utmof care, the fpectators were aftonifted to behold in thefe children all the referve, the politenefs, and attention, of maturer years. The kindnefs with which they were received by the Britift commander, appeared to afford them vifible fatisfaction. Some prefents were exchanged on both fides; and the fcene is defcribed by an eye witnefs, Major Dirom, as higlly interefling. It was the 19th of March before the defnitive treaty was finally adjufted, and delivered by the young princes into the hands of Lord Cornwallis.

In the meanirhile, the nations of Europe were haftening faft into fcenes of unparalleled importance and activity. Thefe arofe from two caufes, the ambition of the great military powers of Europe, and the French revolution. When, by a corruption of that policy which had once produced a vigilant attention to what was called the balance of power, Ruffia and Aufriz had formed, as already mentioned, the new project of extending their dominions, not by contending in arms, as had been the cuftom of former ages, againft nations of equal Atrength, but by amicably dividing the weaker ftates; and Prulfia, not to be left behind in the career of aggrandifement, found it neceflary to concur in their policy; it became evident that the fituation of Europe muft fpeedily undergo great changes: and there was reafon to fear that the mildnefs of government, which in fome meafure had arifen from the facility of emigration, and of obtaining protection in neighbouring fates, might come to an end. The French revomonarchy to a Atate of complete debility, feemed to afford an opportunity to the remaining great powers to extend their fyltem of ambition, by enabling them to regard its ample and fertile territories as a farther fubject of partition.

In another point of view, however, this revolution had now begun to appear an object of no fmall jeaIouly and alarm. The diftinguiked place which France holds among the nations of Eurnpe, rendered the late change of her government an ohject of univerfal attention; and it now began to be leriounly feared as an object of imitation. The public difcuffions which took place in her national affemblies, and in printed publications, were conveyed, through the medium of a language a!noft univerfally underfood, to the mot obfcure corners of Eunope; and kings, nobles, and priens, became apprehenfive, that the contagion of innovation might not terminate in the country in which it had begun. Hence a general winh exifted among thefe ruling claffes of fociety, that an cffort thould be made to overwhelm, before it fhculd be too late,

Vos. IV. Part II.

334
Caules of impending changes in Europe.
that country, from which to much danger to eftablitlled governments feemed to originate. It is fill perhaps too early, even for the moll enlightened and unimpafioned mind, fo far to elevate itfelf above the current of events, as to be enabled to take a clear view of the philofophical hiftory of modern Europe; and more efpecially of that great convulfion, which now began to be the hinge of all the changes that occurred in this, and even in other parts of the globe. It is to be remarked, however, that, during fix cen. turies, the condition of the human race had, in Eu- i rope, been in a flate of rapid and obvious amelioration. This quarter of the globe was at one time governed by a barbarous military ariflocracy, that held agriculture and every uleful ars in contempt; or by a wealthy and numerous, but illiterate and licentious priefthood; whule the body of the people remained in an enlaved condition. By the efforts of various princes the nobles were gradually fubdued. The dominion of law and of order was eftablified; and the body of the people were protected, and, by means of induftry, enabled to rife to the poffeffion of wealth. Literature was encouraged among all ranks of perfons: and the human character affumed a more refpectable and a happier afpect. This fortunate prozrefs was indeed early diffurbed. The new intelligence which they had acquired, enabled mankind to difcern the vices which exifted in their priethood, which formed one of the principal orders, poffefing a very large proportion of the wealth of every European community. This clafs of men had been rendered voluptuous by riches, and indolent by long poffeffion of power; and the ignorance into which they bad fallen, with the fuperfitions which they fill encouraged, were now be.. held with contempt and indignation by a populace that were acquiring induftry, riches, and knowledge. Princes and people in many countries thared the fame fentiment. Some reforms were attempted; but the clergy having refifted fuch chunges as the temper of mankind now rendered necenary, a zeal for their deflruction was excited, which rapidly diffufed itfelf from mind to mind, and from one country to another, till it embraced the extremities of the Chriftian world. Men were, however, divided in their fentiments; and many princes dreaded that the love of change might not fop fhort with the extirpation of one great order of the flate. Deftructive wars, therefore, took place, embittered by religious zeal, in which one-half of Europe contended with ferocity againg the other. This fanguinary rage, which divided not only fates but private families, gradually fublided. It was at laft found, that the clergy might be reformed, while the prince and his nobles retained their powers. Nations once more nade war from views of policy, and religiuus quarrels were forgotten.

In the mean time, the nations of Europe ftill continued their progrefs in improvement; and, as foon as tranquillity had been reflored by the peace of 1753 , this benevolent firit farted into action in every quarter. As the kings of Europe had oripinally, by the e'evation of their uwn power, and of the imporince and profperity of the people, upon the ruins of the fendal anarchy, betn the prime movers of the improvement of the human charater in Europe, fo ot this time they continued to take the lead in the fame ho-

Grizain. nourable career. The value of the mon important of all arts, that of agriculture, had gndually been feen. The realonings and experiments of philofophers were employed upon it; and in Pruffia, Ruflia, and other countries, it was cherilhed by royal bounty. Poland was fill behind the other nations of Europe. There the authority of the crown was little more than nominal. A feudal ariltocracy governed the country, and the cultivators of the fuil were in a flate of flavery. Fien there, however, it tecame a fort of faftion among the more enlightened nobles to give freedom to their peafants.

The mercantile interefl advanced fill more rapidly into importance in Europe. The pre-eminerice which commerce had given to Great Britain, flimulated all r:ho had the means and the opportunity to fofter and increafe it by every artificial aid among their own fubjęs. Manufactories were eftabliftred and fupported by many of the crowned heads on the continent; and trading companies were erteted, velled with ample immunities, and fometimes affifted with great loans. The pride of the military nobility was paffing away. They found fuccefsful ivals tor the efficient offices of ftate in the profeffors of the law. The effablihment of flanding armies rendered them of litele importance in war; and their wealth, as the great landholders of Europe, was daily more and more telipfed by the opulence of the induftrious claffes; and though titcs of honour ftill remained, the eftimation in which they were held was much diminimed, in confequence of the attention univerfally paid to men of letters. Still, however, confiderable abufes remained. In thofe flates that had refifted in former times the imnovations produced by religious zeal, a wealthy priefthood and monatic orders fill exifted, The privileges of the nobles and of the clergy rendered taxation unequal ; and commerce was embarraffed by reflictive laws, and the privileges of old incorporations. There was therefore much to reform among the continental flates of Europe; but everywhere princes were feen taking pride in helping forward this work of eformation. In particular, the late emperor of Germany was extremely eager to diftinguifh himfelf in this carecr. He abolithed monaflic eltablifthments, emancipated the peafants, abolified the privileges of the nobles to a very great degree, and extended the protection of the law, and the privileges enjoyed by other fubjects, to that unfortunate people, the Jews, who had long been objects of religious hatred and perfecution. This prince, lowever, urged his projects with a degree of reftlefsnefs and impatience, which in many inflances defeated the purpofe for which they were undertaken, by not giving leifure to the fentiments of the poople to go along with him in his innovations.
Though the houfe of Rourbon had fupported in family of Trance. France the Roman Catholic fyltem of fuperfition, yet, upon the whole, they were of a more liberal fpirit than any other royal fomily in Europe, and had given greater encouragement to lettess, and to every kind of improvement. It is not wonderful, therefore, that in France, the Roman Catholic fuperfition had become contemptible, and that the defire for improving the condition of mankind, and fimplifying the arrangements of fociety, which was everyuhere purfued by the princes of Fiurope, frould here have become extreme-
ly prevalent. Unfortunately, howerer, though the benevolent chatacter of the reigning monarch led him to encourage tuch projects, yet his undecided and inactive firit, together with the embarisfied flate of the finances, prevented him from tiking the lead in thefe changes, or from reprefing them when inordinately purfued by others. In the mean time, the example of profperity enjoyed under the free couftitution of Great Britain, together with the pride of laving recently contributed to the effablifment of a republican government in Noth Anerica, fixed the character of any changes of a political nature, which at this period might originate in France, from the men of letters, the army, or the prople at large.

There is a paffion of the human mind, to which phi- lamhen 930 lofophers have not hitherto given a name, which attef. mm , its times remains dormant for ages, but which, when hiftoryan kindled into action, feldom faits to alter the whole characker. face of foricty. This is the paftion or age for reforming the world, or for propagating that, which inder the influence of this fentiment appears good for the human sace, or juft and right with regard to fociety at large. In the regions of Afia, under the Arabian prcphet, it affumed the form of a zeal for religious truth, or a paffion to deftroy every form of idolatry, and to bring mankind to the worfthip of one God. Supported by the energy which this pafion infpired, and the contagious frenzy which it communicated, the Mahometan faith was conreyed from the Arabic gulf to the banks of the Ganges, the deferts of Tartary and of Africa. At one time it feemed to embrace all Europe, invading Germany from the eaft, and advencing from the fonth through Spain into the centre of France, whele its career uas with dificulty arrefted by Charles Martel, after a fanguinary contlict of many days. The fame paftion has, in Europe, at different times, uffumed the form of a zeal for freedom and of religious enthufiafm. At the time of the reformation from Popery, it chiefly appeared under the afpect of a defire to accomplifh religiuus reform. In thofe countries which, like England, were vigoroufly governed, and where the prince and the people concurred in the fame object, the zeal of the multitude was reftrained, and the reformation was not carried to extremes; but where the populace led the way, as in Scotland, Gcneva, and other places, the reformation was deftructive to all ancient religious inflitutions. When the paffion for reform, after two centuries of internal tranquillity, was communicated to the French nation, by the example of the princes of Europe and of the citizens of America, it affumed the fhape of a zeal for freedom, and religion was treated with contempt. The paffion, howceer, was the fame that had formerly induced the European flates to engage in fanguinary wars for the fupport or the overthrow of their religious cfablift:ments. In both cafes, the followers of the new fedt were filled with enthufallic notions of their oun powers and their own worth, with vifionary fchemes of impracticable improvenent, and with complete impatience of oppofition, accompanied with an eager zeal for making profelytes. Like cther focial pafions, its contagion rafidly few from city to city, and in a lefs or greater degree it extended to the utmofl limits of Europe. It more paticulatly feized the minds of men of letters, who regarded the Firctich acvolution, in its

Brita:n. commencement, as their own work, and as the fruit of the war which they had long waged againft monatlic inflitutions, and the exemptions from taxes or the publie burdens of the flate, which were enjoyed by the privileged orders. On the other hind, princes and the clergy, tugether with perfons of high rank and great opulence, were ferioully alarmed by the example which France had given of dimistlhing the power of the throne and of the altar, and d. Itroying all privileges enjoyed by particular orders of men; and they feared that this fytten of innovation might proceed, as fome of its wilder votaries hoped, to overturn the fafety of private property, while, at the fame tise, no European nation might be free from its contagion. It is not wonderful, therefore, that the princes of Europe combined againft France on this uccafion, or that they were fupported by their clergy and their nobles. It remained to be feen, however, what part Gieat Britain would a\& in this important fcene. Her church and her ariflocracy were already reformed, and the firll French reformers began their career by the avowed imitation of her example.

In furming a political contitution, the vanity of the French, which induced them to avoid the appearance of fervile imitation, had unhappily led them to differ in one effential point from the Britilh conRitution. Their legiflature conflited only of a king and a fingle houfe of reprefentatives; whereas in Bri tain, by means of a third eltate, that of the peerage, who are naturally jealous of popular innovation, laws injurious to the royal presogative are prevented from being enacted, without the king being insolved in any perfonal difpute with the commons. But, in France, the king himfelf was laid under the necelfity, in fuch cafes, of preventing the paffing of the law, by perfonally exercifing a negative voice; that is, he was plared in the unpopula: and abfurd fituation of oppofing his fingle judgment to the united will of a mation, and that too in the prefent perilous and critical times, when he could wot fail to be fufpected of dilliking a conftitution, by which his defpotic power wav taken away. Stil!, howerver, the reprefentative government of Britain had radically been the madel on which the French had proceed d; an! there is no doubt, that they expected, during any contest in which they might be involved with the powers of the continent, that they would enjov, if not the fupport, at lealt the neutrality ant firsuca le countenance, of the Britifh mation.

Or the other hind, however, the paffion lor innovation which hat feized the French nation, had, in many iultances, proceeded to very extravagant lengths; and there war reafon to fear, nn the part of the court of London, that this panion might communicate itfelf in an inconvenient degree to Britain, where, thoogh political abufes were comparatively triling, and the pation would confequently find lers food for its evertion, yet ennugh might exif to kindle diflurbances and produce anxiety.

In the month of Apil 1792 , a fociety was inilituted in London, at the head of which appeared Mr Grey, Mr Baker, Mr Whitbread, Mr Sheridan, Mr Lambton, Mr Erikine, and Ceveral other members of parlimment, for the exprefs purpufe of obtaining a reform in the reprefentation of the people. The afforiation aftumed the popular title of the friends of the people; and it was fpeedily joined by fome very re!pecta-
ble characters in the commercial and literary world. Similar focietics had, at former periods, exifted in Great Britain ; and the duke of Richmond, Mr Pitt, and others, while they were zealous advocates for the reform of parliament, had attended meetings, not merely of perfons acting in their individoal capacity, but what was undoubtedly more dangerous, of perfons appearing as delegates of other focieties. At the prem fent period, however, government, not without reafon, appear to have regarded any affociation of this kind, as unufually dangerous. The focicty had refolved, that, carly in the next feffion, a motion flould be brought forward in the houle of commons, for the reform of parliament, and that the conduct of the bufinefi fhould be committed to Mr Grey and Mr ErAkine. In conformity with the intentions of the aflociation, on the zoth of April, Mr Grey gave notice in the houle, of a motion, which next foflion he intended to futmit to their confideration, for a reform in the reprefentation of the people. Its neceftity, he faid, had been admitted both by Mr Pitt and Mr Fox. The times were indeed critical, and the minds of the people agitated, but his object was to tramquil lize them, by removing every caule of complaint. He requetled gentlemen to confider the quaction in the interval, and hoped, that by the time the motion was broughe forward, the fentiments of the people on the fubject would be fully afcertained.

Mr Pitt rofe with unufual vehemence. He faid, he Oppofed by felt no difficulty in $C_{\text {a }}$ ing, in moft decifive terms, that Mr Pitt. he objetted both to the time and the mode in which this bufnefs was brought forward. He retained bis opinion of the propriety of a reform in parliament, if it could be oltained by a general concurrence; but he feared at this moment, that if agreed on by that houfe, the fecurity of all the bleflings ue enjoyed would be maken to the foundation. The prelent, he allegtd, was not a time to make hazardous experiments. Could we forget what leffons had been given to the world in a few years? or could men be foppofed to regasd the fituation of this country as in any reipect unfortu. nate when contralled with that of others? He took notice of the new aflociation, and the advertilements in newfpapers, by which they invited the public to join the Ifandard of reform. He faid, he faw with concera the gentlemen to whom he alluded, unite with others, who profelfed not reform only, but direct holtulity to the very form of our government, who threatencd an extinction to monarchy and every thing which promoted norder and fubordination in a llate.

Mr Fox declared himelf fatisfied concerning the neceflity of a reform in the reprefentation, but that he never entertained very fanguine hope of its accomplihment. He would repeat however what he had faid almolt the firt time he addreffed that houfe, that the greatell innuvation which could be introduced into the conftitution of England was to come to a vote that there flould be no innovation in it. His name did not indeed appear in the lift of the lociety for reform, becaufe, though he faw great abufes, he did not fee the remedy. Hat his honourable friend confulted him, he fhould have hefitated $i$ recommending tbe part he had taken; but h virg tahen it, he could not fee why the period was improper for the dilculion. He profeffed frong attachment to the Britifl conllitution, but

Britain. did not regard this as the only free country in the world. He noticed particularly the American ftates as in the enjoyment of practical freedom, and approved of the new confitution of Poland. After a tumultuous debate, in which Mr Burke and Mr Windham oppo-

944 Paine's fecond part of phlets the mean time, a variety of political pamthe Rights which were daily publifthed, the mont remarkable of of Man.
$9+5$ Royal proclamation againft feditious rub lications. "the Rights of Man, part fecond." This was a direct and moft inflammatory attack upon the whole principles and practice of the Britify conttitution. Adminiftration thought fit, on the 21 ft of May, to jffue a royal proclamation againt the publifhing and difperfing of feditious writings; exhorting the magiftrates to vigilance in attempting to difcover the authors of fuch writings, and to preferve the peace and tranquillity of the kingdom; and exhorting the people to guard againft all attempts which aimed at the fubverfion of regular government.

It is not eafy to perceive what precife purpofe government intended to ferve by this proclamation. The authors of the feditions publications alluded to did not conceal themfelves, and the publications were openly fold without any attempt to fupprefs them by profecutions. Perbaps jt was intended to prepare the minds of men for thefe future meafures of direct hoftility againd France, on which government had already refolved. Perhaps it was only meant to roufe and countenance, in the friends of government, a Spirit of oppofition to the propofals of innovation which were now alloat, or it might be intended in this way to try the general feelings of parliament and of the public upon the fubject ; but whatever object adminiftration raight have in vjew by this proclamation, its firft effect was to excite a general fpirit of political curiofity, and to ferve as a public advertifement to the dangerous writings of Thomas Paine and others. In all parts of the inland multitudes of perfons, who had not hitherto interrupted their ordinary occupations to attend to the tranfactions of the continent, or the fpeculative difcuffions which the prefent ftate of France had excited, were now feen crowding to the fhops of bookfellers, inquiring for the treatifes, the names or titles of which they knew not, againf which the king's proclamation had iflued. Every printing prefs in the kingdom was occupied, and copies could fcarcely be fupplied in fufficient abundance to fatisfy the demand.

On the 25 th of May, an addrefs to his majelty being moved by the mafter of the rolls, in confequence of the proclamation, he intimated that the object of the proclamation was Mr Paine's works. He read an extract from one of his pamphlets, importing that all kings were tyrants, and their fubjects faves, and complained of the circulation of fuch publications. Mr Grey afferted, that the miniffer, apprehenfive of the effects of the affociation of the friends of the pcople, had concerted this meafure with an infidious view of feparating thofe who lad been long connected. He pretended that fuch finifter practices were delighted in by a gentleman, whofe whole political life was a tiffue of inconfiftency, and who never propofed a meafure without intending to delude his hearers. He faid, that mole of proceeding againft feditious writings was inefficient, irregular, and milchievous. If improper writ-
ings were publifhed, his majefty's minifters ought to have prolecuted the authors or printers. Upwards of twelve months had elapfed fince the publications now complained of made their appearance. What could they now fay for themfleses, or what could the public think of the conduet of the minifters of the crown, who had fufiered thefe publications, which ware faid to be the bane of the public tranquillity, to poifon the public mind for a whole year? He wifhed to know what could be the motives that brought forward at this time this fudden Show of ardour to fubdue diforder. Had it always manifefted itfelf in the conduct of minifters? Was there any remarkable activity difplayed in preferving order in the affair of Birmingham, where there had been actual outrage and violence to the laws, to liberty, and order? Mr Fox difapproved of the proclamation, becaufe it was infidious and ambiguous, tending to propagate vague and unneceffary alarm. Mr Pitt faid he was far from imputing any ill defign to the new affociation; but obferved that it might be taken advantage of by illdifpofed perfons, who under the fhelter of a refpectable body might pufh their own finifter defigns. The plan of the perfons to whom he alluded, was evidently to deflroy the monarchy, and convert the kingdom into a republic. The addrefs to the throne was agreed to without a divifion; and in the houfe of lords on the 3 rft of May a fimilar addrefs was voted after fome debate. Parliament was prorogued in a hort time thereafter.

The eyes of all Europe were now turned towards France; and the combination which the kings of Europe were known to have formed againft that country was expected fpeedily to proceed to action. The king of Sweden who was foud of war, and had greatly dif. tinguifhed himfelf in his late conteft with Ruffia, having now fettled all difputes with that ftate, offered to lead in perfon the armies of the combined porters, to deftroy in France thofe new inflitutions and opinions which threatened to fubvert the whole ancient fyftem of public order in Europe. He Atill however continued in a flate of extreme hollility with his difaffected nobles; and on the 16 th of March he was affafinated at a mafquerade by an enthufiaft, a nobleman of the name of Ankerftroom, who boafted, when he was apprehended, that he had liberated his country from a tyrant. In the mean time, Leopold emperor of Germany had alfo died, and was fucceeded by his fon Francis II. Leopold had chofen to temporize with France, but his fucceflor thought it unneceffary to obferve any meafures of caution. On fome remonftrances being made by the French government againft his permitting troops to affemble on the frontiers, he avowed the concert of princes againt the conftitution of France; and he flated it to be one of the conditions neceffary to the prefervation of peace, "That the neighbouring powers flould have noreafon for the apprehenfions which arife from the prefent weaknets of the internal government of France." This acknowledged intention to interfere in the internal affairs of the French nation, produced a propolal on the part of the French king to the national affembly, which was readily acceded to, for declaring war againft the king of Hungary and Bohemia, and in a fhort time war was in like manner declared againft Pruffia and Sardinia.

In the mean while, though the combined princes

## B R I

Sritain had not probably as yet completely adjufted the thares they were to receive of the fpoils of France and Poland; yet that the latter might be retained in a flate of weaknefs, and that all traces of the new principles which were at this time alarming the world, night as far as poffible be obliterated, the emprefs of Rulia gave notice to the king of Poland of her determination to invade that flate with an army of $150,000 \mathrm{men}$, for the purpofe of overturning the new conilitution, which had been framed in initation of that of Great Britain. No provifion had been made by the king, who appears to have been a well-intentioned but a weak man, to refift fuch a force. An attempt was however made by Kufciulko, a Polifh nobleman, who had ferved under General Walhington in America, to defend the independence of the country. Some battles were fought, but the Ruflians continued to make progrefs; and on the 23 d of July, the king, defpairing of the refult of the conteft, fubmitted without referve to Rufia, and confented to the reforation of the old conflitution with all its weaknefs and anarchy. When this event took place, confiderable numbers of perfons in Britain were promoting a fubfription of furus of money to altift the Poles to maintain their independence. The population of Poland was fufficient to have enabled it to refilt the power of Rullia ; but the people at large were fill the property of the nobles, and confequently illiterate, and incapable of exerting themfelves with that union which is neceffary to a great national effort.

While the combined princes were thus fucceffful in the north, a very different train of events awaited them in France. The French king and his miniftry directed the Auftrian Netherlands to be invaded, but the objeet was accomplifhed in an unikilful manner. Four diftinct detachments, under Fayette and other geserals, were directed to enter that country at different points. They made fome progrefs; but their raw troops were fpeedily repulfed by the difciplined armies of Auftria, which afterwards advanced with confiderable force. At length Pruflia and Auftria, who had undertaken the extinction of the revolution in France, had completed their preparations, and the duke of Brunfwick was appointed commander of the combined armies which were to enter that country. In a long manifefto iffued by the emperor and the king of Prufia, they thought it neceflary to diflain all views of aggrandiferaent, or interference in the internal adminiftration of France; but declared themfelves refolved to rc-eftabliih in that country public fecurity, with the ancient order of things, and to protect the perfons and property of all loyal fubjects. They threatened to punilh in a ftriking manner, and to give up the city of Paris to moit dreadful and terrible juffice, if the leaft infult thould be offered to the king, the queen, or the royal family. The duke of Brunfwick alfo iflued a manifefto, in his orm name, on the 27th of July, at Coblentz his head quarters, in which he declared that the two allied courts had no intention to make conquefts from France; that they meant merely to deliver the king and royal family from captivity, and to reftore his authority. The duke pronifed protection to all who flould fubmit to the king. He required the national guards to protee the public fafety till farther orders, :nid threatener to treat fuch of them as flould refilt him in arms as rebels to their king. He required, in
like manner, the oflicers and foldiers of the French re- Eritain. gular troops to fubmit to their legitimate fovercign. He declared the French magiftrates refionfible, on pain of lofing their heads and eltates, for every diforder which they fhould not have attempted to prevent. He theatened with death the inhabitants of towns and villages, who fhould dare to defend themfelves againft his troops, but promiled protection to thofe who fhould fubmit. He called upon the city of Paris to fubmit inttantly to the king, making perfonally refponfible, on the pain of lofing their heads, purfuant to military trials, all the members of the national affembly, and the magitrates and mational guards of Paris; threatening on the word of the emperor and king, that if the palace of the Thuilleries flould be forced or infulted, or the leaft outrage offered to the king, queen, and royal family of France, or if they were not immediately placed in fafety and fct at liberty, to inflict the moft exemplary and ever memorable avenging punithments, by giving up the city of Paris to military execution, and expofing it to total deftruction : Laftly, It was declared that no other laws could be acknowledged in France, excepting thofe derised from the king when at full liberty; he was therefore invited to come to fome frontier town, where he might provide for the reftoration of order, and the regular adminiftration of his kingdom.

This fatal manifefto was no fooner publihed, than all Confe. France was in commotion. The infolent language held quences of in it by two foreign powers, one of which, Auftria, publifining had for ages been regarded with hereditary hollility, of Erunfwounded the national pride and patriotic firit of wick's ma. every Frenchman. Many who were the enemies of nifetio. the revolution, could not brook an attack upon the national independence; and the zcal of thofe who had been enthufiaftic promoters of freedom was kindled into frenzy. From all quarters of the country, multitudes haltened to the frontiers, to fhare the danger of protecting the independence of their country. Unhappily for the monarch, Louis XVI. the enemies of the nation had loudly declared themfelves to be his friends, and the reftoration of his abfolute power was made the excufe for a hoftile invation. The king, therefore, and all who were attached to him, became objects of public jealoufy. A very finall republican party had previoully exitted; cyery hour now procured to it an acceffion of ftrength, as it appeared dangerous to intruft the national defence in the hands of the king. He was, therefore, dethroned on the 1 oth of Augult. A republic was proclaimed, and the capital foon became the fcene of a fanguinary mafficre of thofe perfons who had been imprifoned on fufpicion of adhering to his caufc.

The duke of Brunlwick was, in the mean time, $95^{\circ}$, advancing into the country at the head of the combined Brunfivick armies. Verdun and Longwy furrendered to his armisenters in the end of Augult, and he gradually advanced to France. the neighbourhood of Chalons. He had been oppofed, however, at every ftep of his progrels; the prople of the country removed all kinds of proviions from the courfe of his march, while the French army under Dumourier was well fuoplied. At laft, as the lirench daily acquired difcipline, General Kellerman was able to fuftain, with 16,000 men, an attack of 14 hours by a fuperior force. The combined army fulticed by difeale, while their adverfaries were rapidly augmenting:

## B R I

 little dangerous to attempt to advance to the capital．in numbers and in courage，fo that it became not a
The king of Prulia was perfonally pretent with the combined army．We have already noticed the policy of that prince，or of his cabinet．He had refinted the combination of Ruffia and Auftria to ac－ complith their own aggrandifement by dividing the territories of the Turks，and he had given counte－ nance to the new Polili conflitution，to form a bar－ rier againft Ruffia．Being deferted in his views by Britain upon the queftion concerning Oczakow，and finding France unable to give him any fupport，he had found it neceflary to enter into the views of the two imperial courts ；but he appears by no means to have regretted the difcovery which he now made，that France was by no means in the proflrate ftate to which it had been fuppofed to be reduced；that fhe was capable of refifting an invafion，and was likely foon to refume her place among the European powers，and confequently，according to her ancient policy，to give countenance and protection to Pruffia，and to reprefs the ambition of the court of Vienna．It may be farther remarked，that in confequence of Pruflia be－ ing a Proteftant ftate，and of the philofophical notions that had been difufed by the former monarch，Fre－ derick II．many of the Pruflian courtiers and military officers were not unfavourable to forne of the princi－ ples of the French revolution，particularly to the over－ throw of the Roman Catholic church．Neither was Pruf－ fia very jealous of political reforms，as it had countenan－ ced the eftablihment of a free conltitution in Poland， to affift him in refiling the reflefs ambition of Rufia．

A retreat was begun by the combined armies， without any very defperate attempt being made to force the French to a general engagement，or to pc－ netrate farther into their country；fo that fome fufpi－ cions were at this time entertained，by difcerning men， that France would not have much to dread from the obitinate hofility of the king of Prufia．He proba－ bly wilhed to allow the new republic another winter， within which to eftablih a govenment for themfelves． If they fucceeded in their object，he wouhl be fafe againft the future ambition of Rulta and Auftria．If they failed to acquire futhicient energy to defend them－ felves，he could return during the following fummer， to take his thare of their Cpoils．After his retreat， the French，with wonderful activity，commencal of－ fenfive operations．Gencral Cufline took Mentz in OAtober．In the fame month Dumourier invaded the Netherlands，and on the $4^{\text {th }}$ of November，fought the eele！rated battle of Jemappe，in which the Mulfrians were beaten；and，as the late emperor Jofeph 1I．trut－ ing to his alliance with the ruyal family of France，had demolifised thic fortifications of the towns in the Nc－ therlands，excepting Imxembourg and the citadel of Antwerp，the whole of that country，to the frontiers of Holland，now fiddenly fell into the hands of the French．

At the battle of Jcmappe，a new invention in the art of war，that of flying－artillery，is faid to have been firlt put in practice by the Firench army． Like all other contrivances in the art of war，it de－ rived much wcight from its novelty；and as fuccels in this terrible art depends greatly upon intuencing the pafions of mankind，by friking terror by what is nu－ known，or infyiring hope and confidence in confe－
quence of any neiv device，this invention，at the period alluded to，made much noile in Europe．The French boathed greatly of the fuperionty which they derived from the ufe of it，and this boait was no doubt of fome ure to their enterprifes．The invention itfeif is under－ ftood to have been made a thort time before the battle of Jemappe，by the late Mr John Anderfon，profeffor of natural philofophy in the univerfity of Glafgow．He is faid to have informed his friends in Scotland，that he offered the contrivance originally to the Britilh govern－ ment，at leaft to fome perfons connected with admini－ ffration for the time，but that it was neglected by them． Being a man of an irritable temper，he was greatly en－ raged by this neglect，and intantly went over to France， where he communicated his contrivance to M．de la Fayette．Here he met with a very different recep－ tion．His experiments having been repeated by 2 committee of French engineers，the importance of the invention was inflantly difcerned；he was carclied by the mof diftinguilhed perfons in the French capitai， and confidered as one of the moft ingenious men of his age．He was feen looking from a window，with Madame de la Fayette，on the day that the king was brought back to Paris after his unfortunate Hight to the frontiers．His vanity appears to have been much gratificd by the attention which，on this and other occafions，he received；and he remained during life an admirer and friend of the French revolutionary leaders．In the mean time，that people enjoyed the benefit of his invention，which on fome occafions pro－ ved very fatal to their enemies；and the ufe of it is believed to have been only borrowed from them by the Britilh army at a future period．
$\Lambda \mathrm{ftcr}$ the victory of lemappe，the government of the Proceding 954 new French repullic，to conciliate the inhaisitants of ys the the Auftriaa Netherlands，publifhed a refolution to vernch go． open the narigation of the river Scheldt（whicl for fome centuries had been kept fhut up by the jealouly of the Dutch），and thereby to revive the trade of Ant－ werp，anciently onc of the firl commercial cities in Europe．At the fame time to counteract，if pollible， the combination of princes which had been formed agsinft them，and which was now rapidly extending it elf to cvery court in Europe，the new Fench con－ vention（or reprefentative body which had been clect－ ed after the depofition of the king）eagerly endeavour－ ed to reprefent their own caufe as the caufe of man－ hind，or of the people at large in every country，in oppofition to that of their princes or hereditary ruicrs， whom they denominated defpots and tyrants．On the 19th of November，the conventicn palfed a decree，de－ claring，that they would give affiltance，by their armies， to every people that thould attempt to eliablinh a free government for themfelves．The fame convention，two months thereafter，by a majority of rotes，ordered iheir inyprifoned monarch to be put to death on an accufa－ tion that he had betrayed the caufe of the nation．

The important tranfactions which were taking place Ereets of on the contincnt could not fail to produce a powerful the conti－ cifect upon the Bratilh nation，where the minds of men， as already remarked，had been directed in fo particu－ lar a manner to political queftions by the late royal proclamation．According to the different fe：ments of men，they nealfed with terror，or with fatistagion， the culue of Erunfrick＇s manifafto．Nen of a patri－

Fritain.
otic clarastes, however, whatever their political opinions might be, were in general not difitisfied to fee a nation capable, amidit the utnoft public confulion, of repelling an invafion by the beft difipliued :umies, conducted by the mofl experienced commanders, in Europe. The horrid maflacres, however, which took place in September, sogether with the treatment of the royal family, excited very different fentiment, as exhibiting an inftance of uuparall. led barbarity and ufelefs bloodihed. In confequence of the political putlications which, by the months of Augult and Stpt ember, had been univerfally read, the whole Britilh nation was in a molt agitated fate. In all companies, political queftions on the comparative merits of monarchical and republican goverument, together with the propricty of a reform in the Britih houfe of commons, formed the fole fubjuels of cunverlation. Perfors of every rank and fex entered into thefe difcuffions with fingular eagernefs. In general, at the commencement of the difpute, very few had any idea that a republican government would be found practicable in France. With regard to Biitain, which erjoved a found adminiftration of juftice, and much internal profperity, no change feemed necelfary. In proportion, however, as the French guined victories, a republican government feemed lefs impracticable in fuch a country; and, in proportion as the fubjeet of political abufes was canvaffed, new ideas concerning the ftate of government in Britain began to be entertained.-The difgraceful fcenes of tumult and notorious corroption which had occurred in borough elections, the inattention of parliament during late years to the petitions prefented for the abolition of the ilave-trade, or motions made upon other popular topics, and laft of all, the memory of the coalition, and the seproach under which the houfe of commons ever fince that time had fallen, induced many perfons to think a reform in the reprefentation of the people abfolutely necellary. As it is the nature of the human mind, when its attention is completely occupied on any fubject, to proceed to extremes, new notions were daily broached at home, or imported from the volcanic re. gion of France; one notion, in particular, was extremely prevalent, that of the boundlefs perfectibility of the human mind, which is fo true in theory, but fo falfe in fact; which, in the hands of providence feems to be gradually and furely going forward, but which has never failed to cover with confufion all thofe whohave hitherto attempted to act upors it as a prefent and exifing reality. At the period alluded to, however, when fo many novelties were afloat, this notion gained fingular favour. Men of fcience or benevolence, who judged of others from the rectitude of their own intentions; men of ardent imagiaztions, who believed every thing practicable to their unbounded zeal; together with the young and inexperienced, who were unacquainted with the imperfections of the human character,-all imagined, that the period was arrived when mankind, become rational and juft, were no longer to engage in fanguinary wars of ambition; when good fenfe alone was to rule the world; and when the public bufinefs of fociety, reduced to the narrow limits of adminiflering juftice and conflruting high roads and harbours, might be condueted with little trouble, and without the cflabliflment of king and noblics, and different ranks and orders of men, or the difplay of military force for the
prefervation of public tranquility. As thece notions Fritaii: "ere extremely farourab.e to the common apeople, they entered into them with much eagernef, and thus contributed to give them a greater appe rance of practicability. A lort of genetal delirium upon political fubjects prevailed, and mankind were led to believe that the greateft changes in the order of locicty might be accomplifhed with facility and fafety.

Befitics the fociety called the Friends of the People, Political ar other aflociations of lefs diftinguthed pertoric, called fociations. the Conflutional and Corrffonding Socielies, were eftablilhed in London; and during the harvell, focieties :ffuming ti:e name of that of Fiends of the People, were eftablifthed in all towns and villages througheut the country, for the avowed purpofe of accomilifhing a reform of parliament. In proportion, however, as the character of the French nation began to ditplay it felf, in the fanguinary nature of their revolution, and the extravagant projeets and fentiments which hey publifhed, perfons of rank and property, as well as thole of a mild and moderate difpofition in Britain, becane greatly alarmed left fomething fimilar fhould occur in this country. In the month of November an affociation was instituted at the Crown and Anchor tavern in London, by Mr Reeves, the chief juflice of Newfoundland, and other gentlemen connected with adininitration; the awowed purpofe of which was the protection of liberty and property, againtt the attempts of republicans and levellers. Similar aflociations for the fuppost of government were inflituted in other parts of the metropolis, and throughout the country. Thefe laf included, in the courfe of the winter and fucceedng tpring, almolt all perfons of property in the ifland, belides great numbers of others who, from a fpitit of timidity, or the defire of appearing the friends of the exilling goverument, thought fit to join them, fo that in point both of number or wealth it appeared, that, comparatively, very few had formed a refulution to arow a defire of innovation at this period. In Scotland, where the literature genetally diffufed among the common people enabled them to obtain a full knowledge of the new notions then alloat, which their rank and fituation in fociety induced them to regard with favour, it was found very eafy to quiet the general ferment; becaufe the fame literature enabled them, by the perufal of newfapers and pamphlets, to fee the univerfal combination of perfons of rank and property that was formed againft the opinions which had recently gone abroad.

Parliament was affembled on the I $^{\text {th }}$ th December Parliament 1792. The fpeech from the throne intimated, that affembled his majefly had judged it neceffary to embody a part haftily. of the militia, and to affemble parliament previous to the time fixed for that purpofe. It ftated, as the caules of thefe meafures, the feditious practices which bad been Speech 9 difcovered, and the fpirit of tumult and diforder flown from the in acts of riot and infurrection, which required the throne. interpontion of a military force in fupport of the civil magiftrate. The induflry, it added, employed to excite difcontent on various pretexts, and in different parts of the kingdom, appeared to proceed from a defign to attempt the deftruction of our happy conflitution, and the fubverfion of all order and government, and that this defign had evidently been purfued in conneation and concert with peifons in foreign
countrics. His majefty afferted, that he had carefully oblerved a ftrict neutrality in the prefent wat on the continent, and had uniformly abftained from any interference with refpect to the intermal affairs of France; but that it was impoffible for him to fee, without the moft ferious uneafinefs, the ftrong and increafing indications which had appeared there of ar intention to excite difturbances in other countries, to difregard the rights of neutral nations, and to purfue views of conqueft and aggrandifement, as well as to adopt towards his allies, the ftates general, meafures which were neither conformable to the law of nations, nor to the pofitive ftipulations of exiffing treaties. Under all thefe circumftances he felt it his indifpenfable duty to have recourfe to thofe means of prevention and internal defence with which he was intrufted by law; and thought it right to take fome fteps for making fome augmentation of his naval and military force, being perfuaded, that thefe exertions were neceffary in the prefent ftate of affairs, and were beft calculated both to maintain internal tranquillity, and to preferve the blef-
fings of peace.
An addrefs, in confequence of the fpeech from the throne, having been moved, as ufual, in the houle of commons, Lord Wycombe oppofed it. He faid the
fpeech calumniated the people of England, that no infurrection exifted; that the kingdom was on the contrary overflowing with loyalty; that fecculative political opınions had always been agitated under the free conftitution of Britain; and that the perfons thought more difaffected, wifhed to reform that conftitution. He apprehended we had no juft caufe of war at prefent; for he confidered the opening of the Scheldt, or even the protection of the ftadtholder's privileges, as no fufficient juftification of fuch a meafure. Mr Fox laid, that the prefent was the moft momentous crifis, not only that he had ever known, but that he had ever read of, in the hiftory of this country, and that on the condust of parliament, depended not merely the fate of the Britifh conftitution, but of doetrines which go to the happinefs and well-being of all human kind. He alleged, that there was not one fact afferted in his majefty's fpeech, which was not falfe. He dewied the exiftence of an infurrection; remarking that thungh the failors at Shields, Yarmouth, and other places, had entered into riots for an increafe of wages, nobody had alleged that they had any political object in view. He justified the joy which many perfons had expreffed, on account of the retreat of the duke of Brunfwick; and afferted, that this did not imply, in the minds of fuch perfons, the exiftence of a diflike to the Britift conatitution. One extreme, faid he, naturally leads to another; thofe who dread republicanifm, fly for ftelter to the crown; thofe who defire reform, and are calumniated, are driven by defpair to republicanifm, and this, faid he, is the evil that I dread; thefe are the extremes into which thefe violent agitations hurry the people, to the cradual decreafe of that middle order of men, who dread as much republicanifm on the one liand, as they do defpotifm on the other. He defcribed the calling out of the militia, as a fraud, intended to induce the people to believe, that great caufe of alarm exifted, and thereby to bring them more completely under the influence of government. He treated the opening of the Scheldt, as no juft caule of
wat, and faid, he did not believe that it would ever be the real caule, though it might be the pretext. He faid, that fuch a war would undoubtedly aid the ohjeet of republicans and levellers; and recommended the removal of acknowledged grievances, as the cetrain means of appeafing difcontents among the people. He, therefore, moved an amendment to the addrefs, which fimply pledged the houfe, to make inquiry into the facts ftated in his majefty's fpeech.

Mr Windham now deferted the oppofition, and joined adminutration, in contending that great danger to the conftitution exifted. He declared his approhation of the match of the combined armies into France, becaufe he believed their mutive to be good. Mr Dundas afferted, that under the pretext for reform, the example of France had been held out for imitation to the people of this country; that the object of the French evidently was the aggrandifement of their dominions. He faid the interelts and honour of this country, required that we fhould protect Holland, in the right of keeping the Scheldt Chut, and thereby convince it, that it was happier to be connected with Great Britain, than with France. He took notice of the invalion of Poland, that had been al!uded to in the debate; and faid, that if there had not been fuch a divifion in that houfe, on the fubject of the Ruffian war, Poland would have efcaped her prefent fate. Mr Sheridan denied the exiftence of any juft caule of alarm, and faid, that he Chould vote that Englifh minifter to be impeached who thould enter into a war, for the purpofe of re-eftablifhing the former defpotifm in France, or floould dare, in fuch a caufe, to fpend one guinea, or thed one drop of blood.

From the commencement of Mr Pitt's adminiftra-Great de tion, a confiderable number of members of parliament, fertion fr the remnant of the coalition, had remained in oppofition oppofitio to his meafures. At this time, however, in confequence of the alarm which had diffufed itlelf among perfuns of high rank, and perhaps alfo in confequence of a plautible excufe being found for deferting a fruitlefs and inprofitable oppofition, of wbich they were weary, a great number of the memhers of the party hitherto hoftile to adminiftration, now joined in fupporting thofe meafures which they perceived to be agreeable to the executive power. On a divifion there appeared for the addrefs 290 ; for the amendinent 50. On the following day, when the addrefs was reported by the committee appointed to prepare it, Mr Fox moved an amendment, the object of which was to prevent a war. He remarked, that fome gentlemen had laid, that minifters ought fooner to have taken the alarm, and fooner interpufed to guard againf the ambitious defigns of France. He allo thought, that they ought to have armed fooner, but not for the purpofe of joining the general confederacy againft France, but of counteraçing it. They ftoould have armed, the inftant they heard that the two great military powers of Germany had confederated, and refulved to enter $F_{t a n c e}$; they fhould have oppofed any fuch invafion, becaufe it muft have been productive of great injury to Britain, and to the other ftates of Europe, had it been atterided with fuccef. He faid, he was an enemy to the aggrandifement of France; but in oppofing it, he would take case to have juftice on his fide. Had he been minitter when Prultia and Aultria refolved to invade

## $B \quad \mathrm{R}$

that country, he would have told thofe powers they had no right to enter France. Had this been done, the Englif muft have acquired fuch an influence in the councils of that nation, as would have completely prevented any attack upon Holland. He contended, that, in cafe of a war, the mutual jealoufies of Auftria and 'Pruffia would render them unfteady allies; nor was Holland to be trufted, on account of the exiftence of a flong party, hoftile to the fadtholder. Mr Burke ommpared the new French republic to the fyftem of Mahomet, who, with the Koran in one hand, and a fword in the other, held out the former to the acceptance of mankind, which the latter conpelled them to adopt as their creed; and aflerted, that the two.ftates of lirance and Britain might already be confidered as atually in a ftate of war. Mr Dundas defended adminiltration for not having mediated on the invafion of France by Auftria and Pruffia. He admitted, that the fueceffes of the French had been incredibly great; but he noticed the emptinefs of Dumourier's military chett, and the expences daily increafing; comparing them with the fituation of this country, and pronourcing confidently that the war muft be fucceffful and glorious. Mr Fox's amendment was negatived without a divifion.

In the houfe of lords, fimilar debates took place upon the addrefs, and oppofition experienced a fimilar defertion of a part of its members. The duke of Norfolk, the marquis of Lanfdowne, Lord Rawdon (fince earl of Moira), and Earl Stanhope, declared thenfelves averfe to war ; while Lord Grenville, Lord Stormont, the marquis of Townflend, and others, fupported the fentiments expreffed in the king's fpeech.

After the French king had been dethroned, Earl Gower the Britilh ambaffador was recalled; but the French ambafiador, M. Chauvelin, fill continued to refide in London. On the 1 th of December, Mr Fox moved, that a minititer fhould be fent to Paris, to treat with the provifional executive government of France. He declared, that by this motion, he meant not to approve of the conduct of the French government, but fimply to record it as his opinion, that it was the true policy of every nation to treat with the exifting government of every other nation, with which it had relative interefts, withont regarding how that government was conflituted. He faid, we could have no itronger objection to the exilting government of France, than to the government of Algiers and Morocco, where we have confuls. This mnotion gave rife to a very animated debate, in which the prefent oppofition were accufed of wihing to encourage difoontent and fedition, and were defended by Mr Taylor, Mr Grey, and Colonel Tarleton. Mr Jenkinfon enlarged on the fourifting fate of our finances, while the French were involved in enormous expence; that the period for going to war was favourable ; that the difaffected party in this country was very fmall; and, in the inean time, that the ambition of the French nation was daily increafing, and the ambition of a nation was nore dangerous than that of a king. He confidered the protection of the Dutch, in their claims to prevent the navigation of the Scheldt, as a juft caufe for going to war; and faid, that by fending an ambaffador to Paris, wo flould offerd thofe who tiere to be our allies, the king of Prufia and the emperor. Mr Tox's motion was negatived.

Yue. IF: Part II.

On the 19th, Lord Grenville intraduced into the Pritain. houfe of lords, what has been calied the alien bill, $\underbrace{}_{\text {var }}$ which authorized government to difmifs from the ki:g. rhe ansen dom fueh foreigners as they might think fit. It paffed bill. after fome oppofition from the earl of Lauderdale and the marquis of Lanfdowne. During its dependence, the latter nobleman ineffictually propofed $2 n$ addrels to his majelly, to enter into a negociation with the cx. ifting govermment of France, for the purpofe of averting the fate of Louis XVI.

On the 28 th of December, Mr Secretary Lunda: urged the houfe of commons to paifs the alien bill, on aceount of the extraordinary intux of foreigners into the country, and on account of the diffatisfaction of perfons at home. Sir Gilbert Elliot fuppurted the bill, and declared his regret on account of being under the necelfity of differing from his former pulitical aflociates. Mr Burke, as ufual upno the fubject of French affairs, fpoke with great violence. He faid, he would give the bill his moit cordial fupport, as being calculated to keep out of England thofe murderous atheifts, who would pull down the ftate and church, religion and God, morality and happinces. Tlae bill, he faid, was intended to drive from this country murderers and affaffins. At one part of his fpeech, he drew a dagger from under his coat, and, with nuch vehemence of action, caft it on the floor. This, faid he, pointing to the dagger, is what you are to gain by an alliance with France; wherever their principles are introduced, their practice mult alfo follow : you munt guard againf their principles; you muft proferibe their perfons. I vote, faid he, for the prefeut bill, becaule I confider it as the means of fasing my life, and all our lives, from the hands of affaffins. When they Imile, I fee blood trickling down their face; I fee their inidious purpofes; I fee, that the object of all their cajoling is blood. I now warn my country to beware of thofe execrable philofophers, whofe only object is to deftroy every thing that is good here, and eftablift in. morality and murder by precept and example.

## Hic niger ef, hunc iu Romane caveto.

While the alien bill was Aill under confideration, another meafure allied to it in principle was introduced. This was a bill to prevent the circulation of affignats and other paper money, under the authority of France. The object of the bill was to make paymenta nade in this way illegal, even when accepted. During the month of Decomber, an order of council was alfo iffued for preventing the exportation of corn to France, and fome thips which had grain on board were compelled to unload. On the 26 th of December, an act of indemnity paffed upon the fubject.

Affairs were now haftening to an open rupture with Lurd Grece France. On the s $17^{\text {th }}$ of December, M. Chauvelin ville and tranfmitted a note to Lord Grenville, one of the fecre- M1 Chartaries of Atate, in which, in the name of the executivc reflin's corcouncil of the French repablic, be demanded to kiow dence whether his Britannic najefly nught to be confidered as a neutral or a hontile power. He faid, that no wifh exifed en the part of France, to entertain any doubt upon the fubject. That they eren mifthed to anfver pievioufly, all thofe reproaclics which might be thrown out agairft then. Nosice was taken of the decree of the Freacle convention of Norember igh, which it 4 N

## B R I [ 650 ] B R I

Eritain. wàs alleged had been mifinterpreted; that the French republie did not intend to favour infurrections in neutral or friendly flates, and, that the decree applied only to thofe people, who, after having acquired their liberty, might requeft the afifance of the French republic, by a folemn and unequivocal expreffion of the general will. A promife was made that the neutrality of Holland fhould be refpected, while that power confined itfelf on its part within the bounds of frict neutrality. With regard to the qquettion of opening the Scheldt, it was a queltion irrevocably decided by reafon and juftice, of little importance in itfelf, in the opinion both of England and Holland, and which could not feriouly become a caufe of war. It was added, however, that on the fatal fuppofition of a war being refolvedon, while the intentions of France were thus peaceful and conciliatory, the whole weight and refponfibility of it would fooner or later fall on thofe who had provoked it.

Lord Grenville's anfwer to this note, which bears date 3 int December 1792, difclaims confidering M. Chauvelin in any other public character than that of minifter from his mof Chriflian majefty. His lordftip denied, that the deeree of 19 th November was fatisfactorily explained, as the promoters of fedition, in every country, might flill have in view the cafes in which they might count beforehand on the fupport of France. The neutrality of Holland was faid to be already violated by a French officer, who had navigated the Scheldt, to attack Antwerp; that the unimportance of the Scheldt would only render the opening of its navigation a clearer proof that an intention exilled to infult the allies of England, by violating their riglits which were guarded by the faith of treaties.

An official note of the executive power of France was tranfmitted through M. Chauvelin in reply to Lord Grenville's anfwer, in which an attempt was made to juflify their former explanation, or to explain farther the obnoxious decree of November 19th. All intention of making a conqueft of the Netherlands was difclaimed; and it was added, that if the Belgians, through any motive whatever, fhould confent to deprive thenfelves of the navigation of the Scheldt, France would not oppofe it. In an anfwer to this note by Lord Grenville, thefe explanations were declared unfatisfactory. On the $17^{\text {th }}$ of January, M. Chauvelin fent to Lord Grenville his letters of credence, as an ambaffador from the French republic. On the 20 th of the fame month, Lord Grenville fent him a letter, 'refufing to reecive his eredentials, or to confider him in any other character than that of one among the gencral mafs of foreigncrs refident in Eingland. On the 2qth of January, Lord Grenville fent to M. Chauvelin a pafsport for himfelf and his fuite, declaring that, after the fatal death of his mon Chriftian majefty, he could no longer be confidered as holding any public character in Britain.

In confequence of this correfpondence, the French
06.5

The king's melta $e$. announcing was. convention declared war againft England and Holland on the ift of Feb.; and in the mean time, on the 28 th of January, Mr Seerctary Dundas prefented tothe houle of commons a meflage from the king, flating that copies of the papers now mentioned, were laid before the houfe. It was added, that his majefly thought it neceffary to make a farther augmentation of his forces by fea and land, and, that hee relied upon the zeal of the
houfe of commons to enable him to take the moft ef. fectual meafures for maintaining the fecurity of his own dominions, for fupperting his allies, and for uppofing the ambition of France, at all times dangerous, and peculiarly fo, when comected with the propagation of principles utterly fubverfive of the peace and order of all civil fociety.

Thus Britain became a party in the moff fanguinary and eventful war that Europe ceer faw. We way here remark, that, in the month of April, the French govermment made an attempt to enter into a new negutiation. The minifter (Le Brun), tranfmitted to England by a private gentleman letters to Lord Grenville, to be delivered by Mr John Salter a notary in London, in which he requcfted paffiports for M. Maret to come to. Britain to negotiate peace; but no public notice was taken of the application.

In the quarrelso of nations, the real fourees of hofti- Kemarhs lity are often very different from thofe that are eftenfibly held out to the world. It was for fome time cuflomary to difpute in Great Britain, with much eagernefs, the quellion concerning who were the aggrelfirs in this war. In fuch difputes the friends of adminiAration were under great difficulties, in confequence of the narrow ground upon which government had thought fit to rett the grounds or caufes of hofility. The French government had been willing to explain away the offenfive decree of the 19th Nurember, and the queftion about the Scheldt they wcre willing to give up. It would feem, that their total ignorance of the nature of the Britifh conftitution, and of the elements which influence it in practice, prevented them from entertaining any idea that they were likely to enconnter hoftility from this country in confequence of their revolution. Hence they not only neglected their navy, but they had already, in tome meafure, ruined it, by fending their feanen to the frontiers in the character of foldicrs. But though the French had originally no hoifile defigns againtt this country, and though the oftenfible caufes of war on the part of Great Britain were weak, it by no means follows, that the motives which actually intluenced the conduct of the Britifh government, on this occafion, were of the fame nature. France had been the ancient and the dangerous enemy of England. She had fuddenly fallen into a flate of anarchy and confequent debility. All Europe was now leagued againft her. Within fhe was divided by faction, and without the was aflailed by immenfe hoils of the bcft difciplined fuldicrs in Europe, conducted by the moft filiful leaders, to whom fle had nothing to oplofe but an undifeiplined multitude, led on by low-born and inexperieneed chicfs. In this ftate of things, it feemed a rery fafe meafure to make war againt her. To do fo, was only to retaliato the conduct Gie herfelf had recently obferved, when fhe accomplificed the difmemberment of the Britifh empirc, by afliting our revolted colonics. It now feemed practicable, by difmembering France, to render her for ever incapable of being dangerous to Britain.

But the mof powerful incitements to this war undoubtedly arofe from the example of political innovation, which it was fo much the intereft of every government in which there exifted any mixture of hereditary authority, completely to defeat and overwhelm.

Sritain. To comprchend the full force of this motive for going to war, it is neceffiry to have lived in thefe times, to recollect the ferment which univerfally prevailed in the minds of men, and to inagine the fituation and the feclings of a prince, who, though ftill fafe himfelf, yet「aw, in his immediate vicinity, the frit of Eurupean monarchs, of the moft ancient race, and at the head of the mighticel kingdom, hurled from his throne to a prifon, and from that prifon to a feaffold; his power affumed by the meanett of his fubjects, who juitificd their own conduct as the triumph of reafon and of frecdom; their minds inflamed by furious zeal, devoting to deflruction whatever refifted their career; while, at the fame time, the contagion of their fentiments extended itfelf into ncighbouring kingdons, and from the liconle of fpecth and of publieation allowed in Britain, produced a vehemence of difculion, which threatoned to break eut into actions not lefs violent than thofe of the primary revolutionitls of France. In this, thate of things, and under the influence of fuch fentiments, a war againk France femed to be a war in defence of the whole arrangements of fociety, whether eivil or religious; and princes and nobies confidered themielves as engaged in the protection, not merely of their rank and riches, but of their perfonal fafety. By engaging in war, the hands of government would be ftrengthened, in confequence of the patronage produced by the expenditure of public money, and of placing the patriotic fentiments of the people, or the wilh to defend their own country, in oppofition to the feelings of fympathy, with which they were difpofed to regard the efforts of the French leaders in eftablifhing a republican conftitution, and defending their national independence.

Still, howcyer, there were not wanting at that time fome individuals, who thought the war altogether unneceffary to the fupport of the Britilh conifitution and government. The great amount of the national debt, tagether with the patronage of the crown, and the general happincfs and integrity of character which the admirable jurifprudence of England produces in the people at large, gave powerful affurances of ftability to government, and fafety to property. Even before the war commenced, the crimes committed by the French revolutionits had greatly diminifhed the popularity of their caufe; while the affociations on the fide of govermment that were forming throughout the kingdom, demonllrated the fuperiority of its adherents in wealth and numbers. It was therefore thought by a few perfons to be completely practicable to weather the form, without having recourfe to war, efpecially as the body of the people of Great Britain were at this time entire ffrangers to the military art, and completely deftitute of arms, while a confiderable ftanding army was in the hands of the crown. The example of the $A$ merican government, which, though weak in itfelf, and totally deftitutc of a ftanding army, while the people, as individuals, were all poffeffed of arms, and though greatly difturbed at this time by the admirers of the French revolation, yet under the virtuous adminillration of George Wahington, contrived to preferve its neutrality, affords fome countenance to this idea. There were even forme who doubted the prudence of the war, notwithtanding the firength of the combination formed againtt France, and who fufpected, that in a fangui-
nary and defperate contef, fuch as this was likely to raten. prove, armies led an by princes, brought into praner by the cafualty of birth, might prove no m.tch for French enthufiafn in the firtt inflatice, and far lefa ul. timately for the fuperion tactics and enterprife which mult fpeedily be introduced, by men riling to command in confequence of the admiration pridueed by their talcnts and their fuecefs. Latt of all, we have already remarked the opinion fuggefted by Mr Fux, that Great Britain ought, on this occaLon, to have actively protected the ind pendence of France, which would have given fuch an afeendency oper her councils, ay would have enabled us to protect Holland, perhaps to preferve the life, and even the fovercignty, of Louis XV1.; and, at all events, would have inabled us fpeedily to terminate the war, witheut any important changes being fuffered to take place in the relative ftrength of the contisental flates of Eurnpe.

It is to be obferved, that at the clufe of the ycar Mr pitt 1792 , Mr Pitt did not attend parliament when it Errt alfent !rort affembled; nor did he make his appearance in the parliament houfe of commens till the alien bill was going thrungh is a uince its laft flages in January, after the firft debates were ended, and the relative Atrength of parties had appearcd. 'The oftenfible caufe of his abfence was, that having nbtained, on the death of Earl Guildford (Lord North), the place of yarden of the cinqueports, and thereby vacated his feat as a member of the houfe of commons, he had gone to Cambridge to focure his re-clection. The length of his abfence, however, fuggefted to fome perfons a fufpicion, that he was hefitating about engaging to fupport the court in going into the war. Mr Dundas, in the mean while, who, during Mr Pitt's adminiftration, had ufually left the entire management of every debate to the premier, though he had atted otherwife when fupporting Lord North"s minittry, flood forth in the houfc of commons, as the leading icrvant of the rown, in fupport of the propofal for engaging in the war. Mr Pitt, however, on his return, refimed his fatien in the debates of the houfe, and lupported the prefent neafure with the utnoit ardour. In the mean time, it is to be remarked, that, at this perind, Lord Thurlow was removed from the office of lord-high-chancellor, and was fucceeded by Iord Loughburough, who had originally owed his preferment to the fuppost give en by him to Lord North's adrainiflration and meafures, and who had hitherto adhered to opplyofition, but in the late debates had defonded the plans of adminiAration.

On occafion of the meffige from his majerly an- Dctarates on nouncing the actual declaration of war by France, Mrr the Fre::ch Pitt thated, that his majelty had always declined tak- if warato ing any part with regard to the internal govermment of France; and, during the fummer, while France had been engaged in war with Aufria and Prutlia, his majefly had in no form departed from his neutrality; but as the French feemed now determined to fubjugato other nations to their principles, he was under the neceffity of interfering for the protection of his cwn alliee, the Dutch, who had not indeed made any formal requifition for aftitance, but to whefe govermint the French had at all times becu noturioutiy hollile. Mr Pitt alfo reprefented the language of the men in power in France, as intulerably monacing towards the go-

Britain. remment of Britain, and', as dangerous, from its ten-1 dency to introduce anarchy. He read an extract from a letter, written by one of the French excuntive council, and addreffed to all the friends of liberty in the French fea-ports: "The king of England and his prarliament mean to make war againt us. Will the Englith republicans fuffer it? Already thefe free men show their difoontent, and the repugnance which they have to bear arms againft their brothers the French. Well, we will fly to their fuccour; we will make a defeent on the 'ifland; we will lodge there 50,000 caps of liberty; we will plant there the facred tree, and we will itretch out eur arms to our republican brithen: the tyranny of their government will foon be deftroyed." Mr Pitt alfo adverted, in ftrong terms, to the death of the French king as a calamitous event; an act of outrage to cvery principle of religion, juffice, and humanity; an act, which, in this country and the whole of Europe, had excited but one general fentiment of indignation and abherrence, and could not fail to produce the fame fentiments in every civilized nation. He compared it, and other late proceedings, to the maffacie of St Bartholomew. It was, le taid, in all its circumfances, fo full of grief and horror, that it mult be a wifh, in which all united, to tear it, if pofible, from their momories; to expunge it from the page of hillory; and remove it for ever from the obfervation and comments of mankind.

## Excid t ille des avo, nu u phera crefant <br> Secula? Nos certe taceamur, et obruta multa Noble tegi nolvee patiamur crimna genis.

All the members who remained in nppefition, concurred in reprobating the conduct of the French revolutionifts. Mr Fox, however, afferted, that the general maxim of policy was, that the crimes committed in one independent flate could not be cognizable by anothir. He alleged, that the topics adverted to by Mr Pitt, were introduced inte the debate to blind the judgement, by exciting the paffions; and he contended, that the opening of the Scheldt, and the decree of the 19th of November, which were flated as thic caufes of the war, could never juftify fuch a meafure. He cenfured our paft neutrality as unfair. While the French were invaded, we were quiet fpectators; but, on their becoming invaders in their turn, we faid Europe was in danger, and interfercd againft them. With refpect to the general fituation of Europe, he faid, we had been feandalounly inattentive. We had feen the entire conqueft of Poland, and the invafion of France, with fuch marked indiffereny, that it was evident the profeffed caufes were not the real grounds for going to war. He afierted, that the real caufe, always difaveved by our gevernment, but erer kept in mind, was the internal gerernment of France. The deftrution of that government was the avowed nbject of the contlined pawers. We were about to juin them; but we were afhamed to own that Britain was engaging to aid the refteration of defpotifm; and therefore the Scheldt and Holland were collufively had recourfe to as prutexts.

In the houfe of lords, when the fame fubjeet was difcuffed, the marquis of Lanfowne centended, that, by formding an able and experienced miniller to Paris, pur guvernment might have faved the life of Louis
XVI. He faid, the war would be a wanton trar on our part, without provocation on the part of France; and he highly difappreved of the infulting manner in which M. Chauvelin was difmiffed. Various debates afterwards occurred, in which both parties eagerly difputed the queftion, whether the French or the Britifh were the aggrefiors in the war.

Though from the expenfive nature of modern wars, Great cum a great commercial nation, in confequence of its wealth mercial and credit, is cnabled to engage in them with conf- failures. derable advantage; yet, on every fuch occafion, it makes an immenfe facrifice of individual happinefs. The derangement of great branches of trade, and the difappuintinent of commercial fpeculations, never fails to reduce to inftant ruin vaft numbers of manufacturers and merchants, while many thoufands of their dependent labourers, fuddenly deprived of bread, are under the neccffity of enlifting as foldiers; a cireumflance, which is indeed attended with conveniency to government, but is productive of much wretchednefs, for a time, to tle families of fuch perfons. At the peried of which we are now treating, the Britifh commerce had become extremely extenfive, and, in confequence of the commercial treaty, the Britifh and French merchants had become clofely connected. From the fudden fagnation of trade, which the war now produced, added to the alarms which had been excited upon pelitical fubjects, a general paralyfis appeared to feize the country, and the number of bankruptcies exceeded all that had ever happened in the mof calamitous times. A general ftoppage of commercial credit took place. No bank would venture to advance money to merchants or manufacturers; the confequence of which was, that many of them, with large quantities of goods in their poffefion, were unable to make effectual the fmalleft payment. To apply a remedy to this alarming evil, feveral of the principal traders and merchants waited upon Mr Pitt, and requefted the interference of gevernment; which was granted. A felcet committce of the houfe of commens was appointed to inveftigatc the fubject. After confulting with a variety of bankers, manufacturers, and merchants, the committee, on the 29th of April, gave a report favourable to the folicitation of the merchants for relief. A bill was accerdingly introduced, on the 1 if of May, Lonn to authorizing gevernment to iffue five milliens by ex -the merchequer bills, in loaris to fuch merchants and manu-chants. facturers, as Ghould depofit goods in fecurity for the fum advanced. This meafure proved extremely falutary. When it was found that the traders could obtain money from government, the bankers, and all other perfons, immediately became willing to advance them money, or to give credit to their bills; the cenfequence of which was, that not one half of the exclacquer bills was ever iffued. Trade gradually revived, and new channels were by degrces found out, for the difpofal of the productions of Britifi induflry.

On the $27^{\text {th }}$ of March, Mr Pitt, in a committee of 1973 the houfe of commons, fated that he had berrowed governfor the fervice of the prefent year $4,500,0001$. The ment. terms of the loan were, that for every 721 . advanced to the public, the lenders fhould be entitled to 1001 . flock, bearing an intereft of 3 per cent. which would make a capital of $6,210,0001$. the intercf of which, to be paid by the public, would amount to 186,0001 .
a year. He faid, there was another charge attending the loan; for, by the act for appropriatiog the million furpins to a finking fund, it was provided, that whenever a new loan anould be made, a fand equal in one per cent. on the whole of it muft be provided, and applied to the liquidation of it. This would require an annual charge of 62, ool , making in the whole, including the inc:ren, $24^{8}, 4021$. per ammm.

On the 15 th of March, the attorney-general broupht forward a bill for preventing traitornus correfpandence with the king's enemies. It was the intention of this bill, to prohibit the fale to the French government, or the Frencli armies, of arms, military ftores, provifions, or clothes, under the penalty of high treafon. Tho purchafe of lands in France was alfo prohibited. No perfon was allowed to go from this country into France, without a licenfe under his majefty's great feal, under the penalty of being accounted guilty of a middemeanour. Perfons, thongh fubjects of this country, coming from France, werc prohibited to enter the kingdom without a pafiport, or, at leaft, without prefenting to the mafter of the velfel, a declaration to be tranfimitted to the fecretary of flate, and that, in the mean time, they thould not quit the place where they had landed, without the permifion of a jultice of peace, or finding fecurity for their good belaviour. Laftly, The infurance of veffils, either coming from France or going to France, was prohibited. The bill was oppofed as unneceflary, beeaufe the ancient Englih treafon laws prohibit the fupplying of the king's. enemies with naval or military flores, and becaufe there was little danger of Britifh moncy being conveyed to France, in the prefent diftracted flate of that country. It paffed through both houfes, fupported by great majorities.

During the prefcut feffion, a very great number of petitions were prefented to the houfe of eommons, from different parts of the country, praying for a reform in the reprefentation. On the 6th of May, Mr Grey brought forward the queftion, after prefenting a petition, which had been framed bythe aflociation called the Friends of the People in London, and which had a very numerous fubfeription annexed. He afferted, that the number of petitions now brought forrard, demonflated, that the houfe of commons were not the real reprefentatives of the people. He gave a detailed fatement of the varinus defeets in the reprefentation; and, as a fpecimen of the mode of argument now maintained upon the fubject, it may be rumarked, that when Mr Grey came to take notice of burgage tenurcs, and the fplitting of mefluages and hereditaments, for the purpoic of multiplying voters, contrary to an act of King Willian for preventing fuch practices; he quoted an opinion given judicially by Lord Thurlow, when fitting as chancellur in the houfe of lords, in an appeal caufe from Scutland, refpecting the right of rotcrs at clections. His lordhip faid," If the right of election could be tricd by law, in a court of law in England, he was convinced that an Englifi court of law would not be fatisfied with fuch a mode of election as this, that a nobleman's Atcward fhould go down to a borough with ten or twelve pieces of parchuncnt in his hand, containing cack the qualification for a vote, and having affembled a fufficient number of his goaftre's tenants round a table, flould diftribute among
them the parelments, then propofe a candidate, and Buitain. aflerward's collect thefe paremments, and declare his lord's friend duly elected for the borough. Thefe celections Loril Thurlow called a mockery." Mr Grey, after afferting that a confiderable part of the reprefentation of Eingland was in this defective ftate, and urging the necellity of a reform, concluded, with moving that the petition flould be referred to a committec. A very animated debate enfued, which was adjourned, and rencwed on the following day. The propofal of reforn was chicfly oppofed on account of the hazard attending it, which appeared from the example of France, and on accoum of the length, univerfal fuffrage, to Which its more ardent partizans out of doors willed it to be carried. Mr litt, in a \{peceh of confiderable length, explained his former motives for being friendly to a parliamentary reform, and his objcetions againf it at the prefent moment. If this principle of individual fuffrage (puinted at in feveral of the petitions:) was to be carried to its utmof extent, it went, he faid, to fubvert the ncerage and to depofe the king, and, in fine, to extinguish every hereditary diftinction, and every privileged order, and to cflablifh that fyftem of equalizing anarchy, announced in the code of French legilation, and attefted in the blood fhed in the maflacres at Paris. "The queflion then," added Mr litt, " is, whether you will abide by your conititution, or hazard a change, with all that dreadful chain of conlequences with which we have feen it attended in a neighbouring kingdom."

Mr Fins, on the contrary, reprefented in ftrong terms, the inconfiftency of Mr Pitt's prefent conduct with his former profeflions. As to the time of attempting a reform, he faid, it had been propofed at all periods, in war and in peace; but they had all been reprefented as improper. The prefent, he contended, was not a more dangerous period than the year 1782, when Mr Pitt himfelf had brought forward a fimilar propofal. Mr Fox faid, he had always dilliked univerfal reprefentation as much as the chancellor of the exchequer, but that diflike was no reafon for charging it with more micchicf than was fairly imputable to it. He denied that it had been the caufe of all the ceils which had occurred in France. Theefe he afcribed to the councils, generally unwife, and often wicked, by which that country had recenily been governed. Mir Grey's motion was rejected, upon a divifion of 282 againt 41.

Wc have already remarked, that during fome pre-enchion ceding years, the people at large took a very cinfli-about the derable intereft in the queltion concerning the aboli-11 dreoperatle bers of petitions had been prefented to the houfe of commons, during every fuffion, praying that it flould be prohibited. During the prefent felfon, however, no fuch petitions were brought forward. In confequence of the French revolution, and of the dread of innovation at home, the greater number of the nriginal enemies of this traffic had been deterred from oppofing it, left they hould give countenance to the dicuftion of a pupular quettion, by which a dangerous enthufiafin might at this critical time be excited. The remaining enemies of the trace, being alfo zealous advocales for a reform of the parliamentary reprefentation, had refulved to drop all iuferior queftions, and

Britgin: to concentrate their ftrength upon that fingle point, affuring themfelves, that if the houfe of commons thould once be elected in a manner in any degree approaching towards univerfal fuffrage, every popular quef tion would thereafter be eafily carried. The fubject being thus in fome meafure deferted by the people at large, Mrr Dundas did not account it neceflary to revive the propolitions, by which, on the part of government, during the former feffom, he had endeavoured to modorate the views of the opponents of the trade.

On the 1 th of May, howerer, MIr Wilberforse moved for leare to bring in a bill, for abolifing the trade, carried on by Englih merchants, for fupplying forcign territories with llaves. The motion was carried by a majority of 7 ; but as it was not. to take ef fect for fome years, according to the refolution of the houfe in the precoding feffion, Mr Wiberforce moved, that leave be given tu hring in a bill, for limiting and regulating the importation of flares into the Britifh Weft India colonies, for a time to be fixed in the act. This motion was allo carried, sy a majority of 35 againft 25: The bill proceeded through a firt and fen cond reading, but was rejected on the 12 th of Junc, by 2 majority of 31 againf 29 .
During the prefent feffon, certain popular meafures were adopted. On the recommendation of Sir John Sinclair, a gentleman who of late ycars had becn extremely active, in calling forth a fipitit of attention to the improvement of the domettic productions of the ifland, 300 l . per annum ras voted by the houfe of commons, for the eltablifhment of a board of agriculture. This inllitution has been the means of cullecting and conveying to the public much ufeful information refpecting that mofl valuable of all arts. At the fane time, the inflitution is believed to have fuffered from the unpropitinus effect of political influence, which is fo apt to injure the utility of every Britith eftablihment; and afier the removal from its head of its original propofer, which happened in a few yeats, in conferguence of his oppofition to Mr Pitt's meafures, it lott much of its utility. As it poffefies little pratronage, and has no fpecial bufinefs alloted to it, there feems to be danger that it may fink into infignificance.

In confequence of a motion of the lord advocate of Scotland, liobert Dundaa, Eif. a bill was in the month of April brought into parliament, for the re- Jief of the Roman Catholics of Scotland. The perfons of that proferibed feet were flill incapacitated by law from holdiag or tranfmitting landed property, and wore liable to other very fevere reltrictions. The fe were now removed by a bill which paffed without oppofition. The paftirg of this bill was at the prefeat period a popular meafure, althongh a dozen of years had fearecly clapfed, fince the people of Scntiand had aimolt univerfally, and with the umeot violence, combined to oppofe any relaxation of the penal laws againt the Catholics. But one of the farourite notions of all political reformers at this time, was that religion ought to have no influence upon government; that religion, or mur duty to God, is a fubject about which men are only interelled as individuals, and eoncerning which focicty has no right to inferfere. On the other hand, the oppofers of every kind of innovation, were difposed to regard the Eatholics with a favourable eye,
as the adherents of an ancient fyitem, which reprovated all novelties, and tended to infpire the utmoft reverence for eftablibsed authority.

> The inhahitants of the north of Scotland were fuc- Tax on ccefful, by the altutance of Mir Dundas, in ohtaining coals car. a repeal of the duty on coals carricd coalt-ways, as far as refpected that part of Great Britain: but the ciiies of Lonoun and Wetzminfter were lefs foriunate, in a finilar attompt, to procure a repeal of the taxes paid by them on the lame article; as the ninifter would not agree, at the commenccment of a war, to relinquifh a tax which amnunted in this cafe to a confiderable fum.

At this peried the exclufive charter of the Ean India Company being within a year of expiring, that pany's body pretented a petition for a renewal of it. On the charter re 23 d of April the fubject was confidered in the houfc of commons. Mr Dundas introduced the bufinefs by obferving, that the propofal he was about to make of a renewal of the charter was undoubtedly attended with confiderable difticulties. "No writer upon politieal economy, (faid he), has as yet fuppoled that an extenfive empire can be adminiftered by a commercial affueiation, and no writer on eoinmerce bas thought that trade ought to be thackled with an exclufive privilege. In deviating from thefe principles, which have been admitted asid admired, I am fenfible that my upinions have popular prejudices againft them : but $\bar{I}$ am fupported by fuccefsful experience; and when the houle adverts to the peculiarities of the filbject before them, they will at once fee, that I am not attempt: ing to overturn theories, though I am unwiling to recede from old and eftablithed practice. It would be idle, and a proof of ignerance, to maintain, that all the advantages that Great Britain poffefes from its connexion with India, arife out of the prefent exclufive privilege of the company; but it would be impollible to fay what might be the political or commercial cffects of a variation from the prefent fyltem." Mr Dundas then flated, that the fhipping eniployed by the Jalt India Company amounted to 81,000 tons; that the feamen navigating thofe fhips were about m,000 men, who had conflant employment; that the raw materials imported from India for the ufe of home manufactures anounted annually to about 700,0001 . that the anmal exports of Brition produce and manufakure to India and China in the Company's Mips, amounted to upwards of a million and a half fterling. He flated, that great difficulties weuld attend any alteration of the prefent fyftem of government in India, efpecially from the effects which the innovation might have on the minds of the natives. He therefore propofed a variety of refolutions, the molt matcrial of which was; " That it appears in be fit and proper. to continue to the Eafl Iudia Company their exclufive trade, within the limits now enjoyed by them, for a farther term of 25 years, to be computed from the 1 ft of March 1794, liahle to be difcontinued at the end of fuch a period, if three years notice flall previoully be given by parliament; fubjeet, neverthellefs, to the regulations herein after fpecified for promoting the export of gonds, wares, and merchandife, of the growth, produce, or manufafture of Great Britain or Ireland, and for encouraging individuals to carry on trade to and from the Eafl ludies," 'Jhe segulations referred

## B R I

Britain. referred to, promitled the export and import of certain commoditics in the company's flaps, at a ftated freight. The refolutions propofed by Mr Dundas having been carricd, a bill was brought forwards, and paffed through beth heufes, with litle oppodition, for senewing the Ealt India Company's charter.

The trial of Mr Hallings itill proceeded, though very flowly, and was now totally difregarded by the public. A petition was prefented to the houfe of lords on the 18 th of April, from Mr Hastings, complaining of " the enormity of the delays which have attended his long-probracted trial," and earnefly cntreating, that their lordhips would adopt fuch means as might feem beit calculated to accomplikn the end which the petitioner fo anxioully folicited, viz. a clofe of the trial during the prefent ferfon of parliament. Mr Haitings had addrefled the court on the 2 yth of February, to the fame effect, but the bufinefs was not at this time brought to any conclufion.

During this year, gavernment endeavoured to Areng then itfelf by erełing barracks in the neighbourhood of all the great towns in the illand: that, by refiding there, the foldiers might be removed froun the hazard of receiving the contagion of popular opinions. A confolerable degree of political fermentation dtill prevailed in the minds of the people, which, however, was rapidly fubfiding. In England a bookfeller was profecuted, and punished with imprifonment, for felling the feend part of Paine's Rights of Man; and ane or two individuals, of low rank, were committed for feditious wrords. In Scotland, the public attention was much excited by the profecution of two gentlemen, Mr Thomes Muir, a nember of the faculty of advocates, and Mr Fyfche Palmer, a nember of the univerity of Caubridge, who acted as a unitarian miniller at Dundee. Mr Muir had been extremely active during the autumn of the preceding year, when the political agitation was at its height, in promoting affociations about Glafgow and its neighbourhood, for the avowed purpofe of procuring a popular reform of the reprefentation in the houfe of commons. His talents a.s a man of letters were only moderate, but he poifefed the faculty of unpremeditated clocution in a furprifing degree; and he appeared to be influenced in a great meafure by the vanity of haranguing without end, which the daily meetings of the fe focicties afforded him an opportunity of doing. In other refpects he was no way formidable, poffefling little knowlcdge of the trorld, and till lefs difcernment of the human charactor. He injured the caufe he meant to promote, by conflantly collecting numerous affemblages of common people, firlt at Gla[gow and afterwards at Edinburgh, which gave an appearance of diforder and turbulence to the fate of fociety, that was extremely alarming, not merely to government, but to perfons who, in other refpects, might have been difpofed to favour the political fentiments which he arowed, but who were intimidated by the events which nere paffing on the cointinent of Europe, and by the unfettled appearance which affairs were thus made to affume at home.-Mr Palmer was a man of more literary talents. He attended political focieties, but without making any remarkable efforts in them. He was tried before the circuit court of jufticiary, on the zjth of September, fome months after Mr Muir's trial
at Edinburgh, and found guilty of puisliming a political libel, which had been written by fome other pesfon, but which he had corrected, and ordered to be printed. Both of thefe gentlemen were rondenmed to tranfportation, Mr Muir for fourteen and Mr Palmer for feven years, to fuch place beyond feas as his majefy foould think fit to appoint; and they were aceordingly font to Botany Bay. The feverity of thefe fentences excited confiderable difeufion. The crime with which they, the condemned paties, were charged was, that of fodition of leafing-making, or public libel; the exprefs punilhment for which is prefribed by the law of Scotland, to be fine, imprilonm ent, or banifhment. $\Lambda$ sit is a rule in law, that penal fatutes are to be Arictly interpreted, it was doubt ed how far the punihment of tranfortation could be inflicted under a fatute which points out, in general terms, banihment as the puniftment of the ofience. The ancient practice of the Scotifh courts was undoubtedly favonrable to the cxtenfive and more forere interpretation now adopted.

Not intimidated by thele trials, a few perfons of no Britithico:public or political importance whatever, met at Edin- ventiva. burgh in the month of November, and hought fit to eall thenfelves a Britilh convention. 'They minicked the proceedings of the French national convention as clofely as poflible, faluting each other with the title of cutizen, holding publie fittings, admitting ftrangers to the honours of the littings, \&e. and mingling the folemn with the ridiculous in a mot fingular ityle. At any other period their conduct would have excited nothing but ridicule. At this time, however, it was confidered in another light, as fome of the members were brought to trial, and punifhed with the fame feverity that had been cxercifed towards Muir and Palner.

955
To promote the fuccefs of the war, a convention Forciga had been figned in the fring between our court and treaties that of Peteriburgh, Atipulating for the profecution of hoftilities till the French fhould relinquifh all their conquefts. A treaty was foon after concluded with the landgrave of Helle Callel, for a fubfidiary body of 8005 men; a number which, by a fubfequent agreement, was extended to 12,000 . The king of Sardi. dia engaged (for 200,2001 . per annum) to keep up an army of $50,0=0$ men, to be employed in the particular defence of his dominions, and in general fervice againft the encmy. A compact of alliance was adjulked with Spain, one with Naples, and others with Pruffia, Auftria, and Portngal. Befides the ftipulations of vigorous liontility, it vas agreed, that the conduct of other powers lhould be watched with extraordinary circumfpection in this cafe of common concern to every civilized flate, left they fhould abufe their profeficd neurality by protecting the commerce or pro. perty of the French.

950
We referve the particular detail of the military The wro tranfactions of this mon eventful contelt for the article France, to which we refer the reader. We may here oblerve, however, that during the prefent campaign the independence of France feemed at one time to be brought into confiderable hazard. The faction that overturned the monarchy, affembled a convention of national reprefentatives, and was endeavouring to eftablith a republican form of govermment, foon divid- ed itfelf into two parties. The leading party at the firft cftablifbment of the republic confifted chiefly of men of letters, who were led by their fuceulations to expect a wonderful amelioration of the human chafacter, and of the ftate of focicty, from the changes they were producing. They wificd to avoid fanguimary meafures at home, and to reltore tranquillity to their country as fpecdily as poffible. Thefe men, however, appear to have been deficient in activity, as well as in knowledge of the character of their countrymen. They were oppofed by a turbulent and ferocious minority, led by Robefpierre, Danton, and other men of a moit unprincipled and fanguinary temper. 'Ihe moderate and ruling party were deceived by many of thofe whom they employed; and at laft their chief commander, Dumourier, having becu repulfed in the Netherlands by the united forces of Auftria, Pruflia, and England, entered into a negociation with thefe powers for the reforation of monarchy in France. The negociation was rendered abortive by the fidelity of his army, almoft the whole of which deferted their general, and refufed to bring the independence of their country into hazard by allowing foreign armies to interfere in the arrangentent of its internal government.

The defection of Dumourier, together with the repulfe of their armies, brought the moderatc party, Which fill ruled in the French convention, into great difficulties; and it is perhaps a moft unfortunate circumftance, that the Britifh government did not feize that opportunity of making peace with them. The hazard of innovation was now over in Britain. One of the maxims of the firf French republicans was the love of peace and hatred of war. 'The unfuccefsful iflue of the attempt which they had made to penctrate into other countries might have remained long upon their minds, and added force to this fentiment. The tranquillity of Europe might thus have been infured during a confiderable period. A mild party would have been preferved in power, an influence obtained by Great Britain over their councils, and the fanguinary feenes would have been avoided which afterwards occurred in the intcrior of France, and upon the fronticrs. Ihis epportunity of making peace, lowever, was unhappily difregarded, and nothing lefs was expeeted from its ditraction within, and the immenfe combination of force affailing it from without, than the complete fubjugation of that country. 'The want of fuccefs in their military operations at lat encouraged the antagonifls of the more moderate Freneh republicans to attempt their overthrow by an infurrection of the common poople of Paris. The national reprefontativen were in this way fubducd. Ninety members of the convention were imprifoncd, and the minority were cnabled to comvert thomfelves into an apparent majority. liy this event all France was thonwn into confufion. The authority of the convention, thus mutilated, was rejedod by the whole of the fouth of France, and the royal or national harhour of "loulon, with its tlert and thores, furrendered, by negociation, to the Britifh admiral, Lord Hood, as trublee for the next heir of the monarclay: In the weflem parts of France, the ftandard of royalty was reared, and joincd by immenfe multi:udes, who adhered to it with the most obstinate bravery, and verc not fubducd till after a greaterexpence
of blood than was found neceffary for the repulfe of the combined armies of Europe.

On the part of Britain the general plati of a war ${ }^{989}$ of fuch magnitude and fuppufed importance does not generat of the feem to have been nell contrived, or properly carried was deinto effect. A great part of the weftern coalt of fective. France was in full poffeftion of the royalifts, while, at the fame time, the Britifh navy commanded the ocean. It was therefore an caly enterprife, at a time when Britain had an opportunity of taking into pay fo many foreign troops, to have landed a great army on the French coalt, to have affited the royalits, and advanced along with them through an open country, deftitute of fortified towns, to the capital, againft a convention whofe authority was farcely acknowledged by one-third of the nation. Inflead of this mode of proceeding, the combined armies advanced againt the French Netherlands, and wafled the fummer, as well as their own itrength, in the fiege of a few of the powerful fortreffes which defended that frontier. Thus the attack upon France was actually made upon its frongeft fide, that is to fay, in the mult injudicions manner pofible. Leifure was given to the convention to cttablifh its authority at home, and to call forth immenfe levies for the defence of the country, fo that before the clofe of the year the tide of fuccefs was turned in their favour. Toulon was retaken, and tho Spaniards beaten in the fouth; while on the northern frontier, the Britioh army was repulfed before Dunkirk, and the commander in chief of the allies, the prince of Cobourg, before Maubeuge. The duke of Brunfwick and Prince Wurmfer were driven acrofs the Upper lhine near Mentz, within the laft fortnight of the year, after a fucceftion of fanguinary conflicts, in which the French, by fighting every day in fucceflion, and daily bringing forward fref troops, who had been allowed to repofe on the preceding days, at laft fuccecded with their raw levies, in wearing down the ftrength and the courage of their veteran cnemies.
'The Britifh parliament affembled on the 1 It of $\mathrm{Ja}-\mathrm{King}^{\prime \prime}$ 's nuary I794. In the fpeech from the throne his nia-fpeech. jefty called the attention of the two houfes to the iffue of the war, " on which," he obferved, " depended the fupport of our contlitution, laws, and religion, and the fecurity of all civil focicty;" to the advantages that had attended our arms both by land and fea; and the expectation of ultimate fuceefs, as ihe operations of our enemies were alone derived from an albitrary fyftem, which enabled them unjuftly to difjofe of the lives and properties of the peuple, which muft necefarily introduce internal difoontent and confufion. His majefly procecded to ftate the impofibility of making peace upon the only grounds on which it ought to be concluded, the permanent fafety of the country, and the tranquillity of all other nations. He noticed the treatien and conventions into whichs he had entered for this object with furcign porwers; and ment tiance the general loyalty which preveiod amongll all ranks, notvithtlanding the continued cfforts to miflead and feduce the people. He lamented the neceflity of additional burdens upon the people, but noticed the favourable ftate of the revonue.

As ufual, the topies mentioned in the ling's fecech became the fulyect of debate, both in the boule of

## $\mathrm{B} R \mathrm{I} \quad[657] \quad \mathrm{B} \quad \mathrm{R}$ I

Britain. lords and in the houfe of commons, but they excited little attention throughout the nation. Men of property, in general, had been fo much alarmed by the events which occurred in France, that they accounted it:abfolutcly neceffary to repofe implicit confidence in government; and as adminiftration feemed tefolved not yet to defpair of fuccefs in the war, they received full fupport from the approbation of the public. A mi. nority, indecd, exifted throughout the country, by whom the war was openly difapproved of ; but as they confifted in general of perfons of little influence, they could in no way embarrals the meafures of adminiftration. By this minority, the debates in parliament were as little regarded as by the fupporters of government. They had no confidence in that affembly, in confequence of the inconfiderable number of the members that remained in oppofition; and the memory of the cualition between Lord North and Mr Fox, together with the moderate and correctly conftitutional nature of the principles fupported by Mr Fox, deprived this Satefman of the confidence of the more ardent lovers of political innovation, and rendered his eloquence of little value in their eflimation. Indeed there was fomething in the form which the parliamentary debates generally affumed during the prefent war, which tended to sender them uninterefting. It was underfood by the public, that the war was undertaken for the purpofe of fubduing the political principles adopted by the French leaders; but thefe principles, notwithftanding the extravagant length to which they had been carried, and the abfurdities and the crimes which had been committed under pretence of them by the ruling factions of France, fill, at bottom, bore fuch a refemblance to fome fundamental maxims of the Britilh conttitution, and to the principles for which our anceftors fo earnefly contended, that the members of adminiftration feem to have accounted it impsudent to avow in their public fpeeches, that the war originated in the purpofe which their friends out of doors confidered as its radical object. They were urivilling to fay, that they wifhed to encroach upon the independence of a neighbouring State, or to prevent its eflablifhing a reprefentative government; and chofe rather to allege that the war was occafioned by the direct aggrefion and ambition of the French, in attempting to eftablifh their dominion over other nations, and that our object in it was merely to obtain indemnity for the paft, and fecurity againf fuch aggreffion for the future. As oppofition poffeffed confiderable advantages from this equivocating mode of defending the war, every debate was apt to turn into this channel, and the fame arguments were continually repeated without any perfon being convinced.

On occafion of the king's fpeech, Lord Wycombe moved an amendment to the ufual addrefs of thanks, recommending pacific meafures. Lord MIornington, on the other hand, who was one of the principal fupporters of the addrefs, contended that the allernative of war and peace did not at prefent exift. Before we could relinquifh the puinciples on which the war commenced, proof was neceffiry, either that the opinions which we had conceived of the views of France were ersoncous; that the war was become defpetate and irepradicable; or that, from fome improvement in the fyftem and prin-

Voz. IV. Part II.
ciples of the French, the juftice and neceflity which prompted us to commence the war no longer exilled. His lordfhip afcribed to France unlimited views of ag. grandifement; ambition connected with principles lub. verfive of all regular government. In lupport of his opinion, he adduced the act of fratermity, the affumption of Coverejgnty in Savoy and the Netherlands, the opening of the Scheldt, and the apparent defigns of hoftility againft Holland. 'That fuch were the motives his lordhip contended frum a pamphlet written by $\mathbb{M}$. Brifiot, the conducी of the French refidents in America and Conftantinople, and the fcheme of emancipating and arming the negroes in the Weft Indiec. From all thele proofs, his lordmip declared himfelf fully con. vinced of the original juftice and neceffity of the war. He was fo pleafed, notwithftanding the late reverfes, with the general refult of the campaign, that he entertained confident hopes of ultimate fuccefs. He confidered the foundations of the French power as founfound, and the new government as fo weak, that the effect of the confederate arms would foon be triumphantly ftriking. He acknowledged, that the enemy had difplayed extraordinary vigour and energy; but he was convinced that power obiained by a fyftem of terror would not be permanent. He oppofed a negotiation as unlikely to be effectual in the prefent circumftances, and advifed the continuance of the mof refolute exertions of hoftility.

Mr Sheridan, in reply to Lord Mornington, afferted that Great Britain had acted with no lefs difregard of the independence os neutral fates than the French; that we had endeavoured to compel Genoa, Switzer. land, and Tufcany, to join the confederacy againft France, by the moft infulting menaces; and that, as far as prudence would permit, we had affumed the fame language towards Sweden and Denmark. He faid, that if the French fyftem of fraternizing with other nations that wifhed to overturn their own internal government was a juft caufe of war, their dereliction of that fyftem ought to be a reafon for making peace. He denied that the French were the original aggreffors. "I am aftonimed," faid he, "that the minifter who fits near the noble lord, does not himfelf feel it neceffaty to his own dignity to oppofe this paltry atgument of the act of aggreffion having come from them, inftead of leaving that tank to us, to whom comparatively the fact is indifferent. When he hears this called a war of neceffity and defence, I wonder he does not feel aflamed of the meannefs which it fpreads over the whole of his caufe, and the contradiction which it throws among the greater part of his arguments. Will he meet the matter fairly? Will he anfwer this one queftion diftinetly? If France had abftained from any act of aggreftion againft Great Britain, and ber ally Holland, ftoould we have remained inactive fpectators of the laft campaign, idle, apart, ard liftenne to the fray; and left the conteft to Auftria and Pruffia, and whatever allies they could themfelves have obtained? Does he then macan to fay that he would have fat fill; that Great Britain would have fat fill with arms folded; and reclining with luxurious eafe on her commercial couch, have remained an unconcerned fpeetator of this mighty confict, and have left the caule of civil order, government, morality, and religion, and its God, to take care of itfelf, or to owe its prefervation to

Pritain.

## B R I [ 658$] \quad \mathrm{B}$ R I

Britain. the mercenary exertions of German and Hungarian barbarians; proviled only that Frince had not implicated Great Butain by a fpectai offence, and forced us into this caufe of divine and wniverlal intereft by the petty motive of a perforal provocation? He will not tell us fo: or if he does, to anfwer the purpofe of the hour, witl he hold the fame language to our allies? Will he fpeak thus to the emperor? Will he feak thus to the king of Pruffra? Will he tell them that we are not vulunteers in this caufe; that we have no merit in having eintered into it; that we are in confederacy with them only to refent a feparate infult offered to ourfelves; which sedrefled, our zeal in the caule at leaft, if not our engagement to continue in the alliance, muft ceare? Or if he would hold thrs language to tho efe porvers, will he repeat it to thofe leffer itates, whom we are hourly dragging into this perilous contef, upon the only plea by which fuch an act of tyrannical compulfion can be attempted to be palliated, namely, that a perfonal ground of complaint againt the French is not neceffiry to their ennity; but that as the league againk that people is the caule of human nature itfelf, every country where human feelings exif, has already received its provocation in the atrocities of this common enemy of human kind? But it is unneceffary to afk whether he would hold this language to the greater powers. The king of Pruflia, Sir, at this moment, tells you, even with a menacing tone, that it is your ows wat; he has demanded from you a fubfidy and a loan; you have endeavoured to $e^{-}=$his demand, by pleading the tenor of your treaty of defenfive alliance wihh him, and that as the party attacked, you are entitled to the whole of his crertions; he denies that you are the party attacked, though he applauds the pinciples upon which you are the aggrefor; and is there another power in Eurone, to whom our goveinment will venture to tefer the decifion of this queftion? If what 1 now thate is not the fact, let me fee the minifter fand up and contradict me. If he cannot, let us no longer bear that a fallacy fhould be attempted to be impofed on the people of this country, which would be treated with forn and indignation in every other comer of Europe. From this hour, let him either abandon the narrow ground of this being a war of neceffity entered into for felf-defence, or give up the lofty pretence of its being a war of principle, undertaken for the caufe of human nature." Mr Sheridan admitted, that enormities had been committed in France, which difgufted and fickened the foul. This was mof true; but what relation had thefe to England? And if they had, what did it prove? What but that eternal and unalterable truth, that a long-eftablifhed defpotifm fo far degraded and dehafed human nature, as to render its fubjects, on the firf recovery of their rights, unfit for the exercife of them! But, he faid, he Thould always meet with reprobation the inference from this truth, that thofe who had long been flaves ought ever to continue fo. That we and all the powers of Enrope had reafon to dread the madnefs of the French, Mr Sheridan agreed; but was this difficult to be accounted for? Wild and unfettled as they muft neceffatily be from the poffeflion of fuch porver, the furrounding flates had goaded them into a paroxyfm of madnefs, fury, and defperation. We called them monfters, and hunted them as monflers. The confpiracy of Pilnitz, and the brutal threats of
the abettors of that plot, had to anfuer for all the ad ditional horrors that had fince difgraced humants. We had covenanted for their exteimmation, ard now complained that they turned upon us uith the fury that we had impired. The fame Ifeaker afferted, that no reafunable hope of fuccefs exifted upon which we ought to be led. "What," faid he, "uas the flate of our allies when we entered irito the conledeazy? The force of Auftia mbircken, hough compelled to abandon Brabant, and the power of the veteran troops of Pruflia abfolutely uritrice, though the featons and dileare had induced tlem to retive from Champagre. What is their ftate now? Defeat has thimed their ranks, and difgrace has breken their fpiit. They have betn diven acrols the Rhine by French recruit, like meep before a lion's whelp, and that not after the mifhap of a fingle great action loft, but after a fucctfion of bloody contefts of urpricedented fury and obftinacy. Where now is the fcientific confidence with which we were taught to regard the efforts of difcipline and experience, when oppofed to an untrained multitude and unpracifed generals? The jargon of proteflonal pedantry is mute, and the plain fenfe of man is left to its own courfe." Mr Sheridan afferted that the efforts of the inferior flates, the Dutch, the Portuguefe, the Italians, whom we had compelled to enter into the war, had been of no importance, and he alleged that government had conducted the contert with little vigour or ability.

Mr Windham combated the opinion, that the encrmities committed in France nere the effects of the war. It was, he faid, the duty of every government to interfere; for France w:s making war egainft all government, all religion, and all principle. How was it pcffille to preferve peace with a nation which formed a ground for quarrel with every government that dared to fufo peet the purity of their irtentions? Whatever might be underflood as the binding law upon nations carrying on offenfive war, with refpect to interfering in the intermal affairs of other countrics, he conceived that fuch opinions conld not affect a nation fuffaining a defenfive war. "Standing (faid Mr Windham) as we do, the defenders of the prefent and the future world, ought we meanly to crouch in couardice, and fink in defpair."

Mr Dundas defended the management of the war, and the activity which had been empluyed by government in it. Our feamen in the beginning of the year, were only 15,000 ; in the courfe of the war 54,000 men had been added. At the commencement of the war, we had only 13 flips of the line and 30 frigates fit for fervice; at the prefent time, we had 80 fthips of the line and 100 frigates in aqual employ, which, with the almed veffels now in the fervice of the public, made the whole above 300 fail. In augmeriting the army, the moft effectual and economical fyftem had been purfued; befides the militia, 30.000 men had been added to the army. He concluded, that more had been done in the firlt year of this, than of atiy former war; and added, that upon the iffue of this Atruggle, every thing that was valuable to us, either as individuals or a nation, depended.

Mr Fox repeated in a variety of forms the affertion that we were the aghreflors in the war. He contended, that every flate had a full right to regulate it internal

 , l goveanm govenmment;

## $\mathrm{B} R \mathrm{I} \quad\left[\begin{array}{lll}659\end{array}\right] \quad \mathrm{B} R 1$

Britain. government ; and afferted, that the maniffflo of the duke of Brunfuick had occafioned all the excefles of the French. Upon the fubject of acts of agereffion previous to the war, he thought, that this difference between the conduct of the parties fubfilled; France was always ready to negotiate, while the Britifl government invariably refufed. The former expreffed the Arongeft diflike to war, and took every ftep to avoid it. The latter not only flowed an inclination for war, hut endeavoured to inflime and provoke hoflilities. He contended, that the nature of the conduct of the French government towards this country, afforded no gond reafon for a continuance of hoflilities, ind no rational ohjection againlt the permanency of any treaty that might be concluded with them. We negotiated with Louis XIV. though his pretenfions were no lefs dangerous to this country, than thofe of the prefent French leaders. That monarch was a declared enemy to our revolution. He correfponded with the jacobites of England. He endeavoured to overturn our eftablifhment in church and tate. He invaded Holland, and confined not his projects of conqueft to the banks of the Rhine. Mr Fox faid, we ought to be fatisfied with the beft fecurity for peace, that the nature of the circumftances in which it was made would permit, taking care that the power with whom it was made fhould have no temptation to bresk it. He denied, that the prodigal mamer in which the French government condulled their affairs, and the confufion and ruin into which their finauces were haftening, afforded any profpet of fuccefo to the allied powers. He faid, he remembered, that during the Ancrican war, there was mach talk of a vagrant conere?s, which was nowhere to be foand, of their milesable refuurces, and their wretched paper money at 300 per cent. difcount, of which, with any few halfpenc. you hat in your pocket, you might purchafe to the amount of 100 dol. lars. The Americans wete repr-fented, as exercifing on each other the molt intulerable tyranny, on the royalit, the mot unheard-of cruelty; and it was then faid, that if fuch principles were luffered to exift, if the caufe of America was uitimately fuccefsful, there was an ent of all civilized government ; England mult be tindden in the dult. "Yet then (Faid this llatefmarl), I ecommended negotiation, and lived to fee $G$ eat Britain treat with that very congref, fo oten vilified and abufed, and the monarchy remain in fufticient vigour. Gu) graut that I may not fee ber treat with the prefent goverrment of France in sircumftances 1 . 5 , favourable for making perce than the pr fent." He reprobated the condust of adminitration, in endeavouring to compel the weaker ftates to join them in the war, while, at the fame time, they were inverghing againf the French, as invaders of the righas of nations. He concluded with a mott iplendid pancgytic, upon the fuperior dignity which appeared in thefe times in the chatester and conduet of the illuftrious General Wafliingenn, who, for the prefervation of his authoritv, as firl magiftrate of a free people, had not recourfe to trichs of policy or arts of alarm, but depended upon his oun wifdom, inoderation, and firmnefs; which enabled him $t 0$ preferve the neutrality of America, without fear of the contagion of the French revulution, or of the tlireats of Britifh hofility.

Mr Pitt recapitulated the arguments formerly ufed,
to prove that the aggreffion had certainly taken place on the part of France. He mentiuned the fyftem adopted by the Fronch as fubverfive of all regular government, their ufurpation of foreign territory, their hoftile intentions againf Hollard, and their unprecedented views of aggrandilement and ambition. Unlefs it could be proved that we had miftaken thefe principles, we were bound, he faid, to continue the war; and fuppofing that difficulty and difappointment had occurred in the profecution of it, thefe ought to infpire us with additional vigour, and fimulate us to new exertions. Had there been any mifconduet, of which he was not fenfible, in conducting the war, yet that could not affeet the general queltion. If the difficulties we had experienced, arofe from the want of abilities in thofe to whom the management was entrufted, let us refort to other men. If the difficulty arofe from the nature of the conten, then the angument againt minitters would be much weakened. He Aated the objects of the war to be, to procure a fecure and permarient peace, and an indemnity for the expences incurred. 'ro accomplifh thefe ends, he afferted the neceflity of interfering in the internal affairs of France, and lat vindicated this mealure upon the ground of fecuring our own fafety. He conceived there was not the leaft probability of the continuance of the prefent governmerst of France. The effurts of the people had been merely the refult of terro:. They were fupported by the mof defperate refources, which could not pofibly contiaue. He foid, that peace with the prefent French government was lefs defirable to him than war, under any difaters which he could puffibly imayine. He admitted, that a fafe and advant geous peace ought to be roncluded, as ioan as it could poffibly be obtained; but he atfirmed, that the fecurity and benefits of peace with France muft deperd upon the eftablemment of a government effemially different from the prefent. He afferted, that had Louic XIV. fucceeded in his projects, what we fould have luftered trom him would have been a deliverance. compared with the confequence of fuccefs attendiag the prefent Frerch fytem. He faid, he did not attach the fame degree of importance to the reftoration of notrarcliy in France, as to the deflruction of the prefent fydem. He attached importance to the former, only as a form of goversment in which the greater part of the people nould be difpofed to concur, and which would afford the belt fecurity for the permanence of peacc. He noticed, as precluding all negotiation, a late decree of the French convertion, declaring the maty and indivifuility of their republic, in the enumeration of the territories of which they include 1 their late conquefts. He concluded with faying, that there could be no queftion but to relilt, till fuch time as, by the bleffing of providence upon our endeavours, we might fecure the independence of this country, and the general interefts of Ensope. The addrefs was catried by a majority of 277 gainft 59.

In the houfe of lords, a fimilar debate tock place Debate on upno the fame occafion. I.ord St it moved the ad-the aldrets drefs, and the motion was feconded by Lord Auskland in the houre with fpecclies which recited in fromg terms the atroci- of torcs. lies committed by the Frencl faction upon each other, together with the fucceffes of the Britiff toops under the duke of York and elfowhere. Thefe noblemen nere fupported by the duke of Portland, Earl Spencer.

Loid

Britain. Iord Coventry, the earl of Mansfielu, the earl of Hardwicke, the earl of Carlifle, Lord Grenville, and others. They were oppofed by the earl of Guildfurd, who propofed an amendment to the addrefs, recommending negotiation, and by the duke of Narfolk, the earl of Derby, the earl of Lauderdale, Earl Sianhope, and the marquis of Lanfdowne. Earl Mansfield afierted, that the war was begun by the unprovoked aggreffion of France; and continued on our part, not from the motives of ambition and conqueft, but to reltore the bleffings of order and good government to that country, to refilt and defeat the wild attempts of thofe, who had declared it to be their purpofe to diforganize Europe, and who were the enemies of the whole human race. He faid, that a lafting peace with France would be impoffibie. No alliance could be made with anarchy. The government of France was continually fluctuating, and the leaders of the prefent faction were not likely to refpect any engagements formed by their predecef-fors.-Other noblemen fupported the neceffity of perfevering in the war, to avoid breaking faith with foreign powers, and as the only means of preferving the independerse and the conftitution of this country; while, on the other hand, the marquis of Lanfdowne contended, that the fpeech from the throne had difcovered an important fecret, that this was a war for nothing, or which had no fpecific object in view. He ridiculed, with much fuccefs, the difficulty of treating with the French, becaufe they had no government, or were in a fate of anarchy. Let the minifters, faid his lordflip, aft General Wurmfer if there is no exilting government in France. Let them afk the duke of Brunfwick and the king of Pruffia. Let them aik Lord Hood and Sir Gilbert Elliot, the royalift army of La Vendee, the unforturiate Lyonefe, the Spanlards retiring before their arms. He feared it would not be long, before the prince of Saxe-Cobourg and the duke of Yo $k$ muft allow, that there was a government in France. The horrid outrages perpetrated in France, he confidered as chiefly owing to the delufive hopes entertained by the royalifs, of affiflance from this country. The earl of Laudcrdale regretted the confequences, which, by the maagogent of minillers, the war was made to produce upon the fituation of the people of this country. He afferted, that the alarm fpread by minifters bad been made the ground for a fytem of perfecution. The revolutionary tribunal had been regarded with hortor and difgult; but what had been the conduct of the courts of juftice in this and a neighbouring country? What their fentences? Who could venerate a conflitution, which mult be protected by the friend becoming a fpy on the actions of his neiglubour, and the houfe of domellic canviviality being fubjegled to a ftate inquifition? His lordflip difcuffed at fome length the feveritics exercifed in Scotland, and afcribed the revolution in France to the feverity of punifloments and the oppreffion of the poor. "Does the minifter then (faid his lordllip), take the way to prevent the introduction of Freluch principles, when he embarks in a war which weiphs down the people with taxation; and intrnduces a fyRem of feverity, which mull make them deteft, not admire, the conflitution of Great Britain." The addrefs was carried in the houfe of lords, by a majority of 97 againt 12.

Several debates of a fimilar nature occurred during
the courfe of the fofim; but as the iffue of the whole was the lame, and the arguments emplosed did not differ effentially from thole now mentoned, it is unneceflary to flate them in detail.

Britain.

It is one the remarkable charaeterinics 5 the Bri 993
 mation, to be at all times eafily thrown into a ftate the fources of great anxiety and alarm, by any objeet which goo of alarm. vernment for the time thinks fit to reprefent as dangerous. The tho greateft objechs of political terror Fear of to Englifhmen, have at all times been the fear of a invafiono foreign invafion, and the dread of fecret comípiracies, afferted to be entered into by a difaffered party. It is true, that during many ages Britain has not bern fucceffully invaded, and that, fince the time of tlic Spanifh armada, no fuch attempt has been made by any of thofe governments with which Britain has engaged in hoflility; but this very circumftance, which leads rellecting perfons to regard fuch a project as extremely unlikely to occur at atiy particular period, feems to produce a contrary effect upon the people at large. The evils attending invafion having never been felt, lay hold of their imaginations, in the wildeft and moft exaggerated forms; and from the terror thus produced, they are prevented from reflecting upon the difficulties attending fuch a project, which deterred Louis XIV. from attempting it while in the height of his power, and poffeffing the advantage of a difputed fucceffion to the crown. Such is the credulity of the Britifh nation upon this head, that adminiftration can at any time throw them into a flate of the utmoft confternation, by expreffing an apprchenfion of a French invafion. From this alarm, minifters ufually derive confiderable advartages. The roice of faction is filenced for a time by patriotic terror, and all parties are under the neceffity of arranging themfelves under the banners of government for the defence of their country.

The dread of plots and corifiracies produces effects 999 fomewhat fimilar. It is true, that no confpiracy of plots. Englifhmen was ever productive of danger to the government, while it remained even tolerably popular: but this never prevents the nation from being thrown into the utmof confternation, by intimations, on the part of government, that fome defperate confiracy is fecretly carrying on, and is ready to burl forth, to the utter deffruction of the public tranquillity.

During the war of which we are now treating, Mr Pitt's adminiftration derived incredible ftength from thefe two fources of terror; the fear of invafion, and the dread of confpiracies by difaffected perfons. Ncither did he want fkill to profit by them. At the commencement of the war, it had been believed by moft perfons, and perhaps by gavernment, that it would be of fhort duration, as the flate of anarchy which fucceeded the overthrow of the monarchy in France, feemed to render that country an ealy prey to the powerful armies by which it was invaded. When any doubt of fuccefs was expreffed, it was faid, that after making trial of the war for a year, we might defift, in cafe we were unfucceffful. But the original flate of affairs was now conliderably altered, by the fucceffes of the French at the end of the late campaign. The Britif, government fill refolved to perfill in the war; which, however, was now becoming lefs popular, as lefs likely to be attended with fuccefs. On the other hand, the French leaders wore greatly irritated by the

Britain. perfevering hollility of the Britilh minifty, and amilet the pride of victory, menaced England with invafon. It is evident, that they had ftill too much bufinefs upon their hands on the continent, to be able to make the fightelt attempt to carry their threats into execution: but the Britith adminitlration, taking advantage of the threat, expreffed their fears that it might be fuccefsful; and propofed the arming of affociations of volunteers, both cavalry and infaniry, throughout the ifland, for the defence of the nation, both againft foreign invafion, and alfo againft the efforts of difaffected perfons at home. They allo encouraged the raifing of fubforiptions to defray the expence of thefe armed affociations; and although the meafure was difapproved by the minority in parliament, as an unconflitutional mode of saifing money, it was fupported by the majority. An att was paffed, authorizing the cmbodying and training of volunteers, and the meafure was carried to a confiderable extent throughout the country. In like manner, though the political ferment occafioned by the Trench revolution had now confiderably fubfided, and the alarm occafioned by it was gradudlly pafling away, adminiftration, aware of the ftrength they derived frem keeping the country in a flate of anxicty upon political fubjects, announced to parliament, by a mefiage from the king on the 12 th of May, that leditious practices had been carried on by certain focieties in London, with a view to overturn the conftutution, and introduce the fyftem of anarclyy that prevailed in France; that their papers had been feized, and were fubmitted to the corfideration of the houle. On the fame day, Thomas Hardie, a fhoemaker in Piccadilly, who had acted as fecretary to the London Correfponding Society, and Daniel Adams the Cecretary to the Society for Conftitutionai Information, were apprehended for trealonable practices, upon a warrant from Mr Dundas. Mr Horne Tooke, well known for his ingenious philological writings, as well as for the political part he formerly acted in the turbulent days of John Wilkes, with the reverend Mr Jeremiah Joyce, Holcroft a dramatic writer, Mr Ǩyd a barrifter, and John Thelwall, who had for fome time entertained the town in the character of a political lecturer, were in a few days arrefled and committed to the Tower on a charge of high treafon.

A fecret committee of the houfe of commons was mittee. chofen by ballot, for the fake of giving folemnity to the inquiries made into this confpiracy. The members of the committee were the friends of the minitter. The report of the committee, concerning the alleged confpiracy, amounted to little more than a recital of a number of advertifements from focieries, or accounts of their debates, that had previoufly appeared in the public newfpapers. It ferved, however, as a reaton for fulpending the operation of the habeas corpus act, and thereby enabling miniflers to prevent any political movement, or avowed difapprobation of their meafures, from being ralhly exhibited out of parliament.

In the mean while, the fear of invafion, added to the political alarm, which, previous to the commencement of the war, had diffufed itfelf through the countiy, and which was thus artfully maintained, conferred upouminifters a degree of firength, which for a century or two no Britifh adminiftration had poffeffed. Alnoff all men of property were their adherents. Their antago-
nifts fonk into utter difcredit, and fuffered a very fe- Pritain. vere degree of perfecution in every department of fociety; fo that it became dangerous to a man's profpeets in the world, and in ordinary bufinefs, to exprefs the nlighieft doubt of the propriety of any meafurc approved of by government.

In the early part of his alminiftration, Mr Pitt had Finance. endeavoured to ref his reputation, in a confiderable degree, upon the improvement of the finances, and the hope which he held out of paying off the national debt. He now de〔erted all fuch views; and taking advantage of the uncontrouled power he poffeffed at home, and the pliability of parliament, he engaged in a career of unexampled expenditure, in corrupting fucceflive parties in France, or in the management of the war. No oppofition was made to a demand of 85,000 men for the maritime fervice; but the increafe of the army to 60,000 men was refilted by oppofition, though the majority allowed that number. The whole fupply of the year exceeded $20,228,000$. As a loan was negotiated for $11,000,050$.; fpirituous liquors, glafs, bricks, paper, and other alticles were fubjected to new duties; and an additional revenue was drawn from attorncys.

From its firf rife to eminence, as an European Prufian power, the Pruffan court corffdered France as itspolitics. protector againft the ambition of Auftia. VVTe have $^{T}$ remarked, that, at the period of which we are treating, Pruffia had entered with reluctance into the ambitious views of Auftria and Ruffia for the partition of Poland and France. Having found it neceflary to do fo, however, for the fake of haring in their acquifitions, the Pruftion court appears to have conducted itfelf with §ngular prudence and dexterity. During the prefent year, in fpite of the refiftance of a party in Poland, headed by the brave Kofciulko, that country uas partitioned, and Pruffa obtained an ample fare of its territory. The partition of France was an object from which Pruflia had every thing to fear, as it would deftroy that power, by which Auftria, the inveterate enemy of Pruffia, had at all times been kept in awe. When the Pruftian monarch found it neceffary in conjunction with his new allies to inrade France in 1792, he retired upon the firft appearance of a tolerably firm oppolition, and gave the new republic a refpite of another winter, during which to arrange its frength, and call into action its refources. In the year I 793 , the Pruflians remained extromely inactive till towards the clofe of the campaign, when, at lalt, in confequence of repeated remonfrances from their allies, they adranced againft Alface. Being there repulfed, and the republic begiuning to exhibit on all fides a refpeetable inilitary front, the king of Piuflia declared, that the expences of the war were more than his finances could fullain, and required the other German fates to fupply him with money, threatening in cafe of a refufal entirely to defert the common caufe. Upon their declining to comply witl his demands, he actually began to withdraw his troops. By this time, however, the Britifl miniftry bad engaged in the war with a degree of eagernefs, which induced them to make every ficrifice to obtain fuccefs in their object. On this occafion, therefore, to avoid lofing the afiftance of Pruffia towards the common caufe, they offered a fubfidy, which was finally adjufted upon the following terms: His

Pruftian majefty agreed to furnifh 62,000 troops, which "as 30,000 ieyond his contingent ; tor which his Eritanme in ij Aly agreed to pay him 50,0001 . a month, 100,0001 . a month for forage, 400,0001 . to fus the army in motion, and 100,000 on therr return; in all for the remaining mone months of the prefent year, 1.350 .000 . The whole year would amount to $1,8=0,0001$. out of which the itates general were to pay 400,0001 . The forces thus lubfidized, were to be commanded by an officer to be named by the kisg of Prufita.

By this treaty the king of Pinffis was enabled to keep his army upon the war eftablihment with little adilitional expence to himfelf, and would have it in his power to claim a fhare of whatever conquells were made from France; while at the fame time, by flipulating that he himfelf fhould appoint the general of the fubfidized army, he retained a complete command over it, and could prevent his troops from being worn out by active fervice, and reflrain them from doing greater injury to the French republic than he himfelf might judge prudent.

All Europe lacked forward with great anxiety to the approaching campaign, as decifive of the mighty conteft, in which its whole powers, excepting Ruffia, Sweden, and Denmark, were actively engaged. At fea, where ber frength could be mont effectually exerted, Great Britain was eminently fuccefsfui. An expedition, under Sir Charles Grey and Sir John Jervis, was fent to t.e Weit Indies, where Martinique, St Lucia, and other Mands were taken. In the Mediterranean, the French were driven from the illand of Corfica, and the inhabitants acknowledaed the king of Great Britain as their lovereign. But the molt fignal viclury, was that which was gained by Lord Howe, over the French Alect, on the $1 l l$ of Junc, near Breft. During the finft years of the revalution, France had fuffered much diftrefs from a farcity of grain; and fuch was the inveteracy with which the prefent war was conducted, that the Britin government had formed a plan of fubduing that nation by famine, by preventirg their cbaining fupolics of provifions from any foreign country. In their diftsefs, the Fr neh rulers applied for affilance to the United States of America. The ftates 1 llll owed a confiderable debt to France, which they had contracted to the monarchy, in the war with Great Britain, by which their own revolution had been accomplithed. The French now offered to accept payment of this debt, not in inoney, but in corn, a comonodity sbounding in Am rica. The Americans, accor ingly, delivered the grain in their own ports, and 160 fiil of veff.ls laden with grain fet fail tor France. L.ord Howe was fent out to intercept, if poftible, this valuable convoy; while, on the other fide, the Firench admaral, Villaret $J$ yeufe, failed from Breft to hazard an engasement with the Britifh fleet, for the fake of prefenving the convoy. The force of the hollite flewts was neally erpual, the Britth having 26, and the Firench 25 fail of the line; but the French line wa broken, and at the end of an obllinne engagement, fix of their thips were found to be $\cdots k n$. and two funk. Their admatral, howeser, bad t,.. we the batele, detaclied a confines.ble focce for the protection of the comroy, which was thus cisabled
with fafety to reach its deftined port. This victory pro-
Britais, duced sery great exultation in the Britifh natiun, in confequence of the feur of invafion, uhich had been prevoufly excited, the danger of which, this proof of naval fuperiority leemed to place at a dillance.
$1000^{-7}$
On the part of the Frecch, huwever, thefe colonial Contirentat and naval loffes were greatly overbalanced by the campaign. general refult of the campaigr. The allies flill concentrated their principal force agtinlt the Netherlands, and whth that view, befieged and tork Lindecies at the commencement of the campargn; but the fortune of the war was feetdilv eurned. General Pichegru advanced into mariume Flanders, and in a variety of enyagements, defeated General Claisfait, an Aullian officer of great activity, who lipeedily ruined his own army, by darly and fanguinary efforts to drive back a fuperior enemy. An attempt made by the grand army to cut off the retreat of Pichegru was unfuccels. ful. He, in return, afterwards made an attempt, on his part, to cut off the communication betueen the imperialifts and their ftores at Ghent. He was re. pulfed; hut the obftinate conflict which he maintained, and the fteady fire of his troops, during a fucceffion of battles, which lafted from daybreak till the fetting of the fur, convinced the allied armies, that the invafion of France had become a hopelefs project. At laft, the French advanced, under General Jourdan, from the eaftward, and at Fleurus gained a victory in which $15.0=0$ of the Auftrian troops perifited. Mutual difguf, as well as difcouragement, nuw prevailed amung the allies. The Auftrians retreat, leaving the duke of York, at the head of the Britinh and Hanoverian forces, in confiderable peril. He made good his setreat, however, whith the affilance of Earl Moira. This nobleman (formerly Lord Rawdon) had diftinguibed bitofelt in the Amestan war. In the houfe of lords, he had oppoled the prefent war, but he had heen fent by adminiftration with a feeble armament, where the greateft effort, of Britain ought to have been dinected, that is, to affit the ruyalift, on the weftern coaft of France. Finding himfelf too weak to effect any important meafure in that quarter, he had broug't back his tronfis. He was afterwards fent with them to defend Oilend. Learning the ditticult nature of the duke of Yo:k', fi:uation, and perceiving that Ollend coull not lung be protected, and could indeed be of no value after the reft of Flarders was deferted, he marched aciofs, the country, and in the face of much danget, and yreat hardithips, effected a junction with the principal Bttifh army, to which this rei-forcement afforded fe frmable aid.

The French were no i: f fuccetsful upon the upper Rhine, on the frontiers of It ly, and of Spain. At the end of the campaign, an internle froft laving fet in. they reinfurced their armies, and lichegru invaded Holland. After a variety of engagements, the Briomoliand tift and Hanoverians, together with lome Aullianconquered. auxiliaries, whom Britain had fu. fidized, were repulfed, and found it nocemary to leave Holland to its fate. Many Dutch familics fought refuge in Britain. When Utreche had fubnitted to the enemy, the ftadtholder knowing that Amtterdam wonld not be defended, lett his country, and coaped to England in : fifh-ing-joat. He and his family became immediate oin-

Pritain. jects of royal liberality, and were treated with the reTpect due to their rank and misforturtes.

The Datch, who had viersed the Englin with a very unfriendly eye, fince the revolution of the year 1787, appeared to be highly pleafed with this chatne in their affairs. They had for lome time treated nur military countrymen with contempt and illibe a'ity, and were not difpofed to alleviate by kinducfs, or compaffion, the fufferings of the wounded, or the diftrets of the fugitives, who at length effecled their retieat to Bremen, after a long and fovere exercife of their patience and fortitude.

The united provinces were now revolutionized on the Fiench moidel. Liberty, equality, and the rights of m in, were proclaimed; repielentatives of the people were chofen, and the regenerited fate was named the Batartan Resablic. But the pretended friends of the Holland rs, in refouing them from what they termed a dileraceful yoke, did not fuffer thern to enijoy real freedom or independence.

The refule of thefe fucceffes was, that the king of Praflia, now perceiving France reftored to more than ber ancient energy, and become capobie of endenvouring to humble his enemy, and her ancient rival, the houfe of Auftria, deferted the coalition againil her, refufed to ac. cept of any farther fubfidy from Great Britain, and took un ler his procection, as neutral ftates, the whole princes of the north-well of Germany; thereby becoming the oftenfible head and guardian of a large divifion of the empire, which was thus enabled to recover its tranquillity, and to become a quiet fpe? tator of the prolonged contell, which the rell of the empire under Auflia continued to carry on againft France. Spain was under the necefliy of imitating the exanuple of Pruffia, though upon lefs favourable terms, being conftrained to relinquif, as the price of peace, her half of the inland ot Si Domingo. The duke of Tufcany alfo deferted a con-

In the mean while, adminiftration at lome purfued their fyftem of alarming the friends of internal tranquilli- ty, by the dread of confpiracies, and attempts a gainf the confititution. The perfons who, in the month of May, had been imprifoned on a charge of high treafon, were blought to trial in the erid of October. The fill that was tried, was Thomas Hardie. His indictment flated nine overt atts of high treafon. xft, That with others, he had formed an intention of exciting rebellion and infurredion; to carry which into effect, he and they had confpired to fubvert the governmert, and depofe the king. 2dly, That he and they had written diverfe books, pamphlets, letters, and addreffis, recomamending delegates to a convention. 3 dly , That they confulted on the means of forming fuch a convention. 4thly, That they agreed to form themelves into a fociety for the purpofes aforefaid. sthly, That they caufed armis to be made to fubvert the government, and depofe the king. 6thly, That they confpired to levy war within the realm. 7thly, That they confpired to aid the king's enemier. 8thly. That they compoled and publifhed certain books, pamphlets, letters, exhortations, and addreffs, for the purpofes aforefaid. Lafly, That they procured arms, for the purpofe of levying war againil the king, and to excite rebellion, \& - . The written evidence confifted chielly of sJvertifements, and addreffes, publifled in the newfo
pupers, meny of which were expreffed in a very in. Prianim. tempernte Hyle, with regard to minflers; and the procerdmes of the focieties, wheh were all public, were of a fimilar niture. With regard to any minended armoment of the people by thefe fucieties, it appeared to reft upon mo folid loundation. The acculation and defence, therefore, refted chiefly upon the queftion of the intention of the party acculd, and his affeciates. He was ably defended by Mir Thoma, Eifkine, and Mr Gibbs, and the profecution was conducted by the attorney and lolicitor-general. When the proceedings had continued to the eighth day, the jury, after fome deliberation, brought ina verdict of not guilty. The next trial was that of Mr Tooke, who endearoured to prove, that he had merely followed the example of MIr Pitt, in recommending a plan of parliamentary reform. The miniller was examined on the occafion, chictly with regard to the pruceedings of the popular party (before the clofe of the American war) for the attamment of that object; but he evaded moll ot the queftions by alleging a want of recollection. The acquittal of Mr looke, being followed by that of Mr Thelwall, a defpair of convicting any one of the fuppofed traitors produced a dereliction of the indictment.

As the war was becoming unpopular, the acquittal of thefe perfons, which tended to difcredit the alarms kept up by the friends of adminillation, was felt by them as an additional misfortune. Had the indiciments beeri laid only for fedition, the profecutions would probably have proved fuccefful; but minifters were led to carry matters the length of an accufation of treafon, by their fuccefs in a limilar charge at E. rivet dinburgh, in the preceding month of September, a-Wat and gaisht two perfons named Robert Watt and David Downie. Downie. Watt had been a fpy, employed by government to attend political fucieties, and difoover the defigns of the leaders. As he was a needy perfon, and lad been cinable to communicate intelligenice of much importance, be had recrived little pay. To earn more money, he had thuught fit to contrive a plot, which he communicated to Dormie, and fome others, for feizing the cattle and public offices at Edinburgh, with a view no doubt of afterwards bolding out his affociates to government as criminals. Neither he nor they had any means of carrying fuch a plan into effect. Watt, however, had procured fome pikes, which he depofited in a cellar in his own houle. Thefe being accidentally difcovered, he was apprehended; and the perfons to whom he lad communicated his plan, having come forward as witneffes againft him and Duwnit, they were both fuund guilty of high treafon; but ?ownie. who had done little more than appear to approve of Watt's plan, was recommended to mercy, and afterwards pardoned; but Watt was executed.

Another caufe of encouragement to adminiffration Pop-gua to proceed with meafures of feverity, arofe at the fame plot. time from a plot brought to light by fome informers, which by way of ridicule was afterwards termed the pop-gun plot. The perfons implicated in this charge, were John Peter Le Maitre, a native of Jerfey, and apprentice to a watch cafe-maker in Denmark-ीtreet, St Giles's; William Higuiris, apprentice to a chemilt in Fieet-matket; and a man of the name of Smith, who kept a book stall in the neighbourbood of Lin-

## B R I [66 ] B R I

Britain." coin's-inn. Their accufer was one Upton an apprentice or journeyman to a watch-m ker. Le Maitre, Higgirs, and Smith, were apprehended on Saturday the 27 h of September, by a warrant trom the duke of Portland, as fecretary of flate, and were examined on Sunday the $28 \mathrm{th}^{2}$ before the privy council, the lords of which were fummoned again to attend on Tuefday on the fame important bufinefs. The charge fupported by the teftimoriy of Upton, was to the following efteft An inftrument was to have been conftucted by the informer Upton in the form of a walking flick, in which was to have been inferted a brafs tube of two feet long; through this tube a poifoned dart or arrow was to have been blown by the breath of the confpiraior Le Maitre at his majelly, either on the terrace at Windfor, or in the playhoule. The poifon weds to have been of fo fubtle a nature, that if the point but glanced upon the king, it was to have produced indlantaneous death. Nothing thort of the moft confummate ignorance of the fate of human fcience could on any ordinary occafion have procured attention to fuch a ridiculous flory as this. Such, however, is the wellknown credulity of the Englith nation, with regard to political dangers, that adminiftration and their friends appear to bave regarded this plot as an affair of fome importance, as tending to keep men's minds in a flate
reob of anxiety.
Meeting of Parliament affembled on the 30 th of December. In parliament the fpeech from the throne, his majelty urged the necefficy of perfifting in the war, however unfortunate it had been, and noticed the rapid decay of the refources of the enemy. The Dutch had, be obferved, from a fenfe of prelent difficulties, entered into a negotiation for peace with the prevailing party in France; but no eftablifhed government could derive fecurity from fuch a negotiation. The moft effectual means had therefore been employed for the further augmentation of the forses; on whofe valour, as well as on the public fpirit of the people, his majefly profeffed he had the utmof reliance. The feeech ended with mentioning the acceffion of the fovereignty of Corfica to the Britifh dominiuns; a treaty of amity and commerce with America; the conclufion of a treaty of marriage between the prince of Wales and the princels Caroline of Brunfwich, in making fuitable provifions for whom his majefty doubted not of the concurrence and fupport of both houles.

When an addrefs to his majelly in the fame terms with the fpeech was moved in common form, very animated debatcs took place in hoth houfes of parliament. The was was attacked and defended upon the ufual topics, with this additional circumfance, that the events of the late campaign gave confiderable countenance to the affertions of oppofition, that all hope of ultimate fuccefs was irrational. Adminiffration, however, were Clanges in no lefs powerful than formerly. On the lalt day of the the cabinct. preceding feffion, they had received into official fituations, fome of thnfe fupporters of the war. who inf former years had oppofed their meafures. Earl Fitzwilliam had licen appointed prefident of the council. The duke of Portland hecame one of the fecretaries of fate. Earl Spencer was declared keeper of the privy feal, and Mr Windham fecretary at war. Notuithfanding thefe official changes, Mr Pit with the aid of his perfonal friend Mr Dundas, and his relation

Lord Grenville, was underftood to retain the efficient power of the ftate. Mr Dundas had ftill retained the management of the war with France; and as a kini of third lecretary of ftate, he performed a confiderable part of the bufinefs which would otherwife have devolved upon the duke of Portland, while at the fame time he continued as prefident of the board of controul to fuperintend the affairs of India. and to hold the office of trealurer of the navy. Earl Fitzwilliam was foon got quit of, without any difadvantage to adminiftration. He was fent to Ireland as lord-lieutenant, under an agreement, as he alleged, that he was to have full power to promote the recal of the penal fiatutes againft the Catholics, and to concede certain privio leges which had been withheld in 1793. Afterwards, however, minifters in England having altered their fentiments about fome of thefe points, prohibited him to proceed, and as he infited upon the terms on which he accepted his fituat on, he was recalled and difmiffed from office. By joining minifters for a time, he was prevented from acting along with oppofition, in reprobating the war, and thus he was left infulated and feparated from both parties.

Among the debates of the prefent feffion, one of the mof remarkable was that which occurred upon the motion of Mr Grey in the houfe of commons on the 26 'h of Jaunary 1795, "That the exiftence of the prefent government of France ought not to be confidered as precluding at this time a negotiation for peace." He faid that after two years of war, which had drained this country of its blood and treafures, we did not appear to he one point nearer to the object for which it was undertaken. From certain words of the minifler on a former occafion, Mr Grey inferted, that this was a war ufque ad internecionem, or a murtal ftrife to be carried on till one of the parties fhould be deftroyed. He wifhed, by the prefent motion, to put the queftion to iffue, whether this opinion was countenanced by the houfe of commons. He faid that the public at large, and even the enemy with whom we were contending, had a right to know the length to which the contelt was to be carried and the terms upon which peace was to be obtained. He endeavoured to fhow that there exifted no profpect or chance of fuccefs in overturning by force of arms the republicarı government of France, and that a war peififted in with that view muft neceffarily be ahfurd. He conterided, that the people of France were too firmly attached to their new arrangements to be likeiy to give them up, however thcy might change their leaders. A dependance upon a decay of their finances was, he alleged, equally ill found-
ed. Foth in the American war, and the prefent, the affairs of the Piritifl nation were unfortunately entrufted to perfons unathe to diffinguifl between the fallacy of imper ${ }^{\text {rect ch a flulations, and the energy of a people }}$ fruggling for indepentence. He faid that the Fre nch government were admitted to poffefs a landed eflate far exceeding in v-lue the moft exaggerated account of their debts. With thic, was to be confidered the addition of the money of Holland, the prepulation of France, which was equal to that of one-fixth of the whole of Europe, arid the'difracted and impoverifhed flate of our allies. Out own refources were, he doubted not, equal to every thing to which they ought to be applied, but not equal to the coniquelt of Frarice,

## $\left.B \begin{array}{llll}13 & {[65}\end{array}\right] \quad 3 \mathrm{R}$ I

Sritain. or to a war of aggreffion. For the exhbulted fate of the emperor's Ginances, he appealed to a memorial he had recently addreffed to the circles of the Upper Rhine. Was it then from him, from the Italian flates, the kings of Sardinia, Naples, and Spain, or from our difgraceful alliance with the emprefs of Ruflia, that we expected afiltance? Or was it from our good German ally, who had taken $t, 200,000$ h. of our money, who ind not brought into the field the 62,000 men for which he flipulated, who had denied our right to command any of the Pruffian troops, and contended that they ought not to march againft the Frencl, but to remain to defend Germany. The ftrongef reafon which a great nation could have for war, was the defence of its honour ; this, he contended, we had fo fully vindicated, as to fecure us from future infult. The decree of the convention, November 19.1792, was now no bar to a negotiation, as that declaration had been repealed, and followed by a contrary declaration. It had been flated, that there had been periods at which a negotiation could commence. It was a proper period at the time the mifunderfanding commenced with this country; and at feveral times when we had been facceffful fince, negotiation might have been begun. This, Mr Grey remarked, had been repeatedly advifed from his fide of the houfe; and thus much mifery might have been prevented. While we poffefled great power and great refources was the time for negotiation. Should the French proceed in their rapid career of conqueft, it would not be eafy. Were even the houfe willing to truft miniflers with the profecution of the war, would the miniter declare he could truft the allies? This, therefore, was a time for negotiation; and hould our attempts of that nature prove fruitlefs, the houfe and the people would cheerfully concur in a vigorous profecution of the war; and we fhould then refermble France in the only point in which the was to be envied, the unanimity of the people with their government. As additional reafons, Mr Grey noticed the capture of Holland, and the debates in the diet at Ratifon, in which all parties agreed for overtures to the enemy, except the ele气tor of Hanover, and the landgrave of Heffe.

Mr Pitt, in reply, afferted, that the motion was utterly inconfiftent with the fentiments formerly expreffed by his majefly and by parliament. He therefore propofed an amendment, importing, that " it was the determination of the houfe to profecute the war, as the only means of procuring a permanent and fecure peace; relying on the intention of his majefty, vigoroufly to employ the force of this country in fupport of its interef, and on his defire uniformly manifefted of effecting a pacification with France, under any government capable of maintaining the relations of peace and amity." Mr Pitt contended, that no nation at wat with another, ought to treat for peace, with a government that could not give fecurity. This laft he afferted to be the great object by which alone the war could be terminated. "What did we naturally look to in the flate of any country, but to the manner in which they performed their engagements; to their ftability, their apparent authority, and the reliance that might oe placed on their pacific difpofitions? Nothing but a Series of revolutions had been generated under the fy-

For. IV. Patt 11.
fem and plinciples now prevalent in France." He Eritai.. reprefented the agriculture and commerce of France as in the moft difaftrous fituation, and juffice as almoft unknorn. With refpect to their religion, he demanded, whether the houfe would willingly treat with a nation of atheifts. He would not, however, fay, that they might not improve. When they fhould come into fuch a itate, as would give, with regard to their government, that flability and authority, which afforded a probability that we might treat with fecurity, then we might negotiate: but we ought, in prudence, to wait the return of fuch circumillances as would afford a chance of treating with fuccefs. He confidered the French as having begun the war, upon the principle, that their own was the only lawful exilling government, and that they had a right to deftroy all others as ufurpations; a principle from which they lad not yet ceafed to act. In April 1793, the French had enacted the penalty of death, upon any perfon who thould propofe peace with any country, which did not acknowledge the French republic one and indivifible, founded on the principles of equality. The admifion of thofe principles amounted to a confeffion of the ufurpation and injufice of every other government. In treating for peace with France, one preparatory Rep was, the acknowledgment of what the houfe had hitherto denied. They muft acknowledge thofe principles which condemned the ufurpation of all other governments, and denied the very power they were exercifing. Were peace to be obtained, he thought the country in the utmoft danger from French emiffaries; and if a peace thould be fo infecure as to require us to remain in a flate of rigilant jealoufy and never-ceafing fufpicion, we would be under the neceflity of retaining an effablifhment, which would prove burdenfome to peace, and ineffectual to war. With refpect to the comparative refources of this country and France, the latter had, as he fated, expended $260,000,000$ fterling, during the laft two years. Affignats, he faid, were at 15 per cent.; and every thing proclaimed a rapid decay of the French refources. Minifters, he declared, had never looked to the conqueft of France. Peace was not obtructed by any form of government, but by the internal circumftances of Fiance. An attempt to treat, inflead of accelerating peace, would only be productive of danger; it would encourage the enemy, and fink the firitits of the people of this country.

Mr Fox accufed minifters of tergiverfation. He faid, he approved of the amendment, fo far as it flated, that there cxifted nothing in the prefent form of government of France to prevent negotiation; but he complained, that, during two fucceffive years, oppofitiun had moved a fimilar amendment ; and for doing fo, they had been called the advocates of France, jacobins, republicans, enemies of their king and country, \&c. though it was now pretended that all this time they were fpeaking the fentiments of miniters. He contended, that the minifter had, in fact, found it neceffiry to alter his conduct; and that the impolitic fpeech he had put into the mouth of tis majelty, at the opening of the feffion, had made a ferious impretfion upon the public, which muft be done away: What, he afked, would have been the feelings of

Engliftmen,

Fritain. Englifemen, if the convention had determined never to treat with them till there was a reform in the Englih government? We muft do away all our arrogant e.sprefions again France, and then, even though we flould not obtain peace, yet we fhould take from them the caufe of their enthufiafm, that which roufed every natioral feeling, and had carried them to unparalleled exertions. They would not then feel that they were to fight to extremity, for daring to give to their own country the government they liked. He wifhed us not to diminifi our force; but furely we could fight jult as well, if neceflary, after declaring we had no intention to reduce a people to flavery. He ridiculed the idea of danger from the influx of French principles, and obferved, that the conflitution of this coun$t$ ty had-been endeared to us, from the fatal experiments made in France. He called the recollection of Mr Fitt to the declaration of his father, "that they Ahould die in the laft breach before they granted the independence of America;" yet the firft act of his polical life had been to fign the very independence which his father had deprecated. Neceffity dictated that act; and he muft now, on the fame account, retract his declaration refpecting France.

The motion was oppofed by Mr Dundas, on the ground that it would fetter the executive government in their negotiations for peace; and he thought we had the utmoft reaton to expect fuccefs from the profecution of the war: at leaft, it was a fair prefumption, that our fituation would not be worfe if we continued the war. Mr Grey's motion was regatived by a majority of 183, and Mr Pitt's amendment afterwards adopted, by a majority of 164 .

On the following day, the duke of Bedford brought forward, in the houfe of lords, a motion, fimilar to that which Mr Grey had fupported in the houfe of commons. This patriotic nobleman, who enjoyed great popularity, becaufe he expended his princely revenue in promoting and giving countenance to the agriculture of his country, urged the neceffity of an explicit declaration of the real object of the war. Minifters faid, negotiation was difhonourable, as the French were the aggreflors. Admitting this, what fcenes of blood muft Europe have exhibited, had it heen adopted as a general principle, that no party fhould manifeft a wifl for peace, which had not been the aggreffor in the war. That the French, however, were not the aggreffors, his grace contended, from the retraction of the offenfive declaration; from the explanation offered by the miniffer; from different fpeeches in the convention, and the decrec afterwards paffed that they would not interfere with the government of other countries. As to a permanent peace, no fuch thing could be found in the abfolute fenfe of the word. An equitable peace was the only one likely to prove permanent. He contended, that we ought no longer to truft to the efforts of our continental allies. He did not believe the finances of France exhaufted; but admitting they were nearly fo, could we hope to ruin them? certainly not. While there was property in the country, the government would find means to obtain it ; and, while the people were convinced it was a war of extermination or unconditional fubmifion, they would facrifice their property. Still lefs was the
probability of outnumbering them. been made to excite the paffions of men, by解 this a war in the caufe of humanity and of God. Whatever it might have been during the life of the king, whofe death he thought accelerated by our interference, it could no longer be called lo. it had, as a!. lowed by minifters, produced the fyftem of terror in France; and could the death of $50,0 c 0$ Bitifh fub. jects, and of hundreds of thoufands of innocent foldiers on all fides, be called a circumflance favourable to humanity? It was admitted, he faid, that the prefent government of France was infinitely milder than what it had been; but, inflead of affilting her rulers is the work of reformation, our minifters declared, they fhould not reflore order and juftice but by our means, and that we would not be fatisfied without carrying war to their frontiers, and famine to their interior. By this courfe, we fthould never conquer the armies or the opinions of France, but might regenerate the frftem of terror. The adoption of his motion would, his grace obferved, unice the people of this country, if the war continued, and difunite the people of France.

Lord Grenville moved an amendment, precifely fi. milar to that which had been introduced by Mr Pitt in the houfe of commons the preceding evening. He thought the prefent was not a moment corvenient or proper for forwarding a negotiation. It never, he faid, had been his opinion, that this country fhould not make peace with another, merely on account of their form of government ; but, in fuch a negotiation, efpecial care thould be taken to provide for that mof important of all concerns, fecurity. His lordfhip declared his belief, that a majority of the French were favourers of royalty; and the re-eftablifiment of monarcly prefented the moft probable hopes of peace. Minifters had, he faid, never declared that they would not treat with any government capable of maintaining the accuftomed relation of peace and amity. He denied, however, that any probability exifted of the permanency of the prefent French government. He entered into a detail of the fhocking impieties of the French; and infifted upon the failure of their refources, and the difaffection of a corfiderable number of the people towards the prefent ruling party, who had peremptorily refufed to the lawful heirs the reftoration of that wealth, of which their fathers had been unjufly deprived. He allowed, that, by the new fyltem in France, we were in a fituation lefs remote from that in which we might treat with a rational profpect of fecurity. Till that period, however, arrived, which he thought far diftant, he conceived, that a vigorous profecution of the war was far preferable to any attempt to negotiate.

The biftop of Llandaff urged the importance of an immediate negotiation to, promote union at home, and to fhew to the French, that, if refufed by them, the war was continued in confequence of the ambition and oppreflion of their rulers. He was aware, that fome might object to ncgotiation, on the ground of evincing an unworthy want of firmnefs; but, in that refpect, firmnefs was out of the queftion. When circumftances render it prudent to alter a courfe, to perift was not firmefs, but obllinacy. It was-a miftaker notion

Butain. of firmnest that loft America. It might be afked, if $\xrightarrow{\sim}$ thofe who had been guilty of fuch atrocitics ought to go unpunifhed? To this he would anfwer, that though the atrocities of the French difgraced human nature, we were not the avengers; they ought to be left to the wifdom and jullice of God; or, if any thing more was to be faid, let their lordhips pray to God for pardon to the guilty. He afferted, that cren could we place upon the throne of his ancellors, the fon of the laft French monarch, he could grant us no indemnity fur our paft expenditure; his own fubjects, and even our own continental allies, would not fuffer him to do fo. With refpeet to the charge of atheilim againt the French, as a realon for continuing the war, his lordthip added: "Prefumptuous idea! Miferable beings as we are, do we imagine th the arm of flefh is wanting to affift and enforce the will of the Almighty? Not one of the tribe of modern philofophers can affect or injure Chriflianity. The abufe of religion has been miftaken for religion ittelf. Hence, France in the eagernefs of her enthufiafm for reform of religious abufes, overlooked religion itfelf, and fell into atheifm. But the mitt of infidelity will foon be difper fed, and Chritianity appear in a purer fiate."

The duke of Norfolk, the marquic of Lanflowne, the earl of Lauderdate, the duke of Leeds, and the earl of Guildford, farther fupported the motion; while the amendment was defended by the earl of Darnley, Lord Hawkefbary, Earl Spencer, Lord Hawke, the marquis of Abercorn, the lord-chancellor, Lord Aucklind, and others. On a divifion, a great mojority voted in favour of the amendment. The $v$ ctories of the French, during the la:e campaign, and the defpair of ultimate fuccefs in the war, which now began to be entertained throughout the country, encouraged oppofition to senew the fubject, under a variety of forms, and to urge minifers to enter into a negotiation; but, on every occafion, the motions made by them were negatived by a finilar fuperiority of numbers.

The number of feamen and marines voted during the prefent feffim, amounted to 100,000 ; while 119380 men were voted to form the guards and garrifon: To procure the requifite number of feanaen, the parlizment required the merchants to give up a part of tise crens of their hipping, in propnrtion to the tonage; and ordered everv parifh to farnifs one mana for the fervice. A loan of $18,000,000$ was found neceffry, tngether with a large ifine of exchequer bill. as the fupplies voted amounted to no lefs than $29,307,0001$. The new taxes were made payable on rivne, !pirits, tea, coffee. ftamps on deeds, \&c. infurance on thips and cargoes, timber, and on perfons we rmy bair-powder.

M: Wilbeiforce again brought forward the queflion of the Rave-trade. He was fupported by Mr Fox and Mr Pitt; but the propofed abolition of it was rejected in the houte of commons, hy a majority of 17 .
1013
Mir $\mathrm{He}_{2}$ ings's rial ended.

During the prefent foffion, the long trial of Mr HaAlines was at length brought to a conclufion. The fu!ject was difcuffed in a committee of the houfe of lords. The lord chancellor, and the earl of Carnarvon, confilered Mr Hallings as criminal; but he was defended verv elaborately and ably by Lord Thurlow, who was fupported bv the marquis of Lanfdowne, the bithon of Rochefter, and others. When every part of
the accufation had been difallowed by the committee, the report was revicaed by the houfe; and after fome debates on the mode of proceeding, it was refolved, that the queftion thould be feparately put on 16 points. The greateft number of peers, wha voted the defendant guilty in any one refpeet, did not cxceed fix. The votes of innocence on fome of the charges, were 26 ; in others 23; in one 19. The lord chancellor then intimated the decifion of the court to $\mathrm{Mr} \mathrm{Hd}_{\mathrm{fl}} \mathrm{ing}$ s, who received it in filence, bowed, and retircd from the bar. The war in which we were now engaged, had rendered men more cagerly defirous of the aggrandifement of their country that they were when this trial commenced, and alfo lefs fcrupulous about the means by which that aggrandifement was promoted. "The fervices of Mr Haltings were now therefore more highly appretiated; and the public regarded, with fatisfaction, the acquittal of one, who had fo eminently promoted the irterelt of his employers, fecured their authority, and extended and eftablifhed their dominion.

At this time, the dehts of the prince of Wales Debts of amounted to 630.0001 . It had been adjulled at court, the prince that thefe debts thould be paid, and that the prince flould marry his coufin, the daughter of the duke of Brunlwick. After Come difcuffion in the houle of commons, the prince's eflablifhment was fixed at 125.0001. out of which he was required to pay 65,0001. every year, till his debts mould be liquidated. The rents of the duchy of Cornwall, amounting to 13,000 . were alfo fet apart for the extinction of the debts. Farther fums were alfo voted to defray the expences of the marrage, and the repairs and decorations of Carl. ton houfe. Parliament was prorogued on the 27 th of June, by a fpeech from the throne, in which minuters thought it prudent to huld out to the public, fome profpeet of negotiation. " It is impolfible (faid his majelty) to contemplate the internal fituation of the enemy, with whom we are contending, without indulging a hope, that the prefent circumllances of France, may, in their effects, haften the return of Such 2 fate of order and regular government, as may be capable of maintaining the accullomed relations of amity and peace with other powers. The iflue, bowever, of thefe extraordinary tranluctions, is out of the reach of human forefight."

The incidents of the war, during the year $1705 \mathrm{~T}=15$ were lefs memorable than thofe of the former years. lord Bridport, with an inferior force, attacked a French fleet, near Port l'Orient, and took three of their hiips. Vice-admiral Hotham purfued to the Genuefe coafl, a fleet which had failed from 'Toulon, to attempt the recovery of Corfica, and which had captured one of his detached thips. He brought the enemy to a partial engagement, and took two fail of the line; but he afterwards loft one of his own Thips, in confenuence of damage received in the conflict. On their own weftern coafl, the French, with Is fail of the line and 14 frigates, avoided coming to an engagement with Vice-admiral Cornwallis, who had only eight hips, including frigates. Thefe events occurred early in the fummer. Notwithllanding the vigilance of the Britifh navy, the French captured, in the month of July, 30 fail of a valuable convoy, returning from the Mediterranean. They alfo made prize

## B R I [ 668$] \quad B \quad R \quad i$

zritain. of part of a Jamaica fleet. On the other hand, their own commerce had funk fo low, as to prefent few objects for our cruizers and privateers.

As the Dutch, though nominally the allies of the French, had, in fast, become fubjee to them; letters of marque were ifiued againft them by Great Britain, and directions giver, to feize their colonial territories, under the profeffed intention, however, of refloring them when the ftadtholder's government Chould be re-eltablifted. Tlie Cape of Good Hope was taken, together with Trincomale and the other Afiatic fettlements of the Dutch, excepting Batavia. Their territories in the Wefl Indies were not attacked during the prefent year, on account of the difficulties which the Britifh experienced in that quarter, in keeping in fubjection the iflands captured from the French, where various infurrections were incited by their ancient mafters. The ifland of Jamaica was alfo kept in a ftate of great alarm, by a fmall tribe of independent negroes, called Maroons, which had long exifted in the mountainous parts of the illand. Thefe people, in confequence of a quarrel with the white inhabitants, committed many cruel ravages, and were not fubdued till Spanifh hunters and blood-hounds were procured from the !ीand of Cuba, and employed againft them, which induced them at laft to fubmit to deportation from the ifland.

1017 Espedition ro Quiberust.

1013
Campaign in Germany.

When it was too late, the Britifh minifley refolved to give affiftance to the royalifts in the weftern parts of France. An expedition, planned, it was faid, by Mr Windham, and guided by French emigrant officers, with troops, many of whom confifted of prifoners of war, relieved from confinement on condition of bearing arms againft their country, fet fail for the French coaft, and landed upon the extremity of the narrow peninfula of Quiberon. Here they fortified themfelves; but many of the troops, as might have been expected, proving unfaithful, they were fpeedily overpowered by the republicans, who, according to their cuftom, put to death fuch of their countrymen as they found in arms fighting againf them. By this feeble and ill-timed invafion of the French territory, nearly 10,000 men were loft, that is, were killed or taken prifoners.
The continental campaign on the fide of Germany was of little importance during this year, and was upon the whole unfavourable to the French. The convention had fhaken of the government of that fanguinary faetion, which, under Robefpierre and his affociater, had deluged the interior of France with blood, but which had poffeffed the merit of calling forth with aftonilhing energy, the powers of that country for the fupport of its independence. The prefent leaders polfefted lefs activity, and affected a milder train of conduct. The military operations languifhed. The French army remained inadive till autumn, when it croffed the Rhine near Mentz, under General Pichegru, but was fpeedily repulfed, and an armiftice was concluded for the winter. The convention, however, efla, lifthed a new form of government, confifting of an executive directory of five perfons, elefted by two reprefentative bodies, to which the powers of legifation were intrufted; and it was naturally expected, that if the war flould continuc, the ncw cxecutive power
would endeavour to diftinguifh itfe! by fome imporant operations.

The Britih parliament was again affembled at a $\begin{array}{r}\mathrm{rcs}, 9 \\ \text { Mecting }\end{array}$ very early period, the 2gth of Otiober. The flate of parliament public affairs bore at this period an unfavourable afpect. The French armies had been inactive during the fummer, but they had lof rothing; the new republic retained pofleffion of the territory extending from the Pyrences to North Holland, and confequently of an immenfe length o? coall oppofite to Great Britain. In the meanwhile, a dearth of provifions began to prevail at home. The winter, which had fet in with extreme feverity at the clofe of the year 179\%, and enabled the Fiench to conquer Holland with little difficulty, was followed by an ungenial fummer, during which the crop failed in confequence of almof inceffant rains. This ftate of affairs was productive of difcontent in many among the lower orders of the people, and the war was blamed as tending to aggravate the diltrefs which they fuffered. Previous to the meeting of parliament, fome meetings were held by the London Correfponding Society, for the avowed purpofe of petitioning the king in parliment in favour of peace and a parliamentary reform. As the meetings were held in the open fields, they were very numeroully attended, but the perfons compofing them difperfed without difturbance. At the opening of parliament, fome riots took place; and though it did not appear, that the perfons guilty of thefe riots belonged to the fociety above-mentioned, yet it feems probable, that its meetings had tended, along with the general flate of public affairs, to roufe the attention of the multitude to political fubjects.

His majefly proceeded from the palace to open the fef-Riots ar fion of parliament at the wfual hour, between two and the meet. three o'clock; and the crowd in St James's park, which ing of paris always confiderable on thefe occafions, was certainly greater than ufual, though it was thought to have been overrated, when eftimated at 150,000 perfons. A fine day, and a rumour which bad been circulated, with what view it is impofible to afcertain, that a riot was likely to take place, contributed greatly to increafe the multitude of the fpectators. As the royal carriage paffed along the park, the predominant exclamations were " Peace! peace! Give us bread! No Pitt! No famine! No war!" A few voices were heard to exclaim, "Down with George," or words to that effect. In the park, and in the ftreets adjacent to Weftmin-fter-lall, fome fones and other articles were thrown, nine of which, it is afferted, Aruck the flate-coach; and one of them, which was fufpected to have proceeded from a window in Margaret-Areet, near the abbey, perforated one of the windows by a fmall circular aperture : and from thefe circumftances, it was fuppoled by fome to have been a bullet difcharged from an air-gon, or from fome fimilar engine of deffruction: but no bullet was found; and whatever it was, it neither touched the king nor the noblemen who attended him. As his majefly returned from the houfe through the park, though the gates of the Horfeguards were thut to exclude the mob, yet even this precaution was not fufficient to prevent a renewal of the outrages, and another fone was thrown at the carriage as it paffed oppofite to Spring-yarden terrace.

After

## Eritain.

10:1
The king's ऐpeech.

After the king had alighted at St Janes's, the popalace attacked the Iate-carriage, and in its way through Pall. mall to the Mews, it was almoft demolifhed.
'Mhe fpeecir from the throne fated his majefty's fatisfastion, that the general fituation of affais, notwithfanding many events unfivoursble to the common caule, was materially improved. The French had, in Italy, been driver back, and were checked on the fide of Germany. Their fuccefies, and the treaties of peace they had entered into, were far from compenfating the evils they had fuffered from the continuance of war ; and the unparallcled embarraffment and diftrefs of their intermal fituation appeared to have produced an impreffion that their only relief mult refult from peace, and a fettled government. The crilis in which they now were muft probably produce confequences important to the interefts of Europe. If this crifis terminated in any thing affording a reafonable expectation of fecurity in any treaty, the appearance of a difpofition to treat for peace, on jult and fuitable terms, would, his majelty added, be met on his part with an earnell defire to give it the fpeedieft effect. The acceleration of this defirable end required, however, that we thould prove aur ability to profecute the war till we could conclude it in a peace fuited to the juftice of our caufe, and the fituation of the énemy.

In the fpeeches for and againf the ufual addrefles little novelty occurred; the fame fubject, that is, the propriety of the war, having been fo repeatedly difcuffed. Adminiftration took advantage of the attack upon his majefty's perfon, to iflue a proclamation connecting the meetings of the Correfponding Society with
1012 the infults offered to his majelly, and to bring forward New penal two penal ^tatutes. The filft was introduced into the \&atures. houfe of lo:ds by Lord Grenville, under the title of "an aft for the fafety and prefervation of his majefty's perfon and government againf treafonable and Ceditious practices and attempts." One claufe ordained the capital punilhment of every one who nlould expref, utter, or declare by the publication of writings, or by any over-act, fuch imaginations, devices, or intentions, as were calculated to injure the king, impair his authority or that of the parliament, or promote an invalion of his dominions. Another provifion was, that all declarations tending to excite hatred or contempt of the king Thould be confidered as high mifdemeanours; and it was decreed, that a fecond offence of this kind might be punifhed, either in the ordinary mode, or by banifhment from the realm, for a term not exceeding feven years. The other bill was introduced by Mr Pitt in the houfe of commons. It enacted, that no meeting of any defcription of perfons, exceeding the number of 50 , except fuch as might be called by theriffs, or other officers or magiftrates, Should be holden for political purpoles, unlefs public notice thould have been given by feven boulckeepers: that if fuch a body fhould affemble without notice, and 12, or more, individuals thould continue togecher (even quietly) for one hour after a legal ordier for their departure, they fhould be punithed as felons, without benefit of clergy: and that the fame rigur might be excrcifed, if any perfon, after due notice of the meeting, thould ufe feditious language, or propute the irregular alteration of ang thing by law eftablithed. TVitis regard to the delivery of leetures or dilicourfes,
or the exercife of debate, on topics conneded with the laws and government of the country, a licenfe was declared to be neceflary for fuch mectings.

Eritan.

Very animated difcuftions upon thef bills toct pent 1023隹 in both houfes of parliament. While the difuffons and againft were going on, many petitions were prefented againft the penal the bills. On the other hand, various corporations and public bodies petitioned for their enactment. The relult of the whole was ufeful to minifters; as the difputes which thus arofe, tended to revive in the minds of perfons of property that political alarm which was now paffing away, and to remove a iartion of that dillike to the war, which naturally arofe from the want of fuccefs with which it had been attended. The two bills were enacted into laws by the rotes of great majorities. Still, however, adminifration were fenfible that it would become neceflary, for the fake of preferving their popularity, to aflume an appearance of willingnefs to put an end to the war. Accordingly, while the two bills were ftill under difcuftion, each houfe received a meflage from the king, in which, al-Pacifis luding to the new confitution and the dir, government of France, he faid, that fuch an order of the king. things had arifen as would induce him to meet any defire of negotiation on the part of the enemy with a full readinefs to give it the fpeedieft effect. When an addrefs of thanks for this communication was moved, Mr Sheridan fuggefted an amendment, tending to produce an immediate negotiation, and to remove, by a remunciation of the principles on which the war had been conducted, all obfacles to the attainment of peace. Mr Fox alfo withed, that the firt offer thould proceed from our court : but Mr Pitt and Mr Dundas thought it advifeable to wait till the enemy fould manifeft a difpofition to negotiate. Similar obfervations were made in the houfe of peers. At a future peiod, Mr Grey moved, that his majefty flould be requefted to intimate to the esecutive government of France, his readinefs to enter into a negotiation for the re-ellablinment of peace on reafonable terms. He faid, he was forry to obferve, that the court appeared to be more intent on warlike preparation than eager to promote peace: overtures from this country, lie thought, could not be degrading; and he flattered himfelf with the bope, that they would be fucceffful. $M_{r}$ Pitt wifhed that this aflair might be left to the difcretion of minilly. It was proper, he faid, that the allies of Great Britain Mould be confulted, as a clofe concern with them would give greater dignity and effect to a negotiation. Steps had been already taken to afcertain the difpofition of the enemy; and if there frould be a profpect of an honourable peace, the opportunity would be embraced with pleafure. Mr Fox faid, that a better feafon for treating than the prefent might not occur for a long period; and he hoped, that, as the French had renounced the decree of fraternity, every idea of interference in thejr interior concerns would, on our part, be difclaimed. Tlhis nould be a good preparative to negotiation; and a fubfequent offer of moderate terms would expedite the accomplithnent of the defirable object. Only 50 members fupported the mution, while 189 voted againit it.

On the Sth of MI arch 1796, Mr Wickham, his majef- Attempt Aty's miniller to the Swils cantons, tranfmitted a note to negotiates

## $B \quad \mathrm{I}$

M. Barthelemi, the French ambaffador at Berne, Ita:ng, that he himfelf was not authorized to enter into any negotition, but requefting information in writing on the part of his court about three points. Firft, Whether France was difpofedsto fend minillers to a congreis to negotiate a general paace with his Bri tanric majelly and his allies. 2dly, Whether the French government would be willing to fate the geacsal grounds upon which they would confent to conclude a treaty; and 3dly, Whether the French government would think fit to propofe any other mode of arriving at a general pacification. Mi. Barthelemi returned an anficer, on the 26 ih of the fame month, flating, that the executive directory doubted the fincerity of thefe overtures of peace, from the propofal of a general congrefs, which would lead to endlefs negotiations, and from Mr Wickham having received no powers to negotiate. He afferted, however, the srillingnefs of France to make peace; but declared, that the executive direfory had no power to relinquith any of the territories which the conflitutional act had declared to form an integral part of the republic. With regard to other territories occupied by the French armies, thefe, he faid, might become objects of negotia-tion.-As the Netherlands, and the illind of St Domingo, had been declared by the new French conftitution, to form a part of the territory of the republic, the Britifh government immediately publified a note declaring thefe pretenfions on the part of France totally inadmifitible; and that while they were perfilted in, nothing was left but to profecute a war equally juft and neceflary. This firf attempt towards negotiation for peace gave rife to various debates in the Britifh parliament, in all of which adminiftration were

S:pplies were voted during this feffion to the amount of 37,5880001 . and upwards of twenty-five millions and a hilt were borrowed. As no profpect exifted that Britifh armics could be enployed on the continent, the guards and garrifons were reduced to 49,000 men. The forces in the colonies were increafed to 77.000; the failors and marines were 110,000 . Taxcs were impofed on legacies to collateral relations, and on thorfes, and dogs, and hats. The affeffel tases were incleafed, and allo the duties on wine, tobacco, falt, and fugar. Parliament was diffolved on the 20 th of May, and new el ctions immediately took place. tinent.

An extremely active campaign was now opened by the French upon the continent. Their generals, Moreau and Jourdan, advanced into Germany. They were ultimately repulfed by the archduke Charles, but not till they had reached the vicinity of Ratifon. The retreat of Moreau, amidat hollile armies, tormed one of the moft celebrated $c$ ventes of the wir. On the fide of Italy the French ohtained greater ulumate fuccefs. Their new general in that quarter, Bonaparte, compelled the king of Sirdinia to defert the allies, and to purchefre peace at the expence of a confiderable portion of his territory. He next defcended into the Mitanefe; obliged the Italian flates to furrender thicir fineft pintinge, flatues, and other curiofities, together with large lums of monev, as the price of peace; and after a multrude of fanguinary conflicss, he fucceeded in fubduing, by famine. Mantua, the only fortrefs that remained to the Auftrians in Laly.

Few. maritime events of much importance occurred. The Dutch loft their whole tropical poffeffions, with the exception of the unhealthy but rich fettlement of Eatavia in the ifland of Java; and they alfo loft a fquadron which they fent out to attempt the re-capture of the Cape of Good Hope, but which was itfelf made prize of by the Britift admiral, Sir George ElphinIton. On the other hand, the Britifh were under the necellity of abandoning Corfica, in confequence of the conquells of Borraparte in Italy, and the mutinous fpirit of his countrymen, the Corficans.

The refult of the campaign was, that the Britifh Negotiaminiftry, to a void quarrelling with the nation, found it necelfary to fend Lord Nalmefbury to Paris to nego tiate a peace. It was afterwards admitted by Mr Pitt that, at this period, they had no wilh to conclude a treaty, and that the meafure now mentioned was adopted merely in compliance with the obvious withes of the public. Accordingly, as the French fill refufed to relinquin the Netherlands, this was adopted as a fufficient reafon for perfevering in the war.

The early part of the leflion of parliament, which met on the 6th of OAtober, paffed arway with few debate, on account of the intention to attempt an immediate negotiaton, which bad been announced in the king's fpeech, and afterwards on account of the expectation of its iffue. At the clofe of the year, the Frencis directory, in confequence of in invitation from a dilaffected party in Ireland (fee Ireland), fent to invade that country, an exoedition of 17 mips of the line and many fmaller veffels, bearing an army of 18,000 men under General Hoche. The violence of the winds prevented the rendezvous of this armament at Bantry bay, in confequence of which no landing was attempted, and the fleet returned home with the lofs of two fhips of the line and two frigates, which perifhed in a tempeft, and one frigate taken by the Englifh. Shortly thereafter the French difembarked on the coall of Pembrokethire 1250 criminals, whom they had fent as foldiers upon the Irifh expedition, but whorn they did not know how to employ.

At this period the firf inflance of ferious difficulty occurre t in the management of the Britifl funding fyf. tens. The large fums of money fent abroad as fubfidie, to foreign princes by government, had diminithed the quantity of yold and filver in Great Britain by the At the fame time, adminill ration, through the medium of the bank of England's paper, had iflued inmenle fums for the public expences, and in payment of the additional intereft of the national debt. The alarm occafioned by the Irifh invafion coming in addition to thefe circumitances, produced a greater demand than ufual upon the bank to exchange its paper for fpecie. Thus their coffers were foon drained, and to replenith them thry were under the neceflity of giving for bullion a prem: $\cdot \mathrm{m}$, or high price, whish they paid with their paper. This made matters worfe, for cestain perfons fecretly melted down the guineas which the bank had procured to be coined, and, for the fake of the preinium, fold this gold back to the bank as bullion. A ruinous traftic was thus carried on by the bank, which purchafed bullion at a high rate, white they gave out thcir guineas at the ufual price. The direnors of the bank were under the neceffity of laying their cafe before the privy council, which iflued

Britain. an order againft the iffue of caft by the bank. Confiderable alarm was occafioned by this Hep. Committees of the two houfes of parliament were appointed to inquire into the flate of the bank's affairs, both of which reported them to be profperous, yct each recommended a continuance of the late prohibition. An 30 was therefore paffed for confirming the reftristion, and to render it lefs inconvenient, bank-notes for one and two pounds were put into circulation. At the fame time private perfons were not compclled to accept of the bank of England's notes in their tranfactions with each other. As the bank of England is the office through which the Rritill government iffues all payments, and as thefe payments are made in the bank's paper, which adminitration might influence the dircctors to angment indefinitely, many perfons feared and predicicd, that this paper would fpeedily fink in value when compared with gold and filver, as the French afignats and the American paper currency had done when rendered not convertible at pleafure into fpecie. The flability, however, of the Britith Sunding fytem fpeedily difplayed itfelf. The credit of the bank of England's paper remained unfuaken, becaufe governmert received it in payment of all taxes, and thefe taxes fully equalled the interell of the whole fums borrowed by the public.

During the preceding year the emperor had received a fubfidy, under the appellation of a loan, from the Britifh government, anr! a new fubfidy was now given him under a fimilar appellation. To fupply this and the relt of the national expences, early in the fetfion $27,647,0001$. were voied, and afterivards above I 5 millions additional were thought neceflary, and roted. Two loans were negotiated by government, one for 16 millions and a balf in the ufual way, from money-brokers, and another of 18 millions, called the loyalty loan, from the nobility and gentry being requefted to fill it up, which they did with eapernef. The troops voted confifted of 120,002 feamen; 60,765 foldiers for guards and garrifons, that is, for European fervice, and above 64,000 for the dependencies of Great Britain. As the fear of invafion was now revived, a large fupplementary body of militia was levied, together with a confiderable force conffiting of cavalry. The intereft of the two loans was provided for by taxes upon houfes, ftage-coaches, horfcs, auctions, ftamps on agreements and newfpapers, ornamental plate, fpirits, tea, coffee, \&ic. Towards the clofe of the feffion, oppofition unfuccefsfully brought forward motions to addrefs the king to difmils his miniflers, rcfume the negotiation with France, and to repeal the two acts introduced in the preceding fellion, by Lord Grenville and Mr Pitt, for extending the treafon lares, and impofing reftrictions upon popular meetings for political purpofes. They were encouraged in fume meafure to thefe motions by a variety of addreffes which at this time were prefented from different paits of the country, to his majefty, advifing him to difmifs the prefent minittry.

The French had now acquired fuch an alcendency over the Spanifh monarchy, as to induce the govern- ment of that country to declare war againd Britain. Their fleet, amounting to 27 fail of the line, attempted to join a Fiench armament; but were attacked by
 St Vineent, with only 15 lail of the line; and four of their Mipe, from 7t tio 112 guns, were made prizes by the Britilla fleet. 'The ifland of Trinided was allo taken from them; and there alfo they loft four flaips of the line and a frigate.

At the commencement of the fummer an erent oc. rust. curred, which, had the French been prepared to at-the fleet. tempt an inrafion of this country, might have been produftive of ferious evils. This was a mutiny in the月eet. It appears that very grofs impofitions had for fome time been practifed upon the feamen with regard to their provifions, both as to the quantity and quality allowed them. 'They made an anonymous application for redrefs to Earl Howe, by a letter. The application was difregarded, becaulc the flrictnefs of difcipline prevented the oper avowal or public appearance of difcontent, which his lurdihip, therefore, inconfiderately fuppofed did not exilf, and that the letter mult be an impofition. The feamen refolved to enforce rediefs. When orders were given to prepare for putting to fea, the crew of the Queen Charlotte, and other flips lying at Spithead, refuled to act; and treating with contempt the remonftrances of the officers, made choice of delegates, who, after a formal confultation, drew up petitions to the board of admiralty, and the houfe of commons. Earl Spencer, the naval minifter, that is, the fift lord of the admiralty, dreading a dangerons mutiny, and nut thinking the demands unreafonable, promiled compliance; and the king readily offered full pardon to all who fhould immediately return to their duty. The feamen, however, would not declare their fatisfaclion before the parliament had confirmed the promifes of the lords of the admiralty; and, as fome delay was thus produced, the irritation of their minds led to a conteft with Vice-admiral Colpoys, in which fome lives were loft. An act was paffed for the gratification of the feamen both in point of pay and provifions; and fubordination was reflured at Spithead and Plymouth.

The grant of thefe claims encouraged the feamen at the Nore to infift on a more punctual difcharge of arrears, a more equal diftribution of prize-money, and a general abatement of the feverity of difcipline. $A$ council of delegates was clected. at the head of whom was a feamen named Richard Parker, who took the command of the fleet. He prevailed upon the men to rejcet repeated offers of pardon. He robbed two merchant fhips of provifions, and obllucted trade by the detention of others; and he fired on fome thips of war that refuled to accede to the mutinous combination. An act of parliament was paffed in the beginning of June, denouncing capital punithment againft all who fhould hold intercourfe with the rebellious hiips, or volontarily continue on board. As the public Atrongly difapproved of this laft mutiny, for which no excufe could be offered, the feamen gradually returned to their duty. Parker was apprehended, and with feveral other mutineers was punifhed with death. A confiderable number were condemned after trial, but the greater number were pardoned.

During the fummer the port of Cadiz was blocked Mro35 up by the Britifı fleet under Earl St Vincent (former- operationso ly Sir John Jervis.) An attempt was made againt the

Pitain.

Spanifh inland of Teneriffe, but without fuccefs. In the meanwhile another fleet, under Admiral Duncan, lay before the Texel. When he retired for a Mort time, the Dutch admiral De Winter failed out. Intelligence of this event was immediately brought to Admiral Durican at Yarmouth, who inflantly put to fea, encountered the Dutch fleet near their own coaft ; and out of 21 veffels of different defcriptions, captured feven fail of the line and two frigates. This event excited, as ufual in fuch cafes, the molt lively joy in the Britifis nation, from its tendency to put an end to all fears of invafion.

While their allies, or rather fubjeets, were fuffering thefe difallers by fea, the French armies triumphed on the continert. Bonaparte advanced from Italy againft the centre of the Auftian dominions. After feveral fanguinary conflicts, he crofled the Alps, where they approach the fiontiers of Hungary, and forced the cmperor to conclude a preliminary treaty on the 18 th of April, at Leoben. This was followed by a definitive treaty, figned at Campoformio, near Udine, in Italy , on the 17 th of October. The emperor acquired the city of Venice; but he selinquifhed the Milanefe and the Netherlands, and, by lecret articles, confented

Retle $t$ of opzolition. hat the Rhine fhould be the boundary of France.
Britain was now left alone in that conteft into which The had originally entered as a fort of auxiliary to Auftria and Prulia. The Britifh government, therefore, again entered into a negotiation towards the clofe of the fummer. Both the French and Britifh nations now eagenly wifhed for a termination to this fanguinary contelt, and it is probable, that adminiffration at laf ferioully wifhed to conclude a treaty; but by this time a violent party, headed by the director Barras, had gained the afcendency in France, and refolved to continue the war. A demand was therefore infolently made, that Britain fhould renounce every conqueft as a preliminary to farther negotiation, while Fratuce seferved a right to make demands. On a refufal of compliance, the Britıf ambaffidor, Lord Malmethury, was difmiffed from Lifle, where the negotiations had been held.

Parliament affembled on the 2d of November. In the feech from the throne, his majefty expreffed his concern, that his endeavours to reftore peace had been rendered ineffectual. But he expreffed the fulleft reliance in the magnanimity and courage of a free people contending for their beft interefts, in a war in which they were compelled, by neceffity, to perfevere. During this feffion of parliament, few or none of the members of oppolition attended. At the clofe of the preceding feffion the members of oppofition had declared this to be their intention, and they juffified their conduct in the following terms: "In times when every man who cenfures the meafures of adminifration is reparded as in league with the enemy, for what end fhould we incur fo black a cenfure? If we declare our fentiments, we are proclaimed as the enemies of our king ; if we tactly acquiefce in the menfures of the minifter, we voluntarily take upon us a flore of the refponfibility. We have done our utmolt to pievent the war; we have urged repeatedly the neceffity of bringing it to a fpeedy termination: we have not perluaded our opponents. Events muft
now take their natural courfe: we cannot aid with
Britain. counfel; it thall not be faid, that we embarrals by oppolition." This retiremert of oppofition, however, was much efented, and Spoken ot with great bitternels, by the friends of adminiftration, as it had a ten* dency to fuggeft to the nation, the idea that government was conducted by the power of the crown alone, unchecked by the difcuffion of its meafures by men of talents in the two legnthative affemblies.

The inability of the bank of England to pay upon demand its notes in fpecie, according to ancient cuftom, and to the terms of the obligation contained in thefe notes, appears now to have fuggefted to Mr Pitt fome fear with regard to the funding fyllem, and an apprehenfion, that from the immenfe fums anrually borrowed, and the correfponding quantity of papermoney necellarily iffued to pay the intereft of the loans, the fyitem might be carried too far, fo as to difcredit this paper-morey iffued in the name of the bank of England. This apprehenfion was Atrengthened by a fact, of which all perfons were daily becoming fenfihle, that the money price of all kinds of property in Great Britain had rapidly rifen during the war; and this rife of price was very juftly aferibed to a gradual finking in the value of money, (that is, of paper, the only money ufed in Britain) in confequence of its too great abundance. Mr Pitt therefore propoled, inftead of borrowing the whole fum neceflary to defray the expence of the war, and impoling no more taxes than were requifite to pay the intereft of the loan, that heavier taxes fhould be impofed, to defray, by means of them, a portion of the extraordinary expenditure. Accordingly an aft was paffed with the view of railing feven millions within the year. This was to be done by angmenting, in a threefold proportion, and, in fome cales, by raifing to five times their former amount, the afieffed taxes, that is, the taxes on houfes, windows, male-fervants, horfes, and carriages; but fo as not to compel any individual to pay more than onetenth of his income. The leading members of oppo fition attended to oppole this extraordinary meafure, but without effect.

As the French were now difencumbered from all Relative other hofility, it was naturally expected that they fate of would turn their arms in a more dired manner than $\begin{aligned} & \text { France } \\ & \text { Eritain. }\end{aligned}$ formerly again@ the Britifh empire. The refult of the late combination of the flates of Europe, for the partition of France, bad been extremely difaftrous, and had left the new republic in poffeflion of an extent of territory which the ableft and moft ambitious of the ancient French monarchs bad in vain afpired to poffefs. The command which they had now obtained of Holland rendered France more dangerous than formerly, by the fupcrior means of invafion which an additional extent of coaf, and the poffeflion of a large quantity of flipping, might afford; and had the French navy been lefs weak, or the French rulers poffeffed of greater ability, a dange:ous crifis in the hiftory of Great Britain might at this period have occurred.

It never was the intereft of any Bitifı adminifra- $\mathrm{Alam}_{2} \mathrm{IO}_{3}$ tion to conceal from the public at large, the poffibility invation. of a foreign invafion. As the French povernment at this time boaffod of their intention to make fuch an attempt, and ordered a confiderable army to advance

## B R

Britain. to the fea coalf, it feemed in fome meafure the duty of miniflers in Great Britain, to make propirations to refif any fuch effort. Accordingly they readily came forward in parliament, to propofe neafures of defence; and the danger into which the nation confidered itfelf as brought, obliged all men, in fome meafure, ftill to adhere to an adminiftration, which, in other refpects, might have loft all their popularity from the ill fuc-

On the 8th of February 1798, Mr Dundas moved in the houfe of commons for the introduction of a bill, to enable the king to incorporate in the regular militia
ly been confidered as occupying a lefs important place in the difcuffions of the lesill.ture.

As it was fuppofed, that the war, on the part of RedempBritain, would occafion greater expence than when tion of the all Europe had been engaged in it along with her, the land-lax fupplies were augmented to $35,000,0001$. ; and, with a view to draw fupplies from diftant parts of the country, inttead of raifing large loans for the public fervice, which were negotiated in London alone, MIr Pitt brought forward a fcheme, by which proprietors of land were enabled to redeem the land-tax; in other words, that the owner of land, and failing him, that any other perfon, fhould be permitted to purchafe this tax, by a transfer of flock, which produced a dividend greater than the amount of the impol. The meafure was enated into a law, but produced little immediate effect.

On the 35th of May, Mr Pitt brought formard a Navy bill. bill in the houfe of commons, intended to increafe the navy, with a view to refift, with greater luccefs, the threatened invafion. On this occafion, an event occurred, which feemed to indicate, that by the long poffefion of power, and the uncommon fupport he had received from the nation, Mr Pitt had fuffered to grow upon him a certain haughtinefs of manner and impatience of contradiction, which, in former times, would bave proved extremely inconveniert to a Britilh minitler. On the fubject of his propofed bill, he faid, that the obje the had in view, was to fufpend, for a limited time, the protections which various deforiptions of perfons enjoyed, to prevent them from being impreffed into the fervice of the navy. It was his wifh, he faid, that the bill frould this day pafs through its different flages, with a fuitable paufe at each, if required, and that it fhould be fent to the lords for their concurrence. Mr Pitt concluded, by moving for leave to bring in a bill for the more fpeedy and effectual manning of the navy.

Mr Tierney faid, the very extraordinary manner in which the right honourable gentleman called upon the houfe to adopt this meafure, could not fail to create great alarm. He had imagined, that the augmentation of the navy was to be provided for in the ufual way ; or, if any very uncommon mode was to be reforted to for the attainment of that ohject, notice fhould have been given to the houfe. For his part, he had heard no arguments that proved its propriety; and even if he had, fome time ought to have been allowed him to weigh the force of fuch arguments, before be proceeded to give three or four wotes on a meafure, of which no notice of any kind had been given. If the honourable gentleman perfited in hurrying the bill through the houfe in the manner propofed, be mult give it his decided negative. Indeed, from what he had already feen, he mult viets all the meafures of the minifters as hoftile to the liberties of the fubjects of this country.

The chancellor of the exchequer replied, that if every meafure adopted againft the defigns of France was to be confidered as hollile to the liberty of this country, then indeed his idea of liberty differed widely from that of the honourable gentleman. He obferved, that he had given notice befure of the prefent motion ; and that, wert it not paffed in a diy, thofe whom it concerned might elude its effects. Buz

Pritan. $\xrightarrow[-15]{ }$ ¿Ct. -

4 Q a portion of the fupplementary militia. The bill was paffed with little debate. On the 27 th of March, the fame miniter moved for leave to bring in a bill, to cm able his majefty to take meafures for the more effectual fecurity and defence of thefe realms, and to indemnify perfons who might fuffer injury in their property by the operation of fuch meafures. He flated, that the bill had feveral objects. Already fome counties had expreffed a wifh to adopt meafures in their nature fim:lar; for infance, Dorfethire. Propofitions were made by the men of property, which induced the fheriff to bold feveral meetings; but, as from the nature of his office, he could only call out the poffe comitatus, in cafes limited by circumftances of mere local exigency, thefe meetings had no other effeet, than that of giving a collected expreffion to the patriotifm of that county. In other counties, the lord-lieutenants had done more; but it was doubtful whether they could go beyond certain bounds. It was, he raid, the objef of this bill to provide for every poffible emergency, by giving a power to his majefly to difcover who were the perfons prepared to appear in arms to embody for their own defence. Another provifion of the bill was to fee what number of the inhabitants of certain diffricts would be able to act as pioneers, or in other laborious fituations. Mr Dundas alfo remarked, that, in the crifis of real danger, fome perfons might be influenced by motives of perfonal fafety, or the natural wifh of preferving their property, which might lead individuals to withdraw from their country; the prefent bill, however, would provide, that fhould the property of individuals be deftroyed by a marching army, or fall into the enemy's hands, or bc taken for the fervice of the country, indemnification fhould be rendered according to its value. The other provifions were, that in the event of its being necefliry to employ perfons as pioneers to remove ftock, or affif in facilitating the carriage of military flores, proper compenfation would be made. The bill, he oblerved, was intended to give a power of embodying alfo a portion of the regular militia, and employing them in the defence of the country. Upon thefe broad principles of juftice, he was confident, the fpirit of the country could be exerted; and he believed that there was nothing that could better infufe confidence into a $p \times o p l e$, and $m$ ake them feel that their fecurity dependcd on the meafures taken for their defence, than to enable them to unite to defend themfelves.

The bill was enacted into a law ofter fome unimportant debates. The principal members of oppofition not ufually attending, the perfons who chieftr nns at weared th oppofe the meafures of adminiftration, we Mr Tierney, Mr Nichnls, 'Sir William Palteney. Gomeral Tarleton, and others, who had former.

Vol. IV. Past II.

Fritain. if the meafure was neceffary, and that a notice of it would enable its effects to be rluded, how could the honourable gentleman's oppofition be accounted for, but from a defire to obltruct the defence of the country?

Mr Tierney called the right honourable gentleman to order.

The fpeaker oblerved, that whatever had a tendency to throw fufpicion on the fentiments of a member, if conveyed in language that clearly marked that intention, was certainly irregular. This the boufe would judge of; but they would wait to bear the right honourable gentleman's explanation.

The chancellor of the excbequer replied, that if the houfe waited for his explanation, he fcared it muit wait a long time. He knew very well, that it was unpariamentary to fate the motives that actuated the opinions of gentlemen; but it was impoffible to go into arguments in farour of a queftion, without fometimes hinting at the motives that induced an oppofition, to it. He fubmitted to the judgment of the boufe the propriety of what he argued; and he would not depart from any thing he had advanced, by either retracting or explaining them.

The refult of this altetcation was a duel on the following Sunday, between Mr Pitt and Mr Tierney. They weat to Putney Heath, attended by feconds; and, flanding at the diftance of 12 paces, each of them fred twice; but Mr Pitt fired his fecond piftol in the air. The feconds interfered; and thus the affair terminated.

During the fummer of this year, a rebellion broke out in Ireland, the partieulars of which will be fated in tbeir proper place (fee lreland). We fhall only remark here, that Ireland has, at all times, been in a very unbappy flate. Two-thirds of the population are Roman Catholics, poffefling, till lately, no politieal rights; excluded by penal flatutes from all employments in the army, and from every incorporation; while, at the fame time, they are under the neceffity of paying tithes to the Proteflant Epifcopal clergy. The Proteftants, who form the remainder of the people, have long been divided among themfelves; one part being Prefoyterians, while the remainder are attached to the Epifcopal church. Thefe divifions never fail to produce great unhappinefs; and fuch was the miferable policy followed by England, that, inftead of incorporating Ireland with itfelf with a view to form an united empire, with a fingle legiflature, as King James I. had propofed, and as was attempted during the ufurpation, the Britifl government ufually chofe rather to hold Ireland in a flate of conftant dependence, by governing it through the organ of a faction, and by rather encouraging than attempting to do away the divifions that exifted among its inhabitants. The enthufiafm which the French revolution had kindled in fo many quarters of Europe, extended itfelf to Ireland. Some men there, of ardent imaginations, chiefly Proteftant diffenters, perfuaded themfelves that they could regenerate their country, cafl off the dominion of Great Britain, heal the unhappy divifions among the inhabitants of Ireland, and convert it into an independent xepublic. As early as the year 1793, thefe perfons formed themfelves into a fociety, under the name of the Grited lrifbmen, and were gradually joined by a very
great proportion of the population of the country. They at firit fought aid from France; and it was in confequence of their invitation, that the unfuccefsful expedition under General Hoche was undertaken. From that period, the country remained in a flate of the greatef alarm. On one fide rigorous laws were tnacted, and every effort was made, by feverity of punifliment, to reprefs all appearance of oppofition to the exifting government; while, on the other hand, the common people bufied themfelves in the fabrication and concealment of pikes, or broke into the houfes of country gentlemen, to feize whatever fire-arms they could difcover. The cehemes of the difaffected party were greatly difconeerted, by the difcovery and apprehenfion of their principal leader:. A rebellion, however, aftually broke out; and, though attended with confiderable deftruction of human lives and of property, it was of a partial nature, and fpeedily reprefed. During its exiftence, fome circumftances occurrd, which completely demonftrated of how vifionary a nature the fchemes of thofe perfons had been, who hoped to eftablifh, In Ireland, an independent government, upon any bafis that could afford a tolerable hope of national profperity. The difaffecied party among the Proteftants were too weak to be able of themfelves either to flake off the dominion of Great Britain, or to affume the afcendency in Ireland. They were therefore under the neceffity of calling in the aid of the Roman Catholics, of whom the great mafs of Irifh population confifts. They were the more readily induced to do fo, in confequence of the notion, which of late. years had very generally gained ground in Lurope, that religious fentinents form no proper fource of diftinction in civil fociety; and from perceiving the facility with which the Catholics of France had fet at defance the religion of their fathers, when placed in competition with what they accounted the interefts of freedom, or the means of aggrandifement to their country. But it feeedily appeared, that thefe new maxims of conduct could not be adopted by the fuperfitious and illiterate peafantry of Ireland. The Catholics were no fooner in arms, than their chief animofity came to be directed, not againft the dominion of Britain or againft any form of civil government, but againft their own countrymen of the Protefant faith, who muft thus ultimately have fallen a facrifice to the fuccefs of their own fcliemes. In fhort, it became evident to all perfons of reflection, that Ireland could not poffibly exif in tranquillity, or with fafety to the Proteftant part of its inhabitants, independent of the fupremacy of Great Britain.

Upon the continent, the world was amufed with a ${ }^{1049}$ negotiation which was carried on at Raftadt, between nions at the French directory and the German empire. TheRaftadt. negotiation was conducted with much flownefs, and ultimately became ineffeclual. While it was going on, the French government contrived to quarrel with land feize the Swifs cantons, invaded and feized their country, by he and converted it into a new republic, under their French. own influence. Auftria, however, had been fo much humbled by recent loffes, that fhe did not venture, on this occafion, to affert the independence of Switzerland. although it muft have been evident to all difcerning perfons, that her own independence was ultimately caunected with that object.

## BRI [675] B R I

Sritain. Switzerland confits of a vaft aitemblage of lofty and 105 t Importance of Switzer land in European politics. precipitous mountains, fituated in fuch a manner as to divide the moft important countrics of Europe from each other. On one fide, the fe mountains look down upon the fertile country of Italy, to the north they command the very centre of Germany, and to the well they are bounded by France. For ages they have been inhabited by a virtuous and fearlefs race of people, divided into petty communities, who content ed themfelves with maintaining their own independence; and though, as individuals, they entered into the military fervice of the neighbouring princes, yet, as a people, they had long ceafed to take any part in the wars of Europe. For fome centuries, the independence of Switzerland proved the chief bafis of the independence of the neighbouring nations. All parties refpected and avoided any difpute with the Swifs, in a war againit whom much might be loft, but nothing could be won. Accordingly, when the Freach attacked the Auftrians, and when the Auftrians attacked the French, the affailing party was under the neceffity of fending its armies to a great dittance from the cenire of its own power. If defeated, the march homewards was long and difficult; while, even if tolerably fuccefsful, the attock was never ferioully dangerous, in confequence of the weaknefs with which it was made in a remote quarter. Hence when, in 1796 , the French generals, Moreau and Jourdan, marched through Swabia and Franconia to invade Auftria, the length of their march afforded many opportunities of attacking them with fuccefs; and the invaded country had full leifure to call forth its whole refources againft them. The refult was, that, when Jourdan was defeated, the retreat of the other army bicame almoft imprafticable; and hence arofe the unbounded repistation acquired by Moreau, in confequence of accomplifting it with fuccef. Had the French, at that period, occupied Switzerland, the retreat of Moreatu would have been attended with no difficulty; becaufe, by retiring into that rugged country, he could eafily have madr a And againt a very fuperior force for a conlilerable time, till he could receive reinforcements from bome. For the future, therefore, by commenciny a war of invafion againft Auftria, not pon the fromiers of France, but at the eallern extrem'ry of the Swis mountains, the French, if furrefsful, meht reach the gates of Vienna in a few weeks. The independence of Swizerland, hy placing thefe nations at a dittance from exch o'her, had hitherto prevented fuch an enterprife from being carried into effect; and the prefent removal of that barrier by the French directory, during a period of peace with Auftia, difplayed. on their part, a correat knowledge of the caufe which had, at all times, fet bounds to the ambition of France; and, at the fame time, a dctermined fpirit of hoftility againf the independence of the furrounding nates.

In the meanwhile, the weaknefs of the French na. vy rendered it impofible for them to engage in any ferious attack againtt the European part of the Britifh empire. The French government, however, with the double view of attacking the rich empire which Britain had acquired in Afia, and of removing a popular military officer, whofe ambition was already accounted
dangerous, formed a fcheme of fending Bonaparte, Eritaina with an army, to feize and colonize Egypt. To accomplift the lcheme with the greater \{afety, the threats complift the icheme with the greater fafety, the threats French ex-
of invading England were loudly renewed. The troops pedition to upon the coalt were denominated the army of England, Egypt.
Bonaparte was appointed their commander, and vifited them in perfon: But be fuddenly departed, and embarked at Toulon with a great army, before his in1053 tentions were fufpested in Great Britain. Malta was Sea-fight a! furrendered to him on his paffage. Departing thence, the Nile. he landed in fafety in the vicinity of Alexandria, and foon was matter of all Egypt. Here, however, his fucceffes terminated. He was clofely purfued by a Bri.. tilh fleet, under Admiral Nelfon; and the French ad. miral, inftead of putting to fea, having injudicioufly remained at anchor near the hore, gave an opportunity to fome of the Britiln Chips of war to run between a part of his veffels and the coaft, while others attacked the fame veffels from the fea; and thus, by putting them in fucceffion between two fires, captured or dellroyed the whole, excepting two thips of the line, which put to lea and efcaped.

1054
From the time of the battle of Actium, by which Its ettects. the fovereignty of the Roman empire was decided, no naval victory was ever attended with confequences fo immediately and obvioufly important as this. The French directory had concealed their intended enterprife from the O:toman Porte, which lays claim to the fovereignty of Egypt, but has never been able to make its claim fully effectual. The Grand Signior, however, confidered the prefent attempt as an act of hoftility againft himfelf; and the maritime vichory above men. tioned, encouraged him to declare war, in the name of all Muffulmen, againtt that hoft of infidels which had invaded the land, from which the facred territory of Mecca is fupplied with bread. In Europe, fimilar confequences took place. The irrefilible cateer of Bunaparte had compelled Auftria to fubmit to peace, upon terms which lelt France in a llate of molt dangerous aggrandifement. But the terrible Bonaparte, with the beft part of his victurious army, was now held under hlockade by the Britift fleet in a diftant country. The hopes of Auftria began to revive, and there feemed reafon to expect, that by renewing the conteft, her ancient rank isi Europe might be recovered. The king of Naples entered into thefe views with great ea. gernef. and rafly went to war with France, without having patience to wait, and to follow the movements of the greater powers.

The emprefs of Ruffia was now dead, and was fuc- Ruffia joins ceeded by tier fon Paul. She bad never contribured a new coramore than her goot withes towards the war, which bnation the other powers of Europe had waged againf France. France But her fon, a man of a furious and paffionate character, was unable to follow the fame cautious policy, or to remain a quiet fpectator of the iflue of a conteft againt the French republic, in which be confidered all princes as deeply interefted. He was encouraged by the naval victory gained at the mouth of the Nile, which feemed to infure the abfence of Bonapatte and his army, to declare his willingnefs, fo far as his finances would permit, to join in a new combination againf France.

Thuc, by the victory at the Nile, Great Britain

## B R I

i.siain. was cnabled to procure allies, willing to fend abundance of troops againft her eriemy, providing the would defray the necefary expence. In the mean time, the acquifitions and the loffes of Britain, were nearly equally balanced in other quarters. An armament failed towards the illand of Minorca, and a defcent was made near the creek of Addaya. A body of Spariards threatened to furround the firf divigon of the invading a:my; but they were foon repelled, and our troops gained a pofition, from which they might have attacked the cnemy with advantage, if the latter had not retired in the evening. The ammy feized the poft Mefcadal, and a detachment took the town of Mahon and Fort Charles. The chief defence was expected at Civadella, where new works were added to the old fortifications. The approach of the Englifh drove the Spaniards within the walls of that town, and General Stuart fummoned the governor to Surrender it without delay. To enforce compliance, two batteries were ereeted; but, as the invaders had few of the requifites of a fiege, their adserfaries might, with a fmall thare of fpirit, have made a confiderable refiftance. Intimidated, however, by the movements of the troops, and the appearance of the fquadron, the garrifon capitulated; and thus the whole ifland was redu-

Towards the end of the fame year, however, the Britith troops, which during a confiderable length of time had occupied a great number of pofitions upon the coaft of the ifland of St Domingo, found it neceffary to abandon the whole. The power of the French government had nearly been annihilated there, by a negro commander (Touffaint), to whom the Britifl furrendered Port au Prince and St Marc. The loftes incurred in confequence of the unfortunate attempt made by the Britilh government to fubjugate that ifland, were immenfe; 15 millions of money were expended, and, it is faid, that upwards of 20,000 men were loft, chiefly by the ravages of the yellow fever, added to the natural malignity of that climate to European conftitutions.

Parliament affembled on the 20 th of November. It was faid, in the fpeech from the throne, "s that the fuccefs which had attended our arms, during the courfe of the prefent year, had been productive of the happieft confequences, and promoted the profperity of the country. Our naval triumphs had received frefh Splendour, from the memorable aktion in which Lord Nelfon had attacked a fuperior enemy, and turned an extravagant enterprife to the confufion of its authors : the blow thus given to the power and influence of France had afforded ar opening, which might lead to the general deliverance of Europe.
"The magnanimity of the emperor of Ruflia, and the vigour of the Ottoman Porte, had flown, that thefe powess ware imprefled with a juft feufe of the prefent crifis; and their example would be an encouragement to other ftates to adopt that fpirited line of conduet, which was alone confillent with fecurity and lonour. Our preparations at home, and the zeal of all ranks of people, had deterred the enemy from attempting to invade our coafts. In Ireland, the rebel. Jion had been fuppreffed: the vieu's of ill-minded peofle, who had planned the fubverfion of our conftitu.
tion, had been fully detected and expofed; thofe whom they had mifled, muft now be awalisned to their duty; and the mileries which thofe traiorous defigns liad produced, impreffed the neceffity of repelling every attack on the eftablifhed government of their country.
" Under the preffure of pretracted war, it was a great $\mathrm{d}_{\mathrm{d}}$ isfaction to obferve, that the produce of the public revenue had been fully adequate to the increafe of our permanent expenditure; the national credit had been improved, and commerce had hourified in a degree unknown."

The debates which occurred in the houfe of commons upon this occafion, were not remarkably interefting, as the leading members of the old oppofition were ufually abfent. Adminiftration was chiefly oppofed by Mr Tierney, Sir Francis Burdett, Sis John Sinclair, and Sir William Pulteney. In the houfe of lords, Farl 1059 Darnley moved the ufual addrefs to the throne, and the addres was feconded by Lord Craven. This laft nobleman difcuffed, in terms of great triumph, the fituation and profpects of Britain. He remarked, that, after being deferted by the allies, whofe caufe we had efpoufed, it was gratifying to fee the noble fland we had made, and the fuccefs we had obtained by our fingle exertions. The navy of the French republic was annihilated; her boafted army of England loft its title; not only our coafts at home, but our moft valuable poffeffions abroad, were fecured. There was only one branch of commerce wbich we did not before almon exclufively poffefs, namely, that of the Levant ; and of that trade France would now be totally deprived, and we fhould reap all thofe advantages which had heretofore maintained her navy. The fituation of Bonaparte was alfo in our favour ; cut off from all means of retreat, and befet on every fide with obftacles. Thefe fucceffes had given fpirit and alacrity to feveral of the foreign powers, who had unequivocally determined to join againft the common enemy. Ruffia and the Ottoman Porte had declared themfelves; and AuAtria, though unwilling, would find it her intereft to unite in the exertions which our example had recommended to all Europe, and without which it would be in vain to look either for fecurity or peace.

The marquis of Landowne remarked, that the greateft conquefts were but fleeting objects unlefs well ufed, and, however fafcinating by their fplendour, would pals away without folid caufe of joy, unlefs made the means of obtaining the moll defirable good, fo often recom. mended by himfelf in that houfe, a fafe and honourable peace. The real patriot would think. his fervice beft repaid, by knowing it had tended to procure the ceflition of arms, and the return of tranquillity. He had no doubt, but that Lord Nelfon would highly prefer this fatisfaction to any perfonal compliment which could be paid him; and the marquis acknowledged his regret in obferving, that the victory of the Nile, which might have led to peace, was employed as a reafon for new excrtions, and a continuance of the war. And in what manner? By again combining with the European powers, by every one of whom we had already been abandoned. His lordfhip reprobated the conduct of the Frunch; but, afferted, that the propofed means for diminifhing their power, were inadequate to the objeft

Mritain in view. W'e now were told of the vigour manifefted by Rullis and the Poite, a monftrous alliance between the 'lums and Ruftians. We all knew, that their nutual diftrufts exceeded thofe of other nations: it was hereditary, it was implanted in their nature, and ftrengthencd by their clucation. The family upon the throne of the Ruflians had uniformly cherilhed the notion, that Contantinople was to be a part of their inhenitance. It was with this view they named the fecond fon of the prefent emperor Conftantine II. ; and it was from a coalition of this fort, that we were to derive hopes of vigorous operations againlt France. If Ruflia was in earnell, why did we not hear of the other northern powers coming forward and joining in the league. As to the Grand Signior, what was the Ottoman Porte? Turkey was the moft helplels of all countries upon earth, incapable not only of external operations, but of domeftic defence, and in a ftate of univerfal infubordination. Defeated in more than 30 attacks upon one rebellious pacha, unable to refift the rebellion of a lubject, was it from fuch a country that we were to expect a vigorous co-operation; upon fuch a league that we could place our confidence? His lordmip, therefore, urged the propriety of affuming the moment of victory, as the proper period, in which, without humiliation, we might fafely teftify a will for peace.

Lord Holland fupported the fame fentiment. He faid, that the fpeech from the throne held forth the probable fuccefs of a powerful confederacy againft France. We had heard fuch language before; but we had only feen, in confequence of thefe confederacies, devaltation extended over the furface of the globe, with lefs and lefs profpect of procuring tranquitlity. The former confederacy of princes was the chief caufe of the calamities produced by the French revolution. Experience might teach us, that it was impoffible to derive any advantage to this country from them. We might recollect, that we never had an alliance with any of them, who had not deferted us. Auftia, the molt confiderable, was only a drain upon us, and a temptation for the conquefts of the enemy.

The late glorious victory ought to induce us to show a difpofition for peace. It would not be humiliation, but magnanimity; nor would the people of this country fancy it was a degradation, if his majefy's minifters, in their name, would evince a pacific fpirit. The people of England had no mifhes inconfiftent with the glory of their country ; and he heartily regretted, that they had not their due weight in the government. Of the diminution of expence he faw but little probability; having oblerved, that in the years when we had the frongeft affurances of retrenchment, our expenditure had increaled the more.

On the contrary, Lord Mulgrave vas furprifed, that any Englifhman muuld think that this was a morment for propofing peace, (fyecially to fuch an enemy as we had to contend with. Keference to the fate of the former attempts, had little to do with the prefert. He demonded, whether the relative fituation of the two countries were the fame at the beginning of the war, either in point of ulory, in puint of finance, or in point of the populatity of the two goversments. When the contert firt began, the parties ftarted as great rivals upon equal terms; at prefent, however, cvery thing which could conftitute advantage was in our favour.

In fuch a pofition of things, would it be wife to truf Britain. the moderation which the noble lord had fo highlly ex. $-\underbrace{}_{-}$ tolled? vught we to reft our fecurity upon the pacific difpolition of the prefent rulers of France? Was it found policy, at a moment when a project had arifen of fecuring the independence of Europe, to throw away our advantages, and feek, by crouching at the feet of France, a precarious, hollow, and fallacious peace, without endeavouring to turn the glory we had earned into a univerfal benefit to the world ?

In fupport of the fame fentiments, Lord Grenville fated, that the powers of the continent were at prefent willing to embrace a train of conduct fuited to the protcetion of their independency; and was this a moment for England to thow, that the was guided by little felfifh politics? Inftead of leaving Europe to its fate, and abandoning the victims of French domination to their mifery, it ought to be the bufinefs of Great Britain to animate their efforts, and contribute to their deliverance. It was the duty of minifters to promulgate this glorious purpofe, to conciliate differences, to allay jealoufies, and not, by reviving them, to prevent that co-operation which was fo neceffary to the general fafety, and connceted with the true interefts of the country.

As profpest was now opened of reviving upon 1060 moft extenfive fale, the continental war againg France, fures of it became neceffary to provide great pecuniary re-finance. faurces to fubfidize the armies which were to be bruught forward, efpecially by the Ruffians, the poverty of whofe country could ill afford to fultain the expence of. fupporting armies in Italy or the banks of the Rbine. The fame difficulties, however, or rather doubts concerning the prudence of carrying to its utmoft length, the Britith practice of borrowing money to defray the extraordinary expence incurred during each year of war, which had led to an augmentation of what are called the affefed taxes, ftill induced the minifter to attempt to raife a proportion of the extraordinaty or war expenditure within the year, not by a loan, but by taxes to the requifite amount. With this view, what was accounted a very bold meafure was brought forward. This was Income a propofal for impofing a general tax upon the incometax. of every individual throughout the nation. Mr Pitt Aated, in the houle of commons, his plan to be, that no one whofe income was lefs than 60 l . per annum thould be obliged to contribute more than the taxes he already paid; but that every one who had an income of, or beyoud, that amount, foould be additionally burthened, fome in the proportion of ten per cent, others at a lower rate. All who had 2001 . a-year, would be required to fign a decharation of their willingnefs to pay a certain fum, not lefs than a tenth part of their income, without particularizing the modes in which it accrued; and a fcale of ealy computation would be adjufled for the refl. If doubts of the fairnels of the 1fatement flould arife, the commifioners might funmon any individual before them, and demand upon eath a minute fpecifiation of inconce; and if, on a continuance of fuipicion, full proof of accuracy thou! d not be adduced, they might fix the amount of contribution. If they fhould require more than a tenth, no relict would be allowed, unlefs the book ol the tradefmen, or the or dinary accounts kept by athers, fhould be fibmitted to inlpection.

Having flated the outlines of his plan, Mr Pitt mentioncd the data upon which he formed an eftimate of its produce. He was of opinion, that the annual rent of all the land in England and Wales, amounted to twenty-five millions of pound fterling; a fum which, by the allowance of a fifth part for the exceptions under fol. and the modifications under 2001. a year, would be reduced to twenty millions. Six millions the thought might be affumed as the clear income of the larid to tenants, the tithes might be valued at four millions, the produce of mines, canals, \&cc. at three, the rent of houles at five, and the profits of the liberal profeflions at two : on all thefe heade, it might be fufficient to allow an eighth part for Scotlard, which would be five millions. Income drawn from poffeffions beyond ieas might be flated at five; amuities from the public funds, at twelve; thofe of internal trade, mechanical fkill, and induftry, at twen-ty-eight millions. Thefe calculations formed an aggregate of an hundred and two millions; and from this fource about ten millions of fupply were expected to arife.
The whole of this meafure was oppofed, without fuccefs, by Mr Tierney, Sir Juhn Sinclair, Mr Pulteney, and others. Its chief defects were two: it was unequal in its principle, and, when carried into practice, occafioned much falfehood, with a view to evade it. Its inequality in point of principle is extremely obvious; becaufe, under the tax upon income, a man without capital who earned 2001. per annum, by his induftry, paid the fame tax to government, with a man living in idlenefs, and enjoying a revenue of the fame amount upon a land effate ; though, it is obvious that the wealth of two fuch perfons, as well as the degrees in which they deferve public encouragement, are very different. In its collection, this tax prefented to merchants, and all other perfons whofe income depends upon their own induftry, a powerful tempration to teprefent its amount as extremely low. It was expected, indeed, that the vanity of appearing wealthy and profperous, would counteract this tendency; but it was foon found that, in a commercial community, the love of gain is not eafily fubdued by any other paffion: and as a gencral underflanding foon prevailed amony men, with regard to each others feelings upon this fubject, nobody regarded his neighbour as unprofperous, merely becaufe he had reported his own income, to government, at a low rate.
The fear of a French invafion, had in a former age induced the Englift nation fo far to vanquifh their own prejudices, as to confent to an incorporating union with Scotland. The la:e rebellion in Ireland, together with the dread, that by means of French aid, Ireland might be difmembered from the Britifh empire, as the American colonies had been, now produced a fenfe of the neceffity of doing what oupht to have been done three centuries before this date, that is, of uniting Ireland to Britain, by incorporating into one the heretofore difiict legilatures of the two iflands. The mealure was at this period very practicable, becaule Ieland was, in fact, under the dominion of 40,000 troops, who bad been eollected to cruth the rebellion, and pretef the ifland againft the Frerch; and becaufe the friends of govern-
ment were too much intimidated by the confufion, and the fcenes of bloodfhed, which hid recently occurred there, to venture to oppofe vigoroufly, a meafure which promifed to preferve for the future the tranquillity of the country inviolate.

On the $3^{1 \text { th }}$ of January, Mr Pitt propofed the mea. fure in the Britifh houfe of commons. He faid, that a permanent connexion between Britain and Ireland, was effential to the true interefts of both countries; and that unlefs the exifting connexion fhould be im. proved, there was great rilk of a feparation, he had frong reafons to believe. The fett)cment of the year 1782, he faid, was fo imperfect, that it fubflituted nothing for that fyttem which it demolifited, and it was not confidered as final even by the minifters of the time. It left the two realms with independent legiflatures, connected only by the identuty of the executive power, a very infufficient tie, either in time of peace or of war, itradequate to the confolidation of Atrength, or the mutual participation of political and commercial berefits. The cafe of the regency exhibited a ftriking inftance of the weaknefs of the connexiong and if the two parliaments had differed on the fubject of the war, the danger of a disjunction would have been ferioufly alarming. The ertire diflociation of the kingdom was one of the greateft aims of our ene. mies; and, as their eventual fuccefs on Ireland would expofe Britain to extreme peril, the eftablifhment of an incorporative union, by which their views nighe be effectually baffled, was a neceflary act of policy. Great Britain had always felt a common interef in the fafety of Iteland : but that intereft was never for obvious and urgent, as when the enemy attacked the former realm through the medium of the latter. The French had fhown by their conduct, that they deemed Ireland the moft vulnerable part of the empire; and this confideration alone ought to enforce the adoption of a meature, which would tend to llrengthen and fe. cure that country. It ought to be noticed, that the hoftile divifions of its fects, the animofities exifting between the polferity of the original inhabitants and the defcendants of the colonifts, the rudenefs and ignorance of the people, and the prevalence of jacobinical principles among them, had produced a flate of diflrefs, for which there was no cure, hut in the formation of a general imperial legiflature, free alike from terror and refentment, removed from the danger and agiration, uninfluenced by the prejudices and uninflamed by the palliens, of that diflracled countiy.

Among the advantages which would accrue to Ireland, from an incorporation with Britain, he mentioned the protection which fhe would fecure to herfelf in the hour of danger; the noft effectual means of increafing her commerce, and improving her agriculture ; the command of Englifl capital, the infufion of Englifl manners and Englifh induftry, neceffarily tending to meliorate her condition : adding, that fle would fee the avenue to hnnours, to diflinctions, and exalted fituations in the general feat of empire, opened to all thofe whofe alilities and talents enable them to indulge an honourable and laudable ambition. He farther res maked, that the queftion was not what Ireland would gain, tut "hat fie would preferve; not merely how the might beft improve her fituation, but how the mighe
arert a prefling and immediate danger: in this point of view, her gain would be the prefervation of all the bleffings ariming from the Britifl canditution.

After fume commercial Itatements, tending to fhow the benefits derivable to lreland from an union, he afferted the competency of the leginature, not by argument or demonfration, but by allegations of the danger of controvesting fuch rights. A denial of parliamentary competence, he faid, wnuld amount to a denial of the validity of the Scotilh union, and of the authority under which the exining palliament now deliberated; and it wouks even thake every principle of legilation. That a competency for any new, or very important meafure, could only arile from the exprefs direftions or confent of the elcetors, or the great body of the nation, was a jacobinical idea, comected with the dangerous doctrine of the fuvereignty of the people.

As the fuppoled lofs of national independence formcd, in the minds of many, a ftrong objection to the fcheme, he argued, that the dreaded lofs would be a seal benefit ; that the Irith woul? rather gain than lofe in point of political freedom and civil happiness; and thit though a nation poffefling all the means of dignity and profperity, might jufly object to an affuciation with a more numerous people, Ireland being deficient in the means of protection and ciril welfare, could not be injured or degraded by fuch an union, with a neighbouring and kindred flate, as would connect both realms by an equality of law, and an iden. tity of interelt. Her people would not lefs be members of an independent Atate, as to any valuable or ufe-ful-purpofe, or lefs free in the enjoyment of the benefits f fociety and civilization.
Mr Sheridan oppofed an union, as particularly unfeafonable, amida the irritation which prevailed at this period in Ireland; and deprecated the accomplifment of the object by means of force or corruption. The meafure, however, was approved of hy a majority of 145. In the houfe of lords, the fame fubject was afterwards difcuffed with a fimilar refult. In the Irith parliament, however, the propofal was reffied with fuch vehemence, that adminiftration, finding themโelves fupported only by a fmall majority, thought fit to avoid prefing the matter at the prefent period.

Before the rifing of parliament, money was voted to the amount of $30,947,0001$. to provide for the expences of the war.

During the prefent year, the Britifh power in India was greatly augmented, and its territory extended, by the fall of Tippoo Sultan, the fon and fucceflur of Hyder Ally. From the time that this prince had been compelled, in 1792, to fursender one half of his dominions, in confequence of the invation by Lord Cornwallis, it was underftood, that fooner or later, he would make an attempt to recover what he had loft. It would feem that he had entertained hopes of aid from the French, and that with this view he had privately fent envoys to the ine of France, to attempt to form a connexion with the prefent French rulers. When intelligence reached India of the expedition to Egypt, and the victory at the Nile, the Britifl governor-general demanded from Tippoo Sul. tan, an explanation of his views, and after fone fruit.
lefor nerectiation, on the 1 Ith of lichruarg a Btitilh army , under General Harris, invaded the tersitury ot the Mlyfore, which they found in a bad flate of prepara. tion for war. After fome llight engagements, the Britilh army, on the 6ih of April, encamped betore Seringapatam. It was not till the 2 d of May, however, that the befieging batteries begsn to make a breach. On the $4^{\text {th }}$, during the heat of the day, the place was ftormed, and Tippoo himfelf perifised fighting at one of the gates of the fort. His dominions were feized by the Britifh, who bellowed a portion of them upon the Mahratac, and the nizam their ally. A part was referved under the diref fovereignty of the Eaft India Company; and the remainder was nominally befowed upon a prince of that family which had loit its power by Hyde's ufurpation. The fubitantial authority, however, over this lall-mentioned portion of Tippoo's dominions, was in truth retained by the Britift government. As the nizam himfelf foon became entirely dependent upon the Britith power, the whole peninfula of lndoftan might now be confidered, by the death of 'lipfoo, as brought under our government, with the fingle exception of the tenitory of the Mahrattas, which evidently could not long remain unfubdued. Continen

In Europe the prefent campaign was extremelytal war. eventful. The French directory had been more anxious to eflablift its own power at home, than careful to preferve the armies upon the frontiers, and in the conquered countries, in a proper ftate of force and difcipline. A French army, under General Jourdan, advanced into Swabia, in the month of March; but was encountered and beaten by a fuperior force, under the archduke Charles. The importance of the poffeffion of Switzerland inftantly difplayed itfelf. The vanquithed French army croffed the Rhine into Switzerland, and in that mountainous country, contrived to make a ftand during the greater part of the fummer. The Auftrians advanced the lengtb of Zuricl, of which they obtained poffiffion; but before they could proceed farther, the French armies were reinforced towards the end of the feafon, and were enabled in their turn to act offenfively.

In Italy the French acted unkilfully at the open-Suwarrorn's ing of the campaign. Inftead of concentrating their camaign. forces, they attempted to retair poffeftion of the whole of that country, and were thus in various engagements beaten in all quarters. The combined armies of Auftrians and Ruflians were commanded by the Ruflian. general Suwarrow, who preffed upon the French with iucredible activity, carrying on a multiplicity of fieges at the fame inftant, bringing his trnops together with wonderful celerity, when his enemy attempted to take advantage of the manner in which his forces were fcattered. The refult of the whole was, that before the campaign terminated, he had driven the French out of the whole of Italy, with the exception of Savoy and the Genoefe territory. But this was not accomplifhed without a great lofs of men in fieges and farguinary conflicts. In thefe laft the hardy warriors of the north fuffered very feverely. Their leaders depended more for fuccefs upon the intrepidity of their troops, and the promptitude with which they ruthed into action, than upon the 枋iful difpofitions with which they arranged their force, or haraffed their enemy.

## B R I

sritain. Hence, it happened that amidit all Suwarrotes vics tories, no inflace occurred of any column of French troops being compelled to fursender without fighting, mnt was any advantage gained hut by the efforts of Cuperior force exerted in npen bittle. Such a warfare caried on againf a fingle enemy by combined armies, could not long be fucceisful. The Auftrian officers complained ! oudly of their northern allies as men deftitute of military fkill, who wiffed armies without a proportioned return of conquell; while, on the other hand, the Ruffians cenfured their affociates as deftitute of proper fuirit, and as protracting the wat by an ill-

Invafion of Holland by the Britifl.

The advantage derived by the French from the poffeffion of Switzerland, had by this time begun th be underflood. A refolution was therefore adopted of clofing the campaign, not by fending Surarrow from Italy into the fouch of France, but by directing him to turn his arms northward againt the Alps. The archduke Charles had fpent the finmmer in preffing upon the French in that quarter, but had been unable to advance beyond Zurich; he now departed with a divifion of his armg towards Manheim and Philipiburgh, leaving confiderable bodies of Auftrians and Ruffians at Zurich. To aflume the command of thefe troops Susarrow adwanced from Italy at the head of 18,000 men. His views however were anticipated by the French genetal Mafiena, who finding the archduke Charles and Suwarrow at the diftance of more than a day's march on his left and right, inflantly attacked the troops flationed near Zurich. The Auftrians perceived the hazardous nature of their own fituation, and retreated out of Switzerland with only a moderate degree of lofs. But the Ruffians, from an ill-judged contempt of their enemy, from their own ignorance of the country, and want of thill in the art of conducting war in it, maintained their ground till they were hemoned in on all fides. They attempted to refilt the French, as they had often refifted the Turks, by furming a hollow fquare of great flrength ; but neither this nor their own courage afforded any faftiy againft the fying artillery of their enemy, in the face of which an iron front of bayonets was in vain prefented. Their order was at laft broken, and their retreat was extremely difaftrous; Suwarrow was in the fame is ftant advancing rapidly to their reljef; but a victorious enemy turned quickly upon him, and attempted to encompafs him on all fides. By great activity he (ffected his efcape with about $j 000$ of histroops, jn want of every thing, and retaining only the mufquets in their hands.

Thus terminated on the eaftern fide of France this very active campaign. The allies remained matkers of Italy; but France -was ftill enabled to menace that country, as well as Germany, by retaining voffeffion of Switzerland. In the meanwhile, the B -itith attempted with the aid of Ruflian auxiliaries to drive the French out of Holland. On the $27^{\text {th }}$ of Auguit, a landing was effected under Sir Ralph Abercromby at the mouth of the Texel. The Zuyder lea was immediately entered by a Britifh Heet, under ideriral Mitchell. The Dutch admiral, Story, furrendered the fleet under his command, alleging that his men refufed to fight. 'The flips were 12 in number, and eight of them mount-
ed from 54 to 74 guns. Hete, however, the effectual fuccefs of the expedition terminated. The duke of York afterwards affumed the command, and forces amounting to 35,000 men were fent over. Bur it was foon difcovered that the invafion had been ill concerted. To have afforded a profpeet of focefs, the invading army ought to have landed in the vicinity of Rotterdam, which is full of $S$ utchmen, and whete the lupporters of the Itadtholder wore numerous; and to have advanced rapisily into the centre of the country, to encourage the numerous enemies of the French to fland forward in their favour. Intead of this, the army was fet afhore at the extrenity of a long and narrow neck of land, having the fea on both fides, where the French and Dutch found it no difficult matter to obftruet their progrefs with a handtul of troops during a great length of time. Thers difficulties were ine creafed by the unufual wetnefs of the leafon, which greatly injured the roads. The Britilh commander was at length under the neceffity of withdrawing his troops to the point at which they originally landed; and a convention was entered into, by which it was ftipulated on the one hand, that he fhould not injure the country, and that a numher of French ptifoners in England thould be releafed; while, on the other hand, it was agreed that the duke of York Chould be permitted to retreat unmolefted.

At the end of this campaign, the French govern- Ufurpatio 1090 ment underwent a new change at home. Bonaparte of Bonaw after the conqueft of Egypt, had invaded Syria ; butparte. found his caree flopt at Acre by the Turkiih governor of that town, affilted by the Bitifh under Sir Sidney Smith. Having returned into Egypt, and deftroyed a Turkifh army, Bonaparte ventured upon a ftep which is without example in the hiftory of modern Europe. He had heard of the great reverfe which the French armies had fuffered in the early part of the campaign, and of the general difcontent which pre$v$ viled throughout the nation in confequence of thefe misfortunes, and he relolved to try his fortune amidft tre prelent troubled ftate of public affairs. With this view, along with a party of felect friends, he fecretly ftole away from his army in a fmall veffel, leaving his troops blockaded by a Britifh fleet in a harbarous country. The unexpected arrival in France of an officer who had never fought in Europe whout Fuccefs, was weicomed by the public at large as a moft happy event; and in the fift moment of joy, little inquiry was made about the manner in which he had forfaken his ammy, which in any other circumfances would tave been re. garded by a military people as one of the gieateft of crimes. Firding a party willing to fecond his views, Bonaparte took advantage of the fatisfaction occafioned by his arrival, together with the difentents arifing from the corruption and mifmanagement of the directorial adminifiation, to ulurp the government, and to diffolve the reprefentative lo viflature.

The Britifh parliament was afiembled fo early as parliat the $24^{\prime h}$ of Scptember, for the fake of providing for aflembles the expences and augmentation of force, thought rieceffary to give cftect to the invafion of Holland, of the fuccefi of which fanguine hopes were at thist time entertained. The fpech from the throne begar with recommending the propricty of permitting in a very confiderable

Sritain. confiderable extent, the acceptance of the voluntary $\underbrace{\text { Bro }}$ fervice of the militia to augment our force abroad. It flated that our profpects undcr providence had been improved beyond the moft fanguine expectation; the deliverance of Italy might now be confidered as fecured by a campaign, equal in fplendour and fuccefs to the moll brilliant recorded in hiftory.

The kingdom of Naples had been refcued from the French yoke, and reflored to the dominion of its lawful fovereign.

The French expedition to Egypt had been productive of calamity and difgrace, whilf its ultimate views againft our eaftern pofleflions had been utterly confourded; the defperate attempts which our enemies had made to extricate themielves, had been defeated by the courage of the Turkifh forces, directed by the fkill, and animated by the heroifm, of a Britifl officer; and the overtbrow of that reftlefs and perfidious puwer had placed the Britifh interefts in a flate of permanent fecurity.

There was every reafon to expect that our prefent efforts for the deliverance of the United Provinces would prove fuccefsful. We had refcued already the principal port and naval arfenal of the Dutch republic from the enemy; and might hope that the f ill of our generals, and the intrepidity of our troops, would foon with the affiftance of our allies furmount every obftacle, and that the fleet deftined under the ufurped dominion of France to invade thefe inlands, would, under its ancient ftandard, reftore the religion, liberty, and independence of provinces fo long in alliance with this country.

To our good and faithful ally the emperor of Ruf. fia, whofe wifdom and magnanimity directed the force of his extenfive empire to fo many quarters of Europe, we were in a great meafure indebted for the favourable change in the general pofture of affairs. In purfuance of the recommendation of the Britih parliament, his majelty had communicated their fentiments to both houfes of parliament in Ireland, refpecting an union with that kingdom, which would add fo much to the fecurity and happinefs of his Irifh fubjects, and confolidate the ftrength and profperity of the empire.

In confequence of the recommendation from the throne, an act was paffed, authorizing his majefty to receive into the army volunteers from the militia regiments; and fome meafures of finance were adopted : but government having received intelligence of the failure of the expedition againft Holland, parliament was fuddenly adjourned for fome time. In the mean while, affairs on the continent began to aflume an unpropitious afpect. The emperor of Ruffa, from his extreme vehemence of charater, was led to entertain a very violent degree of difcontent, on account of the defeats fuftained by his troops in all quarters towards the clofe of the campaign. He became diflatisficd with his allies, and there was reafon to dread that his irafcible ant unreafonable temper might lead him not merely to defert but to quariel with them. In the mean while, Bonaparte, under the title he had aflumed of Cbief or Firg Conful of the French republic, refolved to fignalize lis acquitition of power, by what was now become a very popular meafure in France, an attempt to procure peace. He thought fit, with this view, to addrefs a letter figned by himfeif, to the king of Great Britain. In this

Vol. IV. Part 11.

letter be announced hisown appointement to the office of Eutau: firft magiffrate of the republic. He anked, "Is the war which for eight years has ravaged the four guarters of | 1872 |
| :---: | the world to be eternal? Are there no means of coming lionaparec to an underflanding? How can the moff enlightened to thicking nations of Europe, powerful and flrong beyond what their fafety and independence require, facrifice to ideas of vain grandeur, commerce, profperity, and peace? Huw is it that they do not feel that peace is of the firft importance, as well as the higheff glory?

"Thefe fentiments cannot be foreign to the heart of your majefly, who reigns over a free nation, with the fole view of rendering it happy. Your majefty will fee in this overture my fincere wifh to contribute eff.cacioufly for the fecond time to a general pacification, by a ftep fpeedy, entirely of confidence, and difengaged from thofe forms which, perhaps neceflary to difguife the dependence of weak flates, prove in thofe that are fltong only the defire of deceiving each other.
"France and England, by the abufe of their ftrength, may ftill for a long time, for the misfortune of all nations, retard the period of their being exhaufted; but, I will venture to fay it, the fate of all civilized nations is attached to the termination of a war which involves the whole world." This letter was tranfmitted through the medium of an agent of the French government, who refided at London for the fake of managing the exchanges and other affairs relative to prifoners of war. Lord Grenville, as fecretary of ftate for the foreign department, informed the agent who had tranfmitted Bonaparte's letter, that his majefly could not depart frem the ufual forms of tranfaging bufinefs, and therefore, rc73 that the orly anfwer to be returned, would be an official Lord Gren. note from himfelf. In this note, his lordhip flated, ville's ate that the king wifhed for nothing more than to reftore tranquillity to Europe; that he had only made war in defence of his people, againft an unprovoked attack; but that it would be in vain to negotiate while the fame fyttem continued to prevail in France which had ravaged Hollarid, Switzerland, Germany, and Italy. "While fuch a fyltem therefore prevails, (continued his lordfhip, ) and while the blood and treafues of a powerful nation can be lavifhed in its fupport, experience has fhown, that no defence but that of open and fteady hoftility can be availing. The moft folemn treaties have only prepared the way to frefh aggreffion; and it is by determined refiftance alone, that whatever remains in Europe of ftability, for property, for perfonal fafety, for focial order, or the exercife of religion, can be preferved. For the fecurity, therefore, of thefe effential objects, his majefly cannot place reliance on the mere renewal of general profeffions of pacific difpofitions. Such profefliors have been repeatedly held out by all who have fucceffively directed the refources of France to the deftruction of Europe, and whom the prefent rulers have declared all to have been incapable of maintaining the relations of amity. Greatly will his majefty rejoice whenever it fhall appear, that the danger to which his own dominions and thofe of his allies have been fo long expofed has really ceafed; whenever he thall be fatisfied that the neceffiry of refiftance flall be at an end, and atter fo many years of crimes and miferies, better principles have prevailed, and the gioantic projects of ambition endangeting the
$4 R$
very

Britain. very exiftence of civil fociety, have at length been relinquifted. But the conviation of fuch a change can refult only from the evidence of facts.
"The beft pledge of its reality and permanence would be the reftoration of that line of princes which, for fo many centuries, maintained the French nation in profperity at bome and confideration abroad. Such an event would at once remove all obftacles in the way of ncgotiation for peacc. It would confirm in France the unmolefied enjoynent of its ancient territory, and give to all other nations, that tranquillity, that fecurity, which they are now compelled to Seek by other means.
"But it is not to this mode that his majefly limits the poffibility of folid pacification; he makes no claim to prefcribe to France what thall be the form of her government, or in whofe hands the thall veft the authority neceffary for conducting the affairs of a great and powerful nation.
"His majelty only looks to the fecurity of his own dominions, of his allies, and of Europe. Whenever he fhall judge it can be in any manner attained, he will eagesly embrace the opportunity, to concert with his allies the means of an immediate and general peace.
"Unhappily at prefent no fuch fecurity exifts; no fufficient evidence of the principles by which the new government will be directed, no reafonable ground of its ftability, appears. In this fituation, therefore, it remains for his majelty to purfue, in conjunction with other powers, thofe exertions of a juf and defenfive war, which a regard to the happinefs of his fubjects will never permit him to continue beyond the neceflity in which they originated, or to teminate on any other foundation than fuch as would contribute to the fecure enjoyment of their tranquillity, their conflitution, and their independence."

As one of the principal objects, on account of which Bonaparte commenced this negotiation, undoubtedly was to calt upon Great Britain the odium of the continuance of the war; he perfevered in this putpofe with
for difcontiming the war were become not lefs urgent; on the contraty, the calamities into which the renova. tion of the war muft infallibly plunge the whole of Europe, were motives which had induced the finf conful to propofe a fufpenfion of arms, which might likewife influence the other belligerent powers. The minifter concluded with preffing this objeet fo far as to propofe the town of Dunkiik, or any other, for the meeting of plenipotentiaries, in order to accelerate the re-ellablifhment of peace and amity between the French republic and England.

In the anfwer of the Britifh minifter to this note, Anfier 1075 the recrimination of aggreffion was as contemptuoully the Briti repulfed as it had been haughtily urged: Referring court. to his former note, the minifter obferved, that the obflacles which had been prefented, rendered hopelefs for the moment any advantages which might be expected from a negotiation; that all the reprefentations made with fo much confidence by the French miniller, the perfonal difpofitions of thofe in power, the folidity and confiftence of the new government, were points which could not be admitted as motives for opening a negotiation, fince thefe confiderations remaired yet to be proved, and of which the only evidence muft be that already explained by his majefty, namely, the refult of experience, and the evidence of facts.

On the 12 d of.January, copies of this correfpoudence were prefented to the Britihh parliament, along with a meffage from his majefly announcing, that he relied on the fupport of his parliament, and the zeal and perfeverance of his fubjects, in fuch meafures as would belt confirm the fignal advantages obtained in the laft campaign, and conduct the conteft to an honourable conclufion. On the 28th of the fame month, the fubject was difcuffed in the houfe of lords upon a motion made by Lord Grenville for an addrefs of thanks to his majefty in confequence of the meffage. Lord Grenville contended, that nothing in the fate of Europe admitted a rational hope, that there was any fecurity but in war; that peace with a nation at enmity with order, religion, and morality, would rather be an acquiefcence in wrong than a fufpenfion of arms in ordinary warfare. In thefe times, when the differences that agi- vench tated fates were of no conmon origin; when indeed they were the offspring of a mad and maddening Syflem of innovation; the work of peace fhould be entered upon with caution, and purfued with jealoufy. To negotiate with eftablifhed governments was formerly not merely eafy, but fafe; but to negotiate now with the government of Fratice, would incur all the rifks of an uncertain truce, without one of the benefits of a temporary peace. He entered into a comment upon the note of the French miniliter, and difputed all its pofitioris. He faid that the love of peace, on the part of France, liad been difplayed in a war of eight years with every nation in Europe excepting Sweden and Denmark; that her difinclination of corqueft had been afcertained by the invafion of the Netherlands, of Italy, of Switzerland, and even of Afia. He contended, that no honourable or permanent peace could be made with the prefent mlers of France. Every power with which The had treated could furnifh melancholy inflances of the perfidy, injuftice, and cruelty of the republic. If fhe agreed to a furpenfion of arms; it was in order to

## B R I

Britain. that the might then undermine his throne by corrupting the principles of his fubjects. The duke of Tufcany was among the early fufferers by a treaty. He ftrove to conform his conduct in every refpect to the views of France; but at the moment when the pledged her honour for the fecurity of his fate, he faw the troops of his ally enter his capital, the governor of that city imprifoned, his fubjects in a flate of rebellion, and himfelf about to be exiled from his dominions. It was to this prince, however, that the republic repeated her aflurances of attachment. That very republic, which fought not conqueft, which declared the would not interfere with the government of other flates, depofed the fovereign and gave democracy to the Florentines. A fimilar conduct had been obferved towards the king of Sardinia, the king of Naples, arid the republics of Venice, Genoa, and Sxitzerland. He repeated the affertion, in which he had always perfevered, that France had been the original aggreffor in the war. His lordthip next proceeded to inveltigate the charaster of the prefent ruler of the French nation.

He remarked, that General Boneparte, in the third year of the republic, impofed upon the French, by the mouth of the cannon, that very conflitution which he had now deftroyed by the point of the bayonet. If a treaty was concluded and broken with Sardinia, it was concluded and broken by Bonaparte; if peace was eftablifhed and violated with Tufcany, it was eftablifhed and violated by Bonaparte ; if armiltices were ratified and annulled with Modena, and the other petty Atates of Italy, they were ratified and annulled by Bonaparte ; if that ancient republic, Venice, was firf drawn into a war, and compelled afterwards to conclude a treity, it was that Bonaparie might more eafily overthrow her conflitution, and annihilate the political fyftem by which the had exifted with ghry and lecurity f:r ages paff if the government of Rome was fubverted, it was fubverted by Bonaparte; if Genoa was reduced to the fame humiliating fituation, her wealth and independence were facrificed to Boraparte; if Switzerland, deluded by offere of peace, was induced to furender up her rights and liberties, the was deprived of them hy Bonaparte. But to examine that part of his conduct which is diplomatic, and paffing over his rapacities, and the cruel maffacres, which were perpetrated by his ordezs, let us review his profeflions to the Porte: he folemnly declared, that he had no intention of taking poffeffion of Egypt; whillt he declared to his own generals that this was his intention, and to the people of Egypt that it was with the confent of the Porte. He had multiplied violations of all moral and religious ties; he had repeated acts of perfidy; his hypocrifies were innumerable, and in that country where be had affirmed the French to be true Muffulmen, he had given us a correct idea of his fincerity and his principles.

Being thus provided with fo many unqueftionable pledges of his future integrity, was it illiberal or impolitic to fufpect a man, who, having nverturned the government of his own country, as he had done that of others, now came forward with offers of pacification. If the intereft of honaparte were deeply ennceined be might be fincere, and there was no doubt but it was his in.
tereft to confolidate his powers; but it ought not to be forgotten, that whenever ariy acts of atrocity were to be accomplified by the French, they had been ufually effeted by a fufpenfion of arms. The propofed negotiation would relieve her from the prefent preflure of alarming difficulties, and could not relieve England from any; the ports of France, which were now blockaded by our fleet and cruifers, would be thrown open to introduce naval ftores, and a variety of neceffary articles, of which the country was in want ; fleets would be fent to bring back the troops which were now deprived of all intercourfe with the republic, and which might then be employed in augmenting the numbers of the French armies. To us a fufpenfion of arms could not be productive of any benefit whatever; our ports were not blocked up, our commerce was not intermpted; and it alfo fhould be confidered, that there would be no fecurity for the maintenance of fuch a fufpenfion. Was Bonaparte now prepared to fign a general peace? If he were not, he could not be fincere in his offers. It was neceffary for him to keep an army of 60,000 men to preferve tranquillity in the interior of France; every at of his govermment was fupported by force; and if he even were fincere, it was hazarding too much to hazard all on his fingle life, What reliance could be placed on the unanimity of the French people? Were we dellitute of hope from the change which had recently taken place in the perfons employed in public offices? Men of the blackeft charakees had been appoinied to fituations of the greatelt truat ; men infamous for profeffed principles of anarchy, had been raifed to places of confidence and power; and thofe who were judges in the fanguinary tribunals of Robefpierre, were now exalted to a diftiriguihed rank in the republic: whilf, therefore, the jacobin fyftem prevailed in France, there rwas no fecurity for England but by a vigorous profecution of hoftilitles.

His lordthip concluded hy difclaining, on the part of adminiftration, any wifh to confider the refloration of the French monarchy as the object of the war; he confidered the reftoration of monarchy as the beft, the fureft and fpecdieft, but not as the only means of refloring peace: his majefty, he faid, would not hefitate to treat with any form of government capable of prefe: wing the cuffomary relations of amity; but to commence a negotiation which would not be likely to terminate in peace, would be dimoneft and fruitlefs.

The duke of Bedford oppofed the fecretary's motion for the addrefs. He contended, that all the objections againft negotiation nuight have been urged againft the negotiations which the minifters themfelves had formerly opened at Lifle. He confidered the conduct of the Britilh government, on the prefent occafion, as unwife; becaufe provoking and unconciliatory. He thought, that, in a correfpondence with the prefent French government, all difcuffion about the original commencement of the war ought to have been avoided. Whether England or France were the firf aggreffor, was a queftion to be referved to pofterity; it was natural for each country to throw the imputat:on off their own ftoulders, and avoid not only the execration of the prefent age, but the curfe of polferity. The wild fcheme of reftosing the French monarchy, was the fine

## Erital:I

Eritain. qud non, if not of peace, of negotiation; for notwithftanding the noble fecretary had denied the charge, whillt he pointed out the impolfibility of treating with the French government during all its flages to the prefent, and infited upon vigorous hoftilities being the only means of our fecurity, there was no inference to be drawn, but that the war mult be continued till monarchy was eftablifhed. What profpect remained of fuch an event taking place, his grace faid he would not pretend to determine; but this fact was certain, that, in the fame proportion as this country opprefled France, in the fame ${ }^{\text {copoportion did foe become violent ; our at- }}$ tempts to deltroy Jacobinifm promoted, and if we perfevered, would eftablith it. If the reftoration of monarchy was not the object, what was it? Were minifters contending that we ought to wait for a more favourable opportunity of entering into negotiation? Was it to be obtained by railing at Bonaparte? There were no terms fufficiently ftrong to cenfure the littlenefs which attacked his character, in order to ruin him in the eftimation of the French natior, as if, by fo doing, we could negotiate with more effect, or gain a fairer profpeet of peace.

The duke of Bedford next contended, that no confidence was to be repofed in our prefent continental allies; and as a fevere fearcity at this period prevailed in the country, this circumftance was made ufe of, as an additional argument againft perfevering in the war. We had been taught to believe, faid his grace, that this country was able to farve France; now, if we took a view of our own internal fituation, we foould find it alarming in an extreme degree. If we repaired to the woods, ${ }^{\text {owe }}$ thould everywhere difcover traces of thofe miferable wretches, whofe poverty left them no refources but depredation; if we contemplated the villages, we Ghould hear only the unavailing cries of children, calling for that food which their parents had not to give them. Numerous were the inftances, of Itrong and healthy country men, appealing from parifh officers, who had denied them affiftance on the ground of their being able to work: it was true, that they had ability, but no employment ; and, left without it, they were perpetually diftreffed with the clamours of their families pin. ing at their miferable homes in wretchednefs and want. The beneficence of individuals had indeed much alleviated thefe evils; but the neceflity of affording relief to the laborious part of the community by charity, was a proof of the weaknefs of the country. Six months ago, our army had been recruited by unconftitutional meafures; the fundamental principle, on which the force of the kingdom was formed, had been violated for the purpofe of conducting us to victory; that fame army, which we had beheld marching with an affurance of fuccefs, had been obliged to purchafe its retreat from the enemies territory with difgrace. Such were the means we had of obtaining a more favourable opportunity to negotiate. Ought minilters to be fuffered to perfilt, were they to have another fecret expedition, to drain the country of its provifions, in order to fill the magazines of the encmy, and to ftamp the Britilh character with difhonour? Surely it ought firlt to be well afcertained, that we had fome rational hope of fuccefs. The chief conful, doubtlefs, fought to make a peace advantageous to himfclf, and the nation
over which he prefided. Like all other ltatefmen, his motives might not be influenced by humanity. It was to be fuppofed his aim would be to fatisfy the Fiench people, and confolidate his own power. As to the abufe which minifters threw upon his character, it was their habit to abule every ruling power in France. But, whenever they had been driven by the voice of the people to negotiate, their former ill language had never been any impediment. It was unfortunately the intereft of minifters to procrafinate the war ; they refained their places by its continuance, and when it was ended, the people would inquire for what they had been fpending their blood and treafures, and reflect on the heavy calamities they endured, without having reaped the lealt advantage by the content. The duke of Bedford concluded his fpeech with a motion for an addrefs, recommending a negotiation for peace.

Lord Borington faid, he would not pretend to determine what might be the real difpofition of the firft conful relative to general pacification; but it was re. markable, that though bis majelty, with that good faith fo well becoming bis character as well as that of the nation, exprefsly ftated his intentions of acting only in concert with his allies, not one word fhould be faid refpeeting peace with them; he argued, therefore, that even if we had acceded to the French propofitions, it was probable we might have left in exiftence the continental war ; we might have enabled France to have ftrengthened and recruited her forces, bafely have allowed her to bring them out againft the powers na $\%$ in alliance with us, and have put into the hands of the fucceffors of Bonaparte a power more formidable than that now enjoyed by himfelf; more formidable from the principles of thofe who might direct it, and, above all, from the abject ftate in which it would moft afturedly find this country, under fuch circumftances. It was impoffible to conceive means more calculated to damp the ardour, and check the enterprife of our Aeets, to deftroy the difcipline and fpirit of our armies, and diffufe diftruft and defpondency into the public mind, than the hafty conclufion of a temporary peace.

Lord Holland reprobated the conduct of minifters throughout the conteft. At one time they afferted, that the ambition of France was fo infatiable, that flse would liften to no terms; they were now driven from that pretext, and they urged that a peace would be infecure. As to the ambition of the enemy, it was a confideration of weight in the arrangement of terms, not a preliminary objection preclufive of treaty. What proof could be given of the abandonment of dangerous views, but a negotiation in which moderation could be difplayed. It was urged, that Bonaparte might be infincere; but if he was not, he could only have done precifely what he had done. Was it reafonable to fuppole that be would admit, that the guilt of the aggrefion lay with France? 'This was a point which ought not to have been difcuffed. The object was to treat on actual circumftances, and the real grounds of difpute. It was not Ialleyrand who began the fubject; he did not, like our minifters, throw out fevere reproach and pointed infult ; he merely Itated, that the pofibility of arrangement, not the original offence, was now the quellion. Suppofe that Bonaparte, defirous to attain peace by any means, flould fit down to confider how

Britain. he could fucceed. What does the note allow him to do? He would find that the reftoration of the hereditary line of kings was the only cafe in which a fpeedy peace would be admitted as poflible; in fact, therefure, this reftoration was the fine qua non, in which imme. diate negotiation was admiffible with minifters. Now let us examine this condition of peace in two points of view? Was it defirable in iffelf? Would it remove the objections urged to negotiation. Surely if the ambition of the republic was fo formidable, we could not forget this ground of apprehenfion, when we talked of reftoring the houfe of Bourbon. Had we forgotten their proverbial ambition, and was their reftoration the remedy for evils arifing from fuch a fource? We had now taken up the principle, fo much objected to jacobins, of diftinguifhing between the people and their government; but what was the conduet of the French? Bonaparie diftinctly renounces this principle in the letter to the king, and acknowle :ges the title and the character of his majefty's government. The note of our minifters was a manifefto to the royalifts, and formed for that purpofe. It fpoke of the miferies of France; but the mileries of France were not the caules of the war: they might intereft our humanity, but were not to be urged as motives in diplomatic papers. As Jittle had we to do with the internal mileries of the republic, as Talleyrand would have to retaliate, by reproaching us with the teft act, the want of parliamentary reform, affeffed taxes, or any other of our grievances.

Lord Holland afferted, that the people at large difapproved of the abrupt rejection of Bonaparte's overtures ; and if it afterwards fhould appear, that he was fincere, how would their lordihips reconcile it to their confciences, to have prolonged by their fanction the calamities of war, without any motive of honour, intereft, or fecurity? He, therefore gave his decided fupport to the amendment.

The earl of Caernarvon faid, he would not confider the anfwer of our minifters as a refufal to treat for peace, or a declaration of eternal war; it was, as the fecretary of ftate had termed it, a call upon the houfe and the country, to paufe before they ralhly fuffered themfelves to enter into a negotiation with an unfettled government. He did not expect any extraordinary faith to be manifefted by Bonaparte, more than by any other chief or chiefs: but, although he fhould be beft pleafed with the reftoration of monarchy in France; in all times, in monarchies as well as repub. lics, ariftocracies, and every other fpecies of government, good faith in treaties was preferved, and exemplified, only fo long as it was the intereft of the parties to maintain it. So little integrity had hiftory left on record, that at the very time they were figned, a fecret intention was often indulged to violate them at a particular period. The addrefs, as moved by Lard Grenville, was carried, by a majority of 79 againtt 6.

In the houfe of commons, Mr Dundas moved a fimilar addrefs, which gave rife to a fimilar debate. Mr Dundas faie, that the leading feature of the French revolution was a difregard of all treaties, and a contempt for the rights of other powers; in proof of this affertion, he confidered it as neceffary, merely to recite the names of Spain, Naples, Sardinia, Tuf-

1077
cany, Genoa, Geneva, Modena, Auftia, Ruflia, England, and Egypt, with Denmark and Sweden, though at all times neutral ftates. He contended, that Britain had not at this time any reafonable caufe to fuppofe that a change of principles had taken place. The jacobinical form of governinent was at an end indeed; but, in fubftance and effence, all the qualities of the revolutionary government were in as full force at this moment as they were in the days of Robefpierre. All power was now confolidated and concentered in the hands of Bonaparte; and the nation food with a military defpot at its head, invefted with unlimited authority to revive the practice of forced loans and requifitions, to wield the force of the ftate as he pleafed, and refort to all the refources of the revolutionary government.

Under thefe circumftances, overtures are made for peace. 'l'his propofition minifters have thought proper to reject, affigning as the caufe, that, as all the former attempts had proved abortive, or, if fuccefsful, were followed by violation, nothing yet prefented itfelf which afcertained fecurity. In the firft place, we were not affured of the fincerity of the offer, and in the fecond, of its permanency. There rere certain circumftances which infpired confidence in fates, as the character of the king of a country, the conduct of his minifters, the general laws of his government; but was there one of thefe criteria to be found in the prefont cafe? If there were nane of them to be found, it refted folely on the affertion of the party himfelf, declaring he was of a pacific difpofition, accredited by his minifter Talleyrand; for to him he had referred to vouch for his character. It was not ho:rever, the bufinefs of this country, to judge the private character of Bonaparte; at the fame time, be muft confefs, that he had an old prejudice hanging about him, fo as to induce him to regard the blafphemer of his God, as not the perfon with whom he would wift to treat. But, waving thefe objections, he was to be confidered in the character in which he forced himfelf upon the houfe, namely, as profefling a paciôc difpolition, and propofing a negotiation with us. Here Mr Dundas particularized, with much fererity, the conduct of Bonaparte, in the various kingdoms and ftates which he had before named; and concluded with obferving, there was not a fingle one with which he had not violated his faith; and affirmed thefe to be flrong reafons for withholding cenfidence, and rejecting treaty. Mr Dundas contended, that a negotiation at this period would be equivalent to a defertion of our allies, and would furrender the continent of Europe to France: that we thould uphold the ufurpation of Bonaparte, while at the fame time, we could have fo little confidence in his good faith, that even, were the negotiation to terminate fuccefsfully, Great Britain could not venture to difarm.

Mr Whitbread afferted, that, had it not been for the interference and ambition of the other powers of Europe, the French revolution would have affumed a very different character from that which it now poffeffed. He remarked, that other powers had treated neutral ftates no lefs unjuitly than had been done by the French; Lord Harvey and Lord Hood had ordered the French minifters to be difmiffed from Florence, and by threats we had compelled Genoa to difmifs her French inhabi-
yritzin. tants. He compared Bonaparte with Suwarrow, and the invafion of Erypt by France, with that of Poland by Aultria, Ruffia, and Pruffia, whofe friendfhip we had frequently courted.

Mr Thomas Erkine entered at great length into the quefio:, upon which he himfelf had previoufly publithed a pamphlet. whether France or Great Britain had been guilty of the original aggreffion in the war. He contended that the Britih governmerit had unneceffarily engaged in it, and perfiffed without neceflity; and ftrenuoully refifted the propricty of giving any approbation to the part which adminiftration had acted in the late correfpondence.

Mr Pitt on the other hand afferted, that the French leaders had themfelves begun the war, on the principle that it was neceffary to confolidate the revolution. With regard to the propofal to negotiate with their prefent leader, he faid that it was impoffible to difcufs fairly its propriety, without taking into confideration his perfonal character and conduct. Some gentlemen indeed had reprefented this as irritating and invidious; but no minifter could difcharge his duty, without flating the principles and difpofitions of the perfon with whom we were to treat, fince the flability of the treaty muft depend on thefe circumfances. Mr Pitt here expatiated on the conduct of Bonaparte at Campoformio, in the Milanefe, Genoa, Modena, Tufcany, Rome, Venice, Switzerland, and Egypt; his arts of perfidy, he faid, were commenfurate with his number of theaties; and if we traced the hiftory of the men in this revolution whofe conduct had been marked by the moft atrocious cruelty, the name of Bonaparte would be found allied to more of them than that of any other within thefe ten eventful and difallrous years.

From thofe facts the houfe might judge what reliance might reafonably be placed on this conqueror, and what degree of credit might be given to his profeffions. It had been obferved, indeed, that whatever had been his character, he had now an interelt in making and preferving peace. This was to him a doubtul propofition; that it was his intereft to negotiate he readily would acknowledge, and to negotiate swith this country feparately, in order to diffolve the whole fyftem of the confederacy on the continent; to palfy at once the arms of Ruffia, of Auftria, or of any other country which might look to us for fupport; and then either to break off his feparate treaty; or if he fhould have concluded it, to apply the leffon taught in his fchool of pulicy in Egypt, and to revive at his pleafure thofe claims of indemmification, which snay have been referved to fome happier periud.

Under all thefe circumftances of his perfonal cha. rafter, and his pecwly açuuied power, what fecurity had he for retaining that prower but the fword? His hold upo.a France was the frord, and he had no other. Was he connceted with the foil or with the habits, the affections or the prejudices of the country? No: he was a franger, a forcigner, and a ufurper. He united in his own perfon every thing that a pure republican muft deteft ; every thing which an enraged jacobin had abjured; every thing which a faithful royalife mult feel an infult. If he was oppoofed in his carecr, he appealed to his army. Placing then his whole dependence on military fupport, could he afford to permit his military renown to pafs away, his laurels to wither, and
his trophies to fink in obfcurity? Was it certain that, with his army confined within France, and reftrained from inroads upon her neighbours, he could maintain at his devotion a force fufficiently numerous to uphold his power? Having no object but dominion, no paffion but glory, was it probable that he could feel fuch an intercft in permanent peace as would juilify our laying down our arms, reducing our expence, and relinquilhing our means of fecurity, on the faitb of his engagements?

But was the inference to be drawn from thefe confiderations, that we ought in no cafe to treat with Bonaparte? No: but we ought to wait for the evidence of facts. If there thould be an appearance that France was governed by other maxims of policy from thofo which had hitherto prevailed; when there wese figns of a flable government, which were not now to be traced; if the danger of the contelt thould increafe, whilt the hope of ultimate fuccefs fhould be diminifl. ed, all thefe would have their due weight : but at prefent there was nothing from which we could prefage a favourable difpofition to change in the French confuls. There was the greateft reafon to rely on powerful cooperation from our allies: the Atrongeft marks in the interior of France of a difpofition to refilt this new tyranny; and every reafon to believe, that if we were difappointed of complete fuccefs, the continuance of the conteft, inftead of making our fituation comparatively worle, would have made it comparatively better.

It might be neceffary, Mr Pitt remarked, to take notice of the negotiation at Lifle in 1797, to which allufions had been frequently made by the opponents of adminiftration. The jacobin fyftem of prodigality and bloodfhed, by which the efforts of France had been fupported, had at that period driven us to exertions which had exhaufted the ordinary means of defraying our immenfe expenditure, and led many who were convinced of the neceffity of the war to doubt the poffibility of perfifting in it. There feemed too much reafon to believe, that, without fome new meafure to check the accumulation of debt, we could no Ionger truft to the funding fyftem by which the nation had fupported the different wars in which we had been engaged during the prefent century. The general and decided concurrence of public opinion was neceflary in order to profecute our plans with vigour. Under this impreflion we negotiated, not from the fanguine hope that its refult would be permanent fecurity; but frum the perfuafion, that the danger arifing from peace in thefe circumfances would be lefs than the continuance of war with inadequate means. Thofe negotiations have fully proved, that the enemy would be fatisfied with nothing lefs than the facrifice of the honour of our country; and from this conviction a fpirit and enthufiafm was excited in the nation which produced the fublequent happy change in our fituation.

Mr Fox afferted, that France undoubtedly at the commencement of the war was the defending party: the aggrefions of Aufria and Prufia could not be denied by any impartial perlon; nothay could be more deciledly hoflile than their proceedings; they ferupled not to declare to France, that it was her internal concerns, not her outward actions, which provoked them to comfederate againft ber: they did not

Britain. pretend to fear their ambition, their conqueft, their troubling their neighbours; but they acculed them of new-modelling their own government. In ail this he was not feeking to juftify the French, either in their internd no external policy; on the contrary, he thought their fucceflive rulers had been as execrable, in various inflances, as any of the molt defpotic and unprucipled governments which the world had ever feen; and it was impolfible that it thould have been otherwife: men bred in the fohool of the houfe of Bourtion, once engag ol in foreign wars, would naturally endeavour to fpread deftruction, and form plans of aggrandifement on every fide ; they could not have lived fo long under their ancient maflers, without imbihing the infatiable ambition and refflet's fpirit, the perfidy and the defpotifin, inhereit in the race; they had imitated their great prototype; and through their whole career of crimes, had done no more than trace the fteps of their own Louis XIV. Are we for ever, cominued Mr Fox, to deprive ourflives of the benefits of peace, becanfe France has perpetrated acts of injultice? With the knowledge of thefe act, we had treated with them twice, and ought not now to refufe to do fo; much lefs ought we to regard any improper language which the French leaders have ufed. Bonaparte had declared the two governments of Great Britain and France could not exift together, and deputed Berthier and Monge to make known this fentiment to the diredory after the treaty at Campoformio. And had not Mr Pitt declared the fame thing in that houle. If we wese to bring up all the idle fpeeches of the French, and they were to repeat ours, there would be no end to thefe reciprocations of animofity. Much, Mr Fox remarked, had been faid of the thort-lived nature of military defpotifn; yet fuch was the government erected by Augultus Cafar, which endured 600 years. Indeed it was too likely to be durable wherever it was eftablifhed. Nor was it true that it depended on the Jife of the firlt ulurper: half of the Roman emperors were murdered, yet the tyranny continued; and this, it was to be feared, would be the cafe in France. Neither would it make any difference in our relation with that country if Bonaparte were removed, becaufe the purchafers of confifcated property, amounting, it was faid, to one million and a half of perfons, muft prove an infurmountable obftacle to the reftoration of the ancient monarchy and the nobility. Mr Fox concluded by remarking that if adminiltration wifhed to include the allies of Britain in the propofed negotiation, they fhould have faid fo to Bonaparte, and not have infifted upon keeping him fome time lorger at war, as a flate of probation; but the fact appeared to be, that, contrary to the wifthes of adminiftration, the people of England were friends to peace, and hence minifters were apprehenfive that Bonaparte might agree to their propofal, and thereby deprive them of all pretext for the continuance of hoftilities. The addrefs was carried upon a divifion of 260 againft 64.

The great meafure of a legiftative union with Ireland was carried into effect during the prefent feffion of parliament. Adminiftration had found it neceffary to delay this interefting affair, in confequance of the ftrength of the oppofition to it in the Irifl parliament; but during the recefs they had obtained a more ample
majority. The Britifn paliament, upon Mr Pitt's Britain. monom, had pafied relojitions in favuur of the mion. $\quad$ The bufinefs was formally introduced to the Jrifh parliament on the sit: of Pebruary 1800 , by a meffage from the lord-licutenant, in which his excellency flated, that he had it in command from his in jefly, to lay before the houfes of legiflatuac, the refolations of the Britih parliament; and to exprefy his majelty's wilh, that they would take the fame into their mort ferious confideration, \&c. After a long and fpirited debate, the miniffry prevailed, by a majority of 43 , for taking his majefty's meflige into confideration on the Wednefday tollowing. The diftinguifhed abilities of Mr Grattall, which had been voluntarily cafl into obfcurity, were once more brought before the public on this interelling occafion. In a debate, which took Deta79 place on the syth of February, on propofing the fult Ireland aarticle of the union, he oppofed the neafure with fuch bout then a degree of vehemence, that the chancellor of the c. - union. chequer accufed him of affociating with traitors, and of difaffection to the government. The reply of $\mathrm{Mr}_{5}$ Grattan was fo pointed and fevere, that the chancellor conceived himfelf under the neceffity of refenting it by a challenge : five flots were exchanged, and the chancellor (Mr Corry) was wounded in the arm. The queftion, however, was carried by a majority of 161 againgt 115, and as the difcuffion proceeded, the numbers of oppofition appeared to diminifh. The laft Atruggle, as it may be deemed, was made on the $13^{\text {th }}$ of March, when Sir John Parnell moved to petition his majefty to call a new parliament, in order that the fenfe of their conftituents might be more fully afcertained; but this motion was overruled by a majority of 46 . In the mean time, the bufinefs proceeded with little oppofition in the houfe of lords, and on the 24th of March that houfe adopted the whole of the articles of union with few alterations. On the Friday following both boufes waited on his excellency with a joint addrefs to that effect, which was afterwards tranimitted to Great Britain; and no time was loft by the miniflers in fubmitting the mafure anew to the Britifl parliament.

On the 2 d of April, a meffage from his majefly was prefented to each of the houfes of the Britih parliament, communicating the refolutions of the lrilh parliament in favour of an entire union between the iwo kingdoms, and recommending the fpeedy execution of a work fo intercling to the fecurity and profperity of the Britifl empire.
lo the houfe of lords the meafure was oppofed by Debates in Lord Holland, chiefly for this reafon, that an union at Britain on the prefent period was not the fpontaneous offer of the the Irint parliament of Ireland, uninfluenced by corruption or menace. The whole articles of the union were after. wards moved, and carried, in a committee of the houfe, after fome debates of no great importance.

In the houfe of commons fimilar debates occurred. Mr Pitt flated, that the principal article in the treaty, that of the frate of reprefentation which Ireland was to have in the united parliament, was founded upon a comparative flatement of the population of both kingdoms, as well as the revenue of both. The number of members, fixed for the counties and two principal citics, was 68 ; and thofe for the mott confiderable

Enain. confiderable cities, torms, and boroughs, were regulated at 31 , who would be feltened without partiality. Haring adverted to the article refpecting the number of reprefertatives for the commons of Ireland, on the ground that they could afford no caufe of fufpicion as to any increafe of the influence of the crown, be next adverted to the arrangements refpecting the houfe of pecrs, and the members to be returned; and faid, as the members for the commons of Ireland were nearly double in number to thofe of Scotland, the fame rules would be obferved with the peerage, which therefore was to confll of 32 members. It was alfo underfood, that fuch peers of Ireland as might not be among the 28 temporal peers, hould be allowed to fit in the united parliament until elected. Such a meafure, in his opinion, could not be thought unconftitutional. He remarked, that the only article, confiting of minute details, related to apportioning the Thares of the revenue of each country refpectively. He faid, it was a circumftance much to be wifhed, that the finances of both countries were fo nearly alike, that the fyftem of both could be identified; but, as from the different proportions of debt, and the different ftages of civilization and commerce, and the different wealth of the countries, that defirable object was rendered impracticable, he contended, however, that the advantage of an union ought not to be deferred, becaufe it could not at once be carried to its full extent.

Mr Grey oppofed the union in the prefent fate of affairs. He faid, that it had been afferted, in a fpeech of the lord-lieutenant to the Irifh parliament, that fivefevenths of the country, and all the principal commercial towns, except Dublin, had petitioned in favour of the union. He faid, this only meant, that 19 counties had prefented petitions, and that thefe counties conflitute five-fevenths of the furface of Ireland. He admitted the petitions in favour of the urion ; but by what means were they obtained? The lord-lieutenant who, befides being the chief civil magiftrate, is commander of a difciplined army of 170,000 men, who is able to proclaim martial lasv when he pleafes, and to eftablifh the military trial of a court-martial, in his progrefs through the kingdom, procured thefe petitions, which, he faid, were figned by few names, and thofe by no means the mot refpectable. Fortunately, faid Mr Grey, there were many pctitions on the other fide, which were not obtained by folicitation and at illegal meetings, but at public affemblies, of which legal notice had been given. Twenty-feren counties had petitioned againft the meafure. The petition from the county of Doune was figned by 17,000 refpectable independent men; and all others were in a fimilar proportion. Upon this Mr Giey foke at fome length, and begged the attention of the committee, while he adverted to fome of the favourite arguments of unionifts. Their grand fource of argument, he faid, was the experience of the benefits derived from the union with Scotland. He load attended to that point, and he could lee, after the moft mature deliberation, no analogy between the circumftances of the Scotch union and thofe ubich called for an union with Ireland, nor could be appreherd that the fame confequences would follow from them. In the union between Scotland and England, there was no phyfical impediment; the relative fituation of the two countries was fuch, that
the king himfelf could adminifter the executive go. Britain, vernment in both: there was no occafion for a feparate eftabliftment being kept up in each. The great difference, faid Mr Grey, between Scotland and England, was 1sot between people and people, but between parliament and parliament. The Scots had prohibited the importation of Englifh goods into Scotland; they had eftablithed a trading company, which interfered with the colonial arrangements of England, and near* ly embroiled her with Spain; they had refufed to li. mit the fucceffion of the crown, and even macted, that it fhould not defcend to the fame perfon with the crown of England. An act was about to have been brought intg the Englifh parliament, to render all Scotfmen aliens, and another to fit out a fleet to attack all Scots veffels they ftould fall in with. Here, Mr Grey obferved, there was no alternative but union or war. If the union fhould, in this cafe, be carried into effect notwithftanding the general difapprobation of the people, he withed that it might tend to itrength. en the connection between the two countries, as much as he believed in his confcience, that it threatened the only folid bond of connection, that of affection and kindnefs, and that it muft prove injurious to the real power of the ftate. Mr Grey concluded, by moving an addrefs to his majelty, requefting a fufpenfion of all proceedings relative to the union, till the fentiments of the people of Ireland could be afcertained.

Mr Sheridan reprefented the meafure as an act of tyranny towards the people of Ireland, which mult become the fatal fource of new difcontenta and future rebellions. Mr Grey's motion was rejected, on a divifion of 236 againft 30 .

Early in the prelent feffion of parliament, mention bad bcen made by oppofition of the unfortunate inva* fion of Holland by the Britifh forces; but minifters declined entering upon the fubject, as the whole expedition had been carried on under the fuperintendence of Mr Secretary Dundas; and that gentleman, fpeedily after the meeting of pariament, had gone down to Scotland in the depth of winter, without any oftenfible bufinefs; a circumftance which gave rife to fufpicions, that fome diffatisfactions exifted at court, on account of the refult of the Dutch invafion, or the manner in which the duke of York had been fupported in it by adminiftration at home.

1051
On the 10:h of February, the fubject was introduced D, bate on into the houfe of commons by Mr Sheridan, who the Dutch moved for an inquiry into the caufes of its failure. He treated the capture of the Dutch navy as of little value, or rather as pernicious, on account of the example of mutiny, which it exhibited on the part of the feamen, whom we had received into our fervice. He admitted, that the reftoration of the fadtholder was, in forme meafure, a juftifiable motive for our interference; but contended, that Britain had treated the people of Holland ill, by obliging them to enter into the prefent war, and by avoiding to promifc a relloration of their colonies, in cafe of a fuccefsful invafion. In thefe circumftances, he thought the Britift government had acted imprudently in expecting any affittance from Dutchmen. He afferted, that the expedition itfelf was ill arranged, as the army, after its land. ing, had no means of moving forward, on account of the want of neceflaries. The refult was, that inftead

Britain. one had been flated as equivalent to the income tax; fix or feven m:llions: the other at the lofs of 10,000 men. There was no occation to leave this point to conjecture, the expenditure actually amounted to I, 142,0001 , and computing by Dr. and Cr. there would in commercial confideration be no objection to it. We had a right to confider the hhips which were taken, and to tate the reduction for the maintenance of a fleet in the north feas to check a Dutcly fleet: If we calculated the value of the former, the decreafe of expence in the latter, and the faving in the pay of 10,000 feamen woted lefs the laft year, the balance was greatly in our favour. We gave up the 8000 prifoners, who were annually fed at a great expence, and gained 6000 Dutch feamen to man our fleets. The object; gained by the expedition were the mips, the reduction of the expence, and the great diverfion in the French forces which facilitated the victories of the combined armies. Without making it a topic of eloquence, he believed he felt as much as any man for the brave foldiers who compofed our army ; but in war no important objects would be obtained without the lofs of many dear and valuable connexions: thofe calamities arofe inevitably from the fruation of a great nation fighting for great objects; for an independent empire, and for exilitence itfelf. To remove the impreffion of our having loft 10,000 men, he would ftate in detail the returns made during the whole of the campaign.

Mr Tierney fupported the propofs 4 for an inquiry ; he difputed the advantages faid to refult from it by weakening the French forces in other quarters, as they bad actually been everywhere fucceffful at the clofe of the campaign. He contended, that at leaf to a fecret committee, or in fome other form, miniters ought to account for their conduct, and exonerate themfelves from fufpicions too firong to be removed without proof, by producing the documents (if any fuch exili) on which this itl-fated expedition had been planned. It was unconflitutional, it was an infult on the houfe, to fay this could not be done confifently with the preSeivation of fecrecy. General Abercromby landed on the 22 d of Auguft wils 10,000 men; he got poffieflion of the Helder; he was reinforced by General Don on the $27^{\text {th: }}$ : Was it not frange, that 15,000 , headed by an able general, and going by invitation, fhould think it imprudent to alvance? Had the Dutch been well affected, why did they not declare themfelves? No French troops were then in Holland to keep them in awe. Why did not the duke of York fail at the fame time with General Don? Why were all our forces fent to orre place, and 43,000 men cooped up in a nasrow peninfula where but few could act at a time? It was frange that minillers, who were fo fond of making diverfions, did not thisk of making a diverfion in fome other quarter. This was a puint which only military men could determine; and the houfe was bound to examine officers, that the truth might be known, whether his royal highefs concluded the capitulation from inftructions, or from his own judgment: he fould (in
his opinion) bave demanded an inquiry; and this was the only way the difgrace could be transferred from himfelf and the gallant officers who ferved under him. He had no reafon to apologize for the liberties he uled with the name of his royal highnefs, although he might one day become his fovereign; for he would not think the worfe of that Englifhman who was moft folicitous for the honours of the Britifh army. We gave up $8: 00$ feamen, who it feems were mere lumber: had his royal highne?s been of the fame opinion, he would not have hefitated in complying with this requifition of General Brune, but inftantly have made the furrender of the prifoners. The capitulation had infixed an indelible blot on the national chara\&er: A king's fon, commanding 40,000 men, capitulated to a French ge. neral who had only 35,000 .

Mr Addington oblerved, that having maturely and dipafionately confidered the nature of the propofed inguiry, it appeared to him to relt upon two grounds: filt, the propriety of judging any meafure by its event; and, fecondly, that in confequence of a failure, there mould be a neceflity for inveftigation. It ought to be recollected, that the wortt cuncerted plans had often produced the mon brilliant fuccefs, and the beft terminated in difalter. Nó luman being could command fuccefs, and no exifting government controul the elements. He concluded with an eulogy on the ikill of our generals, and the intrepidity of our army. The propoled inquiry was rejected by a majority of 216 againlt 45 .

The fupplies during the prefent year were eftimated Revenue. at 39 millions and a balf, to which a million and a half was afterwards added: loans were negotiated to the a mount of 20 millions and a half, and the income tax was mortgaged to a confiderable amuunt.

During the prefent year the war was extremely rost eventful. The army which Bonaparte had left in El Arill Egypt under General Kleber could not fail to be difguited by the defertion of the firft leader of the expedition. Accordingly a negotiation was entered into by Kleber with the Turkifh grand vizier, mo Sir Sidney Smiti) ; the refult of which was, that the French agreed to abandon the whole of Egypt, on condition of being permitted to return unmolefted to France. The agreement was concluded on the $24^{\text {th }}$ of January, and the return home of this difcontented army might have proved dangerous, if not fatal, to the newly eftablifhed power of the firt conful: but here the fortune of Bonaparte interpofed. The Britifh government, fufpecting that fome propofals of this hind might be made, Fent fecret orders to Vice-admiral Lord Keith not to confent to any propolals which might leave fuch an army at liberty to act in Europe, or which fhould not include the furrender of all the fhips in the purts of Alexandria. The confequence was, that Lord Keith refufed to fulfil the treaty called the treaty of El Arif, which Sir Sidney Smith and the Turkilh grand vizier had concluded, and detained as prifoners General Deffaix, and a number of troops that had been fent from Egypt. The French general, Kleber, immediately intimated to the Turks a determination to refume holtilities. He attacked and totally routed their army, confifting of 40,000 men, in the neighbourhood of Grand Cairo: multitudes perifled in the defert and by flaughter, and the Fronch remained mafters of the country.

Britain to permit General Deffdix and his troops along with him to land in France, and to fulfil every part of Sir Sidney Smith's treaty; but the flate of affairs had altered, Kleber had been affafinated, and his fucceffor, Menou, refufed to evacuate Egypt; in confequence of which it became neceflary at a future period to fend an army from Britain, to drive the French out of that country.

The Auftrian armies in Germany were conmanded by General Kray, and in Italy by General Melas. The campaign was conducted on the part of the French government with great ability and decifion. It was pullicly announced in all the French newfpapers, that the armies were to be reinforced as powerfully as poffible, and that an army of referve was to be formed in a centrical polition between Germany and Italy, from which the armies might be fupplied with freth troops according to the events of the war. Dijon was mentioned as the flation of this army of referve, and that it already amounted to 50,000 men. Nobody fufpefted that any important plan of operations or military ftratagem was concealed by the affected notoriety of this arrangement. Accordingly the Auftrians commenced the campaign by an attack upon Maffena in the Genoefe territory. After a fucceffion of obflimate batules the French were driven into Genoa, where they fuflained a fiege, till they were compelld to furrender on account of the want of provifions. While Melas befieged Genoa, and even puthed forward his parties through Nice into the ancient French territory, Bonaparte in perfon fuddenly juined at Dijon an inmenfe army, to the affembling of which, as already remarked, Europe at large had paid little attention, on account of the appellation which it had received of an army of referve. He immediately advanced acrofs the Alps over the mountain of St Bernard; and, as it had been accounted impracticable to tranfport an army over the rugged mountains and precipices which on that quarter form the barier of Italy, he defcended into the Milanefe with little oppofition. At the fame time powerful reir,forcements joined him from Switzerland, of which the French troops continued to hold poffefion. Bnaparte thus placed himfelf in the rear of the Auttrian general, and hazarded himfelf and his army upon the fortune of a fingle battle. He was attacked on the plain of Marengo near Aleffandria; and, as the Auftrians were greatly fuperior in cavalry and artillery, they were victorious during the greatef part of the day. The Fiench winge were turned, the centre divifion broken, and fcarcely 6000 of them ftood firm at any one puint, when General Deffaix, towards the evening, arrived with a reinforcement of 6000 cavalry. By this time Bonaparte wrs perfonally engaged, and on the eve of being killed or taken: but Deffix, Ly facrificing himfelf with the greater part of his cavalry, broke the Auftrian line, and retrieved the fortune of the day; the French armay once more rallied, and the Auftrians relinquifled the field of battle. On the following day Melas propofed to negotiate, and, as the price of an unmoletled paffage to the interior territory of Auftria, agreed to abandon all Piedmont, thus furrendering in an inflant twelve of the Itrongenf fortreffes in Europe.

On the fide of Germany, the French under Moreau Rritain. exerted equal dexterity. They paffed the R!inn with fome troops in the neighbourhoud of S'raduig, where they wore oppofed by the Aulliatis: but this was only a feigned attack. They fpeecily retreated, ard the main body of their army at the fame intian coferood from the mountains of Switzerland, and croffed the Rhine in the rear of the Auarian asmy near Schauffhaufen. After a defperate engagement, the Auftrians were defeated with the lofs of $10,000 \mathrm{men}$, of whom 4000 were made prifoners. As the mode of attack had been unforefeen, and was confeguently urprovided for, the lofs of magazines and baggage was immenfe. In another, and harder fought batele, at Mofkirch, the Auftians loft upwards of 8000 men. Other battles with a fimilar iflue were fought at Biberach, Augfturg, and Hochltet; the refult of which was, that the Auftrians were under the neccflity of croffing the Danube, leaving the French mallers of the elelorate of Bavaria, and enabled to invelt Ulm. A gericral continental fufpenfion of hoflilities was immediately agreed to, by truce. which both parties retained poffefion of their prefent pofitions. A negotiation for peace was entered into between the French and Auftrians, which produced an attempt to negotiate on the part of Great Britain; but as the French demanded a naval armiffice, which could have no other tendency than to enable them to accumulate naval fores, the negotiation was dropt. After confiderable delays, during which the Auftrian minither at Paris concluded a treaty, which his court afterwards dilowned; preparations were made for opening the campaign anew: But the French confented to renew the armiltice with the Auflians, on receiving delivery of the important fortrefles of U1m, In. goldftadt, and Phillipfburg. Thefe armiftices and unfuccefsful negotiations were of great fervice to the French. The confent to a truce in the midit of an unexamp!ed career of victory, gave an appearance of moderation to the new confular government; the conclufion of a treaty at Paris, to which the Auftrian government afterwards sefufed to adhere, induced neutral nations to confider Bonaparte as extremely amious for the attainment of peace. Hence the wonderful fuccels which attended his arms, during the early part of the campaign, was fo far from roufing the jealoufy of the other flates of Europe, that he was confidered as a well-meaning and by no means dangerous neightour, and that the Aullians had impofed ujon his credulity. The northern nations eagerly counted his alliance; the emperar Paul of Ruflia, led by the natural inftability of his temper, and his admiration of military fuccefs, entered into a clofe alliance with Bonaparte, and ferzed the Irritill veffels in his ports; while the Danes, Srredes, and Pruflians, began to form a confederacy for the purpofe of enabling each other to evade the right claimed in war by maritime flates, of preventing their enemy from being fuplied with naval fores by means of nentral veffels. The prefent weaknefs of the Frencis at fea rendered fuch a combination directly hoflile to Great Britain, and favourable to them.

In the meanwhile, Great Britain was greatly di-Scarcity in fireffed at hume by a fcarcity of provifions; riots britain. broke out in London and fome provincial towns. On this account parliament aflembled on the 1ith of No.

## B R I [ 692 ] B R I

## Eritain.

vember, and the principal difcuffions which occurred in it related to the fevere dearth which prevailed throughout the country, and which involved in very great difficulties the middle and lower claffes of focicty. The members of oppofition afferted, that the war and the fearcity were clofely connected; whereas Mr Pitt and his colleagues contended, that a more obvious caufe might be found in the deficiency of the two preceding crops, in confequence of cold rainy feafons. A royal proclamation was iflued in the beginnirg of December, which exhorted all mafters of families to reduce the confumption of bread by at leafl onethird of the quantity confumed in ordinary times; and in no cafe to fuffer the fame to exceed one quartern loaf for each perfon in each week; to abfain from the ufe of flour in pafiry; and reflict the confumption of oats and other grain by horfes. Acts of parliament were at the fame time paffed, prohibiting the exportation, and offering bounties upon the importation, of grain. After all, it was thought by many, that thefe meafures operated doubtfully. By increafing the alarm of fcarcity to the highef poffible pitch, they induced wealthy perfons to buy up grain, and to withhold it from the markets, unlefs tempted by very exorbitant prices. The prohibition of exportation of provifions was unneceffary, when a better price could be obtained in Britain than anywhere elfe; and the fame high prices afforded a fufficient bounty for importation, though puhaps, as an exception to this laft rule, it was neceffary to offer a bounty for grain imported from America, or other diftant quarters of the wo:ld, to afford the merchant a certainty of profit notwithtanding a change of price before the arrival of
his grain.

At the commencement of the fucceeding year.government impofed an embargo on all Ruflian, Datifh, and Swedih ihips in Britin ports, to that Great Britain was now at war with the greatef part of Europe. Our ally, Auftria, ventured inoeed to renew the war ; but the French general, Moreau, feedily gained a fignal victory at Hohenlinder, and drove back the Auftrian army upon their capital, while at the fame time great defeats were fuftained by them in Italy and Franconia. From the neceffity of their affairs the Auftrians were thus fuddenly compelled to fue for peace, which was concluded at Luneville. The Netherlands and the Milanefe were refigned. The emperor confented, that France frould extend its limits to the Rhine; that Tufcany foould be relinquifhed by the grand duke; but that he fhould receive an indemnification in Germany: while, on the other haud, the city of Venice and a portion of its ancient territory were relinquifhed to Auflia. The German princes who fuffered by the treaty, were to receive an indemnification out of the ecclefiaflical flates of the empire; thereby wrakening ftill farther the influence of the houfe of Auftria, which had always been the head of the Catholic intereft in Germany. This treaty left the French mafters of Europe to the fouthward of the Rhine and of the Adige.

The commencement of the year 1801 was marked in Great Eritain by a mof important cvent, the termination of Mr Pitt's adminiffration. When this event was announced to the public, it created no fmall degrce
of aftoniflment in the minds of men. Since Mr Pitt had come into office, a new generation had fprung up, and a fucceffion of the moft extraordinary public tranfactions had occurred, amidf all which, he and his kinfman Lord Grenville, and his friend Mr Dundas, had remained firmly eflablifhed in power. The authority and influence of thefe men had in fome meafure interwoven itfelf in the opinion of mof people, with the very exiftence of the Britifh conflitution. They were furrounded by an immenfe train of powerful dependents and adtherents, railed by their patronage; while, at the fame time, Mr Pitt himfelf retained fuch a degree of popularity, that his difiniffion appeared a very bold meafure in the prefent difficult fate of public affairs.

The oftenfible caufe affigned for Mr Pitt's difmiffion, oftenfible obtained little credit. He was reprefented, as having caufe of promifed to the Irifh Catholics, a full equalization of Mr Pite's their privileges with thofe of their fellow fubjects, on condition that they fhould acquiefce in the treaty of union; but that his majelly had been perfuaded to oppofe the meafure, as contrary to his own coronation oath. In this fate of affains, it was faid that the mi. niftry could no longer honourably remain in office.

Concerving the true caufe of this change, little is publickly known. It does not feem neceffary, however, to fearch for a fecret hillory of fuch a tranlaction, as it may be fufficiently accounted for from thofe principles which, in the conflitution of our nature, generally regulate the conduct of men. The influence acquired by Lord North, in corfequence of the patronage he enjo:ed during the experfive period of the American war, enabled him, by combining with others, to eftablifh a formidable intereft in the legillature. But the power enjoyed by Lord North was trifling when compared with that which Mr Pitt and his friends poffeffed. The war which Mr Pitt had conducted, had been expenfive in a degree alogether unexampled in preceding times. The circumflances under which it was comnienced had united, as a party under him, almoft all the perfons of property in the kingdon. During his long adminiftration, alfo, the cronn poffefied, in a more direct manner than formerly, the increafing patronage of India. In every refpect, therefore, the leading members of this adminiftration mull have been regarded, as having attained to a degree of power and influence, which mivht not eafily be flaken; and which, therefore, might prove inconvenient, when held by any cumbination of fubjects in a free country. In fuch circumflarices, it was natural for an experienced prince to wifh for a change. Mr Pitt had been originally received into office, as the agent of the crown in the houfe of commons, and to fupport the royal prerogative there, againft a combination of powerful and accomplifled men. He hat enjoyed great popularity, and was confidered as the man beff qualificd to conduet the dangerous war of the French revolution. He muft have felt the important rank which he held in the public ellimation; and it is not improbable, that, as in his difpute with Mr Tierney, he treated the houfe of commons with little deference. fo in the cabinet he may have prefumed upon the indifpenfable importance of his own fervices; and accounting himfelf abfolutely neceffary to the adminifiration of the empire, he may have affumed a confiderable degree of independence. Such

## B R I [603] B R I

Triain. a fentiment might at leaft be readily imputed to the minifter and his filiends; and the refult of it would be, that the period when they would no longer be wanted, would begin to be expected with fome eagernefs. This period occurred as foon as the fuccefs of the French arms became fuch, that it was no longer poffible to overturn their new government by war. Accordingly there appears reafon to fuppofe, that, on difmiffing this adminiffation, a refolution was at the fame time adopted by the Britift conrt, ferioufly and earneftly to endeavour to obtain peace upon any tolerable terms.

With regard to the general merits of this adminiftraan Mr Pitestion, it muft be left to remoter times, to form a correct admunitra- judgment, as we are probably ftill too much involved in the parions and prejudices oceafioned by late occurrences, to be able to appretiate them with fufficient candour and intelligence. Mr Pitt derived great advantage from the copious and iplendid eloquence which he at all times difplayed in the houfe of commons; and certainly, no man ever poffeffed fo completely the art of managing the people of England, and of retaining their affections in an aftonifhing degree, while at the fame time he continued to poffefs the confidence of his fovereign. When it is confidered that he obtained the government of the Britifh empire when a very young man, the prudence of his condurt, as well as the magnitude of many of his plans, entitle him to a great thare of eftimation, His finking fund, though not contrived by himfelf, was a great and important meafure, which he brought forward with ability, and carried into effect with a degree of perfeverance, which bas undoubtedly rendered it one of the firmelt pillars of that great political experiment, the funding fyftem. His commercial treaty with France was a meafure recommended by the foundeft wifdom. Had it been permitted to continue in force during a few years longer, it would in all probability have connected fo clofely, by the ties of reciprocal intereft, the Britifh and French nations, that it would even have prevented the fangui. nary conteft by which it was difolved.

The molt ambiguous circumftances in Mr Pitt's public conduct, were thofe which related to parliamentary reform, to the trial of Mr Haftings, and to the flave trade, in which he adopted the popular fide in the debates of the houfe of commons, while the court was confidered as hoffile to his avowed fentiments; and thefe fentiments were never fucceffful. Thofe who admire the dexterous and Rkilful management of the humours and paffiots of men, and thofe who admire difinterefted magnanimity of conduct, will perhaps judge differently upon thefe points. To perfons of cantdour, it may be fufficient to remark, that the paffion of ambition was foftered at a very early period of life in the mind of this minifter, that it is the moft powerful of all human paffions, and has been confidered as affording an excufe for many efforts towards its gratification.

The moft difficult queftion, with regard to the merits of Mr Pitt's adminiftration, relates undoubtedly to the war with France. Though, by the forms of the Britifh conflitution, Mr Pitt was refponfible for engaging in this war, and for continuing in it; yet, as he was not actually the head of the flate, it is polfible that the interference of Britain in it might not originate with him, and that he had only the alternative of engaging
in the war, or of relinquifhing his power. If the war Britait. is to be confidered as advifed and conduaced by him, he will be refponfible for the greatelt misfortune which during feveral centuries Europe has encountered, that of the enormous aggrandifement of France, and the fubjugation of the weaker ftates. Had Britain originally flood aloof, or rather, had the negotiated in favour of the independence of France, brought into hazard as it was by the combination of the great military powers; France would have continued to be confined within her ancient boundary. Italy, Switzerland, and Holland, would have retained their independence; and the ftrength of Auffria would have continued urbroken. Or had Britain withdrawn her force with the earlieft opportunity, and avoided urging and fubfidizing the continental powers, till they were fucceffively vanquifhed, the fame refult might have occurred.

On the other band, if the war is to be confidered as undertaken to overturn the principles of the French, it was undoubtedly fuccefsful to a cettain extent, as it compelled them to abandon thefe principles, and to have recourfe to a military ufurpation; but it ought to be remembered, that to Britain, as a nation, the politio cal principles of the French were of no importance whatever; whereas, their permanent aggrandifement may bring into hazard our very exiftence as a people.

Mr Pitt and his friends called forth the refources of the country for the fupport of the war in an aftonifhing degree. Immenfe treafures were lavifhed away upon it in fupporting our.allies, and on the increafe of our navy. By this laft meafure, if the French acquired the continent of Europe, Britain might be faid to bave acquired all the reft of the world, as no communieation between diftant regions could cxif without her permiffion. It is to be remarked, however, that the acquiefcence of the public in the war was prefersed, by keeping the minds of men in a flate of conftant alarm, from the fear of danger to the conflitution, in confequence of the alleged difaffection of a body of the people. In this manner, a conflant fpirit of perfecution was maintained throughout the country, which thus feemed to be ruled rather by a jealous faction than by a legitimate government. The concluding great meafure of Mr Pitt's adminififration, the union with Ireland, is entitled to much praife. It was fuggefted by the courfe of events, and tended to remedy a great delect in the conflitution of the Britifh empire, the want of confolidation into one united political body.

Of the aflociates of Mr Pitt, his relation Lord Grenville, who acted as minitter in the houfe of lords, was the chief in England, and Mr Dundas in Scotland, and perbaps alfo in the reft of the empire. This latt gentleman poffefled the greateft thare of power ever intrufted to any Scotiman fince the urion, excepting for a flort time to Lord Bute. During a confiderable length of time he appears to have consucted alnoft the whole of the public butinels of that waft allemblage of nations, in all climates of the globe, which conftitutes the Britih empire. Under his patronage, and that of his friend Mr Pitt, a numerous train of dependents rofe to the poffefion of opuience; while they themfelves, engrofled by other purfuits, were underftood to havemade only a very triting provifion for their future di-

## 

Britain. finction or independence, upon a retreat from the emoluments of office.

In doing juftice to the merits of thefe men, the next generation, and even future hiforians, ought to be upon their guard, not to truft raflly to the unfavourable seprefentations of their actions and intentions, which will be extremely apt to pafs down to pofterity, in confequence of one part of their conduct. During the laft tell years of their adminiftration, they gave grat offence to men of letters, at leail at a diftance from the capital, by their difregard of literary talents in exercifing the patronage of the crown, and by placing per fors of little reputation or ability in fituations in which diltinguifted learning and liberal accomplifhments are expected to be found. It is dangerous to offend thofe who poffefs the power of difpenfing renown, or of fixing permasent reproach upon a name; and men of letters, an irritable race, are extremely apt to segard their own quarrel as that of mankind. Any errors of the kind alluded to, which were committed by Mr Pitt's adminiftration, in their nomination to offices, may in a great meafure be afcribed to the tempeltuous firit of the times, which compelled, or at leaft induced, adminiffation, to countenasice an ardent political zeal, and to confider fidelity to their party as fuperior to every other endowment. It was only when a man of talents Hocidentally poffeffed this merit, that he could expeet to meet with any countenance, or that the fervants of the crown did not otherwife account themfelves at liberty to acknowledge his worth. Mr Pitt and Mr Dundas carried into retirement fo much of the public regret, that confiderable furns of money were contributed to erect $f$ atues to their memory.

At the time when the change of miniftry was made, the king became affected with a fevere illnefs, fuppofed to refult from the anxiety and agitation of mind which accompanied that important meafure. In making choice of a new prime minifter, he avoided admitting into power the party that had oppofed the war ; and felected Mr Addington, whom we have mentioned as originally patronized by Mr Pitt, and who, in the fation of feaker of the houfe of commons, had gained the approbation of all parties by his good temper, prudence, induftry, and conciliating manners. This gentleman ajpears to have obtained from his predeceffurs in office a promife of fupport in parliament; and he was induftrioully reprefented throughont the countiy as nothing more than a mominal minifter, holding a tempors] firuation, which, with the lirn opportunity, lie waś to relinquirls in favour of Mr Pitt and his friends. This account of the fate of affairs derived plaufibility from the astual fupport in the parlianentary debates which the new minifter received from thefe gentlemen, and from the innuence which they evidently retained in the nomination to all inferior offices. Mr Addingiu:i's apprintment as firft lord of the treafury and chancellor nf the exchequer, was followed by the nomination of Lord Eldon to the office of lord high chancelins, I.ord S: Viucent to that of firf lord of the admirally, loord Haivli+ßury as fecretary of flate fur the fortigh-Loid Pelham for the home department, and Colone] Yorke as fecretary at war. Lord Eldon was fuceceded by Sir Michael Pepper Arden, who was ereated L.ord Alvanley, as chief jultice of the common pleas; and Mr Addington by Sir John Mitford, as
fpeaker of the houfe of commons. Sir William Grant Britam. was made mafter of the rolls, and Mr Law and Mr Percival attorney and folicitor general.

1095
On the 2d of February, the parliament of Great Imperial Britain and Ireland was opened; but, as the king? parliammit. illnefs immediately fucceeded that event, the new adminiftration could not receive formal poffeffion of their offices til] the month of March, and during that time the old mirillers continued to hold their former rank. At the opening of the imperial parliament, as it was now called, the fpeech from the throne exprefled his majefty's great fatisfaction in being now able to avail himfelf of the advice of the united parliament of Great Britain and Ireland. This memorable era, difinguifized by a meafure calculated to confolidate the flrength of the empire, he hoped would be equally marked by that energy and firmofs which our prefent fituation fo peculiarly required. The court of Peterfburg had treated our reprefentations of the outrages committed againit our (hips and property, and againft Englifımen, with the utmoft difrefpect ; indeed acts of injuilice and violence had aggravated the firlt aggreftions.

Under thefe circumftances, a convention had been concluded between Peterfburg, Copenhagen, and Stockholm, the avowed object of which was to renew their former engagements, for eflablifhing a new code of maritime law, inconfiftent with the rights, and hoftile to the interefts of this country.

The earlieft meafures had been taken to repel this confederacy, and to fupport thofe principles effential to the maintenance of our naval ftrength; in which frm determination there was no doubt of the vigorous affiftance of the united parliament.

The feech concluded with recommending an inquiry into the high price of provifions, and promifes of terminating the prefent contefl whenever it could be done confiftently with fecurity and honour.

When the ufual addrefs was moved, fome debate Debate on occurred in both houfes, with regard to the prefent the addrefs. flate of affairs, more particularly as conneded with the combination of the northern powers againf Britain. In the houfe of commons, Mr Grey deplored the profpect of a war with ail Europe. Rullia, he faid, had evidently been guilty of the groffef violence and injuftice towards this country, in the confifcation of the property of our merchants, and the treatment of our failors: but the emperor accufed the Britift goverrment of violating a convention by which he was to receive the ifland of Malta, as the reward of his co-operation againft France; and the truth of this affertion ought to be invelligated. Concerning the northern confederacy, Mr Grey remarked, that the principles on which it was founded were of no recent origin. The kint of Prullia, in 1740 , difputed the pretenfions of this cuuntry, and contended ftrenuoully for the prithciple, that fiee veflets make free goods. In 1762 , the Dutch refifted the clain of a sight to feareh hips under convoy. In the year 1780 , the affertion of the riglits of neutral flates affumed a greater degree of confiftency and concert ; the fubferibers, that is, all the powers uf Europe, cntered into the armed confederacy, officially amounced its principles, and claimed tbe rights enumerated in that celebrated document, as agreeable to the law of nations. Hence, Mr Grey contended, that to avoid cncountering the inveterate ani-

## B R I

Britain. mofity of other ftates, the fubject ought to be cautioufly inveftigated; and, unlefs it appeared abfolutely necelfary to our fafety, Britain ought from prudence to relinguilh her claim. In his opinion, France, while without feamen or fill, would derive little benefit from the importation of naval flores in neutral velfels.

Mr Pitt, who lill actad as chancellor of the ex. chequer, afferted, that with every one of the three northern powers, independent of the law of nations, we had on our fide the ftrict letter of engagements, by which they were bound to us. In the convention figned between Great Britain and Ruflia, the latter bound herfelf to ufe her efforts to prevent neutral powers from protecting the commerce of France on the feas, or in the ports of France. Denmark and Sweden had ex. prefied their readinefs to agree on that very point, which they were now difpaled to contend. We did not indeed know the precife terms of their new convention; but as its exiftence and general object were acknowledged, we muft neccflarily act upon the fuppofition of their hoflility. Mr Pitt afferted the queflion now to be, Ought we to permit the navy of our enemy to be fupplied and recruited; to fuffer blockaded forts to be furnilhed with warl ke Atores and provifions; and permit neutral nations, by hoitting a lag on a fifhing boat, to convey the treafures of America to the harbours of Spain, and the naval tores of the Baltic to Brelt and Toulon? If the commerce of France had not been deftroyed, if the fraudulent fyllem of neutrals lad not been prevented, her navy would have been now in a very different fituation.

In the month of March, a debate occurred in the houfe of commons, which is worthy of notice on account of the recapitulation which it produced of fome important circumfances connefted with the flate of the mation, and the hiflory of the war. Mr Grey moved for an inquiry into the fate of the nation. He faid, that we were now in the ninth year of a war with France, and threatened with a war againft all the marisime flates of Europe, if not actually involved in it ; we had added $270,000,0001$. to the capital of our national deht, and ab.sve $17,000,0001$. to our annual taxes; we found ourfelves oppofed to France, which was now extended in territory beyond the hopes of her moft fanguine friends, increafed in population, and fupported by all the fates of the north. We were oppofed to her with diminithed means, exhaufted frength, and ftript of every ally. Was it not then incumbent on the reprefentatives of the people, to enter into a ferious inquiry into the means mofl likely to reftore to us fecurity and happinefs. Mr Grey reprefented the conquefts we had made during the war, as not compenfating our difafters, or the acquifitions made by France. Her frontier now reached to the Rhine, to the Alpr, and to the ocean. All thefe poffefions we had confented to abandon as the price of peace; for peace, which our minifters might have made with France confined within her ancient limits, while our own country was profperous and happy. Thus all our loffes were irretrievable, and our triumphs empty. It hat been faid with truth, that there was no flore, from the Texel to the Adriatic, which had not witnef. fed the defeat of our forces, and the difyrace of our arms. The unfortunate attempt upon Dunkirk, the
fhameful retreat through Holland, tice cvacuation of Toulon, the abandonment of Corfica, and the expeciition to Qaiberon, all were fatal proofs of ill-concerted fchemes. Mri Grey adverted to the late expedition againlt Fulland as more difgraceful than the eett, becaule it terminated in a capitulation to an in? erior force. He afferted, that adminifiration had acted with fuch imprudence, that our whoie allies were converted into enemics. 'The Swedes and other neutral nations had complained, that their trace was mol lted, their thips detained, and jullice refufed thera in our courts, or fo long delayed that it was ufelefs. Thefe he confidered as poirts which undoubtedly deferved inveftigation; nor did the internal thate of the country lefs require confleration. The fum already mentioned of $270,000,0001$. liad becn added to the national debr, exclufive of imperial and other loans, and the reduction by the finking fund; and yet we were affured by the ox-miniters that they left the country in a flourifhing condition. And did not every Engliliman, from diminifined comfort, or from pofitive diftre!s, fcel this declaration to be an infult? Afk the ruined manufacturers of Vorkflire, Maschetler, and liirmingham: afk the flarving inhatitants of London and Weflminfter. In forne parts of Yorkfire, formerly the molt opulent, the poor rates had increaled from 5221 . to 60001 . a-year, though the whole rack rent of the parilh oid not exceed $5600 \%$. In Birmingham there were near is,000 who received parochial relief, where the number of inhabitants is 80,000 , and this of a town accounted one of the moft flourifhing in England. The fituation of the fifter kingdom was alarming in the extreme. Since the recal of Earl Fitzwilliam, Ireland had been the feene of tranfactions flocking to humanity. Was it now tranquil? A few days ago a bill paffed the boufe, which, we were told, was neceffary for its fafety; though rebelllion had been crufhed in the field, it was faid to lurk in fecrecy; the mafs of population was difaffected; and nothing prevented the feparation of Ireland from us but the inability of France to fend a force to affit the rehels. Whatever any one might affert, he could not perfuade himifelf, that there was any innate depravity in the Irith mation. He muft believe, that, if they were well governed, they would be fober, indufrious, and orderly. Hence Mr Grey called for an inquiry into the prefent flate of affairs, and demanded the fupport of the new adminiftration, as a teftimony of their difapprobation of the meafures of their predeceffors.

Mr Dundas defended the management of the war. $109{ }^{3}$ The principle which lie laid down, as one which nevier das detende ought to be departed from, was that war ought to be the condircetcd to the deftruction of the commerce and colonial poffeffions of the enemy; in this he included their maritime power, which mult entirely depend upon their commerce. But this was not the only reafon: it was hardly poffible for England to be long at war with France, without being involved in difputes on the continent, which might deprive us of many of the markets which we had for our goods, and therefore it was peculiarly our intereft to gain thefe colonies, that they might remain open for our commodities. In order then to judge how far this war, conducted on this principle, had been difaftrous and dif-

Eritrin: $\xrightarrow{-}$

## B R I

graceful, he would tate its progrefs and fuccefs. Hoftilities commenced againf France, in February 1793; in that year Tobago, St Pierre, Miquelon, Pondichersy, part of St Domingo, and the fleet at Toulon, were taken, befides the poffeflions of the Newfoundland fifhery. In the year 1794, we took Martinique, Guadaloupe, St Lucia, the Saints, Corfica, and Mariagalante ; in 1795 , Trincomale, and the Cape of Good Hope; in 3796, Amboyna, Berbice, and Demerara; in 1797, Trinidad, with four fhips of the line either taken or deftroyed; in 1798, Minorca; in 1799 , Surinam ; in 1800 , Goree, Maltea, and Cu raçoa. Such had been our fucceffes. Mr Dundas defended the expedition ağainf Holland, upon the fame principles as formerly ; obferving that an expedition could not be regarded as completely unfiuccefful, which terminated in the capture of ten fail of the line, and thirteen frigates, which would otherways have been now employed in augmenting the forse of the northern confederacy.

Concerning the navy, Mr Dundas flated, that without enumerating its triumphs, he would brietly mention, that fince the commencement of the prefent war, we had taken or deffroyed 80 fail of the line belonging to the enemy, 181 frigates, 224 fmaller fhips of war, 734 French privateers, 15 Dutch, and 76 Spaninh fhips. The loffes we had fuftained were, three fail of the line, one of which we had retaken; one fifty gun hhip, which alfo we got again ; and of the frigates captured by the enemy, only the Ambufcade remained in their poffeffion. One of the great advantages to Be derived from the colonial poffeffions of the enemy, was the procuring markets for our manufactures. In the yeat 1793 , the manufactures fent from this country to the Wefl Indies, amounted to above $1,800,000$. Aferling. Before the war, our exports to the Eaft Indies did not exceed one million, and in the laf year exceeded $1,600,002$, a proof that we had not loff the markets of Europe, and that his principle had been found policy, to deffroy the commerce of the enemy, and direat all our forces to this end, excepting fuch a part of them as might be neceffary for the defence of Great Britain and Ireland; and when 400,000 men were applied to this purpofe, which is actually the cafe, he left it to the houfe to judge, whether minifters had paid fufficient attention to the fecurity of the country.
Mr Dundas remarked, that the failure of an expedition was now confidered as a decifive proof of mif. conduct in minifters; but in that glorious feven years war, which was in every body's recollection, there were expeditions attempted which completely failed, though the failure was not confidered as a proof of incapacity or neglect in Lord Chatham. The conquefts which we then made, were Senegal, Louifuurg, St Lucia, Duquefne, Guadaloupe, Martinique, the Havannah, Montreal, Pondicherry, Grenada, Belleifle, befides deflroying the fortifications of Cherbourg; we zook or deflroyed 32 fail of the line, and 58 frigztes, befides a proportionable number of fmaller veffels. We were now in poffeflion of every place taken in that yar, excepting Guadaloupe, the Havannah, and Belleine; but on the other land we had gained the Cape of Good Hope, Ceylon, Demerara, Berbice, and all the

Dutch poffeffions in the Eaft and Weft Indies; added to Minorca and Malta. We had alfo deffroyed the confederacy formed againf us in the Eaft Indies, and acquired a great increafe of power and territory there.

Lord Temple expreffed concern at being obliged, by a fenfe of duty, to differ from thofe with whom he had uniformly acted fince he had entered into parliament. He profefled the greatell relpect for the new chancellor of the exchequer ; but he acknowledged, he much wifhed this gentleman had fill continued to fill the chair of the houfe, which he had done fo long with honour to himfelf and to his country. But he felt it incumbent on him, to fupport the prefent motion, becaufe he conceived us to be in a flate of difficulty and danger. To fuch an object, it was worthy the character of the houfe, to devote the moft ferious attention; and it was called upon ir duty to inveftigate it. The king, in the exercife of his nudoubted prerogative, had appointed a new adminifration, to diseet the affairs of the country, in this important juncture; he meant not to fpeak harfhly of it, though it appeared a thing made up of threds and patches, of men unknown and inexperienced, in whom he could place no confidence, becaufe he had had no trial; who, whatever might be their talents, whatever their capacity for governing a great nation, had not hitherto been in circumflances to evince them: and this was not a moment to make experiments. But to return to the motion; that fufpicion was a fufficient ground for inquiry, he conceived to be an excellent principle for a Britifh houfe of commons to act upon.

Mr Pitt after expreffing his refpect for the new adminiftration, oblerved, that no point had been more difputed than that of confidence in minifters. By fome people it was held, that no perfon was entitled to it, till he had given proofs of having merited it. Here it never could be carried in fubftance to the letter; for whoever entered into any employment, muft at firf be new to it; there could be no experience without trial, but when perfons had been tried in one fituation, and had acquitted themfelves well in it, it was a rule to give them credit when they entered into another, till proof of their incapacity or mifconduct appeared. The prefent miniflers were called, indeed, to a new fituation, but they were not new to the houfe and to the public, or to the love and efteem of both.

Mr Pitt then bellowed the mof ample praifes on the merits of Mr Addington, Lord Hawkelbury, and Earl St Vincent. He afked the gentlemen of the oppofition, if they knew any one anong themfelves fuperior to Lord Hawkerbury, excepting one (Mr Fox) whofe tranfcendent talents made him an exception to almoft any rule, but whofe conduct alfo ought to be an exception, having withdrawn his attendance from the houfe, and whofe counfels, had they been followed, mult have been injurious to the country. Of the other individuals compnfing the new adminiftration, much might be foid, but he was unwilling to trefpafs on their patience. He would only add, therefore, upon this fubjea, that it fhowed little retiexion or confideration, to affirm that the prefent minifters were unentitled to confidence, by which be meant, of courfe, no more than a confitutional confidence; and the houfe was bound by the belt principles of found policy, to

Britain. wait to fee the conduct of the fervants of the crown, rope before they withheld it.

Upon the fubject of the retirement or difmifion of the late adminiffration, Mr Pitt contended, that his majefty had a right to part with his fervants, and his fervants to retire, without any explanations to the public. Concerning the affairs of the Irifl Catholics, and their connexion with the difmiftion of adminiftration, which had given rife to many reports, he faid, that a memorandum had been fent, in the name of a noble lord, at the head of the executive government of Ireland, who thought it effential to communicate the grounds of our change of adminiftration, to perfons more immediately amongtt the Catholics. Mr Pitt faid, it had been at his exprefs defire this communication had been made, and the motives explained to them which led to the change, to prevent any mifreprefentation of that fubject. Emancipation of the Catholics was a term he difclaimed. He never underflood the fituation of the Catholics was fuch as to need what deferved to be called emancipation; but he thought the fow benefits which they bad not yet anticipated, might eafily have been added to thofe fo bountifully conferred on them in the prefent reign ; not as a matter of right, but of liberality and political expedience, and, in this fenfe, of wifdom. Had fuch meafures preceded the union, indeed, they would have been rafh and deftructive; and even now, if any attempt was made to pufh it fo as to endanger the public tranquillity, or to pervert the affections of any of his majefty's fubjects, the late minifters would be firm in refifting them. Bat he hoped the day would come when fuch a meafure might be revived, and carried in the only way he wihed to fee it carried, which was conformably to the general trarquillity of the empire. He acknowledged, that it bad appeared to him of fuch importance, that, being unable to bring it forward as a meafure of government, he did not conceive it poffible for him, with honour, to remain in the fame fituation; and, at the fume time, he wifhed it to be underfood, that whenever the fame obitacles did not exitt, he would do every thing in his power to promote its fuccefs. He denied, however, that any of thofe who had retired from office, had fo pledged themf lves to the Catholics, as to be under the neceffity of religning their offices, becaufe they could not perform their promife; and faid, he was authorized to deny, thit ever the Catholics fuppofed they had received fuch a pledge. An expoftulation was natural, but a pledge was never given.

Mr Pitt concluded, that the Britifh government bad juftice on its fide, or rather was fupported by the law of nations, in the claims which it now maintained, to fearch neutral veffels for military fores on their way to the enemy, and to declare particular French or other ports under blockade, to the effect of thereafter having a right to arreft neutral veffels attempting to enter them.

Mr Fox faid, that it was undoubtedly a dostrine recognized by the law of mations, that free bottoms did not make free goods; but doubted the propriety of difcuffing it at this critical juneture. He thought our claims, upon this fubject, were extenided too far, when they were made to reach to naval flores, as thefe

Vor. IV. Part II.

697 ] B R I
had not been at former periods confidered as contra. Britaio. band. IIe confidered the fubjeet as refolving into three branches: convoys, fearch, and contraband goods. If one itate was to convey the trade of anotber, it was a new doctrine, and a fit lubject for reprefentation, by which it might have been fettled. As to fearch, if we were not content with the papers, and had ground of fufpicion, we fthould fearch and do the fame with a convoy, in which we were fully juftified. Suppofe Spain, which was always at war with the Algerines, floonld demand the fearch of every Britith veffel paffing through the Atrait, merely under pretext of her being at war with Algiers, would we fubmit to it? furely not; and yet we had demanded it of others. Refpecting contrabond goods, it was curious to talk of Mhips, and timber and naval \{tores, not being forefeen as implements of war in 1694. Great marrime powers were then in exiffence; and it was idle to compare them with the articles of gunpowder, guns, and canroons. Naval flores were not in the number of modern inventions; and if it had been thought proper to have called them contraband of war, they would have been enumerated.

Mr Fox adverted to the fucceffes of the war, which had been enumerated by Mr Dundas. To the navy he gave much praife; and alfo to the late firf lord of the admiralty, affigning his merit as the reafon for the conflant and brilliant triumphs of the navy; whilft our military expeditions, though our troops' were as brave as our feamen, had generally failed. In naval tactics almolt every thing depended on the talents of the officers; whereas, in military movements, much depended on the original defign. The boafted capture of illands was not the object of the war: our object was to protect Europe againft France. How had we fucceeded? Which of the two nations had been moft aggrand.f.d in the courfe of it? We are told, that only $160,000,0001$. was added to our debt ; fo $56,000,0001$. is cat off, befides that for which the in come tax is mortgaged; and a debt to be paid by inftailments was to be confidered as no debt at all. It now cofl us $38,000,0001$. a-year in taxes, $10,000,0001$. for poors rates; and the whole land-rent of the country was but $25,000,000$ !. A country paying double its land-rent was in a fate demanding inquiry. The war fecretary had talked much about the diverion of war, and frown usits nature on his principles. He had fent his royal highnets, and an army of 30,000 men, to the only neck of land perhaps in the world, where a fifth part of their own numbers was equal to cope with them. Of the armiltice of Hohenlinden, and the negotiation which followed it, Mr Fox fpoke with indignation, reprobating the conduct of the minifter, which had fo fatally proved that eloquence was diftind from wifdom. Time had now evinced, that all the great objects of the war were defeated, and our allies had deferted: and when no profpect of fuccefs remained, we might refort to negotiation. The fame men who had rejected the propofals of Bonaparte with infolence, muft approach with refpect, fuing for favour, to avoid participating in the difgrace.

With regard to the Irilh Catholics, Mr Fox Trid. that, in his opinion, no man ought to be deprived of his righte, becaufe he worfhipped God according to the
diftates dictates of his own confcience; that it was a reflection apoon parliament to fay, as Mr Pitt had faid, that he could not thcre propofe a meafure which he approved. Mr Fox declared his belief, that no fuch difficulty exifted; but that the late minifter might wifh to retire for a feafon, till overtures of peace were made, which he could not make, without mortification, to the man he had infulted. Mr Fox fpoke of the change of adminiftration as a fortunate occurrence. Some indeed might fufpect, from the panegyric of Mr Pitt, that the new miniters were the lefs gaudy puppets, directed by thofe who had quitted their lation; and if they adopted the fyftem of their predeceffors, with the additional blame of being hoftile to the Catholic claims, acting in this point from their own motives, they would be unworthy of confidence.

The new chancellor of the exchequer, Mr Addington, faid, that the degree of confidence which the houfe of commons ought to extend to the prefent minilters, it was not for him to conjecture; they only afked for that portion of it which thould be conftitutionally repofed in perfons duly appointed by his majefty, unlefs it was precluded by antecedent character and conduct. Of himfelf he fhould fay no more, than that he fhould be grieved at its being fuppofed, that he had been induced, by ambition or intereft, to exchange the fituation he had filled for 12 years, for the prefent, in which, in ubedience to the king's command, he was placed. A fenfe of duty and allegiance alune had directed his conduct; and to this he had facrificed every other confideration. He commented on all the leading points in difpute between us and the nurthern powers; and after ably flating the grounds of the principle afferted by this country, and referring to the exception made by exifling treaties, gave it as lis decided opinion, that the right for which we contended was vital and fundamental, and could neither be abandoned nor compromifed; and, at the fame time, expreffing an earnen wifh, that it hould be afferted temperately and firmly. The raval pre-eminence, which it was the object of the prefent confederacy to fubvert, had protected the commerce of Europe, during the prefent war, from piracy. Refpecting Catholic emancipation, he deprecated whatever might have the appearance of intolerance and prefcription. No reftraint ought to be impofed on any who diffented from the eftablifled church, but what was abfolutely neceflary for its fecurity and permaneace; and he anxiouny hoped, that the diffenters of all defcriptions would feel affured, that they were regarded in no other light by government, than as truly valuable members of the community.

He felt it incumbent on him, lafly, to declare, that it was the determination of his majelfy's fervants, to take fuch Ateps, as appeared to them beft calculated for the reftoration of peace; that no form of government in France would obftruct negotiation; and if there was a correfponding difpofition on the part of the enemy, the grand object would be accomplifted. He concluded, with profeffing, that he occupied no party ground, and wifted no confiderce that was not conftitutional. The motion for inquiry was rejected, by a majority of 291 againft 105.
brought forward the bufinefs of the fupplies in the houfe of commons. Their amount was $35,587,4621$.; of which fum, $15,800,0001$. was for the navy; $15,902,0001$. for the army; and for the ordnance $1,938,000$. The income tax was now flated as amounting only to $6,000,000$. As fome deficiencies of former eftimates required now to be provided for, Mr Pitt flated, that the whole charge of the two countries, for the fervice of the year, would amount to $4^{2,197,0001 \text {. which would be divided between the }}$ two countries thus: Great Britain for its fifteen-feventeenths of the joint expence, and thofe charges which belonged feparately to her, would have to defray, in round numbers, $37,870,0021$.; and the charges falling upon Ireland, would be $4,324,0001$. The fum of $25,000,0001$. was raifed by way of loan, and new taxes were impofed upon paper, tea, houfes, lead, the poftoffice, and various other articles. The income tax was alfo farther mortgaged; fo that the debt for which it was pledged, amounted to $76,000,000$.

As the progrefs of the funding fyftem of Great Britain will in all probability be regarded, in future times, as a moft important fact in the political hif. tory of nations, it may be here remarked, that the extent of the national debt was now fo great, and it arofe out of fuch a variety of tranfactions and engagements, that Britifh fatefmen had begun to differ among themfelves about its actual amount.' Mr Tierney had of late prefented to the houfe of commons, annually, a ftatement of the debt and of the expenditure for the current year. His fatements of the amount of the debt had been combated by the minifter. We thall here infert an abftract of a confiderable number of refolutions, which he moved upon the fubject, on the $7^{\text {th }}$ of June; together with counter relolutions moved by Mr Addington, on the 22 d of the fame month.
Mr Tierney fiated, that the total amount of the public funded debt, including the lrift and imperial loans, and deducting the flock purchafed by the commiffioners, and $16,083,8021$. transferred to then on account of the land tax redeemed, was, in February 1801,

Both Mr Addington and Mr Tiertiey concurred in eftimating the total fum to be raifed in Great Britain in the year 1801, at 68,923.9701.; and they calculated the amount of a future peace eftablifiment, exclufive of fums to be paid on winding up the expences of the war, at $28,979,5631$.

In the mean while, to prevent the active co-opera: tion of Denmark with the defigns of Ruffia, an armament was fitied out in the Britifh ports, confifting of 17 fail of the line, three frigates, and about 20 bomb ketches, gun brigs, \&c. under the command of Sir Hyde Patker, and Lord Nelfon. This fleet failed from Yarmouth on the 12 th of March, and triumplantly pafling the Sound, which was deemed impoffible, reached the capital of Denmark. The approaches to Copenhagen were fortified with Ik ill; batteries of cannon and mortars were erected on every part of the fhore, where they were likely to be efficacious; the Crown inands, and that of Amak, were frengthrned by a variety of works; the mouth of the harbour was protected by a chain, and by a fort built on piles; and a line of hipping added to the frength of the place. The admiral having ordered an attack from the louthward, Lord Nelion advanced with 12 fail of the line, four frigates, fome floops, fireflips, and bomb veffels; but, from the intricacy of the navigation, two of the largeft hips ran aground, and another was obliged to cafl anchor far from her intended flations Captain Murray in the Edgar, led the van with great intrepidity. The Monarch fuftained the moft deflructive fire, and her commander (Mofs). tof his life with above 50 of his men. Captair. Ricu was alfo killed while be was attacking the flips at the entrance of the harbour. The battle raged for four hours with great flughter on both fides. The number of hilled on the part of the Enlifl, exceeded 250 ; on the fide of the Dines above 500 . Almort 700 inen in the thips of the aggreflors, and about 1500 of the oppofite party, were wounded. Some of our thips were feverely damáged, while 17 Daniih veffels, floating batteries includ. ed, were funk, hurnt, or captured.

After the victory had been decided, Lord Nelfon threatened to burn all the floating batteries which he had taken, without faving the troops who were on board, if the enemy fhould continue the leaft firing. This meriace produced a ceffation of hoffilities. Lord Nellon landed, and conferred with the prince of Denmark; and a convention was figned for a regular armiltice.

On the 19th of April the Britifl fleet appeared off the entrance of Carlficona, and the admiral ar ouainted the governor, that the court of Denmark having concluded an armiftice by which the unfortunate difpute with the court of St Jamer's had been accommodated, he was dirested to require an explicit anfwer from his Swedith majety, relative to his intention of adhering
to, or abandoning the hollile meafures he had taken
Eritain in conjunction with Ruflia. An ofticial anfwer to this demand was communicated from the king of Sweden to Sir Hyde Parker, intimating, that his Swedilh majefty would not fail to fulfil the engagements entered into with his allies; but that he would nut refufe to liften to equitable propolals inade by deputiec, furnifhed with proper authority to regulate the matters in difpute.

The termuation of the contell $i$, lowever, not to be attributed, cither to the battle of Copenhagen, or to the victorious progrefs of the Britith dleet, but to an event which had jull before taken place, to the allonifhment of Europe, and which produced an almoft inftan- rros taneons revolution in the politics of the north. On Beah of the 23 d of March, the emperor Paul, who had per- t... ". apeformed fo verfatile and extraordinary a part on the poli. Nurlia, tical ftage, from the period when he afrended the Ruf. fian throne, expired fuddenly. His capricious tyranny, which was at laft about to be directed againf the members of his own family, proved fatal to him. His fon and fucceffor, Alexander, immediately ditclaimed the hoftility againft Great Britain, and made reparation for the damage fuffered by our merchants, in corifequence of the embargo impofed upon our veffels. A convention was adjufted with Ruffia in the month of fin June, which put an end to the difpute with the northern Qates, as Sweden and Denmark could not of themfelves bope to refift the power of Great Britain. By the third article of the agreement, it was flipulated, that effects embarked in neutral veffels fhould be free, with the exception of contraband flores of war, and the pros perty of any enemy ; that the latter defignation thould not include merchandife of the produce, growth, or manufacture of the countries at war, acquired by the fubjects of the neutral fate, and tranfported on their account; that the commodities prohibited fhould be fuch only as were declared contraband by the treaty of commerce concluded betwee, Great Britain and Ruflia in 1797 ; that a port fhould be confidered as under blockaje, when the fhips of a belligerent power fould be To fationed, as to render it evidently dangerous to en. ter; that the neutral veffels fhould not be flopped, except upon ftrong grounds, and that the proceeding fhould be uniform, prompt, and legal. The next artio cle provided, that the right of fearching mercantile Thips, failing under convoy of a hlip of wat, thmuld only be exercifed by the flips of the goverament, not by thofe of private adventurers. Thus the chief points in difpute were fettled in our favour.

The war between France and Great Britain was Nava' en. now in Europe reduced to operations merely maritime, o.: mens and thefe were of the moft triting nature. One of the on the molt important of thefe, was that which occurred up- coant on the coalt of Spain, between Sir James Saumarez and a fquadron of French and Spanimh flips of war. On the morning of the 6 h of July, the Britilh admiral ftood through the ftraits of $G$ :braltar, with the intention of attacking three French line of battle hlips and a frigate, which were at anchor off Algefiras. On opening Cabrita point, he found the fhips lay at a confijerable diftance from the enemy's batteries, and having a leading wind up to them, he conceived he had every reafonable hippe of fuccrif. He had previoufly directed Captain Huod in the Venerable to lead the fquadron; but, though it was not intended, the capt in

Eritain. found himfelf under the neceffity of caffing anchor from the wud failing. Captain Stirling in the Pompee, at the fame time, anchored oppolite to the inner mhips of the enemy, and the action commenced. In the ardour for engagine, the Hannibal unfortunately ran around. Every effort was made by the admiral to cover her from the cnemy; but being only three cables length from one of the batteries on flore, he was obliged to retire, and leave her in their hands. The lofs on board the Englifh fquadron was 375 . The admiral was fcarcely in harbour, before he was apprifed, that the French line of battle flips difabled in the action of the 6th, were on the 8th reinforced by a fquadron of five Spanith mips of the line, under the command of Don Juan de Mozen, and a French thip of 74 guns. He learned fusther, that they were all under fail on the morning of the $12 \mathrm{t}_{\mathrm{l}}$ of July, together with his majelly's late thip Hannibal. ". I had almof defpaired (Cays Admiral Saumarez) of having a fufficient force in readinefs to oppofe fuch rumbers." But by great exertion he was able to warp out of the Mole with all the hips under his command, the Pompee excepted, which had not time to get in her mafts. 'The object of the Britifh admiral, was to obftruct the paffage of this powerful force to Cadiz. Late in the evening, he obferved the enemies hips to lhave cleared Cabrita Point, and at eight he bore up to fand after them. At eleven the Superb was up with them, and opened her fire on the enemies thips at not more than three cables length. At this critical period a fatal miftake of the enemy decided the battle. The Spanifh thips, in the darknel's and confufion, fired upon each other; the Real Carlos took fire and blew up, and the Hermenegildo, till miftaking her for an eriemy, ran on board her, and fhared her melancholy fate. The San Antonia of 74 guns and 730 men , commanded by Le Rey chief of divifion, being thus left unfupported, ftruck to the Superb. The remaining fhips of the enemy now crowded all the fail they could carry, and ftood out of the ftraits. At daybreak, only one French fhip appeared in fight, which was ftanding to the fhoals of Cavil. At this juncture the wind failed her, and the Venerable was able to bring her to action, and had nearly filericed her, wben the lofs of the mainmaft, obliged the captain of the Venerable to defift, and this fhip, which was an 84 , efcaped along with the reft.

As the French now refumed their ufual threat of invafior, and aflumed the appearance of collecting a force in the harbour of Boulogne, an attempt was made by Lord Nelfon to obftruct their preparations. He fucceeded in doing fome damage, which appears to have encouraged him to make a more ferious effort. Boats intended for boarding the French veffels, were fent off in the night in four divifions, under the refpective conduct of the captains Somerville, Parker, Cotgrave, and Jones; and fome boais furnithed with howitzers, were detatched under Captain Cowan, to join in the enterprife. Parker's divifion firft approached the eneroy, and commenced a fierce attack. He made firenuous efforts, with undaunted courage, and with fanguine hopes of fuccefs; but an unforefeen obflacle baffed all his exertions. This was a very flrong netting traced up to the lower yarils of the French veffels, which were alfo fallened by chains to the ground, and
to each other. So effectual was the refitance of the foe, thus guarded, that about two thiids of the crew of the boat in which he acted, were repelled in their attempts to board a large brig, by a furious difcharge of cannon and mufquetry. Many of the affailants lof their lives, many were wounded and maimed. The captain received a fhot which carried off his leg and part of his thigh, and his boat would have been feized by the enemy, had not a cutter fealonably towed her off. Somerville in the mean time filenced the fire of a brig near the pier head; hut far from being able to bring ber off, be found difficulty in fecuring the retreat of his own boats. Cotgrave after a lpirited attack, was deprived of the fervices of many of his men by a fire from the flotilla and the fhore. Jones felt fo Atrongly the obfructions of the tide, that he could not approach before the break of day, when the other cap. tains were returning; he, therefore, retired without making any hoflile attempts. Captain Patker died of his wounds after the returs of the fleet to the Downs. The number of Britifl feamen killed and wounded, amounted to 172.

In confequence of the unfortunate refufal of the late Egree $^{\text {rice }}$ adminiftration to ratify the treaty called the capi-ulation of El Arih, negotiated with General Kleber by Sir Sidney Smith, the French fill retained poffefion of Egypt. To remedy the error, a confiderable force had been difpatched from Great Britain, undèr the conduct of an experienced and gallant officer, Sir Ralph Abercromby. The Britifh forces under Lord Keith and General Abercromby, after unexpected delays on the coalt of Afia Minor, arrived off Alexandria on the It of March. The following day the fleet made fail for the bay of Aboukir, and anchored there. Till the 8th, the fea ran high, and no difembarkation could be effected; but on that day, the firll divifion made good their landing at ten o'clock in the morning, in the face of a body of French, who were evidently aware of their intention, and were poffed in force, with confiderable advantage of pofition. The front of the difembarkation was narrow, and a hill which commanded the whole, appeared almoft inacceffible: yet the Britifh troops afcended the hill, under the fire of grape hor, with the moof perfect intrepidity, and forced the French to retire, leaving behind them feven pieces of artillery, and a number of horfes. The difembarkation was continued during that and the following day. The troops which landed on the 8th advanced three miles the fame day; and on the 12 th, the whole army moved forward, and came within Gight of the French, who were formed advantageoufly on a ridge, with their left to the canal of Alexandria, and their right towards the fea.

It was determined to commence the attack on the 13 th; and, with this view, the Bratih army marched in two lines by the left, with an intention of turning the right flank of the enemy. The attack was in forme meafure anticipated by the French, and they defcended from the heights on which they were formed, and attacked the leading brigades of both lines. The Britift troops were therefore compelled to change their pofition, which was done with the greatell precifion, and the refl of the army immediately followed their examples After a fevere confliet, victory declared in favour of the Englifh, though not without confiderable lofs.

The French commander in chicf in Eypt. Menou, appeas to have acted upon this occafian with little julgment. Infead of bringing down nearly his whole force to the coall, which would have enabled him greatly to outnumber, and confequently, in all probability, :o defeat the invaders, who were lets acquainted with the country than his own officers; he thought fit to hazard an engagement, on the 2 Ill of Mach, with only half his force. It commenced before day light in the morning, by a fale attack on the left of the Englifh under Major-general Caddock, in which the French were repulied. But the moft vigorous efforts of the enemy were directed to the right of the Englith army, which they endeavoured, by every polfible means, to turn. 'The attack on that point was begun with great impetuofity by the French infantry, fultained by a flong body of cavalry, who charged in column. The contelt was unufually obflinate. The French were twice repulfed, and their cavalry were repeatedly mixed with the Englifh infantry, but at length gave way altogether. While this was paffing on the right, the French attempted to penetrate the centre of the Britith army with a column of infantry, who were alfo repulfed and obliged to retreat. A corps of light troops, however, was advanced, fupported by infantry and cavalry, to keep in check the left of the Englift, which was certainly the weakelt of the whole line; but all their efforts were fruitlefs, and the Britifh remained mafters of the field. The lofs on our fide was great, being in killed, wounded, and miffing, upwards 1500. The lofs of the French was calculated in the Englift accounts at 3000 . One of the French generals, Roiz, was killed, and generdls Lanuffe and Bodet died of their wounds. A French regiment, which had been ftyled invincible, was deftroyed in this battle, and their colours fell into the hands of a Scotilh regiment, the $4^{2} \mathrm{~d}$. This battle decided the fate of Egypt. The invaders having the command of the fer, received reinforcements, fo that they ipeedily became decidedly fuperior to the remaining French force. In this battle, however, the Britih army was juftly confidered as having fuffered a great calamity in the lofs of its general. This officer was at once beloved and efteemed by the foldiers whom the commanded; he preferved the moft itrict military difcipline, while, at the fame time, he fecured the attachment of his troops by his obvious anxiety for their welfare. Errly in the late war, he was employed on the continent. He commanded the advanced guard in the action on the heights of Cateau, and conducted the march of the guards from Deventer to Oldenfaat in the retreat of the Britifh troops in 1794 . In the following years, till t797, he was engaged as commander in chief in moft of the fucceffful enterprifes of the Britioh in the Weft Indies. On his return to Europe, he was invented with the rank of lieutenant-general, and appointed to the command of the forces in Ireland. In this תation he made great efforts at orice to protect the people, and reftore difcipline to the army, both of which the violence of faction had induced the rulers of that country to neglect. Though he was a man of morieft manuers, yet, being of a molt independent character, he did not hefitate to exprefs, in public orders, the in. dignation which he felt on obferving the diforder aud conlequent mifery which had been introduced into

Ireland, by encouraging the licentious infolance of Eritair. the troops againt peifuns accounted difaffectiod to the government. He frcely informed the aimy in that country, that they " were become formidable to every one but the enemy." In the expedition to Kulland, he difplayed great military talents, which excited the admiration at unce of his own army and of the holtile generals.

After the death of Sir Ralph Abercromby, the command devolved upon General Hutchinion. He loft no time in proceeding towards Alexatdria, where the principal force of the enemy was yet concentered. In the mean time, the town and cafle of Roferta were taken by a divifion of the B it:f army under Colonel Spencer, aided by a body of Tuiks. The French garrifon, amounting to 800 men, made but a feeble refiflance, and retired to the right bank of the Nile, leaving a fers men killed and priforiers.

While fuch was the ftate of affairs in the neighbourhood of Alexandria, Admiral Blanket, with a confiderable force from the Eat Indies, effected a landing at Suez. The admiral was feparated from reft of his fquadron in the dangerous and difficult paffage of the Red fea; but before the end of $\Lambda$ pril was joined by a large re-inforcement under the command of General Biird, colonels Wellefley, Murray, \&c.

As the capture of Grand Cairo, next to Alexandria, was an important object with the allies, a force was detached early in May for its reduction. On the gth of the month General Hutchinlon, with 4000 Britilh and an equal number of Turks, attacked the French near Rhamanieh ; the French were driven in, and in the night retreated towards Cairo, leaving a fmall garrifon at Rhamanieh, which on the following day furrendered to the viCors. The lofs of the Englith on this occation did not exceed 30 men. About the fame time a body of French and Copts, who had moved forward from Cairo to attack the Tutks, were defeat. ed by the grand vizier, who was efientially affited by Colonel Murray, and other Britith officers. The French are faid to have loft 50 men and the Turks about 30 in this action. The whole number of French, \&c. engaged was faid to amount to 4600 , and the Turkih army to 9000 .

It was the middle of June before the Britioh army under General Hutchinfon reached the vicinity of Cairo. He found the works very much extended, though the garrifon did not exceed 4000 or 5000 in number. The captain pacha at the fame time invelled Gizell (which may be regarded as a fuburb of Cairo) on the left bank of the Nile, and the grand vizier 1108 took a pofition within a cannun-fhot of the city. Thus Grand inveited on every fide, the garrifon, on the 22 d, fent a Cairo taflag of truce to the Englifh general, offering to treat ${ }^{\text {ken. }}$ for the evacuation of Cairo upon certain conditions. After a negotiation of feveral days, the furrender was finally agreed upon in a convention of 22 articles; the fubftance of which was, that the Fiench army at Cairo and its dependencies thould be conveyed in thips of the allied powers, and at their expence, together with their baggage, arms, ammunition, and other effects, to the neareft French ports in the Mediterranean; and of this corivention General Menou was to be at liberiy to avail himfelf.

The port of Alexandria was all that now remain e

Britain. in poffeffion of the Frencli; it was attacked by fca and land, and at length furrendered by capitulation on the 2d of September. At the time when the news of this event reached England, the views of men were turned to a new Pate of things. Adminittration had leriounly entered into negotiations for peace. Thele were cons ducted by Lord Hawkenury on the part of Great Britam, and M. Otto, who refided at London as agent for the French prifoners of war, and who was now intruited, on the part of the French, with this important bufinefs. The whole was managed with fuch lecrecy, that not even the perfons who were in official fituations, except thofe immediately concerned, were acquainted with the fate of the negotiation; and the lord-mayor of Loudon was the firlt perfon out of the cabinet to whom the refult was communicated. Thus no unfair adrantage could be taken; and this treaty ftands almoft fingular on our records, fince, at a period when the praclice of gambling in the public funds was from the wide extenfion of public credit more predominant than at any previous crifis, not a fingle inflance occurred of any finifter practice.

By the preliminary articles, which were figned at London on the it of OEtober, by M. Otto on the part of the French republic, and Lord Hawkeibury on the part of his Britannic majefly, Great Britain agreed to the reftoration of all her conquefts, the illand ot Trinidad and the Dutch poffeftions of Ceylon excepted. The Cape of Good Hope was to remain a free port to all the contracting parties, who were to enjoy the fame advaniages. The inland of Malta was to be evacuated by the Britift troops, and reftored to the order of St John of Jerufalem. Egypt was refto. red to the Ottoman Porte. The territory of Portugal was to be maintained in its integrity; and the French troops were to evacuate the territory of Rome and Naples. The republic of the Seven Inands was recognifed by France. 'The fifhery at Newfoundland was eftablifted on its former footing; and, finally, pienipotentiaries were to be named by the contracting parties, to repair to Amiens, to proceed with the formation of a definitive treaty, in concert with the allies of the contracting parties.

During the war negotiations for peace had fo repeatedly proved unfuccefsful, that a general incredulity had come to prevail with regard to the poffibility of fuch an event; accordingly all merchants condueted their fpeculations upon the fuppofition, that there exifted no probability of an immediate termination to the war. The flate of the prefent negotiation had been fo carcfully concealed, that, when the official intelligence of itsiffue was tranfmitted throughout the coun-

1112
Rejoicings

## for the

 peace. try, it everywhere excited the utmof aftonifhment. It produced, however, almoft inftantaneoufly, the moff unbounded expreffions of joy among all orders of per fons. The zealous adherents, indeed, of the late adminifration were upon the whole rather diffatisfied; but their voice was overwhelmed in the general acclamations which took place, and which far furpaffed the expections of joy which had occurred at the termination of any former war. As an abundant harvef was reaped at the fame time, the profpeet of plenty greatly added to the public joy.Parliament affembled on the 29th of OElober. By arliome
midncl's of their condwet, and by their fucceffful ne- Batains gotiations for peace, a powerful hold over the affections of the public. When they firf came into office, they appeared to have obtained a promile of fupport from their predeceflors; but, as might naturally have been expected, tios kind of gratuituas fupport could not be vely confitent or uniform. Mr Pitt himfelf continued to give outienance to the minifter; but others of hin frionds avored their diffatisfaction on account of the treaty with France.

The fpeech frum the throne announced the favour- Kil.g's able conclufion of the negotiations begun in the laff fpect. feffion of parliament. It expreffed much fatisfaction, thit the differences with the northern powers had been adjufted by a convention with the emperor of Ruflia, to whicl the kings of Denmark and Sweden had made known their readinels to accede.

That the preliminaries of peace had been ratified between us and the French republic ; and while this arrangement manifefted the jullice and moderation of our views, it would allo be found conducive to the interefts of this country and the honour of the Britifl character. As the provifion for defraying the expen. ces which muft unavoidably be continued for tome time, and maintaining an adequate peace eftablifhment, could not be made twithout large additional fupplies, all poffible attention ftrould be paid to fuch economical arrangements as might be confillent with the great ob. ject of fecurity to his majefty's dominions.

The fpeech concluded with applauding the na. val and military operations of the laft campaign, and the glorious iffue of our expedition to Egypr; and with a fetvent prayer that the people might experience the teward they fo well merited in a full enjoyment of the bleffings of peace; and above all, in the undiflurbed poffeffion of their religion, their liberties, and laws.

In the houfe of lords, the motion for the ufual addrefs paffed unanimouny. In the houfe of common, both Mr Fox and Mr Pitt deciared, that they joined in the gencral joy which the peace had produced, and gave it their approbation. On the other hand, Mr ${ }^{1813}$ Windham had the misfortune he taid to differ on the appofed by caule of the general joy and exultation; he did not Mr Windapprove of the preliminaries of peace figned with ham. France, nor could he approve the addrefs, if it implied approbation of them; but as he did not confider the fupport of the one as infeparably connefed with the other, he fhould not withhold his vote.

It behoved him to give his reafons for diffenting fo materially in a material point. To fland as a folitary mourner in the midf of public rejoicings, to wear a countenance clouded with fadnefs, whilf all others were lighted up with pleafure, appeared ungracions, But were the circumftances of this peace fuch as juftified our cxultations on former occafions? To him 11 ey appeared in a quite contrary view; and when he was defired to illuminate, he thould firli endeavour to learn whether it was to light him to a feall or a fepulchere. It was his firm perfuafion, that in lyuing this peace his honourable friends had put their fignatures to the death-warrant of the country. He knew the inconfiftency of human affairs, nor was he profane enough to fet bounds to the difnenfations of providence; hut neither could he forefee what whanges might be

Britain. wrought in the difpofitions of the people of England by intrigues from without or convulions from within; but upon no rational view could he fee his way out of the evils it would entail upon this country.

The only thing which was neceflary to enable France to divide with us the empire of the feas was a participation of our commerce. This the would effectually fecure by the prefent peace; while, by the furrender of our conquefts, we had thrown out of our hands the only means to prevent it, the extenfion of our colonial fyftem.

The motives which induced minifters to conclude thefe preliminaries, Mr Windham faid, he knew not: fome of them he had heard, but was not convinced; on the contrary, they appeared wholly infufficient. If we were forced to accept this peace through inability of reforting to alternatives, their conduct was the more excufable; and we had to thank them, not for what they had acquired, but faved for their country. If they can prove, that, by ceding foreign colonies, they hall preferved objects nearer and dearer to us, as Portfmouth, Plymouth, and Ireland, and the foil of England, from ravage and defolation, they were entitled to gratitude inflead of cenfure; and lad eftablifhed, not an apology, but a claim to thanks. Such a plea, however, he did not recognize; and how far they were actuated by neceffity, would be a matter for future difcuffion.

Mr Addington faid, that the obfervations of Mr Windham were premature, as the articles of the treaty were not before the houfe. Without referring to the terms of the peace (for that he could not do at this time without tranfyrefliag order) he would aver, that all we had given up would have afforded us no fort of fecurity againft the danger apprehended by $\mathrm{Mr}_{r}$ Windham. The belt counterpoife to the power of France was in the prefervation of our conftitution, in our induftry and filll, in the right direstion of our refources, (and happily much remained of thefe refources) which he confidered, under providence, as the fecurity of the bleffings of peace.

Refpecting the hint thrown out, that fome unknown neceffity might have been the caufe of minifters having advifed his majefty to fiyn the preliminaries, he totally difclaimed the plea: he did not feek his own jullification, nor would any of his colleagues feek it, in luch a way. If the enemy had not acceded to the terms agreed upon, we fhould have continued the conteft, and been able to have carried it on, proving to the world, that we fill had refources to maintain the honour and fecure the liberties of the Britifh empire.

Mr Sheridan faid, that notwithfanding the unamimity with which the addrefs was confented to, he believed, that if men fincerely delivercd their opinions, there never was a period of lefs real unanimity. Mr Pitt had fpoken of the peace in terms to which he could nót agree, calling it glorious and honourable; ftill more did he diffent from thofe who maintained it was inexpedient to make peace at all. It was a peace of which every Englifhman might be glad, but no one proud; it was a peace involving a degradation of national dignity, fuch as the war might lead us to expeet, the worlt in which this country had ever been engaged; and the peace perhaps as good as any
minifer could make in the circumfances in which Eritair. we were placed.

In confequence of a meffage from his majefly, com- 1116 municating the preliminary treaty with the French re-the prelipublic, an addrefs of thanks was moved on the 3 d of minary November. Earl Spencer exprefied regret, in mani-treaty in fefing a difference of fentiment from the minifters, of of liods. all of whom he entertained a very faveurable opinion, and with fome of whom it was his pride to have coincided in principles, and co-operated in conduct. The great object of Britain, in former wars with France, was the prefervation of the balance of power, that the relative flrength of France flould not exceed that of other countrics, and thereby endanger our fecurity. This was the point which had been confidered, from King William's confederacy again! Louis XIV. to the prefent age. To enfure this balance, it was not only neceflary that Britain fhould not be left by the peace in a worfe political fituation than in the beginning of the war, but that her firength, poffeffions, or acquifitions, fhould continue in proportion as high as thofe of France. In the prefent war, the acquifitions of France had been infinitely beyond all former conception; fhe had, by her arts or her arms, fubdued the Netherlands, Holland, the left bank of the Rhine, and a great part of Italy; her power, compared with that of Great Britain, exceeded what the had been allowed to retain at any former treaty of pacification, nor could we be fecure, when fuch immenfe acquiftions had been left to France, without any thing like an equivalent left to this country. This general principle his lordhip illuftrated at fome length, and flrongly condemned the conditions of the peace now concluded. It was a peace of very great inequality, whether we viewed the relative flate of France and the continent, or of France and England. It was alfo a peace with a republic which was fill under the influence of a revolutionary government, with a ufur.. per who could make a rupture whenever his fpleen or caprice prompted a violation of the contract, and con. fequently a peace which could never be confidered permanent. France, overgrown and gigantic, would eafily be roufed to a new war, whenever the firt conful could gratify his inordinate ambition. In fuch a con-* teft there would be great inequality, and thence would arife danger to this country, which, notwithfanding the valour of our arms by fea and land, would have a powerful and terrible enemy to combat.

Lord Pelham took a retrofpect of the feveral negotiations, efpecially thofe in which the ex-minifters had been concerned. He faid there was very little difference hetween the prefent peace, and that under the confideration of the late miniffry. He flated the nature and progrefs of the negotiation after Lord Malmefbury went to France; and infifted that this was as proper a time to conclude it as any. Although nothing was mentioned in the preliminaries of the prince of Orange, he hoped fomething might be obtained for him by the noble marquis intruited with the definitive treaty. The terms of peace were the beft that could be procured, even in favour of our allies, fuch as fcarcely could have been expected, as already fated in the preliminaries. Portugal was fafe, whatever might be af-

Britain. ferted to the contrary, and the Roman and Neapolitan territories had been seleafed from the French yoke. One of the greatelt triumphs of the war was the expulfion of the French from Egypt, by which our Ottoman ally had been faved, and the Britith name raifed to the pinnacle of glory. With regard to Malta, of which furrender fo many complaints had been made, it was his lordfhip's opinion, that its retention woold have been more injurtous than beneficial to England. A powerful garrilon would have been requifite for its protection, which would bave diftracted our fleets and armies, without any object equal to the vigilance and activity of our men. $I_{11}$ the Eaft and Weat Indies, we had been triumphant by fea and land; our poffeffions in the eaft, fo valuable to this country, had received very important additions, by the conquefts we had made there. As to the fecurity of the peace, we furely had every fecurity which could be expected in this critical juncture of affairs. Befides, it was the policy and intereft of France to preferve it, and in this view he believed it would be preferved, and confequently voted in favour of the motion.
, Lord Grenville contended, that, as Britain was in a profperous ftate, we ought to have obtained more honourable terms of peace, becaufe we were in a condition to demand them. He faid, it was far from his intention, to undervalue the acquifitions of Fance; on the contrary, he thought them more important than was generally efteemed: hie had made the Rhine the boundary of her empire, the had acquired Savoy, \&c. and not only extended her teritories beyond the ambition of her monarchs, but the had her frontiers protected by dependent republics and tributary kings. On our fide, we had triumphs no lefs brilliant and flriking; we had multiplied our colonies, and our mavy failed invincible. We had refcued Egypt, captured Malta, poffeffed ourfelves of Minorca, and flut up the Mediterranean from the mips of France and Spain. The Cape of Good Hope was nurs, if not the only, at leaf an important key of the eaf. In the Eaft Indies, we had every thing except Batavia, which we might alfo have poffeffed, had we thought it worth the coft of an expedition. In the Wenl $\operatorname{In}$ dies, we had Martinico, Trinidad, \&c. Upon the continent of South America, we had an alfolute empire, in extent almof equal to that power to which we reftored it. He meant Sorinam, Demerara, \&c. Such were the colonial poffeffions acquired by the war. It, indeed, was not undertaken for the purpofe of colonisl conquefts; yet the force of the country had wifely been directed to that oljea : for whenever we were at war with France, it was effential to cripple her marine, which could never be better done, than by contracting her commerce, and depriving her of her colonial poffellions; and thefe fhould bave been held as pledges of indemnity, and ftill more as pledges of lecurity. If Europe could not have been reffored to her priftine flate, thefe ought to have been retained as a counterpoife to the power of France.

Lord Grenville denied the fairnefs of comparing the prefent treaty with that propofed at Lifle. We now gave up Surinam, Malea, and Minorca. At no time, during the contert, was the firit of the country
fo depreffed, as at the negotiation at Liflc. If if were atked, why did we choofe fuch a period to negotiate? the anfwer was, It was not chofen; but minifters were convinced, that the war could not be carried on, unlefs the people of England clearly found, that the rulers of Frarice, at that time, would not grant us peace on any terms of moderation. A variety of caulcs combined to produce that defpondency; the foppage of the bank, the defection of our allies, and, above all. the mutiny in the fleet. If fuch were our fituation, the meafure was defenfible on necelfity; but this was not the cafe at prefent. Under all the difadvantages under which the negotiation at Lifle was undertaken, we demanded on that occation the Cape of Good Hope, and Pondicherry and Cochin in the Eaft Indies. The tefult was, in his opinion, that we had given to the French the only thing they wanted, the means of creating a navy, and of rivalling us in our commerce; while we had obtained nothing in return.

The earl of Moira faid, that though the terms of the treaty were inadequate, they were unavoidable. The noble lord who condemned them, ought to recol. lect, that he had left the country in jeopardy, with a nender chance of recovery, and it was impoffible afterwards to conclude an advantageous peace.-Lord Nelfon made fome remarks refpecting Malta. He faid, that when he was fent down the Mediterranean, this inland was in the hands of the French; and on his retuin from Aboukir, it was his firt object to blockade, becaule he deemed it an invaluable fervice to refcue it out of their pofieflion. In any other view, it was of no confequence, beirg at too great a diflance from Toulon to watch the French fleet from that port; and in time of peace, it would have required a garrifon of 7000 men, in war as many more, without being of any real otility to us. The Cape would be equally detrimental if retained by os; and though it certainly ought not to be given up to them, this ceffion would be better than to keep it. Though the war had been long, he believed his majefty feized the firll opportunity of making peace, and he believed it would prove the beft that exifting citcumflances admitted. The addrefs whas carried by a great majority.

When the fame fubject was difcuffed in the houfe of Dethates on commons, Lord Hawketbury afcribed the origin of the the praliwar, to the interference of France in the affairs of minaries in other nations; but faid, that the flate of that country was now confiderably amended, and that it was impolfible to look at the prefent itate of France, without being couvinced, that we had at leaft effected this change. View the manners and opinions of their people in 1793 and 1801 ! After this comparifon he would not hefitate to give his opinion refpecting the moral evils of the peace, and that they certainly were lefs at this moment than at any former period. With regard to the continuance of hoftilities, there were two confiderations by which we were to be regulated; the firf was, Did we poffefs the power of forming another coalition againft France ? and the fecond, If we continued the war, what injury could France do to us, or we to France? The firlt coalition had failed, the fecond had equally failed. What encouragement had we to hope that the third would be more fortunate, and to hazard fo dangerous an experiment?

Eritaha. $\xrightarrow{\text { Bral }}$

It was impoffible, he contended, to find in Europe the elements of fuch a combination of force, directed to the attainment of one grand end; and if no coalition could be formed, what object could we poffibly have in the firther profecution of hoftilities? As to any injury which France could do to us, or we to France, it did not require much argument to prove there was none. Where, and in what manner, was it poffible for us, with our immenfe fuperiority by fea, to effect a fatal blow; or for the republic to invade an ifland, not only defended by its navy, but fortified by the hearts of the people? The fact was, neither power could affect the other; and to continue hoftilities, would be a barbarous effufion of blood, for no end but flaughter. His lordfhip then expatiated or the advantages we had gained, and the good faith we had maintained with our allies, releafing them from exprefs ftipulations when they were expofed to danger by continuing faithful to their engagements. To Portugal every protection had been given, confiftent with our Atrength and her interefts. Naples was required to exclude our thipping from her ports. She went farther, and joired in an alliance, which would have juAified a declaration of war on our part; when, with a matnanimity peculiar to the fpirit of Britain, we interfered in her favour ; obtained the reftoration of her dominions, and the reeeftablifhment of her independence. To the Ottoman Porte, who of all our allies remained faithful to the laft, we evinced proofs of in. violable attachment and gratitude ; for we procured for her not only the reftitution of her tenitories, but the renunciation of France to acquifitions which threatened ber exiftence. To the fadtholder and the king of Sardinia, to whom we were not bound by obligation, every thing had been performed which this country was able to perform. An arrangement concerning the former had been carried on at Berlin; and though from various reafons it had been withdrawn, the ftadtholder was fatisfied with our meafures. But it had been cortended, that we had given up, by treaty, an ifland of great importance to our foreign concerns and commercial profperity, Minorca, which he did not confider as an acquifition worth retaining. In war, we had always acquired that inand whenever we pleafed, and always lof it at the conclufion of peace to avoid the expence. Of Malta, he fooke with lefs confidence, which, from its impregnable flate, was certainly of pulitical confequence in the Mediterranean: but Malta was no fource of trade and opulence; and, connected with the profperity of the Levant, its confequence was confiderably diminiftyed. The Levant trade might, like many other topics of commercial \{peculation, be lighly valued; but as far as it related to England, was next to nothing. The whole of our manufactures, exported thither during the war, had not exceeded the fum of 112,0001 .; and this was to be taken out of the aggregate exports of 24 millions. The trade of Great Britain was inconfiderable, compared with that of other countries, to the Levant. It was chietly fupplied by the fouth of Europe, and mult remain with thefe places, from the nature of its articles and the facility of its intercourfe. Refpecting the north of Europe. it had principally been in the poffeffion of the Dutch. Here it might be absed, why the Dutch, who had no fettlement in the MediterraYol. IV. Part II.
nean, had fucceeded in cultivating this branch of com. Eritain. merce? Becaufe their policy was wifer than ours. We prevented hips, with forged bills of health, from entering ous ports; made all veffels, failing from the Medeterrancan, perform quarantine; and prohibited the landing both of found and bad goods. The Dutch, on the contrary, gave them an airing within their ports, feparated the grood from the bad merchandife, and allowed the immediate importation of the former. Thus they occupied almolt the whole of the northern trade to the Levant, which was fo ftrongly felt by us, that two years ago, it was deemed expedient to repeal thofe laws, to encourage a fyftem of trade, which the Dutch converted wholly to their own profit, without poffefling a port in the Levart.

Lord Hawkeflury added, that of Trinidad and Cey= lon he could not lay too much, when he called them the two great riaval flations of the parts of the world to which they belonged. Ceylon cuntained ports fo capacious and fecure, that the whole of the navy and com.. merce of Great Britain might side with eafe and fafery in them. It held out a pofition to which our Indian army might retire, if necefiar $y$, and defy the attempts of the united force of the world. Trinidad was alfo of confiderable naval importance, and fo healthy and productive, as to induce us to felect it in preference to every other poffelfion in that quarter. Thus, confidering the refult of the war, if the term glory be not taken into account, we have at leait made an honourable peace; we had been engaged in a tremendous conteft, and come out of it, confidering the circumfances, with advantage. The fituation of Europe and of Great Britain might appear critical ; but, in a found fyftem of policy, confifting of firmnefs and moderation, would be found a counterpoife for every danger, and a remedy for every evil.

Earl Temple confidered thofe who had figned the peace, as having figned the ruin of their country. Amongfl other ill confequences, he lamented the encouragement hereby given to republican principles; and one of its effects was to revive the hopes of the difaffected. He recapitulated the various oftenfible objects of the war, not one of which had been accomplifhed. The only adequate plea for fuch a peace, was dire neceflity.-Mr Pitt faid, that, upon a fubject of luch importance, it was his misfortune to differ froma thofe with whom it had been his happinefs to live in habits of ftrictett friendfip.

He remarked, that it was undoubtedly the duty of gowermment, in negotiations, to obtain the beft polfible terms; but it was difficult to know how far infitting on fome leffer points might endanger the whole treaty; and, for his own part, he had no hefitation in declaring, that he would rather clofe with an enemy on any terms, not inconfiltent with the honour of his country, than continue a war for any particular poffeffion. When he had the honour of a feat in his majefly's councils, if it had come to a queftion of terms, and if the pacific difpofition of the enemy had correfponded with ours, he knes, that he himfelf fhould have acted on that principle; and knowing this, it was but candid to apply it to another adminiftration. He did not pretend to ftate, that this peace fully anfivered all his wifhes; but the government had obtain. ed the beft terms they could, and the terms for which

## B R I [ 706

attain this, policy required that we frould remain fatisfied with the next befl.

Mr Fox declared himfelf fatisfied with the terms of the treaty, and afferted, that no perfeverance in the war would have enabled us to make peace upon better conditions. There were perfons he laid, who lamented the peace as glorious for France. If it were fo, and not inglorious to England, it gave him no concern. The opinions of men depended in a great degree upon their conceptions of the caufes of the war ; if one of its objects was the refloration of the accurfed defpotifm of France, to him it was another recommendation of the peace, that it had been obtained without the accomplifhment of luch an object. If the coalition to reftore the Bourbons had fucceeded, the confequences would have been, amongft all the kings of Europe, a perpetual guarantee againft all people who might be oppofed by any of them, in any part of the world. All countries therefore muft be benefited by the failure of fuch a project, but no one more fo than Great Britain. Had the coalition in the reign of Clarles I. eftablifhed fuch a guarantee, would the liberties of the people have been preferved againft the houfe of Stuart? Had fuch a guarantee exifted in latter times, would the revolution of 1688 have been able to maintain it. felf?

In the terms and tone of the prefent treaty, he perfealy coincided. He approved the terms, and thought the noble fecretary had wifely tempered firmnefs of conduct with moderation of tone; but further than this he could not go: he would by no means agree refpecting the time in which the treaty was made, it came many, many years too late.

He faid, he would put it to the houfe, whether at the time the oppofition was moft railed againf, for advifing pacific meafures, we could not have made peace on terms equally advantageous with the prefent. Would not France, on the breaking out of the war, have acceded to any? Would fhe not then have relinquifted Holland, and perhaps abandoned her defigns on the Netherlands? But fince that eventful period could we not have negotiated better very often, for inflatice, after the furrender of Valenciennes? Again, at Lifle when we only failed from the extravagant pretenfions of adminiftration ? In January 1800, the chief conful made a direct overture, and we returned anfwer, that the moft effectual mode of facilitating peace would be to reftore the Bourbons, not indeed as the only means, but it was left to the French to fuggeft any other: Did we hint then at the poffeffion of Ceylon or Trinidad? Would not Bonaparte have added thele? Yes, and the Cape into the bargain. We then might have had Egypt by the convention of El Arifh. The gallant Abercromby, indeed, would not have fallen covered with laurels in the lap of victory, nor would our brave army have acquired immortal honour; but we fhould have gained Egypt without the lofs of blood or treafure. The chief conful might not perhaps have relinquithed the Netherlands, or the left bank of the Rhine; but in Italy he had only the Genoefe territory, and we had nothing then to refift to the fouth-eaftward of the Alps, and our allies were victorious to the frontiers of France. At that time, the inftability of the government operated with us; but neither its ftability nor inftability were of any real confequence. None

Britain. of the convulfions and changes of the French revolu$\xrightarrow{\text { ®- }}$ tion produced any material difference in her relation with foreign powers. She had at the beginning made peace with Pruffia, and feduloully preferved it during the flormy times fucceeding its ratification. We were told by the minifters to paufe, and we did paufe from January 1800 to OCtober 180 r , and added 73 millions to our national debt, fince we returned that impertinent anfwer to the overtures of Bonaparte. This paufe colt five times as much as all the duke of Marlborough's

To negotiate the definitive treaty of peace, the marquis Cornwallis went to Paris towards the clofe of the year, and from thence to Amiens, where the negotiations went on very flowly, and were not concluded till the 27th of March :802. The chief difficulty occurred with regard to Malta. It was at laft agreed that it thould be reftored to the knights of the order of St John, urider the protection and fovereignty of the king of Naples; and that it fhould be under the guarantee of France, England, Rufia, Spain, Auftria, and Pruffia; that if the order frould not have fufficient troops to defond the ifland, the guaranteeing powers fhould each contribute an equal portion of troops, the officers to be appointed by the grand mafter. It was fettled that Malta hhould be a neutral port, that one half of the garrifon thould be Maltefe, and that there Gould be no French or Englifh body of knights, or tongue as it is called. The king of Naples, however, was to be invited to garrifon the ifland with 2000 men for one year, from the rellitution of the knights; which was to take place in three months after the exchange of the ratifications of the treaty. In other refpects, the definitive treaty differed little from the preliminaries for-

During the dependence of the negotiation, the French firt conful, Bonaparte, had taken fome fleps which indicated little moderation, or rather an arbitrary prefumptuoufnefs of character, which demonftrated that it would be estremely difficult to remain upon terms of amity with him, and that the defire of extenfive dominion, which at prefent governed his council, was of too reftlefs a character to allow much hope of tranquillity to the world. Without waiting till a definitive reaty of peace fhould be concluded, he fent an immenfe army to St Domingo, which obliged Britain to fend to the Weft Indies a powerful Heet to watch its motions. On the cortinent his meafures were much more arbitrary. A confiderable portion of Lombardy, with Milan as its capital, had been erected into what was called the Italian republic, containing fome millions of people. This was now united to France, by the form of nominating Bonaparte to the fupreme office of prefident over it. This laft meafure would at any other period have involved all Europe in war ; but at prefent no flate ventured to interpofe; and the Britifh minifters finding no power in Europe difpofed to refift this Rep towards the permanent aggrandifement of France, and being themfelves truly anxious, as it would feem, to reflore peace, did not interrupt the negotia-

Britannic majefty and the French republic, his Catholic majelly, and the Batavian republic, figned at A malens on the 27th of March. Several debates occuried in that houfe upon the fubject; and, at length, on the 15 th of May, Lord Grenville moved the order of the Detrates on day, for the houle to take into confideration the deli-the *fintnitive treaty. He remarked, that it might be afked ot tive ucatyo What ufe was difcuffion, now that peace was concluded? was it to abrogate, could it correct the treaty? To this queftion he was the firf to anfwer that this unfortunatc treaty had been ratified by his majefly, and was therefore irrevocable; to its terms, however injurious, we were bound to accede. By evafion we fhould but add to difalter difgrace, and, with the lofs of national honour, fill up the meafure of national calamity. He wifhed not to impede the execution of the treaty, but to demonftrate to that houfe its dangerous tendency; to afcertain the fituation in which it left the country; to point out the perils which impended, and the fafety which yet remained. His objections to the preliminary treaty he had already flated; but to the definitive treaty there were objections yet more formidable. His lordhip onferved, that the two cafes of negotiation, the fatus ante bellam, which fignified the actual fituation of the parties previous to hoffilities, and the uti poffiletis, which seferred to their pofition during the pacification, had both been applied in the moft prejudicial manner to this country. With regard to herfelf, England had adopted the fatus ante bellum; with regard to her rival, the uti pofidetis. England had ceded her own conquefts, and cunfirmed to France ber new acquifitions. France poffeffed dominions on the continent ; we had to oppofe to that dominion, the colonies of France and Spain. It would have been juft that France fhould purchafe our colonial by her continental facifices. His lordhip contrafted the definitive treaty with that of $: 763$. It had, he faid, been an invariable principle with Lord Chatham, to make the preliminary as much as poffible the definitive treaty; our negotiators had treated with France during a naval armifice. Immediately fubfequent to the prelisminary treaty, France had fent an armament to the Weft Indies, and obliged England to deftine for the Wefl Indies alfo, a naval force more than double to any fquadrons which had been fent during the war. The neceflity of keeping in the Weft Indies 35 fail of the line was the firft fruits of the peace. His lordhip contended, that it was incumbent on our negotiators to have infifted that the French fleet fhould not fail till the preliminary articles were definitively ratified, and till tiae firlt conful had afforded proof that he meditated not the acceffion of power he had fince made in Italy. It was obvious, that the definitive treaty contained conceffions more important than the preliminary atticles; and it was palpably the object of the French government to exclude the commerce of this country from the continesit of Europe. With refpect to the fruation in which Portugal and the prince of Orange were left by the treaty, the houfe had been told that it was a pity, and that the articlcs were read with regret. The propofed indemnity to the prince of Orange was evidently at the option of France; for the Cape of Good Hope, no effort had been made to enfure its indrpendence; and Malta, whofe independence had been $4 \mathrm{U}_{2}$
exprefsly

## B R I [708] B R I

 exprefsly fipulated, with the provifion that it thould be guaranteed by one of the powers of Europe, competent to its protection, was finally placed under the guarantee of fix powers who never could be brought to agree on the fubject of it. Its reflotation to the order was nominal and futile. He had eftimated the whole Maltefe rewnue at $3 \ddagger 000$. of which, however, Soool only came to the knights; he was now competent to itate that the expenditure of Malta amounted, on the average of ten vears, to 130,0001 . per annum. The dominions in France and Spain had been confifcated; the langues of Italy had produced about 20,000l. or 25,000 l. from their property in Piedmont, which was alfo confifated; the langues of Naples and Portugal, with a revenue of 20,002 l, remained to fupport the effablifhment of 130,000 . The order of Malta was virtually extinct ; it wonld be fubject to the nomination, the influence, and the dominion of France. His lordmip objected to the treaty, that certain pecuniary claims, which Britain had for fupporting the Irench prifoners during the war, had been relinquifhed. He contended that, by the circumftance of this treaty not containing a claufe as ufual renewing former treaties, and in particular by the non-renewal of the treaty of Urrecht, this country had ceded its claims of equal participation with France in the privileges of commerce in Spanifh America. In like manner, we had confirmed the ceffion of Goree and Senegal, without renewing the claule which Atipulated for us the liberty of carrying on the gum trade; whilit France had manifelted her hoilility to our commerce, by prohibiting the right of trading on that part of the coalt of Africa. His lordihip proceeded to take a retrofpective view of the fituation of this country at the commencement of the negotiation. With a colonial territory of an immenfe extent, we had, in the very conquefls achieved by our arms, the means of perpetuating our victories. From the Weft Indies, the produce of which amounted to two millions annually, a confiderable revenue had arifen, which was now lof. By our naval fuperiority, wie had controuled the movement of the French fleet; they were now at liberty to Aeer for the Weft Indies, and we were under the neceffity of fending fleets to watch them. We were in poffeftion of refources adequate to the profecution of the war, and held in our hands the means of extorting a juit and reafonable peace. Intearl of improving thefe advantages, we had refigned to the French the preponderance of power on the continent, eftablifhed her fway in Italy, and annexed to her important pofieflions in India. Even our right of fovereignty in India was no longer recognized. It had been fuggefted that this right was guaranteed by the $f_{k}$ lence of the definitive treaty; a mode of argum"nt which appeared equally itrange and fingular. His lordfhip aftirmed, that the fovereignty of the Cape was neceffary to the fafety of our territories in India. He inftanced the war with Tippoo Sultan, when a corvette had been rent to the Cape, from whence frefh troops were immediately difpatched, who landed, mirch.d, and co-operated at the fiege of Seringapatam. By ceding the Cape to Holland, we had ceded it to France. The town and port of Cochin had allo heen furrenicred to Holland, and virtually to France. In the Wen-Indies we had reltored to France Martiniqueand Tobago, and facilitated the recovery of St Dumingo. France was allo millrefs of Louifiana, and in reality of Florida, which could not from its vicinity to Louifiana remain fubject to Spain. France poffefted the key of Mexico, which the might enter at any period. If we turned to the Mediterranean, his lordthip faid, it would be impoffible to fend there a fingle flip, without the permifion of France. We were llipped of Majorca, Minorca, and even of the illand of Elba; we were excluded from Leghorn, and deprived of the neans of maintaining a fleet in that fea. The king of Sardinia could no longer open to us his ports. His lordihip obferved, that the vietory obtained by Lord Nelfon at Aboukir was to be attributed to the affiflance rendered by the king of Naples. In return for thefe fervices, the Britifh government had ftrpulated that the French republic fhould evacuate his do. minions, without fripulating that they fhould not return to them. His lordmip added, that whatever the valour of the Britith navy had won, the incapacity of a Britifh minittry had loft. He would ask whether the advantages of fach a peace preponderated over the difadvantages of the war? It had diminifhed our commerce, and rendered it abfolutely necelfary, for the fake of fafety, to maintain a great naval and militaty force in conftant difcipline.

The duke of Norfolk exprefled his hope, that now the fword was reflored to its fcabbard, it would not again be unfteathed for the acquifition of a ftation in the Mediterranean. Loid Auckland, in reply to Lord Grenville, difcuffed a poist of fome importance in the law ot nations. He flated, that, from an attentive perufal of the works of the publicilts, he had corrected, in his own mind, an error ftill prevalent; that all treaties between nations are annulled by uar, and, to be reinforced, mult be fpecially renewed on the return of peace. It was trne, that treaties, in the nature of compacts and conceffions, the enjoyment of which has been interrupted by the war, are thereby rendered null : but compacts which were not impedied by the courfe and effect of hortilities, fuch as the rights of a fifhery on the coants of either of the belligerent powess, the ftipulated right of cutting logwood in a particular diftrict; compacts of this nature were certainly not affected by war. There were alfo circumltances which might authorize the diffolution of treaties, without any rupture between the two parties. $I_{n}$ the late revolution in Holland, the antecedent treaties fubfinting between us would have been diffolved, although no hoftilities had enfued, by her incapacity to maintain the relations to which thofe treaties were meant to apply. It had therefore been well ob. ferved by Vattel and other writers, that treaties ceafe whenever an effential alteration in either of the contracting parties takes place. He applied this doctrine to Savoy, Switzerland, and othe countries, the temporary victims of the French revolution. His lordinip admitted, that the definitive treaty contained not a fingle provifion, direct or indirect, for the renewal of treaties, which had fubfifted previous to the war; but it was not true, that by the non-renewal of our treaties with Holland, the veffels of that republic would be exonerated from the ancient practice of Atriking their flag to Britilh fhips of war in the Britill feas;

## B R I [700] B R I

Britain. that practice had exifted isdepentlent of the treaty of 1792 , or even of the treaty of Breda in 1767 , which were only recognitions of a pre-admitted claim. The fame rema:k was applicable to the fixth article of the treaty of 1764 , by which the fases-general promifed not to obtlent the navigation of Britifl fubjects in the eallern feat. That arucle was no now grant, but an ackro sle.igment of a right, and a notification to merchants that they would not be diffurbed in the exercife of that right. Withs refpect to Franse, his lordGhip acknowledged, that the commercial treaty of ig 86 had expired, but not till it had reached the natural era of decay; nor flould he feal folicitude for its refufitasion, unlefs our negotiator at Amiens could have proved, that the French manufacturers were able, in SO, , to refume the competition to which they were uncqual in 1786 , under the exifing tariff; unlefs we alfor would have facrificed the additional wine dutics, which produced above a million fterling. He had the decpef conviction of the importanee of commercial treaties; and he appeated to the recolleation of the manufaturers of Birmingham, Staffordihire, Lincolnhire, Yorkflire, and Pailley, who, during fis years, had experienced the benefits of the commercial treaties. His lordhip was ready to admit, that the great and venerable mafs of treaties, which had long conllituted the title-deeds of nations, was utterly gone ; but this event was independent of omifion in the definitive articles; it was caufed by the fate of war and the tide of revolutions, which had fwept away the old order of things in Europe. He thought the French pienipotentiaries right in obje Qing to the renewal of treaties. irreconcileable with the prefent 1tate of Earope. With regard to our fovereignty in Indis, it had been confirmed and extended by various treaties, recognized by all the powers of Europe and Indis, who had accepted privileges from us; and finally ellablifhed by the undifurbed poffeffion of 40 years: that France was bound by the law of nations, in India and elfewhere, and by that law was pledged to refume the fituation fhe had maintained previous to the war.

On the contrary, Lord Cirnation reprefented the treaty as preguant with danger to the country. With the higheft refpest for the virtues of thofe who compofed the prefent adminiftration, his lordih'p confeffed, that he had never confided in their talents or experience. The moment they had taken the helm, they had preffed into their fervice a noble lord, heloved indeed, but ill fitted for the invilious talk of coping with men old in craft, adepts in duplicity, egardefs of principle, and unpractifed in virtue. Under negotiators fo unequal, fome difadvantages were inevitable; yet the preliminary articles which difappointed even the leaff fanguine, and which were approved by none, were welcorned by all. It had been hoped, that fome arricles relative to our allies, and involving our own national honour, would be altered : but the definitive tieaty, infead of realizing, had annihilated thefe hopes; conceffion was heaped on conceffion, difgrace added to difgrace. By omitting to renew former treaties, minifters had unadjufted all former adjufted difoutes, and without the cuftomary acknowledgment of our rights, had left us to the horiour and juttice of France. So mylteriouc, his lordfinip obferved, had
been this part of thitr condu?, tiazt it was dificuit :o underiland whether they lought this omition, or werc betrayed into it: 'The country :vas entitled to krow the truih, and his lordhip challenged the ninittry to avow it. It was palpable, that a deliberate refufal to renew a treaty, admitred but of one conftruction, that the treaty was abrogated; if the refufal had come from France, the Itability of the peace was on a different footing: all former difputes were let loofe.

Lord Ellenborough exprefled nuch furprife, that the non-renewal of treaties fhould have been urged as a Cerious objection to the definitive treaty. To what purpofe was folemn norfenfe to be revived? Were not thefe treaties replete with asticles wholly inapplicable to the prefent political fate of Europe? Fur himielf, he could as well think of the reviral of the condition of mankind, in fome very remote period, as of the ancient treaties which had become inapplicable and obfolete. Our fovercignty in India, his lordhip faid, refted on the rights of conqueft in legitimate war, upon the repeated recognition of all the powers of Europe, and on the beft rights of all, poffeffion. His lordthip, in a rapid epitome of our hiftory in Indit, obferved, that the acceptance of the Dewannee was a foolith thing, though he honoured the gallantry and ability of Lord Clive. He approved of the arrangement refpecting Milta; and thought the ceflion of the Cape of Good Hope a fubject of felicitation rather than of regret. He flated, that the charge at which it mult have been retained was enormous; that Eigland could not fend thither a fingle chaldron of cuils, without the expence of 261.105 ; and it was notorious, that when the Dutch were remitting to this country, in the feafon of farcity, a fcanty fupply of grain, the Englifh government had to procure rice and other provifions from India; and was even obliged to fend home for a fupply of bifcuit, not for our troops, but for the Dutch themfelves. Much hall been faid of the free ravigation of the Indian leas. Had a British mip been fopped in thole feas? For the paltry prerogative of lowering the Dutch flag, he thought there was little magnanimity in exacting of the weaker, more than was required of the Aronger powers; and he added, that Portugal was grateful for the fervices rendered her by the definitive treaty.

The fame fubject, after being repeatedly alluded to, Debate in was finally difcuffed in the boufe of commons on the the home $13^{\text {th }}$ of May. Mr Windham attacked the treaty in of commons feveral of its prominent parts. With regard to MI Ita, on the dehe contended, that it muft ultimately fall into the finitive hands of the French Th. litule order of altetreaty. which contained in itfelf the great characteriftic and diftinctive qualities which the French revolution bad fubverted, was now deftroyed. The little phial which contained the effance of the old principles, had been diluted by minifters, not even with common water, but with water from the puddle. The German knights had already refufed to ferve in a bocy fo degraded and debafed; the Neapolitan foldiers would form no fecurity for the independence of the inland; the flate of Malta was a virtual furrender, and our pofition in the Mediterrancan untenable. The Cape of Good Hope was cedcd, in full fovereignty, to the Dutch, who were thus at liberty to relign it to France, It had been faid, that the Cape was but a tavern; and

## B R I [ 710$]$ B R I

Britain. furely a tavern, in the middle of a long voyage, was no unimportant accommodation : without it, the troops deftined for the Eaft India fervice mull arrive in that country, in a ftate which would unfit them for active exertion. No other refting port was open to us except the Brazils; and who was to enfure us conftant accefs there in a feafon of hoftilities? Our Indian empire was, Mr Windham oblerved, our meet anchor; and whatever was neceflary for its prefervation, was of the laft importance. The difadvantages on our fide, Mr Windham contrafted with the advantages in favour of France. By the reftitution of Cochin to the Dutch, they had acquired the means of annoying our poffeffions in the Eaft Indies. In defining the boundaries of French and Portuguefe Guiana, miniffers appeared to have been puzzled with the Colapanatuba and Afouari, and that the Afouari was the limit aft figned: there was in fact little difference between the treaty of Madrid and that of Badajos. France had obtained her object, the navigation of the river Amazon; and the Portuguefe fettlements were left expo. fed to the foe. Mr Windham deplored the ceffion of Louifiana to France, which, confidering the indefinite extent of Guiana, was a furiender of a fourth part of the globe: two rivers, the greatelt in the world, the Miffllippi in the north, the river of Amazons ir the fouth of America. Rivers were the vital parts of countries; without hyperbole, we might be faid to have given away a brace of continents. In aggravation of this thoughtlefs prodigality, minifters had abandoned the whioe continent of Europe to France; they had let in a tide, which fpread like a torrent in every direction, endangered our fafety at Honduras, and menaced our deftruction in India. We already knew the French too well, to doubt that they would feruple what means they ufed to accomplif their ends. Had they not fraudulently obtained the reflitution of Porto Ferrajo to the king of Etruria, to fecure it to themfelves? Regardlefs of Atipulations and treaties, they had feized on the ifland of Elba; and, to beftow a compenfation on the king of Etruria, extorted Piombino from Naples. Mr Windham proceeded to delineate the coloffal power of France, which refembled nothing that had exifted fince the empire of Rome. The Frenct were a new race of Romans; in ten years they had even acquired more than the Romans achieved in fifty-three. On the map of Europe two nations only flood erect ; and of thofe, the one from diftance more than Arength. Auftria was indeed Aill rich in refources, but deftitute of foreign aid. There was no fingle power which could enter the lifts with France. In the firft conlict it would be nearly cruthed by her tremendous mace: but Mr Windham added, it was by fome fuppofed, that though Europe Chould he wrecked, we at lealt might take to our boat and efcape. By the fpectre of French power, we hould ftill be pur* fued: In Afia, in America, it would follow clofe, fearing us with its gorgon afpect. Mr Windham here coumerated the iflands ceded to France in the Weft Indies. He maintained that the eftablifhment of the blacks in St Domingo would be lefs formidable to this country, than its fubjection to France. Admit. ting that fome black emillaries had reached our inlauds; to private interefts fuch an event might have been more prejudicial, but to political interefts lefs
fatal. Mr Windham repeated, that we had given away two continents; and that the object of Frarice obvioufly was, the attainment of univerfal empire. He admitted, that the peace muft be obferved, now that it was entered into $;$ but concluded with a motion for an addrefs, expreflive of difapprobation of it.

Lord Hawkefbury faid, that from fome obfervations of Mr . Windham's, it would feem that whenever any continental power, however unconnected with us, became involved with France, it was our duty to volune teer our interference, and our affiftance. That we were deeply interefted in the deltiny of the continent, he was willing ro admit; but he conceived our interference with its commotions to be optional, neither inftigated by neceffity, nor extorted by honour. At the end of nine years of war, his lordihip continued, we had found ourfelves deferted by our allies. With the firft intimation which his majefty's minifters received of the new conftitution of the Italian republic, they had heard of its acceptance by the courts of Vienna, Berlin, and Peterburgh. Under thefe circumitances, he would fubmit to the houfe, whether it was incumbent on us to continue the war on account of the Italian republic. The ceffion of Louifiana by Spain to France, was a nother ground of complaint ; tbat province had originally been a French colony, when the Miffifippi was the boundary between it and Great Britain; it had been ceded by France to Spain, in a private convention, between the preliminaries and the definitive treaty of 1763 ; a proof that convertions of this nature, if not right, were at leafl not new. The value of Louifiana was at prefent nominal ; as a naval ftation it was allowed to be infignificant ; and its vicinity to America was calculated to diminif, rather than augment the attachment of that country to France: he therefore left it to the houle to judge wherher Louifiana would have juftified the renewal of hoftilities. Concerning the non-renewal of certain treaties and conventions, his lordmip obferved, that the principle on which treaties had ufually been renewed. appeared not to be underftood. The treaty of Weftphalia formed a diftinet zra in the hiffory of Europe; and in order to afcertain the relative fituations of the different powers, it had been cufomary to renew that treaty, together with any particular conventions fublequent to it. In the prefent inflance, it was to be collfidered, that formerly all preceding treaties had been renewed by all other powers of Europe. In the prefent war no European power had done fo; and confequently, if we renewed former treatics, we only hould be bound whilst other nations were free. By renewing former treaties, we fhould have been forced to fanction all the recent encroachments of France; and by fanctioning the treaty of Luneville we fhould have been acceflary to the difemembernient of the Germanic empire. With regard to commercial treaties, it was impoffible to renew them, without renewing ftipulations refpecting rights of neutrality, and perfonal privileges, detrimental to our interefls. His lordflip reprefented the definitive treaty as coinciding with the preliminary treaty which had previoully received the fanction of thic houfe. In regard to the permanence of the peace, lic was willing to admit, and to deplore, that, in the prefent flate of the world, any peace was infecure; but the peecarious tenure on whicls this blefling was to be held, was no reafon

Britain. for rejecting it. France had renounced her revolutionary principles, and refumed the old maxims of politics and religion. After the preceding convulfions, a good government was hardly to be expected; an ameliorated government was however gradually forming from the ruins of revolution. Had France remained under the Bourbons, the would have been equally our rival ; under all governments her ambition would have been the fame. Finally, his lordihip obferved, that we had emerged from a dangerous war with our refources and credit unimpaired, and that it was improper to wafte them or the fipirit of the country. An exultation had been manifefled on the figning of the preliminaries, which he fhould have been concerned to witnefs on the conclufion of any peace; and no ftronger argument could be adduced of the expediency of refpiring from the war. He concluded with moving an addrefs to his majefty, to teftify the fatisfaction of the houfe, on the conclufion of the definitive treaty.

Mr Dundas oppofed Mr Windham. He faid, that we had now acquired the undoubted fovereignty of $\ln$ dia. In his judgment, however, the Cape and Ceylon formed our two great bulwarks, and he never would have confented to the furrender of the former. He acknowledged that the ceffion of Malta was to him a fubject of equal regret; and that to the relinquifhment of either of thofe places he fhould have refufed his affent, had he continued in adminiftration : but he would not fupport the addrefs moved by Mr Windbam, becaufe it contained an invective againft the peace.

The debate was adjourned, and continued on the following day. Sir William Young contended, that when a flanding army was deemed effertial to the prefervation of peace, it was proper that the people fhould be informed of the ftate of affairs which juftified fuch a meafure. He contended, that Frarice had an afcendancy in Italy, which fubjected Malta to her power, whilf the Italian republic, infead of being an independent flate, was a French province. A new langue was formed of the inhabitants of Malta, who were chiefly compofed of goldfiners, and moftly fpoke the Arab dialect; and thefe were to affimilate with an ancient body of venerable nobility.. He predifted, that the nobles would refufe to incorporate with the new langue, who would confequently place the ifland in the hands of our foes. He reverted to the ceffion of Louifiana; and afcribed that, with other evils, to the non-renewal of the treaty of Utrecht, which has 譄ulated, that France thould acquire no new poffeffions on the continent of Amerira. He took a furvey of the French pawer in the Weft Indies, and concluded with faying, that what Rome had been, France would be.

Lord Caflereagh remarked, that our grand object, from the commencement to the clofe of the war, bad been the eftablifment of general fecurity; that the gradual extinction of jacobin principles, and the gradual reftoration of order and tranquillity, had been given as fureties for the peace. With regard to the territorial acquifitions of France, be admitted, that they might eventually become of infinite importance; but he contended, that they were not pregnant with immediate mifchief, and only. could be the fources of dif-
tant danger. He reprobated the timidity which had Eritain. been felt and expreffed, as calculated only to deprefs the fpirit of this nation, and to elevate that of our rival. His lordflaip lamented the diminution of our influence on the continent; but fuggelited, that to regain that influence, we mult give back to France her colonial poffeflions. He maintained, that with the revival of her commerce, and the cultivation of her colonies, our interefts would increafe. He compared the imports and exports of the two countries; and fated our imports to have increafed during the war, from 19 to 30 millions, and our exports, within the fame period, to have augmented from 24 to 43 millions; articles of Britifh manufacture exported, to bave rifen from 18 to 24 millions, and our tonnage from $1,600,000$ to 2,100,000; our mercantile feamen, to have increafed from 110,000 to 143,000 , although 120,000 failors had been employed in the navy. On the other hand, what were the commercial refources of France? In 1777, the lateft period previous to the war at which any regular account was obtainable, the French exports were twelve and the French imports nine millions. From the Weft Indies, their imports were about feven millions and a half, thcir exports about two millions and a half at the fame period; from their colon es laft year, their imports did not exceed in value 61,0001 . their exports not more than 41,0001 . Admitting, then, that at the commencement of a commercial rivalihip, the exports of France flould amount to feven, her imports to eight millions; whilf our exports amounted to 43 , and our imports to 23 millions; what had we to fear from the conteft? As little reafon, obferved his lordfhip, had we to dread any prohibition on our manufactures by France or her allies. It could not be the intereft of a poor country to purchafe dear articles, in preference to thofe that were cheaper; and allowing that France could be abfurd enough to exclude our manufactures from her own ports, could the extort from the powers under her influence a fimilar prohibition? His lordfhip here reverted to the year 1800, when our exports to the continent of Europe amounted to $7,500,000$ l. though the prohibition againf our goods was more general than it had ever been. He enumerated the countries independent on French influence; Denmark, Sweden, Rufia, Pruffia, Poland, and Germany. The only countries under the domination of France were Holland, Spain, Portugal, and the Italian ftates. To Portugal the influence of France could extend only during war; and fince Venice was under the emperor, at one extremity of Italy, and Naples lay at the other, he faw. little to apprehend from any prohibition which France might feek to eftablifh: In the Weft Indies, his lordmip obferved, the profpect was yet more fatisfactory; the annual value of Bitim produce fent to thofe iflands did not exceed eight millions, an amount, which, when contrafted with the great aggregate of our exports, was of little importance; in the prefent flate of her manufactures, however, France would be compelled to fupply lier colonies from the Britih market. With regard to St Domingo, his lordihip ftated, that on a moderate calculation, about one half, or nearly 300,000 of the blacks had perifted fince the commencement of diforder in the ifland. Allowing this defection, and eltimating:

## B R I [ 712 ] B

 ting each man at 601 . the fum of 18 millions would be neceflary to provide for the ifland the ordinary complement of black inhabitants. Was it probable, that France thould puffefs the capital to make this purchafe, without which, the ifland would be of little value? His lordhip concluded with recommending a vigorous eftablifhment, adequate to the protection of our rights, independence, and homour.Mr Addington faid, that he defired not that the treaty thould be prailed. He had never regarded it with fentiments of exultation; never lavifhed on it panegyric: he was content, that the bonour of the country was unfullied by the meafure he had adopted. If he were aked, why, after the tranfaction at Lyons, no remonftrance had been made to France? he mult anfwer, that it was wrong to put queftions, which his duty as minifter forbade him to refolve. This he would fay, that, had the negotiation failed, it was the intention of his majefty's minifters, to have laid every document concerning it before the houfe. He acknowledged, that the territorial acquifitions of France could not be viewed without regret; but there were events whicl we could not controul, and difpenfations in which we mult acquiefce; he thould iejoice to fee the refources of this country economized by peace, He trufted, that peace would be preferved; or, fiould the war be renewed, hateful as was that fuppofition, it sould be a fatisfaction to every man in that houle to reflect, that nothing had been neglected for the prefervation of peace. He would even fay, that we were purfuing the beft courfe for war, by hufbanding our refources, at a period we had the liberty of doing fo; or, what was better, of preventing a war, by being prepared to meet it.

Mr Sheridan treated the fubjest with fome gaiety. He faid, he fupported the peace, becaufe be was convinced that minifters could obtain no better; their predeceffors had left them to chufe between an expen. five, bloody, fruitlefs war, and a hollow perilous peace. He aitacked the new oppofitionifts, who bad been fupporters of the former adminifration, and demanded for what did we go to war? Why, to prevent French aggrandifement. Have we done that? No. Then we are to refue Holland: Is that accomplifhed? No. Brabant is the fine guo non: 1s it gained? No. 'Then come fecurity and indemnity. Are they obtained? No. 'The late minifter told us, that the example of a jacobin government in Eusope, founded on the ruius of a holy altar, and the tomb of a martyred monarch, was a fpectacle fo dreadful and infectious to chriftendom, that we could never be fafe white it exilled, and could do nothing ftort of our laft effort for its deftruction. For thefe fine words, continued Mir Sheridan, which had at laft given way to fecurity and indemnity, we had laid out near 200,000 lives, and near 300 millions of money, and had gaised Ceylon and. Trinidad. But one grand confulation remained. Bonaparte was to be the extirpator of jacobinifm; the champion of jacobinifm was to become a parricide; the child of fin was to defley his mother; lue had begged pardon of God and man, pioully reftored biftops with the falaries of curates, and penitently extorted of them a fulemn oath to turn fpies and informers in his favour. It had len faid, that France muft have colonies to be afraid of
war; that is the way to make Bonaparte love peace. He has had, to be fure, a rough military education; but if you put him behind the counter a little, he will mend exceedingly. When he was reading the treaty be thought all the names of foreign places, Pondicherry, Chandernagore, Cochin, Martinico, all ceflions. No fuch thing ; they are fo many tsaps or holes to catch this filly fellow in, and make a merchant of him. Mr Sheridan faid, that at prefent in Britain, nobody knew who was minifter, as the prefent mirifters continued to identify themfelves with the former. That when the ex-minifter quitted his office, almoft all the fubordinate minifters kept their places. Of the late minifter, he faid, that none more admired his fplendid talents than he did. If ever man was formed to give luffre to bis country, he "as that man. He had no low, little, mean, petty vices; be had too much good lenfe, tafte, and talents, to fet his mind upon ribbands, ftars, and titles; he was not of a nature to be the tool and creature of any court: but great as were bis talents, he bad mitapplied them in the politics of this country, he had augmented our national debt, and diminifhed cur population. He had done more to abridge our privileges, to ftiengthen the crown at the expence of the conftitu. tion, than any minifter be could mention. M1 Sheridan concluded with moving, as an amendment to Lord Harkefbury's addrefs, that it was the opinion of that houfe, that the omiffion of various opportunities of negotiating peace with advantage to this country, more efpecially the rejection of the overtures made by the firt conful of France in January 1800 , appeared to that houfe to liave led to that fate of aftairs, which rendered peace fo neceflat as tu juftify the painful facrifices which his majefty t:ad been advifed to make for the attainment theicof. The addrefs propoled by Lord Hawkeftury was carried by a wery great sajority.

During this feftion of porliament, the mof important ceneral operation of finance, confilted of the repeal of the tax concuict of upon income, which gave great fatisfaction. Indeed, adminiftrao in their whole conduct, adminill ration conducted them- tion. felves with a degree of moderation and prudence, which greatly conciliated towards them the minds of the pub"ic. "They defended on all occafions the formor miniffry, againfl the atracks of the old eppoftion; and in return, they nere fupported by a confiderable number of the members of that adminiflration, including Mr Pitt. At the lane time, they did not appear unwilling to enter into political comedtions with the members of the old oppofition. Patliament was prosogued on the 28th of June, and diffolved on the following day. The elections which immediately fucceeded, exhilited the fingular fpectacle of an adminiftration, that invoided interfering in the choice of the rembers of parliament. 'The members and friends, however, of the old adminiftration, togetler with their opponerts, were abundantly aclive.

The effed of the change of minifry had by this 1124 time been very ferfibly felt over the whole iflandeshechange 1) uring the preceding tell gears, the minds of men had, of minifity in a iefs or greater degree, been kept ir, atate of cunllant alarm from the fear of plots and confpiracics againf the government; and frum the apprehenfion, that a moft danececus difaffected paty was at all times rady to l.uatt furth into actiun; asd that the Britifn conflitution

Dritan. confitution was ouly preferved in confequence of the fu:fpenfion of the habeas corpus act and other legifintive rellraints, aided by the extreme vigilance of adminiftration, and of their friends, in repreffing difaffected perfons. Hence fociety exilled under a fort of general apprehenfion and diflruff; and perfons originally unfrendly to the war, fuffered in all departments of bufinef, and in every quarter of the country, a confiderable degree of political perfecution. All this bad now paffed away; the new minifters fuffered the penal and reftraining laws quietly to expire, and the conflitution to depend for fupport upon its own frength and the ancient provifions of the lav: ; they gave themfelves no trouble about the general fentiments of the people with regard to fpeculative fubjects, and feemed willing to conciliate the good will of all orders of the flate. The confequence was, that all the fears and anxiety which formerly exifed about the fafety of the conllitution, feemed to pafs away like a dream, and an univerfal attachment to the inflitutions of the country appeared to exiff, without any jealouly that danger to their fafety was to be apprehended from any quarter; and political animofities, being no longer fed by alarms excited by government, were, as if by a fort of enchantment, appeafed and forgotten.

With regard to the effects of peace upon the Britifh and French nations, they promifed at firft to be extremely favourable to the general interefts of humanity. The French had fuccefofully defended their own independence, and in their turn had affailed thofe by whom it had been menaced, with fuch a perfevering energy as fecured to them a portion of refpect from the Britifh nation; while on the other hand, the maritime triumphs of Britain had been fo fplendid during the whole war, and the valour of her troops in Egypt had been fo diltinguifhed, as to fecure to this country a high degree of confideration in the eyes of the French, The people of the two countries accordingly feemed eager to unite into habits of great intimacy with each other. Very confiderable numbers of Frenchmen came orer into Britain; while at the fame time multitudes of perfons of all ranks haftened from Britain, to vifit a country that had of late years excited in fo rcmarkable a degree the attention of all the nations of Europe, and been the fcene of fuch extraordinary tranfations. Upon this tendency of the two nations, thus reciprocally to abandon their mutual animofities, a fyftem of commercial intercourfe might have been reared, of a natuie much more perfec and fimple than that created by Mr Pitt's commercial treaty. There is no reafon to believe, that any difpofition exifted on the part of the Britilh government to fland aloof from France, or to avoid, for any political reafon, the ctxenfion of our commerce into that country. There can be no doubt that fuch an intercourfe would have proved favourdble to France in every point of view. It twould have enabled her people to deive confiderable aid from the great capital of Britih merclants, which would have teen rapidly and liberally adranced towards promoting the culture of their wines and other valuzile produclions. Even in a political point of view, France would have derived aggrandifement from fuch a connexion. What the wanted was a navy to enable her to defend her colonies, or even contend with any chance of fuccefs againt Britain in the event

Vol. IV. Part II.
1125
of a future war. This the could only obtain by neans of commerce, and conmerce ceuld in no way be better encouraged than by engaying continually in trade with the firft commercial nation ugon earth.

Bat it was now to be demonfirated to mankind, that' orduct n! a man may be qualifed to Iend armies fuccel-fully to the trench batile, to overrun prosinces, and to attain the ev verinacus. title of a conquetor, who at the fame time poffeffes only a very moderate portion of magnamimity, of telfcommand, or knowledge of the rules of found policy or the beft interefls of nations. The French goverriment, inflead of leizing the opportunity of encouraging their people to become commercial, and than gradualIy acquire wealth, and form a maritime power by laying open their ports, and holding out to Britain a commercial treaty upon the mof liberal principles, fhut their own ports more clofely than during the molt vinlent period of the war. They vainly fancied, in this way, that they would enable their own manufacturers to rival thofe of Britain, while in fact they only excluded their wines from the Britith market; and by thus lofing the only fure and ready mode of attracting riches into their country, they prevented the acquifition by enterprifing individuals of a large capital gained by trade. without which no manufactures can ever greatly prolper. They idly thought they were in this way limiting the trade of Britain, which having all the eft of the world open to its eflorts, could not thus be injured, and thus in truth they only injured themfelves.

With fimilar ill policy, or at leaft with a reflefs Spirit of ambition, the French govertment could not abtain from purfuing aggrandifement by thofe eflorts of violence which are only tolerable in the midat of war, but which in peace juftly excite the jealouly and indignation of mankind.

One of the firt enterprifes of Bonaparte, in confe- Frenchexquence of the peace, was to reduce under his power pedizion the ifland of St Domingo. That great and fertile agatnit St ifland had fuffered the moft fevere calamities in confequence of the revolution. Thefe had terminated in the emancipation of the negroes from flavery; and they had formed themfelves into a regular arid futhciently orderly government, at the head of which was one of their own race, Touffaint, a man of bumanity, and, it is faid, of confiderable talents. Reports were circulated in Europe, that he wifhed to render St Domingo independent of France; hut of this there is no proof: and it is probable that his chief offence confined of the general eftimation and perfonal confequence to which he had attained; and that the defpotic ipirit of Bonaparte could cadure no appearance of elevation of charater, or of independence, in any part of the French territory. Nor was it umatural, that under a military government force thould have been employed in preference to any methots of conciliation. At the end of the vear 1801, an army of 25,000 men was lent out to St Domingo ; and as fingle fhips and frall fquadrons continutd to fail during the winter, loaded with troor', it is believed that near 40.000 men were employed in what might be called the firft divifion of the expedition. We have vety defeglive accounts of their proceedinge, but they appcar to have been c.xtremely difgraceful on the part of the French. The negro chiefs hasing iefufed unconditional fubmiffion,

orduct on govarn.
$\qquad$ -
$\qquad$

they were attacked, and having been defeated in feveral battles, difunion among themfelves took place, and Touffaint was at laft induced to enter into a negotiation. The terms of the treaty were concealed; but, as he was ftill at the head of a refpectable force, it is believed that the poffeftion not only of his perfonal freedom, but the undifturbed enjoyment of his property, was fecured to him, and his followers were promifed a full indemnity. This took place in the beginning of May $180 z$.

The French general, Le Clerc, the brother-in-law of the chief conful, no fooner perceived the negro chief in his power, and the tranquillity of the colony apparertly re-eftablithed, than he immeditely accomplihed one of the bafeft acts of treachery that ever difgraced a government. The abdicated general was accufed of a confiracy, though it was evident there was not time from his fubmeffion to his feizure even to meditate, much lefs to organize, fuch a meafure. On the Iath of May, Touffaint, with his whole family, was put on board a frigate, and, contrary to the molt folemn treaty, fhipped off for France. There he foon perifhed, in confequence of tharh ufage in prifon. The negroes of St Domingo foon perceived themfelves to be betrayed and deceived. An attempt was made to reduce them back into a flate of flavery after they had now enjoyed freedon for feveral years, and shey were publicly fold as furmerly. The chiefs who had been prevailed with to defert Touflaint, and whofe defertion had led to his furrender, now jully fearing that they were deltined to partake in the milerable fate of their deluded colleague, betook themfelves to Hight. The whole ifland revolted. The climate came in aid of thefe avengers of tyranny and falfehood. The miferable inftrument of the frit conful's cruelty fell himfelf the viction of the climate. After a feries of horrors and atrocities, even worfe than thofe which blacken the memory of Robefpierre, Marat, and Carrier, and which will, to future ages, remain a lafting ftain on the French character; the republic had to regret the lofs of 60,000 of her beft troops, in a vain atrempt to fubdue a colony, which might, with temper the French was not lefs arbitrary. The whole fortreffes of in Europe. Piedmont were difmantled, and the country ultimately annexed to France. The fame was done with regard to the duchy of Parma and Placentia. The Swifs, in the mean time, whofe form of government had been altered in imitation of that of France, wifhed to reflore the ancient conflitutions of the cantons, under which their anceftors had profpered during fo many ages. Their prefent leaders, however, who had rifen to power by the protestion of France, folicited the inverference of Bonaparte in their favour. He accordingly fent a numeruus army againf Switzerland, and in f fite of the remonfrances of the Britifh court, p'aced the fovereignty in the hands of his own dependents or adherents.

After all their fruggles for freedom, the French nation now fubmitted to a confirmed military defpotifm. When Bonaparte firft affumed the appellation of chief conful, it was under the declaration, that his office would only endure, in terms of the confitution then promulgated, for ten years. Lut this conflitution was
now altered, and the affent of the people was demand. ed to a new conflitution, by which Bonaparte was to remain conful for life, and even to poffefs the power of nominating his own fucceffor. Suffrages to this meafure were obtained to the number of $3,577.259$. The event was celebrated with the higheil magniticence in Paris; and addreffes of congratulation were prefented from the difierent courts of the contincnt of Europe, and even from the emperor of Germany.
$1 ; 30$
Thefe tranfactions cou!d not fail to be noticed in Paperwar Britain, and to be the fubject of remark in the public between newfpapers. In thefe the unprincipled ambition of Eand the Bonaparte, and the degraded characler and Rate of Eng the the French nation, became topics of frequent difcuf-newfyapers. fion. It appears that Bonaparte very early became jealous upon this head. The Englifh had long hoafted, in confequence of their political freedom, of their fuperiority as a people over their enflavad neighbours of France; and the firl conful, no doubt, dreaded left the vanity of his lubjects thould be wounded by reprefentations, coming from the free prefs of England, of the fate into which they had fallen. A great degree of irritation was thus produced in the French gavernment againft England; and the chief conful even went fo far as not only to prohibit the importation of Englifh newfpapers into France, but to demand from our government, that the beft bulwark of Britifh freedom thold be done away, by impofing reftrictions upon the liberty of the prefs. He was weak enough, through the medium of the French official juurnal, to commence a conteft of argument and of eloquence againft the writers of Englifh newipapers. In fuch a warfare he could not fail to be beaten; becaufe they had nothing elfe to do but to write, ana becaufe the obfcurity of their fituation, as individuals, enabled them to inflict wounds without fear of repifals. Such writers alfo had much to gain by fuch contell, as they could wifh for nothing more favourable to their employment, that to be enabled, during a dull and monotonous period of peace, to render their lucubrations interefling, and to amufe their readers, by engaging in a paper war with the great Bonaparte. Thefe circumflances, however, added to the reftlefs ambition of this perfonage, and his obvious want of difcernment of the true interefts of France, or want of patience to purfue them, left little reaton to hope that the peace fo recently concluded would be of long duration.

143 r
The new parliament affembled on the 16 th of No-Meeting of veniber, Mr Abbot was chofen fpeaker of the houfe of parliament. commons; and on the 22 d of the fame month his majefty, in a fpeech from the throne, congratulated the country on having experienced the bounty of divine providence in the produce of an abundant harveft. He remarked, that the flate of the manufactures, commerce, and revenues of the united kingdom was flourithing beyond example; and that the loyalty and attachment which were manifefted to the king's perfor and government, afforded the ftrongeft indication of the juff fenfe that was entertained of the numerous bleffings enjoyed under the protection of our happy conilitution. "In my intercourfe with foreign powers, (continued his majefly), I have been actuated by a fin. ccre difpofition for the maintenance of peace. It is neverthelefs impofible for me to lofe fight of that enablifhed and wife fylem of policy by which the in-

Britain. terefts of the other ftates are connected with our own. $\underbrace{}_{\text {I cannot therefore be indifferent to any material }}$ change in their relative condition and frength. My conduct will be invariably regulated by a due confideration of the actual fituation of Europe, and by a watchful folicitude for the permanent welfare of my people.
"You will, I am perfuaded, agree with me in thinking that it is iucumbent on us to adopt thofe means of fecurity, which are beft calculated to afford the profpect of preferving to my fubjects the bleflings of peace.". In both houfes, the ufual addrefs was agreed to unanimoufly and without debate.

About this time, Colonel Defpard, and fix perfons of low rank, were executed for high treafon. He was an lrifh gentleman, of a good family. He had long been under clofe confinement, during the late adminiItration, upon fufpicion of entertaining criminal defigns againft government. His imagination while under feclufion from fociety, appeared to have become inflamed nearly to madnefs. After his liberation, in confequence of the habeas corpus act being no longer fufpended, he had affociated with a number of mean perfons, whom he had induced to imagine, that they were capable of overturning the government, and altering the conftitution. They took an oath to this effect, and agreed to attack the king at the meeting of parliament, to feize the tower and the bank, and to incite a general infurrectiun. Their criminal engagements with each other were fully proved. Their execution was attended with no particular confequences.

In propofing the fupplies, on the roth of December, Mr Addington made fome remarks, which are not unworthy of attention in a hiftorical point of view. He faid, that the year 1792 had, in general, been the moft profperous year of our finance. The permanent taxes in that year amounted to $13,853,0001$. In the latt year, the permanent taxes produced nearly double that fum ; their produce amounting to no lefs than $26,829,0001$. He could now from experience congratulate the houfe, and affure them, that the revenue was coriftantly and regularly on the increafe. There was every reafon to look forward, with the utmoft confidence, to the growing profperity of our commerce and manufastures. The amounts of imports had been grearly fwelled, by the large importation of grain. They amounted in that year to $25,500,0001$. In the part of the prefent year which had expired, they amounted, without that aid, to 15,640.0001. Our general exports, in 1801, amounted so 42 millions. The exports of the prefent year, he had reafon to believe, would fall little fhort of 50 millioas, their real value being taken. The number of veffels which entered into the port of London in 1801, was 3385 ; in 1802, it was 4750 . The tollnage of thofe veffels was in 1801, 418.631 ; in 1802, 574.37 . The number of men navigating in 1801 , was 23,096 ; in 1822, 36,25 . This was, he trufted, fully lufficient to juttify the affertion which he had lately made, that the commerce and navigation of this country had not fuffered from the operation of the tonnage duty. It was to be obferved, that what we gained by ou: traffic, othcrs did not lofe; other powers
had, therefore, no more reafors to look on our com- Britain. mercial purfuits with jealoufy, than we had to look on theirs with fear. In the latter refpect, it was juftly faid laft night, by a noble friend near him (Lord Hawkefbury) we had fairly got the fiart of them. This pre-eminence he had no doubt that we fhould retain, as long as we preferved our fuperiority in com. merce, credit, and capital. The great irfftument of their confervation was the fimking fond, which, as it had fupported us under every difficulty, fo now he was convinced it would uphold and maintain our prefent profperity. When this great plan was propoled, in 1786, by his right bonourable friend Mr Pitt, who was now abfent. the public debt was 238 millions. The fund, at that time, was no more than one-tenth of the intereft on the debt, but though the latter had fo greatly increafed, the fund had adoanced more in proportion, as it now amounted to one-third of the interef.

In the mean while, fome difficulties occurred in the Difficulties execution of the treaty of Amiers. The Britifh mini-on exececutfry had aroided engyging in a quarrel with Bona-ing the parte, on account of his continental ufurpation, be- Amiens. caufe they found no power willing to join with them in reffifing him; but his reflefs ambition induced him to endeavour to lay hold of the ifland of M3lea; and his impatient fpirit prevented his conduting the plan with fuch flownefs as might enable him to avoid lufpicion, and enfure fuccefs. That ifland was deftined, by the treaty, to be intrufled to the order of St John. Without waiting till the Britih fhould abandon it, Bonaparte inkantly fet on foot negotiations with the diferent countries to which the knights of the order belonged, to procure the abolition of the order, tbe confilcation of its revenues, and the prohibition of the future enrollment of knights, or their departure to Malta. Having accomplined thefe objects, he required the Britifh government to deliver up the inland to a grand mafter, appointed, at his infligation, by the pope; or to the king of Naples, who was to receive poffeffion, in the firft inflance, for behoof of the knights. As, ftrictly fpeaking, there was thus no longer any order of Malta to defend the illand, and as the king of Naples was at all times at the mercy of France; the evacuation of $\mathrm{Malala}^{2}$ by the Britifh troops, in the prefent ftate of affairs, would have been equivalent to transferring it to this laft power. The Britih miniAtry had fubmitted to the late continental acquifitions of France, from want of means to oppofe them; but they refolved to oppofe the feizure of an ifland, becaufe the fuperiority of the Britift fleet enabled them fucceffully to do fo. This determination appears in have greatly perplexed the velement and irritable mind of Bonaparte. No fucceffful reffance had hitherto been made to any of his continental enterprifes; and as the attempt now made, to refufe delivery of the ifland of Malta to the king of Naples, ard the nominal grand mafter of the order of St John, could only be juttified by accufing him of having aeted fraudulently againft the fpirit of the treaty; fo an arquief. cence on his part in the retention of the ifland, contrary to the exprefs fitpulations of the treaty of Amiens, would have been equal to a confefion of guilt. In tbis fituation he found himfeif deiected in a

Britain.
deceit, which he was unwilling to acknowledge, while, at the fame time, he fuffered the additional mortification of having facrificed his reputation, without any profit in return, becaufe the irnefilible power of the Britifh navy rendered it impoffible for him to feize Malta by force. While he remained under this dilemma, a converfation occurred between him and she Fritith ambaliador, Lord Whitworth. As the fortunes ô̂ Bonaparte lave been too extranordinary, not to rerder him for ages a prominent object in hifory, it may be worth while, for the fake of throwing all poffible light upon his character and actions, to record the converfation alluded to, in the terms in which it was reported to the Britilh court. Lord Whitworrh in a letter of the 21 ft of February, to Lord Hawkefbury, fays:
"I received a note from M. Talleyrand, (minifer for foreign affairs) informing me, the firft conful defired to converfe with me, and that I would come to him at the Thuilleries, at nine o'clock. He received me in his cabinet, with tolerable cordiality; and after talking on different fubjefts, for a few minates, he defired me to fit down, as he himfelf did, on the other fide of the table, and began. He told me, that he felt it neceffary, after what had paffed between me and M. de Talleyrand, that he fhould in the moft clear and authentic manner make known his fentiments to me, in order to their being communicated to his majefty, and he conceived, this would be more effectually done by himfelf, than through any medium whatever. He faid, that it was a matter of infinite difappointment to him, that the treaty of Amiens, inflead of being followed by conciliation and friendllip, the natural effeds of peace, had been productive only of continual and increafing jealoufy and miflruft ; and that this miltruft was now avowed in fuch a manner, as muft bring the point to an iffue. He now enumerated the feveral prowocations which he pretended to have received from England. He placed in the firf line, our not evacuating Malta and Alexandria, as we were bound to do by treaty. In this, he faid, that no confideration on earth would make bim acquiefce, and of the two, he had rather fee us in poffeffion of the Fauxbnurg St Antoine, than Malta. He then adverted to the abufe thrown out againll him, in the Englifh public prints : but this, he faid, he did not fo much regard as that which appeared in French papers publiffed in London. This he confidered as much more mifchievous, fince it meant to excite this country againf him and his government. He complained of the protedtion given to Georges, and others of his defeliption, who, in Read of being fent to Canada, as had been repratedly promifed, were permitted to remain in England, handfomely penfioned, and were conflantly cominitring all forts of crimes on the coafts of France, - as well as in the interior. In confirmation of this, he told me, that two men had within thefe few days been apprehended in Normandy, ared were now on their way to P'aris, who were hired aff: fims, and employel by the bithop of Arrac, Ly Georges and by Dutheil, as would be fully proved in a court of jultice, and made known to the world. He acknowledged, that the irritation he felt apainf England in--creafed daily, becaufe every wind (I make ufo as much
as 1 can of his orm ideas and expreflions) which blew Butran. from England, brought nothing but enmity and hatred agai: f him.
"Fle no:v went back to Egypt, and told me, that if he had feit the finalleft inclination to take poffeffion of it by force, he might have done it a month ago, by fending 25,000 men to Aboukir, who would have poffeffed thennelves of the whole country, in defiance of the 4000 British in Alexandria. That inflead of that garrifon being a means of protecting E.gypt, it was only furnilhing him a pretence for invading it. This he would not do, whatever might be his defire to have it as a colony; becaufe he did not think it worth the rifi of a war, in which be perlaps might be confidered as the aggreflor, and by which he thould lofe more than he could gain, fince, fooner or later, Egypt would belong to France, either by the falling to pieces of the Turkith empire, or by fome arrangement with the Porte.
"As a proof of his defire to maintain peace, he withed to know what he had to gain by going to war with England. A defcent was the only means of offence he had, and that he was determined to attempt by putting himfelf at the head of the expedition. But how could it be fuppofed, that after having gained the height on which he ftood, he would rifk his life and reputation, in fuch a hazardous attempt, unlefs forced to it by neceffity, when the chances were that he and the greateft part of his expedition would go to the bottom of the fea. He talked much on this fubject, but never affected to diminifl the danger. He acknowledged, that there were a hundred chances to one againt him; but fill he was determined to attempt it, if war flould be the confequence of the prefent difculfion ; and fuch was the difpofition of the troops, that army after army would be found for the cinterprife.
"He then expatiated much on the natural force of the two countries. France with an army of 480,000 men, for to this amount it is, he faid, to be immediately completed, all ready for the mof defperate enterprifes; and England with a fleet that made her miftrefs of the feas, and which he did not think he flould be able to equal in lefs than ten years. Two fuch countries, by a proper underftanding, might govern the world, but by their ftrifes might overturn it. He faid, that if he had not felt the enmity of the Britifl government on every occafion fince the treaty of Amichs, there would have been nothing that he would not have done, to prove his defire to conciliate ; participation in indemnities as well as in influence on the continent, treatics of commerce, in fhort, any thing that could have given fatisfaction, and have teflified his friendfhip. Nothing had, however, been able to conques the hatred of the Britifh government, and, therefore, it was now come to the point, whether we flould have peace or war? To preferve peace, the treaty of Amiens muft be fulfilled; the abufe in the public prints, if not totally fuppreffed, at leaft kept within bounds, and confined to the Englifh papers; and the protection fo openly given to his bitterff enemies, (alluding to Georges, and perfons of that delcription), muft be witl drawn. If war, it was neceflary only to fay fo, and to refufe to fulfil the treaty."

The

The refult of this converfation, and of fome fufpiciuns circumftances in the conduct of the French, was that on the 8 th of March, the following meffage was King's mef-atdreffed by the king to the houfe of commons." His fage on the majefly thinks it neceflary to acquaint the houfe of dañor of holtilities. commons, that as very confuderable military preparations are carrying on in the ports of France and Holland, he has judged it expedicnt to adopt additional meafures of precaution for the fecurity of his dominions. Though the preparations to which his majelly refers, are avowedly dirceted to colonial Cervice, yet as difcuffons of great importance are now fubbiling between his anjeny and the French govermment, the refult of which mult at prefent be uncertain, his majefty is induced to make this cummunication to his faithful commons, in the full perfuafion, that while they partake of his majefly's earmet and unvarying fulicitude for the continuance of peace, he may rely with perfect confidence on their public fpirit and liberality, to enable his majelty to adopt fuch meafures as circumflances may appear to require, for fupporting the honour of his crown, and the effential interefls of his people." Upon the motion of Mr Addington, the houfe voted an addrefs, agreeing unanimoulfy to fup. port the crown in the meafures propofed. It fpeedily appeared, that the preparations which had been alluded to in the king's meffage were extremely tritling. Bonaparte had obliged the Spaniards to cede to him the fovereignty of Louifiana, in North America, thet is to fay, the great country to the fouth-weft of the tiver Mifififippi, which lies between' the United Sates and the Spanith province of Mexico; and an armament, with about 4000 troops, was now preparing to leave the ports of Holland, to take poffefion of the territory thus acquired. The goverument of the United States oppofed this meafure; and the llate of Kentucky fent notice to the prefident, that ro,000 volunteers had enrolled themfelves, and were refiolved, with or without the aid of the union, to refil the fetlement of the French in their neighbourlhood. Bonaparte, who probabiy had no ferious intention of effecting fuch a fettlement, fold for a fun of money to the United States of North America, the country of Louifiama; a country inliabited by many independent tribes of fayages, and to which, upon the principles of natural jullice, neither he, nor the Spaniards, nur the Americans, had any right. But the inhabitauts of Europe, and even the tranfatlagtic race of Europeans, had now for fume ages been accuffomed to regard all foreign countries as unoccupied property, which they may feize and transfer to each other, without regard to the natural inhabitants, whom they eonfider as beings of a fubordinate race and charater. Accordingly, this transference of Louifaata excited no furprife in Eurnpe.
In the meanu hile, as the king's meflage to the houfe of commors, already mentioned, demonifrated a determination on the part of the Britill government to prefer a new war, to fuffering Bonaparte to carry farther his ambitious projects; the mind of that perfun feems to have been srought up to a litange degiee of irritation. In his palace, he affcted to ufe all the forms of the ancient French court. At the drawingyoum, where he was waited upon by the whole amballfadors of Europe, and by a numcrous allemblage of
perfons of high rank from all countries, lie could not preferve the forms of nrdinary civility to the Britith ambaffador; and Lord Whitworth, in a defpatch of $\mathrm{tr}_{3} 5$ the ruth of Mlareh, which was afterwards communi-infults the cated to parliament, gave the following account of the Britith ambehaviour of the firft conful, on one occafion, at the baffator. court of the Thuillcries:-" He accolled me, cvidently urder very confiderable agitation. He began, loy afking me if I had any news from England? I told him I had received a letter from Lord Hawkefury two days ago. He immediately faid, And fo you are determined to go to war: No, I replied; we are too fenfible of the advantages of peace. We have liad war for 15 years already. As he feemed to wait for an anfwer, l obferved only, we have had too much of it. But you wilh to carry it on for 15 years longer, and you force me to it. I told him, that it was very far from lis majefly's intentions. He then proceeded to Count Marcow, and the chevalier Azara, who wcre fanding together at a little diflazee from me, and faid to thetin, The Englif1 wift for war ; but if they are the firlt to draw the fword, I fiall be the latt to theath it : they have no regard to treaties: 'henceforth they fhould cover them with black crape. In a few minutes he came back to me, and refumed the converfation, by fomething perfonally civil to me. He began again, Why thefe arnamerits? Againf what are thefe meafures of precaution? I have not a fingle Thip of the line in the ports of France; but if you wifh to arm, I will arm alfo. If you wift to fight, I will fight alfo. You may perhaps defroy, Eut you will never intimidate France. We wifh neither the one nor the othcr. It is our defire to live in good underftanding wihh her. You muft regard treatics then. Cunfufion to thofe who have no regard to treaties: they will be refponfible for it to all Europe. He was too much agitated to make it advifable for me to prolong the converfation. I thierefore made no anfwer; and he retired to his apartment repeating the laft phrafe.
"It is to be remarked, that all this pafied loud enough to be heard by 200 people, who were prefent; and 1 am perfuaded, that there was not a fingle perfon who did not feel the impropriety of his conduet, and the total want of dignity as well as of decency on the occafion."
In the raear time, the negotiations proceeded. Bonaparte fill infilied upon the literal fulsiment of the treaty of Anienc. He appears to have flatered hin.felf, that the Britill minilitry volld not venture to renew the war on accuant of Malta. Their pacific difpofitions were well known: they had fuffered him to make great encro chments upon the continent, without engaging in hollilities. They wese underflood to confit of men, who were not the leaders of any party, but had only held a fubordinate rank is fupposters of Mr Pitt's adminiffration; and they had been loudly acculed in Britain by the (x-miniflers, and by many of the old oppofition, of want of talents and wan: of fpirit, on account of the apparent tamenefs with which they had recently adted. Hence it feems likely that Bonaparte prefumed that they would ultimately eive way to his dem. $\boldsymbol{d}$ d. P'ut the good terper and forbearance of admi. iftretion, had the effect of rouling, in a very great degrec, the fipitit of the Bitith natios,
and of inducing a great proportion of the people to wift to engage in a war, againt a man whom they now detefted as an odious ufurper. Thus encouraged, adminiltration rofe in their demands of the price to be paid by France for the continuance of peace. Or, the i $2: \mathrm{h}$ of May, Lord Whitworth prefented the ultimatum of the Britifh government, which was in thefe terms:
" 1 . The French government Mall engage to make no oppofition to the ceffion of the ifiand of Lampedofa to his majelty, by the king of the two Sicilies.
6. 2. In confequence of the prefent llate of the inland of Lampedofa, his majefly thall remain in poffeffion of the ifland of Malta, until fuch arrangements fhall be made by him, as may enable his majefty to occupy L, ampedofa as a naval ftation; after which period, the ifland of Malta fhall be given up to the inhabitants, and acknowledged as an independent tate.
" 3 . The territories of the Batavian republic Thall be evacuated by the French forces, within one month after the conclution of a convention founded on the principles of this project.
" 4. The king of Etruria, and the Italian and Ligurian republics, fhall be acknowledged by his ma. jefty.
" 5 . Switzerland fhall be evacuated by the French forces.
" 6. A fuitable territorial provifion fhall be affigned to the king of Sardinia in Italy.
"Secret article.-His majefty Thall not be required by the French government to evacuate the ifland of Malta, until after the expiration of ten years.
"Articles 4.5.6. may be entirely omitted, or mult all be inferted."

This propofal having been rejected, war was announced on the 16 th of May, by a meflage from the king to the two houfes of parliament. On the 21 It of May, a declaration, juftifying this meafure, was infert. ed in the London gazette. As the flatements contained in it are fufficiently candid, and exhibit an authentic detail of the public acts which occafioned this renewal of the war, we Thall here infert a few of its he treaty juftification of Amiens was concluded, his majefly's courts were of the wal. open to the pcople of France, for every purpofe of le- gal redrefs. All fequeftrations were taken off their property; all prohibitions on their tradc, which hat been impoled during the war, were removed; and they were placed on the fame footing, with regard to commerce and intercmurfe, as the inhabitants of any other ftate in amity with his majefly with which there exifted no treaty of commerce.
"To a fyftem of conduef, thus" open, liberal, and friendly, the proceedings of the French government afforded the moft friking contraft. 'The prohibitions which had been placed on the commerce of his majeAty's fubjects during the war, have been enforced with increafed frictnefs and leverity. Violence has been offered in feveral inftances to their veffels and their property; and in no cafe las juftice been afforded to thofe who may have been aggrieved in confequence of fuch acts; nor has any fatisfactory anfwer been given to the repeated reprefentations made by his majefty's minifters or ambaffadors at Paris. Under fuch cirrumflances, when his majenty's fubjects were not !uffered
to enjoy the common adrantages of peace within the territories of the French republic, and the countries dependent upon it, the French government had recourfe to the extraordinary meafure of fending over to this country a number of perfons, for the profeffed purpofe of refiding in the moft confiderable fea-port towns of Great Britain and Ireland, in the character of commercial agents or confu/s. Thefe perfons could have no pretenfions to be acknowledged in that character ; as the right of being fo acknowledged, as well as the priviledges attached to fuch a fituation, could only be derived from a commercial treaty; and as no trea. ty of that defcription was in exiftence between his majefty and the French republic.

There was confequently too much reafon to fuppofe, that the real object of their miffion was by no means of a commercial nature; ard this fufpicion was confirmed, not only by the circumftance that fome of them were militaty men, but by the actual difcovery, that feveral of them were furnifhed with inftructions to obtain the foundings of the harbours, and to procure military furveys of the places where it was intended they hould refide. His majefty felt it to be his duty to prevent their departure to their refpective places of deftination, and reprefented to the French government the neceflity of withdrawing them ; and it cannot be denied, that the circumftances under which they were fent, and the inftructions which were given to them, ought to be confidered as decifive indications of the difpofitions and intentions of the government by whom they were employed.

If the French government had really appeared to be actuated by a due attention to fuch a fyfem; if their difpofition had proved to be effentially pacific, allowance would have been made for the fituation in which a new government muft be placed, after fo dreadful and extenfive a convulfion, as had been produced by the French revolution. But his majefty has unfortunately had too much reafon to obferve and to lament, that the fyflem of violence, aggreftion, and aggrandifement, which characterifed the preceedings of the different governments of France during the war, has been continued with as little difguife fince its termina. tion. They have continued to keep a French army in Holland, againtt the will, and in defiance of the remonftrances, of the Batavian government, and in repugnance to the letter of their folemn treaties. They have, in a period of peace, invaded the territory, and violated the independence of the Swifs nation, in defiance of the treaty of Luneville, which had flipulated the independence of their territory, and the right of the inhabitants to choofe their own form of government. They have annexed to the dominions of France, Piedmont, Parma, and Placentia, and the ifland of Elba, without alloting any provifion to the king of Sardinia, whom they have defpoited of the moll valuable part of his territory, though they were bound by a folemn engagement to the empcror of Ruftia to attend to his interelts, and to provide for his alabliniment. It may indeed with truth be afferted, that the period which has elapfed fince the conclufion of the definitive treaty, has been marked with one continued feries of aggreffion, violence, and isfult, on the part of the French government.

With regard to Malta, the declaration proceeded to

Aate, that when the French government demended its evacuation, feveral articles of the treaty of Amiens refpecting it remained unexecuted. The tenth article had flipulated, that the independence of the iftind nould be placed under the guarantee and protection of Great Britain, France, Auttria, Ruffia, Spain, aud Prulfid. The emperor of Germany liad acceded to the guarantee, but only on condition of a like acceffion on the part of the other powers fpecified in the article. The emperor of Ruffia had refufed his acceffion, except on the condition that the Maltefe langue ftould be abrugated : and the king of Prullia had given no anfuer whatever to the application which had been made to him to accede to the arrangement. "That the fundamental principle upon which depended the execution of the other parts of the article, had been defeated by the changes which had taken place in the conititution of the order fince the conclufion of the treaty of peace. It was to the order of St John of Jerufalem, that his majefty was by the firft Atipulation of the tenth article bound to reitore the inand of $\mathrm{Mal}_{\text {a }}$ ta. The order is defined to confill of thofe langues which were in exillence at the time of the conclufion of the treaty. The three French langues having been abolithed, and a Maltefe langue added to the inflitution, the order conifted therefore at that time of the following langues, viz. Arragon, Caftile, Germany, Bavaria, and Rufliz. Since the conclufion of the definitive treaty, the langues of Arragon and Caftile have been feparated from the order by Spain, and part of the It: lian langue had been abolihed by the annexation of Piedmont and Parma to France. There is Itrong reafon to believe, that it has been in contemplation to fequeftrate the property of the Eavarian langue, and the intention has been avowed of keeping the Rulian langue within the dominions of the emperor.

In the declaration, the French were accufed of having inftigated or accomplifhed the whole of thofe changes, and of thus having rendered it impuffible to fulfil that part of the treaty. It was alfo remarked, that from a report publifhed by an accredited agent of the French government, Colonel Sebaftiani, it appeared that France entertained views hoftile to the Turkifh empire, the integrity of which had been exprefsly ftipulated, which rendered the retention of Malta more neceffary. The behaviour of the firft conful to Lard Whitworth at his audience was allo noticed, together with fome other offenfive occurrences; and it was obferved that "His majefty might add to this lift of indig. nities, the requifition which the French government have repeatedly urged, that the laws and conlitution of this country thould be changed, relative to the liber. ty of the prefs. His majelly might likewife add the calls which the French government have on feveral occafons made to violate the laws of hofpitality, with refpect to perfons who had found an alylum within his dominions, and againft whofe conduct no charge whatever has at any time been fubitantiated. It is impoffible to reflect on thefe different proceedings, and the courle which the French government have thought proper to adopt refpecting them, without the thorongh conviction, that they are not the effect of accident, but that they form a part of a fyftem, which has been adopted fur the purpole of degrading, vilifying, and jnfulting his majefty and his government."

Adminifiration were now placed in a ecry fonguhar fituation. Mr Fox oppofed the war, and propo!ed that an attempt ftould be made to prevail with the empesor of Rullia to mediate a peace; upon the fuppofition that, if has mediation was rejected hy lirance, we might be able to lecure an alliance with hirr. To this propolal adminillration acceded; but although Mr Fo:s oppofed the war, almof the whole uther members of the old oppofition, including Mr Sheridan aod Mr Tierney, 11 rongly approved of it. Mr Pitt and the relt of the ex-miniftry did the fame. As Bonapartc had threatened to attempt an invation, the parties out of power laid hold of this circumftance to excite alarm; they had indultrioully reprefented throughout the country, the prefent minifters, as men of moderate capacity, unfit to be intrufled with the defence of the empire in a perilous crific. Mr Pitt and his colleagues, in their fpeeches in parliament, reprefented the nation as in danger of being infantly invaded by almoft innumerable hofts of experienced troops, who could not be expeeted to delay more than a few days to land upon our fhores. The members of the old appofition held precilely the fame language ; the views of both probably were in fome degree to terrify the country, to call for their fervices, as men of greater energy than the prefent rulers. The militia, both ordinary and extraordinary, were called out, and a new body of troops was ordered to be raifed by hallo ${ }^{+}$, under the appellation of an army of referve; at the fame time, the raifing of bodies of volunteers throughout the ifland was reprefented as abfolutely neceffary, and they were accordingly formed. An act of parliament was alfo paffed, for calling out, in cafe of actual invafion, the whole male population of the kingdom, in claffes according to their age, or their fituation in life, as married or unmarried, or having children, \&fc. To fupport the expence of thefe different armaments, and of the augmentation of the navy, the income tax was reflored with certain modifications.

Thus adminiftration found their whole opponents, unlike any former oppofition, ftiving with emulation to do their bufinefs for them, and to ftrengthen government by new armaments. The confequence was, that during the enfuing autumn, minifters feemed to become perplexed by the multiplicity of bufinefs put into their hands, and to have entertained doubts about the propriety of fome of the meafures in which they had embarked. The plan of raifing fuch numerous bodies of troops by ballot, while at the fame time, fubstitution was permitted to thofe upon whom the ballat fell, became a molt unequal mode of raifing an army for the defence of the ftate, as it fell upon perfons not according to their riches, but according to their age. It was attended with this effect, however, that as the bodies of volunteers raifed by permiffion of government, enjoyed an exemption from certan ballots; this operated, along with the fpirit of the country, as a fufficient premium to induce great multitudes of perfons to enroll themfelves for the purpofe o! acquiring the ufe of military exercife. Minifers at times hefitated to receive t? e numerous bodies of voluntecrs that offered themfelves; but as they departed afterwards from this fentiment, uearly 400,000 men were trained to the ufe of arms, exclufive of the regular army: the militia, and the army of referve.

## B 1 ll I [720] <br> B R i

Eritans. The ports of France, in the meanwhile, were clofely blockaded, and their foreign puffeffions were feized; while the only ftep of retaliation in their power to exert, confifted of feizing the electorate of Hanover, which they plundered unmercifully. Bunaparte offered to give np Hanover as the price of Malta ; but his offer was refuftd.
'The molf inconvenient circumflance to Great Bri1ain, which was produced by the late political tratifactions, confifted of the great embarraffiment occafioned to perfons engaged in commerce, which was the caufe of numerous bankruptcies.

Towards the clofe of the former war, trade had found out for itleif regular channels, and in purticular, the port of Hamburgh had become the great ftorehoule ot Bitith merchandife, from which, as a neutral thate, it was diftributed among the countries engaged in the war. The conclufion of a treaty of peace produced the daily cxpectation of a renewal of the intercourfe with France, and therefore put a fop to the circuitous trade by Hamburgh. As nothing was fubllituted in the fead of the latter, a fufpenfion of operations in fome manufactures occurred. When thefe difficulties were coming to a clofe, the renewal of the war produced a new uncertainty about the channels in which the European trade mult hereafter flow. The difficulty was increafed by the invafion of Hanover by the French, and their excluding the Britufh from the navigation of the Elbe, who 11 their turn blockaded the Eiver whill hips of war, and thus excluded all the world.

Parliament affembled on the $22 d$ of November. In the fpeech from the throne, his $m$ jefty faid: "Since I laft met you in parliament, it has been my chief ob. ject to carry into effect thofe meafures which your wifdom had adopted for the detence of the united kingdom, and for the vigorous profecution of the war. In thefe preparations, I have been feconded by the voluntary exertions of all ranks of my people, in a manner that has, if poffinle, Atrengthened their claims to my confidence and affection. They have proved that the menacts of the enemy have only lerved to roufe their native and hereditary fpirit; and that all other confiderations are loll in a general difpofition to make tho ${ }^{r} e$ efforts and ficrifices, which the honour and the fafety of the kingdom demand at this important and critical conjuncture.
"Though my attention has principally been directed to the great object of internal fecurity, no opportunity has been loft of in aking an impreffion on the foreig: poffeffinns of the enemy. The inands of St Lucia, Tobago, St Picree, and Miquelon, and the fettlements of Demerara and Effequibo, have furrendered to the Britth arms. In the conduet of the operations by which thefe valuable acquifitions have been made, the utmoft prompritude and zeal have been difplay It by the ufficus employed in thofe fervices, and Ly mof furces net.ing under their command by fea and 1.a 1. In Iseland, the leaders and feveral inferior agents in the late traitorous confpiracy, have been brought to juthee, and the public tranquillity has experienced no futher intermption. I indulge the hope that fuch of my deluded fubjects as have fwerved from their allegiance, are now convinced of their error; and that having com-
pared the advantages they derived from the protection of a free conflitution, with the condition of thofe countries which are under the domirion of the French government, they will cordially and zealot fly concur in refifting any attempt that may be made ayainft the fecurity and independence of my united kingdom." -

The iifual addrefs to the throne was unanimounly carried, though Mr Fox complained, that nothing had bepn faid refpecting the flate of our negotiations with Rufiia.

As the debates in parliament during the prefent feftion were by no means very interefting, and as the war to which they alluded, is not brought io a termination, we thall avoid entering into a detail of them. During the winter, the French government continued to repeat with much confidence their threat of inva. fion, and the people of Great Britain remained in daily expectation that a landing would be attempted. Nothing howerer of any importance was done. Bonaparte travelled from Paris to the fea-conft, and back to Paris, repeatedly. It was announced that a body of guides was formed to conduct the invading army, when it fhould have landed in England; and the whole generals and admirals, by whom the expedition was to be conduct cd, were faid to have gone to their refpective pofts. Nothing actually occurred, however, excepting the failing from one French port to another, under the cover of land-batteries, of fmall parties of flat-bottomed boats. Thele at times evaded the vigilance of the Britifh cruifers, though they were frequently alfo captured, or driven afhore, or funk.

We are thus under the neceffity of concluding the prefent article with leaving Britain fill engaged in a war with its ancient enemy. As this war has been reprefented by our moft confpicuous flatefmen as of a moft dangerous nature, and as having brought into the moft ferious hazard our exiftence as an independant flate, it may not here be improper to take fome notice of a fubject which feems to be very defectively underfood both in France and Britain; that is, the relative flrength of the two countries.

The Frush nation confifts of $25,000,000$ of people, and their newly-acquired territories of four or five millious additional. They hold in a fort of vaffalage, or dependence, all Europe to the fouth of the Rhine and the Adige. On the other hand, the population of Gieat Britain and Ireland amounts only to about 14000,000 , and, of the $\int$, a great part of the population of Ireland, may, in the prefent times, in confequence of their difaffection; be jufly confidered as a diminution from the frength of the empire, fo that the effective population of Great Britain may perhaps be accounted as equal only to one half of that of France. The French are alfo confidered as pofferting this ndvantage if a military conteft, that being chiefly an Ägricultural people, not depending for their fupport on trade or manufactures, the fources of their Ilronsth and riches are lefs injured by war than thofe of Great Bitain. But the chief fource of confuifnce on the part of Fiance in a quarrel with Great Butain refulte from the ftrelgth of their numerous armies, compoled of veier:n foldiers, conducted by he moll experienced and celebrated generals of the prefent ape.

The French government has of late allumed a proud

## B R I [ 72 I$]$ B R I

and menacing tone, as the fronger and more warlike party, and confidering themfelves as in no danger from our hoftility, threatened to fubjugate the inand by invading it with their numerous armies. By their threats they hoped to accomplifin two objects: 1ft, To embarrafs the Britifh government, and reduce the nation to great difficulties in fupporting the ruinous expence attending great military and marine eftablifhments, intended folely for defence; and, 2dly, The French in this way expect to acquire unlimited afcendency upon the continent of Europe, by reprefenting themfelves as incomparably more powerful than Britain, which they are only prevented from reducing into flavery, by the ocean which furrounds it. The fame confiderations produce a confiderable effect in Britain: much defpondency is occafioned by reflecting on the expences neceffary to our fafety againf the prefent power of France; and much unhappinefs, from an apprehenfion that the vigilance of our navy may be evaded by their armies, which we are apt to regard as almoft irrefiftible, in confequence of the fuccefs they ultimately enjoyed during the late war.

It is apprehended, that a more mature confideration of the fubject would difpel the apprehenfions of the Britifh nation, and convince them, that at this moment they are very far from being inferior in ftrength to France, or have any reafon to dread the refult of a military conteft with that power in any form in which it can poffibly occur. It may be true, that France poffeftes a population of 26 millions; but it muft be obferved, that it is only a very fmall proportion of that population that can be employed in war; a fufficient number muft remain at heme to proride bread for the whole, and, by their induftry, to defray the enormous expence attending modern military operations, efpecially in offenfive war. But the fituation of the Britifh nation is very different. The Britifh iflands, no doubr, contain a population lefs numerous than that of France, but the people of this country are not, like them, under the necelfity of drawing their fubfitence from the foil of their own country. The Britifh iflands only form the metropolis of a vaft empire in diftant regions. In the eaft, an induftrious and civilized race of men, five times more numerous than the inhabitants of Britain, upon one of the moft fertile portions of the globe, are fubject to our dominion; and whatever can be fpared from the fruits of their induftry, is annually tranfported to Europe, and expended upon the fubfiftence, the defence, and the luxuries of the Britifh nation. In the weft, alfo, the induftry of a different race of men is employed in producing the mont valuable objects of neceffity and luxury, and the profits of their labour centre in Great Britain. Hence it is, that the foil of our European territory is not employed in producing bread for the people, but in a great meafure in fupporting the animals that form the mannificent equipages of the rich, or in fupplying butchers meat for a luxurious nation. Our country is in fome meafure converted, like ancient Italy in the time of the Romans, into gardens and pleafure grounds, while we procure grain from foreign countries.

It is in vain, therefore, that France pofienes a fuperior European population. In the fate of things now deferibed, it is impoffible for her to fupport the fame number of European foldiers that Britain may do.

Vor. IV. Part II.

Every foldier France fends out, muft be maintained and clothed by the induftry of Frenchmen, exerted upon a European foil, of far inferior fertility to that which is cherifled by tropical rains, or the periodical floods of the Ganges. Whereas the Britifh foldier is not fupported merely by Britih induftry, but by the induffry of the natives of Hindoftan, or of the labourers of Jamaica. In this view, by curtailing in a moderate degree her luxury, Britain might convert an immenfe proportion of her population to military fervice, fo as far to exceed any numbers, that during a length of time France could maintain in arms againf her ; for this fimple reafon, that almoft every Britihh fubjcet may be faid to be fupported by the labour of eight or tetu perfons, in a more fertile country than that of France. In this refpeet, Britain refembles ancient Sparta. The citizens of that flate were free, hut each of them was a foldier, becaufe he was fupported by the induftry of a fubjugated race called Helots. What thefe laft were to the Spartans, the Hindoos in the Eift, and the Africans tranfported to the Wefl India iflands, now are to the Britilh nation.

It is alfo to be remarked, that the induftry exerted in Britain is of a more profitable nature than that of France, in as much as manufacturing and commercial fates always acquire greater riches than thofe employed in agriculture alone. We are, therefore, better able to fupport the expence of a protracted war, than the French can poffibly be. Nor is any injury which they can do to our commerce an obje et of ferious alarm. By refufing to trade with us, they only prevent themfelves from acquiring wealth. All Afia and America are open to us, and no exertions of political power have hitherto been found able to exclude the Britioh manufactures from the continent of Europe.

Even the engines of war, we poffefs in a fuperior degree to France. In confequence of the expertneis of our artifts, all kinds of inftruments of deffruction are here produced in greater abundance and with more facility; and our wealth has given us the command of the means of bringing into the field an innumerable cavalry, which could not fail inftantly to embarrafs an invading enemy, and by cutting off every means of communication or fupply, ultimately to reduce them to ruin, with little lofs or difliculty to ourfelves. We are, indeed, accuffonsed greatly to ovcrrate the evils attending invafion. It ought to be recollected, that our wealth by no means confifts merely of what appears upon the furface of the Britifh foil. It confifts in a confiderable degree of our diftant poffeffions, which are protected by our navy; and all the damage that an invading enemy could commit, hemmed in, as ho would be, by our cavalry, could not exceed a few millions fterling, which would prove no caufe of embarrafiment to the finances of Britain.

With regard to the military reputation of the prefeat French armies, it may be remarked, that it is only of a recent date. In the year 1789, the French army was only the fourth in Europe. It it is now the firf, this circumflance proves, that military Rkill is no inacceffible attainment. Well educated men are far more numerous in Great Britain than they ever were in France; and as their natural courage is not inferior, the:e ferms no reafon to doubt, that they might fpeedily ${ }_{4} Y$

## 13 R I

Britain. be enabled to excel their antagonifs in the art of war, as much as they do in all other arts.

It feems, therefore, a falle idea, that in a conteft with France, Britain owes her fafety merely to the ocean. Were Britain fituated where Spain now is, without any other alteration of circumftance, there feems every reafon to believe, that the Britifh armies would fpeedily appear fuperior to the French. By riches drawn from diftant countries, more numerous armies could at all times be maintained in the field; and as thefe armies would centain a far fuperior number of well educated and accomplifhed men, than would appear againf them, they could not fail fpeedily to acquire fuperior fkill, reputation, and fuccefs in war.

As matters actually fland, with a reftefs military government at the head of France, it is undoubtedly neceflary for the Britilh nation to be upon its guard, and to maintain itfelf in a flate of conftant preparation again!t that power. For this purpofe, bodies of men voluntarily arming themfelves, ought not to be entirely relied on. 'The whole youth of the Britifh ifands ought, at a certain age, to be regularly trained to military difcipline. We hould thus be in fome meafure converted into a military people, qualified at all times to protect, not merely our European illands, but the remote poffeffions of which we are the mafters. In fuch a flate, it might perhaps become a queftion with prudent politicians, how far we ought not to confider it as a nectflary ftipulation in any future treaty of peace, that France hhould acquire no territory out of Europe. Thus the would be prevented from obtaining a navy, and thus our foreign poffeffions would enable Britain permanently to retain her relative ftrength, notwithflanding the European conquefts of France.

New Brigain, a large country of North America, called alfo Terra Labrador, has Hudfon's bay and Atrait on the north and weff, Canada and the river St Lawrence on the fouth, and the Atlantic ocean on the eaft. It is fubject to Great Britain, but yields only Ikins and furs. The following is the beft defcription of this country that hath yet appeared. It was drawn up by the commander of the Otter foop, and commuPbil. Tranfinicated to the Royal Society, by the honourable Daines vol. txiv. Barrington in 1774.
p. 372. "There is no part of the Britifh dominions fo little known as the immenfe country of Labrador. So few have vifited the northern parts of this $v \mathrm{v}$ ft country, that almof from the ftraits of Belleille until you come to the entrance of Hudfon's bay, for more than ten degrees of latitude, no chart which can give any toleyable idea of the coaft hath been hitherto formed. The barrennefs of the country explains why it has been fo feldom frequented. Here avarice has but little to feed on.
"Pcrbaps, without an immoderate thare of vanity, I may venture to prefume, that, as far as 1 bave been, which is to the latitude of 59.10. the draught which I have been able to form is by much the belt of any that has hitherto been made.
"Others have gone before me, bleft with abilities fuperior to mine, and to whom I hope to be thought equal unly in affiduity. But I had advantages of which they were deftitute: with a fmall veffel, and having an Indian with me, who knew every rock and fhoal upan
the coaft, I was enabled to be accurate in my obfer- $\frac{7}{3}$ Britait vations; and thefe are the reafons why I deen my own Retch preferable to all others.
"As this country is one of the moit barren in the whole world, fo its fea coaft is the moft remarkable. Bordered by innumerable iflands, and many of them being a confiderable diftance from the main land, a thip of burden would fail a great way along the coalt without being able to form any notion of its true fitua. tion.
"Hence it is that all the charts of it have been fo extremely erroneous; and hence arofe thofe opinions that fome of the inlets extended a vaft diftance into the country, if not quite into the fea of Hudfon's bay.
"Davis's inlet, which has been fo much talked of, is not 20 leagues from the entrance of it to its extremity.
"The navigation here is extremely hazardous. Towards the land, the fea is covered with large bodies and broken pieces of ice; and the farther you go northward, the greater is the quantity you meet with.
"Some of thofe maffes, which the feamen call iflands of ice, are of a prodigious magnitude; and they are generally fuppofed to fwim two-thirds under water. You will frequently fee them more than 100 feet above the furface; and to thips in a ftorm, or in thick weather, nothing can be more terrible.
"Thofe prodigious pieces of ice come from the north, and are fuppofed to be formed by the freezing of cataracts upon the lands about Eaft Greenland and the pole. As foon as the feverity of the winter begins to abate, their immenfe weight breaks them from the More, and they are driven to the fouthward. To the miferable inhabitants of Labrador, their appearance upon the coait ferves as a token of the approach of fummer.
"This vaft tract of land is extremely barren, and altogether incapable of cultivation. The furface is everywhere uneven and covered with large ftones, fome of which are of amazing dimenfions. There are few fprings; yet throughout the country there are prodigious chains of lakes or ponds, which are produced by the rains and the melting of the fnow. Thefe ponds abound in trout, but they are very fmall.
"There is no fuch thing as level land. It is a country formed of frightful mountains, and unfruitful valleys. The mountains are almoft devoid of every fort of herbage. A blighted flarub and little mofs is fometimes to be feen upon them, but in general the :bare rock is all you behold. The valleys are full of crooked low trees, fuch as the different pines, ipruce, birch, and a fecies of cedar. Up fome of the deep bays, and not far from the water, it is faid, however, there are a few fticks of no inconfiderable fize. In a word, the whole country is nothing more than. a prodigious heap of barren rocks.
"The climate is extremely rigorous. There is but little appearance of fummer before the middle of July-; and in September the approach of winter is very evident. It has been remarked, that the winters within thefe few years have been lefs fevere than they have been known heretofore. The caufe of fuch an alteration it would be difficult to difcover.
16. All along the coall there are many rivers that

## B R I

Eritain emply themfelves into the fea, yet there are but few of any condideration; and you mull not imagine that the largelt are any thing like what is generally underftood by a river. Cuftom has taught us to give them this appellation; but the greatell part of them are nothing more than broad brooks or rivulets. As they are only drains trom the ponds, in dry weather they are everywhere fordable; for rumning upon a folid rock, they become broad without having a bed of any depth below the lurface of the banks.
"The fuperficial appearance of this countay is extremely unfavourable. What may be hidden in its bowels, we cannot pretend to fuggeft : probably it may produce fome copper; the rocks in many places being impregnated with an ore of that refemblance. Something of a horny fubitance, which is extremely tranfparent, and which will fcale out into a number of fmall theets, is often found amongit the ftones; there are both black and white of this fort, but the black is the moft rare. It has been tried in fire, but feems to be nowife affected by heat.
"The fpecies of wood here are not very various: excepting a few thrubs which have as yet received no name from the Europeans, the principal produce of the country are the different forts of fpruce and pine. Of thefe, even in the more fouthern parts, there is not abundance; as you advance northwards they gradually diminifh; and by the time you arrive at the 6oth degree of latitude, the eye is not delighted with any fort of herbage. Here the wretched refidents build their mi ferable habitations with the bones of whales. If ever they cheer their aching limbs with a fire, they gather a few fticks from the fea-hore, which have probably been wathed from Norway or Lapland. Here a valt quantity of fnow remains upon the land throughout the year.
"Although the winter here is fo exceffively rigid, in fummer the heat is fometimes difagreeable; and in that feafon the weather is very moderate, and remarkably ferene. It is but feldom foggy, fpeaking comparatively between this and Newfoundland; nor are you fo frequently liable to thofe deftructive gales of wind which vifit many other parts of the globe.
" It is in general high land, and fometimes you meet with mountains of an aftonifhing height; you are alfo frequently piefented with propeets that are really awful, and extremely romantic.
"The inhabitants of New Britain are called E/kimaux." See Greenland and Hodson's Bay.

BRITANNICUS, ton of the emperor Clatudius by Meffalina, was ixcluded from the empire after his tather had married Agrippina; who put her fon Nero on the throne, and caufed Britannicus to be poifoned A. D 55 .

Britannicus, or Britannico, Fobn, an eminent Itahin Icholar of the 15 h century, was born in the Breician territory, of a timily originally from Britain. He publifted notes on Perfius, Juvenal. Terence, Statius, and Ovid, with annotations on Pliny"' Natural Hiftory, which laft were publihed after his death. He died in 1510.

BRITE, or Bright, in Hufbandry. Wheat, barley, or any orher er in, is faid to brite, when it grows over ripe and thaters.

BRITTANY, or Bretagne, a confiderable pro.
vince of France, which is 150 milcs in length and "ritelenef, it 2 ab beadth. It is a peninlula, lurrounded on all $\qquad$ -rition. fides by the ocean except on the eafl, where it juins to Anjou, Muine, Normandy, and Poitou. It is divided into the upper and lower; and therein are large forefts. It carries on a great trade, by reafon of the many harbours on its coalls. It was united to the crown of France in 1532. Rennes is the capital town. According to the new divifion of France, Brittany is divided into feveral depatments.

BRI'TTLENESS, that quality of bodies on ac. count of which they are denominated brithle, or which fubjects them to be eafily broken by preffure or percuffion.

Brittle bodies are extremely hard; a very fmall percuffion exerts a force on them equivatent to the greateft preffure, and thus may eafly break them. This effcet is particularly remarkable in glafs fuddenly cooled, the brittlenefs of which is thereby much increafed. Tin, though in stfelf tough, gives a brittlenefs to all the other metals when mixed therewith. The brittlenefs of glals has been faid to arife from the beterogeneity of the parts whereof it is compoled, as falt and fand can never bind fufliciently together: but this cannot be the cafe; for the pure calces of metals, or any other fimple fubilances, when vitrified, become britte alfo. In timbers, brittlenefs feeres to be connected with durability; the more bittle any fort of wood is, the more durable it is found. Thus oak is of very long duration; while beech and birch, as being tough, prefently rot, and are of little fervice in building.

BRITTON, Tномas, the famous mufical fmallcoal man, w:s born at Higham Ferrers in Northamptonlhire. He ferved his time in London, where he let up in a Itable, next door to the little gate of St John of Jerufalem, on Clerkenwell-green, which he converted into a houfe. Here getting acquainted with Dr Garenciers, his near neighbour, he became an excellent chemif, confructing a moveable laboratory which was much admired by all who faw it. His $\mathbb{N k i l l}$ in mufic was nowife inferior to that in chemiftry, either in the theory or practice; be had for many years a well-fre. quented mufical club, meeting at his own little cell; and was as well refpected as known by perfons of the fret quality; being, above all, a valuable man in his moral character. In Ward's account of clubs, we are told that "Bitton's was firft begun, or at lealt confirmed, by Sir Roger L'Eftrange, a very mufical gentleman; and that the attachment of Sir Roger and other ingenious gentlemer, lovers of the mufes, to Britton, arofe from the profound regard he had in general to all manner of literature. It is obfervable, that this meeting was the firlt of the kilud, and the undoubted paren of fome of the moll celebrated concerts in London. Ward, who was his contemporary, fays, that at the firft inftitution of it, his crincelt wa, performed in his remn houfe, which is thas defcribed. "On the ground floor was a repofitory for fmall coal: over that was the concert room, which was very long and narrow; and had a ceiling fo low, that a tall man conld but juf ftad upright in it. The flairs to this room were on the outfide of the houfe, and could icarce be afcended without crawling. The houle itfelf was very old and low built, and in every rcfperf for mean as to be a fit hom

Friven bitation enly for a very poor man." But this man-
bridges. Silk and cotton manufactures are eftablifhed Lrixellum here. It is 220 miles fouth by weft of Paris. E. Long. 1. 45. N. Lat. 45. 15.

BRIXELLUM, in Ancient Geography, a town of Gallia Cifpadana; remarkabie for being the place where Otho killed himfelf after the battle of Dedriacum: now Berfello or Brefello, in the territory of Rhegio.

BRIXEN, The Brshopric of, is feated in Tirol, in Germany, near the frontiers of Friuli and Carinthia, towards the eaf. The bifhop has a vote and feat in the diet of the empire, and furnimes his contingent when any tax is laid on Tirol. The principal places are Brixen, Sertzingen, Breuneck, and Leintz.

Brixen, the capital of the bifhopric of the fame name, and where the bifhop commonly refides, is feated on the river Eifache, at fome diftance from the mountain Brenner. It is furrounded with mountains, where there are plenty of vineyards, which yield good red wine. It is a populous town; and the houfes are well built, with piazzas, and are painted on the outfide. The public buildings are very handfome, and there are feveral fpacious fquares. It is much frequented, on account of the mineral waters that are near it. E. Long. ii. 50. N. Lat. 46. 35.

BRIXIA, in Ancient Geography, a town of the Cenomani in the Regio Tranlpadana: now Brefcia, capital of the Brefciano.

BRiZA, euaking-grass. See Botany Index.
Brize, in Hufbandry, denotes ground that has lain long untilled.
Brize Vonts, fhelters ufed by gardeners who have not walls on the north fide, to keep cold winds from damaging their beds of melons. They are inclofures about fix or feven feet high, and an inch or more thick; made of flraw, fupported by fakes fixed into the ground, and props acrofs on both infide and outfide; and faftened together with willow-twigs, or iron wire.

BROACH, Brocha (from the French broche), denotes an awl or bodkin; alfo a large packing-needle. A fit, in fome parts of England, is called a broach; and from this word comes to pierce or broach a barrel. In Scotland, broach, broche, or brotche, is the name of an utenfil which the Highlanders ufed, like the filula of the Romans, to faften their veft. It is ufually made of filver, of a round figure, with a tongue croffing its diameter, to faften the folds of the garment; fometimes with two tongues, one on each fide of a crofs-bar in the middle. There are preferved, in feveral families, ancient brotches of very elegant workmaulhip, and richly ornamented. Some of them are infcribed with names, to which particular virtues ufed to be attributed; others are furnifhed with receptacles for relicks, fuppofed to preferve from harm. So that thefe brotches feem to have been worn not only for ufe but as amulets. One or two of this fort are figured and defcribed by Mr Pennant, Tour in Scotland, i. go. iii. 14. edit. 3 d.

BROADCAST, as oppofed to the drill-hufbandry, denotes the method of cultivating corn, turnips, pulfe, clover, the foreign graffes, and moft other field plarits, that are not tranfplanted, by fowing them with the hand; in which method they are feattered over the ground at large, and thence faid to be fown in broad-
calt. This is called the old bufoandry, to diftinguifh it from the drill, horfe-hoeing, or new hußandry. See Agriculture Inde.s.

BroAd-Picce, a denomination given to certain gold pieces broader than a guinea; particularly Carolufes and Jacobures.

Broan-Side, in the fea-language, a difcharge of all the guns on one fide of a lhip at the fame time. A broad-fide is a kind of volley of cannonade, and ought never to be given at a diftance from the enemy above mulket-fhot at point-blank.

BROCADE, or Broc.ado, a ftuff of gold, filver, or filk, raifed and ennehed with tlowers, foliages, and other ornaments, according to the fancy of the merchants or manufdêurers.

Formerly the word fignified only a fluff, wove all nf gold, both in the warp and in the woof, or all of filver, or of both mixed together; thence it paifed to thufe thuffs in which there was filk mixed, to raife and terminate the gold or filver flowers: but at prefent all atuffs, even thofe of filk alone, whether they be grograms of Tours or of Niples, fatins, and even taffeties or luftrings, if they be but adorned and worked with fome flowers or other figures, are called brocades.

In manufacturing brocades, the flatted gilt wire is fpun on threads of yellow filk approaching as near as may be to the colour of gold itfelf. The wire, winding off from a bobbii, Ewifs about the thread as it fpins round; and, by means of curious machinery, too complex to be defcribed here, a number of threads are thus twifted at once by the turning of one wheel. The principal art confifts in fo regulating the motion, that the feveral circumvolutions of the flatted wire on each fide may juft touch one another, and form, as it were, one continued covering. It is faid, that at Milan there is made a fort of flatted wire, gilt only on one fide, which is wound upon the thread fo that only the gilt fide appears; and that the preparation of this wire is kept a fecret, and has been attempted in other places with little fuccefs. There is alfo a gilt copper wire, made in the fame manner as the gilt filver: Savary obferves, that this kind of wire called falfe gold is prepared chiefly at Nuremberg; and that the ordinances of France require it to be $\uparrow$ pun, for its diftinction from the gilt filver, on flaxen or hempen threads. One of our writers takes notice, that the Chinefe, inftead of flatted gilt wire, ufe flips of gilt paper, which they both interwcave in their fuffs and twift upon filk threads: this practice he inconfiderately propofes as a hint to the Britifh weaver. But, whatever be the pretended beauty of fluffs of this kind of manufacture, it is obvious that they muft want durability. The Chinefe themfelves, according to Du Halde's account, fenfible of this imperfection, fcarcely ufe them any otherwife than in tapeflries, and fuch other ornaments as are not intended to be much worn, or expofed to moifure.
Eswis's Commerce of Arts.
 plate of gold or filver. 'ife l'rench minillag, cver sigilant for the advancoment of arts and commerce, judged this nanufaciore important enough to deferve their attention; and accordingly, for contriving the machinery, they enganed the ingenious M. Vaucanfon, known throughout Europe for his curious pieces of mechanifm, who, in the memoirs of the academy for the year 1757 , lately printed, gives an account of his fuccefs, and of the eflablifhment of fuch a manufacture at Lyons.

The lower roll is made of wood, 32 irches in length and 14 in diameter ; the upper one of copper, 36 inches lons and 8 in diameter: this lalt is hollow, and open at one end, for introducing iron heaters. For making the rolls cylindrical, he has a purticular kind of lathe, wherein the cutting tool, which the mon dexterous hand could not guide in a ftraight line through fuch a length as 36 inches, is made to flide, by means of a ferew, on two large fteel-rulets, perfectly ftraight, and capable of being moved at pleafure, nearer, and always exactly parallel, to the axis of the roll.

He firft difpoled the rolls nearly as in the commors flatting mill. In this difpofition, ten men were farcely fufficient for turning them with force enough to duly extend the gilding ; and the collars, in which the ases of the rolls turned at each end, wore or gulled fo faft, that the preffure continually diminifhed, infomuch that a piece of fuff of ten ells had the gilding fenfibly lefs extended on the lalt part than on the firlt. He endeavoured to obviate this inconvenience by forewing the rolls clofer and clofer in proportion as the Auff pafied through, or as the wearing of the collars occafioned more play betwcen them; but this method produced an imperfection in the fluff, every turn of the forew making a fenfible bar acrofs it. To leffen the attrition, each end of the asis, inftead of a collar, was made to turn between three iron cylinders called fricion qubeels: but even this did not anfwer fuly, for now another fource of unequal preffore was difcovered. The wooden roll, being compreffible, had its diameter fenfibly diminifhed : it likewife loft its roundnefs, fo that the preffure varied in different points of its revolution. On trying different kinds both of European and Indian woods, all the hard ones fplit, the foft ones warped without fplitting, and of more than 20 rolls, there was not one which continued round for 24 hours even without being worked in the machine.

Thefe failures put him upon contriving another method of preffing the rolls together, fo that the force fhould always accommodate itfelf to whatever inequalities might happen. The axis of the copper roll being made to turn between friction wheels as before, that of the wooden one is preffed upwards by a lever at each end furnifhed with a half collar for recciving the end of the axis. Each lever has the end of its flort arm fupported on the frame of the machine, and the long arm is drawn upwards by an iron rod communicating with the end of the Gort arm of another lever placed horizontally: to the long arm of this lever is hung a weight, and the levers are fo proportioned, that a weight of 30 pounds prefles the rolls together with a force equivalent to 17,536 pounds, which was found to be the proper force for the fufficient extenfion of the gilding. By this contrivance four men
can turn the rolls with more eafe than ten can turn thole which are kept topether by fcrews; and the fame weight acting uniformly in every part, the preffure continues always equal, though the woorien roll Thould even becnme oval, and though the fuuff be of tnequal thicknefs.

A piece of cloth, of about two ells. is fewed to the beginning and end of the Ituff, to keep it out to its width when it enters and parts from the rolls, which could not be done by the hands for fear of burning or bruifing them; as it would take too much time to few thefe cloths to every fmall piece of an ell or two, a number of thefe is feved together. The Atuff is rolled upon a cylinder. which is placed behind the machine, and its axis preffed down by fprings to keep the Ruff tight as it comes off. Four iron bats, made red hot, are introduced into the copper roll, which in half an hour acquires the proper degree of heat, or nearly fuch a one as is ufed for the ironing of linen: the wooden roll is then laid in its place, and the machine fet to work. If more than 30 ells are to be pafled at once, the wooden roll muft be changed for snother, for it will not bear a long continuance of the heat without danger of fplitting : and therefore the manufacturer thould be provided with feveral of thefe rolls, that when one is removed, another may be ready to fupply its room: as foon as taken off from the ma. chine, it Chould be wrapt in a cloth and laid in a moift place.

The principal inconvenience attending the ufe of this machine, is that the heat neceffary for extending the gilding, though it improves the brightnefs of white and yellow filks, is injurious to fome colours, as crimfon and green. A double preflure will not lup. ply the place of leat ; and the only method of preventing this injury, or rendering it as light as poffible, appeared to be, to pafs the Atuff through with great celerity.

Method of clearing Brocadr when fullied. For this purpofe neither alkalies nor foap muft be ufed; becaufe the former, while they clean the gold, corrode the filk, and change or difcharge its colour; and the latter alfo alters the fhade, and even the fpecies, of certain colours. But Spirit of wine may be ufed without any danger of its injuring either the colour or quality of the fubjeet; and in many cales proves as effectual for reftoring the luftre of the gold as the molt corrofive detergents. A rich brocade flowered with a variety of colours, after being difagreeably tarnimed, had the luftre of the gold perfestly reftored by wafhing it with a foft bruft dipt in warm fpirit of wine, and fome of the colours of the filk which were likewife foiled became at the fame time remarkably bright and lively. Spirit of wine feems to be the only material adapted to this intention, and probably the boafted fecret of certain artilts is no other than this fpirit difguifed. Dr
Cmmarce of Lewis fays he does not know of any other that is of
Arbe, p. 39- fufficient activity to difcharge the foul matter, without being hurtful to the filk. As to powiders, however fine, and however cautioufly ufed, they foratch and wear the gold, which bere is only fuperficial and of extrome tenuilv.

Broc ede-Sbell, the Englith name of a fpecies of Limax.

BKOCATEL, or Brocadel, a kind of coarfe bró Brocatel cade ; chielly ufed for tapelt y.

BROCCOLI, a kind of cabbage cultivated for the ufe of the table. See Rrassica.
broche, or Broach, See Proach.
BROCK, among Iportfmen, a term uftd to denote a badge.- A hart, too, of the third year, is called a brock, or iroket; and a hind of the fame year, is called a brocket's filler.

BROD, a town of Hungary, in the county of Poffega in Sclavonia, feated on the river Save. It was once more confiderable than at prefent ; and is memorable for a victory obtained over the Turks in 1668. E. Long. 18. 36. N, Lat. 45. 20.

BRODEAU, Jонn, in Latin Brodeus, a great critic, on whom Liphus, Scaliger, Grotius, and all the learned, have beflowed grear encumiums, was de. fcended from a noble family in Frince, and born at Tours in 1500. He was liberally educated, and pla. ced under Alciat to ftudy the civil law ; but foon forfaking that, he gave himlelf up wholly to languages and the belles lettres. He travelled into Italy, where he became acquainted with Sadolet, Bembuv, and other famous wits: and here (lays Thuanus) he applied himfelf to the fludy of mathematics, philofophy, and the facred languages, in which he made no frall proficiency. Then, returning to his own country, he led a retired, but not an idle, life, as his many learned lucubrations abundantly teftify. He was a man free from all ambition and vain glory, and fuffered his works to be publifhed rather under the fanction and authority of others than under his own. His chief works are, I. A commentary on the Anthologia. ${ }^{2}$. Ten books of milcellanies. 3. Nores on Oppiari, Euripides. \&ec. He dieit in 1563 , agea 63 .

BRODERA, or Brodra, a town of Afia, in the empire of the Great Mugu:. It ftands in a large fandy plain, on the little river W fler ; and is fortified, after the old way, with pretty good walls and towers. It is inhabited by Banians and callico-weavers. The country about it produces plenty of gum-lac and indigo. E. Long. 72. 30. N. Lat. 22. 10.

BROGLING ror eels; the lame with SNigLING.

BROGLIO, a town of Piedmont in Italy, and capital of a county of the fame name, fituated nerar the frontiers of Provence, in E. Long. 6. 42. N. Lat, 44. 12.

BROKE, SIR Robert, lord chief juflice of the common pleas, was the fon of Thonas Broke, Elq. of Claverly in Shrof fhire, and educated at Oxford ; from whence he removed to the middle temple, and loon became a very eminent lawyer. In the year 1542. He was chofen fummer reader, and double reader in 1550. In $155^{2}$, he was made ferjeant at law; and in the year following (firt al Queen Mary), lord chicf juftice of the common pleas; about which tume he raceived the honour of knighthood. Stow fays he was recorder of London and fpeaker of the houfe of commons; ulich is confirmed by a manufeript in the Athmolean library. He died and was buried at Claverly in Shropflime, the place of his nativity, in 1558 . Wood gives him the clarakter of a great lawy ; ard an uproght judge. His works are, 1. An abridgment containing an abflract
tain cafes arjudged in the reign of Henry VlII. Edward VI. and Queen Mary. 3. Reading on the flatute of limitations, $3^{2}$ Hen. VIII. c. 2.

BROKEN wind, among farriers. See Farriery Index.
BROKER. The origin of the word is contefted; fome derive it from the French broier, "to grind;" others from brocarder, "to cavil, or triggle;" others deduce broker from a trader broken, and that from the Saxon broc, "misfortune," which is often the true reafon of a man's breaking. In which view, a broker is a broken trader by misfortune; and it is faid none but fuch were formerly admitted to that employment.

Broxers are of three kinds; exchange-brokers, flock-brokers, and pawn-brokers.

Exchange-Broxers, are a fort of negotiators, who contrive, make, and conclude bargains between merchants and tradefmen, in matters of money or merchandife, for which they have a fee or premium. Theie, in old Englith law-books, are called broggers, and in Scotland, broccarii, i. e. according to Skene, mediators or interceffors in any contract, \&c.

They make it their bufinefs to know the alteration of the cou-fe of exchange, to inform merchants how it goes, and to notify to thofe who have money to receive or pay beyond lea, who are proper perfons for negotiating the exchange with; and when the matter is accomplifhed, that is, when the money is paid, they have for brokage 2 s . per 100 l . Aterling. Thefe, by the flatute of 8 and 9 William III, are to be licenfed in London by the lord mayor, who gives them an oath, and takes bond for the faithful execution of their offices. If any perfon thall act as a broker without being thus licenfed and admitted, he fhall forfeit the fum of 5001 .; and perfons employing him, 51. ; and brokers are to regifter contracts, \&c. under the like penalty: ulfo brokers thall not deal for themfelves, on pain of forfeiting 2001. They are to carry about with them a filver medal, having the king's arms and the arms of the city, and pay 4os. a-year to the chamber of the city.

In France, till the middle of the $17^{\text {th }}$ century, their exchange-brokers were called courtiers de change; but by an arret of council in $\mathbf{1 6 3 9}$, the name was changed for that more creditable one of agent de change, banque, et finance; and in the beginning of the 18 ch contury, to render the office ftill more honourable, the title of king's counfellors was added.

At Grand Cairo, and leveral places of the Levant, the Arabs, who do the office of exchange-hrokers, are called confuls; the manner of whofe negotiating with the European merchants has fomething in it fo very particular, that we have referred it to a diftinct article. See Consuz.

The exchange-brokers at Amferdam, called makelders, are of twn kinds; the one, like the Englifh. called fworn-brokers, becaufe of the oath they take befuse the burgominters; but the others negotiate without any commiffion, and are called walking-brokers. The firf are in number 395 ; whereof 375 are Ciriftians, and 20 Jews: the others are near double that number; fo that in Amfterdam there are near 1000 exchange-brokers.- The difference hetween the two confilts in this: , The books and perfons of the former are allowed
as evidence in the courts of juftice; whercas, in cafe of frokens difpute, the latter are difowned, and their bargains dif. annulled.
The fee of the fworn exchange-brokers of Amflerdam is fixed by two regulations, of 1613 and $16_{23}$, with regard to matters of exchange, to 18 fols for 100 lives de gros, or 600 florins; i . e. three fols for 100 florins; payable, half by the drawer and half by the perfon who pays the money. But cuflom has made confiderable alterations herein.

The Jews, Armenians, and Banians, are the chief brokers throughout moft parts of the Levant and the Indies. In Perfia all affairs are tranfacted by a fort of brokers whom they call delal, i. e. great talkers, Their manner in making their markets is very fingular: after the brokers have launched out into long, and ufually impertinent difcourfes, coming towards a conclufion, they only converfe with their fingers. The buyer's and feller's broker each takes the other by the right hand, which they cover with their coat or a bandkerchief: the finger flretclied out fands for fix ; bent for five; the tip of the finger for one; the whole hand for 100 ; and the hand clinched for 1000 . They will exprefs even pounds, ftilling c , and pence, by their hands. During all this myflic commerce, the two brokers appear as cold and compofed as if there were nothing pafling between them.

The French diftinguilh two kinds of brokers; one for the fervice of merchants, the other of manufacturers, artificers, and workmen. The bufinefs of the form mer is to facilitate the fale of goods in the wholefale and mercantile way; that of the other, to procure the goods wanted for manufacturers, artificers, \& c. or to fell their goods when made. At Paris there is fcarce a company of tradefmen, or even mechanics, but have their brokers, who are ufually taken out of their body, and make it their fole bufinefs to negotiate in the particular kinds of goods to which fuch company is by flatutes reftrained. There are brokers for drapery, brokers for grocery, brokers for mercery, \&c. There are even brokers for tanners, curriess, cutlers, and the like.

Stosk-Brozers, are thofe who are employed to buy and fell fhares in the joint flock of a company-or corporation, and alfo in the public funds. As the practice of fock-jobbing has been carried to fuch an excefs as became not only ruinous to a great number of private families, but even affected, or at leaft might foon affect, the public credit of the nation, the legiflature thought fir to put a fop to it, or at leaft to bring it within certain.bounds, and under fome regulation. The negotiations, \&c. of thefe brekers are regulated by ftat. 6 Geo . I. cap. 18. and 7 and 10 Geo. II. cap. 8. which, among other things, enacted, that contrakts in the nature of wagers, \&c. incur a penalty of 500l. and by the fale of fock, of which the feller is not poffeffed, a forfeit of 1001. and that brokers keep a book, in which all contracts, with their dates, and the names of the parties concerned, fhall be entered, on pain of 501.

Pawn Broekrs, perfons who keep fhops, and lend money upull pledges to neceffitous perfons, and moit commonly at an exorbitant interef. They are more properly ftyled pawn-brokers, or sallymin; fometimes fripers, or friperers. Thele are meant in I Jac. I. cap-

## B R O

Brokers, Broine.
xxi. Sect. j. where it is declared, that the fale of goods wrongfully taken to any broker, or pawn-broker, in London, Weftminfter, Southwark, or within two miles of London, does not alter their property. And (fect.7.) if a broker, having received fuch goods, fhall not, upon requelt of the owner, difcover them, how and when he came by them, and to whom they are conveyed, he fhall forfeit the double value thereof, to be recovered by action of debt, \&c.

In the cities of Italy, there are companies eftablifhed by authority for the letting out money on pawns, called mosnis of piety; a title little becuming fuch infitutions. In fome parts of Italy, they have alfo mounts of piety of another kind, wherein they only receive ready money, and return it again with intereft, at a certain fum per annum. At Bologna, they have feveral fuch mounts, which are diftinguifhed into frank and perpetual: the intereft of the former is only four per cent.; that of the latter, leven.

Brorers are alfo thofe who fell old houfehold furniture, and wearing apparel, \&c.
BROME, Alexander, a poet, and attorney in the lord mayor's court in the reign of Charles II. was the author of the greateft part of thofe fongs and epigrams which were publifhed in favour of the royalifts, and againtt the rump, as well in Oliver Cromwell's time as during the rebellion. Thefe, together with his Epifles and Epigrams tranflated from different authors, were all printed in one volume 8vo after the refloration. He alfo publifhed a verfion of Horace, by himfelf and others, which is very far from being a bad one. He left behind him a comedy entitled The Cunning Lovers: and the world is indebted to him for two volumes of Richard Brome's plays in octavo ; many of which, but for his care in preferving and publifhing them, would in all probability have been entirely loft. He died in 1666.

Brome, Richard, a dramatic writer who lived in the reign of King Charles I. and was contemporary with Decker, Furd, Shirley, \&c. His extraction was mean, he having been originally no better than a menial fervant to the celebrated Ben Juhnfon. He wrote himfelf, however, into high reputation, as is teftified unt only by various commendatory verfes written by his contemporaries and prefined to many of his plays, but alfo by fome lines which his quondam mafter addrefled to him on account of his comedy called The Nortbern Lafs. Brome, in imitation of his mafter, laid it down as his firlt great point, to apply clofely to the Itudy of men ard manuers. His genius was entirely turned to comedy; and therefore his proper province was obfervation more than reading. His plots are all his own, and are far from being ill conducted; and his charaEters, which for the moft part are ftrongly mark. ed, were the offspring of his own judgment and experience, and his clufe attention to the foibles of the human heart. In a word, his plays in gencral are good ones; met with great applaufe when firf acted; and as Langbain informs us, were thought by the players worthy to be revived, to their own profit and the author's honour, in that critical age which he himfelf lived in. Nay, we havĕ had a proof, even in our own time, of the merit of one of his comedies, which with a very litule alteration has latcly been revived, and with great fuccefs, viz. The Yovial Crewt, which for 1:0 lefs
than three feafons running brought crowded audiences Bromelia, to the theatre-royal in Covent Garden at all the frequent repetitions of its performance. The comedies which the author left behind him are 15 in number; ten of which are collected together, as above mentioned, in two volumes ochavo. He joined alfo with Thomas Heywood in a play called The Lancafbire Witches.

BROMELIA, the pine-apple: for the claffification fee Botany Index. In the natural method it ranks under the 10th order, Coronaric.

As the pine apple, on account of its highly flavour. ed fruit, is a defirable object to thofe who can afford the expence of raifing it, we flall here enter fomewhat into the detail of the moft approved method of cultiva-tion.- The plants are propagated by planting the crowns which grow on the fruit, or the fuckers which are produced either from the fides of the plants or under the fruit: both which are found to be equally good ; although by fome perfons the crown is thought preferable to the fuckers, as fuppofing it will produce fruit fooner than the fuckers, which is certainly a miltake. The fuckers and crowns muft be laid to dry in a warm place for four or five days, or more (according to the moifture of the part which adhered to the old plant or fruit); for if they are immediately planted, they will rot. The certain rule of judging when they are fit to plant, is by obferving if the bottom is healed over and become hard; for if the fuckers are drawn off carefully from the old plants, they will have a hard fkin over the lower part, fo need not lie fo long as the crowns of thofe whofe bottoms are moif. But whenever a crown is taken from the fruit, or the fuckers from old plants, they thould be immediately divelted of their bottom-leaves, fo high as to allow depth for their planting; fo that they may be thoroughly dry and healed in every part, left when they receive heat and moifture they fhould perifh, which often happens when this method is not obferved. If thefe fuckers or crowns are taken off late in the autumn, or during the winter, or early in the fpring, they fhould be laid in a dry place in the flove for a fortnight or three weeks before they are planted; but in the fummer feafon, they will be fit for planting in a week at farthen.

Thefe fhould be planted in a rich good kitchengarden mould, not too heavy fo as to detain the moifure toolong, nor over light and fandy; but where this is wanting, you fhould procure fome freth earth from a good pafture, which hrould be mixed with about a third part of rotten neats dung, or the dung of an old melon or cucumber bed which is well confumed. Thefe fhould be mixed fix or eight months before they are ufed, but if it be a year it will bo the better; and fhould be often turned, that their parts may be the better united, as alfo the clods well broken. This earth fhould not be fcreened very fine; for if you only clear it of the great flones, it will be better fur the plants than when it is made tno fine. You mould olways avoid mixing any fand with the earth, unlefs it be extremely fiff, and then it will be neceffary to have it mixed at leaff fix months or a year before it is ufed ; end it muift be fregoently turned, that the fand may be incorpnrated in the earth lo as to divide its parts: but you foould nut put more than a fixth part

## B R O [729

Bromelia. of fand; for too much fand is very injurious to thefe plants. In the fummer feafon, thefe plants mult be frequently watered; but you fhould not give them large quantities at a time : you muft alfo be very careful that the moiflure is not detained in the pots by the holes being flopped, for that will Coon defroy them. If the feafon is warm, they fhould be watered twice aweek; but in a cool feafon, once a-week will be often enough: and during the fummer feafon you thould once a-weck water them gently all over their leaves; which will wafh the filth from off them, and thereby greatly promote the growth of the plants.

There are fome perfons who frequently thift the fe plants from pot to pot. But this is by no means to be practifed by thofe who propofe to have large wellflavoured fruit: for, unlefs the pots be filled with the roots, by the time the plants begin to fhow their fruit, they commonly produce fmall fruit, which have generally large crowns on them; therefore the plants will not require to be new potted oftener than twice in a feafon. The firt time thould be about the end of April, when the fuckers and crowns of the former year's fruit (which remained all the winter in thofe pots in which they were firf planted) Chould be fhifted into larger pots; i.e. thofe which were in halfpenny or three-farthing pots, thould be put into peniy or at moft three-halfpenny pots, according to the fize of the plants; for you mult be very careful not to overpot them, nothing being more prejudicial to thefe plants. The fecond time for thifting of them is in the beginning of Augult ; when you thould fhift thofe which are of a proper fize for fruiting the following fpring into twopenny pots, which are full large enough for any of thefe plants. At each of thefe times of flifting the plants, the bark-bed hould be firred up, and forne new bark added, to raife the bed up to the height it was at firt made: and when the pots are plunged again into the bark-bed, the plants fhould be watered gently all over their leaves, to wafh off the filth, and to fettle the earth to the roots of the plants. If the bark-bed be well flirred, and a quantity of good freth bark added to the bed, at this latter flifing, it will be of great fervice to the plants; for they may remain in the fame tan until the beginning of November, or fome time later, according to the mildnefs of the feafon, and will require but little fire before that time. During the winter, they will not require to be watered oftener than once a-week, according as you find the earth in the pots to dry: nor fhould you give them too much at each time; for it is much better to give them a little water often, than to overwater them.

You muft obferve never to thift thofe plants which flow their fruit into other pots; for if they are removed after the fruit appears, it will flop the growth, and thereby caufe the fruit to be fmaller, and retard its ripening, fo that many times it will be October or November before the fruit is ripe: therefore you Thould be very careful to keep the plants in a vigorous growing fate from the firf appearance of the fruit, becaufe upon this depends the goodnefs and the fize of the fruit; for if they receive a check after this, the fruit is generally fmall and ill-tafled.- When you have cut off the fruit from the plant whofe kind you are defirous to propagate, you fhould trim the leaves, and

Vol. IV. Part II.
plunge the pots again into a moderate hot-bed, obfer- Eromelis. ving to refrefh then frequently with water, which will caufe them to put out fuckers in plenty; fo that a perfon nay be foon fupplied with plants enough of any of the kinds, who will but obferve to keep the plants in health.

The mofl dangerous thing that can happen to thefe plants is their being attacked by fmall white infects, which appear at firf like a white mildew, but foon after have the appearance of lice : thefe attack both root and leaves at the fame time; and if they are not foon deftroyed, will fpread over a whole Itove in a flort time, and in a few weeks entirely flop the growth or the plants by fucking out the nutritious juice, fo that the leaves will appear yellow and fickly, and have gencrally a great number of yellow tranfparent fpots all over them. Thefe infects, after they are fully grown, appear like bugs, adhering fo clofely to the leaves as not to be eaflly wafthed off, and feenn to have no local motion. They wese originally brought from America upon the plants which were imported from thence; and are probably the fame infects which have deftroyed the fugar-canes of late in fome of the Leeward illands, for upon fome fugar-canes which were fent Mr Miller from Barbadoes he obferved great numbers of thefe infects. Since they have been in England, they have feread greatly in fuch floves where there has not been more than ordinary care taken to deflroy them. They have alfo attacked the orange-trees in many gardens near Lundon, and have done them incredible damage; but they do not endure the cold of our climate in winter, fo that they are never found on fuch plants as live in the open air. The only method yet difcovered for deftroying thefe infeets, is by frequently wafhing the leaves, branches, and ftems, of fuch plants as they attack, with water in which there has been a 1 rong infufion of tobaccu ftalks. But this method cannot be practifed on the ananas plarits, becaufe the infects will faften themfelves fo low between the leaves, that it is impoffible to come at them with a fonge to wafh them off; fo that if all thofe which appear to fight are cleared off, they will foon be fucceeded by a frefh fupply from below, and the roots will be alfo equally infefled at the fame time. Therefore, whenever thefe infects appear on the plants, the fafell method will be to take the plants out of the pots, and clear the earth from the roots; then prepare a large tub, which flould be filled with water in which there has been a flrong infufion of tobacco falks; into this tub you fhould put the plants, placing fome flicks crofs the tub to keep them immerfed in water. In this water they fhould remain 24 hours; then take them out, and with a fponge wafl off all the infects from the leaves and roots, and dip the plants into a tub of fair water, waflsing them therein, which is the moft effectual way to clear them from the infects. After which, you fhould pot them in frefh earth; and, having firred up the bark-bed, and added fome new tan to give a frefh heat to the bed, the pots fhould be plunged again, obferving to water them all over the leaves, and this fhould be repeated once a-week during the fummer feafon; for thefe infects always multiply much fafter where the plants are kept dry, than where they are fometimes fprinkled over with water, and kept in a growing fate. As thefe infects are frequently brought

## B R O [ 730 ] B R O

Bromeeit. over from America on the anamas plants which come from thence, thofe perfuns who procure their plants from thence invuld look carefully over them when they receive them, to fee they lave none of thefe infects on them; for if they have, they will fuon be propagated over all the plants in the fove where they are placed; therefore, whenever they are obferved, the plants fhould be foaked (as before directed) before they are planted into pots.

Such are the direftions generally given with regard to the culture of the pine-apple in this country. Of late, however, fome very confiderable improvements have been made in that article. The leaves of the oak have been fubflituted to the more expenfive bark; and by treating the pines with them, they are found to thrive as well, and to produce as good fruit, as in the other method. Of the proper way of managing thele leaves for the rearing of exotic plants, an account is given under the article Oar-lieaies. But the moft confiderable improvement is that mentioned in the 67 th volume of the Philofophical Tranfactions, where a method is fhown by William Baftard, Efq. of Devonflaire, of raifing thefe fruits in water. His account of this method is as follows.
"Before I enter into the particulars of raifing pineapples in water, it will be neceflary to tell you that my hot-houfe is covered with the beft croun gl lifs, which I apprehend gives more heat than the common fort of green glefs generally ufed for hot-houfes. In the front part of the houfe, and indeed anywhere in the lowet parts of it, the pine-apple planis will not thrive well in water. The way in which I treat them is as follows. I place a melf near the highef part of the back wall, fo that the pine-plants may fand without abfolutely touching the glafs, but as near it as can be; on this thelf I place pans full of water, about feven or eight inches deep; and in thefe pans I put the pineapple plats, growing in the fame pots of earth as they are generally planted in to be plunged into the barkbed in the common way; that is, I put the pot of earth, with the pine-plant in it, in the pan full of water, and as the water decreafes I conftantly fill up the pan. I place either plants in fruit, or young plants as foon as they are well moted, in the fe pans of water, and find they thrive equally well: the fruit reared this way is always much larger, as well as better flavoured, than when ripened in the balk-ked. I have more than once put only the plants themfelves without any earth, I mean after they had roots, into thefe pans of water, with only water fufficient to keep the roots always covered, and found them tlourifin beyond expectation. In my houfe, the fielf I mention is fupported by irons from the top, and there is an intervening fpace of about 10 inches between the back wall and the fhelf. A neighbour of mine has placed a leader ciftern upon the top of the back flue (in which, as it is in contact with the flue, the water is always warm when there is a fire in the houfe), and finds his fruit excellent and large. My fielf does not touch the back flue, but is about a foot above it; and conferquently the water is only warmed by the air in the houfe. Botla thefe methods do well. The way I account for this fuccefs is, that the warm air always afcending to the part where this R.elf is placed, as being the highen part of the houle, keeps it much hot-
ter than in any other part. The temperature at that place is, I believe, feldom lefs than what is indicated by the 73 d degree of Fahrenheit's thermometer, and when the fun thines it is often at above 100 : the water the plants grow in feems to enable them to bear the greatef heat, if fufficient air be allowed; and I often fee the roots of the plants growing out of the holes in the bottom of the pot of earth, and hooting vigoroully in the water.
"My hot-houfe (the dimenfions of which it may be proper to know) is 60 feet long and it feet wide, the llues included; fix feet high in the front, and 1 I feet at the back of the infide of the houfe. It is warmed by two fires. A leaden trough or ciftern on the top of the back flue is preferable to my fhelf, as in it the pine-plants grow much fafter in the winter, the water being always warmed by the flue: of this I have feen the great benefit thefe lan two months in my neighbourhood. It is not foreign to this purpofe to mention, that as a perfon was moving a large pineplant from the hot-bed in my boufe lat fummer, which plant was juft fhowing fruit, by fome accident he broke off the plant jult above the earth in which it grew, and there was no root whatever left to it: by way of experiment I took the plant, and fixed it upight in a pan of water (without any earth whatever) on the fhelf; it there fuon threw out roots, and hore a pineapple that weighed upwards of two pounds."

BROMLEY, a town of Kent in England, fituated on the river RavenBuin, in E. Long. O. 5. N. Lat. 51. 23.

BROMSGROVE, a cown of Worcellerhire in England, feated on the river Salwarp. It is a pretty good town, well inbabited by clothiers; and the market is large for corn, cattle, and all forts of provifions. W. Long. 2. 5. N. Lat. 52.26.

PROMUS, broom-grass. See Botany Index.
BROMY $\triangle$ RD, a town of Herefordhire in Fncland, feated on a rifing ground, and coutaining about 200 houles. W. Long. 2. 46. N. L.at. 52.20.

BRON, a town of Italy, in the duclay of Nilan, where the imperialifts gained an advantage over the French in 1703. E. Long. 10. 0. N. Lat. 44. 50.

BRONCHIA, in Auatomy, the ramifications of the trachea. See Anatomy Index.

BRONCHOCE1,E, a tumour rifing in the anterior part of the neck. See Medicine Index.

BRONCHOTOMY, in Surgery, an incifion made in the afpera arteria, or wind-pipe, which is neceftary in many cafes, and efpecially in a violent quinfey, to prevent fuffocation from the great inflammation or tumor of the parts. It is alfo called laryngotomy and tracheolomig. See Surgery Index.

BRONIFHORST', John VAN, an eminent painter who Rourimed about the middle of the lalt century. He was born at Utrecht: and after having fudied under feveral mafters, entered the fchool of Comelius Poclemberg, whofe fyle of painting he imitated with great fuccefs. He painted hoth hiftory and landfcapes; and his pietures, which are very highly finified, are held in great ellimation. He amufed himfelf with the point ; and fome latidcapes from Poelemburg. together with other fubjects from his own compofitions, are attributed to him.

BRONTIIE, or Thunder-stones, in Natural ITi-

## B R O

 fory. Thefe were fuppofed, according to the opinion of many philofophers, to have only an imaginary exiftence. But of late years the attention of naturalifts has been much directed to fones that have fallen from the clouds. The fact feems to be fulficiently eflablifhed: but whether the fones are formed in the atmofphere during the thunder florm which gencrally accompanies their fall, are rected from a volcano, or projected, as fome fuppofe, from the moon, there is great difference of opinion.BRONTIUM, in Grecian antiquity, a place underneath the floor of the theatres, in which were kept brazen veffels full of fones and other materials, with which they imitated the noife of thunder,

BRONTOLOGY, denotes the doctrme of thunder, or an explanation of its caufes, phenomena, \&c. together with the prefages drawn from it. See Electrisiry.

BRONZE, a compound of copper and tin, to which fometimes other metallic fubftances, particularly zinc, are added. This metal is brittle, hard, and fonorous. It is employed for various ufes, as for making of bells, cannon and flatues; and the proportions of the component metals are varied to fuit the feveral purpoles to which it is applied. This compound, like fome others, is fpecifically heavier than either of the metals taken feparately. A metallie mafs, compofed of four fifths of copper and one-fifth part of tin, weighs in water $7 \frac{\mathrm{r}}{\mathrm{T}}$ grains more than the fame quantities of thefe two metals would together weigh in water it not allayed. This proves, that in the union of copper and tin there is a penetration of parts, the one metal entering into the pores of the other; and this is further confirmed by an obfervation of Mr Tillet, member of the royal academy of fciences. In his memoir concerning the ductility of metals, he takes notice, that when the mixture of copper and tin is made in the proportions abovementioned, the colour of the copper is entirely annulled and covered by that of the tin, although the quantity of the firft be four times greater ; aud this fingular effect cannot be underftood without admitting a total charge in the fize and difpofition of the pores of the compound metal.

Tin being lefs fubject to ruft than copper, bronze is alfo found to be lefs liable to be covered with verdigreafe than pure copper is; and this is one reafon why it is ufed for cannons, flatues, and works expofed to the air and weather. The greater fufibility of bronze than copper is alfo an advantageous property, and much facilitates the cafing of large works. The operation for calling bronze is fufficiently fimple. For this purpofe a brick furnace is ufed, nearly of the thape of an oven for baking bread. The floor of this furnace is concave, and confills of a compofition of fand and clay. In this hollow floor the metals to be fufed are put.The furnace has three openings. The firft is a lateral mouth, at which enters the flame of the wood placed in a fecond furnace, on one fide of the firft : the fecond opening is a chimney placed on a fide oppofite to the mouth, by means of which the flame is drawn over the metal. The third is a hole which is opened and thut at pleafure; through which the inner part of the furnace may be occafionally infpected, that the fate of the metal may be obferved. When the metal is in the fate required, a fourth opening is then unclofed, communi-
cating with the hollow floor, and through which the melted metal Hows by channels into the moulds prepared to recerve it.

Bronze, alfo denotes a colour prepared by the colvurmen of Paris, wherewith to imitate bronzeThere are two forts, the red bronze, and the yellow or golden. 'The latter is made tulely of copper-duff, the finelt and brightelt that can be got: the former is made of the fame, with the addition of a little quantity of red ochre well pulverized. They are both applied with varnifh. To prevent their iurning greenith, the work muft be dried over a chañg-difh as foon as bronzed.

BRONZES, a name given by antiquarians to figures either of men or bealls, to urns, and in general to every piece of fcu!pture which the ancients made of that metal. We likewife give the name of bronzes to Atatues or bufts caft of bronze, whether thefe picces be copies of antiques or original fubjects.-Among medallifts, all copper medals bear the name of bronzs.

BRONZING, the ast or act of imitating b:onze, which is done by means of copper dult or leaf, faftened on the outfide, as gold leaves are in gilding.

BROOD, the young of filh, fowls, \&c.
BROODING, the aft of a hes in hatching her eggs. See Hazching.

BROOK, a little river or fmall current of water.A brook is dittinguifhed from a river, infomuch as a river flows at all times, whereas a brook flows at fome particuiar feafons only.

Broor-Lime, Sec Veronica, Botany Index.
BROOKE, Mrs, daughter of a clergyman of the name of Moore, was a lady as remarkable for her virthes and fuavity of manners as for her great literary accomplifiments. Her firf performance, which introduced her to the notice and confequent efteem of the public, was oulia Mandeville; a work concerning which there were various opinions, but which every body read with eagernefs. It has been often wifhed that fhe had made the cataftrophe lefs melancholy; and we believe that flue afterwards was of the fame opinion, but fhe thought it beneath her character to alter it. She foon afterwards went to Canada with her hurband, who was chaplain to the garrifon at Quebec; and here the faw and loved thofe romantic charasters and fcenes which gave birth to Emily Montague, a work moft defervedly in univerfal efteem, which has paffed through feveral editions, and which is now not eafly met with. On her return to England, accident introduced her, and congeniial fentiments attracted her, to Mrs Yates; and 311 intimacy was formed which terminated only with the life of that lady. Mrs Brooke, in confequence of this connexion, formed an acquaintance with Mr Garrick, and wrote fome pieces for the flage. She had, however, great reafon to be diffatisfied with his behaviour as a manager; and the made The Excurfion, a novel which the wrote at this time, the vehicle by which the exhibited to the public her complaints and anger againft the king of Drury. Her anger, we believe, was juft, but the retribution was too fevere. She herfelf aftewards thought fo, for fte lamented and retracted it. Her firf dramatic performance was the tragedy of Virgivia, 1756. Her next effort in that line was, The Siege of Synope, a tragedy, introduced by Mr Harris, and written principally with a view of placing Mrs

Pates in a confpicuous character. This did not altogether fail, but it did not become popular ; it wanted energy, and it had not much originality; there was little to difapprove, but there was nothing to admire. Her next and moft popular production was Rofina, which, in a moft liberal manner, the prefented to Mr Harris. Few modern pieces have been equally fuccefsful. Her lant mulical piece, entitled Marian, which was introduced by Shield, cortinued for fome time to be occafionally exhibited. Mrs Brooke was allo the tranflator of various books from the French. She was efteemed by Dr Johnfon, valued by Mifs Seward, and ber company courted by all the firft characters of her time. She died in January 1789, $t$ wo days after her hufband. Her husband enjoyed the rectory of Colney in Norfolk, to which he had been preferred after his arrival from America.

BROOM. See Genista, Botany Index.
Butcher's Broom. See Ruscus, Botany Index.
Spanifb Broom. See Spartium, Botany Index.
Broom alfo denotes a well-known houlehold befom or implement wherewith to fweep away dirt, duft, and the like. We fay, a bircb-lroom, a hair-broom, a rufhlroom, a beath-broom. The primitive kind of brooms, from whence the denomination is given to all the reft, was made of the genifta or wild broom growing on commonc.

Broon-flower gives the denomination to an order of knights inftituted by St Louis of France, on occafion of his marriage. The motto was, Exallat bumiles, and the collar of the order made up of broom Howers and hufks, enamelled and intermised with fiturs de lys of gold, fet in open lozenges, enamelled white, chained together; and at it hung a crofs florence of gold. This anfwers to what the French called Ordre de la Genefle, from the name of a fpecies of broom fo called; different from the common broom, as being lower, the ftalk fmallcr, and leaf narrow; the flower is yellow, and bears a long hunt. Some alfo fpeak of another order of the Genefle or Broom eftablified by Charles Mastel, or rather Charles V1.

Broom-Gall, in Natural Hifory, a name given by authors to a remarkable fpecies of gall found on the genifa vulgaris or common broom. This is occafion. ed, like all other galls, by the puncture and eating of an infcet; and, when opened, is found to contain a fmall oblong worm, of a red colour, but whofe fize requires the ufe of a glafs in order to fee it diftinetly.

Broom-Rafc. Sec Orobanche, Botany Index.
BROOME, William, the coadjutor of Pope in tranflating the Odyfley, was born in Cheftire, as is faid, of very mean parents. He was educated upon the fourdation at Eaton, and was captain of the fchool a whole year, without any vacancy by which he might have obtained a fcholarlhip at King's college. Being uy this delay, fuch as is faid to have happened very rarely, fuperannuated, he was fent to St John's college by the contribution of his friends, where he obtained a fmall exhibition. At this college he lived for fome time in the fame chamber with the well-known Ford, by whom Dr Johnfon heard him defcribed as a contracted fcholar and a mere verfifier, unacquainted with life, and undkilful in converfation. Ilis addic-
tion to metre was then fuch, that his companions familiarly called him Poct. When he had opportunities of mingling with mankind, he cleared himfelf, as Ford likewife owned, from great part of his fcholaftic ruf. He appeared early in the word as a tranflator of the Iliads into profe, in conjunction with Ozell and Oldif. worth. How their feveral parts were diftributed is not known. This is the tranflation of which Ozell boafted as fuperior, in Toland's opinion, to that of Pope: It has long fince vanilhed (Dr Johnfon obferves), and is now in no danger from the critics. He was introduced to Mr Pope, who was then vifiting Sir John Cotton at Madingley, near Cambridge; and gained fo mucb of his efteem, that he was employed to make extracts from Euftathius for the notes to the tranflation of the Iliad; and in the volumes of poetry publifhed by Lintot, commonly called Pope's Miffcllanies, many of his early pieces were inferted.

Pope and Broome were to be yet more clofely connected. When the fuccefs of the Iliad gave encouragement to a verfion of the Odyfley, Pope, weary of the toil, called Fenton and Broome to his affiftance; and taking only half the work upon himfelf, divided the other half between his partners, giving four books to Fenton and eight to Broome. Fenton's books are enumerated in Dr Johnfon's life of him. To the lot of Broome fell the fecond, fixth, eighth, eleventh, twelfth, fixteenth, eighteenth, and twenty-third, together with the burden of writing all the notes. The price at which Pope purchafed this affillance was 300 . paid to Fenton arid 500l. to Broome, with as many copies as he wanted for his friends, which amounted to 100 . more. The payment made to Fenton is known only by hearfay; Broome's is very difinetly told by Pope in the notes to the Dunciad. It is evident, that, according to Pope's own ellimate, Broome was unkindly treated. If four books could merit 3001. eight, ano all the notes, equivalent at leaft to four, had certainly a right to more than 6001 . Broome probably confidered himfelf as injured, and there was for fome time more than coldnefs between him and his employer. He always spoke of Pope as too much a lover of money, and Pope purfued him with avowed hoftility; for he not only named him difrefpectfully in the Dunciad, but quoted him more than once in the Bathos, as a proficient in the art of finking: and in his enumeration of the different kinds of poets diftinguifhed for the profound, he reckons Broome among "the parrots who repeat another's words in fuch a boalfe odd tone as make them feem their own." It has been faid that they were afterwards reconciled; but their peace was probably without friendfip. He afterwards publifhed a Mifcellany of Poems, and never rofe to very high dignity in the church. He was fome time rector of Sturfton in Suffolk, where he married a wealthy widow ; and afterwards, when the king vifited Cambridge 1728 , became doftor of laws. He was in 1733 prefent. ed by the crown to the rectory of l'ulham in Norfolk, which he held with Oakley Magna in Suffolk, given him by the lord Cornwallis, to whom he was chaplain, and who added the vicarage of Eye in Suffoll: ; he then refigned Pulbam, and retained the other wo. Towards the clofe of his life he grew again poctical, and amufed himfelf with tranflating Odes of Anacreon, which

Eronming which he publithed in the Gentleman's Magazine under the name of Clucfer. He died at Bath in 1745, and was buried in the abbey church.

BROOMING, or Breaming of a Sbip, the wafhing and burning off all the filth fhe has contracted on her fides, with weeds, Atraw, broom, or the like, when the is on the careen, or on the ground. See Careen. ing.
brossard, Sebastian de, an eminent French mufician. In the former part of his life he had been prebendary and chapel-mafter of the catheltal church of Strafburg ; but afterwards became grand-chaplain, and alfo maitre de chapelle in the cathedral of Mcaus. There is extant of his a work entitled Prodromus muffcalis. He was author alfo of a very ufeful book, entitled DiEfionaire de mufique, printed at Amferdan, in folio, 1703 ; and afterwards at the fame place in octavo, without a date. At the end of this book is a catalogue of authors ancient and modern, to the amount of 900 , who have written on mufic ; divided into claffes, wherein are interfperfed many curious obfervations of the author relating to the hifory of mufic. By Mr Boivin's Catalogue general des livers de muligue for the year 1729, it appears that Brofiard was the author of two fets of motets, as alfo of nine Leçons de Tenebrcs therein inentioned. It feems that thele feveral publications were at a time when the author was far advanced in years; for Walther takes notice, that in the Mercure Galante, he is memtioned as au abbé and componif, fo early as the year 1678 .

BROTHEL-Houses, lewd places, being the common habitations of proftitutes. King Henry VIII. by proclamation, in the 37 th year of his reign, fupprefied all the ftews or brothel-houfes which had long continued on the bank-fide in Southwark, contrary to the
loofe idle fellow; and a fenme bordelier, or brothelier, a common whore. And borelman is a contraction for brothelman. See Bawdr.Houfe.

BROTHER, Fratcr, a term of relation between two male children, fprung from the fame father, or mother, or both. Scaliger and Voffius derive frater from $\phi_{\rho}^{\prime} \alpha \tau n \varrho$, for $q_{g}$ ruag, which properly fignifies a perfon who draws water in the fame well; $\varphi_{g}^{s x \alpha}$, in Greek, fignifying well, and đewres, a company of people, who have a right to draw water out of the fame well. The word, it is faid, came originally from the city Argos, where there were only a few wells diftributed in cettain quarters of the city, to which thofe of the fame neighbourhood alone repaired.

By the civil law, brothers and fifters fand in the fecond degree of confanguinity; by the canon law, they are in the firft degree.- By the Mofaic law, the brother of a man who died without iffue was obliged to marry the widow of the deceafed. Deuter. xxv. 7.

The ancients applied the term brother indiferently to almoft all who ftood related in the collateral line, as uncles and nephews, coufin-germans, \&c.-This we learn not only from a great many paliages in the Old Teftament, but alfo from profane authors: Cicero, in his Philippics, fays, "Antonia was both wife and fifter of Mark Antony; becaufe the was daughter of bis brother C. Antonius." And as to coufins, Tullus XIoftilius, in Dionyfius Halicarnaffeus, calls the Hora-
tii and Cusiatii, brothers; becaufe they were fifters Brothep. children.
'The language of the Jews, Bifhop Pearfon obferves, included in the name of brethren not only the ftrict relation of fraternity, but alfo the larger of confanguinity. We are brethren, fays Abraham to Lot, Gen. xiii. 8. whereas Joot was only his nephew.-So Jacob told Rachel that be was her father's brother, Gen. xxix. 12. where he was only her father's nephew.This colfideration has been urged with good advantage againtt the Autidicomarianites, who, from the mention made of the brethren of Jefus, John ii. 12. Math. xii. 46. have impugned the perpetual virginity of the mother of Chrift.

Among us, it is cuftomary for kings to give the title brother to each other; the unction in coronation being efteemed to create a kind of brotherhood. Nor is the cuftom modern: Menander mentions a letter of Cufroes king of Perfia to the emperor Juftinian, beginning thus: Cofroes, king of kings, \&c. to the emperor Jutlinian my brother.-Kings now allo give the fame appellation to the electors of the empire; and the like was given by the king of France to the late king of Sardinia, while only duke of Savoy.

In the civil law, brothers, fratres, in the plural, fometimes comprehends fifters: as Lucius et Titia, fratres; tres fratres, Titius, Mavius, et Seia.

Fofer-Bnothers, thofe who fucked the fame nurfe. The French calt them fratres du lait, or brothers by milk; which is moft properly ufed in refpect of a perfon who fucked a nurfe at the fame time with the nurfe's own child.

Brothers-Gernan, Fratres Germani. See German.
Brother was alfo ufed, in middle-age writers, for a comes, or governor of a province.

Brother is applied, in a lefs proper fenfe, to denote a perfon of the fame profefition. In which fenfe, judges, bihops, priefts, \&c. call each other brothers.

Brother is alfo a cuftomary term for priefts of the fame perfuafion to addrefs one another by: But it is more particularly ufed to denote the relation between monks of the fame convent; as Brother Zachary: in Englifh, we more ufually fay, Friar Zachary, from the French word, frere, brother.- Preachers allo call their hearers, my lirctbren, or my dear bretbren. This appellation is borrowed from the primitive Chriftians, who all called each other brothers. But it is now principally ufed for fuch of the religious as are not priefts; thofe in orders are generally honoured with the titie of fatber, whereas the reft are only fimply brothers.

Brother is alfo an appellation more peculiarly given to certain orders of religious: 'I'hus, the

Brothers of St Alexis, in the low countries, were an order of perfons who attended on thofe who lay dying, and took care of the burial of the dead. See aifo Brethren of Charitt, of Death, \&c.

Poor Brothers, in the chatily-houfe, a denomination given to decayed gentiemen, to the number of 80 , who are fubfifted with diet, clothing, and lodging, on the eftablifliment. The poor brothers are to be gentlemen by defcent, come to poverty; or decayed merchatits, foldiers, or officers of the king's loufehold. The conditions of admifion are, that they have no

Brothers eflate for life worth 200l. nor coming in, viis et modis, II 24l. per annum ; and that they be 50 years old, unlets Broughton. they have been maimed in the public fervice; in which cafe, the age of 40 fuffices. They wear a livery gown within doors.

Brothers of Arms, an appellation given thole who contract a kind of fraternity in was, obliging themfelves to the mutual fervice and aftiffance of each other. In the military orders, the knights are alfo called tro-ibers.- In the order of Malta, there is a particular clafs, who are called ferzing brothers; confifting of fuch as cannot give proof of their nobility. In Latin they are denominated fratres clientes.

## Brotarrs of the rofy crofs. See Rosycrucians.

BROUACE, a maritime town of Saintonge in France. It confifts of fire or fix Areets which terminate in a great fquare. It is famous for its falt-works, which are the finet in the kingdom. W. Long. 1. 0. N. Lat. $45 \cdot 50$.

BROURSHAVEN, a port-town of the United Provinces, in the illand of Schonen in Zealand, feated on the north fide of the ifland, in a bay of the fea, in E. Long. 3. 35. N. Lat. 51. 50.

BROUGH, a town in Weftmorland in England, feated under Stanmore-hill. W. Long. 2. 50. N. Lat. 54. 50. It was formerly a place of great note, being a Roman furtrefs; but is now fo much decayed, that it is little better than a village.

BROUGHTON, Tномas, a learned divine, and one of the original writers of the Biographia Britannica, was born at London, July 5.1704, in the parifh of St Andrew, Holborn; of which parifh his father was miniter. At an early age he was fent to Eton fchool, where he foon difinguifhed himfelf by the acutenefs of his genius, and the fudioufnefs of his difpoftion. Being fuperannuated on this foundation, he removed about 1722 to the univerfity of Cambridge ; and, for the fake of fcholarmip, entered himfelf of Gonvelle and Caius college. Here two of the principal objects of his attention wete, the acquifition of the knowledge of the modern languages, and the ftudy of the mathematics, under the famous profeffor Sanderfon. May 28. 1727, Mr Broughton, after taking the degree of bachelor of arts, was admitted to deacon's orders. In the fucceeding year, September $22 d$, he was ordained prieft, and proceeded to the degree of M. A. At this time he removed from the univerfity, to the curacy of Offley, in Hertfordfliire. In 1739, he was inftituted to the rectory of Stepington, otherwife Stibington, in the county of Huntingdon, on the prefentation of John duke of Bedford, and was appointed one of that nobleman's chaplains. Soon after he was chofen reader to the Temple, by which means he became known to Biftop Sherlock, then mafter of it, and who conceived fo high an opinion of our author's merit, that, in 1744, this eminent prelate prefented Mr Broughton to the valuable vicarage of Bedmintter, near I3riftol, together with the chapels of St Mary Redcliff, St 'Thomas, and Abbot's Leeigh, annexed. Some Thort time after, he was collated, by the fame patron, to the prebend of Bedminter and Redcliff, in the cathedral of Salifbury. Upon receiving this preferment, he removed from London to Briflol, where he married the daughter of Ihomas Harris, clerk of that city, by whom he had
feven children, fix of whom furvived him. He refided Brongheon, on his living till his death, which happened Decem. Broukhuber 2 t .1774 , in the 7 ff year of his age. He was tius. interred in the church of St Mary Redcliff.

From the time of Mr Broughton's quitting the univerfity, till he was confiderably advanced in life, he was engaged in a variety of publications, of which a lift is given in the Biographia Britamica, zd editior. Some little time before his death, he compofed "A fhort view of the principles upon which Chriftian churches require, of their refpective clergy, fubfcription to eftablifhed articles of religion;") but this work never appeared in print. He poffeffed, likewife, no inconfiderable talent for poetry, as is evident from many little fugitive pieces in manufeript, found among his papers; and patticularly from two unfinithed tragedies, both written at the age of 19 . When he was at Eton fchool, Mr Broughton was of the Came year with Dr Ewer, late bifhop of Bangor; Dr Summer, late provolt of King's college, Cambridge; and Dr Sleech, late prorof of Eton : and during his refidence in London, he enjoyed the efteem and friendfinip of moft of the literary men of his time. Fe was a great lover of mufic, particularly the ancient; which introduced him to the knowledge and acquaintance of Mr Handel: whom he furnifhed with the words for many of his compofitions. In his public chara\&ter, Mr Broughton was diAtinguifted by an active zeal for the Chrillian caule, joined with a moderation of mind. In private life, he was devoted to the interefts and happinefs of his family; and was of a mild, cheerful, and liberal temper. This difpolition, which is not always united with eminent literary abilities, attended him to his grave. In 1778 , a pofthumous "volume of fermons, on felect fubjects," was publifhed by his fon, the Rev. Thomas Broughton, M. A. of Wadham college, O.ford, and vicar of Tiverton, near Bath.

BROUKHUSIUS, Jonus, or John BroekhulZEN, a diftinguithed fcholar in Holland, was born November 20. 1649, at Amfterdam, where his father was a clerk in the admiralty. He learned the Latin tongue under Hadrian Junius, and made a prodigious progrefs in polite literature; but, his father dying when he was very young, he was taken from literary purfuits, and placed with an apothecary at Amfterdam, with whom he lived fome years. Not liking this, he went into the army, where his behaviour raifed him to the rank of lieutenant-captain; and, in 1674 , was fent with his regiment to America in the fleet under Admiral de Ruyter, but returned to Holland the fame year. In 1678 , he was fent to the garrifon at Utrecht, where he contracted a friendihip with the celebrated Grevius ; and here, though a perfon of an excellent temper, he had the misfortune to be fo deeply engaged in a duel, that, according to the laws of Holland, his life was forfeited: but Giævius wrote immediately to Nicbolas Heinfius, who obtained his pardon from the fadtholder. Not long after, he became a captain of one of the companies then at Amfterdam; which poft placed him an in ealy fituation, and gave him leifure to purfue his Atudies. His company being diftranded in 1697 , a penfion was granted him; upon which he retired to a country-houfe near Amferdam, where he faw but little company, and fpent his time amang books. He died December 15. 1707.

## B R O [ 735$] \quad$ B R O

Brouncker As a clafical editor, he is diftinguifhed by his la. bours upon 'libullus and Propertius; the latter was publifled in 1702 , the former in 1708. He was an excellent latin poet himfelf: a volume of his poems was publihed at Uirecht, $168_{4}$, in 12 mo ; but a very noble etition of them was given by Van Hoogfreton at Amfterdam, $171 t$, in 4 to. His "Dutch peems" were allo publifled at Amblerdam, t712, in Svo, by the fame perion, who prefixed his life, extracted from Peter Burman's funeral oration upon him. Brookhufius was allo an editor of Samnazarius's and Palearius's Latin works. With regard to his I.atin poems, the authors of the "Journal de "Trevoux" have delivered themfelves thus (and what they have faid may be applied to the bulk of modern Latin poems): "His verfes are written in good enough Latin; but they want fire. We find in them a great many paflages borrowed from Tibullus and Prupertius, but not their genius. The author was a poet by art, not by nature."

Brouncker, or Brounrer, Whlqam, lord vifcourt of Cafle-I,yons, in Ireland, and the firft prefident of the Rowal Society, was the fon of Sir William Brounker, knt. and born about the year 1620 . He was dillinguifhed by his knowledge of the mathematics, and by the confiderable poffs of honour and profit he enjoyed after the refloration; for he laad at the fame tima the office of chancelior to the queen, and the keeping of her great feal, that of one of the commilfioners of the navy, and mafter of St Catharine's hofpital near the Tower of L_ondon. He wrote, 1. Experiments of the recoiling of guns. 2. An algebraical paper upon the \{quaring of the hyperbola; and deveral letters to Dr Ulher, archbilhop of Armagh. He died in I684.

BROWER, ADRIAN, a famous Dutch painter, born either at Oudenard or Hacrlem, in 1608 , of poor parentage. He became the difciple of Francis Hals, under whom he proved an inimitable artif. His fubjeds were taken from low life, always copied from nature; as droll converfations, drunken brawls, hoors at cards, or furgeons drefing the wounded. Brouwer was apprelenaded at Antwerp as a Spy; where being difcovered by Rubens, he procured his liberty, took him home, clothed him, and endeavoured to acquaint the public with his merit; but the levity of his temper made him quit his benefactor; and he died not long after, in 1640 , deflroged by a diflolute courfe of life.

BROW, or Eye-Brow, a hairy arch extended over the orbit of each eye. See Anatomy Index.
$B_{\text {Row }}$-Pof, among builders, denotes a beam which goes acrofs a building.

Brorr-Antler, among fportimen, that branch of a deer's horn next the tail.

## BROWALLIA. See Botany Index.

BROWN, Rofert, a fchifmatic divine, the founder of the Brownits, a numerous fect of difienters in reign of Queen Elizabeth. He was the fon of Mr Anthony Browi of Tolthorp in Rutlandnire; whofe father obtained the fingular privilege of wearing his cap in the king's prefence, by a charter of Henry VIII. Robert was educated at Cambridge, in Corpus Chrifti, or, according to Collier, in Bennet college, ond was afterwards a fchcolmafter in Southwank. A-
bout the year 1580, he began to promulgate his prin- Emosr. ciples of diffention from the entablined church; ard the following year preached at Norwich, where he foon accumulated a numerous congregation. He was violent in his abule of the church of England; pretended to divine infpiration, and that he alone was the fure guide to heaven. This new fect daily increafing, I)r Frcake billop of Norwich, with other ecclefatlical commillioucrs, called our aponle before them. He was infolent to the court, and they committed him to the cuftody of the theriff's ofticer; but he was releafed at the intercelfion of lord treafurer Burleigh, to whom it feems he was related. Brown now left the kingdom; aud with permifion of the llates, fettled at Middleburg in Zealand; where he formed a church after his own plan, and preached without moleftation; but here perfecution, the fine qua non of famaticifm, was wanting. In 1585, we find him again in England: for in that year he was cited to appear before Archbihop Whitgift; and feeming to comply with the ellablifed church, was, by Lord Burleigh, fent hom: to his father: but relapfing into his former obflinacy, his aged parent was obliged to turn him out of his houfe. He now wandered about for fome time, and in the courfe of his mifion endured great bardhips. At laft be fixed at Northampton; where, labouring with too much indiferetion to increafe his $\int e \mathrm{e}$, he was cited by the bilhop of Pcterborough, and, refufing to appear, was finally excommunicated for contempt. The folemnity of this cenfure, we are told, immediately effected his reformation. He moved for abfolution, which he obtained, and from that time became a dutiful member of the church of Englard. This happened about the year 1590; and, in a Mort time after, Brown was preferred to a rectory in Northamptonfire, where he kept a curate to do his duty, and where he might probably have died in peace: but having fome difpute with the contable of his parih, he proceeded to blows; and was afterwards fo infolent to the jullice, that he committed him to Northampton jail, where he died in 1630 , aged 80 . Thus ended the life of the famous Robert Brown; the greatef part of which was a feries of oppofition and perfecution. He boafled on his death-bed, that he had been confined in no lefs than 32 different prifons. He wrote "A treatife of reformation without tarrying for any, and of the wickednefs of thofe teachers which will not reform themfelves and their charge, becaufe they will tarry till the magiftrate command and compel them, by me Robert Brown;" and two others, making together a thin quarto ; publimed at Middleburg, 1582 .

BROUVN, Ulysees AIaximilian, a celebrated general of the 18 th century, was fon of Ulyfes, baron Brown and Camus, colonel of a regiment of cuiraflics in the emperor's fervice, and defcended from one of the moll ariciert and noble families in Ireland. Ife was born at Bafil in 1705 ; and having firithed his firlt Rudies at Limeric in lreland, was, in 1715 , fent for intu Hungary, by Count George Brown, his uncle, member of the aulic council of war, and colonel of a regi~ ment of infantry. He was prefent at the famous battle of Belgrade, in 1\%17. Next year he followed his uncle into Italy, who made him continue his fudies, in the Clementine college at Rome, ti!l the ycas 7721 , when he was fert to Prague in order to leain the cirit

## B R O $[736] \quad$ B R O

Brown. law. At the end of the year 1723, he became cap. tain in his uncle's regiment; and in 1725 , lieutenantcolonel: in 1730, he went into Corfica with a battalion of his regiment; and contributed greatly to the taking of Callanfara, where he received a confiderable wound in his thigh. In 1732, the emperor made him chamberlain: He was raifed to the rank of colonel in 1734 ; and diftinguifhed himfelf fo much in the war of Italy, efpecially at the battles of Parma and Guaftalla, and in burning in the prefence of the French semy the bridge which the marfhal de Noailles had caufed to be thrown over the Adige, that he was made general in 1736. The following year he favoured the retreat of the army, after the unhappy battle of Banjuluca in Bofnia, by an excellent manœuvre, and faved all the baggage. His admirable conduct upon this occafion was rewarded by his obtaining a fecond regiment of infantry, vacant by the death of Count Francis de Wallis.

At his return to Vienna, in 1739, the emperor Charles VI. raifed him to the rank of general-field-marflal-lieutenant, and made him counfellor in the aulic council of war. After the death of that prince, the king of Pruffia entering Silefia, Count Brown, with a frnall body of troops, difputed the country with him inch by inch. He fignalized himfelf on feveral other occafions: and, in 1743 , the queen of Hungary made him a privy-counfellor, at her coronation in Bohemia. He at length paffed nto Bavaria, where he commanded the van-guard of the Auftrian army; feized Deckendorf, with a great quantity of baggage; and obliged the French to abandon the banks of the Danube, which the Auftrian army paffed in full fecurity. The fame year, viz. in 5743 , the queen of Hungary fent him to Worms, in quality of her plenipotentiary to the king of Britain; where he put the laft hand to the treaty of alliance between the courts of Vienna, London, and Turitt. In 1744, he followed Prince Lobkowitz into Italy; took the city of Veletri, on the 4th of Auguft, in fite of the fuperior numbers of the enemy; entered their camp, overthrew feveral regiments, and took many prifoners. The following year he was recalled into Bavaria, where he took the town of Wilthofen by aflault, and received a dangerous fhot in the thigh. The fame year he was made general of the artillery; and in January 1746, marched for Italy, at the head of a body of 18,000 men. He then drove the Spaniards out of the Milanefe; and having joined the forces under Prince de Lichtenftein, commanded the left wing of the Aufrian army at the battle of Placentia on the 15 th of June 1746, and defeated the right wing of the enemy's forces commanded by Marnhal de Maillebois. After this victory, he commanded in chief the army againft the Genoefe; feized the pals of Bofetta or Jochett, , though defended by above 4000 men; and took the city of Genoa. Count Brown at length joined the king of Sardinia's troops; and took, in conjunction with him, Mont-Alban, and the county of Nice. On the $30 t h$ of November he paffid the Var, in Cpite of the French truops; entered Pruvence; toon' the ifles of St Margaret and St Honorat ; and thought to have rendered himfelf mafter of a much greater part of Provence, when the revolution which happetied in Genoa, and Marfnit Belleifle's advance. ing with his army, obliged him to make that fine re-
treat which procured him the admiration and effeem of all perfons Rilled in war. He employed the reft of the year 1747 in defending the States of the houfe of Auftria in Italy; and after the peace in 1748 , he was fent to Nice to regulate there, in conjunction with the duke of Belleille and the marquis de la Minas, the differences that had arifen with refpect to the execution of fome of the articles of the definitive treaty of Aix la Chapelle.

The emprefs queen, to reward thefe fignal fervices, efpecially his glorious campaigns in Italy, in 1749 made lim governor of Tranfylvania, where he rendered himfelf generally admired for his probity and difintereilednefs. In 1752, he obtained the government of the city of Prague, with the chief command of the troops in that kingdom; in 1753, the king of Poland, elector of Saxony, honoured him with the collar of the order of the white eagle; and the next year he was declared field-marihal.

The king of Pruflia entering Saxony in 1756 , and attacking Bohemia, Count Brown marched againft him; and repulfed that prince at the battle of Lobofitz, on the 1 ft of OAtober, though he had only 27,000 men, and the king of Pruffia had at leaft 40,000. Seven days after this battle, he undestook the famous march into Sasony, to deliver the Saxon troops fhut up between Pirna and Konigftein; an action worthy of the greateft captairs, ancient or modern. He at length obliged the Pruffians to retire from Bohemia; for which he was rewarded, by being made a knight of the golden fleece. Soon after, Count Brown haftily affembled an army in Bohemia, to oppofe the king of Pruflia, who had again penetrated into that kingdom at the head of all his forces; and on the 6th of May fought the famous battle of Prague; in which, while he was employed in giving his orders for maintaining the advantages he had gained over the Pruffians, he was fo dangeroufly wounded, that he was obliged to be carried to Prague, where he died of his wounds, on the 26 th of June 1757, at 52 years of age. There is reafon to believe, that, had he not been wounded, he would have gained the victory, as he had broken the Pruffians, and thic brave Count Schwerin, one of their grcateft generals, was flain.

Brown, Sir Thomas, an eminent phyfician and celebrated writer, was born at London, October 19 th 1605. Having ftudied at Winchefter college, and afterwards at Oxford, he travelled through France and Italy; and returning by the way of Holland, took his degree of doetor of phyfic at Leyden. In 1636 , he fettled at Norwich; and the year following was incorporated as doctor of phyfic at Oxford. His Religio Medici made a great noife; and being tranflated into Latin, inltantly fpread throughout Europe, and gained him a prodigious reputation: it was then tranflated into almof every language in Europe. This book has been heavily cenfured by fome, as tending to infidelity, and even atheifm; while others, with much more reafon, have applauded the piety, as well as the parts and learning, of the author. The revcrend Mr Granger obferves, that among other peculiarities in this book, be fpeaks of the ultimate act of love as a folly beneath a philofopher; and fays, that he could be content that we might procreate, like trees, with. out conjunction; but, after the writing of $i t$, he de- fcended from his philofophic dignity, and married an agreeable woman. It was faid, that his reafon for marrying was, becaufe he could difcover no better rethod of procreation. His Treatife on Vulgar Errors was read with equal avidity; he alfo publifhed Hydriotaphia, or a Difcourfe of Sepulchral Urns lately found in Norfolk. His reputation in his profeflion was equal to his fame for learning in other refpects; and therefore the college of phyficians were pleafed to take him into their number as an honorary member; and King Charles II. coming to Norwich in his progrefs, in 1671 , was pleafed to knight him, with fingular marks of favour and refpect. He died on his birthday, in 1682 , leaving feveral manufcripts behind him, which were publifhed under the title of The poflbumous works of the learned Sir Thomas Brown, Kut. M. D.

Brown, Edward, the fon of the former, phyfician to King Charles II. and prefident of the royal college at London. He was born in the year 1642; and fudied at Cambridge, and afterwards at Merton college, Oxford. He then travelled; and at his return publifhed a brief account of fome travels in Hungary, Servia, Bulgaria, Macedonia, Theffaly, Auftria, Styria, Carinthia, Carniola, Friuli, \&c.: he alfo publifhed an account of feveral travels through great part of Germany ; and joined his name to thofe of many other eminent men, in a tranflation of Plutarch's lives. He was acquainted with Hebrew, was a critic in Greek, and no man of his age wrote better Latin. High Dutch, Italian, French, \&c. he fpoke and wrote with as much eafe as his mother-tongue. King Charles faid of him, that "he was as learned as any of the college, and as well bred as any at court." He died Aupult 27 th, 1708.

Brown, William, an Englifh poet of the 17 th century, was defcended from a good family, and born at Taviltock in Devonithire in the year 1590. After he had paffed through the grammar fchool, he was fent to Exeter college in the univerfity of Oxford, in the beginning of the reign of James I. and became tutor to Robert Dormer, who was afterwards earl of Carnarvon, and killed at Newbury battle, September 20. :643. He is fyled in the public regifter of the univerfity, " a man well killed in all kinds of polite litesature and ufeful arts;" vir omni bumana literatura et Bonarum artium cognitione inflructus. After he had Jeft the college with his pupil, he was taken into the family of William earl of Pembroke, who had a great refpect for him; and he made his forture fo well, that he purchafed an eftate. His poetical works procured bim a very great reputation. They are as follow: 1. Britannia's paftorals. The firft part was publifhed at London, 1613 , in folio; and ufhered into the world with reveral copies of verles made by his ingenious and learned friends John Selden, Michael Drayton, Chriftopher Cook, \&c. The fecond part was printed at London in 1616 , and recommended by various copies of verfes written by John Glanville, who afterwards became eminent in the profeftion of the law, and others. Thefe two parts were reprinted in two vols. 8vo. 1625. 2. The Shepherd's Pipe, in Reven eclogues; London, 1614 , in 8 vo. 3. An elegy on the never-enough bewailed death of Prince Henay, eldeft fon of King James I. Mr Wood tells us, that it

Vom IV. Part II.
is probable our author wrote feveral other poems which he had not feen. It is uncertain when lue died.

Brown, Thomas, "of facetious memory," as he is flyled by Addilon, was the fon of a farmer in ShropMhire ; and entered in Chrif-church college, Oxford, where he foon diftinguifted himfelf by his uncommon attainments in literature. But the irregularities of his life not fuffering him to continue long there, he, inflead of returning to his father, went to London to feek his fortune: his companions, however, being more delighted with his humour than ready to relieve his neceffities, he had recourfe to the ufual refuge of half-itarved wits, feribbling for bread; and publifhed a great variety of poems, letters, dialogues, \&c. full of humour and erudition, but often indelicate. Though a good-natured man, he had one pernicious quality, which was, rather to lofe his friend than his joke.

Towards the latter end of Tom Brown's life, we are informed by Mr Jacob, that he was in favour with the earl of Dorfet, who invited him to dinner on a Chriftmas day, with Mr Dryden and some other gentlemen celebrated for their ingenuity, (as his lordfliip's cuftom was) ; when Mr Brown to his agreeable fur prife found a bank note of 501 . under his plate, and Mr Dryden at the fame time was prefented with another of 1001 . Mr Browridied in the year 1704; and was interred in the cloyfter of Wettmintter abbey, near the remains of Mrs Behn, with whom he was intimate in his lifetime. His works have been printed both in 8vo and 12 mo , making 4 vols.

Brown, Dr Fobn, a clergyman of the church of England, and an ingenious writer, was born at Rothbury in Northumberland in November 1715. His father John Brown, was a native of Scotland; of the Browns of Colitown near Haddington; and at the time of his Con's birth was cuiate to Dr Tomlinfon, rector of Rotbbury. He was afterwards collated to the vicarage of Wigton in Cumberland; to which place he carried his fon, who received the firft part of his education there. Thence he was removed in in $73_{2}$ to the univerfity of Cambridge, and entered of St John's college, under the tuition of Dr Tunftall. After taking the degree of bachelor of arts with great reputation (being among the lift of wranglers, and his name at the head of the lift), he returned to Wigton, and received both deacon's and prieft's orders from Sir George Fleming bifhop of Carlifle. Here he was appointed by the dean and chapter a minor canon and lecturer of the cathedral church. For fome years he lived here in obfcurity; and nothing farther is known concerning him, than that in 1739 he went to Cambridge to take his degree of mafter of arts. In 1745 he diftinguifhed himfelf as a volunteer in the king's fervice, and behaved with great intrepidity at the fiege of Carliffe. After the defeat of the rebels, when feveral of them were tried at the affizes held at Carline in the fummer of 1746 , he preached at the cathedral church of that ciry two excellent difcourfes, on the mutual connexion between religious truth and civil freedom; and between fuperftition, tyranny, irreligion, and licentioufnefs.

Mr Brown's attachment to the royal caufe and to the Whig party procured him the friendfhip of Dr Ofbaldelton, who was the only perfon that continued to
$\underbrace{\text { Drowr. }}$

## B R O

Prown. be his frient through life; the peculiarities of Mr Brown's temser, or fome other caufe, having produced quarreis with every one elfe. When Dr Ofbaldefton w'as advanced to the fee of Carlifle, lie appointed Mr 33:own to be one of his chaplains.

It was probably in the early part of his life, and daring his refidence at Carline, that Mr Brown wrote his puem cutitled Honour, inferibed to the lord vifcount Lonfdale. Our author's next poetical production was his Effoy on Satire; and which was of confiderable advantage tu him both in point of fame and fortune. It was addreffed to Dr Warburton; to whom it was fu acceptable. that he took Mr Brown into his friendMip, and introduced him to Ralph Allen, Efq. of Prjor Pak, near Bath, who behaved to him with great generofity, and at whole houle he refided for fome time.

In 1751 Mr Brown publined his "Eflays on the Characterlaics of Lord Shiftefbury, \&c." dedicated to Ralph Allen, Elq. This was received with a high degree of applafe, though feveral perfons attempted 10 anfwer it. In 1754 our author was promoted by the earl of Hardwicke to the living of Great Horkefley in Eflex.

In 1755, our author toak the degree of doctor of divinity at Cambridge. This year he publithed his trage jy of Barbaroffa; which, under the management of Mr Garrick, was acted with confiderable applaule; but when it came to be publifhed, it was expored to a varicty of Arictures and cenfures. This tragedy introduced our author to the acquaintance of that eminent actor; by whole favour he had a fecond tragedy, named $A b b / / / a n$, reprefented at Drury-Lane playhoufe. This was alfu well received by the public; Lut did not become fo popular as Barbaroffa, nor did it preferve folong the poffelfion of the fage.

In 1757 appeared his famous "Eftimate of the Manners and Principles of the 'limes." The recep. tion which this work met with from the public was very flttering to his vanity; no fewer than feven editions of it having been printed in little more than a year. The chief defign of this performance was to fhow, that a vain, lexsurious, and Selfilh effeminacy in the higher ranks of life, marked the character of the age; and to point out the effects and fources of this cTeminacy. Several antagonilts appeared, fome of whom were neither deftitute of learning noringentity; thouph Dr Brown himfelf afferted that Mr Wallace, a clergvmat of Edinburgh, was the only candid and deceut adverfary that appeared againtl bim. The teftimony given by M1. de Voltaine to the effect which the 1: linate had un the conduet of the nation, is very honourab't tu Dr Brown. "When Martsal Richelieu, in 17, , (fays that celebrated writer), laid ficge to P'o tilanon, the capital of Minorca, the liritilh fent rut Admiral Isong with a Atrong naval force, to drive the lirench ileet off the ifland, and raife the fiege. At this time thrie appeared a book, entitled Sn Fifimate of the Matiers of the Times; uf which there were no lefs than five editions printed off in Loondun in the face of three months. In this treatile the author proves that the Englifl nation was entirely degenerat-ed;-:hat it was near its suin;-that its inhabitants were no longer fo rubutt and harrly as in former times;-3nd tha: its foldiers had loft their courage. -

This work roufed the fenfibility of the Englifh nation, and produced the following confequences. They attacked, almoft at one. and the fame time, all the fea coafts of France, and her poffeffions in Afia, Africa, and America." In 1758, our author publifhed the $\mathrm{C}_{\mathrm{E}}$ cond volume of his Eltimate of the Manners and Principles of the Times; containing additional remarks on the ruling manners and principles, and on the public effects of thofe manners and principles. The defign of this volume was, to retract fuch mifakes as he thought he had committed; to prove fuch points as were af. firmed and not proved; to illuftrate thofe particulars which were hinted, but not explained; to reply to fuch capital objections as had been made to his general fy. ftem by preceding writers on the fame fubject; and to difplay the confequences which might be fairly deduced from his princıples, and through a defigned brevity were omited in the frit volume. But it unfortunately happened that the doetor's felf-opinion, which gave fo much offence in his firl volume, broke out in the fecond with fill greater violence. The confequence of this was, that he expofed himfelf to general cenfure and diflike; and the prejudices againft him occafouned the real excellencies of the work to be very much overlooked. 'The periodical critics, whom he had gone reedlersly out of his way to abufe, treated him with uncommon feverity; and fuch a multitude of antagonilts rofe againt him, fo many objections were urged upon him, by fiiends as well as enemies, that he leems to have been deeply impreffed, and to have retired for a while into the cuuntry. From the country it was that he wrote, in a feries of letters to a noble friend, "An Explanatory Defence of the Eftimate of the Manners and Principles of the Times; being an appendix to that work, occafioned by the clamours lately raifed againft it among certain ranks of men."

But ubile I)r Brown thus diftinguithed himfelf as a political writer, he was advanced to nu higher dignity in the church: nay, on fome difgult, it is fuppofed, he refigned his living in Effex: however, in recompenle, Dr Ofbaldefton, procured him the rettory of St Ni . cholas in Newcalle on Tyne. He would probably have received further favours from this prelate, had not the latter died foon after his promotion to the lee of Londun.

In 1760 our author publifhed an Additional Dialogue of the Dead, between Pericles and Arillides; being a fequel to a dialogue of Lord Lyttelton's between Pericles and Cofmo. One deingn of this additional dinlogue was to vindicate the meafures of Mr Pitt, agamit whofe adminiltration Lord Lytteltun had been fuppofed to have thrown out fome hint. Our authur's next publication, in 1763 , was "The cure of Saul," a facred ode; which was followed in the fame year by " $A$ Dinlertation on the Rife, Union, and Power, the Progreftions, Separations, and Corruptions of Poetiy and Mufic." 'This is one of the molt pleafing of Dr Bruwn's performances, and abounds with a variety of critical difcullions. A number of frietures on this piece were publifhed; and the doctor defended himfelf in a treatife entitled "Rematks on fome Ojfervations on Dr l3rown's Differtation on Poetry and Mufic." In 1764 our author publifhed, in octavo, "The Hitfory of the Rife and Progrefs of Poctry through its 位eral Species;" which is

1 R O [ 7
Brown, no more than the fubfance given in the differtation above mentioned. The fame year Dr Brown publifhed a volume of fermons, dedicated to his patron Dr Of baldellon bifhop of London; but moll, if not all, of thefe, hat been feparately publifhed, excepting the firft three, which were on the fubject of education. In the beginning of the year 1765 , the doetor again returned to politics, and publithed "Thoughts on Civil Liberty, Licentioufnefs, and Faction." At the conclufion of this work the author prelcribed a code of education, upon which Dr Prieftey made remarks at the end of his "Effy on the Courle of a liberal Educaţion for civil and active Life." The Came year he publiftied a fermon" On the Female Character and Education," preached on the 16 h of May $1765^{\circ}$, before the guardians of the afylum for deferted female orphans. His laft publication was in 1766 , "A Letter to the Rev. Dr Lowth, occafioned by his late Letter to the Right Rev. Author of the Divine Legation of Mofes." This was occafioned by Dr Lowth's having clearly, though indirectly, pointed at Dr Brown as one of the extravagant adulators and defenders of Bithon Warburton. Befides thefe works, Dr Brown publifhed a poem on Liberty, and two or three anonymous pamphlets. At the end of feveral of his later writings, he advertifed his defign of publifhing "ChriStian Principles of Legifation," but was prevented from executing it by his death; though the work appears to have been completed.

We come now to the concleding events of our author's life; concerning which the fullowing is the moft authentic intelligence that can be procured. Whiln Dr Dumireff refided in Ruflia in the year 1765 , to which he had been invited in the preceding year to give his advice and affiltance for the eftablifinment and regulatiun of feveral fchools which her imperial majeAty intended to ereet, he received a letter from a lady of diftinguifhed character in England, recommending to him Dr Brown as a proper correfpondent on this occafion. Dr Dumareff then wrote a letter to Dr Brown, telling him the occafion of his application, and the difficulties that occurred. He had imasined that nothing more would be wanted of him than what concerned claffical learning, and a general foundation for the fciences; as that had been the common introduction to every kind of ufeful knowledge in the welfern parts of Europe. But on his arrival he found that a much more extenfive foheme was required; and fuch as extended rot only to learning properly fo called, but allo to matters military and naval, civil and commercial. But having Itnted his difficulties in executing this plan to Dr Brown, the latter propoled a foheme fill more extenfive; and which wis no lefs than a general plan of civilization throughout the whole Ruffian empire. In this plan, lowever, though it fhowed very enlarged ideas and great litength of mind, there were feveral defects which rendered it, as Dr Brown himfelf was afterwards convinced, impracticable. He had laid greater Arefs upon the fupport, energy, and efficacy of abfolute power, in princes when exerted in a good caufe, than experience would warrant; and he was ready to imagine that the bulk of the Ruffian natio:s, juftemer,ing out of barbarifm, was like a tatula rafa, upon which any characters might be written. At lant the doetor's letter was laid before the emprefs,

who was fo pleafed with it that fue immediately invited hims to Kuffia. He accepted the invit-tion, end procured his majefly's leave to gin : 1cool. were or dered for his expence, and he aclually received 200 . But when lae was on the puint of fettine rut, an attack of the gout and rheunatilus, to wh.ch he bad been all his liletime lubject, fo impaired his health, that his friends diffuaded, and at laft fusceeded in preventing him from going. The money was returned excepting 971. 6s. which had been expended in necel. faries for the intended journey. But though he thus declined the journey, a long letter which he after. wards wrote to the emprefs, and which does honour to his abilities, Mows that he had not abandoned his intention of being ferviccable. The affair, however, taken in all its circumfances, did no duubt greatly agitate his mind; and his being obliged at length to give up the jounney, mut have been no Imall difap. pointment to a man of his fanguine expectations. This difappointment concurring with the general ftate of his healtls, and pertraps the recollection of fome other failures that had happened, was followed by a dejection of fpirits; in confequence of which he put an end to his life on the 23 d of September 1766 , in the $51 / 1$ vear of his age. On the morning of that day his fervant came into his bed-chamber, and afked him what fort of a night he had had? to which he replied, "A pretty good one." 'The fervant having quitted the bedfide for a ferw minutes, heard a noife in the doctor's throat, which he imagined to be owing to fome obfruction occafioned by phlegm. Going to aflift his mafter, he found him fpeectlefs, and bleeding profulely, having cut the jugular wein with a razor; and this he had done fo effectually, that death fpeedily enfued. Such was the unhappy end of this ingenious witer; but the manner of it, when fome previous circumftances of his life are underfood, will catt no ftain o:t his charakter. He had a tendency to infanity in lis conflitution; and, from his early life, had been fubject at times to fome diforder in his brain, at leaft to melancholy in its excefs. Mrs Gilpin of Carlifle, foon after Dr Brown's deceafe, wrote in the following terms. in a letter to a friend. "İis diftemper was a fienzy; to which he had by fits been long fubject ; to my own knowledge above 30 years. Had it not been for Mr Farifh frequently, and once for myfelf, the fame cvent would have happened to him long ago. It was no premeditated purpole in him; for he abhorred the thought of felf-murder; and in bittoruefs of foul expreffed his fears to me, that one time or another fome ready milchief might prefent ilfelf to him, at a time when he was wholly deprived of his reafon."

Brown, Simon, a difenting miniller, whofe uncommon talents and fingular misfortunes entitle him jullly to a place in this work, was born at Shepton Mallet in Somerfethire, 1680 . Grounded and cxcelling in grammatical learning, he carly became qualified for the miniftry, and actually began to preach before he was twenty. He was firf called to be a paftor at Portimouth, and aferwards removed to the Old Jewry, where he was admired and elleemed for a number of years. But the death of his wife and only fon, which happened in 1723 . affected him lo as to deprive him of his reafon; and he became from that tine lon to him. felf, to bis family, and to the world: his congregation
at the Old Jewry, in expectation of his recovery, delayed for fome time to fill his pon; yet at length all hopes were over, and $\mathrm{Mr}_{\mathrm{r}}$ Samuel Chandler was appointed to fucceed him in 1725. This double misfortune affected him at firft in a manner little different from diftraction, but afterwards funk him into a fettled melancholy. He quitted the duties of his function, and would not be perfuaded to join in any act of worfhip, public or private. Being urged by his friends for a reafon of this extraordinary change, at which they expreffed the utmoft grief and aftonifhment, he told them, after much importunity, that " he had fallen under the fenfible difpleafure of God, who had caufed his rational foul gradually to perift, and left him only an animal life in common with brutes: that, though he retained the human Chape, and the faculty of fpeaking in a manner that appeared to others rational, he had all the while no more notion of what he faid than a parrot; that it was therefore profane in him to pray, and incongruous to be prefent at the prayers of others:" and, very confifently with this, he confidered himfelf no longer as a moral agent, or fubject of either reward or puniftrment. In this way of thinking and talking he unalterably and obftinately perfifted to the end of his life; though he afterwards fuffered, and even requefled prayers to be made for him. Some time after his feceffion from the Old Jewry, he retired to Shepton Mallet, his native place ; and though in this retirement he was perpetually contending that his powers of reafon and imagination were gone, yet he was as conflantly exerting both with much activity and vigour. He amuled himfelf fometimes with tranflating parts of the ancient Greek and Latin poets into Englifh verfe: he
compofed little pieces for the ufe of children; An Brown. Englih Grammar and Spelling Book; An Abftract of the Scripture-Hiftory, and A Collection of Fables, both in metre; and with much learning he brought together into a thot compafs all the Themata of the Greek and Latin tongues, and alfo compiled a Dictionary to each of thole works, in order to render the learning of both thefe languages more eafy and compendious. Of thefe performances none have been made public. But what howed the firength and vigour of his underflanding, while he was daily bemoaning the lofs of it, were two works compoled during the two laft years of his life, in defence of Chriftianity, againft Wooltion and Tindal. He urote an anfwer to Woolflon's fifth Difcourfe on the Miracles of our Saviour, entitled, A fit Rebuke for a ludicrous Infidel; with a preface concerning the profecution of fuch writers by the civil power. The preface contains a vigorous plea for liberty, and is ftrongly againft profecutions in matte1s of religion; and in the Anfiver, Woolfon is äs well managed as he was by any of his refuters, and more in his own way too. His book againf Tindal was called, A Defence of the Religion of Nature and the Chriftian Revelation, againft the defective account of the one and the exceptions againft the other, in a book entitled, Chriflianity as old as the Creation; and it is allowed to be as good a one as that controverly produced. He intended to dedicate it to Queen Caroline; but as the unhappy flate of his mind appeared in the dedication, fome of his friends very wifely fupprefled it, as fure to defeat the ufe and intent of his work. The copy however was preferved, and is fubjoined in the note (A), as much too great a curiofity
(A) Madam, Of all the extraordinary things that have been rendered to your royal hands fince your firft happy arrival in Britain, it may be boldly faid, what now befpeaks your majefty's acceptance is the chief. Not in itfelf indeed: it is a tiffe unworthy your exalted rank, and what will hardly prove an entertaining amufement to one of your majefty's deep penetration, ex:ct judgment, and fine tafte; but on account of the author, who is the firf being of the kind, and yet without a name. He was once a man, and of fome little name; but of no worth, as this prefent unparalleled cafe makes but too manifeft: for, by the immediate hand of an avenging God, his very thinking fubftance has for more than feven years been continually wafting away, till it is wholly perithed out of him, if it be not utterly come to nothing. None, no, not the leaf remembrance of its very ruins remains; not the fhadow of an idca is left; wor any fenfe, fo much as one fingle one, perfeet or imperfect, whole or diminifhed, ever did appear to a mind within him, or was perceived by it. Such a prefent from fuch a thing, however worthlefs in ittelf, may not be wholly unacceptable to your majefty, the author being fuch as hiftory cannot parallel ; and if the fact, which is real, and no fiction or wrong conceit, obtains eredit, it mult be recorded as the moft memorable, and indeed aftonifhing, even in the reign of George II. that a tract, compofed by fucls a thing, was prefented to the illuftrious Caroline; his royal confort needs not Le added; fame, if I am not mifinformed, will tell that with pleafure to all fucceeding times. He has been informed, that your majelly's piety is as genuine and eminent as your excellent qualitics ase great and confpicuous. This can indeed be truly known to the great Searcher of hearts only. He alone, who can look inta them, can difcern if they are fincere, and the main intention correfponds with the appearance; and your majefly cannot take it amifs if fuch an author hints, that his fecret approbation is of infinitely greater value than the commendation of men, who may be eafily miftaken, and are too apt to flatter their fuperiors. But, if he has been told the truth, fuch a cafe as his will certainly ftrike your majefly with aftoniftument; and may raife that commiferation in your royal breaft, which he bas in vain endeavoured to excite in thofe of his friends: who, by the moft unreafonable and ill-founded conceit in the world, have imagined, that a thinking being could for feven years together live a franger to its own powers, exercifes, operations, and fate; and to what the great God has been doing in it and to it. If your majefty, in your noft retired addrefs to the King of kings, flould think of fo fingular a cafe, you may perhaps make it your devout requeft, that the reign of your beloved fovereign and confort may be renowned to all pofterity by the recovery of a foul now in the utmoft ruin, the refloration of one utterly lon, at prefent among f men. And flould this cafe affect your royal bresft, you will recommend it to the pitty and praycrs of all the truly devout who have the honour to be

## B R O

Brown. ofity to be fuppreffed. The above pieces were publified by Mr, afterwards Dr W. Harris, who, in an advertifement to the reader, recommends the aftlicted cafe of the author, under a deep and peculiar melancholy, to the compaffion and prayers of all his friends, and cvery ferious Chrillian. Mr Brown furvived the publication of this latl work a very fhort time. A complication of diffempers, contracted by his fedentary life (for he could not be prevailed on to refreft himelf with air and exercife), brought un a mortification, which put a periad to his labouss and forrows about the latter end of 1732 . He was unqueflionably a man of uncommon abilities and learning: his management of Wooliton thowed him to have allo vivacity and wit: and, notwithftanding that frange conceit which poffeffed him, it is remarkable that he never appeared feeble or ablurd, except when the object of his frenzy was before him. Befides the two picces above mentiuned, and before he was ill, he had publihhed fome fingle Sermone, together with a Collection of Hymus and Spiritual Songs. He left feveral daughters.

Brown, Ifaac Hawkins, an ingenious Englifl poet, was boin at Burton upon Trent, in Staffordfhire, Jan. 21. 1705-6; of which place his father was the minifter. He received his grammatical inftitution firlt at Litchfield, then at Weftminfter; whence, at fixteen years of age, he was removed to Trinity college, Canbridge, of which his father had been fellow. He remained there till he had taken a mafter of arts degree; and about 1727 fetted himfelf in Lincoln's Inn, where he feems to have devoted mote of his time to the Mufes than to the law. Soon after his arrival there, he wrote a poem on Defign and Beauty, which he addrefled to Mr Highmore the painter, for whom he lad a great friendhip. Several other poetical pieces were written here, and particularly his Pipe of Tobacco. This is in imitation of Cibber, Ambrofe Phillips, Thomfon, Young, Pope, and Swift, who were then all luving; and is reckoned one of the moft pleafing and popular of his performances. In 1743-4, he married the daughter of Dr Trimnell, archdeacon of Leceifter. He was chofen twice to ferve in parliament, firft in 1744, and afterwards it 1748 : both times for the borough of Wenlock in Shropthire, near which place he poffefled a confiderable eflate, which came from his maternal grandfather, Ifaac Hawkins, Efq. In 1754, be publifhed what has been deemed his capital work, De Animi Immortalitate, in two books; in which, befides a mof judicious choice of matter and arrangement, he is thought to have fhewn himfelf not a fervile but happy imitator of Lucretius and Virgil. The univerfal applaufe and popularity of this poem produced feveral Englifh tranfations of it in a very fhort time; the beft of which is that by Soame Jenyns, Efq. printed in his Mifcellanies. Mr Brown intended to have added a third part, but wert no fatther than to leave a
fragment. This excellent perfon died, after a linger- Bromu. ing illnefs, in 1760, aged 55 . In 1768, the prefent Hawkins Brown, Efq; obliged the public with an ele. gant edition of his father's poems, in large octavo; to which is prefixed a print of the author, flom a painting of Mr Highmore, engraved by Ravenet.

Brown, Sir William, a noted phyfician and mul. tifarious writer, was fettled originally at Lynn in Norfolk, where he publified a tranflation of Dr Gregory's Elements of Catoptics and Dioptrics; to which he added, 1. A method for finding the Foci of all Specula, as well as Lenfes univerfally; as alfo magnifying or leffening a given object by a given Speculum or Lens, in any affigned Proportion. 2. A Solution of thofe Problems which Dr Gregory has left undemonftrater. 3. A particular Account of Microfcopes and 'Telefcopes, from Mr Huygens; with the difoveries made by Catoptrics and Dioptrics. Having acquired a competence by his profeffion, he removed io Qineen's Square, Ormond Street, London, where he refided till his death. By his lady, who died in 1763 , he had one daoghter, grandmother to the prefent Sir Martin Brown Folkes, Bart. A great number of lively effays, both in profe and verfe, the production of his pen, were printed and circulated among his friends. The active part taken by Sir William Brown in the conteft with the licentiates, 1768, occiffoned his being introduced by Mr Fuote in his Devil upon Two Sticks. Upon Foute's exact reprefentation of him with his identical wig and coat, tall figure, and glafs flifly applied to his eye, he fent him a card complimenting him on having fo happily reprefented him; but as he had forgotten his muff, he had fent him his own. This goodnatured method of refenting difarmed Foote. He ufed to frequent the annual ball at the ladies boardingfchool, Queen Square, merely as a neighbour, a goodnatured man, and fund of the company of fprightly young folks. A dignitary of the church being there one day to fee his daughter dance, and finding this upright figure flationed there, told him be believed he was Hermippus redivivus, who lived anbelitu puellarum. When he lived at Lynn, a pamphlet was written againdt him: he nailed it up againf his houfe door. At the age of 80 , on St Luke's day, 1771 , he came to Batfon's coffee-houfe in his laced coat and band, and fringed white gloves, to fhow himfelf to Mr Crorby, then lord mayor. A gentleman prefent obferving that he looked very well, he replied, he bad neither wife nor debts. He died in 1774, at the age of 82 ; and by his will he left two prize medals to be annually contended for by the Cambridge poets.

Brown, Tohn, M. D. the founder of a modern theory of phyfic, was born about the year 1735 or 1736 in the parin of Buncle, in Berwickitire, Scotland. His parents being in an inferior rank of life, while he was very young, he was put as an apprentice to a weaver, the
known to your majefty: many fuch doubtlefs there are, though courts are not ufually the places where the devout refort, or where devotion reigns. And it is not improbable, that multitudes of the pious throughout the land may take a cafe to heart, that under your majefy's patronage comes thus recommended. Could luch a favour as this reforation be obtained from heaven by the prayers of your majefy, with what tranfport of gratitude would the recovered being throw himfelf at your majelly's feet, and, adoring the divine power and grace, profefs himfelf, Madam, your majefy's moft obliged and datiful feryant, Simon Browna

Yrown. the drudgery of which having tither dilliked, or difcovering abilities which would by cultivation raife him to a more confpicuous fation, his deflination was changed, and he was placed at the grammar fchool of Dunfe. Here he foon diftinguifted himfelf, and gave abundant proofs, by his ardour and fuccefs in the ftudies which occupied his attention, that he was worthy of being encouraged in literary purfuits. His parents belonged to that body of difienters, in Scotland called Seceders. Flattered with the rapid and fuccefflul progrefs which their fon had begun to make in the acquifition of the Latin language, they deflined him to the minifterial office among their own fect. With this view his education was for fome time directed. But ${ }_{n}$ an accident, it is faid, made him at once renounce this plan and the fect, the tenets of which, as will appear from this circumflance, are estremely rigid. So early as his $13^{\text {th }}$ year, while at the grammar fochool, he was prevailed upon, though not without fhowing confiderable reluctance, to attend a meeting of fynod, one of the church courts of Scotland, which was beld in the church of Dunfe. This, in the eftimation of the party to which he belonged, was a tranfgreffion which could not be paffed over without notiee. Young Brown was called upon to appear before the church-court, and he muft either fubmit to ecclefiaftical cenfure, or fuffer a fentence of expulfion. Teo proud or indignant to yield to the one, or to wait for the other, he anticipated or prevented the effects of both, by declaring that he was no longer a member of the feet, and joining himfelf to the cfablinhed church. From this time, it would appear, his religious ardour was much abated, and his rigid principles were greatly relaxed.

After this period, Brown was for fome time engaged as a private tutor in a gentleman's family in the country; and here, and as an affiftant in the grammar fchool of Dunfe, he remained till about his 2oth year, when he went to Edinburgh, and having paffed through the previous neceffary fudies in the clafles of philofophy, entered himfelf as a fudent of divinity in the univerfity. His claffical knowledge was now of real advantage to him; for while he refided in Edinburgh, purfuing the plan of his fludies, he was able to fupport himfelf by pivate teaching. In this fituation he continued for fome time, after which he refumed his former labours as affiffant in the grammar fchool of Dunfe for a year, and returned to Edinburgh about the year 1759, withen he finally renounced the ftudy of theology, and commenced that of phyfic.

During his medical fudies, be fupported himfelf by his own exertions. He was employed in giving frivate inftructions to fudents who wifhed to acquire the habit of exprefing themfelves with facility and correfinefs in the Latin language, and thus to be prepared for the examinations which are conducted in that language, for medical degrees in the univerfity. For this employment, as well as for tranfating inaugural differtations iuto the fame language, the previous fudies and acquirements of Brown peculiarly fitted him. Thes occupied, he foon recommended himfelf to the rotice of feycral of the profeffors, and particularly to that of Dr Cullem, whofe patronage and fiendthip he obtained in an eminent degrece. The dofor not only employed him as a priv:te tutor in his own family, but ivas extremely afliduous in recommending hims to others.

This fituation afiorded him an excellent opportunity ©Browr. of improving in medical fudies by the converfation of the celebrated profeffor, and by the permiffion which was granted him of delivering lecturcs or illuftrations of the doctor's public lectures to private pupils. In this way Mr Brown began to have full employment, and profperity feemed to fmile upon him. It was about this time that he married the daughter of a refpectable tradefman in Edinburgh, and opened a houfe for boarding fudents. His houfe was foon filled with boarders, who were attracted by the hope of great benefit from his inftrutions and converfation. But here it foon appeared, that he was unft for the management of fucls concerns. By want of economy or mifconduct his afiairs were foon greatly embarraffed, and at laft terminated in total bankruptcy. Soured and irritated by this misfortune, and fill more fo, it is probable, by being difappointed of one of the meotical chairs in the univerfity, which he fuppofed liad been oceafioned by the interference of Dr Cullen, he quarrelled with his friend and patron, and from that moment fet himfelf up as a keen opponent of his doctrines. His application to be adinitted a member of the philofophical fociety was about the fame time rejected; and this, which be imagined arofe from the fame influence, tended not a little to foment the quarrel.

This feems to have been the origin of the celebrated theory which divided the medical world, which excited So much intereft in thofe who efpouled or oppoled it, and infpired fuch a degree of enthufiafm in the debates and writings, efpecially of the pupils of the feminary which gave it birth, that it not unfrequently burfl futh with all the violence of religious fienzy. This indeed is little to be wondered at, when we coufider that half educated young men, as is the cafe with the great proportion of medical fludents, unaecuftomed to patient inveftigation, and fond of novelty, are the moft apt to embrace fuch fpeculations, as conld be fupported and defended by ingenious and fubtle seafonings, rather than by accurate and extenfive obfervation; and thiuk themfelves regarded by their friends and admirers as diflinguifled philofophers, in proportion to their ability in Aarting ubjetions to received opinions, and orerthrowing eflablifhed doctrines. At the fane time, it is but juflice to obferve, that thofe who adhered to his opiriuns, were alfo often treated with fufpicion and fimilar violence. This oppofition of fentiment and ftruggle of opinions had a natural tendency to unite more clofely thofe who were on the fame fide, and this probably in the end was the caule of poor Brown's future misfortunes. Befides, on account of the convivial talents which he poffeffed, his company was earneftly courted by the gay and the diffipated, and this led him to frequent meetings and clubs in taverns, where the dictates of prudence and the rules of temperance were rarcly chfferved. Indulging the fame firit, he was principally coneerned in the inflitution of a lodge of free mafons, in which the bufinefs was conducted in the Latin language. His views in promoting this inflitution, were it is faid, to attrach fudents to attend his lectures, or to become profelytes to his doctines.

It was about the ycar 1780, that the firf edition of his Elementa Biedicince appeared. This wook is a compendium of his opinions, which be continucd for feveral years to illufrate by a courfe of public lectures.

## B R O [ 743 ] $\quad \begin{array}{lllllll} & R & 0\end{array}$

Brown. And as he now propofed to profecute the profeffion of medicine by private practice and public inftruction, it was found neceffary to have a medical degree, as a reftimony to the world of his qualifications. Having oppofed and quarrelled with all the profeffors in the univerfity of Edinburgh, there was little hope of his fucceeding there; and therefore, in confequence of an application to the univerfity of St Andrews, he was admitted to medical honours.

But the terms in which $\mathrm{Dr}_{r}$ Brown lived with his medical brethren, and the unfortunate habits which were daily gathering fltength, precluded him from all rational hopes of fuccefs, either as a private practitioner or a public teacher. He therefore turned his thoughts to London, and removed to that metropolis in the year 1786. Previous to $\mathbf{1 7 8 8}$, he had delivered one courfe of lectures; for in OStober of this year, he was cut off by a fit of apoplexy, on the day after he had delivered his introductory lecture to a fecond courfe. He died in the 53 dl year of his age.

Dr Brown puffefied great vigour of mind, and feems to have been capable of confiderable application. His talents, had they been directed to more practical and more ufeful objects, would have probably raifed him to more eminent diftinction, and rendered him a more valuable member of fuciety. The ftyle of his Elementa is harfh and unpolihed. Fis meaning is often dark and ambiguous. But perhaps this want of perfpicuity is as much owing to the fubjects which he treated, the prin. ciples of which are far from being fettled, as to the obfcurity of his expreflion. He attempted an unbeaten path; it is not wonderful that he was often bewildered and loft.

To the ketch which we have now given of the life of Dr Brown, it will be expected, by fome of our readers, that we add fore account of the leading features of his theory. The following extracted from the obfervations prefixed to an edition of the Elements of Medicine, publihed by Dr Beddoes, will perhaps be as correct and fatisfactory as any thing we cans give.
"s The varied ftructure of organized beings, it is the bufinefs of anatomy to explain. Confcioufnefs, affited by common obfervation, will diftinguilh animated from inanimate bodies with precifion more than fufficient for all the ends of medicine. The caufe of gravitation has been left unexplored by all prudent philofophers; and Brown, avoiding all ufelefs difquifition concerning the caufe of vitality, confines himfelf to the phenomena which this great moving principle in nature may be obferved to produce. His moft general propofitions are eafy of comprehenfion.
" 1. To every animated being is allotted a certain portion only of the quality or principle on which the phenomena of life depend. This principle is denominated excritability.
" 2 . The excitability varies in different animals, and in the fame animal at different simes. As it is more intenfe, the animal is more vivacious or more fufceptible of the action of exciting powers.
" 3 . Exciting powers may be referred to two claffes. 1. External ; as heat, food, wine, poifons, contagions, the blood, fecreted fluids, and air. 2. Internal ; as the functions of the body itfelf, mufcular cxertion, thinking, emotion and palfion.
" 4. Life is a forced Atate; if the exciting powers
Pronm. are withdrawn, death enfucs as certainly as when the excitability is gone.
" 5. The excitement may be too great, too fmall, or in juft meafure.
" 6 . By too great excitement, weaknefs is induced, becaufe the excitability becomes defective; this is indirect debility: when the exciting powers of flimulants are withheld, weaknefs is induced; and this is direit debility. Here the excitability is in excefs.
" Every power that acts on the living frame is ft :mulant, or produces excitement by expending excitability. Thus, although a perfon, accufiomed to animal food, may grow weak if he lives upon veyctables, Aill the vegetable diet can only be conlidered as producing an effect, the fame in kind with animals, theugh infe. rior in degree. Whatever powers, therefore, we imagine, and however they vary from fuch as are hab:tur ally applied to produce due excitement, they can only weaken the fytem by urging it into too much motion, or fuffering it to fink into languor.
"S. Excitability is feated in the medullary portion of the nerves, and in the mufcles. As foon as it is anywhere affected, it is immediately affeced everywhere; nor is the excitement ever increafed in a part, while it is generally diminilhed in the fyltem; in other words, different parts can never be in oppolite ftates of excitement.
"I have already fpoken of an illultration, drawn up by Mr Chititie from a familiar operation, to facilitate the conception of Brown's fundamental poftions. I introduce it bere as more likely to anfuer its purpofe than if feparately placed at the end of my preliminary obfervations. 'Suppofe a fire to be made in a grate, filled with a kind of fuel not very combuftible, and which could only be kept burning by means of a machine containing feveral tubes, placed before it, and conitantly pouring ftreams of air into it. Suppofe alfo a pipe to be fixed in the back of the chimney, through which a contant fupply of freth fuel was gradually let down into the grate, to repair the wafte occafioned by the flane, kept up by the air machine.

- The grate will reprefent the human frame; the fuel in it, the matter of life-the excitability of Dr Brown, and the fenforial power of Dr Dawin; the tube behind, fupplying freth fuel, will denote the power of all living fyitems, conflantly to regenerate or reproduce excitability; while the air machine, of feveral tubes, denotes the various fitmuli applied to the excitability of the body; and the 杖e drawn forth in confequenice of that application reprefents life, the produf of the exciting powers acting upon the excitability.
- As Dr Brown has defined life to be a forced $\cap a e^{2}$, it is fitly reprefented by a flame forcibly drawn forth from fuel litile difpofed to combuftion, by the conttant application of fleams of air poured into it from the different tubes of a machine. If fome of theif tubes are fuppofed to convey pure or dephloginticated air, they will denote the higheft clafs of exciting powerc, opium, mufk, camphor, fpirits, wine, tobiccor \&ic. the diffufible ftimuli of Dr Brown, which bring forth for a time a greater quantity of life than ufual, as the bluwing in of pure air into a fire will temporarily draw forth an uncommon quantity of Hame. If others of the tubrs

## B R O

Brown. be fuppofed to convey common or atmofpheric air, they will reprefent the ordinary exciting powers or Aimuli, applied to the human frame, fuch as heat, light, air, food, drink, \&c. while fuch as convey impure and inflammable air may be ufed to denote what have formerly been termed fedative powers, fuch as poifons, contagious miafmata, foul air, \&c.

- The reader will now probably be at no lofs to undertand the feeming paradox of the Brunonian fyftem; that food, drink, and all the powers applied to the body, though they fupport life, yet confume it; for he will fee, that the application of thefe powers, though it brings forth life, yet at the fame time it waftes the excitability or matter of life, juft as the air blown into the fire brings forth more flame, but waftes the fuel or matter of fire. This is conformable to the common faying, "the more a fpark is blown, the brighter it burns, and the fooner it is fpent." A Roman poet has given us, without intending it, an excellent illuftration of the Brunonian fyftem, when he fays,

> "Balnea, vina, Venus, confumunt corpora nofira;
> "Sed vitam faciunt balnea, vina, V'enus."
> " Wine, warmth, and love, our vigour drain;
> "Yet wine, warmeh, love, our life fultain."

Or to tranflate it more literally,

> "B Bths, women, wine, exhaut our frame;
> " But life itfelf is drawn from them.

- Equally ealy will it be to illuftrate the two kinds of debility, termed dire8 and indirtes, which, according to Brown, are the caufe of all difeafes. If the quantity of ftimulus, or exciting power, is proportioned to the quantity of excitability, that is, if no more excitement is drawn forth than is equal to the quantity of excitability produced, the human frame will be in a State of health; juft as the fire will be in a vigorous ftate when no more air is blown in than is fufficient to confume the frefh fupply of fuel conftantly poured down by the tube behind. If a fufficient quantity of ftimulus is not applied, or air not blown in, the excitability in the man, and the fuel in the fre, will accumulate, producing direct debility; for the man will become weak, and the fire low. Carried to a certain degree, they will occafion death to the firft, and extinction to the laft, If, again, an over proportion of ftimulus be applied, or too much air blown in, the excitability will foon be wafted, and the matter of fuel almoft fpent. Hence will arife indiret debility, producing the fame weaknefs in the man, and lownefs in the fire, as before, and equally terminating, when carried to a certain degree, in death and extinction.
- As all the difeafes of the body, according to Dr Brown, are occafioned by direct or indirect debility, in confequence of too much or too little Atimuli, fo all the defects of the fire mult arife from dired or indirect lownefs, in confequence of too much or too little air blown into it. As Brown taught that one debility was never to be cured by another, but both by the more judicious application of ftimuli, fo will be found the cafe in treating the defects of the fire. If the fire has become low, or the man weak, by the want of the needful quantity of ftimulus, more muft be applied, but very gently at £rft, and increafed by degrees, left a Atrong tlimulus ap-
plied to the accumulated excitability thould produce death; as in the cafe of a limb benumbed with cold (that is, weakened by the accumulation of its excitability in confequence of the abllaction of the ufual fimulus of heat), and fuddenly held to the fire, which we know from experience is in danger of mortification; or as in the cafe of the fire becoming very low by the accumulation of the matter of fuel, when the feeble flame, dfrailed by a fudden and ffrong blaft of air, would be overpowered and put out, inflead of being nourihed and increated. Again, if the man or the fire have been rendered indirectly weak, by the application of too much fimulus, we are not fuddenly to withdraw the whole, or even a great quantity of the exciting powers or air, for then the weakened life and diminiftied flame might fink entirely; but we are by little and little to diminith the overplus of ftimulus, fo as to enable the excitability, or matter of fuel, gradually to recover its proper proportion. Thus a man who has injured his conftitution by the abufe of firituous liquors is not fuddenly to be reduced to water alone, as is the practice of fome phyficians, but he is to be treated as the judicious Dr Pitcairn of Edinburgh is faid to have treated a Highland chieftain, who applied to him for advice in this fituation. The doctor gave him no medicines, and only exacted a promife of him, that he would every day put as much wax into the wooden queich, out of which he drank his whiky, as would receive the impreffion of his arms. The wax thus gradually accumulating, diminifined daily the quantity of the whiky, till the whole queich was flled with was; and the chieftain was thus gradually, and without injury to his coriftitution, cured of the habit of drinking fpirits.
- Thefe analogies might be purfued farther; but my object is folely to furnifh fome general ideas, to prepare the reader for entering more eaflly into the Brunonian theory, which I think he will be enabled to do after perufing what I have faid. The great excellence of the theory, as applied, not only to the practice of phyfic, but to the general conduct of the health, is, that it impreffes on the mind a fenfe of the impropriety and danger of going from one extreme to another. The human flame is capable of enduring great varieties, if time be given it to accommodate iffelf to different flates. All the mifchief is done in the tranfition from one fate to another. Ia a fate of low excitement we are not rafhly to induce a flate of high excitement, nor when elevated to the latter, are we fuddenly to defcend to the former, but ftep by ftep, and as one who from the top of a high tnwer defcends to the ground. From hafty and violent changes, the human frame always fuffers; its particles are turn afunder, its organs injured, the vital principle impaired, and difeafe, often death, is the inevitable confequence.
- I have only to add, that though in this illuftration of the Brunonian fytem (witten feveral years ago), I have foken of a tube conitantly pouring in frefli fuel, becaufe I could not otherwife convey to the reader a familiar idea of the power poffeffed by all living fy ftems, to renew theit excitability when exhaufled ; yet it may be proper to inform the fludent, that Dr Brown fuppofed every living fyftem to have received at the beginning its determinate portion of excitability; and, therefore, slthough he froks of the exhaution, augmenta-

## B R O

Erown II Brownifts.
tion, and even renewal of excitability, I do not think it was his intention to induce his pupils to think of it as a kind of fuid fubftance exifting in the animal, and fubject to the law by which fuch fubftances are governed. According to him, excitability was au unknown fomezubat, fubject to peculiar laws of its own, and whofe different ftates we were obliged to defcribe (though inaccurately) by terms borrowed from the qualities of material fubilances.'
"The Brunonian fyftem has frequently been charged with promoting intemperance. The objection is ferious; but the view already given of its principles fhews it to be groundlefs. No writer had infifted fo much upon the dependence of life on external caufes, or fo ftrongly fated the inevitable confequences of excefs. And there are no means of promoting morality upon which we can rely, except the knowledge of the true relations between man and other beings or bodies. For by this knowledge we are directly led to Thun what is hurtful, and purfue what is folutary : and in what elfe does moral conduct, as far as it regards the individual, confit? It may be faid that the author's life difproves the jultnefs of this reprefentation: his life, however, only fhews the fuperior power of other caules, ard of bad habits in particular; and I am ready to ac. knowledge the little efficacy of inftuction when bad habits are formed. Its great ufe confilts in preventing their formation; for which reafon popnlar inftruction in medicine would contribute more to the happinefs of the human fpecies, than the complete knowledge of every thing which is attempted to be taught in education, as it is condueted at prefent. But though the principles of the fyftem in queftion did not correct the propenfities of its inventor, it does not follow that they tend to produce the fame propenfities in others."

Brown, among dyers, painters, \&xc. a dulky colour inclining towards rednefs. Of this colour there are various fhades or degrees, diftinguilhed by different appellations; for inftance, Spanifh-brown, a fad-brown, a tawny-brown, the London brown, a clove-brown, \&c.

Spanifh-brown is a dark dull red, of a horfe-fleflu colour. It is an earth; and is of great ufe among painters, being generally ufed as the firft and priming colour that they lay upon any kind of timber-work in houfe-painting. That which is of the deepeft colour, and freent from stones, is the belt. Though this is of a dirty brown colour, yet it is much ufed, not to colour any garment, unlefs it be an old man's gown; but to thadow vermilion, or to lay upon any dark ground behind a picture, or to fhadow yellow berries in the darkct places, when you want lake, \&c. It is beft and brightef when burnt in the fire till it be red hot; althoush, if you would colour any hare, horfe, dog, or the like, it fhould not be burnt: but, for other ufes, it is beft when it is burnt ; as for colouring wood, polts, bodies of trees, or any thing elfe of wood, or any dark ground of a pieture.

BROWNIA. See Botany Index.
BROWNISTS, a religious fect, which fprung out of the Puritans, towards the clafe of the 16 th century. Their leader, Robert Brown, wrote divers books in their behalf, was a man of good parts, and fome learning. He was born of a good family in Rutland.

Vol. IV, Part II.
fhire, and related to the lord-treafurer Burleigh. Fe Brusnifs. had been educated at Cambridge; but firft publifhed his notions, and began to inveigh openly afaingt the difcipline and ceremonies of the church, at Norwich, in the year 1580 ; from which time he underwent divers profecutions from the bifhops; infonuch that he boafted he had been committed to no lels than 32 pri. fons, in fome of which he could not fee lis band at roon-day. At length, with bis congregation, he left the kingdom, and fettled at Middleburgh in Zealand; where they obtained leave of the ftates to wormipy God in their own way, and form a church according to their own model; which they had not lorg done, before this handful of men, juft delivered from the feverities of the bilhops, began to differ among themfelves, and crumble into fo many parties, that Brown their paftor grew weary of his office ; and, returning to Eugland in 1589 , renounced bis principles of feparation, and was preferred to the rectory of a church in Northamptonthire, and died, after leading a very idle and diffolute life, in 1630.

The revolt of Brown was attended with the diffolution of the church at Middleburgh; but the feeds of Brownifm, which he had fown in England, were fo far from being deltroyed, that Sir Walter Raleigh, in a fpeech in 1592, computes no lefs than 20000 followers of it. The occafion of their feparation was not any fault they found with the faith, but only with the dilcipline and form of government of the other churches in England. They equally cliarged coriuption on the Epilcopal form, and on that of the Prefbyterians, by confiftories, claffes, and fynods : nor wculd they join with any other reformed church, becaufe they were not aflured of the fanctity and regeneration of the members that compofed it ; on account of the toleration of finners, with whom they maintained it an impiety to communicate. They condemned the folemn celebration of masriages in the church; maintaining, that matrimony being a political contract, the confirmation thereof ought to come from the civil magiftrate. They would not allow any children to be baptized of fuch as were not members of the church, or of fuch as did not take fufficient care of thofe baptized before. They rejected all forms of prayer ; and held that the Lord's prayer was not to be recited as a prayer, being only given for a rule or model wherean all our prayers are to be formed. The form of churclsgovernment which they eftablifhed was democratical. When a church was to be gathered, fuch as defired to be members of it made a confeftion of it, and figned a covenant, by which they obliged themfelves to walk together in the order of the gofpel. The whole poser of admitting and excluding members, with the decifion of all controverfies, was lodged in the biotherhood. The church-officers were chofen from among themfelves, for preaching the word, and taking care of the poor, and feparated to their feveral offices by fafting, prayer, and impofition of hands of fome of the bretbren. But they did not allow the priefthood to be any diltinet order, or to give any indelible cha. racter. As the vote of the brotherbood made a man a minifter, and gave him authority to preach the word and adminifter the facraments among them, fo the fame power could dilcharge him from his uffice, and reduce him to a mere layman again. And as they
maintained

## $B \quad \mathrm{O}$

Frew ins, maintained the bounds of a church to be no greater Brownrigg. than what could meet together in one place and join
in one communion, fo the power of thefe officers was prefcribed within the fame limits. The mininer or paftor of one church could not adminifter the Lord's fupper to another, nor baptize the children of any but thofe of his own fociety. Any lay-brother was allowed the liberty of prophefying, or of giving a word of exhortation to the people; and it was ufual for fome of them, after fermon, to afk queltions, and reafon upon the doarines that had been preached. In a word, every church on the Brownifts model is a body corporate, having full power to do evcry thing which the good of the fociety requires, without teing accountable to any claftis, fynod, convocation, or other jurifdiction whatever. Mof of their difipline has been adopted by the Independents, a party which afterwards arofe from among the Brownitts. The laws were executed with great feverity on the Brownifts; their books were prohibited by Queen Elizabeth, and their perlons imprifoned, and miny of them were hanged. The ecclefiaftical commiffion and the $\AA$ tr-chamber, in fine, diffreffed them to fuch a degree, that they refolved to quit their country. Accordingly, many families retired and fettled at Amferdam, where they formed a church, and chofe Mr Johnfon their pattor ; and after him Mr Ainfworth, author of the learned commentary on the Pentateuch. Their church flourifhed near 100 yearc. Sce Indepenients.

BROWNRIGG, William, M. D. F. R. S. was a native of Cumberland, and born about the year 1712 . Of the early part of the life of this philofopher we have had no opportunity of obtaining information. Being dellined for the medical profeflion, after the previous fludies in his own country, he repaired to Leyden to finifh his education. 'I his univerfity was then in its higheft fplendour; Albinus in anatomy, Euler in mathematics, and the chair of medicine and chemiftry was occupicd by the all-accomplithed Boerhave. Having made at Leyden a long and happy refisence, and taken his degree, he returned to his native country, and, in Whitetaven, marsied a lady of fingular good fenfe, and poffefling an addrefs fo verfatile and luferior as never failed to charm in whatever circle it was exerted. He was author of an inaugural differtation De Praxi medica ineunda, 4to, Lugd. Bat. 1737; of a treatile "On the Art of inoking Common Salt," printed at London, in 1748 , in $8 v o$; which procured for his the addition of F. K. S.: a book now long out of print, but not out of recollection. He allo puilithed "An Engniry concerning the mineral elaftic Spirit contained in the water of Sya in Germany; and, lafly, a treatife, publifhed in 1771 , "On the Me:sis of preventing the Conmunication of Peftlential Contajion." A trip to the Spas of Germany fugpetted to lins 1 le idea of analuzing the properties of the Pyrmons furings, and of fome ot cers, and aktually led him to that train ol difqufation, wheh teminated in the de-elementizing one of our elements, and fixing its inviîble fluid furm in a palpatie and vifible fulfance. That Dr 3uswmigg was the legitimate lither of the fe difcoveries was not only known at the time to his intimate and domeftic circle, but allis to the then prefident of the Royal Socicty, Sis Jfon Priugle ; who, when called upon to beftow upon 1): Priefley the gold
medal for his paper of "Difcoveries of the Nature and Properties of Air," thus obferved; "And it is no difparagement to the learned Dr Priefley, that the vein of thele difcoverics was hit upon, and its courfe fuccefsfully followed up, fome years ago, by my very learned, very penetrating, very induftrious, but modef, friend, Dr Brownigg." To habits of too much diffidence, and to his fcrupulofity of tafte, the world has to attribute the fewnefs of his publications, and the difficulties which always impeded his road to the prefs. The writer of this article has grourds for faying, that a general hiftory of the county of Cumberland was one of the doctor's literaty projects, and that he had made feveral arrangementa fubfervient to fuch an undertaking, particularly in the department of natural hiltory. As a medical practitioner, his works were more nume. rous, and, if not equally celetrated, they were of a character more endearing within the fphere of their utility. His fyftem of treating dileafe formed an epoch in the amnals of medical practice. The poor and the rich had everywhere fomewhat for which they thanked him; and health feemed only one of the bleffings which he had to difpenfe. By thefe means the doctor paffed into the fummit of profefional hotour without rival or competitor, without controverfy or detraction, but not without applications and requefts from fellow fludents and followers from diflant part, from academies, focieties, and univerfities, foreign and domeflic, entreating permiffion to enrol his name among their refpective communities. In his younger days, though the clafics of Greece, Rome, and Britain, were prefent to his fancy, and enlivened and enriched his converfation, yet the Sacied Scriptures were the topics of his delight, and the objects of his veneration: and as his quotations of Virgil and Milton bore teflimony to the elegance of his talle, and the fervour of his genius; fo, when Job and Itaiah were brought forward, he thewed what his imagination would afpire at, in the ranges of fublimity. In the ordinary occursence of good things, he never failed to give God the praife; and in the more folemn difpenfations, he clofed his obfervations or repreffed his feelings, by a furpofe of refignation to God's will. To lis feat at Ormethwaite, near Kefwick, he had retired about 20 years before his death, withdrawing himelf as much from the practice of phyfic as his numerous conntxions, his high characicr, and his friendly difpofition would permit ; and purpofing to divide his time and his tafe between the romantic fcenery of this delicious fpot, and his refearches in natural philofophy. In this retirement he died at the venerable age of 88 , lamented by the poor, to whom he was aliways a beneficent triend, and regretted by all. (Month. Mog.)

BROWNY, the name of a ferviceable kind of frite, who, according to a fuperfitious notion formerly prevalent in the Hebrides and Highlands of Scotland (as well as among the country people in England, where he had the name of Rolin (Goodfellozu), was wont 10 c!ean the houfes, helped to churn, thralleed the corn, and would belabour all that pretended to make a jelt of him. He was repselented as flout and blouming, had fine long flowing hair, and went about with a wand in his hand. He was the very courterpart of Milton's Lubler Fiend, who

Tills how the drudging goblin fwet,
To earn his cream-bowl duly fet,

## $B \quad \mathrm{R}$ U

Erowfe, Eiruce.

When in one night, ere glimpfe of morn, His lhadony thail bath thrafh'd the com That ten day-lab'rers could not end ; Then lays him down the Lubber Fiend, And ftretch'd along the chimney's lengeth, Bafks at the fire his hainy thrength.
BROW'SE, the tops of the branches of trees, whereon bealls feed. This is fometimes alfo call brouce and bruttle; probably from the French brout, which fignifies the fame thing.

Browse more properly denotes the food which deer find in young coples, continually fprouting anew.

BRUCE, Robert, fon of the earl of Carrick, being competitor with Haliol for the crown of Scotland, lof it by the arbitration of Edward I. of England, for geueroufly refufing to hold the crown of Scotland as depending on him, which his anceftors had left him independent. But Baliol hiving afterward broke his agreement with E'iward, Bruce was eafily perfuaded by that king to fide with him again? Baliol, upon promife that he would fettle him on the throne. Having contributed much to the breaking of Baliol's party, he demanded the accomplifhenent of King Edward's promife, who is faid to have given him this anfwer: "What! have I mothing elfe to do but to conquer kingdoms for you?" Howiver, he recovered his crown, defented the Englifh in feveral battles, raifed the glory of the Scots, and extended their dominions. See Hifory of Scitland.

Bruce, Yuraes, F. R. S. the celebrated traveller, was born at Kinnaird-houle in the county of Stirling, Seothad, in the year 1729. The Bruces of Kinnaird are a very ancient family. They were defcended from a younger fon of Robert de Brace, and have been in poltefion of that eftate for three centuries, connested during this period with fome of the mof dillin. grifhed houfes of the kingdom.

Mr Bruce was infructed in grammatical learning at the fchool of Harrow on the Hill in Middlefex, where he acquired a confiderable thare of clafical knowledge. Returning to Scotland, he applied to the fludy of the laws of his country; but foon contracting a diflike to his fituation, he determined to pufh his fortune in the Eaft Indies, and for that purpofe went to London. Being difappointed in his views of procuring an appointment in the company's fervice, be engaged in trade, and entered into partnefflip with a wine micrchant in London of the name of Allen, whofe daughter he married. That lady falling into a bad flate of health, Mr Bruce took her abroad, in hopes that travelling would be attended with beneficisl effects, but in the? he was difappointed, as the dicd within a year after her marriage. He was induced, in order to dif$\mathrm{p}=1$ bis grief, to continue his travel?, during which his father dying (at Edinburgh 4th May 1758), the inheritance of his ancellors devolved upon him, and he returned to Britain. Sume of his fublefluent tranfactions thall now be rclated in his orm words:
"Every one will remember that period, fo glorious to Britain, the latter end of the miniftry of the late earl of Chathan. I was then relurned from a tour through the greatef part of Europe, particularly through the whole of Spain and Pertagal, between whom there was then the appeararice of a:a appoaching war.
"I was about to retire to a fimall patrimony I had

747 ] B R U
received from may ancefors, in order to embrace a life of fudy and refleation, nothing more active ap carring within my power, when chance threw me anex, sected. ly into a very flort and very defultory converfation with Iord Chatham.
"It was a few days after this, that Mr Wood, then under fecretary of flate, my zealous and fincere friend, informed me that Lord Chatham intended to employ me upan a particular fervice; that, however, I might go down for a few weeks to my own country to fettle iny affare, but, by all means, to be ready opon a call. Nothing could be more llattering to me than fuch an offer, when fo young ; to be thought worthy by Lord Chatham of any employment, was doubly a preference. No time was lof on any fide; but juft after recciving orders to return to London, his lordihip had gone to Bath, and refigned his office.
"This difappointment, which was the more fenfible to me that it was the firft 1 had met with in public life, was promiled to be made up to me by Loru* Egremont and Mr George Grenville. The former had been long my friend; but unhappily he was then far gone in a lethargic indifpofition, which threatened, and did very foon put a period to his exillence. With Lord Egremont's death my expectations vanihhed. Further pratticulars are unneceflary; but I hope that, at leaft in part, they remain in that breaft where they naturally ought to be, and where I thall ever think, not to be long forgotten is to be rewarded.
"' Seven or eight months were paffed in an expenfive and fruitlefs attendance in London, when Lord Halifax was pleafed, not only to propofe but to plan for me, a journey of confiderable importance, and which was to take up feveral yearc. His lordfinip faid, that nothin: could be more ignoble than, at fuch a time of life, at the height of my reading, health, and activity, I nould as it were, turn peafant, and voluntarily bury my felf in obfcurity and idlenefs; that though war was now drawing fatt to an end, full as honourable a competition remained among men of firit, which fhould acquit themfelves bef in the dangerous line of ufeful adventure and difcovery.
"He obferved, that the coaft of Barbary, which might be faid to be juft at our door, was yet but partially explored by Dr Shas, who had only illuftrated (very judicioully indeed) the geographical labours of Sufon ; that neitleer Dr Shaw nur Sanfon had been, or pretended to be, capable of giving the public any detail of the large and magnificent remains of ruined architecture, which they both vouch to have feen in great quantities, and of exquifite clegance and perfiction, ail over the country. Such had not been their lludy, yet fach was really the tafte that was required in the prefent times. ile withed, therefore, that I mould be the firt, in the reign juft now beginning, to let an cxample of making large additions to the royal collection; and he pledged himfelf to be my fupport and patron, and to make good to me, upon this additional merit, the promifes which had been held forth to me by former minifters for other fervices.
" Whe difoovery of the fource of the Nile was alloa fubject of thefe converfations; hut it was always mentioned to me with a kind of difitence, as if to be expected from a more experienced travelier. Whether this was but another way of exciting me to the at-

Pruce.

## BR U $\quad[748] \quad B \quad R \quad U$

Gruce. tempt I flall not fay; but my heart, in that inftant, did me juftice to fuggef, that this too was either to be achieved by me, or to remain as it had done for thefe laft two thoufand years, a defiance to all travellers, and an opprobrium to geography.
"Fortune feemed to enter into this fcheme. At the very inftant, Mr Afpinwall, very cruelly and ignominioufly treated by the dey of Algiers, had refigned his confulthip, and Mr Ford, a merchant, formerly the dey's acquaintance, was named in his place. Mr Ford was appointed, and, dying a few days after, the confulthip became vacant. Lord Halifax prefied me to accept of this, as containing all forts of conveniences for making the propofed expedition.
"This favourable event finally determined me. I had all my life applied unwearicdly, perhaps with more love than talent, to drawing, the practice of mathematics, and efpecially that part necefiaty to affronomy. The tranfit of Venus was at hand. It was eertaimly known, that it would be vifible once at Algiers, and there was great reafon to expect it might be twice. I had furnihed myfelf with a large apparatus of inflruments, the completeft of their kind, for the obfervation. In the choice of tbefe, I had been affitied by my friend Admiral Campbell, and Mr Ruffel, fecretary to the Turkey company: every other neceffary had been provided in proportion. It was a pleafure now to know that it was not from a rock or wood, but frons my own houfe at Algiers, I could deliberately take meafures to place myfelf in the lift of men of fcience of all natiurs who were then preparing for the fame fcientific purpofe.
" Thus prepared, I fet out for Italy, through France; and though it was in time of war, and fome flrong objeations had been male to particular paffports, folicited by our government from the French fecretary of Atate, Monfieur de Choifeul moft obligingly waved all fuch exceptions with regard to me, and moft politely affured me, in a letter accompanying my paffort, that thofe difficultics did not in any fhape regard me, but that I was perfectly at liberty to pals through or remain in France, with thofe that accompanied me, without limiting their number, as ftrort or as long a time as thould be agrecable to me.
"On my arrival at Rome, I received orders to proceed to Naples, there to wait his majefly's further commands. Sir Charles Saunders, then with a flett before Cadiz, had orders to vift Malta before he returned to England. It was faid, that the grand mafter of that order had behaved fo improperly to Mr Hervey (ifterwards Lord Brifoi) in the beginning of the war, and fo partially and unjufly between the two naLons in the courfe of it, that an explanation on our part was become neceffity. The grand matter no footer heard of my arrival at Naples, than guefing the errand, he fent off Chevalier Mlazzini to London, where he at once made his peace and his compliments to his majefty upon his acceffion to the throne.
"Nothing remained nusw but to take poffeffion of my confuldhip. I rethrined, without lofs of time, to Rome, and from thence to Leghoru, where having embarked on board the Muntreal man of war, I proseeiled to Algiers.
"Afier a year fpent at Algiers, conftant converfation with the ratives while abroad, and with my mant:-
feripts within doors, had qualified me to appear in any part of the continent without the help of an interpreter. Ludolf had affured his readers, that the knowledge of any oriental language would foon enable them to acquire the Ethiopic ; and I needed only the fame number of books to have made my knowledge of that language go hand in hand with my attainments in the A. rabic. My immediate project of fetting out on my journey to the inland parts of Africa, had made me double my diligence; night and day there was no relaxation from thefe fudies, although the aequiring any fingle language had never been with me either an object of time or difficulty.

At Algiers Mr Bruce was detained longer than he expected, in confequence of a difpute with the dey concerning Mediterranean paffes. This being adjufted, he pruceeder to Mahon, and from Mahon to Carthage. He next vified Tunis and 'Tipuli, and travelled over the interior parts of thefe flates. At Bengazi, a fmall town on the Mediterranean, he fuffered thipwreck, and with extreme diffieulty faved his life, though with the lofs of all his baggage. He afterwards failed to the ifles of Rhodes and Cyprus, and proceeding to Afia Minor, travelled through a confiderable part of Syria and Palefline, vifiting $\mathrm{H}_{\text {affia, }}$ Latakea, Aleppo, and Tripoli, near which laft city he was again in imminent danger of periming in a river. The ruins of Palmyra and Baalbec were next carelully furveyed and fketched by him; and his drawings of thefe places are depofited in the king's library at Kew; "the moft magnificent prefent, in that line," to ufe his own words, "ever made by a fubject to his fovereign."

It is much to be regretted, that Mr Bruce publifhed no particular account of thefe various journeys; from the nature of the places vifited, and the abilities of the man, much curiuns and ufeful information might have been expected. Some manufeript accounts of different parts of them are faid to have been left by him, but whether in fuch a fate as to be fit for publication is very uncertain.

In thefe various travels fome years were paffed; and Mr Bruce now prepared for the grand expedition, the accomplithment of which had ever been neareft his heart, the difcovery of the fources of the Nile. In the profecution of that dangerous object, he left Sidon on the 15 th of Junc 1768, and arrived at Alexandria on the 20th of that month. He proceeded from thence to Cairo, where he eontinued to the 12 th of December following, when he embarked on the Nile, and dailed up the river as far as Syene, vifiting in the courfe of the voyage the ruins of The bes. Leaving Kenne on the Nile, 16th Februaty 1569, he croffed the defeit of the Thebaid to Coffeir on the Red fea, and arrived at Jidda on the 3 d of May. In Arabia Felix he remained, not without making feveral excurfions, till the $3^{d}$ of September, when be lailed from Loheia, and arrived on the 1gth at Mafuah, where he was detained near two months by the treachery and avarice of the naybe of that place. It was not till the 15 th of Nuvember that he was allowed to quit Arkeeko, near Maluah; and he arrived on the 55 th of Fcbruery 3770 at Gondar, the capital of Aby flinia, where he ingratiated himfelf with the moft conliderable perfons of both fexes belonging to the court, Several months

## B. R U

Bruce. were employed in attendance on the king; and in an unfucceffful expedition round the $1_{\text {a }}$ ke of Dembea. Towards the end of Ottober, Mr Bruce fet out for the fources of the Nile, at which long-defired foot he arrived on the 54th of November, and his feelings on the accomplifiment of his wifhes-cannot better be expreffed than in his own words:
" It is eafier to guefs than to defcribe the fituation of my mind at that moment; flanding in that fpot which had baffed the genius, induftry, and inquiry, of ancients and moderus for the conrfe of near 3000 years. Kings had attenpted this dilcovery at the head of armies; and each expedition was diftinguifhed from the latt only by the difference of the numbers which bad perifhed, and agreed alone in the difappointment which lwid uniformly, and without exception, followed them all. Fame, riches, and honour, had been held out for a feries of ages to every individual of thofe myriads thofe princes commanded, without having produced one man capable of gratifying the curiofity of his fovereign, or wiping off this ftain upon the enterprife and abilities of mankind, or adding this defideratum for the eneouragement of geography. Though a mere private Briton, I triumphed here in my own mind over kings and their armies; and every comparifon was leading nearer and nearer to the prefumption, when the place itfelf where I tloon, the object of my vain-glary, fuggetled what depreffed my fhort-lived tiumphs. I was but a few minutes arrived at the fource of the Nile, through numberlefs dangers and fufferings, the leaft of which would have overwhclmed me, but for the continual goodnefs and protection of providence; I was, however, but then half though my journey, and all thofe dangers which I had already paflied awaited me again on my return. I found a defpondency gaining ground falt upon me, and blafting the crown of laurels I had too rithly woven for myfilf."
When he returned to reft the night of that difcovery, repofe was fought for in vain. "Melancholy reflections upon my prelent fate, the doubtfulnefs of my return in fafcty, were I permitted to make the attempt, and the fears that even this would be refufed, according to the sule obferved in Abyfinia with all travellers who have once entered the kingdom; the confcioufnefs of the pain that I was then occafioning to many worthy individuals, expetting daily that information concerning $m y$ fituation which it was not in $m y$ power to give them; fome other thoughts, perhaps, nill neater the heart than thofe, crowded upon my mind, and forbade all approach of feep.
"I was, at that very moment, in poffeffion of what had for many years been the principal object of my ambition and withes; indifference, which, from the ufual infirmity of human mature, folluws, at leall for a time, comnlete enjoyment, had taken place of ir. The marfh, and the fount ins, upon comparifon with the rife of many of our rivers, became now a tritling object in me fight. 1 remembered that magnificent fere in my own native country, where the Trvecd, Clyde, and Annan, rife in or hill; three rivers I now thought not inferior to the ivile in beiuty, preferable to it in the cultivation of thoie countries theoush which the. Hlow; fuperior, vattly fuperiur to it in the virtues and qualities of the inhabitants, and in the beauty of its flocks, crowding its $\mathrm{p}^{2}$ fures in peace, without feat of violence
from man or beaft. I had feen the rife of the Rhine and Rhone, and the more nagnificent fources of the Saone; 1 bcgan, in my forrow, to treat the inquiry about the fource of the Nile as a violent effort of a disabout the fource

Grief and defpondency now rolling upon me like a torrent, relaxed, not refrefhed, by unquiet and imperfeet fleep, I ftarted from my bed in the utmoft agony; I went to the door of my tent. Every thing was fill; the Nite, at whole head I ftood, was not capable either to promote or to interrupt my flumbers, but the coolnefs and ferenity of the might braced my nerves, and chafed away thole phantoms that while in bed had oppreffed and tormented me.
" It was true, that numerous dangers, hardhips, and forrows, had befet me through this half of my excurfion; but it was fill as true, that another Guide, more powerful than my own courage, health, or underflanding, if any of them ean be called man's own, had uniformly protected me in all that tedious half. I found my confidence not abated, that fill the fame Guide was able to conduct me to my withed-for home. I immediately refumed my former fortitude, confidered the Nile as indeed no more thon rifing from fprings as all other rivers do, but widely differing in this, that it was the palm for 3000 years held out to all the nations of the world as a detur dignifymo, which in my cool hours I had thought was worth the attempting at the rik of my life, which I had long either refolved to lofe, or lay this difcovery a troply in which 1 could have no competitor, for the honour of my conntry, at the feet of my fovereign, whofe fervant I was."

Twe object of Mr Bruce's withes being now gratified, the bent his thoughts on his return to his native country. He arrived at Gondar 19th November 1770; but found, after repeated follcitations, that it was by no means an eafy tafk to obtain permiffion to quit Abyfinia. A civil war in the mean time breaking out, feveral engagements took place between the king's forees and the troops of the rebcls, particularly three actions at a place called Serbraxos on the 19 th, 20 th, and 2.2d of May เフ71. In each of them Mr bruce acted a conliderable part, and for his valiant conduct in the fecond received, as a reward from the king, a chain of gold, of $18+$ links, each link weighing $3 \mathrm{I}^{\prime}=$ dwte or fomewhat more than $2 \frac{1}{2}$ !bs troy in all. At Gondar, after thefe engagements, he again pteferred the moft earneft entreaties to be allowed to return home, entreaties which were long refilied; but his health at laft giving way, from the ansiety of his mind, the king confented to his departure, on condition of his ellgaging by oath to return to him in the event of his secovery, with as many of his kindred as he could engage to accompany him.

After a reflidence of ne.rly two years in that wretch. ed country, Mr Bruce left Gondar un the 16 th of Decomber 1771, taking the dangerous way of the defert of Nuhia, in place of the more eafy road of Mafoah, by which he entered Ahyflims. He was irduced to take this route, from his knowledge and former exne. rience of the cruel and favage temper of the naybe of Mafuah, Ariving at leawa the 2uf March 1772,

> "What's Hecuba to him, or he to Hecuba, - That he flould weep for her?"

## BRU [750] B R U

Eruce. Mr Bruce had the misfortune to find the fhekh Fidele of Atbara, the counterpart of the naybe of Mafuah, in cvery bad quality; by his intrepidity and prudence, however, and by making good ufe of his foreknow. ledge of an eclipfe of the moon, which happened on the 1 th of April, he was permitted to depart next cay, and he arrived at Sennaar on the 29th of the fame month.

Mr Bruce was detained upwards of four months at that miferable and inhofpitable place; the inhabitants of which be defcribes in thefe expreflive words: "IVar and realon Ceem to be the only employment of thefe horrid people, whom heaven has feparated by almoft impaflable deferts from the reft of mankind, confining them to an accurfed foot, feemingly to give them an carren in time of the only other worfe which he has referved to them for an eternal hereafter." This delay was occafuned by the villany of thofe who had undertaken to fupply him with money; but at laft, by difpoling of 178 links of his gold chain, the well-earned trophy of Serbraxos, he was cnabled to make preparation for his dangerous journey through the deferts of Nubia.

He left Sennaar on the 5 th of September, and arrived on the 3 d of OAtober at Chendi, which he quitted on the 20 th, and travelled through the defert of Gooz, 10 which village he came on the 26th of Olober. On the $9^{\text {th }}$ of November he left Gooz, and entered upon the moft dreadful and dangerous part of his jurney; the perils attending which he has related with a power of pencil not unworthy of the greatef mafiers. All his camels having perifhed, Mr Bruce was under the neceffity of abandoning his baggage in the defert, and with the greatef difficulty reached Affouan upon the Nile on the 29 th of November.

After fome days reft, having procured frefh camels, he returned into the defert, and recovered his baggage, among which is particularly to be remarked a quadrant (of three feet radius) fupplied by Louis XV. from the military academy at Marfeilles; by means of which noble inftrument, now depufited in the mufeum at Kin naird, Mr Bruce was enabled with precifion and accuracy to fix the relative fituations of the feveral remote p!aces he vifited.

Oa the roth of January 1773 , after more than four years abfence, he arrived at Cairo, where, by his manly and generous behaviour, he fo won the heart of Mahomet Bey, that he obtained a firman, permitting the commanders of Englifh veffels belonging to Hombay and Bengal to bring their flips and merchandife to Ssez, a place far preferable in all refpects to Jidda, to which they were formerly confined. Of this permiffon, which no European nation could ever before arquire, many Jinglifh veffels have fince availed themfelves; and it has proved peculiarly ufeful both in public and private difpatches. Such was the worthy conclufion of his memorable journey through the defert; a journey which, after many hardhips and dangers, terminated in oltaining this great national bevefit.

At Cairo Mr Bruce's earthly career had nearly been concluded by a diforder in his leg, occafioned by a worn: in the flefl. This accident kep: him five weeks in cxtreme agony, and his health was not re.efla. blined till a kivelvemonth afterwards, at the baths of Porretta in Italy. On his return to Fiurope, Mr Bruce
was received with all the admiration due to fo exalted a character. After paffing fome confiderable time in France, particularly at Montbard, with his friend the comte de Buffon, by whom he was received with much hofpitality, and is mentioned with great applatse, he at laft revifited his native country, from which he had been upwards of twelve years abfent.

It was now expected that he would take the eatieft opportunity of giving to the world a narrative of his travels, in which the public curiofity could not but be deeply interefted. But feveral circumfances contributed to delay the publication; and what thefe were will be bell related in his own words:
"My friends at home gave me up for dead; and as my death muft have happened in circumbances difficult to have been proved, my property became as it were a beredisas jacens, without an owner, abandoned in common to thofe whofe original title extended no further than temporary poffeflion.
"A rumber of law-fuits were the irevitable confequences of this upon my return. To thefe difagrecable avocations, which tock up much time, were added others fill more unfurtunate. The relentlefs ague, caught at Bengazi, maintained its ground, at times, for a fpace of more than 16 years, though every remedy had been ufed, but in vain; and what was wortt of all, a lingering diftemper had ferioully threatened the life of a molt near relation (his fecond wife), which, after nine years conflant alarm, where every duty bound me to attention and attendance, conducted her at laft, in very early life, to her grave."

Amid!t the anxiety and the diftrefs thus occafioned, Mr Bruce was by no means neglect ful of his private affairs. He confiderably improved his landed property, inclofing and cultivating the wafte grounds; and he highly embelliffed his paternal feat, making many additions to the houle, one in particular of a noble mufeum, filled with the moft precious Mores of oriental literature, large collections of drawings made, and curious articles obtained, during his far-extended pétegrinations.

The termination of fome law. fuits, and of other bufinefs, which had occupied much of his time, baving at length afforded leifure to Mr Bruce to put his materials in order, his greatly defired and long expected wotk made its appearance in 1790 , in five large quarto volumes embellifhed with plates and charts. It is unneceflary to enter into any critic or anslyfis of this celebrated work. It is univer\{ally allowed to be replete with curious and ufeful information; and to abound in narratives which at once excite our admiration and intereft our feelings. The very fingular and extraordinary pieture which it gives of Abyffinian manners, fartled the belicf of fome; but thefc manners, thaugh firange in the fieht of an European, are little more than might be expected in fuch a barbarous country.

A more ferious objection to the ruih of Mr Bruce's narrative was flarted by an anonymous critic, in an Edinburgh newfpiper, foon after the publication, from the account of two aftronomical phenomena, which it is a?ferted could not poljbly bove lippened, as Mr Bruce afferts. 'The firf of thefe is the appearance of the new moon at Furftout, during Mr Bruce's nay in that place, which he mentions to have been from 25 th Dec. 1768 , to the 7 th of Jan. 1769 ; and on a particular day in that

## $B \quad R \quad U$

Bruce. interval afferts, that the new moon was feen by a fakir, and was found hy the ephemerides to be threc days old ; whereas it is certain that the moon changed on the 8 th of January 1769. The other phenomenon appears equally impolible. At reawa Mr Bruce fays he terrified the thekh by foretelling that an ecliple of the moon was to take place at four o'clock aficrnoon of the 15 th of April $177^{2}$; that accordingly, foon after that hour, he faw the ecliple was begun; and when the thadow was half over, told the thekh that in a little time the moon would be totally darkened. Now, by calculation, it is certain, that at Teawa this eclipfe mult have begun at 36 minutes paft four, and the moon have been totally covered at 33 minutes palt five; while the fun fet there a few minutes paft lix, before which time the moon, then in oppofition, could not have rifen: fo that as the moon rofe totally eclipfed, Mr Bruce could not fee the fladow half over the difk, nor point it out to the thekh. To thefe objections, which appear unfurmountable, Mr Bruce made no reply, though in converfation he faid he would do it in the fecond edition of his book.

The language of the work is in general harft and unpolithed, though fometimes animated. Too great a difplay of vanity runs through the whole, and the apparent facility with which the traveller gained the moft familiar accefs to the courts, and even to the harams, of the fovereigns of the countries through which he paffed, is apt to create in readers fome doubts of the accuracy of the narration. Yet there appears upon the whole fuch an air of manly veracity, and circumflances are mentioned with a minutenefs to unlike deceit, that thefe doubts are overcome by the general impreffion of tru:h, which the whole detail irrefifibly fafters upon the mind. This firf impieflion being almolt wholly difpoled of within a fhort time, Mr Bruce bad llipulated for a fecond edition, which was preparing for the prefs, when death removed the author from this tranfitory ftage.

That event happened on the $26: h$ of $A$ pril $1799^{\circ}$ In the evening of that day, when fome conipany were deoarting, Mr Bruce attended them down Ptairs; on the fteps his foot Altpped, and he fell down headlong. He was taken up fpeechlefs, and remained in a fiate of infenfibility for eight or nine hours, when he expired, on the 27 th of April 1793, in the 65th year of his age.

He married, for his fecond wife, at Carronhall, zoth May 1776. Mary, eldelt daughter of Thomas Dundas of Fingatk. Mrs Bruce died, after a long and lirger. ing indifpofition, during which the was attended with the mofl affectionate affiduity by her hurband, in 1784 , having had iffue two fons and one daughter.

There never, perhaps, exifted a man better qualified for the hazardous enterprife he undertook, than Mr Bruce. His perfon was of the largelt fize, his beight cxceeding fix feet, and the bulk as well as the flrength of his body was proportionally great. He excelled in all corporeal accomplifhments, being a hardy, practifed, and indefatigable fwimmer, trained to exercife and fatigue of every kind, and his long reffdence among the Arabs had givea him a more than ordinary facility in managing the horfe. In the ufe of fire arms he was fo unerring, that in innumerable inflances lie never failed to hit the mark; and his destetity in handling the
fpear and lance on loureback was alfo uncommorly great. He was mafter of mo!t languages, maderfanding the Greek perfectily; and was fo well \{killed in oriental literature, that he revifed the Now Mellament in the Eihiopic, Samaritan, Hebrew, and Syriac, making many ufeful notes and remarks on dillicult pafiges. He had applicel from early youth to mathematice, drawing, and aftronomy; and had açuiled fome knowledge of phyfic and furgery. His memory was aftonilhingly retentive, his judgnent fond and vigorous. Hc was dexterous in negotiation, a malle: of public bufinefs, animated with the warmell zeal for the glory of his king and couniry, a phylician in the camp or city, a foldier and horfeman in the field, while, at the fatne time, his breafl was a franger to fear, though he took every precaution to avoid danger. Such, at leaft, is bis own reprefentation of his character; and though an impartial judge would probably make confiderable abatement for the natural bias of a man drawing his owr portrait, jet it cannot be denied, that in perfonal accomplithments, Mr Bruce equalled, if not exceeded, poof of his cotemporarjes; was uncommonly dillinguilhed for vigour of underflanding, as well as great literary attainments; and in active perfevering intrepidity may be cl..Ined with the molt eminent characters in any age or country.

Thus accomplifhed, Mr Bruce could not but be eminently fitted for an attempt fo full of difticulty and danger as the difcovery of the fources of the Nile: no one who perules his account of the expedition, can fail to pay an unfeigned tribute of admiration to his intrepidity, manlinefs, and uncommon desterity in ex. tricating himfelf out of fituations the mon dangerous and alarming, in the courle of his long and hazardous journey. Not to mention his conduct during his refidence in Abyflinia, his behaviour at Mafuah, Teawa, and Sennaar, evinces the uncommon vigour of his mind; but it was chielly during his paffige througl the Nubian defert that his fortitude, courage, and prudence, appeared to the greateft advantage. Of his learning and fagacity, his delineation of the courfe of Solomon's deet from '「arthith to Opbir, his account of the caufe of the inundations of the Nile, and his comprehenfive view of the Absflinian hifory, afford ample proofs. He exprefies thronghout all his works a deep and lively fenfe of the care of a fuperintending Provi. dence, without whofe influence, he was convinced of the futility of all human ability and forefight to preferve from danger. He appears to have been a ferious believer of the truth of Chrifianity; and his illuftrations of fome parts of the facred writings are original and valuable. (Edin. Mag.)

BRUCHSAI, a town of Germany, in the palatinate of the Rhine, and bifhopric of Spires, fituated on the river Satz, in E. Long. 8. 30. N. I.at. 49. 15.

BRUEGHEI. Sec Breughel.
BRUGES, a city of the Aullrian Netherlands, apital of the territory of Buges, with a bithop's Cee. It is feated in a plain eight miles from the fea; and has a great number of canals, made for the benefit of trase, onc of which leads to Ghent, another to Oilend, and others to Sluys, to Newport, to Furnes, to Ypres, and to Dunkirk, which you may reach in a day in the fummer time. All the waters about Biuges are with-

## B R U $[752] \quad$ B R U

Bruges. out any current; but they may be changed in half an hour's time, by opening the fluices, and letting the water run into the fea. There are feveral bridges about the city, and that which was built in 1739 of freeltone is very flately.

Bruges was in a very flourifhing condition upwards of 200 years ago, and every nation had a conful herein for the maintenance of their rights and privileges; but fince the enlargement of Amfterdam and Antwerp, the trade is diminifhed, and its inhabitants are not numerous enough for fo large a place. However, there are many rich merchants, and a chamber for trade. There are feveral fine churches; in the firt rank of which is the cathedral, whole rich ornaments and treafure deferve notice. The finef fquare in the city is the great market, in which fland the balls, with public galleries, and a large court in the middle, and on one of its fides a hight feeple fupported only with four pillars. It is full of bells, with the mof harmonious chimes in all the country. On the fide of the great〔quare there is aftructure which ferves for a public magazine to lay cloth in. It is built on a canal, and fupported by pillars in fuch a manner, that fmall veffels can pals under it, to crofs the city from the canal of Oftend to that of Ghent.

The fquate where the Wednelday's marktt is kept is very fine; for it contains feveral walks between two rows of trees, and a new guard-houle in the middle. The Burg is a large fquare, in which is the townhoule, built in the Gothic manner, aed adorned with a $v+r i e t y$ of figures of the ancient counts and counteffes of Flanders. In the fame fquare there are feveral other puhlic buildings. The church dedicated to the Virgin Mary is very fine, with a high Ateeple, which ferves as a fea-matk for the flips that come to Oftend; on the infide are two tombs of copper gilt, of an extraordinary magnificence. Befides the cathedral and two collegiate churches, there are five parifh churches, fourteen chapels, and twelve convents for men and women. There are a great many alms-houfes and hofpitals, one of which is called the fchool of Bogards, where there are about 180 boys, fome of which are brought up to learning, others to trades, according to their genius. Their habit is cloth, and half of them wear blue and half red, with a black bonnet. There is alfo a fchool for poor girls, to the number of 120 , clothed with red or blue. In ftort, there is no place in the Low Countries where they take more care of widows and orphans.

It is remarkable that the knights of the golden fleece were inflituted in this city in 1430 , when the marriage of llhilip the Good was celebrated with Elizabeth princels of Portugal. The parts about the city. w'ich belong to it, are called Franc of Bruges, and contain 37 villages, and enjoy perfect liberty, according to the tenor of their freedom. The fortifications of Bruges are but trifling, infomuch that in the sime "f war they always yield to the frongef party. It is $: i$ ht miles eafl of Oilend, 24 north-cafl of Ghent, and 46 weft of Autwerp. E. L.ong. 3.5. N. I.at. $5: 11$.

Brugers, Yobn of, (real name, Yoln sian Eick), a celebrated rismifi painter, and the firll who ditcovered the method of painting in oil, flourified in the 15 ch eentury. IAc found in the courfe of his chemical ex.
periments (to which fcience he alfo applied himfelf), that, by ginding colours with linfeed or nut oil, he could form them into a folid body which would refit

Bruin II the water, and not need the varnifh uled in painting the water colours or in frefco. He prefented the firft picture painted in this manner to Alphonfus I. king of Naples, who was much pleafed with it.

BRUIN, Jонn DE, profeflor of natural philofophy and mathematics at Utrecht, was born at Gorcum in 1620. He had uncommon fkill in diffecting animale, and was a great lover of experiments. He made alfo obfervations in aftronomy. He publifhed differtations De vi alirice; De corporum gravitate el levitate; De cognitione Dei naturali; De lacis canfa et origine, Sic. He had a difpute with laac Voffius, to whom he wrote a letter printed at Amfterdam in 1663 ; wherein he criticifes Voffius's book De natura et proprietate lucis; and Atenuoufly maintains the hypothefis of Defcartes. He died in 1675 , after he had been profeffor 23 years: and his funeral oration was pronounced four days after by M. Grævis.

BRU1SE, in Surgery, the fame with Contusion.
BRUMALES PLANTA, in Butany (from bruma, winter) ; plants which flower in our winter ; fuch are flants from fouthern tropical regions, which retain in fome meafure their former babits, and obferve the fame period of flowering, the fummer in thofe regions being at the fame time of the year with our winter.

BRUMALIA, in Roman antiquity, feftivals of Bacchus celebrated twice a-year; the firt on the 12 th of the kalends of March, and the other on the 58 th of the kalends of November. They were inftituted by Romulus, who during thefe feafts ufed to entertain the fenate. Among other heathen feftivals which the primitive Chrifians were much inclined to obferve, Tertullian mentions the brumæ or hrumalia.

BRUMOY , Peter, a learned Jefuit, born at Rouen in 1668 , difinguifmed himfelf in his youth by his talents for the belles lettres; and during his whole life was beloved fur his probity, his virtue, and the goodnefs of his heart. He wrote many works, the moft confiderable of which is the Theatre of the Greeks. He died at Paris in 1742.

BRUN, Anthony le, an ambaffador of Spain, fammus for his fkill in negotiation, was of an ancient and noble farily, and born at Dole in the year 1600 . He was attorney-general in the parliament of Dole; during which time he had a hand in all the flate negotiations which concemed the provinces. He was lent afterwards by Philip IV. to the diet of Ratimon, and from thence to the court of the emperor Ferdinand III. He was one of the plenipotentiaries of his Catholic majefty, at the conferences of Munfter held in 1643 ; where, though all the other plenipotentiaries took place of him, yet it is faid that he far excecded them all in capacity. The king of Spain was particularly beholden to him for the peace which the Dutch made at Munfter, exclufively of France; and the intriguing turn which he ftrowed upon this occafion made him dreaded ever alter by French ambafiadors. He was a man of letters as well as of politics; and therefore emplayed his pen as well as tongue in the fervice of his mafter. Ifc died at the Hague, during his embalfy, in the year 1654.

Erun, Cliarles le, was defcended of a family of di:

## B R U [753] B R U

Brun. Ainction in Scotland, and born in the year 1619. His father was a ftatuary by profeflion. He difcovered, it is faid, fuch an early inclination for painting, that at three years of age he ufed to take coals, and defign on the hearth and fide of the chimney, only by the light of the fire; and at 12 he drew the picture of his uncle fo well, that it ftill paffies for a fine piece. His father being employed in the gardens at Sequier, and having brought his fon along with him, the chancellor of that name took a liking to him, and placed him with Simon Vouet, an eminent painter. He was afterwards fent to Fountainbleau, to take off fome of Raphael's pieces. He fent him next to Italy, and fupported him there for fix years. Le Brun, in his return, met with the celebrated Pouffin, by whofe converfation he greatly improved himelf in his art, and contracted a friendfhip with him which lafted as long as their lives. A painting of St Stephen, which he finifhed in 165 , raifed his reputation to the higheit pitch. Soon after this, the king, upon the reprefentation of M. Colbert, made him his firf painter, and conferred on him the order of St Michacl. His majefly employed two hours every day to fee him work while he was painting the family of Darius at Fountainbleau. About the year 1662, he began his five large pieces of the hiftory of Alexander the Great, in which be is faid to have fet the actions of that famous conqueror in a more glorious light than Quintus Curtius has done in his hillory. He procured feveral advantages for the royal academy of painting and fculpture at Paris, and formed the plan of another for the fludents of his own nation at Rome. There was fearcely any thing done for the advancement of the fine arts in which he was not confulted. It was through the intereft of M. Colbert that the king gave him the direction of all his works, particularly of his royal manufactory at the Gobelins, where he had a handfome houfe with a genteel Calary affigned to him. He was alfo made director and chancellor of the royal academy, and fhowed the greateft zeal to encourage the fine arts in France. He was endowed with a valt inventive genius, which extended itfelf to arts of every kind. He was well acquainted with the manners and hiftory of all nations. Befides his extraordinary talents, his manners were fo polified and his addrefs to pleafing, that he attracted the regard and affection of the whole court of France, where, by the places and penfions conferred on him by the king's liberality, he made a very confiderable figure. Le Brun was the author of two treatifes; one on phyfiognomy, and the other on the different characters of the patfions. He died at Paris in 16 go.

The talent of this painter, except for landfcapes, was univerfal. He was not indeed admired for his colonring, or for his fill in the diltribution of his lights and hladows; but for a good gufto of defign, an excellent choice of attitude, an agreeable management of his draperies, a beautiful and juft expreflion, and a flrict obfervance of decorum. In fine, his compofitions demand the attention and admiration of the nicelt julges. The pieces that gained him greatelt reputation were, befides what we have alieady mentioned, thote which he finihed at Fontainbleau, the great faircafe at Verfailles, but efpecially the grand gallery there, which was the laft of his works, and is faid to have taken him up it years.

bRUNO, Jordano, an atheifical writer, was born at Nola in the kingdom of Naples; and about the year 1582 began to call in queftion fome of the tenets of the Komifh church, which occafioned his retiring to Geneva: but after two years ftay there, he exprefled his averfion to Calvinifm in fuch a manner that he was expelled the city. After having flaid fome time at Lyons, Thouloufe, and Paris, he came to London, and continued two years in the houfe of M. Caftlerieau the Freneh ambaffador. He was very well received by Gureen Elizabcth, and the politer part of the court. His principal friends were Sir Philip Sidncy and Sir Fulk Greville. With thefe and fome others of their club, Bruno held affemblies; but as they treated of fubjects of a very delicate nature, which could not fuit the tafte or capacity of every body, they kept the door always fhut, and none but fele $\mathcal{C}$ perfons were admitted into their company. At Sir Philip's requeft, he compofed his Spaccio della Befia Triumplante, which was printed in $8 \mathrm{vo}, 1584$, and dedicated to that gentleman. This work, which is remarkable for nothing but its impiety, we are told in one of the Spectators, ( $\mathrm{N}^{\circ} 389$ ), fold at an auction in London for 301. From England he went to Wittemberg, and from thence to Prague, where he printed fome tracts, in which he openly avowed his atheiftical principles. After vifiting fome other towns in Germany, he made a tour to Venice. Here he was apprehended by order of the inquifition; tried; condemned; and refufing to retract, was burnt at the flake, February $9^{\text {th }}$ 1600.

HRUNSBUTTLE, a fea-port town of Germany, in the circle of Lower Saxony, and duchy of Holtein, feated at the mouth of the iver Elbe, in E. Long. 8 , 42. N. Lat. 44. 30. It is fubject to Denmark.
brunsfelsia. See Botany Index.
BRUNSWICK, a city o! Germany, in the circle of Lower Saxony, and capital of the duchy of the fame name. It is compofed of five towns, viz. the (Ild Town, the New Town, the Hagen or Burg, the Old Wieck, and the Sack, which makes it a large place, but the houles are almoft all built of wood. There are feveral churches, one of which is an ancient Gothic building, but the appearance of its antiquity is al. molt ablorbed by the repairs it has undergone. Brunfwick is a fortificd place, and would require a numerous army to befiege, and not a few men to defend it. It is of a fquare form, divided in the middle by the river Ocker. It is about two miles in circumference, and is itrongly fortified. On the ramparts is a mortar piece of brafs, ten feet fix inches long, and nine feet two inches in citcumference, weighing 1800 quintals, and has 93 quintals of iron in its carriages. It will carry a ball of 730 pounds neight to the diflance of 33000 paces, alid rhrow a bomb of a thouland weighe; but it requires 52 pounds of powder for a charge. This city is the refidence of the prince whom we fyle the duke of Branfwick-Wolfenbattle. The inhabitants

## B R U [ 754 ] B R U

Bruniwich. of the city and parts adjacent carry on a confiderable trade with Bohemia. Brunfwick-mum is well known in England; a frall fort of which is the common drink of the iahabitants of the city. The religion here is the Lutheran, and they oblerve it very ftrictly. The peafants are fober and laboriuus, but clownifh and heary; however, as they are rabult and ftrong, they make good folliers. The elector of Hnover is tyled dule of Brunfivick, though he has no property in, nor dominion uver, this city, which belongs to the duke of Brunfwick-TVolfenbuttic. The number of inhabitants is about 24,000 ; and the whole income of the duke is eftimated at 130,000 . The academy of Brunliwick, Dr Moore informs us, has been new-modelled, and the plan of education improved, hy the attention, and under the patronage of the hereditary prince. Students now refort to this academy from many parts of Germany ; and there are generally tome young gentlemen from Britain who are fent to be educated here. Such of them as are intended for a military life, will no: find fu many advantages united at any other place $0:$ the continent as at the academy of Brunfiwick. They will here be under the protection of a family partial to the Britith nation;-every branch of feience is tausht by mafters of known abilities;-the young fudents will fee garrifon duty regularly performed, and may by the inteseft of the prince obtain liberty to attend the reviews of the Pruffian troops at Magdeburg and Berlin. They will have few temptations to expence, in a town where they can fee no examples of extravagance; -have few opportunities of diffipation, and none of grofs debauchery.

I'l:e fortifications at Brunlwick were of great utility lat war, and on one occafion they faved the town from bcing pillaged, and afforded Prince Frederick, who is now in the Pruffian fervice, an opportunity of performing an action, which it is imagined gave him more joy than tw-nty vist ries. This happened in the year x 761 . Soon after the battle of Kirch-Denkern, when Duke Ferdinand protected Hanover, not by conduning his army into that countly, and defending it directly, as the enemy feemed to expeet, and probably wihned; but by diverfion, attacking with ftrong deiachm nts, commanded by the hereditary prince, their magazines in Heffe, and thus drawing their attention from Henover to that quarter. While the duke lay encamped at Willhemftall, watching the mutions of Broglio's asmy, the marechal being greatly fuperior in nambers, lellt a hody of 20,000 men, under Prince Xevier of Saxony, who took peffeffion of Wolfenbutthe, and forsn afier invefted Brunfwick. Prince Ferdinall, amxinus to five his native city, ventured to detach 5000 of his armv, fmall as it was, under his nephew lirederick, aflifted by General Luckner, with orders in harnfs the enemy, and endeavour to raife the fiege. The yourg prince, while on his march, fent a foldier with a letter to the governor, which was wrap. ped round a bullet, and which the foldier was to fwallow in cafe of his being taken by the enemy. - He had tine good fortune to get life into the town. The leteer apprifed the commander of the garifon of the prince's approacls, and particularifed the night and loour when he expected to be at a certin place near the town, requiring him to favour his entrince.

In the roiddle of the night appointed, the prince fell
fuddenly or the enemy's cavalry, who, unfufpicious of Brunfwick his approach, were encamped carelefsly within a mile of the town. They were immediately difperfed, and fpread fuch an alarm among the infantiy, that they alfo retreated with confiderable lofs. Early in the morning the young prince entercd Bruntwick, amiong the acclamation of his fellow-citizens, whom he had relieved from the horrors of a fiege. The kereditary prince having deftroyed the French magazines in Heffe, had been recalled by his uncle, and ordered to attempt the relief of Brunfwick. While lie was adrauscing with all poffible fpeed, and had got within a few leagues of the town, he received the news of the fiege being raifed. On his arrival at his father's palace, he found his brother Frederick at table, entertaining the French officers, who had been taken prifoners the pieceding night.

Brunswick, the duchy' of, is a county of Germany, bounded on the north by the duchy of Lunenburg; on the weft, by the circle of Weftphalia, from which it is Ceparated by the river Weler; on the fouth by Heffe, and the little territory of Plechfield ; and on the eaft by Thuringia, with the principalities of Anhalt and Halberftadt, and the duchy of Magdeburg. The rivirs are, the Wefer, the Ocker, and the Lyne; and it is fertile both in corn and paltures. It is divided into three principalties, Wolfenbutte, Grubenhagen, and Calenberg, which allo comprehends the duchy of Gotingen. The principality of Wolfenbuttle has its own dukes; but the other two belong to the eleclor of Ifanover. The tersitories of the houle of Brunfwick are more ex:enfive; the principal of which are the duchies of Brunfirick and Lunenburg, with the county of Danchehurg, which is annexed thereto. The reft are Plankenburg, Dieport, and Hoye, befides two or three fmaller diftriets.

Brunswick, the fomily of. The illuttrious and amcient houle of Brunkwick owes its origin to Azo IV. of the family of Efte, fon of Hugo III. marquis of Ferrara in Italy. Azo, who died in 1055, left by his wife Cunegonde, daughter and heirels to Guelf 111. duke of Bavaria, a fon who was Guelf IV. greatgrandfather to Ifenry the Lion. Jis lon, Guelf V. furnamed the Valiant, was created duke of Bavaria by the emperor Henry II. His fon, Guelf VI. married Matilda, the richeli heirelis in Furope; but having ro iffue, his brother Hetrry the Black fucceeded to his dominions. He died in 1125 , having married Wulfhild daughter of Magnus, lalt duke of Saxony, of the Bulling family, by whom he had Hemy the Proud, who fueceeded to Bavaria in 1137 ; and he having married a daughter of the emperor Lotharius, his fa-ther-in-law granted him inveftiture of Saxony, and meant him for his lucceffor in the empire; but this Iaft he was difappointed of. Dying in 1139 , both Saxony and Bavaria devolved on his fon Heury V. furnamed the Lion. He married Maude, cldeft dughter of King Henry II. of England, and is alwags looked upun as the founder of the Brunfwick family: it is therefore extremely remarkable, that his prefent majefty mould be defcended from one of our worthielt monarelu, in whom were united the royal Anelo-Saxon and Norman blood. The dominiuns puffeffed by Henry the Lion were the moll extenfive of any prince of his time; but having refufed to affilt the emperor

III. this drew the emperor's refentment on him; and being, already jealous of his pawer and abilities, all his former fervices were forgotten; and in the diet of Whatzburg in In 19 or 1180 , he was proferibed. 'The duchy of Bavaria was given to Otho Count Wittlepatch, from whom is defeended the prelent eleetoral family of Bavaria; the duchy of Saxony to Bernard Afcanius, fuunder of the houfe of Anhalt; and all his other territories difpofed of to different perfons. On this lie retired to England; and by his father's intercefion, Brunfwick and lanenburg were refored to him. His wife Mande died in 1189 , and he in 1195. He left three fons; but the two oldeft not leaving any male iffue, William, the third fon, carried on the line of the family: and his fon Otho was created duke of Bruntwick and Lunenburg in 1235, by the emperor Ferdinand II. Fromi him all the fucceeding dukes of this family have defconded; and no family can boall of a line of princes who have more diffinguifhed themfelves, both by their political abilities and martial achievements; and they are allied to all the principal families in Euroue. The houfe of Brunfwick has divided into feveral branchec. The prefent duke of Brunfwick. Wolfenbuttle is fprung from the eldent; the duke of Brunfwisk-Zell was from the fecond; and from this laft frung the ele:tor of Hanover.

13RUNTISLAND, a parliament town of Fifellire in Scotland, fitwated on the frith of Forth, eiglat miles north of Ediraburgh, in IV. Long. 3. 5. N. Lat. 56. 12. It has the beft barbour on the coaft, which is formed by a rocky ife eked out with piers, for there are none on this fide the country emtirely ratural. This is dry at low water. The church is fquare, with a fteeple rifing in the centre. The old caftle, built by the Duries, commanded both town and harbour. The place has a natural itrength, which, with the conveniency of a port oppofite to the capital, made it, during the troubles of 1560 , a moft defirable poft. The French, allies of the queen regent, fortified it frongly. In 1715, it was furprifed and pofieffed by the rebels, who here formed the bold defign of paffing over a body of troops to the oppofite thore; which was in patt executed under the command of ligigadier Aacintoth, roctwithltanding all the efforts of the men of war to prevent it.

BRUSCHIUS, Gaspar: a Latin hiftorian and poet, was born at Egra in Buhemia, in $: 518$. He was devoted to books from his childhood, and eipecially to poetry, in which he gained fo much reputation, that he attained to the poetical crown, to the dignity of part laureat, and of count palatine. He wrote with prodigions facility; and his veries are extreme!y Howing, caly, and natural. He publifhed Latin poems on a great varicty of lubjects; the hiftory nf the bifhops and bilhoprics of Germany; hifory of German monafteries; and a great number of other works, of which a catalogue is given in Gefner's Bibliotheque. Brufchius was far from being rich, or rather he was very poor; fuhfiting almof entirely by the benefactions of his poetical patrons, and by prefents from the abbots and abbeffes whofe monualteries he deferibed. The liberalities of fome abhats, while he was with Oporin at Bafll, enabled him to buy a new fuit of clothes; but when he found that appearing well dreffed in the
flreets procured him many marks of refpect from the vulgar, he tore his new fincry to precee, " as faves that had ufurped their mafter's honours." Brufchius feems to have been too great a philofopher for the age he lived in, or indeed for any age. He was murdered in the foreft of Scalingenbach, between Rottembery on the Tauber and Wintheim: and it was believed that this affaflination was concerted and carried into execution ty fome gentlemen againft whom Brufchius was about to write fomething.

BRUSH, an affemblage of hairs and hngs brifles faftened in the holes of a wooden hanole or board, pierced for that purpofe, ferving to cleanfe divers bodies by rubbing therewith. The manner of making bruhtes is by folding the hair or brifte in two; and bringing it by means of a packthread, which is engaged in the fold, through the holes with which the wood is pierced all over, being afterwards fafened therein with glue. When the holes are thus filled, the ends of the hair are cut to make the furface even.

Shearmen's Brush, is made of wild boar's brifles; and ferves to lay the wool or nap of cloth, after flearing it for the latt time.

Brush, among painters, a larger and coarfer kind of a pencil, made of hogs brifles, "herewith to lay the colours on their large pieces. The Chinefe painters brult confifts of the falk of a plant; whofe fibres teing fretted at both ends, and tied again, ferve for a bruth.

Wire-Brushes, are ufed by filverfmiths and gilders, for frrubbing filver, copper, or brafs pieces, in order to the gilding of them. There is a method of dyeing or colouring leather, performed by only rubbing the colour on the fkin with a brufh. This the Frencls lea-ther-gilders call brouflure; being the lowelt of all the forts of dye allowed by their Itatutes.

Bresa of a Fox, amung foortmen, fignifies his drag or tail, the tip or end of wich is called the chape.

Brusa is alfo ufed in fpeaking of a fmall thicket nr coppice. In this fenfe the word is formed from the middle-age Latin brufcia, brufcius, which fignifics the fome.

Brush-Wood denotes fmall Render wood or fpray. See Brdwse.

Brush, in Electricity, denntes the luminous appearance of the clectric matter iffuing in a parcel of diverging rays frum a point. Beccaria afcribes this appearance to the force with which the electric fluid, going out of a point, divides the contiguous air, and pafles through it to that which is more remote.
BRUSHING. Among jockies, a brufhing gallop denotes a brik onc: a horle thould have his brufhing gallop in a morning before watering.

RRUSSELS, the capital of Brabant in the Auflrian Netherlands, and generaily the feat of the Auftrian povernor, is fituated on the fmall river Semne, which runs through it. It is a rich and hardfome city; and among the public flructures. the ducal palace where the governor refidec, the town-houfe, and the arfenal, are mott fuperb. No city in Europe, except Naples and Genoa, makes a finer appearance at a diftance: but, like the m , when in the town, it is all up and down hill. It is encompafled with a double brick "ai!, and has feven gates; but being feven miles in compare, is too large to hold out a long fiege. In Bruffels are feren

Yr.fin
II
Brutlele.

Bruffels, Brute.
fine fquares or masket-places; that of the great market is one of the noot beautiful in the world. The town-houfe takes up one quatter of it; and has a very high fteeple, on the top of which is a brazen flatue of St Michael, 15 feet high. In one of the apartments, which is bandfomely adorned, the Atates of Brabant mee:. In three other rooms there is the hiftory of the refignation of Charles V. wrought in tapeftry; which is fo well done, that it may be miftaken for painting. In the other parts of the fquare are the halls of the different trades. There are here feveral palaces of the nobility; that of Orange now belongs to the king of Pruffia. The opera-houfe is built after the Italian manner, with rows of boxes, in which are chimneys. One is covered over with looking-glafs, fo that they ean fit by the fire, drink a bottle, and fee what is doing. There are $\mathbf{2 0}$ public fonatains, adorned with Alatues, at the corners of the mofl public flreets; and in the middle of the town-houfe is one with Neptune, the tritons, and the horfes fpouting out water from their noftrils. The hofpitals are well endowed, fome of which are for the maintenance of Arangers for thrce days. There is alfo a foundling hofpital, and one for penitent courtezans. Among the churches, that of St Gudula is very magnificent. It flands on the top of a hill, near the gate of Louvain, and is furrounded with iron balluftrades. It is an old Gothic flructure, with two large fteeples at the eaft end, and is finely adorned within. The Jefuits have a fine church as well as a library. There are feveral monafteries and nunneries, two of which laft are Englith. The nunnery, called the $B e-$ suinage, is like a little town, being furrounded by a wall and ditch, and has little flreets, where each nun has an apartment. Six or feven hundred gitls are educated bere.

In 1695 , Bruffels was bombarded by Marthäl Villeroy, who demolifhed four thonfand houfes, the fladthoufe, and leveral churches. In 1708, it was befieged again by the elector of Bavaria; but the duke of Marl. borough foon came to its affiftance, and obliged him to raife the fiege with precipitation. Marthal Saxe, the Frencls general, took it in 1776 ; but it was reflored by the treaty of Aix-la-Chapelle. It is much f.llen from it, former fplendor; and all the trade which is carried on there is in lace, camblets, and tapelly, which are made in great perfection. E. Long. 4. 8. N. Lat. 50.51.

Brussels, the quarter or diffrict of, is one of the four parts of the duchy of Brabant. This quarter is bounded on the eall by that of Louvain; on the north by that of Antwerp; on the weft by Fhnders; and on the fouth by Ifainault. Bruffels is the capital city of this quarter, and of all Brabant.

BRUTE, a general name for all animals except markind.
Among brutes, the monkey kind bear the neareft refemblance to man, both in the external hlape and internal flructure, but more in the former than in the latter. In the monkey kind, the bigheft and the neareft approach to the likenef, of man is the ouran outang. or Homy Syluefris t.-The Arulure and coonomy of brutes make the ohje?s of what is called Comparative Anatomi. Sce Anatomy Index.

Philofophers have been much puzzled about the effential characteriftics of brutes, by which they may
be diftinguifted from man. Some define a brute to be an animal nol rifible, or a living creature incapable of luughter; others call them mute animals. The peripatetics allowed them a fenfitive power, but denied them a rational one. The Platonits allowed them reafon and underttanding, though in a degree lefs pure and refined than that of men. Lactantius allows every thing to brutes which men have, except a fenfe of religion; and cven this has been afcribed to them by fome fceptics. Defcartes maintained, that brutes are mere inanimate machines, ablolutely deftitute not only of reafon but of all thought and perception, and that all their actions are only confequences of the exquifite mechani'm of their bodies. This fyftem, however, is much older than Defcartes; it was borrowed by him from Gomez Pereira, a Spanifh phyfician, who employed 30 years in compoling a treatife which he entitled Antonina Margarita, from the Chrithian names of his father and mother. It was publifhed in 1554 ; but his opinion had not the honour of gaining partizans, or even of being refuted; fo that it died with him. Even Pereira feems not to have been the inventor of this notion; fomething like it having been leld by fome of the ancients, as we find from Plutarch and St Auguftin. Others, who rejected 11. Cartefian hypothefis, have maintained that brutes are endowed with a foul effer:tially inferior to that of men; and to this foul fome have allowed immortality, others not. And, lafty, in a treatife publinhed by one Bougeant a Jefuit, entitled, A philo fopbical amufement on the language of leeffs, he affirms that they are animated by evil lpinits or devils.

The opinion of Defcattes was probably invented, or at lealt adopted by him, to defeat twa great objections: one againt the immortality of the fouls of brutes, if they were allowed to have any; the other againt the goodnefs of God, in fuffering creaturcs who had never finned to be fubjected to fo many miferies. The arguments in favour of it may be flated as follow: 1. It is certain, that a number of human ations are merely mechanical; becaufe they are done imperceptibly to the agent, and withuat any direction from the will; which are to be afcribed to the impreffion of objers and the primordial difpofition of the machine, wherein the influence of the foul has no thare; of which number are all habits of the body acquired from the rciteration of certain actions. In all fuch circumflances, human beings ate no better than automata. 2. There are fome natural movements fo involuntary, that we cannot reftrain them; for example, that admirahle mechanifm ever on the watch to preferve an equilibrium, when we foop, bend, or incline our bodics in any way, and when we walk upon a narrow plank. 3. The natural liking for, and antipthy againft, certain objects, which in children precede the power of knowng and difciminating: them, and which fometimes in grown perfons tiumph over all the efforts of reafon, are all phenomena to be accounted for from the wonderful inechanifm of the body, and are fo many cogent proufs of that irrefillible influence which objects have on the human frame. 4. Every one knows how much our paffions depend on the degree of motion into which the blood is pur, and the reciprocal impreflions caufed by the animalfpirits between the heart and brain, that are fo clofely
cornected

## B R U [ 757 ] B R U

Erute. connceled by their nerves; and if fuch effects may be produced by fuch fimple mechanical merins as the mere increafe of motion in the blood, without any direction of the will, we are not to wonder at the actions of brutes being the effects only of a refined mechanifm, without thought or perception. 5. A farther proof will arife from a confideration of the many wonderfuleffects which even the ingenuity of men has contived to bring about by mechanical means; the androide, for inftance, of Mr Kempell, which plays at chefs. Now, it is not to be queltioned, but that the mechanifm of the body of the meaneft animal in finitely furpaffes that of Mr Kempell's machine; and what can be the confequence of this, but that the actions of that animal muft be propostionably more furprifing than thofe of the wooden chefs-player? See Androideg and Auromaton.

The above is a thort abllact of all the arguments that are brought in favour of the Cartefian fyltem : but they are evidently very far from being conclufive. They are deficient, in the firf place, becaufe, though we allow them in the utmoll exterit the Cartefians themfelves can defire, they prove only the poflibility of brutes being inanimate, and that the power of God actually could produce fuch and fuch actions from inanimate machines; but that he actually hath dome fo, they have not the leaf tendency to prove. In the fecond place, the Cartefian argument is infulficient, becaufe it hath no limits, and knows not where to fop; as, by the fame method of arguing, every man might prove his neighbour to be an inanimate machine: for though every individual be confcious of his own thoughts, he is not fo of thofe of his neighbours; and it no more exceeds the power of God to caure an $i_{i s}-$ animate machine perform the actions of a man than thofe of a beaf?. Neither are the two objections which the hypothefis is calculated to anfwer, to be at all admitted as arguments in its favour. They are, 1. That if we allow brutes to have fouls, they mutt be immaterial, and confequently immortal : and, 2. It feems a contradiction to the goodnefs of God to think that he ihould fubject innocerit creatures to fuch a multitude of evils as we fee the brute creation endure in this world. The firf of thefe is productive of no bad confequences to us, though it fhould be granted: and if it is fuppofed that the brutc creatures are really immortal, the fecond objection vanilhes; becaule, in the enjoyment of endlefs felicity, all temporary afflictions how fevere foever, muft be fwallowed up as though they had never beep.

As to a pofitive proof on the other fide, viz, that brutes are really endowed with fenfation and confcioufnefs, there is undoubtediy the fame evidence for the feufibility of brutes that there is for that of mankind. We fee brutes avoid pain as much as we do; and we likewife fee them feck for ple fure and exprefs their hapinefs in the enjoyment of certain things by figus not at all equivocal. Thercfore, though we grant the pomibility of a!! this heing the effect of mere mechanifn; yct, as we are confcious that in ourfelves fimilar effects are produced by a fentient principle, we lave all the reafon in the world to cunclude that in butes they are likewife derived from a principle of fenfation; efpecially feeing we know of no kind of mechanifm in any other part of nature that produces
any thing like the effects juft mentioned: and until we fee that a mechaoifm of this kind docs take place in fome part of nature, we have no reafon to fuppofe it in any. As to thofe actions of the human body in which it feems to move fpontaneoully, like an automaton, without the dircetion of the mird or will, it is almult fuperfluous to obferse, that they were not performed in this manner originally, but required very great exertions of the will and intellectual faculty before the body could be brought to perform them cafily; fo that from this mothing can be inferred. Add to this, that divinc revelation fets forth to us in many places the brute creation as objects of mercy; which could not be done without the higheft abfurdity, if they were not really capable of fetling pleafure and pain as well as we.

The moft rational oppofers of the Cartefian fokeme maintain, that brutes are endowed with a principle of fenfation as well as we; though of an inferior nature to ours. Great difputes, however, have arifen on this fubject ; fome maintaining, that the foul of brutes is merely fenfitive, and that they are altogether deftitute of reflection and underflanding; others, that they not only reafon, but make a better ufe of it than men do. That the brutes are endowed only with Senfation, and totally deftitute of all power of reflection, or evin reafoning, is what can by no means be maintained on good grounds: neither can it be afferted that they ad entirely from inftind, or a blind propenfity to certain things, withou: knowing why or wherefore. In numberlels inftances, needlefs to be mentioned here, but which will readify occur to every reader, it is evident, that education will get the botter of many of the natural indtinets of brates; which could never be the cale were they ablomely incapable of realoning. On the other hand, it is equally certain, that they are by no means capable of education in the fame degrec that men are; neither are the rational exertions of beatls at all to be compared even with thofe of the meanelf favages. One remarkable inflance of this is in the ufe of the element of tire. The moft favage nations have known how to make this element fubfervient to their purpofes; or if fome have been found who have been ertively ignorant of its cxiftence, they bave quickly learned its ufes on fecing it made ufe of by others; but though many of the brute creatures are delighted with warmth, and have opportunities every day of leeing how fire is fup. plied with fuel, and by that means prefered, it never was known that one of them attempted to preferve a fire by this means. This thows a ftrange defed of rationality, unaccountable upon any other luppofition than that the foul cr lentient principle of brutes is fome how or other inferior in its nature to that of man; but llill it is a fentient priaciple, capable of perceptions as quick, and in many inflances much moic to than our own.

Father Rougeant fupports his npinion of the fpilits of brute creatures being devils in the following manner: Ifaving proved at large that beafts naturally have undertanding, "Reafon ( Cays be) naturally inclines us to believe that bealls have a fpintual foul ; and the only thing that oppofes this fentiment is, thic confequences that mighe be inferred from it. If brutes have a fou!, that foul muf be eithor matter or feisit; it mutt
$\underbrace{\text { Brute. }}$

| :--- | :--- | :--- |
| 75 |  |  |

Brule. be one of the two, and yet you dare affirm neither. You dare not fay it is matter, becaufe you muft then neceffarily fuppofe matter to be capable of thinking; nor will you fay that it is firit, this opinion bringing with it confequences contrary to the principles of religion; and this, among others, that man would differ from beafts only by the degrees of plus and misus; which would demolifh the very foundation of all religion. Therefore, if I can clude all thefe confequences; if I can affign to beafts a \{piritual \{oul, without ftriking at the doctrines of religion; it is evident, that my fyftem, being moreover the moft agreeable to reafon, is the only warrantable hypothefis. Now I thail, and can do it, with the greatelt eafe imaginable. I even have means, by the fame method, to explain many very obfcure pafiages in the Holy Scripture, and to refolve fome very great difficulties which are not well confuted. This we fhall onfold in a more particular manner.
"Religion teaches us, that the devils, from the very moment they had finned, were reprobate, and that they were doomed to burn for ever in hell; but the church has not yet determined whether they do actually endure the torments to which they are condemined. It may then be thought that they do not yet fuffer them, and that the execution of the verdict brought againf them is referved for the day of the final judgrent.- Now what I pretend to infer from hence is, that, till doom\{day comes, God, in order not to fuffit fo many legions of reprobate fpirits to be of no vfe, has diffributed them through the feveral fpaces of the world, to ferve the defigns of his providence, and make his omnipotence to appear. Some, continuing in their natural ftate, bufy themfleses in tempting men, in feducing and tormenting them; either immediately, as Job's devil, and thofe that lay hold of human bodies; or by the miniffry of forcerers or phantoms. Thefe wicked fpirits are thofe whom the frripture calls the pozvers of dorlnefs, or the powers of the air. God, with the others, makes millions of beafts of all kinds, which ferve for the ufes of men, whicis fill the univerfe, and caufe the wiflom and omnipotence of the Creator to be admired. By that means 1 can eafily conceive, on the one hand, how the devils can tempt us; and on the other, how beafts can think, know, have fentiments, and a fpiritual foul, without any way friking at the doctrines of religion. I am no longer furprifed to fee them have forecaft, inemory, and judgment. I thould rather have occafion to wonder at their having no more, fince their foul very likely is more perfect than ours. But I diforer the teafon of this; it is becaufe, in leafts as well as in ourfelves, the operations of the mind are dependent on the material organs of the machine to Which it is united; and thofe organs being grofier and lefs perfect than in uc, it follows, that the knowledge, the thoughts, and the other fpiritual operations of the beatts, mutt of courfe be lefs perfect than curs: And if the proud firits know their own difinal ftate, what a hurniliation muft it be to them thus to fee themfelves reduced to the condition of bealls! But, whether they know it or not, fo ftumeful a degradation is flill, with regard to them, the primary effect of the divine vengeance I jaft mantoned; it is an anticipated heil."

Having mentioned the prejudices againt this hyfothefis, fuch particularly as the pleafure which people of fenfe and religion take in beafts and birds, efpecially all forts of domeftic animals: he proceeds, "Do we love beafts for their own fikes? No. As thiey are altogether flrangers to human fociety, they c m have no other appointment but that of being ufeful and amufing. And what care we whether it be a devil or any other creature that amufes us? The thought of it, far from fhocking, pleafes me mightily. I with gratitude admire the goodnefs of the Creator, who gave me fo many little devils to ferve and amufe n:e. If I am told that thefe poor devils are doomed to fuffer eternal tortures, I admire God's decrees, but I have no manner of thare in that dreadful fentence; I leave the excution of it to the fovereign Judge: and, notwithfanding thic, I live with my little devils as I do with a multitude of people, of whom religion informs me that a great number flall be damned. But the cure of a prejudice is not to be effected ir, a moment : it is done by time and refleftion : give me leave then lightly to touch upon this difficulty, in order to obferve a very important thing to you.
" Perfuaded as we are that beafts have intelligence, have we not all of us a thoufand times pitied them for the exceflive evils which the majority of them are expofed to, and in reality fuffer? How unhappy is the condition of horfes! we are apt to fay upon feeing a horfe whom an unmerciful carman is murdening with blows. How miferable is the dog whom they are breaking for hunting! How difmal is the fate of beafts living in woods! they are perpetually expofed to the injuries of the weather; always feized with apprehenfions of becoming the prey of hunters, or of fome wilder animal ; for ever obliged, afier long fatigue, to look out for fome poor infipid food; often fuffering cruel hunger; and fubject, moreover, to illnefs and death! If men are fubject to a multitude of miferics that overwhelm the $m$, religion acquaints us with the reafon of it ; viz. the being born firmers. But what crimes can beafts have committed by birth to be fubject to evils fo very cruel? What are we, ther, to think of the horrible excefles of merics urdergone by beafts? miferies, judeed, far greater than thofe endured by men. This is, in any other fyftem, an incomprehenfible myftery; whereas nothing is more eafy to be conceived from the fy fem I propofe. The rebellions Spirits deferve a puniftument fill more rigorous, and happy it is for them that their punifhment is deferred. In a word, God's goodnefs is vindicated, man himfulf is jufified: for what right can we have, without neceffity, and often in the way of mere diverfion, to take away the lives of nillions of beafs, if God had not authorifed us fo to do? And bearts being as fenfible as ourfelves of pain and death, how could a juft and mercilul God have given man that privilege, if they were not fo many guilty rictims of the divine vengeance?
"But hear fill fomething more convincing, and of greater confequence: beafs, by nature, are extremely vicious. We know well that they never fin, becaufe they are not free; but this is the only condition wanting to make them fimers. The voracious birc's and beafts of prey are cruel. Many infects of onc and the frme fpecies clevour one another. Cats

Brute. are perfidious and ungrateful; monkeys are mifchievous; and dogs envious. All beafs in geneial are jealous and revengeful to excefs; not to mention many other vices we oblerve in them : and at the fame time that they are by nature fo very vicious, they have, liy we, neither the libcriy nor any helpa to refith the bias that hurries them into fo many bad actions. They are, according to the fchools, necelfirated to do evil, to difconeert the general order, to commit whatever is molt contrary to the notion we have of natural juntice and to the principles of virtue. What monller, are thefe in a worll originally created for order and juftice to reign in ? This is, in good part, what formerly perfuaded the Manicheans, that there were of necellity two orders of things, one good, and the other bad; and that the beafts were not the work of the goud principle: a monitrous error! But how then fhall we believe that bealls came out of the hands of their Creator with qualitses fo very ftrange! If man is fo very wicked and corrupt, it is becaufe he has himfelf through fin perverted the happy mature that God had given him at his creation. Of two thinge, then, we nult fay one : either that God has taken delight in making bealts fo vicious as they are, and of giving us in them models of what is moft thameful in the warld; or that they have, like man, original fin, which has perverted their primitive nature.
"The fird of thefe propofitions finds very difficult accefs to the mind, and is an exprefs contradict on to the holv fcriptures; which fay, that whatever came out of God's hands, at the time of the creation of the world, was good, yea very good. What good can there be in a mankey's being fo very mifchievous, a dog fo full of envy, a cat fo malicious? But then miny authors have pretended, that beafis, before man's fall, were different from what they are now; and that it was in order to punifh m m that they oecame fo wicked. Sut this ouinion is a mere fuppofition, of which there is not the leaft foottep in huly Scripture. It is a pitiful fubterfuge to elude a seal dificulty: this at molt might be faid of the beafts with whom man has a fort of correfondence; but not at all of the birds, fithes, and infecta, which have no manner of relation to him. We mutt then have recuarfe to the fecoad propofition, That the nature of beafts has, like that of man, been corrupted by fome original fin: Another bypothefis, void of foundation, and equally inconfiftent with reafon and religion, in all the fyltems which have been hitherta efouuled concerning the fouls of bealts. What party are we to take? Why, admit of my fyltem, and all is explained. The fouls of bealts are refractory firits which have made themfelves guilty towards God. The fin in beafts is no original $\hat{f}$; ; it is a perfonal crime, which has corrupted and pervert d their nature in its whole funfance; hence all the vices and corruption we obferve in them, though they can be roo Ionger criminal, becaufe God, by irrevocably reprobating them, has at the fame time divefted them of their liberty:"

Tiefe quotations contain the Atsength of Father Bougeant's hypothefic, which alfo hath had its followers; but the reply to it is obvious. Bealts, though remarkably mifchievous, are not completely fo; they are in many inflances capahle of gratitude and love, which devils cannot poffibly bc. The very fame paffions that
are in the brutes exif in the human nature ; and if Erase. we choofe to argue from the exiflence of thafe paflione, and the afcendency they have over mankind at fore times, we may fay with as great juftice, that the fouls of men are devils, as that the fouls of brutes are. All that ean be reafonably inferred from the greater prevalency of the malignant palfions among the brutes than amung men, is, that the former have lels rationality than men: and accordingly it is found, that amonerg favages, who exercife their reafon lefs than other men, every feccies of barbarity is prachifed, without being deemed a crime.

On the prelent fubject there is a very ingenicus treatife in German, publithed by the late Profeffo: Bergman, under the title (as trandlated) of "Refearches defigned to how what the Brute animals certainly are not, and allo what they probably are."-1"hat they are not machines, he proves with more detail that feemed neceflary for refuting a hypothelis which would equally tend to make us all machines. It is certain, that the balf-reafoning elephant cannot be deemed a machine, by us, from any other confileration, than that be goes upon four feet, while we go upon two; and he might as well take us for mere machines becaufe ave go upon two feet, whale be goes upon four.

But if animals are not mere machines, what are they ? Manifelly fenfive beings, with an inmaterial principle; and thinking or realoning beings, to a certain degree. In certain claffes of animals this appears evident to our author, who fcems to have obferved with great fagacity and attention their carious operations and proceedings, their ways and means, \&k. He thinks it impoffible to deduce this variety of action, in any aninals (if we except thofe of the loweft clafies in the gradation of intelligence), from a general and uniform intind. For they accommodate their operations to times and circumftances. They combine; they choofe the favourable moment; they avail therrfelves of the occation, and feem to receive inftruction by experience. Many of their operations announce reflection: the bird repairs a thattered neft, infead of conltructing inllinatively a new orie: the hen, who has been robbed of her eggs, changes her place in order to lay the remainder with more fecurity: the cat difcovers both care and artifice in concealing her kittens. Again, it is evident, that, on many oceafions, animals kno:v their faules and millakes, and correct them ; they fometimes contrive the molt ingenious methods of obtaining their ends, and when one method fails have recourfe to another; and they have, without dusbt, a kind of language for the mutual communica. tion of their ideas. How is all this to be accounted for (fays our author), unlels we fuppofe them endowed with the powers of perceiving, thirking, remembering, comparing, and judging? "They lave thefe powers, indeed, in a degree inferior to that in which they are pollefled by the human fpecier, and form claffes below them in the graduated feate of intelli-. gent beings. But fill it feems to our author unta. fonable to exclude them from the place which the pinciples of found philufuphy, and facts afcertained by conftant obfervation, affign to them in the great and diverffied rphere of life, lenfation, and intelligence:he does not, however, confder ther as beings whole

Erute. a \&ions are dire乏ted to moral ends, nor confequently as accountable and proper fubjects for reward or punifbment in a future world.

That brute animals poffefs reflection and fentiment, and are fufceptible of the kindly as well as the irafcible pafions, independently of fexual attachment and natusal affection, is evident from the numerous inflanees of affeetion and gratitude daily obfervable in different animals, particularly the dog. Of thofe and other fentiments, fuch as pride, and even a fenfe of glory, the elephant exhibits proofs equally furprifing and indubi. table, as the reader may fee under the article Eıephas.

As to the natural affection of brutes, fays an ingeWhite's Na-nious writer, " the more I reflect on it, the more I am tural Hifory alonifhed at its effects. Nor is the violence of this
affection more wonderful than the chortnefs of its du-
ration. Thus every hen is in her turn the virago of the yard, in proportion to the helpleffnefs of her brood; and will fly in the face of a dog or a fow in defence of thofe chickens which in a few weeks the will drive before her with relentlefs cruelty. This affection fublimes the paffions, quickens the invention, and flarpens the fagacity of the brute creation. Thus a ben, juft become a mother, is no longer that placid bird he ufed to be, but with feathers flanding on end, wings hovering, and clocking note, the runs about like one poffeffed. Dams will throw themfelves in the way of the greateft danger, in order to avert it from their progeny. Thus a partridge will tumble along before a Cportiman, in order to draw away the dogs from her helplefs covey. In the time of nidification the molt feeble birds will aflault the moft rapacious. All the hirundines of a village are up in arms at the fight of a hawk, whom they will perfecute till he leaves that difrict. A very exact obferver has often remarked, that a pair of ravens ne@ling in the rock of Gibraltar would fuffer no vulture or eagle to reft near their flation, but would drive them from the hill with ama. zing fury : even the blue thrulh at the fcafon of breeding would dart out from the elefts of the rocks to chale away the keltril or the fparrow-hawk. If you ftand near the nefl of a bird that has young, fhe will not be induced to betray them by an inadvertent fondrefs, but will wait about at a diftance with meat in her mouth for an hour together. The tlycatcher builds every year in the vines that grow on the walls of my houfe. A pair of thefe little birds had one year inadvertently placed their nelt on a naked bough, perhaps in a hady time, not being aware of the inconvenience that followed; but a hot funny feafon coming on before the brood was half fledged, the reflection of the wall became infupportable, and mul inevitably have deftroyed the tender young, had not affection fuggefed an expedient, and prompted the parent-birds to hover over the nell all the hotter hours, while with wings expanded and mouths gaping for breath they fcreened off the heat from their fuffering offspring. A farther inflance I once faw of notable fagacity in a willow-wren, which had built in a bank in my fields. This bird, a friend and myfelf had obferved as fic fat in her neft; but were particularly careful not to difturb her, though we faw the eyed us uith fome degree of jealoufy. Some days after, as we pafted that way, we sere defirous of remarking how this brood went on;
but no neft could be found, till I happened to take up Erute. a large bundle of long green mofs as it were caselcfsly thrown over the neft, in order to dodge the eye of any intpertinent intruder."

A wonderful firit of fociality in the brute creation, independent of fexual attachment, has been frequently remarked. Many horfes, though quiet uith company, will not flay one minute in a field by themfelves: the frongefl fences cannot reftrain them. A horfe has been known to leap out at a flable window through which dung was thrown after company; and yet in other refpects is remarkably quiet. Oxen and cows will not fatten by themlelves; but will neglect the finelt pafture that is not recommended by fociety. It would be needlefs to inflance in fheep, which conftantly flock together. But this propenfity feems not to be confined to animals of the fame fpecies. In the work laft quoted, we are told of "a doe ftill alive, that was brought up from a little fawn with a dairy of cows; with them it goes a-field, and with them it returns to the yard. The dogs of the houle take no notice of this deer, being ufed to her; but if ftrange dogs come by, a chafe enfues; while the mafter fmiles to fee his favourite fecurely leading her purfuers over hedge, or gate, or ftyle, till She returns to the cows, who with fierce lowings and menacing horns drive the affailants quite out of the pafture."

Even great difparity of kind and fize does not always prevent focial advances and mutual fellowftip. Of this the following remarkable inftance is given in the fime work: "A very intelligent and obfervant perfon has affured me, that in the former part of his life, keeping but one horfe, he happened alfo on a time to have but one folitary hen. Thefe two incongruous animals fpent much of their time together in a lonely orchard, where they faw no creature but each other. By degrees an apparent regard began to take place between thefe two fequeftered individuals. The fowl would approach the quadruped with notes of complacency, rubbing herfelf gently againft his legs; while the horfe would look down with fatisfaction, and move with the greateft caution and circumppection, left he fhould trample on his diminutive companion. Thus by mutual good offices each feemed to confole the vacant hours of the other; fo that Milton, "hen he puts the following fentiment in the mouth of Adam, feems to be fonsewhat miftaken:

Much lefs can bird with beaft, or fifh with fowl, So well converle, nor with the ox the ape.
In the Gentleman's Magazine for March 1788 we have the following anecdotes of a raven, communicated by a correfpondent who does not fign his name, but who fays it is at the fervice of the doubtful. The raven alluded to " lives, or did live threc years fince, at the Red Lion at Ifungerford; his name, I think, is Rafe. Sou muft know then, that coming into that inn, my chaife run over or bruifed the leg of my Newfoundland dog; and while we were cxamining the itijury done to the dog's foot, Rafe zuas criblently' a ronccrned focifator; for the minute the dog was tied up under the manger with my horfe, Rafe not only vifited but fetched him bones, and attended upon him with particular and repeated marks of kindnefs. The bid's notice of the dog was fo marked, that I obferved it to the
'Erate.
hofter; for I had not heard a word before of the hiftory of this benevolent creature. John then told me, that he had been bred from his pin-feather in intinacy with a dog; that the affection between them was mutual ; and that all the neighbourhood had often been witneffes of the innumerable acts of kindnefs they had conferred upon each other. Rafe's poor dog, after a while, unfortunately broke his leg; and during the long time he was confined, Rafe waited upon him conftantly, carried him his provifions daily, and never farce ieft him alone! One night by accident the hoftler had thut the Rable door, and Rafe was deprived of the com. pany of his friend the whole night; but the hoftler found in the morning the bottom of the door lo pecked away, that had it not been opened, Rafe would in another hour have made his own entrance-port. I then inquired of my landlady (a fenfible woman), and heard what I have related confirmed by her, with leveral other fingular tsaits of the kindneffes this bird thows to all dogs in general, but particularly to maimed or wounded ones. I hope, and believe, however, the bird is ftill living ; and the traveller will find I have not overrated this wonderful bird's merit."

To thefe inttances of attachment between incongruous animals from a fpirit of fociality or the feelings of fympathy, may be added the following inflance of fondnefs from a different motive, recousted by Mr White, in the work already fo frequently quoted. "My friend had a little helplefs levertet brought to him, which the fervants fed with milk in a fpoon; and about the fame time his cat kittened, and the young were difparched and buried. The hare was foon loft, and fuppofed to be gone the way of molt foundlings, or to be killed by fome dog or cat. However, in about a fortnight, as the mafter was fitting in his garden in the dufk of the evening, he obferved his cat, with tail erect, trotting towards him, and calling with little fhort inward notes of complacencey, fuch as they ufe towards their kittens, and fonsething gambling after, which proved to be the leveret, which the cat had fupported with her milk, and cortinued to fupport with great affection. Thus was a graminivorous animal nurtured by a carnivorous and predaceous one!
"Why fo cruel and fanguinary a beaft as a cat, of the ferocious genus of Felis, the murium leo, as Linnæus calls it, thould be affected with any tendernefs cowards an animal which is its natural prey, is not fo ealy to determine. This ftrange affection probably was occafioned by that defiderium, thofe tender maternal feelings, which the lofs of her kittens had avakened in her brealt; and by the complacency and eafe the derived to herfelf from the procuring her teats to be drawn, which were too much diftended with milk, till from habit the became as much delighted with this foundling as if it had been her real offspring.
" This incident is no bad folution of that ftrange circumftance which grave hiftorians as well as the poets affert, of expofed children being fometimes nurtured by female wild beafs that probably had lof their young. For it is not one whit more marvellous that Romulus and Remus, in their infant ftate, fhould be nurfed by a the-wolf, than that a poor little fucking leveret fhould be fotered and cherifhed by a bloody grimalkin.

Tol. IV: Part II.

But befides the different qualities enumerated, be. fides reflection and fagacity often in an athonifhing degree, and befides the fentiments and actions prompted by focial or natural attachments, certain brutes feen on many occafions infirired with a fuperior faculty, a kird of prefentiment or ficond-fight as it were, with regard to events and defigns altogether unforefeen by the rational beings whom they concern. Of the faculty alluded to various inftances will probably confilt with the knowledge or the recollection of moll of our readers: We flall therefore only recite the following, on account of its unqueftionable authenticity. At the feat of the late earl of Litchfield, three miles from Bler:heim, there is a portrait in the dining-room of Sir Henry Lee, by Johnflon, with that of a maflif-dog which faved his life. It feems a fervart had formed the defign of aflaflinating his mafter and tobbing the houfe; but the night he had fixed on, the dog, which had ncver been much noticed by Sir Heary, for the firf time followed bim up flairs, got under his bed, and could not be got from thence by either matter or man: in the dead of night, the fame fervant entered the room to execute his horrid defign; but was inflantly feized by the dog, and being fecured confeffed his intentions. There are ten quaint lines in one corner of the picture, which conclude thus:

But in my dog, whereof I made no ftore,
I find mure love than thofe I trulted more.
Upon what hypothefis can we account for a degree of forefight and penetration fuch as this? Or will it be fuggefted, as a folution of the difficilly, that a dog may poffibly become capable in great meafure of underfanding human difcourfe, and of reafoning and acting accordingly; an.1 that, in the prefent inflance, the villain bad either uttered his defign in foliloquy, or imparted it to an accomplice, in the hearing of the animal?

It has been much difputed whether the brutes have any language whereby they can exprefs their minds to each other; or whether all the noife they make confiffs only of cries inarticulate, and unintelligible even to themfelves. We are, however, too little acquainted with the intelle flual faculties of thefe creatures to be able to determine this point. Certain it is, that their paffions, when excited, are generally productive of fome peculiar cry; but whether this be defigned as an expreflion of the paffion to others, or only a mechanical motion of the mufcles of the larynx occafioned by the paffion, is what we bave no means of knowing. We may indeed, from analogy, conclude, with great reafori, that fome of the cries of beafts are really expreffions of their fentiments ; but whether one beaft is capable of forming a defign, and communicating that defign by any kind of language to others, is what we fubmit to the judgment of the reader, after giving the following inftance, which aniong others is brought as a proof of it by Father Bougeant. " A farrow finding antil that a martin had juft built, flanding very cone

## B R U

Eruttii veniently for him, poffeffed himfelf of it. The marBrutus. tin, leeing the ufurper in her houte, called for help to expel him. A thoufand martins came full feeed, and
attacked the fparrow; but the latter being covered on every fide, and prefenting only his large beak at the entraise of the neft, was invalnerable, and made the boldeft of them who durft approach him repent of their temerity. After a quarter of an hour's combat, all the martins difappeared. The fparrow thought he had got the better, and the fpectators judged that the martins had abandoned their undertaking. Not in the Teaf. Immediately they returned to the charge; and each of them having procured a littlc of that tempered earth with which they make their nefts, they all at once fell upon the fparrow, and inclofed him in the nelt to perifh there, though they could not drive him thence. Can it be imagined that the martins could have been able to hatch and concert this defign all of them together wihhout fpeaking to each other, or without fome medium of communication equivalent to language ?"

BRUTTII, in Ancient Geograpby, one of the two peninfulas of Italy, the ancient Calabria being the other; i!retching to the fourh towards Sicily; bounded by the fea on every fide except by the ithmes, between the river Laus and the Thurii, where it is terminated by Lucania; iubabited by the Bruttii, for whofe country the ancient Romans had no peculiar name, calling both the people and the country i:rdifcriminately Bruttii. 'This, and a part of Lucania, vies the ancient Italia, (Stephanus). It was cailed $B_{\varrho}$ :Thla, which in Greek lignifies pitch, from the great quantily of it produced there, (Buchart). It is divided into two coafts by the Apemine; that on the Tufean and that on the Ionian fea. Now called Calabria Clltra. Different from the ancient Calabria or Meffopia, to the eaft, on the Adriatic or Ionian fen, and which formel the other peninfula or heel of the leg, now called Calabria Citra, the Bruttii forming the foot.

PRUTTON, a town of Somelfethire in England. It is firuated on the river Brew; and is a good place and well inhabited. It it adomed with a very beautiful church; has a free fchool, founded by Edward I; and the alms-houfe or hofpital is fo good, that it has the appearance of a college. They have a woollen manufactory of cloth and ferges, and they are likewife noted for their malt. W. Long. 2. 30. N. Lat. 51. 15.

BRUTUS, or Brute, according to the old exploded hiftory of this couniry by Geofficy of Monmourh, was the firft king of Britain. He is faid to have been the fon of Sylvius, and the of Afcanius the fon of Æineas, and born in Italy: killing his father by chance, he fled into Greece, where he took King Padrofus prifoner, who kept the Trojans in fovery, whom the releafed on condtion of providing thips, \&c. for the Trojars to forfake the land. Reing advifed by the oracle to fail weft beyond Gaul, he, after fome adventures, landed at Totnefs in Devonflire. Albion was then inlabited by a remnant of giants, whom Brutus deftroyed; and calted the ifland after his own name, Pritain. He built a city called Nezw Troy, fince London'; and having reigned here 24 years, at his death parctlled the infand among bis three fons: Loarine had
the middle, called Loggria; Camber had Wales, and Albanaet Scotland.

Brutus, Lucius Junizs, the avenger of the rape of Lucretia, and founder of the Roman republic, flourifhed 500 years before Chrilt. See (Hiflory of) Rome.

Brutus, Marcus, the paffionate lover of his country, and chief confpirator againf Cæfar, Alew himfelf on lofing the battle of Philippi, 42 years before Chrift. See (Hiflory of) Rome.

Brutus, Yobn Michacl, a man of learning, and a polite writer, in the 16 th century. He was a native of Venice; and, having fudied at Padua, 隹解 great part of his life in travelling, and became hiftoriographer to his imperial majefty. He wrote 1. A hillory of Hungary. 2. A hiftory of Florence. 3. Notes on Horace, Caflar, Cicero, \&c.; and other works. He was living in the year 159 .

Brutus, Stepben Yunius, the difguifed author of a political work, entitled Vindicice contra tyrannos. See Languet.

BRUYERE, John DE LA, a celebrated French author, was burn at Dourdan in the year 1664. He wrote characters, defcribing the manners of his age, in imitation of Theophraftus; which characters were not always imaginary or general, but defcriptive, as was well known, of petfons of confiderable rank. Ir the year 1693, he was by an order of the king cholen a member of the French Academy; and died in the year 1696.-." The charadters of Bruyere (fays Voltaire), may juftly be ranked among the extraordinary produc. tions of this age. Antiquity furnifties no examples of fuch a mosk. A ftyle rapid, concife, and nervous; exprefliun animated and pi\&urefque; an ufe of langunge altogether new, without offending againft its eftabliftsed rules, fluck the puhlic at firlt; and the allufions, which are crowded in almoft every page, completed its fuccefs. When La Bruyere flowed his work in manufcript to Malefieux, this laf told him, that the bock would have many readers, and its author many enemies. It foncwhat funk in the opinion of men, whers that whole generation whofe follies it attacked were paffed away; yet as it contains many things applicable to all times and places, it is more than probable that it will never be forgotten."

BRUYIERS, a tom of Lorrain, in Vofque, with a provofthip. E. I.ong. 6. $45 . \mathrm{N}$. Lat. $4^{8 .}$. 15.

BRYANS bridge, a town of Irelaud, in the county of Clare and province of Counaught, leated on the river Shannon, eighe miles north of Limerick. W'. Long. 8. 30 . N. Lat. 52.31.

BRYAN'T, Sir Francis, a foldier, fatefman, and a poet of no inconfiderable fame in his time, was born of a genteel family, educated at Oxford, and afterwards fpent forme time in trivelling abroad. In the year 1522, the $14^{\text {th }}$ of Henry VIIJ. he attended in a military ca. pacity the earl of Surrey in his expedition to the coaft of Britany ; and commanded the troops in the attack of the town of Moslaix, which he took and buint. For this fervice he was knighted on the fpot by the earl. In 1528 , he was in Spain ; but on what felvice is doubtful, In 1529, he was fent ambafiador to France; and the year following, to Rome, on account of the king's divorce. He liad alfo been there in 1522, in the fame capacity, when Cardinal Wulley's clection to the

B R Y
holy fee was in agitation. Me was gentleman of the privy chamber to King Henry V1II. and to his fuccellor Edward V'I. in the beginning of whole reign he marched with the protector againt the Scots; and after the battle of Mufielburgh, in which he commanded the light horfe, was made banneret. In 1548, he was appointed chief governor of Ircland, where he marrited the countefs of Ormond. He died foon after, and was buried at Waterford. He wrote, I. Songs and Sonsets; fome of which were printed with thofe of the earl of Surrey and Sir Thomas Wyatt. Lond. 1565 . 2. Letters written from Rome concerning the king's divorce ; manufeript. 3. Various letters of flate; which Ant. Wood fays he had feen. 4. A difpraife of the life of a courticr, \&re. Lond. 1548, 8vo. from the French of Alaygri, who tranllated it from the Caftilian language, in which it was originally written by Guevara.

BRYE, Joun Tusodore ne, an excellent engraver, was a native of Liege ; but he refiled chietly at Franckfort, where he carried on a confiderable commerce in prints. It does not appear when he was born, nor to what mafter he owed his inftuctions in the art of detigning and engraving. He worked almoll entirely with the graver, and feldom called in the affitarisce of the point. He acquired a neat free ftyle of congraving, exccllently well adapted to fmall fubjects, in which many figures were to be reprefonted; as finseral polvades, procelfans, and the like, which he execlited in a charming manner. He alfo drew very correetly. His heads in general are fpirited and expreffive, and the other extremity of his figures well markcd. His back-jrounds, though frequently very llight, are touched with a mafterly hand. He died, as his fons inform $u s$ in the third part of Boiffard's collection of portraits, on March 27th, 1598 ; the two firlt parts of which collection were engraved by himfelf, afffted by his fons, who afterwards continued it.

BRYENNIUS, Manuel, a Greek writer on mufic, is fuppofed to have flourifhed under the elder Palealogus, viz. about the year of Chrift 1120 . He wrote three books on Harmonics; the firt whereof is a kind of commentary on Euclid, as the fecond and thitd are on Ptolemy. He profeffes to have Itudied perfpicuity for the fake of young men. Meibomius had given the public expectations of a tranflation of this work: but not living to complete it, Dr Wallis undertook it; and it now makes a part of the third volume of his works, publifted at Oxford in three volumes folio, $-699$.

Bryennius, Nicepharus, a prince diflinguithed by his courage, probity, and learning, was born at Oreftia in Macedonia; where his father by rebellion provoked the emperor to fend his general Alexis Comnequs againft him, who ordered his eyes to be pulled out; but being charmed with his lon Bryennius, he married hin to Anne Comnena his daughter, fo famous by her writing. When Alexis came to the throne, he gave Bryennius the title of Caefar; but would not declare him his fucceffor, though folicited to it by the emprefs Irene; and was therefore fucceed. ed by his fon John Comnenus, to whom Bryemuius bshaved with the utmoft fidelity. Being fent, abour the year $113 \%$, to befiege Antioch, he fell fick; and, refurning, died at Confantinople. This prime wrote
the Itiflory of Alexis Commenus, which he compofed Biygmone at the requeft of his mothermin-law the emprefs Irence.

IJKYGMUS, smong phyficians, a grating noife $\underbrace{\text { [ubants. }}$ made by the gnafhing of the tecth.

BRYONIA, bryony. Sce Botany Index.
Bhack Bryony. Sce Tamus, Botany Index.
BKYUM. See Botsny Index.
RUA, an ifland of the gulf of Venice, on the coaf of Dalmatis, near the town of Trau; called likewite the Partridge iflard, becaufe frequented by thole tirds. It is called Bubus by I Pliny. In the times o? the decay of the empire it was called $B_{s}$ as ; an' feveral illus. Atrious men that fell under difgrace at court were banilhed to this illand; among whom were Florentius, malter of the offices of the emperor Julian, Immentius de Valenti, and the heretic Jovinian. The emperors of Conftantinople either were not much acnuainted with this pretended Siberia, or were willing to treat the baniflied with great clemency. It is certain that the climate of this illand is exceeding!y mild; the air perfectly good; the oil, grapes, and fruit excellent ; and the fea around it abounds in fift, and the port is large and fecure. Neither is it fo fmall that a man has not room to walk and ride about as much as he pleafes; for it is ten miles in length, and about 25 in circuit; nor can it be faid to be rugged, though rather high and mountainow:

BUANES, a town of France, in Gafcony, and in the diocefe of Aire, feated on the river Bahus, in E. Long. O. 5. N. Lat. 43 . 47

BUARCOS, a town of Portugal, in the province of Beira. W. Long. 8. 5. N. Lat. 40. 3.

BUBALIS, in Zoology, the tivial name of the buffalo, a fpecies of the bos. See Bos.

BUBASTIS, in the Egyptian mythology, one of the names of lis or the moon. The Egyptians bellowed differcut names on the fun, either to characterize his effects or his relations with re!pect to the earth; they followed the fame method refpecting the moon. Charemon, a facred writer of Egypt, leaves no doubt on this fubject. "Every thing which is pub. lithed of Ofris and Ifis, all the facerdotal fables, allude only to the phafes of the moon, and the courfe of the fun." Bubattis was one of the principal attributes of Ifs. Theology having perfonified her, formed of her a divinity, in whofe honour a city of that name was built, as defcribed by Herodotus, and where the people collected from all parts of Egypt, at a certain period of the year. A cat was the fymbol of this deity. The priefts fed it with facred food; and when it died, they embalmed its body, and carried it in pomp to the tomb prepared for it. The ancients have explained this worlhip varioully. The Greeks pretend that whers Typhon declared war againlt the Gods, Apollo tranl. formed himlelf into a vulture, Mercury into an ibis, and liubaltis into a cat, and that the veneration of the people for the latter animal took rife from that fable; but they afcribe their own ideas to the Egyptians, who thought very differently. However that may be, the cat was greatly honoured in Egypt, and a Roman foldier having imprudertly killed one, was immediately put to death by the populace.

Bubattis, in the language of the prielts, was deemed the daughter of Ifis, and even reprefented her in cer-
B U B

Fybuttis tain circumflances. It is for this reafon that the Greeks, who honoured the moon by the name of Diana, beftowed it alfo on this Egyptian divinity. Bubaftis, fays Herodotus, is called Diana by the Greeks. The Egyptians attributed to her the virtue of affilting pregnant women. The Greeks and Latins, difciples of the Egyptians, afcribed the fame power to Diana; and Horace does not think it unworthy of his pen to addrefs the following ftrophe to her:

$$
\begin{aligned}
& \text { Montium cuflos nemorumque, Virgo, } \\
& \text { Quce laborantes utero puellas } \\
& \text { Ter vocati audis, adimifgue letbo, } \\
& \text { Diva Triformis. }
\end{aligned}
$$

The philofopher will feek for the origin of this ancient worthip in the laws impofed by nature on women, and which in fome meafure follow the lunar revolutions. The natural philofophers and the poets buried it under allegories unintelligible to the people.

A perfect refemblance, however, does not exift between the two deities we have been rpeaking of. The Greeks conftituted Diana goddefs of the chafe and of the forelts; an attribute the Egyptians did not acknowledge in Bubaftis. The former added, that fle was the daughter of Jupiter and Latona, and Bubaftis was produced by Ofiris and Ifa.

A barbarous cuftom was introduced at the feftivals celebrated in honour of Dubaltis, called by the Greeks allo Ilithyia or Lucina, to mark ber prefiding over childbed. The Egyptians adored her under this name in the city of Ilithyia, fituated near Latopolis.

It remains to refolve a queftion which naturally arifes here: How could Bubaltis be called the daughter of lifs, fince the alfo was a fymbol of the moon? The Egyptian theology eafily explains thefe apparent contradictionc. Ifis was the general appellation of the moon, Bubaftis a particular attribute. The fun, in conjunction with the far of the night, formed the celeltial marriage of Ofiris and Ifis; the crefcent which appears three days after was allegorically called their diughter. It is in this fenfe that the Hebrews called this fame phenomenon, the birth of the moon, and that Horace fays,

> Crelo fupinas fe tulcris manus, Nafcente lunâ rufica Phidyle, \&x. \& c.

Thefe oblervations inform us, why in the city of Slithyia, where Bubaltis was adored, the third day of the lunar month was confecrated by a particular worShip. In fact, it is three days after the conjunction that the moon, difengaged from the rays of the fun, appears as a crefcent, and is vifible to us. The Egypians celebrated therefore a folemnity in honnur of Bubaftis, which in their tongue fignified new moon. The crefcent with which her head was crowned, expreffes palpably the intention of the priefs in creating this fymbolicel divinity.

BUBBLE, in Pljifofoply, a fmall drop or veficle of any fluid filled with air ; and formed either on its furface by an addition of more of the fluid, as in raining, \&c.; or in its fubftance, by an intelline motion of its component patticles. Bubbles are dilatable or compreffible, i. e. they take up more or lefs room as the included air is more or lefs heated, or more or lefs pref-
fed from without; and are round, becaufe the included air acts equally from within all around.

BUBBLE, in commerce, a cant term given to a kind of project for raifing money on imagiriary grounds, much practifed in France and England in the years 1719, 1720, and 1721.

The pretence of thofe fchemes was the raifing a capital for retrieving, fetting on foot, or carrying on, fome promifing and ufeful branch of trade, manufacture, machinery, or the like. To this end propofals were made out, fhowing the advantages to be derived from the undertaking, and inviting perfons to be engaged in it. The fum neceffary to manage the affair, together with the profits cxpected from it, were divided into thares or fubfcriptions, to be purchafed by any difpofed to adyenture therein.

Bubbles, by which the public have beentricked, are of two kinds, viz. 1. Thofe which we may properly enough term trading-bublles; and, 2. Stock or fund bubbles. The former have been of various kinds; and the latter at different times, as in 1719 and 1720 .

BUBO, in Ornitbology, the trivial name of a fpecies of Atix. See Strix, Ornithology Index.

Bubo, or Buboe, in Surgery, a tumour which arifes with inflammation, only in certain or particular parts to which they are proper, as in the arm-pits and in the groins. See Medicine Index.

BUBON, macedonian parsley. See Botany Index.

BUBONOCELE, or hernia inguinalis, in Surgery, a tumour in the inguen, formed by a prolapfus of the inteftines, omentum, or both, through the proceffes of the peritoneum and rings of the abdominal mufcles. See Surgery Index.

BUBONIUM, in Botany, a fynonyme of the Inula.

BUC, George, a learned Englith antiquarian, flourifted in the beginning of the 17 th century. In the reign of King James $I$. he was made one of the gentlemen of his majefty's privy-chamber, and knighted: he was alfo conftituted maller of the revels. What he mofly diftinguifhed himfelf by was his writing, r. The hiftory of the reign of Richard III.; in which he takes great pains to wipe off the bloody ftains that have blotted his chatacter, and reprefents the perfon and actions of that prince in a much lefs odious light than other hiftorians have done. He alfo wrote, 2. A Treatife of the Art of Revels; and, 3. A work entitled The Third Univerfitie of England.

BUCANEER, one who dries and fmokes liefh or fifh after the manner of the Indians. The name was particularly given to the firf French fettlers on the ifland of St Domingo, whofe fole employment confifted in hunting bulls or wild boars, in order to fell their hides and flefh. The name has alfo been applied to thofe famous piratical adventurers, chiefly Englifh and French, who joined together to make depredations on the Spaniards of America. Of both thefe we flall give an account.
I. The Bucaneers of St Domingo. The Spaniards had not been long in the poffeftion of the Weft Indies and the continent of America, when other nations, efpecially the Englifh and French, began to follow them there. But though the Spaniards were unable to peo-

Bubble

Bucaneer. ple fuch extenfive countries themflves, they were reSolved that no others thould do it for them; and thercfore made a moft cruel war on all thofe of any other nation who attempted to fettle in any of the Antilles or Caribbee iflands. The French, however, were at laft lucky cnough to acquire fome footing in the inland of St Chriltopher's; but by the time they began to fubfide into a regular form of goverument, the Spaniards found means to diflodge them. Upon this the wretched fugitives, confidering at how, great a ditance they were from their mother-country, and how near to the illand of Hifpaniola or St Domingo, the northern parts of which were then uninhabited and full of [wine and black cattle, immediately refolved to take poffeffion of that country, in conjunction with feveral other adventurers of their own and the Englifh mation ; efpecially as the Dutch, who now began to appear in thefe feas, promifed to lupply them plentifully with all kinds of neceffaries they might require, in exchange for the hides and tallow they thould procure by hunting.

Thefe new fettlers obtained the name of bucuneers, from their cultom of bucanning their beef and pork in order to keep it for fale, or for their own confumption, the method of which will be prefently defcribed. But fome of them foon grew tired of this new way of life, and took to planting; while many more chofe to turn pirates, trufling to find among thofe who remained on fhore a quick fale for all the plunder they could make at fea. This new body of adventurers were called freebooters, from their making free prey or booty of whatever came in their way.

The colony now began to thrive at a great rate, by the cheap and eafy manner in which the freebooters acquired the greateft riches, and the profufion with which they dittributed them among their old companions, the bucaneers and planters, for the mereft trifles. This brought numbers of fettlers from Old France in quality of indented fervants, though they toiled rather like flawes during the three years for which they generally bound themfelves, One of thefe men prefuming to reprefent to his malter, who always fised upon a Sunday for fending him with fkins to the port, that God had forbidden fuch a praftice, when he had declared, "Six days fhalt thou labour, and on the feventh day that thou reat:" "And I (replied the brutal bucaneer) Say to thee, Six days fhalt thou kill bulls, and ftrip them of their 0 :ins, and on the feventh day fhalt thou carry their hides to the fea-fhore." This command was followed by blows, which fometimes enforce obedience, fometimes difobedience, to the laws of God.

Thus the colony confifted of four claffes: bucaneers; freehooters; planters; and indented Cervants, who generally remained with the bucaneers or planters. And thefe four orders compoled what they now began to call the body of adveriurers. The Te pcople lived together in a perfect harmony under a kind of demo cracy: every freeman had a defpotic authority over his own family; and every captain was a fovereign in his own hip, though liable to be difcarded at the difcretion of the crew.

The planters fettled chiefly in the little infand of Tortuga on the morthern coalt of Hifpaniola: but it was not long before fome of them going to the great ifland to hunt with the bucaneers, the reft were fur-
prifed by the Spaniards; and all, even thofe who had Lucaneet. furicndered at difcretion in hopes of mercy, were put to the fword or hanged.
'The next care of the Spaniards was to rid the great ifland of the bucancers; and for this reafon they affembled a body of 500 lance-men, who, by their feldons going fewer than 50 in a company, obtained the name of the Fiflies from their enenics, whole manners and cultoms we flall now enter upon.

The bucaneers lived in little buts built on fome fpots of cleared ground, juft large enough to dry their fkins on, and conrain their bucanning boufes. Thefe fpots they called Boucons, and the buts they dwelt in Ajoupas, a word which they borrowed from the Spaniards, and the Spaniards from the natives. Though thefe ajoupas lay open on all fides, they were very agreeable to the hardy inhabitants, in a clinate where wind and air are fo very defirable things. As the bucaneers had neither wife nor child, they affociated by pairs, and mutually rendered each other all the fervices a mafter could reafonably expeet from a fervant, living together in fo perfect a community, that the furvivor aluays fucceeded his deceafed partner. This kind of union or fellowfhip they called s'emateloter [infailoring], and each other matelot [Gailor], whence is derived the cuftom of giving, at leaft in fome parts of the French Antilles, the name matelotage [failorage], to any kind of fociety formed by private perfons for their mutual advantage. They bchaved to each other with the greateft juftice and opennefs of heart: it would have been a crime to keep any thing under lock and key; but, on the other hand, the leaft pilfering was urpardonable, and punifted with expulfion from the community. And indeed there could be no great temptation to fleal, when it was reckoned a point of honour, never to refufe a neighbour what he wanted; and where there was fo little property, it was impoffible there fhould be many difputes. If any happened, the common friends of the parties at variance interpofed, and foon put an end to the difference.

As to laws, the bucaneers acknowledged none but an odd jumble of conventions made between themfelves, which, however, they regarded as the fovereign rulc. They filenced all objections by coolly anfwering, that it was not the cultom of the coatt; and grounded their right of acting in this manner, on their baptifm under the tropic, which freed them, in their opinion, from all obligations antecedent to that marine ceremony. The governor of 'Tortuga, when that ifland was again fettled, though appointed by the French court, had very little authority over them; they contented themfelves with rendering him from time to time fome flight homage. They had in a manner entirely flaken off the yoke of religion, and thought they did a great deal in not wholly forgetting the God of their fathers. We are furprifed to meet with nations, among whom it is a difficult matter to difcover any trace of a religious wollhip: and yet it is certain, that had the bucanecrs of St Domingo been perpetuated on the fame footing they fubfifted at the time we are fpeaking of, the third or fousth generation of them wonld have had as little religion as the Caffres and Hottentots of Africa, or the Topinambous and Cannibals of America.

They even laid afide their furnames, and aflumed nick-names, or martial names, moft of which lave con.

## B U C

## $B \quad \mathrm{U}$ C

Bucareer. tinued in their families to this day. Many, however, on their marrying, which feldom happeried till they turned planters, took care to have their real furnames inferted in the French contract; and this pragice gave occafion to a proverb, Itill current in the French Antilles, a man is not to be known till be takes a wife.

Their drefs confifted of a filthy greafy thirt, dyed with the blood of the aninals they killed; a pair of trowfers till more nafty: a thong of leather by way of belt, to which they bung a cafe containing fome Dutch knives, and a kind of very fhort fabre called Manchetle; a hat without any brim, except a little flap on the front to take hold of it by; and floes of hog $\mathbb{f k}$ in all of a piece. Their guns were four feet and a half in the barrel, and of a bore to carry balls of all ounce. Every man had his contract fervants, more or fewer according to his abilities; befides a pack of 20 or 30 dngs, amoug which there was always a couple of beagles. Thcir chief employment at firf was ox-hunting; and, if at any time they chafed a wild hog, it was rather for paftime, or to make provifion for a fealt, than for any other advantage. But in procefs of time, fome of them berook themfelves entirely to hunting of hogs, whofe fefir they bucamed in the following manner: Firft, they cut the fleft intolong pieces, an inch and an half thick, and fprinkled them with falt, which they rubbed off after 24 hours. Then they dried thefe pieces in floves over a fire made of the $\mathfrak{f k}$ in and bones of the bealt, till they grew as hard as a board, and affumed a deep brown colour. Pork prepared in this manner will keep in cafks a twelvemonth and longer; and when fteeped but a little while in lukewarm water, becomes plump and rofy, and yields moreover a moft grateful fmeli, either broiled or boiled, or otherwife dreffed, enough to tempt the mof languid appetite and pleafe the mon delicate palate. Thofe who hunt the wild boar, have of late been called fimply bunters.

In hunting, they fet out at day-break, preceded by the beagles, and followed by their fervants with the relt of the dogs; and as they made it a point never to balk their beagles, they were often led by them over the moff frightul irecipices, and through places which any other martal would have deemed abfolutely impalfable. As foon as the beagles had roufed the game, the reft of the Logs ftruck up and furrounded the beaft, Aopping it, and keeping a contant barkirg till the bucancer could get near enough to fhoot it; in doing this, he commorly aimed at the pit of the breaft; when the beaft fell, he hamftrung it, to prevent its rifing again. But it has fometimes happetied that the creature, not wounded cuough to tumble to the ground, has run furivully at his purfucr, and ripped him open. But, in general, the bucaneer feldom miffed bis aim; and when he did, was nimble enough to get up the tree behind which lat had the precaution to place himfelf. What is more; fome of them have been feen to overtake the beaft in chafe, and hamfting it withcut any further ceremony.

As foon as the prey was half fkimned, the mater cut . out a latge bone, and fucked the marrow for brenkfaft. The reft he left to his fetvante, onc of whom always remained behind to finifh the fkinning, and biing the dkin with a clooice piece of meat for the huntfmen's dinner. They then continued the chafe till they had killed as many beafts as there were leeads in the company. The
manter was the lan to return to the boucan, loaded Bucancez, like the reft with a flim and a piece of meat. Here the bucaneers found their tables ready: for every one had his feparate table; which was the firft thing, any way fit for the purpofe, that came in their way, a flone, the trunk of a tree, and the like. No table-cloth, no napkin, no bread or wine, graced their board; not even potatces or bananas, unlefs they found them ready to their hands. When this did not happen, the fat and lean of the game, taken alternately, ferved to fupply the place. A little pimento, and the fqueeze of an orange, their only fauce ; contentment, peace of mind, a good appetire, and abundance of mittb, made every thing agreeable. Thus they lived and feent their time, till they had completed the number of hides fur which they had agreed with the merchants; which done, they carried them to Tortuga, or fome port of the great ifland.

As the bucaneers ufid much exercife, and fed only on flefh meat, they generally enjoyed a good flate of kealh. They were indeed fubject to fevers, but either fuch as lafted only a day, and left no fenfible imprel.fron the day following; or little flow fevers, which did not hinder them from action, and were of courfe fo little regarded, that it was ufual with the patient, when afked low he did, to anfwer, "Very well, nothing ails me but the fever." It was impoffible, however, they froukd not fuffer confiderably by fuch fatigues, under a climate to the heat of which few of them had been early enougls inured. Hence the moft confidetate among them, after they had got money enough for that purpofe, turned planters. The reft foon fpent the fruits of their labour in taverns and tippling-houfes; and many had fo babituated themfelves to this kind of life, as to become incapable of any other. Nay, there have been inftances of young men, who having early embarked through neceffity in this painful and dangerous profeffion, perfifted in it afterwards, merely through a principle of libertinifm, rather than return to France and take poffefion of the moft plentiful fortunes.

Such were the bucaneers of St Domingo, and fuch their fituation, when the Spaniards undertook to extirpate them. And at firft they met with great fuccefs; for as the bucaneers hunted feparately, every one attended by his fervants, they were eafily furprifed. Hence the Spaniards killed numbers, and took many more, whom they condemned to a meft cruel llavery. But whenever the bucaneers had time to put themfelves into a flate of defence, they fought like lions, to a void falling into the hands of a nation from whom they were fure to receive no quarter; and by this means they often efcaped: nay, there are many inflances of fingle inen fighting their way through numbers. Thefe dangers, however, and the fuccefs of the Spaniards in dif. covering their boucans, where they ufed to furprife and cut the throats of them and their fervants in their fleep, engaged them to cohabit in greater numbers, and even to act offenfively, in hopes that by fo doing they might at lat induce the Spaniards to let them live in peace. But the fury with which they behaved whenever they met any Spaniards, ferved only to make their enemies more intent on their deftrustion; and affiftance coming to both parties, the whole ifland was turned into a flaughter-boufe, and fo much blood fipit on both fides, that many places, on account of the carnage of

## B U C

Purancer
which they had been the theatres, were entitled, of the maflacre: fuch as the till of the mafiacre; the plain of the malficte; the evalley of the mafucre; which names they retain to this day.

At length the Spaniards grew tired of this way of proceeding, and had recourfe to their old muthod of furprife, which, againft enemies of more courage than vigilance, was like to fucceed better. This put the bucaneers under a necelfity of never hunting but in large parties, and fixing the boucans in the little iflands on the coaft, where they retired every evening. This expedient fucceeded; and the boucans, by being more fixed, foon acquired the air and confillency of little town:.

When the bucmeers had once fixed themfelves, as relaticl, each boucan ordered fcouts every morning to the higheft part of the illand, in order to reconnoitre the coaft, and lee if any Spanifh parties were abroad. If no enemy appeared, they appointed a place and hour of rendezvous in the evening, and were never abfent if not killed or prifoners. When therefore any one of the company was miffing, it was not lawful for the reft to hunt again till they had got intelligence of him if taken, or avenged his death if killed.

Things continued in this fituation for a long time, till the Spaniards made a general hunt over the whole inland;-and, by deftroying their game, put the bucaneers under a neceflity of betaking themfelves to another courle of life. Some of them turned planters; and thereby increafed fome of the French fettlements on the coalt, and formed others. The reft, not relithing fo confined and regular a life, entered among the freebooters, who thereby became a very powerful body.

France, who had hitherto difclaimed for her fubjects thefe ruffians whofe fucceffes were only temporary, acknowledged them, however, as foon as they formed themfelves into fettlements; and took proper meafures for their government and defence. See the article St Dominco.

The hunting both of the bull and boar is at this day carried on, and proves of confiderable importance. That of the former furnifhes France with the fineft hides brought from America. The bucaneers put the hides in parks which they call loads, mixing together hides of full grown bulls, of young bullocks, and of
cows. Each of thefe loads is compofed of two bullhides, or of an equivalent; that is to fay, either of two real bull bides, or of one bull-hide and two cow-hides, or of four cow-hides, or of three young bullocks hides; three bullocks hides being reckoned equivalent to two full-grown bulls hides, and two cows hides equivalent to one bull's hide. Thefe bulls they commonly call oxen in France, though they be not gelt. Each load is commonly fold for fix pieces of eight rials, which is a Spanith coin, the French coin being but little current, or not at all, in the ifland of St Domingo.

The boar meat bucanned in the manner above men. tioned is fold by the bundle or pack, weighing cummonly 60 pounds, at the rate of fix pieces of cight per pack. The palmetto leaves ferve to pack it up in ; but their weight is deducted, fo that there muft be in each prack 60 pounds of net flech. Thefe bucaneers have al. io a great trade of the lard of boars, which they melt, and gather in large pots called poriches. This lasd,
which is called mantegua, is alfo fold for about eight Buraneer. pieces of eight per por. There is a gieat trade, and a great confump:ion of cach of thefe merchandifes in the French fettements of the ifland of St Dumingo, and in thofe of Tortuga: befides which, they whd tu fend great quantities of them to the Antilles, and even into the continent of French America. There is alfo a great deal of it fold for the fupport of the crew's of the hlips that come from Fratic for trading, or which the prirateers of Tortuga fit out fur cruiling againft the Spaniards.

The Spaniards, who have large fettlements in the ifland of St Dumingo, have alfo their bucaneers thert, whom they call matadores or monteros. Their chate has fomething noble, which favours of the Spanifin pride : the huntfman being on horfeback, ufes the lance to ftrike the bull, thinking it beneath his courage to floot him at a diflance. When the fervants, who are on foot, have difoovered the beaft, and with their dogs have driven it into fome favanabh or meadox, in which the mafter waits for them on horfeback, amed with two lances, the matadore goes and hamfrings it with the firft lance, the head of which is made like a crefent or half-moon, and extremely fharp, and kills it afterwards with the other lance, which is a common one. The chafe is very agreable; the huntfman making commonly, in order to attack the bull, the fame curns and the fame ceremonies which are praflifed in thofe fettivals fo famous in Spain, wherein the greatelt lords expufe themfelves fometimes to the view of the people, to make them admire their dexterity and intrepidity in attacking thofe furious animals: hat then it is a very dangerous chafe; thofe bulls, in their fury, often iunning directly againft the huntfman, who may think himifelf very happy if he comes off only with the lofs of his horfe, and if he himfelf is not mortally wounded.

The Spaniards drefs their hides like the French, who have learned it from them; and thefe hides being carried to the Havannah, a famous harbour in the illand of Cuba, are a part of the trade of that celebrated tow. The flota and the galleons fcarce ever fail touching there, on their return from Vera Ciuz and Poito Bello, and load there thofe hides which they carry into Spain, where they are fold for Havannah hides, the moit efteemed of any that are brought from America into Europe.
II. Bucaneers, the Pirates. Before the Englith had Rayral's made any fettlement at Jamaica, and the French at St Hiff of tlo Domingo, fome pirates of both nations, who have fince Indict. been fo much difinguithed by the rame of Bucaneers, bad driven the Spaniards out of the fmall illand of Tortuga; and,fortifying themfelves there, had with an amazing intrepidity made excurfions againf the common enemy. They formed themfelves into fmall cumpanies, confifting of 50,100 , or 150 men each. A boat, of a greater or fmaller fize, was their only armament. Here they were expofed night and day to all the inclemencies of the weather; having farce room enough to lie down. A love of abfolute indeperdence, the greateit blefing to thofe who are noi proprietors of land, rendered then averfe from thofe mutual reflraints which the members of fociety impofe upon themfelves for the common good; fome of them chofe to fing, while others were defirous of going to flcep. As the autherity they had conferred on their saptain was corfined

Fucancer. to his giving orders in battle, they lived in the greatef confufion. Like the favages, having no apprehenfion of want, nor any case to prelerve the neceffries of life, they were conflantly expoled to the fevereft extremities of hunger and thirft. But deriving, even from their very diftreffes, a courage fupenior to every danger, the fight of a thip tranfported them to a degree of frenzy. They never deliberated on thie attack, but it was their cuftom to boarc the thip as foon as poffible. The fmallnefs of their vefiels, and the fill they flowed in the manage. ment of them, fcreened them frons the fire of the greater niips; and they prefented orlly the fore part of their litule veffels filled with fufileers; who fired at the porthales with fo much exicinefs, that it entirely confounded the molt experienced gunners. As foon as they threw out the grappling, the largeft $\mathbf{v}$ ffiel feldom efcaped them.

In cafes of extreme neceffity, they attacked the peopl of every nation, but fell upon the Spaniards at all times. They thought that the cruelties the latter had exercifed on the inhabitants of the new world jultified the implacable averfion they had fworn againf them. But this was heightened by a perfonal pique, from the mortification they felt in feeing themfelves debarred from the privilege of hunting and fihing, which they confidered as natural rights. Such were their principles of juftice and religion, that, whenever they embarked on any expedition, they ufed to pray to heaven for the fuccefs of it ; and they never came back from the plunder, but they conflantly returned thanks to God for their victory.

The fhips that failed from Europe to America feldom tempted their avidity. The merchandife they contained would not eafily have been fold, nor been very profitable to thofe barbarians in thofe early times. They always waited for them on their return, when they were certain they were laden with gold, filver, jewels, and all the valuable productions of the new world. If they meet with a fingle fhip, they never failed to attack her. As to the Reets, they followed them till they failed out of the gulf of Bahama; and as foon as any one of the vefiels was feparated by accident from the reft, it was taken. The Spaniards, who trembled at the approach of the bucaneers, whom they called devils, immediately furrendered. Quarter was granted, if the cargo proved to be a rich one ; if not, all the prifoners were thrown into the fea.

The bucaneers, when they had got a confiderable booty, at firf held their rendezvous at the illand of Tortuga, in order to divide the \{poil; but afterwards the French went to St Domingo, and the Englift to Jamaica. Each perfon, holding up his hand, folemnly protefted that he had fecreted nothing of what he had taken. If any one among them was convicted of perjury, a cafe that feldom happencd, he was left, as foon as an opportunity offered, upon fome defert illand, as a traitor unworthy to live in fociety. Such brave men among them as had been maimed in any of their expeditions, were firf provided for. If they had loft a liand, an arm, a leg, or a foot, they reccived 26). An eye, a finger, or a toe, loft in fight, was valued only at half the above fum. The wounded were allowed 2s. 6 d . a day for two months, to enable them to have their wounds taken care of. If they had not money enough to anfwer thefe feveral demands, the whole
company were obliged to engage in fome frefh expe- Bucancer. dition, and to continue it till they had acquired a fufficient fock to enable thenı to fatisfy fuch honourable cuntraks.

After this act of juffice and humanity, the remainder of the booty was divided into as many thares as there were bucaneers. The commander could only lay claim to a fingle flare as the reft; but they complimented him with two or three, in proportion as he had acquitted himfelf to their fatisfaction. Favour never had any influence in the divifion of the buoty; for every fiare was determined by lot. Inftances of fuch rigid juftice as this are not eafily met with; and they extended even to the dead. Their hlare uas given to the man who was known to be their companion when alive, and therefore their heir. - If the perfon whoo had been killed had no intimate, his part was fent to his relations when they were known. If there were no friends or relations, it was diftributed in charity to the poor and to churches, which were to pray for the perfon in whofe name thefe benefactions were given.

When thefe duties had been complied with, they then indulged themfelves in all kinds of profufion. Unbounded licentioufnefs in gaming, wine, women, every kind of debauchery, was carried to the utmoft pitch of excefs, and was fopt only by the want which fuch profufion brought on. Thofe men who were enriched with feveral millions, were in an inflant totally ruined, and deftitute of clothes and provifions. They returned to fea; and the new fupplies they acquired were foon lavihed in the fame manner.

The Spanih colonies, flattering themfelves with the hopes of feeing an end to their miferies, and reduced almoft to defpair in finding themfelves a perpetual prey to thefe ruffians, grew weary of navigation. They gave up all the power, conveniences, and fortune, which their connections procured them, and formed themfelves almoft into fo many diffinet and feparate flates. They were fenfible of the inconvenionces arifing from fuch a conduct, and avowed them; but the dread of falling into the hands of rapacious and favage men, had greater influence over them than the dictates of honour, intereft, and policy. This was the rife of that firit of inadivity which continues to this time.

This defpondency ferved only to increafe the bold. nefs of the bucaneers. As yet they had only appeared in the Spanifh fettlements, in order to carry off fome provifions when they were in want of them. They no fooner found their captures begin to diminifh, than they determined to rccover by land what they had loft at fea. The richeft and moft populous countries of the continent were plundered and laid watte. The culture of lands was equally neglected with navigation; and the Spariards dared no more appeas in their public roads, than fail in the latitudes which belunged to them.

Among the bucaneers who fignalized themfelves in this new fpecies of excurfions, Montbar, a gentleman of Languedoc, particularly diflinguilhed himfelf. Hzving by chance, in his infancy, met with 2 circumfantial account of the cruelties practifed in the conqueft of the new world, he conceived an avelfion which he carried to a degree of fronzy againft that nation

## B U C

Bucancers which had committed fuch cnormities. The enthufialm this fuirit of humanity worked him up to, was turned into a rage more cruel that that of the religious fanaticifm, to which fo many victims had been facrificed. The names of thefe unhappy fufferers feemed to soufe him, and call upon him for vengeance. He had hoard fome account of the bucaneers, who werc faid to be the moft inveterate enemies to the Spanilh name: he therefore embarked on board a hip, in order to join them.

In the praflage they met with a Spanifl veffel; attacked it; and, as it was ufual in thofe times, imme. diately boarded it. Montbar, with a fabre in his hand, fell upon the entmy; broke through them; and, hurrying twice from one end of the fhip to the other, levelled every thing that oppofed him. When he had compelled the enemy to furrender, leaving to his companions the happinefs of dividing fo rich a booty, he contented himfelf with the favage pleafure of contem. plating the dead bodies of the Spaniards, lying in heaps together, againt whom he had fworn a contlant and deadly hatred.

Frefh opportunities foon occurred, that enabled him to exert this 「pirit of revenge, without extinguifhing it. The fhip he was in arrived at the coaft of St Domingo ; where the bucancers on land immediately applied to barter fome provifions for brandy. As the articles they offered werc of little valuc, they alleged in excafe, that their enemies had overrun the country, laid wafte their fettlements, and carried off all they could. "Why (replied Montbar) do you tamely fuffer fuch infults?" "Neither do we (anfivered they in the fame tone); the Spaniards have experienced what kind of men we are, and have therefore taken advantage of the time when we were engaged in hunting. But we are going to join fome of our companions, who have been gill worfe treated than we: and then we flall have warm work." "If you approve of it (anlivered Montbar), I will head you, not as your commander, but as the foremof to expofe myfelf to danger." The bucaneers, perceiving from his appearance that he was fuch a man as they wanted, cheerfully accepted his offer. The fame day they overtook the enemy, and Montbar attacked them with an impetuofity that aftonifhed the braveft. Scarce one Spaniard efcaped the effects of his fury. The remaining part of his life was equally diftinguillied as on this day. The Spaniards fuffered fo much from him, both by fea and lard, that he acquited the name of the Exterminalor.

His favage difpofition, as well as that of the other bucaneers who attended him, having obliged the Spani.rds to confine themfelves within their fettements, thefe freebooters refolved to attack them therc. This new method of carry ng on the war required fuperior forces; and their affociations in confequence became more numerous. The firt that was confiderable was formed bv Lolonois, who derived his name from the fands of Olones the place of his birth. From the abject ftate of a bondfman, he had gradually raifed himfelf to the command of two cannes, with 22 men. With there he was fo fuccefsful as to take a Spaning frigate on the coall ot Cuba. He then repaired to PorisauPrince, in which were four hlips, fitted out purpofely to fail in purfuit of hins. He took them, and threw all the crews into the fea, except one man, whom he faved,

Vol. IV. Part II.
in order to fend him with a letter to the governor of reatess. the Havanuah, acquainting him with what he had dose, and affuring him that he would treat in the fame m-riner all the Spaniards that fhould fall into his hands, not excepting the governor $\mathrm{l}_{\mathrm{h}}$.mfilf, if he fhould be fo fortunate as to take him. After this expedition, he ran his canoes and prize-flips aground, and lailed with his frigate only to the illand of 'lortuga.

Herc he met with Michael de Butco, who had dillinguifhed himfelf by having taken, even under the canmon of Porto-Bello, a Spanifh hip, cftimated at 218,5001 . and by other actions equally brave and daring. Thefe two gave out, that they were going to embark together on an expedition equally glorious and profitable; in confequence of which they foon colle eled together 440 men. This hody of men, the moft numerous the bucaneers had yet been able to multer, failed to the bay of Versezuela, which runs up into the country for the fpace of 50 leagues. The fort that was built at the entrance of it fur its defence was taken; the cannon were nailed up; and the whole garifon, confife ing of 250 men, put to death. They then reimbarked, and came to Maracaybo, built on the weflern coaft of the lake of the fame name, at the dittance of ten leagues from its month. This city, which had leecome flourifling and rich by its trade in $\mathfrak{k k i n s}$, tobacco, and cocoa, was deferted. The inhabitants had retired with their effects to the other fide of the bay. If the bucaneers had not loft a fortnight in siot and debauch, they would have found at Gibraltar, near the extremity of the lake, every thing that the inhabitants had fecreced to fecure it from being plundesed. On the contrary, they met with fortifications lately erected, which they had the ufelef fatisfaction of making themfelves mafters of, at the expence of a great deal of blood; for the inhabitants had already removed to a diftance the moft valuable part of their property. Exafperated at this difappointment, they fet fire to Gibraltar. Naracaybo would have flared the fame fate, had it not been ranfomed. Befides the fum they reccived for its ranfom, they alfo carried off with them all the croffes, piflures, and bells of the churches; intending, as they faid, to build a chapel in the ifland of Tortuga, and to conlecrate this part of their fpoils to facred purpofes. Such was the religion of thefe barbarous pcople, who cotld make no other offering to heaven than that which arofe from their robberies and plunder.

While they were idly difipating the 〔poils they had made on the coaf of Venezuel3, Morgan, the moft renowned of the Englifh bucaneers, failed from Jamaica to attack Porto-Bello. His plan of operations was fo well coutrived, that he furpilicd the city, and took it without oppofition.

The conqueft of Panama was an object of much greater importance. 'lo fecure this, Morgan thought it neceflary to fail in the latitudes of Coffa-Ricea, to procure fome guides in the inland of St Catharine's, where the Spaniards confined their malefactors. This place was fo ftrongly fortified, that it ought to have held out for ten years againft a confiderable army. Notwithftanding this, the governor, on the firl appearance of the pirates, fent privately to concert meafures how he might lisurender himfelf without incurring the imputation of cowardice. The refult of this confultation was, that Morgan, in the nighttime, fhould

5 E attack

Buaneers attich a fort at fome diftance, and the governor fhould fally out of the citadel to defend a poll of fo much conlequence; that the affailants thould then aitack him in the rear, and talie lim prifoner, which would cunfequently occafion a fursender of the place. It was astreed that a fmart firing thould be kept on both fides, without doing mifchief to either. This farce was admirably carried on. The Sparsiards, without being expoled :o any danger, appeared to have done their duty ; and the bucancers, atter having totally demolithed the furtifeations, and put on buard their veffels a prodigious quantity of wallike ammunition which they found at St Catharine's, fteered their courfe towards the river Chagre, the only channel that was open to them to arrive at the place which was the object of their utmoft withes.

At the entrance of this confiderable river, a fort w'as built upon a tleep rock, which the waves of the fez conftantly beat aganft. 'This bulwark, very difficult of accefs, was defended by an officer whofe extraordinary abilities were equal to his courage, and by a garifion that deferved fuch a commander. The bucaneers, for the firlt time, here met with a refflance that could only be equalled by their perfeverance : it was a doubtful point, whether they would fucceed or be obliged to raife the fiege, when a lucky accident happened that proved favourable to their glory and their fortune. The commander was killed, and the fort accidentaliy took fire; the befiegers then taking advantage of this double calamity, made themfelves matters of the place.

Morgan leit his veffels at anchor, with a fufficient rumber of men to guard them; and failed up the river in his floops for 33 miles, till he came to Cruces, where it ceafes to be navigable. He then proceeded by land to Panama, which was only five leagues diflart. Upon a large and extenfive plain that was before the city, he met with a confiderable body of troops, whom he put to Hight with the greateft eafe, and entered into the city, which was now abandoned. Here were found prodigious treafures concealed in the wells and caves. Some valuable commodities were alfo taken upon the boats that were left aground at low water; and in the neighbouring forefts were alfo found feveral rich depofits.

Having burnt the city, they fet fail with a great number of prifoners, who were ranfomed a few days after, and came to the mouth of the Chagre with a prodiginus booty.

In 1603 , an expedition of the greate? confequence was formed by Van Horn, a native of Oftend, but who had ferved all his life among the Erench. His intrepidity would never let lim fuffer the leaft figns of cowardice among thofe who afluciated with him. In the heat of an engagement, he went about his thips; fucceffively obferved his men; and immodiatelykilled thofe who Thrank at the fudden report of a piftol, gun, or caunon. This extraordinary difcipline had made him become the tesror of the coward and the idol of the brave. In other refpeets, he readily flared with the men of fpirit and bravery the immenfe riches that were acquired by fo truly warlike a difpofition. When he went upon thefe expeditions, he generally failed in his frigate, which was his own property. But thefe new defigns requiring greater numbers to carry them sn-
to executior, he tock to his afliflance Gramont, Ducaterre. Godfrey, and Jonqué, three Frenchmen diftinguifhed by their exploits; and Lawrence de Graff, a. Dutch. man, who had fignalized himfelf fill more than they. Twelve hundred buceneers joined themfelves to thefe famous commanders, and failed in fix seffels for Vera Cituz.

The darknefs of the night favoured their landing, which was eficeted at three leagues from the place, where they arrived without being difoovered. The governor, the fort, the barracks, and the pofts of the greateff conicquence, every thing, in fhort, that could occafion any tefiftance, vias taken by the break of day. All the citizens, men, women, and children, were fhut up in the churches, whither they had fled for Melter. At the door of each church were placed bartels of gunpowder to blow up the building. A bucaneer, with a lighted match, was to fet fire to it upon the leaft appearance of an infurre ©tion.

While the city was kept in fuch terror, it was eafily pillaged; and after the bucaneers had carried off what was moft valuable, they made a propofal to the citizens who were kept prifoners in the churches, to ranfom their lives and liberties by a contribution of 437,5001 . Thefe unfortunate people, who had neither ate nor drank for three days, cheerfully accepted the terms that were offered them. Half of the money was paid the fame day: the other part was expected from the internal parts of the country; when there appeared on an eminence a confiderable body of troops advancing, and near the port a fleet of 17 lhips from Europe. At the fight of this armament, the bucaneers, without any marks of Curprife, retreated quietly, with 1500 llaves they had carried off with them as a tritling indemnifcation for the refl of the money they expected, the fettling of which they referred to a more favourable opportunity.

Their retreat was equally daring. They boldly failed through the midft of the Spanifh fleet; which let them pals without firing a fingle gun, and were in fact rather afraid of being attacked and beaten. The Spaniards would not probably have efcaped fo eafily and with no other inconvenience but what arofe from their fears, if the veffels of the pirates had not been laden with filver, or if the Spanifh Heet had been freighted with any other effects but fuch merchandife as was little valued by thefe pirates.

A year had fcarce elapfed fince their return from Mexico, when, on a fudden they were all feized with the rage of going to plunder the country of Peru. It is probable that the bopes of finding greater trealures upon a fea little frequented, than on one long expofed to piracies of this kind, was the caufe of this expedition. But it is fomewhat remarkable, that both the Englifh and French, and the particular affociations of thefe two nations, had projected this plan at the fame time, without any communication, intercourfe, or defign of acting in concert with each other. $\Lambda$ bout 4000 men were employed in this expedition. Some of them came by Terra Firma, others by the flraits of Magellan, to the place that was the object of their withes. If the intrepidity of thefe barbarians had been directed, under the influence of a fkilful and refpectable commander, to one fingle uniform end, it is certain that they would have deprived the Spaniards of this impor-

## B U C

Bucaneer, tant colony. But their natural character was an invincible obftacle to fo rare an union; fur they always formed themfelves into feveral diffind bodies, fornctimes even fo few in number as ten or twelve, who acted together, or feparated, as the muft trifling caprice directed. Grognier, Lecuyer, Picard, and Le Sage, were the moft diftinguified officers among the French: $\mathrm{D}_{\mathrm{a}}$ vid Samms, Peter Wiher, and Towley, among the Englith.

Such of thefe adventurers as had got into the South fea by the ftraits of Darien, feized upon the firft veffel they found upon the coaft. Their affociates, who lad failed in their own veffels, were not much better provided. Weak however as they were, they beat feveral times the fquadrons that were fitted out againft them. But thefe victories were prejudicial to them, as they interrupted their navigation. When there were no more fhips to be taken, they were continually obli. ged to make defcents upon the coafts to get provifions, or to go by land in order to plunder thofe cities where the booty was fecured. They fucceffively attacked Seppa, Puebla-Nuevo, Leon, Realejo, Puebla-Viejo, Chiriquita, Lefparfo, Granada, Villia, Nicoy, Tecoanteca, Mucmeluna, Chiloteca, New-Segovia, and Guayaquil, the moft confiderable of all thefe places.

Many of them were taken by furprife; and moft of them deferted by their inhabitants, who fled at the fight of the enemy. As foon as they touk a town it was directly fet on fire, unlefs a fum proportioned to its value was given to fave it. The prifoners taken in battie were maffacred without mercy, if they were not ranfomed by the governor or fome of the inhabitants: gold, pearlc, or precious flones, were the only things accepted of for the payment of their ranfom. Silver being too common, and too weighty for its current value, would have been troublefome to them. The chances of fortune, that feldom leave guilt unpunifhed, nor adverfity without a compenfation for its fuffering, atoned for the crimes committed in the conqueft of the new world, and the Indians were amply revenged of the Spaniards.

While fuch piracies were committed on the fouthern ocean, the northern was threatened with the fame by Gramont. He was a native of Paris, by birtly a gentleman, and had diftinguifted himfelf in a military capacity in Europe; but his paffion for wine, gaming, and women, had obliged him to join the pirates. He was, however, affable, polite, generous, and eloquent ; he was endued 'with a found judgment, and was a perfon of approved valour; which foon made him be confidered as the chief of the French bucaneers. As foon as it was known that he had taken up armis, he was immediately joined by a number of brave men. The governor of St Domingo, who had at length prevailed upon his mafter to approve of the project, equally wife and juft, of fixing the pirates to fome place, and inducing them to become cultivators, was defirous of preventing the concerted expedition, and forbade it in the king's name. Gramont, who had a greater flare of fenfe than his affociates, was not on that account more inclined to comply, and Aternly replied: " How can Louis difapprove of a defign he is unacquainted with, and which has been planned only a few days ago?" This aniwer highly pleafed all the
bucaneers; who direetly embarked, in 1685 , to attach Buerneer. Campeachy.

They landed without oppofition. But at fome diftance from the coaft, they were attarked by 800 Speniards, who were beaten and purfued to the town; where both the parties entered at the fame time. The cannon they found there was immediately levelled againft the citadel. As it had very little effeet, they were contriving fome flatagem to enable them to become matters of the place, when intelligence was brought that it was abondoned. There remained in it only a gunner, an Eugliftman; and an oficer of fuch fignal courage, that he chofe rather to expofe himfelf to the greatelt extremities, than bafely to lly from the place with the reft. The commander of the bucaneers reccived him with matks of diffinction, ge neroufly releafed him, gave him up all his cffects, and befides complimented him witl come valuable prefents: fuch influence have courage and fidelity even on the minds of thofe who feem to violate all the rights of fociety.

The conquerors of Campeachy fpent two months in fearching all the environs of the city, for 12 or 15 leagues, carrying off every thing that the inhabitants, in their Hight, thought they had preferved. When ail the treafure they had collected from every quarter was depofited in the flips, a propofal was made to the governor of the province, who fill kept the field with 900 men , to ranfom his capital city. His refufal determined them 10 burn it, and demolifh the citadel. The French, on the fellival of St Louis, were celebrating the anniverfary of their king; and in the tranfports of their patriotifin, intoxication, and national love of their prince, they burnt to the value of a million of logwood; a part, and a very confiderable one too, of the fpoil they had made. After this fingular and extravagant inftance of folly, of which Frenchmen only could boaft, they returned to St Domingo.

In 1697, 1200 bucancers were induced to join a fquadron of feven Chips that failed from Europe undes the command of Puintis, to attack the famous city of Carthagena. This was the moft ditticult enterprile that could be attempted in the new world. The fiturtion of the port, the ferength of the place, the bad. nefs of the climate, were fo many obflacles that feemed infurmountable to any but fuch men as the bucancers were. But every ubitacle yielded to their valour and good fortune: the city was taken, and booty gained to the amount of $1,750,0001$. Their rapacious commander, however, deprived them of the advantages refulting from their fuccefs. He forupied not, as foon as they fet fail, to offer 5250 . for the Mare of thofe who had been the chief inftuments in procuring him fo confiderable a fpoil.

The bucaneers, exafperated at this treatment, refulved immediately to board the veffel called the Sceptre, where Pointis himfelf was, and which at that time was too far difant from the rell of the haips to expect to be affilled by them. This avaricious commander was upon the point of being maffacred, when one of the malecontents cried out: " Brethren, why flould we attack this rafcal? he has carried ofr nu-hing that belongs to us. He has léft our mare at Cerib:igen3, and there we mult go to recover it." This propofal ras

## $B \quad \mathrm{U}$

isucaueer received with gencral applaufe. A fivage joy at once Surcina fucceeded that gloomy melancholy which had feized them; and without further deliberation all their fhips
failed towards the city.

As foon as they had eritered the city without meeting with any refiftance, they fhut up all the men in the great church; and exacted payment of 218.7501 . the amount of their thare of booty which they had been defrauded of; promifing to retreat immediately upon their compliance, but threatening the mofl dreadful vengeance if they refufed. Upon this, the moll venerable prieft in the city mounted the pulpit, and made ufe of all the inlluence his character, his authority, and bis eloquence gave to him, to perfuade his hearers to yield up without referve all the gold, filver, and jewels they had. The collection, which was made after the fermon, not furnifhing the fum required, the city was ordered to be plundered.

At length, after amafing all they could, thefe adventurers fet fail ; when unfortunately they met with a Heet of Dutch and Englifh fhips, both which nations were then in alliance with Spain. Several of the pirates were either taken or furk, with all the cargo they had on board their hips; the relt efcaped to St Domingo.

Such was the laft memorable event in the hiftory of the bucaneers. The feparation of the Englifh and Frencl, when the war, on account of the prince of Orange, divided the two nations; the fucceffful means they both made ufe of to promote the cultivation of land among their colonies, by the affiftance of thefe enterprifing mean; and the prudence they flowed in fixing the moft diflinguifhed among them, and entrufting them with civil and military employments; the protection they were both under a neceflity of affording to the Spanifh fettlements, which till then had been a general object of plunder : all thefe circumHances, and various others, befides the impoflibility there was of fupplying the place of thefe remarkable men, who were continually dropping off, concurred to put an end to a fociety as extraordinaty as ever exiflel. Without any regular fyftem, without laws, without any degree of fubordination, and even without any lixed revenue, they became the aftonifhment of that age in which they lived, as they will be alfo of polterity.

BUCCELLARI, an order of foldiery under the Greck emperors, appointed to guard and difribute the anmunition bread; though authors are fomewhat divided as to their office and quality. Among the Vifigoths buccellarius was a general name for a clicnt or vaffal who lived at the expence of his lord. Some give the denomination to parafites in the courts of princes, fome make them the body-guards of emperors, and fome fancy they were only fuch as emperors employed in putting perfons to death privately.

BUCCELLATUM, among ancient military writers, denotes camp-bread, or bifcuit baked hard and dry, both for lightnefs and keeping. Soldiers always carried with them enough for a fortaight, and fometimes much longer, during the time that military difcipline was kept up.

BUCCIN $A$, an ancient mufical and military inftrument. It is ufually taken for a kind of thumpet; which
opinion is confimed by Feftus, by his defining it a Euccinum crooked horn, played on like a trumpet. Vegetiu obferves, that the buccina was bent in a femicircle, in which refpect it dificered from the tuba or trumpet. It is very hard to diftiaguilh it from the cornu or horn, unlefs it was fometining leff, and not quite fo crooked ; yet it certainly was of a different 〔pecics, becaufe we never read of the cornu in ufe with the watch, but only the buccina. Befides, the found of the buccina was fharper, and to be heard much farther than either the cornu or the tuba. In Scripture, the like inftrument, ufed both in war and in the temple, was called rams-borns, kiren-jobel, and fopherotb bagijobelim.

This inftrument was in ufe among the Jews to proclaim their feall-day, new-moons, jubilees, fabbatic years, and the like. At Lacedemon, notice was given by the buccina when it was fupper time; and the like was done at Rome, where the grandees had a buccina blown both before and after they fat down to table. The found of the buccina was called buccinus, or bucinus; and the mufician who played on it was called buccinator.

BUCCINUM, or whelf. See Conchology $I_{n}$. dex. One of the fpecies, the Bucimum lapillus, or mafly whell, which is a Britifh fhell, produces a purple dye, analogous to the purpura, or celebrated Tyrian purple of the ancients. By fome, it is fuppofed to be the fame.

BUCCLEUGH, a village in the county of Selkirk in Scotland, from which the noble family of Scott have the title of duke.
bucco, the Barbet. See Ornithology Indes.

BUCENTAUR, a galeas, or large galley of the doge of Venice, adorned with fine pillars on both fides, and gilt over from the prow to the ftern. This veffel is covered over head with a kind of tent, made of purple filk. In it the doge receives the great lords and perfons of quality that go to Venice, accompanied with the ambaffadors and courfellors of fate, and all the fenators feated on benches by him. The fame ref: fel ferves alfo in the magnificent ceremony of Afcenfion day, on which the doge of Venice throws a ring into the fea to efpoufe it, and to denote his dominion over the gulf of Venice.

Bucentaur is alfo the name of a fhip, às gieat and as magnificent as that of the Venetians, built by order of the elector of Bavaria, and launched on a lake which is fix leagues in length.
bucephala, or Bucephalos, in Anciens Geography, a town built by Alexander, on the welt fide of the Hydalpis, a river of the Hither India, in memory of his horfe Bucephalus, which was killed in the a\&ion with Porus, after croffing that river. Others fay, this horfe died of age, 30 years old; and not in the battle, but fome time after. His being branded or marked on the buttock with the head of an ox, gave rife to his name (Hefychius). -This generous animal, who had fo long thared the toils and dangers of his mafter, had formerly received fignal marks of royal regard. Having difappeared in the country of the Uxii, Alexander iffued a proclanation, commanding his horle to be reftored, otherwife he would ravage the whole country with fire and fword. This command

Eucer was immediately obeyed "SJ dear," fays Mirian, "was Bucephalus to Alexander, and fo terrible was Alexatider to the Barbarians."

BUCER, Martin, ofr: of the firf authors of the reformation at Strafburg, was born in 149 t, in Alface; and took the religions habit of St Dominic, at feven years of age: but mesting afterward with the writings of Martin Luther, and comparing them with the Scriptures, he began to entertain doubts concerning feveral thing, in the Romify religion. Aftcr fome conferences with Luther at Heidenorg in 1521 , he adopted molt of his fentiment: ; but in 1532 , he gave the preference to thofe of Zuinglius. He affifted in many conferences concerning religion; and in 1548 was fent for to Augfourg to fign the agrecment between the Papifts and Proteltants, called the imterins. His warm oppofition to this prujtet expofed hims to many difficultics and hardhhips; the news of which reaching England, where his fame had already arrived, Cranmer archbilhop of Canterbury gave him an invitation to come over, which he readily accepted. In 1549, a handfome apartment was alligned him in the univerfity of Cambridge, and a falary to teach theology. King Edward VI. had the greateit regard for him. Being told that he was very fenfible of the cold of the climate, and fuffered much for want of a German flove, he lent him 100 crowns to purchafe one. He died of a complication of diforders in 1551; and was buried at Cambridge with great funeral pomp. Five years after, in the reign of Queen Mary, his body was dug up, and publicly burnt, and his tomb demolifhed; but it was afterwards- fet up by order of Queen Elizabeth. He compofed many works, among which are commentarics on the evangelifs and gof. pels.
buceros. See Ornithology Indis.
BUCHAN, a diftrict of Scotland, Sying partly in the fhire of Aberdeen and partly in that of Banff: it gives the title of earl to the noble and ancient family of Erfkine.
buchanan, George, the beft Latin poet of his time, perhaps inferior to none fince the Auguflan age, was born in February 1506. This accomplibed fcholar and dillinguifhed wit was not defcended of a family remarkable for its rank. He had no occafion for the filendour of anceftry, He wamted not a reflected greatnefs, the equivocal, and too ofsen the only ornament of the rich and noble. The villame of Kil. leirn, in Stirlingthire, Scotland, was the place of his nativity; and the abject poverty in which his father died might have confined him to toil at the loweft employments of life, if the generolity of an uncle had not affified him in his education, and enabled him to purfue for two years his fudies at Paris. But that thort fonce was fcarcely elapfed, when the death of his benefactor made it neceflary that he fhould return to his own country, and forfake, for a time, the paths of fcience.

He was yet under this 20th year, and furrounded with the horrors of indigence. In this extremity, he enlifted as a common foldier under John duke of A1bany, who commarided the troops which France had fent to affift Scotland in the war it waged, at this perict, againft England. But nature had not deflined him to be a hero. He was difgufted with the fatigues
of one cimpaign; ane, fortunately, John Kojor, then Fri.... profeffir of philofophy at St Andecw's, hearing of his neceffity and his merit, afforded him a temporary relief. He now became the pupil of John RTair, is celebrated teacher in the fame univerfity, under whom he fludied the fubtilities of logic: and contrating an attachment to his maller, he lollowed him to l'ari-. There, after having encountered many difficultics, he was invited to teach grammar in the college of St Barbe. In this flavifh occupation lie was lound by the earl of Caffilis; with whom having remaired five years at Paris, be returned into Scctland. We nest acted as preceptor to the famous earl of Nurray, the natural fon of James V. But while he was forming this mobleman for public affaire, he found that his life was in danger; and from enemies, whofe vindictive rage could fuffer no abatement, and who would not fcruple the molt dilhonourable means of gratifying it.

The fcandalous lives of the clergy had, it feems, excited his indignation; and, more than reafoning or argument, bad eftranged him from the errors of Popery. The Francifcan monks, in return to the beautiful but poignant fatires he had written againf them, branded him with the aupellation of atberf; a term which the religious of all denominations are too apt indifcriminately to lavith where they have conceived a picjudice; and, not \{atisfied with the outrage of abufe and calumny, they coufpired his deffruction. Cardinal Beaton gave orders to appreherd him, and bribed King James with a very confiderable fum to permit his execution. He was feized upon accordingly; and the fira genius of his age was about to petilh by the halter, or by fire, to fatisfy a malignant refentment, when, efcaping the vigilance of his guards, he fied into England. Henry VIIf. at all times the llave of caprice and paifiom, was then burning, on the fame clay, and at the fame ftake, the Lutheran and the Papilt. His cowt did not fuit a philofopher or a fatirin. After a fhort flay, Buchanan crofled the fea to France; and, to his extrome difappointment, found at Paris, Cardinal Beaton, as ambafiador from Scotiatid. He retired privately to Bourdeaux, dreading, perbape, new misfortunes, and concerned that he could not profecute his Iludie: in obfcurity and filence. Here he met Andrew Govea, a Portuguefe of great learring and worth, with whom he had formerly been acquainted during his travels, and who was now employed in teaching a public fchool. He difthained not to at as the affillant of his friend; and during the three years he refided at this place, he compofed the trayedies which do him fo much hononr. It was here, alfo, that he wrote fome of the moft pleafant of thofe poems, in which he has rallied the mufes, and threatened to forfake them, as not being able to maintain their votary. About this time, too, he prefented a copy of verfes to the emperor Charles V. who happened to pafs through Bourdcaux.

His enemies, meanwhite, were not inactive. Cardinal Beaton wrote about him to the archbillop of Bourdeaux; and by every motive which a cunning and a wicked hcast can invent, he invited him to punith the moit petlilential of all heretics. The archibihimp, however, was not fo violent as the cardinal. On inguiring into the matter, he was conviticed that the poet lad committed a very fmall impropriety ; and a! lowed

## B $U C$

Buclianant. Iorved himfelf to be pacified. But fortune was not long to continue her fniles. Andrew Govea being called by the king of Portugal, his mafter, to eftablina an academy at Coimbra, he entreated Buchanan to accompany him. He obtained his requeft ; and had not bien a year in bis own country, when he died, and left his affociate expofed to the malice of his inveterate enemies the monks. They loudly objected to him, that he was a Lutheran; that he had written poeiris againf the Francifcans; and that he had been guilty of the abominable crime of eating flefh in Lent. He was confined to a monaftery till he fhould learn what thefe men fancied to be religion: and they enjoined him to tranfle:e the Pfalms of David into Latin verfe; a tafk which every man of tafte knows with what admirahle 12:11 and gerius he performed.

On obtaining his liberty, he had the offer of a fpeedy promotion from the king of Portugal: the iffue of which, his averfion to the clergy did not allow him to wait. He haftened to England; but the perturbed Atate of affairs during the minority of Edward VI. not giving him the promife of any lafting fecurity, he fet out for France. There he bad not been long, when he publifhed his Jephtha, which his neceflities made him dedicate to the marfhal de Briffac. This patron did not want generofity, and could judge of merit. He fent him to Piedmont, as preceptor to his fon Timoleon de Coffi. In this employ he continued feveral years; and during the leifure it afforded him, he fully examined the controverfies which now agitated Europe ; and he put the lafl hand to many of the moll admired of his fraller poems

When his pupil had no longer any ufe for him, he paffed into Scotland, and made an open profeflion of the reformed faith. But he foon quitted his native country for France; which appears to have been more agreeable to his tafte. Queen Mary, however, having determined that he fhould have the charge of educating her fon, recalled him: and till the prince fhou!d arrive at a proper age, he was nominated to the principality of St Andrew's. His fuccefs as James's preceptor is well known. When it was reproached to him, that he had made his majelly a pedant; "It is a wonder (he replied) that I have made fo much of him." Mackenzie relates a flory concerning his tutelage of his pedantic majefly, which fhows under what authority Buchanan held his pupil, and at the fame time the degree of his veneration for royalty. The young king being one day at play with his fellow pupil the mafter of Erfine, Buchanan, who was then reading, defired them to make lefs noife. Finding that they difregarded his admonition, he told his majefty, if he did not hold his tongue, he would certainly whip his breech. The king replied, he would be glad to fee who would bell the ca:, alluding to the fable. Buchanan, in a paffion, threw the book from him, and gave his majefty a found flogging. The old countefs of Mar, who was in the next apartment, rufhed into the room, and taking the king in her arms, afked how he dared to lay his hand on the Lord's anointed. Buchanan's anfwer is too in.lelicate to be repeated.
On the misfortunes that befel the amiable but imprudent Mary, he went over to the party of the earl of Murray; and at his earneft defire he was prevailed upon to write his "Detection;" a work which his
greateft admirers have read with regret. Having been fent with other commiffioners to England, againft his miffrefs, he was, on his return, rewarded with the abbacy of Crofs Regal; made director to the chancery; and fome time after lord privy council and privy feal. He was likewife rewarded by Qireen Elizabeth with a penfion of rool. a-year. The laft twelve years of his life he employed in compofing his Hiflory of Scotland. After having vied with almofl all the more eminent of the Latin pocts, he contefted with Livy and Salluf the palm of eloquence and political fagacity. But it is to be remembered with pain, that, like the former of thefe hiftorians, he was not always careful to preferve himfelf from the charge of partiality. In the year 1582, he expired at Edinburgh, in the 76th year of his age.

Various writers who have mentioned this author, \{peak of him in very different language, according to their religious and political principles. From his works, however, it is evident, that, both as a Latin poet and profe writer, he hath been rarely equalled fince the reign of Auguftus; nor is he lefs deferving of remembrance as a friend to the natural liberties of mankind, in oppofition to ufurpation and tyranny. "The happy genius of Buchanan (fays Dr Robertion), equally formed to excel in prole and verfe, more various, more original, and more elegant, than that of almoft any other modern who writes in Latin, reflects, with regard to this particular, the greateft luftre on his country." To this memory an obelifk 100 feet high was erected by fubfription in 1788, at Killearn the place of his nativity, defigned by Mr J. Craig, nephew to the cclebrated poet Thomfon,

The following is a lift of his works. 1. Rerum Scoticarum, \&c. 2. Pfalnorum Davidis paraphrafis postica. 3. De jure regni apud Scotor Dialogus. 4. Pfalmus civ. cum judicio Barclaii, \&c. 5. Pfalnus exx. cum analy $\sqrt{2}$ organica Bezzeri. 6. Baptyfes, five Calumnia. 7. Alcafis, tragedia. 8. Tragedice facra, et extera. 9. De Caleto recepto carmen, opud Stephan. 10. Francifanus et Fratres, \&c. 11. Eligia, Silvia, \&c. 12. De fpera Herborna. 13. Poemata. 14. Satyra in cardinalem Lotharingium. 15. Rudinenta grammatices, Tho. Linacri cx Anglico fermone in I.atinum verfic. 16. An admonition to the true lords. 17. De profodia. 18. Cbawaleon, 1572. 19 Ad viros fui feculi epiftole. 20. Litera regina Sartica ad com, Bothueitiz. 21. A detection of the doings of Mary queen of Scots, and of James earl of Bothivell, againit Henry Lord Darnly. 22. Vita ab ipfo foripta biennio ante mortem, cum commentario D. Rob. Sibbaldi, M. D. 23. Life of Mary queen of Scots. Thefe lave been feverally printed often, and in various countries. An edition of them all collected together was printed at Edinlurgh in 1704, in 2 vols. folio.

BUCHANNESS, a cape or promontory of Scotland, which is the farthefl point of Buchan, not far from Peterhead, and the moft eaftern of all Scothand. E. Long. ©. 30. N. Lat. 57. 28.

BUCHALV, a free and imperial town of Germany, in Suabia, feated on the river Tederfee, 22 nilcs fouthweft of Ulm. Here is a monaftety, whof atbefs has a woice in the diets of the empire. E. Leng. 9. 37. N. Lat. $4^{8.5}$.

Buchaw, a fmall territory of Germany, in the circla

Iucioreft of the Upper Rhinc, which compretands the diltrite 11 of the abbot of Fulda.

BUCHOREST, a pretty large town of Takey in Enrope, feated in the middle of Walachia, and the ordinary relidence of a hofpodar. The houles are man and very ill built, except a few that belong to the principal perfons. In 17:6, a party of Germans fint from Trarfylvanid entered this town, and touk the prince prifuner with all his court, and carried then off. 'This expedition was the mose eafly performod, as feveral lords of the country had a fecret intelligence with the governor of Tranylvania. This prince had no other Way to regain his liberty, but by giving up that part of Walach:-, which lies between the river Aluth and Tranfylrania, to the empctor of Germany, by the peace concluded at Pafarowitz in 1718 . The Germans entered again to the capital of his dominions, and leviced exceffive contributions. But affiirs took another turn after the fatal battle of Crotika in 1737 ; for the emperor was obliged to reftore this part of Walachia to the hofpodar, in virfue of the treaty of Belgrade. E. L"Ig. 26.32 . N. Lit. 44. 30.

BUCHAM, a finall, iree, and imperial town of Suabia in Germany, feated on the lake of Cunfance, in E. Long. 9. 20. N. Lat. 47. 41.

BUCIOCHE, in commerce, a fort of woollen cloth manulastured in Provence in France, which the French fhips carry to Alexandria and Cuiro.

BUCK, in Zoology, a male horned beall of venery or chafe, whofe female is denominate a doe. See Cerrus and Buck-Hunting.

Buck, is alfo applied to the male of the hare and rabbi: kind. See Lepys. and Hare-Hunting.

Eucr-Bem. See Menyanthes, Botany Indir.
Buck-Thorm. See Rhamnus, Botany Index.
Bucx Wheat. See Polygonem, Botany Iudex.
BUCKENHAM, New, a town of Norfolk in England, which formerly bad a ftrong caftle, but now demolifined. It is feated in a flat, in E. Long. 1. 10. N. Lit. 52. 30.

BUCKET, a fmall portable veffel to hold water, ofters made of leather for its lightnefs and ealy ufe in cales of fire. It is aifo the veffel let down into a well, or the fides of fluips, to fetch up water.

BUCKING, the firt operation in the whitening of linen varn or cloth.

BUCKINGHAM, the chief town of Buckinghamthire in England, Itands in a low ground, on the river Oule, by which it is almoft furrounded, and over which there are three bandfome flone-bridges. The town is large and populous, fends two members to parli ment, and had the title of a duchy. It feems, however, to have been but an inconfiderable place at the Conqueft ; for, according to Doomfday-book, it paid only for one hide, and had but 26 burgeffes. Edward the elder fortified it in the year 918 9 gainft the incurfions of the Danes, with a rampart and turrets. It alfo had formerly a cafte in the middle of the town, of which no veftiges now remain. The flurine of St Rumbald, the patron of fiftermen, preferved in the church, was held in great veneration. The county-gaol flands in this town, and here the affizes are fometimes kept. It was formerly a flaple for wool, but that advantage it hath now lof. It is governed by a bailiff and 12 burgefies, who are the fole electors of the members. In its neigh-
 Lone =. 59 N. I. It. 51.30.

Bucximisum. Share, (uppofed to derive its name from the Saxon word Baic, denoting a hatt or buck) an inland county of England. During the time prior to the landing of the Romans it was incluced in the divifon of Catieuchlani; and after their conquelt it was included in their third province of Flavia Cadarienfic. During the heptarchy it belonged to the bingdom of Mercia, which commenced in 582 , and terminated in 827 , having had 88 kings; and it is now in. cluded ia the Norfulk circuit, the diocefe of Lincoln, and the province of Canterbury. It is bounded on the rorth by Northampton haire; fouth by Berkfhire; caft by Bedfordihise, Fertfordhire, and Middlefex; and welt by Oxfordflise. It is of an oblong form, whofe greateit extent is from north to fouth. It contains $4+1,000$ acres: has above 111,400 inhabitants, 13 ; parilices, 73 vicarages; is 49 miles long, 18 broad, and 109 in circum'erence. It has 15 market-towns, viz. Buckingham and Aylefbary the comty towns, Marlow, New-port-Pegnel, Wirflow, Wendover, Beaconsfield, Wiccomb, Chefham, Amerharo, Stony Strat ford, Colribrook, Ivingho, Oulney, Rifborough ; befides the confiderable villages of Eaton and Fenty Stratford, and 613 others inferior. It is divided into cight hundred, provides 560 men for the militia, fends 14 parliament-men, and pays 12 parts of the land tax. Its rivers are the Thames, Oufe, Coln, Wichmm, Amertham, Ifis, Tame, and Loddon. Its chief produce is bone-lace, paper, corn, fine wool, and breeding rams. The moft noted places are the Chiltern Hills, Valc of Aylelbury, Bernwood Foreft, Wooburn-Hleath, and 15 parks. The air is generally good, and the foil mollly chalk or marle. The population of Buckinghomhire amounted to 111,000 perfons in the year 1801 ; in 3700 the number was 80,500 . Increafe in a century 30,500 .

Euckingham, George Villicrs duke of. See Vil. iers.

Bucxing am, Gobn Sbeffild duke of. See Sherfield.

BUCKLE, a well known utenfil, made of divers forts of metals, as gold, filver, Ateel, brafs, \&c.

The fathiun or form of buckles is various; but their ufe, in general, is to make faft certain patts of drefs, as. the hlwes, garters, \&e.

Buckie, in Horaldry: The buckle was to much efteemed in former times, that few perfons of repute and honous wore thcir girdle without it; and it may be confidered, in coats of arms, as a token of the furety, the faith and fervice of the bearer.

BUCKLER, a piece of defenfive armour ufed by the ancients. It was worn on the left arm, and compofed of wickers woven together, or wood of the ligheft fort, covered with hides and fortified with plates of brafs or other metal. The figure was fometimes round, fometimes oval, and fometimes alnon §quire. Moit of the bucklers were curiounfy adorned with all to:ts of figures of birds and bealts, as eagles, hons; nol of thefe only, but of the gods, of the celeftial boJiec, and all the works of nature; which cullom w is derived from the heroic tumes, and from then communicated to the Grecians, Romans, and Barbarians.

The foutun or Roman bucker, was of wood, the parts being joined together with little plates of iron,

1. $\quad \pi$ h.itu-hanc

Fuckers and the whole covered with a bull's bide. A: iron H Racolic. Rancone plate went about it without, to ke:p off blows; and another within, to hinder it from taking any damage by lying on the ground. In the middic was an iron bofs of amlo juting out, very ferviceable to glance off ftores and darts; and fometimes to prels violently upun the eriemy, and drive all hefore them. They are to be diftinguified from the clypei, which were lefs, and quite round, belonging more properly to cther nations, though for fome little time ufed by the Romans. The fcuta themfelves were of two kinds; the ovata, and the inhlricata: the former is a plain oval figure; the other oblong, and bending inward like half a cylinder. Polybius makes the fouta four feet long, and Plutatch calls then modugts, reacbing down to the feet. And it is very probable that they covered almoft the whole body, fince in Livy we meet with foldiers, who food on the guard, fometimes fleeping with their head on their fhield, having fixed the other part of it in the earth.
Volive Bockefrs: Thofe confecrated to the gods and hung up in their temples, either in commemoration of fome hero, or as a thankfiving for a victory obtained over an enemy; whofe bucklers, taken in war, were offered as a trophy.

BUCKOR, a province of Afia, fubject io the Great Mogul. It is feated on the river Inclus, on the banks of which there are corn and cattle; but the weft part, which is bounded by Sageflan in Perfia, is a defert. The inhabitants are flong, robuft, and $\mathrm{\imath pt}$ to mutiny; for which reafon the Mogul has a garrifon at the chief town called Buckor, which is feated in an illand made by the river Indus. They are all Mahometans, and drive a great trade in cotton cloth and other Indian commodities. E. Long. 70. 5. N. Lat. 28. 20.

BUCKRAM, in commerce, a fort of coarfe linen cloth thffened with glue, ufed in the making of garments to keep them in the form intended. It is alfo ufed in the bodies of women's gowns; and it often ferves to makes wrappers to cover cloths, ferges, and fuch other merchandifes, in order to preferve them, and keep them from the duft, and their colours from fading. Buckrams are fold wholefale by the dozen of fmall pieces or remnants, each about four ells long, and broad according to the piece from which they ate cut. Sonetimes they ufe new pieces of linien cloth to make burkrame, but molt commonly oll fheets and old pieces of fails.

BUCKSTALL, a toil to take deer, which muft not be kept ly any body that has not a park of his own, under penaltie:.

BUCOL.IC, in ancient poetry, a kind of poem relating to thepherds and country affairs, w! ich, according to the moft generally received opinion, took its rife in Sicily. Buccoics, fays Vofius, have fome corformity with romedv. Jik it, thev are pictures and imitarions of ordinary life; with this difference, however, that comedy reprefents the manners of the inhabitants of cities, and bucolies the occupations of country people. Sometimes, continues he, this laft poern is in form of a nonologut, and fometimes of a dialogue. Sometimes there is action in it, and Cometimes orly narration; and fometimes it is compofed both of तeticin and natration. The hexametre verfe is the mofl pro-
per for bucolics in the Greek and Latin tongues. Mofelus, Bon, Theocritus, and Virgil, are the moft renowred of the ancient bucolic poets.

BUD, in Botany. See the article Gemma.
BUDA, the capital city of Hungary, called Ofen by the inhabitants, and Buden by the Turks. It is large, well fortified, and has a cafle that is almoft impregriable. The houfes are tolerably handfome, being molt of them built with Equare fone. It was a much finer place before the Turks had it in their poffeffion; but they being mafters of it 135 years, have fufficed the finelt buildings to fall to decay. The lower city, or Jews town, extends lake fuburbs from the upper city to the Danube. The upper town tahes up all the declivity of a mourtain; and is fortified with good walls, which have towers at certain difo tances. The cafte, which is at the extremity of the hill, on the eaft fide, and commands the greatelt part of it, is furrounded with a very deep ditch, and defended by an old-fafhioned tower, with the addition of new fortifications. There is alfo a fuburb, enclofed with hedges, after the Hungarian mauner. The moft fumptuous Atructures now are the caravanferas, the mofques, bridges, and baths. Thefe laft are the fineft in Europe, for the magnificence of the building, and plenty of water. Some of the fprings are ufed for bathing and drinking; and others are fo hot, that they cannot be ufed without a mixture of cold water. The Danube is about three quarters of a mile in breadth; and there is a bridge of boats between this city and Peft, confifting of 63 large pontoons. The Jews have a fynagogue near the caffle-gardens. The adjacent country is fruitful and pleafant, producing rich wines; though in fome places they have a fulphureous flavour.
This city was the refidence of the Hungarian monarchs, till the Turks took it in 1526 . Ferdinand arch-duke of Auftria recovered it the next year ; but in 1529, the Turks became maflers of it again. In 1684 the Chiftians laid fiege to it; but they were obliged to raife it foon after, though they had an army of 80,000 men. 'Two years after, the Turks lof it again, it being taken by aflault in the fizht of a very numerous army. The booty that the Chriftians found there was almoft incredible, becaufe the rich inhabitants had lodged their treafures in this city as a place of fafety. However, part of thefe riches was loot in the fire oc. cafoned by the affault. This laff fiege cof the Chriftians a great deal of blood, becaufe there were many in the camp who carried on a fecret correfpondence with the Turks. When the ferafkier faw the city on fire, and found he could not relieve it, he beat his head ayainft the ground for anger. In 1687 this city had like to have fallen into the hands of the Turks again by treachery. After this, the Chriftians augmented the fortifications of this place, to which the pope contributed 100,000 crowns, for this is looked upon as the key of Chriftendem. It is frated on the Dariule, ics miles fouth-eaft of Vienna, 163 north by weft of Belgracte, and 563 north-weft of Conftantinople. E. Long. 19. 22. N. Lat. 47. 20.

Buda, the Beglerbeglic of, was one of the chief governments of the Turks in Europe. It included all the conentrics of Upper Hungary between the rivers Teiffe and Danube, and between Agria and Novigrad;

Budderdale. ern part of Sclavonia, and almoft all Servia: but a good part of this government now belongs to the queen of Hungary.

BUD牛US, William, the moft learned man in France in the 15 th century, was defcended of an ancient and illuftrious family, and born at Paris in 1467. He was placed young under mafters; but barbarifm prevailed io much in the fchools of Paris, that Budaus took a dillike to them, and fent his whole tume in idlenefs, till his parents fent him to the univerfity of Orleans to ftudy law. Here be pafled three years without adding to hisknowledge; for his parents fending for him back to Paris, found his ignorance no lefs than before, and his reluctance to ftudy, and love to gaming and other ufelefs pleafures, much greater. They talked no more to him of learning of any kind; and as be was heir to a large fortune, left him to follow his own inclinations. He was pàffionately fond of hunting, and took great pleafure in horfes, dogs, and hawks. The fire of youth begirning to cool, and his ufual pleafures to pall upon his fenfes, he was feized with an irrefiftible paffon for ftudy. He immediately difpofed of all his hunting equipage, and even abflracted himfelf from all bufinefs to apply himfelf wholly to fludy; in which be made, without any affiltance, a very rapid and amazing progrefs, particularly in the Latin and Greek languages. The work which gained him greateft reputation was his treatife de $A / \sqrt{ }$. His erudition and bigh birth were not his only advantages; he had an uncommon flare of piety, modefty, gentlenefs, and good-breeding. The French king, Francis I. often fent for him; and at his perfuafion, and that of Du Bellay, founded the royal college of France, for teaching the languages and fciences. The king fent him to Rome with the character of his ambaffador to Leo X. and in 1522 made him mafter of requefts. The fame year he was chofen provoft of the merchants. He died at Paris in 1540. His works, making four volumes in folio, were printed at Bafil in 1557.

BUDDe ${ }^{\text {EUS }}$, Jorn Francis, a celebrated Lutheran divine, and one of the moft learned men Germany has produced, was born in 1667 , at Anclam, a town of Pomerania, where his father was minifter. He was at firft Greek and Latin profeffor at Colburg; afterwards profeffor of morality and pulitics in the univerfity of Hall; and at length, in 1725 , profeffor of divinity at Jena, where he fixed, and where he died, after having acquired a very great reputation. His principsl works are, i. A large hiftorical German dictionary. 2. Hifforia coclefiafica Veteris Teflamenti, 2 vols 4 to. 3. Elementa philofopbice praclica; influmentalis, et theoreticie, 3 vals 8 vo, which has had a great number of editions, becaufe in moft of the univerfities of Germany the profeffors take this work for the text of their leflom. 4. Selecta juris natura et gentium. 5. Mifcellanea facra, 3 vols to. 6. Ifavoge biforico-theologica ad tbeologiam univerjan, fingulafque ejus partes, 2 vols 4 to ; which is much valued by the Lutherans. 7. A treatife on atheifm and fuperftition.

BUDDESDALE, or Bettisdale, a town of Suffolk in England, feated in a dale or valley, and its Atreet takes in a good part of Ricking, all which to-

Vol. IV. Part II.
gether make up the town; for of itfelf it is but a hamlet, having a fmal! chapel, and an endowed grammarfchool, to which belong certain fcholarfhips, affigned to Benuet or Curpus Chrifti college in Cambridgc, being the gift of Sir Nicholas Bacon, lord keeper of the great feal. E. Long. 1. 8. N. Lat. 52. 25.

BUDDING, in gardening. See Engrafting.
BUDDLE, in Metallurgy, a large fquare frame of boards, ufed in wafhing metallic ores.

BUDDLEIA. See Botany Index.
BUDELICH, a town of Germariy, in the electoral circle of the Rhine and archbiftopric of Treves, feated on the little river 'Traen, in E. Long. 6. 55. N. Lat. 49. 52.

BUDGE-Barrels, among engineers, fmall barrels well hooped, with only one bead; on the other end is nailed a piece of leather, to draw together upon flrings like a purfe. Their ufe is for carrying powder along with a gun or mortar ; being lefs dangerous, and eafier carried, than whole barrels. They are likewife ufed upon a battery of mortars for holding mealpowder.

Budgell, Eustace, Efq. an ingenious and polite writer, was the fon of Gilbert Budgell, doctor of divinity; and was born at St Thomas, near Exeter, about the year 1685 . He was educated at Chriftchurch college, Oxfurd; from which he removed to the Inner Temple, London : but inftead of fudying the law, for which his father intended him, he applied to polite literature; kept company with the genteeleft perfons in town; and particularly contracted a frict intimacy with the ingenious Mr Addifon, who was firf coufin to his mother, and who, on his being made fecretary to Lord Wharton, lord lieutenant of Ireland, took him with him as one of the clerks of his office. Mr Budgell, who was about 20 years of age, and had read the claffics, and the works of the beft Englifh, French, and Italian authors, now became concerned with Sir Richard Steele and Mr Addifon in writing the Tatler, as he had, foon after, a fhare in writing the Spectators, where all the papers written by him are marked with an $X$; and when that work was completed, he had likewife a hand in the Guardian, where his performances are marked with an afterilk. He was afterwards made under fecretary to Mr Addifon, chief fecretary to the lords jullices of Ireland, and deputy clerk of the council. Soon after, he was chofen a member of the Irifh parliament; and in 1717, Mr Addifon, having become principal fecretary of tlate in England, procured him the place of accountant and comptroller general of the revenue in Irelind. But the next.year, the duke of Bolton being appointed lord-lieutenant, Mr Budge!! wrote a lampoon againit Mr Webfter, his fecretary, in which his grace bimfelf was not fpared; and upon all occafions tieated that gentleman with the utmoft contempt. This imprudent flep was the primary caufe of his ruin : for the duke of Bolton, in fupport of his fecretary, got him removed from the poft of accountantgeneral ; upon which, returning to England, he, contrary to the advice of Mr Addifon, publifled his afe in a pamphlet, entitled, "A letter to the lurd * * *, from Euftace Budgell, Efq. accountant-general," \&c. Mr Addifon had now refigned the feals, and was retired into the country for the fake of his health: $\mathrm{Mr}_{\mathrm{r}}$

Eadding
Budgeli.
lord Halifax and the earl of Sunderland: he, how-
ever, made feveral attempts to fucceed at court, but was confantly kept down by the duke of Bolton. In the year 1720 he lon 20,0001 . by the South-fea fcheme, and afterwards fpent 50001 . more in unfucceffful attempts to get into parliament. This completed his ruin. He at length employed himfelf in writing pamphlets againt the miniftry, and wrote many papers in the Craftiman. In 1733, he began a weekly pamphlet, called The Bee; which he continued for above 100 numbers, printed in eight volumes 8 vo. During the progrefs of this work, Dr Tindal's death happened, by whofe will Mr Budgell had 20001. left him; and the world being furprifed at fuch a gift from a man entirely unrelated to him, to the exclution of the next heir, a nephew, and the continuator of Rapin's hiflory of England, immediately imputed it to his making the will himfelf. Thus the fatirif:

Let Budgell charge low Grub-ftreet on my quill, And write whate'er he pleafe except my will.
It was thought he had fome hand in publilling Dr Tindal's Cbrifianity as old as the Creation; for he often talked of another additional volume on the fame fubject, but never publiihed it. After the ceffation of the Bee, Mr Budgell became fo involved in la:v-fuits, that he was reduced to a very unhappy fituation. He got himfelf called to the bar, and attended for fome time in the courts of law; but finding himfelf unable to make ariy progrefs, and being diftreft to the utmont, he determined at length to make away with himfelf. Accordingly, in the year 1736, he took a boat at Somerfet-flairs, after filling his pockets with ftones; ordered the waterman to hoot the bridge; and, while the boat was going under, threw himlelf into the river. He had feveral days before been vifibly diftracted in his mind. Upon his bureau was found a flip of paper, on which were thefe words :

## What Cato did, and Addifon approv'd, Cannot be wrong.

Befides the above works, he wrote a Tranflation of Theophraftus's Characters. He was never married ; but left one natural daughter, who afterwards affumed his name, and became an actiefs in Drury-lane.

BUDINUS, in Ancient (icography, a mountain of Sarmatia Europea, from which the more northern fpring of the Boryfthenes is faid to take its rife, according to Ptulemy. But this is contradieted by later accounts. Now Podolia.

BUDN $\mathbb{E} A N S$, in ecclefiantical hiftory, fo called from the name of their leader, Simon Budneus. They not only denied all kind of religious worthip to Jefus Chrift, but afiested, that he was not begotten by any extraordinary an of divine power; being born, likc nther men, in a natural way. Budnæus was depofed from his minifterial functions in the year 1584 , and publicly excommunicated, with all his difciples; but afterwards abandoning his peculiar fentiments, he was readmitted to the communion of the Socinian feat. Crellius afcribes the origin of the above opinion to Adam Neuler.

BUDOA, a matitime town of Dalmatia, with a
bifhop's fee, fubject to the Venetians. It is feated between the gulf of Cattaro and the city of Dulugno, on the coalt of Albania; and is an important fortrefs, where the Venetians always keep a frong garrifon. In 1667, it fuffered greatly by an earthquake : and in 1686 was befieged by Soliman, bafha of Scutari; but General Cornaro obliged him to raife the fiege. E. Long. 19. 22. N. Lat. 42 . 12.

BUDRIO, a town of Italy, in the Bolognefe. The adjacent fields produce large quantities of fine hemp, which renders the town of more confequence than larger places. E. Long. 11. 35. N. Lat. 44. 27.

BUIDUN, is the name of one of the Ceylonefe gods: he is fuppofed to have arrived at fupremacy, after füceffive tranfmigrations, from the loweft ftate of an infect, through the various fpecies of living animals. There have been three deities of this name, each of which is fuppofed to reign os long as a bird removes a hill of fand, half a mile high, and fix miles round, by a fingle grain in a thoufand years. Sce Sakradawendra.

BUDIVEIS, a royal city of Bohemia in Germany. It is pretty large and well built, furrounded with frong walls, fortified with a good rampart, and might be made an important place. - It was taken by the king of Pruffia in 1744, but he did not keep it very long. E. Long. 14. 19. N. Lat. 42. 15.

BUDZIAC tartary, lies on the rivers Neifter, Bog, and Nieper; having Poland and Ruflia on the north, Little Tartary on the caf, the Black fea on the fouth, and Beflarabia on the weft. The chief town is Oczakow. It is fubject to Turkey.

BUENA vista, one of the Cape de Verd illands, lying in N. Lat. 15.56. It is allo called Bonvifa, and Bonnceue; but the firf is the true appellation, the others being only abbreviations and corruptions of the original narae, which fignifies a good proppect, in. timating the beautiful appearance it makes to thips at fea. This ifland is seckoned near 20 leagues in circumference, and is diftinguifhed on the north fide by a ridge of white rocks that bound it. The coaft that flretches ealt and north-weft is terminated with fundry banks to the lea; but the intetior past is chiefly mountainous. From the nothern point there is a large ridge of rocks projecting near a whole league into the fea, againft which the waves break with incredible fury. Another point of rocks flretches into the fea on the fouthern point of the ifland eaflward, a league and a half beyond that point; and in that bay is the beft road for fhipping.

BUENOS AYRES, a country of South America, belonging to the Spaniards. This name, given frum the plealantucls of the climate, is extended to all that comntry lying between Tucuman on the eaft, Paraguay on the north, and Terra Magellanica on the fouth, or to the vertex of that triangular point of land which compofes South America. The country is watered by the great river La Plata; firll difcovered in 1515 by Juan Diaz de Solis, who with two of his attendants was maflacred by the natives; and partly fubdued by Seballian Gaboto, who gave the great river the appellation of La Plota, from the abundance of the frecious metals he procured from the inhabinnts, imagining then to be the produce of the country, though in fact they were brought from Peru.-No country in the

## 13 U F

Buenos Ayres II Buffet.
woild abounds more in horned cuttle and borfes than Buenus Ayres, where the greateft expence of a horle or cow is in the catching it, and they are fiequently to be had at the fmall price of two or three reals. In fuch abundance are thefe ufful animats, that the hide alone is deemed of any value, as this conllitutes a main article in the trale of the country. All rove witd in the fields; but they are now become more difficult of accefs, the terrible havock made among them laving taught the cautious brutes to keep at a greater diftance. All kinds of fifl are in the fame abundance ; the fruits produced by every quarier of the globe grow up here in the utmot perfection; and for the enjoyment of life, and the falubrity of the air, a finer country cannot be imagined. The principal cities are Buenos Avres the capital, Monte Video, Corienteo, and Santa Fe.

Buenos Arres, Neufra Sennora de, the capital of the country called Buenos Ayres, in South America, was founded in the year 1535, under the direction of Don Pedio de Mendoza, at that time governor. It ftands on a point called Cape Blanco, on the fouth fide of the Plata, fronting a fmall river, in S. Lat. $34^{\circ}$ $34^{\prime} 38^{\prime \prime}$, according to the obfervations of Father Feville. The fituation is in a fine plain, rifing by a geatle afcent from the river; and truly paradifaical, whether we regard the temperature of the climate, the fertility of the foil, or that beautiful verdure which overfpreads the whole face of the country, of which the inhabitants have a profpect as far as the eye can reach. The city is very confiderable in extent, containing 3000 houfes, inhabited by Spaniards and others of different complexions. The Atreets are Atraight, broad, and pretty equal in the heights and dimenCuns of the buildings; one very handforme fquare adorns it, the front being a cattle in which the governor holds his court, and prefides over a garrifon of 3000 foldiers. Moft of the buildings are of chalk or brick, except the cathedral, a magnificent Atrueture, compofed chiefly of ftone.

BUFALMACO, Boramico, an Italian painter; the firlt who put labels to the mouths of his figures, with fentences; fince followed by bad mafters, but more frequently in caricature engravings. He died in ${ }^{1} 340$.

BUFF, in commerce, a fort of leather prepared from the flin of the buffalo; which dreffed with oil, after the manner of mamany, makes what we call buff-fkin. 'Inis makes a very confiderable atticle in the French, Inglift, and Dutch conmerce at Confantinople, Smyrna, and all along the coaft of Africa. The ninins of "elks, oxen, and other like animals, when prepared after the lame manner as that of the buffalo, are like. wife called buffs.

Of buff-finin, or buff-leather, are made a fort of coats for the horfe or gens d'armes of France, bandaliers, belts, pouches, and gloves.

In France, there are feveral manufactories defigned for the dreffing of thofe forts of hides, particularly at Corbeil, near Paris; at Niort, at Lyons, 2t.Rone, at Itanepus, at Cone.

BUFFALO, in Zoology. See Bos.
BUFFET was anciently a little apartment, feparated from the relt of the room by flender wooden columns, for the difpoling of china, glafs-ware, \&c.

## B U F

It is now properly a large table in a dining.room, called alfo a fide looard, for the plate, glaffer, bottles, bafons, \&c. to be placed on, as well for the fervice of the table as for magnificence. In houfes of perfons of diftinction in France, the buffet is a detached reorr, decorated with piclures relative to the fubject, with foumtains, cifterns, and vales. It is commonly faced with marble or bronze.

BUFFIER, Claude, a French writer, in $166 r_{1}$ became a Jofuit in 1679, and died at Jaris in 1737. There are many works of this author, which fhow deep penetration and accurate judgment; the principal of which is, Un Cours dies Sciences, \&c. that is, " a Courfe of Sciences upon priaciples new and fimple, in order to form the language, the underftanding, and the heart, 1732 ," in folio. "This collection includes an excellent "French grammar upon a new plan; a philofophic and practical treatife upon cloquence; an art of puetry," which, however, is not reckoned the bett part uf this mifcellany; "elements of metapl:ylics: in examination into vulgar prejudices; a treatife of civil fociety; and an expofition of the proofs of religion:" all full of reflections, jult as well as new. He was the author of other works, in verfe and prote, of which no great account is had; and it is remarkable, that his tyle in both is rather ealy than accurate and correct, notwithftanding the precepts in his "Grammar," which is really philofophic.

BUlfon, George Louis Le Ceerc, Count of, a celebratcd naturalift, was born at Montbard, in Burgundy, the 7 th of September 1 yO7: lis father was a counfellor of the parliament of Dijon, and the fon was deftined to the fame oflice, if fcience had not drawn him away from the law. He ftudied at Dijon; and his eager activity, his acutenefs, penetration, and robuf conftitution, fitted him to purfuc bufinefs and pleafure with equal ardour. His early paffion was for aftronomy, and the young Le Clerc was never without Euclid in his pocket. At the age of twenty, he went with an Englift nobleman and his governor to Italy; but he overlooked the choicent remains of art, and, amidft the ruins of an elegant and luxurious people, he firft felt the charms of natural hiftory, whofe zealous and fuccefsful admirer he afterwards proved. On his return to France, be fought, on fome occafional quarrel, with an Englifuman, whom he wounded, and was obliged to retire to Paris. He there tranflated Nis ton's Fluxions from the Latin, and Hales's Sintic: from the Englifh, into the French language. He afterwards came to England, at the age of 25 ; and this journey concluded his travels: he ftaid liere about three months. At the age of 21 , he fircceeded to the cllate of his mother, which was valued at about 300,000 livres (above 12, cool. Aesling) ; and be was one of thufe whufe eafy or affuent circumfances urge on to literary purfuits, and clear the path of fome of its thooris. Perlaps this was the period of his retirement to Montbard, where he fpent muchlime, and where his leifure was little intermpted: while in ile capital, his office of intendant of the king's garden and cabinet engaged much of his time. He loved muct compary, and was partial to the fair ; but he loved glory mure. He fpent 14 hours every day in Itudy; and, when we examine the extent of his knowlerge, and the number of his works, we wonder at his heving excelied fo
much

Eustirf,
Jubin.

Buffon, Buffion.
much even in this time. At five in the morning he retired to a pavilion in his valt gardens, and he was then inacceffible. This was, as Prince Henry of Praffia called it, the cradle of natural hiflory; but the was indifferently accommodated. The walls were naked: an old writing-table, with pen, ink, and paper, and an elbow chair of black leather, were the only furniture of his ftudy. His manufcripts were in a cabinet in another building, and he went occafionally from one to the other. 'The eras of Buffon's works are pretty well known. When each was finilhed, it was put afide, in order that he might forget it, and he then returned to it with the feverity of a critic. He was anxious to have it perfpicuous; and if thofe to whom he read his works befitated a moment, be changed the paffage. The works of others he at laft read like Magliabechi, the titles, the contents, and the moft inverefting parts; but he read M. Neckar's Compte Rendu, and the Adminiflration of the Finances, at Jeugth; he fpoke of them alfo with no little enthufiafm. His favourite autbors were Fenelon, Montefquieu, and Richardfon.
M. de Buffon's converfation was unadorned, rarely animated, but fometimes very cheerful. He was exact in his drefs, particularly in dreffing his hair. He fat long at table, and theo tcemed at his eale. His converlation was, at this time, unembarrafferl, and his guefts had frequently occafion to notice fome happy turn of phrafe, or fome deep reflection. His complaifarice was very confiderable : he loved praife, and even prailed himfelf; but it was with fo mach franknefs, and with fo little contempt of others, that it was ne. ver difagreeable. Indeed, when we confider the extent of his reputation, the credit.of his works, and the attention with which they were always received, we do not wonder that he was fenfible of his own value. It would perhaps have difplayed a fronger mind to have concealed it, His father lived to 93, and almoft adored his fon; his grandfather to 87 ; and the fubject of the prefent article exceeded only 80 . He died in April i788. Fifty-fix Atones were found in his bladder; but if he had confented to the operation, he might probably have lived longer. He left one fon; who near a high tower in the gardens of Montbard has placed a low column, with the following infcription:

> Excelrz Turri Humilis Columna,
> Parenti fuo
> Fil. Buffon.

This for fell a victim to the tyranny of Robefpierre during the Jate revolution in France.

BUFFOON, a droll, or mimic, who diverts the public by his pleafantries and follies. Menage, after Silmafius, derives the word from luffo; a name given to thofe who appeared on the Roman theatre with their cheeks blown up, that, receiving blows thereon, tbey might make the greater noife, and fet the people a laughing. Others, as Rhodigirus, make the origin of buffooncry more vencrable; deriving it from a fealt inflituted in Attica by King Ercethcus, called bupbonia.

Buffoons are the fame with what we otherwife find denominated fourra, gelafiani, mimilogi, minifelli, go-
liardi, joculatores, \&c, whofe chief feene is laid at the tables of great men. Gallienus never fat down to meat without a fecond table of buffoons by him; Tillemont alfo renders pantonimes by buffoons. In which fenfe he obferves, the flow's of the buffoons were taken away by Domitian, reftored by Nerva, and finally abolifhed by Trajan.

BUFON1A, toad-grass. See Botany Index.
BUFONITA, in Nutural Hifory, the toad-1tone. This has been received not only among the lift of native ftones by the generality of authors, but even has held a place among the gems, and is fill worn in rings by fome people; though undoubtedly it is an extraneous foflil. 'There has been a ftrong opinion in the world, that it was found in the head of an old toad; and that this animal voided it at the mouth, on being put on a red cloth. The general colour of the bufonitæ is a deep dufky brown; but it varies greatly in this refpect in feveral fuecinens, fome of which are quite black, others of an extremely pale fimple brown, a chefnut colour, liver colour, black gray, or whitifh. The bufonitæ are ufually found immerfed in beds of Itone; and fo little doubt is there of what they have originally been, viz. the petrified teeth of the lupus pijcis, or wolf-fifh, that part of the jaw of the fifh has fomerimes been found with the teeth petrified in it. The bufonite are faid to be cordial and aftringent : many other fanciful virtues are afcribed to them, which the prefent practice has rejected.

BUG, or bugg. See Cimex, Entomologi Index.

Cbeap, eafy, and cleun mixture for effectually deflroy ing Buggs. Take of the higheft rectified fpirit of wine, (viz. lamp-fpirits) that will burn all away dry, and leave not the leaft molture behind it, half a pint; new difilled oil, or fpirit, of turpentine, half a pint: mix them together; and break into it, in fmall bits, half an ounce of camphire, which will diffolve it in a few minutes; Shake them well together; and with a piece of fponge, or a brufh dipt in fome of it, wet very well the bed or furniture wherein thefe vermin harbour and breed, and it will infallibly kill and delfroy both them and their nits, although they fwarm never fo much. But then the bed and furniture muft be well and thoroughly wet with it (the dun upon them being firft brulhed and thaken off), by which means it will neither foil, fain, nor in the lealt hurt, the fineft filk or damalk bed that is. The quantity here ordered of this misture (that cofts but ahout a fhilling) will rid any one bed whatever, though it fwarms with buggs. If any buggs thould happen to appear after once ufing it, it will only be for want of well wetting the lacing, \&e. of the bect, or the folding of the linens or curtains near, the rings, or the joints or holes in and about the bed or head-board, wherein the buggs and nits neftle and breed; and then their being wetted all again with more of the fame mixtute, whith dies in as fatt as you ufe it, pouring fome of it into the joints and holes where the bruth or fpunge cannot reach, will never fail abfolutely to deftroy them all. Some beds that have much wood-work can hardly be thoroughly cleared without being firft taken down; but others that can be drawn out, or that you can get well behind, to be done as it fopuld be, may. The imell this mixture occafions will be all gone in two or three days; which

Bug yet is very wholefome, and to many people agrecable. Remember always to flake the mixture rogether very well whenever you ufe it, which mult be in the daytime, not by candle-light, lelt the fubtlety of the mix. ture fhould catch the tlame as you are ufing it, and occafion damage.

Early in the fpring, even in February, the larva of this infect begins to burt from tho egg; and it is at this feafon that attention is fo very requifite. The bed ought to be ftripped of all its furniture; which fhould be walhed, and even boiled, if linen; if Iluff, it thould be hot-preffed. The bednead fhould be taken to pieces, dufted, and wafked with 「pirit of wine in the joints; for in thofe parts the females lay their eggs. This done, the joints, crevices, cavities, \&c. fhould be well filled with the belt foft foap mixed with verdigris and Scots fnuff. On this fubfance the larva, if any efcape the cleanfing, or any, which is common in old houfes, creep into the bedftead, will feed at firft, and of courfe be deftroyed : this laft will effect the purpofe in houfes where thefe vermin are not fo numerous, by repeating the operation every three montis.$\dagger$ Travels in Profeflor Kalm $\dagger$ mentions, that, from repeated trials, Amsrica. he has been convinced that fulphur, if it be properly employed, entirely delloys buggs and their eggs in beds or walls, though they were ten times more numesous than the ants on an ant-hill. His traullator, Dr Forlter, adils, that a ftill more effectual remedy is, to wath all the infected furniture with a folution of arfenic. See further the article Cimicifuga.

BUGEY, a province of France, bounded on the eaft by Savoy, on the welt by Breffe, on the fouth by Duphiny, and on the north by the territory of Gex and the Franche Comte. It is about 40 miles long and 25 broad. Though it is a country full of hills and rivers, yet it is fertile in fome places, the rivers abound in trouts, and there is plenty of all forts of game. The chief places are Belley the capital, Seifel, St Rambert, Fort L'Eclufe, and Chateau-Neuf.

BUGGERS, (Bu/garii), anciently fignified a kind of heretics, otherwife called Paterini, Cathari, and Albigenfes.

The word is formed of the French Bougres, and that from Bougria or Bulgaria, the country where they chiefly appeared. Among other errors they held that men ought to believe no feripture but the New Teftament ; that baptifin was not neceffary to infants; that hufands who converfed with their wives could not be faved; and that an oath was abfolutely unlawful. They were ftrennoufly refuted by Fr. Robert, a Dominican, furnamed the Bugger, as having formerly made profeffion of this herefy.

The Buggers are mentioned by Mathew Paris, in the reign of Henrv lII. under the name of Bugares. Circa dies autem illos invaluit beretica pravitas corum qui vulgariter dicuntur Paterini et Bugares, de quorum errorius malo tacere quam loqui.

Bugger, or Buggerer, came afterwards to be ufed for a Sodomite; it being one of the imputations laid, right or wrong, on the Bulgarian heretics, that they taught, or at leaft practifed, this abominable crime.

Buggea (Bulgarius), is alfo a denomination given to ufurers; ufury being a vice to which the fame heretics are faid to lave been much addicted.

BUGGERY, or Sodomy, is defined by Sir Edward Coke to be a carnal copulation againft nature, either by a confufion of fpecies, that is to fay, either a man or woman with a brote beaft ; or fexes, as a man with a man, or a man unnaturally with a woman. It is laid this fin againft God and nature was firft brought into England by the Lombards. As to its punifiment, the vaice of thature and of reafon, and the exprefs law of God $\ddagger$, determines it to be capital. Of $\ddagger$ Levit. xx. this we have a fignal inftance, long before the Jewifh 13, $\sqrt[r]{ }$. difpenfation, by the deftruction of two cities by fire from heaven; fo that this is an univerfal, not merely a provincial, precept. Our ancient law, in fome meafure, imitated this punifhment, by commanding fuch milcreants to be burnt to death; though Fleta fays, they hould be buried alive; either of which punifhments was indifferently ufed for this crime among the ancient Goths. But now the general punithment of all felonies is the fame, namely, by hanging: and this offence (being in the times of Popery only fubject to ecclefiatical cenfures) wasamade felony without benefit of clergy by fatute 25 Hen . VllI. c. 6. revived and confirmed by 5 Eliz. c. 37. And the rule of law herein is, that, if buth parties are arrived at the years of difcretion, agentes et conferticntes pari paena plectantur, "both are liable to the lame punifhment."

BUGIA, a province of the kingdom of Algiers in Africa. It is almoft furrounded with mountains; aud is divided into three parts, Benijuhar, Auraz, and Labez. Thefe mountains are peopled with the molt ancient Arabs, Moors, or Saracens. The province is very fertile in corn.

Bugia, by the Africans called Bugeiah, a maritime town of Africa, in the kingdom of Algiers, and once the capital of the province of that nanie. It is fuppofed to be the Salde of Strabo, built by the Romans. It hath a luandfome port formed by a narrow neck of land running into the fea; a great part of whofe promontory was formerly faced with a wall of hewn ftone; where was likewife an aqueduct, which fupplied the port with water, difcharging it into a capacious bafon ; all which now lie in ruins. The city itfelf is buitt on the ruins of a large one, at the foot of a ligh mountain that looks towards the north-eaft ; a great part of whofe walls run up quite to the top of it; where there is allo a caltle that commands the whole town, befides two others at the bottom, built for a fecurity to the port. The inhabitants drive a confiderable trade in ploughfhares, mattocks, and other iron tools, which they manufacture from the neiphbouring mines. The town is watered by a large siver, fuppofed to be the Nalava of Ptolemy. The place is populous, and hath a confiderable market for iron work, oil, and wax, which is carried on with great tranquillity; but is no Kooner over than the whole place is in an uproar, fo that the day feldum concludes without forne flagrant initance of barbarity. E. Long. 4. N. Lat. 35 - 30.

BUGIE, a town of Egypt, fituated on the weीern flore of the Red fea almott oppofite to Ziden, the port town to Mecca, and about 100 miles weat of it. E. Long. 36. N. Lat. 22.15.

## 13 U K

BUILDING, a fabric erceted by art, cither for dcvotion, magnificence, or conveniency.
Building is alfo ufed for the art of conftructing and raifing an edifice; in which fenfe it comprehends as well the expences as the invention and exccution of the defign. See Architecture.

The modern buildings are much more commodious, as well as beautiful, than thofe of former times. Of old they uled to dwell in houfes, mofl of them with a blind faircafe, low ceilings, and dark windows; the rooms built at sandom, withont any thing of contrivance, and often with heps from one to another; fo that one would think the people of former ages were sfraid of light ard frefh air: whereas the genius of our times is altogether for light faircafes, five fafhwindows, and lofty ceilings. And fuch has been our builders indultry in point of compactnefs and uniformity, that = houfe after the new way will afford, on the fame quantity of ground, almoft double the conveniences which could be had from an old one.

By aft $11 \mathrm{Geo}$. . . and 4 Geo . III. for the regulation of building witlin the weekly bills of mortality, and in other places therein fpecified, party walls are requised to be erected of brick or flone, which fhall be two bricks and a half thick in the cellar, two bricks thick upwards to the garret floor, \&cc. and other limitations are enacted refpecting the difpofition of the timbers, \&xc. And every building is to be furveyed; and the perfon who offends againft the flatute in any of the particulars recited, is liable to a forfect of 2501. to be levied by warrent of juftices of the peace. The other principal ftatutes relating to building are 19 Car. II. c. 3. 22 Car. II. c. 11.5 Eliz. c. 4. 35 Eliz. c. 6. 6 And. c. 3 I. 7 Ann. c. 17.33 Geo. 11. c. 30. and 6 Geo. III. c. 37.

Building of Ships. See Ship-Building.
BUII.TH, or Bealt, a town of South Wales in Brecknockfthire, pleafantly feated on the river Wye, over which there is a wooden bridge that leads into Radnorfhire. W. Long. 3. 10. N. Lat. 52. 8.

BUIS, a territory of France, in Dauphiny. It is a fmall mountainous country, but pretty fertile; and Buis and Nions are the principal places.

BUKARI, a fmall well-built town of Hungarian Dalmatia, fituated on the Golfo di Bikeriza, in E. Lomg. 20. 53. N. Lat. 45. 20.

BUKHARIA, a general name for all that vaft tract of land lying between Karazm and the great Kolit, or fandy defert bordering on China. It derives its name of Bukharia from the Mogul word Bukhar, whicl fignifies a learned man; it being formerly the cuftom for thofe who wanted infruction in the languages and feiences to go into Bukharia. Hence this name appears 10 have been given to it by the Moguls who under Jenghiz Khan conquered the country. It is nearly the fame with that called by the Arabs Mavearainabr, which is little other than a tuanflation of the word Tranfoxana, the name formerly given to thofe provinces.

This region is divided into Great and Little Bukhari\%.

Great Bukbaria (which feems to comprehend the Sogdiana and Badriana of the ancient Greeks and Romans, with their deperdencics) is fituated between the 2th and $46: 1$ degrees of north latitude, and between
the 7 Gth and 92 d degrees of eafl longitude. It is Bukharia. bounded on the north by the river Sir, which feparates it from the dominions of the Eluths or Kalmucs; the kingdom of Kafogor in Little Bukharia, on the eaft ; by the dominions of the great Mogul and Perfia on the fouth; and by the country of Karazm on the welt: being about 770 miles long from wef to eaf, and 730 miles broad from fouth to north. It is an exceeding rich and fertile country; the mountains abound with the richeft mines; the valleys are of an aftonifhing fertility in all forts of fruit and pulfe; the fields are ccvered with grafs the beight of a man; the rivers abound with excellent fiff; and wood, which is fcarce over all Grand Tartary, is here in great plenty. But all thefe benefits are of little ufe to the Tattar in. habitants, who are naturally fo lazy, that they would rather go rob and kill their neighbours than apply themfelves to improve the benefits which nature fo liberally offers them. This country is divided into three large provinces, viz. Bukharia proper, Samarcand, and Balk; each of which generally has its proper khan. The province of Bukharia proper is the moft weftern of the three; having on the weft Karazm, on the north a defert called by the Arabs Guznah, on the eaft the province of Samarcand, and on the fouth the river Amu. It may be about 390 miles long, and 320 broad. The towns are Bokhara, Zam, Wardanfi, Karakul, Siunjbala, Karhi, Zaruji, Nerfem, Karmina, Scc.

Little Butharia is fo called, not becaufe it is lefs in dimenfions than the other, for in reality it is larger; but becaufe it is inferior to it as to the number and beauty of its cities, goodnefs of the foil, \&c. It is furrounded by deferts : it has on the weft, Great Bukharia; on the north, the country of the Kalmucs; on the eaft, that of the Moguls fubject to China; on the fouth, Thibet, and the north-well corner of China. It is fituated between the $93^{d}$ and 118 th degrees of eaft longitude, and between $35^{\circ} 30^{\prime}$ and $45^{\circ}$ of north latitude; being in length from eaft to weft about 850 miles, and in breadih from north to fouth 580 : but if its dimenfions be taken according to its femicircular courfe from the fouth to the north-eall, its Jength will be 1200 miles. It is fufficiently popolous and fertile; but the great elevation of its land, joined to the height of the mountains which bound it in feveral parts, particularly towards the fouth, renders it much colder than from its fituation might natorally be expected. It is very rich in mines of gold and filver; but the inhabitants reap little benefit from them, becaufe neither the Eluths nor Kalmucs, who are mafters of the country, nor the Bukhars, care to work in thern. Neverthelefs, they gather abundance of gold from the beds of the torrents formed by the melting of the fiow in the fring; and from hence comes all that gold duft which the Bukhars carry into India, China, and Siberia. Much mulk is likewife found in this country; and all forts of precious flones, even diamonds; but the inhabitants have not the att of either cutting or polifhing them.

The inhabitants both of Great and Iittle Bukhadia, are generally thofe people called Budhars. They are commonly fun-bunt and black-haired; although forne of them are very fair, handfome, and well made. They do not want politenefs, and are addicted to com-

## B U K

Eukharia. merce; which they carry on with China, the Indice, Perfia, and Ruffra : but thole who deal with them will be fure of being overreached, if they do not take great care. The habits of the men differ very little from thofe of the Tartars. Their girdles are like thofe of the Poles. The garments of the women differ in nothing from thofe of the men, and are commonly quilted with cotton. They wear bobs in their ears I 2 inches long; part and twift their hair in treffes, which they lengthen with black ribbands embroidered with gold or filver, and with great taffels of filk and filver, which hang down to their heels; three other tufts of a fmaller fize cover their breafts. Both fexes carry about with them prayers written by their priefts, which they keep in a fmall leathern purfe by way of relics. The girls, and fome of the women, tinge their nails red with the juice of an herb called by them kena: they dry and pulverize it ; then mixing it with powdered alum, expole it in the air for 24 hours before they ufe it, and the colour lafts a long time. Both Cexes wear clofe breeches, and boots of Ruflia leather, very light, and without heels, or leather foles; putting on galloches, or high-headed flippers like the Turks, when they go abroad. They wear alfo the fame fort of bonnets and covering for the head; only the women fet of theirs with trirkets, fmall pieces of money, and Chinefe pearls. Wives are diftinguifhrd from maids by a long piece of linen worn under their bonnets; which folding round the neck, they tie in a $k$ not behind, fo that one end of it hangs down to the wait.

The Bukhar houles are of fone, and pretty good; but their moveables confit mofly of fome China trunks plated with iron. Upon thefe, in the day-time, they fpread the quilts they have made ufe of at night, and cover them with a cotton carpet of varions colours. They have likewife a curtain fprigged with towers and various figures; allo a fort of bedfead half a yard high, and four yards long, which is hidden in the daytime with a carpet. They are very neat about their viftuals; which are dreffed in the mafter's chamber by his llaves, whom the Bukhars either take or buy from the Roffians, Kalmucs, or other neighbours. For this purpofe there ate in the chamber, according to the largenefs of the family, Ceveral iron puts, fet in a kind of range near a chimney. Sume have little ovens, made, like the reft of the walls, with a fliff clay or bricks. Their utemfils confift of forme plates and porringers made of cagua wood or of china, and fome copper veffels. A piece of coloured calico ferves them inftead of a table-cloth and napkins. They ufe neither chairs nor tables, knives nor forks; but fit crols-legged on the ground ; and the meat being ferved up, they pull it to pieces with their fingers. Their fpoons refemble our wooden ladles. Their ufual food is minced meats, of which they make pies of the form of a half moon: thefe ferve for provifions when the Bukhars go long journeys, efpecially in winter. They carry them in a bag, having firt expofed them to the froft ; and when boiled in water, they make very good broth. Tea is their common driak, of which they have a black fort prepared with milk, falt, and butter; eating bread with it, when they have any.

As the Bukhars buy their wives, paying for them
more or lefs according to their handfomenefs; fo the Eukharia. fureft way to be rich is to have many daughters. The perfons to be marricd mull not fee or fpeak to each other from the time of their contrad to the day of marriage. This is celebrated with three days feafting, as they do great annual fettivals. The evening before the wedding, a company of young girls mect at the bride's houle, and divert themfelves till midnight, playing, dancing, and finging. Next morning the guefts affemble, and help lier to prepare for the ceremony. Then, notice being given to the bridegroom, he arrives foon after, accompanied by ten or twelve of his relations and friends. Thefe are followed by fome playing on flutes, and by an Alus (a kind of prieft), who fing', while he beats two little timbrels. The bridegroom then makes a horfe race; which being ended, he diftributes the prizes, fix, cight, or twelve, in number, according to his ability. They confilt of daniafks, lables, fox kins, calico, or the like. The parties do not fee each other while the marriage ceremony is performing, but anfwer at a diflance to the quellions afked by the priefl. As foon as it is over, the biidegtoom returns home with his company; and after dinner carries them to the bride's houle, and obtains leave to fpeak to her. This done, tre goes back, and returns again in the evening, when he finds her in bed; and in prefence of all the somen, lays himfelf down by her in his clothes, but only for a moment. The fame farce is acted for three days fucceflively; but the thid night he paffes with her entirely, and the next day carries her home.

Although the prevailing religion throughout all Little Bukharia is the Mahometan, yet all others enjoy a perfect toleration. The Bukhars fay, that God firlt commuricated the Koran to mankind by Mofes and the prophets; that afterwards Mahomet explained, and drew a moral from it, which they are obliged to receive and practife. They hold Chrift to be a prophet, but have no notion of his fufferings. Yet they believe in the refurrection, but cannot be perfuaded ibat any mortal fhall be eternally damned : on the contrary, they believe, that as the dxmons led them into fin, fo the punifment will fall on then. They believe moreover, that at the laft day every thing but God will be annihilated; and, confequently, that all creatures, the devils, angels, and Chrif himfelf, will die. Likerwife, that, after the refurrection, all men, excepting a few of the ele $\Omega$, will be purified or challifed by fire, every one according to his fins, which will be weiphed in the balance. They fay there will be eight different paradifes for the good; and feven hells, where finners are to be purified by fire : that thofe who will fuffer mutt, are liars, cheats, and others of that kind: that the elect who do not feel the fire will be chofen from the good; viz. one out of 100 men, and one out of 1000 women; which little troop will be carried into one of the paradife, where they thall enjoy all manner of felicity, till it fall pleafe Gud to create a new world. It is a fin, according to them, to $\mathfrak{f a y}$, that God is in heaven. God, fay they, is everywhere ; and therefore it dero. gates from his omniprefence to fay that he is confined to any particular place. They keep an annual fuft of 30 days, from the middle of July to the middle of Auguft, during which time they tafte nothing all day; but eat twice in the night, at funfet and midnight;

## B U L

nor do they drink any thing but tea, all ftrong liquors being forbidden. Whoever tranfgrefles thefe ordinances is obliged to emancipate his molt valuable flave, or to give an entertainment to 60 people: he is likewife to receive 85 frokes on the back with a leathern ftrap called dura. The common people, however, do not obferve this faft exactly, and workmen are allowed to eat in the day-time. The Bukhars fay prayers five times a-day ; before morning, towards noon, after noon, at funfet, and in the third hour of the night.

Jenghis Khan, who conquered both the Bukharias from the Arabs, left the empire of them to his fon Jagatay Khan. He died in the year 1240 , and left the government to his fon Kara Kulaku, and of Little Bukharia to another called Amul Kboja Kban. A long fucceffion of khans is enumerated in each of thefe families, but their hifory contains no interefting particulars. They are long fince extinct, and the Kalmuc Tartars are mafters of the country.

BUL, in the ancient Hebrew chronology, the eighth month of the ecclefiaftical, and the fecond of the civil, year : it has fince been called Mar/bevan, and anfwers to our OAtober.

BULAC. a town of Egypt, fituated on the eaftern fhore of the river Nile, about two miles weft of Grand Cairo, of which it is the port town, and contains about 4000 families. It is a place of great trade, as all the veffels yoing up and down the Nile make fome ftay here. It is alfo at chis place that they cut the banks of the river every year, in order to fill their canals and overflow the neighbouring grounds, without which the foil would produce neithes grain nor herbage. E. Long. 32. N. L?r. 30.

EULAFO, : mufical infrument, confifting of feveral pipes of wood tied together with thongs of leather, fo as to form a fmall interfice between each pipe. It is ufed by the negroes of Guinea.
bulam, or Bulama, an ifland on the weflern coaft of Africa, at the mouth of the Rio Grande, in N. Lat. $11^{\circ}$ and W. Long. $15^{\circ}$. This iflaud, which is about 18 leagues long, and four broad, forms part of a clufter of iflands, which have been known hy the name of Biffogos, and are fuppofed to be the Hefperides of the ancients.

This ifland was purchafed in 1792 by a fociety infituted for fimilar purpofes with thofe of the Sierra Leone affociation. The fum of 90001 . Was fubfcribed for the eftablifhment of the colony, and the management of it is intrulted to a committee who failed from Spithead in April 1792, and having arived at Bulama, took poffeffion of the new purchafe, and left a body of fettlers confifting of 49 men, 13 women, and 25 children, under a fuperintendant, with a fupply of forcs and provifions neceffary for an infant fettlement. The following account of the climate, foil, and productions of Bulama, drawn up by Mr Johanfen, gives a flattering picture of this ifland. " "Tbe climate, fays he, on the whole, may be decmed falubrious, and will become more fo in proportion to the increafe of cultivation. The mornings and evenings are temperate and pleafant; the middle of the day is hot, but the fine fea breeze which then fets in tends greatly to cool and refreih the air. The heat of the fun is not fo exceffive or intulerable as has been generally fuppofed; indeed nature has moft admirably adapted our mechanical and phyfi-
cal qualities to the exigencies of different regions; and man, who is the inhabitant of every climate, may, in fome meafure, render himfelf indigenous to every foil. Here the only danger arifes from too fudden an expofure to the operation of the vertical rays of the fun, or an excefs of labour; both of which the firft fettlers ought moft ftudiouny to avoid.
"It appears from Mr Beaver's obfervations at noon, between the 20th of July 1792, and the 28th of April 1793, that the thermometer, when lowef, was at 74; the medium heat 85 ; and that it never exceeded 96 , except at one time when it rofe to 100 , during a calm that occurred in the interval between the north-eaft breeze in the morning and the fouth-weft in the evening of the 19th of February 1793. The difference be$t$ ween the heat of noon and that of the morning and evening is from 20 to 30 degrees. On the 23 d of October 1.792, hail of the fize of a pin's head fell during two minutes, although not a cloud was to be feen during this phenomenon. The mercury in the thermometer then flood at 85 ; the wind was at north-eaft in the morning and fouth-weft in the evening.
"Immediately atter furfet a dew conflantly begins to fall, which induces fome to light a fire in their houfes; they at the fane time put on warmer clothing. There is little or no twilight; and night and day are nearly equal : the earch has therefore time to cool during twelve hours abfence of the fun.
"None of thefe terrible and deffructive hurricanes fo frequently experienced in the Weft Indies are to be met with here. The tornadoes, which arife chiefly from the eaftern point of the compafs, are but of fhort duration, feldom lafting above an hour, and may be readily forefeen fome time previoufly to their commencement. They occur at the beginning and clofe of the wet feafon, and are higkly beneficial, as they purify the air, and difpel the noxious vapours with which it would otherwife abound.
"The rairs fet in about the latter end of May or the begiuning of June, and difcontinue in Ofober or November. They do not fall every day, for theie is often a confiderable interval of clear weather, during which the atmofphere is beautifully ferene ; the howers in the firft and laft month occur but feldom; and are far from being violent; while, on the other hand, they fometimes refemble torrent., more efpecially towardsthe middle of the feafon. During the whole of this period, Eunopeans fhould, if poffible, confine themfilycs to their inhabitants, as the rains prove injurious to health, more efpecially if thofe expofed to them neglect to wipe their bodies dry, and to change their clothes immediately on their return home. It is dermed prudent alfo not to dig the earth until the expiration of a month after the return of fair weather, as this is confideted to be unhealthy.
"During the continuance of the dry feafon, a dew falls duriug the "night, in fufficient quantity to anfwer all the purpofes of vegetation.
"Every franger is generally here, as well as in the Wefl Indies, fubject to a fever or fenfoning on his arrival. This is not infectious; it proceeds perhaps from an increafed perfpiration and a fudden extenfion of the pores of the human body, in confequence of the heat, by which means it is rendered more liable to imhibe the abundant exbalations that arife from the animal, ve-

## B U L

[785] B U L

Bulam.
getable, and mineral kingdoms; but even this, flight as it is, might doubtlefs be avoided by means of a proper regimen, and a fhort feclufion from the full action of the open air, more efpecially at noors, and during the evening, till the climate has been rendered familiar.
"Bulama is admirably adapted for all the purpofes of an extenfive commerce, being not only happily fituated at the mouth of the Rio Grande, but in the vicinity of feveral other navigable sivers; fo that a trade with the internal parts of Africa is thereby greatly facilitated. The landing is remarkably eafy and fafe, there being no lurge; the ebb and flow is regular, and there is an increafe of 16 feet of water at fpring tide. 'The bay oppofite the Great Bulama is adorned with a number of iflands, covered with trees, and forms a moft excellent harbour, fufficiently capacious to contain the whole navy of Great Britain, which might ride there in fafety. The lettlement in general is well fupplied with water. A number of fprings have been lately difcovered in different places; and befides a draw-well in the fort which was erected for the defence of the colony, there is a fmall ftream, which runs into Elewfis bay, near the new fettlement called Hefper Elewfis: this is admirably fituated for the fupply of flipping.
"The ifland is beantifully furrounded and interfper. fed with wroods: lofty fruit and foreft trees, moftly free from underwood and brambles, form a verdant belt, in fome places two or three miles broad, which entirely encircles it, in fuch a manner as to reprefent a plantation artificially formed around a park. Within this the fields are regularly divided by trees, fo as to refemble the hedge-rows in England. The beach has in fome places the appearance of gravel walks; it is fringed with mangrove trees, which, forming a line with the high-water mark, dip their branches into the fea, and thus afford nourifhment to the oyfters that often adhere to their extremities.
"The foil is abundantly rich and deep; ftones do not here impede the labours of the farmer ; and indeed none have hitherto been difcovered, but a fmall fort, refembling pieces of ore, which are to be met with on the fhore. There are many favannabs or $n+t u r a l$ meadows, fo extenfive that the eye can farcely defcry their boundaries. Thefe are admirably adapted for the rearing of ftock and feeding of cattle of every kind.
"Cotton, indigo, rice, and coffee, grow fpontaneoully on this coalt; the fugar cane is indigenous to many parts of Africa, and might be cultivated here by the labour of freemen, in equal perfection, and to much greater advantage, than in the exhaulted illands of the Weft Indies. All kinds of tropical produstions, fuch as pine-apples, limes, oranges, grapes, plums, caffada, guava, Indian wheat, the papaw, water-melon, muf:melon, the pumkin, tamarind, batuana, and numbers of other delicious fruits, alfo flourifh here. The adjoining territories produce many valuable forts of fices, gums, and materials for dycing : all of which, it is but fair to fuppofe, might be readily cultivated in a kindred climate and a congenial foil.
"The neiohbouring feas abound with a variety of fill, highly agrecable to the palate. The lion, tyger, jackall, \&c. are natives of the continent; but in Bulama no animals have been difcovered, the wolf, fome

Vol. IV. Part II.
buffaloes, a few clephants, and a fpecies of the deer, ex. Ruhurd , cepted.

Eull.
"The woods abound with doves, guinca fuwls, and a variety of birds, celebrated for the bcanty of their plumage."

BULARCHUS, a Greek painter; the firft who in. troduced (among the Greeks at leaft) different colours in the fame picture. He flourifhed in 740 B . C.
$B \cup L B$, in the anatomy of plants, a kind of large bud, generally produced under the ground, upon or near the root of certain herbaccous plants, hence denominated bulbous.

A bulb is defined by Limneus to be a fjecies of hy bernaculum, produced upon the defcending caudex or soot; confiting of Aipulx, petioli, the rudiments of the former leaves, and feales or bark.

To elucidate this definition, it is proper to remark, that every bud contains, in miniature or cmbryo, a plant, in every refpect fimilar to the parent plant upons which it is feated. Plants therefore are perpetuated in the buds, as well as in the feeds; and the fpecics may be renewed with cqual efficacy in either way.

The tender rudiments of the future vegetable, of which the bud is compofed, are inclofed, and during the feverities of winter defended from cold and other external injuries, by a hard bark or rind, which generally confifts of a number of fales placed over each other like tiles, and faftened together by means of a tenacious, refinous, and frequently odoriferous, fubfince. Thus defended, the buds remain upon different parts of the mother plant till the enfuing fpring; and are, therefore, with great propriety, denominated by Linnæus the bybernaculum or winter-quarters of the future vegetable.

With refpect to their place, buds are fituated either upon the ftem and branches, or upon the roots: the former are ftyled gemme, or buds properly fo called; but as they fubfitt leveral years by their roots, may be furnimed with the other fpecies of byteriaculum called bull's, which, according to the definition, are feated upon the defcending caudex or root.

Again, trees which are perennial, with a woody and durable ftem or trunk, have generally proper buds or gemmx, but no bulbs.

In bulbous plants, as the tulip, onion, or lily, what we generally call the root, is in fact a bulb or hybernaculum, which inclofes and lecures the embryo or future fhoot.

At the lower part of this bulb may be obferved a flelly knob or tubercle, from whence proceed a number of fibres or threads. This knob, with the fibres attached to and langing from it, is, properly fpeaking, the true root; the upper part being only the cradle or nurfery of the future flem, which after the bulb has repaired a certain number of times, it periflhes; hut not till it has produced at its fides a number of fmaller bulbs or fuckers for perpetnating the fecies.

One part of Linnæus's definition Atill remains obfcure. The bulh, fays he, is compofed of the remains or rudiments of the former leaves of the plant ; ì rudimento foliorum prateritorum.

It is ealy to comprehend that buds contain the rudiments of the future leaves; but how can bulbs be faid

Fulb to contain the iudiments of leaves that, to ail appearII

BULGARIA, a fmall province of Turkey in Europe, bounded on the nortl by Wallachia, on the ealt by the Black fea, on the fouth by Romania and Macedonia, and on the weft by Servia. It is very narrow, but 325 miles long on the fide of the Danube, from Servia till it falls into the Black fea.
The Bulgarians anciently inhabited the plains of Sarmatia that extended along the banks of the Volga. Thence they migrated, about the middle of the 7 th century of the Chriftian era, in queft of new fettlements. A large body of them paffed the Danube, and took poffeflion of the country adjacent to the weftern coaft of the Euxine fea. Sevetal attempts were made by the Romans in difpoffefs and extirpate them: But they defended themfelves with equal refolution and fuccefs. Confantine III. being defeated and intimidated, concluded an ignominions peace with them (A. D. 678 ), and purchaled their friendflip by the payment of an annual tribute. Juftrian II. refufed to comply with thefe difionourable terms, and invaded their territories (A. D. 687) ; but he was defeated, and conAtrained to renew the treaty. War was carried on, slmoft without interruption, betwcen them and the callern empeross, during the courfe of feveral centuries. After a long and doubtful ftroggle, the Romans prevailed; and the emperor Bafil reduced Bulgatia to the form of a province (A.D.1019). From this time the Bulgarians remained in fubjection, and were governed by Roman dukes, until the reign of Ifaac Angelus, when they revolted (A. D. i186).

The hiltory of Bulgaria, in the fubfequent peried, fcarcely merits attention. Stephen IV. king of Hutigary, having defeated the Bulgarians, obliged them 10 acknowledge him as their fovereign. His fucceftars were ftyled kings of Hungary and Bulgaria; and this title was tranfmitted, together with the kingdom of Hungaly, to the houfe of Auftria.
By the aid of the ealern emperors they threw off the Hungarian yoke; and, in return, they affifed their ally in an attempt to recover Adrianople (A, D. 1369). Provoked by this combination, Amurath invaded their country; and Bajazet, his fuccefior, completed the conqueft of it (A. D. I396).

Bulgaria ftill remains a province of the Ottoman empire. The inhabitants are Chriftians; but extremely ignorant, infomuch that they feem to know nothing of Chrillianity but baptifm and falting. It is divided into fonr fangiacates; Byden, Sardice, Nicopolis, and Siliftia. The chief towns are of the fame names, except Sardice, which is now called Sopbia.

Bulgarian Language, the fame with the Sclavonic.

BULL, Dr John, a celebrated mufician and compoler, was born in Somerfethire about the year 1563, and, as it is faid, was of the Somerfet family. He was educated under Blitheman. In 1586, he was admitred at Oxford to the degree of bachelor of mufic, having pratifed in that faculty i4 years; and in 1592, was created doctor in the univerfity of Cambridge. In 159 t , he was appointed organift of the queen's chapel, in the room of his mafter, Blitheman.

Ball was the fi:t Greham profeflor of mufic, and was appointed to that flation upon the fpecial recommendation of Queen Elizabeth. However finiful he might be in his profeffion, it feems he was not able to

- sead his lectures in Latin ; and therefore, by a fpecial provifion in the ordinances refpecting the Grchthan profelfors, made anno 1597, it is declared, that becaufe Dr Bull is recommended to the place of mufieprofeffur by the queen's mot excelleni majefly, being not able to fpeak Latin, his lectures are permitted to be altogether Engl:fh, fo long as he thall coatinue mu-irc-profeffor there.

In the year 1601, he went abroad for the recovery of his heath, which at that time was declining; and during his ablence was permitted to fublititute, as his deputy, a fon of W 1 lm Bird, naıned Thomas. He travolled incognito into Frauce and Germany ; and Wood takes occafion to relate a ftory of bim while abroad, which the reader thall have in his own words.
" Dr Bull hearing of a famous mufician belonging to a cathedral in' St Omer's, he applied bimfelf, as a novice, to bim, to learn fomething of his faculty, and to fee and admire his works. This mufician, after fome difcourfe had paffed between them, conduked Bull to a veflry or mufic-fchool joining to the cathedral, and flowed him a leffon or fong of 40 parts; and then made a vaunting challenge to any peifon in the world to add one part more to them, fuppofing it to be fo complete and full, that it was impolfible for any mortal man to correct or add to it. Bull thereupan, defiring the ufe of pen, ink, and ruled paper, fuch as we call mufical paper, prayed the mufician to lock him up in the faid ichool for two or three hours; which being done, not without great didain by the mufician, Bull, in that time or lefs, added 40 more paits to the faid lefton or fong. The mufician thereupon being called in, he viewed it, tried it, and retried it ; at length he burft out into a great ecftafy, and fisore by the great God, that he that added thefe 40 parts niuft be either the devil or Dr Bull. Whereupon Bull making himfelf known, the mufician fell down and adored him. Afterwards, continuing there and in thofe parts for a time, he became fo much admired, that he was courted to accept of any place of preierment fuitable to his profeffion, either within the dominions of the emperor, the king of France, or Spain; tut the tidings of thafe tranfactions coming to the

Englith coust, Queen Filizabeth commanded him home." Fafi, anno 1586.

Dr Ward, who has given the life of Dr Bull, in his lives of the Greflam profeffors, relates, that upon the deceafe of Queen Elizabeth he became cliief organin to King James, and had the honour of entertaining his majelty and Prince Henry at Merchant Thaylors hall with his performance on the organ. 'I he fame author proceeds to relate, that in 1613 Bull quitted England and went to refide in the Netherlands, where he was admitted into the fervice of the archduke. He fuggeftr, as the reafon of Buil's retirement, that the fcience began to fink in the reign of King James; :"hich he infers from that want of court-patronage, which, it feems, induced the nufficims of that day to dedicate their works to one another. But furely Bull had none of the fe reafons to complain of being flighted that others had. He was in the fervice of the chapel, and at the head of the prince's muficians; and in the year ${ }^{160}+$ his falary for the chapel-duty had been augnented. The circumftances of his departure from England may be collected fron the following entry now to be feen in the cheque book: " 1613 , John Bull doctor of mufic went beyond leas without licenfe, and was admitted into the archduke's fervice, and entered into paie there about Mich. and Peter Hopkins a bafe from Pal's was fworn into his place the $27^{\text {th }}$ of December following. His wages from Mich. unito the day of the fwearing of the faid Peter Hopkins was difpofed of by the deane of his majefly's chapel." Wood fays, that Dr Bull died at Hamburgh : others have faid at Lubeck.

The only works of Bull in priat are leflons in the "Parthenia, or the maidenhead of the firll mufic that ever was printed for the sirginals." An anthem of bis, "Deliver me, O God," is to be fourid in Bernard's collection of church-mufic. Dr Ward has given a loag lift of compofitions of Dr Bull in manufcript in the collection of the late Dr Pepuich, by which it appears that he was equally excellent in vocal and inftrumental harmony. By fome of the leffons in the Parthenia it feenis that he was poffeffed of a power of execution on the happichord $f_{a r}$ beyond what is generally conceived of the mafters of that time. As to his leflons, they were, in the eflimation of Dr Pepufch, not on!y for the harmony and contrivance, but for air and modulation, fo excellent, that he ferupled not to prefer them to thofe of Couperin, Scarlatti, and others of the modern compofers for the harpfichord.

Bule, George, bifhop of St David's, was born at Wells, in 1634 ; and educated at Exeter college, in Oxford. The firf benefice he enjoyed was that of St George's, near Brifiol, whence he rofe fucceffively to be reftor of Suddington in Gloucefterfhire, prebendary of Gloucefter, archdeacon of Llandaff, and in 1705 billop of St David's. This dignity he enjoyed about four years, and died in 1709 . During the ufurpation of Cromwell, he adhered Aleadily, though flill with great prudence, to the forms of the church of Eng. Ind: and in the reign of James 11. preached very Atrenuoufly againft the errors of Popery. He wrote, 1. A defence of the Nicene faith. 2. A poftolical harmony. 3. Primitive apofolical tradition; and other works.

Bulc's Eye, among feamen, a fmall, obfcure, fub. lime cloud, ruddy in the middle, that fometimes appears to mariners, and is the immediate forerunner of a great ftorm at fea.

Bull-Fighting, a fport or exercife much in vogue among the Spaniards and Portuguefe, confifting in a kind of combat of a cavalier or torreadore againft a wild bull, either on foot or on horfeback, by riding at him with a lance. The Spaniards have bull-fights, i. e. feaft attended with fhows, in honour of St John, the Virgin Mary, \&c. This fport the Spaniards received from the Moors, among whom it was celebrated with great eclat. Some think that the Moors might have received the cuftom from the Romans, and they from the Grecks. Dr Plot is of opinion, that the TavegoxaAxY:ay ims gas among the Theffalians, who firft inftituted this game, and of whom Julius Cæfar learned and brought it to Rome, were the origin both of the Spanift and Portuguefe bull-fighting, and of the Englim bull-ruming. This practice was prohibited by Pope Pius V. under pain of excommunication incurred isfo faito. But fucceeding popes have granted feveral mitigations in behalf of the torreadores.

From the following account of a bull-feaft in the Colifeum at Rome 1332, extracted from Muratori by Mr Gibbon, the reader may form fome idea of the pomp, the ceremonies, and the danger which attended thefe exhibitions. "A general proclamation as far as Rimini and Ravenna invited the nobles to exercife their K kill and courage in this perilous adventure. The Roman ladies were marfhalled in three fquadrons, and leated in three balconies, which on this day, the third of September, were lined with fearlet cloth. The fair froova di Rovere led the matrons from beyond the Tiber, a pure and native race, who ftill reprefent the features and character of antiquity. The remainder of the city was divided between the Colonna and Urfini families: the two factions were proud of the number and beauty of their female bands; the charns of Savella Urini are mentioned with praife; and the Colonaa regretted the abfence of the youngeft of their houfe, who had fprained her ancle in the garden of Nero's tower. The lots of the champions were drawn by an old and refpectable citizen; and they defcended into the arena, or pit, to encounter the wild bulls, on foot as it fhould feem, with a fingle fpear. Amidnt the crowd, our annalift has felected the names, colours, and devices of 20 of the moft confpicuous knights. Several of the names are the moft illuftrious of Rome and the ecclefiaftical Atate; Malatefta, Polenta, della Valle, Cafarello, Savclli, Cappoccio, Conti, Annibaldi, Altieri, Corfi. The colours were adapted to their tafte and fituation. And the devices are expreflive of hope or defpair, and breathe the fpirit of gallantry and arms. "I am alone, like the youngeft of the Horatii," the confidence of an intrepid ftranger: "I live difconfolate," a weeping widower: "I burn under the afhes," a difcrect lover: "I adore Lavinia or Lucretia," the ambiguous declaration of a modern paffion: "My
faith is as purc," the motto of a white livery: "Who is fronger than myfelf ?" of a lion's hide: "If I am drowned in blood, what a pleafant death!" the wifh of ferocious courage. The pride or prudence of the Urfini reftrained them from the field, which was occupied by three of their hereditary rivals, whofe infariptions denoted the lofty greatnefs of the Colonna name: "Though fad, I am ftrong:" "Strong as I am great;" "If I fall (addrefling himelf to the fpectators) you fall with me:"-intimating (fays the writer), that while the other families were the fubjects of the Vatican, they alone were the fupporters of the Capitol. The combats of the amphitheatre were dangerous and bloody. Every champion fucceffively encountered a wild bull; and the victory may be afcribed to the quadrupeds, fince no more than eleven were left on the field, with the lofs of nine wounded and 18 killed on the fide of their adverfaries. Some of the noble!t families might mourn ; but the pomp of the funerals, in the churches of St John Lateran and St Maria Maggiore, afforded a fecond holiday to the people. Doubtlefs it was not in fuch conflicts that the blood of the Romans fhould have been fhed; yet, in blaming their rahnefs, we are compelled to appland their gallantry; and the noble volurteers, who difplay their magnificence and rifk their lives under the balconies of the fair, excite a more generous fympathy than the thoufands of captives and malefactors who were reluctantly dragged to the feene of flaughter."

A friking selick of barbarity in the Spanifh manners of the prefent day, is the exceflive attachment of the nation to bull-fights, a fpectacle which flocks the delicacy of every other people in Europe. Many Spaniards confider this practice as che fure means of preferving that energy by which they are characterized, and of habituating them to violent emotions, which are terrible only to timid minds. But it feems difficult to comprehend what relation there is between bravery and a fpeftacle where the affiflants now run no danger; where the actors prove by the few accidents which befal them, that theirs has nothing in it very interening; and where the unhappy victims meet only with certain death as the reward of their vigour and courage. Another proof that thefe fpectacles have little or no infuence on the difpofition of the mind is, that children, old men, and people of all ages, fations, and charagers, affift at them, and yet their being accuflomed to fuch bloody entertainments appears neither to correct their weaknefs and timidity, nor alter the milduefs of their manners.

The bull-fights are very expenfive; but they bring great gain to the undertakers. The woift places coft two or four rials, according as they are in the fun or in the flade. The price of the higheft is a dollar. When the price of the horfes and bulls, and the wages of the torrcadorcs, have been paid out of this mones, the reft is generally appropriated to pious foundations; at'Madrid it forms one of the principal funds of the hofpital. It is only during fummer that thefe combats are exhibited, becaufe the feafon then permits the fpectators to fit in the open air, and hecaufe the bulls are then more vigorous. Thofe which are of the beft breed are condemned to this kind of facrifice; and conninifeurs are fo well acquainted with their diftin. guifhing marks, that as foon as a bull appears upon the

## B U L

Bull. arena, they can mention the place where he was reared. This arena is a kind of circus furrounded by about a dozen of feats, rifing one above another; the higheft of which only is covered. The boxes occupy the lower part of the edifice. In fome cities, Valladolid for example, which have no place particularly fet apart for thefe combats, the principal fquare is converted into a theatre. The balconies of the houfes are widened, fo as to project over the ftreets which end there; and it is really a very interefting fight to fee the different clafles of people affembled round this fquare, waiting for the fignal when the entertainment is to commence, and exhibiting every external fign of impasience and joy. The feeflacle cummerices by a kind of proceffion around the fquare, in which appear, both on horfeback and on foot, the combatants who are to attack the fierce animal ; after which two alguazils, dreffed in perukes and black robes, advance with great gravity on horfebick; who go and afk from the prefident of the entertainment an order for it to commence. A fignal is immediately given; and the animal, which was before thut up in a kind of havel with a door opening into the fquare, foon makes his appearance. The officers of jullice, who have nothing to do with the bull, prefently haften to retire, and their flight is a prelude to the cruel pleafure which the fpectators are about to enjoy. The bull, however, is received with loud fhouts, and almoft ftunned by the noify expreffions of their joy. He has to contelt firf againft the picadores, combatants on horfeback, who, dreffed according to the ancient Spanith manner, and as it were fised to their faddles, wait for him, each being armed with a long lance. This exercife, which requires ftrength, courage, and dexterity, is not confidered as difgraceful. Formerly the greateft lords did not difdain to practice it ; even at prefent fome of the hidalgos folicit for the honour of fighting the bull on horfeback, and they are then previoufly prefented to the people, under the aufpices of a patron, who is commonly one of the principal perfonages at court.

The picadores, whoever they may be, open the fcene. It often happens that the bull, without being provoked, darts upon them, and every body entertains a favour able opinion of his courage. If, notwithfanding the Sharp-pointed weapon which defends his attack, he returns immediately to the charge, their fhouts are redoubled, as their joy is converted into enthufiafm; but if the bull, fruck with terror, appears pacific, and avoids his perfecutors, by walking round the fquare in a timid manner, he is hooted at and hilfed by the whole fpectators, and all thofe near whom he paffes load him with blows and reproaches. He feems then to be a common enemy, who has fome great crime to expiate; or a victim, in the facrifice of which all the people are interefted. If nothing can awaken his courage, he is judged unworthy of heing tormented by men ; the cry of perros, perros, brings forth new enemies againft him, and large dogs are let loofe upon him, which feize him bv the neck and ears in a furious manner. The animal then finds the ufe of thofe weapons with which nature has furnifhed him; he toffes the dogs into the air, who fall down Atunned, and fometimes mangled; liev however recover, renew the combat, and gencrally finifh by overcoming their ad.
verfary, who thus, periflies ignobly. If, on the other hand, he prefents himfelf with a good grace, he runs a longer and nobler, but a much more painful carcer. The firlt act of the tagedy belongs to the combatants on horfeback ; this is the moft animated and bloody of all the fecnes, and often the moft difgufting. The irsitated animal braves the pointed feel which makes deep wonnds in his neck, attacks with fury the innoccut horfe who carries his enemy, rips up his fides, and overturns him together with his rider. The latter, then difmounted and difarmed, would be expofed to imminent danger, did not combatants on foot, called chulos, come to divert the bull's attention, and to provoke him, by flaking before him different pieces of cloth of various colours. It ic, however, at their own rifk that they thus fave the difmourted horfoman; for the bull lometimes purfues them, and they have then need for all their agility. "lhey often efcape from him by letting fall in lis way the piece of ftuff which was their only arms, and againtl which the deceived animal expends all his lury. Sometimes he does not accept this fubititute, and the combatant has no other refource but to throw himfelf fpeedily over a barrier, fix feet high, which inclofes the interior past of the arena. In fome places this barrier is double, and the intermediate face forms a kind of circular gallery, behind which the purfued torreadore is in fafety. But when the barrier is fingle, the bull attempts to jump over it, and often fucceeds. 'The reader may eafily imagine in what confternation the neareft of the fpectators then are; their hatte to get out of the way, and to crowd to the upper benches, becomes often more fatal to them than even the fury of the bell, who, fumbling at every Rep, on account of the narrounefs of the place and the inequality of the ground, thinks rather of his own 「afety than of revenge, and befides foon falls under the blows which are given him from all quarters.

Except in fuch cafes, which are very rare, he immediately returns. His adverfary recovered, has had time to get up; he immediately remounts his horfe, provided the latter is not killed or rendered unfit for fervice, and the attack commences; but he is often obliged to change his horfe feveral times. Expreflions cannot then be found to celebrate thefe acts of prowefs, which for feveral days become the favourite topic of converfation. The horfes, rery affecting models of patience, courage, and docility, may be feen treading under their feet their own bloody entrails, which drop from their fides half torn open, and yet obeying, for fome time after, the hand which conducts them to new tortures. Spectaiors of dclicacy are then flled with difguf, which converts their pleafure into pain. A new act is however preparing, which rcconciles them to the entertainment. As foon as it is concluded that the bull has been fufficiently tormented by the combatants on horfeback, they retire and leave him to be irritated by thofe on root. The latter, whu are called banderilleros, go before the animal ; and the moment he dat:s upon them they plunge into his neck, two by two, a kind of darts called banderillas, the points of which are hooked, and which are ornamented with fmall ftreamers made of coloured paper. The fury of the bull is now redoubled; lue roars, roffes his head, and the vain efforts which he makesferre only to in-

## B U L - [ 790 ] B U L

Bull. creafe the pain of his wounds: this bait feene calls forth all the agility of his adverfaries. The fpectators at firft tremble for them, when they behold them braving fo near the horns of this formidable animal ; but their bands, well exercifed, aim their blows fo fkilfully, and they avoid the danger fo nimbly, that after having feen them a few times, one neither pities nor admires them, and their addrefs and dexterity feem only to be a fmall epifode of the tragedy, which concludes in the following manner: When the vigour of the bull appears to be almolt exhaufted; when his blood, iffuing from twenty wounds, flreams along his neck and moifens his robuft fides; and when the people, tired of one object, demand another victim; the prefident of the entertainment gives the fignal of death, which is announced by the found of trumpets. The matador then advances, and all the refl quit the arena; with one hand he holds a long dagger, and with the other a kind of llag, which he waves backwards and forwards before his adverfary. They both ftop and gaze at one another: and while the agility of the matador deceives the impetuofity of the bull, the pleafure of the feetators, which was for fome time fufpended, is again awakened into life. Sometimes the bull remains motionlefs, throws up the earth with his feet, and appears as if meditating revenge.

The bull in this condition, and the matador who calculates his motions and divines his projects, form a group which an able pencil might not difdain to delineate. The affembly in filence behold this dumb feene. The matador at length gives the mortal blow; and if the animal immediately falls, a thoufand voices proclaim with loud fhouts the triumph of the conqueror; but if the blow is not decifive, if the bull furvives and fecks fill to brave the fatal feel, murmurs fucceed to applaufe, and the matador, whofe glory was about to be raifed to the fkies, is confidered only as an unfkilful butcher. He endeavours to be foon revenged, and to difarm his judges of their feverity. His zeal fometimes degenerates into blind fury, and his partizans tremble for the confeguences of his imprudence. He at length directs his blows better. The animal vomits up blood; he flaggers and falls, while his conqueror is intoxicated with the applaufes of the people. 'Inree mules, ornamented with bells and freamers, come to terminate the tragedy. A rope is tied around the bull's horns, which have betrayed his valour, and the animal, which but a little before was furious and proud, is dragged ignominioufly from the arena which he has horoured, and ieaves only the traces of his blood and the remembrance of his exploits, which are foon effaced on the appearance of his fuccefiors. On cach of the days fet apart for thefe entertainments, fix are thus factificed in the morning, and twelve in the aftergoon, at leaft in Madrid. The three laft are given exclufively to the matador, who, without the affitance of the piradores, exerts his ingenuity to vary the pleafure of the feefators. Sumetimes he caufes them to be combated by fome intrepid Aranger, who attacks them mounted on the back of another bull, and fometimes he matches them with a bear; this laft method is gencrally deflined for the pleafure of the populace. The points of the bull's horns are concealed hy fornething wrapped round them, which hreaks their force. The animal, which in this fate is called Em-
bolado, has power neither to pierce nor to tear his antagonif. The amateurs then deleend in great numbers to torment him, each after his own manner, and often expiate this cruc! pleafure by violent contufions ${ }^{-}$ but the bull always falls at length under the firoke of the matador. The few feectators who are not infected with the general madnefs of this fport, regret that thofe wretched animals do not, at leasf. purchafe their lives at the expence of fo many torments and to many efforts of courage; they would willingly affif thetn to efcape from their perfecutors. In the minds of fuch fpectators, difgult fucceeds compaffion, and fatiety fucceeds difgult. Such a feries of uniform fcenes makes that interef become languid, which this fpectacle, on its commencement, feemed to promife. But to connoiffeurs, who have thoroughly fudied all the Aratagems of the bull, the refounces of his addrefs and fury, and the different methods of irritating, tormenting, and deceiving him, none of thefe licenes refembles another, and they pity thofe frivolous oblervers who cannot remark all their varieties.

The Spanin government are very fenfible of the moral and political inconveniences arifing from this fpecies of frenzy. They have long fince perceived, that among a people whom they wifh to encourage to labour, it is the caufe of much diforder and diffipation; and that it hurts agriculture, by deftroving a great number of robut animals, wbich might be ufefully employed: but they are "obliged to manage with caution a tafte which it might be dangerous to attempt to abolifh precipitately. They are, however, far from encouraging it. The court itfelf formerly reckoned bull-fights among the number of its feftivals, which were given at certain periods. The Plnza-Mayor was the theatre of them, and the king and the royal family honoured them with their prefence. His guards prefided there in good order. His halberdiers formed the interior circle of the fcene: and their long weapons, held out in a defenfive poflure, were the only barrier which they oppofed againf the dangerouscaprices of the bull. Thefe entertainments, which by way of excellence, were called Figlas Realis, are become very rare. Charles III. who endeavoured to polifh the nation, and to direct their attention to ufeful objects, was very defirous of defroying a tafte in which he faw nothing but inconveniences; but he was too wife to employ violent means for that purpofe. He, however, confined the number of bull-fights to thofe, the profits of which were applied to the fupport of fome charitable inflitution, with an intention of fubftituting for thefe other funds afterwards. Bull-fights, by thefe means being rendered lefs frequent, will, perhaps, gradually lofe their attractions, until more farourable circumfances permit the entire abolition of them.

Bulz-running, denotes a feudal cuftom obtaining in the honour of Tutbury in Staffordfhire; where, anciently, on the day of the affumption of our Lady, a hull is turned loofe by the lord to the minttrels; who, if they can catch him befure he paffes the river Dove, are to have him for their own, or, in lieu thereof, to receive each 40 pence; in confideration of which cuflom they pay 20 pence yearly to the faid lord.

BULL and Boar. By the cuftom of fome places, the parfon is ubliged to keep a bull and boar for the ufe

Bull-Head or Millor's Thumbl. See Cortus, Ichthyology Index.
Buil, among ecclefialtice, a written letter, difpatched, by order of the pope, from the Roman chancery; and fealed wilh lead, being written on parchment, by which it is parely difinguifled from a brief: fee the article Brıcr.-It is a kind of apoltolical refrript, or edict ; and is clieliy in ure in matters of juftice or grace. If the furmer be the intention of the bull, the lead is hung by a hempen cord; if the latter, by a filken thread. It is this pendent lead, or fenl, which is, properly fyeaking, the bull, and which is impreffed on one fide with the heads of St Peter and St Paul, and on the other with the name of the pope and the year of his ponsificate. The bull is written in an old, round, Gothic letter, and is divided into five parts, the narative of the fa\&t, the conception, the claufe, the date, and the falutation, in which the pope ityles himfelf $f$ ierous fervorum, i. e. the fervant of fervan:s. The fe inftrumerts, befides the lead hanging to them, have a crofs, with fome test of fcipture, or religious motto, about it. Balls are granted for the confecration of bihops, the promotion to benefices, and the celebration of jubilees, \&s.
Bull in Cama Domini, a particular tull read every year, on the day of the Lord's fupper or Maundy Thurfday, in the pope's prefence, contaiting excommunications and anathemac ayainat heretics, and all who ditturb or oppofe the juridiation of the holy fee. After the reading of the bull, the pope throws a burning torch in the public place, to denote the thunder of this anathema.

Golden BuLL, an edift, or imperial corfitution, made by the empero: Charles IV, reputed to be the magna charta, or the fund mental law of the German empire.

It is called golden, becaufe it has a golden feal, in the form a pope's bull, tied with yellow and red cords of filk : upon one file is the emperor reprefented bisting on his throne, and on the other the capitol of Rome. It is alfo called Caroiine, on Charles I Y .'s account. Till the publication of the golden bull, the form and ceremony of the election of an emperor were dublous and undetermined, arid the number of the electors not fixed. This lolemn ediet regulated the functions rights, privileges, and pre-eminences of the electors. The original, which is in Latin, on vellum, is preferved at Fraricfort: this ordonnance, containing 30 articles or chapters, was approved of by all the princes of the empir, and remains fill in force.

Silier Buzls were not in fo frequent ufe; though we do not want infances of them.

Leaden Bulss were fent by the emperors of Conftartinople to defpots, patriarchs, and princes; and the like were alfo ufed by the grandees of the Imperial court, as well as by the kings of France, Sicily, \&ic. and by bithops, patriarchs, and popec. It is to be obferved, that the leaden bulls of thefe latl had, on one iide, the name of the pope or biflop infcribed. Pulydore Virgit makes Pope Stephen III, the firlt who ufed leaden bulls, about the year 772 . But others find inflances of them as casly as Silvefter, Leo I. and

Gregory the great. The latter poper, befides their own names, Arike the figutes of Se Peter and St Paul o. their bulls, a practice fria insroduced by Pope Palchal 11. But why, in theft bulls, the fygure of St Paul is on the right, and that of St Peter on the left fide, is a queftion which has occafioned many conjectures and difputes.

Waxen Boles are faid to have been firl hrought into England by the Normans. They were in frequent ufe among the Greek emperors, who thus fealed letters to their wives, mothers, and lons. Of thefe there were two forts, one red, and other green.

BULLA, or dipper, in Coaschology: A genus belonging to the order of vermes teltactex. It is an animal of the fnail kind: the fhell confifts of one valve, convoluted, and without ariy prickles; the aperture is narrowifh, oblong, longitudial, and entire at the bafe; the columella is fmooth and oblique. There are 13 fpecies; fout of them found in the Britifl feas ; the reff chiefly natives of the Afratic and Atlantic oceans. See Conchozogy Index.

BULILE, in Antiquity, a kind of ornaments much in ufe anong the ancient Romans. Mr Whittaker $\ddagger$ is of opinion that they were originally formed of leather among all ranks of people; and it is certain that they continued fo to the laft among the commonalty. He alfo imagines, that at firt the bulla was intended as an amulet rather than an ornament; as a proof of which he tells us that the bulle were frequently imprefied with the figure of the fexval parts. It is univerfally aflerted by the critics, that the bulle were made hollow for the reception of an amulet; but this Mr Whittaker contradicts from the figure of a golden one lately found at Manchefter, which had no aperture whereby an amulet could lave been introduced - Pliny refers the original of the bulla to the elder 'Tarquin, who gave one with the pretexta to his fon, becaufe at the age of if he had with lis own hand killed an enemy: and in imitation of him it was afterwards affumed by other patricians. Others affirm that the bulla was given by that king to the fons of all the patricians who had borne civil offices. Laftly, others allege, that Rcmulus firl introduced the bulla, and gave it to TulIus Hoit:lius, the firf child born of the rape of the Sabines.-As to the form of the bulle, Mr Whittaker informs us that they were originally made in the Mrape of hearts; but they did not always retain the form of a heart, any more than they were always made of leather. As the wealth of the fate and the riches of indiviouals increafed, the young patrician diAinguilhed himfelf by a bulla of gold, while the common people wore the amulet of their ancettors. The figure of the heart then became fo generally round, foine even hauing the impreflion of an heart upor them, that there are not many of the original furm to be found in the cabinets of the curous. The form is naturally varied from a complete circle to that of a fegmuent; and this was the llape of the above-mentioned bulld found at Manchefler. When the youth arrived at 15 years of age, they hung up their bulle about the necks of their gods lares. We are further informed. that the bullee were not only hung about the necks of young men, but of horfes alfo. Wfe may add, that bullie were fometimes allowed to fatues; whence the phrafe fature bullata.

ITjurs of Mancleferit, vol. 1. p. $79^{\circ}$.

Bullew was alfo the denomination given to divers other metalline ornaments made after the fame form ; and in this fenfe buller feem to include all gold and filver ornaments of a roundih form, whether worn on the labits of mell, the trappings of horfes, or the like. Such were thofe decorations ufed by the ancients on their doors and belts. The bullæ of doors were a kind of large-headed nails faftened on the doors of the sich, and kept bright with great care. The doors of temples were fometimes adorned with golden bullo. Mr Bandelot takes the bullæ worn by foldiers on their belts to be fomething more than mere ornaments. They feem to have been confidered as prefervations from dangers and difeafes, and even means of acquiting glasy, and other advantages. The like may perhaps be extended to the bulla on doors, which were probably placed there as a fecurity to them from being broken or violated.

Bulle alfo denotes a table hung up in the public courts, to diftinguifh which days were fafti, and which nefafti; anfwering in fome meafure to our kalendar.

BULLET, an iron or leaden ball or fhot, wherewith fire arms are loaded. Bullets are caft in ironmoulds, confifting of two concave hemifpheres, with a bandle whereby to hold them; and between them is a hole, called the gate, at whicls to pour in the melted metal. The chaps or hemifpheres of bullet-moulds are firft punched, being blood-red hot, with a round ended punch, of the fhape and nearly of the fize of the intended bullets. To cleanfe the infides, they make ufe of a bullet bore, which confifts of a fteel mank, having a globe at one end, wherewith to bore the infive of a mould clean, and of the intended fize.

BULLEyN, Willam, a learned phyfician and botanif, was born in the ifle of Ely, in the former part of the reign of Henry VIII.. and educated at Cam. bridge. Botany being his favourite fludy, he travelled through various parts of England, Scotland, and Germany, chielly with an intention to improve his knowledge in that fcience. In the reign of Edward VI. or of Queen Mary, Mr Bulley:! appears, from his remarks on the natural productions of that country, to have refided at Norwich, or in that neighbourhood, and alfo to have fpent forie time at Bloxhall in Suffolk; but he afterwards removed into the north, and fettled at Durhan, where he practifed phyfic with confiderable reputation and fuccefs. His great patron at this time was Sir Thomas Hilton, knight, baron of Hilton, who was governor of Tirmouth callle in the reign of Philip and Mary. In 1560, he canse to London, and, foon after bis arrival, was accufed by William Hilton of Bidick of having murdered his brother Sir Thomas, our author's friend and patron. He was arraigned before the duke of Norfolk, and honourably acquitted. This Hilton afterwards hired fome villains to affalitrate the doctor; but this attempt proving ineffequal, he had him arrefted on an action for debt. and he remained for a long time in prifon. During this confinement, Dr Bulleyn compofed feveral of thofe warks which raifed his reputation as a medical writer. He died in January 1576, and was buried in St Giles's Cipplegate, in the fame grave with his brother the divine, who died s 3 .years before, and in which John Fox the martyrologift was interred it years after. Dr Bulleyn appears from
his writings to have been well acquainted with the Bullialdus works of the ancient Greek, Roman, and Arabian phyficians. According to the medern practice, his books, were they generally known, would be of little ufe; but as he was a man of genius and fertile imagination, they are by no means barren of entertainment. He wrote, 1. The government of health, $1559,8 \mathrm{vo}$. 2. A regimen againt the pleurify, 8 vo. London, 5562 . 3. Bulleyn's bulwatk of defence againft all ficknels, forenefs, and wounds, that dooe daily aflault mankinde, London printed by John Kingtion, 1562, folio. This includes, The government of health. 4. A dialogue both pleafant and pietifull, wherein is a goodlie regimen againt the fever peffilence, with a confolation and comfort againft death, London, $1564,8 \mathrm{vo}$. $1569,8 \mathrm{vo}$, very fcarce. There is a wooden print of the author prefixed to the firf edition of his government of health; alfo a fmall one engraved by Stukeley in 1722.

BULLIALDUS, IsmaEl, an eminent affronomer, was born at Laon in the Ifle of France in 1605 . He travelled in his youth for the fake of improvement; and afterwards publihed feveral works, among which are, 1. De natura lucis. 2. Pbilolaus. 3. Afronomia pbilolaica, opur nozum, in quo motus planetarum per novam et zeram bypothefin demonfirantur. 4. Afronomia philolaica fundamenta clarius explicata et afferta adverfus Zethi Wardi impugnationem. He alfo wrote a piece or two upon geometry and arithmetic. In 1661 , he paid Hevelius a vifit at Dantzic, for the fake of feeing his optical and aftronomical apparatus. Afterwards he became a prefbyter at Paris, and died there in 1694.

BULLINGER, Henry, born at Bremgarten in Switzerland in 1504 , was an eminent Zuinglian miniIter, a great fupporter of the reformation, and employed in many ecclefiaftical negotiations. He compofed many books, one againf Luther in particular. He died in 1775.

BULIIIUN, uncoined gold or filver in the mals.
Thofe metals are called fo, either when fmelted from the native ore, and not perfectly refined; or when they are perfectly refined, bint melted down in bars or ingots, or in any unwrought body, of any degree of finenef.

When gold and filver are in their purity, they are fo foft and flexible, that they cannot well be brought into any fallion for ufe, without being firt reduced and hardened with an alloy of fome other bafer metal.

To prevent thele abufes which fome might be tempted to commit in the making of fuch alloys, the legiflators of civilized countries have ordained, that there thall be no more than a certain proportion of a bafer metal to a particular quantity of pure gold or filver, in order to make them of the finenefs of what is called the tlandard gold or filver of fuch a country.

According to the laws of England, all forts of wrought plate in general ought to be made to the legal ftandard; and the price of our flandard gold and filver is the common rule whereby to let a value on their bullion, whether the fame be inguts, bais, duft, or foreign fpecie : whence it is eafy to conceive that the value of bullian cannat be exactly known, withuat being firf afliyed, that the exact quantity of pure metal therein contained may be determined, and confequently whether it be above or below the fandard.

## B U N [ 793 ] B U O

Silver and gold, whether coined or uncoined (though ufed for a common meafure of other things), are no lefs a commodity than wine, tobacco, or cloth; and may, in many cafes, be exported as much to the national advantage as any other commodity.

BULLOCK, the fame with an ox, or gelded bull. See Bos, Mammalia Index.

BULTER, a term ufed to denote the refule of meal after dreffing, or the cloth wherein it is dreffed, otherwife called the bulser-cloth.

BULWARK, in the ancient fortification. See Rampart.

BUMICILLI, a religious fect of Mahometans in Egypt and Barbary, who pretend to fight with devils, and commonly appear in a fright and covered with wounds and bruifes. About the full moon they counterfeit a combat in the prefence of all the people, which latts for two or three hours, and is performed with affagaias, or javelins, till they fall down quite fpent ; in a little time, however, they recover their fpirits, get up, and walk away.

BUNDLE, a collection of things "vrapped up together. Of bafte-ropes, harnefs-plates, and glovers knives, ten make a bundle; of Hamburgh yarn, 20 akeans; of balket rods, three feet the band.

BUNEL, PETER, a native of Thouloufe, was one of the moft elegant writers of the Latin tongue in the 16 th century, but was fill more confpicuous for the regularity of his manners. He did not feek either for riches or lucrative employments; but, contented with the bare neceffaries of life, applied himfelf wholly to the improvement of his mind. He died at Turin in 1547, aged 47 ; and has left behind him fome Latin epiftles, which are written with the utmoft purity. The magiAtrates of Thouloufe have a bult of him in marble, placed in their town-houfe. The moft correct edition of his Letters is that of Henry Stephens in 1581.

BUNGAY, a market town of Suffolk, fituated on the river Wavenny, about 32 miles north-eaft of Bury. E. Long. 1. 35. N. Lat. 52. 35 .

BUNIAS, in Botany, a genus of the $39^{\text {th }}$ natural order, Siliquofe $e$, belonging to the tetradynamia clafs of plants, for which there is no Englifiname. The filicula is deciduous, four-fided, muricated, or hagreened with unequal pointed angles. There are eight fpecies; all of them annual plants, but none of them poffeffed of any remarkable property.

BUNIUM, pig-nut, or eartb-nut. See Botany Index.

BUNT of $a S_{A I L}$, the middle part of it, formed defignedly into a bag or cavity, that the fail may gather more wind. It is ufed moftly in top-fails, becaufe the courfes are generally cut fquare, or with but fmall allowance for bunt or compafs. The bunt holds much Ieeward wind; that is, it hangs much to leeward.

Bont-Lines, are fmall lines made faft to the bottom of the fails, in the middle part of the bolt-rope, to a crirgle, and are fo reeved through a fmall block, feized to the yard. Their ufe is to trice up the bunt of the fail, for the better furling it up.

BUNTING. See Emberiza, Ornithology Index.

BUNTINGFORD, a town of Hertfordthire, with a market on Mondays, and two fairs, on June 29th, and November 3 oth, for pedlars wares. It is a good
thoroughfare town, but fmall, and is accounted only a large hamlet. W. Long. 0.6. N. Lat. 51.55.

BUNTZEL, or BUNTZLAU, a town of Silefia, in the duchy of Jauer. The greateft part of the houfes are bnilt with llone, and there were formerly rich mines in the neighbourhood. It is in the common road to Leipfic; and the trade is in earthen ware, of which great quantities are made. E. Long. $15 \cdot 5$. N. Lat. $5^{1 .} 12$.

BUNYAN, John, author of the Pilgrim's Progrefs, was born at Elftow, rear Bedford, in 1628 . He was the fon of a tinker; and, in the early part of his life, was a great reprobate, and a Coldier in the parlizment army : but being at length deeply ftuck with a fenfe of his guilt, he laid afide his protligate courles, became remarkable for his fobriety, and applied himfelf to obtain fome degree of learning. About the year 1655, he was admitted a member of a Baptif congregation at Bedford, and was foon after chofen their preacher: but, in 1660 , being taken up, and tried for prefuming to preach, he was cruelly fentenced to per. petual banifhment; and in the mean time committed to jail, where neceffity obliged him to learn to make long-tagged thread-laces for his fupport : to add to his diftrefs, he had a wife and feveral children, among whom was a daughter who was blind. In this unjuft and cruel confinement he was detained twelve years and a half, and during that time wrote many of his tracts ; but be was at length difcharged by the humane interpofition of Dr Barlow. When King James's declaration for liberty of confcience was publifhed, he was chofen paftor of a congregation at Bedford. He at lerggth died of the fever at London, on the 31 it of Auguft 1688, aged 60. He alfo wrote an allegory, called The Holy War. His Pilgrim's Pragrefs has been tranlated into moft European languages; and his works have been collected together, and printed in two volumes folio.
buONOCARSI, or Pierino del Vaga. Sce Pierino.

BUOY, in fea affairs, a fort of clofe cafk, or block of wood, faftened by a rope to the anchor, to determine the place where the anchor is fituated, that the fhip may not come too near it, to entangle her cable about the ftack or the flukes of it.

Buors are of various kinds; as,
Can-Buors: thefe are in the form of a cone ; and of this confiruction are all the buoys which are floated over dangerous banks and flallows, as a warning to pafling fhips, that they may avoid then. They are extremely large, that they may be feen at a diftance; and are faftened by frong chains to the anchors which are funk for this purpofe at fuch places.

Nun-Buors are thaped like the middle fruttum of two cones, abutting upon one common bafe, being cafks, which are large in the middle, and tapering nearly to d poirt at each end.

Wooden-Buors are folid pieces of timber, fometimes in the thape of a cylinder, and fometimes in that of a nun-buoy; they are furnifted with one or two holes, in which to 6 x a Gort piece of rope, whofe two ends, being fpliced together, make a fort of circle or ring, called the Arop.

Cable-Bvors, are common cafks employed to buoy up the cables in different places from rocky ground. In 5 H the

Runtz:I
III
Fuoys.

## B U P [ 794 ] B U R

Buy the harbour of Alexandria in Egypt, every fhip is moored with at leaft three cables, and has three or four of thefe buoys on each cable for this purpole.

Slings of the Boor, the rupes which are fattened aboat ir, and by which it is hung : they are curioufly Spliced around it, fomething relembling the braces of a drum.

To fream the Buor, is to let it fall from the fhip's fide into the water; which is always done before they let go the anchur, that it may not be retarded by the buoy-rope as it finks to the bottom.

Buor-Rope, the rope which fallens the buoy to the anchor: it thould be little more than equal in length to the depth of the water where the anchor lies, as it is intended to float near, or immediately above, the bed of it, that the pilot may at all times know the fituation thereof. See Plate XXX11I. Fig. 1. No 3. where $b$ is the anchor, $c$ the buoy-rope, and $d$ the buoy floating on the furface of the water. The buoy-rope is often extremely ufeful otheruife, in drawing up the anchor when the cable is broke. It fuusid always, therefore, be of fufticient frength for this purpofe, or elfe the anchor may be loll through negligence.

Buos of the Nore, is a buoy placed at the mouth of the river Thames, to direct mariners how to avoid a dangerous fand.

BUOYANT, formething which, by its aptnef, to flat, bears up other more ponderous and weighty things. See Buoy.

BUPALUS, a celebrated fculptor, and native of the ifland of Caios, was fon, grandfon, and great granjfon of fculptors. He had a brother, named Atbenis, of the fame profeffion. They flourihed in the Goth Olympiad: and were contemporary with Hipponax, a poet of an ugly and defpicable figure. Our fculptors diverted themfelves in reprefenting him under a iidiculous form. But Hipponas wrote fo fharp a fatire againf them, that they hanged themfelves, as fome fay. Pliny, however, does not allow this; but fays, on the contrary, that, after Hipponax had taken his revenge, they made Several fine flatues in feveral places; particularly a Diana at Chios, which was placed very high, and appeared with a frowning countenance to thofe that came in, and with a pleafant one to thofe that went out. There were feveral flatues at Rome made by them; and they worked only in the white marble of the ille of Paroc. Paufanias mentions Bupalus as a good architect as well as fculptor; but fays nothing of Athenis.

BUPHAGA. See Ornithology Index.
BUPHONIA (from pus, ox, and quvn, Rangbler, in antiquity, an Athenian feall or ceremony, denominated from a bullock flain therein, witl quaint formalities. For the origin of the buphonia, we are told it was forbidden by the laws of Attica to kill an ox: but it once happened, at the feaft of the diipolia, that an ox ate the corn, others fay the cakes, which had been dreffed for the facrifice. Thaulon the prieft, enraged at this, prefently killed him, and tled for it. On which the Athenians, fearing the refentment of the gods, and feigning themfelves ignorant who had committed the fart, brought the bloody axe before the judges, where it was folemnly arraigncd, tried, found guilty, and condenned. And, in memory of this event, a feaf was inflituted under the denomination of
buphonia; in which it was fill cuftomary for the prieft Buphthal. to lly, and judgment to be given about the flaughter of the ox.
buphthalmum, ox-eye. See Butany Indix. bupleurum, hare's ear. See Botany Index. bUPRESTIS. See Entomology Index.
BUQUOI, a town of Artois, in the French Netherlands, fituated on the confines of Picardy. E. Long. 2. 40 . N. Lat. 50.12.

BUR, a broad ring of iron, bebind the place made for the land on the fpears ufed formerly in ulting; which bur was brought to teft when the tilter charged his fpear.

BURBAS, in conmmerce, a fmall coin at Algiers, with the arms of the dey fruck on both fides: it is worth half an afper.

BURCHAUSEN, a town of Germany in the Lower Bavaria, fituated on the river Saltz. E. Long. 13.25. N. Lat. 48. 5.

Burdegala, or Burdigala, in Ancient Geography, a trading port town of Aquitania, fituated on a lake of the fea, formed by the mouth of the Garumna. It was a famous feat of the Mufes, as appears by Aufonius's book entitled Profeffores; and bisthplace of Aufonius: Now Bourdeaux, capital of the Bourdelois, on the river Garonne. W. Long. o. 40. Lat. 44. 54.

BURDEN, or Burdon, in Mufic, the drone or bale, and the pipe or fling which plays it: hence that part of a fong that is repeated at the end of every ftanza, is called the burden of it.-A chord which is to be divided, to perform the intervals of mufic, when open and undivided, is alfo called the burden.

Burden propelly fignifies a heavy weight or load. Ringelberg recommends the bearing burdens as the beft fort of exercife; efpecially to ftrengthen men of ftudy. To this end, he had a gown lined with plates of lead, which he could jult lift with both his hands. This load be bore fix or $f \in v e n$ days together, either increafing or diminilhistg it as be found oceafion; by which means be could both write and exercife at the fame time.

Burden alfo denotes a fised quantity of certain commodities. A burden of gad fleel is two fcore, or 120 pounds.

BURDEN of a Ship is its contents, or number of tons it will carry. The burden of a flip may be determined thus: Multiply the length of the keel taken within board, by the breadth of the fhip within board, taken from the midfhip-beam, from plank to plank; and multiply the product by the depth of the hold, taken from the plank below the keelfon, to the under part of the upper deck plank; and divide the laft product by 94 : the quotient is the content of the tonnage required. See Freight.
burdock. See Arctium and Xanthium, Botany Index.
burell, or Civita Burella, a town of Italy in the kingdom of Naples, and in Abruzzo Citra, near the river Sangro. Li. Long. 15.5 . N. Lat. 4 r. 56.

BUREN, a town of the United Provinces, in Guelderland. It gives the title of count de Buren to the prince of Orange. E. Long. 5.22. N. Lat. 52. 0. Burin, a town of Germany, in the citcle of Weitphalia,

## B U R [795] B U R

Eurford phalia, and bithopric of Paderborn. It is feated on II the river Alme, five miles fouth of Paderborn. E.
Burgau- Long. 8. 25. N. Lat. 61. 35 .
dine.
BURFORD, a town of Oxfordfhire, feated on an sfcent on the river Windrum, is a handlome place, chietly noted for the making of faddles. The dorms near it, noted for horfe-races, are of great advantage to the town. Burford is an earldom in the family of St Albans. It is 23 miles weft-north-weft of Banbury, and 85 weft of London. W. Loag. I. 43. N. Lat. 51.40.

BURG, BURGH, or DUn, in northern topography. See Dun.

Burg, a town of Lincolnfhire, feated in a marfh, 12 miles fouth-ealt of Bollon, and 127 north of London. E. Long. O. 5. N. Lat. 53. 12.

Burg, a town of the Dutch Nethe:lands, in Zutphen, feated on the Old lfel, 18 miles eaft of Nimeguen. E. Long. 6. 12. N. Lat. 52. O.

Burg-Cafle, or Borough-coglie, a fortrefs on the edge of the county of Suffolk, thee miles weft of Yarmouth, where the rivers Yare and Waveny meet. It was formerly a delightful place; but now only the ruins of its walls remain, near which Roman coins are often dug up.

BURGAGE, or Tenure in BURGAGE, is where the king, or other perfon, is lord of an ancient borough, in which the tenements are held by a rent certain. It is indeed only a kind of town foccage; as common foc* See Soc* cage*, by which other lands are holden, is ufually of cage. a rural nature. A borough is diftinguilhed from other towns by the right of fending members to parliament; and where the right of election is by burgage-tenure, that alone is a proof of the antiquity of the borough. Tenure in burgage, therefore, or burgage tenure, is where houles, or lands which were formerly the frite of houfes in an ancient borougt, are held of fome lord in common foccage, by a certain eftablifhed rent. And thefe feem to have withflood the thock of the Norman encroachments, pijncipally on account of their infignificancy, which made it not worth while to compel them $t 0$ an alteration of tenure, as 100 of them put together would fcarce have amounted to a knight's fee. Befides, the owners of them, being chiefly artificers, and perfons engaged in trade, could not with any tolerable propriety be put on fuch a military eftablifhment as the tenure in chivalry was. The free foccage, therefore, in which thefe tenements are held, feems to be plainly a remnant of Saxon liberty; which may alfo acconnt for the great variety of cuftoms affecting many of thefe tenements lo held in ancient burgage; the principal and moft remarkable of which is that called Borough Englifh. See the article Borovgr-Englifh.

BURGAUf, in Natural Hifory, the name of a large fpecies of fea-fnail, of the lunar or round-meuthed kind. It is very beautifully lined with a coat, of the nature of the mother-of-pearl; and the artificers take this out, to ufe under the name of mother-of-pearl, though fome call it, after the name of the thell they take it from, burgaudine.

BURGAUDINE, the name given by the French artificers to what we call mother-of-pearl. In their works, they do not ufe the common nacre-fhell for this, but the lining of the American burgau. Hence fome
call the mother-of-pearl burgoudine, and others the birigaudine mother-of-pearl.

BURGDORE, a handfome and pretty large town of Switzerland, in the canton of Bern, cated on an eminence. The river Emma is about at pifol thot frum the toun ; and as it olten changes its bed, it fremuently does a great deal of mifchief. It runs at tlie foot of a rock of a prodigious height, and there is a fonebridge over it. Near the town there is a fulphurous fpring which fupplies their baths with water, which is good againft palfies and difcafes of the netves. E. Long. 7. 35. N. Lat. 47. 6.

BURGEON, in gatdening, a knot or button put forth by the branch of a tree in the fpring. The word is formed from the French bourgeon, which fignifies the fame, formed fiom the Latin Eurrio, of Curra. Burgeon amounts to the fame with what is othervife caled eye, bud, or germ. Frolts are chiefly dangerous when the burgeons begin to appear. The burgeons have the fane fkin, fame pith, fame ligneous body, and the fame infertions as the lialk; that is, all the parts are the fame in both, only more coniracted in the former.

BURGESS, an inloabitant of a borough, or walled town, or one who poffeffes a tenement therein. The word is alfo applied to the magiftrates of fome town ; as the bailiff and burgeffes of Leominfter.

Anciently, burgefles were held in great contempt; being reputed fervile, bafe, and unfit for war; fo that the gentry were not allowed to intermary in their families, or fight with them; but in lieu thereof, were to appoint champions. A burgefs's fon was reputed of age, when he could diltinetly count money, meafure cloth, \&c.

Burgess is now ordinarily ufed for the reprefentative of a borough-town in parliament. Burgefles are fuppofed to reprefent the mercantile part, or trading intereft of the nation. They were formerly allowed, by a rate eflablifhed in the reign of Edward III. two fillings a-day as wages. It is much to be regretted, that the members for boroughs bear above a quadruple proportion to thofe for counties. The right of election of burgefies depends on feveral local charters and cufoms: though by 2 Geo. II. c. 24. the right for the future thall be allowed according to the laft determination of the houfe of commons concerning it: and by 3 Geo. III. c. 15. no freeman, except fuch as claim by birth, fervitude, or marriage, thall be entitled to vote, unlefs he hath been admitted to his freedom twelve months before. No perfon is eligible as a burgefs, who hath not a clear eftate of 300 l . a-year.

BURGGRAVE, properly denotes the hereditary governor of a cafle, or fortified town, chiefly in Germany. The word is compounded of bourg, cown, and graf or grave, count. The burggraves were originally the fame with what we otherwife call caflellans, or comites caffellani; but their dignity was confiderably advanced under Rudolph of Haplburgh ; before his time they were ranked only as counts, and below the princes, but under him began to be efteemed on a footing with princes. In fome parts, the dignity is much degenerated, efpecially in the palatinate. There were formerly, according to Leti, is families who enjoyed 5 H 2
the

## $B \operatorname{U} \quad[796] \quad B \quad \mathrm{U}$ R

Burgh the title of burggraves, 13 of which are now extinet. Burglary. But this is differently reprefented by others. In Bohemia the title of burggrave is given to the chief officer, $n$ r to him that commands in quality of viceroy. In Pruflia, the burggrave is one of the four chief officers of the province. In Guelderland, the burggrave of Nimeguen is prefident of the fiates of the province.

## 13URGH. See Borough.

Burgh, or Dun. See Dun.
Burga-Bote fignifies contribution towards the building or sepairing of cafles, or walls, for the defence of a borough or city.

By a law of King Athelftan, the caftles and walls of towns were to be sepaired, and burgh-bote levied every year within a fottnight after rogation days. No juerfon whatever was exempt from this fervice; the king himfelf could not exempt a man from burgh-bote; yet, in after times, exemptions appear to have been frequently granted; infomuch, that, according to Cowel, the word lurgb-bote came to be chicfly ufed to denote not the fervice but the liberty or exemption from it.

Burgn-Breche, or brech, a fine impoled on the comsounity of a town, or burgh, for the breach of peace among them.

Bu'RGH-Vails, were yearly payments to the crown of Scotland, introduced by Malcolm III. and refembling the Fek-Farm rents of burghs in England. See Mail.

Eurgh-Mafer, an officer in the tin mines, who directs and lays out the meers for the workmen, \&c. o:hcrwife denominated bailiff and bar-mafter.
3)URGHERMASTER. See Burgomaster.

BURGHMOTE, the court of a borough. By the laws of King Edgar, the burghmote was to be held thrice in the year; by thole of Henry I. 12 times.

BURGLARY, or nocturnal house.breaking, (burgi latrocinium), which by the ancient Englifh law was called bamefucken, a word alfo uied in the law of Scotland, but in a fornewhat different fenfe, has always been looked upon as a very heinous offence : not only becaufe of the abundant terror it carries with it, but allo as it is a farcible invafion and dillurbance of that right of habitation which every individual might ace quire cven in a fate of nature; an invafion which, in fuch a flate, would be fure to be punified with death, unlefs the affailant were ftronger. But, in civil fociety, the laws come in to the affifance of the weaker party: and, befides that they leave him this natural right of killing the aggreffor if he can, they alfo proteet and avenge him in cafe the affailant is too powerful. And the law has fo particular and tender a regard to the immunity of a man's houfe, that it flyles it his cafle, and will never fuffer it to be violated with impunity; agrecing herein with the fentiments of ancient Rome. For this reafon no outward doors can in general be broken open to execute any civil procefs, though in criminal caufes the public fafety fupcrfedes the pri-

- See the article Ariff.
vate *. Hence allo in part arifes the animadverfion of the law upon eaves-droppers, nufancers, and incendiaries: and to this principle it muft be affigned, that a man moy affemble people together lawfully (at leaft if they do not exceed 11), without danger of raifng a riot, rout, or unlawful affembly, in odder to protect his loufe; which he is not permitted to do in any other cale.

The definition of a burglar, as given us by Sir Ed-
ward Coke, is, " he that by night breaketh and en- Eurglary tereth in a manfion houfe, with intent to commit a felony." In this definition there are four things to be confidered; the time, the place, the manner, and the intent.

1. The time muft be by night, and not hy day ; for in the day-time there is no burglary; i. e. if there be day-light or crepufculum enough, beguri or left, to difcern a man's face withal. But this does not extend to moonlight; for then many midnight lurglaries would go unpunilhed: and befides, the malignity of the offence does not corfift fo much in its being done in the dark, as at the dead of night; when all the creation, except beafts u: prey, are at reft; when fleep has difarmed the owner, and rendered his caftle defencelefs.
2. As to the place. It muft be, according to Sir Edward Coke's definition, in a manfion-houfe : for no diflant barn, warehoufe, or the like, are under the fame privileges, nor looked upon as a man's caltle of defence; nor is a breaking open of houfes wherein no man refides, and which for the time being are not manfion-houfes, attended with the fame circumftances of midnight terror. A houle, however, wherein a man fometimes refides, and which the owner bath left only for a fhort feafon, animo revertendi, is the object of burglary, though no one be in it at the time of the fact committed. And if the barn, ftable, or warehoufe, be parcel of the manfion-houfe, though not under the fame roof or contiguous, a burglary may be committed therein; for the capital houfe protects and privileges all its branches and appurtenances, if within the curtilage or homeftall. A chamber in a college, or an inn of court, where each inhabitant hath a diftinet property, is, to all other purpofes as well as this, the man-fion-houfe of the owner. So alfo is a room or lodging in any private houfe the manfion for the time being of the lodger; if the owner doth not himfelf dwell in the houle, or if he and the lodger enter by different outward doors. But if the owner himfelf lies in the houfe, and hath but one outward door at which he and his lodgers enter, fuch lodgers feem only to be inmates, and all their apattments to be parcel of the one dwelling houfe of the owner.
3. As to the manner of committing burglary: there mull be both a breaking and an entry to complete it. But they need not be both done at once; for if a hole be broken one night, and the fame breakers enter the next night through the fame, they are burglars. There muft be an actual breaking; as at leaft, by breaking or taking out the glafs of, or otherwife opening, a window; picking a lock, or opening it with a key; nay, by lifting up the latch of a door, or unloofing any other faftening which the owner has provided. But if a perfon leaves his doors or windows open, it is his own folly and negligence; and if a man enters therein, it is no burglary; yet, if be afterwards unlocks an inner or chamber door, it is lo. But to come down a chimney is held a burglarious entry: for that is as much clofed as the nature of things will permit. So allo, to knock at a door, and, upon opening it, to rufh in with a felonious intent ; or under pretence of taking lodgings, to fall upon the lansilord and rob him; or to procure a conftable to gain admittance in order to fearch for traitors, and then to bind the conflable and rob the houfe; all thele entites have been adjudged burglari-

B U K [ 7 ous, though there was no actual breaking: for the law
will not fuffer itfelf to be tritted with by fuch evafions, efpicially under the cloak of legal procefs. As for the entry, any the lealt degree of it, with any part of the body, or with an inftrument held in the hand, is fufficient : as, to itcp over the threlhold, to put a hand or hook in at a window to draw out goods, or a pillol to demand one's money, are all of them burglarious $\mathrm{crs}^{-}$ tries. The entry may be before the breaking, as well as after; for by tatute 12 Anne, c. 7 . if a perfon enters into the divelling-houfe of another, without breaking in, either by day or by night, with an intent to commit felony, or, being in fuch houfe, thall commit any felony; and fall in the night break out of the fame; this is declared to be burglary.
4. As to the intent; it is clear that fuch breaking and entry mult be with a felonious intent, otherwife it is only a trefpafs. And it is the fame, whether fuch intention be actually carried into execution, or only demonftrated by fome attemptor overt act, of which the jury is to judge.

Burglary is a felony at common law, but within the benefit of clergy. Burglary in any houfe belonging to the plate-glafs company, with intent to fteal the flock or utenfils, is by ftatute 13 Geo. III. c. 3 . declared to be fingle felony, and puniftred with tranfportation feven years.

BURGOMASTER, Burghermaster, Bourgermefier, or Burgmefler, the chief magiftrate of the great towns in Flanders, Holland, and Germany. The power and juridiction of the burgomafter is not the fame in all places, every town having its particular cuftoms and regulations: at Amferdam there are four chofen by the voices of all thole people in the fenate who have either been burgomafters or echevins. They difpofe of all under offices that fall in their time, keep the key of the bank, and enjoy a \{alary but of 500 guilders; all feafts, public entertainments, \&c. being defrayed out of the common treafury. The word is formed from the two Flemifh words, borger, burgefs, or citizen; and mefer, mafer. Some exprels it in Latin by conful, others by fenator. -Mr Brenau obferves, that burghermafier in Holland, anfwers to what is called alderman and foeriff in England, atiorney at Compeigne, copitoul at Thouloufe, conful at Languedoc, \&c.

BURGOO, or Burgout, a fea-faring difh, made of whole oatmeal, or groats, boiled in water till they burft ; then mixed with butter. It is a cheap and flrengthening diet. Burgoo, otherwife called lollolly, is held by Cockburn very proper to correct that thick. nefs of humours and coftivenefs to which the other dict of failors much difpofes them. Yet the burgoo vietual. Jing is the leaft liked of all their provifions, becanfe of the fcanty allowance of butter to it. The fame author thinks it might be worth the confideration of thofe to whom the care of the feamer is committed, to contrive to render this food more agreeable to them.

BURGOS, a city of Spain, the capital of Old Cafile, with an archbifhop's fee, erected in 1574. It is furrounded with mountain, which render the air very cold nine months in the year, and the other three excelfively hot. It is feated on the declivity of a hill, on

97 ] B U R
the top of which there is a ftrong cafle, and the lower part of the town is watered by the river Alançon. The principal avenue to the city is by a bandfome bridge over this river, which leads to a beautiful gate, adorned with the flatues of Ceveral kings of Spain. The town is large and populous; but the houfes are ill built, and the ftreets are fiarrow and dirty, except fome fer; efpecially that which leads to the cathedral. There are feveral fquares adorned with fountains and flatues. 'I'he great fquare in the middle of the city is furrounded with fine houles, with piazzas to eacl. The cathedral church is a matterpiece of Gothic architecturc, and one of the fineft in all Spain. The church of the Augufines is remarkable for its beautiful and rich chapel of the holy crucifix. There are feveral fine corvents and munneries; one of which laft contains 150 nurs, who mult all be of noble extraction. "Ihey have likewife a royal hofpital, very richly endowed; and at this place they fpeak the bef Caftilian, that is, the pureft Spanif, in the kingdom. W. Long. 4.7 . N. Lat. 42. 20.

BURGUNDIONES, a part or branch of the Vindili or Wandili. Cluverius places them about the Warta, a river of Poland: though the conjectures on the feat of thefe people are doubtful; and no wonder, becaufe the Roman expeditions terminated at the Elbe. They afterwards removed to the Cifalbin Germany, and at length to Cilic Gaul, and gave name to the duchy and county of Burgundy.

BURGUNDY, a late province or government of France, which now forms the three departments, of Cote d'Or, Saone and Loire, and Yonne. It contains, befides the government of Burgundy, La Breffe, La Bugy, and the diftrich of Gex; having Champagne on the north, Lyonnois on the fouth, Franche Compte on the ealt, and Nivernois and Bourbonnois on the weft. Its length from north to fouth is about 45 leagues, and its breadth from eaft to weft about 30 . It is tery fertile in corn, wine, fruit, and tobacco; being watered by the Seine, the Dehune which falls into the Saone, the Brebince or Bourbince, the Armançon, the Oucke, and the 'rille. Thare are fome noted mineral fprings in it, with fubterraneous lakes, and plenty of ochre. For a long time it had dukes of its own, fubordinate to the crown of France; but at laft, Louis XI. upon the failure of the heirs male, feized upon it, and annexed it to his crown. The principal places are Dijon, Auxerre, Autun, Bourbon l'Ancy, \&c.

BURIAL, the interment of a deceafed perfon.
The rites of burial are looked upon in all countries, and at all times, as a debt fo facred, that fuch as neglected to difcharge it were thought accurfed: hence the Romans called them $j y f a$, and the Greeks $\quad \mu \quad \mu x_{s}$ dicace, oria, words implying the inviolable obliga. tions which nature has laid upon the living to take care of the oblequies of the dead. Nor are we to wonder that the ancient Greeks and Romans were extremely folicitous about the interment of their deceafed friends, fince they were ftrongly perfuaded that theirfouls could not be admitted into the Elyfar. fields till their bodies were committed to the earth ; and if it happened that they never obtained the rites of burial, they were excluded from the happy manfions for the term of 100 years. For this reafon it was confidered as a

Eurbal.
duty incumbent upon all travellers who thould meet with a dead body in their way, 10 calt duft or mould upon it three times; and of thefe three handfuls one at leaft was call upon the lead. The ancients likewife confidered it as a great misfortune if they were not laid in the fepulchates uf their fathers; for which rafon, fuch as died in foreign countries had ufually their a thes brought home, and interred with thofe of their anceftors. But notwithatanding their great care in the busial of the dead, thcre were fome perfons whom they thought unworthy of that latt office, and to whom therefore they refufed it: fuch were, I. Public or private cnemies. 2. Such as betrayed or confpired againft their country. 3. Tyrants, who were always looked upon es enemies to their country. 4. Villains guilty of facrilege. 5. Such as died in debt, whofe bodies belonged to their creditors. "And, 6. Some particular offenders, who fuffered capital punifhment.

Of thofe who were allowed the rites of burial, fome were difinguifhed by particular circumitances of difgrace attending their interment: thus perfuns killed by lightning were buried apart by themlelves, being thought odious to the gods; thole who wafted then patrimony forfeited the right of being buried in the lepulchres of their fathers; and thole who were guilty of Celf-murder were privately depofted in the ground, without the accuftumed folemnities. Among the Jews, the privilege of burial was denied only to felf-murderers, who were thrown out to rot upon the ground. In the Cbriftian church, though good men alway" defired the privilege of interment, yet they were not, like the heathens, fo concerned for their bodies, as to think it any detriment to them, if cither the barbarity of an enemy, or fome other accident, deprived them of this privilege. The primitive Chriftian church denied the more fulemn rites of turial only to unbaptized perfons, felf-rurderers, and excommunicated perfons who continced ubilinate and impenitent, in a manifeft contempt of the church's cenfures.

The place of burial among the Jews was never pare ticularly determined. We find they had graves in the town and country, upon the highwe.vs, in ga:dens, and upon mnuntains. Anong the Greeks, the temples were made repofitores for the dead in the primitive ages; yet the general cuftom in latter ages, with them, as
well as with the Romans and other heathen nations, was to bury their dead without their cities, and chiefly by the highways. Among the primitive Chriflians, burying in cities was not allowed for the firft 300 years, nor in churches for many ages after, the dead bodies being firlt depofited in the atrium or churchyard, and porches and purticoes of the church: hereditary bury-ing-places were forbidden till the 12 hh century. As to the time of burial, with all the ceremonies accompany. ing it, fee the article Funfral-Rites.

BURICK, a town of Germany, in the circle of Weftphalia, and duchy of Cleves, fubject to the king of Pruffia. It was taken by the French in 1672 , who demolified the fortifications. It is agreeably feated on the river Rhine, uver againf Wefel, in E. Long. 6.8. N. J.at. 5 I. 38.

BURIDAN, Jонn, a native of Bethune, in Artois, was one of the molt celebrated philofophers of the 14 th century. He taught in the univerfity of Paris with great reputation ; and wrote commentaries on logic, morality, and Arifotle's metaphyfics. Aventinus relates, that be was a difciple of Ockam ; and that, being expelled Paris by the power of the Realifts, whicls was fuperior to that of the Nominalifts, he went into Germany, where be founded the univerfity of Vienna. From him came the proverb of the afs of Buridan, fo famous in the fchools. Buridan fuppoted a hungry als fixed at an exactly equal diftance between two buthels of oats: or an afs, as much prefled by thint as hunger, between a bumel of oats and a pail of water, each of them acting equally on his fenfes. Having made this fuppufition, he defired to know what the afs would do? If he was anfwered that he would remain immoveable, then he concluded he would die of hunger between two bufhels of oats, or of both lunger and thirft, with both corn and water within his reach. This appeared abfurd, and brought the laughter on his fide; but if it was replied, that the afs would not be fo flupid as to die of hunger or thirft in fuch a fituation, Then (faid he), the afs has free will, or is it poffible that of two equal weights one fhould outweigh the ather? Thefe two confequences appeared equally abfurd; and thus Buridan, by this fophifm, perplexed the philolophers, and his afs became famous in the fchools.
